## Subsection 9.—Main Historical Tables and Tables Showing Current Trends in External Trade.

In this subsection are assembled, in summary form, the main tables of Canadian trade since Confederation, while the figures of trade in the latest years are given in greater detail by countries and commodities.

## 1.—Aggregate External Merchandise Trade of Canada, fiscal years 1863-1938.

NOTE.—See explanatory text on page 485.

Fiscal Year.	Imports of Merchandise Entered for Home Consumption.			Exports of Merchandise.			Total of Imports for Home Consumption and Exports.

\* No record of imports and exports of coin and bullion for 1919.

4.—Duties Collected on Exports, 1868-92, and on Imports for Home Consumption, 1868-1938, with Percentages of Expense of Collection to Gross Customs Revenue Collected, fiscal years 1868-1938.

NOTE.—Duties on exports were not collected after the year 1892. The figures in this table are the gross figures of duties collected; the net national revenue from customs taxation, because of the drawbacks paid where commodities on which duties have been collected are afterwards exported in a more highly manufactured state, is considerably smaller. For net customs revenue, see statistics of revenue from customs duties, in the historical revenue table in Chapter XXI on Public Finance.

Fiscal Year.	Duties Collected on Exports.	Duties Collected on Imports.	Percentage of Expense of Collection to Gross Customs Revenue.	Fiscal Year.	Duties Collected on Exports.	Duties Collected on Imports.	Percentage of Expense of Collection to Gross Customs Revenue.

## 13.—Principal Imports into Canada for Consumption from United

No.	Item.	United Kingdom.			
		1935.	1936.	1937.	1938.
<b>VII. Non-Metallic Minerals—concluded.</b>					
Glass—					
1	Carboys, bottles, jars, etc..... \$	45,378	52,570	52,241	68,066
2	Common window glass..... sq. ft.	8,125,661	9,591,316	12,304,701	10,700,500
		294,910	330,884	430,754	368,319
3	Plate glass..... sq. ft.	833,928	700,683	1,780,233	1,847,056
		324,618	256,801	571,252	473,130
4	Tableware of glass..... \$	56,079	68,362	96,509	103,944
	Totals, Glass <sup>1</sup> ..... \$	947,902	925,033	1,429,446	1,391,229
5	Graphite and its products..... \$	48,019	52,532	51,629	75,433
Petroleum and Asphalt—					
6	Asphalt..... \$	119	54	1	148
7	Crude petroleum..... gal.	34,259	19,833	5,398	32,475
		5,254	3,168	928	6,067
8	Fuel oil for ships..... gal.	—	—	—	—
		—	—	—	—
9	Gasoline..... gal.	—	450	6,802	6,682
		—	190	653	661
10	Kerosene, refined..... gal.	4	4,640	Nil	5,485
		7	887	—	921
11	Lubricating oils..... gal.	88,529	94,520	91,142	110,512
		36,609	34,674	31,135	39,923
	Totals, Petroleum and Asphalt <sup>1</sup> ..... \$	63,889	55,761	63,974	101,018
12	Diamond dust or bort..... \$	23,891	122,176	74,922	52,814
13	Sand, silica..... cwt.	Nil	Nil	3,900	2,345
		—	—	737	403
14	Carbons, electric..... \$	1,552	726	1,114	1,582
15	Diamonds, unset..... \$	98,378	103,261	96,582	180,270
16	Salt..... cwt.	653,179	574,482	683,686	651,989
		203,935	168,530	205,469	192,506
17	Sulphur..... cwt.	779	1,337	45,324	630
		1,270	2,571	37,116	1,372
	Totals, Non-Metallic Minerals <sup>1</sup> ..... \$	13,163,008	12,332,009	13,102,638	13,492,855
<b>VIII. Chemicals and Allied Products.</b>					
18	Acids..... \$	325,940	448,848	550,949	668,958
19	Cellulose products (totals)..... \$	121,842	137,749	132,882	83,189
Drugs and Medicines—					
20	Medicinal preparations..... \$	597,425	584,963	539,082	595,204
21	Preparations for spraying..... \$	92,224	86,171	104,562	122,674
	Totals, Drugs and Medicines <sup>1</sup> ..... \$	860,572	897,396	816,147	851,865
Dyeing and Tanning—					
22	Aniline and coal-tar dyes..... lb.	534,987	565,619	707,555	702,349
		369,520	357,470	455,397	436,061
23	Oak, quebracho, and similar extracts..... lb.	255,465	534,175	250,101	735,208
		7,255	18,089	9,552	27,484
	Totals, Dyeing and Tanning <sup>1</sup> ..... \$	603,011	603,024	683,293	694,930
24	Explosives..... \$	12,464	19,795	40,681	48,012
25	Fertilizers..... \$	8,628	3,396	51,675	35,241
26	Glycerine..... lb.	1,740,013	101,964	675,984	163,403
		190,001	10,270	106,969	50,491
Paints and Varnishes—					
27	Carbon black..... lb.	239	56,734	65,524	69,328
		27	3,098	3,543	3,624
28	Lithopone..... lb.	6,557,943	7,417,130	8,367,012	9,951,902
		228,728	256,732	301,419	382,915
29	Oxides..... lb.	1,158,317	1,204,588	1,491,019	1,621,168
		160,769	170,418	187,888	218,504
30	Ready-mixed paints..... gal.	25,287	27,433	28,062	34,394
		35,141	33,374	41,080	44,437
31	Varnish..... gal.	10,595	5,832	8,425	9,102
		20,013	11,021	14,624	14,461
32	Zinc white..... lb.	10,449,275	10,410,360	10,587,291	9,913,319
		408,608	398,292	408,730	510,015
	Totals, Paints and Varnishes <sup>1</sup> ..... \$	1,196,499	1,346,596	1,555,349	1,801,118

<sup>1</sup> Totals include other items not specified.<sup>2</sup> None reported.

DETAILED IMPORTS FOR CONSUMPTION

## 13.—Principal Imports into Canada for Consumption from United

No.	Item.	United Kingdom.			
		1935.	1936.	1937.	1938.
<b>VIII. Chemicals and Allied Products—concl.</b>					
1	Perfumery..... \$	101,677	105,145	142,587	158,908
Soap—					
2	Laundry soap..... lb.	198,785	258,247	319,045	567,773
	..... \$	14,564	17,200	21,782	36,972
3	Toilet soap..... \$	39,255	51,500	64,612	73,200
	Totals, Soap <sup>1</sup> ..... \$	69,655	85,044	108,529	133,875
Chemicals, Inorganic, n.o.p.—					
4	Sulphate of alumina..... cwt.	75,735	82,885	105,325	127,191
	..... \$	63,052	64,638	83,797	109,787
5	Ammonia and its compounds..... \$	192,256	146,756	254,104	484,429
6	Compounds of tetra-ethyl lead..... lb.	—	—	—	38,853
	..... \$	—	—	—	17,576
7	Chlorine, liquid..... lb.	—	—	—	—
	..... \$	—	—	—	—
8	Calcium chloride..... cwt.	61,225	1,171	300	154
	..... \$	99,556	1,289	326	218
9	Potash and potassium compounds..... \$	128,833	97,509	87,185	71,357
10	Soda and sodium compounds..... \$	836,544	935,842	1,017,527	1,049,741
	Totals, Chemicals, Inorganic, n.o.p. <sup>1</sup> ..... \$	1,875,509	1,725,016	1,722,021	2,172,543
	<b>Totals, Chemicals and Allied Products<sup>1</sup></b> ..... \$	<b>6,210,239</b>	<b>6,336,345</b>	<b>6,957,434</b>	<b>7,706,251</b>
<b>IX. Miscellaneous Commodities.</b>					
Amusement and Sporting Goods—					
11	Films..... \$	65,448	57,257	77,154	44,761
12	Dolls..... \$	2,144	5,548	3,994	11,370
13	Toys..... \$	155,382	189,825	200,756	178,623
	Totals, Amusem't and Sporting Goods <sup>2</sup> ..... \$	468,032	540,510	572,211	577,570
14	Brushes..... \$	125,751	129,438	140,858	140,199
15	Containers (outside coverings)..... \$	1,151,079	1,234,653	1,174,090	823,706
Household and Personal Equipment—					
16	Buttons..... \$	10,823	14,457	13,528	14,327
17	Cases and boxes, fancy..... \$	100,159	114,688	146,746	161,258
18	Jewellery, n.o.p..... \$	33,411	40,010	35,444	46,523
19	Pocket books, etc..... \$	144,265	158,102	170,505	180,358
20	Refrigerators..... \$	925	1,099	1,589	515
21	Tobacco pipes, etc..... \$	138,125	121,711	147,108	184,132
	Totals, Household, etc., Equipment <sup>1</sup> ..... \$	746,114	794,512	879,827	962,300
22	Musical instruments..... \$	46,210	57,731	88,507	80,170
Scientific and Educational Equipment—					
23	Philosophical and scientific apparatus..... \$	54,712	99,175	54,512	67,280
24	Surgical and dental instruments, etc..... \$	270,187	302,107	255,996	223,432
	Totals, Scientific and Educational Equipment <sup>1</sup> ..... \$	440,015	565,617	475,934	662,969
25	Ships and vessels..... \$	7,998	23,343	24,653	8,575
26	Vehicles, n.o.p..... \$	58,704	147,475	463,595	563,325
27	Works of art..... \$	177,679	218,518	385,235	346,443
28	Special imports..... \$	2,099,535	1,647,293	1,760,993	1,813,544
29	Cartridges..... \$	36,226	21,442	68,202	86,163
30	Electric energy..... k.w.h.	Nil	Nil	Nil	Nil
	..... \$	—	—	—	—
31	Express parcels..... \$	5,958	7,426	8,078	11,018
32	Pencils, lead..... \$	56,209	72,875	74,695	69,879
33	Post Office parcels..... \$	311,658	373,231	290,911	180,528
34	Precious stones..... \$	58,678	86,026	123,164	88,109
35	Settlers' effects..... \$	214,810	179,705	202,024	284,170
36	Waste paper clippings..... cwt.	23,429	40,009	29,799	21,097
	..... \$	15,963	26,410	18,942	20,417
	<b>Totals, Miscellaneous Commodities<sup>1</sup></b> ..... \$	<b>6,194,730</b>	<b>6,317,717</b>	<b>6,962,416</b>	<b>6,963,105</b>

<sup>1</sup> In this classification the expression "Canadian Farm Products" refers, in the case of exports, to commodities actually produced, in their original state, on Canadian farms. In the case of imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both imports and exports, materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

**17.—Values of Total Exports, Imports Entered for Consumption, and Duties Collected Thereon, at Certain Ports and by Provinces, fiscal years ended Mar. 31, 1937 and 1938.**

NOTE.—The values of imports and exports at the several ports of entry given in the following table indicate that merchandise of the value stated was entered inwards, or passed outwards, at the ports mentioned, but it is not to be inferred that the imports were all for consumption at such ports or that the exports originated there.

**Subsection 10.—Comparison of the Volume of Imports and Exports.**

The statistics of the external trade of Canada are analysed in this subsection to reveal changes in the physical volume of external trade as well as in the dollar value of that trade. Value figures alone may be somewhat misleading when used to show the physical growth of production and external trade. When, for example, Table 1 of this chapter is examined, it seems to show stagnation in our external trade between the early 70's and the middle 90's of last century and a very rapid growth thereafter. Yet we know that the apparent stagnation was partly due to the fall in general prices between the '70's and the middle '90's, while the rapid growth of the later figures is exaggerated by the rise of prices after 1897, especially in the War period, 1914 to 1921. Since 1929 another precipitate decline in prices has exaggerated the actual decrease of trade. Thus the figures as published give us no true measure of the volume of our external trade, yet, of the commodities that satisfy human needs, it is the *volume* rather than the *value* with which the masses of the population are more intimately concerned. Volume is, from many points of view, a more important consideration than value, and it is desirable to secure a record of the fluctuations in the volume of the country's trade as distinguished from the value thereof. This objective is attempted with regard to world trade in Subsection 1 of this chapter in which the internationally familiar term 'quantum' has the same significance as 'volume' here. Table 22 which follows serves the same purpose with regard to Canadian external trade.

The method adopted for ascertaining the fluctuations in volume has been to take a base year—1936—and to revalue the quantities of each commodity imported or exported in any given year at the average import or export value of that commodity in the standard or base year. Where quantities are not available, the values of items are assumed to have moved in the same direction and in the same proportions as closely related commodities. For this reason the results must not be regarded as of great precision but, since the value of goods not returned by quantity and of those not comparable over a limited series of years is small in comparison with the total trade, the amount of error introduced on this account is inconsiderable. By this method it is comparatively easy to compare the volume of the trade in a particular year with that in a recent year and the margin of error is fairly small. When, however, a comparison of the volume of trade in a particular year with that of a more remote year is undertaken, the margin of error is very much greater. Certain new commodities have come into existence in the course of the period, while the qualities of others have been materially changed; further, various new items have been added to the customs classifications, and it is not always possible to say just what customs items at present correspond with those of a year as long past as 1914. For these reasons comparisons with the pre-War fiscal year ended 1914 were discontinued after 1929. This comparison for 1929 and certain previous years appeared on pp. 581-583 of the 1930 Year Book. For similar reasons the retention of 1926 as the base year was tending to lessen the reliability of recent calculations, and, consequently, 1936 has been taken as a new base year in the present edition. Comparisons with 1936 were carried back to 1932 at pp. 583-585 of the 1938 Year Book.

In Table 22 the values and volumes of imports and exports, respectively, for the years 1933 to 1938 are compared with 1936, for the main groups, as follows: the imports and exports are first shown at the values at which the trade was recorded; the same imports and exports are then shown at the value they would have had

if the average price or unit value had been the same in each year as it was in 1936. In other words, the figures on the basis of 1936 average values enable a comparison to be made of the imports or exports for the given years on the basis of variations in quantity only, variations due to different prices having been eliminated. Index numbers of declared values, that is, the total declared values of the imports or exports in each year expressed as percentages of 1936, are then given. These are followed by the index numbers of average values, which show the prices at which goods were imported or exported in each year expressed as percentages of the prices in 1936. Finally, the index numbers of physical volume show the relative quantity of merchandise imported or exported in each year expressed as a percentage of the quantity of the same merchandise in 1936.

The fiscal year 1938 shows a general increase in the volume of imports under all groups, indicative of the recovery of the purchasing power of the people of Canada. The greatest change since the low period of the depression represented by the fiscal year 1933 is the increase in the imports of iron and its products.

In the latter half of Table 22, dealing with exports, the index numbers show a very encouraging recovery since the fiscal year 1933 in both the volume of exports and in the average values or the prices at which they sold in the world markets. Recovery in volume has been particularly marked in the cases of the wood and paper, iron, and non-metallic mineral groups. These products represent to a large extent capital goods or materials, and the demand for them was very much curtailed during the worst years of the depression. The volume of vegetable products exported in 1938 was very low owing to the drought of the 1937 agricultural season.

The index numbers of average values of imports rose from 88.3 in 1933 to 105.9 in 1938, or by about 20 p.c., while the index of average values of exports rose in the same period from 78.6 to 114.3, or by 45 p.c. This greater rise in the prices of exports than in those of imports represents welcome progress toward a betterment in Canada's barter terms in world trade, which suffered so severely during the depression owing to the much greater decline in the prices of primary goods than in those of highly fabricated commodities. See also Subsection 1, pp. 476-485 regarding price disparities in world trade.

### Section 4.—The Tourist Trade of Canada.\*

**Tourist Expenditures in Canada.**—In recent years the tourist trade has become an important source of revenue in certain sections of the Dominion, materially affecting the balance of trade. It represents the economic disposition of national assets in which Canada is particularly rich, namely: its picturesque scenery; its invigorating climate; its opportunities for hunting, fishing, and boating, as well as for winter sports—for the exploitation of which a considerable capital expenditure has been made on hotel accommodation, improved highways, and other attractions. Those entering from the United States in automobiles are by far the most important class of tourist. The business accruing to the Dominion in this manner represents some return for expenditures on highways which have been very large in the period since the War. In order to attract this traffic, highways have been built through regions of picturesque scenery, such as the Rocky mountains, northern Ontario, and the Laurentians and Gaspé in Quebec. A further asset for Canada arises from the fact that these scenic regions with their invigorating climate are at their best in the summer holiday season when motorists are most ready to travel. The expenditure of travellers coming to Canada from other countries has the same effect, in so far as its influence on the balance of trade is concerned, as the export of additional commodities would have. Indeed, in so far as commodities are sold to tourists travelling in the Dominion, our exportable surplus of such commodities is reduced.

It is impossible to obtain a direct record of expenditures of this kind. Moreover, even a rough estimate of the total is extremely difficult to make, visitors to Canada being of all classes, engaging in widely different activities or forms of recreation, remaining for varying periods, with expenditures undoubtedly ranging from very small to very large amounts.

Tourists who enter Canada may be divided into two broad classes: (1) those coming in *via* ocean ports; (2) those entering from the United States, the latter subdivided into entries by (a) automobile, (b) rail or steamer, (c) other modes of travel as bus, aeroplane, ferry, etc. In 1938 these classes are estimated to have expended in Canada (1) \$14,000,000, and (2) \$253,000,000, respectively, with entries under (a) \$178,000,000, (b) \$58,000,000, and (c) \$19,000,000.

The Department of National Revenue records the number of tourists entering Canada in automobiles from the United States through each of the ports of entry along the border. Estimates of the expenditures of tourists of this class in 1938, according to the provinces by which they entered, are as follows: Maritime Provinces, \$14,000,000; Quebec, \$31,000,000; Ontario, \$116,000,000; Manitoba, \$3,000,000; Saskatchewan, \$1,000,000; Alberta, \$1,000,000; and British Columbia, \$12,000,000.

**Expenditures of Canadian Tourists Abroad.**—Canadian tourists visiting other countries travel in the main to the British Isles and other European countries on visits home, or as sightseers. Again, many of them, especially elderly or delicate persons, go to Florida, Bermuda, or the West Indies. These tourists may be classified in the same way as those entering Canada. The total expenditures of such Canadian tourists to other countries were estimated in 1938 to be as follows: to overseas countries, \$17,000,000; to the United States by automobile, \$49,000,000; to the United States by rail or steamer, \$29,000,000; and to the United States by other modes of travel, \$25,000,000; a total of \$120,000,000.

\* Abridged from "The Tourist Trade in Canada, 1920-26", and reports for each year from 1927-38, inclusive, published by the Dominion Bureau of Statistics and obtainable on application. These reports contain a full explanation of the methods used in making the estimates.

Summary.—For the years 1924 to 1938 the total estimated expenditures of tourists from other countries in Canada, as compared with those of Canadian tourists in other countries, are given in Table 23.

<sup>1</sup> Information not available on a comparable basis.

<sup>2</sup> Converted into Canadian funds at average rates of exchange for the period.

<sup>3</sup> Preliminary figures.

Until the depression made itself felt in 1930, there was a steady increase in the amounts spent both by tourists from other countries in Canada and by Canadians in other countries. During the years 1930-32 the tourist trade, in spite of successive declines, exhibited a surprising vitality as compared with the generally depressed state of trade and industry. In each of these years the expenditures of tourists in Canada (and in the latter two the balance after deducting the corresponding expenditures of Canadians in foreign countries) constituted an 'invisible' export of greater value than any single commodity exported. A marked contraction in both volume of travel and tourist expenditures occurred in 1933 and conditions in 1934 were very little better. A pronounced improvement in tourist trade took place in 1935 and since then it has maintained a level approximating that existing before the depression.

### Section 5.—Balance of International Payments.\*

Statements of the Canadian balance of international payments, as in Tables 24 and 25, provide an annual summary of the current transactions in merchandise, gold, and services, and the movements of capital between Canada and other countries. Thus, besides the visible balance of merchandise trade, account is taken of the less apparent exchanges of services and capital frequently termed the 'invisible' items. The statement is divided into two accounts, the current account and the capital account, in order to distinguish current income and disbursements from transactions on capital account.

\* Revised under the direction of Herbert Marshall, B.A., F.S.S., Chief of the Internal Trade Branch of the Dominion Bureau of Statistics.

**Transactions on Current Account.**—The current account includes all current transactions in goods, gold, and services. The total credits in the account show estimates of credits received by Canada each year from the sale of merchandise, gold, and services to other countries, while total debits include estimated payments to other countries by the Dominion for purchases of merchandise or services, including payments of interest and dividends on British and foreign investments in Canada. Therefore, the current account furnishes a measure of the total external income and disbursements of the nation. It also indicates the net movement of capital between Canada and other countries each year, for any difference between current income and disbursements abroad must in theory reflect a movement of capital. For example, when credits on current account exceed debits there is a credit balance reflecting an outflow of capital from Canada, as current income from abroad is greater than all disbursements of a current character abroad under such circumstances, the resulting surplus supply of foreign exchange being utilized either to increase Canadian capital assets abroad or to reduce capital liabilities abroad. Conversely, when disbursements abroad on current account exceed external income there is a debit balance reflecting an import of capital. In other words, to obtain foreign exchange under the latter circumstances to meet the excess of current disbursements over income, Canada either has borrowed capital abroad or disposed of or withdrawn Canadian assets abroad. Thus, while the balancing item of the current account reflects the net movement of capital, its accuracy is limited by the degree of completeness and precision attained in the estimates of the current account items. Furthermore, it is only at best a measure of the net movement of capital and therefore does not disclose the great diversity and large volume of movements of capital revealed by the direct analysis of capital movements in the capital account.

**Capital Movements.**—The capital account delineates the movements of capital between Canada and other countries. The broad distinction between transactions appearing in the current account and those appearing in the capital account lies in the fact that the former group represents payments for current purchases of goods or services, whereas the latter group are on capital account and usually reflect changes in either Canada's external assets or liabilities, although all changes of the latter type, it should be noted, do not give rise to movements of capital. Thus, the capital account performs a dual function. It indicates the general significance of capital movements in the foreign exchange market and accordingly, along with the current account, throws light upon the background of transactions upon which the foreign exchange value of the Canadian dollar is dependent. It also makes it possible to appraise the effects of the movements of capital, during any period, upon the Canadian balance of international indebtedness. For the potential effects of capital movements upon the Canadian economy may only be appreciated by studying the volume and character of the various counter movements. Often, although the net movement of capital during a period may be relatively small, the significant effects that the gross movements have upon the composition of the foreign assets and liabilities of Canada may be considerable.

The Dominion Bureau of Statistics has recently completed a comprehensive study of the Canadian balance of international payments from 1926 to date and it is, consequently, now possible to draw up for this period revised statements of the balance of payments which incorporate new information that has become available.\*

\* "The Canadian Balance of International Payments—A Study of Methods and Results"; also annual reports on the Canadian Balance of International Payments; published by and obtainable from the Dominion Bureau of Statistics.

Of special interest is the detailed analysis of capital movements between Canada and other countries that has been revealed in the capital account.

**Gold Held under Earmark by the Bank of Canada.**—Since February, 1936, the Bank of Canada has been holding gold under earmark for clients abroad. These holdings presumably may be of either domestic or foreign origin. The physical movement of gold into or out of Canada is recorded in the trade tables as explained on pp. 474-476. Since changes in the gold held under earmark involve international financial transactions which are considered in estimating Canada's balance of international payments (see Table 25) the amounts so held by the Bank of Canada are shown here in Statement XV.

**Balance of Payments in Recent Years.**—The outstanding features of the Canadian balance of international payments in the five years 1934 to 1938, shown in Table 24, have been the credit balances on current account in each year reflecting substantial surpluses of current external income over and above all current disbursements abroad. Large credit balances from exports of merchandise and from the tourist trade and growing credits from the sale of gold were more than sufficient in each year to meet payments to other countries on account of interest and dividends, freight, and miscellaneous services.

The large outflow of capital indicated by the credit balances on current account is analysed in the capital account. In each year there have been large outward movements of capital for the retirement of Canadian securities owned abroad with accompanying reductions in the contractual liabilities abroad of Canadian debtors. Other security transactions arising from the international trade in outstanding securities have in each year, except 1934, resulted in inflows of capital indicating a sustained external demand, much of which was from the United Kingdom, for Canadian securities. Other capital movements during the period under review have been outward in large volume and have been connected with the activities of banks, insurance companies and other financial institutions, and international direct investments. The general effects of the movements of capital during the period have been in the direction of materially reducing the contractual liabilities

abroad of Canadian borrowers with accompanying declines in the interest payments on externally-held Canadian bonds, as well as in that of increasing somewhat Canadian assets abroad.

The largest external current income in the five post-depression years shown was received in 1936 and 1937. In both years there were also very substantial credit balances on current account. A decline in the credit balance in the latter year was due to a greater increase in total current disbursements than in current credits, the result principally of a substantial expansion in merchandise imports in 1937 and the decline in grain exports. While the credit balance on merchandise account was reduced in 1937 there were substantial increases in credits from gold and the tourist trade that offset in part the decline in merchandise credits and the increase in debits for interest and dividends, freight, and miscellaneous services.

The net outward movements of capital were very heavy in both 1936 and 1937. The extraordinary outflow for the redemption of Canadian securities owned outside of Canada in the former year was considerably reduced in 1937 with the development of less favourable circumstances for refinancing. The net movement of capital from the trade in outstanding securities was relatively small in each year taken as a whole, although the volume of transactions was very great. A small inflow of capital from these transactions in 1936 was followed by a small outflow in 1937. Other capital movements, outward in large volume in 1936, continued to expand in 1937. A smaller part of the total outflow of capital in 1937 was employed for the reduction of Canadian liabilities abroad than in the two preceding years.

The Canadian balance of international payments is shown in summary form for the five latest years in Table 24, while greater detail for the two years 1936 and 1937 is given in Table 25.

#### 24.—Summary of Canadian Balance of International Payments, 1934-38.

## 25.—Estimated Balance of International Payments, 1936 and 1937.

NOTE.—If the estimates of the current and capital items below were absolutely correct and all inclusive, the balancing item of the current account and the balancing item of the capital account would be equal. The difference between these two amounts in the statement represents either errors in the computations or the omission of transactions which could not be traced at the time the tables were prepared. Figures for both years are subject to revision. Corresponding figures for earlier years back to 1926 may be found in the report "The Canadian Balance of International Payments—A Study of Methods and Results", issued by the Dominion Bureau of Statistics.

Although the more important current transactions of these concerns, such as dividends, have been included in the current account, various small items of current transactions which are difficult to segregate, remain in this item. <sup>3</sup> Direct estimate of net outflow of capital.

## CHAPTER XVII.—INTERNAL TRADE.

This treatment of trade within the Dominion commences with a general statement on interprovincial trade, followed by sections dealing with the statistics of the grain trade and of the marketing of live stock and animal products. Statistics of cold storage facilities and of commodities in cold storage are next in order. Following these will be found sections relating to various administrative services connected with trade, including: the payment of bounties; the granting of patents, copyrights, and trade marks; weights and measures; and electricity and gas inspection. Section 9 deals with the statistics of wholesale and retail merchandising and of various types of service establishments. The concluding section of the chapter contains a brief treatment of the control and sale of alcoholic liquors and beverages in Canada.

### Section 1.—Interprovincial Trade.\*

Canada may be divided into the following five economic regions, each deriving its specific character from the predominant occupations of its people:—

1. *The Eastern Fishing, Lumbering, and Mining Region*, comprising the river valley and gulf of the St. Lawrence, together with the Atlantic coast; in other words, the greater part of the Maritime Provinces, the northern part of the province of Quebec (excluding the former district of Ungava), and a portion of northern Ontario.

2. *The Eastern Agricultural and Industrial Region*, comprising the cultivated portions of the Maritime Provinces and of the provinces of Quebec and Ontario. In the latter provinces the cultivated areas extend along the banks of the St. Lawrence and its tributaries.

3. *The Central Agricultural Region*, extending from the Red River valley to the Rocky mountains and from the Canada-United States boundary to about 56° N. lat.

4. *The Western Fishing, Mining, and Lumbering Region*, comprising the western portion of the province of Alberta, the whole of British Columbia, and the southern portion of Yukon.

5. *The Northern Fishing, Mining, and Hunting Region*, extending from the regions of permanent settlement northwards, and from the boundary of Labrador to the Pacific and to the Alaskan boundary. This vast region is sparsely inhabited by indigenous nomadic tribes engaged in fishing and hunting for their own support or for exchange with the fur-trading companies, and with individual traders who visit the region. In recent years mining activity has been developing in this region, especially along its southern fringe and in the basin of the Mackenzie river. In the east, a well-equipped port is located at Churchill. The Hudson Bay railway and this ocean terminal provide a short route to Europe for the products of the Prairie Provinces.

Great differences exist between the products of these various regions; even the fisheries and lumber products of the East are quite distinct from those of British Columbia. The needs of the people throughout the country are met to a great extent by the exchange of the products of one region for those of another.

Interprovincial trade in what is now Canada had its beginning, many years before Confederation, in the exchange of the furs and lumber products of Upper and Lower Canada for the fisheries and mineral products of the Maritimes. Although

\*Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

a large part of British Columbia lumber, minerals, fish, and fruits, Prairie Provinces agricultural products, Ontario minerals, Quebec wood-pulp, paper, and asbestos, and Maritime Provinces lumber, potatoes, fruit, and fish are exported to foreign countries and the central manufacturing provinces import the greater part of their coal, there is a large trade of manufactured and raw materials between the economic regions of the Dominion. This trade is carried principally on the railways and, to a lesser extent, on the St. Lawrence river and Great Lakes and in late years an increasing amount is being carried by motor trucks.

Monthly railway traffic reports and an annual summary report are published by the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics showing, for each province and for the Dominion as a whole, the total revenue freight traffic of all railways, divided into 76 classes of commodities. The data also show the quantity of each class that originated and terminated in each province, and are of use in computing the net imports and exports of each province for each of the 76 classes of commodities. These statistics show rail traffic only, a limitation which should be borne in mind in connection with the trade of provinces having water transportation. Summary figures for all commodities are given in Table 1. The totals, however, give no indication of how the imports of manufactures are offset by the exports of grain, coal, etc., in particular provinces. Such analyses are possible only from the detailed data.

The revenue freight traffic movement on the steam railways of Canada fluctuates to a certain extent with the yield of the crops and with activity in the mining and construction industries involving heavy movements of low-grade freight. The general trend from 1921 to 1928 was upward, increasing from 83,814,436 tons of freight carried in 1921 to 119,227,758 tons in 1928. In 1929, however, a decrease to 114,600,778 tons was reported and, with the industrial depression, there were still greater decreases to 57,099,111 tons in 1933, but traffic began to improve during the last six months of 1933 and each month of 1934 showed an increase over the corresponding month of 1933 and the total for the year was 18 p.c. greater than for 1933. The rate of increase was reduced somewhat during the first half of 1935 but continued through to the end of 1937. Except for a rise in September and October, 1938 freight traffic was considerably below that of 1937.

<sup>1</sup> The freight originating and that terminating will not agree because that which originates within a certain year does not all terminate within the same year. On the other hand, some which terminated in 1936, for instance, originated within the previous year.

## Section 2.—The Grain Trade.

### Subsection 1.—Governmental Agencies Regulating or Co-operating with the Grain Trade.

The agencies exercising control of the grain trade in Canada are: the Board of Grain Commissioners, which administers the provisions of the Canada Grain Act, 1912; and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act, 1935.

#### THE BOARD OF GRAIN COMMISSIONERS.

This Board was established in 1912 under the authority of the Canada Grain Act (c. 27, 1912). It assumed functions in regulation of the grain trade which were formerly carried out under the Manitoba Grain Act and the Inspection and Sale Act. The Board consists of a Chief Commissioner and not more than two other Commissioners, appointed by the Governor in Council for periods of ten years. The chief offices of the Board are located in Winnipeg.

The Board is responsible for the administration of the provisions of the Canada Grain Act and its functions relate to: the grading and weighing of grain; deductions from grain for dockage; shortages appearing upon the delivery of grain into or out of any elevator; the unfair or discriminatory operation of any elevator; the deterioration of grain during storage or treatment; and any other provisions of the Act, or regulations made or licences granted thereunder.

The Canada Grain Act.—The Canada Year Book, 1922-23, contained on pp. 581-583 a historical summary of the more important points respecting the shipment, inspection, and sale of Canadian grain under the Canada Grain Act, and an outline of the Canada Grain Act of 1925 appeared at p. 1017 of the 1925 Year Book. The 1929 amendments were dealt with at pp. 1047-1048 of the 1930 Year Book, and the Canada Grain Act, 1930, at p. 1101 of the 1931 Year Book.

## THE CANADIAN WHEAT BOARD.\*

The Canadian Wheat Board, now engaged in directing the sale of the 1938 wheat crop, operates under the Canadian Wheat Board Act, which was assented to as a statute of Canada on July 5, 1935. The Wheat Board first began to function in the autumn of that year. It could hardly be termed a sudden departure from previous methods of grain marketing. There had been government boards in operation during the War and immediately thereafter, and, even more recently, the Dominion Government had been active in the wheat market through the so-called stabilization measures of the period, 1931-35.

## ORIGIN OF THE BOARD.

**War and Post-War Boards.**—It became evident in June, 1917, that the open market could not operate at the same time as centralized buying on behalf of the Allied Governments. Such buying had, in fact, effectively cornered the Winnipeg market earlier in the year and a commercial settlement had to be made by acceptance of lower grades not usually deliverable on the option. The Canadian Government decided that the distribution and price of Canadian wheat should be controlled to prevent "to the utmost possible extent any undue inflation or depreciation of values by speculation, by the hoarding of grain supplies, or by any other means". Thus, the Board of Grain Supervisors was established by Order in Council on June 11, 1917. It was a monopoly board in that it took over all the wheat produced in Canada and acted as the intermediary between the producers and the Wheat Export Company, buying for the Allied Governments. On the basis of No. 1 Northern at Fort William, the Board paid \$2.40 for the balance of the 1916 crop, \$2.21 for the 1917 crop and \$2.24½ for the 1918 crop. There was no trading in wheat futures on the Winnipeg Grain Exchange from Sept. 1, 1917, to July 21, 1919, while the Board of Grain Supervisors was handling the Canadian wheat crop.

Just ten days after the latter date, the wheat futures market was closed again and the Canadian Wheat Board was appointed by Order in Council of July 31, 1919, to handle the 1919 wheat crop and the remainder of the 1918 crop. This Board was also a monopoly board but it was established for an entirely different reason than that which prompted the establishment of the Board of Grain Supervisors. It has been stated above that the first Board was appointed because the open market was not judged competent to deal with centralized government buying, *i.e.*, buying concentrated in the hands of the Allied Governments' agency. The 1919 Board was appointed because it did not appear that this centralized and organized buying would exist in 1919-20 "nor any open and stable market of the character that obtained prior to the war". There was this further distinction between the two Boards: the Board set up in 1917 paid a fixed and final price to the producer for his wheat; the 1919 Board paid an advance to the producer (\$2.15 per bushel, basis No. 1 Northern, Fort William) and gave him participation certificates entitling him to his proportionate share of any surplus above the initial price. These certificates brought two payments totalling 48 cents to raise the complete price to \$2.63 per bushel.

Trading in wheat futures was started again in the fall of 1920, but wheat prices suffered in the general price deflation which began soon thereafter. The high prices of the 1917-20 period, however, are associated by many farmers with the method of marketing through Government Boards. This view was expressed to the Royal Grain Inquiry Commission, hearing evidence in Western Canada in 1937, nearly twenty years afterwards.

\* Prepared by T. W. Grindley, Ph.D., Secretary, The Canadian Wheat Board, Winnipeg, Man.

**Efforts to Re-establish a Government Board in 1920-23.**—In the early post-War years, wheat prices showed a generally downward tendency and there were various endeavours to re-establish government marketing of wheat. In 1920-21, the yearly average price of No. 1 Northern wheat at Fort William-Port Arthur was \$1.99, in 1921-22 \$1.30, in 1922-23 \$1.10, and in 1923-24 \$1.07. As the price fell, the agitation for a Wheat Board was intensified. The debates of the Dominion Parliament and of the Provincial Legislatures of the Prairie Provinces during this period bear testimony to the interest of the western producers in methods of marketing.

An Act was passed during the 1920 session that provided for the continuance of the Wheat Board but later in the year (July 16) the Government announced that, with the change in buying conditions, the Board would not operate in 1920-21. Prices fell throughout the crop year and those farmers who sold immediately after threshing secured a better price than would have been secured by a Board that distributed its sales throughout the year on a falling market.

The agrarian agitation for a Board persisted and there was much discussion as to the power of the Dominion Government to control the grain trade, except in times of emergency such as those under which the previous Boards had operated. In 1922, the Dominion Government passed enabling legislation setting up a Canadian Wheat Board but it called for similar and concurrent legislation in at least two of the three Prairie Provinces. This legislation was passed in Saskatchewan and Alberta but it was defeated in Manitoba. The other two provinces decided to proceed, but failed in their efforts to secure competent men for the Board. The scheme was then dropped for the time being. The Report of the Royal Grain Inquiry Commission, 1938 (p. 64), comments on this decision as follows:—

It seems probable that the final abandonment of the movement for a Board was brought about partly by the recognition of the fact that the need of government control and the conditions which had enabled the 1919 Board to obtain high prices were products of the war and had virtually disappeared.

**Interest Turns to Co-operative Marketing.**—When it was announced in June, 1923, that competent men could not be secured for the Government Board, attention was then turned to the possibility of co-operative marketing. The Alberta Co-operative Wheat Producers, Ltd., began handling and merchandising wheat for its members in the fall of 1923, followed by the Saskatchewan and Manitoba Pool organizations and the Canadian Co-operative Wheat Producers, Ltd., in 1924. The latter was the Central Selling Agency of the three Provincial Pools. Voluntary co-operation was thus substituted for a legislative set-up.

These producers' co-operatives operated on a large scale, handled the farmers' grain on a pooling basis through contracts, acquired their own country and terminal elevators, and were an important feature of wheat marketing during the period, 1923-30. Generally speaking, the Pools did not 'hedge' their wheat and, since they were handling about half the western wheat crop, the open market was not called upon to absorb the full hedging pressure during this period.

**Governments Participate Again.**—The difficulties of the Pools began with the failure to sell their share of the huge crop of 1928 and were aggravated by the fall of prices late in 1929 coupled with difficult sales conditions. The trend back to government participation began when the three Provincial Governments came to the rescue of the Pools with financial guarantees. In February, 1930, the banks were guaranteed

against loss on the Pools' share of the 1929 crop and the balance of the 1928 crop. The total deficit of the Pools on account of all grains was \$24,300,000 and their annual repayment obligations to the Provincial Governments with respect to both principal and interest have been met as they fell due.

It should be mentioned here that difficulties with wheat about this time were by no means confined to Canada. The year 1929-30 saw the real beginning of government participation in the wheat business on a world-wide scale. Exporting countries were trying to assist their producers to dispose of surpluses at reasonable prices while importing countries endeavoured to insulate their producers against the full effects of low international price levels. In both cases, the measures adopted had to be made more drastic as prices fell.

**Stabilization.**—When the Pools ran into further troubles with falling prices and limited demand in 1930-31, the Dominion Government was again brought into the wheat-marketing picture. Its advent was marked by the appointment of Mr. John I. McFarland as Manager of the Pools' Central Selling Agency and by the giving of Dominion Government guarantees to the banks. The second step was the initiation of market stabilization measures which in essence amounted to holding of cash grain and purchasing of futures at times when such seemed necessary to 'stabilize' the market. These were carried on by the Central Selling Agency, financed by the lending banks and guaranteed by the Dominion Government. These operations were, of course, unusual and patterned to meet emergency conditions. They were quite different to the previous duties of the Central Selling Agency and so in July, 1931, the Provincial Pools were divorced from Central and each operated a small separate voluntary pool for the next four years. Direct interest in the Pools, therefore, ends with their separation from Central, but the reader must be concerned with the transition of the government stabilization proceedings into the Canadian Wheat Board of 1935. These proceedings were carried on, as has been seen, under the name of the Canadian Co-operative Wheat Producers, Ltd., and using the accumulated wheat stocks of that organization as a base.

The following statement summarizes the holdings (cash wheat and futures) of the Canadian Co-operative Wheat Producers, Ltd., at selected and significant dates:—

Without entering into any discussion of the merits or demerits of these stabilization measures, it may be seen that a considerable volume of wheat was acquired in the process. Large sums of money were naturally involved and in the 1935 session of Parliament attention was directed to legislation which would serve the double purpose of disposing of the holdings acquired under stabilization and at the same time handling the new crops.

From this résumé of the recent history of grain marketing in Canada it seems fair to conclude that the Canadian Wheat Board Act, 1935, was not a radical or new move in marketing method but merely a natural development from the past, of which the stabilization measures were a transition phase.

#### THE CANADIAN WHEAT BOARD ACT, 1935.

**Genesis of the Canadian Wheat Board Act, 1935.**—A resolution indicating the intention of the Government to introduce a Wheat Board Bill was tabled in the Canadian House of Commons on Mar. 4, 1935. The Bill itself was introduced on June 10 and then referred to a Special Committee of the House, whose hearings began on June 18. The Bill referred to the Committee granted monopoly power to the Board to handle all wheat produced in Western Canada, but when it was reported back to the House in amended form on July 2 a voluntary Wheat Board was provided for, with certain more drastic and compulsory clauses that could be brought into effect upon proclamation of the Governor in Council. The Act was assented to on July 5, 1935.

**Scope of the Act.**—The Canadian Wheat Board Act, 1935, is a very complete piece of legislation and contains unusual powers. Apart from Sections 9, 10, 11, and 16 of the Act, the legislation provides for a voluntary marketing organization to purchase wheat from farmers at a fixed price and to issue participation certificates which entitle the producers delivering to the Board to receive a share of any profits realized by the Board. The farmer can exercise his own judgment as to whether he delivers to the Board or not. If at any time the open market price falls below the fixed price established by the Board, then it goes without saying that the Board will receive practically all the wheat offered by farmers. If, on the other hand, the market price is higher than the fixed price, then it is a matter of choice with the farmer as to where he shall sell his wheat.

The four sections mentioned (9, 10, 11, and 16) have not been proclaimed but it might be interesting here to note how drastically they would change the present set-up.

Under Section 9, the Board could control all grain elevators licensed under the Canada Grain Act. These elevators could be operated by the Board or by agents of the Board. Under Section 10, the Board could control the transportation of wheat to or from any elevator. Under Section 11, inspecting officers of the Board of Grain Commissioners shall refuse to issue a grade certificate for wheat stored in any elevator operating in contravention of the Canadian Wheat Board Act. Sections 9, 10, and 11, if brought into effect, would establish the Canadian Wheat Board as an absolute monopoly in dealing with the primary movement of wheat. The power for these clauses is derived from the fact of Dominion control over elevators and railways as works for the general advantage of Canada. Section 16 provides penalties for any person who commits a breach of Sections 9, 10, and 11.

**Marketing Policy as Defined by the Act.**—There are three paragraphs of the Canadian Wheat Board Act, 1935, that refer to marketing policy. These are as follows:—

Section 8, paragraph (b), states that it shall be the duty of the Board "to sell and dispose of from time to time all wheat which the Board may acquire, for such price as it may consider reasonable, with the object of promoting the sale and use of Canadian wheat in world markets"

Section 8, paragraph (c), states that it shall be the duty of the Board "to sell and dispose of stocks of wheat and contracts for the delivery of wheat acquired from Canadian Co-operative Wheat Producers, Limited, and the wheat represented by such contracts as may be reasonably possible, having regard to economic and other conditions"

Section 8, paragraph (j), states that it shall be the duty of the Board "to offer continuously wheat for sale in the markets of the world through the established channels: Provided that the Board may, if in its opinion any existing agencies are not operating satisfactorily, take such steps as it deems expedient to establish, utilize and employ its own or other marketing agencies or channels"

**Relation to Established Trade.**—Under Section 8, paragraph (i) of the Canadian Wheat Board Act, it is the duty of the Board "in selling and disposing of wheat as by this Act provided, to utilize and employ without discrimination such marketing agencies, including commission merchants, brokers, elevator men, exporters and other persons engaged in or operating facilities for the selling and handling of wheat, as the Board in its discretion may determine".

It is interesting to note that the Board must utilize existing marketing agencies, but if any such agencies are not operating satisfactorily the Board may use its own or other agencies to carry on its marketing activities. In general, the Board has used all the facilities of the organized trade in its operations. The Board has signed agreements with country and terminal elevators, mills, and other grain-handling organizations.

**Relation to Government.**—The Canadian Wheat Board is required to report to the Minister of Trade and Commerce for Canada on a weekly basis, showing its purchases and sales, wheat and contracts on hand, cost of same to the Board, and the general financial position of the Board. Under this clause the Government is assured of continuous information on the activities of the Board.

**Relation to Futures Market.**—It is also of interest to note Section 8, paragraph (k), which reads as follows:—

It shall be the duty of the Board, with the approval of the Governor-in-Council, to make such investigations as from time to time it may deem necessary of the operations of the Winnipeg Grain and Produce Clearing Association and the Winnipeg and Vancouver Grain Exchanges in their dealings in wheat and other grains where such wheat and other grains are the subject of transactions affecting interprovincial or international trade, and for the purpose aforesaid the Board shall have, without the issue of any commission, all the power and authority conferred upon a commissioner appointed under the Inquiries Act, being chapter ninety-nine of the Revised Statutes of Canada, 1927, and shall from time to time report to the Minister the result of such investigations.

This section would enable the Board to conduct investigations into the matter of futures trading. In practice, the Board makes full use of the facilities of the Winnipeg Grain Exchange for the disposal of its holdings. It is convenient and necessary for the Board to do so because the Exchange is almost invariably used by the trade in initiating and hedging sales or purchases of the actual cash wheat.

**The Handling of Other Grains.**—The Board may, with the approval of Governor in Council, apply the terms of the Canadian Wheat Board Act, 1935, to oats, barley, flax, and rye. So far the Board has not taken the initiative in applying the terms of the Act to the secondary crops in Canada.

**Financial Arrangements.**—The Act provides that the Board may borrow money on the security of wheat and that in its relation with the chartered banks the Minister of Finance may guarantee bank loans of the Board.

**Real Purpose of Legislation.**—There is no doubt that the intent of the Canadian Wheat Board Act, 1935, was to protect the Canadian producer against untimely developments in the international wheat situation. In actual fact the Canadian Wheat Board, through its power to fix a minimum price, through its power to receive Dominion financing, and through its power to transfer deficits to the Dominion Government, really acts as a buffer between chaotic conditions in the international wheat market and the farmers on the land in Western Canada.

Under this legislation the burden of international conditions as affecting wheat does not fall entirely upon the producer of wheat but is shared between the producer and the country at large.

#### THE BOARD IN 1935-36.

**Appointment of Board and Advisory Committee.**—The Canadian Wheat Board was appointed on Aug. 14, 1935, and comprised Mr. John I. McFarland as Chief Commissioner, Mr. D. L. Smith as Assistant Chief Commissioner, and Dr. H. C. Grant as Commissioner. An Advisory Committee was also appointed under Section 6 of the Act, with the following members: Robert McKee, of Vancouver, B.C.; Lew Hutchinson, of Duhamel, Alta.; L. C. Brouillette, of Regina, Sask.; Brooks Catton, of Hanley, Sask.; Sidney T. Smith, of Winnipeg, Man.; Paul F. Bredt, of Kemnay, Man.; C. H. G. Short, of Montreal, Que.

The first meetings of this Advisory Committee were held on Aug. 27, 28, and 29, 1935.

**Minimum Prices.**—The minimum price for No. 1 Northern wheat was announced on Sept. 6 at 87½ cents per bushel basis No. 1 Northern at Fort William-Port Arthur. Prior to the announcement, the market had closed at 85½ cents for No. 1 Northern but on the following day, Sept. 7, the market closed at 89 cents. The market price for No. 1 Northern remained above the minimum until Oct. 26 when it fell below for the first time. Apart from a couple of days in late November (the 23rd and 25th) when the market price was above the minimum, market prices were then slightly below the minimum for about eight months. In May, 1936, prices were at their lowest level of the crop year, No. 1 Northern closing at 73½ on the 26th. There was a recovery in June and on July 3, the market price of No. 1 Northern again went above 87½ cents and remained above for the remainder of the year, closing on July 31 at \$1.03½.

While the market price was above the fixed minimum price for nearly two months during the period of heavy deliveries, the Board was not at all certain how much of the farmers' wheat it would get. Its selling policy was consequently restricted. After the end of October when the market was below the fixed prices, practically all the farmers' wheat was delivered to the Board and the situation was much clearer.

On Sept. 17, the minimum prices for all the other grades, except "Feed", were fixed. The price of "Feed" was set on Sept. 23.

**The Basis of Minimum Prices.**—A digression is necessary here to consider some of the factors which might influence the level of the fixed minimum price. The Act itself gives no clue to the factors which should be considered, merely saying [Section 8 (a)] that it shall be the duty of the Board to fix a price to be paid to the producers for wheat delivered to the Board, subject to the approval of the Governor in Council. While the Wheat Board legislation is in effect, it guarantees a minimum price to farmers under an optional marketing plan. The setting of a minimum price is one of the most interesting phases of the Canadian wheat situation; it has many economic, and also social and political, implications. The Board must exercise careful judgment in carrying out this section of the Act, because once the fixed minimum price is established it cannot be changed until the end of the crop year. The Board must forecast conditions nearly twelve months in advance. If the price established is too low it has little significance to the farmer, and if the price is established too high it becomes a burden upon the Dominion treasury. The fixed price also has a close relation to farmers' wheat deliveries. While, theoretically, the farmer may sell his wheat wherever he wishes, self-interest will direct deliveries to the Board if the open market is below the fixed minimum price. If the open market is above the minimum price, the farmer will naturally weigh the advantages of selling at the open-market price or taking the fixed minimum price and speculating on the value which may eventually lie in the participation certificates.

There are several bases upon which the Board could fix the price:—

1. It could be a price considered possible of attainment through sales on the market.
2. It could be a price that would enable the farmer: (a) to 'get by', (b) to cover production costs, or (c) to make a profit.
3. It could be a price calculated to compensate roughly for the farmers' burden through protection of Canadian industries or one that would avoid large governmental expenditures for direct relief.

It is probable that no one of these bases is transcendent at the time of price-fixing and it is also probable that different considerations rule in different years, when the fundamental conditions change so drastically.

In looking back upon the 1935 price, it seems reasonable to suppose that the price was based upon the concept of fair market value—a reasonable interpretation of what was considered possible of attainment by sales during the crop year. It proved to be somewhat optimistic, as we shall see later, but was fairly close in such a complex situation. If the 1935 price carried any relationship to a price which would permit the western farmer to continue in business or to get his costs of production, such a relationship was incidental and unintentional.

It should be pointed out here that the fixed price is on a Fort William basis for the top grade. It is not the average price nor what the farmer obtains at the elevator. On a high quality crop, the average farmer centrally located probably receives about 20 cents less per bushel than the fixed price for No. 1 Northern, basis Fort William. On a poor quality crop, like the rust-devastated harvest of

1935, the same spread might be 25 or even 30 cents below the fixed price. The minimum prices established in 1935 and 1938 do not look so generous from this point of view. Farmers with low yields or low quality have not enough to live on.

**The Two-Price System.**—The fixed price under the Act is purely a domestic price, that is, the price that the Board is willing to pay producers for wheat. It should be noted that it is paid to producers only, that the Board is restricted to purchasing wheat from producers. Thus when wheat has been sold by a producer through other channels, there is no way in which it can be re-delivered to the Board.

There is no necessary relationship between the domestic fixed price and the price at which the Board sells to shippers or exporters. The Board has a free hand in matters of price but must follow the general selling policy set out in the Act. Naturally, the Board will be anxious to make as good a showing as possible and will obtain the highest possible competitive price for its sales. The primary responsibility of the Board, however, is to sell wheat, *i.e.*, to offer it continuously. If a deficit is incurred in such operations, it is by the Government.

**Early Operations of 1935-36.**—It has been described how the Board consisting of Messrs. McFarland, Smith, and Grant was appointed on Aug. 14, 1935. The market price of wheat remained above the fixed minimum price for six or seven weeks after the latter was set. Despite this, however, there were considerable deliveries to the Board. The Board had plenty of wheat to sell because, in addition to the incoming wheat, it had the cash wheat and futures of the Canadian Co-operative Wheat Producers, Ltd., which it was required to take over and dispose of under Sections 7 (*f*) and 8 (*c*) of the Act.

Although sales on the futures market were made in advance, the Board actually began its operations on Sept. 25, when it commenced to take delivery of wheat. There was naturally some uncertainty as to how much wheat would be directed to the Board as long as the market prices remained above the minimum prices. As soon as the market fell below, deliveries quickened and then all the marketings were directed to the Board's account. The Board finally received 150,700,000 bushels out of total country marketings in the crop year amounting to 216,300,000 bushels.

**Change in Personnel of Board.**—On Dec. 3, 1935, the personnel of the Board was changed, the new members being Mr. J. R. Murray, Chief Commissioner, Mr. George H. McIvor, Assistant Chief Commissioner and Dean A. M. Shaw, Commissioner. The services of the Advisory Board were dispensed with, it being considered that this body was unnecessary under a voluntary Wheat Board. The sales policy of the Board was adapted to conform with a statement of the Hon. W. D. Euler, M.P., Minister of Trade and Commerce, issued on Dec. 4. This statement read as follows:—

The concentration of surplus stocks of wheat in Canada during the past few years has created an abnormal situation in the world wheat trade.

Last June this situation was recognized by Parliament as not being in the interests of Canada or her wheat producers, and the Dominion Government desires to have our surplus restored to a normal basis. To accomplish this the Wheat Board will seek the good will and co-operation of the grain and milling trades in all importing countries.

It is not necessary to have and there will not be any 'fire sale' of Canadian wheat, but it will be for sale at competitive values and will not be held at exorbitant premiums over other wheats.

**Later Operations of 1935-36.**—The Board proceeded to obtain first-hand information on the overseas situation. Mr. Cecil Lamont was sent to the United Kingdom and the Continent in this regard and also to inform the overseas traders with respect to the Board's policy. In May, 1936, Mr. McIvor; Mr. H. Cockfield of the advertising firm of Cockfield, Brown and Company; and Dr. W. F. Geddes, Chemist of the Board of Grain Commissioners, were sent overseas with the main object of seeing what could be done to promote the use of Canadian wheat. As a result, Mr. R. V. Biddulph was appointed as European Commissioner of the Board in October. Mr. Biddulph's headquarters are in London, England, and he has since been working with the Board and with Canadian advertising agents in advertising Canadian wheat, particularly among the millers and bakers.

In addition, the Secretary of the Board, Mr. C. B. Davidson, made an analysis of the trade between wheat importing and exporting countries. These data and a report by Dr. Geddes were presented in evidence before the Royal Grain Inquiry Commission.

It was the policy of the Board to divide wheat sales during 1935-36 in such a way that the 1935-36 crop would be sold before the end of the crop year, if possible, and that any wheat or contracts carried over would be those of the old wheat taken over from the Canadian Co-operative Wheat Producers, Ltd.

At the end of July, 1936, the position of the Board was as follows:—

(a) The amount of the 1935 wheat crop on hand was 2,030,761 bushels.

(b) Of the holdings of the Canadian Co-operative Wheat Producers, Ltd., the remaining amount was 82,667,891 bushels.

The total holdings of the Board were thus reduced from 295,376,167 bushels at the end of November, 1935, to 84,698,652 bushels on July 31, 1936. While the world movement of wheat during the crop year was at a very low level, Canada was able to secure a large proportion of the small trade partly because of crop failures in Argentina and the United States. Toward the end of the crop year demand was also quickened as the 1936 crops of North America were ravaged by drought.

When the final accounting on the 1935 crop was made after the last sales in November, 1936, the loss on the Board's operations was fixed at \$11,858,104.18. Naturally then, the participation certificates distributed to the producers were valueless.

#### THE BOARD IN 1936-37.

It has been seen that the Board carried 84,698,652 bushels of wheat and contracts into the new crop year. With short crops in both Canada and the United States and an improved demand, prices rose fairly steadily throughout the crop year and, from the 1936-37 Report of the Board, it is seen that most of the old wheat holdings of the Canadian Co-operative Wheat Producers, Ltd., were disposed of at a net profit of \$9,628,881.31. At July 31, 1937, the remainder of this wheat amounted to 6,964,000 bushels of futures contracts which were being held against seed requirements for the 1938 crop. The latter procedure was necessary because of the particularly destructive drought in Saskatchewan in 1937.

In April, 1936, the 1930 Wheat Crop Equalization Payments Act was passed by the Dominion Parliament. This Act provided \$6,521,026.16 to allow the Provincial

Pools to equalize payments to their members at 60 cents per bushel, basis No. 1 Northern at Fort William, on wheat delivered to the 1930-31 Pool.

With regard to the handling of the 1936 wheat crop, it was announced by the Government on Aug. 28, 1936, that the price of 87½ cents a bushel for No. 1 Northern, at Fort William or Vancouver, fixed by the Board on July 29, 1936, but subject to the approval of the Governor in Council [Section 8 (a) of the Act], was approved but would only become effective if the closing market price for No. 1 Northern wheat in store Fort William fell below 90 cents per bushel. Prior to this announcement, that is, in the period from Aug. 1 to 28, producers delivered 617,655 bushels to the Board. Given the opportunity of taking the wheat back or settling at the open market, the producers took back 559,664 bushels while 57,991 bushels were settled for at the market price. In the latter process and for various incidentals, the Board incurred a loss of \$49,574.88.

During the crop year 1936-37, the closing market price for No. 1 Northern wheat did not fall below 90 cents and therefore the Wheat Board did not accept wheat of the 1936 crop. This was handled by the grain trade, and the Board was concerned mainly with the disposal of its remaining supplies and with continuation of the overseas promotional work on behalf of Canadian wheat. The disposal of the old wheat was not allowed to interfere with the marketing of the small 1936 crop. Most of the sales were made in the period November, 1936, to June, 1937.

In July, 1937, Mr. J. R. Murray resigned as Chief Commissioner and was succeeded by Mr. George H. McIvor. Mr. R. C. Findlay became Assistant Chief Commissioner and Dean A. M. Shaw continued as Commissioner.

The carryover of Canadian wheat was down to a mere 32,937,991 bushels by July 31, 1937, and with another poor crop in sight, the problems engendered by large unsold stocks of wheat were at least temporarily solved.

#### THE BOARD IN 1937-38.

As in the previous year, the Board fixed a price of 87½ cents per bushel for No. 1 Northern wheat at Fort William, but this was approved conditionally by the Governor in Council. The condition, as in 1936-37, was that the fixed price would not become effective unless the closing market price for No. 1 Northern fell below 90 cents on a Fort William basis. The price stayed above this level so that the Board did not receive deliveries of the 1937 crop.

The Board exchanged its futures contracts, amounting to 6,964,000 bushels, for cash wheat suitable for seed and in the spring of 1938 superintended the distribution of this seed to needy farmers whose 1937 crops had been spoiled by drought. The Board also undertook the purchase and sale of oats and barley for relief feed and seed purposes on behalf of several Provincial Governments.

The 1937 wheat crop was even smaller than that of 1936 and was, in fact, the lowest since 1914. It was handled through the ordinary channels of the grain trade. By the end of the crop year, the carryover of wheat in Canada was down to 23,411,171 bushels.

#### THE BOARD IN 1938-39.

There was a sharp change in the wheat situation evident during the first six months of 1938. Prices fell sharply from the peak of January, 1938, with particularly large declines in May and July. While Canada ended the crop year at July 31, 1938, with a very small carryover, other countries, and particularly the United States,

were not so fortunate. A large acreage and good yields brought surplus conditions back to that country in 1937-38. World demand for wheat continued at a very low level. New crop conditions in the Northern Hemisphere were promising, and the United States acreage was at a record level. After five successive years of poor crops, the crop of Western Canada of 1938 survived the threats of rust and drought damage to give a near-average return. At the beginning of the new crop year there was every indication that 1938-39 would be a year of abundant supplies, continued low demand, and low prices.

With many of these adverse factors already in evidence, the Royal Grain Inquiry Commission (Mr. Justice Turgeon) had reported to the Government on May 4 as follows:—

For all these reasons (and notwithstanding the adverse considerations to which I have referred in relation to government Boards) I do not feel that I can suggest the immediate dissolution of the Canadian Wheat Board. There is a strong possibility that conditions may develop which will require a measure of assistance in the marketing of the coming crop, and I do not know, of course, how long these conditions may continue after the final chapter of this report is written. In the meantime I can think of nothing better to suggest than that the Board be maintained to meet any situation which may arise.

Under the circumstances outlined above, the Government announced on Aug. 4 that the minimum price of 80 cents a bushel for No. 1 Northern wheat at Fort William, fixed by the Board, had been approved. The Wheat Board was again to be actively concerned with the marketing of the crop of Western Canada.

On Aug. 16, the fixed minimum prices for other grades, except Mixed Wheats, were announced. The prices of Mixed Wheats and certain odd grades were announced on Sept. 14.

On Aug. 31, it was announced that Mr. W. Charles Follitt had been appointed to replace Dean A. M. Shaw, who had retired, as the third member of the Board.

From the first, there was little doubt as to the extent to which farmers' deliveries would come to the Board. The market prices were below the fixed minimum prices and, naturally, the farmers patronized the Board. It seems fair to assume that practically all the 1938 wheat crop of the Prairie Provinces will be marketed through the Wheat Board. The only uncertainty in this regard arose during the political crisis of September, which was largely responsible for an increase of prices from the low of the October future of 56½ cents on Sept. 6 and 7 to the high of 69¼ cents at the market opening, Sept. 28. There was some belief at this time that the market would continue to rise, reach the level of the fixed price, and thus divert remaining marketable supplies to the open market. With the settlement of the Czecho-slovakian dispute by the Munich Agreement of Sept. 29, this possibility was dispelled. Most of the increased price arose from higher freight and insurance rates although at times there was spirited bidding for nearby supplies. When the immediate danger of war passed, prices gradually fell to the pre-crisis levels.

Early appraisals of the difficulties in the world wheat situation have been amply borne out. The world wheat crop, excluding Russia and China, is now estimated at 4,445,000,000 bushels. The European crop exceeded the previous record year, 1928. The total United States production is given as 930,801,000 bushels, added to a healthy carryover from the previous year. The Canadian crop at 350,010,000 bushels is the largest since 1932. There is a ray of hope in the Australian crop reduced from 188,018,000 bushels in 1937-38 to current forecasts of 135 to 145 million

bushels. Unfortunately this decrease is more than offset by the increase in Argentina from 184,799,000 bushels last year to the first official prediction of about 316,000,000 bushels for 1938-39.

The large crops and resultant exports from the Balkans, particularly Roumania, have been upsetting. These surpluses move mostly on a barter basis, often arranged for political rather than economic reasons. Being a cheap, low-quality wheat it has more effect on price levels than would be suggested by the quantities moved. The same can be said for Russian wheat which moved in quantity in the early part of the crop year. Working under a variable subsidy program, United States wheat has also been promoting uncertainty. Traders have had several painful experiences in buying ahead this year and with policies so subject to change, buying on a hand-to-mouth basis will probably rule during the crop season.

The world movement of wheat, so far this crop year, has been higher than in the same period of 1937-38 but still very low compared with the recent average and with exportable supplies. In 1938-39 Canada had supplies of about 271 million bushels for export or carryover, and authorities have been estimating exports at 125 to 160 million bushels. The movement to date has been well up to the latter figure which would leave a carryover of over 100 million bushels at July 31, 1939.

The method of wheat marketing in Canada at present is a combination of the various procedures that have been tried since the War. The Canadian Wheat Board pays a fixed minimum price for wheat and issues participation certificates to producers. The elevator companies handle the wheat for the Board and deliver it at terminal points under the terms of a handling agreement and periodic shipping instructions. The Pools do not operate as they did in 1924-30 but their elevators handle wheat for their patrons. The Board in effect operates on a pooling principle and, working under Government guarantees, pays a higher initial price than the Pools could safely undertake to pay. The shippers and exporters perform their usual functions, buying from the Board at terminals and shipping forward or overseas. The Winnipeg Grain Exchange is open and is used by the Board and the trade in transactions necessary to the purchase, sale, and movement of Canadian wheat. Doubtless there will be other changes in marketing as procedures are adapted to meet the changing wheat situation, so the foregoing is merely one chapter in a continued story. The record is merely brought up to February, 1939.

#### Subsection 2.—Movement of Canadian Wheat, Crop Year 1937-38.\*

A résumé of the movement begins with a description of the crop of the Western Inspection Division. The wheat crop of 1937 marketed in the Western Division during the crop year from Aug. 1, 1937, to July 31, 1938, amounted to 158.5 million bushels. A carryover of 25.2 million bushels from the previous crop year, and an import of 1.7 million bushels, brought the stock of the Western Division to a total for the year of 185.4 million bushels. As for distribution, 111.6 million bushels were commercially disposed of, the chief items of which were 20.2 million bushels exported to the United Kingdom and 73.5 million bushels shipped to the Eastern Division. The direct exports to the United States were 886 thousand bushels and to other countries 2.9 million bushels. The total shipments from the Western Division were thus 97.6 million bushels. The wheat used by the milling companies for the manufacture of flour amounted to about 13.9 million bushels of which 12.3 million bushels were ground into flour for domestic consumption. The all-rail movement eastward from the Western Division, including shipments to the

\* Revised in the Agricultural Branch, Dominion Bureau of Statistics.

Ogilvie Flour Mills Co. at Fort William for grindings, was 2,360.7 thousand bushels. Lake shipments from Fort William and Port Arthur were 83.6 million bushels, 71.0 million bushels going to Canadian ports and 12.5 million to United States ports. The principal Canadian lake ports were those of lake Huron and Georgian bay, with receipts of 18.4 million bushels, and Port Colborne with 15.0 million bushels. Among the United States lake ports, Buffalo was of chief importance in the handling of Canadian wheat, with receipts by water from Port Arthur and Fort William of 11.1 million bushels. The export of wheat through Vancouver was only 9.6 million bushels, as compared with 31.7 million in the previous crop year; 911 thousand bushels were exported through Prince Rupert, 467 thousand through New Westminster, and 604 thousand from Churchill. The seed requirements were estimated at 31.6 million bushels, feed for live stock and poultry at 10.4 million bushels, and the stocks at the end of the crop year were 16.2 million bushels.

The Eastern Division received during the crop year not only the eastern crop, estimated at 21.6 million bushels, but also shipments from the West aggregating 73.5 million bushels. The quantity on hand at the beginning of the crop year was 7.7 million bushels, making, with an importation of 4.5, a total stock entering the Eastern Division of 107.3 million bushels. The distribution included 7.3 million bushels carried over in store into the following year, 42.3 million bushels exported from the St. Lawrence ports, and 8.9 million bushels shipped through the winter ports of Saint John and Halifax, while 916 thousand bushels moved over the Border into the United States for consumption. In addition, 11.9 million bushels were cleared for export to the United Kingdom and other countries *via* the United States Atlantic ports. The chief ports concerned with the movement of Canadian grain from both Divisions were New York, Albany, Boston, and Portland.

Total exports from Canada to the United States for consumption amounted to 1.8 million bushels, to the United Kingdom 55.4 million bushels, to other countries 19.4 million bushels; 63.5 million bushels were shown to be shipped *via* Canadian ports and 11.3 million bushels *via* United States ports, after deducting 614 thousand bushels transhipped from Buffalo to Montreal and adding the same to the Canadian movement. Total exports during the crop year amounted to 76.7 million bushels.

Table 2 shows the apparent home consumption of wheat in relation to population from 1868 to 1937, inclusive, and indicates imports and exports in relation to production over the period.

Table 3 gives a summary of the distribution of Canadian grain for the crop year ended July, 1938.

Table 4 shows, for the licence years 1937 and 1938, the number of elevators and their total storage capacity, the figures being given by provinces for each class of elevator, with a summary showing the total of all elevators for each province. The growth of Canadian elevators in number and capacity has accompanied the expansion of grain acreage in the present century. Canadian elevators in 1901 numbered 426 with a capacity of 18,329,352 bushels; in 1911, 1,909 elevators and 105,462,700 bushels; and in 1921, 3,855 elevators and 231,213,620 bushels. There were in 1938, a total of 5,845 elevators with a capacity of 423,063,420 bushels.

Table 5 gives a summary of the inspections of grain, 1935-38. Detailed statistics may be found in the Reports on the Grain Trade of Canada,\* Tables 6 and 7 show the shipments of grain by vessel and rail for 1937 and 1938 and Tables 8 and 9 deal with the Canadian grain handled in recent years at Eastern elevators.

\* The latest report is for the crop year ended July 31, 1937, and may be obtained from the Dominion Statistician.

2.—Production, Imports, Exports, and Home Consumption of Wheat in Relation to Population in Canada, 1868-1937.

NOTE.—Figures set in italics are estimates.

<sup>1</sup> Years ended June 30, 1899 to 1905, and July 31, 1906 to 1938. <sup>2</sup> Wheat flour has been converted into bushels of wheat at the average rate of 44 bushels to the barrel of 196 lb. of flour. <sup>3</sup> In calculating the apparent home consumption, stocks of wheat on hand at July 31 have been included since 1921 and stocks of wheat flour since 1926. The consumption figures for these years are not, therefore, strictly comparable with the figures for the earlier years, for which data on carryover stocks are not available. <sup>4</sup> From records of the decennial census.

3.—Summary of the Distribution of Canadian Grain, crop year ended July 31, 1938—  
concluded.

Item.	Wheat.	Oats.	Barley.	Flax.	Rye.
	bu.	bu.	bu.	bu.	bu.
11. Totals accounted for (sums of 7, 8, 9, and 10).....	211,740,572	68,624,302	37,699,476	2,216,466	2,829,450
12. Losses in cleaning.....	3,100,000	217,000	253,000	27,000	7,900
13. Grain, not merchantable.....	1,658,300	9,147,000	1,118,300	4,900	50,700
14. Balances, merchantable grain fed on farms or otherwise consumed in, or moved out of, Canada through other channels.....	2,787,938	220,537,852	48,372,074	107,575	3,355,034
15. Totals (Sums of 11 to 14).....	219,286,810	298,526,154	87,442,850	2,355,941	6,243,084
16. Amounts inspected.....	119,102,429	25,233,980	26,056,612	358,100	1,445,781
17. Percentages inspected.....	65-29	9-40	31-35	51-33	25-05
18. Percentages of commercial grain inspected (line 16 of 11).....	55-88	36-77	69-12	15-27	51-10
19. Commercial grain from season's crop (10 and 7-1-3).....	120,274,662	6,015,898	24,472,826	524,525	1,245,266
20. Percentages of crop commercial grain (line 19 of 2).....	67-02	2-24	29-44	67-72	21-58
21. Values of crop..... \$	184,651,000	114,093,000	42,020,000	1,148,000	4,152,000

4.—Numbers and Storage Capacities of Canadian Grain Elevators, 1937 and 1938.

NOTE.—Detailed statistics of elevators for the years 1901 to 1918 are given in the 1921 Year Book, pp. 507-509, and the figures for later years will be found in successive Year Books.

<sup>1</sup> Exclusive of minor quantities of Canadian corn, buckwheat, mixed grain, and soya beans.

**Flour Milling in 1937.**—The flour- and feed-milling industry in Canada in 1937 showed a decrease of 32 mills of all classes from 1936, and capacity of flour mills was increased by 15 barrels of flour a day from the 1936 figure. Capital investment was \$56,280,032. The mills were distributed by provinces as shown in the statement appearing in the Manufactures Chapter at p. 391. Statistics of the employees, value of products, etc., for both flour and feed mills, for the latest year available, will be found in Table 9 of the chapter on Manufactures, pp. 377-442 of this volume.

### Section 3.—Marketing of Live Stock and Live-Stock Products.\*

The estimated value of farm animals sold for meat in Canada in 1937 was \$140,989,000. In addition, the 1937 wool production was worth \$2,972,000 and the farm value of poultry and eggs produced was \$51,766,000. Live stock makes a very important contribution to farmers' income and also provides the basis for a large slaughtering and meat-packing industry in Canada. Since the War the slaughtering and meat-packing industry has been one of the most important single manufacturing industries in Canada.

\* Revised by the Agricultural Branch, Dominion Bureau of Statistics. For more detailed information on this subject, see: Canada Year Book, 1922-23, pp. 594-595; Live Stock and Animal Products Statistics, published annually by the Dominion Bureau of Statistics; and the Annual Market Review, published annually by the Live Stock Branch of the Dominion Department of Agriculture. Statistics of live stock and poultry are given at pp. 215 to 218 of this volume.

#### 10.—Animals in Canada, Animals Killed or Sold by Farmers, and Wool Produced, census years 1871-1931.

<sup>1</sup> Figures for 1871-91 do not include work oxen.

<sup>2</sup> Census taken as of June 1, while previous censuses

were taken in April, so that the proportion of young animals is greater than for years previous to 1911.

<sup>3</sup> Animals slaughtered on farms were not included. The following figures are comparable with data given for other years, the amounts being partly estimated: cattle, 1,915,059; sheep, 1,097,015; swine, 4,252,624.

In Table 11 indexes are given showing the numbers of animals on farms for the years 1921 to 1938, expressed as percentages of the average numbers on farms during the period 1921 to 1925.

#### 11.—Index Numbers of Animals on Farms in Canada, calendar years 1921-38.

(Average number for 1921-25=100.)

Year.	Horses.	Milk Cows.	Other Cattle.	Sheep.	Swine.

**Live-Stock Marketings, 1937.**—The numbers of cattle and calves sold at stockyards showed increases in 1937 as compared with 1936, while hogs, and sheep and lambs showed decreases. Cattle sold numbered 999,332 in 1937 and 885,477 in 1936, calves 544,428 and 450,955, hogs 1,037,788 and 1,044,207, and sheep and lambs 395,957 and 401,862, respectively.

Table 12 shows the receipts for sale at the various stockyards and a partial disposition of the live stock sold in 1936 and 1937.

The interprovincial and export movement of live stock in 1937 showed increases in all classes. Total shipments in 1937 with comparative figures for 1936 in parentheses were as follows: cattle 878,867 (756,512); calves 358,917 (255,991); swine 911,097 (900,185); and sheep 315,553 (262,013).

The marketings of live stock through stockyards, by direct shipment to packers, or by export according to provinces of origin for the calendar year 1937 are given in Table 13. In Table 14 are given the statistics of the grading of animals from several provinces marketed through the stockyards in 1937 and, in the case of hogs, those marketed direct to packers, since a majority of these animals are handled in this way. Of recent years the practice is developing of grading an increasing proportion of hogs by the carcass after being dressed at the packing plant. Hogs graded by each method are shown separately in Table 14.

**Slaughtering and Meat Packing.**—This industry has become one of the most important branches of manufacturing in Canada. Its growth, shown by the statistics of Table 15, has been accompanied by a concentration of the major part of the production of the industry into a comparatively small number of large establishments, thereby facilitating the utilization of by-products and greater efficiency of operation. There has been a large increase in the number of establishments since 1931, due to the inclusion of wholesale butchers operating small plants engaged in slaughtering only. The inclusion of these small establishments did not affect materially the value of production of the industry. The numbers of live stock slaughtered at Canadian inspected establishments in 1936 and 1937 are shown in Table 16.

**Consumption of Animal Products.**—The figures of Table 17 give an indication of the standard of the diet of the people of Canada. Animal products such as meat, butter, and eggs are generally more pronounced in the diet of people with a high standard of living. In Canada there is a relatively high per capita consumption of beef, pork, butter, and eggs but a relatively low per capita consumption of mutton and lamb, and cheese. During the depression years, the per capita consumption of these products was not affected as much as might have been expected. Changes in the per capita consumption of various animal products occur as a result of changes in price relationships. These, in turn, are related to cycles of over- and under-production particularly marked in the case of the meat products of hogs and cattle. Beef and pork, particularly, interchange in leadership as regards the amount consumed, according to the price relationships between them. In 1937, 58·89 pounds of beef were consumed per capita as compared with 62·35 pounds of pork. In 1934, pork consumption was 66·12 pounds per capita and beef consumption 67·87 pounds per capita.

<sup>1</sup> For estimates of population upon which per capita figures are calculated, see p. 113. <sup>2</sup> Subject to revision. <sup>3</sup> The basis of compilation for 1938 has been changed and statistics are not comparable with preceding years. The figures will be revised back on the new basis in the 1940 Year Book. <sup>4</sup> Includes carloads in transit. <sup>5</sup> Revised since the publication of the 1938 Year Book. <sup>6</sup> Fowl, turkeys, ducks, and geese.

**Export and Import Trade in Live Stock and Live-Stock Products.**—The exports of live stock and live-stock products from the Dominion to the United Kingdom, the United States, and all countries, are shown for the four fiscal years ended Mar. 31, 1935-38, in Table 12 of the chapter on External Trade, at pp. 514-516, and imports in Table 13 at pp. 528-530. Exports and imports by calendar years 1932-37, may be found at pp. 71, 73, and 74 of the report on "Live Stock and Animal Products Statistics, 1937". At pp. 57-83 of the report on "Trade of Canada (Imports for Consumption and Exports), Calendar Year 1938" figures are given of exports of animals and animal products for 1937 and 1938 and imports of this class for the same calendar years will be found at pp. 224-248 of the same report.

### Section 4.—Cold Storage.

**Cold Storage Warehouses.**—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6), now consolidated as c. 25, R.S.C., 1927, subsidies have been granted by the Dominion Government to the construction and equipment of cold storage warehouses open to the public, the Act and regulations made thereunder being administered by the Department of Agriculture. Table 18 shows for 1938 the number of cold storage warehouses in Canada, with the refrigerated space. Creameries with mechanical refrigeration are not included in the figures.

#### 18.—Cold Storage Warehouses in Canada, by Provinces, 1938.

*Note.*—The figures in this table were supplied by J. F. Singleton, Associate Director of Marketing Services, Dairy Products and Cold Storage, Dominion Department of Agriculture.

**Cold Storage Stocks.**—Statistics of the stocks of food in the cold storage warehouses of Canada are collected and published monthly by the Agricultural Branch of the Dominion Bureau of Statistics. A summary of cold storage reports is published annually as a separate statement and the same data are included in the report on "Live Stock and Animal Products Statistics", published annually. In Table 19 are included statistics, by months for 1937 and 1938, of the stocks of food in cold storage and in process of cure for various important commodities.

**19.—Stocks of Food Commodities on Hand in Cold Storages and Dairy Factories, by Months, 1937 and 1938.**

**NOTE.**—Figures in this table are of stocks on hand at the first of each month as published by the Agricultural Branch, Dominion Bureau of Statistics.

## Section 5.—Bounties.\*

In cases where it is considered advisable for the government to encourage the production of a particular commodity, bounties paid by the government are recognized substitutes for protective duties. In the past they have been made use of by Canada to a considerable degree, but the only bounties which involved payments in the past few years were those on copper bars and rods, hemp, and bituminous coal mined in Canada and used in the manufacture of iron or steel. A statement of the bounties paid under the Copper Bounty Act, which expired on June 30, 1931, and the Hemp Bounty Act, which expired on Dec. 31, 1932, was given on p. 662 of the 1934-35 Year Book. The bounty on bituminous coal was the outcome of a recommendation of the Royal Commission on Maritime Claims relating to the use of Canadian coal in the manufacture of iron and steel and the payments have been as follows:—

Paid in the fiscal year—

1930-31.....	273,148 net tons at 49½c.....	\$ 135,209.23
1931-32.....	126,356 net tons at 49½c.....	62,546.18
1932-33.....	118,783 net tons at 49½c.....	58,797.54
1933-34.....	213,841 net tons at 49½c.....	105,851.25
1934-35.....	336,849 net tons at 49½c.....	166,740.02
1935-36.....	390,168 net tons at 49½c.....	193,133.12
1936-37.....	564,605 net tons at 49½c.....	279,523.96
1937-38.....	583,817 net tons at 49½c.....	288,989.41
1938-39 to Sept. 30th, 1938.....	180,385 net tons at 49½c.....	89,290.56
Totals.....	2,788,042	\$1,380,081.27

Bounties have been paid at various times in the past on iron and steel, on lead, on crude petroleum, on manila fibre, on zinc, and on linen yarns, but the bounties on iron and steel ceased in 1911, on lead in 1918, on zinc in 1921, on linen yarns in 1923, and on crude petroleum in 1927. The total amounts paid in bounties on these commodities between 1896 and the date of expiration were: iron and steel, and manufactures of (1896-1912), \$16,785,827; lead (1899-1918), \$1,979,216 for 1,187,169,878 lb.; zinc (1919-21), \$400,000; linen yarns (1921-23), \$17,523; manila fibre (1903-13), \$367,962; crude petroleum (1905-27), \$3,457,173 on 233,135,217 gallons. (For quantities of crude petroleum and bounties paid in each year, see table on p. 635 of the 1927-28 Year Book.) Total payments for expired bounties between 1896 and 1932, including the \$611,763 paid on copper bars and rods and the \$26,847 for hemp, aggregated \$23,646,311, which, with the \$1,122,384 paid for coal, makes a total of \$24,768,694 to Oct. 31, 1937. The Year Book of 1915, pp. 459-461, gave a description of the bounties that had been payable since 1883, as well as tables showing, for each commodity, the quantities on which bounties were annually paid and the amounts of such bounties for the years 1896 to 1915, inclusive. For details of the bounties on zinc, see p. 635 of the 1927-28 Year Book.

## Section 6.—Patents, Copyrights, and Trade Marks.†

Patents.—Letters patent, which in England have been in the gift of the Crown from the time of the Statute of Monopolies (1624) and earlier, are a statutory grant in Canada and have always been so. The earliest Act was one of Lower Canada, passed in 1824, wherein provision was made for the granting of patent rights to inventors who were British subjects and inhabitants of the province. Upper Canada passed its Act in 1826, and Nova Scotia and New Brunswick passed theirs at later

\* Revised by L. T. Lett, Department of Trade and Commerce.

† Revised by J. T. Mitchell, Commissioner of Patents, Ottawa.

dates. In 1849, after the Union, a consolidating Act was passed applying to both Upper and Lower Canada, and the B.N.A. Act assigned the granting of patents exclusively to the Parliament of Canada. The Dominion Patent Act of 1869 repealed the provincial Acts and has formed the basis of all succeeding legislation.

Letters patent are now issued subject to the provisions of c. 150, R.S.C., 1927 (as amended by c. 4, 1928, c. 34, 1930, c. 21, 1932, and c. 32, 1935), and application for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa, Canada.

The growth of Canadian inventions\* is shown by the fact that the number of applications and total fees increased each year without a break from the beginning of the present century until the fiscal year ended Mar. 31, 1913, when 8,681 applications were received and the total fees amounted to \$218,125. In the fiscal year ended Mar. 31, 1938, there were 10,950 applications, with fees amounting to \$367,127, as shown in Table 21. Of the patents for 1938, 5,354 or 70 p.c. were issued to United States inventors, 647 to Canadians and 668 to residents of Great Britain and Ireland, while Germany with 432, France with 152, Holland with 121, and Sweden with 62 followed in the number of inventors to whom patents were issued. Applications for patents were distributed over the whole field of invention, but progress was specially noteworthy in the chemical and electrical arts. In the chemical field the development of new artificial resins continued with polyvinyl acetal resins receiving particular attention. The treatment of hydrocarbon oils for the production of motor fuels, aromatics and unsaturated hydrocarbons was very active. The production of artificial hormones as well as improvements in the processes of extracting them from natural substances increased and much attention has been given to the production of concentrates of vitamins and protamine insulin. There were advances in the development of plastic materials and coating compositions from synthetic resins and cellulosic materials.

In the electrical art, television continues to be given the greatest amount of attention. In cathode ray tubes the most noteworthy inventions have been the development of electron multipliers for larger amplification, for greater amounts of power, and for the intensification of optical images.

\*'Invention' means any new and useful art, process, machine, manufacture, or composition of matter or any new and useful improvement in any art, process, machine, manufacture, or composition of matter.

**Copyrights and Trade Marks.**—Registration of copyright is governed by c. 32, R.S.C., 1927, and applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa, Canada.

The Copyright Act of 1921 (amended in 1923 and consolidated in c. 32, R.S.C., 1927) sets out in Sec. 4 the qualifications for a copyright, and in Sec. 5 its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the (Berne) Convention and the additional Protocol . . . or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union, and the United States of America, as well as in Canada.

The Trade Mark and Design Act (c. 201, R.S.C., 1927) was amended by c. 10 of the Statutes of 1928 bringing the Act into agreement with the terms of the Convention for the Protection of Industrial Property, as amended at The Hague in 1925 with regard to refusal to register certain trade marks. The renewal of expired trade-mark registration was also provided for, and it was enacted that in certain cases interested parties might apply to the Exchequer Court of Canada for the cancellation of a trade mark at any time within three years from its registration. The Unfair Competition Act, 1932 (22-23 Geo. V, c. 38), repealed all parts of the above Act relating to trade marks and all trade marks are now registered under and protected by the new Act.

**Section 7.—Weights and Measures.\***

The object of weights and measures administration is to maintain uniformity and accuracy in the use of the legal standards of the country in industry and commerce.

Prior to Confederation, the administration of weights and measures was in the hands of each Provincial Government but passed to the Dominion Government in 1867, under Sec. 91 of the British North America Act. Steps were then taken to simplify the standards in use and to establish uniformity throughout the Dominion.

What might be termed the principal Weights and Measures Act of Canada was passed in the session of 1872-73; its provisions closely followed English weights and measures law, but the system of weights and measures was greatly simplified. This Act established as the primary legal standards for Canada the imperial pound, gallon, and yard, but in place of the system of stones, quarters, hundredweights (112 lb.), and the long ton (2,240 lb.) it provided a decimal series of weights, 1, 2, 3, 5, 10, 20, 30, 50, 100 lb., and the short ton of 2,000 lb. The only exception to this was the continued use of the old French land measure, the arpent, in Quebec. The troy ounce of 480 grains and its decimal sub-multiples are the legal weights for the weighing of gold and precious metals. The metric system is legal for all transactions.

Many changes, deletions, and additions have been made to the Act of 1873 by later legislation, but its principles remain unchanged. The latest legislation is the Weights and Measures Act (c. 212, R.S.C., 1927), as amended by c. 48, 1935.

The Weights and Measures Service was first administered by the Department of Inland Revenue, and offices were opened in all the principal centres of Canada and equipped with standards and inspection equipment. In 1918 the Service was transferred to the Department of Trade and Commerce. For purposes of administration, the Dominion is divided into 19 districts, each in charge of a district inspector. The chief rules of administration are as follows:—

(a) Every new type of weighing and measuring device must be submitted to the Department at Ottawa for approval before being placed on the market.

(b) Every new machine must be inspected and stamped by an inspector before being sold or taken into use.

(c) Imported machines are held by the customs until release is approved by the nearest inspector.

(d) All inspections take place on the traders' premises, except where devices are brought to the inspection offices.

\* Revised by E. O. Way, Director of Weights and Measures, Department of Trade and Commerce.

The following table, giving a summary of the articles and machines inspected in the fiscal years ended Mar. 31, 1937 and 1938, shows an increase of 53,448 articles and devices inspected over 1936-37, including an increase of 12,384 in weighing machines. The total revenues collected by the Service in the fiscal years ended 1937 and 1938 amounted to \$399,626 and \$395,465, respectively, while the expenses, including salaries, totalled \$345,199 and \$385,207, respectively.

### Section 8.—Electricity and Gas Inspection.\*

The Electricity and Gas Inspection Branch of the Department of Trade and Commerce administers three Acts: the Electricity Inspection Act (c. 22, 1928), the Gas Inspection Act (c. 82, R.S.C., 1927), and the Electricity and Fluid Exportation Act (c. 54, R.S.C., 1927).

The latest report of the Branch shows 518,385 electricity and gas meters tested in the fiscal year ended Mar. 31, 1938, as compared with 518,415 in the preceding year. The total revenue derived from electricity and gas inspection was \$348,461 as compared with an expenditure of \$235,754. The Branch also collected \$431,419 as export duty and licence fees under the provisions of the Electricity and Fluid Exportation Act; the cost of collecting this revenue was only \$376.

Other related statistics collected in the administration of the last-named Act will be found on p. 366, in the Water Power chapter of the Year Book. Here, however, are given statistics, also collected by the Branch in the process of administration, showing a phenomenal increase in the number of consumers of electricity in the past 24 years from 505,597 to 1,905,692 (Table 25); a lesser increase in the gas meters in use from 267,454 in 1916 to 685,888 in 1938 (Table 26); and the number of cubic feet of gas sold in Canada from 1920 to 1938 classified as carburetted water gas, coal gas, coke oven gas, natural gas, acetylene gas, and butane (Table 27).

\* Revised by J. L. Stiver, Director, Electricity and Gas Inspection Service, Department of Trade and Commerce.

## Section 9.—Merchandising and Service Establishments.\*

A comprehensive census of business carried on by trading and service establishments was undertaken for the first time in 1931 in connection with the Seventh Decennial Census. A partial survey of trading establishments had been made in 1924, but the results of this initial survey, while indicative of the extent of domestic trade, suffered from the incompleteness of the canvass made. The Census of Merchandising and Service Establishments, 1931, covered not only the operations of retail and wholesale merchandising establishments in 1930 but also those of service establishments, including hotels. In addition, information was collected to show the initial channels (manufacturers' wholesale branches, other wholesalers, retailers, industrial consumers, export sales, etc.) through which goods manufactured in Canada are distributed and the proportion of the total value of production sold through each channel. The results of the census have been published in several series of reports and in Volumes X and XI of the Census of 1931.

**Annual Statistics.**—An outgrowth of the Census of Merchandising and Service Establishments, 1931, has been an annual survey of wholesale and retail trade based on reports from larger concerns in the respective fields. In the case of wholesale trade, the annual survey is confined to wholesalers proper and reports are secured from firms which had a volume of sales of \$100,000 or more in 1930 together with firms of a similar size which have commenced business since 1930. The survey of retail trade is based on the reports of all chain stores and of independent stores with a turnover of \$20,000 or more in 1930. Reports are also secured from newly-established independent stores. While the annual figures for merchandising are not based on such a comprehensive survey as that made in connection with the decennial census, they provide the most reliable indicators available of recent trends in merchandise trade as they cover more than two-thirds of the dollar volume of business.

**Monthly Statistics.**—Monthly indexes of retail sales, based on returns from department stores, chain stores, and a representative sample of independent firms, are now available for the period commencing January, 1929. A description of these indexes appears in Subsection 2 of this chapter. Monthly indexes of wholesale trade are also available, although for the shorter period beginning January, 1936. This series is shown in Table 30.

### Subsection 1.—Wholesale and Other Bulk or Non-Retail Merchandising.

Under this heading there appeared at pp. 670-672 of the 1934-35 Year Book a summary of trade in the wholesale field, as derived from the Census of Merchandising and Service Establishments, and tables showing, for 1930, bulk merchandising statistics (1) by provinces, and (2) by type of distributor. The interested reader is referred to that material, which is the latest available on that basis.

**Wholesale Trade in Canadian Cities, 1930.**—Figures for all wholesale establishments and for wholesalers proper in cities of over 20,000 population are shown for 1930 in Table 28. Included in the figures for all wholesale establishments

\* Prepared by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. For a list of publications of this Branch, see Chapter XXIX, Section 1, under "Internal Trade".

are data for agents, brokers, manufacturers' sales branches, and other specialized wholesale agencies. Wholesalers proper embrace only regular wholesale houses, such as wholesale merchants, importers, and exporters. The importance of such cities as Montreal, Toronto, Winnipeg, and Vancouver as wholesale centres is clearly shown by the figures.

**Annual Wholesale Statistics.**—In constructing an annual index of wholesale sales, the chief objective has been to obtain the most representative measure of wholesale trade and particularly of the pre-retail business. This annual index is confined to wholesalers proper, who are for the most part wholesale merchants, importers, exporters, and supply and machinery distributors. From this group are excluded such distributors as agents and brokers, manufacturers' sales branches and other types of specialized distributors. However, in order to attain the above-mentioned objective of a representative measure of wholesale trade, it was later found to be necessary to make certain alterations in the classifications used in presenting the results of the Census of Merchandising and Service Establishments, 1931. These alterations were referred to at p. 612 of the 1937 Year Book.

Total sales and indexes are shown in Table 29, by provinces and kinds of business; the 1930 figures are those of the census, while those for the other years are estimates based on the results of fairly extensive annual surveys. Wholesale trade during 1937 totalled \$1,352,212,000, up 14.4 p.c. from 1936 and only 1.3 p.c. below the \$1,370,066,000 recorded for 1930. Sales in Prince Edward Island and Saskatchewan were practically unchanged in 1937 from the preceding year while all other provinces reported increases ranging from 9.2 p.c. for Alberta to 18.3 p.c. for Quebec. The largest increases in sales in 1937, as in the immediately preceding years, were reported by firms dealing in industrial or building equipment and which had suffered the most severe losses in trade between 1930 and 1933.

29.—Total Sales and Indexes of Sales made by Wholesalers Proper, by Provinces and Kinds of Business, 1930, 1933, 1936, and 1937.

**Monthly Indexes of Wholesale Sales.**—Commencing with January, 1935, the Dominion Bureau of Statistics has published monthly indexes of wholesale sales based on returns submitted by approximately 200 wholesale firms comprising a representative sample of nine different lines of business. The base on which these indexes were first computed was that of average monthly sales in 1935 equalling 100; the results of the annual surveys of wholesale trade were then utilized in reducing the monthly indexes to the 1930 base in order that they should conform with other series. Since the monthly indexes are based upon a smaller coverage of sales than that secured for the annual census, these results cannot be expected to have the accuracy of the more exhaustive survey. The monthly indexes do, however, give a fair indication of current trends in wholesale trade.

Dollar volume of wholesale sales averaged 3.5 p.c. lower in 1938 than in 1937 for the nine lines of business included in the monthly indexes. Wholesalers in the dry goods, clothing, and footwear trades suffered the greatest losses, sales for these groups ranging from 10 to 13 p.c. lower in 1938 than in the preceding year. Wholesale grocery sales were off by 2.9 p.c. and hardware was down by 5.6 p.c. Dealers in automotive equipment and tobacco and confectionery reported increases over 1937 while other groups showed but minor changes.

Figures on a regional basis show that the Prairie Provinces made the best showing relative to 1937 with a decline of only 1.2 p.c. The decrease for Quebec province was greatest at 6.3 p.c.

**Subsection 2.—Retail Trade and Service Establishments.\***

As complete a review of the retail merchandising and service statistics as will appear in the Year Book from the Census of Merchandising and Service Establishments, 1931, was given at pp. 673-690, inclusive, of the 1934-35 Year Book. This review gave detailed analyses of such trade, annual net sales, and employees engaged, by provinces, business groups and kinds of business, and by manner of operation (*i.e.*, independents, two-store multiples, three-store multiples, voluntary and other types of chains, etc.). Since these statistics will stand until the next census is taken, it has been considered unnecessary to reprint them in this edition of the Year Book. In this edition, therefore, the only table reprinted, and this merely in part, is that showing the retail trade in Canadian cities, which appears now as Table 31. There is, however, additional new matter presented dealing with: (1) total sales and indexes of sales, by provinces and kinds of business, 1930 and 1933-37 (figures for 1930 being from the census and those for other years estimates based upon returns secured from the annual surveys); (2) the growth of the chain store; (3) the monthly index of retail sales and in which corrections have been made to allow for variations in number of business days and for seasonal changes; (4) detailed statistics showing the importance of the motion picture industry; and (5) statistics of sales of new and used motor vehicles.

\* A review of retail trade for the period 1923-30 was given at pp. 637-639 of the 1930 Year Book. This was summarized from a special study report "A Decade of Retail Trade" published in bulletin form in 1935 by the Internal Trade Branch of the Dominion Bureau of Statistics.

**Retail Merchandise Trade in Canadian Cities.**—The retail merchandise trade in Canadian cities of over 20,000 population during 1930, according to the Census of 1931, is shown in Table 31.\* The cities are arranged in descending order according to their 1931 census populations. A notable feature of these figures is the wide variation in different cities in the relationship between population and retail sales. In general, per capita sales are high for cities which form distributing centres for large or populous areas, while such sales are lowest in residential or industrial cities adjacent to larger centres, as in the case of Verdun, Outremont, Westmount, and Hull.

\* A similar table showing retail merchandise trade in cities of over 10,000 population is given at pp. 684-685 of the 1934-35 Year Book.

**Annual Retail Statistics.**—As in the case of wholesale merchandising, annual statistics of retail sales are based on the complete census covering 1930, supplemented by an annual survey of all the more important retail establishments, such establishments having accounted for over two-thirds of the total value of sales in 1930. In Table 32, therefore, the figures for 1930 are the results of the comprehensive census, while the figures for later years are estimates calculated from the annual surveys.

It is impossible to measure accurately the effect of the general decline in prices as a factor in the decrease in the total sales from 1930 to 1933. It probably was the principal factor in the food and apparel groups. On the other hand, the prices of more

\* Revised since the publication of the 1938 Year Book.

durable goods have not declined so much as food prices, so that the greater reduction in sales of groups handling durable goods is, no doubt, due much more to reduced volume.

The improvement in retail trade, evident in Canada since the spring months of 1933, was continued in 1937 when the value of sales was 11.1 p.c. greater than in the preceding year and 37 p.c. greater than in 1933. The index of retail sales for 1937 on the base 1930 equals 100 stands at 89.0. Sales in Saskatchewan were 2.1 p.c. lower in 1937 than in 1936. All other provinces reported increases; these ranged from 3.5 p.c. in Prince Edward Island to 14.5 p.c. in New Brunswick.

**Chain Stores.**—During the past decade the chain store has come to occupy an important place in the field of distribution. The Dominion Bureau of Statistics classifies as chains all retail organizations operating four or more branches, excepting departmental concerns. The number of chains reported in any year thus depends not only on the rise or disappearance of firms but also on the number of units operated. As a minimum of four stores is required before a firm is classified as a chain, the

Trade, by Provinces and Kinds of Business, 1930, 1933-37—concluded.

reduction in branches below this number automatically removes a firm from the chain store group. In an effort to obtain some comparative information for chain stores, a careful check was made of census and other records for the year 1923. The data secured do not provide complete figures for chain stores in the early year, but the figures in Table 33 give some indication of the growth in chain stores between 1923 and 1930 for the trades in which chains hold important positions.

<sup>1</sup> Incomplete figures, see text on pp. 612-613.

The sales of chain stores formed 17.7 p.c. of the total retail merchandise trade in 1930 and 16.9 p.c. in 1937. Grocery and combination store chains had 29.5 p.c. of the total sales for these businesses in 1930 and 33.5 p.c. in 1937. The proportion of chain sales to total sales in some other important lines of trade for the year 1937 were: shoe stores, 33.4 p.c.; drug stores, 20.6 p.c.; and furniture stores 15.0 p.c. Summary figures for all chain stores in Canada are given in Table 34.

**Retail Sales of New Motor Vehicles in Canada.\***—Statistics on new motor vehicle sales in Canada are collected monthly from Canadian manufacturers and assemblers, and from manufacturers in the United States of vehicles made for sale in this country. Number of units sold and retail value of sales are both reported. The retail value is the price paid by an individual purchaser at the Canadian point of manufacture and includes sales and excise taxes, charges for standard accessories, dealers' commissions, etc. Freight charges from factory to place of purchase are excluded. Duty is included in the retail value of sales of imported cars.

\* For statistics of numbers of motor vehicles registered in Canada and apparent consumption of motor vehicles, see pp. 663-664.

The automotive trade is much more sensitive than most branches of retail business to fluctuations in consumer purchasing power. Sales of new motor vehicles in 1938 were down 15.9 p.c. in number and 9.3 p.c. in value from the preceding year but were still 7.1 p.c. in number and 15.1 p.c. in value above the figures for 1936. Declines below 1937 were about the same for passenger and commercial vehicles, percentage changes in point of view of number of units sold being 16.0 p.c. for the former and 15.7 p.c. for the latter series.

### 35.—Retail Sales of New Motor Vehicles in Canada, calendar years 1932-38, with Total Value for 1930.

NOTE.—The first year for which details are available is 1932. The total value for 1930 was secured in connection with the Census of Merchandising and Service Establishments.

**Retail Sales of Used Motor Vehicles in Canada.\***—That the sale of a new motor vehicle in Canada means the sale by distributors of two used models is the opinion generally recognized in the automotive trade. The accuracy of this ratio is confirmed by the results of a special survey of the retail automotive trade for 1937 for which reports were secured direct from 3,426 retail distributors of motor vehicles in the country. Dealers and distributors reported a total of 413,043 motor vehicles sold for \$245,277,623 in 1937 of which 141,881 were new models which sold for \$157,671,890 or an average of \$1,111 each and 271,162 were used vehicles which retailed for \$87,605,733 or an average of \$323 each. The total number of vehicles sold is thus divided in the proportions 34.4 p.c. new and 65.6 p.c. used or, on the average, there were 1.91 used vehicles sold for every new model.

\* See footnote to p. 614.

The ratio of used to new vehicles sold varies considerably for different regions of the country, usually being higher in those sections in which the concentration of motor vehicles in proportion to population is greatest and lower in those sections in which there are fewer used vehicles available to be traded in as part payment for new models. The ratio of used to new models sold ranged from 1.53 in Quebec province where the population per motor vehicle registration is highest to 2.16 in Ontario where the population per motor vehicle registration is lowest.

<sup>1</sup> Returns from individual dealers for the special survey showed 141,881 new motor vehicles sold for \$157,671,899 in 1937 whereas retail deliveries for the same year as reported by the manufacturers and shown in Table 34 are 144,441 units sold for \$149,170,527. The greater number reported by the manufacturers is to some extent an indication of the incompleteness of coverage of the dealers' reports. It is partially due to the fact that while the manufacturers' reports covered the calendar year some of the dealers' returns covered a fiscal period ended in the spring of 1938 when sales were below the level of the corresponding period in 1937. Value figures reported by dealers were based on total selling price including freight charges whereas freight charges were omitted from the manufacturers' reports. This accounts for the difference in the value figures in the two series.

**Financing of Motor Vehicle Sales in Canada.\***—Financing corporations play an important part in the retail distribution of both new and used motor vehicles in Canada. They extend credit facilities to customers who could not enter the market if required to pay with cash and to others who, though in a position to pay cash, find it more convenient to budget their expenditures on the instalment basis. They also provide a service to the motor dealers by assuming the risks and inconveniences connected with instalment sales, thus permitting the dealers to operate on a smaller capital outlay than would otherwise be necessary.

Statistics on financing are compiled monthly from returns secured from all large finance companies in Canada which are engaged in purchasing accounts, con-

\* See footnote to p. 614.

tracts, or notes arising out of retail sales of motor vehicles. Aggregates of the monthly data show that sales of 162,703 motor vehicles (including both new and used models) were financed to the extent of \$69,685,853 in 1938. These figures reveal decreases of 8.5 p.c. in number and 8.1 p.c. in amount from the 177,898 vehicles which were financed for \$75,850,173 in 1937. New vehicles numbering 45,267 were financed for \$33,701,624 or an average of \$745 each. There were also 117,436 used vehicles whose sales were financed to the extent of \$35,984,229 or for \$306 each.

A comparison of sales and financing of new motor vehicles is shown in Table 37; 37.4 p.c. of all new motor vehicle sales in Canada in 1938 passed through the hands of financing corporations. The corresponding amount of financing amounted to 25.0 p.c. of the total selling value of all new models. Total sales of used vehicles are known only for 1937. In that year 44.9 p.c. of all used vehicle purchases were financed by these finance corporations.

<sup>1</sup> Subject to revision.

**Monthly Indexes of Retail Sales.**—In recent years the Dominion Bureau of Statistics has published monthly indexes of the dollar value of retail sales based upon reports received from department stores, from chain organizations, and from a number of independent firms operating in twelve lines of business. While these reports cover only a part of the field and relate mainly to the business of department and chain stores, they embrace a sufficiently large number of stores to provide a fairly accurate indication of the current movements in retail sales for the kinds of business which are included.

Two sets of figures are shown for the general indexes of retail trade in Table 38; in the first set no adjustments have been made, while in the second, corrections are incorporated to allow for the variations in number of business days and for seasonal influences. This general index of retail sales shows that the low point in retail trade was reached in the early part of 1933. Following this there was a gradual improvement in the dollar volume of sales until December, 1937, when an exceptionally heavy Christmas business brought the seasonally adjusted index to the highest level recorded since the summer of 1931. Retail trade in Canada for the year 1938 was maintained at a level only slightly below that of 1937. Following the

high peak in December, 1937, there was a falling-off in sales until the months of April and May when the seasonally adjusted composite index for the twelve lines of business included in the survey stood 4 p.c. below the 1937 average. Substantial improvement in June was followed by a drop in July and August. A gain in September has been maintained, the general index adjusted for seasonal variations moving horizontally until the end of the year with the result that dollar sales for the twelve lines of business included in the index stand only 2 p.c. below the 1937 average. The chart illustrates the trends of the unadjusted and adjusted indexes more readily than the figures.

The indexes of retail sales for the individual lines of business mentioned in Table 39 are corrected to allow both for variations in the number of business days in different months and for usual seasonal influences.

### 38.—Index Numbers of Retail Sales Based on Monthly Reports of Department and Chain Stores, by Months, 1929, 1930, 1933, and 1935-38.

NOTE.—The general indexes are composite figures secured by weighting the indexes of sales for the twelve kinds of business in proportion to their relative position in the total trade.

**39.—Adjusted Index Numbers of Retail Sales Based on Monthly Reports of Department and Chain Stores, by Kinds of Business, January, 1936, to December, 1938.**

NOTE.—The indexes are compiled from the returns of 36 departmental organizations and 160 chain companies operating more than 3,300 stores and a number of independents in those lines of business where chains are of minor importance. The indexes are adjusted for variations in number of stores operated, for number of business days in each month, and for seasonal variations.

<sup>1</sup> Figures for 1936 and 1937 were recalculated since the publication of the 1938 Year Book to allow for revisions in sub-indexes.

**Motion Picture Statistics.**—The motion picture has become the most popular form of public entertainment and the business of satisfying the demand for such amusement has assumed a corresponding importance. In 1930 the expenditure on motion picture entertainment (exclusive of amusement taxes) was \$3.77 per capita. By 1933, due to reduced patronage and lower prices of tickets, the per capita expenditure had dropped to \$2.33, while for 1935 the figure rose slightly to \$2.50. In 1936 there was a further increase to \$2.70 and in 1937 it rose again to \$2.93.

Statistics for motion picture theatres in Canada were secured for the first time in connection with the Census of Merchandising and Service Establishments, 1931. According to the results of this census, there were 910 motion picture theatres in operation in 1930. During the depression a number of theatres were closed so that in 1933 only 765 were reported. During the following three years some recovery took place, 797 theatres being reported in operation in 1934, 862 in 1935, 959 in 1936 and 1,047 in 1937. Summary figures of motion picture theatres by provinces for 1930, 1936, and 1937 are given in Table 40 and the principal statistics by leading cities for 1936 and 1937 in Table 41.

**40.—Motion Picture Theatres, Employees, Salaries and Wages, and Total Receipts, by Provinces, 1930, 1936, and 1937.**

NOTE.—Figures for intervening years will be found in the corresponding table of previous editions of the Year Book.

<sup>1</sup> Not including amusement taxes. <sup>2</sup> Total receipts divided by number of admissions. No corrections are made for juvenile attendance, matinee, and evening prices, etc. <sup>3</sup> Includes Lachine, Verdun, Westmount, and Outremont. <sup>4</sup> The increase in number of theatres in Alberta is due to the inclusion of places previously listed as itinerant halls, which are now permanently-equipped buildings. <sup>5</sup> Includes Yukon and Northwest Territories.

## Section 10.—Control and Sale of Alcoholic Liquors and Beverages in Canada.\*

During the years 1916 and 1917, as a War policy, legislation prohibiting the sale of alcoholic liquors, except for medicinal and scientific purposes, was passed in all the provinces except Quebec, where similar legislation was passed in 1919. The prohibition extended to the sale of beer and wine except in Quebec. Native wine, however, could be sold in Ontario.

In aid of provincial legislation prohibiting or restricting the sale of intoxicating liquors, the Dominion Government, in 1916, passed a law making it an offence to send intoxicating liquors into any province to be dealt in contrary to the law of that province. In 1919 this Act was changed to read that "on the request of the Legislative Assembly of a province a vote would be taken on the question that the importation and the bringing of intoxicating liquors into such province be forbidden". If the majority of those voting were found to be in favour of such prohibition, the Governor in Council was to declare it in force.

After the War the provinces continued under prohibition for varying periods. Plebiscites were taken from time to time to ascertain the will of the electorate as to whether the policy of prohibition, adopted as an emergency War measure, should be continued. During 1921 Quebec and British Columbia discarded the existing prohibition laws and adopted the policy of liquor sale under government control. The same course was followed by Manitoba in 1923, Alberta in 1924, Saskatchewan in 1925, Ontario and New Brunswick in 1927, and Nova Scotia in 1930. Thus Prince Edward Island is the only province still adhering to a policy of prohibition.

The provincial Liquor Control Acts have been framed to conform to conditions peculiar to the regions where they are in force and no two are exactly alike. The salient feature of all is the establishment of a provincial monopoly of the retail sale of alcoholic beverages, with the practical elimination of private profit therefrom. Partial exception is made in the retail sale of malt liquor by brewers, which certain provinces permit while reserving regulative rights and taxing such sales heavily. In all the provinces, however, spirits may be bought only at government liquor stores. The provincial monopoly extends only to the retail sale of alcoholic beverages, the manufacture being still in private hands but under the supervision of the Liquor Boards or Commissions. The original Liquor Control Acts have been modified from time to time as deemed advisable. Brief summaries of the legislation are given in the Bureau's annual report on the Control and Sale of Liquor.

**Sales by Liquor Control Boards.**—Data on gross sales, other revenue, and net profits of the provincial Liquor Boards, are tabulated in Table 42. In connection with the figures on gross sales it is essential to note that for Quebec, Manitoba, and for Alberta (prior to Apr. 1, 1936), the sales of beer made directly by the brewers to the licensees are not included. The proceeds from such sales do not pass through the Boards, but the purchasers must pay through the brewers to the Boards a tax equal to 5 p.c. of the purchases in the case of Quebec, and 12½ cents per gallon in Manitoba. In Alberta purchasers from the brewers paid a tax of 12½ cents per gallon prior to Apr. 1, 1932, and 15½ cents per gallon thereafter to Apr. 1, 1936.† For Manitoba and Alberta, it is possible to calculate from the taxes the gallonage of beer sold but the corresponding values are not available.

\* Abridged from the report: "The Control and Sale of Liquor in Canada", by Miss L. J. Beehler, M.A., published by the Dominion Bureau of Statistics.

† An amendment to the Alberta Liquor Control Act passed at the 1936 session of the Legislature provides that "brewers who manufacture beer in Alberta may sell only to the Liquor Board". All sales, both to beer licensees and to permit holders, are now made only through the Board. Under the new arrangement the gallonage tax is no longer levied.

For Quebec, the quantity and value of sales are published by the Liquor Commission, as shown in the footnote to Table 42.

It should be noted that the values, as given, do not represent the sales values to the final consumers as, in most provinces, the sale of beer by the glass is permissible. Further, all the liquor sold in any province is not consumed by the residents of that province. The tourist traffic is an important factor in this connection.

All the revenue resulting from the Liquor Control Acts is not paid to the Liquor Boards. In certain provinces, permit fees are paid directly to the governments and do not pass through the Boards. Table 42 further indicates the total revenue accruing to the governments through the control of liquor sales.

The reports of the Boards do not in all cases show the quantities of liquors sold; in comparing values for a series of years or between provinces it should be borne in mind that price variations may be an important factor.

**Apparent Consumption of Liquor in Canada.**—It is not possible to obtain accurate figures on Canadian consumption of liquor. Except in Nova Scotia, Quebec, Ontario, and Alberta, the Liquor Boards do not publish figures to show sales on a gallonage basis, and even were such data on quantity sales available for all provinces they would not necessarily represent total consumption. For example, the quantities consumed by tourists reach a considerable amount. Further, there is no definite information regarding the illegal traffic in liquor, though inquiry has revealed that such illicit business has at times reached fairly large proportions.

In Tables 43, 44, and 45 an attempt has been made to indicate separately the apparent consumption in Canada of spirits, malt liquors, and wines. Obviously, these computations are subject to error for the reasons mentioned above, and also because no consideration has been given to increases or decreases in the quantities held in stock by the Boards or by licensees. For example, owing to exceptionally favourable conditions abroad, the Liquor Boards may in certain years buy heavily to replenish stocks or create reserves; such purchases would unduly weight the apparent consumption figures for these years. The figures in these tables have been arrived at as follows:—

**Spirits.**—Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown as "entered for consumption" are released from warehouse, duty paid, presumably for consumption for beverage purposes in Canada. However, part of these may be exported. The supply of spirits available in Canada for home consumption or for export must be the sum of the quantities shown under (a) entered for consumption; (b) imports; and (c) exports in bond, and if the total domestic exports and re-exports of imported goods are deducted from this figure the remainder indicates the apparent consumption in Canada.

**Malt Liquors.**—Only a small part of the output of malt liquors is placed in warehouses. The available supply is, therefore, made up of (a) production; (b) changes in warehouse stock; and (c) imports. By deducting the domestic exports and re-exports of imported goods from this total supply, a figure showing the apparent consumption in Canada is obtained.

**Wines.**—The apparent consumption of native wines is obtained by dividing the rates of excise tax into the total tax collections. This is believed to furnish a better measure of consumption than the method formerly used (*i.e.*, subtracting exports from production) since part of the product is not consumed in the year of production but is placed in storage for maturing. The apparent consumption of imported wines is arrived at by deducting from the imports into Canada, the re-exports of foreign supplies.

**42.—Gross Sales and Net Profits of Liquor Control Boards, Additional Revenues Paid Directly to Governments, and Total Net Revenue from Liquor Control, 1935-37.**

## CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS.

Canada is a country of continental dimensions, nearly 4,000 miles in length from east to west, with its relatively small population of 11,209,000 (estimated population as at June 1, 1938), in the main thinly distributed along the southern strip of its vast area. Different parts of the country are shut off from each other by areas of rough, rocky, forest terrain, such as the region lying between New Brunswick and Quebec, the areas north of lakes Huron and Superior, dividing the industrial region of Ontario and Quebec from the agricultural areas of the prairies and the barriers interposed by the mountains of British Columbia. To such a country with a population so distributed and producing, as do our western agriculturists, mainly for export, or, like our manufacturers, largely for consumption in distant portions of the country itself, cheap transportation is a necessity of life. Before 1850, when the water routes were the chief avenues of transportation and were closed by ice for several months each year, the business of the central portions of the country was reduced to a state of relative inactivity during the winter. The steam railway was required, therefore, for the adequate economic development of Canada, more particularly for linking up with the commercial and industrial world the vast productive areas of the Canadian West, and thus promoting their development. The construction of the Canadian Pacific railway gave to Canada, as an economic unit, length; the building of the newer transcontinental railways has given the country breadth.

Railway transportation, though essential in a country such as Canada, is nevertheless expensive for bulky and weighty commodities, and also for short distances where the cost of repeated handling amounts to more than actual transportation. For bulky freight, new enterprises have been either undertaken or are under consideration for improving water communication, such as the new and deeper Welland canal, the deepening of the St. Lawrence canals and of the channel between Montreal and Quebec, and the development of the Hudson Bay route. For freight movement over moderate distances the motor truck, operating over the growing network of improved highways, is providing an increasing proportion of the service. For inaccessible areas remote from the railways, the aeroplane has established itself commercially and is a valuable addition to other transportation facilities.

In order to appraise the value of each of these agencies of transportation from this viewpoint, this chapter of the Year Book, after treating of government control over agencies of transportation and communication in Part I, deals with the four main agencies, namely, carriers by rail, road, water, and air, in Parts II, III, IV, and V, respectively. In each Part the arrangement is intended to show: (1) the plant, equipment, and facilities available; (2) the cost to the Canadian people; and (3) the traffic carried or services performed, in so far as statistics are available for each agency. Unfortunately this arrangement brings out some rather serious gaps in the information at present available; these are pointed out in the respective Parts.

Scarcely less important, from the social and economic viewpoints, is the development of communications in a country so vast and with population centres so scattered. The Post Office has been a great though little-recognized factor in promoting solidarity among the people of different parts of the Dominion, and this same

desirable object is now being further aided by the radio, while telegraphs and telephones have done much to annihilate distance—the rural telephone, in particular, having been of great social and economic benefit in country districts. The press, again, assisted by cheap telegraph and cable rates and by low second-class mail rates to all parts of the country, has been helpful in developing national sentiment. These means of communication are dealt with in Parts VI, VII, VIII, and IX.

## PART I.—GOVERNMENTAL CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION.

Problems of transportation, because they are of such vital importance in the economic life of Canada, occupy a large part of the time and thought of our Parliaments and public men. With the modern development of new forms, it is becoming increasingly important to realize that the several agencies of transportation—carriers by rail, road, water, and air—are, or should be, inter-related parts of an integral whole. Each agency has its place in the efficient provision of necessary transportation in Canada. The problem, therefore, is to adjust the conditions under which each of these agencies operates so that the resulting movement of passengers and freight may be accomplished with the maximum of economic efficiency, that is, at the least possible cost commensurate with desired convenience. The recognition of this growing necessity for viewing the problems of transportation and related communications as parts of a co-ordinated whole is indicated by the organization of the Dominion Department of Transport. This Department was organized on Nov. 2, 1936, under authority of c. 34, 1936, unifying in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation, and radio. The Meteorological Service is also under the Department of Transport.

Private enterprises engaged in the transportation and communications business in Canada, have, in the past 50 years, shown the same tendency toward consolidation and amalgamation which has been evident elsewhere throughout the civilized world. The basic reason for such consolidation and amalgamation has been the fact that the business of transportation and communications is, generally speaking, a 'natural monopoly', i.e., a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. The outstanding example of these consolidations in Canada in our time is the concentration of control of the railways of the country in the hands of the Canadian Pacific Railway Company and the Canadian National Railways.

However, since such control brings with it elements of monopoly and possible overcharge which are distasteful to the public, it has been deemed advisable in Canada, as in other countries, to set up authorities controlling the rates to be charged and the other conditions on which services to the public are to be rendered by common carriers. This control eventually, so far as the railways within the jurisdiction of the Dominion Government were concerned, was placed in the hands of the Board of Railway Commissioners, now the Board of Transport Commissioners. From time to time the regulatory authority of the Commission was extended to a limited extent to other utilities. A brief summary of the history and functions of this body follows.

Besides the Board of Transport Commissioners, dealing with the larger public utilities coming under the jurisdiction of the Dominion Government, there exist, in several of the provinces, bodies which undertake among their duties the supervision and control of local public utilities operating under the jurisdiction of the

provinces, and the regulation of their rates for service. Among these are the Ontario Department of Municipal Affairs (formerly the Railway and Municipal Board of Ontario, established in 1906), the Quebec Commission of Public Utilities established in 1909, the Nova Scotia Board of Commissioners of Public Utilities, and the Public Utilities Commission of Manitoba. In the three westernmost provinces these same duties are performed by provincial Departments of Railways.

### **The Board of Transport Commissioners for Canada.\***

In the early days of railway building in Canada, the provinces were more concerned with rapid development than with rate regulation. Under the Railway Clauses Consolidation Act of 1851, rates were fixed by the directors of the railway, subject to the approval of the Governor in Council. Beyond this, competition was relied upon to bring rates to a reasonable level. As time went on, however, those who believed in the efficacy of competition as a regulator were disillusioned. For example, complaints were made that the Grand Trunk gave low through transit rates, say from Chicago to New York, through Canada, and recouped itself by high non-competitive rates in Upper Canada. In 1888, the supervision of rates was assigned to the Railway Committee of the Privy Council, sitting in Ottawa.

At the turn of the century, two reports were prepared for the Department of Railways and Canals by Prof. S. J. McLean, the first setting down the experience of railway commissions in England and the United States, and the second discussing Canadian rate grievances, with a recommendation that regulation by commission be adopted in Canada. The second report found that non-competitive rates were exorbitant as compared with competitive rates and that the railways had exercised their right to vary rates without notice, to the great distress of shippers. Among the weaknesses of the Railway Committee as a rate-regulating body was its fixed station at Ottawa, which made the cost of appearing before it practically prohibitive. Besides, members of Parliament had no necessary aptitude for dealing with railway rates, and of their two functions—legislative and administrative—the legislative was to them the more important.

The Board of Railway Commissioners for Canada, as provided for by the amended Railway Act of 1903, was organized on Feb. 1, 1904. In the beginning, its membership consisted of a Chief Commissioner, a Deputy Chief and one Commissioner. In 1908 the membership was increased by the inclusion of an Assistant Chief Commissioner and two other Commissioners. According to the Act, the Board might be divided into two sections of three members but, since any two constituted a quorum, two Commissioners usually heard all but the more important cases, and, agreeing, gave the decision of the Board. By the Transport Act (c. 53, 1938) the name of the Board was changed to the Board of Transport Commissioners for Canada and its powers were extended to cover transport by water and by air, as well as by rail. The new Board has the same number of members and form of organization as outlined above for the former Board.

With regard to transport by rail, the powers of the Board, in brief, cover matters relating to the location, construction, and operation of railways. The most important of these powers has to do with rate regulation. Passenger rates are divided into standard and special, freight rates into standard, special, and competitive. Standard rates are maximum rates and the only ones which must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval,

\* Revised by P. F. Baillargeon, Secretary, Board of Transport Commissioners for Canada.

provided that a change of rates has been advertised. But important rate adjustments usually come to the notice of the Commission, for the changed rate alters the extent of the territory in which a shipper can compete and on this account he is apt to appeal the case to the Commission. It is a knotty problem to mark the boundaries of competitive areas—to decide whether Nova Scotian manufacturers should be given rates which would allow them to compete west of Montreal, or again, whether high construction and operation costs in British Columbia should enforce a rate which would prevent her goods from moving far into the prairies. By an amendment to the Railway Act, the regulation of telephone, telegraph, and express rates was given to the Commission, but with narrower powers than were given to it in dealing with railways. By the Transport Act, the Board now has the power also to issue licences to persons or concerns entitled to engage in transport by air on the air routes declared to be under its jurisdiction by the Governor in Council. In the near future the power to issue licences to ships will also be exercised by the Board when the part of the Transport Act dealing with transport by water comes into effect by proclamation of the Governor in Council.\*

The procedure of the Board is informal, as suits the nature of its work, for experience has shown that hearings in strict legal form lead the parties to the argument to take uncompromising attitudes. If possible, matters are settled by recommendations to the railway company or the shipper; thus, during 1937, 94.96 p.c. of the applications to the Board were settled without formal hearing. The Railway Committee had kept its station at Ottawa, giving only formal hearings, and so the grievances of those who could not afford to appear in person or pay counsel went unredressed. The itineraries of the Transport Commission are arranged so that evidence may be taken at the least expense to those giving it.

The Chief or Assistant Chief Commissioner, depending upon which one is presiding, gives final judgment on points of law when, in the opinion of the Commissioners, the question is one of law. On questions of fact the findings of the Board are final and are not qualified by previous judgments of any other court. Questions of law and jurisdiction are differentiated. In the first case, the Board may, if it wishes, allow an appeal to the Supreme Court; in the second, the applicant needs no permission to present his appeal.

The Railway Committee of the Privy Council, being a Committee of the Cabinet, was responsible to Parliament. When the powers of the Committee were made over to the Railway Commission (now the Board of Transport Commissioners) the responsibility was retained, but necessarily by a different means. There is now provision for an appeal from any decision to the Governor General in Council, who may also of his own motion rescind or vary the action of the Board, but the power to rescind or vary usually consists in referring to the Board for reconsideration. From its inception until Dec. 31, 1937, the Board gave formal hearing to 10,493 cases. Its decision was appealed in 124 cases, including 6 references for the opinion of the Supreme Court of Canada, 75 of these, including the above references, being to the Supreme Court of Canada and 49 to the Governor General in Council. Of the appeals, 13 of those carried to the Supreme Court were allowed and 3 of those to the Governor General in Council.

## PART II.—RAILWAYS.

The treatment of rail transportation is divided into three sections dealing, respectively, with steam railways, electric railways, and express companies.

\*This Part of the Act was proclaimed in force, with effect Jan. 15, 1939.

## Section 1.—Steam Railways.\*

The steam railway is still the most important transportation agency from the standpoint of investment and of traffic handled. Fortunately, the statistical field is more completely covered for this form of transportation than for any other, since there are fairly complete figures dealing with steam railway mileage, and equipment, finances, and traffic.

**Historical Sketch.**—Construction was begun on the first Canadian railway in 1835. This was a line only 16 miles long between Laprairie and St. Johns, Que., intended to expedite the journey between Montreal and New York. It was officially opened July 21, 1836, the motive power being the steam locomotive "Dorchester", built by Stephenson of Liverpool. About the same time, a line 6 miles long was built in Nova Scotia from Stellarton to a loading point on Pictou harbour to haul coal from the mines to vessels. On this line the motive power was at first provided by horses, but in the spring of 1839 the "Samson", a locomotive built in England, brought over in a sailing vessel and still preserved in Halifax, was put in operation. A railway from Montreal to Lachine was opened in 1847 and another line to St. Hyacinthe in 1848. In 1850, however, there were only 66 miles of railway in Canada.

**Commencement of the Railway Era—The Grand Trunk.**—The railway era in Canada may be said to have begun in 1851, when charters were granted providing for the construction of a main line of railway between the two Canadas. These charters were repealed when the Grand Trunk charter was granted in 1852. The result was the completion of the Grand Trunk railway between Montreal and Toronto in 1856, its extension westward to Sarnia in 1859, and eastward to Rivière du Loup in 1860. The Atlantic and St. Lawrence railway, to Portland, Maine, was leased in 1853 and in 1859, on the completion of the Victoria bridge across the St. Lawrence at Montreal, the Grand Trunk had a through route 800 miles long from Portland to Sarnia. Within the next thirty years many important railways of Ontario, including the Great Western, were acquired and the Grand Trunk lines were extended to Chicago.

**Construction of the Intercolonial.**—An intercolonial railway linking Nova Scotia and New Brunswick with Upper and Lower Canada had been proposed as early as the 1830's. In 1844 the Imperial Government made a survey for a military road, and in 1851 agreed to recommend to Parliament either a guarantee of interest or an advance of the sum required to build a railroad. Differences of opinion as to the route resulted in the project being dropped, but in 1853 Nova Scotia undertook to construct, by 1862, a trunk line from Halifax to the New Brunswick frontier, with branch lines to Pictou and Victoria Beach. In both Nova Scotia and New Brunswick, however, the scheme of an intercolonial railway broke down for lack of funds, and in 1867 there were only 374 miles of railway in the Maritimes. These, under the B.N.A. Act, passed to the Dominion Government. The latter undertook the completion of the railway, and in 1876 the line was opened to Rivière du Loup. Later on, by acquisition of, lease of, or running rights over, other lines, the Intercolonial was extended to Montreal.

\* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an Annual Report on Steam Railways, as well as numerous other reports, for a full list of which the reader is referred to Chapter XXIX of this volume. Certain of the financial statistics of steam railways are compiled with the co-operation of officers of the Department of Transport.

*The First Transcontinental Railway—The C.P.R.*—As early as 1849 a pamphlet published by Major Carmichael-Smyth advocated the construction of a Canadian Pacific railway along a route approximating that later taken. In 1851 a Parliamentary Committee reported against the enterprise at that time. In 1871 the terms under which British Columbia entered Confederation bound the Dominion to commence the Pacific railway within two years and complete it within ten years. The building of the railway as a public work actually commenced in 1874, but was not very rapidly pushed forward. In 1880 the Government entered into a contract with the Canadian Pacific Railway syndicate, granting to the syndicate all portions of the line completed or under construction, a cash subsidy of \$25,000,000, a land grant of 25,000,000 acres, free admission of materials for construction, and protection for 20 years against competing lines. The company on its side agreed to complete the railway to a fixed standard by May 1, 1891, and thereafter to maintain it efficiently. As a matter of fact, the last spike on the main line was driven on Nov. 7, 1885. Like the Grand Trunk, the Canadian Pacific Railway began to acquire branch lines as feeders in the settled parts of the country along its route.

*The Second Transcontinental—The Grand Trunk Pacific.*—About the end of the century the Grand Trunk, which already had a line as far west as Chicago, submitted to the Canadian Government a proposal whereby it might participate in the settlement and development of the West. Lines were to be leased from Chicago via Minneapolis to Winnipeg, and thence a new line, subsidized by the Government, would be built to the Pacific coast. The Government raised objections to so much of the line lying in the United States and a second proposal was made for a connecting line with larger subsidies from North Bay to Winnipeg. The Government submitted, in 1903, a counter proposal that the line, instead of terminating at North Bay, should be continued east to Moncton, New Brunswick, the eastern section from Moncton to Winnipeg to be constructed by the Government and leased to the Grand Trunk Pacific for a 50-year period, the railway paying no rent for the first seven years and 3 p.c. on the cost of the railway for the remaining 43 years. The western half of the railway from Winnipeg to Prince Rupert was to be built by the Grand Trunk Pacific, the Government guaranteeing interest on bonds to 75 p.c. of the cost of construction, not exceeding \$13,000 per mile on the prairie section and \$30,000 per mile on the mountain section. The Grand Trunk reluctantly accepted this proposition and construction of the National Transcontinental and Grand Trunk Pacific commenced.

*The Third Transcontinental—The Canadian Northern Railway.*—The third transcontinental railway, the Canadian Northern, was begun in 1896 with the completion by Mackenzie and Mann of the 125-mile line of the Lake Manitoba Railway and Canal Co., chartered in 1889. The charters of the Winnipeg and Hudson Bay; the Manitoba and Southeastern; the Ontario and Rainy River; and the Port Arthur, Duluth, and Western were next acquired. Assisted by the Manitoba Government, which desired to establish competition with the Canadian Pacific Railway, the Canadian Northern then secured the Manitoba lines of the Northern Pacific and in 1902 completed its line from Winnipeg to Port Arthur. During the following decade, the agricultural west was filling up very rapidly and, with the public of Canada under the influence of this boom, the Canadian Northern Railway was able to secure guarantees of bonds from the Dominion and Provincial Governments to

enable it to extend its lines both westward to Vancouver and eastward to Montreal and so complete the great scheme of a transcontinental road.

*Effect of the War on the Railways—The Drayton-Acworth Report.*—With two new transcontinental main lines, besides branches, under construction, Canadian railway mileage was doubled between 1900 and 1915, increasing from 17,657 miles in the former year to 34,882 miles in the latter. The builders of the new lines, as well as the Canadian Government and people, had expected that immigration of capital and labour from Europe would rapidly settle the areas tributary to the new railroads and give them abundant and lucrative traffic, as had been the case with the C.P.R. Instead, the War came, and European labour and capital were conscripted for the struggle; immigration fell off and the anticipated traffic did not develop. On the other hand, the interest on the bonds had to be met, and in 1915 the Government felt it necessary to give assistance to the railways. In 1916, after having again made loans to the Grand Trunk Pacific Railway and the Canadian Northern Railway Co., a Royal Commission was appointed by Order in Council of July 13, 1916, to investigate: (1) the general problem of transportation; (2) the status of each of the three transcontinental systems; (3) the reorganization of any of the said systems, or their acquisition by the State; and (4) other matters considered by the Commission to be relevant to the general scope of the inquiry. The majority report of the Commission, signed by Sir Henry Drayton and Mr. Acworth, has formed the basis of the subsequent railway policy of Canada. Their recommendation was that the public should take control of the Canadian Northern, of the Grand Trunk Pacific, and the Grand Trunk proper, and that they should be administered on purely business principles by a board of trustees, such compensation as seemed proper to be decided by arbitration and given to the shareholders of the Canadian Northern and the Grand Trunk.

The process of the acquisition of these railways and the financial results of their operation down to the end of 1937 are described in the latter part of Subsection 2, pp. 640-649.

*The Royal Commission of 1931.*—During 1930 and 1931 both freight and passenger traffic declined until new low records were being established each succeeding month. Freight and passenger revenues consequently decreased at alarming rates and with increased capital expenditures and fixed charges, the financial condition of Canadian railways demanded readjustment. To study the situation and, if possible, to remedy it, the Government appointed a Royal Commission which, on Sept. 13, 1932, submitted its report, summarized at pp. 648-650 of the 1933 Year Book. During the following session of the Dominion Parliament legislation known as The Canadian National-Canadian Pacific Act (c. 33, 1933) was passed. A summary of this legislation was given at p. 655 of the 1936 Year Book.

#### Subsection 1.—Mileage and Equipment.

The mileage of steam railways in operation in Canada is given for 1835 to 1849 and for each year from 1850 to 1937 in Table 1, showing the first great period of construction in the 1850's, when the mileage grew from 66 to 2,065, the lull in the 1860's, the second great period of construction in the 1870's and 1880's, the lull in the 1890's, the third great period of construction between 1900 and 1917 and the subsequent falling-off in the rate of increase.

<sup>1</sup> First railway construction begun but line not open for traffic until 1836, and prior years.

<sup>2</sup> As at June 30 for this

<sup>3</sup> As at Dec. 31 for this and later years.

In total railway mileage Canada now ranks fourth with 42,727 miles, the United States, Soviet Russia, and British India being the only countries with greater total mileages. In miles per capita only Australia has a greater average, the figure for Canada being one mile of line for each 263 persons (exclusive of 339 miles, chiefly main lines, of Canadian railways crossing over United States territory).

The operated mileage in the different provinces is given for recent years in Table 2. Construction was most active in Manitoba, Saskatchewan, and Alberta during the period covered while there has been a tendency for mileages to decline slightly in the other provinces, due to the abandonment of unprofitable lines.

**Rolling-Stock.**—Statistics of the rolling-stock of the steam railways of Canada are given for the latest seven years in Table 3. The figures may be supplemented by the statement that between 1920 and 1937 the average capacity of box cars increased from 34·779 tons to 41·068 tons, of flat cars from 33·459 to 41·433 tons, of coal cars from 43·404 tons to 52·524 tons, and of all freight cars from 35·141 tons to 41·755 tons. The average tractive power of the locomotives in use in 1920 was 31,112 lb. and in 1937, 38,870 lb.

<sup>2</sup> Includes 3 auto-railers.

<sup>3</sup> Includes

## Subsection 2.—Finances of Steam Railways.

The tables in this subsection deal with the capital liability, capital invested, earnings, operating expenses, employees and their earnings, and governmental aid to steam railways. However, the presentation of the financial statistics of railways in Canada would not be complete without some detailed consideration of the finances of the Government-owned railways. This is given in the latter part of the subsection. Some further statistics of revenue are included in Table 21, where they are shown in relation to traffic.

**Capital Liability.**—The capital liability of the steam railways of Canada is shown in Table 4 for the years 1901 to 1937. The great increase after 1922 is due to the inclusion of all Government loans to railways and investment in road and equipment of Government railways as part of the capital liability of the railways. The reduction in 1937, due to the Canadian National Capital Revision Act (c. 22, 1937), is explained on p. 644. Statistics of individual lines are given in Table 5.

## 4.—Capital Liability of Steam Railways, 1901-37.

Note.—Corresponding figures for each year from 1876 to 1900, inclusive, are given on p. 649 of the 1927-28 Year Book.

<sup>1</sup> Not reported. <sup>2</sup> Includes 28-18 miles of joint track. Canadian lines only for Canadian National, but Canadian and U.S. lines for Canadian Pacific. <sup>3</sup> Including capital of leased lines. <sup>4</sup> Included with Canada Southern Rly. <sup>5</sup> Constructed and operated by Ontario Government Railway Commission. <sup>6</sup> Includes \$202,088,488 Canadian railway capital owned by Canadian railways.

**Capital Investment.**—The capital structure of the Canadian National Railways, changed by the Capital Revision Act, 1937, was reduced by \$262,770,972. Details of this Act are explained further on p. 644. The excess of capital liability as shown in Table 4 over the investments shown in Table 6 is accounted for by loans and advances from the Government to cover deficits of the Canadian National Railways and by the fact that some railway stock issues represented little actual investment in physical property. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property to other Government departments, etc.

**Earnings and Expenses.**—Operating expenses of Canadian railways rose during 1918, 1919, and 1920, much more than operating revenues, and the operating ratio, or ratio of expenses to revenues, increased from around 70 p.c. to above 90 p.c. and remained high thereafter. The United States Government took over the operation of the United States railways when that country entered the World War and

increased the rates of pay of the railway employees. The Canadian railways were also obliged to make corresponding increases and these have been the chief factor in increased operating ratio. Declining revenues without corresponding reductions in expenses during the past five years have also maintained the high ratio. The gross earnings and operating expenses of individual railways for 1937 appear in Table 5.

**Railway Wages and Salaries.**—The data in Table 9 show the numbers of employees and the amounts of salaries and wages as reported by the railways for 1926 to 1937, inclusive. The Canadian National Railways brought into their railway accounts in 1928 the commercial telegraph employees, and these have been added for 1926 and 1927 in this table to make the data comparable. Because of inability of the railways to supply strictly comparable data for previous years, the numbers of employees and wages have been omitted for such, but index numbers have been computed for 1912-37 on as nearly comparable bases as possible, using 1926 data as equal to 100. The number of employees fluctuates with the volume of traffic, but not to the same extent. Salaries and wages are affected by the number of employees, rates of pay, and by the time worked. The rapid increase in the average wage in 1918 and 1919 was due to large increases in rates of pay corresponding to the "Macadoo Award" in the United States. Also the fluctuations in 1932-37 were due to reductions and restorations in basic rates of pay.

## 9.—Steam Railway Employees, Totals and Averages of Salaries and Wages, and Ratio of Salaries and Wages to Operating Revenues and Expenses, 1912-37.

<sup>1</sup> Ratio of salaries and wages chargeable partly to capital prior to 1926 but to operating expenses only for 1926 and subsequent years. <sup>2</sup> Years ended June 30 for this and previous years. <sup>3</sup> Owing to the inability of the railways to supply strictly comparable data for the years prior to 1926, statistics of employees and wages, which are given on p. 604 of the 1936 Year Book, have been omitted here; the adjusted index numbers express the relation with later years as closely as it can be approximated. <sup>4</sup> Years ended Dec. 31 for this and later years.

**Government Aid to Railways.**—In order that the private railways of Canada might be constructed in advance of settlement, as colonization roads, or through thinly settled districts where little traffic was available, it was necessary for Dominion and Provincial Governments and even the municipalities to extend some form of assistance. The form of aid was generally a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land other than for right-of-way were also made. Tables 10 and 11 show the areas of the land granted as subsidies and for right-of-way, station grounds and townsite purposes to steam railway companies by the Dominion and Provincial Governments; the former gives the data by type of grant and the latter by railway companies to which the grants were made.

As the country developed, the objections to the land-grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan, or a subscription to the shares of the railway, as shown analytically in Table 12. Guarantees of debenture issues were given in a later period and since the formation of the Canadian National Railways all debenture issues of that system, except those for rolling-stock, have been guaranteed by the Dominion Government.

<sup>1</sup> Does not include \$216,207,142 perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National System, on which interest and dividends are guaranteed by the Dominion Government.

## FINANCIAL STATISTICS OF GOVERNMENT-OWNED RAILWAYS.

**Canadian Government Railways.**—The Intercolonial Railway, built as a condition of Confederation and completed in 1876, and the Prince Edward Island Railway, opened in April, 1875, have, since their construction, been owned and operated by the Dominion Government. In 1903 the Dominion Government undertook the construction of the National Transcontinental railway line from Moncton, N.B., to Winnipeg, to be leased to the Grand Trunk Pacific Railway Co. for a period of 50 years. However, during the Great War the company was unable to take over the operation of the road when completed in 1915. The Government itself undertook its operation and was also obliged to lease the Lake Superior branch of the Grand Trunk Pacific Railway, which was isolated from the main line. A number of eastern branch lines have been acquired in recent years. The Hudson Bay Railway is a direct liability of the Dominion Government and is being operated by the Canadian National for the Government from Apr. 1, 1935, but is not included in the

data for Canadian National Railways. To Mar. 31, 1938, the total cost of this railway was \$34,368,231,\* exclusive of the expenditure of \$6,274,188 on the terminal at Nelson. The terminals at Churchill were transferred in 1937 to the National Harbours Board. The investment to Dec. 31, 1937, was \$13,308,376\* and the operating deficit for 1937 was \$140,890.

Table 14 shows the principal items of the investment account of the Department of Transport pertaining to railways. The major portion of these investments were construction costs of the Intercolonial system, the National Transcontinental railway, and the Hudson Bay railway, and the purchase price of small railways in the eastern provinces.

The terminals at Churchill consisting of a grain elevator, warehouse, and docks were transferred to the National Harbours Board and the investment removed from the railway account. Loans and advances to the Canadian National Railways for payment of operating deficits were charged to the Consolidated Revenue Account of the Dominion and also cleared from the railway account and other adjustments were made under the Canadian National Railways Capital Revision Act, 1937, more fully explained on p. 644.

The Canadian Pacific item and 'Other railways' item include grants to railways for construction included in the Public Accounts, Appendix No. 28 C.

In addition to these expenditures the Dominion Government has made loans to the Canadian National and Canadian Pacific railway companies for capital purposes, for special works programs, and for equipment leased to the railways; the amounts outstanding on Mar. 31, 1938, were:—

Canadian National Railway Co.....	\$21,441,135-50
Canadian Pacific Railway Co.....	7,343,760-00
Total.....	28,784,895-50

\* These figures include deficits from operations during construction.

<sup>1</sup> Transferred to National Harbours Board in 1938.      <sup>2</sup> Advances used for capital purposes, out of total loans of \$655,527,456.      <sup>3</sup> New stock held by Government controlling company, which in turn holds all subsidiary companies' stock.      <sup>4</sup> Under the Capital Revision Act this liability of the C.N.R. was discharged and replaced by no-par value stocks, set up at \$269,325,706 and \$18,000,000.

**The Consolidation and Organization of the Canadian National System.\***—In pursuance of an Act of 1917 (7-8 Geo. V, c. 24), the Government acquired the capital stock of the Canadian Northern Railways with a mileage of 9,566.5. The insolvency of the Grand Trunk Pacific led to the appointment of the Minister of Railways as receiver on Mar. 9, 1919, and in October, 1920, the road was transferred to the Canadian National Railways. The Grand Trunk Railway was acquired under c. 13 of the Statutes of the second session of 1919, providing for arbitration of the consideration to be given to its shareholders. This arbitration finally disposed of, steps were taken to consolidate the various railways under government operation and control. In October, 1922, the Grand Trunk Board and the Canadian Northern Board gave place to a single Canadian National Board, to which the former Canadian Government Railways were turned over for management and operation. The unification of the Grand Trunk and Canadian National Railways was provided for by Order in Council of Jan. 30, 1923, which also brought into effect the Act to incorporate the Canadian National Railway Co. and respecting Canadian National Railways (c. 13, 1919).

**Operating Finances of the Canadian National Railways.†**—In Table 15 "Canadian Lines" include those of the Canadian Northern system, the Grand Trunk Railway of Canada, the Grand Trunk Pacific, and the Canadian Government Railways. The "United States Lines" include those lines known as the New England line, the Grand Trunk Western, the Duluth, Winnipeg and Pacific, and, from Feb. 1, 1930, the Central Vermont. The Hudson Bay Railway was returned to the Government while under construction, and appropriations, etc., for this were not included with the 1926 and later data.

Gross revenues, operating expenses, and net revenues shown in Table 15 include only those from steam railway and commercial telegraph operations, but the deficits are for the entire system, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

\*For further details of the acquisition of the Canadian Northern, Grand Trunk Pacific, and Grand Trunk Railways by the Dominion Government, see pp. 602-603 of the 1926 Year Book.

†For detailed statistics of the operation and finances of the Canadian National Railways during 1937, see Steam Railway Statistics, 1937, and Canadian National Railways, 1923-37, published by the Dominion Bureau of Statistics, also the Annual Report of the Canadian National Railways.

Under the Canadian National Railways Capital Revision Act (c. 22, 1937), interest on Dominion Government loans, amounting to \$530,832,598, and Government claims for interest, amounting to \$43,949,039, were cancelled as liabilities of the railway and these have been eliminated from Table 15.

<sup>2</sup> Charged to "Proprietor's Equity".

<sup>3</sup> Contributed by Dominion Government.

**Capital Revision of the Canadian National Railways.**—The Canadian National Railways Capital Revision Act, c. 22 of the Statutes of 1937, dealt with certain Government liabilities of the system. It created the Canadian National Railways Securities Trust as a medium for maintaining in perpetuity the Government's claims against the system for loans made, amounting to \$643,860,558, and accrued unpaid interest of \$574,781,637. This total of \$1,218,642,195 included a claim of \$43,949,039 for interest on loans not included in the Canadian National accounts. No-par value capital stock of the Securities Trust was issued to the Government in exchange for these claims at an initial stated value equal to the amount of loans used for capital purposes, namely, \$270,037,438. Capital stocks held by the Government were cancelled to the extent of \$247,628,339, and claim for an old loan of the Province of Canada, amounting to \$15,142,633 was abandoned. All stock ownership of the various railways was placed under the control of the Canadian National Railways, the Government in turn receiving stock of the latter company. Table 16 gives the changes effected by the Act in the railway accounts.

A great deal of confusion has been evident when the liability accounts of the National Railways and those of the Dominion were brought together, and to avoid duplication in future, the Act provided that liabilities of the National Railways to the Government (excepting temporary financing) be shown under the descriptive heading of "Dominion Government Proprietor's Equity"; this is because such liabilities are all included in the net debt of Canada.

This new account will reflect annually all capital losses due to abandonments and the like that are not included in the annual deficit of the Railway as submitted to Parliament.

Deficits will be paid from the Consolidated Fund of Canada, in conformity with the provisions of the Canadian National-Canadian Pacific Act, 1936, which provides that deficits shall not be funded. Any temporary assistance by the Government on capital account will be repaid through the proceeds of securities sold by the Canadian National Railways.

Finally, the Act provides that an appendix shall be included in the Public Accounts of Canada to show the historical record of Government assistance to Railways, and a note to this effect will appear on the balance sheet of the Canadian National Railways in connection with the "Proprietor's Equity"

**16.—Condensed Consolidated Balance Sheet at Dec. 31, 1936, showing Adjustments as of Jan. 1, 1937, as Authorized by the Canadian National Railways Capital Revision Act, 1937.**

Item.	As Published Dec. 31, 1936.	Adjustments Authorized by Act.	As Revised Jan. 1, 1937.

<sup>1</sup> Does not include Dominion Government claims for interest amounting to \$43,949,039. <sup>2</sup> Made up of: loans for capital, \$270,037,438; loans for deficits, \$373,828,120; and accrued interest, \$530,832,598.

**Capital Structure and Debt of Canadian National Railways.**—The Capital Revision Act, eliminated the Profit and Loss balance as at Jan. 1, 1937, and Profit and Loss balances for 1937 and future years will also be eliminated by charging to “Dominion Government Proprietor's Equity” the losses due to abandonment of lines and other such items which do not involve the payment of cash at the time the items are written down, and by the Government contributing cash for the cash deficits. These cash deficits are shown in the last column of Table 15 and for the years 1923-36 have been met by loans by the Government, by direct payment from July 1, 1927, and by reduction of working capital.

Table 17 shows for each year 1922 to 1937: (1) shareholders' capital; (2) funded debt held by public; (3) Government loans and advances; and (4) appropriations for Canadian Government Railways. The share capital consisted of \$165,627,739 stock of the Grand Trunk Railway held by the Dominion Government and \$100,000,600 of the Canadian Northern Railway stock also held by the Dominion Government. There was also outstanding on Dec. 31, 1922, \$4,591,975 stock of constituent lines held by the public, of which \$8,175 has been retired. The table shows the adjustments of the capital liabilities of the system made effective Jan. 1, 1937, under the Capital Revision Act.

### Subsection 3.—Steam Railway Traffic.

In addition to an analysis of passenger and freight traffic statistics for all steam railways, a separate analysis is given of the operations and traffic of the Canadian National Railways, since, being controlled by the Dominion Government, the information is considered of special interest.

**Passenger and Freight Traffic.**—The maximum volume of passenger traffic, as indicated by passengers carried one mile, was reached in the calendar year 1919 and the maximum of freight traffic in 1928. In recent years both freight and passenger traffic, especially the latter, have been affected by the increase in the use of motor vehicles and this traffic decrease was much aggravated by the general decline in commercial activity after 1929, but improvements took place in 1934, 1935, 1936, and 1937.

The average haul for freight in Table 21 is the average for all railways, which eliminates the effects of consolidations of railways and of interchanging freight between Canadian railways. The average revenue per passenger increased in 1918 and 1919 with increases in rates, but the increases between 1924 and 1930 were due largely to decreases in the short-haul traffic. The increases in freight-train loading and train revenues have been due to the use of larger and more powerful locomotives.

### 21.—Summary Analysis of Statistics of Passenger and Freight Services and Receipts, calendar years 1929-37.

NOTE.—Corresponding figures for 1910-15 are given at pp. 628-629 of the 1922-23 Year Book, for the years 1915-19 at pp. 652-653 of the 1937 Year Book, and for 1920-28 at p. 658 of the 1938 Year Book.

<sup>1</sup> Includes express, baggage, mail, etc., cars.

<sup>2</sup> Duplications included.

<sup>3</sup> Includes caboose

miles. <sup>4</sup> Duplication eliminated, see Table 22 for details of freight carried.

<sup>5</sup> Revised

classification includes mileage previously classed as "mixed".

Mileage and Tariff of the Canadian National Railways.—The Canadian National's steam mileage at Dec. 31, 1937, including lines in the U.S.A., but exclusive of the Northern Alberta Railways and Toronto Terminals Railway (which are controlled jointly by the Canadian National and the Canadian Pacific Railways), was 23,803. Including the Thousand Islands Railway, 4-51, and the Muskegon Railway and Navigation Co., 5-25, controlled but separately operated, the total steam mileage was 23,813. Including 120.26 miles of electric lines, the grand total was 23,933.

*The Maritime Freight Rates Act (17 Geo. V, c. 44).*—This Act, effective July 1, 1927, ordered that the accounts of the Canadian National lines east of Lévis and Diamond Junction, Quebec, be separated from the remainder of the Canadian National system. These lines were designated the "Eastern Lines" of the Canadian National Railways. The Act ordered that specified freight rates on the Eastern Lines be reduced by 20 p.c. Other railways were allowed to make similar reductions in their freight rates in that territory and to bill on the Board of Railway Commissioners of Canada for the difference in freight receipts due to such reductions. The differences between the reduced rates and the normal rates are treated as revenues by the Canadian National Railways and paid by the Dominion Government. The totals paid to all railways under the Act were: \$1,353,464, \$2,758,893, \$3,092,677, \$3,615,218, \$2,554,673, \$1,922,073, \$1,989,130, \$2,529,394, \$2,348,399, \$2,505,823, and \$3,182,458, respectively, for the years 1927-37, a total of \$27,852,203.

The Quebec Bridge across the St. Lawrence above Quebec city, with a main span of 1,800 ft., carrying a single-track railway and accommodation for motor and pedestrian traffic, forms a connecting link in the Canadian National Railways system and is operated as a part of it.

Table 22 shows some of the more important train traffic statistics of Canadian National Railways operation for the years 1936 and 1937.

<sup>1</sup> Excludes electric lines.

**Commodities Hauled.**—In Table 23, the duplications from two or more railways handling the same freight have been eliminated. The peak year was 1928 when agricultural products hauled amounted to 30,176,695 tons.

**23.—Commodities Hauled as Freight on Steam Railways, calendar years 1933-37.**

**NOTE.**—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. In this respect these figures differ from those in the corresponding table in the 1926 and previous Year Books.

**Railway Accidents.**—The numbers of passengers, employees, and others killed or injured in steam railway accidents are given in summary form from 1929 to 1937 in Table 24, and in detailed analysis for 1935 to 1937 in Table 25. All injuries to passengers are included, but for employees only injuries which keep the employee from his work for at least three days during the ten days following the accident are recorded.

**24.—Numbers of Passengers, Employees, and Others Killed or Injured on Steam Railways, calendar years 1929-37.**

NOTE.—For the years ended June 30, 1883 to 1900, see Canada Year Book, 1910, p. 378; for the years 1901-19, the 1922-23 edition, p. 635; and for 1920-28, the 1938 edition p. 662.

Year.	Passengers.		Employees.		Others.		Totals.	
	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
1929.....	20	551	118	12,433	298	809	431	13,843
1930.....	15	548	103	9,678	345	837	463	11,063
1931.....	3	399	55	5,966	202	830	260	7,195
1932.....	7	342	77	4,631	242	598	326	5,571
1933.....	8	319	53	4,409	219	645	290	5,373
1934.....	16	432	57	5,179	242	589	315	6,200
1935.....	19	440	70	5,221	271	625	351	6,286
1936.....	6	691	93	6,338	282	708	381	7,732
1937.....	4	427	77	5,774	265	729	346	6,930

During 1937, 4 passengers were killed and 379 injured in train accidents, as against 6 killed and 657 injured in 1936. The number of employees killed was also reduced from 83 to 59 and the number injured from 1,293 to 1,082; the numbers of other persons killed and injured were 263 and 659, as against 273 and 622, respectively, in 1936. All the increase in other persons injured was in the number of trespassers which rose from 186 to 272. These were persons stealing rides on trains, walking on the right-of-way, and also persons crossing the railways at highway crossings when the gates were down. There were 2 fewer persons killed at highway crossings, but 48 more were injured than in 1936. These increases were all motorists, the number injured jumping from 266 to 323 and the number of motorists killed increasing from 105 to 109.

These accidents include all accidents in which railway trains were involved and accidents on railway property. The classification of accidents used in the Bureau's vital statistics classes collisions between motor vehicles and trains as motor vehicle accidents; also provincial statistics of motor vehicle accidents class them as motor vehicle accidents and consequently adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor vehicle.

## Section 2.—Electric Railways.\*

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life. One important means by which this necessity is supplied throughout Canada is the electric street railway, operated by hydro-electric energy in the majority of cases.

Historical.—Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. Before many years their safety and convenience resulted in the discarding of the older systems. The first electric railway line in Canada and probably the first in North America, which ran between Windsor and Walkerville, was established early in June, 1886 (it is recorded that it was in active operation before June 11). An electric system 7 miles in length was opened at St. Catharines in 1887, using the double overhead trolley. The third electric railway in the Dominion was established in Victoria on Feb. 23, 1890, and the fourth commenced operation in Vancouver in June, 1890. These were followed by the completion of the Ottawa Electric Railway in 1891 and the electrification of the Montreal and Toronto systems in 1892. The street railways of other eastern cities were generally electrified during the 1890's, while in the newer western cities electricity was used from the commencement. In the cities of Eastern Canada, electric street railways are generally operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the street railways are owned and operated by the municipalities, a fact indicated in Table 28.

Many difficulties are met in operating the cars during the winter season, owing to the heavy falls of snow. This, however, has been overcome by the use of sweepers, scrapers, and ploughs. The single overhead trolley system has been found the most suitable and is in general use. During the past few years an increasing number of motor buses have been used; in 1924 only 48 were operated, but by 1937 the number had increased to 653. In 1936 the Montreal system secured 7 trackless trolley buses. These cars have pneumatic tires, require no track but use a second trolley wire instead of the steel rail for the return of the electric current.

In addition to street railways in the cities there are several systems serving suburban areas and also doing an inter-urban business, but this latter class of service is fast being supplanted by bus service. Indeed the development of motor vehicles,

\* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an annual report on Electric Railways in Canada.

while providing competition for all forms of rail transportation, has affected electric railways more seriously than steam railways. The dependence of the former upon short-distance passenger traffic renders them particularly susceptible to the competition of motor vehicles. Since the War, a number of electric railways have been abandoned, first main track mileage has declined 29 p.c. since 1925 while even in the larger cities electric railways have generally been obliged to increase their tariffs owing to the slow growth or actual decline of traffic.

### Subsection 1.—Equipment of Electric Railways.

Table 26 shows details of the track mileage and of the rolling-stock of electric railways in the four latest years. Statistics of the first and second main track mileage in each year since 1929 will be found in Table 29, and of the mileage operated by individual companies in Table 28.

26.—Mileage and Equipment of Electric Railways, calendar years 1934-37.

## Section 3.—Express Companies.\*

"Express service is an expedited freight service on passenger trains." But express companies do not own the means of performing their services; they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have had close relations with the railways practically from the beginning. A brief history of the various express companies will be found on pp. 611-612 of the 1926 Year Book.

Goods are sent by express for quick transit, so that express rates do not compete with freight rates. Thus in its first tariff the Dominion Express Co., in pursuance of its contract with the Canadian Pacific Railway, gave a rate of 2½ times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue. The rates are subject to the approval of the Board of Transport Commissioners.

**Express Company Operations.**—During 1937, three Canadian and one American express organizations operated in Canada. The Canadian Pacific Express Co., formerly the Dominion Express Co., is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean

\* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch issues an annual report on Express Statistics.

steamship lines of the parent company. The express business of the Canadian National system and Northern Alberta railway is handled by departments of the respective railways. The Railway Express Agency, Inc., operates over the Canadian sections of United States railways and over the route from Skagway to points in Yukon. These companies are all organized under powers conferred by Acts of the Dominion Parliament and their business consists in the expeditious shipment of valuable live stock, and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels and baggage, and the issue of money orders, travellers cheques, letters of credit, and other forms of financial paper. No statistics are available regarding the volume of traffic carried by express. Much of the traffic, of course, consists of parcels and small lots which would make statistical classification and measurement very difficult. However, there is also an important movement in car lots of live stock, fresh fish, fruit, vegetables, and other perishable commodities.

In the following tables the amounts paid by express companies to the carriers, i.e., railways, steamship lines, etc., for transporting the express matter, are shown under the heading "Express Privileges". Of the total of 62,634 miles operated in 1937, 42,195 were over steam railways, 280 over electric railways, 14,227 on ocean steamship services (mainly by the Canadian Pacific lines), 4,606 miles on inland or coastal steamboat routes, 490 by aircraft, and 835 miles over highways by motor trucks.

### 31.—Summary Statistics of Revenues and Expenses of Express Companies, calendar years 1929-37.

*Notes.*—Corresponding figures for the years ended June 30, 1911-18, are given at p. 673 of the 1927-28 Year Book, and for the years 1919-28 at p. 669 of the 1935 edition.

Calendar Year.	Gross Earnings.	Operating Expenses.	Express Privileges.	Net Operating Revenues.

**PART III.—ROAD TRANSPORTATION.\***

Since the recent development of highways in Canada has been almost exclusively for the purpose of providing roadbed for motor vehicle traffic, highways and motor vehicles have been treated since the 1937 edition as related features of transportation, instead of being dealt with in separate parts of the chapter as in former editions. After an introductory section which briefly summarizes provincial regulations regarding motor vehicles and motor traffic, the whole subject of road transportation is dealt with under the headings of facilities, finances, and traffic, similarly to the treatment of other forms of transportation.

**Section 1.—Provincial Motor Vehicle and Traffic Regulations.†**

**NOTE.**—In this Section, it is obviously impossible to include the great mass of detailed regulations in force in each province. The purpose in view is to provide only the more important general information. For detailed regulations for specific provinces the sources of information are given on pp. 661-662. See also "The Highway and Motor Vehicle in Canada", an annual bulletin published by the Dominion Bureau of Statistics and obtainable from the Dominion Statistician, price 25 cents.

**General.**—The licensing of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the Provincial Governments in Canada. Regulations which apply in all the provinces may be summarized as follows:—

**Operators Licences.**—The operator of a motor vehicle must be over a specified age (usually 16 years) and must carry a licence, obtainable only after prescribed qualification tests and renewable annually. Special licences are required for chauffeurs.

**Motor Vehicle Regulations.**—In general, all motor vehicles and trailers must be registered annually, usually for the calendar year, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only, for the back, in the case of trailers). A change in ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days) in any year to visiting private vehicles registered in another province or a State which grants

\* Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an annual report "The Highway and Motor Vehicle in Canada".

† The information in this Section has been revised from material provided by the officials in charge of the administration of Motor Vehicle and Traffic Acts and Regulations in the individual provinces.

reciprocal treatment. Further regulations require a safe standard of efficiency in the mechanism of the vehicle and in its brakes, and provide for its equipment with non-glare headlights and a proper rear light, with a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

*Traffic Regulations.*—In all the provinces, vehicles keep to the right-hand side of the road. Motorists are everywhere required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. While permissible speeds vary in different provinces, slower speeds are always required in cities, towns, and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motor vehicles must not pass a street car which has stopped to take on or discharge passengers except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and any driver involved must not leave the scene of accident until he has rendered all possible aid.

*Penalties.*—These ascend in scale from small fines for minor infractions of any of the regulations to a suspension of the operator's driving permit, impounding of the car or imprisonment for serious infractions, recklessness, driving without an operators licence, and especially for attempting, while intoxicated, to operate a motor vehicle.

There is such wide variation in the different provinces regarding the basis of licences and fees, the regulation of public commercial vehicles, details of traffic rules, speed, and the use of motor vehicles, that it is impossible even to outline them satisfactorily in the space available here. The most important features are summarized in the annual bulletin referred to in the headnote to this Section, p. 660. The authorities responsible for the administration of motor vehicles and the legislation governing vehicles and traffic are given below for each province.

**Prince Edward Island.**—*Administration.*—The Provincial Secretary, Charlottetown. *Legislation.*—The Highway Traffic Act (c. 2, 1936) and amendments.

**Nova Scotia.**—*Administration.*—Motor Vehicle Branch, Department of Highways, Halifax. *Legislation.*—The Motor Vehicle Act (c. 6, 1932) and amendments and the Motor Carrier Act (c. 78, R.S.N.S. 1923) as amended by c. 29, 1937.

**New Brunswick.**—*Administration.*—Motor Vehicle Branch, Department of Public Works, Fredericton. *Legislation.*—The Motor Vehicle Act (c. 20, 1934).

**Quebec.**—*Administration.*—Motor Vehicle Bureau, Provincial Revenue Offices, Treasury Department, Quebec. *Legislation.*—The Motor Vehicle Act (c. 35, R.S.Q. 1925) and amendments.

**Ontario.**—*Administration.*—Motor Vehicles Branch, Department of Highways, Toronto. *Legislation.*—The Highway Traffic Act. (c. 288, R.S.O. 1937) and amendments.

**Manitoba.**—*Enforcement.*—Attorney General. *Registrations.*—Treasurer, Revenue Office, Winnipeg. *Legislation.*—The Highway Traffic Act (c. 19, 1930) and amendments.

**Saskatchewan.**—*Administration.*—Motor Licence Division, Provincial Tax Commission, Revenue Building, Regina. *Legislation.*—The Vehicles Act (c. 68, 1935) and amendments.

**Alberta.**—*Administration.*—Motor Vehicle Branch, Department of the Provincial Secretary, Edmonton, and Alberta Highway Traffic Board, Edmonton. *Legislation.*—The Vehicles and Highway Traffic Act (c. 31, 1924) and amendments, and Public Service Vehicles Act (c. 91, 1936).

**British Columbia.**—*Legislation.*—The Motor Vehicle Act (c. 195, R.S.B.C. 1936) and the Highway Act (c. 116, R.S.B.C. 1936) and amendments. Administration of the Motor Vehicle Act and enforcement of the Highway Act is vested in the Commissioner of Provincial Police, Victoria, while administration of the Highway Act is under the Administrator, Highway Transport Branch, Vancouver.

**Yukon.**—*Administration.*—Territorial Secretary, Dawson, Yukon. Information regarding regulations may also be obtained from the Lands, Parks, and Forests Branch, Department of Mines and Resources, Ottawa. *Legislation.*—The Motor Vehicle Ordinance, No. 14, 1914, and amendments.

## Section 2.—Roads and Vehicles.

The facilities for road transportation are dealt with in two subsections devoted, respectively, to roads and highways and to motor vehicles.

### Subsection 1.—Roads and Highways.

**Historical.**—A brief description of the early colonization roads in Canada was given at p. 733 of the 1934-35 Year Book.

**Recent Highway Development.**—With the rapid increase in the percentage of motor-car owners to population (see pp. 663-664) the demand for improved roads has become more and more insistent since the War. Furthermore, the advantages to be gained by attracting touring motorists have been a powerful incentive to governing bodies to improve trunk roads and scenic highways within their jurisdictions. One sphere where the motor car has been of special economic advantage has been in rural areas, where its speed and economy are a great improvement over the old horse-drawn vehicle. As a result, in the Census of 1931 every second farm reported a farm-owned motor vehicle (1.96 farms per farm-owned motor vehicle). This widespread rural ownership of automobiles has in turn brought about an improvement of secondary rural roads.

The table of road mileages, p. 663, includes all roads under provincial jurisdiction and local roads in the Maritime Provinces and Ontario and estimates of local roads in the four western provinces. There are great stretches of country in the northern portions of Quebec, Ontario, the Prairie Provinces, and British Columbia with very few people and very few roads, but the southern portions are well supplied. The Trans-Canada Highway is now under construction, running from the Atlantic to the Pacific oceans entirely in Canadian territory.

Statistics of urban streets have been collected since 1935 from cities and principal towns; the small municipalities omitted would increase the totals very little. For 1937 the total number of miles of street reported was 11,411, composed of: 1,777 miles of sheet asphalt; 756 miles of portland cement concrete; 1,212 miles of bituminous macadam, concrete, and other bituminous surfaces; 534 miles of water-bound macadam; 2,508 miles of gravel and crushed stone; and 763 miles of other surfaces; making a total of 7,550 miles of surfaced streets and 3,861 miles of earth roads. These figures for urban streets or roads are not included in the table of highway mileage which follows.

## 1.—Classification of Highway Mileage, by Provinces, 1937.

NOTE.—The date for which the mileage was reported is indicated for each province. The figures for Canada are the sums of the mileages so reported. Urban streets are not included in the figures.

<sup>1</sup> None reported.<sup>2</sup> Incomplete, see footnote 1.<sup>3</sup> Includes some water-bound macadam.

## Subsection 2.—Motor Vehicles.

**Registration.**—The increase in the use of motor vehicles in Canada has been very rapid; this is shown by the statistics of Table 2. In Table 3 the numbers of motor vehicles registered in 1936 and 1937 are given by provinces, classified as passenger cars, commercial cars or trucks, motor buses, and motor cycles.

The average population per vehicle registered was 8.4 in 1937. Canada ranked fourth in this respect, the United States being first with 4.3. On the basis of the total registration of 1,319,702, only four countries had larger numbers in 1937, viz., United States, United Kingdom, France, and Germany.

## 2.—Numbers of Motor Vehicles Registered in Canada, by Provinces, calendar years 1929-37.

NOTE.—Registrations given here include passenger cars, trucks, buses, motor cycles, service cars, etc., but not trailers or dealer licences. Figures for the years 1904-28 are given at p. 668 of the 1937 Year Book.

Year.	P.E. Island.	Nova Scotia.	New Brunswick.	Quebec.	Ontario.	Manitoba.	Saskatchewan.	Alberta.	British Columbia.	Total. <sup>1</sup>

**Apparent Consumption of Automobiles in Canada.**—The apparent consumption of automobiles in Canada in any year may be computed by deducting the number exported from the sum of the production and imports. Prior to 1925 the figures of apparent consumption do not show a pronounced trend but between 1925 and 1929 they increased substantially. From 1929 to 1932 the decrease was rapid and continuous but was practically halted in 1933, in which year production showed some improvement but mainly on account of the export demand. In 1937 the apparent consumption showed an increase of 39 p.c. over the figure for 1936. Statistics regarding retail sales and sales financing of motor vehicles in Canada appear at pp. 614-617 of this volume.

#### 4.—Apparent Consumption of Automobiles in Canada, 1926-37.

NOTE.—Figures for the years 1917-25 will be found at p. 673 of the 1938 Year Book.

Year.	Production.	Imports.	Total Supply.	Exports.	Re-Exports.	Total Exports.	Apparent Consumption.

### Section 3.—Finances of Road Transportation.

The cost of road transportation to the people of Canada might be summarized under the following headings: expenditures on roads and highways; expenditures of individuals and corporations upon owned motor vehicles; and expenditures for freight and passenger services rendered by motor-vehicle public carriers such as taxi, bus, and motor transport companies. Since expenditures on roads and highways are made almost entirely by governmental bodies, fairly complete statistics are available regarding them, but, owing to the tremendous number of individuals and organizations which would have to be canvassed and the difficulties involved, complete statistics are not available under the other two headings.

An estimate may be made of the value of motor vehicles in use. Vehicles registered in 1937 numbered 1,319,702 (Table 2, p. 663). Vehicles estimated as purchased in 1937 numbered 413,043, valued at \$245,278,000. Used cars included in these purchases had an average value of \$323. Subtracting purchases in 1937 from total registrations in 1937, there remained 905,659 cars purchased by their owners in previous years, which, at an estimated average value of \$200, would be worth \$181,000,000, giving a total value of \$426,000,000 for all motor vehicles registered in 1937.

The annual expenditure for the purchase of new motor vehicles is given for the year 1930 and since 1932 in the chapter on Internal Trade at p. 615. Unfortunately, this series as yet covers only a few years, several of which were years of depression, so that its significance will increase with a longer and more representative period. The retail value of new cars sold in 1932 was \$45,261,000, while in 1937 it had risen to \$149,170,527. The average for the seven years, 1930 and 1932-37, was \$95,094,000.

Some indication of the annual expenditures for the servicing of motor vehicles may be obtained from the statistics of retail merchandising appearing on pp. 610-611. Sales of gasoline are given on p. 670. No statistics are available regarding the earnings of motor transport and bus companies.

**Expenditures on Roads and Highways.**—Roads in Canada, except in the Territories and the National Parks are under the jurisdiction of provincial and municipal authorities. The Dominion Bureau of Statistics has just completed a compilation of expenditures on highways, bridges, ferries, and foot paths, for the period 1919-37. This compilation includes expenditures by the Dominion on roads, bridges, etc., in National Parks, and on unemployment road projects, by the provinces, and by rural municipalities in Ontario, and covers the bulk of the expenditures on rural roads and on bridges and ferries, which are links in the road systems. The mileage of improved highways prior to 1919 was relatively small, the present extensive provincial highway systems having been almost entirely developed since the War to meet the requirements of motor traffic. Prior to 1919 roads were under the jurisdiction and maintenance of the municipalities in which they lay. However, the old gravel and water-bound macadam roads formed foundations in many places for new concrete and bituminous surfaces applied later.

The total expenditures during these nineteen years by these authorities were: for construction \$780,571,155, and for maintenance \$326,401,275, expenditures for plant and general items being divided between construction and maintenance on a *pro rata* basis, where not allocated by the authorities.

The details of these expenditures are shown in Table 5. In addition to the Dominion expenditures shown as such, subsidies were granted to the provinces, \$20,000,000 under the Canada Highways Act, 1919, and \$42,526,662 under unem-

ployment Acts, 1930 to 1937, including \$19,145,258 for the Trans-Canada Highway. The table does not include expenditures by urban municipalities on streets and sidewalks, which have been collected only since 1935, and for the three years 1935-37 amounted to \$34,351,382 for construction and maintenance. The expenditures on these streets during the year 1937 amounted to \$3,881,344 for construction and \$8,333,779 for maintenance. Of the total of \$12,215,123, the sum of \$9,210,050 was expended on roads, \$1,032,697 on bridges and ferries, and \$1,546,605 on sidewalks and footpaths.

\* Not reported.

\* Not including provincial expenditures for P.E.I., which were not reported.

\* Includes \$718,446 provincial operating expenses of bridges and ferries in Nova Scotia.

The foregoing table summarizes expenditures on roads for the whole period 1919-37, while Table 6 shows such expenditures during individual recent years. Provincial expenditures included here under 1937, for example, are those for their respective fiscal years, which ended on the dates indicated in Table 1, p. 663.

6.—Capital, Maintenance, and General Expenditures on Provincial Highways or Provincially Subsidized Highways in Canada, calendar years 1933-37.

<sup>1</sup> No report.

<sup>2</sup> Total expenditures divided between construction, maintenance, and general  
Does not include Prince Edward Island.

**Provincial Funded Debt Incurred for Highways.**—By far the greater portion of the highway expenditures has been made by the provinces and consequently must be paid out of provincial taxes. Payment for much of the construction costs has been deferred and this has accounted for part of the rapid increase in provincial funded debt since 1919. In 1919 the net funded debt of all the provinces was \$290,748,592; by 1937 it had increased to \$1,568,046,003 (see Table 35, p. 917) and the portion chargeable to highways was \$569,719,611 or almost double the net debt for all purposes in 1919. As already explained on p. 662, the provincial systems of modern motor roads have been almost entirely a post-War development and prior to 1919, there were practically no provincial expenditures on highways.

Table 7 shows the highway debt of the provinces outstanding at the ends of their respective fiscal years approximating the calendar years 1935-37, and the annual payments thereon during the same three years.

#### 7.—Provincial Government Funded Highway Debt and Annual Charges Thereon, 1935-37.

NOTE.—Provincial Governments report for their fiscal years ended at various dates. For these dates in the latest year, see Table 1, p. 663.

**Provincial Government Revenue.**—The taxation of motor vehicles, garages, chauffeurs, etc., is becoming a lucrative source of Provincial Government income. In every province the following licences or permits, duly issued by the provincial authorities, are required: motor vehicles of all kinds, trailers (in all provinces except Alberta), operators or drivers, paid chauffeurs, dealers, garages, and gasoline and service stations. A sales tax on gasoline is also levied by each province. The following table shows the provincial revenue for the years 1936 and 1937, indicating, at the same time, the more important sources from which it is derived. Dominion Government revenues from import duties, excise, and sales taxes are not included.

## 8.—Provincial Revenues from the Taxation of the Distribution and Operation of Motor Vehicles, calendar years 1936 and 1937.

NOTE.—See the headnote to Table 7.

## Section 4.—Road Traffic.

Up to the present the motor vehicle has affected passenger traffic more than freight traffic of the steam and electric railways. This diversion of passenger traffic has been effected largely by the private automobile, although the motor bus is rapidly becoming more important and now operates between all large centres. The motor truck also carries a considerable amount of freight, although no statistics showing the tonnage handled are as yet available. The difficulties of collecting statistics from the very large number of unorganized operators concerned are obvious.

Widely differing opinions are held regarding the extent to which the motor vehicle has cut into railway traffic.\* A definite conclusion cannot be reached until reliable statistics regarding motor vehicle traffic are available. While undoubtedly the passenger motor vehicle now carries a certain amount of passenger traffic which would otherwise be carried by steam or electric railways, the error should be avoided

\* Counsel for the railways before the Transport Committee of the Senate of Canada in 1933 presented arguments showing a serious loss of revenue by the railways from motor vehicle competition. On the other hand, in *Automobile Facts and Figures, 1935*, published by the Automobile Manufacturers' Association, estimates of railway and motor traffic are given which, in the field of freight movement, rather minimize the seriousness of the motor truck competition, if conditions of motor traffic in Canada may be assumed to be similar to those of the United States.

of considering all the passenger movement by motor vehicles as a loss to the railways. Much of that movement is due to the convenience and cheapness of motor vehicle travel and would not take place at all under less favourable circumstances.

Similar considerations apply also, though less importantly, to freight moved by motor trucks. Part of the short-haul truck traffic has displaced the horse-drawn vehicle rather than the railway. Furthermore, traffic diverted from the railways to motor vehicles has been offset to some extent by new traffic for the railways created by the automobile industry, consisting of raw and finished products of manufacture, motor fuel and oil, and materials for construction and maintenance of roads suitable for motor travel.

On the other hand a phase of this new competition with railway transportation has been its effect on freight rates. The railway rate structure took into consideration the value of the goods handled, *i.e.*, bulk and low-value commodities were carried at relatively low rates, while manufactured and high-class commodities were at higher rates, the difference in rates having little relation to the difference in costs of transportation. Such a structure allowed raw materials to be moved cheaply and the railways were compensated by higher rates on the finished commodities. The motor truck is changing this; the motor truck operator carries these high-class commodities at rates closer to actual costs and does not attempt to carry raw materials except in special cases. His costs are reduced by a right-of-way being supplied for which he pays only a part of the cost and, if his rates are much above the actual cost, the manufacturer can quite easily supply his own transportation. Some branch lines of the railways are practically deserted except for a short time each year when snow interferes with motor vehicle operation. Consequently, railway losses include both losses from freight diverted and also from reductions in rates for high-class freight in attempts to retain such traffic without compensating increases in low-class freight rates.

**Gasoline Consumption.**—All provinces require retail sales of gasoline to be reported and a tax is imposed on all gasoline consumed by motor vehicles using the highways and streets and also on that used for an increasing number of other purposes. The taxable gasoline is, however, still largely consumed by motor vehicles and indicates in a general way the increase or decrease in the use of motor vehicles. Net sales are the differences between the total or gross sales reported and the quantities on which the tax is refunded in whole or in part, or on which the tax is not imposed at the time of sale.

**Motor Vehicle Accidents.**—Motorists are required to report accidents but comprehensive statistics are not available for all provinces. The Vital Statistics Branch of the Bureau of Statistics compiles statistics on all deaths from motor vehicle accidents and these are shown in Table 10. A direct comparison of such statistics between the provinces is of little value due to differences in size, population, motor vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor vehicles has also been tabulated. These data still give no weight to differences in use of motor vehicles, differences in climate, roads, tourist cars, etc., all of which are factors in accidents.

Table 11 shows the numbers of persons killed or injured in automobile accidents as reported by the motor vehicle branches of the Provincial Governments. It is quite possible that the latter reported some persons as injured who subsequently died from the injuries and these would be included in the fatalities of the vital statistics shown in Table 10; also accidents that occurred late in December and resulted in deaths would be charged to December by the provincial authorities but to January of the next year in the vital statistics. Consequently, these data do not agree.

**10.—Deaths Resulting from Motor Vehicle Accidents in Canada, by Provinces, calendar years 1926-37.**

**PART IV.—WATERWAYS.\***

Under this heading the statistics relating to shipping, aids to navigation, canals, and harbours are brought together because they are all essential and integral parts of the facilities for water-borne traffic; these facilities work together to promote the expeditious handling of the same freight without transshipment intervening. Under this form of treatment all the facilities for water-borne traffic are first presented, then the cost or other available financial statistics and, finally, figures which give

\* Information and statistics dealing with the indicated subject have been supplied as follows: aids to navigation, harbours, administrative services, and Government merchant marine, by the Department of Transport; graving docks and part of the financial statistics, by the Department of Public Works; Panama Canal, by the Governor of the Panama Canal Zone; other canal traffic, and statistics of shipping, by the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

some indication of the traffic handled. The general aim is to present a rounded picture of water transportation, rather than details of the activities of Government Departments dealing with certain phases of it.

**The Canada Shipping Act.**—Legislation regarding all phases of shipping was consolidated under the Canada Shipping Act (c. 44, 1934). The Act was a sequel to the passage of the Statute of Westminster in 1931, under which the Parliament of Canada accepted full responsibility for the regulation of Canadian shipping. The Canada Shipping Act was a comprehensive piece of legislation and constituted, in fact, the incorporation in the shipping law of Canada of features of international agreements and of British and previous Canadian legislation. A brief summary of the Act is given at pp. 681-683 of the 1938 Year Book.

### Section 1.—Equipment and Facilities.

The developments and equipment to facilitate water traffic are classified under the sub-headings of shipping, aids to navigation and miscellaneous works, canals, and harbours. A subsection is added giving figures of administrative activities regarding the pilotage service, steamship inspection, personnel, and accidents to shipping.

#### Subsection 1.—Shipping.

Although a large part of the water-borne traffic, especially inland and coast-wise, is carried in ships of Canadian registry, the commerce of the Dominion is by no means entirely dependent upon Canadian shipping since all waterways, including canals, and inland lakes and rivers, are open upon equal terms, except in the case of the coasting trade, to the shipping of all countries of the world.

**Canadian Registry.**—Statistics are given below showing the numbers and tonnages of vessels on the Registry of Shipping of Canada, and of vessels built in Canada and vessels sold to other countries. Under Part I of the Canada Shipping Act, every ship that falls under the definition of "British ship" given in Sec. 6 of the Act and is controlled, as to management and use, in Canada, must, unless registered elsewhere in the Empire, be registered in Canada. An exception is made in the case of ships not exceeding 10 tons register and engaged solely in coastal or inland navigation. A ship (whatever her qualification for British registry) which is not registered in any part of His Majesty's dominions, is not entitled to the privileges accorded to British ships. Vessels about to be built *may* be recorded, and vessels being built or equipped *must* be recorded, by a registrar of British ships under the Act. The procedure for the registration in Canada of British ships and the issuance of certificates is covered in Secs. 9-36. Secs. 64-70 govern the registry of alterations (or the registering anew if such be required) and lay down penalties for non-compliance with the requirements. The conditions governing transfer of registry are also laid down.

For a record of the number and tonnage of ships engaged in the carrying trade of Canada, see the tables under Section 3 (pp. 690-694) of this Part of the chapter. The tables are included there under traffic statistics because they relate more directly to traffic and services than merely to the shipping available. For an account of the shipping services operated by the Dominion Government, see p. 688.

### 1.—Numbers and Net Tonnages of Vessels on the Registry of Shipping of Canada, by Provinces, as at Dec. 31, 1923-37.

### Subsection 2.—Aids to Navigation and Miscellaneous Works.

Included under this heading are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson bay and strait, the St. Lawrence river and gulf, the inland rivers and lakes and at the entrances to harbours—a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described under administrative services on p. 680. As a further aid to safe navigation, there are chains of radio signal and direction-finding stations which are described under that section of this chapter dealing with radiotelegraphy, on pp. 721-723.

### 3.—Marine Danger Signals Maintained in Canada, fiscal years 1927-33.

NOTE.—In addition to the aids to navigation listed, approximately 9,268 unlighted buoys, balises, dolphins, and beacons are maintained. The figures are supplied by the Department of Transport.

A great deal has been done to improve navigable waters by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Probably the largest task of this nature has been the St. Lawrence River Ship channel. An extensive floating plant is in service to maintain and improve the deep-water channel from Montreal to the sea for ocean-going shipping. Incidental to these developments of navigable waters are works to guard shore lines and prevent erosion, and also the control of roads and bridges which cross navigable channels. In order to prolong the season of navigation in important waters which freeze over in winter, ice-breaking operations are carried on at both the beginning and end of winter. This is particularly the case in connection with sea-going shipping from Montreal.

#### 4.—Duration of the Season of Open Navigation in the St. Lawrence Ship Channel, calendar years 1911-38.

NOTE.—For the years 1882-1910, see Canada Year Book 1934-35, p. 756.

<sup>1</sup> "Channel Open" means it can be navigated although there may be floating ice still in the river.

#### Subsection 3.—Canals.

Before the period of extensive railway construction which commenced for Canada in the 1850's, the water routes, more especially the St. Lawrence, the Great Lakes, and the Ottawa, were the chief avenues of transportation. These routes were interrupted at certain points, necessitating portages, and to eliminate the toil of unloading, transporting, and reloading at the portages the canals of Canada were constructed.

The earliest mention of canals in Canada is in connection with the Lachine canal, begun by early French settlers in 1700. Only after the conquest of Canada by the British, however, were improvements of the main water routes made. In the early part of the 19th century increased internal and foreign trade and the introduction of steam navigation resulted in more attention being given to this work. Although some of the early canals were constructed primarily for military purposes, they soon became essential to the commercial life of the country. However, since the development of railways in Canada, and even more since the growth of motor vehicle traffic, the canals, with the exception of those on the Great Lakes and St. Lawrence river, are playing a minor part in the transportation activities of the country.

There are in Canada six canal systems, under the control of the Dominion Department of Transport, which are connected with the Atlantic ocean by navigable routes, in addition to a number of other minor locks and canals, under the control of the Dominion Department of Public Works or other authority, to facilitate local navigation on disconnected lakes and rivers. The six main systems consist of the canals: (1) between Port Arthur or Fort William and Montreal; (2) from Montreal to the International Boundary near lake Champlain; (3) from Montreal to Ottawa; (4) from Ottawa to Kingston and Perth; (5) from Trenton, lake Ontario, to lake Huron (not completed); and (6) from the Atlantic ocean to Bras d'Or lakes, Cape Breton. By means of these canals, total waterways of 1,890 miles have been opened to navigation, the actual mileage of canals being 508-67.

A detailed description of the individual canals is given on pp. 626-629 of the 1926 Year Book. Summary statistics of their length and lock dimensions are given in Table 5.

<sup>1</sup> Navigable depths are occasionally less at times of extremely low water. <sup>2</sup> Minimum depth between locks 25 ft. <sup>3</sup> Minimum depth of navigable channels is 4-5 ft. <sup>4</sup> Minimum depth of canal with lake Ontario at elevation 244 feet above sea-level is 11 ft. <sup>5</sup> The depth of canal prism is 17 ft. <sup>6</sup> Under the control of the Department of Public Works.

**Subsection 4.—Harbours.**

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the seaboard and inland ports. Much equipment designed to facilitate interchange movements is provided by the harbours. This harbour equipment includes the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil, grain, etc. Equipment may include cold storage, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks, and, in the main harbours, dry-dock accommodation.

Eight of the principal harbours of Canada are under the administration of the National Harbours Board, as explained below. Seven other harbours are administered by commissions which include municipal as well as Dominion Government appointees, while the remainder are administered by harbour masters directly under the authority of the Department of Transport.

In addition to the harbour facilities owned by the National Harbours Board or other operating commission, at most ports there are dock and handling facilities owned by private companies such as railways, pulp and paper, oil, and sugar indus-

tries, etc. At a number of ports there are also graving docks which are dealt with separately below.

**National Harbours Board.**—Prior to October, 1935, the seven national harbours of Canada—Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, and Vancouver—were under the management and control of separate Harbour Commissions, each consisting of three persons appointed from the immediate locality. Orders in Council were passed on Oct. 31, 1935, accepting the resignation of the individual Harbour Commissions, and other Orders in Council passed, as of the same date, vesting in a single Board of three Harbour Commissioners the powers and responsibilities inherent in each of the seven former commissions. In this way effect was given to the more important recommendations of Sir Alexander Gibb, following his survey of national harbours in 1931.

During the 1936 session of Parliament, the individual Acts relating to the administration of these harbours were repealed and a single uniform Act (c. 42) substituted, placing the general direction and control of the national harbours referred to under the National Harbours Board, leaving the local administration in the hands of a port manager responsible to the Board. This legislation became effective on Oct. 1, 1936. An Order in Council was passed Feb. 27, 1937, transferring Churchill harbour (including the grain elevator) as well as grain elevators at Prescott and Port Colborne, to the National Harbours Board for administration, management, and control.

In pursuance of the legislation referred to, the National Harbours Board, with headquarters at Ottawa, is responsible, under the Minister of Transport, for the administration of the harbours and grain elevators referred to above. Engineering works in the several harbours are carried on under the direct control of the Chief Engineer of the Board assisted by an engineering staff at headquarters and engineers on the works. The Board has local representatives at various harbours with title of port manager or superintendent. Accounting for each harbour is carried out by Treasury officers under the direction of the Comptroller of the Treasury and earnings at any harbour cannot be diverted for use elsewhere. All revenues and expenditures are subject to audit by the Auditor General of Canada.

In the statement below, a summary in tabular form is given of the most important facilities for the expeditious handling of cargo at six of the principal ports of Canada which are under the control of the National Harbours Board. The facilities include those under the control of other organizations as well as those of the Board at these ports.

FACILITIES OF SIX OF THE PRINCIPAL HARBOURS OF CANADA, AS AT DEC. 31, 1938.

<sup>1</sup> There is no harbour railway at Halifax but there are the following railway facilities: railway line at Dartmouth, 30.66 miles; storage yards, 63.67 miles; private sidings, 11.72 miles. <sup>2</sup> Excluding Government piers. <sup>3</sup> Not reported.

**Public Harbours and Harbour Masters.**—In other ports, the Governor in Council, as formerly, may create public harbours by proclamation, as provided by Part X of the Canada Shipping Act (c. 44, 1934), and the Minister of Transport may, from time to time, appoint harbour masters for these ports, who will administer them under rules and regulations approved by the Governor in Council. Remuneration of these harbour masters will be from fees levied on vessels under the terms of the Act.

**Graving Docks.**—The Department of Public Works of the Dominion Government has constructed five dry docks, dimensions of which are shown in Table 6. The dock at Kingston, Ont., is under lease to the Kingston Shipbuilding Company, while the old Esquimalt Dry Dock was temporarily transferred to the Department of National Defence on Nov. 1, 1934. This transfer is to be effective until such time as the dock is commercially required, when it will be returned to the control of the Department of Public Works. The large dry docks at Lauzon, Que., and Esquimalt, B.C., can be divided into two parts and were built at a cost of approximately \$3,850,000 each. Under the Dry Dock Subsidies Act, 1910 (9-10 Edw. VII, c. 17), several docks have been subsidized by payments of 3 to 4 p.c. per annum on the original cost for a given number of years, as shown in Table 7.

#### 6.—Dimensions of Graving Docks Owned by the Dominion Government.

Location.	Length.	Width at—			Depth of Water on Sill.	Rise of Tide.

Port Arthur, Ont.....	708-3	77-6	16-2	1,258,050	3 p.c. for 20 years.
Montreal, Que. (floating dock), <i>Duke of Connaught</i> .....	601	100	31-5	3,000,000	3½ p.c. for 35 years.
Prince Rupert, B.C. (floating dock).....	600	100	32	2,199,168	3½ p.c. for 35 years.
Saint John, N.B.....	1,164-5	133	40	5,500,000	4½ p.c. for 35 years.
North Vancouver, B.C. (floating dock).....	556-5	98	28	2,500,000	4½ p.c. for 35 years.

<sup>1</sup> Subsidy payments have been completed.

### Subsection 5.—Government Administrative Services.

The services covered by this subsection are those dealing with the pilotage service, steamship inspection, sea-faring personnel, and accidents to shipping.

**Pilotage.**—This service functions under the provisions set forth in Part VI of the Canada Shipping Act (c. 44, 1934). The necessity for pilots is that qualified men may offer their services to the stranger in local and confined waters. At the same time, pilotage might also be considered as a method of insurance—the fewer accidents, the cheaper insurance rates will be.

There are 40 pilotage districts in Canada, eight of which, namely, Sydney, Halifax, Saint John, Quebec, Montreal, St. Lawrence-Kingston-Ottawa, British Columbia, and Churchill, are under the Minister of Transport as Pilotage Authority. The Pilotage District of New Westminster, B.C., is under a local authority. The other districts function under local Pilotage Authorities appointed by the Governor in Council under the provisions of the Canada Shipping Act.

Table 8 shows the number and aggregate tonnage of ships using pilots for the major Canadian ports during the two latest fiscal years. Corresponding statistics are not available for the St. Lawrence-Kingston-Ottawa district.

8.—Details of Pilotage, by Districts, fiscal years 1937 and 1938.

**Steamship Inspection.**—The Steamship Inspection Service provided for under Part VII of the Canada Shipping Act, 1934, consists of a headquarters staff, at Ottawa, and staffs of inspectors at the principal ocean and inland ports. The Act provides for a Board, known as the Board of Steamship Inspection, which decides on questions arising out of the administration of the Act. The Steamship Inspection Service is responsible for the administration and carrying out of the provisions of Part VII of the Act respecting the periodic inspection of power-driven ships and the issue of inspection certificates, the assignment of load lines, the conditions under which dangerous goods may be carried in ships, and the protection against accident of workers employed in loading or unloading ships. The Steamship Inspection Service is also responsible for the administration and carrying out of the provisions of Part II of the Act relating to the certification and employment of marine engineers.

<sup>1</sup> Includes 328 lives lost in the *Princess Sophia* disaster.

**Section 2.—Financial Statistics of Waterways.**

The principal statistics available to aid in making an appraisal of the cost of water-borne traffic consist of the record of public expenditures on waterways. Such expenditures are classified as investments which are shown in Table 12, and as annual expenditures for maintenance and operation, shown in Table 13, which are partly balanced by the revenues shown in Table 14. Undoubtedly, in so far as capital expenditures for the permanent improvement of waterways are concerned, those of the Dominion Government cover the major part. There has been some

expenditure by municipalities on local harbour facilities, while private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian National (West Indies) Steamships, as shown at p. 689, has come almost entirely from private sources such as railway companies, steamship companies, industrial corporations, and private individuals. No figures are available regarding private investments in shipping except those appearing in the reports of the operating companies which cover only a portion of the field. Neither are there statistics showing the revenues of ship operators from passenger and freight traffic. In the case of railways, statistics show fairly completely: (1) the investment in plant, roadbed, etc.; (2) the revenues of the railways or the annual payment by the people of Canada for the passenger and freight transportation; and (3) the annual deficits which are also indirectly paid by the public whether as investors or taxpayers. No such picture can be given for water-borne traffic.

#### **Subsection 1.—Capital and Operation Expenditures of Waterways.**

In the following statement of investments by the Dominion Government, no amounts have been written off as a result of the destruction or abandonment of property such as the first, second, and third Welland canals and the Port Nelson terminal. Neither have the capital expenditures been reduced by allowances for depreciation. However, in the case of ports and facilities under the control of the National Harbours Board and other harbour commissions, allowance has been made for depreciation, obsolescence, etc., so that the figures given represent approximately present appraisal values. No figures are available for the Hamilton Harbour Commission and commissions controlling a number of other smaller ports. For those ports and harbours not under the control of incorporated commissions, capital expenditures, made by the Department of Public Works, are included in the classification "Other harbours, rivers, construction, improvements, etc." but while expenditures have been distributed by provinces, no separation for individual ports or works has been made. Sydney, Sorel, Fort William, and Alberni are important ports for which improvement costs are included under their respective provincial totals.

The classification as between capital and operation expenditure is very difficult to make with respect to certain of the items, and cannot be regarded as exact for the long period. This difficulty applies particularly in the case of dredging where the distinction between the removal of accumulating silt and the deepening of a channel is largely one of opinion. For this reason the dredging account of the Department of Public Works is not included in the total investments of Table 12, but is given at the end of the table since a large part of the work has been undoubtedly of the nature of a permanent improvement. This dredging account does not, however, include the total expenditures for dredging, as some dredging expenditures have been distributed with other items such as the St. Lawrence Ship channel, canals, and harbours. Both capital and operation costs include expenditures by the former Departments of Marine and of Railways and Canals, now the Department of Transport, and by the Department of Public Works, while the capital expenditures of the National Harbours Board and other independent commissions are also included in Table 12.

### 12.—Capital Expenditures of the Dominion Government<sup>1</sup> on Waterways and Harbours to Mar. 31, 1938.

NOTE.—The dredging expenditures by the Department of Public Works shown separately at the end of this table cannot be accurately divided between capital and maintenance expenditures. However, since they have been largely for permanent improvements, they are shown here but are not included in the grand totals of capital expenditure. Other dredging expenditures are included in the various items.

<sup>1</sup> Includes some expenditure not included in the 1938 Year Book and by authority other than the Dominion Government. <sup>2</sup> These are the fixed assets as reported by the National Harbours Board at Dec. 31, 1938. <sup>3</sup> Includes "Income expenditure" for buildings and permanent improvements to canals. <sup>4</sup> Not reported. <sup>5</sup> As reported by the Toronto Harbour Commission in their latest published report, that for Dec. 31, 1935. <sup>6</sup> Loans of the Dominion Government to the New Westminster Harbour Commission. Most of the facilities in the harbour are provided by commercial organizations.

Expenditures for maintenance and operation together with the revenues of a number of the principal harbours and terminal elevators have been eliminated from Tables 13 and 14 and shown separately in Table 15 since these facilities are now under the control of the National Harbours Board or other commission.

**Shipping Subsidies.**—The information given in the following table formerly appeared under the part of this chapter dealing with the Post Office but is now shown here because these subsidies are granted to assure the required steamship services rather than for the mere carriage of mails.

**16.—Mail Subsidies and Steamship Subventions, fiscal years 1936-38.**

**NOTE.**—The figures in the following table were supplied by F. E. Bawden, Director of Steamship Subsidies, Department of Trade and Commerce. Such data appear annually in the report of the Auditor General and represent the amounts paid in connection with contracts made under statutory authority by the Department of Trade and Commerce for trade services, including the conveyance of mails.

### Subsection 2.—Merchant Marine Services Operated by the Canadian Government.

**Canadian Government Merchant Marine.**—The circumstances under which the Canadian Government became possessed of and responsible for the operations of a merchant marine are explained on p. 776 of the 1934-35 Year Book.

This merchant fleet reached its greatest development in 1924 and at Dec. 31 of that year numbered 57 vessels of a total deadweight tonnage of 353,450, representing an original capital investment of \$79,661,921. On June 8, 1936, the 10 remaining vessels were disposed of for a consideration of \$389,444. A table showing the operating results from 1919 to 1936 appeared at p. 689 of the 1937 Year Book.

**Canadian National (West Indies) Steamships.**—In conformity with the Canada-West Indies Trade Agreement Act of 1926 (16-17 Geo. V, c. 16), the Dom-

ion Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships, Ltd. The service is provided by a fleet of eleven vessels of a total deadweight tonnage of 62,761. Five of these craft, known as the 'Lady' ships, were specially constructed for passenger service on this route, while the remaining six vessels previously formed part of the Canadian Government Merchant Marine fleet, and were taken over by the Canadian National (West Indies) Steamships, Ltd., for operating purposes, under entrusting agreements with the respective companies that owned the ships. The investment in vessels at Dec. 31, 1937, amounted to \$10,954,693, mainly made up of the construction cost of the 'Lady' ships and the present-day valuation of the other six ships, together with the cost of conversion for use in the West Indies service of three of the latter. The financial results of the operations of the Canadian National (West Indies) Steamships, Ltd., have been as follows:—

Calendar Year.	Operating Revenues.	Operating Expenses.	Operating Net.	Depreciation.	Interest.	Book Loss.

### Section 3.—Water Traffic and Services.

Complete statistics, comparable to those given for the railways, showing all the freight carried by water, are not available. Indeed it would be very difficult to obtain a record of the traffic handled by small independent coasting vessels. However, there is a record of the number and tonnage of ships calling at all ports and of all the cargoes which pass through the canals.

#### Subsection 1.—Shipping.

Canadian shipping may be divided into three classes: (1) ocean or sea-going shipping; (2) inland or rivers and lakes international shipping (exclusive of ferriage); and (3) coasting trade or coastwise shipping. Ocean shipping covers the sea-going vessels arriving or departing from Atlantic and Pacific Coast ports, including St. Lawrence River ports up to Montreal. Inland international shipping is the term used to cover shipping between Canadian and United States ports on the Great Lakes and international rivers, and on lakes and rivers accessible to shipping from United States ports such as the Ottawa, Rideau, Trent, etc. (Ferriage is, however, excluded from this and other classes of shipping.) Coastwise shipping or the coasting trade covers shipping between one Canadian port and another on the Atlantic coast, on the Pacific coast, and on the inland international lakes and rivers or lakes and rivers accessible to them. It does not, however, include shipping on isolated Canadian waterways, such as the Mackenzie river, lake Winnipeg, lake St. John, etc.

**Ocean Shipping.**—Canadian ocean shipping dates back to the days of early European fishermen who frequented the shores of Newfoundland and the Maritime Provinces. Later on, exploration and settlement produced a larger volume of traffic.

The first ocean-going vessels in Canada were probably built by Pont-Gravé, one of the first settlers in New France, and soon afterwards Talon and Hocquart, intendants of the colony, realizing the advantages offered by the timber resources available, gave ship-building every encouragement. Shipyards were established at Quebec and other points along the St. Lawrence, and these, together with later establishments in the Maritime Provinces and on the western coast, have formed the principal bases of Canadian shipping on the Atlantic and the Pacific.

Canadian shipping attained some prominence in the days of fast wooden sailing vessels, and also at a later date when steam power first came into use. In 1833, the *Royal William*, a Canadian ship built to ply between Quebec and Halifax, crossed the Atlantic from Pictou to London, and was the first vessel to navigate the Atlantic entirely under steam power. At the present time, in addition to other lines, the Canadian Pacific Railway operates fleets on the Atlantic and Pacific oceans, and the Dominion Government operates a fleet in the West Indies trade.

The following table has been compiled from the Shipping Reports of the Department of National Revenue for the individual fiscal years 1926-38.

### 17.—Sea-Going Vessels Entered and Cleared at Canadian Ports with Cargo and in Ballast, fiscal years 1926-38.

Note.—For the years 1868-1910, see Canada Year Book, 1911, p. 379; for 1911-25 see the 1938 Year Book, p. 698.

<sup>1</sup> Includes freight in both tons weight and tons measurement.

**Inland Shipping.**—Inland shipping is associated in its beginnings with the birch-bark canoe of the American Indian. Later the *bateau* and Durham boat came into common use after the migration of the U.E. Loyalists. In the absence at that time of any roads to make land travel possible, the St. Lawrence river and the Great Lakes formed the main highway to the interior. The route from Montreal to the Upper Lakes was broken at three places—from Montreal to Kingston transportation was by *bateau* or Durham boat; from Kingston to Queenston schooners were used; then, after the portage road from Queenston to Chippawa, the schooner was again taken to the destination.

In 1809, the *Accommodation*, the first Canadian steamship, was built for the Hon. John Molson, to run between Montreal and Quebec. On lake Ontario, the *Frontenac* was used from 1817 on a weekly service between York and Prescott and, following this beginning, came a period of great activity in lake and river shipping. In 1845, the *Gore* reached lake Huron by way of the Welland canal to carry on transport trade on the Upper Lakes, where previously there had not been enough traffic to support a large ship. Shipping on the Upper Lakes became brisker now, for there were settlers to be carried from Buffalo to the western United States and grain to be brought back. In this period Canadian shipping made its profit by carrying United States goods, for there was little traffic originating in the Canadian near-West.

Upon the advent of steam railways, water-borne traffic did not decrease but, on the contrary, increased, and at present the greater part of the western grain is shipped *via* the Great Lakes route to eastern ports. The iron ore and coal traffic between lake Superior and lake Erie is chiefly United States traffic and sometimes exceeds 80 million short tons in a year; the total traffic on these Upper Lakes alone is greater than that carried by all Canadian railways and about one-twelfth of that carried by all United States railways.

Totals of inland shipping are given for each fiscal year since 1929, and by provinces for the latest year, in Table 19, p. 694.

**Coasting Trade.**—This form of water-borne traffic has assumed great importance in Canada owing to the long coast lines on the Atlantic and Pacific oceans and along the Great Lakes and St. Lawrence River system. The movement of grain from Fort William and Port Arthur to Canadian ports on the Lower Lakes and to Montreal is one important factor in coastwise shipping. The registered tonnage of vessels entered and cleared in the coastwise movement is shown for each fiscal year since 1929, and by provinces for the latest year, in Table 19.

**Shipping by Ports.**—The volume of shipping in the leading ports of the provinces of Canada is shown in Table 18. Details are given of the sea-going vessels arrived and departed, and of the total of all shipping (exclusive of ferriage) arrived at each port. Arrivals only for all shipping are given here because, especially in the case of small ports, arrivals, owing to the necessity for customs examination, are more completely reported than departures. In the fiscal year ended Mar. 31, 1938, the tonnage of sea-going vessels arriving at and departing from Vancouver exceeded that of any other port in Canada; Victoria was next, followed by Montreal and Halifax, but in respect to sea-going cargoes loaded and unloaded, Montreal led by a wide margin, followed by Vancouver, Sydney, Saint John, and Halifax.

18.—Numbers and Tonnages of Sea-Going Vessels Entered and Cleared and of All Vessels (Exclusive of Ferrige) Entered, at each Principal Canadian Port, fiscal year 1938.

Note.—For details of coastwise and inland international shipping at these ports and at all other ports of Canada, see the Shipping Report of the Dominion Bureau of Statistics for 1938.

**Grand Total Shipping Trade.**—Statistics are given in Table 19 showing sea-going, inland international, coastwise, and total vessels (exclusive of ferriage), entered and cleared at Canadian ports, by provinces, during the fiscal year ended Mar. 31, 1938, and totals for the fiscal years 1929 to 1938. It is noteworthy that the volume of coastwise shipping is the greatest, while sea-going is next in tonnage. Both sea-going and coastwise shipping show marked expansion since 1923, although the effect of the depression is evident here also. Inland international shipping, on the other hand, has varied considerably and showed a more definite decrease during the depression. The ferry between Sarnia, Ontario, and Port Huron, Michigan, making 19,167 round trips with a cumulative registered tonnage of 2,148,656 tons in and the same out, was excluded for the first time in 1938. This ferry was displaced by a bridge in 1938-39.

19.—Numbers and Tonnages of All Vessels (Exclusive of Ferriage), Entered and Cleared at Canadian Ports, 1923-38, With Details by Provinces for the fiscal year 1938.

NOTE.—Totals for the years 1923-28 will be found at p. 702 of the 1938 Year Book.

<sup>1</sup> The Ontario figures and the totals for "Inland International" and "Total Shipping" are inclusive of ferriage at Sarnia amounting in each case of "Arrived" and "Departed" to: 13,180 vessels and 1,415,612 tons for 1934; 13,444 vessels and 1,433,031 tons for 1935; 14,583 vessels and 1,620,820 tons for 1936; and 15,217 vessels and 1,678,272 tons for 1937. Corresponding deductions for earlier years are not available.

<sup>2</sup> Ferry at Sarnia was discontinued in 1938. See footnote 1.

## Subsection 2.—Canal Traffic.

Since the canals of Canada are open to the vessels and traffic of all nations upon equal terms, United States traffic constitutes an important part of the total carried through certain canals, especially the Welland Ship canal. This is shown in Tables 20 and 23. More complete details of the traffic through canals may be found in the annual report on Canal Statistics published by the Dominion Bureau of Statistics.

## 20.—Traffic through Canadian Canals, by Nationality of Vessels and Origin of Freight, navigation seasons 1929-38.

NOTE.—Figures include duplications where cargoes use two or more canals. For Canadian canal traffic from 1886-99, see 1902 Year Book, p. 398; for the figures of 1900-19, the 1933 Year Book, p. 697; and for 1911-28, p. 708 of the 1938 edition.

<sup>1</sup> Figures include a small percentage of ports of other foreign countries.

The canal traffic figures in Tables 20 to 23 include duplications where the same freight passes through two or more canals. Table 24 eliminates most of this duplication for the St. Lawrence-Great Lakes system. Even in this analysis, however, grain traffic originating at Lake Superior ports and transhipped from Upper Lake to smaller boats at Port Colborne or other points on lakes Erie or Huron, is really a duplication, although not appearing as such, and is shown separately as a deduction in the table. The elimination of duplications for Canadian canals only, is not feasible because both Canadian and United States vessels use the locks on both sides of the river at Sault Ste. Marie without the payment of tolls or other restrictions.

**24.—Freight Traffic Using the St. Lawrence River, Welland Ship, and Sault Ste. Marie Canals, navigation season 1938.**

<sup>1</sup> Figures include both Canadian and United States canals at Sault Ste. Marie.

**The Panama Canal.\***—The Panama canal, which was opened to commercial traffic on Aug. 15, 1914, is a waterway which is destined to be of the greatest importance to the British Columbian ports, from which vessels now leave direct for Great Britain and European ports throughout the year. As an alternative route to that of the transcontinental railway lines, such a passage by water is of vital importance in the solution of the larger transportation problems of the continent, and while its influence is perhaps more potential than actual, such a check on transcontinental rail rates is a valuable one. During the War the great expectations based upon the opening of the canal were not realized, owing to the scarcity of shipping, but, with the post-War decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe has taken place, and, while the proportion carried in vessels of Canadian registry is comparatively small, the cargo tonnage has nevertheless assumed considerable proportions.

Table 25 shows the amount of traffic originating in or destined for Canada carried through the canal. The greater importance of the route as one from Pacific to Atlantic ports is illustrated by the much larger volume of freight originating at western ports than at eastern ports, and the larger volume destined for eastern than for western Canadian ports. Strictly inter-coastal Canadian cargo during the latest year aggregated 82,798 long tons as compared with 119,939 long tons in 1937.

With respect to total traffic through the canal by nationality of vessels and cargo carried, vessels of United States registration carried 9,892,619 tons, or 36.1 p.c. of the total cargo of 27,385,924 locked through in the fiscal year ended June 30, 1938. British vessels carried 6,417,016 tons, or 23.4 p.c.; Norwegian vessels 3,433,571 tons, or 12.5 p.c.; Japanese vessels 1,877,502 tons, or 6.9 p.c.; and German vessels 1,518,593 tons, or 5.5 p.c.

\* Revised, and figures supplied, by courtesy of the Governor of the Panama Canal Zone.

25.—Traffic to and from the East and West Coasts of Canada via the Panama Canal, years ended June 30, 1929-38.

Subsection 3.—Harbour Traffic.

The freight movement through a large port takes a number of different forms. The overseas movement, *i.e.*, the freight loaded into or unloaded from sea-going vessels, frequently constitutes a surprisingly small part of the total. Usually the volume coming in and going out by coastwise vessels is larger. Then there is the 'in transit' movement in vessels which pass through the harbour without loading or unloading. Finally there is the movement from one point to another within the harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled in all the ports and harbours of Canada, as many of them are small, and without the staff necessary to obtain a detailed record of freight handled. However, the cargo of sea-going vessels loaded and unloaded is shown for the principal ports, for the provinces and for Canada, in Table 18. Similar statistics of cargo carried by vessels in coastwise and inland international shipping are not available. The National Harbours Board now reports annually the water-borne cargo loaded and unloaded at the eight ports under its control. Six of these are among the principal ports of Canada and the cargo handled in each is shown in Table 27. The classification is the same as for railway freight (Table 23, pp. 652-653) and canal traffic (Table 22, p. 696). The figures include freight carried by coastwise and inland international, as well as by sea-going shipping. The total of sea-going cargo is shown for these same ports in Table 18, and the difference would be largely coastwise for these particular ports. The figures for each port include all cargo loaded or unloaded whether by facilities under the Board or at private docks and terminals in these ports. Cross-harbour movements and bunkering are excluded except as mentioned in the footnote to the table.

## PART V.—AIR NAVIGATION.\*

Aircraft furnish a rapid and convenient means of transportation for passengers and supplies in remote and unsettled areas where transportation otherwise is slow and very costly. Similarly, aircraft have provided a relatively cheap and feasible means of obtaining information for the development and conservation of natural resources in many parts of Canada where the cost by other means would be prohibitive. Air-mail and air-transportation lines and commercial services are increasing steadily in number and in the scope of their operations and usefulness.

The treatment of air navigation in this Part of the Year Book is confined to civil aviation; the military activities and organizations are dealt with under National Defence (see "Air Service" in the Index). The subject is introduced with a section dealing with the history and administrative control of civil aviation and this is followed by sections on facilities and equipment, finances and employees, and traffic, along the lines of the treatment adopted in this chapter for other forms of transportation.

The collection and compilation of statistics of civil aviation was transferred from the Branch of the Controller of Civil Aviation to the Bureau of Statistics in 1936. To preserve continuity with aviation statistics published in previous Year Books, a statistical summary of civil aviation for the years 1932 to 1937 is given below in Table 1. The statistics collected since 1936 have been somewhat enlarged and consequently no comparisons with similar data for previous years can be made for items appearing in other tables of this Part.

\* Descriptive and administrative information has been prepared from material supplied by J. A. Wilson, Controller of Civil Aviation, Department of Transport, while statistics have been compiled by G. S. Wong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics.

<sup>1</sup> Revised since publication of the 1938 Year Book.<sup>2</sup> Under postal contract 1,323,584 lb.<sup>3</sup> Details of licensed aircraft for 1937 are given in Table 3.<sup>4</sup> No information reported.<sup>5</sup> The basis of classification was changed in 1935 and is now shown from 1933 onward. Figures on the old basis for 1929-34 will be found at p. 746 of the 1934-35 edition of the Year Book.<sup>6</sup> This class did not exist prior to 1936.**Section 1.—History and Administration.****Subsection 1.—Development of Aviation in Canada.**

**Historical Sketch.**—A brief historical outline of the development of aviation in Canada appeared at pp. 710-712 of the 1938 Year Book.

**THE TRANS-CANADA AIRWAY.**

**Modern Airway Facilities.**—The term 'airway' may be defined as the path of flight between two terminal airports on which have been installed permanent aids to air navigation. In North America a standard system of aids to air navigation has gradually been evolved. This is being closely adhered to in the construction and equipment of the Trans-Canada airway, and some of the most important characteristics should be mentioned. Efficient weather and radio services are essential features. Terminal airports, *i.e.*, those where regular stops are made, should be all-way and all-weather fields, having three or more hard-surfaced runways, at least 3,000 feet in length, fully lighted with electric airway beacons, floodlights, boundary lighting systems to define the runways, range and approach lights to indicate the path of flight to the paved landing strips, and obstruction lights to define obstacles that might interfere with the clear approach to the airport. At a distance of about three miles there should be a radio-beam station, by means of which the pilot is guided along the airway and brought directly over the airport at the proper altitude for landing.

A meteorological service is essential on every main airport. By means of two-way radio, aeroplanes in flight are given, every thirty minutes, the latest information on the weather, are controlled during their flight, given full information as to other aeroplanes flying in their vicinity, and advised when to land.

Present practice requires radio-beam and two-way communication stations along the airway at intervals of about 100 miles between the terminal airports.

Adjacent to these and directly in the path of flight secondary aerodromes are constructed. These are not necessarily stopping points but they afford a safe landing in case of need. The number of additional intermediate aerodromes considered necessary for safety varies with the type of country. In open, settled, farm lands, where there are no mountains and where the weather is normally fine, they may be dispensed with altogether or spaced at intervals of about 50 miles between the major airports. Owing to the nature of the climate and the difficult physical character of the terrain in the Rocky Mountain region and northern Ontario, where there are absolutely no alternative emergency landing places, the spacing averages about 30 miles. The Trans-Canada airway when finally completed will consist of a chain of airports from 30 to 50 miles apart reaching from Moncton to Vancouver. All important communities in Canada not on the line of the Trans-Canada airway will be connected with it by branches and arrangements for exchange of international traffic with the airway system of the United States at cities near the border are being perfected.

**Construction.**—Natural conditions divide the Trans-Canada airway into four distinct regions—the Mountain region, from the Pacific coast to the foothills in Alberta; the Prairie region, stretching from the foothills to the Ontario boundary; the Laurentian area, extending through western Ontario as far as the Ottawa valley; and the Atlantic section, which takes in the settled areas in the basin of the Great Lakes, the Eastern Townships of Quebec, and the Maritimes.

The Prairie region obviously presented the simplest construction and operating problems. There, precipitation is light, visibility normally good, contour changes are gradual, and aerodrome sites requiring little development were obtainable everywhere. Airway surveys commenced on the prairie section in the summer of 1928, and aerodrome construction and lighting installation followed. By the end of 1929, a chain of lighted aerodromes from Winnipeg to Edmonton *via* Regina and Calgary had been prepared and a contract for the carriage of mails had been let to Canadian airways by the Post Office Department. Actual flying operations started on Mar. 1, 1930, with the operation of a nightly service each way. Five radio-beam stations, constructed in 1931, increased the efficiency of the airway materially. This service continued in regular operation with satisfactory results till Mar. 31, 1932, when, for reasons of economy in all services, it was temporarily suspended. Although the operation of the trans-prairie service was stopped, the airway surveys then in hand in the mountains and in northern Ontario, Quebec, and the Maritime Provinces were continued with a view to the eventual completion of the system from coast to coast.

The necessity for finding useful employment for many single homeless men in all parts of the country led to the establishment of aerodrome construction camps on the Rocky Mountain section, and in northern Ontario, Quebec, and the Maritime Provinces. These resulted in much valuable work being performed, and the system was continued to June 30, 1936, when all labour camps were shut down and the construction work was continued either by contract or by day labour.

An Act creating a national operating company—Trans-Canada Air Lines—for the operation of the Trans-Canada system was passed by Parliament in 1937, and in July and August of that year a joint survey was made by the staff of the operating company and the Department of Transport to decide on the air navigation facilities required to complete the airway. The increase in landing speed and the introduction of night and all-weather flying necessitated larger airports with longer clear approaches and improved surfaces. Facilities which had been adequate five years before no longer sufficed. The construction and installation of the necessary radio-

range stations, the enlargement of the airports, and installation of the airway lighting system was put in hand in September, 1937, and has been prosecuted with energy since that date. Work was further advanced in the Western section; activities were concentrated there to bring it into operation as soon as possible. In the meantime, the Trans-Canada Air Lines were organizing and training their flying and ground crews, obtaining the necessary aircraft, and building hangars and workshops essential for the operation of the airway.

**Operations.**—On Jan. 1, 1938, all this work was far enough advanced to enable experimental flying on a daylight schedule between Vancouver and Winnipeg to commence. The results of these experimental flights proved so satisfactory that, on Mar. 4, a beginning was made in carrying mails experimentally between Vancouver and Winnipeg. By Oct. 1 the erection of the remaining radio stations and the installation of teletype, two-way wireless service, meteorological service, the improvement of the airports, and lighting of the route for night operations was completed and a regular air-mail service was formally inaugurated on that date over this portion of the route. The northern connection to Edmonton from Lethbridge was also opened at the same time, though until the new and larger airport at Calgary is finished no stop can be made there.

The erection of the wireless stations between Winnipeg and Montreal was, in the meantime, proceeding rapidly. The completion of the airports and the installation of the lighting was commenced as soon as weather conditions permitted in northern Ontario. Delivery of the ten "Lockheed 14" aircraft purchased for the operation of the main line was completed during September, and the construction work was so well advanced that regular daily flights on schedule were inaugurated for the training of personnel, both flying and ground, on this section of the route on Sept. 10. An express service between Montreal, Toronto, and Vancouver was inaugurated on Oct. 17. By Dec. 1 the construction and equipment of the airway was sufficiently far advanced to justify the inauguration of a daily air-mail service between Montreal and Vancouver and this commenced on that date. Experience in flying operations over the airway showed that additional radio-range stations were required at certain points in the Rocky mountains and elsewhere to give adequate security under adverse conditions. Four additional ranges were constructed and brought into operation early in 1939.

There are now thirty radio-range stations in operation on the route at roughly hundred-mile intervals, though in the mountains the spacing is closer. Adjacent to most of them is an airport fully lighted for night flying where meteorological observations are made and relayed to planes in flight and to the central forecasting stations at Vancouver, Lethbridge, Edmonton, Winnipeg, Kapuskasing, Toronto, and Montreal. At these stations a weather map is prepared four times daily and district forecasts are issued for the ensuing six hours.

Construction work east of Montreal has also been prosecuted with energy. At the main base for the Maritime Provinces at Moncton, N.B., a major airport is under construction, and a contract has been let for the erection of the radio-range station. The intermediate field at Blissville, N.B., is now completed and the radio-range station is under construction. At Megantic, major improvements at the airport have been undertaken, all with a view to making possible regular operations between Moncton and Montreal by the autumn of 1939.

## TRANSATLANTIC AIR SERVICE.

The past decade has witnessed the creation of a world-wide system of communications by air. European air lines cover that continent with a network connecting all the principal centres and stretching out to the farthest confines of Africa, Asia, and Australasia. In North America, the United States airway system provides a similar network and has been extended to give rapid means of transportation to all points in Central and South America. The Pacific ocean has been spanned and South America connected with Europe. The only major trade route not yet regularly served by aircraft is the North Atlantic. This trade route is perhaps the most important in the world. It joins the greatest centres of population and industry of the Old and New Worlds. It is served by the most highly efficient transport and communication systems in the world and here, if anywhere, is to be found traffic of sufficient value and quantity to justify the establishment of a commercial air service. The great circle track, or shortest route joining these two great industrial districts, passes down the Rhine valley, through northern France and Belgium, London, Northern Ireland, the Straits of Belle Isle, Montreal, the valley of the St. Lawrence and thence to the Mississippi basin. The eastern and western terminals of the direct transatlantic airway lie in the British Commonwealth and from the earliest days of aviation the Canadian Government has watched its development with growing interest. The length of the ocean crossing and the climatic difficulties have delayed the establishment of any regular service by this route, but, with the advance of aeronautical and radio science and meteorological services, these are being conquered.

At the invitation of the Government of Newfoundland, representatives of the Canadian and United Kingdom Governments visited St. John's, Newfoundland, in July, 1933, for a conference on transatlantic flying. This conference was also attended by representatives of Imperial Airways and Pan American Airways. The result of this conference was close co-operation between the three Governments in certain preliminary surveys and meteorological studies.

An agreement for co-operation in the establishment of the transatlantic air service by the Governments of Canada, the United Kingdom, the Irish Free State, and Newfoundland was reached by representatives of these Governments in Ottawa in December, 1935. Since the friendly co-operation of United States interests, rather than the institution of a rival service, was highly desirable, at the close of the Ottawa Conference in December, 1935, the representatives of the Commonwealth Governments proceeded to Washington and an agreement was reached with representatives of the United States Government for their co-operation in the institution of a regular transatlantic air-mail, passenger, and express service. The practical results of these two conferences were the trial flights made by aircraft of Imperial Airways and Pan American Airways during the summer of 1937. Flying boats were used by both companies. Imperial Airways operated two of the new 'Empire' type, high wing monoplane boats, while Pan American Airways used the 'Clipper' flying boat, a type which had been successfully flown on their transpacific service. The success of these trial flights inspires confidence that, in a relatively short time, commercial transatlantic services will be in operation.

In 1938 there was little activity on the transatlantic air service owing to the necessity of building new flying boats embodying the lessons learned during the 1937 operations. Delivery of the new types, both British and American, has been made and regular air operations are planned for the near future.

The only transatlantic flight made by the northern route during the year was made by the *Mercury*, the upper component of the interesting Short-Mayo

composite aircraft. This seaplane, carrying 1,000 lb. of express matter, was launched by her mother ship the *Maia* near Foynes at 20:00 hrs. (B.S.T.) July 21 and proceeded non-stop to Montreal landing at 16:20 hrs. (B.S.T.) July 22, refuelling there and going on to New York. The *Mercury* made the return flight by easy stages via Montreal, Botwood, the Azores, and Lisbon to Southampton.

Canada's share in the trial flights has been confined so far to the provision of seaplane bases, meteorological and radio services in Canada and, as regards the two services last named, in Newfoundland as well. Under the Ottawa Agreement, when the trial flights justify the establishment of a regular service, a joint operating company will be formed by Imperial Airways, Trans-Canada Air Lines, and a company nominated by the Irish Free State for the permanent operation of the route. Negotiations are now proceeding between the three companies for the establishment at an early date of such a joint operating company.

### Subsection 2.—Administration.

Civil aviation, previously administered by the Department of National Defence, is now a function of the Department of Transport, created in November, 1936.

In 1933, Parliament passed the Transport Act (c. 53 of the Statutes) enlarging the jurisdiction of the former Board of Railway Commissioners to include the regulation of air transport and certain classes of water transport. The Board of Transport Commissioners is co-operating with the Civil Aviation Branch in the regulation of air services so as to stabilize the industry by preventing destructive competition, and to ensure a higher standard of safety and efficiency in the operation of all regular air services in the Dominion.

The administrative duties under the Controller of Civil Aviation include the inspection and registration of aircraft and air harbours, the licensing of commercial and private air pilots, air engineers, and air navigators. In addition to these duties, the location and construction of air routes and any matters connected with airship services are administered by this Branch.

To encourage and stimulate a keener and more widespread interest in and knowledge of aviation, the Department of National Defence, since 1928, has assisted by issuing light aeroplanes and making grants to each of the 22 flying clubs, *viz.*: Halifax, Cape Breton, Saint John, Montreal, Brant-Norfolk, Fort William, Hamilton, Kingston, London, Ottawa, St. Catharines, Toronto, Border Cities, Kitchener, Brandon, Winnipeg, Moose Jaw, Regina, Saskatoon, Calgary, Edmonton, and Vancouver. Many aerodromes have been established through this movement. Details of membership, aircraft, hangars, flights, etc., of flying clubs are shown separately in the tables.

**Royal Canadian Mounted Police.**—Since the Royal Canadian Mounted Police took over the duties of the Preventive Service in 1932, aircraft have been utilized in the work on a wide scale. During 1938 such operations were carried out along the Atlantic seaboard and the lower gulf of St. Lawrence by three DeHavilland Dragonfly land planes based at Moncton, N.B. Operations commenced on May 19 and continued until Nov. 23, during which time 229 separate patrols were carried out involving a total of 736 flying hours. The bulk of these patrols were made in connection with Preventive Service work and information was relayed to the radio station at Shediac, N.B., concerning movements of suspected vessels off-shore. Contact was also maintained with R.C.M.P. cruisers and patrol boats by means of "dropped messages". The Aviation Section proved very helpful to the Preventive

Service and the fact that these planes were on patrol had a great moral effect upon the rum-runners. During the season these planes were called upon to assist in locating missing vessels and crews and on two occasions were successful in locating the missing craft.

**Provincial Government Operations.**—The Ontario Provincial Air Service owns 28 aircraft, which are operated by the province in the work of forest fire protection, transportation, and air photography in northern Ontario. The Manitoba Government Air Service operated, in 1938, 4 aircraft on forest protection in the province for the Forestry Branch. The Department of Lands and Mines of New Brunswick also operated one aircraft during 1938. Work requiring the use of aircraft was carried out in other provinces by commercial operators on contract with the Provincial Governments concerned.

**Commercial Aviation.**—During 1938 the principal activity of commercial aircraft operators in Canada was the carriage by air of passengers, freight, and mails to mining fields in the more remote parts of the Dominion. Their work also included forest fire patrols, timber cruising, air photography, flying instruction, advertising, short passenger flights, etc., in various parts of the country.

**Air-Mail Services.**—Regular air-mail services were established in December, 1927. Statistics of the air-mail services, showing routes operated, mileage flown, and mail carried during the fiscal year ended Mar. 31, 1937, may be found in Table 6, p. 736, under the Part of this chapter dealing with the Post Office.

## Section 2.—Airports and Aircraft.

### Subsection 1.—Ground Facilities.

The nucleus of the chain of aerodromes and ground facilities mentioned below, which will constitute the trans-Canada airway, consists of municipal or flying-club airports adjacent to the larger urban centres. There are also numerous terminals from which commercial flying services operate, chiefly into the northerly mining regions. These different types of air harbours are indicated in Table 2.

A large air terminal has been built at St. Hubert, seven miles south of Montreal. Immigration, customs, and postal facilities are available. An aerodrome has also been constructed at Rimouski to expedite the dispatch and reception of transatlantic mails.

### 2.—Air Harbours in Canada, 1937.

Note.—Dashes in this table indicate that no information is available under those heads.

## Subsection 2.—Aircraft.

The Manufacture of Aircraft.—An aircraft industry, to construct in Canada the aircraft and equipment required for aviation, is essential to the development of flying. Canadian Vickers was the pioneer firm in Canada. Several manufacturers

are now producing original types especially suited to operation in Canada. Several aircraft manufacturers from England and the United States have formed branches in Canada for the assembly and service of their products. There are also a number of plants for the manufacture of landing gear, especially skis and pontoons, designed to meet the particular requirements of Canadian conditions.

The principal statistics of the aircraft industry, *i.e.*, those establishments for which aircraft or parts are the chief product, are shown for the latest available year in the Manufactures chapter (Table 9, p. 398). However, some other firms principally engaged in the manufacture of other goods also produce aircraft. The total aircraft produced in Canada in recent years was as follows: 18 valued at \$117,689 in 1934; 58 at \$479,614 in 1935; 109 at \$1,210,910 in 1936; and 110 at \$1,461,626 in 1937. During 1937 there were imported, almost entirely from the United Kingdom and the United States, 77 aircraft valued at \$1,388,621, and 271 aeroplane engines valued at \$1,032,664.

### 3.—Licensed Civil Aircraft in Canada, as at Dec. 31, 1937.

### Section 3.—Finances and Employees.

**Investments.**—The development of aviation requires a considerable outlay of capital not only for the provision and replacement of aircraft but also for the provision of landing fields or harbours, buildings, servicing shops, etc.

#### 4.—Investment of Provincial Governments, Flying Clubs, and Commercial Organizations for Civil Aviation in Canada, 1937.

Item.	Provincial Government.	Light Aeroplane Clubs.	Commercial.	Total.

Salaries and wages.....\$	167,651	98,170	1,008,199	1,274,020

## Section 4.—Traffic.

The freight carried by aircraft consisted largely of machinery, supplies, etc., for mines in the northern part of Quebec, Ontario, the western provinces, and the Northwest Territories. Many of these mines are accessible only by canoe in the summer and dog team in the winter or by aircraft, and aircraft transportation will probably be the cheapest and most effective method of transportation during the life of a large number of them. The amount of freight and express carried by aircraft has grown steadily and rapidly, increasing from 2,372,467 pounds in 1931 to 26,279,156 pounds in 1937. This is considerably more than was carried in any other country, with the possible exception of Russia; the United States reported 7,127,369 pounds for 1937. The activity in mining, particularly in gold mining due to the increased price of gold, has been a large factor in this rapid growth of air transportation of freight and express. Much mail, not included in the mail carried under contract, is also carried into the mines by aircraft. Further information regarding air-mail services appears under Part VIII of this chapter dealing with the Post Office at p. 735.

<sup>1</sup> Flights between Canada and the United States.  
<sup>2</sup> Includes student passengers.  
<sup>3</sup> Carried under Canadian postal contracts—1,323,584 lb.  
<sup>4</sup> Exclusive of 23,500 square miles by National Defence aircraft.  
<sup>5</sup> Exclusive of 56,500 square miles by National Defence aircraft.

<sup>1</sup> From point to point only.

<sup>2</sup> Includes student passengers.

<sup>3</sup> Exclusive of 56,500 square miles by National Defence aircraft.

Some countries include in their statistics traffic between two foreign stations of companies incorporated in the reporting country. In Table 7 are shown separately statistics of companies operating regular routes between points in Canada and the United States. These statistics include only those of traffic between the two countries. The company operating between Montreal, Albany, and New York reported only the flights, passengers, and freight, etc., from and to Montreal. Consequently, it would be quite proper to add this international traffic to the strictly Canadian traffic.

The Northern Airways Company has a postal contract for mail in the north-west to be carried by any means feasible and on this contract 50,800 pounds not included in the official air-mail contracts were carried by aeroplane.

9.—Accidents Resulting from Aircraft in Flight in Canada, 1937.

## PART VI.—WIRE COMMUNICATIONS.\*

The statistics regarding communication by wire are classified under two sections—telegraphs and telephones.

## Section 1.—Telegraphs.

The early history of telegraphic communication in Canada is given at p. 778 of the 1934-35 Year Book.

**Dominion Government Telegraph Service.**—This service is operated by the Telegraph Branch of the Department of Public Works. Its general object has been to furnish wire communications for outlying and sparsely settled districts where the amount of business is so small that commercial companies will not enter the field but where the public interests require that there should be communication. Thus these facilities include: telegraph and telephone services to scattered settlements around the coast of Cape Breton island; cable services to Campobello, Grand Manan, and other islands in the bay of Fundy, to Prince Edward Island, Magdalen islands, and Anticosti island in the gulf of St. Lawrence; telegraph or telephone services along the north shore of the gulf of St. Lawrence from Quebec to the straits of Belle Isle; cable connections with Pelee and Manitoulin islands in Ontario; some lines to northern outlying districts in Saskatchewan; lines from Edmonton to the Athabaska and Peace River country in Alberta; telegraph or telephone communications around the coast of Vancouver island and to fishing, lumbering, and mining settlements along the coast of the mainland of British Columbia, as well as to isolated mining centres in the interior; and finally the overland telegraph line to Dawson and other settlements in Yukon. Statistics of these services are included in the tables which follow.

## 1.—Summary Statistics of All Canadian Telegraphs, calendar years 1929-37.

NOTE.—Figures for the years 1920-28 will be found at p. 722 of the 1938 Year Book.

Year.	Gross Revenue.	Operating Expenses.	Net Operating Revenue.	Pole Line Mileage.	Wire Mileage.	Employees. <sup>1</sup>	Offices.	Messages, Land.	Cablegrams. <sup>2</sup>	Money Transferred.

<sup>1</sup> Excluding commission operators.

<sup>2</sup> Excluding messages relayed to the United States.

**Telegraph Systems.**—The Canadian telegraph systems are composed of lines owned by the Dominion Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world, and are operated under considerable climatic and geographical disadvantages. In the operation of railways and in the receipt and dispatch of market and press reports, the service to the nation is invaluable.

\* Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch issues annual reports dealing with telegraph and telephone statistics, respectively, to which the reader is referred for more detailed information.

Table 2 gives figures of telegraph operation and line and wire mileage of various companies for the years 1933 to 1937. Statistics of the Halifax and Bermudas Cable Co., the Canadian Marconi Wireless Telegraph Co., and the Pacific Cable Board are not included.

2.—Statistics of Chartered Telegraph Companies, calendar years 1933-37.

Company.	Year.	Miles of Line.	Miles of Wire.	Number of Messages. <sup>1</sup>	Number of Offices. <sup>2</sup>

<sup>1</sup> Cablegrams not included.

<sup>2</sup> The figures for Table 1 include offices of wireless and cable companies and to that extent are larger than the sums of the items given here for corresponding years.

<sup>3</sup> Included with Canadian National. Western Union handles only through business.

<sup>4</sup> Leased telephone line.

<sup>5</sup> Includes sub-offices.

**Submarine Cables.**—Sixteen transoceanic cables have termini in Canada—fourteen of them on the Atlantic coast and two on the Pacific. In addition there are eight cables between Atlantic coastal stations in Canada and the United States. The year in which the cable was first demonstrated to be of commercial value was 1866, and up to the present its use has greatly increased. The Atlantic cables are controlled by English and United States interests. The Pacific cable, from Canada to Australia and New Zealand, has been in operation since 1902, and was owned by a partnership of the Governments of Great Britain, New Zealand, Australia, and Canada. As a result of the recommendation of the Imperial Wireless and Cable Conference of 1928, in view of increased wireless competition, it was decided to dispose of the Pacific and West Indian Islands cable systems to the Imperial and International Communication Co., a company formed to take over all Empire-owned cables and lease the Empire-owned beam wireless systems. The necessary legislation was passed by the United Kingdom in February, 1929, and by Canada in June, 1929.

## Section 2.—Telephones.

A brief historical account of the early development of telephones in Canada appeared at p. 781 of the 1934-35 Year Book.

## Subsection 1.—Systems and Equipment.

**Telephone Systems.**—The 3,191 telephone systems existing in 1937 included the three large provincial systems in Manitoba, Saskatchewan, and Alberta, and a smaller governmental system in Ontario, together with the system operated by the National Parks of Canada, Department of Mines and Resources. There were also 142 municipal systems, the largest operated by the cities of Edmonton, Fort William, and Port Arthur. Out of the 2,237 co-operative telephone companies, no fewer than 1,152 were in Saskatchewan alone, 757 in Alberta, and 212 in Nova Scotia. The largest among the 558 joint-stock companies operating telephone systems in 1937 were the Bell Telephone Co., and the British Columbia Telephone Co. Over 58 p.c. of the total telephone investment in Canada belonged to the Bell Telephone Co., and their telephones in Quebec and Ontario constituted 56 p.c. of the total for Canada.

**Telephone Equipment.**—The number of telephones per capita is second only to that of the United States, the numbers being 14.4 telephones per 100 population in the United States in 1937 and 11.9 in Canada. This is a favourable showing in view of the low density of population in Canada as a whole and the fact that 46 p.c. (46.30 p.c. in 1931) of the population is rural.

There were 594,274 telephones out of a total of 867,714 in 51 leading cities of Canada operated from automatic switchboards; the remainder, or 273,440, were operated from manual switchboards. Automatic switchboards have completely displaced manual switchboards in the principal cities of the Prairie Provinces and are displacing them in the other provinces.

### 3.—Mileages of Pole Line and Wire, and Telephones in Use Classified by Business, Residential, Rural, and Public Pay, as at Dec. 31, 1926-37.

Note.—Figures for the years 1911-25 will be found at p. 724 of the 1938 Year Book.

<sup>1</sup> Includes telephones on rural exchange lines and urban exchange lines which have more than four parties.

The density of telephones in the different provinces is naturally influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.

#### 4.—Telephones in Use, by Provinces, as at Dec. 31, 1937.

#### Subsection 2.—Telephone Finances.

The financial statistics of Table 5 show that the investment in telephone property in Canada, represented by the cost of property, is a very large item and is exceeded in the field of transportation and communications only by the investments in steam railways (pp. 636-637) and roads and highways (pp. 665-667).

#### 5.—Summary Financial Statistics of Telephones in Canada, calendar years, 1920-37.

NOTE.—For figures for the years 1911-19, see p. 724 of the 1938 Year Book.

<sup>1</sup> Includes Bell Telephone Company data.<sup>2</sup> Excludes rural lines.

## Subsection 3.—Telephone Calls.

Systems operating almost 90 p.c. of all telephones in Canada made estimates by actual count on days of normal business, and, after adjusting for uncompleted calls, holidays, Sundays, etc., the average was multiplied by 365. The long-distance calls in practically all cases were the actual long-distance calls put through or completed. The averages were 1,953 local and 23.3 long-distance calls per telephone and 235 telephone conversations per capita. The estimated per capita average for the United States in 1936 was 210.

## 7.—Local and Long-Distance Calls and Averages per Telephone and per Capita, calendar years 1928-37.

Year.	Local Calls.	Long-Distance Calls.	Total Calls.	Averages per Telephone.			Total Calls per Capita. <sup>1</sup>

<sup>1</sup> Per capita figures are based on official estimates of population given on p. 113.<sup>2</sup> Revised since publication of the 1938 Year Book.

## PART VII.—RADIO COMMUNICATIONS.

Radio in Canada, and in ships registered in Canada, was, prior to July 1, 1938, administered under the provisions of the Radiotelegraph Act passed in 1913, and the Regulations issued thereunder from time to time. This Act, owing to the rapid developments of intervening years, was repealed and replaced by The Radio Act, 1938, which became effective on July 1, 1938.

In the interim, however, the Canada Shipping Act had already been revised (see 1936 Year Book pp. 1107-1108), and those sections of the former Radiotelegraph Act pertaining to radio equipment in ships were deleted and embodied in the revised Canada Shipping Act, 1934.

In 1932, the Canadian Radio Broadcasting Act, 1932, was passed and under its terms control of all radio broadcasting was vested in the Canadian Radio Broadcasting Commission. This Act was subsequently repealed and replaced by the Canadian Broadcasting Act, 1936. Under the new Act, the technical control of all broadcasting stations reverted to the Department of Transport, while the regulation of programs was placed in the hands of the Canadian Broadcasting Corporation. It contains a section which empowers the Minister of Transport to make regulations for the control of any equipment liable to cause interference with radio reception.

Accordingly, authority for the administration of all radio within the jurisdiction of Canada is vested in the Minister of Transport under the following legislation: The Radio Act, 1938; The Canada Shipping Act, 1934; The Canadian Broadcasting Act, 1936.

## Section 1.—Administration.

### Subsection 1.—Technical Control and Licensing.

All radio stations within the Dominion of Canada are required to be licensed, whether used for transmission or reception, or both. The issuance of all classes of licences, the assignment of call signs and frequencies, and the inspection and monitoring of radio stations in Canada is carried out by the personnel of the Radio Division. This latter and the Civil Aviation and Meteorological Divisions form the Air Services Branch of the Department of Transport.

In addition to being subject to the provisions of the Radio Act, 1938, and the regulations issued thereunder, the operation of radio, including broadcasting, in Canada is subject to the International Telecommunication Convention (Madrid, 1932) and the Radiocommunication Regulations issued thereunder (Revision of Cairo, 1938), as well as to those of the Inter-American Radio Conference, Havana, 1937.

The Radio Regulations for ship stations issued under the Canada Shipping Act, 1934, lay down the specifications of radio equipment to be carried on certain classes of vessels, and also designate the qualifications of the operators required to be carried thereon.

To ensure the safety of life at sea, certain passenger steamers and cargo vessels, by international regulation, must carry radio equipment manned by competent operators holding certificates of proficiency in radio. The Department maintains a complete radio inspection service to enforce this regulation. Inspectors, located at major ports throughout the Dominion, are responsible for checking the efficiency of the radio equipment on ships calling at Canadian ports, regardless of their nationality, and seeing that only competent operators are carried. Under the Safety of Life at Sea and Load Line Conventions Act, 1931, ships of foreign and Canadian registry, while in Canadian ports, are surveyed with a view to the issuance of safety certificates. Seventy-six thousand and thirty-one radio stations of all classes were inspected by departmental radio inspectors during the year.

Examinations for certificates of proficiency in radio are also conducted by the inspection staff of the Radio Division. Certificates of all classes to the number of 7,764 were issued up to Mar. 31, 1938. Table 1 shows the total radio stations in operation as at Mar. 31, 1934-38, by classes. The vast majority of these are, of course, private receiving stations, and the distribution of the latter, by provinces, is shown in Table 2.

**1.—Summary of Radio Stations in Operation in Canada, by Class, as at Mar. 31, 1934-38.**

<sup>1</sup> One combined direction-finding and radio beacon station included in total of direction-finding stations, and one combined coast and radio beacon station shown in total of coast stations. <sup>2</sup> This class of station discontinued Apr. 1, 1935. <sup>3</sup> Figures include licences issued free to the blind, numbering 3,155 in 1937-38, 2,758 in 1936-37, 2,314 in 1935-36, 1,931 in 1934-35, and 1,517 in 1933-34. <sup>4</sup> Not including 12 stations under construction.

As indicated in Table 1, there are 88 private commercial broadcasting stations in Canada. The fee for this class of licence is \$50.00 per annum. The extent to which private receiving sets are used for the reception of broadcasting in the different provinces is indicated by the table below. There are two classes of private receiving station licences, one for battery operated receivers (fee \$2.00 per annum) and the other for electrically operated receivers (fee \$2.50 per annum).

**2.—Private Receiving Station Licences Issued in Canada, by Provinces, fiscal years 1935-38.**

<sup>1</sup> Include licences issued free to the blind as per footnote 3 of Table 1.

**Subsection 2.—Investigation and Suppression of Inductive Interference.**

Thirty-three cars are equipped with sensitive apparatus for the investigation of interference to radio reception, and operate from permanent inspection offices located in 22 cities across the Dominion. The inspectors in charge of these cars interview broadcast listeners who have reported interference, and determine the actual source. Tests are then made to ascertain whether or not the interference can be effectively and economically suppressed. The owners of the interfering apparatus are advised of the results of the tests carried out and are given full information regarding the most effective means of suppressing or eliminating the interference. Thirty-four part-time inspectors located in other cities and towns are supplied with portable receivers and a limited amount of equipment for the investigation of interference in their districts.

**Section 2.—Operation of Radio Communications.****Subsection 1.—Dominion Government Radio Stations.**

Radio communication facilities of several different types are essential for the safe and accurate navigation of ships and aircraft, and in order to meet the requirements of Canadian as well as foreign ships plying Canadian waters and aircraft flying over Canadian territory, the Department of Transport has established networks of direction-finding, marine radio beacon, aviation radio range, radiotelegraph, and radiotelephone stations.

**Department of Transport, Marine Service.**—Four distinct networks of stations provide a complete radio aids-to-navigation service for ships. These networks serve the following areas: Great Lakes; Gulf of St. Lawrence and Atlantic Coast; Hudson Bay, Strait and sub-Arctic; and Pacific Coast. The first three networks are interlocking. There is, however, no direct radio connection between the Pacific Coast network and the networks in Eastern Canada and the sub-Arctic, although contact is maintained between a short-wave station operated by the Department of Transport at Ottawa and the Pacific Coast and Hudson Bay and Strait systems.

During the fiscal year 1937-38, Government radiotelegraph stations on the East coast, West coast, the Great Lakes, and Hudson bay and strait handled 393,911 messages or 8,101,848 words, compared with 452,133 messages or 7,872,891 words handled during 1936-37. For 1937-38 the cost of maintenance was \$503,025 compared with \$474,805 in the previous year.

## 4.—Type of Service Performed and Areas Served By Marine Radio Stations of the Department of Transport, as at Mar. 31, 1938.

<sup>1</sup> Contacts West Coast and sub-Arctic stations.

Department of Transport, Aeronautical Service.—The radio services provided for aviation may be divided into two categories: first, those furnished on behalf of aircraft flying trans-Canada routes; and secondly, those intended for aircraft flying transatlantic routes. This phase of radio in Canada is being rapidly developed and it is expected that within a very short time aircraft pilots will be provided with as complete a service as is, at the present time, supplied to marine navigators. This service will include the completion of a chain of radio range stations extending from coast to coast along the trans-Canada airway and on important connecting routes. These stations are located at airports approximately every 100 miles and transmit signals which enable pilots to navigate entirely by instruments. Routine weather reports are also broadcast hourly.

## 5.—Type of Service Performed and Routes Served by Aeronautical Radio Stations of the Department of Transport, as at Mar. 31, 1938.

Service Performed.	Routes Served.			No.

Auxiliary meteorological reporting station, Port Harrison, P.Q.....				1
<b>Grand Total</b> .....				16

<sup>1</sup> Twelve additional stations on this route are under construction in Ontario, located as follows: Earlton Jct., Kapuskasing, Kenora, Killaloe, Muskoka, North Bay, Ottawa, Pagwa, Porquis Jct., Sioux Lookout, Toronto (Maiton), Wagaming.

**Department of National Defence.**—The Royal Canadian Corps of Signals operates, in addition to stations established for military purposes, 17 permanent stations and 2 summer stations situated along the Mackenzie river and in Yukon on behalf of the Bureau of Northwest Territories and Yukon Affairs, Department of Mines and Resources.

**Department of Public Works.**—Seventeen stations are operated to provide emergency communication between the mainland and certain islands, and 5 stations to provide emergency links in existing landline circuits.

**Department of Mines and Resources.**—This Department operates one experimental station at the Dominion Observatory for the transmission of time signals, and 4 private commercial and 2 experimental stations in the National Parks of Canada.

### Subsection 2.—Provincial Government Radio Stations.

**British Columbia.**—The Department of Lands operates 8 ship stations, 12 private commercial stations and 9 experimental stations in connection with forest fire protection services. Under the Attorney-General's Department the provincial police operate 4 ship stations and 25 private commercial stations, and the Game Commission operates 3 ship stations.

**Saskatchewan.**—Department of Natural Resources operates 22 private commercial stations and 3 experimental stations in connection with forest fire protection services; Saskatchewan Power Commission operates 2 experimental stations and 12 commercial receiving stations (in service trucks, etc.) to provide emergency radio communication during power-line failures, etc.

**Manitoba.**—The Department of Mines and Natural Resources operates 2 private commercial stations and 1 aircraft station in connection with survey parties.

**Ontario.**—The Forestry Service operates in northwestern Ontario, 5 public commercial stations furnishing a point-to-point radiotelephone service, 4 public commercial stations furnishing a point-to-point radiotelegraph service and 4 public commercial stations furnishing a ground-to-plane radiotelephone service to aviation companies operating in that area; 23 private commercial stations and 38 experimental stations in connection with forest fire protection services.

### Subsection 3.—Privately-Owned Commercial Stations.

From Table 1 it will be noted that there were 7 limited coast stations, 58 public commercial stations, and 399 private commercial stations in operation in the Dominion at Mar. 31, 1938. A public commercial station situated at Drummondville, Que., provides transoceanic radiotelegraph and radiotelephone services to Great Britain and Australia. These stations are similar in one respect, in that they are owned and operated by private individuals or companies incorporated under the laws of the Dominion, or one of the provinces thereof.

The limited coast stations, although privately owned, provide ship-to-shore communication services open to the public. One of these stations, owned and operated by the Canadian Marconi Co., situated at Louisburg, N.S., provides a long-range service to ships at sea. The services performed by commercial stations, both public and private, are many and varied. Generally speaking, these stations are located in areas not otherwise served by telephone, telegraph, or other means of telecommunication. The majority of these stations perform a point-to-point radiotelegraph or radiotelephone service, although an increasing number are being utilized

for ground-to-plane communication. These stations provide an invaluable means of contact with mining camps, lumber mills, exploration and survey parties, trading posts, and many points which would otherwise be cut off from the outside world.

Private commercial stations may be used only for the handling of messages relative to the private business of the licensee, whereas public commercial stations may be used for the handling of messages for the general public.

### **Section 3.—Program Broadcasting and Regulation under the Canadian Broadcasting Corporation.**

The Canadian Broadcasting Corporation succeeded the Canadian Radio Broadcasting Commission on Nov. 2, 1936, and since that date further substantial progress has been made in development of national broadcasting to provide a regular and satisfactory service to listeners throughout Canada. The legislation under which the Corporation operates is the Canadian Broadcasting Act, 1936. It provides that the Corporation shall consist of a Board of nine Governors chosen to give representation to the principal geographical divisions. In practice, the Board of Governors determines and supervises policy, while actual administration and operations are under the direction of the General Manager.

The regulation of programs is placed in the hands of the Canadian Broadcasting Corporation. However, while under the Act the CBC issues regulations of a general character applicable to all broadcasting in Canada, it does not otherwise interfere with the freedom of choice in programs of privately-controlled stations suitable for covering local areas, but coverage of wider regions is almost entirely dependent upon the CBC networks.

#### **Subsection 1.—Policy and Administration.**

**Policy.**—Major policies formulated by the Board may be considered in four categories: (1) extension of technical facilities; (2) pattern of program development; (3) regulation of commercially sponsored programs; and (4) general administration and control of expenditures.

*Extension of Technical Facilities.*—This feature of policy embraces two considerations, the first in relation to facilities of the CBC, and the second to extension of privately-owned stations. The Board has adopted the policy that licences for high-power transmitters, on both long- and short-wave bands, should be reserved for use by the public service system. Under Sec. 24 of the Act the CBC is required to review all applications for licences for new stations, as well as applications for increases in power, change in frequency or change in location, and in this problem it is the policy of the Board to give every practicable encouragement and assistance to local stations to serve community interests.

*Program Development.*—This problem in Canada is still in the pioneer stage and the resolute aim is to encourage and marshal Canadian talent to achieve a standard of performance that will be representative of the native charm of the culture of the various regions and withal distinctively Canadian.

*Program Regulation.*—By Sec. 22 (1) of the Canadian Broadcasting Act, 1936, the CBC is empowered to control all programs broadcast in Canada. New regulations were promulgated to be applicable on and after Nov. 1, 1937, to all broadcasting stations in Canada and have been effective in eliminating abuses and maintaining a desirable standard and quality in Canadian programs. The close co-operation between the CBC and privately-owned stations has been particularly helpful in observance of these regulations.

**Administration.**—The by-laws of the Corporation approved by the Governor in Council provide a formula for general administration and reflect the policy of the Board. Vigilant control of expenditures is exercised by the Board in determining the amounts to be available for principal objects, although actual supervision of the details of expenditures is under direction of the Chief Executive. The organization of the CBC consists of the following divisions: Executive, Secretariat, Finance, Engineering, Programs, Publicity, Commercial, and Station Relations.

### Subsection 2.—Broadcasting Facilities.

The principal functions of the Engineering Division are: operation and maintenance of CBC stations; new construction; field surveys; and special studies in transmission and development.

Early in November, 1936, the Board of Governors directed that an engineering survey be made to determine the extent of radio coverage in Canada. The result of a comprehensive survey showed that only 49 p.c. of the population was served by the then existing facilities. On account of the imperative need for a satisfactory improvement whereby listeners throughout Canada might be served by national programs, arrangements were made for establishment of high-power stations strategically located to provide efficient coverage. As a first instalment in this plan 50 kw. transmitters were constructed at Hornby, Ont., and Verchères, Que., respectively, and were officially opened in December, 1937. In the next stage, arrangements were made for inauguration of two corresponding high-power transmitters to serve listeners in the Maritime Provinces and in the Prairie Provinces. The 50 kw. transmitter at Sackville, N.B., was opened officially and joined the national network on Apr. 8, 1939, and it is anticipated that the western transmitter, at Watrous, Sask., will be ready for operation in June. When this fourth high-power transmitter is opened, it is calculated that there will be an improvement in coverage from 49 p.c. in 1936 to 84 p.c. in 1939 in terms of population and that, except in remote areas, listeners in rural districts as well as in the urban centres will receive a regular and dependable service from stations on the CBC regional and national network.

The CBC owns or leases 9 stations on which it has control of full broadcasting time and, to complete the basic national network, time for national programs is reserved on 28 selected privately-owned stations. CBC programs are made available as well to 21 other privately-owned stations on an optional basis. A list of basic and supplementary stations on the network is shown in Table 6.

Special studies by the Engineering Division from data obtained in field-strength surveys, and in operation of plant and wire-line transmission facilities, have resulted in important technical improvements in the quality of transmission and service.

The need for a high-power short-wave system has been given careful consideration. This project is one of special national importance as Canada is the only major trading nation without such facilities. Consultations are being continued in the hope of devising a suitable and practicable plan of establishing modern facilities which will enable Canada to reciprocate exchange of programs with Great Britain and other nations.

Interference from foreign stations is still a problem of serious concern to the CBC but upon ratification by the nations concerned of the agreement reached at the Inter-American Wavelength Conference held at Havana in November, 1937, it is confidently expected that application of the formulæ agreed upon will ameliorate this unsatisfactory condition.

### 6.—Broadcasting Stations of the CBC National Network, showing Time Zones, Identification Letters, Locations and Frequencies, as at Mar. 31, 1939.<sup>1</sup>

Note.—Owned or leased stations are marked with a dagger (†) and affiliated stations, on which certain hours are reserved for CBC programs, by an asterisk (\*). For the remaining stations the use of CBC programs is optional.

<sup>1</sup> Revised to Apr. 8, 1939.

### Subsection 3.—Finances.

The fixed assets of the Corporation as at Mar. 31, 1938, consisting of real estate, buildings, technical equipment, records, music, and studio and office furniture, at book value amounted to \$1,105,649, against which was a reserve for depreciation of \$178,942, leaving a net book value of \$926,706. Fixed assets were increased by \$702,988 during the fiscal year ended Mar. 31, 1938.

The Corporation's operating finances are subject to prudent budgeting control resulting in an adequate operating surplus. A statement of revenue and expenditure during the fiscal year ended Mar. 31, 1938, is shown in Table 7. Of the total expenditure including depreciation in this period, 50.3 p.c. was used for programs, 22.1 p.c. for wire lines, 13.2 p.c. for station operation, 2.7 p.c. for lease of time on private stations, and 6.8 p.c. for administration.

### 7.—Income and Expenditure of the Canadian Broadcasting Corporation, fiscal year 1938.

Net Income.		Expenditure.	
	\$		\$
Net licence and commercial revenue	2,252,732	General and administration	146,686
Interest on bank deposits	1,003	Operation of stations and studios	303,969
		Programs	1,085,420
		Station network	536,396
		Depreciation	106,846
			2,182,317
		Less—inventory of expendable stores	17,206
<b>Total Net Income</b>	<b>2,253,735</b>	<b>Total Expenditure</b>	<b>2,165,111</b>
		Operating surplus for year	88,624

#### Subsection 4.—Programs.

The national program service has been expanded extensively since Nov. 2, 1936, by the introduction of new activities and an enlargement of the scope of the service generally. Surveys were made for the purposes of a stocktaking of current programs and of ideas and material for new programs, and also to seek new talent. Since these surveys, plans have been formulated which, however, can only be put into effect gradually, pending recruitment of additional trained producers.

Careful consideration has been given to developing a balanced schedule of programs. Although this is an ideal which can be reached only approximately, the variety of programs so far presented is evidence that no type of program is allowed to outweigh others. Table 8 shows the classification of CBC programs for the fiscal year ended Mar. 31, 1938, according to percentage of programs and percentage of time. In the realm of strictly musical programs symphony concerts, little symphony or string symphony concerts, vocal and instrumental recitals, choral concerts, and various instrumental ensembles have been presented regularly. Special consideration has been given to encouragement of Canadian symphony orchestras and of ensembles of a recognized professional standard.

The dramatic field has been surveyed with care and special emphasis has been placed on offering an incentive to creative writing of distinctively Canadian plays especially adapted to broadcasting. To this end the CBC instituted its first National Drama Contest; 199 dramas were received from all parts of Canada. Also, for the first time, the CBC broadcasted a series of Shakespeare's plays. The services of leading British and United States actors were obtained for the chief roles.

The talks schedule has been greatly increased and in addition to commentaries on the news, current topics, and book reviews, special series by eminent Canadians have been introduced. Advantage has also been taken of the presence of distinguished visitors to bring to Canadian listeners authoritative and timely talks. As a result of experiment it is hoped to inaugurate a panel of Canadian speakers especially gifted in the preparation and delivery of interesting talks. By the presentation of round table and other discussions, the CBC has contributed to the stimulation of general interest in controversial public problems.

Actuality broadcasts and special events have a predominant place in the schedule of national programs. The event which overshadowed all others in this field was the descriptive commentaries and associated programs on the occasion of the Royal Visit. All the arrangements and production for broadcasting were solely in the hands of the Canadian Broadcasting Corporation.

Other special events and sports broadcasted in 1938-39 were: Allan Cup Hockey; Canadian Basketball Championships; Canadian Amateur Golf Championships; Canadian Open Golf Championships; Big Four and Intercollegiate Football; Eastern Canada and Dominion Football Championships; Canadian Boxing Championships; Canadian Track and Field Championships; King's Plate Horse Race; Canadian Lawn Tennis Championships; Canadian Canoe Championships; Gold Cup Motor Boat Races; International Fishermen's Races; Canadian Lacrosse Championships; Opening Ivy Lea Bridge at which the Prime Minister and President Roosevelt spoke; Conferring of Honorary Degree on President Roosevelt by Queen's University; Opening Blue Water Bridge, Sarnia, Ont.; Centennial Celebrations, Prescott, Ont.; Transatlantic Flight by flying boat *Mercury*; Opening Ottawa Airport; Opening Trans-Canada Air Express; Opening Val D'Or-Rouya railway line; Armistice Day Ceremony, Parliament Hill, Ottawa; Royal Winter Fair; Opening Canada-Newfoundland Telephone Service; Farewell Banquets for Rt. Hon. R. B.

Bennett, Toronto, Ont., and Saint John, N.B.; Unveiling Memorial to Canadian Women in Senate Chamber, Ottawa; International Tuna Fishing Competition, N.S.

A specially equipped mobile unit constructed for the CBC has been of unusual value in extending the scope and increasing the quality of remote control broadcasts.

Exchange relations with the British Broadcasting Corporation and with the major broadcasting systems in the United States are most satisfactory and of distinct advantage in enabling the CBC to bring to Canadian listeners selected sustaining programs of an exceptional standard and interest, such as grand operas by the Metropolitan Opera Association, the NBC Symphony Concerts, and the Sunday afternoon concerts by the New York Philharmonic Society. The many other programs received in exchange have added immeasurably to the pleasure of listeners in Canada, and it is gratifying that CBC programs relayed to Great Britain and the United States have been highly commended. The exchange of producers between the CBC and the BBC has already proved helpful in fortifying productive skill and enlarging the scope of ideas.

The exchange of programs with other countries, notably France, Sweden, South Africa, New Zealand, and Australia, has been explored, and these countries are prepared to exchange programs with Canada as soon as the CBC inaugurates high-power short-wave facilities to place the exchange on a reciprocal basis. For the first time Canada broadcasted a program to the world, The Fifth World Concert on Oct. 23, 1938. It was relayed to twenty-four countries.

The number of programs broadcast per month showed a continued increase, so that by the end of 1938 over 1,600 programs per month totalling over 600 hours were being broadcast. This increase meant that still more Canadian talent is being utilized. Some 3,807 artists were involved exclusive of groups and choirs paid in bulk. During the winter season of 1938-39, the average number of network hours per week was 77, with an average of 16½ hours or 30.4 p.c. devoted to commercial programs, and 60½ hours or 69.6 p.c. devoted to sustaining (non-commercial) programs.

<sup>1</sup> Not reported.

**PART VIII.—THE POST OFFICE.\***

**Historical.**—A brief account of the pre-Confederation development of postal services in Canada was given on pp. 789-790 of the 1934-35 Year Book.

At Confederation the provincial systems were transferred to the Dominion. The Post Office Act of 1867 established a service throughout Canada. The domestic rate on letters was reduced from 5 to 3 cents per half-ounce, and in 1870 the rates to the United States and the United Kingdom were reduced from 10 to 6 cents and from 12½ to 6 cents, respectively, per half-ounce. In 1875 a convention between Canada and the United States reduced postal rates between the countries to the domestic level. In 1878, on the admission of Canada to the Postal Union, letter postage to the countries of the Postal Union was reduced to 5 cents per half-ounce. After a conference in 1897 Imperial penny postage (2 cents per half-ounce) was established on Dec. 25, 1898, while the domestic rate was reduced from 3 to 2 cents per ounce. These rates were maintained until 1915, when, with the rising costs of the War period, rates were increased. Penny postage again became effective for Canada, to the United States, Newfoundland, and other countries of North America on July 1, 1926, and to the United Kingdom and all other places within the British Empire on Dec. 25, 1928, with later extensions to France and South America. On July 1, 1931, a special revenue tax, imposed by the Government for the purpose of obtaining additional revenue, came into effect on letters addressed to places in Canada, throughout the Empire, to France, to Spain and to North and South America generally, making the rate in these cases 3 cents for the first ounce and 2 cents for each additional ounce.

The Post Office Department is administered by the Postmaster General. Besides the several administrative branches at Ottawa, the Dominion is divided into 15 districts, each in charge of a District Director or Superintendent of Postal Service. The Canadian system embraces a territory more extensive than that served by any other system, excepting those of United States and Russia, and the relatively small population compared with the great distance to be covered makes inevitable a peculiarly difficult and relatively expensive service.

**Rural Mail Delivery.**—A system of rural mail delivery was inaugurated in Canada on Oct. 10, 1908, limited at that time to existing stage routes. The service was greatly extended by new regulations taking effect on Apr. 1, 1912. The result has been an increase in the number of rural routes from approximately 900 in 1912 to 4,575 in 1938, having 261,818 mail boxes as against approximately 25,000 in 1912.

**Mail Transportation.**—The conveyance of mail by land, water, and air entailed a total expenditure of \$13,637,680 during the fiscal year ended 1938. Railway carriage cost \$6,897,341, land transportation cost \$6,087,889, conveyance by steamship cost \$277,049, while that by air cost \$375,401. These amounts were paid solely for services rendered as carriers. For details regarding air-mail services, see p. 736. Special subsidies are granted to assure the maintenance of certain steamship services. Since these subsidized services provide transportation for passengers and freight as well as mail, the subsidies are included with other expenditures on water transportation on pp. 687-688.

**Statistics.**—Tables 1 to 3 show, respectively, the numbers of post offices in operation in Canada in the latest six years, the gross revenue in each office collecting \$10,000 and upwards in 1937 and 1938, and the net revenues and expenditures of the Department in various years since 1890.

\* Revised by H. Beaulieu, Director, Administrative Services, Post Office Department.

					1938..	35,546,161	32,296,805	-	3,249,356

<sup>1</sup> Exclusive of commissions and allowances to postmasters and some other smaller items. The gross revenue in the fiscal year 1937 was \$41,181,566, and in 1938, \$42,998,349.

**Postage.**—The net revenue receipts shown in Table 3 are received mainly in the form of postage as is indicated by the following gross figures.

The gross value of the postage stamps, post cards, etc., sold during each of the latest eight fiscal years, was: \$25,769,781 in 1931, \$27,242,715 in 1932, \$25,999,159 in 1933, \$25,541,129 in 1934, \$26,303,451 in 1935, \$27,341,608 in 1936, \$28,179,323 in 1937, and \$28,808,513 in 1938. Receipts from postage paid in cash were as follows: \$8,887,322 in 1931, \$9,078,136 in 1932, \$8,173,950 in 1933, \$8,129,387 in 1934, \$8,619,712 in 1935, \$9,277,072 in 1936, \$10,203,389 in 1937, and \$10,865,895 in 1938.

**Auxiliary Services.**—The auxiliary postal services—the issuing of money orders (including postal notes) and the facilities offered by the Post Office Savings Bank—have expanded enormously since Confederation. In 1868, there were 515

money order offices in operation, issuing orders to an amount of \$3,342,574; the following tables show the magnitude of operations now. Statistical tables showing deposits with the Government savings banks since Confederation and the business of the Post Office Savings Bank, 1933-38, are included in the chapter on Currency and Banking (Chapter XXII).

#### 4.—Operations of the Money Order System in Canada, fiscal years 1911-38.

NOTE.—For 1868 to 1900, see Canada Year Book, 1911, p. 289; for 1901-10, see 1932 Year Book, p. 622.

**Air-Mail Services.**—The total weight of mail carried by air throughout Canada during the year ended Mar. 31, 1938, was 1,368,246 lb., while the mileage flown was 1,474,230.

An interesting feature of the returns is the continued volume of mail carried by air into the several mining districts, and there would seem to be little doubt that aerial postal communication contributes materially to the development of Canada's natural resources.

## PART IX.—THE PRESS.\*

The desirability of including in this chapter of the Year Book an article dealing with the role of the press in the economic and social development of Canada has been under consideration for several years. The compilation of such a survey in the space that can be spared is not an easy task, owing to the great breadth of the subject and the complexity of the interrelationships of the modern press. Indeed, it would be impossible in such an article to trace throughout their history the relationships of the many newspapers existing to-day. However, it is felt that a useful purpose may still be served by emphasizing major trends and tendencies, that have influenced the development of the press as a whole, against a historical background that shows the beginnings of journalism in each section of the country.

The purpose of the following article, then, is to trace from the small but important individual pioneer efforts the growth of the huge interrelated modern organization of to-day, and incidentally to try to point to the direction in which present tendencies are leading.

This Part has therefore been planned in two sections along the following lines:—

Section 1, where the development of the press in Canada is treated, such treatment having been arranged under the following subdivisions:—

(1) A short introduction.

(2) A review of the beginnings of journalism in each section of the country, tracing such beginnings down to about the middle of the nineteenth century, from which time the modern press may be said to date.

(3) The transition period leading to the evolution of the modern newspaper press.

(4) The development of co-operation.

(5) The influences that have affected the development of the modern press, and present-day tendencies.

(In subdivisions 3, 4, and 5, the modern press is treated, not so much as a number of individual papers and journals, although this angle is not forgotten nor lost, but more from the standpoint of the organized machinery that has developed to unify and co-ordinate the individual units.)

Section 2 gives detailed statistics of the daily papers, weekly papers, magazines, and miscellaneous publications, followed by a series of general comparative tables all of which are designed to show the present statistical picture and the growth of the modern press.

### Section 1.—The Development of the Press in Canada.

#### Introduction.

The press of all lands has, of course, from the first, been a very important factor in carrying information to the people and in crystallizing and expressing public opinion on current questions, but in no period of history has it been so important an influence as it is to-day. Its power in this regard is generally understood to be enormous, but, as is always the case where such potency is concentrated in human institutions, it may be used either constructively or destructively.

History shows how time and again, in many countries, the influence of the press has been perverted to achieve selfish aims. On the other hand, the modern British tradition of "a free press" has proved one of the bulwarks of democracy. Naturally,

\* Prepared under the direction of the Dominion Statistician by A. E. Millward, B.A., B.Com.

the traditional background upon which the press has been developed in Canada is therefore of first importance. It is sometimes forgotten by those who have grown up in modern days that free expression of views in printers' ink was not always possible and that the press has had to fight bitterly and long for the rights which are regarded as commonplace to-day.

True, the basic British tradition of a free press had been established in Great Britain prior to the rise of journalism in Canada and the progress thus made passed in due course into the fabric of tradition. But, notwithstanding this, Canadian publishers had their own battles to fight, their own problems to solve, and their own set of traditions to build on that foundation. In doing this they have been influenced profoundly by two forces: on the one hand, the conservative qualities and literary standards of British newspapers of the better type to which they were traditionally sympathetic; and on the other, the strong tendencies of the new-world press to sensational journalism and a catering to popular taste in order to build up circulation and financial independence. The present-day Canadian newspaper is, on the whole, a creditable product in which both influences have played their parts.

From its beginnings the Canadian press has developed along individualistic lines, although to-day, because of vast changes in modern journalistic methods, strong personalities are not associated so directly with their publications or projected so forcibly into the public eye as was the case in the eighteenth and nineteenth centuries.

According to *McKim's Directory* for 1939, the Dominion, in 1938, supported 1,804 newspapers and periodicals, of which 112 are issued daily. Ontario had 660, or 36 p.c. of the total. Quebec with 387 does not seem to occupy the place the population of the province warrants, but one French paper, *La Presse*, boasts the third largest circulation of any paper in Canada and the *Montreal Star* ranks fourth in this respect among the English papers of the Dominion. However, circulation figures of French-Canadian periodicals (daily, weekly, or monthly) do not provide an absolute yardstick for measuring the reading habits of the French-Canadian population for the following reasons:—

(1) French-Canadians are, on the whole, more bilingual in their reading habits than English-speaking Canadians. A large number of French-Canadian families in Montreal, Quebec, or Ottawa do not limit themselves to French papers exclusively. The average French-Canadian business man will buy at least two French and one or two English local papers every day. In Ottawa, for example, many French readers get all three of the local daily papers, of which only one is French.

(2) In nearly every family of the more literary class is to be found one or two publications from Paris.

(3) As in the case of the English-speaking population, the French-Canadian reading public are not immune from the attraction of the large American periodicals and the most popular of these are to be found even in remote villages.

### The Beginnings of Journalism in Canada.

#### NEWSPAPERS.

The art of printing from movable type invented by Gutenberg of Mainz swept over the countries of western Europe in the 20's of the fifteenth century with the force of a renaissance, but was naturally much later in penetrating the pioneer colonies of North America. By the middle of the eighteenth century, however, it had become well established in the New England colonies. The art had become deeply rooted in Massachusetts especially, and it was from Boston that, in 1751, Bartholomew Green, Jr., brought the first printing press to what is now Canada. At

the mature age of fifty years he began his life anew in Halifax, and, although he was destined to live for but a few weeks after his arrival, this event gave Canada the inestimable benefits of type-printing and for this reason alone is of historic importance. It was Green's immediate successor, one John Bushell, an associate, also from Boston, who laid the foundations of Canadian journalism, for it was due to his enterprise that the Halifax *Gazette* was established in 1752.

To appreciate the background of early Canadian journalism, the reader must understand something of the conditions under which the early pioneer journalists worked.

The editors and publishers of Canada's early papers were outstanding local leaders; journalism was a strong formative social force in local centres and guided community development. In such times newspaper publication, though a small business, was a tremendously important influence. Nevertheless, circulation was definitely restricted by the difficulties of communication and transportation, the limitations of pioneer life, the isolation of the communities served, the expense of publication, and the relatively low average standard of literacy. The editor in this period was often the actual news-gatherer as well as writer of much of the material which found its place in the columns of his paper, for news from the outside world was difficult to get; he was frequently compositor, proof-reader, printer, and distribution agency all in one—a strong individualist by temperament, he was inclined to be a reformer or radical in politics.

The expense of printing by the tedious processes then in vogue and the limited revenues obtainable from subscriptions and advertising, restricted early publications to weekly or, at best, semi-weekly editions. Indeed, the passage from the weekly to the daily paper was a very gradual process in Canada and was made possible only by the growth of large urban centres. Because of these difficulties, early papers were, generally speaking, dependent on outside assistance to a substantial degree, although there were several examples of papers which fought through without any such aid. It was well for Canadian journalism generally that able men sponsored early efforts and sought the widening influence of the press to express their views.

In these circumstances, it is a matter of note that the early press in the Maritimes and in Lower and Upper Canada retained so much of rugged individualism and willingness to fight, even at the expense of survival, for its independence and rights whenever these were challenged, for in the upheavals of Canada's early history writers of skill and great journalistic ability rose and fell with the tides of political unrest. These early journalists have left their impress on the scroll of Canada's history and many of them in their later days became outstanding political figures, for journalism naturally opened the gateway to politics.

A few of the galaxy of outstanding journalistic figures up to the middle of the nineteenth century were:—

*The Maritimes*—Joseph Howe (later the Hon.); John Sparrow Thompson (father of a Canadian Prime Minister); G. E. Fenety; H. D. Blackader; William Annand (later the Hon.); and Jonathan McCully (later the Hon. and one of the Fathers of Confederation). *Lower Canada*—Fleury de Mesplet; the Hon. Pierre Bédard; Etienne Parent; Jean Baptiste Eric Dorion (with whom were associated Papin, Daoust, Blanchet, and others); John Melton; John Lowe (later Deputy Minister of Agriculture at Ottawa); and B. Chamberlin (later Queen's Printer at Ottawa). *Upper Canada*—William Lyon Mackenzie; Thomas Dalton; Hagarty

(later Sir John and Chief Justice); Hincks (later Sir Francis); William Macdougall (later the Hon.); and Hugh Scobie, Peter Brown and his son George Brown of the *Globe*.

**The Maritime Provinces.**—As mentioned on p. 739, the *Halifax Gazette*, established in 1752 by John Bushell, was the first paper to be published in what is now the Dominion of Canada. At that time the *Gazette* was merely a leaflet (a half-sheet of foolscap, both sides printed) which provided the early colonists of Nova Scotia with a weekly summary of news and important events. Although anything but impressive in appearance, it was the humble seed from which the sturdy growth of Canadian journalism has since developed.

At this time in her history, the British and German population of Nova Scotia is recorded as only 4,203, having increased from the 2,544 British emigrants brought to Halifax in 1749 by Cornwallis. The subscription price to the *Gazette* was twenty shillings a year and the number of original subscribers was 72: after misfortune, which resulted in the withdrawal of official patronage, the *Halifax Gazette*, then under the proprietorship of Anthony Henry, a former partner of Bushell, ceased operations under that name in 1766. A rival newspaper, the *Nova Scotia Gazette*, took its place and secured the official patronage in the same year.

In 1769 the *Nova Scotia Chronicle and Weekly Advertiser* was established by Henry, who would not admit defeat in spite of his earlier reverses. This paper was more liberal in outlook than its rival and was offered at an appreciably lower price; it soon became more popular than the *Gazette* and later (1770) gained control of, and was incorporated with it as the *Nova Scotia Gazette and Weekly Chronicle*, which, still under Henry, became the official organ.

The next newspaper in the Maritimes was the *Halifax Journal*, which was established by another Bostonian in the person of John Howe (father of the Hon. Joseph Howe) who was for many years the leading printer in the Maritime Provinces. This paper was published in 1781 and had a continuous existence for ninety years. In the 1780's three solidly established newspapers were appearing in the city of Halifax alone and the little town of Shelburne supported three others. Halifax kept the lead in Canadian journalism for a long time and, while overtaken later by Toronto, the brightness of its record is undimmed. In 1783 the *Royal Saint John Gazette and Nova Scotia Intelligencer* was founded. New Brunswick was then a part of Nova Scotia but, when it became a separate colony in the following year, the name of the paper was changed to *Royal New Brunswick Gazette and General Advertiser*: this was an official organ used for official notices as well as news.

Another New Brunswick paper was the *Morning News* of 1839, which championed popular rights along the lines of Howe's *Nova Scotian* (see next paragraph). At this time, journalism, in each part of the Maritimes, was closely interconnected, not only in spirit but through the personal relationships of the editors.

In 1828 Joseph Howe, who later became one of the great parliamentarians of Nova Scotia, established the famous *Nova Scotian*; he had formerly been interested in the *Gazette and Weekly Chronicle*, which was now known as the *Acadian*. The *Nova Scotian* changed its name to the *Morning Chronicle* towards the middle of the century and, with its evening edition, the *Halifax Star*, (1873), and many contemporaries (see Tables 1 and 2) including the *Halifax Herald* (of which the *Halifax Mail* is the evening edition), the *Sydney Post-Record*, and the *Glace Bay Gazette*, still moulds public opinion in that province.

In Prince Edward Island the first paper was the *Royal Gazette* founded in 1791 at Charlottetown: this was an official organ. The first regular unofficial newspaper

was the Prince Edward Island *Register* of 1837. The two Prince Edward Island newspapers both with wide circulations to-day, *viz.*, the *Patriot* and *Guardian*, date back to 1857 and 1891, respectively.

The early Maritime press was notable for its stand in connection with the struggle for the freedom of the press and responsible government, and the outstanding figure in these struggles was Joseph Howe, certainly one of the greatest publicists Canada has had.

**Lower Canada.**—Journalism in the old Province of Canada began soon after the transfer of Canada to Great Britain. Prior to the cession there had been no regular journals in the Province. The first newspaper to be published here and the second in what is now Canada was the *Quebec Gazette*, founded in 1764, at which time the *Halifax Gazette* had already been in existence for twelve years. The senior proprietor, Wm. Brown, was Scottish-born but came from Philadelphia, and, through his sponsor, Dunlop, had an indirect connection with the great Benjamin Franklin. The paper itself was printed in alternate columns of English and French with the stated purpose of affording "a weekly lesson of improvement to any inhabitant willing to attain to a thorough knowledge in the language of the place different to that of his mother tongue—whether English or French". Three hundred subscriptions at \$3 each were obtained before operations were commenced and the paper lived for more than a century under different publishers.

The second paper in the Province of Canada was published in Montreal in 1778. This was also a *Gazette* and attempted to enlist the sympathy of French-Canadians for the American Revolution. Benjamin Franklin, Samuel Chase, and Rev. Charles Carroll were the missionaries deputed to proceed to Montreal for this purpose, but a Frenchman, Joseph Fleury de Mesplet, an editor and printer who had been in the employ of Franklin at Philadelphia and who, incidentally, published the first book to be printed in Montreal, *viz.*, *L'Adoration Perpetuelle* in 1776, was chosen to edit the paper for them. The original plans quickly went awry and Mesplet was left with the equipment. He brought out the *Gazette du Commerce et Littéraire* from the celebrated Château de Ramezay as a paper of four eight-column quarto pages, printed in French. The first number was taken up entirely with literary selections, moral and amusing anecdotes, etc., owing to the dearth of commercial intelligence. Indeed there was very little general news in the first issues, and the editor apparently had difficulty in publishing accounts of current events without giving offence to those in authority, who in the end proved too strong for him.

In 1779 Mesplet was arrested and the publication of his paper was suspended but it appears to have been resumed in 1785. By 1788 the *Gazette* had made much progress; the page was now enlarged from quarto to foolscap and printed in double columns in both languages. It was at this time that the paper took on the character of a true newspaper, though literary features were not entirely neglected. Mesplet published the *Gazette* until 1789. About 1794, Lewis Roy, who had established the *Upper Canada Gazette* in 1793, appears to have been associated with the Montreal paper, and in 1795 it passed into the hands of Thomas A. Turner. In 1816-17 James Brown, the pioneer in paper-making in Canada (see p. 752), was its publisher and printer, and the format was again changed. Under the proprietorship of Robert Abraham, who took the paper over in 1844, it became a daily in summer and a tri-weekly in winter and began to take on its modern form. It has since grown to be one of the most prominent and respected papers in the country.

Seven newspapers were founded in Lower Canada before 1800; in 1824 there were 12 newspapers published in Lower Canada—4 in Quebec city, 7 in Montreal, and 1 in Stanstead; but fifty years later, *viz.*, in 1874, there were 88 newspapers and periodicals of all kinds published in the province of Quebec. The history of journalism in Quebec presents a complex and ever-changing picture due to the differences in religion, language, and race. It is next to impossible to trace the intricate changes in management and form which characterize the French language papers, such as *La Canadienne* (1806), *La Minerve* (1826—the publishers were exiled after the Revolution of 1837), *L'Avenir* (1848), *La Pays* (1851), *L'Événement* (1867), *La Patrie* (1878), *Le Soleil* (1882), *L'Étendard* (1883), and *La Presse* (1884). Of these early French papers only *L'Événement*, *La Patrie*, *Le Soleil*, and *La Presse* remain to-day. *La Presse* is now, in fact, the third largest paper in regard to circulation in Canada (see Table 1). Taking into account the disadvantages under which they laboured, the French papers have shown comparable progress, initiative, and enterprise with their English contemporaries.

Reverting to the English papers, in 1805 the Quebec *Mercury* was established and survived for nearly one hundred years; in 1811 the Montreal *Herald* was founded and in 1846 the Montreal *Witness*. Meanwhile, a strong provincial press had grown up in the Eastern Townships, where the *Farmers' and Mechanics' Journal and Eastern Townships Gazette* had been founded in 1834. In 1838 this paper became the *Sherbrooke Gazette*. In 1833 the Montreal *Daily Advertiser* had been founded, the first daily paper to be published in what is now Canada.

**Upper Canada.**—The first paper in what is now Ontario was the *Upper Canada Gazette and the American Oracle*, published in 1793 at Newark (now Niagara) by Lewis Roy, a Frenchman from Quebec, who in the following year succeeded, temporarily, to the editorship of the *Montreal Gazette*. In 1799 when the seat of Government was transferred to York (now Toronto), this paper followed the Government and continued to be published there until 1813. The *Canada Constellation* occupied the field which the *Gazette and Oracle* had filled in Niagara, but later gave way to the *Niagara Herald* (1800).

From 1800, Toronto (then York) became the centre of experimental journalism in Upper Canada. Many short-lived attempts to establish papers were made in the early years of the nineteenth century against very great difficulties, but the *Upper Canada Gazette* was the chief survivor. It depended mainly on New York papers for its British and foreign news and the difficulties with which it had to contend are indicated by the circumstance that it made its appearance on wrapping paper on more than one occasion. The *Gazette* finally ceased publication in 1813, when invaders from the United States scattered its type and destroyed its press. As the *Weekly Register* it was revived in 1817. Meanwhile the *Upper Canada Guardian and Freeman's Journal* had been established in 1807 as an opposition paper. The *Observer*, founded in 1820, supported the administration.

The *Colonial Advocate*, edited by William Lyon Mackenzie, appeared in 1824, also as an opposition paper. It was at first printed at Lewiston, New York, but circulated in York. In 1831 the *Courier* was established and, in 1833, Thomas Dalton founded the *Patriot* as a strong Conservative paper.

In the period following the Rebellion of 1837, journalism in Upper Canada entered a second phase. The experimental stage had now ended and this second period leads directly to the modern journalism of to-day. We are now brought face to face with personalities like Hincks (later Sir Francis) who established the *Examiner*, and Hugh Scobie, who established the *Colonist*, both in 1838; Peter Brown,

the founder of the *Banner* in 1843; George Brown (his son), who established the *Toronto Globe* in 1844; and James Beatty who founded the *Leader* as a moderate reform paper in 1852. The *Daily Telegraph* came along in 1866 and the *Evening Telegram* (one of the most successful papers in Canada) ten years later, both founded by John Ross Robertson, but these, with the *Mail*, the *Evening News*, and the *Star*, belong to the transition phase leading to the modern period (see p. 745).

**Prairie Provinces.**—The beginnings of the press in Eastern Canada have been followed in outline down to the middle of the nineteenth century. At this time papers were appearing in even the smaller settlements in the Canadas and the Maritimes, but the spread to the West was just beginning. In Fort Garry, the chief post of the Hudson's Bay Company, but at that time a mere hamlet, the *Nor'-Wester* had its inception as a result of the enterprise of two Ontario newspapermen, William Buckingham, afterwards secretary to the Hon. Alex Mackenzie, an English and Ontario journalist of experience, and Wm. Coldwell of the *Toronto Leader*. T. D'Arcy McGee was its Ottawa correspondent. It appeared in 1859 as a four-page weekly and was the leader of public opinion among the colonists of the North-West. This paper ran until 1872.

Other early attempts to establish papers in Manitoba were the *Red River Pioneer*, the *New Nation* (a Fort Garry paper associated with the first Riel Rebellion), the *Manitoban*, and *Le Métis*, 1870 (a French paper which circulated among the half-breeds). The *Manitoban*, which later became the *Winnipeg Free Press*, was founded by W. F. Luxton in 1874 as a weekly and became a daily in 1879. Luxton was the most prominent personality in Manitoban journalistic history and later founded the *Daily Nor'-Wester*, now known as the *Telegram*. One of the first dailies in Winnipeg was the *Herald* of 1877, which, however, lasted for only a couple of months.

The *Saskatchewan Herald*, published in Battleford, was the first paper in what is now the province of Saskatchewan, and was founded in 1876, the year of the organization of the Provisional District of Saskatchewan, by P. G. Laurie, a man of notable character. The *Regina Leader* came on the scene about seven years later; it was edited and owned by Nicholas Flood Davin, a journalist of outstanding capacity.

The *Edmonton Bulletin*, associated with the name of Frank Oliver (later the Hon.), was started in 1880 and was the first paper in what is now Alberta. The *Calgary Herald* edited by John J. Young, quickly followed.

**British Columbia.**—It has been said that the history of journalism in British Columbia has been the history of pioneering and townsiteing. This is more or less the case in all the western provinces, but there is some truth in the statement that the remains of ambitious pioneer journals are far more numerous in the coastal province than on the prairies. The conditions that governed the sudden rise of communities and their equally sudden disappearance among a floating population mainly concerned with mining are the chief reasons for this. To-day British Columbia has, in proportion to its inhabitants, more newspapers than any other province in the Dominion.

The first recorded newspaper of what is now the province of British Columbia was published in Victoria in 1857 and printed from a French font on a French press under the editorship of a Frenchman (Comte Paul de Garis) who left France after the troubles of 1851. This effort lived for only two or three months. In 1858, two publishers from the United States, Messrs. Whitton and Towne, started the *Victoria Gazette*, the first English paper. This was the period of the gold ex-

citement and activity in journalism was stimulated. The Vancouver Island *Gazette* followed the *Victoria Gazette* by only one month, but both these papers died quickly, within the year of publication.

The *British Colonist* was established in December, 1858, and, under the name of the *Colonist*, this paper has remained in the field down to the present day. The first editor and manager of the *British Colonist* was the late Hon. Amon de Cosmos (otherwise John Smith). Later the Hon. John Robson, one of the early premiers of the province, was associated with this paper. The *Cariboo Sentinel*, a small four-page paper which sold for \$1 a copy, gave current news of the mining companies of the Cariboo and belated news of all kinds to the miners of the district. It was established in the 1860's soon after the Cariboo gold-fields were discovered.

The years between 1860 and 1880 (which belong to the modern period) were very prolific as regards new ventures, but many of the newspapers then established passed away after a brief existence. In the early 'eighties the *Victoria Times* came into the picture and is worthy of special note. This paper has extended its sway and is, to-day, an active force in the province. The Hon. William Templeman, another example of the successful combination of journalism and politics, was the first editor and later became proprietor.

#### MAGAZINES.

Among the magazines to be published prior to 1850 in what is now Canada were:—

The *Nova Scotia Magazine*, published at Halifax in 1789; the *Quebec Magazine* in 1791; *l'Abeille Canadienne*, 1818-19; the (Montreal) *Canadian Magazine*, started in 1823 but discontinued in 1825 after the issue of the twenty-fourth number; the *Canadian Review* (Montreal) 1824-26, an ambitious journal which gave to its readers 240 pages of good reading each month and followed the English pattern of literary reviews; the *Bibliothèque Canadienne*, 1825 (continued as *L'Observateur* in 1830 and as *Magazin du Bas Canada* in 1832); the *Acadian Magazine or Literary Mirror* (Halifax), 1826; the [York (Toronto)] *Canadian Magazine*, 1833; the *Literary Garland* (Montreal), 1838-51, a magazine which, though less ambitious than several of its contemporaries, had more vitality and numbered many outstanding literary figures among its contributors; the *Monthly Review* (Montreal), 1841; *Revue Canadienne* (Montreal), 1845; *Barker's Canadian Magazine* (Kingston), 1846; *Snow Drop* (Montreal), 1847, a well-conducted child's magazine; *Victoria Magazine* (Belleville) 1847; and *Repertoire National* (Montreal), 1848.

It will be noticed that ten of the above fifteen magazines originated in Lower Canada; this does not mean, however, that their circulations were limited to that area, for Montreal was a publicity centre for Upper Canada also.

#### The Transition Period Leading to the Evolution of the Modern Newspaper Press.

The beginnings of journalism outlined above were followed by a period of reconstruction and change which led directly to the modern period.

This phase of journalistic development cannot be chronologically defined but may be said, roughly, to have preceded Confederation by about fifteen years and extended to between 1880 and 1890. It was characterized by the appearance first in Ontario of the large metropolitan or city 'dailies' that ultimately developed through tedious and difficult stages—for the independent national type of paper did not spring into being all at once—into strictly business enterprises, as distinct from

local party organs. It was a time when the widening demands and tastes of readers as well as economic trends were forcing steadily mounting expenditures on newspaper editors to finance larger staffs, better news services, and added features. Control and management of a city daily as a 'business unit' and on a national basis in turn fostered a willingness of editors to co-operate to secure expensive services and safe-guard their own vital interests.

The *Toronto Globe* was one of the earliest newspapers in this class, but other large dailies that made their appearance in Ontario during this pioneering period or were a part of it included the *Daily Telegraph* (1866), the *Evening Telegram* (1876), the *Mail* (1872), and the *Evening News* (1880). (Short reference has already been made to these on page 743.) The *World* [1880-1922 (?)] is noteworthy because of the new influences it brought to bear on Canadian morning journalism. The Macleans (W. F. Maclean, M.P., and his brother, James Maclean) made an excellent newspaper team. They were independent in their outlook and reputed to be among the best paragraphers of their day. They introduced new standards somewhat along the lines of the 'tabloids', and several other morning papers followed their lead to some extent. The *Toronto Star* (1892) also belongs to this group of pioneer papers.

In Quebec the *Montreal Star*, founded by Graham, Scott, and Lanigan as a one-cent paper in 1869, and *La Presse* (1884) were established in this period. As has been noted, the *Montreal Gazette* had developed into a daily by this time and, under the editorship of R. S. White (1886-1896) was kept in the vanguard of progress. The *Montreal Herald* (1811) also reached a high point of its success between 1870 and 1885 under the able editorship of Hon. E. Goff Penny.

Leading papers in the Maritimes and Western Canada, such as the *Chronicle* (1844), the *Herald* (1873), the *Star* (1873), and the *Mail* (1878), all of Halifax, and the *Saint John Telegraph-Journal* (1868) in the Maritimes, and the *Winnipeg Free Press* (1874), the *Regina Leader-Post* (1883), the *Calgary Herald* (1880), the *Edmonton Bulletin* (1880), the *Victoria Colonist* (1858), and the *Vancouver Sun* (1886) of Western Canada, were obliged by the forces of competition to fall into line with the movement and gradually there emerged the national press along modern lines, the main characteristics of which are developed in the next section.

The trend toward large scale production and the increasing financial obligations involved in the production of a modern daily newspaper are illustrated in the case of Toronto daily newspapers which in the present century have shown a reduction in number of from six to three [excluding the *Clarion* and the *Hebrew Journal* (Yiddish)]. But these three have an enormously greater aggregate circulation than the six had in 1901.

### The Development of Co-operation.

After the press had once become well established in the various sections of British North America, progress was rapid. No combined statistics are available prior to Confederation, but there do not appear to have been more than between 150 and 200 periodicals in circulation in 1850. McKim's *Canadian Newspaper Directory* (1892) published an estimate for the year 1864, when there were stated to be 22 dailies, 220 weeklies, 27 monthlies, and 44 mixed papers in circulation; in 1874 there were 46 dailies, 325 weeklies, 41 monthlies, and an unreported number of mixed papers; in 1881, according to Rowell's *American Newspaper Directory*, there were 61 dailies, 407 weeklies, 58 monthlies, and 41 mixed papers; and by 1891, McKim's *Directory* gave 97 dailies, 653 weeklies, and 217 monthlies.

The weekly, a source of local news in small towns and villages which were springing up rapidly in this period, shows a strong and sustained growth, but the monthly periodical, which in the final decade of the period jumped from 58 to 217, makes the most remarkable showing and indicates the widened appeal of this form of publication. The statistics of Table 4 continue the record annually from 1921 to 1938, and it will be noted that the numbers of weeklies and monthlies have continued to increase more rapidly than the dailies. The influences which have worked to produce this result are touched on at p. 755.

In every department of newspaper work—mechanical, news-gathering, business, advertising, and editorial—wonderful progress has been made by the press, especially during the latest fifty years. Moderating and rationalizing influences have been at work from within the press itself, and these, together with the benefits which co-operation has brought, have resulted in raising the tone and influence of the press without unduly undermining its vigour or unnecessarily impairing individuality.

**Co-operation for General Aims.\***—After the middle of the nineteenth century, the advantages to be attained by co-operative effort, not only from the standpoint of self-protection but equally in promoting personal contact between editors in different parts of the country and later the pooling of news-gathering facilities, became a much desired objective of more influential editors.

The earliest attempt at newspaper co-operation in Canada was the organization of the Canadian Press Association at Kingston in September, 1859, at a time when Canada was still one province under the United Parliament, though in fact two separate communities weakly bound together and characterized by political and social disunion.

In these days of the small local paper the development of a united press presented almost insuperable difficulties, for such a press at such a time in the country's history did not lend itself to organization, while the strong individualism of many editors, as well as the expense and time involved in attending meetings at times when travel was difficult, made them somewhat deaf to appeals for co-operation.

That such deep-seated opposition was partially overcome by 1859 was a tribute to the untiring efforts of the editors of leading papers of the day. The following newspapers were represented in the organization of proceedings at Kingston: the *Hamilton Spectator*, the *Kingston Whig*, the *Belleville Intelligencer*, the *Brockville Recorder*, the *Cornwall Freeholder*, the *Montreal Echo*, the *Milton Journal*, the *Barrie Advance*, the *Montreal Gazette*, the *Picton Times*, the *Belleville Independent*, the *Kingston Herald*, the *Whitby Watchman*, the *Napanee Standard*, the *Milton New Era*, the *Dundas Banner*, and the *Kingston News*.

The new Association at first commanded the support of a considerable number of journalists in Upper Canada, but in Lower Canada even among writers of the English press it was not at first a factor. The Association extended its influence, however, as time went on, and by the early part of the twentieth century had shown substantial growth and increased prestige; but its name was still a misnomer, inasmuch as membership was confined almost entirely to the two central provinces. It is important to note that at this stage the Association was an unincorporated body that functioned as a fraternal semi-professional group of newspaper men, without paid staff or central office; it met annually for the discussion of the ethics

\* The information under this heading has been prepared from material supplied by John M. Izrie, Managing Director, *Edmonton Journal*; A. Partridge, Manager, Canadian Daily Newspaper Associations, Toronto; and C. V. Charters, Managing Director, Canadian Weekly Newspapers Association, Brampton, Ont.

and problems of newspaper work, and owed its success to the splendid service rendered by its officers and executive committee, as well as by individual members.

As stated in the summary records of the Association, the purpose was primarily the promotion of friendly feeling and social intercourse among members and not the pooling of news-gathering facilities or self-protection; the latter were objectives of organization which came later. The list of Honorary Secretaries of the Association contains many names well known and highly regarded. Among these are: Col. J. B. MacLean (1890, 1891, and 1894); J. E. Atkinson (1892-93); Col. John A. Cooper (1895-1901); the late Joseph T. Clark (1902-04); the late John R. Bone (1905-10); and J. H. Cranston (1910-11).

Organizations whose purposes were similar to those of the Canadian Press Association were formed elsewhere in Canada and by 1911 three others were functioning as follows: the Maritime Press Association, in the Maritime Provinces; the Western Canada Press Association, in Manitoba and Saskatchewan; and the Alberta and Eastern British Columbia Press Association, in the area designated in the title. In this same year (1911) it was decided to establish the Canadian Press Association on a business basis with paid staff and central office and to endeavour to bring about a merging with it of the three other Associations. Mr. John M. Imrie, now managing Director of the *Edmonton Journal*, was the first Secretary-Manager of the re-organized Association. By the end of 1912 the influence of the Canadian Press Association was Dominion-wide and in 1913 application was made for incorporation under Dominion charter.

After that year the Canadian Press Association was known as the Canadian Press Association, Inc. The newspaper rather than the individual now became the basis of membership and fees were changed from \$2 per year to a graduated scale, depending on the importance of the paper, ranging up to \$120 per year. There followed a steady and substantial enlargement in service to members, including: a standard of practice in matters relating to advertising; a standard for the guidance of members in the censorship of advertising 'copy'; collection of overdue accounts; promotion of advertising; credit information; and co-operative purchasing of newsprint and assistance to members in negotiations with mechanical unions. Membership was divided into three sections, *viz.*, the Daily Newspaper Section; the Weekly Newspaper Section; and the Trade and Magazine Section. Each had its own chairman and executive committee and over all was a president and board of directors.

During the War, the Canadian Press Association, Inc., co-operated with various Departments of the Dominion Government and certain Provincial Governments in the utilization of promotional advertising in the work of government. It co-operated actively with the Minister of Finance and the National Bondholders Committee in the floating of several Victory and other War loans. On the initiative of the Association, government control of supply and price of newsprint was instituted half way through the War and continued for three years in order to cope with an acute situation which had developed.

In 1919 membership of the Association was approximately 900 as compared with 390 in 1910; the increasing services and the more marked specialization and divergence of interests between the different sections brought to the fore the question of the re-organization of the Association into three separate associations serving respectively the daily, the weekly, and the trade and magazine papers; a central bureau, it was felt, could no longer handle all these interests adequately and with

justice to each, while at the same time there was a strong feeling of loyalty to the parent association which all members desired should continue.

The separation was finally decided upon in 1919 and on Jan. 1, 1920, the Canadian Daily Newspapers Association, the Canadian Weekly Newspapers Association, and the Canadian National Newspapers and Periodicals Association commenced their separate and distinct existences; each inherited the traditions of the parent body and the expanded services which have developed have been built around the nucleus of the earlier organization. Indeed this nucleus still exists, although the fact is not generally known. The senior and parent organization is now represented by a president, a secretary, a nominal bank account (which has not been added to or reduced in twenty years) and a board of directors, elected dutifully year after year by the Canadian Daily Newspapers Association if not by the others of the original three—an indication of the regard in which sentiment and tradition are held by the press.

The objects of the individual associations in general are the same although of course adapted to the particular needs of each. They embrace:—

- (1) The elevation of the standard of newspaper writing and publishing;
- (2) The distribution of pertinent information of interest to members;
- (3) The protection of the business interests of members, such as advertising, job printing, circulation, subscription rates, paper supplies, etc.;
- (4) Protection of members from unjust and unlawful exactions.

Each association has its own executive organization and appoints standing committees to deal with specialized sections of its work.

*French Canadian Co-operation for General Aims.*\*—The first successful effort at co-operation of the French-Canadian press was made in 1932, following the meeting of the editors of about fifteen rural weeklies at Three Rivers, Que. Messrs. Labranche and St-Arnaud, who then edited *La Chronique Trifluvienne*, were instrumental in starting the movement. The name adopted by the founders of the new association was "l'Association des Journaux ruraux de langue française d'Amérique", but this was changed to "Association des Hebdomadaires Canadiens-Français" in 1935. The Association, duly incorporated by Quebec charter, had at Nov. 30, 1938, a membership of 33 (or about 55 p.c. of the total French weeklies of Quebec province outside the city and community weeklies). The Association des Hebdomadaires Canadiens-Français, though a relatively new organization in the co-operative field, has contributed substantially to the improvement of the Quebec weeklies, especially as regards betterment of make-up, editorials, captions, illustrations, and advertising policy. It has also championed the interests of its members in many ways.

A new venture is being tried out by the French rural press: that of the syndicate or chain papers. The attempt seems full of promise in the lower St. Lawrence valley and the Eastern Townships.

**Co-operation for Circulation Audits.** †—The growth of advertising and the desire of the advertiser for some reliable means of gauging the effectiveness of the space bought, as well as the keen competition on the part of publishers to increase their revenues by selling as much space as possible, led to the necessity for measuring the circulation of the various types of publications.

\*Summarized from material furnished by Edouard Hains, Business Manager of the Association des Hebdomadaires Canadiens-Français.

†Summarized from *Marketing* for Oct. 15, 1938.

As far back as 1899 advertising men with vision tried to find some remedy for the chaotic situation then existing with regard to circulation estimates, but, although several plans were tried out, they were only partially successful. It was not until the organization of a bureau embracing all forms of publishing and advertising was suggested in 1913 that the idea met with the whole-hearted response necessary to its ultimate success.

Early in 1914 the Audit Bureau of Circulations was organized to include advertisers and publishers of the North American Continent; it met with enthusiastic response in Canada. This is a co-operative non-profit organization, conducted entirely in the interests of its members, and engaged solely in the collection and verification of information on circulations which it publishes in the form of standardized reports to its members.

Several Canadian newspaper publishers took an active part in the formation of the Bureau, and among the charter members are listed: the *Calgary News-Telegram*, the *Edmonton Journal*, the *Vancouver World*, the *Halifax Herald and Mail*, the *Kitchener News Record*, the *Kingston British Whig*, the *London Free Press*, the *Stratford Herald*, and the *Moose Jaw Times*. Canadian magazines are represented by the *Canadian Monthly* (London, Ont.) and farm papers by the *Grain Growers' Guide* (Winnipeg) and *Canadian Farm* (Toronto). The first Canadian advertiser member was the Canadian Pacific Railway. Before the end of 1915 about thirty-five other papers had joined the Bureau and since then the growth in Canada has been steady. To-day, Canadian membership includes 88 newspapers, 20 magazines, 7 business papers, 13 farm papers, and 17 advertising agencies, while 19 other advertisers support the Bureau by holding advertiser memberships. The total membership of the Audit Bureau of Circulation is (December, 1938), about 2,000 members, of which number about 1,600 are publishers.

**Co-operation for News-Gathering and -Distribution.\***—While association between Canadian newspapers for interests connected with the business and social end of newspaper work antedates Confederation, this relationship did not include the function of news-gathering and -distribution—the most fundamental and important part of newspaper work, yet one in which co-operation was most difficult in a country of Canada's dimensions and sparse population. The extensive organization and world-wide connections required for the proper performance of this function, and the fact that the daily press alone was mainly concerned, led to the organization of separate machinery to this end.

The first step in co-operative news-gathering and -distribution in Canada did not come until 1907. Previous to that year the small town dailies and many of the larger papers had to be satisfied with news services from commercial sources, supplemented by occasional and spasmodic telegraph bulletins. Control was, up to that time, vested in the railways—the Canadian Pacific Railway, and the Great North Western Telegraph Company, an affiliate of the Grand Trunk Railway—the services provided were cheap enough but poor, and papers had to take what was served to them.

Opposition to this system first manifested itself in the West, but there was general agreement among publishers throughout the country that it was unsatisfactory. In 1907 the Western Associated Press, organized as a co-operative news-gathering association, came into being at Winnipeg. Arising from small beginnings, it gathered support in the Prairies, although it was in direct competition with the

\* This section has been summarized from material supplied by J. F. B. Livezey, in 1938, before his retirement as General Manager, the Canadian Press, Toronto, and by other collaborators.

Canadian Pacific Railway. Its members were content for several years to put up with inferior service to that supplied commercially (although this placed them at a disadvantage with their non-member competitors) in defence of the principle at stake. The Western Associated Press later gained the support of the established dailies of Vancouver and Victoria and grew in strength and importance.

The ultimate success of the Western Associated Press was due primarily to the efficiency of the services rendered by Wallace Dafoe, one of the great newspaper correspondents of that day, and the skill of J. F. B. Livesay, as well as to subsequent cheapening of telegraph costs. The Western Associated Press became a model for the later Canadian Press.

In 1909 the Eastern Press Association was organized in the Maritime Provinces. Ontario and Quebec each established its own organization two years later, so that there were four independent news-gathering bodies covering different sections of the Dominion. The year 1910 marked a turning-point in the fight of the co-operative press associations. In this year the Western Associated Press appealed to the Railway Commission against the exorbitant and inequitable rates charged to its members for use of the Canadian Pacific telegraphic facilities as compared with the rates charged for its own news service. Eastern and Western co-operative associations all combined on the issue, which was eventually won. The principle was recognized that the railways had no business in the news-agency field and the Canadian Pacific Railway voluntarily surrendered to the Canadian papers the Canadian rights to the Associated Press, the great co-operative association of American daily newspaper publishers. In 1911 Canadian Press, Limited, was organized to take over these rights on behalf of Canadian publishers as a whole, and this link was the only bond existing up to that time between the four sectional associations. These were all co-operative with memberships limited to daily newspapers who must be members also of Canadian Press, Limited.

In the immediately ensuing years, E. H. Macklin, President of Western Associated Press, worked tirelessly toward the ideal of a Dominion-wide national co-operative news association. But there stood in the way the apparently insuperable difficulty of covering, by costly leased wires, the geographical 'gaps', lacking population to support daily newspaper publication, necessary to knit these four associations into a single entity. These gaps lie between Saint John and Montreal, Ottawa and Winnipeg, and Calgary and Vancouver. The urge of war, however, supplied the necessary impetus. Realizing that the unification in a news sense of all Canada was essential to the successful prosecution of the War effort, the Borden Government in 1917 made an annual grant to Canadian Press, Limited, of \$50,000 for the express purpose of binding these gaps by leased wire. Accordingly, on September 1 of that year the four sectional co-operatives were merged into one national news-gathering and -distributing agency which became known as The Canadian Press, operating under Dominion charter.

In 1924 the grant was withdrawn, but The Canadian Press by that time was able and willing to shoulder the added burden, and felt that by so doing it would free itself from even a suspicion of government control. The annual meeting of 1925 went on record that "never again must the Canadian Press accept a grant or subsidy from any source".

The Canadian Press has built up alliances with The Associated Press, Reuters, and Havas, through which it exchanges news it gathers for that of the rest of the world. Its head office is in Toronto but it maintains its own bureaus in London, New York, Halifax, Montreal, Ottawa, Winnipeg, Edmonton, and Vancouver.

Morning Papers	-	19
Total Papers	-	91

With minor exceptions it includes within its membership every Canadian daily newspaper.

*Present Procedure in Regard to Membership in The Canadian Press.*—The Canadian Press operates under Act of Dominion Parliament, 1923, as a non-profit-making and co-operative association. It has no stock issues and every daily newspaper desiring its services must secure a membership. This membership carries with it one vote at annual or special meetings and thus the wealthiest newspaper has no more and no less voting power than that of the smallest daily newspaper in a pioneer community. At the annual meeting 21 directors, representative of all sections of the country, are elected and these in turn elect for the year an honorary president, a president, and first and second vice-presidents. Each member is entitled to the full news services of the association, limited only by his ability to pay. In return he contracts to give the association, exclusively, the local and regional news he collects. He also contracts to pay the assessments levied on a co-operative basis, based on ratio of the population of his city to the total population of all cities in which memberships exist. Circulation is not considered and where two or more newspapers are published in one city, their cost is equalized, though some concessions are made to French member newspapers because of their cost of translation.

Theoretically, the membership is open to every daily newspaper established in its field and able to pay its assessments. The application for a new membership must secure two-thirds vote of the board of directors and must also pay an entrance fee equivalent to thrice the annual cost levied against his city on the population basis.

#### **Influences that have Affected the Development of the Modern Press, and Present-Day Tendencies.**

**Mechanical Progress and Its Effects.**—Until the middle of the 1880's the "Industrial Revolution" in its chief aspects had not affected the type-setting process—the fundamental operation of the printing and publishing industry. Type continued to be set by hand as in the days of Gutenberg and Caxton. In 1885, however, Otto Mergenthaler took out a United States patent for a slug-casting machine, which was the forerunner of the modern linotype, and enabled one man to set up the quantity of type formerly set up by five or six, thus 'speeding up' the process of 'composition'—a matter of great importance to a daily newspaper which aims to serve up news while it is 'hot'. Canadian dailies began to use this machine about 1890, and Canadian weeklies and magazines have used it and its rival, the monotype machine which sets up single type, in the present century.

The development of the modern printing press has been less sudden and spectacular, though quite as epoch-making. Hand-presses were used in the production of the early Canadian newspapers, and the hand-press on which the first newspaper in Upper Canada was printed about 1792 was for a long time on exhibition in the windows of the Toronto *Telegram* for comparison with the press of that paper; this early hand-press was capable of running about 100 copies per hour—a fact which in itself militated against large circulation.

The first steam-power press, capable of producing about 1,100 copies per hour, appeared about 1811, and in England the London *Times* was first printed on such machines in 1814; these were replaced in 1827 by machines printing 4,000 copies per hour. By 1856, further improvements made it possible to print 8,000 copies per hour on the Hoe machines then in use. Since then, further improvements have been made, and we are told in the *Encyclopædia Britannica* that "present-day

newspaper presses are capable of printing simultaneously from as many as 15 reels and of producing 300,000 copies per hour". Canadian newspapers have taken full advantage of the improvement and cheapening of both the type-setting process and the printing process to increase both the size and the circulation of their newspapers, the aggregate number of copies of Canadian daily newspapers alone reaching in 1936, 2,276,000 per day, or approximately one per household for the total population.

Canadian weeklies, too, have an enormous aggregate circulation. In some cases, they are weekly editions of daily newspapers, and these have very large individual circulations. The great majority of Canadian weeklies, however, supply in the main the local news of the communities which they respectively serve, together with digests of world news which are perhaps more valuable because of their condensation. In spite of the growing influence of the dailies, these local weeklies still exercise a great influence on the affairs of their respective communities. Other weeklies serve the special needs of various businesses and professions, or are the organs of churches and fraternal organizations, and still others are printed in languages other than the official languages of Canada, and serve the needs of those who speak these languages by keeping them in touch with the progress of affairs in their original homes. Altogether, the weeklies printed in Canada had an aggregate circulation of 3,916,000 copies per week in 1937 (see Table 5, p. 771).

The mechanization of the type-setting and the printing processes described above, great as was its stimulus to the output of printed matter, had also its attendant disadvantages. The high cost of type-setting machines and the enormous cost of modern printing presses converted the publication of newspapers from an artistic and intellectual into a business undertaking, and was largely responsible for a tendency for the business office to dominate the editorial and news desks. Again, since advertising rates are very generally based upon circulation, there was a struggle for sales, which resulted in the elimination of many deserving newspapers such as the *Montreal Witness*. Further, because of greater rapidity of communication, the city dailies have tended more and more to cut in upon both the circulation and influence of the older weeklies, which in many cases were edited by men of good education and independent views. These were leaders of public opinion in their communities and were in many cases chosen to represent those communities in municipal councils, in the Legislatures, and in Parliament. In a word, the evolution of Canadian newspapers and magazines in the past half-century has exemplified both the advantages and the disadvantages of modern large-scale production.

**The Press as Affected by Its Supply of Paper.**—Every newspaper or magazine is ultimately dependent for its publication upon the maintenance of its supply of paper, which may be regarded as the chief raw material of the printing and publishing industry. The development of the Canadian press has therefore been to a great extent conditioned by the evolution of the manufacture of paper and the prices at which paper can be obtained.

The first periodical publications to be printed in Canada were doubtless printed on imported paper, which must in those days have been relatively expensive, so that the first issue of the *Halifax Gazette* was printed on a half sheet of foolscap. The problem of the supply of paper was a serious one for the early printers, and it is highly significant that probably the first paper-mill in what is now Canada was set up at St. Andrews in the county of Argenteuil, by James Brown, then printer of the *Canadian Gazette* in Montreal, in 1803.\* Ontario's first paper-mill was set up at

\* Fauteux says 1806.

Crook's Hollow (now Greensville) in 1813, and a Nova Scotian paper-mill was established at Bedford Basin near Halifax in 1819. All these paper-mills and their successors used rags as raw material almost exclusively; it was not until 1866 that Alexander Buntin installed in his paper-mill at Valleyfield, Quebec, the first wood grinder in America, while in the same year Angus, Logan and Company started the first mill making chemical fibre from wood. These mills were the pioneers in what is now one of the greatest of Canadian industries, which assures to our newspapers an abundant supply of their chief raw material.

In this article, however, we are concerned not with the paper industry as such, but with its influence upon the development of the Canadian press. This may best be measured by the trend of prices. Good statistics of prices, unfortunately, are available only from 1890, when the quoted price of newsprint paper was \$3.70 per 100 lb. delivered. Thereafter there was a downward trend, and the corresponding quotation in 1905 and 1906 was only \$2 and in 1907 and 1908 only \$1.95. This decline of nearly one-half in the price of newsprint, at a time when general prices were advancing, was presumably due to improved and less expensive methods of manufacture. At any rate, it had a great influence upon the development and expansion of Canadian newspapers. Like other prices, that of newsprint shot upward during the War to a maximum of \$5.678 per 100 lb. for carload lots f.o.b. Canadian mills in 1921. Nineteen twenty-two recorded an abrupt fall to approximately \$3.60, and thereafter prices declined steadily, especially during the depression, to a minimum of \$1.643 in 1934, since when there has been an increase, the quotation for September, 1938, being \$2.163. In this latest period there have been various increases in the prices of Canadian newspapers but these increases appear to have had little effect upon the circulation.

**The Influence of the Rising Standard of Literacy.**—The effect of the more universal education of the population of Canada upon the growth of the press is difficult to appraise. The increase in the total population from 1891 to 1931 was about 115 p.c., but the increase in population over five years of age who could read and write was 170 p.c. Again, the total population increased by 180 p.c. from 1871 to 1931, but the population attending school increased by 217 p.c. in the same period.

From these figures it is evident that the increase in the number of people of an educational standard who patronize the press has been proportionately greater than the actual increase of population. Even so, the increase has not been great enough to be a very important factor in the growth of the press. One must conclude that other factors, such as improved news services, wider appeal through special features (financial, sports, social, etc., pages), and better means of distribution with the general improvement in transportation facilities, have had much more influence upon the growth of the press than the practical elimination of illiteracy among the population of Canada.

It is probable that the people of the Dominion to-day are far more 'news-conscious' and are to a greater extent habitual readers of periodicals than were their forefathers at the time of Confederation, but the press itself has been one of the leading influences in developing this more universal patronage of its services.

**Present-Day Tendencies in the Newspaper Field.**—The press is, from its nature, in the van of all progressive movements. It must keep pace with the times or quickly suffer the consequences, and the 'tempo' of change is now increasing so rapidly that, especially among the smaller papers and journals, competition is very keen.

On p. 745 the influence of the *Toronto World* in changing the standards of morning journalism has been touched on. In recent times the publication of pictures to visualize a news story has been developed to a high degree of efficiency and newspaper photography has become a highly specialized art. This influence has introduced an intimate touch formerly lacking to newspaper readers. Chamberlain, Mussolini, or Hitler are so well known to the man-in-the-street to-day that he would recognize each of them in person at once.

Among the influences that to-day operate to increase the costs of publication are the recent introduction of photographic illustrations transmitted instantaneously from all parts of the world by wire, and the higher standards that have been forced on the local paper by the competition which modern highway transport has brought about. Expensively edited large city dailies can now be brought into the territory of the local paper, and though they may not cut into the circulation of the latter to any great extent, since purchasers of outside papers are not all disposed to cancel the local paper, yet they do tend to enforce a higher editorial standard on the local paper. Still another factor of expense competition makes it impossible to ignore is the success that has attended the colour-printing process as applied to newsprint. The advances made in this field were exemplified on the occasion of the Royal Tour of Canada in the excellent special editions put out by certain Toronto and Winnipeg papers.

Modern transportation agencies and the Post Office Department provide distribution machinery by which the large dailies reach well beyond the confines of their own cities and suburbs. The *Montreal Gazette* and the *Toronto Globe and Mail*, for instance, circulate within a radius of 150 to 300 miles from the centres where they are published and printing arrangements either for the regular or special editions are such that it is possible to deliver copies by carrier within this territory between 7 and 9 o'clock on the morning of the date of issue.

Aerial transportation is another factor which is rapidly growing in importance and which will have to be reckoned with in the near future. At present only experimental deliveries of papers by air-line have been carried out by leading dailies from Montreal and Toronto to Chicago, Winnipeg, and points even farther west, where their sheets have been put on sale during the afternoon of the day of issue. The cost of such transport is at present heavy and will be a factor in retarding the organization of regular scheduled deliveries, but, as history has frequently shown, from new movements such as this vast changes are apt to result. The official opening of the Trans-Canada Air Lines on Mar. 1, 1939, will expedite this movement.

Again, the influence of radio on the press has been immense and is likely to change radically the methods and ways of serving up certain classes of news items. It seems safe to assume that eventually the fields to which each vehicle is best suited will become more definitely defined; the radio can never supplant the press, but it can and will tend to supplement it in even wider measure and greater degree than it does to-day. It is mainly in regard to advertising that the competition of the radio is now being felt. Naturally, when large advertisers lay out their annual appropriations and allot a large share to radio broadcasting, it means so much less for newspapers and magazines, but the case is not so one-sided as it at first appears, for the appropriations for advertising have undoubtedly been greatly increased on account of the radio, and effective appeal through the eye as well as, and often rather than, through the ear is part of the psychology of advertising. Radio as an advertising medium has appealed to producers of nationally and internationally advertised products for the most part, and has not yet influenced other fields materially. Its effect, up to the present, has been to stimulate the quality of press layouts and colour

processes rather than to cut in on newspaper revenues, although some reduction in revenue appears to be attributable to this form of competition.

What new doors will be opened up by television it is, of course, impossible to say. The results of these influences have been to increase the costs of putting out a newspaper. As is generally known, the advertiser carries the paper—not the subscriber—but publishers have obliged readers to shoulder part of the added burden by general increases in subscription rates. It may now be taken for granted that the 'penny' paper has disappeared for good.

Another important result of rising standards and extra services has been the development of a marked tendency to consolidation among papers. It is no longer possible to start up a new paper without ample financial backing, and the risks of failure are multiplied. This accounts for the trend already mentioned towards amalgamation in the case of large dailies. There is a similar trend towards single sheets in many small cities and towns which formerly boasted two or more rival sheets; this type of consolidation, brought about on economic grounds, makes the papers less inclined to take political sides in their editorial columns and accounts, in some measure, for the increase in the number of 'independent' papers in recent times.

In this connection newspaper chains, though not developed in Canada on a scale comparable with that to be found in the United States, deserve mention. Certain influential dailies are by this means brought together under a common management for the savings which can be effected in the purchase of certain services, for which competition is keen and the cost high. For instance, in the case of syndicated material, whether in the form of serials, illustrations or news 'stories' which 'break' suddenly and have a high immediate value, a chain of several papers is advantageously situated to bargain for the rights of publication as against even the largest daily.

In Canada, at present, only two interprovincial chains operate. These are the Southam and the Sifton groups. The former takes in the *Ottawa Citizen*, the *Hamilton Spectator*, the *Winnipeg Tribune*, the *Calgary Herald*, the *Edmonton Journal* and the *Vancouver Province*; the latter embraces the *Winnipeg Free Press* and its associate papers, the *Regina Leader-Post*, and the *Saskatoon Star-Phoenix*. The fact that these papers are under a common management does not mean that their editorial policies are directed along similar lines or that their political complexions are necessarily the same. On the contrary, the local managers are usually given a free hand to shape the policies of the papers according to the conditions in their territories and both 'independent' and 'party' papers may be found in the same group.

The advantages which accrue to the large chain are (though to a lesser extent of course) open to the small chain, and as a result of the keenness of competition there is a definite trend towards the linking of relationships between papers intra-provincially in order to profit from the stronger bargaining position thereby created and a general lowering of costs. Among such provincial-local links may be mentioned those of the *Montreal Gazette* with the *Sherbrooke Record* in Quebec; the *Kingston Whig-Standard* with the *Peterborough Examiner*, and the *St. Thomas Times Journal* with the *Stratford Beacon-Herald*, the *Sarnia Canadian Observer* with the *Woodstock Sentinel-Review*, the *Galt Reporter*, and the *Welland-Port Colborne Tribune* in Ontario; etc.

**Present-Day Tendencies in the Magazine Field.**—In this field, Canada has developed a number of outstanding national journals. In spite of the comparatively

high cost of production here as compared with the United States, and the magnetic attraction which that country, with its large population, has had for rising talent, several magazines built up influential positions and wide circulations. Nevertheless, outside competition is keenly felt by Canadian publishers and it is held that the matter of quality of product no longer enters greatly into the picture. Modern magazine circulation is the result of salesmanship pressure even more than editorial quality and the aggressive methods, aided by the financial strength, of certain United States magazines are real difficulties to the Canadian magazine publisher.\*

Other modern competitive influences which Canadian magazines must meet come from the larger week-end metropolitan newspapers, which, in modern times, feature stories and general magazine material as well as news and, in more recent years, from radio advertising.

Geographical conditions militate to some extent against the growth of a truly national newspaper press in Canada and for this reason the Canadian magazines are much more important than their mere economic value implies. Their distribution is, in most cases, Dominion-wide and their national unifying influence as well as the encouragement they give to the growth and expression of national feeling and sentiment are assets which cannot be measured. The leading magazines are published in the larger cities; among these are; *Maclean's Magazine*, *Canadian Magazine*, and *National Home Monthly* which have become firmly established in the general field of English magazines, while *Le Samedi* is the leader of a group of French-Canadian magazines published and widely distributed in the province of Quebec. Magazines published for women began to break ground after 1900 and have since made great headway. *Chatelaine* and *Canadian Home Journal* have won recognition in the women's field.

Within the past thirty years competition for advertising between magazines and newspapers has become keen. Previously, what magazines there were struggled along with relatively little advertising and most of that was presented in the accepted newspaper style of the day. To-day the magazine has opened up new fields and has developed a technique of its own. The superior paper stock on which it is usually printed and the extensive use of colour printing have assisted the movement and commanded the services of the best artists, engravers, and colour specialists. National advertising, the application of psychological principles, and the direction of appeal to influential consumer groups rather than purchasers are factors that have entered into the development of the modern art. The reader who takes up a magazine usually has time and is in the mood to peruse leisurely and give thought to its attractive display pages with the result that the publisher and the advertiser co-operate to make the most of the opportunity and it is natural, therefore, that some of the most attractive and appealing forms of advertising are promoted through the medium of the magazine.

The art of good advertising, as in the case of magazines generally, is exemplified in the trade journal and has contributed much to its success. This is the avenue through which commercial and manufacturing houses, that can afford elaborate advertising plans, choose to appeal to their prospective clients, and the specialization of good journalism with advertising reaches a high point in this type of publication.

In the fields of agricultural and business periodicals and religious and educational publications, Canada has supported many outstanding successes.

\* The *Canadian Magazine*, which has been among the oldest and best known national periodicals in the Dominion, announced in its April, 1939, issue that it was forced to cease publication. The reasons given were that the publishers could not justify further commitments to carry on in the face of ever-increasing taxation, uncertainty, and what was claimed to be unfair competition of radio advertising programs.

In Table 3, pp. 765 to 770, will be found data regarding the leading magazines and special papers of Canada. According to the classification, adopted from *Canadian Advertising*, there were, towards the close of 1938, a total of 70 general magazines in active circulation in Canada of which 11 were published in the French language. Active Canadian financial papers, at the same period, numbered 21, of which 2 were in the French language; farm papers 37 (4 French); and no less than 216 journals and papers classified as "business" periodicals. The magazines and papers represented in the table are the principal ones in each class on the basis of approved circulation.

### Conclusion.

From the comparison of conditions outlined in the early part of this article with the influences and tendencies at present operative some idea of the immense service which the newspaper has rendered in Canada and the great cost in human effort (heroic at times) which this has entailed is obtained.

It will be seen that modern days have brought many changes. The highly complex and quickly responsive organization now necessary for news-gathering and the costly and intricate machinery required to turn out the large present-day dailies and weeklies have raised newspaper publication into a branch of 'big business', on which a large and increasing army of employees relies for subsistence and in which large capital investments are at stake (see pp. 398-399 for statistics of printing and publishing). The successful paper must now stand on its own feet financially and otherwise, and, although opinion as expressed in the editorials often has party leanings, the news of the better-class modern newspaper is usually unbiased and the strength of the 'independent' press has shown consistent growth.

Thus, in spite of the present tendency to concentration and co-operative expression for certain aims which have been described at pp. 745 to 751, the press as an entity is still an aggregate of separate units, each working out its own destiny in its own way. The great dailies, which originate in the larger cities from coast to coast, are the more imposing, but the smallest weekly is just as much a unit in the 'democracy of the press'.

The co-operative associations already described are unifying influences only so far as economy of operation is concerned and not as regards editorial policy or internal management. In regard to news-gathering, besides working through the Canadian Press, some of the larger papers have also their own foreign correspondents. By means of such news-collecting agencies the press is in touch on the one hand with events occurring in the four corners of the earth, and on the other with the local weeklies and semi-weeklies of the smaller towns to which a large part of outside news is syndicated.

Canada, in spite of the scattered distribution of her population, has, in her press, machinery for the distribution of up-to-date information among her people which is unsurpassed in other countries of comparable importance in population, wealth, and markets.

It is unnecessary to emphasize further the important place which the dissemination of news has played in the growth and development of Canada. This is woven into the fabric of the Dominion's history; it has depended in turn on the progress of all forms of transportation and communication—steam, electricity, the telegraph, the ocean cable, the telephone, and, since the War, the aeroplane and the radio. The scope of the modern paper has widened considerably with these increased facil-

ities. All possible subjects from literature, art, nature study, home-making, and health, to amusement columns which while away a tedious hour for both young and old, as well as personal-problem columns, are now featured. It is a truism—almost a platitude—that the success of modern constitutional government rests on an aggressive and soundly informed public opinion, but it is not so commonly recognized that without a free press—high-principled and vigorous in the best interests of the State—democracy, in many ways the most difficult form of government, would be greatly handicapped.

## Section 2.—Statistics of the Press.

The Dominion Bureau of Statistics does not collect statistics regarding the circulation of newspapers and periodicals in Canada and the following tables have been compiled from data taken from *Canadian Advertising* in so far as individual papers and periodicals are concerned, viz., with regard to the statistics of Tables 1, 2 and 3, and *McKim's Directory of Canadian Publications*, with regard to the historical and summary tables, viz., Tables 4 to 7. The former publication, being issued quarterly, has an advantage in regard to the individual circulations inasmuch as statistics can be brought up to within three months from the time this section of the Year Book is printed, but the long series of *McKim's* annuals provide material for historical trends on a comparable basis.

Tables 1, 2, and 3 classify the statistics of the principal dailies, weeklies, and magazines in Canada. The publications enumerated in Table 4 include a number for which no estimate of circulation is given. Such publications are therefore omitted from the compilation of circulations in Tables 5 and 6. This accounts for the difference in the number of daily, semi-weekly, and weekly publications shown in Tables 4 and 5. Comparison of the figures of Table 6 showing publications in cities of 20,000 population or over, with those for the same year of Table 5, showing publications for the whole of Canada, indicates that the daily newspapers are confined almost entirely to these larger urban communities, but that, in the field of weekly publications, while the greater part of the circulation is accounted for by the publications of these cities, by far the greatest number of weeklies are issued in smaller communities. The week's seems to be the standard medium for local news in small towns and villages.

The French weekly press in particular has always been a strong influence in Quebec. The urban section centres in Montreal and a few of the larger papers like *La Patrie* *Le Petit Journal* (see Table 1), and *Le Samedi* (classed as a magazine in Table 3) are well established. The rural weekly press in this province stands close comparison with that of the rest of the country. Its evolution has been parallel to that of the English rural press, with the difference that its field has been more limited. Most of the French rural weeklies, if small as measured by circulation, are old institutions, many of them having passed the half-century mark. As in the case of the English weekly press, the development of local job printing, especially commercial advertising, has been a strong influence in the survival of many of the smaller rural weeklies.

<sup>3</sup> Includes papers published two, three, or four times a week.

<sup>4</sup> Includes special Saturday and Sunday editions of daily papers.

**Publications in the French Language.**—Such publications include a comparatively large proportion of periodicals dealing with literature, music, religion, and similar cultural subjects, and the circulations of many of these periodicals are not reported in *McKim's Directory of Canadian Publications*. Publications for which the circulations are not reported are not included in either the number or circulation figures of Table 7, p. 773. Since the majority of such unreported publications are likely to have fairly small circulations, the figures of the table represent a larger proportion of total circulation than of the total number of publications. Among daily newspapers, there is only one small publication unreported in each year.

## 7.—Numbers and Circulations of French Language Publications in Canada, by Provinces, 1936 and 1937.

NOTE.—Figures of circulation given to nearest thousand as some publications are not exactly reported. Compiled from *McKim's Directory of Canadian Publications*.

## CHAPTER XIX.—LABOUR AND WAGES.\*

### PART I.—LABOUR.

#### Section 1.—Occupations of the Wage-Earning Population.

The total population in gainful occupations is recorded at the census. In Section 15 of Chapter IV, pp. 128-146 of the 1937 Year Book, the gainfully occupied in 1931 were dealt with rather extensively under the heading "Occupations of the Canadian People". Statistics of the numerical and percentage distribution of the wage-earning section of the gainfully occupied, by industrial and occupational groups, were published at pp. 741-742 of the 1938 edition of the Year Book, and a table at p. 732 of the 1937 edition showed the numerical and percentage distribution of wage-earners, by age groups, as at the Census of 1931.

#### Subsection 1.—Occupational Trends in Canada, 1891-1931.

A "gainful occupation", as defined by the Census of Canada, is one by which the person pursuing it earns money or a money equivalent or in which he assists in the production of marketable goods. Wives or children assisting heads in the conduct of family enterprises are considered to be gainfully occupied if regularly employed even though they may receive no fixed money payment. For example, a farmer's son, not attending school, who is fully employed on the family farm is recorded in the census as gainfully occupied though he may be working in a "no pay" capacity on the farm. On the other hand, members of the family of working age not actively employed at farm work are not included among the gainfully occupied. Persons retired from gainful occupations, the disabled who are permanently unemployable, or inmates of institutions are not counted as engaged in gainful occupations.

Unemployed persons are counted among the gainfully occupied population in the census, persons out of work on the census date being asked to report the occupation in which usually employed or the occupation in which last regularly employed.

In Table I the gainfully occupied are classified by occupation groups, showing the percentage importance of each group by census years over the period 1891 to 1931, for Canada and the provinces.

The occupation group totals in this table account for every person following any one of the types of occupation coming under the specified groups listed here, irrespective of the industry in which the person might be employed. For example, all persons directly engaged in the making or repairing of commodities, e.g., bakers, tailors, machinists, printers, etc., are classified under "Manufacturing" in this table whether employed in the manufacturing industry or not. Similarly, all persons following such a transport occupation as truck driver are listed under "Transportation", whether employed by a trucking concern or factory, store, etc. Clerical workers constitute a separate group as do labourers in all but the primary industries. The labourer on a farm is usually a farm labourer and in a mine, a

\* The sections and subsections of this chapter, with the exceptions of Sections 1, 3, 7, and 9 (Subsections 3, 4, and 5) and Section 10, all of Part I, and Section 4 of Part II, have been revised by, or under the direction of W. M. Dickson, Deputy Minister, Department of Labour, Ottawa. The information in Section 3, Part I, has been obtained through the courtesy of the Provincial Departments of Labour or Bureaus of Labour, and that in Section 7, Part I, has been revised by the chairmen of the respective provincial Workmen's Compensation Boards. Section 10 has been revised under the direction of Dr. W. C. Clark, Deputy Minister, Department of Finance, Ottawa. The remaining sections have been prepared and revised in the Dominion Bureau of Statistics.

mine-working labourer, but the labourer in a steel mill is not necessarily a metal worker or engaged in some 'process' occupation, nor is the labourer on a steam railway always a transport worker.

The most significant feature of the trend of occupations in Canada during the period 1891 to 1931, as shown by Table 1, is the decline shown in the relative importance of agricultural pursuits. In 1891 over one-half of all males in gainful occupations were employed in agriculture, while in 1931 the proportion had fallen to just over one-third. This decline has been much more pronounced in the eastern provinces than in the Prairie Provinces and British Columbia.

In most of the provinces the percentage of the gainfully occupied in other primary pursuits has not changed materially over this 40-year period. In British Columbia, however, the proportion of total males in fishing and logging occupations has dropped from 12.9 p.c. to 8.5 p.c. over the period while the percentage importance of mining occupations has declined from 10.4 p.c. to 3.9 p.c. Incidentally, the actual number in mining occupations in this province fell from over 14,000 at the beginning of the century to just over 10,000 in 1931.

The relative importance of manufacturing occupations in providing employment for male workers did not change materially in any of the provinces during the period under review, although, as would be expected, such village manufacturers as millers, coopers, harness-makers, and blacksmiths show declining trends. In Ontario and British Columbia the growth of manufacturing occupations has been somewhat more rapid than for all occupations combined. Among females there has been a very noticeable decline in the relative importance of manufacturing occupations over this period, the decrease in the numbers of dressmakers and milliners contributing largely to this result. The numerical increase in the number of females in these occupations has been considerable, but it has been overshadowed by the remarkable expansion in the numbers in clerical occupations and the services.

The number of males in construction occupations increased by over 100 p.c. in the 40-year period ended in 1931 which corresponds closely with the rate of increase shown for the total gainfully occupied males over the same period. Brick and stone masons, however, increased by only 9.1 p.c., but electricians, in particular, plumbers, and painters all recorded rapid growth. It is interesting to observe that the importance of construction occupations in the Prairie Provinces reached its height in 1911, the culmination of a period of outstanding development in the West.

There were over four times as many males in transport occupations in 1931 as in 1891, the percentage of all males in this group rising from 4.3 p.c. in 1891 to 8.3 p.c. in 1931. The increase in the number in railway transportation was quite rapid up until 1921, while from 1921 to 1931 road transport occupations showed exceptional growth. The phenomenal increase in the number of females in this group of occupations has been due almost entirely to the spectacular growth in the number of telephone operators during the past 30 or 40 years. Since 1921 the increase in the number of females in this occupation has not been appreciable.

The number of persons in trade and finance occupations has also increased at a more rapid rate than in all occupations combined, though the rate of growth since 1911 has been less pronounced in most provinces.

There were three times as many males in professional occupations in 1931 as in 1891 and almost five times as many females as in the earlier year, the proportion of all males and females in these occupations rising from 2.4 p.c. to 3.2 p.c. for males

and from 12.3 p.c. to 17.6 p.c. for females over the period. Professors and college principals increased by no less than 867.5 p.c., professional engineers by 453.9 p.c., and dentists by 440.0 p.c.; the rate of increase for clergymen and priests, *viz.*, 76.7, p.c., not only failed to approximate the increase shown for most professional occupations, but actually was less than the 130.9 p.c. increase in the gainfully occupied male population over the period 1891 to 1931.

In personal services it is noteworthy that, while males in the barbering and hairdressing occupations showed an increase of 389.0 p.c. over the 40-year period, females in hairdressing and beauty parlours increased by no less than 7,832.9 p.c. It is interesting to note that although one-third of all females were employed in the personal services in 1931, there has been a decline in the relative importance of this occupational group since 1891, when over half of all female workers found employment in the group. This decline has been general throughout Canada, though it should be pointed out that the importance of the personal service occupations has been on the increase since 1921.

Clerical occupations have continued to grow at a more rapid rate than the gainfully occupied as a whole. For females, in particular, employment in clerical occupations has expanded at a remarkable rate, the number in these occupations rising from about 3,000 to approximately 117,000 from 1891 to 1931. In Ontario and British Columbia about one-fifth of all female workers in 1931 found employment in clerical occupations.

The class "labourers" is difficult to compare from census to census due to changes in the method of classification and, to some extent, in the quality of enumeration. However, there does seem to have been an increase in the relative importance of this class since 1891, a marked growth having taken place between 1901 and 1911. It should be mentioned that the labourers included in this class in Table 1 are exclusive of those in the primary industries. Agricultural, mining, etc., labourers are included in their respective groups in this table.

1.—Numbers and Percentages of the Gainfully Occupied, 10 Years of Age or Over Classified According to Sex, in each Occupational Group, by Economic Areas, 1891-1931.

NOTE.—Occupations for 1891 to 1921, inclusive, were rearranged on the basis of the 1931 classification, though some adjustment of the 1931 grouping was necessary.

<sup>1</sup> Includes all farmers' sons, 14 years or over, whether or not reported with gainful occupations. <sup>2</sup> Does not include nomadic Indians. <sup>3</sup> Does not include Indians. <sup>4</sup> Includes pulp-mill employees. <sup>5</sup> Does not include Indians living on reserves. <sup>6</sup> Includes almost all mine and smelter employees, except clerical workers. <sup>7</sup> Separate figures for "Manufacturing" and "Construction" not available by economic areas for 1901. <sup>8</sup> Separate figures for "Transportation" and "Trade and finance" not available by economic areas for 1901. <sup>9</sup> Figures for "Professional" not available by economic areas for 1901. <sup>10</sup> Clerical workers in government service were included with "Service". <sup>11</sup> Includes proof-readers, shippers, weighmen, and postmen, classified elsewhere in other years. The addition of these persons to the 1931 figures would have added 18.0 p.c. to the number of males in this occupational group. <sup>12</sup> Includes "Other and unspecified".

## Section 2.—The Dominion Department of Labour.

The Department of Labour of the Dominion Government was established in 1900 under the authority of the Conciliation Act. At the outset its chief duties comprised the administration of certain provisions of this statute which were designed to aid in the prevention and settlement of labour disputes, the administration of the Government's fair wages policy for the protection of workmen employed on Dominion Government contracts and on works aided by grants of public funds, the collection and classification of statistical and other information relative to conditions of labour, and the publication of a monthly periodical known as the *Labour Gazette*. From 1900 to 1909 the Department was administered by the Postmaster General, who was also Minister of Labour. It was constituted a separate Department under the Labour Department Act, 1909.

The work of the Department was greatly increased in 1907 by the passage of the Industrial Disputes Investigation Act. At present the Department is also charged with the administration of an Act passed in 1918 known as the Employment Offices Co-ordination Act, with the Government Annuities Act of 1908, the Technical Education Act of 1919, the White Phosphorous Matches Act of 1914, the Fair Wages and Hours of Labour Act of 1935, the Vocational Education Act of 1931, the Combines Investigation Act of 1923 as amended in 1935 and 1937, and the Dominion relief legislation. The work of the Department has developed in other directions, especially in the collection and publication of information as to industrial disputes, wages, industrial agreements, prices, industrial accidents, labour legislation, and labour organization; also in connection with the International Labour Organization of the League of Nations. For the operation of the Government Annuities Act and the Technical Education Act, see the chapters on Insurance and Education, respectively.

**Industrial Disputes Investigation Act.**—The Industrial Disputes Investigation Act (R.S.C., 1927, c. 112) has attracted considerable favourable attention from legislators and publicists throughout the world. As enacted in 1907, it forbids strikes and lockouts in mines and certain public utility industries until the matters in dispute have been dealt with by a board of conciliation and investigation consisting of three members, two appointed by the Minister of Labour on the recommendation of the respective parties to the dispute, the third on the recommendation of the first two, or, if they fail to agree, by the Minister himself. Should either of the parties fail to nominate a board member, the Minister may appoint a fit person on its behalf. After such a board has made its report, either of the parties to the dispute may reject its findings and declare a strike or a lockout, a course which has been adopted, however, only in a small percentage of cases. The machinery of the Act may be extended to other industries with the consent of the parties concerned.

In January, 1925, a judgment was rendered by the Judicial Committee of the Privy Council declaring that the Act as it stood was not within the competence of the Dominion Parliament.\* At the ensuing session of Parliament amendments were made to the statute with the object of limiting its operation to matters not within exclusive provincial jurisdiction. It was also provided by these amendments that the statute should apply in the case of "any dispute which is within the exclusive legislative jurisdiction of any province and which by the legislation of the province is made subject to the provisions of this Act" The legislatures of all provinces

\* See p. 241 of the *Labour Gazette* for February, 1925, for text of judgment of the Judicial Committee of the Privy Council in regard to the validity of this statute.

except Prince Edward Island took advantage of this provision and enacted enabling legislation by which the Dominion Industrial Disputes Investigation Act became operative in respect of disputes of the classes named in the Dominion law and otherwise within exclusive provincial jurisdiction. In December, 1937, however, a statute entitled the Industrial Conciliation and Arbitration Act was passed by the British Columbia Legislature providing provincial machinery for dealing with industrial disputes within the legislative jurisdiction of the province and repealing the Industrial Disputes Investigation (British Columbia) Act.

A review of the proceedings under the Industrial Disputes Investigation Act from its enactment in March, 1907, to Mar. 31, 1938, shows that, during the 31 years, 895 applications were received for the establishment of boards of conciliation and investigation, as a result of which 574 boards were established. In all but 39 cases, strikes or lockouts were averted or ended.

**Fair Wages Policy.**—The Fair Wages Branch of the Department of Labour is charged with the preparation and enforcement of the labour conditions and schedules of minimum wage rates which are inserted in Dominion Government contracts for works of construction, remodelling, repair or demolition. The number of fair wages schedules prepared, from the time the Fair Wages Policy was adopted by the Dominion Government in 1900 up to the end of the fiscal year 1937-38, was 8,220. The number of fair wages schedules furnished during the fiscal year 1937-38 was 703.

The Department of Labour also co-operates closely with other departments of the Government in ensuring the observance of the fair wages conditions inserted in contracts for the manufacture of various classes of equipment and supplies for Government use, and is frequently consulted by other departments regarding the prevailing rates of wages to be observed on works carried out by day labour.

The Fair Wages Policy of the Government of Canada was originally based on a resolution adopted by the House of Commons in 1900. It was later expressed in an Order in Council adopted on June 7, 1922, amended on Apr. 9, 1924, and again on Dec. 31, 1934. Under these Orders in Council certain specified conditions were designated as being applicable to contracts for building and construction operations, and other conditions as being applicable in the case of contracts for the manufacture of certain classes of Government equipment and supplies. The policy required that the current wage rates and working hours of the district should be observed in the case of all workmen employed, or, if there were no current rates or hours in existence, that fair and reasonable conditions should be observed in both respects. Contracts for railway construction to which the Dominion Government has granted financial aid, either by way of subsidy or guarantee, are likewise subject to fair wages conditions. The policy has, moreover, been extended within recent years to cover contracts for works carried out by the several Harbour Commissions and by the National Harbours Board which replaced them.

On May 30, 1930, an Act of Parliament was adopted known as the Fair Wages and Eight Hour Day Act, 1930, providing for the payment of current wage rates to all persons employed on contracts made with the Government of Canada for works of construction, remodelling, repair, or demolition, provided that the wages in all cases should be fair and reasonable. This statute also directed that the working hours of persons while so employed should not exceed eight hours a day. It was further declared that the foregoing conditions were to be applied to all workmen employed by the Government itself on the construction, remodelling, repair, or demolition of any work.

The Fair Wages and Eight Hour Day Act, 1930, was superseded, however, on May 1, 1936, by the Fair Wages and Hours of Labour Act, 1935, which was adopted by Parliament on June 28, 1935. This latter statute re-enacts a number of the sections of the former Act and adds new provisions to comply with the recommendations of the Royal Commission on Price Spreads. Like its predecessor, the Act makes provision for fair wages and an eight-hour day on Government contracts for works of construction, remodelling, repair, or demolition, imposing, however, a limit of forty-four hours a week on such works and extending the Dominion Government's policy of fair wages and an eight-hour day to works carried out by any provincial or municipal authority with the aid of Dominion Government funds, as well as to other works aided by the Government of Canada.

The Act sets out that the term "fair wages" means such wages as are generally accepted as current for competent workmen in the district in which the work is being performed for the character or class of work in which such workmen are respectively engaged; but shall in all cases be such wages as are fair and reasonable.

The benefits of the Fair Wages Policy apply also to workmen employed by Government departments on a day-labour basis in building and construction works.

On Mar. 27, 1930, an Order in Council was passed providing that, except in cases where the work of employees was intermittent in character, or the application of the rule was not deemed to be practicable, or in the public interest, the hours of work of any Dominion Government employees who had up to that time been required to work more than eight hours daily should be reduced to eight hours a day, with a half-holiday on Saturdays.

An Order in Council was adopted on Dec. 31, 1934, rescinding the labour conditions previously applied to contracts for the manufacture of various classes of Government supplies, and substituting other conditions therefor. The provision for the payment of wages not less than current rates, or fair and reasonable rates if there are no current rates, is retained in the new conditions, but with the added proviso that in no event shall the wage rate for male workers 18 years of age or over be less than 30 cents an hour, and for female workers 18 years of age or over, 20 cents an hour. It is also declared that males and females under 18 years of age shall be entitled to rates of wages not less than those provided for women and girls in the minimum wage scales of the respective provinces, and that, in any cases where the provincial minimum wage laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Dominion contract work.

Owing to the large and increasing number of contracts which are being placed by the Dominion Government for the manufacture and overhaul of aircraft, for the manufacture of munitions, and for the construction and repair of boats of various types, it is now the policy of the Government to insert in such contracts schedules which have been drawn up in consultation between the Department of Labour and the other Government departments concerned, setting forth the minimum rates of wages and the maximum hours to be observed in the execution of the respective undertakings throughout the country. The Department of Labour co-operates closely with the Government departments concerned in ensuring that the contract conditions are strictly enforced.

**Labour Gazette.**\*—Since the establishment of the Department of Labour in 1900, a monthly publication known as the *Labour Gazette* has been issued. From

\* A charge of 20 cents per annum is made for this publication to subscribers in Canada, the United States of America, and Mexico, and of \$1 per annum to subscribers in all other countries.

its inception the *Labour Gazette* has maintained a continuous record of industrial, social, and economic conditions in Canada, as reflected in legislation, employment and unemployment, price trends, labour disputes, conventions and recommendations of labour organizations, and industrial relations programs. One of the particular functions of the Department is the promotion of industrial harmony, and prominence is therefore given in the *Labour Gazette* to proceedings under the Industrial Disputes Investigation Act and the Conciliation and Labour Act. Complete information is also given with respect to proceedings under other measures administered by the Department, including the Employment Offices Co-ordination Act, the Combines Investigation Act, the Technical Education Act, the Government Annuities Act, the unemployment relief legislation, and the Fair Wages and Eight Hour Day Act.

Included in the statistical information published is a monthly analysis of prices, wholesale and retail, in Canada, indicating trends in the cost of living and showing the prices of staple articles, together with index numbers of price movements over a series of years. Financial and statistical summaries of pensions for the aged and blind in Canada are also published at regular intervals. A special section records the work of the International Labour Organization (League of Nations), the draft conventions and recommendations adopted by that body being published in full.

The *Labour Gazette* is widely distributed throughout Canada, and the statistical and other information contained therein is constantly used in connection with the discussion of wages and other issues between employers and workers.

**Labour Legislation.**—The Department gives considerable attention to labour legislation in Canada and abroad. Notes and articles are published in the *Labour Gazette* and special bulletins in printed or mimeographed form are issued from time to time. While each of these deals with some particular phase of labour legislation in the Dominion or in some of the provinces, information is usually given concerning legislation on the same subject in other countries.

Since 1917, the Department has published a series of reports on labour legislation in Canada. Four reports reproduced the text or a summary of all the labour legislation in force at the end of each of the years 1915, 1920, 1928, and 1937, respectively. The reports for other years relate only to the laws enacted during each respective year.

### Section 3.—Provincial Labour Departments and Bureaus.

The rapid industrial development at the end of the nineteenth century in Quebec and Ontario, the leading manufacturing provinces, brought with it the recognition of the need of special provincial offices to safeguard the interests of labour, with the result that the Ontario Bureau of Labour was established in 1900 and the Quebec Department of Public Works and Labour in 1905. In 1904, an Act was passed in New Brunswick providing for a Bureau of Labour, but this never became operative. Some years later, to cope with conditions created by the growth of industry in the West, Acts were passed providing for the creation of Provincial Bureaus of Labour in Manitoba (1915), in Saskatchewan (1920), and in Alberta (1922), while a Department of Labour was established in British Columbia in 1917. A Department of Labour was established in Nova Scotia by c. 3 of the Statutes of 1932, and the Manitoba Bureau of Labour became a Department in 1934. All these authorities publish annual reports on their activities.

**The Nova Scotia Department of Labour.**—The Act establishing the Nova Scotia Department of Labour provides that: the Department of Labour shall take cognizance of all matters relating to labour, and shall administer such affairs, matters, Acts and regulations as the Governor in Council from time to time assigns to that Department, whether or not they have been assigned or have belonged, by or under any Act of the Legislature of Nova Scotia or otherwise, to some other department or to some member of the Executive Council.

The Department is in charge of a Minister of Labour, who has under him a Deputy Minister of Labour. The latter is empowered to collect and publish information and statistics affecting labour, and to administer such Acts as may be assigned to the Department by Order in Council. At present, labour bureaus in the province, the administration of the Factories Act, Minimum Wage Board, Limitation of Hours Board, Industrial Standards Act, Trade Union Act as affects check-off, and unemployment relief have been assigned by Order in Council to the Department of Labour.

**The Quebec Department of Labour.**—This Department was formerly known as the Department of Public Works and Labour, each division having a separate Deputy Minister, but in 1931 each division was recognized as a distinct department.

The duties of the Department of Labour include the institution and control of inquiries into important industrial questions and it may collect useful facts and statistics relating thereto, to be transmitted to the Quebec Bureau of Statistics. The Department is charged with the administration of provincial Acts respecting industrial and commercial establishments, trade disputes, and the maintenance of fair wages clauses in Provincial Government contracts. The Quebec Workmen's Compensation Commission is under its jurisdiction, together with the Provincial Employment Service.

The Department is responsible for the licensing and qualification of electricians, moving-picture machine operators, stationary and portable machine enginemen, and pipe mechanics; it is also charged with the inspection of electrical installations, heating installations, steam, hot-water and hot-air furnaces, boilers registered under the Interprovincial Code, together with the registering of blue-prints in connection with the construction of boilers. A special branch of the Department is entrusted with the inspection of public buildings and the approval of the plans of new buildings.

The Department, since the 1934 session, was charged with the enforcement of the Collective Labour Agreements Act which has been considerably modified during subsequent sessions. It is not the duty of the Government to lead employers and employees into the preparation of agreements, but when a collective labour agreement has been passed and adopted by the Lieutenant-Governor in Council, a joint committee, being and having the rights of an independent corporation, is formed to supervise the enforcement of the decree. The joint committee, under the authority of the Act, may adopt regulations for its own administration, render obligatory the certificate of competency in a given trade in cities of more than 5,000 population, and collect an assessment, not exceeding one-half of one per cent, on the payrolls of employers and on the wages of employees for the purposes of the putting into force of the decree. During the fiscal year 1937-38, 74 decrees were in force in the province in various industries.

In order to supply the needs of unorganized trades wherein collective labour agreements could not be entered into, the Fair Wage Act was adopted in 1937. The Fair Wage Board, created under its authority, is a permanent arbitration tribunal having the powers and rights of a corporation. It may determine, even on its own initiative, for the periods of time fixed by it, for the territories it may designate, and for any category of employees it may indicate, fair wages, working hours, and, in general, deal with any matter pertaining to employment. However, this Act does not affect collective labour agreements in force or which may become compulsory thereafter. It replaces the former Women's Minimum Wage Act so far as the welfare of women is concerned.

The 1937 session gave fresh life to the Old Age Pension Act adopted in 1936 in line with Dominion Old Age Pension legislation; a commission was formed to supervise the carrying out of this Act and since September, 1936, it has been placed under the jurisdiction of the Department of Labour.

An Act respecting the welfare of youth authorizes the Lieutenant-Governor in Council to prohibit work by boys and girls under 16 years of age in industrial or commercial establishments designated by him and, with respect to such dangerous work as he may designate, the employment of boys and girls of less than 18 years of age.

Allowances to needy mothers will be granted in virtue of an Act to provide such assistance. The Old Age Pension Commission, which is entrusted with the carrying out of this social legislation, is also the organization supervising the enforcement of the Blind Persons Aid Act. Blind men and women over 40 years old are now in receipt of an allowance.

The Department has jurisdiction over the limitation of hours of work; since the coming into force of the enabling Act, hours of labour in the building trades have been limited to 44 and 48 per week throughout the province.

Since September, 1936, the Department of Labour has been charged with the control of unemployment relief in the province; such service was formerly under the jurisdiction of the Department of Public Works.

The Department issues qualification certificates to workmen charged with the use and handling of explosives and is responsible for the enforcement of the Scaffolding Inspection Act in towns where there is no municipal enforcement.

**The Department of Labour of Ontario.**—The Department of Labour of Ontario was established in 1919 and placed under the direction of a Minister and a Deputy Minister of Labour. This Department had its origin in the Bureau of Industries formed in 1882 under the Department of Agriculture, to collect and publish statistics relating to the industries of the province and (later) to administer the first Factory Act of 1886. In 1900 a Bureau of Labour, attached to the Department of Public Works, was authorized to collect and publish information relating to employment, wages and hours, strikes, labour organizations, and general conditions of labour. Several investigations were made regarding such matters and the first free employment offices were opened by the Bureau of Labour. In 1916 this Bureau was in turn superseded by the Trades and Labour Branch, also under the Ministry of Public Works but administered by a Superintendent. The establishment of the Branch had been recommended by the Ontario Commission on Unemployment and the expansion of the work undertaken by the Branch, and the increase in the demands made upon its resources led to the creation of a special Department of the Government by the Department of Labour Act, 1919.

The Department of Labour administers the following Acts: the Department of Labour Act; the Factory, Shop and Office Building Act; the Steam Boiler Act; the Operating Engineers Act; the Building Trades Protection Act; the Employment Agencies Act; the Apprenticeship Act; the Regulations respecting the Protection of Persons Working in Compressed Air; the Regulations respecting the Protection of Persons Working in Tunnels and Open Caissons, Coffers Dams, and Crib Work; the Minimum Wage Act, 1937; the Industrial Standards Act; the One Day's Rest in Seven Act; the Government Contracts Hours and Wages Act; and the Workmen's Compensation Act.

The Minimum Wage Act, 1937, revises the former Minimum Wage Act as it applies to female workers and extends the scope of the Act to include male employees. Pursuant to an amendment to the Department of Labour Act, the Industry and Labour Board was established in 1937. It consists of three members, one of whom is chairman and all of whom are officers of the Department of Labour. One member is a woman. The Board has power to administer the provisions of any Act assigned to it, and the Minimum Wage Act, 1937, the Apprenticeship Act, and the Industrial Standards Act have been assigned for administrative purposes.

The Department is required to maintain employment offices, to collect information respecting employment, sanitary and other conditions in work places, wages and hours of work, and to study labour legislation in other parts of the British Empire and in foreign countries, as well as any suggested changes in the labour laws of Ontario. The representatives of the Department of Labour have right of access to offices, factories, and other work places at any reasonable hour, and may be authorized to hold inquiries under the Public Inquiries Act. The Department publishes annual reports which cover the work of the officers employed in the administration of the various Acts assigned to it.

**The Manitoba Department of Labour.**—The Act of 1915, establishing the Manitoba Bureau of Labour, provided that it be attached to the Department of Public Works; an amendment of 1922, however, provided for its attachment to any other Department as the Lieutenant-Governor in Council may determine. The Bureau was created a separate Department by c. 28 of the Statutes of Manitoba, 1931, but the Act was not proclaimed until July 6, 1934.

The Department is charged with the administration of the following Acts: the Bureau of Labour Act; the Manitoba Factories Act; the Bake Shop Act; the Shops Regulation Act; the Minimum Wage Act; the Elevator and Hoist Act; the Steam Boiler Act; the Building Trades Protection Act; the Public Buildings Act; the Fair Wage Act; the Electricians' Licence Act; the Amusements Act (Secs. 11 to 15); the One Day's Rest in Seven Act; the Employment Bureau Act; the Strikes and Lockouts Prevention Act.

The Bureau of Labour and Fires Prevention Branch is a sub-department of the Department of Labour (formerly a sub-department of the Department of Public Works). The Bureau also enforces the Fires Prevention Act.

**The Saskatchewan Bureau of Labour and Public Welfare.**—This Bureau was created by an Act of 1934. It is administered by the Minister of Municipal Affairs, assisted by a permanent Commissioner. The function of the Bureau is to administer the following Acts: the Factories Act; the Building Trades Protection Act; the Employment Agencies Act; the One Day's Rest in Seven Act; the Weekly Half-Holiday Act; the Minimum Wage Act; the Workmen's Wage Act; the Trade Union Associations Act; and the Industrial Standards Act. It is also charged

with the operation of public free employment offices; the collection and publication of information and statistics relating to employment; wages and hours of labour throughout the province; strikes and other labour difficulties; trade unions and labour organizations; the relations between capital and labour, and other subjects connected with industrial problems; the commercial, industrial, and sanitary conditions of employment.

**The Alberta Department of Trade and Industry.**—This Department exercises the powers and functions conferred upon it by the Department of Trade and Industry Act, and in addition supervises the administration of the following Acts: the Minimum Wage Act, 1925, relating to the wages of women workers; the Male Minimum Wage Act; the Industrial Standards Act; the Alberta Trades Disputes Act; the Factories Act; the Theatres Act; the Trade Schools Act; the Licensing of Trades and Businesses Act, 1937; and the Qualification of Tradesmen Act. The Department of Health has the administration of the Alberta Employment Offices Act as well as measures for unemployment relief.

**The British Columbia Department of Labour.**—This Department was instituted by an Act of 1917, under a Minister and Deputy Minister of Labour. It administers the laws of British Columbia affecting labour, and is empowered to collect information respecting industries, wages, employment, prices, labour organizations, and other data pertaining to labour problems. Prominent among the Acts administered by the Department are: the Male Minimum Wage Act, 1934; the Female Minimum Wage Act, 1934; the Hours of Work Act, 1934. These are administered by the Board of Industrial Relations, the Deputy Minister of Labour being Chairman of the Board. Other activities of the Department include the administration of: the Semi-monthly Payment of Wages Act; the Factories Act; the Apprenticeship Act; the Trade-Schools Regulation Act; the Industrial Conciliation and Arbitration Act, 1937; and the operation of employment bureaus within the province.

#### **Section 4.—Canada and the International Labour Organization.\***

The International Labour Organization of the League of Nations was set up in 1919 in accordance with Part XIII of the Treaties of Peace to promote the improvement of industrial conditions by legislative action and international agreement.

The Organization comprises the International Labour Conference, which meets annually and is composed of four representatives of each Member State, two of whom are Government delegates, while two represent employers and workers, respectively, and the International Labour Office in Geneva, which functions as a secretariat of the annual conference and also collects and publishes information on subjects relating to industrial life and labour. The Office is under the control of a Governing Body, consisting of 32 persons, appointed by the International Labour Conference, of whom 16 represent governments, 8 represent employers and 8 represent workers. In addition to its control of the Labour Office, the Governing Body is charged with the preparation of the agenda of the annual conference.

Under the terms of the Peace Treaties, 8 of the government seats on the Governing Body are held by the countries of "chief industrial importance" Canada has been designated as one of these 8 states of chief industrial importance. There are at present 57 countries comprised in the membership of the International Labour Organization, including nearly all of the industrial states of the world. Germany

\* On this subject see also the 1921 Year Book, pp. 607-609; the 1922-23 Year Book, pp. 704-707; and the 1924 Year Book, pp. 666-670.

ceased to be a member of the Organization in October, 1935, and the withdrawal of Italy and of Japan will become effective in December, 1939, and November, 1940, respectively. The United States of America, although not a member of the League of Nations, joined the International Labour Organization in 1935, as did also Russia.

Mr. H. Hume Wrong, the Permanent Delegate of Canada to the League of Nations, Geneva, represents the Government of Canada at the meetings of the Governing Body of the International Labour Office. At the triennial election of the Governing Body in 1937, Mr. P. M. Draper, the President of the Trades and Labour Congress of Canada, was elected as a deputy member of the workers' representatives on this body.

The conclusions of the International Labour Conference are cast in the form of draft conventions or recommendations, addressed to the national governments which comprise the membership of the International Labour Organization. A two-thirds majority of the Conference is required for the adoption of either a draft convention or a recommendation. Under the terms of the Treaties of Peace, the Member States are bound to bring the draft convention or recommendations before the authority or authorities within whose competence the subject matter lies, for the enactment of legislation or other action. Thus the findings of the Conference become binding on the various countries concerned only if and when action regarding them is taken by the latter.

The Dominion Department of Labour is entrusted with the duties arising out of the relations of Canada with the International Labour Organization. These have entailed much correspondence, not only with the International Labour Organization, but also with the different departments of the Dominion Government, with the provinces, and with employers' and workers' organizations. Replies have also been prepared in the Department of Labour to various questionnaires issued by the International Labour Office. Performance of these duties has necessitated a close study of the different technical questions which have figured on the agenda of the various conferences and at the meetings of the Governing Body.

Twenty-four sessions of the International Labour Conference have been held since its inception in 1919. Sixty-three draft conventions and 56 recommendations have been adopted at these annual gatherings. The draft conventions and recommendations of the Conference have, among other subjects, related to the following: hours of labour; measures for the avoidance of unemployment; employment conditions of women and children; employment conditions of seamen; employment in agriculture; weekly rest; statistics of immigration and emigration; principles of factory inspection; inspection of emigrants on board ship; workmen's compensation for accidents and occupational diseases; social insurance; minimum wages; prevention of accidents to dockers; forced labour; holidays with pay; and regulation of hours of work of salaried employees and of workers in mines, manufacturing industries, and agriculture.

Up to December, 1938, 810 ratifications of these conventions had been registered with the League of Nations, of which 11 were conditional or with delayed application; 48 had been approved by the competent national authority; and 136 had been recommended to the competent national authority for approval.

**Canadian Action on Draft Conventions and Recommendations.**—Nine draft conventions in all have been ratified by the Dominion, namely, those relating to: (1) minimum age for employment of children at sea; (2) unemployment indemnity for seamen in case of the loss or foundering of a ship; (3) minimum age for employ-

ment as trimmers and stokers; (4) medical examination of children and young persons employed at sea; (5) seamen's articles of agreement; (6) marking of the weight on heavy packages transported by vessels; (7) limitation of hours of work in industrial undertakings to eight in the day and forty-eight in the week; (8) weekly rest in industrial undertakings; and (9) creation of minimum wage-fixing machinery. The first four of these conventions were ratified in March, 1926, following the adoption of legislation by Parliament to give effect to the proposals which were respectively involved. The next two were ratified in June, 1938, legislation to implement them having been embodied in the Canada Shipping Act, 1934. The last three conventions were ratified in March, 1935, following the adoption of legislation by Parliament on these respective subject matters, *i.e.*, hours of labour, weekly rest, and minimum wages. Doubts having arisen as to the legal competence of the Dominion Parliament to deal with these matters, a reference was submitted to the Supreme Court of Canada, which was later carried in appeal to the Judicial Committee of the Privy Council. The judgments of the latter body, given in January, 1937, were to the effect that all three of these statutes were *ultra vires* of the Parliament of Canada.

At the 1935 session of Parliament a resolution was also adopted approving of another draft convention of the International Labour Conference with a view to its subsequent ratification, namely, that relating to safety of workers engaged in loading and unloading ships. This convention, however, has not been ratified to date.

### Section 5.—Organized Labour in Canada.

The Dominion Department of Labour publishes annually a report on labour organization in Canada. This report outlines the composition and development of the various organizations of wage-earners in the Dominion and gives statistical and other information respecting membership, benefits, registration of trade unions, etc.

**Total Reported Membership of Organized Labour in Canada.**—The numerical strength of organized labour in Canada at the close of 1937 was given by the Department of Labour as follows: international organizations, 2,048 local branches, with an aggregate membership of 217,465; Canadian central labour bodies, 853 branches and 98,633 members; independent units, 72 branches and 16,521 members; National Catholic unions, 285 branches and 52,000 members; grand total, 3,258 local branches and 384,619 members. As compared with 1936, this represents an increase of 372 branches and 62,146 members. Table 2 shows the total membership of trade unions in Canada for each year since 1911.

2.—Membership of Trade Unions in Canada, 1911-37.

Year.	Members.	Year.	Members.	Year.	Members.
1911.....	133,132	1920.....	373,842	1929.....	319,476

1919.....	378,047	1928.....	300,602	1937.....	384,619

**Main Groups.**—The following paragraphs outline the main groups into which Canadian labour organizations now fall.

*Trades and Labour Congress of Canada.*—The Trades and Labour Congress is representative of the international trade union movement in the Dominion, the bulk of its membership being drawn from the international organizations which have local branches in Canada. The Congress reported an affiliated membership of 191,147. Of the 1,828 local unions reported to be in affiliation with the Congress, 1,622 made returns, showing a combined membership of 204,966. An audit was made of the membership of the Congress and revealed a paid-up membership of 145,966, as at Dec. 31, 1937. It is generally maintained that the percentage of membership in arrears usually runs to a considerable figure, in some instances as high as 25 p.c. This would appear to be borne out by the aforementioned audit.

*All-Canadian Congress of Labour.*—The All-Canadian Congress of Labour was organized in Montreal, Mar. 16, 1927, by representatives of national and independent organizations. As at Dec. 31, 1937, the Congress reported an affiliated membership of 28,048. Of the 267 local unions reported to be in affiliation with the Congress, 240 made returns, showing a combined membership of 22,542. The audit of the membership figures revealed a paid-up membership of 19,335.

*Canadian Federation of Labour.*—Following a disagreement among the executive of the All-Canadian Congress of Labour prior to the scheduled convention of that body in September, 1936, a new organization was formed under the name of Canadian Federation of Labour. (This was the name of a national organization formed in 1902 but merged with the All-Canadian Congress of Labour when that body was formed in 1927.) At the close of 1937, the Federation reported an affiliated membership of 52,622. Of the 72 local unions reported to be in affiliation with the Federation, 39 made returns showing a combined membership of 8,704. It is not possible to give audited figures of paid-up members for the Canadian Federation of Labour.

*Federation of Catholic Workers of Canada.*—In 1918 a conference of National Catholic Unions, which were first established in 1901, was held in Quebec city, followed by other meetings in Three Rivers in 1919 and in Chicoutimi in 1920. The delegates at the latter conference, numbering 225 and representing 120 unions, decided to establish a permanent central body to co-ordinate the work of the scattered units. Accordingly at the 1921 conference held in Hull, at which approximately 200 delegates representing 89 unions were present, a constitution to govern the new body was approved. The name selected was "Federation of Catholic Workers of Canada", and permanent officers were elected, the constitution and by-laws becoming effective on Jan. 1, 1922. For 1937, the Federation reported an affiliated membership of 52,000. Of the 285 local unions reported to be in affiliation with the Federation, 166 made returns showing a combined membership of 36,801. It is not possible to give audited figures of paid-up membership for the Federation of Catholic Workers of Canada.

**International Trade Unions Operating in Canada.**—Table 3 gives the names of the 96 international labour organizations which now carry on operations in Canada and also shows the number of branches which were in existence in the Dominion at the close of 1937 and the reported total membership in Canada of each organization. For details regarding affiliations the reader is referred to the Twenty-Seventh Annual Report on Labour Organization, compiled and published by the Dominion Department of Labour, which may be obtained from the King's Printer, Ottawa, at a price of 50 cents per copy.

Table 4 shows the numbers of branches and the reported total membership of Canadian central labour bodies operating in Canada at the close of 1937. At the foot of the table are shown the statistics of the National Catholic and independent unions, thus giving a grand total of all Canadian unions which have no affiliation with the international movement. If these figures are added to the totals of internationally affiliated unions shown in Table 3, the result will correspond to the total labour union membership in Canada as shown on page 788.

### Section 6.—Fatal Industrial Accidents.

Statistics of fatal industrial accidents have been compiled by the Dominion Department of Labour since 1903, the data being obtained from provincial Workmen's Compensation Boards, the Board of Railway Commissioners for Canada and various other governmental authorities, from departmental correspondents, and from press clippings. Table 5 shows the numbers of fatal industrial accidents reported to the Department during each year from 1934 to 1938, inclusive. The number of fatalities in each of the different industries is also shown as a percentage of the total number.

<sup>1</sup> Figures subject to revision.

**Causes of Fatal Accidents.**—The classification of fatal accidents in 1938, by causes, shows that the largest number, 310, came under the category "by moving trains, vehicles, etc.". This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as moving implements, water craft, and aircraft.

"Falling objects" caused 191 fatalities. Next in order as a cause came "falls of persons", 185 in number, including those who fell into pits, shafts, holds of vessels, harbours, rivers, etc. Fatalities numbering 168 were caused by dangerous substances, including electric current, explosives, hot and inflammable substances, gas fumes, boiler explosions, etc. Hoisting apparatus was responsible for 37 fatalities, while there were 34 due to the handling of heavy or sharp objects. Animals caused 34 fatal accidents, including 31 caused by horses. There were 33 fatalities caused by striking against or being struck by objects, 20 by working machines, 16 by prime movers, and 10 by tools. The category "other causes" includes 76 fatalities of which 23 were due to industrial disease, strain, etc., 19 to lightning, frost, storms, and sun-stroke, 18 to cave-ins, landslides, ice-jams, etc., 8 to shooting and violence, 2 to infection not elsewhere classified, and 6 for which no particulars were available.

Numbers of industrial accidents, fatal and non-fatal, dealt with by the various provincial Workmen's Compensation Boards, are included in the following section dealing with workmen's compensation.

### Section 7.—Workmen's Compensation in Canada.

An account of the development of workmen's compensation legislation in Canada from employers' liability legislation is given at pp. 744-746 of the 1927-28 Year Book, while a summary of the legislation with regard to workmen's compensation, including a statement of the scale of compensation in each province, as at Jan. 1, 1938, appears in the general sketch of labour legislation in Canada at pp. 795-796 of the 1938 edition. Details regarding the operation of the various Workmen's Compensation Boards of the provinces are given below.

**Operation of the Workmen's Compensation Boards.**—*Nova Scotia.*—The Workmen's Compensation Act was passed in 1915, but only became effective on Jan. 1, 1917. During the twenty-two years between that date and Dec. 31, 1938, 173,583 accidents were reported to the Board of which 155,666 were compensated. Prior to Jan. 1, 1920, medical aid was furnished in special cases only.

### 6.—Compensation and Medical Aid Paid, and Accidents Compensated by the Nova Scotia Workmen's Compensation Board, 1930-38.

*New Brunswick.*—The Workmen's Compensation Act of New Brunswick was passed in 1918. It extends to a wide range of industries, and is administered by a Board of three persons, levying assessments and paying benefits. For the sums paid out annually from 1930 to 1938 as compensation and for medical aid, see Table 7.

*Quebec.*—The Quebec Workmen's Compensation Commission was established in 1928 by authority of cc. 79 and 80 of the Statutes of that year. The Act was brought into force by proclamation on Mar. 22, 1928, operations of the Commission commencing as of Sept. 1, 1928. Under this Act, the Quebec Commission did not insure employers against their liability. On Apr. 4, 1931, a new Act was enacted by the Quebec Legislature (21 Geo. V, c. 100), effective Sept. 1, 1931, providing for state insurance, practically along the same lines as the Workmen's Compensation Act of Ontario. This new Act was amended by 23 Geo. V, c. 98, enacted on Apr. 13, 1933; by 25-26 Geo. V, c. 80, enacted on Apr. 11, 1935; by 1 Edw. VIII, cc. 39-40, enacted on Nov. 12, 1936; by 1 Geo. VI, c. 94, enacted on May 20, 1937; by 2 Geo. VI, c. 89, enacted on Apr. 12, 1938, and by 2 Geo. VI, c. 88, enacted on Aug. 1, 1938. Table 8 shows the operations of the Quebec Commission from Sept. 1, 1928, to Dec. 31, 1938.

<sup>1</sup> Figures subject to revision.

*Ontario.*—Under the system operated by the Ontario Workmen's Compensation Board in Schedule 1, where the liability is collective, 24 classes of industries pay various percentages of their payrolls annually to the Board, and escape individual civil liability for accidents and certain specified industrial diseases. The percentage of payroll collected by the Board is graded according to the degree of hazard in the occupation and ranged in 1938 from 15 cents per \$100 of payroll in needle trades to \$14.30 in wrecking and window cleaning. The average for all classes was \$1.31 per \$100 of payroll which amounted to \$481,275,700. Certain other industries under Schedule 2, including municipal undertakings, railways, car shops, telegraphs, telephones, etc., are made individually liable to pay the rates of compensation fixed under the Act. Employees of the Dominion or of the province, killed or injured in the discharge of duty, are by special legislation placed on the same footing as those of private employers of the second class.

Statistics of the benefits awarded and the accidents to workers reported during the period 1930-38 appear in Table 9. During the year 1938, 51,925 accidents were paid for, including 281 cases of death, 13 of permanent total disability, 876 of permanent partial disability, 23,255 of temporary disability, and 27,500 in which medical aid only was provided; the latter are all under Schedule 1, as medical aid in Schedule 2 cases and Crown cases is furnished directly by the employer.

### 9.—Compensation and Medical Aid Paid, and Accidents Reported by the Ontario Workmen's Compensation Board, 1930-38.

*Manitoba.*—Under the Workmen's Compensation Act, effective Mar. 1 1917, Part I of the Act, dealing with workmen in hazardous occupations, is administered by the Workmen's Compensation Board, which charges insurance rates according to the hazard of the industry, the sums received by the workman being in lieu of the rights of action previously existing. The province, the city of Winnipeg, and certain corporations operating public utilities are permitted by the law to practise self-insurance.

The Workmen's Compensation Board also administers the provisions of the Dominion Act respecting payment of compensation of employees of His Majesty who are killed or suffer injuries while performing their duties, being c. 15 of the Statutes of 1918 and subsequent amendments.

From the date of the coming into force of the Manitoba Workmen's Compensation Act to Dec. 31, 1937, the Board has dealt with 128,256 compensable accidents and paid out \$16,383,437 for compensation and medical aid. Of the accidents in 1937, 4,781 involved medical aid costs only, 4,120 involved temporary and 232 permanent disability, while 20 resulted in death. The figures quoted above and hereunder cover accidents dealt with under both provincial and Dominion legislation.

*Saskatchewan.*—The Workmen's Compensation (Accident Fund) Act became fully effective July 1, 1930, and covers practically all employees in the province except railway employees engaged in the running trades, casual workers, farm and ranch labourers, domestic and menial servants, janitors, retail store employees, and persons who cannot be classed as workmen.

The Act is administered by a Board of three and imposes compulsory collective liability on the employers covered. The schedule of benefits is similar to that provided by other compensation Acts. Table 11 shows the number of accidents and benefits paid for the period 1930-38.

*Alberta.*—The Workmen's Compensation Act of 1918 became effective Aug. 1, 1918, as regards mining, and Jan. 1, 1919, in respect of almost all industries except agriculture, railroading, and the operation of retail stores and offices. Railroading (except for the running trades) was brought within the scope of the Act in 1919, and a further amendment in 1928 left only conductors and trainmen exempt from the operations of the Act.

Table 12 shows the operations of the Board for the calendar years 1930 to 1938. Of the 13,377 accidents reported in 1938, 51 were fatal and 112 resulted in permanent injury, as compared with 13,177 accidents reported in 1937, of which 43 were fatal and 103 resulted in permanent injury. The amounts shown below do not include sums transferred to the pension fund, which had assets amounting to \$3,335,358 on Dec. 31, 1937, nor do they include administration expenses nor sums set aside to cover estimated liabilities. The numbers of accidents compensated shown in the last column do not include claims disposed of by payment only of accounts for medical aid.

*British Columbia.*—The Workmen's Compensation Act, effective Jan. 1, 1917, provides compulsory accident insurance in almost every industrial occupation carried on in the province, and in 1937 protected an estimated number of 143,000 employees with a payroll of almost \$165,000,000. Insurance rates levied against employers are graded according to the hazard of the industry. All employers under the Act are required, in addition, to deduct one cent per day or part thereof from the wages of each employee and to remit this money to the Board to the credit of the medical aid fund. This fund provides all necessary medical, surgical, and hospital expenses for injured employees. Silicosis was added as an industrial disease in metal mining commencing Jan. 1, 1936.

## Section 8.—Strikes and Lockouts.

Statistics of strikes and lockouts in Canada have been collected by the Dominion Department of Labour since its establishment in 1900. Table 14 shows the numbers of disputes, of employees involved in disputes, and the time loss in man-working days for each year from 1930 to 1938 and the totals for the period 1901-29, inclusive. The items in the columns headed "Time Loss in Man-Working Days" in the tables following are calculated by multiplying the number of persons directly involved in strikes and lockouts by the number of working days they are so affected during the time the disputes are in existence. Tables 15 and 16 give detailed analyses, by provinces and by industries, for 1937 and 1938.

Summary tables of the figures with details as to strikes and lockouts during 1938 will be found in the *Labour Gazette* for March, 1939, pp. 251-281.

**Industrial Disputes in Recent Years.**—From 1930 to 1937 the figures as to numbers of strikes and lockouts, numbers of employees involved, and time loss were substantially greater than during the period 1926 to 1930, but were still much lower than during the years prior to 1926 when coal-mining strikes involved large numbers of employees and resulted in great time loss. In 1938 figures were about the same as the average for the period 1926-30. Since 1930 most of the important disputes have been in clothing manufacturing, logging, sawmilling, and wood-working industries, with a substantial number in coal mining. In 1938, as in 1936 and 1937, strikes of textile factory workers occurred but not on nearly so large a scale. The largest strike of the year was that of sawmill workers at Fort Frances, Ont. Other important disputes were of fishermen at Lunenburg, N.S., lime-plant workers at Blubber Bay, B.C., automobile factory workers at Windsor, Ont., taxi drivers at Toronto, Ont., cotton-mill workers at Cornwall, Ont., restaurant employees at Toronto, and coal miners at Minto, N.B.

The number of disputes in 1938 was 147 as compared with 278 in 1937, the number of workers involved was 20,395 as compared with 71,905 in 1937, and the time loss 148,678 man-working days as compared with 886,393 in 1937. Table 14 includes figures regarding coal mining, industries other than coal mining, and all industries.

#### 14.—Strikes and Lockouts in the Coal Mining, Other, and All Industries in Canada, 1930-38, with Totals for 1901-29.

NOTE.—For the years 1901-20, see the 1933 Year Book, p. 763, and for 1921-29 the 1935 Year Book, p. 763.

Table 15 is a record of industrial disputes by provinces for the years 1937 and 1938. In 1937 the important strikes by industries were located in the provinces as follows: in Ontario in textile, automobile, furniture, sawmilling, rubber, boot and shoe industries, and water transportation (pulpwood loaders and longshoremen); in Quebec in textile, clothing, meat-packing, foundry, and ship repair industries; in Nova Scotia in coal mining; in New Brunswick in coal mining and sawmilling; in Manitoba in fur manufacturing; in Alberta in coal mining and meat packing; in British Columbia in gold mining and meat packing.

In 1938 the main disputes by provinces and industries were as follows: in Ontario in logging and sawmilling, automobile, textile, boot and shoe, clothing (hats), and fur products industries; in Quebec in textile and leather products; in Nova Scotia in fishing and coal mining; in New Brunswick in coal mining; in Alberta and Saskatchewan in coal mining; in British Columbia in fishing.

Table 16 shows strikes and lockouts by industries during 1937 and 1938, the most important in 1937 occurring in manufacturing (mainly in textiles, clothing, etc.; metal products; and miscellaneous wood products), mining, logging, and transportation and public utilities; and during 1938 in manufacturing (mainly in textiles, clothing, etc.; metal products; and miscellaneous wood products), mining, transportation and public utilities, and fishing and trapping.

**Causes and Results of Industrial Disputes.**—In each of the previous years since the record was begun in 1901, the most important cause of disputes has been changes in wages, but in 1936 and in 1937 union questions (chiefly union recognition, the discharge of workers for union activity or membership, the employment of union members only) led to a great number of strikes and in 1938 such strikes were the same in number as those due to wage grievances, involving about the same number of employees and the same loss in working time. This time loss was 40 p.c. of the total for the year in each case.

Approximately one-third of all disputes were settled by direct negotiations, one-third by conciliation and arbitration, and one-quarter by the return of workers or their replacement. This shows a large increase in the number of disputes settled by conciliation and arbitration compared with previous years when negotiations ended about one-half of all disputes. As for results, the figures show that about one-third of the workers directly involved were successful, that nearly one-half were partially successful, and the remainder, one-sixth, were unsuccessful.

## Section 9.—Employment and Unemployment.

## Subsection 1.—Operations of the Employment Service of Canada.

Employment Service of Canada.—Under Sec. 3 of the Employment Offices Co-ordination Act (c. 57, R.S.C., 1927), an Act passed by the Dominion Parliament in May, 1918, the Minister of Labour is empowered:—

(1) to aid and encourage the organization and co-ordination of employment offices and to promote uniformity of methods among them;

(2) to establish one or more clearing houses for the interchange of information between employment offices concerning the transfer of labour and other matters;

(3) to compile and distribute information received from employment offices and from other sources regarding prevailing conditions of employment.

The Act further provides that certain sums of money are to be appropriated annually and paid to the provinces on a basis proportionate to the amount that each expends on the maintenance of employment offices.

The desired uniformity and co-ordination of employment-office activities throughout the various provinces are obtained by having the Dominion's payments contingent upon an agreement ensuring that the provinces, in the conduct of their employment offices, shall endeavour to fill situations in all trades and occupations for both men and women, and that no charge shall be made to employers or employees for this service. Each province agrees to maintain a provincial clearance system in co-operation with the interprovincial clearance system established by the Dominion Government, in order to secure the necessary mobility of labour as between localities in the same province or in different provinces. For the fiscal year 1938-39, agreements were concluded with all of the provinces except Prince Edward Island. Thus a chain of employment offices reaching from Halifax to Vancouver, administered intra-provincially by the Provincial Governments but co-ordinated inter-provincially by the Dominion Government, constitutes the Employment Service of Canada. At the time the Act came into force only 12 provincial employment offices were operated in Canada. This number was steadily increased until, at the close of 1919, owing to the impetus given by the requirements of the demobilization period, offices were functioning at 84 different centres. Subsequent contractions have reduced the Service to offices permanently located at 74 centres (on Dec. 31, 1938), distributed by provinces as follows: Nova Scotia, 4; New Brunswick, 3; Quebec, 11; Ontario, 30; Manitoba, 4; Saskatchewan, 9; Alberta, 5; and British Columbia, 8.

**Employment Service Council of Canada.**—An Order in Council, issued in 1918 in pursuance of the Act, provided for the formation of a body to be advisory to the Minister of Labour in the administration of the Act. This body, known as the Employment Service Council of Canada, is composed of representatives of the Dominion Departments of Labour and Pensions and National Health, the Provincial Governments, the Canadian Manufacturers' Association, the Canadian Construction Association, the Trades and Labour Congress of Canada, the Railway Association of Canada, the railway brotherhoods, the Canadian Lumbermen's Association, the Canadian Council of Agriculture, and the returned soldiers. At the eleven meetings of the Council, the most recent of which was held on Aug. 21-22, 1930, various recommendations and suggestions relative to employment office administration were brought forward and presented to the Minister.

**Operations of Employment Offices.**—Statistics covering the work of the local offices are collected and tabulated by the Employment Service Branch of the Department of Labour. Table 17 shows the positions available, applications for work and placements effected by the Service in each year since 1930 for the Dominion, and for the years 1937 and 1938 by provinces. During 1938 there were 782,664 applications for employment, 401,241 vacancies, and 382,295 placements recorded, as compared with 712,223 applications, 418,388 vacancies, and 389,536 placements in 1937. About 33 p.c. of the total placements were of a casual nature, many of these being the result of work given on a rotation basis by municipalities and Provincial Governments on various relief schemes throughout the year to persons who otherwise would have been unemployed.

**Reduced Railway Fares.**—In order to facilitate the movement of labour in cases where there are not enough workers in any one locality to fill the available

vacancies, the Employment Service, by special arrangement with nearly all the members of the Canadian Passenger Association, has been granted the privilege of issuing certificates which entitle the bearers to purchase railway tickets at the reduced rate of 2.5 cents per mile. This rate is for a second-class ticket and is applicable only to fares of not less than \$4. During 1938, 6,167 certificates were issued, 5,631 to persons proceeding to points within the same province as the dispatching office and 536 to workers going to points in other provinces. During 1937, 14,158 certificates for special rates were granted, 11,961 to persons travelling to employment within the same province as the dispatching office and 2,197 to persons for whom employment had been secured in other provinces.

**17.—Applications for Employment, Positions Offered, and Placements Effected by the Employment Service of Canada, 1930-38, and by Provinces, 1937 and 1938.**

NOTE.—For figures by provinces from 1920 to 1936, see corresponding table of previous Year Books, commencing with the 1926 edition. Totals for the years 1920-29 are given at p. 766 of the 1938 edition.

**Subsection 2.—Unemployment as Reported by Trade Unions.**

Monthly statistics on unemployment are compiled and published by the Employment Service Branch of the Dominion Department of Labour, based on returns received from about 1,850 local trade unions, having an aggregate membership of approximately 225,000 workers. "Unemployment" as here used means involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or idle because of illness, are not considered as unemployed, while unions involved in industrial disputes are excluded from the tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentages of unemployment are based, it should be understood that the figures for each month have reference only to the reporting organizations. Table 18 is a record of unemployment in trade unions for the past 9 years, by provinces. The maximum of unemployment in

1938 was in December, when the percentage stood at 16.2; the 1938 low was 10.4 p.c. recorded in September. In 1937 the January figure of 14.5 p.c. constituted the maximum, and the minimum of 7.6 p.c. was reached in August. Employment among organized workers, as indicated by these statistics, was less on the average in 1938 than in 1937, the average of the monthly figures of unemployment for 1938 being 13.1 p.c., while for 1937 the corresponding figure was 10.7 p.c.

**18.—Percentages of Unemployment in Trade Unions, by Provinces, half-yearly, 1930-37, and by months, 1938.**

NOTE.—For percentages of unemployment at June 30 and Dec. 31 from December, 1915, to December, 1929, see p. 827 of the 1934-35 edition of the Year Book. For data by months from 1921, see successive issues of the Year Book commencing with the 1922-23 edition.

**Subsection 3.—Employment as Reported by Employers.**

The Dominion Bureau of Statistics tabulates monthly reports of the numbers employed by firms having 15 or more persons on their staffs; the returns are representative of practically every industry except agriculture, domestic and personal service, and the more specialized professional callings. During 1938, about 10,720 of these employers reported an average working force of 1,069,780 persons, varying from 1,001,970 at Apr. 1, to 1,119,291 at the beginning of October.

These employment statistics have been shown in a special study\*, which correlates the distribution of workers covered in 1931 with the distribution of workers

\* See the report "Comparison of the Geographical and the Industrial Distribution of the Workers Included in the Monthly Employment Surveys, with the Geographical and Industrial Distribution of the Workers Enumerated at the Census of 1931", by M. E. K. Roughsedge, obtainable from the Dominion Statistician, Ottawa.

enumerated at the 1931 Census, to be representative, so far as several major industrial groupings are concerned, of the census classification.

The census of occupations showed 2,570,097 wage-earners in the Dominion, of whom 2,100,139 or 81.7 p.c. were at work on the census date (June 1, 1931). Obviously it is with those at work that the monthly employment figures for the same date must be compared. The 7,865 firms making returns for June 1, 1931, reported 940,875 employees, being 36.6 p.c. of the total number of persons reporting themselves as actual or potential wage-earners, and 44.8 p.c. of those at work in all industries at the census date. When the classes of workers not covered in the employment surveys are deducted from the census figures, there remains a total of 1,318,954 persons at work at the census date in the industries sampled in the monthly record, or a total of 1,369,351 if a due proportion of the unspecified workers is included. The employment survey for June 1, 1931, constituted 71.3 p.c. of this adjusted figure, *i.e.*, of the census total for the comparable industries without the unspecified workers, and 68.7 p.c. if a proportion of the unspecified workers is regarded as belonging in the census statistics adjusted industrially for this comparison. This sample may be considered quite adequate, but it would be rather larger if comparison could be made with a similar census taken at the present time, since the number of co-operating firms is constantly growing, having risen from 7,965 at June 1, 1931, to 10,178 at June 1, 1937, or 9,690 at June 1, 1938; the June 1 comparison is used so that the seasonal factor may not enter into the case. The increase in the co-operating employers is accompanied by a growth in the ratio of wage-earners sampled, though the latter increase is not in proportion to the gain in the number of reports tabulated, owing to the fact that the firms now being added to the mailing list tend to employ staffs below the average.

Representation in "Manufacturing" when correlated, is shown to be 82.8 p.c. of the workers enumerated at the census in the same industrial group; in mining it was 96.9 p.c.; in communications 80.4 p.c.; and in transportation 64.2 p.c. It follows that the figures of employment collected monthly may be used as a good index of the movement of the wage-earning population in intercensal years. (See also pp. 809-812).

Employment during 1937 reached a particularly high level, exceeded only by that of the boom year 1929; while there was in 1938 some slackening of this unusually great industrial activity, employment was nevertheless maintained at a level higher than that of 1936 and previous years of the record, except 1929 and 1930. Based on the 1926 average as 100, the 1938 index averaged 111.8, as compared with 114.1 in 1937 and 103.7 in 1936, the previous maximum since 1930. In 1929, when industrial activity in Canada was at its maximum, the index averaged 119.0, while in 1933, the year of minimum employment, the average was 83.4.

The general situation reported in 1938 was repeated with but little variation in the different units of population and industries, in most of which employment was at a lower level than in 1937, but generally exceeded that reported in 1936 and earlier years since 1930. In the eight leading industrial cities, the volume of employment on the whole continued less than elsewhere in Canada, but the average indexes approximated rather more closely to those of the Dominion than was the case in 1937.

The fluctuations in general industrial employment in the past 13 years are illustrated in the following chart. This shows, to Dec. 1, 1938, the generally upward movement that characterized business activity from 1933 to 1937 together with the slowing up evident in 1938, which, however, left industrial employment at a generally higher level than in 1936 and earlier years since 1930.

**Employment by Economic Areas.**—Employment in the Maritime Provinces, Ontario, and British Columbia was quieter in 1938 than in the preceding year, while in Quebec and the Prairie Provinces the indexes averaged slightly higher. In Quebec, the gain was due mainly to an increase in unemployment relief works, while that in the prairie area reflected improvement in the agricultural situation. In all five economic areas, employment generally was at a higher level than in 1936 and immediately preceding years.

In each of the economic areas, manufacturing showed curtailment as compared with 1937, and mining was more active. Among the other industrial divisions, however, less uniformity was seen, but logging, transportation, and construction in most areas did not afford so much employment. Trade and services generally showed a slightly upward movement.

**19.—Index Numbers of Employment as Reported by Employers in Economic Areas, as at the First of each Month, January, 1937, to December, 1938, with Yearly Averages since 1927.**

*NOTE.*—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated economic area to the total reported by all employers making returns in Canada at Dec. 1, 1938. Averages for 1921-26, inclusive, are given at p. 770 of the 1938 Year Book.

**Employment by Cities.**—While improvement over 1937 was reported in Montreal and Quebec city, this was due in the main to an increased program of unemployment relief works; the activity connected with the Eucharistic Congress during the summer of 1938 also helped the situation in Quebec. The remaining six centres for which data are segregated—Toronto, Ottawa, Hamilton, Windsor, Winnipeg, and Vancouver—reported curtailment; the decline in the index ranged from 0.6 p.c. in Toronto to 5.5 p.c. in Windsor. If the figures for the two Quebec cities are eliminated from the city total, the percentage reduction in the other municipalities closely approximates that in the Dominion as a whole.

Despite the gains from 1937 in Montreal and Quebec city, the indexes in those centres, and in five of the others for which separate tabulations are made, were lower than the general index, Windsor being the exception.

Activity in the leading cities taken as a unit, which in the pre-depression years was at practically the same level as general industrial employment, has lagged since 1934. While the index for the eight cities continued below that for Canada as a whole, the discrepancy was rather less in 1938 than it had been in 1937, approximating that shown in 1936. The general index in 1937 had been lowered by the employment level in the cities, while in 1938 the reverse was the case, an index from which the city figures are eliminated showing a falling-off of 4.1 points as compared with that of 2.3 points in the general index.

Employment generally in manufacturing, communications, trade, services, and construction in the larger cities, has not yet reached a level equal to that in other parts of Canada. The most outstanding difference in this comparison, as in 1937, was in construction, in which the index for the cities averaged 75.2 during 1938, compared with the Canada figure of 105.4; in the building division, the indexes were 52.7 and 60.1, respectively. The former, however, showed a slight gain over the 1937 figure of 50.9, while the Dominion index was the same in 1937 and 1938. The city employment index for transportation in each of these years, was above the Canada figure, standing in 1938 at 90.7, compared with 84.4 throughout the Dominion.

**20.—Index Numbers of Employment as Reported by Employers in Leading Cities, as at the First of each Month, January, 1937, to December, 1938, with Yearly Averages since 1927.**

Note.—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated city to the total reported by all employers making returns in Canada at Dec. 1, 1938. Averages for 1922-26, inclusive, are given at p. 772 of the 1938 Year Book.

**Employment by Industries.**—With only a few exceptions, the various industries reported curtailment in 1938 as compared with 1937, but most divisions showed a higher level of employment than in 1936 and earlier years since 1930. Manufacturing gained only slightly from the beginning to the end of 1938, as compared with an average advance of nearly 9 p.c. between Jan. 1 and Dec. 1 in the period, 1921-37. The index for the twelve months was 111.0, compared with 114.4 in 1937, but with 103.4 in 1936. Most branches of factory employment reported that activity was reduced from the 1937 level, but the great majority afforded more employment than in 1936. Mining as a whole showed slight improvement over the preceding year, and employment therein was at its maximum for the eighteen years of this record; the advance took place in the metallic ore division. Logging, following the exceptional activity of 1937, was quiet in the year under review. The indexes averaged rather higher than in 1936, but this was due to the situation which prevailed in the earlier months of 1938, employment since May being below its level in the same period of 1936.

The volume of employment afforded in trade was practically the same as in 1937, when the index was higher than in other years for which data are available. In the service group, consisting mainly of hotels and restaurants, and laundries and dry-cleaning establishments, the annual index was slightly above that for other years of the record. Communications showed little general change from 1937, when those industries provided employment for a greater number of persons than in any other year since 1932. The transportation index was fractionally lower than in the preceding year, but showed a very slight gain over 1936.

Construction generally was rather brisker than in 1937; this was due mainly to the higher level of employment reported in the earlier months of the year under review, although improvement over the same period of 1937 was reported at the beginning of November and December. The construction index also averaged higher than in 1936. Building showed no general change as compared with 1937, but was brisker than in 1936; highway work afforded more employment than in any other year since 1934, partly owing to unemployment relief projects. On the other hand, railway construction and maintenance provided employment for a smaller number of men than in any of the four preceding years.

## 21.—Index Numbers of Employment as Reported by Employers, by Industrial Groups, as at the First of each Month, January, 1937, to December, 1938, with Yearly Averages since 1927.

NOTE.—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of the employees reported in the indicated industry to the total reported by all employers making returns in Canada at Dec. 1, 1938. Averages for 1921-26, inclusive, are given at p. 773 of the 1938 Year Book.

#### Subsection 4.—Employment and Unemployment Statistics of the Census.

In the 1933 edition of the Year Book, pp. 775-780 were devoted to an examination of the preliminary figures of unemployment as reported at June 1, 1931, for that date and for the preceding twelve months. The final results of this inquiry are available in Vol. VI of the Census Publications, which may be obtained from the King's Printer, Ottawa, at a price of 75 cents for the paper-bound volume.

Tables 24 and 25, on p. 836 of the 1934-35 Year Book, summarize, by industries, the statistics of those actually unemployed at the date of the census, and of time lost during the twelve months preceding that date.

**Estimates of Employment of the Wage-Earning Population.\***—The term 'unemployment' is, unfortunately, variously interpreted but it is of the utmost importance that it should be strictly defined; an explanation of the sense in which it is used in the censuses of Canada and in estimates of employment and unemployment made by the Bureau of Statistics, therefore, is given here.†

\* Prepared by M. C. MacLean, M.A., F.S.S., Chief of Social Analysis, Dominion Bureau of Statistics.

† See also subsections 2 and 3 pp. 802 to 809 for other estimates.

A person, 10 years of age or over, enumerated by the Census is asked if he has a gainful occupation. All persons who answer "yes" are tabulated as gainfully occupied. In 1931 the number thus gainfully occupied was 3,927,230. These did not include such persons as female home workers, persons at school, etc. Many not so included might be occupied usefully and could be included in the broader class of "working population", but they were not occupied for direct financial gain. The family workers were considered gainfully occupied if assisting, without pay, in the business or other gainful occupation of the family head, but not if they were females assisting in the family house work. In addition, young persons who had never been gainfully occupied; persons retired from gainful occupations, whether through old age or sole dependence on income or charity; and persons in institutions, such as penitentiaries, were not included among the gainfully occupied.

The total of the gainfully occupied was then subdivided into four sub-classes, viz., (1) wage-earners, *i.e.*, those employed by an employer and paid certain amounts for their services; (2) employers, *i.e.*, owners who employed labour (but not employed managers); (3) 'own accounts', *i.e.*, persons who were gainfully occupied on their own, but did not employ labour; (4) unpaid family workers in the business of the head. Although these four classes seem clearly distinct, many cases of doubtful classification arise in practice, e.g., the unskilled labourer on odd jobs is included in the class of wage-earners; on the other hand, a plumber is a wage-earner when he is hired by a plumbing establishment, but he is on own account when, if not so hired, he pursues his trade independently. The equipment he uses and the skill he has acquired and probably certain conditions of licensing, registration, or living in a certain locality make him a business man even if he does not employ others. The same is true of the carpenter, etc. The doctor who puts up his shingle is on own account, but if he is on the paid staff of a hospital he is a wage-earner. Likewise with the lawyer, etc. The storekeeper who owns his own business is an own account or employer, but if he is merely the manager and paid for his services by the chain or corporation he is a wage-earner.

The term 'unemployed' can, in practice, be applied only to the sub-class known as wage-earners. Persons who have never worked but are seeking work, and persons on own account who have lost their business and are looking for jobs, are technically unemployed, but there is no way in which the numbers of such can be obtained and used without introducing elements of doubt and misleading features that would render the data meaningless. Similarly, the number on own account who have lost their business or occupation and are seeking another should be entered as a separate class. The term 'unemployed', then, is restricted to wage-earners and is always used in that sense in Bureau of Statistics figures. To illustrate the point by an example: on June 1, 1931, 470,000 wage-earners 10 years of age or over were not working, 437,000 of them because of no job or temporary lay-off. These latter were definitely unemployed on that day. On the same day, after making allowance for the majority of pupils and students attending school, there were 894,022 others over the age of 10 years, or 713,981 over the age of 10 and under the age of 70 (excluding married females and other female heads of families not gainfully occupied), who could not be regarded as wage-earners, including about 103,000 persons retired on income between these ages. These persons were not employed but they could not be said to belong among the unemployed. In any case they were not considered unemployed by the census. Much confusion has been caused by comparing this figure of unemployed (437,000) in 1931 with an estimate or opinion at a later date of a number of persons out of work for which the comparable census figure would be

437,000 plus the 714,000 (non-wage-earners between 10 and 70 years referred to above). In other words, if between censuses we speak of the unemployed as all persons who at the time have no gainful work, we should compare that figure, not with the 437,000 of the census, but with 1,151,000.

Another point that should be made clear follows from the above definition of unemployment. If a person has first to become a wage-earner before he can be unemployed, a sudden increase in the wage-earner content of the population results in an increase in the potential unemployed upon the cessation of the activity which led them to become wage-earners. The number of wage-earners increased from 1,972,089 in 1921 to 2,570,097 in 1931, *i.e.*, 30 p.c., although the population increased only 18 p.c. The number actually working on June 1 increased from 1,778,328 in 1921 to 2,100,139 in 1931, *i.e.*, 18 p.c., or just as fast as the population. However, this increase in employment was not great enough to take care of the increase in wage-earners.

A further point also needs clarifying. In monthly figures of employment the persons counted are those on payrolls, but there are persons on these payrolls in a particular month who may be working on their own in another month. Thus, in a sudden expansion of road work, farmers are among the workers; after the work is done they become farmers once more. Similarly with adolescents who return to school, or female home-makers who take advantage of seasonal work. Such persons might constitute a very considerable proportion of the payrolls in the best seasons. Only so long as they are on payrolls are they wage-earners. This largely explains why the number of wage-earners varies so much from month to month in estimates of unemployment. When work starts up in one locality it absorbs some of the unemployed wage-earners of that locality and also others who had not previously worked, or who had worked on own account, and does not therefore cause a decrease in the number unemployed throughout the country comparable to the increase in employment. Thus the phenomenon of increasing employment unaccompanied by decreasing unemployment becomes intelligible enough.

*Wage-Earners.*—As already explained, the wage-earners are a sub-class of the larger class, the gainfully occupied, and figures of employment and unemployment should have sole reference to this sub-class. A full enumeration of wage-earners employed and unemployed can be obtained only at a census, but the expense of making an annual census would be prohibitive so that the decennial census must be relied upon for basic data upon which estimates for intervening years are made to show the intercensal trend. Such estimates are of value so long as they are interpreted as estimates and understood to be subject to some degree of error after all care has been taken. In making the estimates of unemployment, appearing in Table 22, use was made of the studies of the composition of the population as to age and sex distribution, proportion at each age and sex gainfully occupied (a rather constant proportion in different centres and at different periods), and other factors affecting the problem, such as the movement between the different occupational classes of the population. This may be considered the grand base, starting from which a co-ordination of the unemployment statistics of the Department of Labour and the employment statistics of a branch of the Bureau of Statistics takes place. While the Department of Labour figures refer to unemployed union members and thus are not a sample of unemployment at large, they can be rendered more or less representative by making use of the relationship of their unemployment to unemployment at large, as shown in the census. The data on employment collected by the Bureau have been analysed mathematically for their ability to depict

the situation in all industries, not only in the ones they cover, and found to be quite trustworthy; upon them, therefore, the total number actually employed in any month may be reasonably estimated. There remains the problem of estimating the fluctuations in the number of total wage-earners. From these data the number of unemployed is estimated. In brief, a percentage employed from month to month is calculated on: (1) the Department of Labour's figures of unions, corrected for sample qualities; (2) the Bureau's employment figures in relation to the total population normally gainfully occupied, this latter making allowance for the changing population content. The percentage is then applied to the census number employed to calculate the number of wage-earners in any month. The difference between the wage-earners and the number employed is obviously the unemployed. Another condition is exacted, *viz.*, the maintenance of a high correlation between factors (1) and (2) and in order to ensure this, checking at frequent intervals is resorted to to guard against any new element entering undetected into the equation used.

The table and chart which follow show the Bureau of Statistics estimates, worked out on this basis, of total wage-earners and of those employed, together with proportions employed for the years 1921-38, inclusive: monthly estimates are given for 1937 and 1938.

**Subsection 5.—Unemployment Relief.**

The assistance rendered by the Dominion Government under relief legislation enacted during the years 1930-37, inclusive, is set out in previous issues of the Canada Year Book. The recapitulation appearing here shows the Dominion's disbursements as at Dec. 31, 1938, under each of the statutes enacted during the period 1930-37, inclusive, with respect to unemployment relief.

**The Unemployment and Agricultural Assistance Act, 1938.**—At the third session of the Eighteenth Parliament the Unemployment and Agricultural Assistance Act, 1938, which received the Royal Assent on May 25, 1938, was enacted. This statute, the administration of which is vested in the Minister of Labour, provides that the Governor in Council may authorize the execution of undertakings determined to be in the general interests of Canada. The statute further provides that agreements may be entered into by the Governor in Council with any of the provinces respecting the alleviation of unemployment conditions and of agricultural distress therein, to assist those in need, and for the granting of financial assistance to any province by way of loan, advance, or guarantee for the purpose of assisting the province to pay its share of the expenditures for such purposes.

**Grants-in-Aid.**—Under the provisions of the Unemployment and Agricultural Assistance Act, 1938, which expired on Mar. 31, 1939, the Dominion continued to assist all of the provinces, except New Brunswick, in discharging their responsibilities in connection with the granting of material aid to necessitous persons by way of grants-in-aid. As the province of New Brunswick did not distribute material aid, the Dominion agreed to contribute an amount, equal to that which would have been necessary by way of grants-in-aid, toward the cost to the province of an enlarged relief works program.

In accordance with the recommendations of the National Employment Commission, payment of the grants-in-aid to the provinces was covered by agreements which laid down regulations governing the granting of material aid to which the Dominion Government contributed. Under the agreements provision was made that, for the fiscal year ended Mar. 31, 1939, the Dominion would contribute towards the provinces' material aid expenditures 35 p.c. in the case of the Prairie Provinces and 30 p.c. in the case of British Columbia, Ontario, Quebec, Nova Scotia, and Prince Edward Island, or a maximum amount, whichever was the lesser. The maximum amounts provided for the fiscal year were as follows: Prince Edward Island \$48,000; Nova Scotia \$210,000; Quebec \$4,800,000; Ontario \$5,580,000; Manitoba,

\$1,980,000; Saskatchewan, \$2,430,000; Alberta, \$1,500,000; British Columbia, \$1,380,000.

For the purposes of the agreements, the term "material aid" was defined as meaning either food, fuel, clothing, and shelter, supplied to individuals in necessitous circumstances, or, subject to the approval of the Minister of Labour, the costs of carrying on works and training projects specifically designated by the provinces as projects intended to provide said individuals when employed thereon the equivalent of food, fuel, clothing, and shelter, which would otherwise have to be supplied to those individuals.

Under the terms of the agreements the provinces were required to maintain such residence regulations that no person would become ineligible to receive material aid by reason of having lost residence in a municipality or jurisdiction within the province before having established residence in another, and to require from all applicants for material aid, resident in a district in which there was an office or representative of the Employment Service of Canada (other than resident farm operators and those engaged in farm work), proof of application by them to the said Service for work and of determination by said Service of their employability.

It was further provided that the maximum value of material aid contributable to by the Dominion given to any head of family or other individual, of itself or together with any additional allowance for material aid made by the province or any of its municipalities, should be less than the normal earnings of an unskilled labourer in the district wherein the recipient resided, as averaged over the year preceding the granting of said aid. It was provided that in determining said maximum account might be taken for average loss of time, and in respect to heads of families adjustment might be made for normal earnings of dependants of employable age and of proved employability.

To remove from the minds of recipients of material aid the fear that in accepting such work as was available they might sacrifice the possibility of receiving material aid when further need arose, and to ensure that seasonal workers should make out of their earnings reasonable provision for seasonal unemployment, the agreements provided that the provinces should require such cities and towns as were designated by the provinces to provide for each person in those jurisdictions who was ceasing to receive material aid during the term of the agreements, by reason of entering gainful occupation, a statement of the rate of material aid granted prior to said cessation and a reasonable budget of expenditures for the breadwinner or family while the breadwinner was in gainful occupation. The provinces further agreed in this respect to require each applicant for further aid to obtain a properly certified statement of earnings to be filled in and signed by employers of the applicant prior to his or her readmission to material aid benefits.

Provision was made that no person other than a resident of Canada should be eligible for material aid, and that no person should, in relation to his or her eligibility for said aid, be discriminated against or favoured by reason of his or her race, religious views, or political affiliation.

**Youth Training.**—Operation of the Dominion-Provincial Youth Training Program on a somewhat extended basis during its second year was provided for by Parliament in the session of 1938. Parliament had voted \$1,000,000 to be available in 1937, the first year of the program's operation. At the following session this sum was increased to \$1,500,000, to be used during the fiscal year 1938-39. The increased amount enabled the Dominion Government to allocate larger sums, on a dollar-for-dollar basis, to the respective provinces for youth-training projects.

The procedure followed in the first year of the program was repeated in the second. Each of the nine provinces was notified by the Dominion Minister of Labour that a sum of money from the vote had been allocated to it for youth-training projects. Subsequently agreements laying down the general principles governing the program were drawn up and each was signed by the Dominion and the province concerned. As previously mentioned, the provinces agreed to contribute one-half the cost of youth-training projects, together with administration costs. These agreements were later approved by the Dominion and Provincial Governments.

Projects submitted by the provinces, approved by the Dominion and operated during 1938, followed along lines laid down in the first year of the program. Generally speaking, these projects might be classified under the following heads: urban occupational training; industrial apprenticeship and learnership; forestry work; agricultural training, both practical and technical; home service training for women; handicrafts and other specialized services; technical training in mining; practical training in hard rock and placer mining; and physical training.

The importance of vocational guidance and placement was emphasized during the second year of the program. In this connection it was recognized that one of the main objectives was to place in employment young men and women who had taken training courses. Placement officers were engaged in this work, and results fully justified their employment. Placements of those in training during 1938 exceeded the number recorded in the first year of the plan.

A glance at some of the projects operated during 1938 indicates the general nature of the program. Four provinces operated mining training projects, *viz.*, Nova Scotia, Quebec, Ontario, and British Columbia. The training offered by the several provinces varied somewhat. In both Nova Scotia and Quebec gold mines were operated, those in training receiving their instruction under direction of qualified mining engineers. A nucleus of skilled miners assisted learners to acquire familiarity with the use of their tools. Ontario again provided technical training, which was given at the Haileybury School of Mining. As the course lasted for six months, the number undergoing training had necessarily to be limited. In British Columbia training was more general in character, but with special attention being given to placer mining and prospecting.

Forest-training projects were operated in a number of the provinces. This type of training has proven its value, not only in rehabilitating youth but also from the point of view of forest conservation. Young men are put to work at a healthy, clean occupation which takes them into the open and develops them physically. They are taught useful lessons in forest conservation and allied occupations. They learn how to live together under healthy, open-air conditions, because forestry projects are centred in camps established for the purpose and located on or near the scene of operations. At the same time the forests of Canada, a great source of wealth to the Dominion, are protected and increased through the work done by those trained under the program. Not only are sources of fire danger removed, but the clearing away of dense undergrowth improves chances of survival and growth to maturity of trees which otherwise would rot and fall early in their lives. Reforestation and afforestation projects are also undertaken.

Particularly in Western Canada, agricultural training was prominent. Both men and women were given instruction in a wide variety of subjects with a view to increasing the economic return from their home farms. This instruction varied, in some degree, from province to province, but courses for men included such subjects as farm mechanics, operation and repair of farm machinery, construction of farm buildings, poultry, horticulture, dairying, farm management and accounting,

soils and fertilizers, insects and pests, field and animal husbandry, and blacksmithing. Included in the women's courses were care and management of the home, food and cookery, catering for tourists, hospitality and etiquette, laundering, child care, home nursing and first aid, making and repair of clothing, handicrafts, social customs and courtesies, dairying and poultry, horticulture, and rural home crafts.

Courses in occupational training for commerce and industry were carried on in cities and towns of several provinces. In some cities instruction was limited to classes held in vocational schools in the day or evening, but in most localities special centres were opened and furnished with the necessary machinery and equipment. The teachers were qualified and had practical experience in the trades concerned. A number of such centres were supplied rent free and in a few cases light, heat, and water were also free of charge. This was made possible by the co-operation of municipal authorities, business firms, and interested individuals. The length of a course varied but was usually of six months' duration, with 30 or 40 hours' instruction each week.

Classes for young men were given in motor mechanics, radio servicing, electricity and house wiring, machine shop practice, painting, plastering, wood-working and carpentry, diesel engineering, and other trade subjects; for young women there were classes in business and commercial subjects, dressmaking, power-sewing, machine operation, waiting on table, salesmanship, cookery and other forms of specialized work connected with the home.

In addition to such urban occupational training to prepare young people for employment, provision has been made for assisting industry to train workers either as apprentices or learners. An apprentice is a young person under contract with an employer to learn a skilled trade. A learner is a young person under training to acquire sufficient dexterity to become a qualified operator in a semi-skilled occupation.

Home service training schools for women were operated in every province of the Dominion. These were uniformly successful both from the point of view of training and of placement. In a number of the provinces physical training and recreational projects were operated.

**Farm Placements.**—The agreements entered into with the provinces of Manitoba, Saskatchewan, Alberta, and British Columbia under the Unemployment and Agricultural Assistance Act, 1937, respecting the placement on farms of unemployed persons who would otherwise be in receipt of aid, expired on Mar. 31, 1938, together with the legislation under which they were executed. Under the provisions of the Unemployment and Agricultural Assistance Act, 1938, these agreements were, at the request of the provinces, extended to Apr. 30, 1938. During October, 1938, agreements with the four western provinces, effective from Oct. 1, 1938, to Mar. 31, 1939, were executed providing for the Farm Employment Plan, with payment to the individual placed on the farm of an allowance equal at the end of the period to \$7.50 per month. Provision was also made for the purchase of suitable work clothing at a cost not in excess of \$3 for each individual, while the necessary costs of transportation of workers from the point of employment to the home of the employing farmer were also contributed to by the Dominion under the terms of the agreements. The basis of the Dominion's contribution to the provinces under the provisions of the Farm Employment agreements was the same as under the 1937 agreements, *viz.*, 50 p.c., the provinces bearing all necessary administration expenses. The largest number of placements during any one month under the 1937 agreements was effected during January, 1938, when 42,733 persons were placed. This number was made up as follows: Manitoba 10,244, Saskatchewan 26,772, Alberta 5,439, British Columbia 278.

**Supplementary Works Plan.**—With British Columbia, where the size of farms does not lend itself to the best development of the Farm Employment Plan, an agreement was made whereby the Dominion and the province would participate on an equal basis and provide forestry and road work for 4,640 persons for the period from Nov. 1, 1938, to Mar. 31, 1939.

**Agricultural Assistance.**—As drought conditions during the growing season of 1937 had created a condition of agricultural distress which was considered to be of national importance, the Dominion Department of Agriculture assumed the administration of material aid and feed and fodder relief as from Sept. 1, 1937, in 170 rural municipalities and local improvement districts in Saskatchewan and 52 in Alberta. It was necessary to continue the distribution of material aid under the Unemployment and Agricultural Assistance Act, 1938, until returns from the 1938 crop might be in sight.

The agreements with the provinces under which material aid was distributed were therefore renewed for the period April to June, 1938, inclusive, and later were extended to the end of August. The amounts expended under the agreements for the five-month period were \$3,391,765 in Saskatchewan and \$299,077 in Alberta.

Adverse crop conditions were again widespread in Saskatchewan in 1938 and it was found necessary to continue to assist the province in the maintenance of the settlers and their stock in the dried-out districts. An agreement was reached for the period Sept. 1, 1938, to Mar. 31, 1939, whereby the Dominion undertook to pay the full costs of material aid and feed and fodder relief in a newly-defined drought area, consisting of 92 municipalities, to a maximum amount of \$4,500,000. Approximately five-sixths of this amount was required for material aid and the remainder for feed and fodder.

Another activity of the Department of Agriculture under the Unemployment and Agricultural Assistance Act, 1938, was the re-establishment of settlers in the provinces of New Brunswick, Saskatchewan, Alberta, and British Columbia. This was a continuation of the policy of the previous year and the agreements with the four provinces arrived at under the 1937 Act were extended, with slight modifications in one or two instances. The program was designed to assist settlers in pioneer areas to become self-sustaining and expenditures under the agreements were made chiefly for the breaking and clearing of land and the purchase of building materials, farm implements, and live stock. The amounts made available under the agreements for the year 1938-39 were as follows: New Brunswick \$25,000; Saskatchewan \$250,000; Alberta \$75,000; British Columbia \$15,000.

**Mining Transportation Facilities and Highways to Further Development of Tourist Traffic.**—Under the Unemployment and Agricultural Assistance Act, 1938, and by appropriations provided by Parliament to the Department of Mines and Resources in the Supplementary Estimates, 1938-39, agreements were made with all of the provinces for assistance in the construction of roads or other transportation facilities into mining areas, and for construction of highways to further development of tourist traffic. The agreements with the respective provinces provided for assistance up to specified maximum amounts for either one or both of the above purposes. Aid to mining transportation projects was provided in all provinces except Prince Edward Island and New Brunswick on the uniform basis of payment by the Dominion of two-thirds of the construction costs of projects recommended by the provinces and approved by the Dominion. While Dominion aid in developing tourist highways was not entirely confined to assistance under the Act, the agree-

ments with the provinces granted financial assistance to tourist road construction. The Dominion assistance for tourist road projects was uniformly 50 p.c. of the costs of construction of approved projects, except in Quebec, Manitoba, and Saskatchewan. In the latter two provinces it was desired to undertake larger programs than could be assisted at the above ratio and eventually arrangements were made to grant 10 p.c. in Saskatchewan and approximately 30 p.c. in Manitoba to the costs of approved projects.

The Golden-Revelstoke highway is the uncompleted section of the Trans-Canada highway in British Columbia. The road comprises a total of 192.6 miles, of which 20.5 miles are to be completed. The Dominion entered into an agreement with the province of British Columbia to build this highway at the Dominion's expense, and the province, when advised that construction of a specified portion or portions of the highway had been completed, agreed to take over, maintain, and repair, at its own expense, these portions.

The Kingsgate-Kootenay highway is the main tourist approach road in British Columbia leading from Kingsgate on the International Boundary to the southwest limit of Kootenay National Park. Under an agreement with the province of British Columbia, this road is being reconstructed and paved by the province, and involves 153 miles. The Dominion's contribution toward this project is on an equal basis.

The Waterton Lakes-Calgary-Banff highway is the main tourist highway in Alberta from Waterton Lakes Park to Calgary and Banff Park. The bituminous surfacing of this highway is being carried out by the province under an agreement whereby the Dominion contributes 50 p.c. of the expenditure. All grading and surfacing necessary on this route prior to surface treatment is the responsibility of the province, which will bear the entire cost of such work.

**Relief Settlement.**—The Dominion continued to assist the provinces of Quebec, Manitoba, and Alberta in placing selected families who would otherwise be in receipt of material aid on the land under the Relief Settlement Plan outlined on p. 762 of the 1937 Canada Year Book. The number of settler families and individuals approved and settled under the various agreements entered into with the provinces respecting relief settlement since 1932 are set forth in Table 23.

## Subsection 6.—National Registration of Persons on Material Aid.

The National Employment Commission Act, 1936, under which the National Employment Commission\* was established in May, 1936, required the Commission to undertake a national registration and classification of persons on aid throughout Canada [Sec. 6 (a)]. To meet this obligation there was set up the Registration Branch of the Commission, which, in co-operation with the governments of the provinces and municipalities, took a first national registration of persons on aid, where the Dominion contributed financially to such aid, in September, 1936. In order to secure current figures, comparable with those available for September, 1936, the provinces and municipalities were required to provide follow-up returns each month commencing with October, 1936. In September, 1937, a second registration was taken, based upon the experience of the previous registration, and this, too, was subsequently kept up to date month by month.

In Section III of its final report, the National Employment Commission recommended that the work of the registration be carried forward under the Minister of Labour, after the termination of the work of the Commission itself. Consequently, when the Commission ceased to exist at Feb. 1, 1938, the work of the registration was placed under the Department of Labour as the National Registration Branch, where it has been carried forward on the same basis; a third national registration, comparable with those of the two preceding years, was taken in September, 1938.

From the commencement of the national registration, the number of local authorities throughout Canada issuing aid has averaged about 2,000; the success of the registration depends upon receiving complete and reasonably prompt returns from each of these authorities.

\* See the 1937 Year Book, pp. 1052-1053, and the 1938 Year Book, pp. 778-779.

In addition to the registration of persons on material aid\* throughout the municipalities and provinces, special registrations have been maintained since January, 1938, of pensioners on aid, and of Indians on aid, through the Department of Pensions and National Health and the Indian Affairs Branch of the Department of Mines and Resources, respectively.

Monthly reports are published by the Department of Labour which give detailed statistics as to numbers, classes, employability, etc.

**Statistics of Persons on Aid.**—Prior to the inception of national registration, general statistics of persons in receipt of material aid were secured through reports furnished to the Dominion Commissioner of Unemployment Relief by the several provinces distributing aid. The Dominion monthly averages so reported for the years up to 1936 are as follows: 1932 (8 months), 833,989; 1933, 1,227,558; 1934, 1,135,901; 1935, 1,162,563; 1936, 1,148,083. Table 25 shows the Dominion totals of persons on both urban and agricultural aid for each month in 1937 and 1938. Persons on agricultural aid constituted 35.9 p.c. of the monthly average for 1938. Agricultural aid is largely confined to the Prairie Provinces; Saskatchewan and Alberta receiving 86.4 and 6.6 p.c., respectively, of such relief afforded in 1938. Table 26 shows the numbers of fully-employable persons on urban aid\* by sex, for the same period, as derived from the national registration.

Subsequent to Apr. 1, 1937, the province of New Brunswick substituted a works program for material aid and consequently that province does not contribute to the registration totals on material aid as shown in these tables, for the months after the date mentioned. Moreover, in the case of all provinces the present figures include only persons receiving aid to which the Government of the Dominion contributed financially.

An analysis of the status of the 896,477 persons shown in Table 25 as receiving aid in December, 1938, reveals that 189,986, or 21.2 p.c., were heads of families,† 653,772, or 72.9 p.c., their dependants, while remaining 52,719, or 5.9 p.c., were classified as 'individual persons'.‡ Of the 604,666 persons shown as receiving urban aid, 132,482 were heads of families, of whom 106,035 were fully-employable, 14,834 partially-employable, and 11,613 were unemployable. Of the 45,804 recipients classified as individual persons, 24,300 were returned as fully-employable, 11,481 as partially so, and 10,023 as unemployable. Of the dependants of heads of families, totalling 426,380 receiving urban aid, 10,692 had been previously gainfully employed, 21,304 had never been employed, 651 were only partially-employable, and the remainder were classified as 'non-worker type dependants', including wives, children under 16 years, and other dependants of non-worker type over 16 years of age.

\* Material aid refers only to direct relief, so that in the sense here used the term does not include persons being provided with work on relief projects paid for in wages, even though such work was undertaken to alleviate unemployment. Material aid is divided into urban aid and agricultural aid. Agricultural aid refers to assistance given to resident farm operators and their dependants for human subsistence, where such farmers would normally derive their livelihood from the land which they occupy. Urban aid refers to all persons other than farm operators and their dependants, and thus includes the unemployed and unemployable persons.

† 'Head of family' is used to designate a person who is socially responsible for the support of one or more dependants. An 'individual person' is one who is neither a dependant of a head of family nor has anyone dependent upon himself. The term 'wife' refers to the member of a family unit who performs the housekeeping duties and 'wives' are a subclassification of dependants. 'Dependants' are all who look to the head of a family for their support and thus 'dependants' include some adult employable persons still living under the parental roof.

Section 10.—Old Age Pensions and Pensions for Blind Persons.

The Old Age Pensions Act, 1927.—Legislation respecting Old Age Pensions (R.S.C., 1927, c. 156) was adopted by the Dominion Parliament in 1927. Under the provisions of this statute the Dominion Government reimbursed each province participating in the Dominion scheme to the extent of one-half of the provincial

expenditure for old age pensions. An amendment passed at the 1931 session of Parliament (c. 42, Statutes of 1931) provided that the Dominion contribution to the provinces be increased from 50 p.c. to 75 p.c. of the provincial disbursements for old age pensions. The Dominion contribution of 75 p.c. of provincial disbursements was made effective from Nov. 1, 1931; the provinces have since been reimbursed on this basis.

The Dominion Old Age Pensions Act is now operative in all provinces and in the Northwest Territories.

The Gold Commissioner of Yukon was given authority, by a Yukon Territorial Council Ordinance passed in 1927, to enter into an agreement with the Dominion Government for the purpose of obtaining the benefits of the Old Age Pensions Act for residents in the Territory. No proposed scheme of administration for adoption in Yukon has been submitted for the approval of the Governor in Council.

Sec. 5 of the Act provides that before any agreement is made with a province the scheme for the administration of pensions proposed to be adopted by the province shall be approved by the Governor in Council, and that no change in such scheme shall be made without the consent of the Governor in Council.

The qualifications required of an applicant for pension are set forth in Sec. 8 of the Act which reads as follows:—

(1) Provision shall be made for the payment of a pension to every person who, at the date of the proposed commencement of the pension:—

(a) is a British subject, or, being a widow, who is not a British subject, was such before her marriage;

(b) has attained the age of seventy years;

(c) has resided in Canada for the twenty years immediately preceding the date aforesaid;

(d) has resided in the province in which the application for pension is made for the five years immediately preceding the said date;

(e) is not an Indian as defined by the Indian Act;

(f) is not in receipt of an income of as much as three hundred and sixty-five dollars (\$365) a year; and

(g) has not made any voluntary assignment or transfer of property for the purpose of qualifying for a pension.

(2) The receipt of a pension shall not by itself constitute a disqualification from voting at any provincial or municipal election.

Sec. 9 provides that the maximum pension payable shall be \$240 yearly, subject to reduction by the amount of the income of the pensioner in excess of \$125 a year. The pension authority may accept a transfer of the pensioner's interest in a dwelling house in which he resides, in which case the value of the dwelling is not considered in calculating the amount of pension payable. Subject to certain conditions, the pension authority is entitled to recover out of the estate of any deceased pensioner the amount of pension payments with interest at 5 p.c. per annum, compounded annually.

Sec. 11 provides for the reduction of pension where a pensioner has resided for a portion of the 20 aforementioned years in a province with which no agreement has been made. Sec. 15 provides for the suspension of pension where a pensioner has transferred his residence to some place out of Canada. It is provided by Sec. 16 that a pension shall not be subject to alienation or transfer by the pensioner or to seizure in satisfaction of any claim against him.

The Governor in Council was empowered by Sec. 19 of the Act to make regulations pursuant to this section. Existing regulations were revised and approved by Orders in Council dated Dec. 9, 1937, and Feb. 3, 1938.

Table 27 is a financial summary of old age pensions in Canada as at the end of the calendar year 1938.

<sup>1</sup> Estimates of population on which these figures are based are given at p. 113.

**Pensions for Blind Persons.**—By an amendment to the Old Age Pensions Act in 1937, provision was made for the payment of a pension to every blind person who, at the date of the proposed commencement of pension:—

- (a) is, and continues to be so blind as to be unable to perform any work for which eyesight is essential;
- (b) has attained the age of forty years;
- (c) is not in receipt of a pension in respect of blindness under the Pension Act, or an allowance in respect of blindness under the War Veterans' Allowance Act;
- (d) is:—
- (i) unmarried, or a widower without a child or children, or a widow without a child or children, and is not in receipt of an income of as much as four hundred and forty dollars a year, or—
  - (ii) married, or a widower with a child or children, or a widow with a child or children and is not in receipt of an income of as much as six hundred and forty dollars a year; and—
- (e) fulfils the conditions laid down in paragraphs (a), (c), (d), (e) and (g) of Subsection 1 of Section 8 of the Act.

The maximum pension payable to a blind person is \$240 yearly except in the case of a blind person, who, after the coming into force of the amendment to the Act, marries a person so blind as to be unable to perform any work for which eyesight is essential. The maximum pension in such a case is \$120 yearly.

The amended Act provides that pensions payable to blind persons shall be subject to reduction as follows:—

- (a) in the case of an unmarried person or a widower without a child or children or a widow without a child or children, by the amount of the income of the pensioner in excess of two hundred dollars a year;
- (b) in the case of a married person or a widower with a child or children or a widow with a child or children, by the amount of the income of the pensioner in excess of four hundred dollars a year;
- (c) in the case of a person married to a blind person receiving a pension under the amended Act, by the amount of the income of the pensioner in excess of two hundred dollars a year.

It is also provided that no blind person who is married, or is a widower with a child or children, or a widow with a child or children, shall be entitled to any pension in excess of the pension to which an unmarried person is entitled unless such married person and his or her spouse or such widower or widow and one or more of his or her children are living together.

The Governor in Council is empowered to make regulations with regard to pensions for blind persons and to define the expression "is so blind as to be unable to perform any work for which eyesight is essential".

**Section 11.—The Co-operative Movement in Canada.**

A general article on "The Co-operative Movement in Canada" appears at pp. 704-720 of the 1925 edition of the Year Book under the three sub-headings of "Consumers' Co-operation", "Co-operative Credit", and "Producers' Co-operation".\* A digest of the latest material on each of these three subdivisions of co-operation follows, the presentation of producers' co-operation being confined to that among agricultural producers.

\* The article referred to above was prepared for the Year Book by Miss Margaret Mackintosh, M.A., of the Department of Labour, Ottawa.

The Co-operative Union of Canada was formed in 1909, with six affiliated societies and 1,595 members. In 1937, 57 societies reported to the Union, their membership being 162,801. The sales of the reporting societies totalled \$13,171,020 and the purchase dividends returned to their members amounted to \$216,187. The classes of co-operative activities covered included retailing, wholesale trading, marketing, dairying, transportation societies, and buying clubs.

Since October, 1909, the Union has published a monthly, *The Canadian Co-operator*, from which these statistics and those in Subsection 1 have been taken.\*

### Subsection 1.—Consumers' Co-operation.

The statistics in Table 29, which cover only those retail societies reporting to the Co-operative Union of Canada, cannot be considered as strictly comparable due to the fact that, should a large society fail to report in any one year (and this has frequently happened in the past), an apparent decrease in the activities of the societies, not in line with actual conditions, would result.

The following notes, covering membership only, will help the reader to judge the real trend of consumers' co-operative activity. The increase of 624 in 1932 was due, in part, to the failure of 2 existing societies to report in 1931, although 3 new societies reported a membership of 533. Of the total increase of 1,354, in 1933, 1,058 was due to the reporting, for the first time, of 4 societies which had been in existence from 2 to 5 years, while one new society reported 57 members. In 1934, the apparent increase of 418 is modified by the fact that it includes 210 members of a society not reported in 1933, while one new society, with 44 members, reported in 1934. In 1935 the situation was complicated, since 6 societies which reported in the previous year failed to do so in 1935, their 1934 membership having totalled 736—on the other hand, 2 previously-existing societies, which did not report in 1934, reported 177 members and 3 new societies reported 525 members; as these two factors almost balance, it would appear that the existing societies increased their membership by nearly 600. In 1936, three new societies reported a membership of 461, while those established societies which reported in both 1935 and 1936 showed an increase in membership of 1,022; in addition, six buying clubs in Quebec and Ontario reported a membership of 739. In 1937, the 38 societies which also reported in 1936 showed an increase in membership of 1,839; five societies which did not report in 1936 had a membership of 1,467, of these, 3 were new organizations with 474 members. Three societies, with 638 members, reported in 1936 but not in 1937.

\* For details regarding the Co-operative Union of Canada and its activities, see the 1925 Year Book, pp. 708-709.

### Subsection 2.—Co-operative Credit in Quebec.

A form of co-operation which has achieved great success is that which provides short-term credit for small farmers and industrial workers in the province of Quebec. In 1900, what are known as "Les Caisses Populaires", or People's Banks, were begun with the establishment, by the late Alphonse Desjardins, of La Caisse Populaire at Lévis. M. Desjardins adopted the following principles: lending money only for approved purposes to carefully selected members in a restricted area; limited liability; issuing shares of small amount payable by instalments and withdrawable; and distribution of profits. These banks are for the most part established in agricultural districts. Loans are made to purchase agricultural implements at cash prices, to increase farm live stock, to improve farm buildings, to tide over a period of depression, to pay off a merchant, and for various similar purposes. The loans, though comprised within the term 'short credit', are for longer periods than are usual in ordinary commercial transactions because agricultural operations necessarily extend over longer periods than those of trade. They may be for 12, 15, or even 24 months, because they must give time for the farmer to realize on his products.

Details of organization may be found in the Statistical Year Book of Quebec, in the 1936 edition of which may be found statistics of the system as a whole. Complete information of the working of each individual bank, including such details as number of members and depositors, rates of interest paid, loans made and profits realized, classification of size of loans, receipts and expenses and a résumé of chief operations from the date of organization to 1937, for those banks operating in the latter year, are published in the report entitled "Co-operative People's Banks and Co-operative Agricultural Societies"

Table 30 shows the progress of these banks by quinquennial years from 1915 to 1930 and annually since then.

### Subsection 3.—Agricultural Co-operation in Canada in 1937.\*

Canadian farmers have been accustomed to the idea of mutual assistance since the days of early settlement as evidenced by barn raisings, beef rings, threshing syndicates, and the exchange of labour for various types of farm work. Isolated groups have been in business for some time but in the past thirty years the number of

\* Prepared by W. F. Chown, Division of Economics, Marketing Service, Department of Agriculture.

such organizations has increased rapidly. Available statistics for 1937 show 1,217 active farmers' business organizations with a total turnover of \$155,080,435.

These associations have been organized by farmers and are operating for their mutual benefit. They have been brought into being in order to obtain better price terms through increased bargaining power or to provide some service not at present available or to improve some existing service considered inadequate.

In Canada the expansion of co-operative activity has taken place most rapidly and to the greatest degree in the marketing field. Presumably this field has offered the greatest opportunity to effect savings and to provide needed services. Collective action has also made possible the pooling of the proceeds received from the sale of agricultural products of the same grade and quality and the return to the farmers of an average price for such products. This has frequently implied better grading and preparation for market while the products are still in control of the producers than would otherwise have been the case. The value of farm products marketed amounted to \$134,493,746 for the crop year ended July 31, 1938.

Many associations formed primarily for marketing have found it possible to render an additional service to their members by utilizing the buying power already mobilized for the purpose of purchasing supplies needed on the farm. For example, fruit-marketing associations may buy fertilizers, spray material, barrels, boxes, flour and feed, and general merchandise for their fruit-growing members. A number of associations have been formed primarily for the purpose of buying supplies, usually bulk commodities, and some are operating stores carrying a full line of general merchandise. Over half of this type operates in the Prairie Provinces and the principal commodities handled are gasoline, tractor fuel and other petroleum products, coal and wood, and binder twine. Sales of supplies and merchandise amounted to \$20,091,893 for the crop year 1937-38 or about 15 p.c. of the value of farm products marketed.

In order to increase effectiveness, sales agencies have been formed on a regional basis or Dominion-wide commodity basis such as the Canadian Co-operative Wool Growers, Limited, and the Canadian National Silver Fox Breeders' Association. Wholesale societies are also operating in most of the provinces which consolidate the buying power of the local associations and augment the benefits to be obtained from quantity buying. The United Farmers of Ontario, Limited, and the Co-operative Fédérée de Québec combine the functions of sales agency and wholesale for their affiliated local associations.

Fruits, vegetables, grain, seed, eggs, poultry, wool, and furs are usually graded and otherwise prepared for market before being offered for sale. Elevators, stockyards, common and cold-storage warehouses, and chick hatcheries are owned and operated co-operatively. Butter and cheese are manufactured, chicken and apple products are canned, commercial feeds and spray materials are prepared in co-operative plants. The First Co-operative Packers of Ontario, Limited, process hogs into bacon and other pork products. The Consumers' Refineries Co-operative Association, Limited, Regina, refine crude oil into gasoline, distillate, and other petroleum products.

In 1908 the Nova Scotia Legislature passed the Farmers' Fruit Produce and Warehouse Associations Act and in the same year the Quebec Legislature enacted the Co-operative Agricultural Associations Act. Since that time each province has provided for the incorporation of co-operative associations by suitable legislation. Since 1932, five provinces have enacted new co-operative associations

Acts and in three provinces there have been extensive amendments or consolidations. Such legislation varies between provinces but in most cases interest on capital is limited and profits are required to be distributed to members on the basis of patronage. There is no Dominion co-operative Act but several farmers organizations have been incorporated under the Dominion Companies Act. Others have been incorporated by special Acts of the Dominion Parliament and provincial legislatures. Over 90 p.c. of the associations reporting are incorporated by one or other of these means but many have not achieved such status and are buying or shipping clubs or circles.

The Provincial Governments have set up machinery to further the cause of co-operation usually within their Departments of Agriculture and in connection with marketing. The Agricultural Economics Branch was established within the Dominion Department of Agriculture in 1929 and one phase of its work has been the study of the farmers' co-operative movement. Under joint agreements with the Provincial Governments, a survey of existing organizations was undertaken in 1931 and has been maintained annually since that date.

The number of associations reporting to the Economics Division has shown an increase in each of the seven years since the survey was started. The total business for the year increased from 1932-33 to a peak in 1936-37 of \$173,927,117. The total business for the year 1937-38 amounted to \$155,080,435, a decrease of \$18,846,682 from the previous year. In 1937 Saskatchewan suffered extremely from drought and the estimated value of grain handled by the Saskatchewan Co-operative Wheat Producers, Limited, dropped from \$56,000,000 in 1936-37 to \$15,000,000 in 1937-38, a decrease of \$41,000,000. Therefore, the business of other co-operatives increased by about \$22,000,000. A scrutiny of the results of individual associations reveals that this gain was quite widespread and that, in general, business was good.

In addition to the trading associations described above and for which statistics are given in Table 31, farmers are interested in other forms of co-operative activity.

A mutual fire insurance company was formed in Ontario as early as 1836 and several, still functioning as farmers' mutuals, were organized between 1850 and 1860. To-day there are about 350 such companies with net assets of over \$5,000,000 and insurance at risk amounting to over \$1,000,000,000. These have a long history of successful operation behind them.

Approximately 62,000 or 5 p.c. of the telephones in Canada are operated by rural co-operative companies in which there is a total investment of \$19,193,394.

Inspired by the example of Quebec, 6 other provinces have passed co-operative credit union legislation within recent years, and societies have been formed for the purpose of making credit available to members. A number of these have been formed in rural communities.

Societies have been formed by fishermen on both coasts for the purpose of canning and marketing fish and buying gear on the co-operative plan. As many of the members of these societies are also farmers, mention may well be made of this activity in a summary of agricultural co-operation. During 1937, 16 fishermen's co-operative societies in Nova Scotia with a membership of 760 did business amounting to \$251,114 and had on hand, at the end of the year, assets amounting to \$67,976.

<sup>2</sup> Not organized on a share-capital basis.

<sup>3</sup> Includes assets and liabilities of United Farmers of Ontario, Ltd., and Co-operative Fédérée de Québec but business has been distributed according to commodity groupings.

## Section 12.—Labour Legislation in Canada in 1938.

A summary of the labour laws in force in Canada at the end of the year 1937 is given in the Canada Year Book for 1938 at pp. 787-796. Legislation enacted during 1938 is published in the Report on Labour Legislation in Canada, 1938, issued by the Department of Labour. A résumé of the principal enactments and regulations follows.

**Dominion Legislation.**—Regulations of Dec. 14, 1938, under the Canada Shipping Act, give effect to the draft convention of the International Labour Conference for the protection against accidents of workers employed in loading and unloading ships.

In Chapter XXX, Section I, there appears a summary of Dominion legislation enacted in 1938. Under the sub-heading "Labour", the Unemployment and Agricultural Assistance Act, the Shop Cards Registration Act, the National Housing Act, and Municipal Improvements Assistance Act are summarized. The interested reader is referred to those references for details.

The Income War Tax Act was amended to exempt from taxation one-tenth of any lump sum payable by an employer on account of an employee's superannuation scheme for each of the first ten years after the establishment of such a scheme.

**Provincial Legislation.**—In Quebec, an Act to Facilitate the Exercise of Certain Rights enables a trade union to be sued by summoning one of its officers or by summoning the group collectively. The Act applies to any group of persons associated for carrying out any purpose of an industrial, commercial, or professional nature which does not possess a legal personality and is not a partnership within the meaning of the Civil Code.

**Trade Unions.**—The Saskatchewan Freedom of Trade Union Association Act, the Industrial Conciliation and Arbitration Act of Alberta, and the Labour and Industrial Relations Act of New Brunswick recognize the right of employees to organize for any lawful purpose and to bargain collectively with their employers. The Alberta statute repeals the Freedom of Trade Union Association Act, 1937. In Alberta and New Brunswick the Acts stipulate that bargaining may be conducted through representatives of employees elected by a majority vote of the employees affected, and in New Brunswick and Saskatchewan through trade union officers. In the three provinces penalties are provided for any employer who seeks to prevent an employee from joining an association. In Saskatchewan and Alberta every trade union must file its constitution and by-laws with the Government and in New Brunswick it may be required to do so. In Quebec identical clauses inserted in the Collective Labour Agreements Act and the Fair Wage Act make liable to a penalty any person who prevents or attempts to prevent an employee from becoming a member of an association or who dismisses or tries to have dismissed any person on the ground that he is or is not a member of an association.

**Conciliation.**—The above-mentioned Alberta and New Brunswick statutes provide for conciliation in industrial disputes and, if conciliation fails, for investigation and report by a board consisting of one representative of each party and an independent chairman. The question of acceptance of the board's award is to be submitted to a separate vote of employers and employees, the voting to be by secret ballot. In New Brunswick strikes and lockouts are prohibited unless the dispute has been referred to a conciliation board and the parties have voted on its recommendations or unless the matters in dispute have been dealt with by the Fair Wage

Board. The Alberta Act prohibits a strike or lockout during the period between application for a conciliation commissioner and 14 days after the date fixed for the vote. The New Brunswick Act repeals the Fair Wage Act, 1936, but re-enacts most of its provisions.

The British Columbia Industrial Conciliation and Arbitration Act is amended to provide that if the majority of the employees of an employer were, on Dec. 7, 1938, organized in a trade union, it is lawful for them to bargain collectively through the officers of the union. In other cases collective bargaining is to be conducted as formerly through duly elected representatives of the employees affected.

*Wages.*—In Quebec the title of the Workmen's Wage Act, 1937 (a revision of the Collective Labour Agreements Extension Act, 1934) is again changed to Collective Labour Agreements Act. Amendments in this statute and in the Fair Wage Act enable the Lieutenant-Governor in Council to amend or revoke a wage ordinance or a decree making an agreement binding or to make either of them retroactive for not more than four months. Unless there is an express stipulation to the contrary, no decree or ordinance is to apply to any department of the Government of Quebec or to work done by a third party for the Government under a contract providing for a scale of minimum wages.

An amendment in the Alberta Industrial Standards Act clarifies the points which may be dealt with in a schedule of wages and hours to be made binding under the Act. Both the employer and employee who make an agreement for wages below the legal minimum are liable to a penalty. So also is an employer who discharges or discriminates against an employee for making a complaint or testifying in an inquiry under the Act. In Saskatchewan an amendment in the Industrial Standards Act stipulates that before a schedule of wages and hours is made binding the Minister must be satisfied that it is agreed to by a majority of the employees affected and by employers representing a major part of the volume of business in the industry affected. Another amendment authorizes the fixing of minimum prices for services in the same way as wages and hours.

The Manitoba Fair Wage Act is extended to barbering, hair-dressing, printing, engraving, dry cleaning, and any other industry that may be included by Order in Council. Minimum wages and maximum hours in these industries may be fixed by the Fair Wage Board as in the case of public works or they may be established in a manner similar to that provided in the Industrial Standards Acts of Alberta, Nova Scotia, Ontario, and Saskatchewan.

New sections added to the Alberta Male Minimum Wage Act authorize the Board of Industrial Relations, with the approval of the Lieutenant-Governor in Council, to prescribe fair wages for any class of workmen in any specified industry, trade, or occupation (except farm labourers and domestic servants) or in any specified area, work, or undertaking throughout the province. The prescribed rate is to be payable where the contract for the work contains a clause requiring the payment of fair wages and also in cases where the rate is not fixed in the contract of employment.

The Alberta Mining Industry Wages Security Act, which replaces the Coal Miners' Wages Security Act, applies to quarries, salt mines, and works for processing salt or tar sands, and to drilling for gas and oil as well as to coal mines. Every employer, before engaging in such an industry and thereafter when required, must furnish the Minister with a statement of his assets and liabilities and, annually, with a statement of wages paid. Other sections of the Act which will come into

force on proclamation require employers to deposit security for wages for the ensuing twelve months, and to keep posted notices that such security has been furnished. Monthly returns as to the wages paid are stipulated.

The special tax imposed on wages under the Income Taxation Act of Manitoba is reduced from 2 to 1 p.c.

*Hours of Labour.*—An amendment to the Alberta Hours of Work Act, defines "overtime" as time worked in excess of nine hours a day or 48 hours a week for a female employee, and ten hours a day or 54 hours a week for a male employee. In Manitoba, the Highway Traffic Act now prohibits a driver being on duty as driver for more than nine consecutive hours, except in emergency due to breakdown of the vehicle, or on duty in any capacity for more than 12 hours in any twenty-four or on more than six days a week. The British Columbia Fire Departments Two-Platoon Act is extended to every municipality and place in which there is a paid fire department or brigade.

*Workmen's Compensation.*—The Workmen's Compensation Acts of Alberta and Nova Scotia are revised and amendments are made to those of British Columbia, New Brunswick, Ontario, Quebec, and Yukon. The revised Act of Alberta implements certain recommendations of a committee of the Legislature. The Board has no longer power to exclude industries from the Act. To aid in equalizing assessments, any excess of payments over receipts in the Medical Aid Fund are to be charged to the Accident Fund and any surplus in the latter may be transferred to an equalization reserve. The deductions that may be made from wages towards the cost of medical aid may not be less than 1c. or more than 5c. per day or part of day worked. Other changes provide for compensation at the rate of 100 p.c. of earnings to workmen injured while doing rescue work in a mine, payment of compensation for the first three days if the disability lasts more than 30 days, and for payments in respect of children up to the age of 18 years. In cases of permanent partial disability the Board is to estimate the impairment of earning capacity and award compensation accordingly. Municipalities must make annual returns to the Board regarding employers of labour within their borders. Where an accident is due to the employer's failure to comply with the directions or regulations of the Board, a special levy may be made upon the employer not exceeding one-half of the compensation payable in respect of the accident.

The Nova Scotia Workmen's Compensation Act is chiefly a revision of existing legislation. Travelling salesmen are brought within the scope of Part I and the Board is authorized to pay compensation for a permanent partial disability even if the workman is not totally disabled for seven days. Accounts for medical aid must be submitted within one year.

In British Columbia the scale of benefits is raised. Burial expenses are now payable up to \$125 and compensation to a widow or invalid widower is increased to \$40 per month. The maximum total compensation is raised to \$70 per month in cases where there is a widow or invalid widower with children, or dependent parents in addition to a widow or invalid widower or orphan children. Compensation for disablement is increased to 66½ p.c. of average earnings. Surplus funds accumulated owing to the lower rate of benefit paid to alien dependants residing outside of Canada are to be used to increase payments to dependent widows and children in certain cases.

Radio broadcasting stations are brought under Part I of the Act in New Brunswick and the Board is empowered to re-admit industries which it has excluded

by regulations and to require employers to file statements giving the names and addresses of employees, their hours, wages, and duties, and any other information that may be required.

Two statutes amend the Workmen's Compensation Act of Quebec. The first empowers the Lieutenant-Governor in Council to appoint an officer to administer the Accident Fund and a medical board of three members to review the medical evidence. The other Act brings within the scope of the principal Act infectious silicosis and the similar condition resulting from inhalation of dust from asbestos.

In Ontario provision is made for the payment of an additional sum, not exceeding \$125, for necessary expenses of transferring the body of a workman from the place where death occurs to the place of interment in Ontario.

An amendment in the Workmen's Compensation Ordinance of Yukon extends from six months to twelve, the maximum period during which compensation for temporary disability may be paid.

*Safety Measures.*—The Ontario Department of Labour Act is amended to authorize regulations *re* the construction of coffer dams and crib work and amendments are made in the Nova Scotia and British Columbia Coal Mines Regulation Acts, the New Brunswick Mining Act, the Steam Boilers Act of Saskatchewan, and power is given to the British Columbia Public Utilities Commission to make regulations for safety and health. In Nova Scotia there are new rules for the use of machinery and the amount of combustible matter permitted in the dust of a mine which is not naturally wet or treated with water is reduced from 50 to 35 p.c.

In British Columbia coal miners may select one of their number to inspect, with the mine manager or inspector, the scene of an unusual occurrence or fatal accident.

In New Brunswick the Act contains new rules for timbering and the use of explosives, and requires any person in charge of a working face to have had at least one year's experience underground and to hold a certificate of a specified character. Power is given to an inspector to enter a mine at any time and, by written order, to require the discontinuance of any dangerous practice or condition.

In Saskatchewan the Canadian Interprovincial Regulations for the construction and inspection of boilers and machinery may be adopted with or without change as regulations under the Steam Boilers Act. Certain amendments are made in the recognized qualifications laid down for engineers.

*Unemployment.*—In Alberta and Saskatchewan, statutes providing for co-operation with the Dominion Government in dealing with unemployment are continued in force for another year, and the Unemployment Relief Loan Act of Manitoba, which authorizes the raising of loans for relief purposes, is also extended until 1939; provision is made that relief expenditures might be met from the Consolidated Revenue Fund as well as by loan.

In Alberta provision is made in the Bureau of Relief and Public Welfare Act for committees of not more than three members to investigate relief problems presented to the Agricultural Committee on Relief. The section requiring a municipality to provide relief in urgent cases for persons who are not residents but who are living there temporarily applies now only to employable persons.

In British Columbia, an amendment to the Residence and Responsibility Act enables a person who has moved from one local area to another to be granted, by the latter area, unemployment or poor relief or other social assistance on the same terms as residents. Unless the regulations provide to the contrary, the costs of such assistance are to be paid by the area of which the person is a resident.

The Nova Scotia Labour Act, 1933, was continued in force until May 1, 1939. This Act forbids any person or corporation employing 25 or more workers to hire any person who has not been a resident of Nova Scotia for at least one year, unless the person hired produces a certificate from the Government Employment Agent or Municipal Clerk in the place where he is to be employed stating that there are no unemployed persons in such place capable of doing and willing to do the work.

The Youth Aid Act of Quebec enables agreements to be made by the Provincial Government with any person, corporation, institution, or government to assist young persons to establish themselves in suitable employment and authorizes a maximum expenditure of \$1,000,000 for this purpose. Provision is also made for agricultural, mining, and textile schools, and for the study of fisheries.

The British Columbia Apprenticeship Act is amended to regulate the employment of minors 16 years of age or over in trades to which the Act applies.

Vocational training may be provided under the Manitoba Public Schools Act and pupils placed under the instruction of any person engaged in trade or industry. Liability of the School District for any injury to such pupils is limited by the Act. The person giving the instruction and his agents are also free from liability unless their negligence or misconduct contributes to the injury or death.

The Trade Schools Regulation Acts of Ontario and Manitoba are to come into force on proclamation. Both laws will require such schools to be registered and inspected. Before issuing a certificate of registration, which must be renewed each year, the Minister must be satisfied that the school has competent instructors and sufficient equipment, and is furnishing proper instruction at reasonable rates. Regulations may prescribe minimum hours of instruction and maximum fees, and designate any vocation as a trade within the meaning of the Act.

*Superannuation and Old Age Pensions.*—The Municipal Superannuation Act of British Columbia, repeals the Act of 1921, and provides for a contributory pension scheme applying: (a) to certain employees, except pensionable teachers, of municipalities and school boards that have adopted the provisions of the former Act or that adopt those of the new statute by a two-thirds majority of the Council or Board; (b) to permanent employees of certain municipal boards; and (c) to hospital employees (except casual workers to whom the Act is declared to apply by the Provincial Secretary on the joint request of the hospital and a majority of its employees). Provision is made for revising allowances granted under the earlier statute to bring them into line with the new Act and for a superannuation fund made up of contributions from employers and employees. Male employees, other than policemen and firemen, are entitled to pensions at the minimum retiring age of 60 or the maximum of 65 years. Policemen, firemen, and women employees are pensionable at the minimum of 55 or the maximum of 60 years.

The Alberta Old Age Pensions Act is amended to bring blind persons over 40 years of age within its scope in accordance with the Dominion Old Age Pensions Act.

### **Section 13.—Legislation Respecting Combinations in Restraint of Trade.**

A general article on Canadian legislation concerning combinations and monopolies in restraint of trade appears in the 1927-28 Year Book under the heading "Legislation Respecting Combinations in Restraint of Trade", pp. 765-770. In each later issue of the Year Book an annual statement on proceedings under the Combines Investigation Act is included.

The first Dominion legislation in this field was "An Act for the Prevention and Suppression of Combinations Formed in Restraint of Trade", passed in 1889 and now in force in amended form as Sec. 498 of the Criminal Code. Legislation providing special facilities for the investigation of combines was first enacted in 1907 and was included in the Customs Tariff of 1907. In 1910 the Combines Investigation Act of that year was enacted. The latter Act was replaced by the Combines and Fair Prices Act, 1919, which, in turn, after declaration of its constitutional invalidity by the Judicial Committee of the Privy Council, was replaced by the present Combines Investigation Act in 1923 (R.S.C. 1927, c. 26).

**The Combines Investigation Act.**—This Act provides means for the investigation of trade combinations, mergers, trusts, and monopolies alleged to have operated in restraint of trade and to the detriment of the public. The Act was amended in 1935 and 1937. In 1931 its constitutional validity was upheld by the Judicial Committee of the Privy Council following a reference of questions on this point by the Governor in Council to the Supreme Court of Canada. The Combines Investigation Act provides for publication of reports of investigations of alleged combines. Participation, or knowing assistance, in the formation or operation of combinations or monopolies, that are detrimental to the public and come within the scope of the Act, is an indictable offence. Provision also is made in the Act for the reduction or removal of customs duties, at the instance of the Governor in Council, in cases where it is found that, with respect to any commodity, there exists any combine to promote unduly the advantage of manufacturers or dealers at the expense of the public, and that such disadvantage to the public is facilitated by existing customs duties.

**Investigations in 1938.**—An investigation into an alleged combine in the distribution of tobacco products in the province of Alberta and elsewhere in Canada was made during the year. The finding of the Commissioner in a report submitted on Aug. 31, 1938, was that a combine existed in the distribution of tobacco products. The report was referred to the Attorney General of Alberta, and charges were laid against 44 tobacco companies and distributors. Court proceedings in this case were pending at the end of the year.

During the year an investigation was instituted to determine whether a combine exists in connection with the manufacture and sale of corrugated and solid fibreboard boxes and related products. The investigation extended over into the early part of 1939. Another investigation commenced in 1938 and not completed at the end of the year was an inquiry into the distribution of fruits and vegetables produced in British Columbia.

Investigations made during 1938, in addition to those mentioned above, have covered a wide variety of products and of trade practices, and have dealt with complaints in connection with classes of trade including manufacturing, primary production, wholesaling, and retailing. Steps to deter and prevent undue price enhancements by combinations or monopolies, unreasonable practices for the elimination of competitors, and other detrimental restraints of trade, have been taken along lines designed to be preventive where possible.

#### Section 14.—Mothers' Allowances.

Seven of the nine provinces of Canada provide for the payment of allowances to mothers who are widowed or without adequate means of support. The province of Manitoba was the first to make such provision in 1916, and the example has been followed by the other western provinces and by Ontario, Nova Scotia, and Quebec.

The Mothers' Allowances Act, 1930, of New Brunswick has not been proclaimed in effect.

All the mothers' allowances Acts stipulate that the mother must be a resident of the province at the time of making application and a widow or, in all provinces but New Brunswick and Nova Scotia, a wife whose husband is mentally incapacitated. In each case the applicant must also be a resident of the province at the time at which death, incapacity, or desertion occurs. Under all the laws, except those of New Brunswick, Nova Scotia, and Quebec, the wife of a physically disabled man is eligible but the section in the Alberta Act relating specifically to such persons has not been proclaimed. In British Columbia allowances are paid in cases where total disability is expected to continue for one year or more.

In Alberta, British Columbia, Ontario, and Saskatchewan, 'deserted'\* wives are paid an allowance, and in British Columbia and Saskatchewan, the wives of inmates of penal institutions are eligible. Under all the statutes except those of Alberta and Saskatchewan, the mother must be a British subject, or the widow or wife of a British subject. Allowances may be paid to foster-mothers under certain conditions in all the provinces but Alberta, Nova Scotia, and New Brunswick.

In New Brunswick, Nova Scotia, and Quebec, allowances are payable in respect of two or more dependent children, but in New Brunswick and Nova Scotia an allowance is payable for one child under 16 if there is an invalid child over 16 years of age. In the other provinces, allowances are payable in respect of one or more dependent children, but in Manitoba, under the regulations, no allowance is payable in respect of an only child, or an only child under 15 years of age, unless the mother is temporarily or permanently unable to care for the child. In British Columbia, New Brunswick, Nova Scotia, Ontario, Quebec, and Saskatchewan a dependent child is a child under 16 years of age. In Alberta, a boy under 15 or a girl under 16 is deemed to be dependent. In Manitoba, only children under 15 are regarded as dependent unless they are invalids.

In Alberta the cost of the allowances is divided between the province and the municipalities concerned, and in the other provinces the whole cost is carried by the province.

**Rates of Allowances.**—In British Columbia, the Act provides for a maximum monthly allowance of \$42.50 for a mother with one dependent child, an additional \$7.50 for each child under 16 years of age, and a further \$7.50 in cases where the husband of the mother is totally disabled and is living with her. In New Brunswick and Nova Scotia, a maximum allowance of \$60 per month is fixed by statute. In the other provinces, the provincial authority administering the Act has power to fix the rate of the allowance. In Ontario, the maximum for a mother and one child is \$35 per month in a city, \$30 in a town of over 5,000 population, and \$25 in a rural district, with an additional \$5 for every child in each case. In Saskatchewan, under the terms of an Order in Council of January, 1936, maximum monthly payments range from \$8 to a mother with one child to \$44 to a mother with ten or more children.

In Manitoba, the maximum allowance for a mother and two children is \$50 excluding allowance for winter fuel, with a maximum of \$89 for a family of seven or more children. In Alberta, the allowance is determined by the special circumstances in each case, the maximum payment ranging from \$25 per month to a mother with one child, to \$50 per month where there are five children.

\* In Ontario presumption of death after complete disappearance of the husband for 3 years is interpreted as desertion. In Saskatchewan death may be presumed after 7 years, while in Alberta and British Columbia pensions may be paid after desertion for 5 and 2 years, respectively.

Tables 32 to 37 show, for six provinces, the numbers of families and of children assisted, the total benefits paid, and in some cases the division of the cost of the latter between provinces and municipalities, for as many years as comparable figures are available.

**Nova Scotia.**—The Mothers' Allowances Act (c. 4, 1930) was passed at the session of 1930 and came into force on Oct. 1, 1930. Table 32 shows the numbers of families assisted and the amounts paid under the Act from its inception to Nov. 30, 1938.

32.—*Mothers' Allowances in Nova Scotia, fiscal years 1931-38.*

Fiscal Year.	Numbers Assisted.		Benefits Paid.
	Families.	Children.	
1931 (year ended Sept. 30)	1,030	3,179	\$ 310,602
1932 " "	1,108	3,342	331,337
1933 " "	1,158	3,487	341,929
1934 " "	1,168	3,549	356,075
1935 (14 months ended Nov. 30)	1,239	3,720	413,997
1936 (year ended Nov. 30)	1,222	3,630	363,981
1937 " "	1,260	3,682	389,213
1938 " "	1,295	3,713	412,745

**Quebec.**—The first regulations under the 1937 Act providing for mothers' allowances have been made. Procedure has been defined for application, which must be made either to the Bureau administering the Act under the Minister of Labour or to one of the revisers appointed under the Old Age Pensions Act to investigate eligibility. Evidence must be furnished that the applicant is eligible for an allowance under the Act and two testimonials as to her ability to care for her children properly must be submitted. The Bureau has power to determine the rate of an allowance. Allowances are to be paid monthly by cheque and to take effect from the day following receipt by the Bureau of the information, but no pensions are payable before Dec. 15, 1938.

Each beneficiary must establish annually her right to an allowance and notice must be given the Bureau of any change in circumstances that may affect the grant. The regulations fix the rate of the allowances to be paid.

A woman with two dependent children under 16 is to receive \$40 monthly and an additional \$5 for each additional child, the total allowance not to exceed \$60. The Act provides for payment of the allowance to a grandmother taking the place of the mother but if she is the wife of the children's grandfather he is not released from the obligation to provide for the children imposed by the Civil Code of Quebec. Allowances may be reduced if the beneficiary or her dependants can be provided for to some extent by relatives by marriage whom the Civil Code requires to contribute to their support.

If a beneficiary or her dependants own real property exceeding \$1,000 in net value, the annual allowance may be reduced by 30 p.c. when the applicant resides in a city or town of 10,000 or more, and by 39 p.c. if she resides elsewhere. Where the net value of real property is between \$500 and \$1,000 there is a 15 p.c. reduction. The allowance may be cut by 5 p.c. where movable property other than household furniture is acquired to the value of more than \$500. The allowance is to be decreased also where there are assets other than household furniture and clothing convertible into cash, and general power is given the Bureau to make reductions in other circumstances where it seems reasonable. A person owning

or acquiring liquid assets other than household furniture valued at over \$1,000 is not entitled to allowance.

Ontario.—The Mothers' Allowances Act (R.S.O., 1927, c. 280) was originally passed at the session of 1920, as c. 89 of the Statutes of that year, and came into force on Oct. 1, 1920. Table 33 shows the operations under the Act from its inception.

Manitoba.—The Mothers' Allowances Act (1916, c. 69), the first of its kind in Canada, came into operation on Mar. 10, 1916. Allowances are now made under the authority of the Child Welfare Act (1936, c. 6). Table 34 shows the benefits paid since Dec. 1, 1918, together with statistics of families and children assisted, these latter figures are not available for all of the earlier years.

**British Columbia.**—The Mother's Pensions Act (R.S.B.C., 1936, c. 194) was originally passed as c. 61 of the Acts of 1920, and came into force in July, 1920. Table 37 shows the numbers of families and the numbers of children assisted, together with the amounts expended in each of the fiscal years 1921-38.

Under the original Act, the full cost of pensions was borne by the province. In 1932 one-half of the costs of pensions paid to residents of a municipality was charged to the municipality to which they belonged, but at the end of the fiscal year 1936-37 responsibility for all payments was again assumed by the province.

In 1938 there were 400 cases where mothers received extra allowances for incapacitated husbands.

## PART II.—WAGES.

### Section 1.—Wage Rates and Hours for Various Classes of Labour in Canada.\*

Statistics of rates of wages and hours of labour have been collected for recent years by the Dominion Department of Labour, and are published in a series of bulletins supplementary to the *Labour Gazette*. Report No. 1 of this series was issued in March, 1921. The records upon which the statistics are based begin in most cases with the year 1901. Index numbers have been calculated to show the general movement of wage rates; the series covers six groups of occupations back to 1901, and common factory labour, miscellaneous factory trades, and lumbering back to 1911. The index numbers are based upon wage rates in 1913 as 100. Average index numbers, weighted according to the average numbers of employees in each group as shown in the censuses of 1921 and 1931, are also given. Weighting has not been applied within the groups. In groups by occupations or industries such as these, weighting makes comparatively little difference as rates of wages for the various classes of labour tend to rise and fall to the same extent even in different localities. In the three groups of common factory labour, miscellaneous factory trades, and logging and sawmilling, the index numbers being calculated from samples, the averages are automatically weighted by the numbers of samples, which vary according to the numbers of workers in the various occupations and industries. The upward movement that appeared in the index numbers for some groups in 1934 became general in 1935 and continued in 1936, 1937, and 1938. On steam railways wages were increased in 1937 and in 1938.

\* See pp. 774-783 of the 1927-28 Year Book for an article on the "Wages Statistics of the Census of 1921" and pp. 797-799 of the 1933 Year Book for "Earnings in the Census Year 1931".

## 1.—Index Numbers of Rates of Wages for Various Classes of Labour in Canada, 1913-38.

NOTE.—Rates of wages in 1913=100. Index numbers for 1901-12 are given at p. 674 of the 1932 Year Book.

<sup>1</sup> Weighted according to average numbers of workers in each group in 1921 and 1931.

Rates of wages and hours of labour in 1938 in various trades in the largest cities of the five economic areas of Canada will be found in Table 2. For statistics of the wages and hours of employees of steam railways and wages of employees in and about coal mines in Canada, see pp. 751-752 of the 1930 Year Book, where the rates etc., for the seven or eight years prior to 1929, are given. Wages in coal mines of Nova Scotia were reduced 10 p.c. in 1932, and in Drumheller, Alta., in 1933; in 1935 in both districts 5 p.c. was restored. On steam railways deductions of 10 p.c. were in effect during 1932, 1933, 1935, and 1936; 15 p.c. in 1934; running trades 20 p.c. for six months in 1933. In 1937 the deduction was reduced gradually from 10 p.c. to 4 p.c. On Feb. 1, 1938, the deduction became 2 p.c., and the basic rates were restored Apr. 1. In editions of the Year Book prior to 1933, a table showing the wages and hours of common labour in factories for certain cities is given in this section. The information for 1938 will be found at p. 66 of *Wages and Hours of Labour in Canada*, published as a supplement to the *Labour Gazette* for March, 1939. For the five cities of Table 2 it is included under sub-heading 5 of the stub.

The attention of those specially interested in the subject of wages and hours is directed to the valuable detailed study, *Wages and Hours of Labour in Canada, 1929, 1937 and 1938*, published by the Department of Labour as a supplement to the *Labour Gazette* for March, 1939.

<sup>1</sup> Maximum rates based on length of service; Halifax rate for one-man cars; 5 cents extra for one-man car operators in Montreal, Toronto, and Winnipeg; Vancouver 6 cents extra.

Section 2.—Wages and Hours of Labour Under Provincial Minimum Wage Legislation.

All of the provinces in Canada except Prince Edward Island have in effect legislation providing for the establishment of minimum wage rates for female employees in certain industries and occupations through boards which are authorized to establish and enforce these minimum rates. Such legislation was enacted between 1918 and 1920 in all of these provinces except New Brunswick. In Nova Scotia

the legislation is applicable to female workers only, but in the other provinces it now applies both to male and female workers. There is also legislation for the restriction of hours of labour which are regulated in some of the provinces by the minimum wage boards but in the others only under the factory acts, etc. (See Sec. 12 of Part I on Labour Legislation in 1938.)

In British Columbia since 1925, and in Manitoba since 1931, separate orders have been effective for some classes of male workers and their scope was much extended in 1934 and subsequent years. In New Brunswick, the Labour and Industrial Relations Act, 1937, which reproduces the provisions of the Fair Wage Act, 1936, provides for the establishment of minimum wage rates but no orders of general application had been issued at the end of 1938. In Saskatchewan since 1936, and in Quebec from 1937, all minimum wage orders for females apply also to male workers. In Alberta, separate orders for male workers were issued in 1937 for the first time. In Ontario, under the Minimum Wage Act, 1937, the legislation was extended to male workers but only one order for males had been made effective at the end of 1938, namely, that relating to the textile industry. In Quebec and New Brunswick, wages in logging are regulated under forestry regulation acts.

Beginning in Quebec in 1934, certain wage rates established through collective agreements were made binding by industries in certain districts or throughout the province, under the Collective Labour Agreements Extension Act, 1934, and later under the Workmen's Wages Act, 1937, and the Collective Labour Agreements Act, 1938. The Industrial Standards Acts of Ontario and Alberta in 1935, that of Nova Scotia in 1936, and of Saskatchewan in 1937 provided for joint conferences of employers and employees for the establishment of wage scales in various industries in the districts concerned.

Information as to minimum wage rates for work under Dominion Government contracts for the manufacture and supply of equipment, stores, clothing, etc., appears in the paragraphs on Fair Wages in the section on the Dominion Department of Labour at pp. 779-782.

#### Subsection 1.—Minimum Wages for Females.

The table on pp. 844-845 gives information as to minimum rates of wages and as to hours for which these rates are payable under the orders of the various provincial boards and commissions in effect at the end of 1938.

The information here given is intended to afford merely a statistical summary of the minimum wages with hours of labour in the provinces and industries affected, and, while some of the more significant details have been given in footnotes, it has been found impossible to include the information in such form as to indicate any more than the general conditions under these provisions.

For complete information it is necessary to refer to the orders of the various provincial boards. These have been given in some detail in the *Labour Gazette* from time to time as issued, and in summary form, by provinces, in the *Wages and Hours Supplement to the Labour Gazette*, March, 1939. In some provinces these orders include regulations as to employment conditions, sanitary conditions, etc. The boards have power to issue licences for lower rates of pay for handicapped workers and to meet special conditions in the nature of emergencies.

## 3.—Minimum Wage Rates for Female Workers in Canada Under

<sup>11</sup> No minimum wage.

<sup>12</sup> In Montreal district—19 to 26 cents per hour, 54-hour week.

<sup>14</sup> Departmental stores and mail-order houses: experienced—\$12; minors, learners, etc., \$8-\$11.

<sup>17</sup> Applies also to wholesale and mail-order houses.

<sup>18</sup> Rate of \$12 applies to Winnipeg and district, and Brandon at any time; to Portage la Prairie, May to October; and to any summer resort, June to September.

<sup>19</sup> Restaurants only—any place where meals are provided.

<sup>20</sup> Applies also to elevator operators; there is a separate order for janitresses in apartment houses.

<sup>21</sup> Or 25-30 cents per hour.

<sup>22</sup> Cleaners 35 cents per hour. No minors to be employed.

<sup>23</sup> Applies also to attendants at garages and automobile service stations, drivers of motor cars and other vehicles.

<sup>24</sup> Applies also to elevator operators including learners (under separate order).

<sup>25</sup> Winnipeg, St. Boniface, St. James, and Brandon.

<sup>26</sup> Applies only to offices connected with industries named in factories order (manufacturing).

<sup>27</sup> Applies also to physicians', dentists' and optometrists' offices, post, and telegraph offices.

<sup>28</sup> Applies also to telegraph employees.

In the preceding table figures for adult learners, and for minors and apprentices are shown in a range covering both classes. There is wide variation in the rates for such classes in the several industries and the time allowed for such periods varies in most cases from one year to 18 months. Probationary periods (usually 3 months) without pay are allowed in some cases—beauty parlours, millinery, dress-making in shops, etc.

### Subsection 2.—Minimum Wages for Male Employees.

Provisions for minimum wage rates for male employees are outlined in the *Wages and Hours Supplement to the Labour Gazette*, March, 1939, pp. 130-152, a summary of which follows:—

In Prince Edward Island, the city of Charlottetown, as authorized by an amendment to its incorporating Act, has established by by-law a minimum wage rate of 35 cents per hour for labourers and workmen engaged by contractors.

In New Brunswick the Labour and Industrial Relations Act, 1937, which incorporates the Fair Wage Act, 1936, provides for the establishment of minimum rates of wages and maximum hours for both male and female workers. Orders have been issued for a number of individual establishments but none of general application in any trade or industry. Under the Forest Operations Act, 1934, the Commission, during 1937, established for stream-driving a minimum average rate of \$3 per day and board, net, or its equivalent in case of piece work. For booming and sorting a minimum rate of 28 cents an hour without board was set. After Oct. 1, 1938, for cutting, yarding, and hauling, a minimum rate for each employee of \$30 and a minimum average rate of \$34 per month and board, net, were fixed.

In Quebec, the Fair Wage Act, 1937, replacing the Women's Minimum Wage Act, applies to both male and female workers (see Subsection 1, Table 3). Under the Act to Assure Reasonable Wages for Workmen Engaged in Forest Operations, 1937, a minimum of \$45 per month with board is established. An Order in Council under the Act approved Aug. 30, 1938, provides that for youths of 18 to 20 years, incapacitated persons, and men of 60 years or over the minimum is \$30 per month with board; regular hours are limited to 60 per week and time and a quarter for overtime.

In Ontario, until repealed in 1937, the Minimum Wage Act had provided that wherever a male employee replaces a female employee in any class of industry, the male employee must be paid at least the minimum rate established. This Act was replaced by the Minimum Wage Act, 1937, applying to both male and female workers. At the end of 1938 only one order had been issued under the new Act (textile industry—see Subsection 1, Table 3) and the old orders were still in effect.

In Manitoba, the Minimum Wage Act provides that when a minimum wage scale has been established for any industry, no person of the age of 18 years or over may be paid less than 25 cents per hour except where the Board has passed specific regulations providing for a different rate. As all industries except farming, market gardening, and domestic service are now under regulation, the above minimum rate of 25 cents per hour for male persons of 18 years of age or over applies to all except where special regulations have been made, as follows: in manufacturing, departmental stores and mail-order houses, retail and wholesale stores, and general employees the orders apply to male as well as female employees (see Subsection 1, Table 3). For hotels, restaurants, etc., the minimum for male workers over 18 is

\$12 per week of 48 hours at any time in Greater Winnipeg and Brandon and during summer months in Portage la Prairie and summer resorts. The minimum is \$10 per week of 48 hours in other places. All orders apply to boys under 18 in cities except that special orders for boys under 18 in cities provide for minimum rates of \$8 to \$10 in manufacturing establishments, hotels, garages, etc. The Taxicab Act establishes for Greater Winnipeg a minimum of \$17.50 per week or 40 cents per hour with a minimum of \$1.60 per day, hours not to exceed 12 per day, 6 days per week. The Highway Traffic Act sets minimum rates for drivers of public passenger vehicles at \$80 per month or \$20 per week, 9 hours per day for driving, 12 hours in any capacity, 6 days per week. The Fair Wage Act provides for minimum wages and maximum hours on public works under contract, and also on private construction work as defined in the Act, under schedules approved by the Minister of Public Works.

In Saskatchewan, minimum wage rates for female employees in shops and factories now extend to male employees and to all of the province by amendment in 1936 to the Minimum Wage Act, 1919. (See Subsection 1, Table 3). The Coal Mining Industry Act, 1935, and an amendment to the Public Services Vehicles Act in 1935 provide for the establishment of minimum wage rates but none had been set by the end of 1938.

In Alberta, under the Male Minimum Wage Act, a general order covers all workers except those engaged in farm work and domestic service, those working under schedules under the Industrial Standards Act and casual, seasonal, or temporary workers for employers not engaged in the industry and, except woodworking, etc., in rural districts. The general order establishes a minimum of 33½ cents per hour for full-time employees over 21 years with at least one year's experience and 28 and 30 cents for such employees with less than one year's experience; for full-time employees under 21 years, the minimum rates are from 20 cents for beginners to 33½ cents after three years' experience. Corresponding minimum rates for part-time employees are from 30 to 40 cents for those over 21 and from 23 to 35 cents for those under 21. A special order for employees of sawmills, box factories, woodworking, logging, and tie-cutting in rural districts provides a minimum rate of \$30 per month. Another special order sets the following minimum rates for retail delivery boys: under 16 years—\$7.50, under 18—\$9.50 per week, if employed by the week or longer period; 17 to 22½ cents per hour if employed by the day or hour.

In British Columbia, under the Male Minimum Wage Act, 1934, applying to all occupations except farm labourers and domestic servants, orders have been issued as to the following: logging, sawmilling, furniture and woodworking industries, baking, fruit and vegetable canning, construction, the carpentry trade in some localities, shipbuilding, goods transportation by road, mercantile industry, stationary engineers, barbers, elevator operators, first-aid attendants, and janitors. In many instances the minimum rates for unskilled labour are: 40 cents per hour for males over 21 years of age, 25 to 35 cents for those between 18 and 21, and 20 to 25 cents per hour for those under 18. In addition, the Female Minimum Wage Act, 1934, provides that where a minimum wage rate has been set for female workers in any industry, male workers may not be employed at work usually done by female employees at less than the fixed minimum wage.

**Subsection 3.—Wages and Hours of Labour under Collective Agreements and Schedules of Wages and Hours Made Obligatory by Order in Council in Certain Provinces.**

In Nova Scotia, under the Industrial Standards Act, 1936, minimum wage rates and standard hours have been fixed for bricklayers, carpenters, electrical workers, plumbers and steamfitters, and plasterers in Halifax and Dartmouth.

In Quebec, under the Collective Labour Agreements Act, 1938, (which replaced the Workmen's Wages Act, 1937, and the Collective Labour Agreements Extension Act, 1934), wages and hours in agreements between representatives of employers and of workers have been extended and made compulsory for all employers in the trade or industry in the district affected, and were in effect at the end of 1938, as follows:—For the whole province, in certain manufacturing industries, *viz.*, boots and shoes; gloves; men's and boys' clothing (except work clothing); children's clothing; women's coats and suits; dress cutting; lithographing; furniture; can, container, and metal utensils; also for granite, marble, and stone quarrying: in most of the cities and towns and in some villages for the building trades, and the barbering and hair-dressing trades: in three districts, which include all cities of over 11,000 population, for job-printing trades; and in two of these districts for newspaper work as well: for iron oxide mining and aluminium smelting in the districts in which these industries are carried on: in the four largest cities and in Granby and Sorel, for bakeries: in Sorel, for butchers: in Quebec, Montreal, and Sherbrooke, for garages and service stations: in the Montreal and Quebec districts, for the fur industry, and for ornamental iron and bronze work: in Montreal and district, for women's and children's millinery; men's hat and cap industry; the passenger, freight, and industrial car and bus manufacturing industry; and for funeral undertakers: in Montreal and in Sorel, for longshoremen: in Quebec, for dairy employees and tavern employees: in Sorel, for taxi and truck drivers: in four cities and towns, for clerks and accountants: in six Eastern Township counties, for horseshoers and wheelwrights: in Montreal, Sherbrooke, and Victoriaville, for shoe repairing.

In Ontario, under the Industrial Standards Act, 1935, wages and hours schedules have been made binding by Order in Council and were effective at the end of 1938, for the following industries: throughout the province, for breweries, furniture (wood) factories, men's and boys' clothing factories, and women's cloak and suit factories; in four districts, for the logging industry; in Ottawa, for bakers; in Toronto, for jewellery manufacturing, coal hoisting, coal handling and driving, and taxi driving; in Toronto, Ottawa, Kingston, Cornwall, Brantford, St. Thomas, Kirkland Lake, Windsor, Sault Ste. Marie, and Timmins, for one or more of the building trades; and in most of the cities and larger towns for barbers.

In Saskatchewan, under the Industrial Standards Act, 1937, schedules were in effect by Order in Council at the end of 1938, as follows: two building trades in Moose Jaw and six building trades in Regina; barbers in eleven districts and hair-dressers in five districts; taxi drivers, draying, transferring and storage, and shoe repairing at Regina; bakers and sign painters at Moose Jaw; jewellery workers at Saskatoon.

In Alberta, under the Industrial Standards Act, 1935, schedules have been put into effect by Order in Council and were effective at the end of 1938, as follows: in Calgary, Edmonton, and the adjacent districts, for bakers; seven building trades at Calgary and two at Edmonton and their surrounding districts; taxi drivers at Edmonton; the welding industry at Edmonton and Calgary; taxi drivers and bowling

alley employees at Edmonton and Calgary; the honey-producing industry in the Coaldale, Taber, Vauxhall zone, and the Eastern Irrigation zone; the lumbering industry, including logging, sawmills, planing mills, and box factories, in the Flatbush, Chisholm, Spurfield, and Faust zones. Under the Department of Trade and Industry Act, 1934, a code setting forth minimum wages for barbers throughout the province was in effect at the end of the year 1938.

### **Section 3.—Cost of Living of Wage-Earners.**

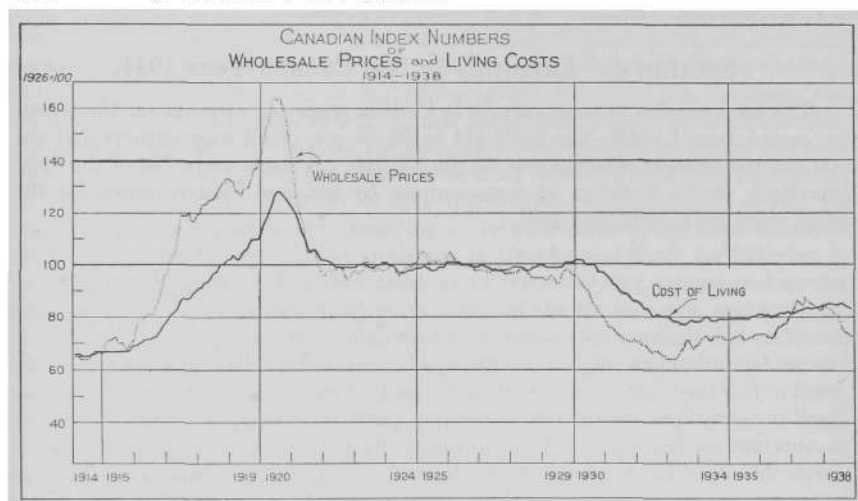

The material appearing under this heading has been transferred to Chapter XX—Prices, where it appears with the Bureau of Statistics general cost of living index under the heading "Retail Prices and Services", p. 866.

### **Section 4.—Earnings in the Census Year 1931.**

The total number of wage-earners in Canada reporting earnings for the census year ended June 1, 1931, was 2,476,414 or 96.35 p.c. of all wage-earners and the total amount of their earnings was \$2,100,552,700. A table at p. 789 of the 1937 Year Book shows statistics of wage-earners, by sex, and their earnings, for the census years 1911, 1921, and 1931.

## CHAPTER XX.—PRICES.\*

For purposes of statistical analysis, commodity prices are usually divided into two principal groups, wholesale prices and retail prices. The term 'wholesale' is not used literally, and primary producers', factory, and jobbers' quotations, as well as actual wholesale prices, are often included in this group. Markets in which this type of price is quoted are usually well organized, and frequently very sensitive. They are responsive to changing business and monetary conditions. Wholesale quotations are accordingly preferred, therefore, for sensitive index numbers of prices designed to reflect price reactions to business factors, and for more general index numbers to furnish a basis of measuring changes in the purchasing power of money. Although possessing admitted defects, general wholesale price index numbers are widely used for this latter purpose.

Retail prices represent more diffused markets, and are less sensitive. There is ordinarily a lag of several months between this type of quotation and its wholesale counterpart. Retail prices are important from a statistical point of view, however, because they indicate changes in living costs and, along with measurements of income, show fluctuations in the economic well-being of the community.

### Section 1.—Wholesale Prices of Commodities.

#### Subsection 1.—Historical Review of Canadian Prices.

Annual average index numbers for every year since Confederation are given in Table 1. In that table will be noted the high prices of 1867, following the close of the American Civil War and the Austro-Prussian War of 1866, and the tendency to declining prices in subsequent years. Prices went up again after the Franco-German War of 1871 and reached a high point in 1872 and 1873, but the crisis of the latter year resulted in a decline. A downward trend persisted fairly steadily throughout the 25 years from 1872 to 1897, when the gold supply of the world did

\* Except as otherwise credited, the sections of this chapter have been revised under the direction of Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. This Branch compiles and publishes statistics on: Prices (wholesale, retail, securities, bond yields, services, exchange, cost of living), Retail and Wholesale Trade, Foreign Capital Investments in Canada and Canadian Investments Abroad, Balance of International Payments, and other related subjects. For a complete list of the publications of this Branch, the reader is referred to Chapter XXIX, Section I, under 'Internal Trade'.

not increase as rapidly as the supply of commodities. This gold shortage was accentuated by the demonetization of silver, which ceased to be legal tender and was reduced to the level of token money by most nations. Relief came through the discoveries of gold in the Rand mines and the application of the cyanide process to low-grade ores. The result was a rapidly increasing world production of gold from about 1890 to the outbreak of the Great War, with consequent rising prices as the volume of the new gold became an appreciable part of the total stock. Thus prices increased from the low point of 75.6 in 1897 to 100 in 1913 and 102.3 in 1914. Afterwards, the Great War, both through the scarcity of commodities which it occasioned and the inflation of the currency which it produced, drove prices rapidly upward to a maximum of 243.5 in 1920, followed by a rapid drop to 152.0 in 1922. This was succeeded by a slight increase to 160.3 in 1925. The tendency from 1925 to 1929 was gradually downward, although the period was one of increasing prosperity.

Commencing in the autumn of 1929, the severe economic depression was accompanied by a drastic decline in wholesale prices. Its extent may be gauged from the drop of the wholesale price index from 153.7 in August, 1929, to 99.2 in February, 1933. A subsequent irregular rise carried this index upward to 132.1 in 1937, although the trend of prices was downward in the latter half of that year. This movement persisted throughout the greater part of 1938, carrying the wholesale index lower by 7 p.c. to 122.8.

#### 1.—Annual Index Numbers of Wholesale Prices in Canada, 1867-1938.

(1913=100. Unweighted index from 1867-1912.)

Year.	Index No.	Year.	Index No.	Year.	Index No.	Year.	Index No.

1884	100.6	1902	86.2	1920	243.5	1938	122.8

#### Subsection 2.—The Index Number on a Post-War Base (1926).

Wholesale price levels in Canada during 1938 were reduced materially. The Dominion Bureau of Statistics weekly index of 567 commodity prices receded almost steadily from a level of 84.3 for the first week of January to 74.0 for the week of September 9. At this point the index stiffened and remained comparatively firm through the last quarter, closing the year at 73.2. Between December, 1937, and December, 1938, the monthly general index of wholesale prices dropped from 82.7 to 73.3, for a loss of 11.4 p.c. The vegetable products index, paced by the rapidly falling and heavily weighted grain index, was mainly responsible for this major setback. As it became increasingly evident that Canada and other leading exporters would harvest large wheat crops, the grain index tumbled sharply to the year's low of 41.7 on Nov. 4. This compared with an opening index of 96.1.

## 2.—Weighted General Wholesale Price Index Numbers, by Months, 1928-38.

(1926=100.)

Month.	1928.	1929.	1930.	1931.	1932.	1933.	1934.	1935.	1936.	1937.	1938.

<sup>1</sup> Revised since the publication of the 1938 Year Book.

The range of fluctuation in the component groups between December, 1937, and December, 1938, explains to some extent the behaviour of the general index. The 1938 net changes (with 1937 net changes in parentheses) were: vegetable products -29.3 p.c. (+1.5 p.c.), animal products -6.8 p.c. (+5.8 p.c.), textiles -3.9 p.c. (-2.7 p.c.), wood and wood products +0.9 p.c. (+8.5 p.c.), iron and its products -5.6 p.c. (+13.9 p.c.), non-ferrous metals -1.4 p.c. (-7.1 p.c.), non-metallic minerals -1.0 p.c. (+1.4 p.c.), and chemicals -2.1 p.c. (+2.0 p.c.). It is readily apparent that index fluctuations with the exception of vegetable products were comparatively small. Of the eight groups, wood and wood products was the only one to show a gain in 1938, and that of a minor character. The tremendous effect of the recession in the grain index was clearly shown by the loss in the vegetable group index. The position of the animal products group index was altered considerably during the latter half of 1938, coinciding with the substantially cheaper feed situation. Live-stock prices which had been kept at a high level for the first six months were quick to react to the changing grain picture. Declines in the textile group were mostly confined to raw wool and its manufactures. In the wood and wood products group strength was due mainly to the higher prices ruling in the newsprint industry when a basic New York price of \$50 a ton was set for 1938. All sections of the iron and steel group experienced weakness though price reductions were chiefly centred in the pig iron and rolling-mill products indexes.

Lower prices in the aluminium, antimony, and solder sub-group indexes were mainly responsible for the narrow change in the non-ferrous group. Removal of the sales tax on building materials in 1938 contributed to a slight recession in the non-metallic group index, and lower gasoline prices were also associated with the decline in this group. Price reductions in the chemical group were general and outweighed advances for fertilizers and industrial gases.

The Canadian farm products index, in which grains are the most important constituent, suffered a sharp setback in 1938. The opening level was 87.3 but successive monthly declines brought it down to a 1938 low of 63.0 on Sept. 9. Following the stabilizing effect of the 80-cent minimum price set on No. 1 Manitoba Northern wheat by the Canadian Grain Board, the index ruled firmer for the remainder of the year, closing at 64.6.

As might be expected from the foregoing comments, primary commodity indexes showed considerable recessions during 1938, compared with manufactured goods indexes. The position occupied by producer goods, raw and partly manufactured materials, and Canadian farm products relative to manufactured materials was approximately on a par with December, 1935, or about 10 p.c. below corre-

sponding levels of a year ago. An interesting point to be noted was the pronounced stability of the building materials index, which showed greater resistance to decline than either primary or fully manufactured product indexes.

**Percentage Changes in Wholesale Prices of Basic Commodities.**—A close examination of the price movements of basic commodities indicates the underlying character of recent trends. Percentage changes in prices for twenty such products are given in the statement below for the latest two years, the commodities being grouped by direction of price movement.

Between December, 1936, and December, 1937, such prices ranged from an increase of 27 p.c. to a decrease of 33 p.c. and between December, 1937, and December, 1938, from an increase of 16 p.c. to a decrease of 56 p.c.

The contrast between field and animal farm products is rather striking, especially in the net results over the two-year period. On this basis all field crops represented show very substantial reductions in price, but cattle and hogs show the highest increases among the twenty commodities listed, and, while butter, hides and skins, and raw wool each fell in price, the net reductions (especially of butter) are not so great as in any of the field crops.

On the basis of individual years, only two out of the twenty commodities show a consistently upward trend and prices of five commodities have moved consistently downwards. The group showing a reversal of trend in an upward direction in 1938 includes such imported raw materials as rubber, raw cotton, and raw silk, which suffered more severely than most from falling prices in 1937, while wheat is the most outstanding of those commodities showing a reversal of trend in a downward direction.

**PERCENTAGE CHANGES IN BASIC COMMODITY WHOLESALE PRICES, 1937 AND 1938.**

Commodity.	Dec. 1936- Dec. 1937.	Dec. 1937- Dec. 1938.	Dec. 1936- Dec. 1938.

**Industrial Material Prices in Canada.**—The Dominion Bureau of Statistics inaugurated in 1938 a new series of index numbers, consisting of 30 basic industrial materials. It is computed from an unweighted geometric average with 1926 prices equal to 100. The 30 commodities were divided into 2 main groups of 18 sensitive manufacturing materials and 12 stable price series. The 18 sensitive commodities

were, in turn, separated into 2 sub-groups of 13 sensitive manufacturing materials and 5 food products.

The major trends outlined by the index of industrial material prices since 1926 can be summarized briefly as follows: from 1926 to 1929 underlying instability was apparent and the general index moved lower at a gradual pace throughout the period. From the base average, the index fell to 93.7 in September, 1929. Then followed a severe decline, which depressed industrial material prices along with other principal commodity groups until the beginning of 1933. Temporary improvement occurred in 1932 during the summer months, but markets weakened again towards the close and dropped to new low levels in February, 1933. At this point the index stood at 45.8. A gradual rise punctuated by intermittent short-period declines ensued. In March, 1937, industrial material prices attained their highest point since 1929, the index for the month reaching 85.2. A slightly lower peak was shown in July, after a minor reaction, when the index rose to 84.5 from 82.3 in June. From this period to November, 1938, the index of industrial material prices receded to levels on a par with those of 1936 and the latter part of 1935; the index for November being 64.2. The course of the industrial material price index since 1929 has been generally similar to that of the Bureau's wholesale price index of 567 commodities.

3.—Monthly Price Index Numbers of Industrial Materials, 1926-38.

**Wholesale Price Index Numbers of Principal Exports and Imports.**—Declines of unusual magnitude were noted in the prices of Canada's leading exports during 1938. The Bureau's index of export wholesale prices dropped continuously from 82.3 in January to 61.9 in September, where it levelled off to close the year at 60.8. This was down 22.9 p.c. from December, 1937. An analysis of individual commodity price changes showed practically all the loss concentrated in the vegetable products group in which grain and flour prices are of predominant importance. These prices, as noted previously, suffered very sharp recessions in 1938. The actual index decline in vegetable product exports was from 89.8 in January to 44.4 in December. With the exception of the chemicals group which advanced, due to increases in fertilizer prices, all other sections of the export index series experienced moderate price recessions between the opening and closing months of the year.

Compared with the export situation, import price movements were of a minor character, the net recession amounting to only 4.4 p.c. between December, 1937, and December, 1938. Sub-group indexes in this series were generally lower in December, 1938, than at the close of the previous year although slight advances were noted for non-ferrous and chemical sub-group indexes. At the beginning of 1938 the import price index level exceeded that for exports by only 4.1 p.c., the narrowest difference in several years. By December, however, the divergence in favour of imports had increased to 35.2 p.c.

### 8.—Index Numbers of Wholesale Prices of Exports and Imports, 1926-38 (1926=100).

NOTE.—Statistics for 1913-25 are given at p. 830 of the 1938 Year Book.

## Section 2.—Retail Prices and Cost of Living.

Collection of data and calculation of index numbers of retail prices and the cost of living are carried out in co-operation by the Dominion Bureau of Statistics (Department of Trade and Commerce) and the Department of Labour. Resultant series of index numbers are computed from different points of view. Index numbers of retail prices and cost of living, issued by the Bureau, have for their object the measurement of the general movement of such prices and costs in the Dominion as a whole, and are so calculated as to make comparisons possible with other general index numbers constructed on similar principles, for example, the index of wholesale prices. Calculated, as they are, on the aggregative principle, *i.e.*, the total consumption of each commodity, the Bureau's index numbers afford an excellent measurement of changes in the average cost of living in the Dominion as distinguished from that of any particular class or section.

The computations of the Labour Department are designed to show changes in the cost of living for workmen in cities. They are thus more limited in scope and far more restricted in application than the Bureau of Statistics index. As a development of retail prices and cost of living studies, investigations into the living expenditures of families in representative cities have been made by the Bureau of Statistics. These supplement the general index numbers and serve as a very good guide to changes in cost of living between different cities and in different parts of the country. This Section is divided into three subsections: Subsection 1 dealing with general index numbers of retail prices and services; Subsection 2, which summarizes the Bureau's recent investigation into the family living expenditures of wage-earners in 12 representative cities of Canada; and Subsection 3 with cost of living of wage-earners (this material formerly appeared as Sec. 3 of Part II of the Labour and Wages chapter).

### Subsection 1. The Bureau of Statistics Index Numbers of Retail Prices and Services.

In the Bureau's index, 1926 is taken as the base year and is represented by 100 to bring it into conformity with other series of index numbers shown in this chapter. A description of the system of weighting of individual items, sub-groups, and groups, and of the method of construction of this index number is given at pp. 812-818 of the 1931 Year Book. As will be seen from Table 9, the general cost of living index moved up from 83.1 in 1937 to 84.0 in 1938, continuing the upward trend apparent after July, 1933. Higher prices ruled in all groups. The monthly index for living costs fluctuated during 1938 between 84.8 and 83.5.

### 9.—Index Numbers of Retail Prices, Rents, and Costs of Services (on the 1926 Base), 1926-38 and by Months, 1937, 1938, and January-April, 1939.

NOTE.—Statistics for 1913-25 are given at p. 820 of the 1938 Year Book. Monthly figures prior to 1937 will be found in the corresponding table of previous editions of the Year Book.

Year.	Food Index.	Fuel Index.	Rent Index.	Clothing Index.	Sundries Index.	Total Index.
1926	100.0	100.0	100.0	100.0	100.0	100.0

<sup>1</sup> Subject to revision.

The tables formerly published in the Year Book, which showed the prices of a family budget of staple foods, fuel, rent, etc., and annual index numbers of the cost of living, on the 1913 base, by provinces, have been omitted from this edition, due to pressure upon Year Book space. Annual figures on this base will be found in the Bureau's report "Prices and Price Indexes", while monthly ones are published in the *Labour Gazette*, and, in part, in the monthly bulletin on prices and price indexes.

It will be noticed that the general index described above takes within its orbit costs of services as well as retail prices of commodities. Services are in fact a very considerable item in the cost of living of the average family, and special studies have been made from time to time by the Bureau of Statistics covering the most important services which affect the family budget.

Thus, information with regard to street-car fares, rates for manufactured and natural fuel gas for domestic consumption (which is mostly a service charge), and domestic electric light and telephone charges, was published at pp. 801-804 of the 1927-28 Year Book. Detailed information for intervening years regarding such services will be found at pp. 114-125 of the Annual Report on Prices and Price Indexes, 1913-37, issued by the Dominion Bureau of Statistics.

**Prices of Services.**—This later information indicates that the prices of manufactured fuel gas, after showing a downward tendency between 1926 and 1936, reversed direction and recorded a moderate rise, the Dominion index number for

1937 being 94.5, as compared with 93.6 in 1936. The index number of the price of natural fuel gas declined from 100.0 in 1926 to 92.5 in 1930, rose again to 94.3 in 1932, then declined to 92.3 in 1936 and 1937. On the other hand, telephone rates have shown a distinct increase, the Dominion index number of domestic telephone rates having risen from 100.0 in 1926 to 107.4 for 1933-37. Again, the business telephone rate has risen from 100.0 in 1926 to 118.5 for 1933-37.

*Hospital Charges.*—Special investigations on hospital charges are now made annually by the Dominion Bureau of Statistics and the results are given as Dominion averages in the following table. In general, this shows that hospital charges in 1930 were 94 p.c. above the 1913 level. From 1930 to 1935 rates gradually declined to less than 88 p.c. above those in 1913, then rose slightly in 1936 and 1937. Operating room charges have not increased at the same rate as room charges, being approximately 54 p.c. above those in 1913, while the latter averaged more than 90 p.c. higher. The cost of maintaining patients in hospitals declined more than 11 p.c. between 1930 and 1934, then gradually rose by almost 4 p.c. during the next three years.

The detailed results of this investigation, including the statistics by provinces, are given at pp. 115-119 of the Annual Report on Prices and Price Indexes, 1913-37, issued by the Dominion Bureau of Statistics.

#### Subsection 2.—The Nutrition and Family Living Expenditures Investigation.\*

To examine possibilities for meeting the need for definite information in respect to nutrition and family living expenditures, especially in urban centres, an inter-departmental committee was organized in 1937. On this committee were representatives from the Bureau of Statistics, the Department of Pensions and National Health, the Department of Labour, and the National Research Council. Following recommendations by this committee, Parliament made a vote to the Bureau of Statistics for the purpose in 1938.

At June 15, 1939, the Bureau of Statistics had completed a survey of family living expenditures in the 12 cities of Charlottetown, Saint John, Halifax, Quebec, Montreal, Ottawa, Toronto, London, Winnipeg, Saskatoon, Edmonton, and Vancouver.

\* Revised by H. F. Greenway, M.A., Prices Statistician and Officer in Charge of the Nutrition and Family Living Expenditures Investigation, Dominion Bureau of Statistics.

ver. The statistics cover the 12 months ended Sept. 30, 1938. The sample families were selected from those with certain characteristics which make them typical of Canadian wage-earner homes. Both parents and one or more children were present in each home, and in some cases one lodger or a domestic also lived with the family. Earnings in the samples ranged from \$450 to \$2,500 per annum. It was found that family incomes tended to centre between \$1,200 and \$1,600—the proportion receiving less than \$1,200 being larger than the proportion receiving above \$1,600. Of the 1,439 families from which records were received, 1,135 were families of British origin in the cities mentioned, 211 were French families in Montreal and Quebec, and 93 were families of other racial origins in Montreal and Winnipeg. Table 11 gives summary results for the 1,135 British families and the 211 French families separately.

In addition to the main information as to family expenditures, certain other questions were asked, the replies to which throw light upon some family characteristics at progressive income levels. These are summarized in the statement below.

Preliminary results of the survey show that remarkable similarity prevails in the proportions of income spent upon the more essential budget items in different areas of the Dominion. On the average about two-thirds of the total expended each year goes for necessities. The widest difference is apparent in food purchases, which range from 25.3 p.c. for Charlottetown up to 32.4 p.c. for those families in Montreal of other than British and French origin. Food purchases tend to be higher in the larger cities. Proportion of expenditures devoted to the provision of shelter ranges from 15.1 p.c. in Charlottetown to 20.9 p.c. in Ottawa; fuel and light accounts for between 4.5 p.c. in Quebec city and 7.7 p.c. in Charlottetown; and clothing for 9.6 p.c. in Vancouver to 12.5 p.c. for Montreal families other than British and French.

Many factors affect expenditures for living needs. The amount of family income is generally considered the dominant influence, but income in turn is related to the age of the principal breadwinner, and the numbers and ages of children also affect the character of family living expenditures. The importance of any

factor may be assessed by studying living expenditure tendencies when other factors are held constant and differences in expenditure patterns are examined in relation to variations in these factors separately. Such studies of tendency may be related, also, to typical as well as average conditions of income, family size, age, etc. It is desirable to have a clear-cut picture of living expenditure patterns of the more numerous family types which are to be found in the community. In the studies which the Bureau is making, living expenditure records are shown grouped according to three principles of classification with a view to examining the relationships between living expenditures and the factors in family composition noted above, *viz.*, number of children in the family, age of the father, and principal types of families. Certain results of the preliminary analyses are summarized here:—

**Summary of Results.**—There appeared to be no general tendency in urban wage-earner families of British origin for the number of children to increase in the higher family income groups, although in French families the average number of children was larger at higher income levels.

There seemed to be a significant relationship between the rise in average expenditure levels of two-children British wage-earner families over those with one child, but average expenditures for two-, three- and four-children families showed only minor differences, and averages for five-children families dropped back sharply to very near the one-child family expenditure level. Average expenditures of French families covered by the survey moved steadily upward as the number of children increased.

In both racial origin groups, amounts spent per person declined as the number of children in the family increased. Average expenditure per person dropped from \$516 in British families with one child to \$212 in households with five children. Corresponding averages from French families were \$397 and \$219. All budget groups contributed to this decline, with food outlay per person falling from \$127 to \$74 for British families and from \$109 to \$75 for French families with one and five or more children, respectively.

A different picture was obtained when expenditure records were classified according to the age of the father. The number of children per family tended to increase until the father's age was somewhere between 45 and 54, and amounts spent per person on food and clothing increased slightly as the age of the father moved upward into that range. This was associated with a more rapid rise in income than in numbers of children at progressive age levels of the father.

Analyses of records for living expenditure tendencies related to numbers of children and the length of time the family had been formed, did not reveal the existence of a "typical" family. Families with one child under 13 years, or with two children from 4 to 12 years apparently possess some claim to this title, but contrary to popular opinion, families with three children form a definite minority. The tendency already noted, for income to increase as the family life span lengthened was apparent in family groups with the same number of children. The earnings of older children were partly responsible for this increase. For families with the same number of children, expenditures on food and clothing mounted as the family life span extended but not by the full amount of the income increase. Housing and household furnishing expenditures actually declined as the number of children increased. Most other budgetary outlays showed very little relation either to rising income or the lengthening family life span. Apparently a wide diversity in consumer tastes exists, which is scattered fairly evenly among "non-necessity" expenditures such as recreation, transportation, and savings.

## 11.—Average Distribution of Family Expenditures, by Income Groups.

NOTE.—The total average amounts of expenditure shown are in some cases greater than the maximum of the salary group, because savings from annual income have been treated as items of expenditure, and considerable credit is utilized by wage-earner families. The matters of purchases made from previous savings and by trade-in allowances also enter into the picture.

The following bulletins, resulting from the study, may be obtained from the Dominion Statistician: (1) a 2-page preliminary bulletin for each of the 12 cities; (2) a 2-page preliminary bulletin summarizing the results of the investigation; (3) a 9-page bulletin showing Dominion averages and averages by cities and by English- and French-speaking families; (4) a 14-page preliminary detailed analysis of family living expenditures in Canada. Other bulletins and reports are in course of preparation.

### Subsection 3.—Cost of Living of Wage-Earners.\*

An index number of the cost of living in working-men's families has been computed by the Department of Labour since 1913, and is published monthly in the *Labour Gazette*. This index is specifically designed for the purpose of measuring the trends of the cost of living for certain wage-earning classes with a somewhat lower standard of living than that which is measured by the Bureau of Statistics index number of retail prices, shown on pp. 860-861 of the present volume. It is constructed from family budgets, principally a weekly family budget of staple foods, fuel, and rent which has been published monthly in the *Labour Gazette* since 1915 and annually since 1911; in addition, figures are included for clothing and sundry items and further data for fuel, light, and rent. The Labour Department aims, by this method, to have a basis for computation that can be readily applied to the data for any given locality or district at any time, or for any class of labour—for instance, coal miners, who usually do not live in cities. This index is used extensively in negotiations as to wage rates and in the settlement of industrial disputes. An abridgment of the index is presented in Table 12.

\* Revised under the direction of W. M. Dickson, Deputy Minister of Labour.

### 12.—Changes in the Cost of Living of Wage-Earners in Canada, 1929-36, and for stated months, 1937 and 1938.

(Average prices in 1913=100.)

NOTE.—Comparable statistics for December, 1914-28, will be found at p. 811 of the 1938 Year Book.

<sup>1</sup> The figures for "All Items" were calculated by giving the following weights to each group: food, 35 p.c.; fuel, 8 p.c.; rent, 18½ p.c.; clothing, 18½ p.c.; sundries, 20 p.c.

### Section 3.—Index Numbers of Security Prices.

Security prices have long been utilized in statistical measurements related to economic phenomena. They are extremely sensitive to changing business conditions, although this valuable characteristic is sometimes overshadowed by the fact that their movements may be greatly influenced by speculative interest very remotely associated with underlying economic conditions. Thus in 1928 and 1929, common stock prices advanced far beyond levels indicated by business profits and prospects.

The behaviour of Canadian common stock prices has been quite different from that of commodity prices since pre-War years. There was no advance in security markets during the Great War paralleling the pronounced inflation in commodity values. Between 1926 and 1929, however, when commodity prices were declining gradually, common stocks more than doubled in price. Both sets of prices recorded a sharp drop between 1929 and 1933, and both have shown recovery subsequently. This has been much more pronounced in the case of security prices.

**Investors Index Numbers of Common Stocks.**—International events appeared to be the dominating force behind major security price movements in 1938 and, as successive crises were weathered, swift declines were followed by equally sharp rallies. There were two outstanding political crises in 1938 and these were both clearly reflected in security price indexes, the first occurring prior to the union of Germany and Austria on Apr. 1, and the second during the Sudeten dispute in September. Except for these two periods Canadian stock exchange prices pursued a much steadier course than in 1937. The Bureau's general index of 95 common stocks entered 1938 on a rising tide, continuing the advance inaugurated in the third week of October, 1937. It was not until October, 1938, however, that the general index moved above corresponding 1937 levels. At the end of the year it was 6.5 p.c. higher than the 1937 close.

Opening at 102.2, the daily index for 95 common stocks rose rapidly to a 'plateau' between 106 and 110, where it remained for almost two and a half months. The first major decline then commenced, and by the end of March the index had been swept down to a 1938 low of 87.9. Following this period an irregular rally set in which reached its greatest momentum during the latter part of June and early July, carrying the index back close to 108 on July 19. This advance was terminated by increasing European tension which was not eased until the Munich Accord was signed on Sept. 29. Indexes immediately rebounded from the low levels then ruling and the daily general index reached a 1938 high of 112.8 on Nov. 12. This gain was not all held and at the year's close the index had receded to 108.7. Practically all gains during the year were confined to the industrial section, and special mention might be made of the rapidly advancing prices of shares included in machinery and equipment, building materials, and industrial mines sub-group indexes. This was particularly noticeable during the latter half of the year and reflected to a considerable extent the impetus given by rearmament programs. Food and beverage sub-groups registered a considerable net gain for the year, while the textile index showed the only recession in the industrial section.

Among the utilities the telephone and telegraph sub-group, influenced largely by Bell Telephone, was the only one to register an advance during 1938. Transportation and power groups showed weakness, the former recording a new low for the past 25 years.

Bank shares were not subjected to the same sharp price reactions as other issues, though the undertone for the first six months was noticeably easier as indicated by the daily index for this series, which moved down 2.2 points to 80.5 in the third week of June. The mid-year rally, previously mentioned, advanced the index about 5 points in July and it remained close to that level for the balance of the year, closing at 83.8, slightly higher than the corresponding figure at the end of 1937.

### 13.—Investors Index Numbers of Common Stocks (on the 1926 Base), by Months, 1938.

NOTE.—Figures for 1935 are given at p. 816 of the 1936 Year Book, for 1936 at p. 803 of the 1937 Year Book, and for 1937 at p. 825 of the 1938 edition; those for earlier years will be found in the corresponding table of earlier editions.

**Preferred Stocks.**—Preferred share price fluctuations generally paralleled common stock price movements during 1938. In December, 1938, the preferred index stood at 86.9, which was 7.3 p.c. higher than the corresponding level in December, 1937. A general index for 95 common stocks moved up 6.5 p.c. during the same interval, indicating that the relative position between these two series had shown practically no net change during the past year. The preferred stock index touched a 1938 low of 77.5 in March while the highest level of 88.0 was attained in October. The range between the 1938 high and low points was much narrower than in the previous year, the actual amounts being 13.8 p.c. and 27.3 p.c., respectively.

**Weighted Index Numbers of Mining Stocks.**—The course of mining stock price indexes was broadly similar to the pattern shown by industrials and utilities except that fluctuations in the former were much sharper. The general index for 24 mining issues closed the year at 161.5 or 17.7 p.c. above the December, 1937, close. Most of the increase came in the final quarter and was due almost entirely to the advance in base metal shares.

Gold shares during 1938 were unusually quiescent in comparison to previous years. An index for this sub-group reached a yearly high of 126.6 on Feb. 1 while the low of 101.6 was recorded on Mar. 18. There was a stronger rally through the spring and early summer, but with the reappearance of European tension, the gold index broke to a secondary low of 104.7 on Sept. 26. A swift recovery moved it to 120 on Sept. 30 and during the next three months the range of fluctuations did not exceed 3 p.c. Actual net appreciation between the close of 1937 and 1938 amounted to 4.5 p.c.

Base metal shares, while subjected to the same relapses as the golds, nevertheless recovered from each decline to reach successively higher levels until, at the close of 1938, the base metal index was 48.3 p.c. higher than at the close of 1937. The improving industrial situation, combined with heavy rearmament orders, had an especially stimulating effect on base metals.

### Section 4.—Index Numbers of Bond Yields.\*

Few economic statistics are of more significance than the net rates of return received on absolutely the safest securities, such as government bonds maturing on a fixed date. Interest rates naturally grade upward from the rates which the safest of possible borrowers has to pay, and from the fluctuations of that price an idea may be obtained as to the relation between the supply of, and the demand for, funds for investment.

The exceptional requirements of the War years turned the Dominion authorities to the internal market, a field which had hitherto served mainly the needs of the provinces and municipalities. To the latter, therefore, it is necessary to go for earlier historical records of long-term bond yields in the internal market. Province of Ontario issues covering the years from 1900 to date are available in this field, and were utilized for the first long-term bond yield index constructed by the Bureau of Statistics. The relatively long period for which these records have been preserved makes this series of considerable value. On pp. 805 and 806 of the 1937 Year Book a statement will be found bearing on the movements of Ontario bond yields since 1900. Since the War, however, the growing importance of Dominion financing in the domestic market has made it advisable to supplement the Ontario series with the Dominion index of bond yields shown in Table 16.

Dominion of Canada bonds were materially firmer in 1938, reflecting to a considerable extent the abundance of idle funds seeking safe investment. Oversubscription of practically all Dominion offerings of refunding and loan issues was indicative of the large quantities of available funds. During the opening months of the year Dominion bond prices rose steadily, the index for this series touching a peak of 118.2 in May. European international events overshadowed the domestic situation during the summer months and the index reacted to 116.0 in September. A strong rally, following the September crisis, advanced the index to 117.7 in December where it showed a gain of 1.8 p.c. over the 1937 close. Provincial bonds were featured by the erratic fluctuations of Western maturities. Sharp advances in Manitoba, Saskatchewan, and Alberta issues during the early summer coincided with prospects of an exceptionally large grain crop. These gains were considerably reduced during the latter half of the year and at the close the relative position between Eastern and Western bonds was practically unchanged though both were somewhat firmer than in December, 1937.

\* The index of Ontario long-term bond yields formerly shown may be found in the Bureau's monthly bulletin "Prices and Price Indexes", obtainable from the Dominion Statistician.

## CHAPTER XXI.—PUBLIC FINANCE.

The following treatment of public finance includes an outline of Dominion, provincial, and municipal finance in Canada, supported by the necessary detailed statistics, and closes with a brief discussion of the national wealth and national income of the Dominion as the basis of all public finance.

The great increase in Dominion expenditure since 1913 has been due partly to the Great War with the resulting burden of interest, pension charges, etc., and partly to railway expenditures and social services including, latterly, unemployment relief. Increases on a commensurate scale have also taken place during the same period in provincial and municipal expenditures. Thus, in their fiscal years ended 1937, the total ordinary expenditure of the nine Provincial Governments was \$253,443,737 as compared with \$53,826,219 in 1916, only 21 years before—an increase of over 371 p.c. (The aggregate interest payments of Provincial Governments rose from \$7,817,844 in 1916 to \$67,222,797 in 1937.) Again, in recent years, between 1924 and 1936, the aggregate tax receipts of the municipalities of Ontario have increased from \$94,526,271 to \$121,825,930 (comparable figures are not available for earlier years)—an increase of about 29 p.c. In Quebec the ordinary receipts of municipalities increased from \$33,288,115 in 1915 to \$79,471,242 in 1933—an increase of 139 p.c.; the 1934, 1935, and 1936 figures given in Table 37 are not comparable as explained in the footnote thereto. While taxation receipts in the Prairie Provinces and the Maritime Provinces, for those years for which comparable figures are available, do not show an upward trend, except in the case of Nova Scotia, the figures cover relatively recent years in the majority of cases, and in the Prairie Provinces a larger proportion of tax levies has remained uncollected. In British Columbia the taxes collected by the municipalities totalled \$9,382,099 in 1917 and \$17,070,680 in 1936.

**Public Debt of Canada.**—The latest year for which a figure for the aggregate public debt of Canada can be given is 1937. The statement below is summarized from the statistics given in the respective sections of this chapter, the guaranteed or indirect debt being shown separately. The figures with regard to provincial debt are for the respective fiscal years of the provinces ended in 1937, given on p. 917.

( See text and statement on page 871. )

\*Includes Canadian National Steamships and Harbour Commissions.

### Section 1.—Dominion Public Finance.\*

**Historical Sketch.**—Both under the French *régime* and in the earlier part of the British, the territorial or casual revenues of Canada, consisting of certain seigniorial dues and the proceeds of the sale of government timber and land, were reserved to the Crown, while the right of levying taxes and of regulating the trade and commerce of the colony was, after 1763, deemed to be vested in the British Parliament.

By the Quebec Act of 1774, certain duties on spirits and molasses were imposed, to be expended by the Crown in order to provide a revenue "towards defraying the expenses of the administration of justice and the support of the civil government of the province". A little later, in 1778, the British Government, by the Declaratory Act (18 Geo. III, c. 12), renounced forever the right of taxing the colonies to provide Imperial revenue, but maintained its claim to impose duties considered necessary for the regulation of trade, the proceeds to go towards defraying the expenditures of the colonial administration. After the Constitutional Act of 1791, the customs duties remained under the control of the Imperial Government, their revenue, as well as the territorial revenue above mentioned, coming in to the Executive Administration independently of the Legislative Assembly and thus making the Executive power largely independent of the Legislature. In case these revenues proved insufficient, recourse could generally be had to the grant made by the Imperial Government for the support of the army. As time went on, however, the Crown revenues became more and more inadequate to meet the increasing expenditure, while the wave of economy in the United Kingdom after 1815 made it impossible any longer to supplement these revenues from military sources. On the other hand, the purely provincial revenues collected under the authorization of the Provincial Legislature showed an increasing surplus. The power of the purse thus began to pass into the hands of the Legislatures; further, in 1831 the British Parliament passed an Act placing the customs duties at the disposal of the Legislatures.

Under the Act of Union, a consolidated revenue fund was established. All appropriation bills were required to originate in the Legislative Assembly, which was forbidden to pass any vote, resolution, or bill involving the expenditure of public money unless each had been first recommended by a written message of the Governor General. The British Government surrendered all control of the hereditary or casual revenues, which were thenceforth paid into the treasury of the province to be disposed of as its Legislature should direct.

At the interprovincial conference which took place prior to Confederation, it was decided that the new Dominion Government, which was to take over permanently, as its chief source of revenue, the customs and excise duties that had yielded the greater part of the revenues of the separate provinces (direct taxation being as unpopular in British North America as in other new countries), was also to assume the provincial debts and to provide out of Dominion revenues definite cash subsidies for the support of the Provincial Governments. (See Tables 22 and 23.) Until the Great War, which made other taxes necessary, the customs and excise revenue constituted the chief resource of the Dominion Government for general purposes—the Post Office revenue and the Government railway receipts, which are not taxes at all, being mainly or entirely absorbed by the expenses of administering these services. Indeed, for many years preceding the War, customs and excise duties, together with the revenue from the head tax on Chinese immigrants, were the only items of receipts

\* Revised under the direction of Dr. W. C. Clark, Deputy Minister, Department of Finance, with the exception of those parts dealing with War tax revenue and inland revenue on pp. 886-895, which were revised by the Department of National Revenue.

that were classified as taxes by the Department of Finance. In the last pre-War fiscal year these two items aggregated \$126,143,275 out of total receipts on consolidated fund account amounting to \$163,174,395, the Post Office and Government railways furnishing between them \$26,348,847 of the remainder, offset, however, by expenditures on these two services amounting to \$27,757,196. Miscellaneous revenue, largely fees, amounted in that year to \$10,682,273—a comparatively small fraction of the total. As both customs and excise taxes were indirect, the average Canadian felt but little the pressure of taxation for Dominion purposes.

The War enormously increased the expenditure, and this increase had in the main to be met by loans. It is, however, a cardinal maxim of public finance that, where loans are contracted, sufficient new taxation should be imposed to meet the interest charge upon the loans and to provide a sinking fund for their ultimate liquidation. This War taxation was begun in Canada within the first weeks of the War when, in the short War session of August, 1914, increases were made in the customs and excise duties on various commodities, including, coffee, sugar, spirituous liquors, and tobacco. In 1915 special additional duties of 5 p.c. *ad valorem* were imposed on commodities imported under the British preferential tariff and 7½ p.c. *ad valorem* on commodities imported under the intermediate and general tariffs, certain commodities being excepted. New internal taxes were also imposed on bank circulation, on the income of trust and loan companies, on insurance in other than life and marine companies, on telegrams and cablegrams, railway tickets, sleeping-car berths, etc., also on cheques, postal notes, money orders, letters, and post cards. In the following year, the business profits war tax (dropped in 1921)\* was introduced, and in 1917 an income tax was imposed. In 1918 both of these taxes were increased and their application widened, and in 1919 the income tax was again increased, and still further augmented in 1920 by a surtax of 5 p.c. of the tax on incomes of \$5,000 and over; the sales tax was also introduced in 1920. The cumulative result of these War taxes was that, in the fiscal year ended Mar. 31, 1921, customs duties were, for the first time, displaced from their position as the chief factor in Canadian revenue, the War taxes yielding \$168,385,327, as against the customs yield of \$163,266,804. This situation has remained true down to 1937 with the exception of the period between 1928 and 1931, when customs duties temporarily assumed their former position.

The importance which the sales tax has attained as a source of revenue will be seen from Tables 16 and 17. When first introduced in 1920 the tax was 1 p.c. on sales but the rate has been varied from year to year and from May 2, 1936, has been 8 p.c. A statement appears at p. 836 of the 1938 Year Book showing the changes made from the inception of the tax up to 1938. A lesser, but still substantial, source of revenue is the special excise tax on importations, instituted in 1931, the changes in rates of which are shown in a second statement. †

**Recent Modifications in the System of Taxation.**—A more detailed sketch of the changes made in taxation from 1914 to 1926 will be found at pp. 755-759 of the 1926 Year Book, while similar information *re* tax changes in 1927 to 1929 is given at pp. 791-792 of the 1930 Year Book, for the years 1930 to 1935 at pp. 824-826 of the 1936 Year Book, and for 1936-38 at pp. 837-839 of the 1938 Year Book.

The 1938 Budget Speech, delivered by the Minister of Finance on June 16, 1938, introduced an important tax change in the form of an exemption from sales tax of the major products used in house construction. Other changes of a minor

\* Belated revenue from this tax has been collected in subsequent fiscal years down to 1933 (see Table 9, p. 836.)

† Pursuant to changes made in the 1939 Budget, this tax now applies only to importations under the General Tariff, and hence in the future will be of small importance as a source of revenue.

nature were made in the exemptions and rates of the gift tax; exemption of corporation income tax in respect to dividends received from wholly-owned non-resident subsidiary companies, if at least 75 p.c. of the combined capital of the parent and subsidiary companies is employed abroad and if the country in which the subsidiary is located grants a like exemption to parent companies in respect to subsidiaries in Canada; exemption from sales tax of feed for fur-bearing animals, harness, and materials for the repair of fishermen's boats. The special excise tax on tires and tubes as original equipment for automotive vehicles was also removed.

No tariff changes whatsoever were introduced by the 1938 Budget. Instead, it was announced that the Government would postpone unilateral tariff action pending conclusion of the trade negotiations then in progress with the United States. The new Canada-United States Trade Agreement which resulted from these negotiations is dealt with on p. 468.

A statement at pp. 811-817 of the 1937 Year Book shows complete details of the Dominion tax system as of July, 1936, and statements at pp. 836-837 of the 1938 edition show changes made in the sales tax and in the special excise tax on importations since the inception of these taxes in 1920 and 1931, respectively.

### Subsection 1.—The Current Balance Sheet of the Dominion.

A summary review of the current financial situation of the Dominion as at Mar. 31, 1934-38, is given in the balance sheet shown as Table 1. This shows the figures for gross debt on Mar. 31, 1938, to have been \$3,540,237,615, partly offset by active assets aggregating \$438,570,044, leaving the net debt at \$3,101,667,570. Non-active assets, including such public works as canals and railways, also loans to railways, amounted in the aggregate to \$1,444,255,048, leaving a debit balance on Consolidated Fund Account on Mar. 31, 1938, of \$1,657,412,522. The details of the various assets and liabilities are contained in the schedules accompanying the balance sheet and printed in the Public Accounts.

It should be noted that under the heading "Non-Active Assets", p. 876, the revision of the capital structure of the Canadian National Railways in 1938 resulted in the elimination of all loans made in previous years to the Canadian National Railways to cover deficits and the setting up of the new accounts shown for 1938. These latter represent the Government's present equity in the Railways (see p. 645 for further details). There is, therefore, no comparability between the 1938 figures and those for previous years as regards these items.

### 1.—Balance Sheets of the Dominion of Canada, as at Mar. 31, 1934-38.

<sup>1</sup> See text on p. 875.<sup>2</sup> Direct liabilities only. Indirect liabilities or guarantees given by the Dominion of Canada are listed in Table 29, on pp. 905-906.<sup>3</sup> The Bank of Canada assumed liability for outstanding Dominion notes from Mar. 11, 1935.

## Subsection 2.—Receipts and Disbursements.

The receipts of the Dominion Government on Ordinary Account for the fiscal year ended Mar. 31, 1938, were \$510,297,581, an increase of \$65,268,626 as compared with the previous year; besides these, special receipts amounted to \$3,009,879 and other credits, including refunds to capital account and credits to non-active accounts,

amounted to \$3,385,289—a total revenue of \$516,692,749. The regular expenditure on ordinary account was \$414,891,410, while special expenditures amounted to \$68,534,364. Under the category of "Government-Owned Enterprises", total disbursements amounted to \$44,833,388, under "Capital Account" to \$4,430,152, and under "Write Down of Assets" to \$1,718,803. Thus total disbursements amounted to \$534,408,117. There was an increase of \$17,715,368 in the net debt (gross debt less active assets) during the year. (See Table 27 for interest-bearing debt.)

Detailed statistics of receipts and disbursements are contained in Tables 2 and 3. Tables 4 and 6 are historical tables giving the figures of the main items of Dominion receipts and expenditures since Confederation, while Table 7 shows the per capita receipts and expenditures for these years, calculated on census and estimated populations. Per capita receipts and expenditures are given by principal items in Table 8.

**Changes in the Public Accounts, 1936.**—Several important changes were made under various headings in the Public Accounts for 1936. On the revenue side "War and Demobilization Receipts", previously carried as "Special Receipts", were transferred to Ordinary Account (Casual Revenue). On the expenditure side several recurring items were also transferred from "Special" to "Ordinary", as follows: cost of loan flotations, representing flotation costs of new loans and annual charges for amortization of bond discount; the Government's annual contribution to the Superannuation Fund; the annual payment to maintain the reserve in the Government Annuities Fund; adjustment of War claims; and expenditures made under the Railway Grade Crossing Act. A new category was established under the heading "Government-Owned Enterprises", to cover expenditures incurred by the Government on account of the Canadian National Railways, the Canadian National Steamships, and various Harbour Commissions. Other major changes were the establishment of a separate category for Write-down of Assets, and transference of payment of Old Age Pensions from the Department of Labour to the Department of Finance.

In Tables 2, 3, and 8 the new classification of items has been adopted for the 1936, 1937, and 1938 figures and the figures for 1934 and 1935 have been adjusted to the new basis. The result is that the figures for each of the latter years as given in the tables do not conform with the figures shown in the Public Accounts for that same year, because of the new set-up after 1935, but the figures below are on a comparable basis throughout. Certain new items are introduced for 1938, but these do not affect the comparability of the figures of earlier years.

## 2.—Details of Revenue Receipts, fiscal years 1934-38.

**NOTE.**—See text above re adjustment of statistics for 1934 and 1935. Dashes in this table indicate that no revenue was collected under the corresponding heads because the items were not applicable in the years so indicated.

<sup>1</sup> It was found that the tables heretofore used in valuation understated the liability on annuity contracts. This exceptional amount is due to the adoption of tables in conformity with the mortality experience of previous years.

<sup>2</sup> Prior to 1937-38, general administration expenses were not segregated from other expenditures of the respective services of the Departments which were amalgamated to form the Department of Mines and Resources and the Department of Transport.

<sup>3</sup> Prior to 1937-38 expenditures on Civil Aviation, now the Air Service Branch of the Department of Transport, were included under expenditures for the Air Service Branch of the Department of National Defence.

<sup>1</sup> Includes expenditures on militia, Dominion lands, and debt allowances to provinces; details of expenditure under these headings, under Public Works, and Railways and Canals, are shown on pp. 846-847, 1938 Year Book.

<sup>2</sup> First year expenditure recorded under this head.

<sup>3</sup> Includes \$2,725,500 for the

improvement of the St. Lawrence, spent during the previous years by Montreal Harbour Commission.

<sup>4</sup> Nine months. <sup>5</sup> Includes certain advances non-active to railways, amounting to \$45,780,690 in 1920, \$109,662,655 in 1921, \$97,950,645 in 1922, \$77,863,938 in 1923, \$23,710,617 in 1924, \$9,934,453 in 1925, \$10,000,000 in 1926, \$10,000,000 in 1927; together with advances of \$5,979,856 in 1923, \$1,500,000 in 1924, \$900,000 in 1925, \$668,000 in 1926, \$426,817 in 1927, \$999,837 in 1928 and \$758,000 in 1929; to the Canadian Merchant Marine, etc.

<sup>6</sup> Figures for 1930 and following years conform with new set-up of Public Accounts as explained on p. 877.

<sup>7</sup> For details, see Table 5, p. 883.

## 5.—Analysis of "Other Expenditures" (shown in Table 4), 1930-38.

Fiscal Year.	Special Expenditure.		Government-Owned Enterprises.		Other Charges.		Total.
	Unemployment Relief Acts and Public Works Construction Acts.	Wheat Bonus and Losses on Grain Marketing Operations, etc.	Losses Charged to Consolidated Fund.	Loans and Advances Non-Active.	Write-Down of Assets Chargeable to Consolidated Fund.	Non-Active Accounts.

<sup>1</sup> For detailed statement, see Table 9, p. 886. <sup>2</sup> Includes various smaller items of revenue receipts for most earlier years and special receipts since 1921. <sup>3</sup> Nine months. <sup>4</sup> Year tax imposed. <sup>5</sup> Figures for 1930 and following years conform with new set-up of Public Accounts as established in 1936 (see p. 877).

**7.—Per Capita Figures of Taxation, Total Revenue Receipts, Expenditure on Consolidated Fund Account, and Total Expenditures, 1868-1938.**

NOTE.—The years marked with an asterisk (\*) are those of the censuses, Apr. 6, 1891; Apr. 1, 1901; June 1, 1911, 1921, and 1931. For the intercensal years the populations are estimated as at June 1 (see p. 113). See the tables on pp. 871-884 for the figures of revenue and expenditure on which this table is based. Figures for intermediate years not shown between 1868 and 1885 will be found at p. 849 of the 1938 Year Book.

## Subsection 3.—War Tax Revenue.

An account of the various War taxes imposed in 1915 and subsequently has already been given on p. 874 in the introduction to this Section. For convenience of reference, amounts received from these taxes since first instituted are segregated and the totals paid to the Receiver General are given in Table 9. The taxes imposed on banks, trust and loan companies, and insurance companies are collected by the Department of Finance. The excise War taxes and the income War tax are collected by the Department of National Revenue. Receipts from the income tax are analyzed in Tables 10 to 14. The amounts of excise War taxes collected from different sources in the past six fiscal years are given in Table 16, while Table 17 contains the details by provinces for the latest year.

## 9.—War Tax Revenues Received by the Receiver General, fiscal years 1915, 1919, 1926, and 1925-38.

NOTE.—Statistics for the intervening years from 1916 to 1924 will be found at p. 851 of the 1938 Year Book. Receipts for these years are included in the totals.

Fiscal Year.	Banks. <sup>1</sup>	Trust and Loan Companies. <sup>1</sup>	Insurance Companies. <sup>1</sup>	Business Profits. <sup>2</sup>	Income Tax.	Sales and Other Excise Taxes.	Total War Tax Revenue.

<sup>1</sup> The figures are for special taxation only, imposed in 1915 as outlined on p. 874. "Insurance Companies" are exclusive of life and marine insurance companies. <sup>2</sup> Although this tax was not charged upon profits accruing after Dec. 31, 1920 (see 14-15 Geo. V, c. 10), belated revenue therefrom continued to be received until 1933.

**Income Tax.**—One of the chief sources of revenue of the Dominion Government is the income tax which, with the sales tax, now provides much the larger part of what is still known as War tax revenue. The latter tax was inaugurated in 1915 but the income tax was not resorted to as a source of revenue until 1919 and, whereas during the first year of its operations \$9,350,000 was collected, the Dominion coffers were enriched to the extent of \$120,000,000 in 1938.

Tables 10 to 14 analyse the receipts from income tax from different angles: by provinces; by individuals and corporations; by size of income class; and by occupations of taxpayer.

<sup>a</sup> Not segregated into individual and corporation groups for this year.

<sup>b</sup> In 1927 the exemption limits, in the case of individuals, from \$2,000 to \$3,000 for married, and from \$1,000 to \$1,500 for single persons came into operation; in 1933 the limits were \$2,400 and \$1,200, and in 1934 the reduction to the old basis was effective. The effects are reflected in the changes in the numbers of taxpayers.

Table 15 shows the amount received from the special 5 p.c. tax of 1933 (c. 41, 1932-33) imposed at the source on interest (if paid solely in Canadian funds) and dividends paid by Canadian debtors to non-residents of Canada, and on interest and dividends received by Canadian residents by way of bearer coupons or cheques where such are payable by Canadian debtors, optionally or otherwise, in foreign currencies, and such coupons or cheques are cashed in a currency which is at a premium over Canadian funds. The receipts are classified by provinces, no further classification being available.

**Excise War Taxes.**—In addition to the income tax, and to those War taxes collected by the Department of Finance, as outlined in the text at the head of p. 886, there are certain excise War taxes collected by the Department of National Revenue. These amounted to \$184,627,479 for 1938. In Table 16 an analysis of these taxes for the years 1933-38 is given and in Table 17, collections by provinces under each head are shown for the latest fiscal year.

**16.—Summary of Excise War Taxes Collected by the Department of National Revenue, fiscal years 1933-38.**

(Accrued Revenue.)

### Subsection 4.—Inland Revenue.

Under the Inland Revenue Act (R.S.C., 1906, c. 5), the Department of Inland Revenue had the control and management of standard weights and measures and of the collection of excise duties, of stamp duties, internal taxes, bridge and ferry tolls and rents until 1918. It administered the statutes which dealt with the adulteration of food and other articles, electricity and gas inspection, patent medicines, petroleum, naphtha, and the analysis of fertilizers and feeding stuffs. This Department also established the food standards which were put into force by Orders in Council under the authority of Sec. 26 of the Adulteration Act. Later the administration of the Adulteration of Food, and the Proprietary and Patent Medicine Acts was transferred to the Department of Health, that of the Commercial Feeding Stuff, and Fertilizers Acts to the Department of Agriculture, and that of the Acts relating to weights and measures, and the inspection of gas, electric light, and water meters to the Department of Trade and Commerce. By Order in Council of May 18, 1918, the Departments of Customs and of Inland Revenue were combined as the Department of Customs and Inland Revenue, under one Minister of the Crown. On June 4, 1921, the Department of Customs and Inland Revenue was consolidated as the Department of Customs and Excise (11-12 Geo. V, c. 26). As from Apr. 1, 1927, the name of this Department, which collects the great bulk of the revenue of the Dominion, was changed to Department of National Revenue by authority of 17 Geo. V, c. 34. This Act provides for three chief departmental officers—the Commissioner of Customs, the Commissioner of Excise, and the Commissioner of Income Tax; an Assistant Commissioner of Customs may also be appointed. While the income tax is collected by the Commissioner of Income Tax, the other main branches of inland revenue—the excise duties and excise War taxes—are collected by the Commissioner of Excise.

**Canadian Excise Tariff.**—The following is a statement of the Canadian excise tariff, as existing at Jan. 1, 1939:—

1. Spirits distilled in Canada, per proof gal. . . . .	\$ 4-00	3. Beer or Malt Liquor:—	
Canadian brandy, per proof gal. . . . .	3-00	(a) Brewed in whole or part from any substance other than malt, per gal. . . . .	\$ 0-22
Except Spirits as follows:—		(b) Imported (in addition to any of the duties otherwise imposed), per gal. . . . .	0-07
(a) Used in a bonded manufactory for medicines, extracts, etc., per proof gal. . . . .	1-50	4. Malt:—	
(b) Used in a bonded manufactory for perfumes, per proof gal. . . . .	1-50	(a) Produced in Canada and screened, per lb. . . . .	0-06
(c) Used in a bonded manufactory for vinegar, per proof gal. . . . .	0-27	(b) Imported, per lb. . . . .	0-06
(d) Used for chemical compositions approved by Governor in Council, per proof gal. . . . .	0-15	(c) Imported, crushed or ground, per lb. . . . .	0-08
(e) Sold to licensed druggists for pharmaceutical preparations, per proof gal. . . . .	1-50	5. Malt Syrup:—	
(f) Distilled from native fruits and used by a licensed wine manufacturer for fortification of native wines, per proof gal. . . . .	Free	(a) Produced in Canada, per lb. . . . .	0-10
2. Spirits imported (in addition to any of the duties otherwise imposed), per proof gal. . . . .	0-30	(b) Imported, per lb. . . . .	0-16
		6. Tobacco, Cigars, and Cigarettes:—	
		(a) Manufactured tobacco, per lb. . . . .	0-20
		(b) Cigarettes weighing not more than 3 lb. per M., per M. . . . .	4-00
		(c) Cigarettes, weighing more than 3 lb. per M., per M. . . . .	11-00
		(d) Cigars, per M. . . . .	3-00

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to any *bona fide* public hospital for medicinal purposes only.

**Revenue from Excise Duties.**—The inland revenue collected from excise duties, other than War taxes, is shown by items for the past six fiscal years in Table 18. Tobacco, including cigarettes, is shown by the figures to have supplied about 61 p. c. of the revenue from excise duties in the fiscal year 1938.

**18.—Details of Excise Duties Collected, fiscal years 1933-38.**

(As shown in the Report of the Commissioner of Excise.)

**NOTE.**—Dashes in this table indicate that no revenue was collected under the corresponding heads because the items were not applicable in the years indicated.

<b>Totals, duties collected plus licence fees.....\$</b>	<b>11,437</b>	<b>7,826</b>	<b>5,559</b>	<b>7,405</b>	<b>7,442</b>	<b>8,641</b>

It will be seen from the above table that the quantity of spirits manufactured increased between 1933 and 1938 from 4,345,834 proof gal. to 10,198,330 proof gal. The statistics have fluctuated greatly since 1920, varying from the low of 2,356,329 proof gal. in that year to the high of 16,816,312 proof gal. recorded in 1929.

**Alcohol and Tobacco Taken Out of Bond.**—In Table 20 are shown the quantities of spirits, malt liquor, malt, cigars, cigarettes, and tobacco taken out of bond for consumption in the fiscal years ended 1920 to 1938.

Between 1920 and 1938 the number of cigars taken out of bond fell from 270,089,761 to 136,275,443 and the quantity of tobacco, which was 23,049,012 lb. in 1920, had fallen to 20,870,651 lb. by 1925, since when there was a steady increase to 25,155,143 lb. in 1938. The consumption of cigarettes increased from 1,553,468,890 in 1919 to 5,082,314,590 in 1931 but thereafter showed a decline. After 1935, however, consumption reached new records.

Between 1923 and 1929 spirits taken out of bond (exclusive of imported spirits) rose from 729,678 gal. to 2,016,802 gal., but there was a decided and steady drop to 769,527 gal. for 1933. Since 1933 substantial increases have been shown. Malt liquor showed an increase from 36,789,195 gal. in 1923 to 65,719,129 gal. in 1929 but there was a decrease to 40,105,883 for 1934; since then there has been a steady increase to the high point of 67,019,336 gal. in 1938.

## 20.—Quantities of Spirits, Malt Liquor, Malt, and Tobacco Taken Out of Bond for Consumption, fiscal years 1920-38.

NOTE.—For years prior to 1900, see 1916-17 Year Book, p. 528; for 1901-10, see 1933 Year Book, p. 840; and for 1911-19, the 1938 Year Book, p. 855.

### Subsection 5.—Subsidies and Loans to Provinces.

**Subsidies.**—By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Dominion is required to make certain annual payments to the individual provinces. These payments fall into the following classes:—

**Interest on Debt Allowances.**—By the terms of the union of the provinces at Confederation in 1867, the Dominion assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except in the case of Ontario and Quebec, interest at 5 p.c. on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately \$25 per capita. On the subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Con-

federation indebtedness. From time to time, adjustments have been made in the basis of calculation of the debt allowances of the various provinces and the Dominion pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted. The aggregate annual payment from the Dominion to the provinces in respect of interest on debt allowances is \$1,609,386.

*Allowances for Government and Legislature.*—Under the terms of the Union, annual grants of specific amounts were made to the various provinces for the support of their governments and legislatures. These fixed amounts vary with the population of the provinces according to the following scale, approved in 1907:—

Where population is—	\$
Under 150,000.....	100,000
150,000, but does not exceed 200,000.....	150,000
200,000, " " 400,000.....	180,000
400,000, " " 800,000.....	190,000
800,000, " " 1,500,000.....	220,000
Over 1,500,000.....	240,000

The aggregate annual allowances presently paid under this head amount to \$1,750,000.

*Allowances per Head of Population.*—Under the British North America Act of 1867, a grant of 80 cents per head of the population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per head up to a population of 2,500,000, and at the rate of 60 cents per head for so much of the population as exceeds that number. The cost to the Dominion in 1938 of the annual allowances paid to the provinces per head of population was \$8,095,070.

*Special Grants.*—In the case of certain of the provinces, grants have been added to the original scale of subsidies in view of special circumstances obtaining, which, for the fiscal year 1938, amounted in aggregate to \$2,280,880 as set forth below:—

*Prince Edward Island.*—A special grant of \$195,000 less a deduction of \$39,120 (net grant of \$155,880).

*New Brunswick.*—An annual grant of \$150,000 since 1875 in consideration of the repeal of lumber duties reserved to the provinces by the B.N.A. Act of 1867.

*Manitoba.*—A special grant on the basis of population amounting at present to \$562,500 per annum.

*Saskatchewan and Alberta.*—Currently receiving an annual sum as compensation for loss of revenue derivable from their Public Lands, based on their respective populations which amounts, in the case of Saskatchewan, to \$750,000 per annum at present and, in the case of Alberta, to \$562,500.

*British Columbia.*—A special grant amounting at present to \$100,000 per annum.

*Other Special Grants.*—In addition to the above, there are other special grants paid to the Maritime Provinces and British Columbia which are voted annually, aggregating, in the fiscal year 1938, \$3,225,000 as follows:—

	\$
Prince Edward Island.....	275,000
Nova Scotia.....	1,300,000
New Brunswick.....	900,000
British Columbia.....	750,000

Temporary grants were made to the Provinces of Manitoba and Saskatchewan in the amounts of \$750,000 and \$3,500,000, respectively, in the fiscal year 1938.

## 21.—Subsidies of Dominion to Provincial Governments, fiscal years 1933-38.

<sup>1</sup> Compensation for lands and allowances for buildings. <sup>2</sup> Allowances in lieu of debt. <sup>3</sup> Does not include special and temporary grants paid to Maritime Provinces, Manitoba, Saskatchewan, and British Columbia.

**Loans to Provinces.**—All of the provincial loans recently advanced by the Dominion have been made to the western provinces under the authority of relief legislation beginning with the Unemployment and Farm Relief Act, 1931, and these have been secured by interest-bearing treasury bills of the respective provinces, the rate being 3 p.c. since July 1, 1936. The sum total of such loans outstanding as at Mar. 31, 1939, was \$163,300,825 less write-offs of \$18,487,055, making net loans outstanding \$144,813,770.

In addition to these, however, there were also outstanding at that date \$3,203,000 of housing loans, being the balance of loans made to the provinces in the years following the Great War, on the authority of Orders in Council passed in 1918 and 1919, and of the Appropriation Acts of 1920 and 1921. Upon these loans the province of Ontario repaid the whole of the advances in 1928. The province of Quebec repaid in full in 1937 and New Brunswick in full in 1938. The other provinces concerned have in most cases reduced their indebtedness from year to year.

Table 23 gives details of the loans made by the Dominion Government to the provinces concerned on account of relief expenditures, and Table 24 shows the amounts outstanding as at Mar. 31, of each of the years 1920-39, on account of loans made for housing.

**23.—Loans to Provincial Governments Under the Relief Acts, by Provinces, fiscal years 1935-39.**

NOTE.—Figures for 1932 (the first year such loans were made) and 1933 will be found at p. 844 of the 1936 Year Book, and for 1934 at p. 858 of the 1938 edition.

**Subsection 6.—The National Debt.**

The gross national debt of Canada on Mar. 31, 1914, was \$544,391,369, as against assets of \$208,394,519, leaving a net debt of \$335,996,850. Comparatively small as was this debt, it was a debt incurred almost altogether either for public works of general utility which, like the Intercolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets of the nation, or was expended as subsidies to enterprises, which, like the Canadian Pacific Railway, though not government-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, it was a debt incurred for productive purposes. Also, it was mainly held outside the country, the principal of the Dominion funded debt payable in London being \$302,842,485 on Mar. 31, 1914, as against only \$717,453 payable in Canada.

The great changes brought about in our national debt during the 25 years from 1914 to 1938 have been: (1) the enormous increase in net debt from \$335,996,850 to \$3,101,667,570; (2) the gross debt, having been largely incurred for War purposes is not represented by corresponding assets; (3) the debt is now mainly held in Canada, \$2,455,690,435 being payable in Canada at Mar. 31, 1938.

**Recent Funded Debt Operations.**—Conversions and other national debt operations carried out between 1914 and 1930 are dealt with at pp. 842-843 of the 1933 Year Book; those between 1931 and 1934 at pp. 905-907 of the 1934-35 Year Book; those of the fiscal year 1935 on pp. 845-846 of the 1936 Year Book; and those of the fiscal year 1937 on p. 837 of the 1937 Year Book. The following review carries the summary down to Mar. 31, 1939.

On May 5, 1937, an issue of \$113,500,000 was made in Canada for the purpose of converting a part of the \$236,299,800 5½ p.c. Victory Loan due Dec. 1, 1937. This issue was a conversion operation only, no cash applications being accepted. The new issue was comprised of three maturities, 1 p.c. two-year bonds due June 1, 1939, 2 p.c. five-year bonds due June 1, 1942, and 3½ p.c. twelve-year bonds due June 1, 1949, yielding 1.38 p.c., 2.375 p.c., and 3.35 p.c., respectively, to the purchaser.

To provide a part of the funds to pay off the unconverted portion of the 5½ p.c. Victory Loan Bonds, an issue of \$100,000,000 was made in Canada on Nov. 3, 1937. This issue was also in three maturities, 1 p.c. one and one-half-year bonds due June 1, 1939, 2½ p.c. seven-year bonds due Nov. 15, 1944, and 3½ p.c. fourteen-year bonds due Nov. 15, 1951, yielding 1.59 p.c., 2.74 p.c., and 3.34 p.c., respectively. The \$33,293,000 4 p.c. school land debentures due July 1, 1937, and held by the provinces of Manitoba, Saskatchewan, and Alberta, were renewed for a further period of one year at an interest rate of 4 p.c.

In January, 1938, the Dominion offered an issue in the London market for conversion of £7,658,472 Dominion of Canada 3 p.c. Inscribed Stock and Bonds and £3,093,700 Dominion of Canada, Canadian Pacific Railway 3½ p.c. Land Grant Stock and Bonds, both of which issues were coming to maturity on July 1. The new issue in the amount of £10,000,000 (\$48,666,667) bearing interest at 3½ p.c., and maturing on July 1, 1963, was offered at £98:10s. (98.5 p.c.). The yield to the public was approximately 3.34 p.c.

On May 18, 1938, the Dominion Government offered in Canada an issue of \$50,000,000 in bonds of two maturities, dated June 1, 1938. A six-year 2 p.c. bond due June 1, 1944, priced at 99.375 and accrued interest and yielding approximately

2·11 p.c. was offered in the amount of \$20,000,000, and a twenty-year 3 p.c. bond, due June 1, 1958, priced at 99·00 and accrued interest, and yielding approximately 3·07 p.c. comprised the remaining \$30,000,000. In addition to the \$50,000,000 of new money called for, the holders of 2 p.c. bonds due Oct. 15, 1938 (outstanding in an amount of \$90,000,000), were given the opportunity of conversion into bonds of the new issue, the outstanding maturity being convertible, with final coupons attached, at 100·80 p.c. in exchange for the new bonds at the offering price. Under this offering, conversions were made to the extent of \$89,825,000, all but \$175,000 of the outstanding issue being refunded. The conversion subscriptions were allotted between the offering maturities in the amount of \$70,825,000 for the six-year 2 p.c. bonds, and \$19,200,000 for the twenty-year 3 p.c. bonds. Thus, the total amount outstanding of the former maturity is \$90,625,000, and of the latter, \$49,200,000.

On July 1, 1938, the School Land Debenture Stock, held by the western provinces in the amount of \$33,293,471, matured and was renewed for another year at the prevailing rate of 4 p.c.

For the purpose of meeting a New York maturity of \$40,000,000 in 2 p.c. notes issued Jan. 1, 1936, and falling due on Jan. 1, 1939, the Dominion Government on Nov. 17, 1938, sold an issue of thirty-year 3 p.c. bonds in the amount of \$40,000,000 in New York. These bonds were priced at 97½ and accrued interest, yielding approximately 3·14 p.c.

In the past four years a market for short-term treasury bills has been built up in Canada which has proven highly satisfactory. Each issue has, with two exceptions (where the bills were sold direct to the Bank of Canada), been offered for public tender. A complete list of treasury bills sold by public tender for the period Mar. 1, 1934, to Feb. 15, 1937, appears on p. 838 of the 1937 Year Book. The sales since that date are as follows:—

TREASURY BILLS SOLD IN CANADA, MAR. 1, 1937, TO MAR. 31, 1939.

Date of Issue.	Date of Maturity.	Amount.	Average Cost.	Date of Issue.	Date of Maturity.	Amount.	Average Cost.

Statistics of National Debt.—Summary statistics of the national debt of Canada as at Confederation, and at the end of each fiscal year thereafter down to 1938, are given in Table 25, while details of the active assets and of the gross lia-

bilities are given, as at the end of each of the past five fiscal years, in Table 1, pp. 875-876. Further details of the funded debt, showing the various issues of bonds, the annual interest charges and the place at which principal and interest are payable, are given as at Mar. 31, 1938, in Table 26. From this it appears that the total payable in London at that date was \$409,867,597, in New York \$449,000,000, and in Canada \$2,455,690,435. Thus three-quarters of the funded debt of the Dominion was payable within the Dominion itself, and the interest payable outside of Canada was a comparatively small item.

**The Interest-Bearing Debt of Canada.**—Something of the extent of the burden of national debt being carried by the Canadian people may be realized from the fact that, for the fiscal year ended Mar. 31, 1938, the interest charges on the total interest-bearing debt amounted to about 28 p.c. of the total receipts from taxation and nearly 25 p.c. of the receipts from all sources.

Before the Great War, interest rates were comparatively moderate, but the unprecedented expenditure of the world's capital in that gigantic struggle led, in all the participating countries, to the raising of enormous loans at comparatively high rates of interest, which in many cases still have to be paid until refunding

becomes possible under the terms of the contracts made between the nations and their creditors. Thus, in Canada, the average rate of interest paid upon the direct interest-bearing obligations of the nation, which was only 3.368 p.c. at Mar. 31, 1913, rose to 5.164 p.c. at Mar. 31, 1922, and fell gradually to 3.560 p.c. at Mar. 31, 1938. Details of the interest-bearing debt of Canada, and the interest charges thereon, as at Mar. 31 of the years from 1913 to 1938 are given in Table 27.

27.—The Interest-Bearing Debt, the Annual Interest Charge Thereon and the Average Rate of Interest, as at Mar. 31, 1913-38.

Fiscal Year.	Bonds, Debentures, and Treasury Bills.	Annual Interest Charges on Bonds, Debentures, and Treasury Bills.	Average Interest Rate on Bonds, Debentures, and Treasury Bills.	Savings Bank Deposits, Trust and Other Funds.	Annual Interest on Savings Bank Deposits and Other Funds.	Total Interest-Bearing Debt. <sup>1</sup>	Annual Interest Charge.	Average Rate of Interest.

<sup>1</sup> The total of interest-bearing debt, as here given, includes bonds purchased and held by the Treasury for sinking funds. <sup>2</sup> In 1936 an amount of \$11,827, being compensation to seigneurs, previously included under Savings Bank Deposits, Trust and Other Funds, was transferred to Bonds, Debentures, and Treasury Bills.

**Guaranteed Debt of the Dominion.**—Besides the direct debt of the Dominion, already dealt with, there are also large indirect obligations, arising mainly out of the guarantee of securities, by the Dominion, of the railway lines which now form the Canadian National Railways, and the subsequent extensions thereof. Together with these are other smaller indirect obligations, originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of its Harbour Commissions, issued in the main for harbour improvements. Since 1932 guarantees of certain bank loans have been made under the various Relief Acts. With the commencement of business of the Bank of Canada on Mar. 11, 1935, the guarantee, authorized by Sec. 27 (6) of the Bank of Canada Act, of the deposit required to be maintained in the Bank of Canada by every chartered bank, came into force. This guarantee will require to be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities, and if the Bank suspends payment of any of its liabilities". Under the terms of the Home Improvement Loans Guarantee Act, 1937, the Government guarantees chartered banks and other approved lending institutions against losses up to 15 p.c. of the aggregate value of loans made by each such institution for the financing of

repairs, alterations, and improvements to rural and urban dwellings. The Act provides that the amount of guarantees shall not exceed \$50,000,000 and therefore the limit of the Government's guarantee is \$7,500,000. Under the terms of the Saskatchewan Seed Grain Loans Guarantee Act, 1936, the Dominion Government guarantees the principal and interest of loans made in Saskatchewan by chartered banks for seed grain assistance to farmers during the spring of 1936. These loans are primarily guaranteed by the province of Saskatchewan and the Dominion's liability is only to the amount that the province is unable to fulfil its guarantee. The amount of this guarantee is \$2,555,113.

Under the terms of the Seed Grain Loans Guarantee Act, 1937, the Dominion Government guarantees the principal and interest of loans made in Alberta, Manitoba, and Saskatchewan during the spring of 1937. The loans in each province are primarily guaranteed by the Provincial Government and the Dominion's liability is only to the amount of the guarantee that the province is unable to meet. Such guarantees for Alberta and Manitoba are not to exceed \$1,042,692 and for Saskatchewan the amount was expected to reach about \$6,400,000.

Under the Act of 1938, such guarantees during the spring of 1938 are extended only to Alberta and Saskatchewan and the liability of the Dominion Government is not to exceed \$1,900,000 for Alberta and \$14,500,000 for Saskatchewan.

Statistics showing the growth of these indirect obligations since 1914 are given in Table 28, while Table 29 shows the obligations as they existed on Mar. 31, 1938.

### 28.—Securities Guaranteed by the Dominion Government (Amounts Held by the Public), as at Mar. 31, 1914-38.

Notes.—Dashes in this table indicate that there were no guarantees of the type shown for the corresponding years.

## Section 2.—Provincial Public Finance.\*

Provincial Governments in Canada are in the position, under Sec. 118 of the British North America Act, 1867 (30 and 31 Vict., c. 3), and the British North America Act, 1907 (7 Edw. VII, c. 11), of having a considerable assured income in subsidies from the Dominion Treasury. Details of these payments are given for recent years at pp. 894-897 of this chapter. In addition, through their retention of ownership of their lands, minerals, and other natural resources, those provinces that, by the voluntary action of their previously existing governments, entered Confederation, raise considerable revenues through land sales, sales of timber, mining royalties, leases of water powers, etc., while the Prairie Provinces, though having controlled their own natural resources since 1930, formerly received from the Dominion special grants in lieu of land revenues. Further, under Sec. 92 of the British North America Act, provincial legislatures are given authority to impose direct taxation within the province for provincial purposes and to borrow money on the sole credit of the province. The total revenues received by Provincial Governments for their fiscal years ended 1937 are analysed by source in Table 32.

Prior to the opening of the present century, provincial receipts and expenditures were generally moderate, as may be seen, both for individual provinces and for the provinces collectively, from Tables 30 and 31. The demand, more especially in Ontario and the West, for increased services from governments, particularly in respect of education, sanitation, and public ownership and operation of public utilities, and the performance of these functions, necessitated increased revenues, which had in the main to be raised by taxation. Among the chief methods of taxation to be employed has been the taxation of corporations and estates, succession duties showing a considerably increased yield even within the comparatively short period of twenty-one years from 1916 to 1937 covered by the statements compiled by the Finance Branch of the Bureau of Statistics.† The fact that provincial government is cheaper per head in the eastern provinces (although both Ontario and Nova Scotia have shown large per capita increases in recent years) is evident from Table 31, which gives the per capita ordinary revenues and expenditures for various fiscal years, from 1871 to 1937. This, however, is not to be taken as evidence that the larger services rendered to the public are not worth what is being paid for them.

For the half-century subsequent to Confederation, the provincial accounts, published by each Government according to its own system of accounting, were quite incomparable as among the provinces, a fact much regretted by students of provincial public finance. Upon the creation of the Dominion Bureau of Statistics in 1918, its Finance Branch undertook the work of placing the various provincial public accounts on a comparable basis, correlating, for example, the revenue derived from succession duties, taxation of corporations, sales of public lands, royalties on forest, mineral, and fisheries products, as well as the expenditures on such services as agriculture, civil government, education, and public works. As the result of the

\* Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics. This Branch issues detailed statements on Provincial Finance which may be obtained from the Dominion Statistician. For a list of these publications, see Section 1 of Chapter XXIX.

† The succession duties collected by the provinces in 1937 amounted in the aggregate to \$26,620,946, as compared with \$1,020,972 as recently as 1904, or an increase of more than 26-fold in 33 years. The aggregate revenue raised by taxation of corporations, land, income, and miscellaneous (exclusive of gasoline taxes, succession duties, and amusement taxes), increased from \$7,217,548 in 1916 to \$52,128,602 in 1937, an increase of 622 p.c. in 21 years.

Bureau's exhaustive analysis of the provincial public accounts, a summary statement of the ordinary receipts and expenditures of the Provincial Governments appears for the first time in the 1919 Year Book. The various items of receipts and expenditures were classified under appropriate headings and a uniform terminology was adopted. From these statements it is possible to ascertain the amounts received and expended in each year under the respective headings for each province, as well as for the provinces collectively. The detailed figures for the years 1916 to 1920 will be found on pp. 680-685 of the 1921 Year Book, those for 1921 on pp. 786-791 of the 1922-23 Year Book and those for 1922 to 1926 on pp. 836-841 of the 1927-28 Year Book.

The Bureau now makes more extensive analyses of the finances of the provinces, including capital and trust accounts as well as ordinary revenue and expenditure. These analyses are based on a uniform classification adopted at a conference held in 1933 between provincial treasury officials and the Dominion Bureau of Statistics. This new extended analysis, however, does not affect the comparability of the summary totals of Table 30.

Data for 1937 are given on the new uniform basis in Tables 32 and 33.

### Subsection 1.—Provincial Revenues and Expenditures.

**Ordinary Revenues and Expenditures.**—The total ordinary revenues and expenditures of the provinces for their individual fiscal years are shown in Table 30, for the census years 1871-1926 and for each year from 1931-37. While revenues have grown very rapidly over the period covered, expenditures have more than kept pace. Tables 32 and 33 show detailed ordinary revenues and expenditures for 1937.

Some explanation is perhaps necessary in regard to the Capital Receipts and Expenditures and the Trust and Public Charities Funds Receipts and Expenditures shown in the lower parts of these latter tables. In regard to the former, receipts represent the proceeds of loans and borrowings in the form of bonds, debentures, and treasury bills and are largely offset by capital payments for debt retirements; there are, however, receipts from the Dominion Government in regard to old age pensions and unemployment relief which are regarded as capital receipts. Finally, refunds of capital expenditures, made earlier in the form of advances or loans, are also included under this heading.

With regard to the Trust and Public Charities Funds accounts, these, as will be noted, relate chiefly to the province of Quebec where, under the Public Charities Act, parts of the revenues derived from Liquor Commission profits, taxes on amusements and race tracks, and the hospital tax on meals are transferred to the Public Charities Fund for the benefit of hospitals, sanatoria, refuges, and other charitable institutions. In New Brunswick, Quebec, and Manitoba there are also judicial deposits in connection with appeals, sales by the sheriff, etc., which are made to the Trust Funds accounts. Since 1916, *i.e.*, in the short space of 21 years, while total revenues of all provinces have shown an increase of 437 p.c., ordinary expenditures have increased 371 p.c.

**The Growth of Provincial Taxation.**—Whereas in earlier years the Dominion subsidies, together with the revenues arising out of the natural resources of the provinces and from fees for specific services rendered to the citizens, nearly sufficed to cover the whole expenses of government and rendered a resort to taxation for provincial purposes practically unnecessary in most of the provinces, the great

increase in the functions of government since the commencement of the present century has put an end to this state of affairs. The aggregate amount of taxation for provincial purposes in the fiscal years prior to 1916 is unfortunately not available. Since that time provincial taxation has increased from \$12,521,816 in 1916 to \$117,694,985 in 1937 (exclusive of motor vehicle licences, liquor traffic profits, and other licences and permits, etc.), or over nine-fold in 21 years, according to the recently amended classification made in the Dominion Bureau of Statistics.

The increase in the use of automobiles, both for commercial purposes and pleasure, is clearly demonstrated by the growing revenues from licences and permits issued by the Provincial Governments. In 1921 the total revenue of all provinces from automobile licensing alone amounted to \$7,857,751. It has since fluctuated considerably, reaching \$21,735,827 in 1929 but declining to \$19,952,575 in 1931. The revenue from this source in 1937 was \$26,053,580.

The gasoline tax is now generally adopted as a means of increasing provincial receipts and has proved to be a lucrative source of revenue. In 1923 only Manitoba and Alberta showed gasoline-tax revenue, the total being \$280,404. In 1924 the five provinces of Prince Edward Island, Quebec, Manitoba, Alberta, and British Columbia collected such revenue to the amount of \$559,543, while in 1925 the same provinces, with Ontario added, collected \$3,521,388. In 1926 all provinces, except Saskatchewan, collected gasoline taxes to the amount of \$6,104,716, in 1927 to \$7,615,907, and in 1928 to \$9,151,735; thereafter, gasoline taxes were collected in all provinces and amounted to \$17,237,017 in 1929, \$20,956,590 in 1930, \$23,859,067 in 1931, \$24,987,273 in 1932, \$25,931,480 in 1933, \$26,812,275 in 1934, \$20,474,977\* in 1935, \$32,310,353 in 1936, and in 1937 to \$35,415,061. The higher yields in recent years, however, were due partly to higher rates of taxation. The general rates of taxation at present (1939) in force are 10c. in the Maritime Provinces, 8c. in Quebec and Ontario, and 7c. in the Western Provinces; certain exemptions are allowed in each province.

The provincial revenues from the liquor traffic increased considerably between 1925 and 1930, but subsequently declined until 1934, again increasing in 1937. The adoption of government control of the sale of liquor in one province after another, until now it exists in all but Prince Edward Island where prohibition is still in force, has resulted in trading profits, licensing revenues, and permit fees, all of which have swelled the provincial revenues. Prior to the adoption of government control, such revenues were not available to the provinces. In 1925 the total revenue collected by all provinces from the liquor traffic was \$8,964,824; in 1926 it was \$11,609,392, increasing to \$27,599,687 by 1929. In 1933 such revenue amounted to \$16,160,980, in 1934 to \$12,814,120, in 1935 to \$12,886,197, in 1936 to \$19,338,366, and to \$25,913,699 in 1937. The method of control varies somewhat as between the provinces. In the majority of cases there are independent commissions or boards to administer the provincial liquor traffic Acts, but the accounting and trading profits are shown somewhat differently in the various provincial public accounts reports.†

**Fiscal Years of the Provinces.**—The fiscal years of the provinces are as follows: P.E.I., Dec. 31; N.S., Sept. 30 prior to 1935 and Nov. 30 thereafter; N.B., Oct. 31; Que., June 30; Ont., Oct. 31 prior to 1935 and Mar. 31 thereafter; Man. and Sask., Apr. 30; Alta. and B.C., Mar. 31.

\* The wide difference between the figure for 1935 and the one for 1936 is accounted for largely by the change in the fiscal year for the province of Ontario from Oct. 31 to Mar. 31, so that the Ontario figures for 1935 included in the 1935 total were for five months only.

† See Chapter XVII, pp. 622-625, and also the report of the Dominion Bureau of Statistics on "The Control and Sale of Liquor in Canada".

### 30.—Ordinary Revenues and Expenditures of the Provincial Governments for their respective fiscal years ended in the census years 1871-1926 and in each year from 1931-37.

NOTE.—For provincial ordinary revenues and expenditures in all other provincial fiscal years since Confederation, see 1932 Year Book, pp. 734-786. Figures for intervening years between 1916 and 1931 are given at p. 875 of the 1938 Year Book.

## Subsection 2.—Provincial Debts and Assets.

**Bonded Indebtedness of the Provinces.**—Of the total liabilities of the provinces the major part is represented by bonded debt owing to the public in Canada and abroad. The total gross bonded debt amounted to \$1,440,294,809 in 1937 as compared with only \$218,875,927 in 1916, an increase of over \$1,220,000,000 in the 21 years. In addition to this bonded debt there were treasury bills outstanding on provincial accounts amounting to \$241,598,174\* for 1937. Figures of bonded debt for this and previous years to 1916 are given in Table 34. The rapid rise in the bonded debt of the provinces from \$218,875,927 in 1916 is accounted for largely by the development of public ownership of utilities (such as the "Hydro" in Ontario), the extension of the highways and surfaced roads systems in all provinces (highway debentures outstanding in 1937 accounting for \$569,720,000 of the provincial debt), and the requirements for the promotion of industrial activities and public and social welfare. These demanded heavy expenditures which could not easily be met out of current revenue. The borrowings, while increasing the public debt, are in the main considered justifiable, as the public utilities are in most cases meeting from their revenues the interest on indebtedness incurred in their construction, and the provincial assets generally are sound enough to take care of capital investment for other services which are necessary to develop the country.

**34.—Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments, by Provinces, for their respective fiscal years 1916, 1921, 1926, and 1931-37.**

NOTE.—Figures for intervening years, from 1917-30, are given at p. 877 of the 1938 Year Book.

<sup>1</sup> Liabilities statement is for Apr. 30; this amount includes \$500,000 due May 1.

**Total Provincial Public Debt.**—Table 35 gives a classified analysis of the public debt of Provincial Governments at the close of their fiscal years in 1936 and 1937.

\* Including \$5,865,000 which the province of New Brunswick considered a current liability.

**35.—Debts of Provincial Governments at the ends of their respective fiscal years in 1936 and 1937, showing Bonded Debt with offsetting Sinking Funds, Treasury Bills, Other Direct Liabilities, Available Assets offsetting Direct Liabilities, and Indirect Liabilities.**

NOTE.—For dates on which the fiscal years of the provinces end, see text on p. 909. For details for 1935 see the 1935 Year Book, p. 878.

<sup>1</sup> In addition to the available assets shown most of the provinces had partially secured loans and advances for railways, dyking districts, unemployment relief, and grain relief, etc., a large portion of which will be realizable. <sup>2</sup> Including treasury bills regarded as current debt by New Brunswick. <sup>3</sup> New Brunswick considers this a current liability. <sup>4</sup> Ontario does not consider as "available assets" Dominion Debt Account; Common School Fund; Quebec Turnpike; and Plant, Live Stock, and Equipment. <sup>5</sup> The large reduction, as compared with 1936, is accounted for by the smaller amounts receivable for relief purposes and the fact that trust funds are not now included as "available assets."

**Interest Payments and Receipts of the Provinces.**—The current burden of a debt in the case of a continuing organization is represented by interest payments, which may be offset in whole or in part by interest received on loans made to provincially-owned public utilities or to corporations or individual citizens. In a country where provincial public policy varies widely with regard to public ownership, it appears desirable to include a statement showing, for each province, the gross interest payments, the interest receipts, and the net interest payments. This information is given below for the provincial years ended in 1937. (See text at foot of p. 909 for respective dates).

Provinces.	Gross Interest Paid.	Interest Received.	Net Interest Paid.	Net Interest Paid per Capita. <sup>1</sup>

<sup>1</sup> Estimates of population on which these figures are based are given on p. 113.

### Section 3.—Municipal Public Finance.\*

The existence of local self-governing units has always been characteristic of democratic societies, and nowhere more so than in Canada. The struggle for responsible government was naturally accompanied by an agitation for local self-government in the cities and towns of Canada and, after responsible government had been conceded, a complete system of municipalities was established throughout the old Province of Canada by the Municipal Act of 1849.† Under the division of powers made by the British North America Act between the Dominion and the Provincial Governments, legislation regarding municipal government, being a local matter, was naturally assigned to the provinces, which differ considerably with regard to their types of municipal organization. Thus, in Prince Edward Island the only incorporated municipalities are the city of Charlottetown and seven incorporated towns. In British Columbia seven of the 33 cities have fewer than 1,000 people, while there are no towns at all and only 18 villages; again, in the same province the rural districts are mainly administered from the provincial capital, there being only 28 rural municipalities. Finally, in Saskatchewan and Alberta

\* Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics. This Branch issues statements on "Financial Statistics of Urban Municipalities of 10,000 Population and Over", on "Bonded Indebtedness of Municipalities" and on "Assessment Valuations of Municipalities". For a list of publications see Chapter XXIX, Section 1, under "Finance".

† For a brief outline of the rise of the municipal system of Ontario, see 1922-23 Year Book, p. 108.

there exist local improvement districts, areas which have not as yet been organized into rural municipalities, where the taxes are levied, collected, and expended by the Provincial Governments. Such districts, however, may be regarded as on the way to becoming self-governing rural municipalities. Their statistics are therefore included in Table 36 which gives statistics of the numbers and types of municipalities in 1936.

36.—Numbers of Municipalities, by Provinces and Classes, 1936.

<sup>1</sup> Nova Scotia has 18 counties, some of which are 'municipalities', while others are divided into 'municipalities'.

<sup>2</sup> There are 43 counties in all, geographically, but a number are united for municipal purposes.

<sup>3</sup> Officially known as 'townships'.

<sup>4</sup> Includes Flinflon Municipal District.

**Municipal Revenue from Taxation.**—As a result of accumulated borrowings to meet conditions peculiar to the depression, the relentless advance of interest charges against realizable taxation has brought about a condition in many municipalities where expenditures are out of all proportion to receipts, in spite of the fact that the trend of interest rates has been definitely downwards. It is natural under such conditions that the general subject of taxation should receive the increasing attention of the public and, of all forms of taxation, the imposition of municipal taxes—where the tax is applied broadly to assessed valuations placed on homes and other real property and on incomes and business—hits the ratepayer's pocket most directly.

In view of the wide public interest in municipal taxation, the Dominion Bureau of Statistics published a bulletin giving as complete a picture as is possible of tax levies and taxation receipts of municipalities, classified into cities, towns, and rural municipalities, by provinces, for the years 1913-36.\* The following summary table, taken therefrom, gives figures of tax receipts for these years so far as they are available. Unfortunately, there are certain inconsistencies and omissions, as between provinces, which the footnotes to the table attempt to explain.

\* See the bulletin "Municipal Tax Levies and Receipts, by Provinces", obtainable from the Dominion Statistician.

<sup>1</sup> Statistics are for Charlottetown only. <sup>2</sup> Cities of Saint John, Moncton, and Fredericton only for 1931-33; for Saint John and Moncton only for 1934 and 1935. <sup>3</sup> B.C. has no municipal organization of towns and provision was first made for villages in 1922. Statistics of tax receipts for cities and rural districts are shown from 1917-21, and those for cities, villages, and rural districts from 1922. <sup>4</sup> Figures not available. <sup>5</sup> The figure shown is for all municipalities except cities, whereas cities are included for other years. A comparable figure is not obtainable but receipts for Winnipeg were \$10,374,391, and the total tax imposition for the cities of Brandon, Portage la Prairie, and St. Boniface was \$1,652,241 in 1931. <sup>6</sup> Revenues for municipalities and receipts for schools. Statistics are not comparable with those previous to 1934 owing to modifications of provincial reports. <sup>7</sup> Revised since the publication of the 1938 Year Book. <sup>8</sup> Statistics of taxation receipts covering all municipalities were published for the first time in 1936.

**Municipal Assessments.**—The chief basis of municipal tax revenue is the real estate within the limits of the municipalities; though, as indicated above, in certain provinces personal property, income, and business carried on are also taxed. General taxes are normally assessed at the rate of so many mills on the dollar of the assessed valuations. In the Prairie Provinces, the values of improvements made to real property are often rated at a very low figure, e.g., in Saskatchewan, where the taxable valuations of buildings are about 12 p.c. of the taxable valuations of lands, and in Alberta, where they are about 30 p.c. of the taxable valuations of lands, as shown in Table 38.

There are various reasons for fluctuations in assessment valuations, due to differences in laws and varying practices with regard to assessment as among provinces, as among classes of municipalities, and as among municipalities of the same class from year to year. Such matters are more fully dealt with in the special report of the Dominion Bureau of Statistics on "Assessment Valuations by Provinces", obtainable from the Dominion Statistician.

Lands in the West, valuations for which in earlier years were somewhat inflated, have of late been assessed on a sounder basis, and in some provinces the Equalization Boards have placed a more equitable valuation on lands as among the various rural municipalities.

## 38.—Summary Statement showing Total Assessment Valuations of Municipalities, by Provinces, 1932-36.

NOTE.—Corresponding figures for 1927 and 1928 are given at p. 824 of the 1930 Year Book and for 1929-31 at p. 874 of the 1936 Year Book. Data for earlier years are given in previous editions.

<sup>1</sup> Includes certain taxable valuations not specified.

<sup>2</sup> Not available.

<sup>3</sup> No assessment in this province.

<sup>4</sup> Includes exemptions for municipality of Cumberland, Nova Scotia.

<sup>5</sup> In Nova Scotia personal property and income assessments for cities are for Sydney only.

<sup>6</sup> Includes property temporarily exempted.

<sup>7</sup> In addition, assessments for schools only in Ontario were: townships \$4,976,492, towns and villages \$18,249,670, and cities \$36,803,023 in 1932; townships \$3,495,026, towns and villages \$12,884,022, and cities \$86,638,946 in 1933; townships \$2,636,133, villages \$1,167,415, towns \$16,656,397, and cities \$36,657,415 in 1934; and cities \$34,204,218 in 1935. Statistics for 1936 include \$2,787,073 assessment for school purposes only for cities. Assessments for school purposes only for other municipalities were not shown in the Ontario reports for 1935 and 1936.

<sup>8</sup> Cities only.

<sup>9</sup> Corporation income only.

<sup>10</sup> Local improvement districts not included.

<sup>11</sup> Complete totals not available.

<sup>12</sup> In interpreting these totals, footnotes to the constituent items should be noted.

**Bonded Indebtedness.**—Like other Canadian governing bodies the municipalities of the greater part of Canada borrowed rather freely during the boom period of 1900-12, and again during the nineteen-twenties. The bonded indebtedness of

Ontario municipalities rose from \$153,568,409 in 1913 to \$431,546,483 in 1936, while that of Quebec municipalities increased from \$173,720,141 in 1913 to \$513,113,001 in 1936, and a proportionate increase took place in other provinces. The recent growth in the bonded indebtedness of all classes of municipalities is shown by provinces in Table 39. The figures show that there was an increase in 1936 over 1935 in the provinces of Prince Edward Island, Nova Scotia, Quebec, Manitoba, Saskatchewan, and Alberta; the others showed a decrease. In Saskatchewan, net debenture debt is shown for all municipalities in 1919, while from 1920 the statistics represent gross debenture debt. In Alberta in the earlier years, figures represent principally net debenture debt but from 1929 gross debenture debt is shown. All other provinces give gross total debenture debt throughout.

### 39.—Total Bonded Indebtedness of All Classes of Municipalities, by Provinces, 1919-36.

Note.—Figures are for gross debenture debt unless otherwise indicated.

<sup>1</sup> Figures include Charlottetown for all years and for 1919-23 Summerside and Montague are also included; figures include Kensington for 1924-33; Montague for 1925-33; Summerside, Souris, Georgetown, and Alberton 1926-33; and Borden 1932-33. For later years the figures include all eight incorporated municipalities of the province. <sup>2</sup> Municipalities included cannot be enumerated for the years 1919-23; figures are for 3 cities, 18 towns, 2 villages, and 15 counties in 1924; 2 cities, 13 towns, 2 villages, and 15 counties in 1925; 3 cities, 18 towns, 1 village, and 15 counties in 1926; 3 cities, 23 towns, 4 villages, and 15 counties in 1927, 1928 and 1929; 3 cities, 19 towns, 2 villages, and 15 counties in 1930; and 8 cities, 20 towns, 2 villages, and 15 counties from 1931. <sup>3</sup> Statistics of school debt for villages and rural municipalities not included. <sup>4</sup> Footnotes on constituent items should be noted in interpreting these totals.

<sup>5</sup> Net debenture debt. <sup>6</sup> Includes deferred liabilities, not separable. <sup>7</sup> Includes schools.

<sup>8</sup> Revised since the publication of the 1938 Year Book.

## 40.—Principal Financial and Other Statistics of Canadian Cities and Towns with Populations of 10,000 or Over, 1936.

NOTE.—Population figures for Manitoba, Saskatchewan, and Alberta are Census of 1936.

## Section 4.—National Wealth and Income.

### Subsection 1.—National Wealth.

Notwithstanding the enormous statistical and economic difficulties inherent in any evaluation of the national wealth, the justification for such attempts lies in the importance of such information for an analysis of a nation's social and economic position. A general idea of the size and composition of the national wealth is essential for the intelligent consideration of many problems, both national and international, although, in view of the numerous elements of uncertainty in a calculation of this nature, the statistics must be regarded as indicative rather than strictly accurate; when carefully prepared they hold a very important place in a national statistical system.

There are several methods of computing national wealth, *i.e.*, the aggregate value of the public and private property within the nation apart from undeveloped natural resources. Perhaps the most familiar of these methods is that of working back to capital values through income tax returns, but this can be applied only in countries where small as well as large incomes are assessed for income tax. A second method is that of estimation from probate returns, the value of the estates of deceased persons being regarded as representative. A third is that of a complete census, based upon a canvass of the individual. A fourth method, namely, the so-called 'inventory' method, is often employed.\* The estimate of Canada's wealth herein presented is based on the inventory principle, *i.e.*, an attempt is made to secure for the nation an approximation of the businessman's inventory of

\* An explanation of method and of the background of early estimates of national wealth as applied to Canada will be found in the article "The Wealth of Canada and Other Nations" by R. H. Coats, Dominion Statistician, published in the Journal of the Canadian Bankers' Association, October, 1919.

his possessions. This method consists in totalling the amounts known from various sources to be invested in agriculture, manufacturing, dwellings, etc. It does not include the value of undeveloped natural resources but only natural wealth which has been appropriated. For instance, it includes the value of the machinery and other capital equipment used in coal mining but not the unmined coal; the boats used in fishing but not the fish in the sea; the power plants and equipment used in developing water power but not the waterfalls themselves. In the case of forest wealth partial exception is made by the inclusion of accessible raw materials. When making comparison between the different provinces it should be remembered that this method tends to understate the potential wealth of any section of the country which is rich in mines, fisheries, or water power for, while it is next to impossible to estimate what such resources are worth, in so far as they are known to exist and to be capable of profitable development under present conditions they undoubtedly have value.

Whatever method is used, difficulty arises when we try to reduce all the things which go to make up wealth (things which once created are not themselves subject to violent change) to a common denominator. Estimates of national wealth must always be expressed in terms of the national currency. Yet the purchasing power of the currency unit is always fluctuating and following 1929 increased at one point (February, 1933) by more than 50 p.c. in terms of wholesale prices. Even in 1930, the average index number of wholesale prices was down by nearly 10 p.c. from 1929, while in December of that year the average index number of wholesale prices was 19 p.c. lower than in the same month of 1929.

The effect of such drastic reductions in values is first felt by the commodities which are being currently produced and, through these, the dollar value of production is diminished; consequently the national income of a country where most people are producers is reduced. Ultimately, a persistent decline of this character affects the capital values of real estate, buildings, machinery, etc., and its influence is then felt in a reduction in the national wealth as stated in dollars.

The first official estimate of national wealth issued by the Dominion Bureau of Statistics was for 1921, being based on the census data of that year. The national wealth was then placed at \$22,195,000,000. Later estimates were \$25,673,000,000 for 1925 and \$27,668,000,000 for 1927. The estimates for 1921, 1925, and 1927 are not exactly comparable with those for 1929 and 1933 given below, but are sufficiently so for most purposes. The estimate for 1929 is \$31,276,000,000, and the 1933 estimate \$25,768,000,000. The former presents a picture at the peak of domestic prosperity, whereas that of 1933 reflects the writing down of values resulting from the depression. The 1933 estimate is the latest that has been published.

**Wealth of Canada by Items, 1929 and 1933.**—In the items showing the composition of the national wealth, as set out in Table 41, care has been taken to exclude duplication. In any consideration of the individual items it should be remembered that each item covers only the portion of wealth which is stated in the description attached thereto. For instance, the item "Fisheries" includes only capital invested in primary operations. Capital invested in fish-canning and -curing establishments is included with "Manufactures", though this also might be considered as part of the wealth connected with "Fisheries". Similarly, the items for "Manufactures" do not include lands and buildings in urban centres which are shown under the heading "Urban Real Property".\*

\* A fuller explanation of the composition of the separate items is contained in the bulletin "Canada's National Wealth", obtainable from the Dominion Statistician.

#### 41.—Estimate of the National Wealth of Canada, with Percentage and Per Capita Distribution of Component Items, 1929 and 1933.

NOTE.—For discussion of these items, see p. 871 of the 1933 Year Book and the bulletin referred to on p. 925.

<sup>1</sup> These averages are based on the estimates of population as given in Table 42, p. 927.

**Aggregate and Per Capita Wealth, by Provinces, 1929 and 1933.**—As regards the provincial distribution of wealth in 1933, Ontario ranked first with an estimated aggregate wealth of \$8,796,000,000 or 34.14 p.c. of the total; Quebec second with \$6,738,000,000 or 26.15 p.c.; Saskatchewan third with \$2,527,000,000 or 9.81 p.c.; and British Columbia fourth with \$2,431,000,000 or 9.43 p.c. of the whole.

While Ontario and Quebec led in absolute wealth, the western provinces came first in per capita wealth. British Columbia held first rank with a per capita wealth of \$3,414, Alberta second with \$2,721, and Saskatchewan third with \$2,711. Ontario

with a per capita wealth of \$2,468 was fourth, Quebec was fifth with \$2,269, and Manitoba sixth with \$2,201. The per capita wealth for the whole Dominion was estimated at \$2,413.

Further details, including figures for 1929, are shown in Table 42. In 1929 the provinces held the same relative places, both as regards aggregate and per capita wealth.

**42.—Provincial Distribution of the National Wealth of Canada, with Percentage and Per Capita Analyses, 1929 and 1933.**

*NOTE.*—Figures for 1921 and 1925 are given on pp. 849-850 of the 1927-28 Year Book, and for 1927 on p. 870 of the 1931 Year Book.

<sup>1</sup> As the statistics for Yukon are uncertain, the per capita estimate of wealth is not shown.  
<sup>2</sup> Includes the population of the Northwest Territories: 9,000 in 1929 and 10,000 in 1933, 0.09 p.c. in both cases.

**Analyses of Itemized Wealth, by Provinces, 1929 and 1933.**—In Table 39 on pp. 882-883 of the 1936 Year Book detailed statistics of the wealth of each province by leading items are given. This information is not repeated in this edition.

**Subsection 2.—National Income.**

The subject of the national income is dealt with at pp. 889-896 of the 1938 Year Book, under the following headings: definition of national income, approaches to the measurement of national income, and income tax statistics as a measure of national income. The statistics shown under the latter heading have been transferred to Subsection 3 of Sec. 1 of this Chapter, where they appear under the general heading of War tax revenue. The subject of national income as a whole, and the revision of the method of estimation, are still undergoing investigation by the Bureau, as outlined on p. 891 of the 1938 Year Book. Statistics for the years 1933-34, based upon the Survey of Production, were given at p. 866 of the 1937 Year Book. These are the latest figures published on the old basis.

### Subsection 3.—British and Foreign Capital Invested in Canada and Canadian Capital Invested Abroad.\*

Revised estimates of British and foreign investments in Canada and Canadian investments in other countries were issued in 1938 by the Internal Trade Branch of the Dominion Bureau of Statistics. Because of the great variety of forms these investments take and the difficulties inherent in arriving at satisfactory valuations, along with the continual changes in ownership in some cases, these estimates should be considered as approximations rather than exact representations. They are, however, indicative of the general proportions of the investments involved. In using these statistics it should be recognized that changes in value from one year to another do not always reflect actual capital movements between Canada and other countries as there are important changes in the value of 'equity' investments arising from internal operations, such as reinvested profits, for instance, which are quite independent of external factors.

The present investigation has been carried back as far as 1926 and revised statistics of international investments are shown for the years 1926 and 1929 to 1937 in Tables 43 and 44. Very marked changes have taken place in Canada's international indebtedness during the present century. The industrial expansion in Canada in the years preceding the Great War was closely related to the heavy inflow of capital from Great Britain. In 1914 the value of British investments in Canada was not much different from the value of British investments as shown in the accompanying tables in recent years, although slightly higher than in 1926. The rapid growth in United States investments in Canada took place after 1914. Part of this increase in the investments of the United States in Canada came after 1926 and is reflected in Table 43 which shows a change in these investments between 1926 and 1930 of from \$3,161,200,000 to \$4,298,400,000. This influx of capital followed two contrasting channels. A large part of the capital was raised through the sale of new issues in New York but the capital coming to Canada through the channel of direct investment was also especially heavy and this capital invested directly in Canada has given United States investments in Canada a particular character. Since 1930 there has been a reduction in the value of United States investments in Canada, as a result of the redemption of Canadian securities owned in the United States, changes in the values of equity investments in Canada, and other factors.

In Table 45 there is shown in detail the distribution in 1937 of British and foreign capital invested in Canada. The indebtedness of Canadian governments abroad amounted to \$1,698,000,000 of which \$514,200,000 represented government securities held by British investors and \$1,180,600,000 government securities held by residents of the United States. The total non-resident investments in Canadian railways, \$1,632,900,000, was about the same as the total government securities held abroad, but the British investments predominated in this group, being \$1,065,600,000 compared with a United States investment of \$538,500,000. In most other classes of investment the amounts owned in the United States were larger than the British although the latter were generally substantial.

In appraising Canada's international indebtedness, consideration must also be given to Canadian investments abroad. These have grown from \$1,352,800,000

\* Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. The subject is treated more fully in the bulletins "British and Foreign Capital Invested in Canada and Canadian Capital Invested Abroad, 1926-36", "Canadian Balance of International Payments—A Study of Methods and Results" and recent reports on direct investments, obtainable from the Dominion Statistician. For a list of the publications of this Branch, see Chapter XXIX.

in 1926 to \$1,757,900,000 in 1937. The principal growth was in Canadian portfolio holdings of United States securities although considerable amounts of the securities of Latin American and European governments were also acquired in the earlier part of the period. The increase in the holdings of these miscellaneous investments in other countries has been greater than the increase in total Canadian investments abroad, as there has been a very marked reduction in the net assets of the Canadian banks in other countries during this period.

For 1937, Canadian capital in other countries is estimated at \$1,757,900,000. The largest part of this, about \$1,097,600,000, was invested in the United States and was principally in the form of direct investments in railways and branch and subsidiary plants and in portfolio investments in the stocks and bonds of United States governments and corporations. Investments in other countries include a miscellaneous item of \$382,000,000 representing an estimate of Canadian holdings of other foreign securities such as the bonds of Latin American and European governments. Direct investments in other countries, largely in the British West Indies and Latin America, amounted to \$169,600,000.

Of further interest, in considering the relative importance of Canada's international indebtedness in the nation's economic life, is the place Canadian capital occupies in the total amount of capital invested in Canada. It is estimated that the amount of capital invested in Canada is about \$18,000,000,000. This sum includes the bonded indebtedness of Dominion, provincial, and municipal governments, investments in railways, all manufacturing concerns, mines and metal industries, public utilities, trading establishments, finance, insurance, land, and mortgages. It does not include private capital in domestic enterprises such as farms, homes, etc. Of this sum, it is estimated that 62 p.c., or over \$11,000,000,000, is owned in Canada; about 22 p.c., or \$3,932,400,000, in the United States; 15 p.c., or \$2,684,800,000, in the United Kingdom; and less than 1 p.c., or \$147,800,000, in other countries.

**Investments of Canadian Insurance Companies Operating Abroad.**—An important change in the revised figures shown in Tables 43 to 46 is the omission of an item previously included, *viz.*, "Investments of Canadian Insurance Companies Operating in Other Countries" These insurance investments, so-called, are not investments of quite the same character as the other items. The large assets in other countries held by Canadian insurance branches in those countries have against them, besides ordinary liabilities, the fiduciary interest of the policyholders. In fact when the prospective claims of policyholders are considered it appears that, on balance, there is a small net investment of these branches in Canada rather than a Canadian investment abroad. This is possible because the assets underlying the reserve funds need not all be held abroad. On the other hand, the fact that assets can be transferred between countries gives an importance to them as a factor in capital movements. Again, British and foreign securities held by Canadian companies in Canada have already been included as Canadian investments abroad. On account of the ambiguity of this item and the fact that it has already been included in another form, it has not been repeated in the tables.

With regard to British and foreign insurance investments in Canada, since there exist net assets in Canada over all liabilities including reserves against future claims of Canadian policyholders the residual amount is shown as a bona fide investment in Canada in Tables 43 and 45.

#### 43.—Estimated British and Foreign Capital Invested in Canada, Classified According to Main Types, as at Dec. 31, 1926, and 1929-37.

NOTE.—Net equities of policyholders, etc., outside of Canada invested in Canada through Canadian insurance companies operating abroad are not shown in this table for the reason given in the text on p. 929. The omission does not materially affect the totals. Statistics for 1927-28 are shown at p. 893 of the 1938 Year Book.

## CHAPTER XXII.—CURRENCY AND BANKING; MISCELLANEOUS COMMERCIAL FINANCE.

In this chapter are assembled the statistics regarding financial institutions and transactions, other than those pertaining to insurance which are dealt with separately in Chapter XXIII. The important subject of currency and banking is treated in Part I of the chapter, while trust and loan companies, sales of Canadian bonds, corporation dividends, and foreign exchange, constitute sections of the miscellaneous commercial finance covered in Part II.

### PART I.—CURRENCY AND BANKING.

#### Section 1.—Historical Sketch.

At pp. 900-905, inclusive, of the 1938 Year Book there appears a historical sketch of currency and banking in Canada which is not repeated in this edition. Certain features of a central banking system were there traced which finally led up to the establishment of the Bank of Canada. In chronological order these were:—

1.—*Central Note Issue*, permanently established with the issue of Dominion notes under legislation of 1868.

2.—*The Canadian Bankers' Association*, established in 1900, and designed to effect greater co-operation among the banks in the issue of notes, in credit control, and in various aspects of bank activities.

3.—*The Central Gold Reserves*, established by the Bank Act of 1913.

4.—*Re-discount Facilities*, although originated as a War measure by the Finance Act of 1914, were made a permanent feature of the system by the Finance Act of 1923, which empowered the Minister of Finance to issue Dominion notes to the banks on the deposit by them of approved securities. This legislation provided the banks with a means of increasing their legal tender cash reserves at will.

#### Section 2.—The Bank of Canada.

##### Subsection 1.—The Bank of Canada Act and its Amendments.

C. 43 of the Statutes of 1934, "An Act to incorporate the Bank of Canada", provided for the establishment of a central bank in Canada. The capital of the Bank was originally \$5,000,000, divided into shares of \$50 par value. These shares were offered for public subscription by the Minister of Finance on Sept. 17, 1934, and were largely oversubscribed. The maximum allotment to any one individual or corporation was 15 shares. Shares of the Bank could be held only by British subjects ordinarily resident in Canada, or by corporations controlled by British subjects ordinarily resident in Canada. The maximum holding permitted one person was 50 shares. The Bank commenced business on Mar. 11, 1935.

By an amendment to the Act, passed at the 1936 session of Parliament, the capitalization of the Bank was increased to \$10,100,000 by the sale of \$5,100,000 Class "B" shares to the Minister of Finance; the original shareholders were designated Class "A"

The Bank of Canada Act was further amended in 1938 (c. 42 of the Statutes of 1938). By this legislation the capital of the Bank was reduced from \$10,100,000 to \$5,000,000 divided into 100,000 shares of the par value of \$50 each to be exchanged for the Class "B" shares held by the Minister of Finance which were to be cancelled by the Bank of Canada. All "A" shares, held by the public, were purchased for the sum of \$59.20 each, plus accrued dividends, and these certificates were also cancelled. This legislation, therefore, brought the Bank of Canada under complete government ownership. Due to changes in constitution and ownership, adjustments in the method of appointing directors as well as in other directions were made.

The Bank is authorized to pay cumulative dividends of 4½ p.c. per annum from its profits after making such provision as the Board thinks proper for bad and doubt-

ful debts, depreciation in assets, pension funds, and all such matters as are properly provided for by banks. The remainder of the profits will be paid into the Consolidated Revenue Fund of Canada and to the Rest Fund of the Bank in specified proportions until the Rest Fund is equal to the paid-up capital, when all the remaining profits will be paid into the Consolidated Revenue Fund.

The Bank may buy and sell securities of the Dominion and the provinces without restriction if of a maturity not exceeding two years, and in limited amounts if of longer maturity: short-term securities of the Dominion or provinces may be re-discounted. It may also buy and sell short-term securities of British Dominions, the United States, or France without restriction, if maturing within six months, and such securities having a maturity exceeding six months in limited amounts. The Bank may buy and sell certain classes of commercial paper of limited currency, and, if endorsed by a chartered bank, may re-discount such commercial paper. Advances for six-month periods may be made to chartered banks, Quebec Savings Banks, the Dominion, or any province against certain classes of collateral, and advances of specified duration may be made to the Dominion or any province in amounts not exceeding a fixed proportion of such government's revenue. The Bank may accept from the Dominion or Provincial Governments or from any chartered bank or any bank incorporated under the Quebec Savings Bank's Act, deposits which shall not bear interest. The Bank may buy and sell gold, silver, nickel, and bronze coin, and gold and silver bullion, and may deal in foreign exchange.

The provisions regarding the note issue of the Bank of Canada are dealt with on p. 938.

The Bank of Canada must maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. The reserve, in addition to gold, may include silver bullion, balances in pounds sterling in the Bank of England, in United States dollars in the Federal Reserve Bank of New York, and in gold currencies in central banks in gold standard countries or in the Bank for International Settlements; treasury bills of the United Kingdom or the United States of America having a maturity not exceeding three months; and bills of exchange having a maturity not exceeding 90 days, payable in London or New York, or in a gold standard country, less any liabilities of the Bank payable in the currency of the United Kingdom, the United States of America, or a gold standard country.

The chartered banks are required to maintain a reserve of not less than 5 p.c. of their deposit liabilities payable in Canadian dollars in the form of deposits with and notes of the Bank of Canada.

The Bank acts as the fiscal agent of the Dominion of Canada without charge and may, by agreement, act as banker or fiscal agent of any province. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The head office of the Bank is at Ottawa, and it has an agency in each province, namely, at Charlottetown, Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Calgary, and Vancouver.

The Governor of the Bank is its chief executive officer and Chairman of the Board of Directors, and he is assisted by a Deputy Governor and an Assistant Deputy Governor. The first appointments were made by the Government. Subsequent appointments are to be made by the Board of Directors subject to the approval of the Governor in Council.

At the first meeting of the shareholders on Jan. 23, 1935, seven directors were elected by the shareholders for terms to run as follows: one until the third annual general meeting (1938), two until the fourth (1939), two until the fifth (1940), and two until the sixth annual general meeting (1941). Directors are now appointed

by the Minister of Finance with the approval of the Governor in Council for terms of three years. There are now eleven directors. Former directors continued in office when the Government took over the management of the Bank. In the transaction of the business of the Bank each director has one vote.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor, and one member of the Board, which must meet once a week. This Committee has the same powers as the Board but every decision is submitted to the Board of Directors at its next meeting. The Board must meet at least four times a year. The Deputy Minister of Finance is an *ex officio* member of the Board of Directors and of the Executive Committee, but is without a vote.

The Governor, or in his absence the Deputy Governor only, has the power to veto any action or decision of the Board of Directors or the Executive Committee, subject to confirmation or disallowance by the Governor in Council.

### Subsection 2.—The Bank of Canada and Its Relationship to the Canadian Financial System.

An article under this title is given at pp. 881-885 of the 1937 edition of the Year Book. It deals with such subjects as the functions of the Bank, its control and regulation of credit and currency, the mechanism by which such control is exercised, the expansion and contraction of credit, the mitigation of general economic fluctuations, the control of exchange operations, the advisory function of the Bank, and its duties as the Government's banker.

### Subsection 3.—Bank of Canada Operations.

The operations of the Bank of Canada, as shown by the liabilities and assets statement as at Mar. 13, 1935, and Dec. 31, 1936-38, are shown in Table 1.

<sup>1</sup> From the Bank's Annual Statement.

The chart given below showing Bank of Canada liabilities and assets covering the short period since September, 1936, illustrates the relationship between the central bank's balance sheet and chartered bank cash reserves. The expansion of Bank of Canada liabilities and assets has provided for increased Bank of Canada notes in active circulation, as the chartered bank-note issue is limited and is gradually being retired under Bank Act regulations, and has somewhat enlarged the cash reserves of the chartered banks. The principal change in Bank of Canada assets since September, 1936, has been the rise in investments, variations in which have been due in part to seasonal variations in cash reserves and active note circulation.

Reproduced from the Bank of Canada's "Statistical Summary" March, 1939.

## Section 3.—Currency.

## Subsection 1.—Canadian Coinage.

The present standard of Canada is gold of 900 millesimal fineness (23·22 grains equal to one dollar). Under the Uniform Currency Act of 1871, gold coin has been authorized but only very limited issues were ever made. The British sovereign and half sovereign, and United States eagle, half eagle, and double eagle are legal tender. Subsidiary coin consists of 50, 25, and 10 cent silver pieces,\* 800 fine (reduced from 925 fine in 1920). Such subsidiary silver coin is legal tender to the amount of ten dollars. The 5-cent piece (now made of nickel) is legal tender up to five dollars and the 1-cent bronze coin up to twenty-five cents. There is no provision for the redemption of subsidiary coin. Table 2 gives statistics of Canadian coinage, and Table 3 shows the coins in circulation at the end of each year from 1926 to 1938.

\* The Currency Act of 1910 made provision for a silver dollar and a 5-cent silver coin. The former was not coined until 1935, when a limited issue was made as a jubilee coin. The 5-cent silver coin was coined freely until 1921. It still has limited legal tender but has been replaced in the coinage by the 5-cent nickel piece.

<sup>1</sup> Nickel coins were first issued in 1922.

**The Royal Canadian Mint.** The Ottawa Mint was established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan. 2, 1908. By 21-22 Geo. V, c. 48, it was constituted a branch of the Department of Finance, and by the Proclamation of Nov. 14, 1931, issued under Sec. 3 of that Act, it has, since Dec. 1, 1931, operated as the Royal Canadian Mint. At first the British North American provinces, and later the Dominion of Canada, obtained their coins from the Royal Mint in London or from The Mint, Birmingham, Ltd., and in its earlier years the operations of the Mint in Canada were confined to the production of gold, silver, and bronze coins for domestic circulation, of British sovereigns, and of small coins struck under contract for Newfoundland and Jamaica. Previous to 1914 small quantities of gold bullion were refined, but during the War the Mint came to the assistance of the British Government by establishing a refinery in which nearly twenty million ounces of South African gold were treated on account of the Bank of England, and the subsequent great development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Gold coins have not been struck since 1919, most of the fine gold produced from the rough shipments from the mines being delivered to the Department of Finance (since Mar. 11, 1935, the Bank of Canada has acted as agent for the Government) in the form of bars of approximately 400 fine oz. each, the rest being sold in a convenient form to manufacturers. The fine silver extracted from the rough gold, when not required for coinage, is sold in New York or disposed of to local manufacturing firms.

**Subsection 2.—Dominion and Bank of Canada Notes.**

**Dominion Notes.**—It is explained in the historical outline referred to at the beginning of this chapter that Dominion notes became established in 1868. The legislation by which the issue was expanded with the growth of the country is given in a footnote on p. 952 of the 1934-35 Year Book.

Prior to the taking over of the note issue by the Bank of Canada when it opened on Mar. 11, 1935, Dominion notes were issued under any one of three statutory authorities: (1) the Dominion Notes Act (Statutes of 1934, c. 34), which required a gold reserve of 25 p.c. to be held against the first \$120,000,000 of notes issued and full gold coverage against any issue in excess of \$120,000,000; (2) the Finance Act (R.S.C. 1927, c. 70), Part II of which authorized the Minister of Finance to advance to any chartered bank or to the savings banks of Quebec, Dominion notes to any amount on the pledge of approved securities deposited with the Minister—these advances bore interest and no gold coverage was required to be held on Dominion notes so advanced; (3) c. 4 of the Statutes of 1915, authorizing the Government to issue Dominion notes to the amount of \$26,000,000 without gold coverage, but partly covered by the deposit of \$16,000,000 of railway securities guaranteed by the Dominion Government.

The Dominion note issue was therefore partly gold-backed and partly fiduciary. Dominion notes were legal tender and, in normal times when Canada was on the gold standard, they were redeemable in gold.

Dominion notes were of two types, those for the purpose of general circulation, and 'special' notes. The latter were used only by the banks for inter-bank transactions and clearings, or for cash reserves or deposit in the Central Gold Reserves. They were mainly of \$5,000 and \$50,000 denominations. Dominion notes for the purpose of general circulation were of the denominations of 25 cents, \$1, \$2, \$4, \$5, \$50, \$500, and \$1,000, although for a considerable time no \$4 or \$50 notes had been issued. Since the minimum denomination for chartered bank notes was set at \$5, Dominion notes of lower denominations naturally were largely in circulation among the general public, but there was nothing to prevent any of these Dominion notes from being included in the reserves of the banks, and it was provided that at least 40 p.c. of the banks' reserves were to consist of Dominion notes.

**Bank of Canada Notes.**—The Bank of Canada, when it commenced operations, assumed the liability for Dominion notes outstanding, which were replaced in public circulation, and partly replaced as cash reserves, by its own legal-tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50, \$100, and \$1,000. Deposits of chartered banks at the Bank of Canada completed the replacement of Dominion notes as cash reserves.

The chartered banks are required under the Bank Act of 1934 to reduce the issue of their own bank notes gradually during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes are thus replacing chartered bank notes as the issue of the latter is reduced.

In Table 5 are shown the denominations of Dominion or Bank of Canada notes in circulation in 1926, 1929, 1932, and in the three latest years. In the denominations under \$5, which have, for many years, been used for general circulation, there has been little change. In the denominations from \$5 to \$1,000, where Bank of Canada notes have partially replaced chartered bank notes or Dominion notes, there has been a large increase. On the other hand, the special Dominion notes in denominations from \$1,000 to \$50,000 which were used almost exclusively for inter-bank transactions or bank reserves, are no longer in use.

Subsection 3.—Chartered Bank Notes.

By reference to the historical outline referred to at the beginning of this chapter, the developments may be traced by which bank notes became the chief circulating medium in Canada in the period preceding the establishment of the Bank of Canada. The main steps of this development which remained as permanent features of the system are assembled and emphasized here. By the Bank Act of 1870 (later consolidated with the general Bank Act of 1871), the note issue of a bank was not to exceed its paid-up capital, no bank notes were to be issued under \$4 in value (later changed to \$5 and multiples thereof), and, while the banks were allowed to use their own discretion regarding the amount of their cash reserves, it was stipulated that at least one-third (later increased to 40 p.c.) of such cash reserves as they chose to carry should consist of Dominion notes. In the revision of 1880, a note-holder was definitely recognized as a preferred creditor. The Bank Act of 1890 provided for the Bank Note Circulation Redemption Fund, made up by each bank depositing with the Minister of Finance an amount equal to 5 p.c. of its note circulation. As a result of the operation of this fund and of making notes a prior lien against the assets of failed banks, no bank-note holder in Canada has suffered a loss since 1881. In 1908, after the financial crisis of 1907, provision was made for the banks to issue, during the crop-moving season, October to January, inclusive (later extended to September to February, inclusive), an excess circulation up to 15 p.c. of their combined capital and 'rest' or reserve funds, such excess to be taxed at a rate not exceeding 5 p.c. per annum. The revision of the Bank Act in 1913 provided for the establishment of Central Gold Reserves in which banks might deposit gold or Dominion notes and issue additional notes of their own there-against. The Finance Act (c. 3) of 1914, gave the Minister of Finance authority to issue Dominion notes to the banks against approved securities deposited with him. Originally passed as a War measure, this

was made a permanent feature of the system by the Finance Act (c. 48) of 1923, and provided the banks with the means of further expanding their note issue by the deposit of the Dominion notes, so obtained, in the Central Gold Reserves.

Bank notes, although forming the chief circulating medium in the hands of the public, were a fiduciary issue; they were not legal tender but were convertible into Dominion notes which were legal tender.

The provisions regarding bank notes were materially changed with the establishment of the Bank of Canada under the Bank Act (c. 24) of 1934. The authority both for seasonal expansion and for additional issue secured by deposit in the Central Gold Reserves was then terminated. Provision was made for a gradual reduction in bank-note circulation over a period of years as explained on p. 938. As a result of these changes, current data on bank-note circulation are not comparable with those of earlier years. However, statistics of total notes in the hands of the general public are comparable. This public circulation includes chartered bank notes together with Dominion notes and Bank of Canada notes, exclusive of those held by the banks as reserves. Statistics on this basis are shown in Table 6.

6.—Note Circulation in the Hands of the Public, 1926-38.

## Section 4.—Monetary Reserves.

### Subsection 1.—Bank of Canada Reserves.

In the 1936 edition of the Year Book, the composition of Canadian Gold Reserves held by the Government is presented for the years 1905 to 1934, in Table 3, p. 395. Since March, 1935, the gold reserves have been held by the Bank of Canada. By authority of the Exchange Fund Act (c. 60, 1935), effective in July, 1935, they are to be valued at the prevailing current market price of gold. The effect of the revaluation as from the above date is shown in the chart on p. 935. The new data are now to be found under the item "Reserves" on the "Assets" section of Table 1, p. 934.

### Subsection 2.—Chartered Bank Canadian Cash Reserves.

**Before the Establishment of the Bank of Canada.**—Up to March, 1935, legal tender cash reserves in Canada were made up partly of Dominion notes (see pp. 937-938); and partly of gold coin and bullion, and subsidiary coin, including these forms of cash held by the banks themselves; and as deposits in the Central

**Gold Reserves.** In so far as these reserves were in actual gold or were in Dominion notes backed by gold, they were subject to the expanding or contracting influences of monetary gold imports or exports arising from Canada's balance of international payments, so long as Canada was on the gold standard.

**Since the Establishment of the Bank of Canada.**—When the Bank of Canada was established, the chartered banks turned over their reserves of gold in Canada and Dominion notes to the new bank in exchange for deposits with and notes of the Bank of Canada. It was provided that henceforth the chartered banks were to carry reserves in these forms amounting to at least 5 p.c. of their deposit liabilities in Canada. Since that time, therefore, the gold reserves against currency and bank credit have been in the custody of the central bank.

The cash reserves shown in Table 7, include, prior to Mar. 11, 1935, the gold and coin and Dominion notes held by the banks in Canada and the deposits in the Central Gold Reserves not ear-marked against the issue of bank notes, and, since the above date, notes of and deposits with the Bank of Canada.

## Section 5.—Commercial Banking.

### Subsection 1.—Historical.

Since one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in the one historical sketch which is given on pp. 901-905 of the 1938 Year Book. However, the function of note issue is no longer as important as it was. Latterly, the services of the chartered banks in gathering deposits from innumerable sources have emphasized the importance of deposit banking by which the savings of the people are put to immediate productive and commercial use; with the development of commercial banking, other necessary commercial banking facilities have been given more importance. Included among these is the mechanism of bills of exchange by which foreign trade is financed. The principal features of this development of commercial banking facilities in the evolution of the Canadian banking system may be summarized as follows: (1) its origin, closely related to the Montreal produce and export trade, and to the commerce of Halifax and Saint John; (2) the development of the branch bank system in order to meet the demands of a rapidly moving frontier of settlement; (3) the adaptation to the requirements of the grain and cattle trade of the west; and (4) the consolidation during later years of the features which tended towards its early success. The development of a stable system has been accompanied by fail-

ures, particularly marked about the middle of the 19th century, but progress has nevertheless been steady, based on sound principles, and adapted as closely as could be to the particular needs of the country.

The branch bank is perhaps the most distinctive feature of the Canadian system as it exists to-day, and for a country such as Canada, vast in area and with a small population, the plan has proved a good one. A result of the growth of branch banks was the development of a partially centralized system—centralized as to banks, of which there are now ten, rather than as to districts as in the partially centralized system of the United States. There were 28 chartered banks in existence at Confederation. The elimination of weaker banks or their amalgamation with more stable institutions has been a progressive move towards greater security and confidence. The banks at Confederation were as follows:—

ONTARIO AND QUEBEC.	
Bank of Montreal.	Royal Canadian Bank.
Quebec Bank.	Union Bank of Lower Canada.
Commercial Bank of Canada.	Mechanics' Bank.
City Bank.	Canadian Bank of Commerce.
Gore Bank.	
Bank of British North America.	NOVA SCOTIA.
Banque du Peuple.	Bank of Yarmouth.
Niagara District Bank.	Merchants' Bank of Halifax.
Molson's Bank.	People's Bank of Halifax.
Bank of Toronto.	Union Bank of Halifax.
Ontario Bank.	Bank of Nova Scotia.
Eastern Townships Bank.	
Banque Nationale.	NEW BRUNSWICK.
Banque Jacques-Cartier.	Bank of New Brunswick.
Merchants' Bank of Canada.	Commercial Bank of New Brunswick.
	St. Stephen's Bank.
	People's Bank of New Brunswick.

Table 8 shows the amalgamations since 1867, while a table at pp. 894-895 of the 1937 Year Book shows the insolvencies since Confederation; there have been no further changes reported and, therefore, the table is not reprinted here.

### 8.—Bank Absorptions in Canada since 1867.

NOTE.—The purchasing banks named in that part of the table on p. 943 are no longer in business.

<sup>1</sup> Dates later than 1900 are those of the Orders in Council authorizing the absorptions.

## Subsection 2.—Combined Statistics of Chartered Banks.

In Table 9 are given summary statistics of Canadian banking business since Confederation. In order to afford a clear view of the nature of banking transactions in Canada, bank liabilities have been classified in two main groups: liabilities to shareholders and liabilities to the public. Only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are divided into four groups, 'other assets' being included in the total. As of interest to students of banking practice, the relative rates of increase of capital and reserve funds may be noted, also the great increase in the proportion of liabilities to the public to total liabilities, and the gradually increasing percentage of liabilities to the public to total assets. The accompanying chart of ownership division of total assets is of interest in this connection. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times. Holdings of Dominion and Provincial Government and municipal securities were relatively insignificant prior to the Great War.

### 9.—Historical Summary showing Development of the Canadian

Notiz.—These statistics are yearly averages computed from the twelve monthly returns. Dashes  
 Figures for intermediate years not shown between 1870

<sup>†</sup> Supplied by the Bank of Canada.

**Classification of Deposits and Loans.**—As a result of an amendment to the Bank Act in 1934, deposits and loans are required to be classified according to size of the deposit, or purpose of the loan, each year. The following figures cover deposits and loans in Canada only.

**13.—Classification of Deposits, According to Size, in Chartered Banks in Canada, as at Oct. 31, 1936-38.**

NOTE.—For figures for 1934, see the 1937 Year Book, p. 902; for 1935 figures, the 1938 Year Book, p. 922.

**Clearing-House Transactions.**—In advanced industrial societies money is only 'the small change of commerce'. The great bulk of monetary transfers, particularly in the case of the larger transactions, is made through the banks. Thus it has been estimated that, in the United States in 1917, about 6 p.c. of the business transactions of the country were financed by the use of money and the remaining 94 p.c. by the use of cheques. Accordingly, if we knew the aggregate amount of the cheques paid through the banks and charged to accounts, we should have an almost complete record of the volume of business transacted, and thus of the business activity of the country.

Statistics of this character were at first secured through the operation of the clearing houses—places where the representatives of all the banks met daily in the leading cities and presented for payment the notes of other banks and the cheques drawn upon other banks that had been paid in to their institutions in the regular course of business. In Canada, the first clearing houses to be established were those of Halifax (1887), Montreal (1889), Toronto (1891), Hamilton (1891), and Winnipeg (1893), and the number has subsequently increased to 32.

For the purpose of the Central Clearing Settlement, each bank maintains in its account with the Bank of Canada, Ottawa, a balance (in excess of whatever deposit is maintained as part of the 5 p.c. reserve against deposit liabilities in Canada required by statute) deemed sufficient to settle its clearing obligations. Montreal, Ottawa, Toronto, Winnipeg, and Vancouver are settlement points for the clearing houses in their respective zones. The debit or credit balances of the banks at the specified points are daily communicated by the clearing-house manager, and confirmed by the respective bank, to the local agent of the Bank of Canada (to the Bank of Canada in the case of Ottawa) for transmission to the Bank of Canada at Ottawa by telephone or telegraph, which bank on the same day debits or credits, as the case may be, the account of the respective bank maintained with the Bank of Canada. By this means practically all the banking transactions of the country are adjusted daily in Ottawa in the accounts maintained by the banks with the Bank of Canada.

Table 15 shows for the years 1934-38 the total volume of clearings in the clearing houses of Canada. These figures, it may be added, represent not only actual city clearings but exchanges between numerous rural branches in each district.

**15.—Amounts of Exchanges of the Clearing Houses of Chartered Banks in Canada, calendar years 1934-38.**

NOTE.—For the years 1919-23, see p. 806 of the 1924 Year Book; for 1924-28, p. 359 of the 1929 Year Book; for 1929-32, p. 911 of the 1933 Year Book; and for 1933, p. 988 of the 1934-35 Year Book.

**Bank Debits.**—As the number of separate banks has in recent years been steadily diminishing through amalgamations (see pp. 942-943), there being only 10 in December, 1938,\* as compared with 18 in 1923, inter-bank transactions are a steadily decreasing proportion of total business transacted, and bank clearings have ceased to be a satisfactory measure of general business. The Canadian Bankers' Association agreed to secure from January, 1924, the monthly aggregate figures of the amount of cheques charged to accounts at all banking offices situated in the clearing-house centres of Canada, and monthly and annual figures of cheques charged to accounts (bank debits) have been published since that time by the Dominion Bureau of Statistics. Further, in order that an estimate might be made of the proportion of banking transactions outside the clearing-house cities to the total, the Canadian Bankers' Association secured for the month of January, 1935, the grand total of all cheques charged to accounts at all branch banks throughout the Dominion. The results were published in the Bureau's Monthly Review of Bank Debits for February, 1935, and showed that in January, 1935, the aggregate of transactions outside the clearing-house cities was 12½ p.c. of the grand total in the clearing-house cities. The corresponding figures in the five economic areas were as follows: Maritime Provinces 104.2 p.c.; Quebec 6.9 p.c.; Ontario 13.5 p.c.; Prairie Provinces 8.4 p.c.; British Columbia 16.7 p.c. Only in the Maritime Provinces did the total of bank debits in clearing-house cities appear to represent inadequately the grand total of business transactions.

\* Barclays Bank, established in 1929, was the latest addition to the commercial chartered banks in Canada; the number has remained at 10 since 1931.

**Subsection 3.—Statistics of Individual Chartered Banks.**

**Assets and Liabilities.**—Tables 17 and 18 show, respectively, the principal and total assets and liabilities of the individual banks for the years 1929 and 1935-38, the figures being averages computed from the monthly bank returns. The statistics in column 2 of Table 17 represent, for the years 1935 (when the Bank of Canada was established) to 1938, the total of Bank of Canada notes in the possession of the chartered banks together with their deposits at the Bank of Canada. For 1929 (before the establishment of the Bank of Canada) they represent the totals of the banks' holdings of gold and coin in Canada, Dominion notes, and that part of their deposits in the Central Gold Reserves not required against their note issues.

## 17.—Principal and Total Assets of Individual Chartered Banks, 1929 and 1935-38.

Note.—The statistics in this table are averages computed from the twelve monthly returns in each year.

<sup>1</sup> Absorbed by the Imperial Bank of Canada, May 1, 1931. <sup>2</sup> Four-month averages. Bank commenced business in September, 1929. The grand totals for 1929 are, however, twelve-month averages for all banks.

**Earnings of Canadian Banks.**—The chartered banks of Canada are for the most part Dominion-wide institutions, doing business in all parts of the country. Their earnings, therefore, reflect with very considerable faithfulness the fluctuations of general business.

**19.—Net Profits of Canadian Banks and Rates of Dividend Paid, for their business years ended 1933-38.**

*NOTE.*—These figures are not strictly comparable owing to variations from year to year in the practices of individual banks and between banks. With the exception of La Banque Provinciale du Canada, the profits for 1936, 1937, and 1938 are shown after deducting Dominion and Provincial Government taxes.

**Branches of Chartered Banks.**—During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same, 36 in 1881 and 1891, and 34 in 1901, but during the present century there has been in banking, as in industry, an era of amalgamations, the number of banks having dropped to 25 in 1913 and to 10 in 1931. That this has been far from involving a curtailment of banking facilities is seen in Table 9, which shows the development of the banking business since 1867, and in Table 20, which compares the number of branch banks existing in Canada at different periods, and shows a growth from 123 at Confederation to 4,083, inclusive of sub-agencies, at Dec. 31, 1930. Since then, owing to the shrinkage in commercial activities as a result of the depression, some unprofitable branches have been closed and the total has declined to 3,332, exclusive of 144 branches and agencies in other countries, as at Dec. 31, 1938.

20.—Numbers of Branches of Chartered Banks in Canada, by Provinces, as at Dec. 31, 1868, 1902, 1905, 1920, 1926, 1930, 1935-36.

### Section 6.—Government and Other Savings Banks.

In a comparatively new country where capital is relatively scarce, it is natural that the banks that finance the business institutions should also absorb the bulk of the people's savings for use in promoting the business of the country. Thus, in Canada the great bulk of the current savings of the people is found in the savings or notice deposits of the Canadian chartered banks, the annual average figures of which are given for recent years in Table 9 of this chapter, the 1938 average being \$1,630,481,857. Further, the current savings of the Canadian people are going very largely into the purchase of life insurance, the total premiums paid in the single year 1937 aggregating \$205,686,107. In comparison with the enormous figures of notice deposits in chartered banks and with total insurance in force, the deposits in the special savings banks are comparatively small, but are none the less significant.

There are three distinct types of savings bank in Canada at the present time, in addition to the savings departments of the chartered banks and of trust and loan companies. First, there is the Post Office Savings Bank, the deposits in which are a direct obligation of the Dominion Government. Secondly, there are Provincial Government savings banking institutions in Ontario and in Alberta, where the depositor becomes a direct creditor of the province. Thirdly, there are, in the province of Quebec, two important savings banks, the Montreal City and District Savings Bank and the Caisse d'Economie de Notre-Dame de Québec, established under Dominion legislation and making monthly reports to the Department of Finance.

**Dominion Government Savings Banks.**—Prior to 1929 there were two classes of Dominion Government savings bank in Canada, the Post Office Savings Bank under the Post Office Department, and the Dominion Government Savings Bank attached to the Department of Finance. The former was established under the Post Office Act of 1867 (31 Vict., c. 10) in order to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the Dominion to every depositor for

repayment of all money deposited by him together with the interest due thereon' Branches of the Government Savings Bank proper, under the authority of the Finance Department, were established in the leading cities of Canada under the management of the Assistant Receivers General and in other places, in the provinces of Nova Scotia and New Brunswick, under managers appointed by the Governor in Council. The Dominion Government Savings Bank was amalgamated with the Post Office Savings Bank in 1929. Historical statistics for both systems will be found in Table 23 and more detailed figures covering the latest six years in Table 24.

### 23.—Deposits with Dominion Government Savings Banks,<sup>1</sup> representative years 1868-1900 and 1905-38, inclusive.

NOTE.—Figures for intermediate years will be found on p. 833 of the 1926 Year Book.

**Provincial Government Savings Banks.**—Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta, while a similar institution was in operation in Manitoba from 1924 to 1932 when the depositors' accounts were taken over by the chartered banks.

*Ontario.*—In the session of 1921, the Legislature of Ontario authorized the establishment of the Province of Ontario Savings Office, and in March, 1922, the first branches were opened. Interest at the rate of 1 and 1½ p.c. per annum compounded half-yearly is paid on accounts. The deposits are repayable on demand. Total deposits on Jan. 31, 1939, were over \$41,900,000, and the number of depositors at that date was over 114,000. Twenty-six branches are in operation throughout the province.

*Alberta.*—In Alberta the Provincial Treasury receives savings deposits and issues demand savings certificates bearing interest at 2 p.c., or term certificates for one, two, or three years, in denominations of \$25 and upwards, bearing interest at 2 p.c. for one year and 2½ p.c. for two or three years. The total amount in savings certificates on Dec. 31, 1938, was \$6,350,451, made up of \$3,835,375 in demand certificates and \$2,515,076 in term certificates.

**Other Savings Banks.**—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871, had on Dec. 31, 1938, a paid-up capital and reserve of \$4,750,000, savings deposits of \$65,044,916, and total liabilities of \$67,844,910. Total assets amounted to \$72,991,081 including over \$54,000,000 of Dominion, provincial, and municipal securities. The Caisse d'Economie de Notre-Dame de Québec, founded in 1848 under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a Dominion charter by 34 Vic., c. 7, had on Dec. 31, 1938, savings deposits of \$13,936,501, a paid-up capital and reserve of \$2,750,000, and total assets of \$17,346,254.

The co-operative people's banks of Quebec (256 reported to the Provincial Government in 1937) are also an important element in promoting thrift and assisting business in that province. Thus on Dec. 31, 1937, savings deposits in these banks amounted to \$9,768,984, while the amount on loan was \$10,668,901. Loans granted in 1937 numbered 17,639 amounting to \$4,310,777. Profits realized amounted to \$519,714. (See also p. 826 of this volume.)

**25.—Deposits in the Montreal City and District Bank and the Caisse d'Economie de Notre-Dame de Québec, representative years 1868-1900, and 1905-38, inclusive.**

NOTE.—Figures for intermediate years will be found on p. 833 of the 1926 Year Book.

**PART II.—MISCELLANEOUS COMMERCIAL FINANCE.****Section 1.—Loan and Trust Companies.\***

The Canada Year Book, 1934-35, presents at p. 993 an outline of the development of loan and trust companies in Canada from 1844 to 1913.

The laws relating to trust and loan companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. In Table 1, however, certain summary statistics of provincial companies have been supplied for 1937 by courtesy of those companies and are included in order to complete the picture for loan and trust companies throughout Canada. It is estimated that more than 90 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with Dominion registered companies. The statistics of Tables 2 and 3 refer only to those companies operating under Dominion charter, except that, beginning in 1925, the statistics of loan companies and trust companies incorporated by the province of Nova Scotia, and brought by the laws of that province under the examination of the Dominion Department of Insurance, have been included as well as those for trust companies in New Brunswick since 1934 in Table 3. These historical series start with the year 1920, at which time the Dominion Department of Insurance took over the administration of the legislation concerning Dominion trust and loan companies—the Department of Finance had previously exercised supervision of their activities.

As indicating the progress of the aggregate of loan company business in Canada, it may be stated that the book value of the assets of all loan companies rose from \$188,637,298 in 1922 to \$213,649,794 in 1931, but declined to \$193,175,022 in 1937. The assets of trust companies (not including trust, estates, and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from \$154,202,165 in 1928 to \$241,120,562 in 1937. In the former year, the total of trust, estates, and agency funds administered amounted to \$1,077,953,643 and in the latter year to \$2,558,856,368. (Table 1.)

**Functions of Loan Companies.**—The principal function of loan companies is the lending of funds on first mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. Of the loan companies operating under provincial charters, the majority conduct loan, savings, and mortgage business, generally in the more prosperous farming communities. The historical statistics published in Table 2 respecting loan companies were revised in 1937 by the separation of the statistics of small loans companies, which are now included in Section 2.

**Functions of Trust Companies.**—Trust companies act as executors, trustees, and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the

\* Revised under the direction of G. D. Finlayson, Superintendent of Insurance, Department of Insurance.

living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Some companies receive deposits, but the lending of actual trust funds is restricted by law. The figures of Table 1 are of particular interest in the case of trust companies, which, on account of the nature of their functions, are mainly provincial institutions, since their chief duties are intimately connected with the matter of probate, which lies within the sole jurisdiction of the provinces.

**Section 2.—Small Loans Companies.**

There have been incorporated in recent years, by the Parliament of Canada, a number of companies which make small loans, usually not exceeding five hundred dollars each, on the promissory notes of the borrowers and additionally secured in most cases by endorsements or chattel mortgages. While small loans companies may, under their charter powers, make loans on the security of real estate, actually they have made but very few of such loans. As the business of these companies has now reached considerable proportions, the figures relating thereto are now separated from those of the loan companies proper and are no longer included in Table 2. The figures relating to the assets and liabilities of the three companies of this class that have commenced operations are shown in Table 5.

### Section 3.—Sales of Canadian Bonds.

Interesting aspects of public financing and of the investment of capital in Canadian development since 1926 are illustrated by the sales of Canadian bonds by classes, shown in Table 6. (The figures are reproduced from the *Monetary Times Annual*.) In the first part of this table, the bonds sold in each year are divided according to whether the financing was for Dominion or Provincial Governments, or for municipalities, railways, or other corporations, while in the second part, the sales in each year are distributed according to sales in Canada, the United States, and the United Kingdom.

The total sales of Canadian bonds naturally reached a very high mark toward the close of the War, owing to the Dominion Government financing required to cover the War expenditures. However, the total sales were greater in 1936 than in any other year, owing largely to the Dominion Government's conversion loans.

Dominion Government financing through bond sales since 1907 may be divided into three periods: the first from 1908 to 1914, when the money was required largely for internal development of the country, public works, and Government railways; the second from 1915 to 1919, when War expenditures required very large borrowings; and the third since the War, when the issues have been largely required for refunding

former loans at lower interest rates and for expenditures in connection with public works and railways.

Provincial bond issues have been on a much larger scale since the War than formerly, probably due to the development of provincially-owned public utilities and of improved highways. Sales of the bonds of Canadian municipalities, on the other hand, were greater in 1913, toward the end of the 'land boom', than they have been in any other year, although sales in 1930 almost reached the record. However, apart from considerations of the increased urbanization of the population there has not been the same marked increase in the average annual sales of municipal bonds in the period since the War, as compared with the period before the War, that is noticeable in the case of provincial bonds.

Sales of corporation bonds, which from 1926 to 1930 had averaged over \$257,000,000 per year, dropped to \$10,550,000 in 1932, and to \$4,385,000 in 1933, this being due largely to the uncertainty of the industrial outlook. Railway bonds also showed a precipitate decline to \$12,500,000 in 1932, and fell to \$1,000,000 in 1933. From 1934 to 1938 substantial recoveries were shown in the former class, the 1936 figures being particularly high. A change in the method of accounting between the Dominion and the Canadian National Railways partly accounts for the apparent decrease since 1936.

A very striking change has taken place during the present century in the market in which Canadian bond issues are principally sold. Prior to the War, a great part of the capital required for Canadian development came from the United Kingdom, and the major portion of Canadian bond issues was sold there. The outbreak of war temporarily eliminated that market, and Canadians turned largely to the United States for outside capital. However, the great increase in wealth during and since the War has enabled a much greater proportion of public and industrial financing to be done at home, and, beginning with the Victory Loan campaigns, Canadians not only learned how to invest their money in bonds, but had the necessary funds to invest on a large scale in bond issues. In 1938, 92.1 p.c. of all bonds issued were sold in Canada, 3.6 p.c. in the United States, and 4.3 p.c. in the United Kingdom.

### Section 4.—Corporation Dividends.

(From the *Financial Post Business Year Book*.)

The 1938 improvement in Canadian business, as indicated by higher corporate earnings, was reflected in the total annual dividend payments of \$325,931,000, compared with \$323,724,000 in 1937. The 1938 dividend disbursements amounted to over double those of 1933, the lowest year of the depression in this respect. Of the total disbursements for the year, mining companies accounted for \$90,000,000 or 27.6 p.c. In Table 7 there is given an eight-year record of aggregate monthly dollar payments and yearly totals for all companies paying dividends in Canada.

### Section 5.—Foreign Exchange.\*

The Canadian dollar, adopted as Canada's currency in 1857, was equivalent to 15/73 of the pound sterling; in other words, the pound was equal to \$4.866 in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of the Great War. During the first eleven years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date, the dollar in the two countries was equivalent at par, and variation was only between the import and export gold points or under \$2 per \$1,000.

At the outbreak of the Great War, both the pound sterling and the Canadian dollar were removed from the gold standard and fell to a discount in New York, though this discount was 'pegged' or kept at a moderate percentage by sales of United States securities previously held in the United Kingdom, by borrowing in the United States, and, after the United States entered the War, by arrangement with the United States Government. After the War, when the exchanges were 'unpegged' about November, 1920, the British pound went as low as \$3.18 and the Canadian dollar as low as 82 cents in New York. In the course of the next year or two, exchange returned practically to par, and the United Kingdom resumed gold payments in April, 1925, and Canada on July 1, 1926. From then until 1928 the exchanges were within the gold points, but in 1929 the Canadian dollar again fell to a moderate discount in New York. The dislocation of exchange persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points, however, only for a few scattered intervals. Fluctuations since September, 1931, are dealt with below.

**Recent Movements in Canadian Exchange.**—In September, 1931, the equilibrium of the international exchange was seriously disturbed. This unfortunate turn of events followed a period of over six years during which the nations of the world had worked steadily towards the stabilization of their currency systems upon a gold basis. Within two months of the time when the United Kingdom found it necessary to suspend free gold shipments, however, only a very small number of countries, including the United States and France, were left with currencies unshaken by preceding abnormal gold movements. The decision of the United Kingdom to go off the gold standard (Sept. 21, 1931) resulted in a sharp depreciation of sterling in New York. Canadian rates depreciated also, and fluctuated broadly with sterling until the United States dollar dropped from the ranks of gold standard currencies on Apr. 19, 1933.

Since that time major adjustments have occurred in practically all currencies of the world. The United States dollar was replaced on a gold basis, but was devalued at 59.06 p.c. of its former gold parity (13 $\frac{5}{7}$  grains or  $\frac{1}{35}$  oz. of gold to the dollar as against 23.22 grains previously) on Jan. 31, 1934, with other countries following suit at irregular intervals until the final break-up of the European gold 'bloc' in September, 1936. These countries, including France, Belgium, and Switzerland, were the last to abandon post-War gold standards established between 1925 and 1927. During 1936, the United States dollar and the Canadian dollar fluctuated narrowly

\* Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics.

about par, while the pound sterling declined in the latter half of the year until it also approached its old New York and Montreal parity of \$4.866. With the exception of the last three months of the year, when readjustments within the former gold bloc were occurring, 1936 exchange fluctuations were unusually narrow. This was broadly true also for 1937, although there were considerable declines in the French franc, Spanish peseta, and Brazilian milreis.

On May 5, 1938, the French franc was devalued to a minimum rate of 179 francs to the pound sterling; the pound itself dropped sharply during the year from an average of \$5.00 in January to \$4.71 in December. The Canadian dollar remained at fractional discounts in New York from March to December.

## CHAPTER XXIII.—INSURANCE.\*

Insurance business is transacted in Canada by companies of the following classes: (1) companies incorporated under the laws of the Dominion of Canada or of the former "Province of Canada", (2) companies incorporated under the laws of the provinces of Canada, and (3) companies incorporated or formed under the laws of British and foreign countries. The word "companies", as here used, includes fraternal benefit societies and exchanges which transact the business of insurance. The Dominion Insurance Acts provide that companies of classes (1) and (3) above may not transact business anywhere in Canada unless registered† by the Dominion, but these Acts also provide that fire insurance on property in Canada may be effected in companies of class (3) even though not registered, if the insurance is effected without solicitation, advertising, or the use of the mails; and if an office is not maintained in Canada, though property to be insured may be inspected and losses may be adjusted. Insurance so effected is generally known as 'unlicensed insurance'. Companies of class (2) above may transact business in the province of incorporation, subject to compliance with the laws thereof, or in any other province subject to compliance with the laws thereof, or, on compliance with the Dominion laws, may be granted Dominion registration. Most of these companies limit their business to the province of incorporation or to one or more other provinces; a few only have been granted Dominion registration.

What has been said above implies that jurisdiction concerning insurance companies and insurance business is divided between the Dominion and the provinces. There have been many references to the courts and appeals to the Privy Council with a view to determining the respective legislative domains, both in respect of insurance legislation specifically and in respect of legislation affecting companies generally, including insurance companies. The latest Privy Council decision was handed down in 1931. It may now be taken as established that the Parliament of Canada may require companies formed or incorporated outside of Canada to obtain Dominion registration and to continue to be so registered as a condition of transacting business in Canada, and these companies may be required to make returns from time to time of their business and doings in Canada and to furnish evidence of their solvency. The powers of the Dominion go much further in reference to companies incorporated by the Parliament of Canada, but include all of the powers that may be exercised over companies formed or incorporated outside of Canada and registered by the Dominion. The Acts passed in 1932,‡ as since amended, implement the powers of the Dominion as determined by the Privy Council decisions.

The Dominion Acts under which companies are registered are administered by the Department of Insurance under the Minister of Finance. The chief officer of the Department of Insurance is the Superintendent of Insurance. The first Superintendent was appointed in 1875 as head of a newly created Insurance Branch of the Department of Finance. In 1910 the Insurance Branch was constituted into a separate Department, the Department of Insurance, under the Minister of Finance.

Precedent to obtaining first registration, in addition to filing certain documents, including a full and complete financial statement, a company must satisfy

\*The statistics of Fire, Life, and Miscellaneous Insurance have been revised under the direction of G. D. Finlayson, Superintendent of Insurance, and those pertaining to Government Annuities (Section 4) under the direction of W. M. Dickson, Deputy Minister of Labour.

† Prior to 1932, the Dominion Insurance Acts provided for the "licensing" of companies; the Acts passed in 1932 provided for "registration". The change in terminology does not indicate any change in substance.

‡ The Canadian and British Insurance Companies Act, 1932 (22-23 Geo. V, c. 46). The Foreign Insurance Companies Act, 1932 (22-23 Geo. V, c. 47).

the Minister that it is sound and solvent and must make the required initial deposit of securities, varying from \$10,000 to \$100,000, depending on the class of business to be undertaken. Annual returns are required of all registered companies and the Acts require an examination to be made, by the Superintendent or on his behalf, of the books and records of companies with a view to substantiating the accuracy of the statements filed and the soundness of the companies. Should any company show an unsatisfactory financial condition, the Acts require remedial measures to be taken. British and foreign companies are required to maintain in Canada assets sufficient to cover all of their liabilities in Canada, while Canadian companies are required to maintain in Canada all of their assets, except such as it may be necessary to deposit outside of Canada as security for 'out of Canada' business.

The statistics herein given for companies registered by the Dominion are divided into three classes relating to: (1) insurance against fire; (2) life insurance; and (3) miscellaneous insurance, *viz.*, accident, automobile, aviation, burglary, credit, earthquake, explosion, forgery, guarantee, bail, leakage, live-stock, sickness, steam boiler, title, tornado, and weather insurance. These statistics are compiled from the reports of the Department of Insurance; throughout they apply to calendar years.

Since 1915, the Department of Insurance has collected statistics, included herein, of business transacted by provincial companies licensed by the provinces, classified as to: (1) business transacted within the province of incorporation, and (2) business transacted in other provinces.

Returns for unlicensed insurance, above referred to, were required under Sec. 16 of the Special War Revenue Act for taxation purposes, and statistics compiled from these returns are given in the Canada Year Book, prior to the 1933 edition, as Table 8. This section of the Act having been held unconstitutional by the Privy Council decision, Oct. 22, 1931, on an appeal from the Court of the King's Bench of the province of Quebec, the returns for 1930 were incomplete and are not given in the 1933 Year Book. By an amendment to the Act at the 1932 session of Parliament, a section analogous to Sec. 16 was enacted, applicable to unlicensed insurance and the information was, therefore, revived in the 1934-35 edition. However, this information is no longer required from such companies and has been again dropped.

Statistics of Dominion Government annuities are given at the end of this chapter. The Department of Labour administers the Acts under which these annuities are sold.

### Section 1.—Fire Insurance.

Fire insurance in Canada began with the establishment by British fire insurance companies of agencies, usually situated in the seaports and operated by local merchants. The oldest existing agency of a British company is that of the Phoenix Fire Office of London, now the Phoenix Assurance Company, Ltd., which commenced business in Montreal in 1804. On account of the growth of the insurance business of these early British companies, branch offices were established and local managers were appointed, charged with directing the companies' affairs in Canada.

The Halifax Fire Insurance Co. is the first purely Canadian company of which any record is available. Founded in 1809 as the Nova Scotia Fire Association, it was chartered in 1819 and operated in the province of Nova Scotia until 1919 when it was granted a Dominion licence. Among the other pioneer fire insurance companies still in operation, mention may be made of the following: the Quebec

Fire Assurance Co., which commenced business in 1818 and was largely confined in ownership and operations to Quebec province; the British America Assurance Co., incorporated in 1833, the oldest company in Ontario; the Western Assurance Co., organized in 1851, and now, after a rapid and steady growth, one of the largest companies of its kind on the continent; two United States companies, the *Ætna* Insurance Co., Hartford, Conn., and the *Hartford Fire Insurance Co.*, which commenced business in Canada in 1821 and 1836, respectively.

The report of the Superintendent of Insurance for the year ended Dec. 31, 1937, shows that at that date there were 274 fire insurance companies doing business in Canada under Dominion registration; of these 56 were Canadian, 68 were British, and 150 were foreign companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada—11 Canadian, 13 British, and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 80 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

Although in its early days the Dominion did not prove a very lucrative field for fire insurance companies, the great advance in building construction and the wide use of improved fire appliances and safety devices have materially reduced the danger of serious conflagrations and have placed the risks assumed by companies in Canada on an equality with those of other countries.

A feature of the fire insurance business, besides the large percentage of British and foreign companies, is the continued increase in the number of companies which are operating on the mutual or reciprocal plan. These companies, in which all profits or losses are directly received or paid by the policyholders, are making themselves felt as competitive factors in the fire insurance business.

**Statistics of Fire Insurance.**—Statistical tables of fire insurance in Canada, illustrative of the progress of total business since 1869, and of the operations of individual companies for the year 1937, follow. The net amount of fire insurance in force on Dec. 31, 1937, with companies holding Dominion licences, was \$9,773,324,476,\* while the net amount in force with provincial companies on the same date was \$976,220,698. Thus the grand total fire insurance in force on Dec. 31, 1937, with Dominion and provincial companies was \$10,749,545,174.

Table 1 shows figures of the growth since 1869 of companies registered by the Dominion, the relationship between losses paid and net premiums written, and the variation in the cost per \$100 of insurance. It will be observed that the cost of insurance reached a maximum in 1904 and 1905; there has since been a steady decrease with the exception of the years 1921, 1922, and 1924, when temporary reversals of the downward swing were in evidence. It is noteworthy that the cost of fire insurance has decreased by 56.88 p.c. since 1905. Table 2 shows the business done in Canada by individual companies during the year 1937, while in Tables 3, 4, and 5 are given figures of the assets, liabilities, incomes and expenditures during the years 1933 to 1937, classified by nationality of companies. A further summary of business is given by provinces in Table 6 for the years 1936 and 1937, showing premiums and losses classified by provinces and by nationality of companies. Further, a summary of the business transacted by both Dominion and provincial licensees is given in Table 7.

\* According to preliminary figures, fire insurance in force in companies registered by the Dominion increased by \$190,197,753 in 1938. The large increases of later years are due, in part, to Dominion registration of certain provincially registered companies.

1.—Summary Statistics of Fire Insurance by Companies Operating under Dominion Registration, calendar years 1869-1933.

**Summary of Fire Insurance in Canada, 1937.**—Of the total amount of fire insurance effected in Canada during each year, a part is sold by companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation, but may be allowed to sell insurance in other provinces. The bulk of fire insurance business, however, is transacted by companies registered by the Dominion. Operations in 1937 are summarized in Table 7.

## 7.—Dominion and Provincial Fire Insurance in Canada, 1937, with Totals for 1936.

**Fire Losses.**—Closely allied to the subject of fire insurance is the question of fire losses. The Dominion Fire Prevention Association publishes, under the auspices of the Dominion Department of Insurance and with the co-operation of the Association of Canadian Fire Marshals, a report of the loss of life and property caused by fire, from which the information shown in Tables 8 and 9 has been summarized.

In addition to the data shown, the report gives such additional information as: per capita loss by provinces and by type of building, numbers of fires reported, origins of fires, and criminal investigations arising from fires.

In 1938, the per capita loss was greatest in British Columbia, being \$3.32 as against the Dominion average of \$2.31. The uninsured losses amounted to \$4,838,762, or 18.7 p.c. of the total. Of the 44,104 fires reported in 1938, 1,615 were the subject of official inquiry, 143 prosecutions were instituted, and 102 convictions were registered.

## 8.—Fire Losses in Canada, 1926-38.

NOTE.—For fire losses from 1923-25, see *Statistical Report of Fire Losses in Canada, 1923*, published by the Dominion Department of Insurance. An estimate of losses from 1898-1922 was published in *Statistical Bulletin No. 27 (1922)*, issued by the same Department.

<sup>1</sup> This amount was given as the total loss, no uninsured losses being reported for Saskatchewan in 1938.

### Section 2.—Life Insurance.

An article descriptive of the growth and development of life insurance in Canada, more particularly with reference to insurance legislation, contributed by A. D. Watson, of the Department of Insurance, Ottawa, appears on pp. 937-944 of the Canada Year Book, 1933.

**Life Insurance Statistics.**—Life insurance business was transacted in Canada in 1937 by 41 companies registered by the Dominion, including 28 Canadian, 5 British, and 8 foreign companies. There were also 7 British and 5 foreign companies registered to write insurance, that had practically ceased to write new insurance, while 2 other British and 3 other foreign companies were authorized under the Act to transact business in connection only with policies written prior to Mar. 31, 1878. One foreign company was licensed to transact business in 1931, but has not yet written any life insurance business in Canada, except by way of reinsurance. The Canadian business of 2 other foreign companies was reinsured during 1937 by companies registered with the Department of Insurance.

As shown by the chronological statistics of Table 10, life insurance business in Canada has expanded from very small beginnings, the total net life insurance in force in all companies licensed by the Dominion in 1869 being only \$35,680,082, while in 1937 it was \$6,541,625,046,\* the amount per head of the estimated population of Canada having more than doubled since 1919—an evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. Notable also from these statistics is the fact that in this field British companies, the leaders in 1869, have fallen far behind the Canadian and the foreign companies. The total net amount of new insurance effected during the year 1937 was \$671,957,904,† as compared with \$618,264,819 in 1936, \$588,353,277 in 1935, \$595,194,820 in 1934, \$578,585,659 in 1933, \$653,249,366 in 1932, \$782,716,064 in 1931, \$884,749,748 in 1930, and \$978,141,485 in 1929, while the premiums paid were \$199,095,527, as compared with \$200,541,265 in 1936, \$200,157,567 in 1935, \$202,583,536 in 1934, \$206,954,224 in 1933, \$216,132,957 in 1932, \$225,100,571 in 1931, \$220,523,727 in 1930, and \$210,728,479 in 1929.

In Table 11 detailed statistics are given of the business of Canadian, British, and foreign companies, respectively, by companies, in 1937, while Table 12 is a summary showing the business of Canadian, British, and foreign companies for the past 5 years. Table 13 shows the ordinary and industrial policies in force and

\* This total does not include \$174,351,181 of fraternal insurance. Preliminary figures for 1938 indicate \$6,630,531,401 of life insurance in force in Dominion companies not including \$179,021,972 of fraternal insurance.

† The net amount of new insurance effected in 1938 was \$627,373,341 according to preliminary figures.

effected during the year ended Dec. 31, 1937. Table 14 gives the insurance death rates by classes of companies, and Tables 15, 16, and 17 show, respectively, the assets, liabilities, and cash income and expenditure of Canadian and other life insurance companies for the years 1933-37. Statistics of Dominion fraternal insurance are given in Table 18 and of Dominion and provincial insurance combined in Table 19, which shows that on Dec. 31, 1937, the total life insurance in force in Canada was \$6,841,958,943.

### 10.—Life Insurance in Force and Effected in Canada by Companies Operating under Dominion Registration, calendar years 1869-1938.<sup>1</sup>

NOTE.—Figures for other intervening years between 1870 and 1890 are given at p. 958 of the 1933 Year Book.

<sup>1</sup> Figures do not include insurance in force and effected by fraternal societies operating under Dominion charters. The amount of insurance in force in such societies amounted to \$179,021,972 in 1938, according to preliminary figures. Corresponding figures for the years 1933-37 are given in Table 18, pp. 991-992.

<sup>2</sup> For estimates of populations upon which these figures are based, see p. 113. <sup>3</sup> During 1937 approximately \$85,000,000, and during 1938 approximately \$80,000,000 were transferred from insurance in force in Canada. These amounts represent mainly transfers to business out of Canada of certain reinsurances previously classed as Canadian business. They also include transfers to annuities of contracts providing for combined insurance and annuity benefits or options. <sup>4</sup> Subject to revision.

<sup>1</sup> During 1937 approximately \$85,000,000 was transferred from insurance in force in Canada. This amount represents mainly transfers to annuities of contracts providing for combined insurance and annuity benefits or options. It also includes transfers to business out of Canada of certain reinsurances previously classed as Canadian business.

<sup>2</sup> Death claims, matured endowments, and disability claims.

<sup>1</sup> Includes expenditure on business outside of Canada.

<sup>2</sup> Expenditure in Canada.

**Life Insurance Effected through Fraternal Benefit Societies.**—In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 18 gives statistics of life insurance effected with fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income, and expenditure relating to the whole business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. Each benefit fund of every society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries, London; of the Faculty of Actuaries in Scotland; of the Actuarial Society of America; or of the American Institute of Actuaries) and unless the actuary certifies to the solvency of each fund a readjustment of rates or benefits must be made. The statistics in the first part of this table relate to the Canadian societies reporting to the Insurance Department of the Dominion Government. These numbered 9 in 1937, *viz.*, Alliance Nationale, Artisans Canadiens Français, Canadian Woodmen of the World, Catholic Mutual Benefit Association, Commercial Travellers' Association of Canada, the Grand Orange Lodge of British America, Independent Order of Foresters, Sons of Scotland, and Ukrainian Mutual Benefit Association of St. Nicholas.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain Dominion authority precedent to transacting business in Canada, but any such societies which at that date were transacting business under provincial licences, while forbidden to accept new members, were permitted to continue all necessary transactions in respect of the insurance of their then members. Most of these societies have since obtained Dominion authority to transact business, also some foreign societies that had not previously been licensed by the provinces. Of both classes of society, 27 transacted business in Canada in 1937, *viz.*, Aid Association for Lutherans, Association Canado-Américaine, Brotherhood of R. R. Trainmen Insurance Department, Catholic Order of Foresters, Commercial Travelers' Mutual Accident Association of America (accident business only), Croatian Fraternal Union, Expressmen's Mutual Life Insurance Company (which is continuing the business issued by the Expressmen's Mutual

Benefit Association), First Catholic Slovak Ladies Union, First Catholic Slovak Union, Jewish National Workers' Alliance, Knights of Columbus, Ladies' Catholic Benevolent Association, Lutheran Brotherhood, Lutheran Mutual Aid Society, Maccabees, Ministers Life and Casualty Union, Modern Woodmen of America, National Fraternal Society of the Deaf, National Slovak Society of U.S.A., Royal Arcanum, Slovene National Benefit Society, Sons of Norway, United Commercial Travelers of America (accident business only), Woman's Benefit Association, Women's Catholic Order of Foresters, Workmen's Circle, and Yeomen Mutual Life Insurance Company (which is continuing the business issued by the Brotherhood of American Yeomen).

**Summary of Life Insurance in Canada, 1937.**—In addition to the business transacted by life insurance companies registered by the Dominion, a considerable volume of business is also transacted by companies licensed by the provinces. Statistics of these provincial companies have been collected since 1915 by the Department of Insurance. Table 19, showing policies effected and in force, premiums received, and losses paid, in Canada in 1937, summarizes the volume of business done by Canadian, British, and foreign life companies and fraternal societies, whether registered by the Dominion or licensed by the provinces.

## 19.—Summary of Dominion and Provincial Life Insurance in Canada, by Class of Licensee and by Type of Company, 1937.

<sup>1</sup> During 1937 approximately \$85,000,000 was transferred from insurance in force in Canada. This amount represents mainly transfers to annuities of contracts providing for combined insurance and annuity benefits or options. It also includes transfers to business out of Canada of certain reinsurance previously classed as Canadian business.

**Summary of Life Insurance in Force Out of Canada by Canadian Companies Registered by the Dominion Government.**—Tables 20 and 21 give summary statistics of insurance in force as at Dec. 31, 1937, in currencies other than Canadian, classified by companies and by the currencies in which business was written, respectively. The data are given in Canadian dollars, mainly at par rates of exchange for the countries concerned, but there are several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. The major part (over 61 p.c.) of the business in force was written in United States currency and over 22 p.c. in sterling. From another standpoint, over 31 p.c. was written in currency of British countries outside Canada and nearly 67 p.c. in currencies of foreign countries.

Canadian life companies operating under Dominion registration had, at Dec. 31, 1937, life insurance in force in countries outside Canada amounting to \$3,043,105,341. As shown in Table 21, insurance in force in currencies other than

Canadian amounted to \$2,994,998,562. The difference between these figures is presumably the net amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the British and foreign investments of Canadian life insurance companies as at Dec. 31, 1937, amounted to \$732,112,350.

Since the business in force in Canada of these companies at Dec. 31, 1937, amounted to \$4,304,631,608, the total business on their books, Canadian and non-Canadian, amounted to \$7,347,736,949. Thus over 41 p.c. of the total business in force was out of Canada. If to this total are added the amounts of life insurance in force in Canadian fraternal benefit societies registered by the Dominion Government (\$108,743,852 of Canadian, and \$96,764,663 of foreign business), the total business of Canadian companies and societies operating under Dominion registration reached the amount of \$7,553,245,464 at the end of 1937. On the assumption that all provincially-licensed companies and societies are Canadian and limit their business to Canada, then, adding the amount of their business in force in Canada (\$125,982,716), the grand total of net insurance in force in Canadian companies and societies, in and out of Canada, would amount to about \$7,679,228,180 at Dec. 31, 1937.

**20.—Life Insurance Effected and in Force, and Reserves by Canadian Companies (Excluding Fraternal Societies) Operating under Dominion Registration, in Currencies other than Canadian, by Companies, 1937, with Totals for 1936.**

Note.—Figures are given in Canadian dollars, mainly at par rates of exchange.

### Section 3.—Miscellaneous Insurance.

Since 1875 the growth of insurance business other than fire and life has been steady. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass, and steam boiler insurance—the only four classes of miscellaneous insurance then transacted—was 5, 3, 1, and 1, respectively. The report for the year 1937 shows that miscellaneous insurance in Canada now includes various forms of accident and 21 other classes of insurance transacted by Dominion companies. In 1880, 10 companies transacted business of the miscellaneous kind, but in 1937 such insurance was issued by 246 companies, of which 53 were Canadian, 65 British, and 128 foreign; 189 of these 246 companies also transacted fire insurance. In addition, 17 fraternal orders or societies carried on accident and sickness insurance as well as life insurance business and 2 fraternal orders or societies carried on accident insurance only.

**Accident Insurance.**—The first licence of this kind was issued to the Travelers' Co., of Hartford, Conn., in 1868. The first licence to a Canadian company was issued to the Accident Insurance Co. of Canada, which was organized in 1872 and commenced business in 1874. In 1927 life companies were empowered to include in life insurance policies additional insurance, payable only in event of death from accident, up to an amount not exceeding the amount payable in event of death from other causes, commonly known as 'the double indemnity benefit'. A large proportion of life insurance policies issued in recent years includes this benefit. Seventy-eight companies transacted accident insurance in 1937.

**Automobile Insurance.**—This is now one of the most important branches of the miscellaneous class of insurance. Premiums increased from \$80,446 in 1910 to \$573,604 in 1915 and to \$18,260,176 in 1930; for 1937 they were \$16,810,675, showing an increase of 24.4 p.c. as compared with 1936 and a 7.9 p.c. decrease compared with 1930. There has been an increase in the number of companies from 7 to 155 during the 27-year period.

**Plate Glass Insurance.**—Policies were first sold in Canada by the Metropolitan Plate Glass Insurance Co., a United States concern, which withdrew from Canada during 1882. The 77 companies operating in Canada in 1937 received premiums of \$549,105 and incurred losses of \$238,544, compared with premiums of \$465,436 and losses of \$237,257 for 1936.

**Burglary Insurance.**—In 1893 only one company issued burglary policies. A second followed in 1905 and in 1910 five companies were operating, while 78 com-

panies sold this type of insurance during 1937. The premium income of these companies amounted in 1937 to \$1,522,799, and the losses incurred amounted to \$586,549.

**Hail Insurance.**—Insurance against hailstorms is a class of business of comparatively recent development in Canada. During the year 1937, 32 companies undertook this class of risk, the premiums written amounting to \$567,833, and the losses incurred to \$408,949. The total premiums for the 28 years during which this business has been carried on in Canada amounted to \$69,384,139 and the total losses paid to \$47,488,528.

## Section 4.—Government Annuities.

For more than thirty years the Dominion Government has carried on a service which permits and encourages Canadians, during the earning period of their lives, to make provision for their old age. The necessary legislation was passed in 1908 as the Government Annuities Act (c. 7, R.S.C., 1927, amended by c. 33, 1931), which is administered by the Minister of Labour, and provides that any person resident or domiciled in Canada may purchase an annuity from the Government of Canada.

A Canadian Government annuity is a fixed yearly income paid by the Government of Canada. The income is payable in quarterly instalments (unless otherwise expressly provided) for life, but may be guaranteed for ten, fifteen, or twenty years in any event. The minimum amount of annuity obtainable on the life of one person or on the lives of two persons jointly is \$10 a year and the maximum amount of annuity payable to any annuitant or to joint annuitants is \$1,200 a year.

Although in the vast majority of cases annuities issued on the lives of individuals are purchased by the individuals themselves, provision is made in the Act whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members.

Annuity contracts are of two classes, deferred and immediate, under each of which there are various plans available. Deferred annuity contracts are for purchase by younger persons desiring to provide for their old age; purchase may be made by monthly, quarterly, or yearly premiums, or by a lump sum. Immediate annuity contracts are for purchase by older persons wishing to obtain immediate incomes through their accumulated savings.

The property and interest of any annuitant in any contract for a Government annuity is neither transferable nor attachable. As a rule, the purchaser contracts that in the event of the death of the annuitant before the date fixed for the annuity to begin, all money paid shall be refunded to the purchaser or his legal representatives with interest at the rate of 4 p.c., compounded yearly.

From Sept. 1, 1908, the date of the inception of the Government annuities system, up to and inclusive of Mar. 31, 1938, the total number of annuity contracts issued was 42,623. Of these contracts, 3,608 have been cancelled, leaving in force on Mar. 31, 1938, 39,015 contracts. The total amount of purchase money received during the same period was \$115,109,178. Table 27 gives the details of annuities contracted for and purchase money received from 1909 to 1938, by fiscal years.

<sup>1</sup> Seven months.

Statistics of the annuities fund and value of contracts issued are given in Tables 28 and 29. On Mar. 31, 1938, 16,205 immediate annuities and 22,810 deferred annuities were in force. The total value of these annuities on that date was \$107,644,200 and the amount of annuity under vested contracts in force on that date was \$6,700,996.

The valuation shown on Mar. 31, 1938, established all outstanding contracts on the basis of the revised rates charged for Government annuities effective as of Feb. 1, 1938.

Immediate guaranteed.....	4,700	1,962,411	23,542,652	5,392	2,263,450	29,219,119
Immediate last survivor.....	2,190	1,026,424	12,941,387	2,423	1,100,761	15,696,690
Deferred annuities.....	19,267	-	24,873,660	22,810	-	29,403,233
<b>Totals.....</b>	<b>33,685</b>	<b>6,104,298</b>	<b>68,224,794</b>	<b>39,015</b>	<b>6,700,996</b>	<b>107,644,200</b>

<sup>1</sup> Amount of immediate annuities.

It will be seen from the statements above that Government annuities have grown steadily in favour, especially since 1921, the fund reaching a total of \$107,644,200 on Mar. 31, 1938.

## CHAPTER XXIV.—COMMERCIAL FAILURES.

According to Sec. 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was actually passed by the Dominion Parliament in 1869, applying to the four original provinces. This Act was in force for four years and was renewed by c. 46 of the Statutes of 1874, while in 1875 a new Insolvency Act (38 Vict., c. 16) applicable to the whole Dominion was passed, but was repealed in 1880. After this there was no Dominion legislation on the subject of bankruptcy until 1919. During the interval of nearly 40 years commercial failures were handled under provincial legislation, and the statistics relating to such failures during this period were compiled and published by Dun's and Bradstreet's commercial agencies. In 1919 a general Dominion Bankruptcy Act was passed (9-10 Geo. V, c. 36). Statistics of commercial failures dealt with under this Act since it came into force in 1920 have been compiled and published by the Dominion Bureau of Statistics. (See p. 1006.)

Table 1 below gives summary statistics of industrial and commercial failures in Canada, by classes for 1934-38, and by classes and provinces for 1938. At p. 969 of the 1936 Year Book a historical table gives failures for Canada and Newfoundland by classes for the years 1915 to 1935. Early in 1936, however, Dun and Bradstreet, Incorporated, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises previously included in manufacturing and a new class for commercial service. Real estate companies, holding, and other financial companies, and agents of various kinds were dropped. These changes have had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities are reduced more in proportion to the number of failures since the companies eliminated usually ran high in indebtedness. The present figures of Table 1 are not comparable with those given at p. 969 of the 1936 Year Book, to which the reader is referred for earlier historical data, both because of the above reasons and because the earlier statistics cover Canada and Newfoundland whereas these are for Canada only.

**Failures, by Divisions of Industry.**—In every year the great majority of the commercial failures of the country are found among the trading establishments, which are so much more numerous than the manufacturing. Thus, according to the records of Dun and Bradstreet, Incorporated, out of a total of 1,049 commercial failures in Canada in 1938, 699 were among the retail trading establishments, including 211 in foods and 125 in apparel.

Out of the 225 manufacturers who failed, 67 were in the textiles business, 44 in foods, and 27 among manufacturers of forest products. The figures of commercial failures are analysed in detail for the years 1936, 1937, and 1938, in Table 3.

Assignments under the Bankruptcy and Winding Up Acts.—Under the Bankruptcy and Winding Up Acts (R.S.C., 1927, cc. 11 and 213) certain documents relating to assignments have, since 1920, been forwarded to the Dominion Statistician for statistical analysis. Table 4 gives the resulting figures of failures, by provinces, for 1922 and subsequent years, and Table 5 is a classification by branches of business. Table 6 gives the assets and liabilities of the assignors. A detailed analysis of the 1937 and 1938 failures, by provinces and branches of business, is made in Tables 7 and 7A.

## 4.—Commercial Failures in Canada, by Provinces, 1922-38.

**Administration of Bankrupt Estates.**—The administration of bankrupt estates is now supervised by the Superintendent of Bankruptcy (appointed in 1932) with the object of conserving as far as possible the assets of bankrupt estates for the benefit of the creditors. Figures from the first report are given at p. 1039 of the 1934-35 Year Book, and those for subsequent years are to be found in later editions. Table 8 shows the details of bankruptcy administration, by provinces, for 1938, together with totals for all years since the first report was published.

<sup>1</sup> In addition to the payments by the trustee, secured creditors valued their security or realized it themselves without the intervention of the trustee to an amount of approximately \$4,264,633. <sup>2</sup> Exclusive of the city shown separately.

## CHAPTER XXV.—EDUCATION.\*

### Section 1.—Schools, Colleges, and Universities.

The British North America Act assigned public education in Canada, except in the case of the native Indian population, to the jurisdiction of the Provincial Governments. A system of public elementary and secondary education, financed mainly by local school authorities but assisted by provincial grants, has developed in each province. There are some private schools in all provinces (*i.e.*, schools that are not conducted by publicly-elected or publicly-appointed boards, and that are not financed out of public money), but their enrolment is not large in comparison with that of the public schools. At the level of higher education, six provinces have each a provincially-supported university, and the remaining three each have one or more colleges supported out of provincial funds.

Table 2 of this Chapter gives statistics of enrolment in four different categories of educational institutions: (1) Provincially-Controlled Schools; (2) Privately-Controlled Schools; (3) Dominion Indian Schools; (4) Universities and Colleges. Subsections follow, that treat each of the four groups separately, except Indian Schools, for which data are given in Chapter XXVIII, Miscellaneous Administration, along with other information on Indian Affairs.

**School Attendance in Relation to Educational Status of the Entire Population.**†—School attendance data, collected from schools annually, do not give the numbers not at school but who are of school age. Even the number of persons who, at a fixed date, report themselves as having been at school is not necessarily the same as the number of persons who attended school during the year. In a rapidly moving population the difference may be considerable. Much less do annual figures show the penetration of schooling into the population structure as a whole. In this respect a study of census data must be depended upon.

*Educational Status of the 1931 Population.*—In considering the educational status of those now living in Canada, not only present school attendance but school attendance as far back as 1861 must be considered, since the ages at which schooling took place may have been anywhere between 5 and 19 years for persons now 75 years of age or over. Unfortunately, records of school attendance are not available for 1861 or 1891 but, from those of the other censuses, data can be presented in such a way as to show the numbers of the present population who were of school age at each of those dates and an approximation of the educational status of the 1931 population can thus be obtained, in spite of the fact that the figures are qualified by the several factors brought out in the footnotes to Table 1.

**New School Curricula.**—One of the noteworthy features of education in most of the English-language provinces during the past few years has been revision of the school curriculum—the most thorough-going revisions in the hundred years of

\* Revised, except for those parts otherwise indicated, by J. E. Robbins, M.A., Ph.D., Chief, Education Statistics Branch, Dominion Bureau of Statistics. This Branch is concerned with compiling and publishing comparable data relating to educational institutions throughout Canada, and to this end co-operates with the Provincial Departments of Education. A list of the publications of this Branch will be found in Chapter XXIX, Section 1, under "Education".

† Prepared by M. C. MacLean, M.A., F.S.S., Chief of Social Analysis, Dominion Bureau of Statistics.

**1.—Number of Persons of the 1931 Population who were of School Age (5-19) in 1931, and at the dates of the Seven Previous Censuses.**

Census Year.	Canadian Born. <sup>1</sup>	Immigrant. <sup>1</sup>	Total.	Number Attending School.	Per Cent Attending School.
	No.	No.			
1931.....	3,017,687	3,436	3,021,123	1,933,971	65.67

<sup>1</sup> The fact that it is impossible to separate repatriated Canadians from either the Canadian born or immigrants leads to a slight duplication. <sup>2</sup> Not comparable with first four figures because it includes all immigrants 5-19 years of age arriving before 1901 whether they were in Canada at ages 5-19 or not.

<sup>3</sup> Estimated. <sup>4</sup> School attendance figures for 1871 and 1881 are for all ages. Populations of Yukon and Northwest Territories are included in 1871 population.

public education in Canada. Teachers are given much more freedom and responsibility in interpreting them; 'activity programs', 'enterprises' and 'projects' are encouraged; the emphasis on health teaching, physical education, and social studies is substantially increased; the old 8-4 division of grades as between elementary and secondary education is changed to 6-3-3; and there is very much less use of departmental examinations to test successful completion of a year's work. In some provinces it is now possible to matriculate to the university without a single examination external to the school. The old entrance-to-high school examination, obligatory for all students twenty years ago, is now taken by only about one-fourth of the students, considering the provinces together, and the proportion writing external examinations at the end of Grades IX and X is lower still.

**Changes in Rural Administration.**—Another change in the educational structure, widely advocated, and beginning to make its appearance, is the adoption of a larger unit of administration for rural schools. The typical unit of rural school administration in the past has been a community of a few dozen families responsible for raising independently the greater part of the money required to operate its schools. (For a description of the system of school administration, see pp. 960-962 of the 1937 Year Book.) Difficulties in this system have long been obvious, and one province, Alberta, has now abandoned it. In a period of three years, beginning in 1936, the Alberta Department of Education is bringing its more than 3,000 rural school districts into some fifty school divisions for financial and administrative purposes. Two or three similar units have been established in British Columbia, while Manitoba and Ontario, in some localities, are making headway in consolidating educational services on a municipal or township basis, such as has been used in Quebec. For several years the Nova Scotia and New Brunswick Departments of Education have been giving close attention to the possibility of developing larger units.

**Adult Education.**—Post-school education is a field that has received greatly increased attention in Canada during recent years. The Canadian Association for Adult Education, established in 1935, is one of the very few Dominion-wide educational organizations to maintain a full-time staff. It is being financed largely by grants from the Carnegie Corporation of New York and the provincial Departments

of Education. Its director, at the annual meeting in 1938, reported that the number of people following more or less formal courses, apart from the regular school and university enrolment, was in the neighbourhood of 200,000. The Association aims to assist the various agencies whose work is represented by this enrolment, as well as to encourage more informal types of adult education. It is collaborating with the Canadian Broadcasting Corporation, for instance, in its attempt to train leaders for listening groups and make radio a more influential educational factor. It is co-operating with the National Film Society in the development of Canadian cultural and educational films. The Film Society, set up in 1935, has a national office in Ottawa and branches in the larger cities from coast to coast where regular programs of special films are screened. The Association for Adult Education also takes an active interest in library problems.

Some of the most distinctive work of Canadian universities has been done by their extension services on behalf of the population at large. The University of Alberta is outstanding in the variety of services offered, while others have won an international reputation for work of a specialized kind—notably St. Francis Xavier University in Nova Scotia with its more than one thousand study groups, which aim at bettering the economic and social condition of communities through the formation of co-operative enterprises. The extension service of the University of Toronto has given particular attention to assisting the Workers' Educational Association, which began as an Ontario organization but now has classes in larger centres throughout the country. It is not possible to describe here the extent of adult education activities of the universities, but their increasing importance is indicated.

The provincial Departments of Education, too, are giving greater attention to the educational needs of the adult population. The biennial conference of their representatives in 1938 (the Canadian Education Association) took adult education for its central theme. Due in some measure perhaps to the Association's interest in adult education, the Association was joined by Newfoundland and became the Canada and Newfoundland Education Association.

**Research in Education.**—The many changes of recent years, completed or contemplated, in Canadian education have led educators to feel a greater need for scientific investigation of their problems, and, since most of the problems are common to a majority of the provinces, they have thought in terms of creating a medium through which they could collaborate in research. Plans have been on foot for a considerable period and resulted, during the early months of 1939, in the formation of a Canadian Council for Educational Research. This Council was supported by Departments of Education through the medium of the Canada and Newfoundland Education Association, by the provincial teachers' organizations through the agency of the Canadian Teachers' Federation, and with assistance, for the initial years, from the Carnegie Corporation of New York. The Council is composed of seven members: five on a regional basis (one from each of British Columbia, the Prairie Provinces, Ontario, Quebec, and the Maritime Provinces), the Director of Research for the Canadian Teachers' Federation, and the Chief of the Education Branch of the Dominion Bureau of Statistics.

A record of the first topics proposed for the Council's consideration indicates some of the problems currently to the fore in the minds of Canadian educators:

(1) relations between the school systems and occupations; (2) instruction by correspondence; (3) teacher training; (4) the selective character of Canadian education; (5) tests and examinations to measure the outcome of modern programs of study; (6) the development of educational records which will give the maximum amount of useful information; (7) the effectiveness and practicability of instruction by means of radio and visual materials.

### Subsection 1.—Provincially-Controlled Schools.

An outline of the provincial systems of school administration is given on pp. 960-962 of the 1937 Year Book. Summary statistics of these along with privately-controlled schools, Dominion schools, and universities and colleges are given in Table 2.

### 2.—Enrolment in Educational Institutions in Canada, by Provinces, School Year, 1936-37.

<sup>1</sup> 1935-36 figure.

<sup>2</sup> Schools for the blind, deaf, or mentally defective. These are boarding schools, and many of the pupils are from provinces other than the one in which they are at school.

<sup>3</sup> Included with "Universities and Colleges—Preparatory courses".

<sup>4</sup> Includes also those in the Departmental summer schools for teachers in Ontario and British Columbia, not held at universities or colleges.

<sup>5</sup> Official estimates as at June 1, see p. 113.

<sup>6</sup> Includes 172 in ordinary day schools and 417 in Dominion Indian schools for Yukon and the Northwest Territories.

<sup>7</sup> Includes 14,000 estimated population for Yukon and the Northwest Territories.

A table at p. 963 of the 1937 Year Book includes the record of annual enrolment by provinces from 1911 to 1935, together with the record of average daily attendance shown in Table 3 below. The record of average daily attendance is the more comparable one, as between provinces, and probably the more significant for most purposes. Both figures have been practically at a standstill, or declining, in all provinces except Quebec, for several years, due to the annually decreasing number of younger children entering the schools. The decrease would be much more pronounced were it not for the tendency for older children to remain in school longer. The extent of this latter trend is indicated on pp. 956-957 of the 1937 Year Book.

### 3.—Average Daily Attendance in Provincially-Controlled Schools, by Provinces, 1921-37.

NOTE.—Figures for years previous to 1911 will be found at pp. 839-840 of the 1932 Year Book, and those from 1911 to 1920 at p. 963 of the 1937 edition.

Year.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total.

<sup>1</sup> Approximate.

<sup>2</sup> Not available.

A record of the age distribution of pupils in the provincially-controlled schools of all provinces is presented in Table 4. The ages of boys and girls are not shown separately, and it should be mentioned that there is a definite tendency for boys to leave school at younger ages than girls. A table at p. 964 of the 1937 Year Book shows, for the years 1911 to 1935, the comparative numbers of boys and girls in the secondary grades of seven provinces.

## 4.—Age Distribution of Pupils in Provincially-Controlled Schools, by Provinces, 1937.

**Technical Education.**—Recent editions of the Year Book have mentioned the tendency in post-War years toward diversity of instruction at the secondary level. It will be of interest to note here the extent to which communities of various sizes have made provision for technical and commercial instruction.

Among the 35 cities in Canada with populations of more than 20,000, there are 9 without day technical schools. Three of these—Verdun, Outremont, and Westmount—are within reach of the Montreal Technical School. The others in order of size are Winnipeg, Halifax, Sherbrooke, Sydney, Glace Bay, and Moncton, the last four being among the smaller cities of the group. Evening technical classes are held in practically the same number of larger cities, though not the same cities, those without them in this case being all in Ontario and Quebec.

Among the 103 cities with populations of between 5,000 and 20,000 about one-fourth have day technical schools and a similar number have evening technical classes. In smaller centres day schools are extremely rare, considering that there are nearly 400 places with populations of between 1,000 and 5,000, and only half a dozen schools among them. A considerable number, however, provide evening instruction of a technical character.

As information is not available concerning the number of centres offering commercial instruction in Quebec, reference can be made to only eight provinces. The chief difference to be noted, in comparison with the coverage of other technical instruction, is that approximately twice as many towns and smaller cities include commercial courses in their high schools. There are privately-owned business schools in quite a number of others, although they, too, are unusual in places with populations smaller than 5,000.

The number of centres offering evening classes of a technical nature has declined very considerably in the past few years, and attendance at such classes has fallen by one-third. Enrolment in day technical schools has changed little for several years (an interesting situation in view of the fact that the academic high school enrolment has continued to increase) probably due to the technical schools being filled to capacity with no money available for their extension.

Over a ten-year period technical students have increased proportionately more than academic students. They have approximately doubled while the others have increased by less than one-half. Even so, in the eight provinces only about one high school student in five is following a technical course.

Technical enrolment includes a number of part-time students in training under provincial apprenticeship Acts, an arrangement that seems to be regarded with favour. Ontario has had an Apprenticeship Act since 1928, under which boys learning the building trades have received their training partly in industry and partly in the technical schools; in 1936 the scope of the Act was extended to include barbering, hairdressing, and the automobile repair trade. A similar plan has been operated in British Columbia in the building trades since 1930, and an Apprenticeship Act was passed by the Nova Scotia Legislature in 1937.

In addition to the arrangements for apprenticeship that are being systematized under provincial statutes, it appears that a growing number of industrial companies are practising plans, of their own arrangement or in conjunction with private correspondence schools, for the technical training of their younger employees. Some of the country's largest railway, mining, and paper companies, as well as other manufacturing establishments, have such plans in operation.

High schools where the only technical course is agricultural are not included in the foregoing references. The total number of schools in Canada that would be called agricultural high schools, in the sense that the term technical high school is used, is less than a dozen, but some of the provinces provide considerable agricultural instruction in the regular courses for school leaving, normal entrance, or matriculation. About one-third of the academic secondary schools in Ontario (collegiate institutes, high and continuation schools) have agricultural classes. The 'ruralization' of teaching in Quebec schools has received emphasis in recent years. Available information, however, does not permit of a tabulation which would convey a reliable impression of the extent of agricultural education in the ordinary schools of the several provinces together.

There are residential agricultural schools (other than agricultural colleges) with one- or two-year courses as follows: two in Alberta, one in Ontario, and two in Quebec. They serve much the same purpose as the diploma courses in agricultural colleges which are held at one centre in each province, except in Quebec where there are three, and in two Maritime Provinces, New Brunswick and Prince Edward Island, where there is none. Such boarding schools for the teaching of agriculture are rare in Canada as compared with some other agricultural countries. Denmark, with a population about equal to Ontario's, has 21 such schools with an attendance of from 2,500 to 3,000, in addition to 59 folk high schools (also residential institutions) with an attendance of 6,500 drawn mainly from farm young people. The total enrolment in agricultural boarding schools in all Canada, including students taking the diploma courses at agricultural colleges as well as the other five schools, is about 800.

For no other occupation, however, with the possible exception of homemaking, do Governments in Canada conduct so many educational services outside of the schools as for agriculture. Short courses for prospectors, established by provincial Mines Departments, have been attended by nearly 5,000 men in a year lately, but short courses for farmers, their wives and children, varying in length from a few days to a few weeks, are attended each year by several times this number. Courses are by no means the only type of educational service sponsored by the Extension Branches of Departments of Agriculture and agricultural colleges. One other variety alone, the organization of boys' and girls' farm clubs, includes more than

30,000 young people. A review of the various types of service is not possible in a short space and will not be attempted here.

**Teaching Staffs.**—The teaching staffs of day schools under provincial control in Canada consisted in 1937 of 73,291 teachers, 18,424 males and 54,867 females. Practically all of the increase of 3,500 teachers since 1930 has been in the male class. Table 5 summarizes statistics regarding rates of salary for rural and urban teachers in recent years. The "Annual Survey of Education in Canada, 1937" deals in detail with the classification of these teachers, the rates of salary paid, and the teaching experience.

**5.—Average Annual Salaries Received by Teachers in Rural and Urban Schools, by Provinces, 1926 and 1931-37.**

**Financial Statistics.**—Table 6 presents records of the finances of the boards operating the provincial schools, in a comparable way, in so far as this can be done with existing records.

**6.—Financial Support of Provincially-Controlled Schools in Canada, by Provinces, 1926, 1931, and latest years.**

NOTE.—The receipts shown in the following table do not include any amounts raised by loans, or the sale of bonds or debentures, as all revenue of this nature must be repaid ultimately with money raised by local taxation. With the exception of the Maritime Provinces, for which the information is not available, the total debenture indebtedness of the schools of each province is given annually, thus showing the net increase or decrease per year. Figures for 1914 to 1925 will be found at pp. 955-957 of the 1936 Year Book and those for intervening years from 1926 at pp. 967-969 of the 1937 edition and p. 939 of the 1938 edition.

<sup>1</sup> Includes tuition fees where these are recorded.

<sup>2</sup> Includes contributions to teachers' salaries in the Maritime Provinces, and, in New Brunswick, grants made to schools by the Vocational Education Board.

<sup>3</sup> Record not available. <sup>4</sup> The Ontario figures include the township grant towards the salaries of rural public school teachers. In the rural municipalities of Manitoba about three-fifths of the school support is equalized by a uniform rate levied over the whole municipality.

## Subsection 2.—Private Schools.

**Private Elementary and Secondary Schools.**—There are numerous schools in each province doing work similar to that of the ordinary provincially-controlled schools, but that are not publicly financed or administered and hence are not included in Subsection 1 (except in Quebec). Except in Quebec, the private schools have from about 2 to 4 p.c. of the elementary and secondary pupils in the different provinces. In Quebec the proportion is about 10 p.c., but most of them are subsidized by the Provincial Government and provincial reports include a record of them similar to, and in some cases (as of average daily attendance) inseparable from, the records of publicly-controlled schools. Thus their statistics are of necessity included in Subsection 1. Table 7, however, shows their enrolment quinquennially since 1921, the year in which the Education Branch of the Dominion Bureau of Statistics commenced the collection of reports from private schools. A directory of the schools is included in the "Annual Survey of Education, 1937"

## 7.—Enrolment in Private Elementary and Secondary Schools in Canada, by Provinces, 1921, 1926, 1931, 1936, and 1937.

NOTE.—Figures for intervening years are given at p. 970 of the 1937 Year Book.

<sup>1</sup> Revised since the publication of the 1938 Year Book.

**Business Colleges.**—There are private schools in fields of education other than elementary and secondary, the most numerous group working in the field of business and commercial education. A record of enrolment from this group also has been collected by the Education Branch of the Dominion Bureau of Statistics since 1921; a summary of this information is presented in Table 8.

## 8.—Enrolment in Private Business and Commercial Schools (Business Colleges) in Canada, by Provinces, 1921, 1926, 1931, 1936, and 1937.

NOTE.—Figures for intervening years are given at p. 971 of the 1937 Year Book.

Year.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total.

## Subsection 3.—Higher Education.

Editions of the Year Book previous to 1938 include considerable current information on universities and colleges, concerning enrolment, graduates, teaching staffs, and finances. For example, pp. 971-978 of the 1937 Year Book presents the enrolment and graduates of individual schools of higher education for the year 1934-35 and, furthermore, refers to previous editions of the Year Book in which statistics regarding the finances, staffs, etc., of these institutions are presented. Statistics of this nature may be consulted in the report "Higher Education in Canada 1936-38", published by the Dominion Bureau of Statistics.

There has been an increase of about 50 p.c. in the annual number of university graduates since 1923 or 1924, when the abnormalities of enrolment resulting from the War had practically disappeared. Nearly 3 p.c. of the young people growing up in Canada to-day become university graduates—about 4 p.c. of the young men and 1.5 p.c. of the young women. The proportion receiving degrees in Arts or Science is now nearly double that of fifteen years ago, but in several of the other faculties the proportion has not increased at all, and in some has definitely fallen.

There has been no tendency in post-War years for women to increase their enrolment in such professional lines of study as medicine, dentistry, pharmacy, law, theological, or missionary courses. A few appear in the record of every branch of study into which enrolment can be divided, except forestry, but they have held in the main to Arts, including Science and Commerce, and to Education, Social Service, and Public Health. Altogether they constitute about one-fourth of university graduates, but their proportion of the total has not tended to increase noticeably since the abnormal enrolment of returned soldiers came to an end in the early 1920's. Their proportion is highest in Ontario and the western provinces.

In this connection it is of interest to recall that university education for women in Canada began only within the lifetime of the older generation still living. The centenary of university education for women was celebrated in the United States recently, the original event having been the admission of four young women to the post-matriculation course at Oberlin College, Ohio, in the autumn of 1837, but according to the archives of the Canadian Federation of University Women, it was not until about 40 years later that women were first admitted to a university course in Canada, and only about 50 years ago that the practice became general.

### 9.—Graduates from Canadian Universities and Colleges, 1930-37.

NOTE.—For figures from 1920-29, see pp. 993-997 of the 1938 Year Book.

<sup>1</sup> Includes M. Com. and M. Ed. or M. Ped.      <sup>2</sup> Includes M.A. Sc., M.S.A., M.Sc.F., M. Arch., M.V.Sc., M.Sc. Dent., M. Surgery (where conferred separately).      <sup>3</sup> Except diplomas for teachers and theologians.      <sup>4</sup> Not including diplomas in Education and Social Service, a few other diplomas, post-graduate and honorary degrees.

## Section 2.—Scientific and Industrial Research in Canada.

The field of scientific and industrial research in Canada is covered, so far as the Governments are concerned, by the Dominion and Provincial Departments of Agriculture, Forestry, Fisheries, Mines, etc., together with such special research bodies as the National Research Council, the Ontario Research Foundation, and the Research Council of Alberta. The specific research work carried on by the Dominion Government in these special fields is dealt with in the respective chapter material of this and previous editions of the Year Book, and on pp. 866-872 of the 1932 edition an article outlining the scope of research work generally and in particular the establishment and organization of the National Research Council, the Ontario Research Foundation, and the Research Council of Alberta is given.

The field of private research is, of course, much broader, and data regarding the nature of the work being carried on are more difficult to obtain; it covers all research work conducted at universities, that sponsored by scientific societies and foundations, and the vast field of technical and industrial research conducted by individual industries (which in many cases benefit from their affiliations with parent organizations in the United States or the United Kingdom). A committee, on which all interested Dominion Government departments, the National Research Council, and major industries operating in Canada are represented, is scheduled to meet in Ottawa in late July or August, 1939. A more complete survey of industrial research in Canada than has previously been made will then be possible and a revised article covering the entire subject is planned for the 1940 edition of the Year Book.

## Section 3.—Libraries.

The Dominion Bureau of Statistics publishes biennially a Survey of Libraries in Canada. It lists public, university, government, and other special libraries individually, showing the location, size, etc., of each. The latest edition includes information on school and hospital libraries. The following paragraphs are taken from the data in the Survey for 1936-38.

**Public Libraries.**—Table 10 provides a summary of the public library situation by provinces. The circulation in a year represents about two books per person in the Dominion, but service is confined to 40 p.c. of the population, and they average about five books apiece per year. Except in a few areas the libraries serve only the cities and towns, but, during the 1930's, on both the east and west coasts there have been convincing demonstrations of rural library service, with the assistance of the Carnegie Corporation of New York. The Fraser Valley demonstration has become a permanent regional library, and two other similar libraries have been established in British Columbia. In Prince Edward Island the demonstration included the whole province, and it has become a permanent provincial library system. Interest in it has extended to the adjacent provinces. Nova Scotia, in 1938, established the Regional Libraries Commission which employed a full-time director to assist interested areas of the province in organization. At the same time there have been important independent developments in Ontario. Beginning with Lambton County, seven county library schemes have been developed in the southwestern part of the province. Although, as yet, only 5 p.c. of the Dominion's rural population has library service, the current interest and trend indicates that there may be a considerable increase before long. In cities with populations of more than 10,000 about 92 p.c. of the people have some measure of library service (i.e., a public library

within their municipal boundaries), while in smaller urban centres the proportion is 42 p.c.

**19.—Summary Statistics of Public Libraries, by Provinces, 1937, with Totals for 1935, 1933, and 1931.**

<sup>1</sup> Revised since previously shown in the 1937 Year Book.

<sup>2</sup> Not available.

In the larger centres the libraries are conducted as municipal institutions, usually by a board appointed by the city or town council. Almost 300 are in this category. The more numerous smaller libraries are conducted by voluntary associations. Small provincial grants are given to libraries of both types in most of the provinces, but not in New Brunswick, Quebec, and Manitoba. There is a provincial centre for the direction and encouragement of public library development in the Public Libraries Branch of the Ontario Department of Education, and in the Public Library Commission of British Columbia. This seems to be one of the most effective means of assisting the library movement; public library service has been more complete in Ontario and British Columbia than in other provinces. Prince Edward Island now possesses a centre in the headquarters of its provincial library, and Nova Scotia in its recently-founded Regional Libraries Commission.

**Travelling Libraries.**—The picture of public library service would not be complete without reference to the travelling libraries. Their object is to supplement the book stock of small public and school libraries and to provide some public library service in communities otherwise without any. Three universities—Acadia, Dalhousie, and St. Francis Xavier—conduct such a service in Nova Scotia, and McGill University circulates libraries in Quebec and the Maritime Provinces. Each of the five most westerly provinces operates a provincial system of travelling libraries with headquarters at the provincial capital. In the Prairie Provinces the provincial service is augmented by libraries sent out by the Saskatoon Public Library and by the Lady Tweedsmuir Libraries. The latter were established in the autumn of 1936 under the personal direction of Her Excellency; in two years some 25,000 books, in packages of from ten to fifty, have been distributed largely in the drought areas.

**Open Shelf Libraries.**—The loaning of specified books by mail to individual borrowers is offered by most of the centres that conduct travelling libraries. Circulation exceeds 25,000 annually in British Columbia, and 20,000 in Alberta. An effort is being made by provincial library associations and several national educational associations to have reduced postage rates on books circulated in this way.

**University, College, and Professional School Libraries.**—There were 232 libraries in this group, with 4,314,050 volumes and 531,489 pamphlets; the expenditure on books in 1937 was \$259,840. They are primarily for the use of the 65,000 students and 7,000 professors in the institutions.

**Business, Technical Society, and Government Libraries.**—There were 163 important book collections under this heading with 2,493,991 volumes and 713,124 pamphlets in 1937. The largest libraries are those of the Dominion and Provincial Governments.

**Schools of Library Science.**—Full-time courses in library science have been offered by McGill University and the University of Toronto for a number of years, and a part-time course by Acadia University. In 1937, a school of library science was established by the University of Montreal and, in 1938, courses were inaugurated by the University of Ottawa. Nearly half of the full-time librarians in all categories of libraries—621 in 1,301—have had some training in library science such as the university centres are giving. Attendance of men, however, is low. Only 15 p.c. of Canadian librarians are men.

### Section 4.—Museums.

In 1938, the Education Branch of the Dominion Bureau of Statistics prepared two pamphlets on Canadian museums (including art galleries) based on information received from questionnaires: these were "Assistance to Schools from Museums and Art Galleries" and "Museums in Canada".\* The latter includes a directory of all museums found throughout the country, and a brief description of their contents. Table 11 provides some information concerning the more active institutions (i.e., the 37 with full-time staffs), classified according to their chief source of support.

\* These publications may be obtained on application to the Dominion Statistician. The prices charged are 15 cents per copy for the former and 25 cents for the latter.

<sup>1</sup> Information not received.<sup>2</sup> An admission fee is charged on certain days.<sup>3</sup> 934 on free

days (4 days weekly); 333 on the other 3 days.

Expenditures on the museums with permanent staffs (including archives and art galleries as well as museums in the narrower sense) seem to have been between \$800,000 and \$900,000 in the year preceding the date of the report. (In a few cases, notably the National Museum, on account of its administration as part of the Bureau of Geology and Topography, it is hardly possible to say accurately how much expenditure should be attributed thereto and, accordingly, only the general proportions of the total figure can be known.) Roughly one-half of the total seems to be provided by the Dominion Government, one-quarter by the Ontario Government, one-tenth by the other eight provinces combined, one-tenth by associations or endowments, and smaller amounts by cities, non-provincial universities, and commercial establishments.

**Section 5.—Art in Canada.**

An article entitled "The Development of the Fine Arts in Canada", contributed by Newton MacTavish, M.A., D.Litt., appears at pp. 995-1009 of the 1931 Year Book and a shorter article, dealing more particularly with the National Art Gallery, at pp. 886-888 of the 1924 Year Book.

## CHAPTER XXVI.—PUBLIC HEALTH AND RELATED INSTITUTIONS.

The subject matter of this chapter is divided into sections dealing with: administration of public health activities in Canada by the Dominion and Provincial Governments; institutional statistics of public health and benevolence where, besides health and hospitalization records, social statistics also receive some attention—the latter are becoming more and more necessary to the proper drafting of social legislation and the study of social problems; the Victorian Order of Nurses; and the Canadian Red Cross Society.

The rapid increase in the numbers committed to various institutions, such as hospitals for the insane, feeble-minded, and epileptic; the alleged increase in juvenile crime and the extension of social work in this field; the increasing number of institutions caring for the aged and incurable, as well as for dependent, neglected, and handicapped children, have been marked features of the first part of the twentieth century.

### Section 1.—Administration.

In Canada public health is administered by the Dominion and Provincial Governments through their respective health departments.

The Dominion Government deals only with such public health matters as are exclusively national, or such interprovincial public health matters as cannot be controlled effectively by the provinces. In addition, the Dominion Government makes grants to voluntary organizations that are engaged in public health work, notably: Canadian Welfare Council; Canadian National Institute for the Blind; Canadian Tuberculosis Association; Canadian National Committee for Mental Hygiene; Victorian Order of Nurses; Canadian Branch of St. John Ambulance Association; Canadian Red Cross Society; Health League of Canada; Canadian Mental Hygiene Council.

With the object of obtaining uniform legislation and procedure in the various provinces, the Dominion Council of Health was created in 1919. This body consists of the Deputy Minister of the Dominion Department of Pensions and National Health as Chairman; the chief executive officer of the provincial department or board of health of each province; together with such other persons, not exceeding five, as may be appointed by the Governor in Council to hold office for three years. Of these appointed members, four represent agriculture, labour, and urban and rural women's work, respectively; the fifth member is a scientific adviser on public health matters. The Council meets twice a year at Ottawa, when public health problems are discussed and uniform standards and legislation adopted.

Speaking generally, the administration of local public health activities and the establishment and maintenance of institutions is in the hands of the Provincial Governments, under Sec. 92 of the British North America Act, 1867. Under their control, municipalities, societies, and individuals generally initiate charitable and humane efforts, depending on the Government to some extent for financial aid and for competent uniform inspection of methods and standards. Important, and reflecting most clearly the benefits accruing from such work, are the provisions for medical inspection of school children. These are carried out in some cases by the district or sub-district medical health officers, and in others by public health nurses

whose activities are confined to this work alone. In addition, expert advice and assistance are supplied freely to children, teachers, and parents. In many cases dental inspection is provided for. This work is relatively new and has been carried on upon a considerable scale for only a short period; but great benefits have already resulted, notably, in the general improvement in health and sanitary conditions and in the control and prevention of epidemics.

Public hospitals are the most numerous among health institutions. They are usually erected and supported by the municipalities, their actual administration being in the hands of boards of trustees; their revenue, in addition to that provided by the municipality, is derived from grants from the Provincial Governments, donations of individuals and societies, and fees paid by patients. Admission and treatment are free to all deserving persons who apply for them and whose resources are so limited as to prevent their otherwise receiving proper medical attention, while it is generally expected of others that payments for services shall be made in proportion to costs and their ability to defray them. Such public hospitals include isolation and maternity hospitals, tuberculosis sanatoria, etc. The two lazarettos for lepers are under Dominion administration, as are also hospitals for veterans and certain marine and immigrant hospitals.

Private hospitals do not receive public grants. There are also hospitals, more common in the province of Quebec, which are conducted by various religious orders; Red Cross hospitals and outposts; and special hospitals which may be privately administered or maintained by the provinces.

Mental institutions, homes for the feeble-minded and the epileptic are in most cases under provincial administration, although in Nova Scotia the insane of each county are cared for in county institutions.

Among charitable and benevolent institutions, orphanages, refuges, and homes for the aged are usually supported by the larger centres and by county municipalities. Homes or schools for the deaf and dumb, and the blind are largely under provincial administration.

In the case of penal and reformatory institutions, penitentiaries are administered by the Dominion Government, while reformatories, industrial schools, prison farms, and similar corrective institutions are administered by the Provincial Governments.

#### **Subsection I.—Public Health Activities of the Dominion Government.**

The Act of Parliament (18-19 Geo. V, c. 39, An Act respecting the Department of Pensions and National Health) creating the Dominion Department of Pensions and National Health, clearly defined its functions. The Department is divided into two divisions—those of Pensions, and National Health. The chief functions of the National Health Section (which from 1919 to 1929 was the Department of Health) are: to protect the country against the entrance of infectious disease; to exclude immigrants who might become a charge upon the country; to treat sick and injured mariners; to see that men employed on public construction work are provided with proper medical care; to set the standards and control the quality of food and drugs, except export meat and canned goods, which are under the Department of Agriculture; to control proprietary medicines and the importation and exportation of habit-forming drugs such as morphine, cocaine, etc.; to care for lepers; to carry out special studies in co-operation with Provincial Departments or Boards of Health and to co-operate with the provinces with a view to preserving and improving the public health. Following are the various Divisions of the Department of Health with outlines of their functions.

**Division of Quarantine, Leprosy, Immigration Medical, Sick Mariners and Marine Hospitals.**—*Quarantine*—Quarantine has for its object the prevention of the entry into the country by water, land, or air traffic of quarantinable diseases, especially plague, cholera, yellow fever, smallpox, and typhus. Quarantine stations are maintained at Halifax, N.S., Saint John, N.B., Quebec, Que., and William Head, B.C. Supervision is exercised especially over all vessels coming from abroad and any passengers or crews who are found to be suffering from quarantinable disease, together with contacts, are removed to the quarantine station, and the necessary measures taken regarding the infestation of vessels with rats or other vermin; all this in accordance with the principles laid down in the Convention of Paris, 1926. *Leprosy*—The Leprosy Branch of this Division operates two hospitals for the treatment of all cases of leprosy found in Canada, one at Tracadie, N.B., and the other at Bentinck Island, B.C. *Immigration Medical*—Medical advice is given the Immigration Department with regard to the mental and physical suitability of prospective immigrants. With this end in view there has been placed in Great Britain, Ireland, and on the Continent of Europe, a staff of Canadian doctors, who carefully examine all intending emigrants to Canada prior to their embarkation. This arrangement obviates any expense, discomfort, disappointment, and hardship experienced hitherto when it was necessary to deport, on account of physical or mental disability, immigrants who had made the journey across the ocean to Canada. Medical officers are also stationed at the principal ports of entry in Canada, who make a final inspection of prospective immigrants and supply medical care for those who are ill on arrival. *Sick Mariners and Marine Hospitals*—The sick mariners and marine hospitals provide medical and surgical attendance and such other treatment as may be required to all sick and injured mariners arriving at Canadian ports and belonging to vessels that pay sick mariners' dues, in conformity with Part V of the Canada Shipping Act (c. 44, 1934).

**Division of Sanitary Engineering.**—The activities normally carried on under Public Health Engineering include: the administration of the Public Works Health Act, which is concerned with the health of men on construction works, canals, railways, and other forms of public works; by agreement with the U.S. Public Health Service, investigations and reports on sources of water supplies for use aboard common carriers in international and interprovincial traffic between Canada and the United States; special investigations and reports regarding pollution of the International Boundary waters in conjunction with representatives of the U.S. Public Health Service; supervision of water supplies of common carriers on the inland waters of Canada and in international and interprovincial traffic; co-operation with the Dominion Department of Mines and Resources *re* sanitation in National Parks and summer camps on Dominion lands, and allied matters; co-operation with the American Railway Association regarding regulations on sanitation; co-operation with the Provincial Health Departments and the U.S. Public Health Service for the certification of water supplies of common carriers in interprovincial and international traffic.

**Proprietary or Patent Medicine Division.**—This Division is organized to give the public a reasonably safe and truthfully labelled proprietary medicine supply. Registration of all secret-formula non-pharmacopoeial medicines for human use is required, and control is exercised over the potent drugs used in the manufacture of such medicines and the representations made regarding their use.

**Laboratory of Hygiene.**—The Laboratory of Hygiene is chiefly concerned with the control of biologic products used in treatment of human diseases, particu-

larly with reference to the potency of certain toxins, antitoxins, and other serological preparations. Sera and vaccines are scrutinized for purity, sterility, and potency. Such drugs as digitalis, strophanthus, ergot, pituitrin, and the salvarsans are examined for potency, and standards for them, based upon those of the League of Nations' Health Committee, are prepared by the Laboratory and furnished to all manufacturers desiring to use them in making their products. The manufacture and sale of vitamins and hormones are controlled. Disinfectants are investigated as to manufacturers' claims for germicidal qualities. Special and general aid is rendered to other departments of government, and research problems are undertaken.

**Food and Drugs Division.**—In this Division, inspection and laboratory services are maintained primarily for the purposes of the Food and Drugs Act, which is regulatory in character, designed to prevent the importation and sale of adulterated or misbranded food and drugs. Laboratories in Halifax, Montreal, Ottawa, Toronto, Winnipeg, and Vancouver examine samples taken from suspected stocks. Corrective measures are applied whenever adulteration or misbranding is found. Standards of quality have been established for many products, and the supervision of informative, truthful label declarations is a special objective. Laboratory services are provided for other Divisions of the Department, and co-operation with other departments of government is effectively carried on.

**Narcotic Drug Division.**—Since the introduction of opium smoking in Canada forty or more years ago the use of habit-forming drugs, such as morphine, heroin, and cocaine, has increased. One of the first steps taken by the Department of Health was the creation of a Narcotic Branch. Through this Branch, the importation and sale of such drugs are controlled in accordance with the principles laid down by international Conventions agreed to at The Hague and Geneva. Wholesale agents and druggists are obliged to keep records of importation or sale and to forward their records periodically to the Department. The legitimate use of these habit-forming drugs is thus controlled.

**Epidemiology.**—The Epidemiological Division co-operates with the provincial Departments of Health in the control of the communicable diseases and carries out special studies in regard to morbidity and mortality of disease and public health problems that arise from time to time.

**Industrial Hygiene.**—The purpose of the Industrial Hygiene Division is to develop methods for the protection and improvement of the health of industrial workers. This Division conducts special studies regarding illness in industries in co-operation with the provincial Departments of Health.

**Child and Maternal Hygiene.**—The work of this Division consists of measures designed for the reduction of infantile and maternal mortality in Canada. This necessitates collection of information regarding causative factors and the dissemination of knowledge regarding the application of remedial measures.

**Medical Investigation Division.**—This Division is concerned with medical examination of civil servants, supervision of sick leave and superannuation of civil servants throughout Canada on behalf of the Civil Service Commission, and special medical studies.

**Publicity and Health Education.**—As the name indicates, the efforts of this Division are directed towards the dissemination of information on all phases of public health. The work consists of the compilation and distribution of public health literature, of exhibits, lectures, etc.

**Subsection 2.—Public Health Activities of the Provincial Governments.\***

**Prince Edward Island.**—The supervision of public health matters in Prince Edward Island was placed, on July 1, 1931, under a specially created Department of Public Health, presided over by a Minister and his Deputy. Two part-time physicians, five full-time public health nurses, and two sanitary and food inspectors are employed. Under the direction of the Deputy Minister, the province is divided into five public health districts and each nurse is assigned a territory in which she is responsible for the inspection of school children, home visits, home-nursing classes, immunizing and vaccinating clinics, etc. The sanitary and food inspectors make regular surveys of the food-manufacturing plants, school premises, hotels, boarding houses, restaurants, etc., throughout the province. The Government also operates the Falconwood Hospital for the Insane and the Provincial Infirmary.

In addition the Government subsidizes the Provincial Sanatorium, which has a capacity of sixty beds and has functioned to capacity since July 1, 1931. In charge of the Provincial Sanatorium is a Medical Superintendent with an assistant and a staff of trained nurses. The Superintendent conducts chest clinics at regular intervals throughout the province as well as a regular weekly clinic in the Sanatorium, where referred cases from physicians are examined.

The Department of Health operates the Provincial Laboratory and a qualified technician is in charge, who examines material forwarded by physicians throughout the province.

Two venereal disease clinics are conducted by the Public Health Department, one in Charlottetown and the other in Summerside. All prisoners in Queens and Prince Counties' gaols are examined and treatment given when required. Other patients unable to attend these clinics on account of distance are treated by their own local physicians who are supplied with the necessary medication.

**Nova Scotia.**—In Nova Scotia the Department of the Public Health directs its energies to communicable disease control; pre-natal, post-natal, and school hygiene; sewage disposal; safety of milk and water supplies; collection of vital statistics; mental hygiene and health education. All of this has brought into being a comprehensive organization, presided over by a Minister. This acts in an advisory capacity to all local boards of health; makes regulations respecting any matter relevant to the public health; maintains a field force that provides a consulting service in tuberculosis and other health activities; supports a public health nursing service with specially trained nurses, who work both in the schools and in the homes; gives a free public health laboratory service which extends throughout the province; supervises the provincial hospitals, both general and special; provides inspection of public general hospitals and humane institutions; stocks and dispenses sera and vaccines; and distributes literature on all phases of health.

In addition to the foregoing, the Department has recently broadened out and has taken under its ægis certain phases of social welfare and dependency that give it the administration of mothers' allowances, old age pensions, child welfare, and a training school for the mentally deficient.

In reviewing Public Health activities in Nova Scotia during the year 1938, mention should be made of new demands for service that have led to expansion of the older programs and the provision of new ones. A Divisional Medical Health Officer was placed in charge of the Western Health Division of the province. Another Doctor of Medicine was, in September, made Chief of the Bureau of Vital

\* The material under this heading has been revised by the respective provincial authorities.

Statistics. More public health nurses were attached to the Cape Breton Island Health Unit and it is expected that this particular branch of the organization will soon be brought to full strength.

**New Brunswick.**—The Department of Health, under the administration of a Minister of Health, was established in 1918. It provides the following services: general sanitation, including supervision of water supplies and sewage disposal; control of communicable diseases, including tuberculosis and venereal diseases; public health laboratory and the supply of biologicals; medical inspection of schools; collection of vital statistics; public health nursing and child welfare; health education; and general supervision and co-ordination of the work of the sub-district boards of health.

Under the Minister, the Department is directed by the Chief Medical Officer who is also Registrar General of Vital Statistics. The staff consists of a director of laboratories, eleven full-time medical health officers, a director of public health nursing service and, in addition, a part-time director of venereal disease clinics.

There are ten health districts, each in charge of a District Medical Health Officer who also provides the tuberculosis diagnostic and medical inspection of schools services.

Sixteen sub-health districts, each with its own board of health of which the District Medical Health Officer is the chairman, have been organized. The sub-district boards of health have their own individual staffs of sanitary, food, plumbing, and other inspectors, registrars of vital statistics and public health nurses, all operating under the Provincial Health Act and Regulations.

The Department also maintains twenty-four depots for the distribution of biologicals and twelve venereal disease clinics.

The twenty-first annual report of the Chief Medical Officer contains a review of the various services, the vital statistics for the province, and the reports of staff members and of the sub-district boards of health.

**Quebec.**—The Department of Health, under the control of the Minister of Health, replaced the former Provincial Bureau of Health at the end of the year 1936.

The province of Quebec inaugurated, in 1926, a new system known as the 'county health units', consisting of a full-time health service for each county, or group of two or three adjoining counties. At present 42 health units covering 52 counties have been organized with new counties asking for the same privilege. The former district health officers, reduced to 11, are in charge of all the counties not yet organized as county health units.

The services of all these officers and their staffs of nurses, sanitary inspectors, etc., are given in the form of consultations, public lectures, school medical inspections, baby and travelling tuberculosis clinics, and investigations of all kinds, immunization, sanitation, etc.

In addition to an Administrative Division, the Ministry of Health maintains the following divisions: Laboratories, Sanitary Engineering, Demography, Mental Hygiene, Public Charities, Epidemiology, Health Units and Districts, Industrial Hygiene, and Nutrition. The latter includes maternal and child welfare. A new division, the Division of Tuberculosis, is now being established.

The energies of the Ministry of Health are also directed towards the prevention of epidemics, more particularly tuberculosis and the more important causes of infant mortality. To this end, the Ministry has established 21 anti-tuberculosis

dispensaries and 70 baby clinics, including those receiving government grants. During the year 1937-38, in the anti-tuberculosis dispensaries and the travelling tuberculosis clinics, 23,712 people were examined. The various county health units have provided for the immunization of 29,413 children against diphtheria, which, with those previously immunized, make a total of 271,919.

**Ontario.**—The Department of Health of Ontario is under a Minister of the Government. In the direction of the departmental program, he is assisted by a Deputy Minister and a Chief Medical Officer of Health. These activities are appropriately divided into the following divisions: Hospitals, Tuberculosis Prevention, Preventable Diseases, Laboratories, Maternal and Child Hygiene and Public Health Nursing, Oral Hygiene, Sanitary Engineering, Industrial Hygiene, and Inspection of Training Schools for Nurses.

The local health work is carried on by a Board of Health and a Medical Officer of Health in each of the 900 municipalities. Fourteen municipalities have full-time health officers.

The increased public interest in the prevention of tuberculosis has justified the large measure of emphasis placed, during the past three years, on this phase of the program. The Administration pays the maintenance charges of all those suffering from tuberculosis who are medically indigent and who are in need of sanatorium treatment. Diagnostic service is made available to all physicians in respect to tuberculosis through travelling clinics working out from various centres throughout the province.

The Department has continued its efforts to make both diagnosis and treatment of cancer possible for all. Seven cancer clinics are operating in well-chosen centres in the province; each of these is substantially subsidized by the Department.

The Department assumes the responsibility for the free distribution of biological products used in the prevention and cure of preventable diseases. Insulin is distributed to those in need of such treatment on the recommendation of the local authorities; a percentage of the cost is contributed by the local municipalities. An efficient bacteriological service, including the examination and classification of pathological tissue, is offered through the central laboratory and the seven branch laboratories, which are situated at appropriate centres throughout the province. Consultative service in the field of mental hygiene is made available through clinics which operate throughout the province. A regular schedule is maintained by these clinics and the profession is urged to take advantage of the service offered.

The control of venereal diseases is stimulated by the conduct in the large urban centres of clinics operated for the treatment of these diseases. In all municipalities, the Department assumes a percentage of the cost of treatment of those suffering from either syphilis or gonorrhœa, who are not in a position to pay for the necessary treatment.

**Manitoba.**—Manitoba has an organized Department of Health and Public Welfare. The Health and Public Welfare Act states that the Minister shall preside over and have the management and direction of the Department, and the Department shall have administrative jurisdiction over all matters in the province which relate to health and public welfare. The various Divisions of the Department include those of: Disease Prevention (food and dairy inspection, public health nursing, sanitation, venereal disease prevention, communicable diseases, industrial hygiene, and maternal and child hygiene); Provincial Laboratories; Vital Statistics; Hospitalization; Psychiatry (Selkirk and Brandon Hospitals for Mental Diseases—

Manitoba School for Mentally Defective Persons, Portage la Prairie—Psychopathic Hospital, Winnipeg); Child Welfare; Estates of Insane Persons and Indigency in Unorganized Territory; Supervision of Aged and Infirm Persons (being supported by public funds); Supervision of Medical Service (supplied by the province).

The previously established Board of Health and the Welfare Supervision Board have assumed an advisory capacity to the Minister of Health and Public Welfare; and the Child Welfare Board is both advisory and administrative, being responsible for the administration of the Child Welfare Act as it pertains to Mothers' Allowances.

**Saskatchewan.**—The Department of Public Health has been organized since 1923 under a Minister and a Deputy Minister. The Public Health Act of Saskatchewan also provides for a Public Health Council, consisting of the Deputy Minister as Chairman, three medical practitioners, a veterinary surgeon, and a civil engineer. This Council acts in an advisory capacity to consider new health regulations and allied problems.

The Department is organized into seven Divisions. The Division of Administration, directly under the Deputy Minister who is also the Registrar General, coordinates the activities of the Department as a whole, directs the general policy in public health matters, supervises finances, legislation, hospital grants, municipal boards of health, and medical relief in certain unorganized territories. The Division of Public Health Nursing supervises maternity grants, organizes inspection of school children and home visits, pre-school and preventive clinics in co-operation with local physicians, and conducts a public health nursing service throughout the province. The Division of Communicable Disease deals with epidemiology in all its phases and administers the regulations governing cemeteries and care and transportation of the dead. Supervision of trachoma, venereal disease, and tuberculosis (other than the organization of the Anti-Tuberculosis League) also comes under this Division. The Division of Sanitation supervises food, water, milk, and ice supplies, sewerage systems, urban and rural sanitation, and the organization of union hospital districts. The Division of Laboratories includes in its organization bacteriology, serology, pathology, chemical analyses, and medico-legal work. The Office of the Registrar General (formerly the Division of Vital Statistics) administers the Vital Statistics Act and the Marriage Act. The system used in classifying vital statistics has been decided upon in co-operation with other provinces and the Dominion Bureau of Statistics. The Mental Hygiene Act and the mental institutions established under its provisions in North Battleford, Weyburn, and Regina (psychopathic ward), are administered by the Department, and the internal operations of these institutions are supervised by the Commissioner of Mental Services.

**Union Hospitals.**—In Saskatchewan, in addition to the general hospitals, there exists a system known as the Union Hospital Organization, designed to furnish hospital accommodation in rural districts. Under the provisions of this plan, two or more municipalities may co-operate in building, equipping, and maintaining a hospital. Municipalities constituting a hospital district may enter into an agreement with the hospital board to provide free treatment for certain classes of patients at the cost of the municipalities concerned.

**Cancer Commission.**—This Commission, created in 1930, consists of the Deputy Minister of Public Health as Chairman, together with two physicians as members, and a physician as secretary. Consultative diagnostic and treatment clinics have been established in Regina and Saskatoon, and radon is manufactured at an emanation plant in Saskatoon. Close contact is maintained with current advances in the prevention, diagnosis, and treatment of cancer.

*Health Services Board.*—This Board consists of the Deputy Minister as Chairman, a representative of the provincial College of Physicians and Surgeons, and a representative of the Association of Rural Municipalities. The Board is inquiring into the extent and administration of the various health services existing in the province, collecting and studying data on the general situation regarding incidence of illness from all causes, considering methods for an equitable distribution of the costs of illness, studying the needs of the people with respect to general health services and the necessity of co-ordination of those now existing. An advisory committee is associated with the Board, and consists of representatives from medical, hospital, and allied organizations.

*Relief Medical Services Branch.*—Since 1931 special grants have been given to physicians and to hospitals in order to allow them to render necessary services to those residents of the drought area unable to pay for such services. At the present time grants are paid to physicians, dentists, and approved hospitals, and arrangements have been made with the Red Cross Society and the Canadian National Institute for the Blind whereby these bodies provide drugs and optical supplies from government funds. The medical officer in charge of the Relief Medical Services Branch, besides administering these grants, also supervises medical and allied services which come under the Bureau of Labour and Public Welfare and the Northern Settlers' Branch of the Department of Municipal Affairs. This arrangement gives these branches of government the advantage of having proper medical advice in the handling of their problems.

*Alberta.*—The Department of Public Health was established by an Act of the Provincial Legislature in 1919. The Department includes the following Divisions: Communicable Diseases; Sanitary Engineering and Sanitation; Public Health Education; Laboratory; Public Health Nursing; Health Education; Municipal Hospitals; Hospital Inspection; Social Hygiene; Vital Statistics; Mental Hygiene; Dental Hygiene; Tuberculosis Control; Child Welfare and Mother's Allowances. The following institutions are administered by the Department: Central Alberta Sanatorium; the Provincial Mental Hospital, Ponoka; the Provincial Training School, Red Deer; the Provincial Auxiliary Hospital, Claresholm; the Provincial Mental Institute, Edmonton; and the Provincial Auxiliary Hospital, Raymond.

Free clinics for venereal diseases are maintained in the principal cities and in the two provincial gaols. Educational work on social hygiene is carried on by means of lectures, moving pictures, bulletins, and radio talks.

*British Columbia.*—The Provincial Health Officer, responsible to the Lieutenant-Governor in Council sitting as the Provincial Board of Health, administers the laws relating to Public Health in British Columbia. Five divisions supply specialized services, namely: Tuberculosis Control, Venereal Disease Control, Laboratories, Sanitation, and Vital Statistics. Reorganization of the Division of Venereal Disease Control was completed during 1938. Government clinics for diagnosis and treatment are operated at Vancouver, Victoria, New Westminster, and Trail, while consultative service and free drugs are supplied to the private practitioners throughout the province. Reorganization of the Division of Vital Statistics took place on Apr. 1, 1939, under the supervision of a Director, bringing this phase of Public Health work into line with the other services. The Division of Laboratories has extended its activities so that it supervises all branch laboratories throughout the province, in addition to the central one in Vancouver. The Division of Tuberculosis Control has made further advances, and diagnostic and treatment services are extended to all parts of the province. The Public Health Nursing

Service is being constantly extended to include more rural areas of the province, and particular attention is being given to public health education.

### Section 2.—Institutional Statistics.\*

Under authority granted by the Dominion Government in 1930, the Dominion Bureau of Statistics has since co-operated with the provincial authorities through the Census of Institutions, and now collects, on a Dominion-wide basis, statistics for the following types of institutions: (1) *hospitals*—institutions primarily engaged in the prevention and cure of physical sickness and disease, such as hospitals for the sick, sanatoria, and institutions for incurables; (2) *mental and neurological institutions*—for the treatment and care of mental ailments, such as asylums for the insane, institutions for the feeble-minded, epileptic, etc.; (3) *charitable and benevolent institutions*—caring for the poor of both sexes and of all ages, such as homes for the aged, county refuges, orphanages, etc.; and (4) *penal and corrective institutions*—having for their purpose the reclamation of the criminal and the reformation and training of delinquent boys and girls. Institutional statistics, as summarized in Table 1, may, therefore, be regarded as dealing with the four main types of social pathology, *viz.*, physical, mental, economic, and moral. They provide a body of statistical data which affords to students of social problems a fairly comprehensive view of institutional life in Canada.

**Historical.**—A brief historical sketch of the origin and growth of the several classes of institutions in Canada is given at pp. 1006-1009 of the 1936 Year Book.

\* The statistics of this section have been revised by J. C. Brady, Officer in Charge of Census of Institutions, Dominion Bureau of Statistics.

Subsection 1.—Statistics of Hospitals, other than Mental.

The total number of various hospitals in operation in Canada during 1937 is given in the first part of Table 1. It is seen that, in addition to 622 public hospitals, there were 241 private hospitals, and 32 hospitals operated by the Dominion Government. The latter were made up of: 8 for War veterans, 4 quarantine and immigration, 1 marine, and 2 leper hospitals under the direction of the Department of Pensions and National Health; 9 military hospitals under the Department of National Defence; and 8 hospitals for Indians under the Department of Mines and Resources.\*

Summary statistics of reporting hospitals, which included 99.7 p.c. of all public and private hospitals in 1937, are presented for the years 1933 to 1937 in Table 2, and detailed statistics of staff, facilities, and movement of patients are shown by provinces in Table 3.

\* A complete list of all hospitals in Canada, giving name, location, type, and bed accommodation for 1937 is issued by the Dominion Bureau of Statistics.

2.—Summary Statistics of Reporting Public and Private Hospitals in Canada, 1933-37.

NOTE.—Figures include hospitals and homes for incurables, but do not include mental hospitals.

<sup>1</sup> These institutions are classified in detail in Table 1.<sup>2</sup> Includes 9 general hospitals in Yukon and N.W.T. reporting 1,365 admissions, 85 live births, 1,343 discharges, and 47,196 collective days' stay.<sup>3</sup> Personnel and facilities for Tranquille Sanatorium not available.

**Out-Patient Departments.**—Out-patient departments are operated in connection with hospitals or other institutions, and treat patients who do not occupy beds in the hospital. The extension of out-patient services to patients of modest means has far-reaching and beneficial effects. It may replace admission to a hospital, or may serve to secure necessary and beneficial hospitalization. As a general rule, out-patient departments are subsidized from the funds of the general hospital and separate records are not kept. Until a uniform system of accounting is adopted, it will not be possible to give the average cost per patient.

Table 4 gives the hospitals of each class operating public out-patient departments in Canada, by provinces, 1937. The statistics are rendered more complicated

than is desirable because of lack of uniformity in the method of reporting patients and treatments. The majority of hospitals report both patients and treatments, but a considerable number report either patients or treatments, but not both.

#### 4.—Public Hospitals Reporting Out-Patient Departments, 1937.

Note.—Figures of tuberculosis sanatoria and government and municipal clinics held in hospitals are not included.

<sup>1</sup> Includes one private hospital.

**Dominion Government Hospitals.**—Hospitals which are operated by the Dominion Government are conducted for special purposes connected with departmental administration such as the care of War veterans or members of the Permanent Force, quarantine of and the care of immigrants or lepers, the care of Indians as wards of the Government, etc.

Of the 32 Dominion hospitals referred to in Table 1, 15 are administered by the Department of Pensions and National Health (8 under the Pensions Section and 7 under the National Health Section); 8 are administered by the Indian Affairs Branch of the Department of Mines and Resources; and 9 are military hospitals under the control of the Department of National Defence.

Table 5 gives main statistics for these hospitals classified by the Departments which control them.

## Subsection 2.—Statistics of Mental Hospitals.

The Census of Mental Institutions of Canada for June 1, 1931, gave the number of patients in all mental institutions as 31,686, of whom 24,188 were insane, 7,006 mentally deficient, and 492 epileptic. The number of patients in mental institutions per 100,000 of the general population was 305.4 on June 1, 1931, 316.5 on Dec. 31, 1932, 324.9 on Dec. 31, 1933, 335.6 on Dec. 31, 1934, 348.2 on Dec. 31, 1935, and 359.5 on Dec. 31, 1936.

At Dec. 31, 1937, there were 41,677 patients in mental institutions in Canada, and 3,054 on parole, making a total of 44,731, whereas the normal bed capacity was only 37,798, showing a seriously overcrowded situation over a period when the patient population on Jan. 1, 1937, and the admissions and separations during the year are considered. This overcrowded condition is specially marked in British Columbia, Manitoba, Saskatchewan, Ontario, and Quebec. Of the 41,677 resident patients in 1937, 32,678 were insane, 8,159 were mentally deficient, 595 were epileptic, and 245 mental cases were otherwise classified. The patients per 100,000 of population at the end of the year were 373.0. Table 6 gives general statistics of mental institutions for 1937.

## Subsection 4.—Corrective and Reformatory Institutions.

Summary statistics under this heading collected at the Census of 1931 are given at p. 1019 of the 1936 edition of the Year Book. These statistics are now being collected quinquennially and figures for 1936 are given in Table 8. The reader will find detailed statistics of crime and delinquency (which are presented on an annual basis), as distinct from these institutional statistics, in Chapter XXVII immediately following this chapter.

## 8.—Summary Statistics of Corrective and Reformatory Institutions, by Provinces, June 1, 1936.

NOTE.—Statistics for penitentiaries are not included in this table but are to be found in the following chapter. See also headnote to Table 7.

## Section 3.—The Victorian Order of Nurses.

The Victorian Order of Nurses, established in 1897, is a National nursing organization having as its object the care of the sick in their own homes on a visit basis regardless of race, creed, or economic status. There are 89 branches of the Order employing approximately 350 public health nurses.

The primary function of the Victorian Order is bedside nursing and teaching of health in the homes visited. Three types of care are given by the nurses, *viz.*, maternal and infant welfare, general nursing, and health education. During 1938, the Order had 350 nurses in the field and 89 Branches distributed as follows: Nova Scotia, 15; New Brunswick, 6; Quebec, 5; Ontario, 49; Manitoba, 1; Saskatchewan, 3; Alberta, 2; and British Columbia, 8. During 1938, 765,969 visits were made to 84,697 patients, which was an increase in the work as a whole. The average number of visits per case was 9.4. Of the total visits made, 59 p.c. were free, while fully-paid visits constituted 25 p.c. (of which 17 p.c. were insurance) and part-paid visits 16 p.c. Maternal and infant welfare cases constituted 62 p.c. of the total visits made.

The maternal death rate per 1,000 living births attended by Victorian Order nurses for the past five years was 2.1.

## Section 4.—The Canadian Red Cross Society.\*

Closely allied with the Dominion and Provincial Governments in activities to promote the health of the people is the Canadian Red Cross Society. Founded in 1896, its purposes are to furnish volunteer aid to the sick and wounded of armies in time of war, and, in time of peace, to carry on and assist in work for the improvement of health, the prevention of disease, and the mitigation of suffering.

\* Revised by W. S. Caldwell, M.D., Assistant Director, Ontario Division, The Canadian Red Cross Society, Toronto.

The more important phases of the peace-time work carried on by the Society are: the continuing care of sick and disabled ex-service men; the operation of Red Cross outpost hospitals; the promotion of Junior Red Cross and the treatment of crippled or otherwise disabled children; the maintenance of a disaster relief organization fully prepared for immediate action in any emergency; the organization of classes for the study of home nursing and nutrition; the care of immigrant women and children at the Port of Halifax; the training and supplying of visiting housekeepers for families when the homemaker is ill; co-operation with government departments and other voluntary organizations in the combating of disease, the promotion of child welfare, and the care of the physically defective—in general, provision for the needs of the distressed and destitute.

Since the inception of the peace-time program in 1920, the Red Cross Society has established outpost hospital service in 72 centres in Canada's northland. Twenty-four of these have been handed over to their communities, four have been found no longer necessary, and in 1938 there were 44 outposts operating under the emblem of the Red Cross. In 1938, Red Cross outposts cared for 46,671 patients, of which 8,517 were in-patients, with a total of 90,538 hospital days' treatment. Without the aid of these outposts, thousands of our fellow-citizens who gain their livelihood on the fringes of the settled parts of Canada would lack any kind of skilled assistance in the event of sickness or injury.

Junior Red Cross, a movement for the children of elementary and sometimes secondary schools, is devoted to the promotion of the principles of health, good citizenship, and international friendliness. Guided only by the teacher-mentor, the children work out their own program of personal and school hygiene, community service, and interchange of handicrafts and information with the Juniors of other lands. Though primarily an educational movement, it is significant that, since its inception, the Canadian Junior Red Cross has helped nearly 16,000 crippled or otherwise disabled children. Junior Red Cross now embraces a membership of over 18,000,000 children in 50 nations of the world. At the end of the school year 1937-38, there were 13,090 active Junior Red Cross Branches in Canada, with a total membership of 397,176, and 965 Branches in Newfoundland with 32,800 members. Junior Red Cross in Newfoundland bears practically the same relation to National Office as the nine provincial divisions in Canada.

The consolidated financial statement of the Society for 1938 showed total receipts of \$979,360, of which \$607,890 consisted of voluntary contributions. Gross expenditures were \$1,014,260, of which the major items were \$354,436 for outpost hospitals and nursing stations, \$161,897 for assistance to soldiers and their dependants, \$54,802 for the treatment of crippled children, \$102,262 for general and sickness relief, \$72,761 for disaster relief, \$45,681 for organization of Junior Red Cross, and \$25,899 for home nursing, visiting housekeeper, and nutrition services.

## CHAPTER XXVII.—JUDICIAL AND PENITENTIARY STATISTICS.\*

**Canadian Criminal Law and Procedure.**—An account of the development of the Criminal Code in Canada is given at pp. 1085-1087 of the 1934-35 edition of the Year Book. In this article a résumé of procedure and of the extent and jurisdiction of the various classes of judges and magistrates is given.

The statistics presented in the tables that follow, which are summarized from the Annual Report of Statistics of Criminal and Other Offences, are collected directly from the criminal courts in the different judicial districts throughout the Dominion. There are 155 judicial districts, including 2 sub-districts, divided as to provinces as follows: Prince Edward Island 3, Nova Scotia 18, New Brunswick 15, Quebec 24, Ontario 47, Manitoba 6, Saskatchewan 21, Alberta 12, British Columbia 8, and Yukon 1. The figures for the Northwest Territories are obtained from the reports of the Royal Canadian Mounted Police.

### Section 1.—General Tables.

The collection and publication of criminal statistics now made by the Dominion Bureau of Statistics was initiated in 1876 (39 Vict., c. 13). All records of crime in that period are now available in publications of the Judicial Statistics Branch of the Bureau. The statistics relate to years ended Sept. 30, the latest report being for 1937. Beginning with the report for 1922, an enlargement of the classification of offences has been adopted, by which offences of juvenile offenders are compiled separately from those of adults.

Crime is divided into two definite classes, 'criminal' or 'indictable' offences, which include all serious crime covered by the Criminal Code (see p. 1054), and 'summary' or 'non-indictable' offences, which comprise breaches of municipal by-laws, traffic laws, and other less serious crimes (see p. 1061). Broadly speaking, indictable offences are triable by jury, although in certain cases the accused is accorded the right of election as to whether he be tried by jury or before a judge without the intervention of a jury, and in other cases the jurisdiction of the magistrate as to trial is absolute and does not depend upon the consent of the accused. Non-indictable offences are usually dealt with summarily by police magistrates under the Summary Convictions Act, and comprise breaches of municipal regulations and other minor offences. The term 'indictable' applies to offences of adults only, similar offences committed by juveniles† being termed 'major' offences; similarly, non-indictable offences of adults are termed 'minor' offences when attributed to juveniles.

In 1937, there were 464,180 cases of adult offenders handled by the courts, as compared with 420,247 in 1936. Of this total, 43,968 cases were of an indictable nature, while 420,212 were non-indictable. The corresponding figures for 1936 were 42,541 indictable and 377,706 non-indictable cases. In the case of juvenile offenders, 9,675 young persons were brought before the courts, of whom 1,959 were either dismissed or had their cases adjourned *sine die*.

**Convictions for All Offences.**—In previous editions of the Year Book, the historical statistics of all offences shown in Table 1 of this chapter have been compiled

\* Revised by H. M. Boyd, Chief, Judicial Statistics Branch, Dominion Bureau of Statistics. The sixty-second Annual Report of Statistics of Criminal and Other Offences, for the year ended Sept. 30, 1937, is obtainable from the Dominion Bureau of Statistics, price 50 cents.

† The term 'juvenile' is restricted to persons under 16 years of age.

on the basis of criminal and minor offences. This classification was followed officially prior to 1922 and has been carried on in the Year Book for purposes of comparability. The statistics of Table 1 below, however, have been revised in this edition back to 1886 on the more logical basis of indictable and summary conviction offences. The indictable class of offence does not include many offences which had formerly to be classed as criminal since they were summary convictions of adults that could not be included with minor offences.

Total convictions in 1937 increased by 44,101, or 10.5 p.c. as compared with 1936. Of the total, 7,716 were cases in which juveniles were found guilty of major or minor delinquency, an increase of 506, or 7.0 p.c. over 1936. The convictions of adults are treated in detail in ss. 2 and 3 under the respective headings "Convictions of Adults for Indictable Offences" and "Summary Convictions of Adults"; those of juveniles are shown in Sec. 3.

In using the statistics in Table 1, it should be remembered that, while the Criminal Code undergoes little change over periods of time, the figures of summary convictions are influenced very much by the changing customs of the people, and show a strong tendency to increase with the increasing urbanization of the population. From reference to the columns of Table 1 showing percentages of all offences, it is readily seen that summary convictions, as a class, have consistently increased their proportion of all offences, but the most significant column of this table is the figure of indictable offences per 100,000 of population. Attention may be drawn to the increase in the proportion of both indictable offences and summary or non-indictable offences to population in recent years, convictions of indictable offences having risen from 221 per 100,000 population in 1921 to 355 in 1931 and 381 in 1937, and those for non-indictable offences from 1,795 per 100,000 in 1921 to 3,183 in 1931 and 3,801 in 1937.

**1.—Convictions for All Offences (Juveniles Included), years ended Sept. 30, 1886-1937, showing Numbers and Percentages of Indictable and Summary (or Non-Indictable) Offences, and Rates per 100,000 Population.**

The recent trend of total convictions, including those of juveniles, and of sentences imposed is shown by provinces for the years 1931 to 1937 in Table 2. Death sentences have shown a fairly steady decline over the period. Increases in the number of convictions are shown for 1937 in every province, with the exception of Quebec.

<b>Totals.....</b>	<b>428</b>	<b>85</b>	<b>255</b>	<b>67</b>	<b>21</b>

Pardons.—The total number of cases in which the prerogative of mercy was exercised during 1937 was 1,272; of these 66 were not imprisoned, and were granted remittance or reduction of fines, etc. Of those imprisoned 588 cases were released on ticket of leave, and 668 were released unconditionally, 37 were deported, 67 fines were remitted or reduced; 4 death sentences were commuted and 53 cases disposed of in various other manners. These figures relate to the judicial year ended Sept. 30, and are not therefore comparable with those given in Sec. 5, Penitentiary Statistics.

## Section 2.—Offences of Adults.

Statistics of the total numbers of convictions registered for offences committed by adults (persons 16 years of age or over) are shown in Table 4, for the years 1933-37. The statistics in this table are comparable with those shown for juvenile offenders in Table 18. The separation between adult and juvenile offenders is only available for the years beginning with 1922, but totals of adult offences for the years 1922-32 may be obtained by subtracting those of Table 18 from those of Table 1.

## 4.—Convictions for Indictable and Summary Offences, by Class of Offence, Compared as to Numbers and Ratios, years ended Sept. 30, 1933-37.

## Subsection 1.—Convictions of Adults for Indictable Offences.

The progress of a community, from a moral point of view, is often judged by the number of convictions for indictable offences, as these are less affected than non-indictable offences by extraneous circumstances and the varying methods of law enforcement in different areas and in different years. However, in the study of such statistics it is important to have comparable figures over a period of years, and these are set out by provinces for each year since 1911 in Table 5. Again, in Table 7 are shown the numbers of charges and convictions and the percentages of acquittals for the three years ended Sept. 30, 1935-37.

It may be stated that during the thirty-eight year-period from 1900 to 1937 crimes increased from 5,768 to 37,148 or 544 p.c. The increase in the population during the same period was but 109.7 p.c., revealing that the increase in the crime rate was five times that of the population.

## 5.—Convictions of Persons 16 Years of Age or Over for Indictable Offences, by Provinces, years ended Sept. 30, 1911-37.

NOTE.—For figures for 1900-10, see p. 1016 of the 1933 Year Book.

<sup>1</sup> Included with Manitoba since that part of the N.W.T. from which earlier returns were received was included in Manitoba by the Extension of Boundaries Act, 1912. Later figures are for the present area of the N.W.T.

**Multiple Convictions.**—The total number of convictions must not be confused with the total number of persons convicted in any one year since an increasing number of persons tried for indictable offences have been convicted for more than one offence at the same trial. The trend of such 'multiple convictions' is interesting to students of sociology, and the following table has been compiled to show this for the five-year period 1933-37.

6.—Numbers of Persons Convicted of More than One Crime at the Time of Trial Compared with the Numbers Convicted of One Crime, years ended Sept. 30, 1933-37.

Persons Convicted of—	1933.	1934.	1935.	1936.	1937.

In Table 7, which shows charges, convictions and acquittals by provinces, convictions for indictable offences show increases in Prince Edward Island, New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia. Nova Scotia and Quebec show decreases from the previous year's totals while the Territories remain the same.

7.—Charges, Convictions, and Percentages of Acquittals for Indictable Offences, by Provinces, years ended Sept. 30, 1935-37.

NOTE.—The figures of this table do not include charges or convictions of juvenile delinquents.

<b>Canada.....</b>	<b>39,506</b>	<b>33,531</b>	<b>42,541</b>	<b>36,059</b>	<b>43,968</b>	<b>37,148</b>	<b>15.1</b>	<b>15.2</b>	<b>15.5</b>

**Classes of Indictable Offences and Analyses of Convictions.**—Indictable offences are divided under the Canadian system into six main classes, as shown in Table 8. The increase in total convictions from 36,059 in 1936 to 37,148 in 1937, viz., 1,089, is accounted for by increases in Classes I, III, IV, and V; these more than nullify decreases in Classes II and VI.

Class I (Offences against the Person) shows an increase of 367, or 8.23 p.c., in 1937 over 1936. In this class, abduction, aggravated assault, assault on wife and females, assault on and obstructing police, bigamy, blackmail, carnal knowledge, concealment of birth, endangering life on railway, non-support, procurement, rape, and shooting and wounding show increases in 1937 as compared with 1936.

In Class II (Offences against Property with Violence) 237, or 4.89 p.c., fewer convictions were made in 1937 than in 1936, although an increase is shown in the number of convictions for robbery.

For Class III (Offences against Property without Violence) there is an increase of 1,472 convictions, or 8.65 p.c., in 1937 compared with the 1936 figure. Convictions for bringing stolen goods into Canada, embezzlement, false pretences, receiving stolen goods, fraud, theft, and theft of automobile were more numerous in 1937 than in 1936. Horse and cattle stealing, and theft of mail show fewer convictions in 1937 than in the preceding year.

In Class IV (Malicious Offences against Property), an increase of 99 convictions, or 20.12 p.c., is shown for 1937 as compared with 1936.

Convictions for offences in Class V (Forgery and Other Offences against the Currency) increased from 1,094 in 1936 to 1,242 in 1937. The 148 increase represents 13.53 p.c. Both crimes in this category, forgery and offences against currency, increased during 1937.

Class VI (Other Offences), including crime not classified in the preceding five classes, shows 760, or 9.32 p.c., fewer convictions in 1937 than in the preceding year. Criminal negligence, illicit stills, keepers and inmates of bawdy houses, offences against public morals, offences against the Opium and Narcotic Drug Act, perjury, and breach of revenue laws show increases during 1937 but there are decreases in convictions for attempted suicide, carrying unlawful weapons, conspiracy, gambling and lotteries, intimidation, prison breach and escape, riot and unlawful assembly, sodomy, breaches of the Trade Mark Act, and miscellaneous.

Details are given in Tables 8 to 11.

Convictions of Females.—Over 10 p.c. of all convictions for indictable offences during 1937 were those of females. This is a slight increase over the 9.4 percentage shown in 1936. Numerically, convictions of females increased from 3,370 in 1936 to 3,783 in 1937. All provinces and territories, with the exception of British Columbia, contributed to this increase.

Women comprised a greater percentage of total convictions for 1937 than for 1936 in Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan, and Yukon and Northwest Territories. Percentage figures for Manitoba, Alberta, and British Columbia showed declines.

10.—Females Convicted of Indictable Offences, by Provinces, years ended Sept. 30, 1933-37.

<sup>1</sup> Not reported separately prior to 1936.

<sup>2</sup> Notwithstanding the fact that the United Church of Canada was completely organized in 1926, these persons still reported themselves as Methodists.

**Recidivism.**—The number of those offenders who relapse into crime after a first conviction has been steadily increasing. In the latest five years the number of first offenders convicted of indictable offences has decreased from 74.6 p.c. of the total of convictions for this class of offence to 65.4 p.c. Table 12 shows the numbers of first and second offences and of reiterated offences of an indictable nature for which convictions were made in the five latest years, together with the percentage of each of these classes to the total.

**12.—Numbers and Percentages of First Offences, Second Offences, and Reiterated Offences of an Indictable Nature, years ended Sept. 30, 1933-37.**

**Subsection 2.—Summary Convictions of Adults.**

The following statistics relate to non-indictable offences committed by adults (persons 16 years of age or over) and disposed of by police magistrates or other justices of the peace, under authority of the Summary Convictions Act. Such convictions numbered 420,212 during the year ended Sept. 30, 1937, an increase of 42,506, or 11.25 p.c., as compared with 1936. Every province, with the exception of Quebec, showed an increase in the total of convictions for non-indictable offences.

**13.—Summary Convictions, by Provinces, years ended Sept. 30, 1911-37.**

<sup>1</sup> Included with Manitoba, since that part of the N.W.T. from which earlier returns were received was included in Manitoba by the Extension of Boundaries Act, 1912. Later figures are for the present area of the N.W.T.

The marked increase in the past nine or ten years has been due almost entirely to breaches of traffic regulations, which have risen from 96,340 in 1927 to 288,688 in 1937, or from 50 p.c. to nearly 69 p.c. of the total summary convictions. Drunkenness, breaches of by-laws, vagrancy, and offences against liquor Acts all show increases in convictions in 1937 over 1936. Offences against gambling Acts show a substantial decrease.

14.—Summary Convictions, by Offences, years ended Sept. 30, 1933-37.

**Convictions for Drunkenness.**—The number of summary convictions for drunkenness in Canada in 1937 was 34,606, an increase of 21.7 p.c. over 1936. This was the highest point reached since 1930, when 35,789 convictions were recorded.

Maximum figures were attained in the years 1913 and 1914; during the War there was an appreciable reduction and since the War, while figures have fluctuated, they have not approximated former high levels.

### 15.—Convictions for Drunkenness, by Provinces, years ended Sept. 30, 1911-37.

NOTE.—For figures for 1900-10, see p. 1021 of the 1933 Year Book.

<sup>1</sup> Included with Manitoba, since that part of the N.W.T. from which earlier returns were received was included in Manitoba by the Extension of Boundaries Act, 1912. Later figures are for the present area of the N.W.T.

**Offences against the Liquor Acts.**—Until the Great War, alcoholic liquors were generally sold under specified conditions by licensed hotels or licensed shops. Offences against the liquor Acts usually represented a breach of the conditions of sale. During the War, prohibition was generally established but in more recent years the tendency has been for the Provincial Governments to take over the sale of liquor through commissions and derive a revenue therefrom (see pp. 622-624). Eight of the nine provinces now have their liquor commissions, Prince Edward Island being the only province in which prohibition prevails. In these circumstances, the convictions for offences against the liquor Acts in 1929 reached the highest figure on

record, viz., 19,327, but have since fallen off to 11,142 in 1937. The numbers of such convictions in each year since 1911 are given by provinces in Table 16.

**16.—Convictions for Offences against the Liquor Acts, by Provinces, years ended Sept. 30, 1911-37.**

NOTE.—For figures for 1900-10, see p. 1022 of the 1933 Year Book.

<sup>1</sup> See footnote to Table 15, p. 1063.

**Breaches of Traffic Regulations.**—Convictions for breaches of traffic regulations (Table 17), which at the beginning of the century numbered only 185 in all Canada, have, as a result of the growing density and increasing use of motor vehicles, become the largest element in the non-indictable offences. Such convictions reached a record total of 288,688 in 1937, when they represented 69 p.c. of the total of 420,212 (see Table 14) summary convictions. Convictions for breaches of traffic regulations in 1937 showed increases in all provinces.

## 17.—Convictions for Breaches of Traffic Regulations, by Provinces, years ended Sept. 30, 1911-37.

NOTE.—For figures for 1900-10, see p. 1023 of the 1933 Year Book.

<sup>1</sup> No convictions were reported for the Northwest Territories.

For the year 1937, Ontario, which had 47 p.c. of the registrations of motor vehicles in Canada (see p. 663), had 65 p.c. of the total convictions; Quebec in the same year had 15 p.c. of the motor vehicles and 20 p.c. of the convictions; and Manitoba 6.1 p.c. of the motor vehicles and 8.2 p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. Thus, the above three provinces contain large centres of population, while in the Maritime Provinces, Saskatchewan, and Alberta, with lower degrees of urbanization, convictions were low in proportion to the number of motor vehicles registered.

**Sex of Offenders.**—Between 1926 and 1937 the numbers of females convicted of summary offences increased by 136·0 p.c. In proportion to the numbers of male offenders, however, they showed a decrease, only 5·8 p.c. of the offenders convicted summarily in 1937 being females, as against 6·1 p.c. in 1926. By sexes, the summary convictions appear as follows: 1926, males 159,528, females 10,385; 1927, males 182,392, females 10,848; 1928, males 232,554, females 13,209; 1929, males 274,977, females 15,066; 1930, males 292,557, females 16,202; 1931, males 312,111, females 15,667; 1932, males 281,318, females 16,591; 1933, males 275,229, females 17,444; 1934, males 311,542, females 17,202; 1935, males 339,494, females 23,148; 1936, males 355,772, females 21,934; 1937, males 395,699, females 24,513.

### Section 3.—Juvenile Delinquency.

The terms 'indictable' and 'non-indictable' are applied only to offences of adults, similar offences committed by juveniles (persons under 16 years of age) being termed 'major' offences and 'minor' offences, respectively.

Table 18 shows the numbers of convictions of juveniles for all offences, classified as major and minor offences, for the judicial years 1922-37. No separation by class of offence is available for earlier years. The rates per 100,000 population in this table apply to the total population, no estimates by age-groups being available for intercensal years. Between 1930 and 1937, a definite upward trend is discernible in the column of percentage of major offences to all offences, but, when studied in relation to population growth, both major offences and minor offences have shown definite improvement since 1930.

#### 18.—Convictions of Juveniles for All Offences, showing Percentages of Major and Minor Offences, and Rates per 100,000 of Total Population, years ended Sept. 30, 1922-37.

NOTE.—In this table "Property without violence" includes Classes III and IV and "Other Offences" includes Classes V and VI.

While, officially, juveniles are persons under 16 years of age, public interest in the question of offences committed by 'young persons' has greatly increased in recent years, and, in response to this interest, the following table has been compiled, in which the convictions for indictable offences of persons aged over 16 and under 21 have been added to the figures of juveniles found guilty of major offences. The rates per 100,000 population are the proportion of the offences committed by persons in any one age group, the figures of population being taken from the decennial censuses, except in the case of the two latest years, where the population in each age group is the officially estimated population.

It will be observed that the age group 16 to under 21 years shows a much higher crime rate than the juvenile group (7 to 16 years) or the total young persons group (7 to under 21 years). For 1911, the 16 to under 21 group shows a rate per 100,000 population of the same age which is 127 greater than that shown for juveniles and 83 greater than the general rate for young persons; for 1921, the proportion is 227 per 100,000 greater than the juvenile rate and 155 greater than the young persons rate; by 1931 the rate had increased to 359 greater than the juvenile rate and 236 greater than the young persons rate. In the two latest years the rate of this group continued to rise, reaching 443 convictions per 100,000 over the juvenile rate and 289 over the young persons rate in 1937.

**19.—Convictions of Juveniles for Major Offences and of Adults Aged 16-21 for Indictable Offences, by Age Groups and Rates per 100,000 Population of the Same Age, years ended Sept. 30, 1911, 1921, 1931, and 1936-37.**

<sup>1</sup> No convictions were reported for the Territories.

**Major Offences.**—In Table 21 are shown the various major offences for which juvenile delinquents were convicted from 1931 to 1937. It will be observed that theft, house- and shop-breaking with theft, and other wilful damage to property account for the great bulk of the offences; in 1937, 91 p.c. of the major offences were of this character.

**Recidivism.**—The number of juvenile delinquents who have previously appeared before a court has generally increased although the fluctuations between individual years are rather wide over the period for which figures are available. As shown in Table 22, nearly a third of the juveniles convicted of major offences in 1937 had previously been found guilty, as compared with less than a fourth of those convicted of similar offences in 1928.

**Minor Offences.**—Table 23 shows the numbers of juveniles convicted of minor offences in the years ended Sept. 30, 1933-37, by main classes, with percentages of each class of offence to total offences, and rates per 100,000 of total population. In 1937 there was an increase of 252 convictions, or 11 p.c., over the 1936 figure.

### Section 4.—Municipal Police Statistics.

Police statistics were collected in 1937 from 160 cities and towns of 4,000 population or over in 1931 (1936, for the three Prairie Provinces), aggregating a total of 4,435,472 persons. The total number of police was 5,502 which is an average of one policeman to each 806 persons in the population of those cities and towns.

The returns showed a total of 453,950 crimes known to have been committed; 121,960 arrests were made and 244,342 summonses issued. The prosecutions numbered 360,437 with 304,906 convictions.

Automobiles reported stolen numbered 8,452 during 1937, of which 8,339 or 98.7 p.c. were recovered; 12,318 bicycles were stolen with 7,439 or 60.4 p.c. recovered. The value of other goods reported stolen was \$1,893,766 with \$1,254,679 or 66.2 p.c. recovered. There were 43,752 automobile accidents reported to the police, and 452 deaths and 15,007 injuries resulted from such accidents. Other accidents reported resulted in the death of 487 persons and injuries to 6,542.

The Royal Canadian Mounted Police is dealt with in Chapter XXVIII—Miscellaneous Administration—at pp. 1097-1098.

### Section 5.—Penitentiary Statistics.

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries of Canada. Seven institutions are included in the system, the two largest of which are at Portsmouth, Ont., and St-Vincent de Paul, Que., while the other five are at Dorchester, N.B.; Prince Albert, Sask.; Stony Mountain, Man.; New Westminster, B.C.; and Collins Bay, Ont. During the fiscal year ended Mar. 31, 1938, the average daily population of these institutions was 3,279 and the total net cash outlay for the year was \$2,510,793 or \$2.10 per convict per diem, compared with 3,103 average daily population and \$2,307,716 total net cash outlay or \$2.04 per convict per diem for the year 1936.

The special penitentiary for Doukhobors on Piers island, which was administered under the warden of the penitentiary at New Westminster, was in operation from 1932 to Mar. 28, 1935, when the 39 remaining inmates were transferred to New Westminster. The statistics of this special penal colony are included with those of the regular penitentiaries in the following tables, and the reader is referred to p. 1035 of the 1936 Year Book for details of the Piers Island colony, given by sex, age, race, and conjugal condition.

Female convicts are kept in the penitentiary at Portsmouth, Ont., a suburb of Kingston, where special quarters and staff are maintained for their detention and supervision. Female convicts in custody there on Mar. 31, 1938, numbered 39 compared with 32 in 1937, and 30 in 1936.

**Movement of Population of Penal Institutions.**—Penal institutions may be classified under four heads: (1) penitentiaries, with slow turnover, since prisoners have long sentences; (2) reformatories for boys; and (3) reformatories for girls, also with rather slow turnovers, but more rapid in the case of boys than in that of girls; and (4) common gaols, where the turnover is extremely rapid. If the average population for the year be taken as the average of the inmates at the beginning and at the end of the year, and the number discharged be the turnover, the turnover in 1937 was: in penitentiaries, 42.6 p.c.; in reformatories for boys, 228 p.c.; in reformatories for girls, 86 p.c.; in gaols, no less than 1,434 p.c. Thus, the average time spent in gaol was about 3.6 weeks. In dealing with these figures it must be borne in mind that the common gaol population changes from day to day, and is partly made up of accused persons awaiting trial who may be liberated to-day or sent to a penitentiary or reformatory to-morrow.

### 25.—Population of Penal Institutions, 1935-37.

**NOTE.**—Penitentiary statistics until 1919 were supplied directly by each penitentiary and were for the calendar year. For 1920 and subsequent years they have been supplied by the Superintendent of Penitentiaries and are for the fiscal years ended Mar. 31. Commencing with the fiscal year 1937 they have been compiled by the Dominion Bureau of Statistics. For other institutions, the figures are for the years ended Sept. 30.

Tables 26 to 28 give the more important penitentiary statistics as reported to the Bureau. The number of convicts in penitentiaries was 1,865 in 1910, rose to 2,118 in 1916 and declined to 1,468 in 1918. After demobilization and the depression of 1921, the number of convicts rose to 2,640 in 1922, declined to 2,225 in 1924, and then increased to 4,164 in 1932. The increase was particularly rapid after 1929, amounting to 1,395 or 44 p.c. in three years. The number of convicts in 1936, at 3,098, was lower than in any year since 1929, but, in 1937 there was an increase of 5.4 p.c. with a further increase of 9.7 p.c. in 1938. The number of paroles, as shown in Table 26, numbered 190 in 1938.

Table 27 shows the ages of convicts by groups. In 1938, of the total of 3,580, 5.4 p.c. were under 20 years of age; 45.6 p.c. between 20 and 30 years of age;

thus 51 p.c. were under 30. In 1914, there were 2,003 convicts of whom 9.3 p.c. were under 20 and 44.4 p.c. between 20 and 30, a total of 53.7 p.c. under 30. In 1923, there were 2,486 convicts and 11.3 p.c. were under 20, 46.6 p.c. between 20 and 30, or 57.9 p.c. under 30 years of age. The average age of convicts in 1938 was 32.3 years and in 1937 31.2 years. Detailed statistics of the race, nationality by place of birth, conjugal state, sex, social habits, and religion of convicts are presented in Table 28.

### 26.—Movement of Convicts in Penitentiaries, fiscal years 1931-38.

Schedule.	1931.	1932.	1933.	1934.	1935.	1936.	1937.	1938.
	No.	No.	No.	No.	No.	No.	No.	No.

<b>Totals.....</b>	<b>3,714</b>	<b>4,164</b>	<b>4,587</b>	<b>4,290</b>	<b>3,552</b>	<b>3,096</b>	<b>3,264</b>	<b>3,580</b>

<sup>1</sup> The unusually high figures for many items and the totals in 1933 and 1934 are due to the confinement of Doukhobors in the special penitentiary on Piers Island, B.C. (See p. 1070). <sup>2</sup> All 'coloured'.  
<sup>3</sup> These persons returned themselves as Methodists in spite of the union with Presbyterians and Congregationalists to form the United Church of Canada in 1925.

# CHAPTER XXVIII.—MISCELLANEOUS ADMINISTRATION.

## Section 1.—Public Lands.

Table 1 summarizes the land area of Canada by tenure. Items 3, 4, and 5 are obtained from Dominion Government sources and Items 1, 2, and 7 from Provincial Government sources. In the majority of cases the area of provincial lands (Item 6), as calculated by balancing the figures, agrees with the area as estimated by the provincial departments concerned. Thus, any differences reported from year to year in the area of lands alienated or in process of alienation are compensated for by the adjustment of lands still remaining under the Crown in the right of the provinces concerned. The total land areas shown are the equivalents in thousands of acres of those given by provinces in square miles on pp. 8 and 27.

### 1.—Summary of Classification of Lands in Canada, by Tenure (*circa* 1938).

NOTE.—The land area of Canada is shown classified by surface resources on p. 27.

Tenure.	P.E.I.	N.S.	N.B.	Que.	Ont.	
	'000 acres.	'000 acres.	'000 acres.	'000 acres.	'000 acres.

<b>Totals, Land Area<sup>2</sup>.....</b>	<b>140,623</b>	<b>152,364</b>	<b>159,232</b>	<b>229,939</b>	<b>936,680</b>	<b>2,218,596</b>

<sup>1</sup> Includes lands in process of alienation. Department of Mines and Resources.

<sup>2</sup> Estimated by the Hydrographic and Map Service, for the provinces indicated only.

<sup>3</sup> In Yukon and N.W.T., areas aggregating 330,542,050 acres have been set apart by Order in Council as game preserves and sanctuaries in which only native Indians and Eskimos may hunt, but have not been permanently dedicated to this purpose by Parliament and are not, therefore, regarded as parks.

<sup>4</sup> Includes the Wood-Buffalo Park (which, though reserved by the Dominion, is not administered as a National Park) and the Tar-Sands Reserve. <sup>5</sup> That portion of the Wood-Buffalo Park in the Northwest Territories.

**Subsection 1.—Dominion Public Lands.\***

The public lands under the administration of the Dominion Government comprise lands in the Northwest Territories, including the Arctic archipelago and the islands in Hudson strait and bay; lands in Yukon Territory; National Parks (see pp. 28-31) and historic sites; Indian reserves (see p. 1085); Ordnance and Admiralty lands; and, in general, all lands held by the several departments of the Dominion Government for various purposes connected with Dominion administration. The lands and other natural resources lying within the boundaries of the provinces of Manitoba, Saskatchewan, Alberta, and British Columbia, which had formerly been administered by the Dominion Government, were transferred in 1930 to the administration of the provinces concerned. (See p. 1019 of the 1931 Year Book.)

The great bulk of the land areas under Dominion administration are those of Yukon and Northwest Territories, amounting to about 936,680,000 acres or 42 p.c. of the land surface of Canada. In general the southern border of both Yukon and Northwest Territories is 60° N. latitude. In Europe, Oslo, Stockholm, and Leningrad are near this line, and about three-fourths of Norway, two-thirds of Sweden, all of Finland and a large proportion of Russia are north of it. This northern part of the national domain is under the administration of the Lands, Parks, and Forests Branch of the Department of Mines and Resources. The Royal Canadian Mounted Police maintain law and order throughout Yukon and Northwest Territories. More detailed particulars follow:—

**The Northwest Territories.**—The government of the Northwest Territories is vested in a Commissioner, a Deputy Commissioner, and a Council of five members appointed by the Governor General in Council, with Ottawa as the seat of government. The Territories are subdivided for administrative purposes into the provisional districts of Mackenzie, Keewatin, and Franklin. The District of Mackenzie is the most widely known and developed, trading posts and settlements being located all along the great stretch of inland waterways known as the Mackenzie system.

The administrative headquarters for the Mackenzie District is located at Fort Smith on the Slave river, immediately north of the Alberta-N.W.T. boundary. From this point there is uninterrupted navigation to the Arctic ocean, a distance of 1,300 miles, and along the Arctic coast as far east as King William island. When navigation conditions are favourable it is possible to effect inter-communication between the Western and Eastern Arctic through Bellot strait which separates Boothia peninsula, the most northerly tip of the mainland, from Somerset island.

The Administration provides a medical and nursing service, assists the Anglican and Roman Catholic missions in providing educational and hospital facilities, and cares for the general welfare of the population of the Territories. The population of the Territories at the time of the 1931 Census was 9,723.

Areas totalling approximately 584,050 square miles comprising many of the finest hunting grounds of the natives have been set aside as preserves wherein only resident Indians, Eskimos, and half-breeds may hunt and trap game. Included in

\* Prepared under the direction of R. A. Gibson, Director, Lands, Parks, and Forests Branch, Department of Mines and Resources, Ottawa.

this area is the new Mackenzie Mountains Preserve, which takes in all the land between the Mackenzie river, the Yukon boundary, and the Peel River Preserve. With a view to conserving the game in the districts not included in the game preserves, licences to hunt and trap game may, under the regulations, be issued only to:—

1. Residents of the Northwest Territories as defined by these regulations who at the present time hold hunting and trapping licences and who continue to reside in the Northwest Territories.

2. The children of those who have had their domicile in the Northwest Territories for the past four years, provided such children continue to reside in the Northwest Territories.

The Wood-Buffalo Park in the vicinity of Fort Smith, which covers an area of 17,300 square miles (a portion of which is in Alberta), has been reserved specially for the protection of buffalo. The Thelon Game Sanctuary to the east of Great Slave lake, which was set aside primarily to aid in the conservation of musk-oxen, provides sanctuary for all species of game. Under the Northwest Game Act, musk-oxen may not be killed anywhere in the Northwest Territories.

With a view to the development of an industry which would augment the supply of wild life available as a source of food and clothing for the natives, the Dominion Government, in 1935, established a herd of reindeer on a reserve of approximately 6,600 square miles, immediately east of the Mackenzie delta. The herd has contributed to the well-being of the native population, and had increased in numbers from the original 2,370 head to more than 4,500 at the round-up in the summer of 1938. In December of that year, about 900 of the deer, the nucleus of another herd, were established under native management in a location 150 miles east of the reserve.

In view of the great increase in the use of aircraft for mail and general transportation, the Administration is developing landing facilities at many points throughout the Mackenzie District. A winter landing field has been provided at Fort Smith and others are in course of completion at Resolution, Providence, Simpson, and Norman. Floating docks, etc., have been constructed at several points for the use of seaplanes.

An excellent air-mail service is provided by the Post Office Department, while the Department of National Defence operates a system of radio stations linking up the chief settlements and mining centres of the Northwest Territories and the Yukon Territory with Edmonton, Alberta. Radio stations are in operation at Fort Smith, Resolution, Simpson, Norman, Aklavik, Port Brabant (seasonal), Port Radium, Yellowknife, Thompson Lake, Dawson, Mayo, Whitehorse, and Burwash Landing. Direction-finding and meteorological stations are operated by the Department of Transport at Chesterfield, Nottingham Island, Resolution Island, and Coppermine.

Exploratory work has been carried on throughout the Territories and much aerial surveying has been done, particularly in the mineralized areas of Mackenzie District. Mineral prospectors are exploring new areas, the aeroplane being used as the chief means of transportation. The Precambrian Shield, which has proved so rich in valuable minerals in southerly Canada, is continued into the Territories—that portion lying between Great Slave and Great Bear lakes and Hudson bay—

and valuable discoveries have been made in this area. The rich native silver and high-grade pitchblende ores discovered, during the past few years, near Great Bear lake are now under development. The oil wells near Norman on Mackenzie river have been in active operation since 1932, the bulk of the oil produced being used by mining interests operating at the eastern end of Great Bear lake. In recent years much prospecting has been carried out in the Great Slave Lake area where discoveries of gold have been reported. Active development is now in progress at many points. The agricultural land of the Territories lies almost entirely in the extension of the central plain along the Mackenzie valley.

It is known that there are many possible water-power sites throughout the Territories and certain of them may be developed as a consequence of mining enterprises. Much of the Mackenzie valley carries a forest cover that furnishes timber and fuel for local needs. Fishing, agriculture, and lumbering are engaged in to some extent, but the principal industry of the Territories is still the taking and exportation of furs, with mining rapidly increasing in importance. Many trading posts operate throughout the regions tributary to the Arctic coast, Hudson bay, and the great inland systems of waterways.

**Yukon.**—Yukon was created a separate Territory in June, 1898. Provision is made for a local Government composed of a chief executive classified as Controller, also an Elective Legislative Council with jurisdiction over local matters and composed of three members with a three-year tenure of office. The Controller administers the Government under instructions from the Governor General in Council or the Minister of Mines and Resources. The seat of government is at Dawson. The Territory has hospitals, schools, and other amenities of modern life, including wireless and telegraphic facilities. The population in 1931 was 4,230.

The usual route followed by travellers to the Yukon Territory is by steamer from ports on the Pacific coast to Skagway, Alaska, from that point to Whitehorse by the White Pass and Yukon railway, and thence by river boat to Dawson.

The use of aircraft for transportation purposes is increasing and landing fields have been conditioned at Dawson, Mayo, Whitehorse, and Carcross. A temporary licence has been issued for the field at Whitehorse which is becoming important through its being on the main route for international traffic. Some work has been done on emergency fields at Selkirk, Carmacks, and McQuesten.

Yukon has produced over \$200,000,000 worth of gold since the Klondike rush, but the old placer claims, operated with cradle, pick, and shovel, have given place to consolidated holdings worked with hydraulic dredges and other modern machinery. The development of the silver-lead ores of the Mayo district has been one of the major factors in the growth of lode-mining enterprises. Copper, tungsten, and coal are also found in the Yukon Territory. There is a hydro-electric installation of 13,200 h.p. in Yukon, which is used to supply electric energy for placer-mining operations and for the city of Dawson.

Although fishing, agriculture (including fur farming), and some lumbering are carried on as auxiliary industries, the future of Yukon is inevitably bound up with mining development and the fur trade.

### Subsection 2.—Provincial Public Lands.

In the Maritime Provinces, in Quebec, Ontario, and British Columbia (except the Railway Belt and the Peace River Block) the public lands have been administered by the Provincial Governments since Confederation. Since the transfer of the natural resources to the Prairie Provinces and British Columbia, as outlined in Chapter XXVII, p. 1019 of the 1931 Year Book, public lands in all provinces have been under provincial administration. In Prince Edward Island, all the land is alienated and there are no provincial public lands.

Those interested in securing information regarding provincial public lands are referred to the following officials of the respective provinces: Minister of Lands and Forests, Halifax, N.S.; Deputy Minister of Lands and Mines, Fredericton, N.B.; Deputy Minister of Lands and Forests, Quebec, Que.; Deputy Minister of Lands and Forests, Toronto, Ont.; Director of Lands, Department of Mines and Natural Resources, Winnipeg, Man.; Director of Lands, Department of Natural Resources, Regina, Sask.; Director of Lands, Department of Lands and Mines, Edmonton, Alta.; Deputy Minister of Lands, Victoria, B.C.

### Section 2.—National Defence.

Before the outbreak of the Great War, the Canadian Militia consisted of a Permanent Force, which, on Mar. 31, 1914, numbered 3,000 officers, non-commissioned officers, and men, and an Active Militia, which at the same date numbered 5,615 officers and 68,991 non-commissioned officers and men. After the outbreak of War on Aug. 4, 1914, successive contingents of troops of all arms were recruited, equipped, trained, and dispatched by the Dominion Government to England for active service. When hostilities ceased on Nov. 11, 1918, there had been sent overseas, for active service in the Canadian Expeditionary Force, about 418,000 officers, non-commissioned officers, and men.\* In addition to these, several thousand Canadians served with the Royal Air Force.

**Organization.**—Prior to 1922, three departments of the Canadian Government were concerned with the defence of Canada, *viz.*, the Department of Militia and Defence, the Department of the Naval Service, and the Air Board.

During the session of 1922, the National Defence Act was passed, consolidating the Department of Militia and Defence, the Department of the Naval Service, and the Air Board into the Department of National Defence. This Act became effective by proclamation on Jan. 1, 1923. Under it, there is a Minister of National Defence and a Deputy Minister of National Defence. To advise the Minister, a Defence Council has been constituted by Order in Council, consisting of a President (the Minister), a Vice-President (the Deputy Minister), and the following members: the Chief of the General Staff, the Chief of the Naval Staff, and the Chief of the Air Staff. The Adjutant-General, the Quartermaster-General, the Master-General of the Ordnance, and the Judge Advocate-General, are associate members. There is also a Secretary of the Council.

### Subsection 1.—The Naval Service.

The Naval Service of Canada was established by the Naval Service Act, 1910 (9-10 Edw. VII, c. 43), the main provisions of which are described in the 1910 Year Book, pp. xxvi-xxix.

\* For the detailed expenditures of the Dominion Government on account of War appropriations in the fiscal years 1915-21, see the Canada Year Book, 1921, p. 798.

The Royal Canadian Navy and its Reserve Forces are under the direction of the Chief of the Naval Staff, who is a member of the Defence Council. The Service consists of:—

1. Royal Canadian Navy (permanent).
2. Royal Canadian Naval Reserve (non-permanent).
3. Royal Canadian Naval Volunteer Reserve (non-permanent).
4. Royal Canadian Fleet Reserve (non-permanent).

Administrative and operational staff for all four Forces is provided from the Royal Canadian Navy.

**The Royal Canadian Navy.**—The Royal Canadian Navy has an authorized complement of 150 officers and 1,822 ratings. A large majority of the men of the R.C.N. are serving under 7-year engagements. A small proportion consists of specialist gunnery, torpedo, and engine-room ratings, lent from the Royal Navy. (On Apr. 1, 1933, there were 4 Royal Navy officers and 2 Royal Navy ratings on loan to the Royal Canadian Navy.)

A proportion of the officers of the Royal Canadian Navy serve periodically in ships of the Royal Navy, to acquire experience in capital ships, cruisers, etc., and training courses are arranged for selected officers at the instructional schools of the Royal Navy to qualify in war staff, gunnery, torpedo, wireless, and other duties. Courses for selected men in the gunnery, torpedo, wireless telegraphy, and mechanical training schools of the Royal Navy are similarly arranged.

The ships of the Royal Canadian Navy are:—

H.M.C.S. <i>Saguenay</i> (destroyer—in commission).	H.M.C.S. <i>Fundy</i> (minesweeper—in commission).
H.M.C.S. <i>Skeena</i> (destroyer—in commission).	H.M.C.S. <i>Noctika</i> (minesweeper—in commission).
H.M.C.S. <i>St. Laurent</i> (destroyer—in commission).	H.M.C.S. <i>Comox</i> (minesweeper—in commission).
H.M.C.S. <i>Fraser</i> (destroyer—in commission).	H.M.C.S. <i>Venture</i> (training schooner—in commission).
H.M.C.S. <i>Ottawa</i> (destroyer—in commission).	H.M.C.S. <i>Skidegate</i> (motorship—in commission).
H.M.C.S. <i>Restigouche</i> (destroyer—in commission).	H.M.C.S. <i>Glencain</i> (auxiliary ketch).
H.M.C.S. <i>Armentières</i> (minesweeper—in commission).	
H.M.C.S. <i>Gaspe</i> (minesweeper—in commission).	

Naval training establishments comprising: naval barracks; gunnery drill sheds, with all modern appliances for teaching gun-laying, sight-setting, etc.; torpedo and electrical schools; parade grounds, and other equipment are maintained at Halifax and Esquimalt. Naval dockyards, with workshops, etc., for refitting and supplying necessary stores to H.M.C. ships, are also maintained at Halifax and Esquimalt.

**Royal Canadian Naval Reserve.**—The establishment of the Royal Canadian Naval Reserve is 70 officers and 430 men recruited from among sea-faring personnel. Officers have been appointed to act as registrars at Halifax, Charlottetown, Quebec, Montreal, and Vancouver.

Officers and men of the Royal Canadian Naval Reserve attend naval training at Halifax and Esquimalt for 42 days for the first year of enrolment and for 14 days annually or biennially thereafter. They are permitted to volunteer for service afloat up to a maximum of six months during each period of enrolment. The period of enrolment in the Royal Canadian Naval Reserve is five years.

The R.C.N.R. Fishermen's Reserve, comprising 40 skippers and 160 seamen, is established on the Pacific coast of Canada.

**Royal Canadian Naval Volunteer Reserve.**—The establishment of the Royal Canadian Naval Volunteer Reserve is 138 List "A" officers, 26 instructors, and 1,652 ratings, distributed as follows: Halifax, Saint John, Charlottetown, Quebec, Montreal, Ottawa, Toronto, London, Hamilton, Port Arthur, Winnipeg, Saskatoon,

Regina, Edmonton, Calgary, Vancouver, Prince Rupert. An additional Division is in process of establishment.

Each Division is under the immediate command of an officer of the R.C.N.V.R., appointed as commanding officer. The commanding officer is assisted by other commissioned officers of the Force.

A petty officer instructor (a highly qualified ex-petty officer of the Royal Navy or of the Royal Canadian Navy) is employed at each Division to give instruction to men of the Division in gunnery, torpedo practice, seamanship, and other naval subjects.

Each List "A" officer and man of the R.C.N.V.R. performs annually a minimum of 30 drills, of a duration of not less than one hour each, at Division headquarters. In actual practice 40 to 50 drills have been performed annually by each member of the R.C.N.V.R. Officers and men also attend from two to three weeks naval training annually at the naval bases at Halifax or Esquimalt, or at sea in H.M.C. or H.M. ships.

Officers and men who can obtain the necessary leave of absence are permitted to perform a maximum of four months voluntary service during each period of enrolment, and a large number have availed themselves of this opportunity of gaining extended naval experience under sea-going conditions. The period of enrolment and of re-enrolment in the R.C.N.V.R. is three years.

### Subsection 2.—Military Forces.

The Militia of Canada is constituted by the Militia Act. The Active Militia is divided into the Permanent and the Non-Permanent Militia.

**Permanent Active Militia.**—The Permanent Force consists of the following units:—

**CAVALRY.**—The Royal Canadian Dragoons; Lord Strathcona's Horse (Royal Canadians).

**ARTILLERY.**—The Royal Canadian Horse Artillery Brigade ("A", "B", and "C" Batteries); Royal Canadian Artillery (Nos. 1, 2, and 5 Heavy Batteries, No. 3 Medium Battery, and No. 4 Anti-Aircraft Battery).

**ENGINEERS.**—The Royal Canadian Engineers (13 detachments and 1 field company).

**SIGNALS.**—The Royal Canadian Corps of Signals.

**INFANTRY.**—The Royal Canadian Regiment; Princess Patricia's Canadian Light Infantry; The Royal 22<sup>e</sup> Regiment (a French-Canadian regiment).

**ARMY SERVICE CORPS.**—The Royal Canadian Army Service Corps (12 detachments and training centre).

**MEDICAL CORPS.**—The Royal Canadian Army Medical Corps (15 detachments).

**VETERINARY CORPS.**—The Royal Canadian Army Veterinary Corps (4 detachments).

**ORDNANCE CORPS.**—The Royal Canadian Ordnance Corps (12 detachments).

**PAY CORPS.**—The Royal Canadian Army Pay Corps (13 detachments).

**MILITARY CLERKS.**—The Corps of Military Staff Clerks (12 detachments).

The strength of the Permanent Active Militia is limited by the Militia Act to 10,000, but at present the limited establishment is less than 4,300.

*Schools of Instruction.*—The Canadian Small Arms School is the only school which is an independent unit of the Permanent Force, but at all stations of the Permanent Force in Canada, Royal Schools of Instruction are conducted.

The Canadian Armoured Fighting Vehicles School situated at Camp Borden is conducted by personnel of the Permanent Active Militia; the purpose of this school is the instruction of personnel of both the Permanent and Non-Permanent Active Militia of Canada in the use and maintenance of mechanized equipment.

**Non-Permanent Active Militia.**—The Non-Permanent Active Militia consists of:—

**CAVALRY.**—

- 20 Regiments of Cavalry,  
Cavalry (Armoured Car), and  
Cavalry (Mechanized).

**ARTILLERY.**—

- 103 Field Batteries.  
20 Medium Batteries.  
10 Heavy Batteries.  
4 Anti-Aircraft Batteries.  
1 Light Anti-Aircraft Battery.  
1 Survey Company.

**ENGINEERS.**—

- 1 Field Squadron.  
17 Field Companies.  
6 Field Park Companies.  
9 Army Troops Companies.  
1 Electrical and Mechanical Company.  
1 Workshop and Park Company.  
2 Anti-Aircraft Companies.  
2 Corps Field Survey Companies.  
2 Fortress Companies.

**SIGNALS.**—

- 7 Cavalry Signal Troops.  
2 Armoured Car Regiment Signal Troops.  
4 Divisional Signals.  
7 District Signals.  
2 Corps Signals.  
10 Cable, Wireless, etc., Sections.  
2 Fortress Signal Companies.

**CANADIAN OFFICERS TRAINING CORPS.**—

- 22 Contingents.

**INFANTRY.**—

- 59 Battalions (rifle).  
23 Battalions (machine-gun).  
6 Battalions (tank).

**ARMY SERVICE CORPS.**—

- 1 Cavalry Divisional R.C.A.S.C.  
6 Divisional R.C.A.S.C.  
2 Corps Troops R.C.A.S.C.  
2 Corps Ammunition Parks.  
2 Pontoon Bridge Parks.  
1 Reserve Mechanical Transport Company.  
1 Advance Horse Transport Depot.  
2 Railroad Supply Detachments.  
1 Mechanical Transport Vehicle Reception Depot.  
2 Composite Companies.

**MEDICAL CORPS.**—

- 2 Cavalry Field Ambulances.  
22 Field Ambulances.  
1 Cavalry Field Hygiene Section.  
11 Field Hygiene Sections.  
6 Casualty Clearing Stations.

**DENTAL CORPS.**—

General List.

**VETERINARY CORPS.**—

- 1 Veterinary Hospital.  
2 Cavalry Mobile Veterinary Sections.  
7 Mobile Veterinary Sections.  
1 Veterinary Evacuating Station.

**ORDNANCE CORPS.**—

- 6 Army Field Workshops.  
1 Ordnance Workshop Company.  
1 Ordnance Store Company.  
1 Anti-Aircraft Group Workshop.  
1 Ordnance Ammunition Company.  
1 Cavalry Divisional Ordnance Workshop.  
11 District Store Sections.

**POSTAL CORPS.**—

- 1 Base Post Office.  
11 Postal Units.

The total establishment of the Non-Permanent Militia is 7,117 officers and 79,193 other ranks, a total of 86,310, distributed as shown in the following table.

**2.—Permanent and Non-Permanent Active Militia in Canada, 1933.**

Arm of Service.	Permanent Active Militia.		Non-Permanent Active Militia.	
	Personnel.	Horses.	Personnel.	Horses.
Staff and General List.....	71	Nil	Nil	Nil
Cavalry.....	444	323	8,141	4,840

Signals.....	422	"	4,008	"
Officers' Training Corps.....	Nil	"	4,553	"
Infantry.....	997	27	42,721	"
Army Service Corps.....	300	Nil	1,535	"
Non-Combatants.....	990	"	6,435	4
<b>Totals.....</b>	<b>4,268</b>	<b>354</b>	<b>86,308</b>	<b>4,844</b>

**Reserve Militia.**—In addition to the Active Militia, there is also the Reserve Militia—a framework designed to serve as a basis for contingent military organization. Drill and training are voluntary and entail no expense to the public.

The reserves of the Active Militia, as distinguished from the Reserve Militia mentioned above, comprise:—

- (a) The Reserve of Officers (general list).
- (b) Reserve Regimental Depots.
- (c) Corps Reserves and Corps Reserve Lists of the Non-Permanent Active Militia consisting of qualified officers who are permitted to withdraw from the training establishment of Corps of the Non-Permanent Active Militia.
- (d) Certain Reserve units of the R.C.A.M.C. (N.P.)—"General Hospitals" and "Motor Ambulance Convoys".

**Military Districts.**—For the command, training, and administration of the Canadian Militia, Canada is divided into 11 military districts, each under a District Officer Commanding, assisted by a district staff.

**Militia Appropriations.**—The appropriations for the Militia for the six fiscal years ended Mar. 31, 1934-39, are shown at p. 1045 of the 1938 Year Book. For the fiscal year 1940 they amounted to \$21,836,500. Actual expenditures of the Department of National Defence, by Services, for the 5 latest fiscal years will be found in Table 3 of the Public Finance Chapter of this volume, at p. 879.

### Subsection 3.—Air Force.

The Royal Canadian Air Force is comprised of the Permanent Active Air Force, the Auxiliary Active Air Force, and a Reserve of Officers. The Royal Canadian Air Force administers and controls all military air operations and certain air operations for civil government departments. The duties of the Royal Canadian Air Force are as follows:—

- (a) To organize, train, and maintain an air force for the defence of Canada.
- (b) The conduct of limited flying operations (chiefly photography) for civil government departments when the exigencies of the service permit.

Permanent Active Air Force commands, stations, and units are located as follows:—

R.C.A.F. Headquarters, Ottawa, Ont.	R.C.A.F. Station Headquarters, Camp Borden, Ont.
R.C.A.F. Record Office, Ottawa, Ont.	Intermediate Training Wing Headquarters.
Western Air Command Headquarters, Vancouver, B.C.	Intermediate Training Squadron.
R.C.A.F. Station Headquarters, Vancouver, B.C.	Intermediate Ground Instructional School.
No. 4 (General Reconnaissance) Squadron.	No. 2 Technical Training School.
No. 6 (Torpedo Bomber) Squadron.	No. 12 Technical Detachment, Toronto, Ont.
No. 9 (General Reconnaissance) Squadron.	No. 110 P.F. Detachment, Toronto, Ont.
No. 2 Equipment Depot, Winnipeg, Man.	No. 114 P.F. Detachment, London, Ont.
No. 3 Repair Depot, Vancouver, B.C.	No. 119 P.F. Detachment, Hamilton, Ont.
No. 1 (Fighter) Squadron, Calgary, Alta.	Eastern Air Command Headquarters, Halifax, N.S.
No. 3 (Bomber) Squadron, Calgary, Alta.	R.C.A.F. Station Headquarters, Dartmouth, N.S.
No. 13 Technical Detachment, Vancouver, B.C.	No. 5 (General Reconnaissance) Squadron.
No. 21 Magazine Detachment, Kamloops, B.C.	No. 4 Repair Depot, Dartmouth, N.S.
No. 111 P.F. Detachment, Vancouver, B.C.	No. 22 Magazine Detachment, Debert, N.S.
No. 112 P.F. Detachment, Winnipeg, Man.	No. 116 P.F. Detachment, Halifax, N.S.
No. 113 P.F. Detachment, Calgary, Alta.	No. 117 P.F. Detachment, Saint John, N.B.
No. 120 P.F. Detachment, Regina, Sask.	R.C.A.F. Station Headquarters, Ottawa, Ont.
Air Training Command Headquarters, Toronto, Ont.	R.C.A.F. Photographic Establishment.
R.C.A.F. Station Headquarters, Trenton, Ont.	Test and Development Flight.
Advanced Training Wing Headquarters.	No. 7 (General Purpose) Squadron.
Advanced Training Squadron.	No. 8 (General Purpose) Squadron.
Advanced Ground Instructional School.	No. 1 Aircraft Depot, Ottawa, Ont.
No. 1 Technical Training School.	No. 11 Technical Detachment, Montreal, Que.*
Air Armament School.	No. 115 P.F. Detachment, Montreal, Que.†
Air Navigation and Seaplane School.	No. 118 P.F. Detachment, Montreal, Que.†
Wireless School.	
Equipment Training School.	
No. 2 (Army Co-operation) Squadron.	

\* Under Military District No. 4, Montreal, Que., for administration of personnel only. Directly under Air Force Headquarters for all other purposes.

† Administered through Military District No. 4, Montreal, Que.

Auxiliary Active Air Force units are located as follows:—

Administered by Western Air Command Headquarters:

- No. 109 Wing Headquarters, Vancouver, B.C.
- No. 111 (Coast Artillery Co-operation) Squadron, Vancouver, B.C.
- No. 112 (Army Co-operation) Squadron, Winnipeg, Man.
- No. 113 (Fighter) Squadron, Calgary, Alta.
- No. 120 (Bomber) Squadron, Regina, Sask.

Administered by Air Training Command Headquarters:

- No. 101 Wing Headquarters, Toronto, Ont.
- No. 110 (City of Toronto) (Army Co-operation) Squadron, Toronto.
- No. 114 (Bomber) Squadron, London, Ont.

Administered by Air Training Command Headquarters:—*concluded.*

- No. 119 (Bomber) Squadron, Hamilton, Ont.

Administered by Eastern Air Command Headquarters:

- No. 116 (Fighter) Squadron, Halifax, N.S.
- No. 117 (Coast Artillery Co-operation) Squadron, Saint John.

Administered by Military District No. 4, Montreal, Que.:

- No. 102 Wing Headquarters, Montreal, Que.
- No. 115 (Fighter) Squadron, Montreal, Que.
- No. 118 (Bomber) Squadron, Montreal, Que.

The strength of the Royal Canadian Air Force on Mar. 31, 1939, was:—

	Officers.	Airmen.
Permanent Active Air Force.....	261	1,930
Auxiliary Active Air Force.....	99	867
Reserve of Officers.....	156	

#### Subsection 4.—The Royal Military College.

The Royal Military College of Canada, situated at Kingston, Ont., was founded in 1876 for the purpose of giving Gentlemen Cadets the moral, mental, and physical training necessary for commissioned ranks in the Army, and also for qualifying officers for command and for staff appointments. Subsequently the scope of the course was adjusted to prepare Gentlemen Cadets not only for the Army but also for the Navy and Air Force.

The Gentlemen Cadets are given a four-year course in engineering and military training. The first three years is devoted to a common course in the basic subjects for general engineering. In the fourth year, the Gentlemen Cadets are permitted to make a choice of one of the following optional courses: general, civil engineering, mechanical engineering, electrical engineering, chemical engineering, mining and metallurgic engineering.

The educational requirement for admission is junior matriculation for any recognized Canadian university or an acceptable equivalent. Candidates for admission are also required to be of good moral character and to pass a rigid medical and physical examination.

The total cost of the course for the four years is approximately \$1,500, which sum includes board and lodgings, and the cost of uniforms and educational supplies.

The number of Gentlemen Cadets who may be in attendance during any year is restricted by Order-in-Council to two hundred. The vacancies to be filled each year are allotted to the provinces in the same ratio as their respective populations bear to the population of Canada. Vacancies are filled in order of merit based on educational and physical qualifications.

Applications for admission must be submitted to the Secretary, Department of National Defence, Ottawa, not later than May 31, preceding date of entry.

A more extended reference to the activities of the College is given at pp. 1047-1048 of the 1938 Year Book.

### Section 3.—Department of Public Works.\*

Since Confederation and before, the constructing department of the Dominion Government has been known as the Department of Public Works. In 1879 the railways and canals were placed under the control of a new department, the building and maintenance of penitentiaries were transferred to the Department of Justice, the maintenance and construction of lighthouses to the Marine and Fisheries Department, and the smaller drill halls and armouries to the Department of National Defence. The work of the Department of Public Works is now divided into three principal branches, *viz.*, the Engineering Branch, the Architect's Branch, and the Telegraph Branch.

**Engineering.**—The Engineering Branch conducts the construction and repair of wharves, piers, breakwaters, dams, weirs, bank and beach protection works; the improvement of harbours and rivers by dredging; the construction, operation, and maintenance of dredging plant and the construction, operation, and maintenance of graving or dry docks; the construction and maintenance of interprovincial bridges and approaches thereto, also the construction, operation, and maintenance of bridges with movable spans on certain highways; hydrographical and topographical surveys which are required for the preparation of plans, reports, and estimates; test borings for the purpose of ascertaining the nature of foundations; the testing of cements and materials of construction; the licensing of international and interprovincial ferries, and the control of works constructed in or over navigable waters by authority of the Navigable Waters Protection Act (R.S.C., 1927, c. 140).

**Architecture.**—The Architect's Branch constructs and maintains Government buildings, post offices, customs houses, examining warehouses, quarantine stations, immigration and experimental farm buildings, military hospitals, and telegraph offices. It also constructs armouries and drill halls and leases office accommodation as required for the various Departments.

**Telegraphs.**—The Telegraph Branch has control of the construction, operation, and maintenance of all Government-owned telegraph lines and cables. These lines are located in the provinces of Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan, Alberta, British Columbia, and Yukon (see also p. 714).

**Graving Docks.**—The Department constructed five dry docks and is responsible for subsidies under the Dry Dock Subsidies Act, 1910 (9-10 Edw. VII, c. 17). A description of these docks is given in the Transportation Chapter, p. 679.

**Revenues and Expenditures.**—Details of gross revenues and expenditures, formerly published in this Section, may be obtained from the Annual Report of the Department. Net revenues and expenditures for this as well as all other branches of Government are available in the Public Finance chapter of this volume.

### Section 4.—The Indians and Eskimos of Canada.

#### Subsection 1.—The Indians of Canada.†

The Indians of Canada whose affairs are administered by the Department of Mines and Resources, Indian Affairs Branch, number about 112,510 (according to a departmental census taken in 1934), their numbers varying slightly from year to year. A small yearly increase is evident, and the popular notion that the race is disappearing is not in accordance with facts. Before they were subjected to the degenerating

\* Revised by J. M. Somerville, Secretary, Department of Public Works.

† Revised by T. R. L. MacInnes, Secretary, Indian Affairs Branch, Department of Mines and Resources.

effects of European civilization and the devastating results of the many colonial wars, the numbers of the Indians were undoubtedly larger, but any reliable information as to the aboriginal population during either the French or the early British régime is non-existent, and there is no adequate basis for a comparison between the past and present aboriginal populations. An interesting sketch of the progress of the Indians of Canada since Confederation will be found in the Report of the Department of Indian Affairs, 1927.

**Administration.\***—Reserves have been set aside for the various bands of Indians throughout the Dominion, and the Indians located thereon are under the supervision of the local agents of the Department. The activities of the Department as guardian of the Indians, include the control of Indian education and health, the development of agriculture and other pursuits among them, the administration of their lands, community funds, estates, and the general supervision of their welfare.

The local administration of the Indian bands on the reserves scattered throughout the Dominion is conducted through the Department's agencies, of which there are in all 113. The number of bands included in an agency varies from one to more than 30. The staff of an agency usually includes various officers in addition to the agent, such as medical officer, clerk, farm instructor, field matron, constable, stockman, etc., according to the special requirements of the agency in question. The work of the agencies is supervised by the Department's inspectors, each inspector having charge of a certain number of agencies. Expenditures upon destitute Indians are made by the Dominion Government, either from public funds or from tribal funds of the Indians themselves.

The Indian Act provides for the enfranchisement of Indians. When an Indian is enfranchised he ceases to be an Indian under the law and acquires the full status of citizenship. In the older provinces, where the Indians have been longer in contact with civilization, many are becoming enfranchised. Great discretion, however, is exercised by the Government in dealing with this problem, as Indians who become enfranchised lose the special protection attached to their wardship, so that it is necessary to guard against premature enfranchisement.

**Treaties.**—In the older eastern provinces, the history of the Indians has been one of slow development with that of the community. In western Ontario, the Prairie Provinces, and the Territories the situation has been different. There, the rapid spread of civilization made it necessary to take prompt and effective measures to protect the moral claims of the Indians, which are recognized by the Government. Accordingly, treaties were entered into with the Indians, whereby the latter ceded to the Crown their aboriginal title and interest in the country. In consideration of such cession the Crown agreed to set aside adequate reserves, make cash grants, provide per capita annuities, give assistance in agriculture, stock-raising, hunting, trapping, etc., as particular circumstances might require, provide education for the Indian children, and otherwise safeguard the Indians' interests. These treaties have been made from time to time as occasion arose and as new territories were opened up. No treaty has been made with the Indians of British Columbia, except in the Peace River Block, but their welfare has received no less attention from the Government on that account.

**Government Expenditure.**—On Mar. 31, 1938, the capital of the Indian Trust Fund, which a year earlier had amounted to \$13,997,644, had increased to \$14,081,905. The amounts expended from the Consolidated Revenue Fund were

\* For an outline of the early administration, see p. 937 of the 1932 Year Book.

as follows: voted by Parliament for the purposes of the Department, \$4,775,646; annuities by statute, \$252,644; and special supplementary, \$116,784.

**Statistics.**—Statistical tables of population, school attendance, income, and agricultural activities of the Indians in Canada follow. In Table 3 the populations for 1871-1931 are compiled from reports of the various censuses since Confederation, while the statistics and other information in the remaining tables are taken from the last Annual Report of the Indian Affairs Branch of the Department of Mines and Resources. The Branch takes a quinquennial census of Indians under its control, whereas census figures include all persons of Indian origin. The quinquennial census taken by the Branch in 1934 showed a total of 112,510 as compared with 108,012 in 1929 and 104,894 in 1924, an increase of 7.3 p.c. in ten years. The details of the Census of 1934 are given in the Annual Report of the Department for that year. The figures of the decennial census include some thousands of persons of Indian race who are not on the reserves but are living as ordinary citizens of Canada.

### 3.—Indian Population of Canada at the Decennial Censuses of 1871-1931.

Province or Territory.	1871. <sup>1</sup>	1881. <sup>1</sup>	1891. <sup>2</sup>	1901.	1911.	1921.	1931.

<b>Totals.....</b>	<b>102,358</b>	<b>106,647</b>	<b>120,638</b>	<b>127,941<sup>4</sup></b>	<b>105,492</b>	<b>116,596</b>	<b>122,929</b>

<sup>1</sup> Census figures in the organized provinces and estimates for the rest of Canada. <sup>2</sup> Racial origin not taken in 1891; the figures have been taken from the report of the Department of Indian Affairs of that year.

<sup>3</sup> The decrease in the Indian population of the Northwest Territories is due to the extension of the boundaries of Quebec, Ontario, and Manitoba in 1912. This also accounts for the increase in the 1921 Indian population of these provinces.

<sup>4</sup> Includes 34,431 'half-breeds'.

**Indian Education.**—The educational work of the Department is now very extensive. In the fiscal year ended Mar. 31, 1938, a total of 367 Indian schools were in operation, including 80 residential schools for Indians with an enrolment of 9,233, and 277 day schools for Indians with an enrolment of 9,309 Indian pupils, also 10 combined public and Indian schools, with 201 Indian pupils enrolled. The total enrolment in the Indian schools has increased from 12,799 in 1915-16 to 18,743 in 1937-38 and the average attendance from 8,080 to 14,099 or from 63.1 p.c. to 75.2 p.c. of the enrolment. Continuation and high school work is now being taught in several of the day and residential schools. The amount spent on Indian education in the fiscal year ended Mar. 31, 1938, was \$1,830,071.

## 4.—Enrolment and Average Attendance of Pupils at Indian Schools, fiscal years 1916-38.

<sup>1</sup> Includes income received from timber and mining dues and from annuities earned as interest on Indian trust funds, but does not include money received from land rentals for which figures are not available by provinces.

## Subsection 2.—The Eskimos of Canada.\*

The Eskimos of Canada are found principally on the northern and Hudson Bay coasts of the mainland and on islands in the Arctic archipelago and in Hudson bay, although in the Baker Lake-Chesterfield Inlet area on the west side of Hudson bay there are bands of Eskimos who are essentially an inland people, and who subsist chiefly on caribou. The diet of the coast Eskimos is largely marine mammals and fish, varied at times by caribou obtained from the interior during the seasonal migrations of these animals. The skins of the caribou are used for winter clothing.

The wandering life of the Eskimos and the vast area over which they are scattered present great difficulties in ascertaining their exact numbers. The total for the entire Dominion, according to the latest returns, is about 6,000, located mainly in the Northwest Territories, with approximately 1,590 in Quebec, 85 in Yukon Territory, 62 in Manitoba, and 3 in Alberta.

The administrative care of Eskimos outside of the organized provinces devolves upon the Department of Mines and Resources which, by regulative measures (including the setting aside of game preserves where only natives may hunt and the establishment of a reindeer herd), conserves the natural resources necessary to their subsistence. Contact with the Eskimos is maintained through permanent stations (at a number of which medical officers are located), in the Eastern, Central, and Western Arctic, by patrols of the Royal Canadian Mounted Police, and by means of the annual Canadian Eastern Arctic Patrol by steamship.

## Section 5.—Pensions and other Provision for War Veterans.†

**Pensions Section.**—This Section is responsible for the administration of returned soldiers' affairs under the Department of Pensions and National Health Act, the War Veterans' Allowance Act, and the Veterans' Assistance Commission

\* Prepared under the direction of R. A. Gibson, Director, Lands, Parks, and Forests Branch, Department of Mines and Resources, Ottawa.

† Revised by F. H. Brown, Assistant Secretary, Department of Pensions and National Health. See also the 1930 Year Book, pp. 982-993.

Act. It is also responsible, by direction of the Canadian Pension Commission, for certain administrative duties under the Pension Act and the Returned Soldiers' Insurance Act. The Representative of the Treasury is responsible for all payments under these Acts.

The Annual Report for the fiscal year ended Mar. 31, 1938, shows a decrease from the previous year in the number of ex-members of the Forces who received in-patient hospital treatment, the number being 11,443 as against 11,742 in 1936-37, and 12,835 in 1935-36. The Department maintains eight hospitals, situated in the following centres: Halifax, Saint John, Ste. Anne de Bellevue, Toronto, London, Winnipeg, Calgary, and Vancouver. A sheltered employment workshop is operated at Montreal and one shop by the Red Cross Society at Victoria.

One of the features of the activities of the Department is provision in a departmental institution for pensioners who, through age or infirmity, are unable to care for themselves. The number of such cases showed an increase during the year, the total on Mar. 31, 1938, being 377 as against 299 a year previously, 286 in 1936, and 235 in 1935. In the issue of orthopaedic and surgical appliances there has been a slight decrease. The number of pensioners who were granted relief was 11,179 in 1937-38, as compared with 12,322, in 1936-37, and 12,083 in 1935-36. The expenditure on relief in 1937-38 was \$2,232,398; in 1936-37, \$2,435,285; and in 1935-36, \$2,365,579.

The provision under which the Department assumes responsibility in respect of accidents sustained by pensioners of 25 p.c. and upwards when engaged in industry has been continued. During the fiscal year under review, the number of claims was 317; in 1936-37, 260; in 1935-36, 279; and in 1934-35, 222. Expenditures were as follows: 1937-38, \$39,997; 1936-37, \$18,590; and 1935-36, \$27,138. Expenditures are largely governed by the number of fatal and serious accidents.

The following is a summary statement of the manner in which the funds appropriated by Parliament have been dealt with; the costs of administration and of the adjudication of pensions are also shown.

NET PAYMENTS BY THE PENSIONS BRANCH OF THE DEPARTMENT OF PENSIONS  
AND NATIONAL HEALTH, FISCAL YEAR 1938.

*Net Cash Payments—*

European War pensions.....	\$ 40,774,881
War veterans' allowances.....	3,903,007
Unemployment assistance.....	2,232,398
Sheltered employment.....	57,879
Hospital allowances.....	943,431
Probational training allowances.....	67,209
	\$ 47,978,805

*Net Cost of Services (Indirect Payments to and on behalf of Ex-members of the Forces  
and their Dependents)—*

Hospital treatment.....	\$ 2,754,776
Employers' liability compensation.....	39,997
Last Post Fund.....	60,000
Canadian Legion.....	9,000
Transportation of pensioners, patients, etc.....	71,018
After-care of the blind and transportation of blinded ex-soldiers.....	6,094
	\$ 2,940,885

NET PAYMENTS BY THE PENSIONS BRANCH OF THE DEPARTMENT OF PENSIONS  
AND NATIONAL HEALTH, FISCAL YEAR 1938—concluded.

*Other Expenditures (Including Payment of Militia, Statute, and other Pensions, Trust Funds under Administration, Recoverable Expenditures, Returned Soldiers' Insurance, etc.)—*

Militia pensions (statute).....	\$ 1,445,028
North West Rebellion and civil flying.....	20,000
Interest on trust funds.....	4,040
War service gratuities.....	5,652
Returned soldiers' insurance.....	843,313
Pensions under administration.....	309,653
Capital expenditures.....	100,869
Recoverable expenditures.....	31,403
Veterans' Assistance Commission.....	264,716
	\$ 3,575,174
Total Expenditure apart from Cost of Administration.....	\$ 54,494,864

*Cost of Administration—*

Departmental—

Salaries.....	\$ 952,665
General.....	127,493
	\$ 1,080,158
Canadian Pension Commission.....	488,584
Veterans' Bureau.....	181,824
Pension Appeal Court.....	70,840
Comptroller of the Treasury.....	431,061
	\$ 2,252,467
Total Expenditure.....	\$ 56,747,331

The total costs of administration under the Pensions Branch, *viz.*, \$2,252,467, shown above, include not only the costs of administering the services shown under "Expenditure" but also the costs of administering income (such as the collection of premiums on returned soldiers' insurance) and trust fund items, which amounted in the aggregate to \$3,651,142 in 1938.

**The Canadian Pension Commission.**—By c. 45 of the Statutes of 1933, the Board of Pension Commissioners for Canada and the Pension Tribunal ceased to exist; their duties were taken over by the Canadian Pension Commission, which was formed by the Act referred to, and the personnel of the Commission was increased from three to not less than eight nor more than twelve.

The Commission is responsible for the adjudication and awarding of pensions in respect of disabilities connected with military service and the awarding of pensions to the dependants of those who die. It operates under the authority of the Pension Act. The following table shows the number of pensions in force at the end of each of the fiscal years 1918 to 1938, together with the annual liability. The large increase in disability pensioners from 1930 to 1933, inclusive, was primarily due to the reinstatement on pension of those who had commuted their pensions from 1920 onwards. This restoration was under the authority of an amendment to the Pension Act in 1930.

## 7.—Pensions in Force, as at Mar. 31, 1918-38.

Fiscal Year.	Dependants.		Disabilities.		Totals.	
	Number of Pensions.	Liability.	Number of Pensions.	Liability.	Number of Pensions.	Liability.
		\$		\$		\$

**Veterans' Bureau.**—Pursuant to legislation passed in 1930, a Veterans' Bureau was organized as a branch of the Department and came into active operation on Oct. 1, 1930. The duties of the Bureau are set forth on p. 945 of the Canada Year Book, 1932. Briefly stated, the Bureau was created and is operated to assist applicants for pension in the preparation and presentation of their cases. There is a Chief Pensions Advocate with his staff at Ottawa, and Pensions Advocates have their offices in all the principal cities of Canada.

**War Veterans' Allowances.**—The War Veterans' Allowance Act was enacted in 1930 to provide for the maintenance of veterans who, because of age or disability, are incapable of providing for themselves.

The Act provides for the payment of allowances to veterans with the requisite service, at the age of sixty years, or at any age, if so disabled as to be "permanently unemployable".

In addition to providing for the veteran of 60 and the "permanently unemployable" veteran, provision is made in the Act for a further group, as a result of the deliberations of a Parliamentary Committee in 1936. This group is referred to in the Act as "those having served in a theatre of actual war who have attained the age of 55 and who, in the opinion of the Board, are incapable of maintaining themselves because of pre-ageing, disability and general unfitness".

This amendment, therefore, provides for a border-line class to include those who, from a medical standpoint, cannot be classed as "permanently unemployable" and who, from an age standpoint, have not quite reached the age of sixty.

An outline of the provisions of the original Act will be found at pp. 946-947 of the 1932 Year Book.

## NUMBERS OF RECIPIENTS AND ANNUAL LIABILITY.

### Section 6.—Soldier Settlement of Canada.\*

At the end of the calendar year 1938 the Soldier Settlement of Canada had 19,843 farm properties under administration, representing a net investment of \$46,110,222. Under the Soldier Settlement Act of 1919, 25,017 soldier settlers were established on the land with loans. On Dec. 31, 1938, there were 9,553 soldier settlers, 5,851 civilian settlers, and 1,667 settlers under the British Family Scheme. There were 2,772 farms on hand of which 2,053 were leased; 3,808 settlers had repaid their loans in full in cash; 2,123 properties had been transferred to municipalities and provinces under Sec. 21A of the Soldier Settlement Act.

Under the 3,000 British Family Scheme, 3,346 families came forward for settlement. Of these 1,828 had withdrawn as at Dec. 31, 1938, 27 had repaid their loans, leaving 1,491 families still operating their farms. Under the New Brunswick Family Settlement Agreement, 359 families came forward; of these one had repaid his loan, 182 had withdrawn, and 176 remained on the land.

The following numbers of settlers had applied for the benefits of the Farmers' Creditors Arrangement Act: 2,632 soldier settlers, 1,125 civilian settlers, and 1,318 British family settlers. Of these applications, 1,048 cases of soldier settlers had been disposed of, involving indebtedness of \$3,873,567 and a reduction of \$1,377,855; civilians—604 cases disposed of, debt \$2,146,555, reduction \$721,540; British family settlers—657 cases disposed of, indebtedness \$2,770,240, reduction \$1,235,513.

The supervision staff of the Department have made land appraisals and reported on the applications of farmers (other than those under the Soldier Settlement of Canada) under the Farmers' Creditors Arrangement Act. To Dec. 31, 1938, 10,237 land appraisals and reports had been made in British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, and the Maritime Provinces.

Other investigational services in the calendar year 1938 were: 284 investigations for the Department of Mines and Resources; 7,067 investigations in rural districts with respect to applications under the War Veterans' Allowance Act of 1930; 2,953 investigations for the Department of Pensions and National Health and the Canadian Pension Commission with respect to applications for relief allowances and special investigations of pension cases in rural districts.

### Section 7.—Department of the Secretary of State.†

The Department of the Secretary of State was constituted in its present form in 1873, through the merging of the previously-existing offices of the Secretaries of State for Canada and for the provinces. The Secretary of State is the official mouthpiece of the Government as well as the medium of communication between the Dominion and Provincial Governments, all correspondence between the Governments being conducted by him with the Lieutenant-Governors. He is also the custodian of the Great Seal of Canada and the Privy Seal as well as the channel by which the general public may approach the Crown.

The Secretary of State is also the Registrar General, registering all proclamations, commissions, licences, warrants, writs, and other instruments issued under the Great Seal and the Privy Seal. He is further charged with the administration of the Boards of Trade Act, the Companies Act, the Canada Temperance Act, the Copyright Act, the Naturalization Act, the Patent Act, the Trade Unions Act, the

\* Revised by F. C. Blair, Director, Soldier Settlement of Canada.

† Revised by E. H. Coleman, K.C., LL.D., Under-Secretary of State, Department of the Secretary of State.

Ticket of Leave Act, the Unfair Competition Act, and with the collection and tabling of parliamentary returns. Statistics regarding patents and copyrights appear under Chapter XVII at pp. 598-601. The following information on other subjects has been secured in the course of administration.

**Charters of Incorporation.**—The number of companies incorporated under the Companies Act and amending Acts during the fiscal year 1938 was 358 with a total capitalization of \$104,401,299. Supplementary letters patent were granted during the year to 251 companies; 47 of these increased their capital stock by the aggregate amount of \$22,571,383, 60 decreased their capital stock by \$33,229,414; the remaining 144 were granted supplementary letters patent for various purposes, such as changing names, extending powers, etc. The total capitalization of new companies plus the increase of capital of existing companies amounted to \$126,972,682, partly offset by the above-mentioned decreases in capitalization totalling \$33,229,414.

In Table 8 will be found the number and capitalization of companies incorporated during the years 1914-38.

**8.—Number and Capitalization of Companies Incorporated under the Companies Act and Amending Acts, fiscal years 1914-38.**

NOTE.—Statistics for the years 1900-13 will be found at p. 1061 of the 1938 Year Book.

\* Includes consideration of the amounts of capital received on the issue of shares without nominal or par value.

**Naturalizations.**—The naturalizations effected under the Naturalization Act (R.S.C., 1906, c. 77) for the calendar years 1908-17, inclusive, are given on p. 594 of the Year Book for 1919. Since Jan. 1, 1918, the only method of obtaining naturalization has been under what is known as the 'Imperial' Naturalization Act, which came into force on Jan. 1, 1915. This Act was known under the title of the Naturalization Act, 1914, until July 7, 1919, when it was repealed and the Naturalization Act, 1919, came into force. On July 1, 1920, the Naturalization Act, 1919 was

repealed, and the Naturalization Act, 1914, was revived and amended under the title of the Naturalization Acts, 1914 and 1920. By an amendment passed by Parliament in 1923, the restriction by which persons of alien enemy birth were ineligible to receive certificates of naturalization for a period of 10 years after the termination of the War was removed, and at the present time any alien may apply for naturalization, regardless of his nationality. All these Acts have been consolidated in R.S.C., 1927, c. 138. Since Jan. 15, 1932, women British subjects, marrying aliens, retain British nationality, unless they, by marriage, acquire their husbands' nationalities, and the wives of aliens no longer become British subjects through their husbands' naturalization. They must apply to the Secretary of State.

Table 9 shows the number of naturalization certificates issued to single persons or heads of families under these Acts during the calendar years from 1928 to 1937. The total numbers of persons naturalized during the fiscal years 1937 and 1938, were 31,744 and 27,455, respectively, including (except as stated above) the wives and minor children of those to whom naturalization certificates were issued.

**Canada Temperance Act.**—Under Parts I and II of this Act, provision is made for the prohibition of the sale of intoxicating liquors in counties and cities. The last vote taken under these Parts was in the county of Compton, Que., on Apr. 28, 1930, in response to a petition for the repeal of the Act in that county. The vote resulted in favour of the repeal, which became effective on June 14, 1930. Part III of the Act relates to penalties and prosecutions, Part IV to the prohibition of the importation and exportation of intoxicating liquors into and from the provinces, while Part V enacts provisions in aid of provincial legislation for the control of the liquor traffic.

### Section 8.—Royal Canadian Mounted Police.\*

The Royal Canadian Mounted Police is a constabulary maintained by the Dominion Government. It was organized in 1873, and was known as the North West Mounted Police, whose duties were confined to what was then known as the Northwest Territories. In 1904, its name was changed to Royal North West Mounted Police.

In 1905, when Alberta and Saskatchewan were constituted provinces, an arrangement was made whereby the Force continued to discharge its duties as formerly, each province making a contribution towards defraying the cost. This was continued until 1917. Soon after the close of the Great War an extension of Governmental activities made it obvious that the enforcement of Dominion Statutes was assuming increasing proportions, and that it would soon be necessary to have a police force responsible therefor. In 1918, the duty was assigned to the Royal North West Mounted Police of the enforcement of Dominion legislation for the whole of Western Canada west of Port Arthur and Fort William, and in 1920 for the whole of Canada.

In 1920, the name of the Force was changed to the Royal Canadian Mounted Police, and the former Dominion Police with headquarters at Ottawa, whose duties were largely connected with guarding public buildings in that city and the Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., were absorbed by the Royal Canadian Mounted Police.

At the present time, the R.C.M. Police is responsible throughout Canada for the enforcement of the laws against smuggling by land, sea, and air. It enforces the provisions of the Excise Act, is responsible for the suppression of the traffic in narcotic drugs, enforcement of the Migratory Birds Convention Act, and assists the Mines and Resources, Fisheries, and several other Dominion Departments, in executing the provisions of their respective Acts, and in some cases in administrative duties. It is responsible for the protection of government buildings and dockyards. It is the sole police force operating in the Yukon Territory and the Northwest Territories, and performs a variety of services in all provinces and both Territories for the Dominion Government.

Under the R.C.M. Police Act, any province may enter into an agreement with the Dominion Government for the services of the Royal Canadian Mounted Police, to enforce provincial laws and the Criminal Code, upon payment for its services, and at the present time such agreements are in force with the provinces of Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, and Alberta.

The Force is controlled and administered by a Minister of the Crown (at present the Minister of Justice) and it may be employed anywhere in Canada. From a

\* Revised by Brigadier S. T. Wood, Commissioner, Royal Canadian Mounted Police.

force of 300 in 1873, it had a strength on Dec. 31, 1938, of 2,591. Its means of transport at that time consisted of 138 horses, 531 motor vehicles, and 405 sleigh dogs and 12 police dogs. The Force is organized into 13 divisions of varying strength distributed over the entire country. The term of engagement is five years for recruits, with re-enlistment for a period not exceeding five years. The Officers are commissioned by the Crown. Recruits are trained at Regina, Sask. The course of training is six months and consists of drill, both mounted and dismounted; physical training, including instruction in wrestling, boxing, and jiu-jitsu. Special attention is paid to police duties, both Dominion and provincial, and detailed lectures are given in these, including court procedure. Instructional courses for promotion are held, and, where practicable, an annual refresher course of training is given.

In 1937, a 'Reserve' strength of 300 men was authorized by Parliament; during the months of July and August, 1937, 300 'Reservists' were given training at Fredericton, N.B., Ottawa, Ont., Regina, Sask., and Vancouver, B.C. In future these 'Reservists' will be the principal source from which recruits for the Force will be drawn. The Reserve now stands at 252.

## Section 9.—The Civil Service of Canada.

**Organization.\***—Prior to 1882, appointments to the Civil Service were made directly by the Government. In that year, a Board of Civil Service Examiners was appointed to examine candidates and issue certificates of qualification to those successful at examinations. Appointments, however, were still made by the Government of the day.

The Royal Commission of 1907, appointed to inquire into the Civil Service Act and its operation, reported in favour of the creation of a Civil Service Commission. This body was established in 1908; it consisted of two members appointed by the Governor in Council and holding office during good behaviour, but removable by the Governor General on address of the Senate and House of Commons. The Civil Service was classified into three divisions under the Deputy Heads of Departments, each division consisting of two subdivisions, each of these having its scale of salaries. The Commission was charged with: the organization of, and appointments to, the Inside Service (at Ottawa), certain appointments to be made after open competition and others after qualifying tests; and the holding of qualifying examinations for the Outside Service (the Service apart from Ottawa) to obtain lists from which selections could be made by the various Departments. All British subjects between 18 and 35 years of age who had resided in Canada for three years were eligible to try these examinations.

In 1918, a third member of the Civil Service Commission was appointed, and by the Civil Service Act of that year the principle of appointment after open competition was applied to the Outside as well as the Inside Service. The Act also provided for the organization by the Commission of the various Government Departments, for a classification of all positions in the Service on a duties basis, for the establishment of new rates of compensation, and for the principle of promotion by merit wherever consistent with the best interests of the Service. Provision was also made for preference, in the matter of appointment to the Service, to be given to qualified applicants who had served in the Great War.

Subsequent amendments have removed from the Commission's jurisdiction some branches of the Service, such as skilled and unskilled labour positions, and the staffs of certain units.

**Civil Service Statistics.†**—From April, 1924, a monthly return of personnel and salaries has been made by each Department to the Dominion Bureau of Statistics, according to a plan that ensures comparability between Departments and continuity in point of time. The institution of this system was preceded by an investigation covering all years back to 1912; summary results are presented in Table 11.

During the War years, as will be seen from Table 11, the number of employees increased very rapidly, as a result of the extension of the functions of government and the imposition of new taxes, necessitating additional officials as collectors. Such new services as the Department of Pensions and National Health and the Soldier Settlement Board were also created. The maximum was reached in January, 1920, when 47,133 persons were employed; this number has since decreased to 43,859 in January, 1938. It may be added that, out of 44,102 in March, 1938 (see Table 13), 1,261 in the Income Tax Branch and 2,288 in the Department of Pensions and National Health, or 3,549 in all, were engaged in services of outstanding

\* Revised by Miss E. Saunders, Assistant Secretary, Civil Service Commission, Ottawa.

† Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics, Ottawa.

importance which had no existence before the War. Further, 12,122 persons were, in March, 1938, employed in the Post Office Department, performing services of an industrial rather than of a governmental type, and receiving their salaries out of payments made by the public for services immediately rendered, rather than out of taxation.

The statistics of numbers of employees and of salaries, now being secured monthly, are more comprehensive than those previously published, as a result of the inclusion of various classes of employees, largely part-time, seasonal and 'fees of office' employees, who were not included in the report published in 1925. These employees are largely in the Departments of Transport, Fisheries, and Public Works. There remain, however, many persons in the "non-enumerated classes" whose numbers cannot be supplied monthly by the departmental officials but whose compensation is included in the monthly figures of expenditure on personnel, as shown in Table 12.

<sup>1</sup> Figures for January, 1925-38, are not comparable with those for preceding Januaries, because monthly records now being published include various classes of employees not included in the historical record for the 13 years 1912-24. <sup>2</sup> Revised since the publication of the 1938 Year Book.

Table 12, which gives statistics by Departments with a further classification by principal branches where available, is included in order to give comparable figures

for the latest months. In the month of March, 1938, the total number of employees in the enumerated classes was 44,102 as compared with 42,836 in March, 1937. The total expenditure on wages and salaries for all classes of employees except "non-enumerated classes" for March, 1938, was \$5,612,621 as compared with \$5,227,843 for March, 1937.

**12.—Total Numbers of Civil Service Employees, by Departments and Principal Branches ("Non-Enumerated Classes" Excluded), and Total Expenditures on Salaries and Wages of all Employees ("Non-Enumerated Classes" Included), March, 1937, and March, 1938.**

### Section 10.—Supervision of Race-Track Betting.

By an amendment to Sec. 235 of the Criminal Code, passed in 1920, the supervision of race-track betting, under the pari-mutuel system, was placed in the hands of the Minister of Agriculture. The actual supervision is carried out by officers of the Royal Canadian Mounted Police and the system was operated for the first time during the racing season of 1921. Statistics are available from the year 1924 and are shown in Table 13 for the Dominion as a whole, while Table 14 gives figures by provinces for the year 1937.

## Section 11.—The Tariff Board.\*

The Tariff Board was constituted by Act of Parliament in 1931 (c. 55, 21-22 Geo. V). It consists of three members (a Chairman, a Vice-Chairman, and a Member) and a Secretary, all appointed by the Governor in Council.

The constitution and duties of the Board are defined in two parts of the Act of 1931. Under Part I, the Board makes inquiry into and reports upon any matter in relation to goods which, if brought into Canada or produced in Canada, are subject to or exempt from duties of customs or excise and on which the Minister of Finance desires information. The investigation into any such matter may include inquiry as to the effect which an increase or decrease of the existing rate of duty upon a given commodity might have upon industry or trade, and the extent to which the consumer is protected from exploitation.

It is also the duty of the Board to inquire into any other matter or thing in relation to the trade or commerce of Canada which the Governor in Council sees fit to refer to the Board for inquiry and report.

The Act provides that reports shall be made to the Minister of Finance, and tabled in the House of Commons. The principal commodities reported on are: wool textiles; boots and shoes; jute yarns and twines; fruits and vegetables; hookless fasteners (zippers); wooden doors; silver-bearing articles (toiletware); rabbit skins; brass, copper, and nickel-silver commodities; boiler tubes; skelp; hats and hoods; biscuits; cork boards, slabs, and planks; crude petroleum and its derivatives; artificial silk yarns, cotton yarns and fabrics; plastics of all kinds; steel wool; certain sporting goods, etc. In 1939 reports were made on the radio industry; animal and vegetable oils, fats, and greases; cigars; coke; worsted weaving yarn; cocoa-fibre mats and matting; starches and dextrines; automobiles and furniture.

Part II of the Act empowers the Board to hear and decide appeals from rulings made by the Department of National Revenue with respect to fair market value of goods for duty purposes, erroneous appraisals, and the rate of duty applicable to any class of goods. Under Order in Council the Board has authority and power: (1) to declare or find with respect to any importation, whether any goods are "of a class or kind made or produced in Canada"; (2) to review the value for duty applied by the Customs to new or unused goods under provisions of Sec. 36 of the Customs Act and make its findings with regard thereto; (3) to determine and declare whether any and, if so, what drawback of Customs duty is payable under the provisions of Schedule B of the Customs Tariff. Findings of the Board of Appeals are published in the *Canada Gazette*.

\* Revised by James R. MacGregor, Secretary, Tariff Board.

## Section 12.—Dominion Trade and Industry Commission.\*

The Dominion Trade and Industry Commission was constituted by Act of Parliament in 1935 (c. 59, 25-26 Geo. V). It consists of three Commissioners, one of whom is the Chief Commissioner and another the Assistant Chief Commissioner. The Act provides that for the time being the members of the Tariff Board (see Section 11) shall be the Commissioners, and the Chairman and Vice-Chairman of the Tariff Board shall be the Chief Commissioner and Assistant Chief Commissioner, respectively. The administration of the Act is vested in the Minister of Trade and Commerce.

Duties of the Commission consist of investigating and recommending the prosecution of offences against Acts of Parliament relating to commodity standards; preparation of draft specifications for commodity standards; application of the national trade mark "Canada Standard" to commodities that conform to specifications established under any Act of Parliament; investigation of complaints respecting unfair trade practices, and recommending the prosecution of offenders against any Dominion law prohibiting unfair trade practices; the convening of conferences for the purpose of considering commercial practices prevailing in industry, and determining what practices are unfair or undesirable in the interest of the industry or the public. Offences against Acts of Parliament and regulations relating to commodity standards and unfair trade practices are reported by the Commission to the Attorney General of Canada with a recommendation for prosecution.

## Section 13.—Other Miscellaneous Administration.

In previous editions of the Year Book this chapter has been brought to a close with outlines of Dominion Government administration as follows: the International Joint Commission; the Geodetic Survey of Canada; the Topographical Survey; the Dominion Observatories.

The three latter services were, up to the end of 1936, administered by the Department of the Interior but, as will be seen from the outline of Dominion legislation on p. 1085 of the 1937 edition of the Year Book, the newly-organized Department of Mines and Resources, which came into effect on Dec. 1, 1936, absorbed the old Departments of Mines, Interior, Indian Affairs, and Immigration. The Geodetic Survey and the Dominion Observatories administrations are continued as Divisions of the Surveys and Engineering Branch of the new Department, but topographical survey work has been re-organized, the mapping work having been combined with the Hydrographic Service as a Division of the Surveys and Engineering Branch, and the topographical survey work taken over by the Bureau of Geology and Topography of the Mines and Geology Branch.

The purpose of establishing the above-mentioned new Departments was to correlate the efforts of the staffs of such older Departments as had, in the course of time, acquired overlapping features, or which could be more economically administered under one head without impairing the usefulness of necessary services.

\* Revised by James R. MacGregor, Secretary, Dominion Trade and Industry Commission.

## CHAPTER XXIX.—SOURCES OF OFFICIAL STATISTICAL AND OTHER INFORMATION RELATIVE TO CANADA.

The chief source of information on the current state of the country is the Dominion Bureau of Statistics, organized as the central statistical bureau for Canada, and described in the first section of this chapter.

The second section of the chapter contains a list of the Acts of Parliament administered by the several Departments of the Dominion Government, and the third section a bibliography of the publications of these Departments. This is followed, in Section 4, by a bibliography of the publications of Provincial Governments.

### Section 1.—The Dominion Bureau of Statistics.\*

The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43).† The Act was a consolidation of all previous statistical legislation and was based on the report of a Commission on Statistics, appointed in 1912, which recommended (a) a series of specific reforms and enlargements in Canadian statistics, and (b) a policy of statistical co-ordination for the Dominion, under central direction. In 1915, following the recommendations in this report, the office of Dominion Statistician was created but, as stated, it was not until 1918 that the recommendations of the Commission were embodied in legislation. Among its many provisions the following are indicated:—

3. There shall be a bureau under the Minister of Trade and Commerce, to be called the Dominion Bureau of Statistics, the duties of which shall be to collect, abstract, compile and publish statistical information relative to the commercial, industrial, social, economic and general activities and condition of the people, to collaborate with all other departments of the Government in the compilation and publication of statistical records of administration according to the regulations, and to take the Census of the Dominion as hereinafter provided.

9. (1) The Minister may enter into any arrangement with the government of any province providing for any matter necessary or convenient for the purpose of carrying out or giving effect to this Act, and in particular for all or any of the following matters:—

(a) The execution by provincial officers of any power or duty conferred or imposed on any officer under this Act or the regulations;

(b) The collection by any provincial department or officer of any statistical or other information required for the purpose of carrying out this Act; and,

(c) The supplying of statistical information by any provincial department or officer to the Dominion Statistician.

15. (1) No individual return, and no part of an individual return, made, and no answer to any question put, for the purposes of this Act, shall, without the previous consent in writing of the person or of the owner for the time being of the undertaking in relation to which the return or answer was made or given, be published, nor, except for the purposes of a prosecution under this Act, shall any person not engaged in connection with the Census be permitted to see any such individual return or any such part of any individual return.

(2) No report, summary of statistics or other publication under this Act shall contain any of the particulars comprised in any individual return so arranged as to enable any person to identify any particulars so published as being particulars relating to any individual person or business.

33. Subject to the direction of the Minister, the Bureau shall collect, abstract and tabulate annually, statistics in relation to all or any of the following matters; (a) Population; (b) Births, Deaths and Marriages; (c) Immigration and Emigration; (d) Agriculture; (e) Education; (f) Public and Private Finance; (g) any other matters prescribed by the Minister or by the Governor in Council.

\* A more complete account of the formation and activities of the Bureau of Statistics will be found on pp. 961-964 of the 1932-33 Year Book.

† Consolidated as the Statistics Act (c. 190, R.S.C., 1927).

As first established\* the Bureau included, by transfer or absorption, the following divisions: (1) the Census and Statistics Office (covering the census, and also agriculture, general manufactures, and judicial statistics), (2) Fisheries Statistics, (3) Mining Statistics, (4) Forestry Statistics, (5) Dairying and Fruit Statistics, (6) Water- and Electric-Power Statistics, (7) the Railways and Canals Statistical Branch of the Department of Railways and Canals, (8) the Trade Statistical Branch (Exports and Imports), (9) Grain Trade Statistics, (10) Live-Stock Statistics, (11) Prices Statistics, and (12) Employment Statistics. In addition, four new branches were created, dealing, respectively, with Public Finance, Internal Trade, Vital Statistics, and Education.

Since its organization in 1918, the Bureau has created out of these many heterogeneous units a unified, nation-wide statistical system in which the correlation of the several subjects and their interpretation from a comprehensive national viewpoint has been the primary objective. By means of Dominion-Provincial statistical conferences held from time to time, a useful degree of co-operation and uniformity of statistical classification and method has been achieved and progress along these lines continues. These main advantages of statistical centralization have not only been substantially attained, but the treatment of statistics, not merely as aggregations of figures, but as primary data from which complex social and economic phenomena may be interpreted, has been emphasized. This view of a true national statistic as revealing the controlling economic forces which operate and their interplay, and the value of such a statistic in administrative planning along national lines, involves, of course, an added function of the Bureau, *viz.*, its usefulness as a national laboratory for economic and social research. This is a development which, as yet, is in its infancy but the foundation of such a service, comparable with the increasing importance of Canada in the economic and political world, has already been laid.

In the relatively short space of twenty years the Dominion Bureau of Statistics has laid the foundations for a service comparable with the increasingly important position taken by Canada in the economic and political world.

As now organized, the Branches of the Dominion Bureau of Statistics are: I. Administration; II. Demography—Census and Vital Statistics; III. Agricultural Statistics; IV. Fisheries and Animal Products; V. Mining, Metallurgical and Chemical; VI. Forestry and Allied Industries; VII. General Manufactures; VIII. External Trade (Imports and Exports); IX. Internal Trade; X. Construction; XI. Transportation and Public Utilities; XII. Financial Statistics; XIII. Judicial Statistics; XIV. Education Statistics; XV. Census of Institutions; XVI. Census Analysis and Social Statistics; XVII. General Statistics. An organization chart showing the relationship of the Branches and the divisions of their work is given at pp. 1144-1145 of the 1934-35 Year Book.

While primarily serving the Government, the Bureau realizes that in a democratic community every citizen is a part of the Government and should be well informed regarding the social and economic conditions of his country. Accordingly, the Bureau furnishes to all applicants answers to all manner of questions on all sorts of topics. In particular, it supplies to business men of all classes information regarding business conditions and statistics regarding production, imports, exports, prices, stocks, etc., of all kinds of commodities, thus enabling them to direct their operations more effectively to their own greater advantage and to the greater

\* See the first Annual Report of the Dominion Statistician, for the fiscal year ended Mar. 31, 1919.

advantage of Canada. Special tabulations may be made, or other investigations carried out at a fee based only on the extra clerical costs to the Bureau.

**Publications.**—Items in the vote of the Bureau, passed by Parliament each year, provide limited funds for the printing and processing of reports and bulletins. Reports printed from type are set up by the King's Printer, but the Bureau itself operates its own contact printing presses and all processed reports and bulletins are completely printed as well as published by the Bureau of Statistics.

The present policy with regard to the distribution of publications is based on sales to the public at actual cost of paper and presswork only; compilation, editing, and other overhead costs are not included. The object is to extend the service to the public as widely as possible and so spread the compilation and overhead which are the big items in total costs. A special subscription rate of \$25 per year is made to firms and individuals listed to receive the "all publications" service. The charge entitles the payer to receive a copy of each publication as issued, with the exception of news bulletins. Other special rates are set for series of publications in related groups; these are referred to in the respective sections of the list following.

Applications for reports should be sent to the Bureau of Statistics; they should indicate the individual publication or series of reports in which the applicant is interested and include the necessary remittance in the form of a cheque or money order made payable to the Receiver-General of Canada, Ottawa.

#### ADMINISTRATION—

Annual Report of the Dominion Statistician. (Included in the Annual Report of the Department of Trade and Commerce, *Price 25 cents.*)

#### POPULATION—

##### I. CENSUS.

##### (A) Report of the Seventh Census of Canada, 1931:—

Vol. I. General—Administrative Report of the Seventh Census followed by a summary of the leading facts of the Censuses of Population and Agriculture, Institutions, Merchandising and Service Establishments, etc., and cross-analyses relating thereto. The Appendix gives a complete bibliography of census materials and reproduces the more salient figures for specified years, chronologically arranged, back to 1605. The volume also contains a series of life tables for the Dominion and each province. *Price, Cloth \$1.50, Paper \$1.*

Vol. II. Population by Local Subdivisions—Conjugal condition, racial origin, religion, birthplace, year of immigration, language, literacy, school attendance, etc. *Price, Cloth \$1.50, Paper \$1.*

Vol. III. Ages of the People—Classified by sex, conjugal condition, racial origin, religion, birthplace, language, literacy, year of immigration, naturalization, etc. *Price, Cloth \$1, Paper 75 cents.*

Vol. IV. Birthplace, Racial Origin and Year of Immigration of the People—Classified and cross-classified by conjugal condition, naturalization and citizenship, religion, language, literacy, school attendance. *Price, Cloth \$1, Paper 75 cents.*

Vol. V. Earnings of Wage-Earners, Dwellings, Households, Families, Blind and Deaf-Mutes—Cross-classified by birthplace, conjugal condition, year of immigration, naturalization and citizenship, racial origin, religion, language, literacy, school attendance. *Price, Cloth \$1, Paper 75 cents.*

Vol. VI. Unemployment—Classified by industry, occupation, cause, age, sex, conjugal condition, period of idleness, birthplace, racial origin, year of immigration. *Price, Cloth \$1, Paper 75 cents.*

Vol. VII. Occupations and Industries—Cross-classified by birthplace, race, age, sex, etc. *Price, Cloth \$1, Paper 75 cents.*

Vol. VIII. Agriculture—Agricultural population, farm holdings and land area, tenure, value of farm property and farm products, acreage and yields of crops, live stock, mortgage indebtedness and farm expenses, farm machinery, facilities and roads, co-operative marketing, etc. *Price, Cloth \$1, Paper 75 cents.*

## POPULATION—continued.

## I. CENSUS—continued.

## (A) Report of the Seventh Census of Canada, 1931—concluded.

Vol. IX. Institutions—Hospitals for the Sick—Type, bed capacity, facilities, movement of patient population, personnel, capital investment, maintenance, receipts and expenditures, etc.; Mental Hospitals—Movement of patient population and their psychoses, age, nativity, racial origin, economic condition, conjugal condition, environment, literacy, religion, administration and personnel, etc.; Charitable and Benevolent Institutions—Type, movement of population, finances, inmates, age, sex, administration and personnel, etc.; Penitentiaries and Corrective and Reformatory Institutions—Inmates, offences, sentences, age, birthplace, citizenship, racial origin, previous employment, environment, educational status, conjugal condition, social habits, overseas service, administrative staff, receipts and expenditures. Price, Cloth \$1, Paper 75 cents.

Vols. X and XI. Merchandising and Service Establishments—Retail merchandise trade cross-classified by kind of business, type of operation, size of business, employees, salaries and wages, capital investment, rent and other operating expenses, credit, etc.; wholesale trade cross-classified by type of establishment, kind of business, operating expenses, etc.; with special reports on retail trade in urban and rural areas, chain stores, food retailing, drug stores, hotels, moving picture theatres, co-operative marketing and purchasing, etc. Price, Cloth \$1, Paper 75 cents, each Volume.

Vols. XII and XIII. Census Monographs—Consisting of a series of studies of outstanding Canadian problems as follows: (1) Population Growth; (2) Age Distribution of the Canadian People; (3) Fertility of the Population of Canada; (4) Racial Origins and Nativity of the Canadian People; (5) Illiteracy and School Attendance in Canada; (6) Rural and Urban Composition of the Canadian People; (7) The Canadian Family; (8) Housing and Rentals in Canada; (9) Dependency of Youth; (10) Occupational Structure of the Canadian People; (11) Unemployment; (12) Population Basis of Agriculture; (13) Canadian Life Tables, 1931. Nos. 4, 5, 6, 7, 9, 11, and 13 are already published as separates; the remainder are in course of preparation. Price of each monograph, 35 cents, except Nos. 11 and 13, which are 50 cents each.

## AGRICULTURE.—

Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products: published separately for each province. Price 25 cents each.

## (B) Bulletins of the Seventh Census of Canada, 1931:—

- (1) POPULATION.—Final Bulletins.—(XI) Rural and Urban Population for Canada and Provinces. (XIII) Cities, Towns and Villages in Canada, by Provinces. (XVI) Ages, by Provinces. (XIX) Radio Sets in Canada, 1931. (XXVI) Age Distribution by Single Years of Age for Canada, by Provinces, 1931. (XXVII) Immigrant Population Classified by Sex, Country of Birth, Province of Residence, Years of Arrival in Canada, and Citizenship of the Foreign Born, 1931. (XXVIII) Gainfully Employed Ten Years of Age and Over, Classified According to Occupation and Sex for Cities of 30,000 and Over, 1931. (XXIX) Birthplace of the Population Classified According to Nativity of Parents for Canada and Provinces, 1931. (XXX) Canadians and other Nationals. (XXXI) Gainfully Employed Ten Years of Age and Over for Canada and Provinces, 1931. (XXXII) Literacy, Language Spoken, and Conjugal Condition of the Population Ten Years of Age and Over, 1931. (XXXIII) Earnings Among Wage-Earners for Canada and Provinces, 1931. (XXXIV) Ages of the Gainfully Employed Ten Years of Age and Over, for Canada and Provinces, 1931. (XXXV) Age Distribution by Five-Year Age Groups for Cities, Towns and Villages of 5,000 Population and Over, 1931. (XXXVII) Population of the Municipal Wards of Montreal City by Quinquennial Age Groups, Conjugal Condition, Birthplace, Racial Origin, Religion, School Attendance and Literacy, by Sex, 1931. (XXXIX) Houses and Dwellings. (XL) Population of the Municipal Wards of the Cities of Toronto, Vancouver, Winnipeg, Hamilton, Quebec, and Ottawa by Quinquennial Age Groups, Conjugal Condition, Birthplace, Racial Origin, Religion, School Attendance and Literacy, by Sex, Census of 1931. (XLI) Orientals, Ten Years of Age and Over, Gainfully Employed by Race, Occupation and Sex, in British Columbia, 1931. (XLII) Persons Speaking Gaelic. (XLIII) Blind. (XLIV) Deaf Mutes. (XLV) Racial Origins of Gainfully Occupied, Ten Years of Age and Over for Canada and the Provinces. (XLVI) Birthplaces of Gainfully Occupied Ten Years of Age and Over, for Canada and the Provinces, 1931. (XLVII) Conjugal Condition of Gainfully Occupied Females, Fifteen Years of Age and Over, for Canada and the Provinces, 1931. Distribution of Occupations by Industry. Unemployment and Earnings Among Wage-Earners—

## POPULATION—continued.

## I. CENSUS—concluded.

(B) *Bulletins of the Seventh Census of Canada, 1931*:—concluded.

(1) POPULATION.—*Final Bulletins*.—concluded.

(1) Saint John, N.B.; (II) Winnipeg, Man.; (III) Kitchener, Ont.; (IV) Ottawa, Ont.; (V) Vancouver, B.C.; (VIII) Toronto, Ont.; (IX) Montreal, Que. Occupational Trends in Canada, 1891-1931. *Reprints*.—Population 1871-1931. Age distribution. Earnings of Wage-earners.

[NOTE.—For Census monographs on population, see under Vols. XII and XIII, p. 1109.]

(2) AGRICULTURE.—*Final Bulletins*.—Animal Products on Farms, by Counties—(VII) Ontario; (VIII) Quebec; (IX) British Columbia. Live Stock on Farms, by Counties—(X) Prince Edward Island; (XI) Nova Scotia; (XII) New Brunswick; (XIII) Manitoba; (XIV) Saskatchewan; (XV) Alberta; (XVI) British Columbia; (XVII) Ontario; (XX) Stock Sold Alive, Stock Slaughtered, Young Animals Raised, 1930, and Pure-Bred Live Stock on Farms, 1931, by Counties or Census Divisions. (XXIV) Forest Products of Farms, by Counties or Census Divisions, 1930. (XXV) Condition of Farm Land, by Counties or Census Divisions, 1931. (XXVI) Area of Field Crops, by Counties or Census Divisions, 1931.

(C) *Bulletins of the Quinquennial Census of the Prairie Provinces, 1936*:—

*Preliminary Bulletins*.—(I) Population of Certain Cities, Towns and Villages. (II) Population of Certain Cities, Towns and Villages. (III) Population of Certain Cities, Towns and Villages and Electoral Districts. (IV) Population of Certain Electoral Districts, Towns and Villages. (V) Number of Occupied and of "Vacant" or "Abandoned" Farms in Certain Electoral Districts. (VI) Population of Certain Electoral Districts and Cities, Towns and Villages. (VII) Area under Field Crops in 1936 in Certain Electoral Districts. (VIII) Population of Certain Electoral Districts and Cities, Towns and Villages. (IX) Population of Rural Municipalities in the Provinces of Manitoba, Saskatchewan, and Alberta. (X) Population of Certain Electoral Districts and Cities, Towns and Villages. (XI) Number of Occupied and of "Abandoned" or "Vacant" Farms in Certain Electoral Districts. (XII) Population of Certain Electoral Districts, Rural Municipalities, Cities, Towns and Villages. (XIII) Population of Electoral Districts in the Provinces of Manitoba, Saskatchewan, and Alberta. (XIV) Preliminary Announcement of Unemployment and Employment among Wage-Earners, in Cities and Towns of 5,000 Population and Over. (XV) Area under Field Crops in the Prairie Provinces, 1936 and 1931. (XVI) Number of Live Stock on Farms on June 1, 1936, in the Prairie Provinces. (XVII) Preliminary Announcement of Unemployment and Employment among Wage-Earners in Urban Centres of 1,000 to 5,000 Population. (XVIII) Preliminary Announcement of Unemployment and Employment among Wage-Earners in the provinces of Manitoba, Saskatchewan, and Alberta. (XIX) Number of Farms in the Prairie Provinces by Census Divisions. (XXII) Preliminary Report on Agriculture for the Province of Manitoba, *Price 15 cents*. (XXV) Preliminary Report on Agriculture for the Province of Saskatchewan, *Price 15 cents*. (XXVIII) Preliminary Report on Agriculture for the Province of Alberta, *Price 15 cents*. *Final Bulletins*.—(XX) Population by Townships, Rural and Urban, by Census Divisions, Age, Sex, Conjugal Condition, Birthplace, Racial Origin, Official Language, Immigration, School Attendance, Literacy, for cities of 10,000 population and over, *Price 25 cents*. (XXI) Occupations and Industries of Gainfully Occupied for Cities of 10,000 Population and Over, *Price 25 cents*. (XXIII) Population Classifications by Provinces, *Price 25 cents*. (XXIV) Unemployment Among Wage-Earners for Cities of 10,000 Population and Over, *Price 25 cents*. (XXVI) Earnings and Employment among Wage-Earners for Cities of 10,000 Population and Over, *Price 25 cents*. (XXVII) Occupations and Industries of Gainfully Occupied for the Provinces of Manitoba, Saskatchewan and Alberta, *Price 25 cents*. (XXIX) Unemployment among Wage-Earners for the Provinces of Manitoba, Saskatchewan and Alberta, *Price 25 cents*. (XXX) Unemployment and Earnings among Wage-Earners on Relief and Not on Relief for Cities of 30,000 Population and Over, *Price 25 cents*. (XXXI) Earnings and Employment among Wage-Earners for the Provinces of Manitoba, Saskatchewan and Alberta, *Price 25 cents*. (XXXII) Earnings of Wage-Earner Heads by Tenure and Size of Family for Cities of 10,000 Population and Over, *Price 25 cents*. (XXXIII) Occupations in Relation to Length of School Life for the Provinces of Manitoba, Saskatchewan, and Alberta, *Price 25 cents*. (XXXIV) Buildings, Dwellings, Households and Rent, by Size of Dwelling, for the Provinces of Manitoba, Saskatchewan, and Alberta, *Price 25 cents*. (XXXV) Types of Farming, *Price 25 cents*.

## II. INTERCENSAL ESTIMATES OF POPULATION.

## POPULATION—concluded.

## III. VITAL STATISTICS.

Annual Report on Vital Statistics of Canada by Provinces and Municipalities, *Price \$1*; Preliminary Annual Report on Vital Statistics of Canada, *Price 25 cents*; Preliminary Quarterly Report on Vital Statistics of Canada, *Price 50 cents per year*; Monthly Report of Births, Deaths, and Marriages registered in Cities, *Price 50 cents per year*; Special Report on Contributory Causes of Death, 1926; Order of Birth in the Registration Area of Canada, 1925; Manual of the International List of Causes of Death, Revision of 1929 (limited edition); Special Report on Mortality in Canada from Cerebral Hemorrhage and Certain Diseases of the Heart, Arteries and Kidneys, 1921-32; Special Report on Mortality in Canada According to Place of Residence, 1930-32; Special Report on Mortality from Tuberculosis in Canada According to Place of Residence, 1930-32; Special Report on Births in Canada According to Place of Residence of Mother, 1930-32; Special Report on Mortality in Canada, 1921-32; Handbook on Death Registration and Certification, containing International List of Causes of Death (special distribution); Special Report on Mortality in Canada, 1921-35, *Price 25 cents*; Special Report on Occupational Mortality in Canada, 1931-32, *Price 25 cents*; Special Report on Deaths in Canada, Classified According to Residence of Decedents, 1935 (Parts I and II), *Price, each part, 25 cents*; Special Report on Deaths in Canada, Classified According to Residence of Decedents, 1936 (Parts I, II, and III), *Price, each part, 25 cents*.

## PRODUCTION—

## I. ANNUAL SURVEY OF PRODUCTION.

Including and differentiating gross and net values—(1) Primary Production (agriculture, forestry, fisheries, trapping, mining, and electric power), (2) Secondary Production (general manufactures, custom and repair, and construction), and (3) Provincial and Per Capita Analyses, Explanation of Method, *Price 25 cents*.

## II. AGRICULTURE.

- (1) *Agricultural Production*—Monthly Bulletin of Agricultural Statistics with Table of Contents and Index, *Price \$1 per year*. (The official record of current statistical data relating to agriculture. Contains reports on crop conditions, prices, weather, etc.—estimates of areas, yields, quality, and value of field crops—value of farm lands—wages of farm help—number and values of farm live stock and poultry—dairying—fruit—eggs—tobacco—apiculture—maple products—clover and grass seed—miscellaneous crops—stocks of grain—annual summary of value of agricultural production—index numbers of agricultural prices, production, and values—international agricultural statistics.) Reprinted from the Monthly Bulletin of Agricultural Statistics: (a) The Fertilizer Trade in Canada; (b) Farm Expenditures in Alberta and Saskatchewan, 1934; (c) Fruit Statistics of Canada, 1926-35. Agricultural Statistics by Counties and Crop Districts, 1926-30. Annual Statistics of Fruit, Nursery Stock and Floriculture. Handbook of Instructions to Crop Correspondents, and Summary of Annual Agricultural Statistics. Crop Reports—released on dates listed in the Crop-Reporting Program covering: (a) Intentions to Plant Field Crops; (b) Winter-killing and Spring Condition of Fall Wheat, Fall Rye, and Hay and Clover Meadows; (c) Progress of Spring Seeding; (d) Acreage, Condition, Yield, Stocks on Hand, and Value of Field Crops, (e) Telegraphic Crop Reports, June-September, weekly for the Prairie Provinces, and every second week for all Canada, *Price \$2 per year*. Monthly Condition Reports (seasonal) with preliminary estimates of Production for: (a) Fruit and Vegetables, *Price \$1 per year*; (b) Tobacco, Annual Survey of Production and Marketing of Commercial Tobacco Crop, *Price 25 cents*. (See also Census of Agriculture under "Population".)
- (2) *Grain and Grain Products*—(a) Annual Report on the Grain Trade of Canada, *Price 50 cents*; (b) Monthly Review of the Wheat Situation, *Price \$1 per year*; (c) Canadian Grain Statistics (weekly report on grain supplies and movements), *Price \$2 per year*; (d) Canadian Milling Statistics (monthly), *Price 50 cents per year*; (e) List of Mills with Capacity, *Price 50 cents*; (f) The Grain Situation in Argentina (monthly), *Price \$1 per year*; (g) The Production and Distribution of Canadian Grains and Seeds—(1) Barley, (2) Oats, (3) Rye, (4) Flaxseed; (h) World Trade in Barley, *Price 50 cents*; (i) World Shipments of Wheat and Wheat Flour, 1926-27 to 1931-32; (j) Salient Features in the Grain Situation in Canada; (k) Trends in World Wheat Acreage, with graphic appendix.
- (3) *Live-Stock and Animal Products*—(a) Annual Report on Live-stock and Animal Products Statistics, *Price 25 cents*; (b) Monthly Report on Cold Storage Holdings in Canada (1) Meat and Lard, *Price \$1 per year*, (2) Fish, *Price \$1 per year*, (3) Dairy and Poultry Products, *Price \$1 per year*, (4) Canadian Fruit and Vegetables, *Price 50 cents per year*; (c) Monthly Reports on Stocks of Butter, Cheese, and Eggs in the Principal Cities of Canada, *Price 50 cents per year*; (d) Monthly Review of Dairy Production, *Price \$1 per year*; (e) Annual Estimates of the Consumption of Meats,

## PRODUCTION—continued.

## II. AGRICULTURE—concluded.

(3) *Live-Stock and Animal Products*—concluded.

Poultry, Butter, Cheese, and Eggs; (f) Annual Report on Dairying Statistics of Canada, *Price 25 cents*; (g) Annual Surveys of Live Stock and Poultry at June 1 and Dec. 1, *Price 25 cents*; (h) Annual Report on Production of Poultry and Eggs, *Price 25 cents*; (i) Annual Summary of Cold Storage Holdings, *Price 25 cents*; (j) The Dairy Situation in Canada (quarterly), *Price \$1 per year*.

(4) *Other*—Monthly Report on Raw and Refined Sugar (visible supply, meltings, shipments, exports and imports), *Price \$1 per year*. Annual Summary of Sugar Reports. Production and Value of Honey and Beeswax, 1924 to 1938. Annual Report on the Agricultural Situation and Outlook (published in co-operation with the Department of Agriculture) with supplements as follows: (a) The Potato Situation in Eastern Canada, 1935; (b) Production Trends and Policies in Agriculture, 1936; (c) Charts, 1937. Statistical Supplements 1938 and 1939. Report of the Conference on Agricultural Statistics, Ottawa, Mar. 30-Apr. 2, 1936.

*NOTE*.—Subscription price for all publications of the Agricultural Branch, \$10 per year.

## III. FURS.

Annual Report on Fur Farms, *Price 25 cents*. List of Companies, Firms, and Individuals Engaged in Fur Farming in Canada, *Price \$5*. Advance Bulletin of Statistics of the Production of Raw Furs, *Price 10 cents*. Annual Bulletin of the Production of Raw Furs (comprising the pelts taken by trappers and those sold from fur farms), *Price 25 cents*.

## IV. FISHERIES.

Annual Report of Fisheries Statistics, *Price 50 cents*. Advance Bulletins of Fish Caught and Marketed, by Provinces: Prince Edward Island, *Price 10 cents*; Nova Scotia, *Price 10 cents*; New Brunswick, *Price 10 cents*; Quebec, *Price 10 cents*; Ontario, The Prairie Provinces, and Yukon, *Price 10 cents*; British Columbia, *Price 10 cents*; Canada, *Price 20 cents*.

## V. FORESTRY.

Annual Summary of the Value, etc., of Forest Production (includes operations in the woods for sawmills, shingle mills, pulp and paper mills, etc., production of mining timber, production of poles and cross ties, and farm production of firewood, posts, etc.), *Price 25 cents*.

[See also Reports on Manufactures of Forest Products listed under "Manufactures", Section VII, Subsection (5).]

## VI. MINERAL PRODUCTION (MINING AND METALLURGY).

(1) *General*—(a) Annual Report on the Mineral Production of Canada, *Price 50 cents*; (b) Preliminary Reports (semi-annual) on the Mineral Production of Canada, *Price 25 cents*; (c) Monthly Reports on Leading Minerals—reports on gold, silver-lead-zinc, nickel-copper, petroleum-natural gas production, cement-clay products, *Yearly subscription \$1 per report*; Reports on gypsum, salt, asbestos, feldspar. *Yearly subscription 50 cents per report*; (d) Preliminary Estimate of Canada's Mineral Production, *Price 25 cents*.

(2) *Coal*—(a) Annual Report on Coal Statistics for Canada, *Price 50 cents*; (b) Monthly Summary Report on Coal and Coke Statistics for Canada, *Price \$1 per year*; (c) Quarterly Report on Coal and Coke Statistics for Canada, *Price 50 cents per year*.

(3) *Annual Bulletins on Mining—Metals*—The Gold-Mining Industry in Canada (including alluvial gold mining, auriferous quartz mining, copper-gold-silver mining, and tables showing Canadian and world production of gold), *Price 50 cents*. The Silver-Mining Industry in Canada (including silver-cobalt-arsenic mining, silver-lead-zinc mining, and tables showing Canadian and world production of arsenic, cobalt, lead, silver, and zinc), *Price 25 cents*. The Nickel-Copper Mining, Smelting and Refining Industry (including Canadian and world production of nickel, platinum metals and copper), *Price 25 cents*. The Production of Miscellaneous Metals (including aluminium, antimony, barium, beryl, bismuth, cadmium, calcium, chromite, lithium, magnesium, manganese, mercury, molybdenite, radium, selenium, tin, titanium, tungsten), *Price 50 cents*. The Non-Ferrous Smelting and Refining Industry, *Price 25 cents*. The complete Mining Series of Reports (with the exception of Coal), *Price \$7*.

Non-Metals—Abrasives, *Price 15 cents*; Asbestos, *Price 25 cents*; Feldspar and Quartz, *Price 25 cents*; Gypsum, *Price 25 cents*; Iron Oxides, *Price 15 cents*; Mica, *Price 25 cents*; Natural Gas, *Price 25 cents*; Petroleum, Crude, *Price 25 cents*; Salt, *Price*

## PRODUCTION—continued.

## VI. MINERAL PRODUCTION (MINING AND METALLURGY)—concluded.

(3) *Annual Bulletins on Mining—Non-Metals—concluded.*

25 cents; Talc and Soapstone, Price 15 cents; Miscellaneous Non-Metallic Minerals (including actinolite, barytes, bituminous sands, fluorspar, graphite, magnesian-dolomite, magnesium sulphate, bog manganese, mineral waters, peat, phosphate, silica brick, sodium carbonate, sodium sulphate, sulphur-pyrites), Price 50 cents.

Structural Materials—The Cement Industry, Price 25 cents; Clay and Clay Products, Price 25 cents; Lime, Price 25 cents; Sand and Gravel, Price 25 cents; Stone, Price 25 cents.

[See also Reports on Iron and Steel and Their Products, Manufactures of Non-Ferrous Metals, the Manufactures of Non-Metallic Minerals and Chemicals, and Allied Products listed under "Manufactures", Section VII, Subsections (6), (7), (8) and (9).]

NOTE.—Subscription price for all Mining, Metallurgical and Chemical reports [including reports under groups (6), (7), (8), and (9), pp. 1114-1116]. \$15 per year.

## VII. MANUFACTURES.

(1) *General*—General Report on the Manufacturing Industries of Canada, Price 50 cents. Geographical Distribution of the Manufacturing Industries of Canada, Price 50 cents; also Reports for the Provinces and Leading Cities: Quebec, Price 25 cents; Ontario, Price 25 cents; British Columbia, Price 25 cents; Prairie Provinces, Price 25 cents; Maritime Provinces, Price 25 cents. Alphabetical List of Products (annual report); Quantity of Manufacturing Production in Canada, 1923-29; Consumption of Luxuries (periodic report).

(2) *Manufactures of Vegetable Products*—General Report on Manufactures of Vegetable Products, Price 50 cents. Annual bulletins as follows: (a) Coffee, Tea, Spices and Miscellaneous Foods, Price 25 cents; (b) Fruit and Vegetable Preparation, including Canning, Evaporating and Preserving, and Pickles, Sauces, Vinegar and Cider, Price 25 cents; (c) Flour and Grist Mill Products, Price 25 cents; (d) Bread and Other Bakery Products, Price 25 cents; (e) Biscuits and Confectionery, including Cocoa and Chocolate, Price 25 cents; (f) Macaroni and Vermicelli, Price 15 cents; (g) Distilled Liquors, Price 25 cents; (h) Breweries, Price 25 cents; (i) Wine, Price 25 cents; (j) Rubber Industry, Price 25 cents; (k) Prepared Breakfast Foods, Price 15 cents; (l) Sugar Refineries, Price 25 cents; (m) Tobacco Products, Price 25 cents; (n) Linseed Oil and Soya Bean Oil, Price 15 cents; (o) The Canned Foods Industry, Price 25 cents; (p) Ice Cream, Price 15 cents; (q) Pack of Fruits and Vegetables, (preliminary), Price 10 cents; (r) Stocks of Unmanufactured Tobacco on Hand, (quarterly report), Price \$1; (s) Stocks of Canned Fruits and Vegetables, (quarterly report), Price \$1; (t) Aerated and Mineral Waters, Price 25 cents; (u) Stock and Poultry Foods, Price 15 cents.

(3) *Animal Products and Their Manufactures*—Annual Report as follows: The Dairy Factory Industry, Price 25 cents. Annual bulletins: (a) Slaughtering and Meat Packing and Sausage and Sausage Casings, Price 25 cents; (b) Process Cheese, Price 10 cents; (c) Leather Tanneries, Price 25 cents; (d) Miscellaneous Leather Goods, Leather Belting, Leather Boot and Shoe Findings, Price 25 cents; (e) Leather Boots and Shoes, Price 25 cents; (f) Leather Gloves and Mittens, Price 20 cents; (g) Fur Goods and Fur Dressing, Price 25 cents. Monthly bulletin on Boot and Shoe Production, Price \$1 per year (including annual). Monthly bulletin on Concentrated Milk Products, Price \$1 per year.

(See also Reports on Live Stock, etc., listed under "Agriculture".)

(4) *Textile and Allied Industries*—General Report on the Textile Industries of Canada, Price 50 cents. Annual Bulletins as follows: (a) Cotton Textiles (cloth, yarn, thread and waste), Price 50 cents; (b) Woollen Textiles (cloth, yarn, waste, carpets, and woollen goods, n.e.s.), Price 50 cents; (c) The Silk Industry, Price 25 cents; (d) Men's Factory Clothing, Price 25 cents; (e) Women's Factory Clothing, Price 25 cents; (f) Hats and Caps, Price 25 cents; (g) Hosiery and Knitted Goods, Price 25 cents, (h) Men's Furnishings, n.e.s., Price 25 cents; (i) Oiled Clothing and Waterproofs, Price 15 cents; (j) Cordage, Rope and Twine, Price 15 cents; (k) Corsets, Price 15 cents; (l) Cotton and Jute Bags, Price 15 cents; (m) Dyeing and Finishing of Textiles, Price 15 cents; (n) Awnings, Tents and Sails, Price 15 cents.

(5) *Manufactures of Forest Products*—Printed Reports, Price 50 cents each; (a) The Lumber Industry; (b) The Pulp and Paper Industry; (c) Wood-Using Industries; (d) Paper-Using Industries. Annual bulletins: (a) The Lumber Industry, Price 35 cents; (b) Lumber Distribution in Canada and the United States (biennial), Price 35 cents; (c) The Pulp and Paper Industry, Price 30 cents; (d) Wood-Using Industries (Summary), Price 35 cents. Annual Preliminary Reports on Wood-Using Industries: (a) Planing Mills, Sash and Door Factories, Price 20 cents;

## PRODUCTION—continued.

## VII. MANUFACTURES—continued.

(5) *Manufactures of Forest Products—concluded.*

(b) Hardwood Flooring, Price 15 cents; (c) Furniture, Price 15 cents; (d) Boxes, Baskets and Crates, Price 15 cents; (e) Carriages, Sleighs and Vehicle Supplies, Price 15 cents; (f) Cooperage, Price 10 cents; (g) Coffins and Caskets, Price 10 cents; (h) The Wooden Refrigerator Industry, Price 10 cents; (i) Boat Building, Price 10 cents; (j) Lasts, Trees and Shoe Findings, Price 10 cents; (k) Handles, Spools and Wood-turning, Price 10 cents; (l) Wooden-ware, Price 10 cents; (m) Excelsior, Price 10 cents; (n) Charcoal Manufacture, Price 10 cents; (o) Beekeepers' and Poultrymen's Supplies, Price 10 cents; (p) Miscellaneous Wood-Using Industries, Price 10 cents. Annual Preliminary Reports on Paper-Using Industries: (a) The Printing Trades (comprising the following industries: Printing and Publishing; Printing and Bookbinding; Lithographing; Engraving, Stereotyping and Electrotyping; Trade Composition; and Blue Printing), Price 35 cents; (b) Paper Boxes and Bags, Price 25 cents; (c) Roofing Paper, Price 10 cents; (d) Miscellaneous Paper Goods, Price 10 cents. Monthly bulletins: (a) Asphalt Roofing Production, Price 50 cents per year; (b) Asphalt Roofing Sales, Price 50 cents per year; (c) Rigid Insulating Board, Price 50 cents per year.

*NOTE.*—Subscription price for all Forestry Branch publications \$5 per year.

- (6) *Iron and Steel and Their Products*—Biennial Report, Price 50 cents. Annual bulletins as follows: Preliminary Summary on the Iron and Steel Industry—(a) Primary Iron and Steel, Price 15 cents; (b) Castings and Forgings, Price 25 cents; (c) Heating and Cooking Apparatus, Price 15 cents; (d) Boilers, Tanks and Engines, Price 25 cents; (e) Farm Implements and Machinery, Price 25 cents; (f) Automobile Parts and Accessories, Price 25 cents; (g) Automobile Statistics for Canada, Price 50 cents; (h) Railway Rolling-Stock, Price 25 cents; (i) Wire and Wire Goods, Price 25 cents; (j) Sheet Metal Products, Price 25 cents; (k) Hardware, Tools and Cutlery, Price 25 cents; (l) Bridge Building and Structural Steel, Price 25 cents; (m) Miscellaneous Iron and Steel Products, Price 25 cents; (n) Machinery, Price 25 cents; (o) Bicycles, Price 15 cents; (p) Aircraft, Price 15 cents; (q) Shipbuilding, Price 15 cents; (r) Iron and Steel and Their Products (final summary), Price 10 cents. Commodity bulletins on the production of pig iron, steel, washing machines, cream separators, warm air furnaces, galvanized sheets, wire nails, wire rope and cable, steel wire, wire fencing, stoves, etc. Monthly Reports: (a) Pig Iron, Steel, and Ferro-Alloys, Price \$1 per year; (b) Automobile Statistics for Canada, Price \$1 per year; (c) Steel Ingots, Price \$1 per year. Quarterly Report on Galvanized Sheets, Price \$1 per year.
- (7) *Manufactures of Non-Ferrous Metals*—Biennial Report, Price 50 cents. Annual bulletins as follows: (a) Aluminium Products, Price 15 cents; (b) Brass and Copper Products, Price 25 cents; (c) White Metal Alloys, Price 25 cents; (d) Jewellery and Silverware, Price 25 cents; (e) Electrical Apparatus and Supplies, Price 50 cents; (f) Miscellaneous Non-Ferrous Metal Products, Price 15 cents; (g) Non-Ferrous Smelting and Refining, Price 25 cents; (h) Manufactures of the Non-Ferrous Metals (final summary), Price 10 cents. Quarterly reports on production and sales of radio sets, Price \$1 per year. Quarterly reports on sales of storage batteries, Price 50 cents per year. Commodity bulletins on the production of batteries, silverware, vacuum cleaners, electric motors and generators, electric transformers, incandescent lamps, etc.
- (8) *Manufactures of Non-Metallic Minerals*—Biennial Report, Price 50 cents. Annual bulletins as follows: Preliminary Summary on Manufactures of Non-Metallic Minerals—(a) The Asbestos Mining Industry and the Asbestos Products Industry, Price 25 cents; (b) The Cement Industry, Price 25 cents; (c) Coke and Gas, Price 25 cents; (d) Glass (blown, cut, and ornamental, etc.), Price 15 cents; (e) Lime, Price 25 cents; (f) Petroleum Products, Price 50 cents; (g) Clay and Clay Products, Price 25 cents; (h) Salt, Price 25 cents; (i) Sand-Lime Brick, Price 15 cents; (j) Stone (primary, monumental, and ornamental), Price 25 cents; (k) Abrasives, Price 15 cents; (l) Miscellaneous Non-Metallic Mineral Products (including carbon electrodes—gypsum products—mica products—non-metallic minerals, n.e.s.), Price 15 cents. Non-Metallic Mineral Products (final summary), Price 10 cents. Special Report on the Consumption of Coke in Canada, Price 25 cents. Monthly Report on Coal and Coke Statistics, Price \$1 per year.
- (9) *Chemicals and Allied Products*—Biennial Report, Price 50 cents. Annual bulletins as follows: Preliminary Summary on Chemicals and Allied Products—(a) Coal Tar Distillation, Price 15 cents; (b) Acids, Alkalies and Salts, Price 15 cents; (c) Compressed Gases, Price 15 cents; (d) Fertilizers, Price 15 cents; (e) Medicinal and Pharmaceutical Preparations, Price 25 cents; (f) Paints, Pigments and Varnishes, Price 25 cents; (g) Soaps, Cleaning Preparations and Washing Compounds, Price 25 cents; (h) Toilet Preparations, Price 25 cents; (i) Inks, Price 15 cents; (j) Adhesives, Price 15 cents; (l) Polishes and Dressings, Price 15 cents; (m) Hardwood Distillation,

**PRODUCTION—concluded.****VII. MANUFACTURES—concluded.****(9) Chemicals and Allied Products—concluded.**

Price 15 cents; (n) Miscellaneous Chemical Products (including boiler compounds—cellulose products—insecticides—sweeping compounds—disinfectants—matches—dyes and colours—chemical products, *n.e.s.*), Price 15 cents. Special Report on the Fertilizer Trade in Canada, Price 25 cents. Commodity bulletins on Sulphuric Acid, Ammonium Sulphate, etc. Special Reports—Directory of Chemical Industries in Canada, as of Jan. 1, 1938, Price \$1. Consumption of Chemicals in Municipal Waterworks in Canada, 1936 and 1937, Price 25 cents.

**(10) Miscellaneous Manufactures—General Report, Price 25 cents.** Annual Bulletins as follows: (a) Brooms, Brushes and Mops, Price 15 cents; (b) Musical Instruments (including pianos, organs and phonographs) and Musical Instrument Materials and Parts, Price 15 cents; (c) Buttons, Price 15 cents; (d) Bed Springs and Mattresses, Price 15 cents; (e) Sporting Goods, Price 15 cents.

#### Mines and Resources.—

NOTE.—The Department of Mines and Resources has published a large number of reports and maps dealing with the natural resources of Canada and applications for publications, other than the Annual Report of the Department, should be addressed to the Directors of the Branches concerned. Hereunder is listed the more important publications of the year 1938. Catalogues listing the complete series of reports will also be furnished upon request.

DEPARTMENTAL.—Annual Report of the Department of Mines and Resources for fiscal years.

MINES AND GEOLOGY BRANCH.—Annual Report Separate Mines and Geology Branch. *Bureau of Geology and Topography.*—Memoir 215: Fossil Flora of Sydney Coal Field, by W. A. Bell; Memoir 210: Rice Lake Gold Lake Area, Southeastern Manitoba, by C. H. Stockwell; Memoir 217: Laberge Map-area, Yukon, by H. S. Bostock and E. J. Lees; Memoir 218: Mining Industry of Yukon, 1937, by H. S. Bostock. *National Museum of Canada.*—Bulletin 90: The Sarcee Indians of Alberta, by D. Jenness; Bulletin 91: Annual Report of the National Museum for the Fiscal Year 1937-38. *Bureau of Mines.*—Limestones of Canada, P. IV, Ont., by M. F. Goudge; Comparative Pulverized Fuel, by C. E. Baitzer and E. S. Malloch; Canadian Mineral Industry, 1937; Improving Properties of Clays and Shales. *Explosives Division.*—The Storage of Explosives; Report for the Calendar Year 1937.

LANDS, PARKS AND FORESTS BRANCH.—Annual Report Separate Lands, Parks and Forests Branch. *Bureau of Northwest Territories and Yukon Affairs.*—Game Ordinance and Fur Export Tax Ordinance; Canada's Reindeer Experiment. *National Parks Bureau.*—Jasper National Park—General Information Folder; Riding Mountain National Park; Guide to Fort Chambly; Kootenay, Yoho, Glacier, Mt. Revelstoke—General Information Folder; Banff National Park—General Information Folder; National Parks of Canada; Historic Sites of Canada (French); Catalogue of Motion Picture Films; Waterton Lakes National Park. *Forest Service.*—(No. 2) White Spruce; (No. 53) Brown Stain in Sugar Maple; (No. 91) Forests of New Brunswick; (No. 92) Economic Aspects of the Forests and Forest Industries of Canada; (No. 54) The Strength of Eastern Canadian Spruce Timbers in Sizes Shipped to the United Kingdom; (No. 56) The Preservative Treatment of Fence-Posts; (No. 95) The Penetration into Wood of Cooking Liquors and other Media; Forestry Lessons; Canada's Forests.

SURVEYS AND ENGINEERING BRANCH.—Annual Report Separate Surveys and Engineering Branch. *Dominion Observatories.*—Saturday Evening Program—July, August, September; Vol. XII, No. 18—Bibliography of Seismology, Price 25 cents; Vol. VII, No. 6—The Calculation of Rotating Factors for Eclipsing Binaries, Price 40 cents; Vol. XII, No. 19—Bibliography of Seismology, Price 25 cents; Vol. VII, No. 3—The Definitive Orbit of the Spectrographic Binary Beta Arietis, Price 25 cents; Vol. VII, No. 4—The Spectroscopic Orbit of H. D. 195986, Price 60 cents; Vol. VII, No. 5—One Hundred and Thirty-two New Variable Stars in Five Globular Clusters, Price 60 cents; Saturday Evening Program—October, November, December; Vol. XI, No. 4—Gravity Determinations in 1936, Price 25 cents; Vol. VII, No. 7—The Spectrographic Orbit of Boss 3511; Saturday Evening Program—January, February, March; Vol. XII, No. 20—Bibliography of Seismology, Price 25 cents; Saturday Evening Program—April, May, June. *Hydrographic and Map Service.*—Tide Tables for: Atlantic Coast, Price 25 cents; Prince Rupert; Halifax and Sydney; Saint John; Quebec and Father Point; Charlottetown; Vancouver and Sand Heads, Price 10 cents each; Pacific Coast, Price 25 cents; British Columbia Pilot, Price \$1; Catalogue of Maps and Publications; Supplement No. 2—(St. Lawrence River Pilot). *Water and Power Bureau.*—Water Resources Paper No. 78—Pacific Drainage, 1932-33 and 1933-34. *Geodetic Service.*—No. 59—The Transfer of Geodetic Data from One Ellipsoid to Another, Price \$1.50; Reports of International Association No. 75.

**National Defence.**—Annual Report; List of Officers, Defence Forces of Canada, Naval, Military, and Air Services; Canadian Navy List; Naval General Orders; General Orders, Militia; Militia Orders; Air Regulations; Air Force General Orders.

**National Research Council.**—A list of 773 publications issued by the National Research Council, 1918-33, is available for free distribution on request. This list includes Annual Reports of the Council; Technical Reports Nos. 1-18; Bulletins Nos. 1-19; Mimeographed Reports not hitherto listed as Council publications; Papers reprinted from the Canadian Journal of Research which contain (i) Reports of experimental work carried on in the National Research Laboratories, (ii) Reports of work done elsewhere with financial assistance from the National Research Council. All of these reports have been arranged in chronological order of publication and numbered in sequence. This new series of publications is preceded by the letters "N.R.C. No."

The Canadian Journal of Research has not been included in the N.R.C. No. series. Established as a medium for the publication in Canada of the results of original scientific research carried on in the Dominion, the Canadian Journal of Research is now published in four sections: A—Physical Sciences; B—Chemical Sciences; C—Botanical Sciences; D—Zoological Sciences. The Journal has a wide circulation and is to be found in the leading scientific libraries of the world. From its inception in May, 1929, to the end of Volume 12 in June, 1935, the Journal was issued in a single volume each month. Copies of these 12 volumes unbound are available at \$1.50 each. An index of volumes 1-12 is available at \$1. From July, 1935, the Journal has been published in four sections as noted above. Each section is page 1 separately. Sections A and B are bound in one cover each month and Sections C and D are likewise bound together. The issues from July to December, 1935, were included in Volume 13 (Price \$2). Volume 14 contains the Journals issued in 1936 and one volume has been published each year since then. Single numbers of the Journal are priced at 50 cents each; the yearly subscription for Sections A and B is \$2.50; Sections C and D, \$2.50; the four sections complete \$4.

Additional information regarding Council publications and reports of Council activities may be obtained from the Officer-in-Charge, Research Plans and Publications Section, National Research Council, Ottawa, Canada.

**National Revenue.**—Annual Report, containing statements relative to Imports, Exports, Excise, and Income. National Revenue Review (monthly).

**Pensions and National Health.**—(1) Sanitation—Sewage Treatment for Isolated Houses and Small Institutions where Municipal Sewage System is not available; (2) The Canadian Mother's Book; (3) Infantile Paralysis; (17) Wells; (18) Home Treatment, Rural Water Supplies; (19) Athletes' Foot; (21) Housing; (22) A Survey of Vitamins; (23) Air Conditioning and Heating in Relation to Health; (24) Information for Men—Syphilis and Gonorrhoea; (25) Information for Young Women about Sex Hygiene; (26) Information for Parents—Teaching Sexual Hygiene to Children; (27) Prevention of Blindness in Babies; (29a) Goitre—Facts for the General Public; (30) How to Build Sound Teeth; (31) What You Should Know about Tuberculosis; (32) Smallpox and Vaccination; (34) The Rat Menace.

**Post Office.**—Annual Report of the Postmaster General. Official Postal Guide. Regulations as to Rural Mail Delivery. Booklet of Postal Information.

**Public Archives.**—Annual Reports.—1914-15 (60 cents); 1921 (30 cents); 1923 (55 cents); 1926 (10 cents); 1928 (25 cents); 1929 (50 cents); 1930 (50 cents); 1931 (\$1); 1932 (\$1); 1933 (\$1); 1934 (10 cents); 1935 (\$1); 1936 (\$1); 1937 (\$1); 1938 (\$1).

**Numbered Publications.**—No. 9, Early Canadian Northwest Legislation—Oliver (2 Vols.) (1914-15), \$2; No. 12, Reports on the Laws of Quebec, 1767-70—Kennedy and Lanctot (1931), \$1; No. 13, Vol. I, Catalogue of Pamphlets,<sup>2</sup> 1493-1877—Casey (1931), \$1; Vol. II, Catalogue of Pamphlets,<sup>2</sup> 1878-1931—Casey (1932), \$1.

**Special Publications.**—(h) Documents—Constitutional History of Canada, 1759-91—Shortt and Doughty, 2 ed. (2 Vols.), (1918), \$2; (i) Catalogue of Pictures, etc.,<sup>3</sup> Part I, Sec. 1—Kenney (1925), \$2.50; (j) Documents—Canadian Currency, Exchange, etc., during the French Period<sup>4</sup>—Shortt (2 Vols.), (1925-26), \$3; (l) The Kelsey Papers<sup>5</sup> (Hudson Bay Co. Journals, 1683-1722)—Doughty and Martin (1929), \$2; (m) Documents—Currency in Nova Scotia<sup>6</sup> 1675-1758—Shortt, Johnston, Lanctot (1933), \$2; (n) Documents—Constitutional History of Canada, 1819-28—Doughty and Story (1935), \$2; (o) The Elgin-Grey Papers,<sup>7</sup> 1846-52—Doughty (4 Vols.) (1937), \$5.

<sup>1</sup> Contain texts, calendars, and catalogues of documents as well as reports on the administrative work of the Divisions. <sup>2</sup> Title page and introduction in English and French, same volume; titles of pamphlets as in original; index in English. <sup>3</sup> Title, preface, and introduction in English and French in same volume; notes in English; titles of pictures exact. <sup>4</sup> Complete volumes, including index in English and French in same volume. <sup>5</sup> Title and introduction in English and French in same volume notes and index in English; texts of journals exactly as in original (English). <sup>6</sup> Title and foreword in English and French, otherwise in English. <sup>7</sup> Title and introduction in English and French, otherwise in English.

**Public Works.—Annual Report.**

**Secretary of State.**—Annual Report. The Arms of Canada. The Canadian Patent Office Record, *Annual subscription, \$10, single numbers, 10 cents.* Annual Report of the Commissioner of Patents, *Price 10 cents.*

**Trade and Commerce.**—Annual Report of the Department of Trade and Commerce, *Price 25 cents;* Annual Report of the Board of Grain Commissioners for Canada, *Price 25 cents;* Annual Report of Electricity and Gas, *Price 25 cents;* Annual Report of Dominion Grain Research Laboratory, *Price 10 cents;* List of Licensed Elevators, etc., *Price 50 cents;* Motion Pictures (catalogue of), *Price 25 cents.*

*NOTE.—Requests for the above publications should be addressed to the King's Printer.*

## CHAPTER XXX.—THE ANNUAL REGISTER, 1938-39.

### Section I.—Dominion Legislation, 1938.

Legislation of the Third Session, Eighteenth Parliament,  
Jan. 27, 1938, to July 1, 1938.

**Finance and Taxation.**—Four Appropriation Acts were passed during the session, *viz.*, cc. 1, 2, 18, and 54; c. 2 applied to the fiscal year ended Mar. 31, 1938, and cc. 1, 18, and 54 to the fiscal year ended Mar. 31, 1939. C. 1, the Appropriation Act, No. 1, 1938, granted a sum not exceeding \$39,057,624·49 towards defraying the several charges and expenses of the public service, being one-sixth of the amount of each of the several items to be voted, set forth in the Main Estimates. C. 2, the Appropriation Act, No. 2, 1938, granted a sum not exceeding \$36,717,668·24 towards defraying the several charges and expenses of the public service, set forth in the Schedule to this Act. By c. 18, the Appropriation Act, No. 3, 1938, were granted: \$39,057,624·49 towards defraying the several charges and expenses of the public service, being one-sixth of the amount of each of the several items to be voted, set forth in the Main Estimates; \$17,751,572·68 towards defraying the several charges and expenses of the public service, being one-sixth of the amount of each of the several items to be voted, set forth in the Supplementary Estimates. By c. 54, the Appropriation Act, No. 4, 1938, were granted: \$156,230,497·94 towards defraying the several charges and expenses of the public service, being two-thirds of the amount of each of the items to be voted, set forth in Schedule A to this Act; \$88,757,863·42 towards defraying the several charges and expenses to the public service, being five-sixths of the amount of each of the several items to be voted, set forth in Schedule B to this Act. Under s. 4 of this chapter, the Governor in Council is empowered to raise a loan not in excess of \$200,000,000 for public works and general purposes, the principal and interest being chargeable to the Consolidated Revenue Fund. All borrowing powers outstanding under Appropriation Act, No. 3, 1937 (c. 45, 1937), expire on the coming into force of this legislation.

By c. 33, the Municipal Improvements Assistance Act, the Minister of Finance may, with the approval of the Governor in Council subject to the provisions of this Act, enter into an agreement with any municipality to make a loan or loans, under certain conditions laid down in s. 3 and on security, for the purpose of meeting the whole or part of the cost of constructing, or making extensions or improvements to, or renewals of any self-liquidating municipal project. The aggregate principal amount of such loans shall not exceed \$30,000,000 and the aggregate amount loaned to any one municipality shall not exceed that proportion of \$30,000,000 which the population of the municipality bears to the total population of Canada. Interest on such loans shall be charged at 2 p.c. per annum and principal shall be amortized by semi-annual payments over a period which shall not be longer than the useful life of the project.

**National Revenue.**—Under c. 29, which amends the Excise Act (c. 52 of the Statutes of 1934) legislation dealing with licences to carry on the trade or business of rectifying spirits, to import, make, or sell apparatus for the manufacture of spirits, and to import, manufacture, possess, or use chemical stills, is amended in several respects, the chief of which follow. The sections under Part II of the original legislation dealing with licences to rectifiers and to importers of apparatus are

repealed. Conditions of granting other licences under this Part are also modified, especially as regards the conditions of licence for chemical stills. In respect to abatement of spirits warehoused, two additional provisos are added, *viz.*, an abatement not exceeding 2 p.c. may be allowed on deficiencies found in distillery stocks and an abatement not exceeding 3 p.c. of the quantity originally warehoused in wooden barrels may be allowed for wood absorption. Spirits manufactured from native wines, when such spirits are used for fortification purposes, are excluded with gin from spirits which must be warehoused for two years before they may be entered for consumption. With regard to tobacco and cigars, sections of the Act dealing with duties levied on raw leaf imported into Canada are repealed, together with sections dealing with the completion of manufacture of tobacco and cigars, the monthly returns of completed manufacture, and the minimum of cigars to be produced from a stated amount of raw material; the quantities of raw-leaf tobacco, cigars, and cigarettes that may be warehoused or ex-warehoused by a single entry as outlined in s. 267 of the original legislation are modified. The sections of the original legislation relating to foreign raw-leaf tobacco are repealed and the penalties for unlawful removal, sale, or possession of tobacco or cigars are modified.

C. 48 amends the Income War Tax Act (c. 97, R.S.C. 1927). Small loan companies are excluded from the definition of non-resident-owned investment corporations. Taxable income, as defined by Part I of the original legislation, now includes annuities or other annual payments received under the provisions of any will or trust. Subject to certain provisions, dividends received from wholly-owned subsidiary non-resident companies are exempt from tax, also any lump sum payments made by an employer to an employees' superannuation or pension fund. No deductions are to be allowed for royalties paid by non-residents of Canada out of royalties received from Canadian sources. By s. 32A, persons or corporations resident in Canada transacting with persons or corporations resident outside Canada for the purpose of avoiding or reducing liability to taxation shall continue to be liable to such taxation; and by s. 32B any assets distributed by a company to its shareholders without sale or at reduced price shall also be liable to taxation at fair market value to be determined by the Minister. The schedule of rates to be paid on gifts or donations has been revised, ranging now from 5 p.c. on gifts up to and including \$25,000 to 15 p.c. on \$1,000,000. Exemption is provided for gifts or donations, the value of which does not exceed one-half the difference between the income of the taxpayer in the previous year and the income tax payable thereon. The sections dealing with annuities and royalties are applicable to income of 1937 and subsequent periods, those dealing with exemptions and gifts to the income and gifts of 1938 and following, while s. 7 (introducing ss. 32A and 32B) concerning transactions reducing liability to taxation is applicable to income of 1936 and following years.

The Special War Revenue Act (c. 179, R.S.C. 1927 and amendments) is further amended by c. 52 of the Statutes of 1938. The excise tax on change of ownership of shares having a value of exactly one dollar each is raised to  $\frac{1}{2}$  cent per share in place of  $\frac{1}{10}$ th of 1 p.c. of the value. In calculating sales tax, the definition of 'sale price' is amended to include charges for advertising, financing, servicing, and similar charges contracted for at the time of the sale. Conditions regarding penalties are revised and Schedules II and III enacted by the 1936 amendment Act (c. 45, 1936), are replaced by Schedules I and II, respectively, of this legislation.

*Bank of Canada.*—The Bank of Canada Act (c. 43 of the Statutes of 1934, as amended by c. 22, 1936) is further amended by c. 42. The capital of the Bank is

reduced from \$10,100,000 to \$5,000,000, divided into 100,000 shares of the par value of \$50 each, issued to the Minister of Finance and to be exchanged for the 102,000 Class "B" shares which were issued to him under the legislation of 1936 and held by him on behalf of the Dominion of Canada. Such Class "B" shares are to be turned over to the Bank of Canada for cancellation. Holders of Class "A" shares (which were issued to the public under previous legislation) shall receive from the Bank of Canada the sum of \$59.20 for each share, together with the amount of dividends accrued to the date of the coming into force of this legislation, and all such shares shall be cancelled. By s. 3, the Board of Directors shall consist of a Governor, a Deputy Governor and eleven directors. Due to the changes in the constitution and ownership, adjustments in the method of appointing directors, and in other directions, are made.

**Agriculture.**—C. 5 amends the Canada Grain Act (c. 5 of the Statutes of 1930, as amended in 1932-33 and 1934) with respect to the binning of western wheat in licensed semi-public or private terminal elevators. That part of Schedule 1 of the 1930 legislation dealing with Red Spring Wheat and Canadian Western Garnet is repealed and the Schedule to this Act which includes "Garnet" grades as well as "Manitoba Northern", is substituted therefor.

Subject to the provisions of c. 13, the Seed Grain Loans Guarantee Act, 1938, the Governor in Council may authorize the guarantee of the principal and interest of loans made by any chartered bank for purchasing seed grain and providing other assistance to farmers in connection with seeding operations during the spring of 1938 and guaranteed by the provinces of Alberta and Saskatchewan, respectively, under the Agricultural Relief Advances Act of Alberta; or the Municipalities Seed Grain and Supply Act, 1938, the Local Improvement Districts Act, 1936, or the Local Improvement Districts Relief Act, all of Saskatchewan. The liability of the Dominion Government in respect of principal under all such guarantees shall not exceed \$1,900,000 for Alberta loans and \$14,500,000 for Saskatchewan. The form and terms of such guarantees must be approved by the Governor in Council.

C. 45 makes a minor amendment to the Dairy Industry Act.

C. 47 further amends the Farmers' Creditors Arrangement Act, 1934, as amended in 1935. The definition of 'creditor' is extended to cover a creditor who, notwithstanding the absence of privity of contract, holds a pledge or a lien against the property of the debtor. Provision is made for a proposal filed but not dealt with, or a proposal formulated or confirmed by a Board of Review, prior to the coming into force of this Act to be proceeded with, or confirmed by such Board of Review, or to be binding, provided the title to the land or chattels concerned has not been extinguished prior to the coming into force of this Act. The Court may grant to the estate of a deceased farmer, whose death has occurred on or after July 3, 1934, the right to file a proposal or continue proceedings under a proposal filed before the death of the farmer. By s. 5 an addition is made to s. 10 of the original legislation whereby the Court may annul a composition in case of default in carrying out any of the terms, and the farmer shall then be deemed to have committed an act of bankruptcy and Part I of the Bankruptcy Act shall, notwithstanding s. 7 thereof, apply. Where a proposal has been filed, the stay of proceedings is effective until the date of the final disposition of the proposal. It is further provided that no new proposal shall be filed in a province after a date to be fixed by a proclamation respecting such province. The latest date for the filing of a proposal in Manitoba and British Columbia is June 30, 1939, and in every other province, but Saskatchewan and Alberta, Dec. 31, 1938, exception being made as to soldier settlers.

The definitions of 'control sample' and 'official sample', as set forth in the Seeds Act, 1937, are revised in minor detail by c. 51.

**Civil Service.**—The Civil Service Act (c. 22, R.S.C. 1927) is amended by c. 7. A proviso is added to the requirement that all appointments to the Civil Service shall be upon competitive examination, it being stipulated that no person shall be appointed or transferred to a local position unless such person has qualified, by examination, in the knowledge and use of the language of the majority of the persons with whom he has to do business. This proviso also affects s. 32 of the original Act which states that every examination shall be held in the English or French language at the option of the candidate.

**Indians.**—Amendments to the Indian Act (c. 98, R.S.C. 1927) are the subject of c. 31 of the Statutes. Leasing of and granting of the right to prospect, and of surface rights on Indian lands by the Superintendent General, under regulations of the Governor in Council, in connection with mining operations, are more specifically defined. The Minister of Finance is also empowered to authorize advances to the Superintendent General to enable the latter to grant loans to Indian Bands or individual Indians and to finance co-operative projects on their behalf. The total amount of such outstanding advances shall at no time exceed \$350,000 and shall be reported annually to Parliament.

**Insurance.**—C. 21 amends the Canadian and British Insurance Companies Act, 1932, by widening the list of investments for insurance company funds to include equipment trust certificates of Canadian railways, and bonds of certain public bodies of the United Kingdom and of the Dominions.

**Justice.**—C. 4 amends the Evidence Act (c. 59, R.S.C. 1927) with respect to proof of the mailing of any request, notice, or demand by a department of the public service. A sworn statement of an officer of such department, accompanied by a certificate of registration, a copy of such notice, and a Post Office receipt for delivery shall be evidence of such sending. By a paragraph added to subsection 2 of s. 29 of the Act, an affidavit of a manager or accountant of a bank shall be accepted as proof that the drawer of a cheque on that bank has no account therein.

By c. 11, a minor amendment is made to the Penitentiary Act with respect to period of confinement in gaol or other place pending the determination of appeal not being computed as time served.

By c. 28, the Exchequer Court Act (c. 34, R.S.C. 1927) is amended by deleting the words "upon any public work" at the end of paragraph (c) of subsection 1 of s. 19 thereof. This amendment is very important as it enlarges considerably the field of responsibility of the Crown for its servants' negligence.

C. 44 amends the Criminal Code (c. 36, R.S.C. 1927). In respect to aliens carrying firearms, the burden of proof that an accused person is not an alien is upon him. It is declared an offence to alter or remove any manufacturer's serial number on any firearm capable of being concealed upon the person; in addition to the registration of revolvers and pistols undertaken by the R.C.M.P., provision is made for a general registration of all revolvers and pistols during the period between Mar. 1 and July 1, 1939, and during the same period every five years thereafter; firearms carried by a minor under the age of fourteen elsewhere than in his own dwelling house or premises, without a permit, may be seized. A number of other minor changes are made to the sections dealing with the possession and use of firearms. By s. 11, restrictions are placed upon the publication of reports of judicial proceedings. Penalties are revised or enacted for: failure to stop a motor car after

an accident (in connection with which offence, a provision relating to *prima facie* evidence of the accused's intent to escape liability is also added by the amendment); reckless or dangerous driving, and driving when licence has been suspended or an order prohibiting driving has been made by the Court; theft of plants, etc., growing in gardens or cultivated plants growing elsewhere. Minor revisions are made to the sections relating to fraudulent dealing regarding gold, silver, and other precious metal (by s. 424A, which is added, salting mines or samples is made an indictable offence); and penalties for certain offences of arson are modified. Informations or complaints under Part XV of the Criminal Code may be heard and determined and convictions or orders made by any person having the authority of two or more justices of the peace in cases where, by an Act or law, hearing is to be by two or more justices. In the case of an appeal from a judgment of acquittal, the accused shall remain in custody or on bail until the determination of the appeal. Where a person is convicted of more than one offence at the same sitting and more than one fine is imposed with the provision that in default of payment the offender shall be imprisoned, terms of imprisonment may be consecutive. Other minor amendments are also made.

**Labour.**—For the purpose of continuing to support and supplement the measures of the provinces and other bodies to establish certain unemployed persons in gainful occupations, to train other unemployed persons for like establishment, and to assist those in need and thereby lessen provincial and municipal burdens consequent upon unemployment and agricultural distress, the Unemployment and Agricultural Assistance Act (c. 25) was enacted. The Act authorizes the execution of such undertakings as may be determined and the employment thereon of competent persons who are in receipt of relief. All contracts for such undertakings carried out under provincial jurisdiction but to which the Dominion Government is contributing shall be approved by the Minister of Labour and supervised by the Dominion Government. The Government may enter into agreements with any of the provinces respecting alleviation of unemployment conditions and of agricultural distress and may, where necessary, grant financial assistance by way of a loan to assist the province to pay its share of the expenditures for such purposes. Such agreements may be entered into with corporations or individuals respecting expansion of industrial employment; but no financial assistance shall be granted to any province unless certified statements, as to the province's financial position as the Dominion Government may require, are furnished. The Dominion Government may also examine and audit provincial records related to such works if deemed necessary.

C. 41, cited as the Shop Cards Registration Act, 1938, provides for the keeping of a register of shop cards, in which any labour union may register and thereby ensure exclusive use of any shop card it has adopted. A shop card, when registered, shall endure for fifteen years, but may be renewed for a like period before the expiration of the term. Regulations are laid down concerning application for such registration, action in case of unauthorized use of a registered shop card, and cancellation of or additions and alterations to such a card.

In view of the fact that the facilities of the Dominion Housing Act, 1935, were not made use of by persons with small incomes or by persons living in small communities, that Act is repealed by c. 49 and a new Act substituted therefor. Under Part I of this Act, it is provided that an investigation may be made into existing housing conditions and that the Minister of Finance may take such steps as he considers necessary to improve them and to promote sound construction. The Minister of Finance is empowered, subject to provisions laid down, to enter into

contract with approved lending institutions or local authorities for the purpose of joining with them in making loans to assist in the building of houses, under conditions set forth in the Act. In order to encourage the making of small loans in small or remote communities, the Minister shall pay losses sustained by lending institutions or local authorities up to certain specified amounts. Since it is in the national interest that a limited experiment in low-rental housing should be undertaken to create needed employment, Part II of the Act empowers the Minister of Finance, subject to stated provisions, to make loans not exceeding \$30,000,000 to local housing authorities for the purpose of assisting in the construction of houses to be built under a low-rental housing project and leased to families of low income. By Part III it is provided that the Minister may, since high real estate taxes have been a factor in retarding the construction of new houses, pay to a municipality in respect of a house constructed between June 1, 1938, and Dec. 31, 1940, 100 p.c. of the municipal taxes on such house for the first tax year, 50 p.c. for the second tax year, and 25 p.c. for the third tax year. Conditions of cost, ownership, assessment, etc., in regard to properties on which such municipal taxes may be paid are enumerated.

**Natural Resources and Historic Sites.**—Under c. 23, an Act respecting the National Battlefields, Quebec, the Minister of Finance is authorized to continue the payment from Consolidated Revenues of \$750,000 (\$75,000 per year for a period not exceeding ten years) for the purpose of carrying out the provisions regarding these Battlefields, the term of similar payments under c. 36, 1928, having expired.

The National Parks Act and the Nova Scotia and Prince Edward Island National Parks Act, 1936, are amended by c. 35. Under Part I, Wawaskey National Park in Alberta is abolished and the boundaries of Elk Island National Park are changed. By Part II, certain lands, set forth in Schedule 2, are withdrawn from P.E.I. National Park.

Certain agreements are set out in the Schedule to c. 36—an Act to amend the Manitoba Natural Resources Acts, the Saskatchewan Natural Resources Act, and the Alberta Natural Resources Act—respecting the confirmation of the transfer to the provinces concerned of the interest of the Crown in the waters and water powers under the Natural Resources Transfer Agreement.

The Northwest Territories Act is amended by c. 38 to permit of the granting of certificates of authority to enter and search any building (including vehicles, conveyances, etc.) which is not a dwelling house and is not within the Northwest Territories, for any thing the shipment and carriage of which is prohibited from such Territories. Powers granted under the certificate, and how seizure is to be conducted and goods disposed of are described.

**Parliamentary Representation.**—C. 8 amends the Dominion Franchise Act to permit of the annual revision of the lists of electors being omitted for the year 1938.

The Dominion Elections Act, 1938, is the subject of c. 46. The Dominion Elections Act, 1934, the Dominion By-Elections Act, 1936, and the Dominion Franchise Act, 1934, are repealed, and revised legislation is enacted for the exercise of the franchise by electors and for the proper election of Members of the House of Commons. The appointment of the Chief Electoral Officer and his staff, the conditions under which writs of election shall be issued, appointments of returning officers and election clerks, qualifications and disqualifications of electors, preparation of election lists and revision of same, polling procedure and all other matters pertaining to the conduct of elections and the handling of returns are provided for.

**Pensions.**—The Soldier Settlement Act is amended by c. 14 in regard to the payment by the Board of rates, taxes, and insurance in default by a settler and the repayment of same to the Board. The time for credit on payment of arrears is also extended.

C. 16 amends the War Veterans' Allowance Act by extending its terms to cover veterans of the South African War. The War Veterans' Allowance Board shall consist of from three to five members, each to receive a salary of \$6,000 a year except the one appointed chairman who shall receive a salary of \$7,000 a year. The powers of the chairman and the Board are defined. Allowances are payable with the approval of the Board to veterans who have been domiciled in Canada for six months immediately preceding commencement of allowance and who are either 60 years of age; under 60 years but permanently 'unemployable'; or, having served in a theatre of actual war, are, in the opinion of the Board, incapable and unlikely to become capable of maintaining themselves.

Veterans who are physically and mentally capable or who are already in receipt of old age pensions are not entitled to benefit under this legislation.

**Royal Canadian Mounted Police.**—The Royal Canadian Mounted Police Act is amended by c. 24 with regard to the specific application of Parts I and III of the original Act to members of the Reserve called up for duty, and to stoppage of pay in addition to other penalties for absence without leave. Time served in the permanent naval, military, or air forces is to be included in the 'term of service' for purposes of computing pension (in previous legislation the 'permanent forces of Canada' was specified). The sections under which constables may be required to retire or pensioned constables may be recalled are also amended.

**Trade and Commerce.**—Cc. 19 and 20 are Acts respecting trade agreements between Canada and Guatemala and between Canada and Haiti, respectively. Most-favoured-nation treatment is extended, reciprocally, between the parties concerned. The Articles of agreement are set forth in a Schedule to each Act.

The Copyright Amendment Act of 1931 is, by c. 27, to be now read and construed with the Copyright Act (c. 32, R.S.C. 1927). Both pieces of legislation are amended in several respects, the chief being in regard to fees, charges, or royalties collectable from radio or gramophone performances. No such fees, etc., are collectable for performances in places other than theatres ordinarily used for entertainments to which an admission charge is made but the Copyright Appeal Board shall provide for collection from radio broadcasting stations or gramophone manufacturers of adequate fees, etc., the amount of these to be fixed by the Board.

The inspection and sale of binder twine and the weight of a bushel of each of 33 commodities commonly traded in are regulated or fixed by c. 32 and the Inspection and Sale Act (c. 100, R.S.C.) is repealed. Part I of the legislation deals with binder twine and how it must be labelled for sale in Canada. Any duly appointed inspector has the right of entry upon premises, etc., to examine binder twine. Binder twine damaged by fire or water shall not be offered for sale unless it has been reconditioned and so labelled, or conspicuously labelled as 'damaged'. Penalties are laid down for violation of the Act. Part II of c. 32 lays down the legal weights of a bushel of each of 33 commodities and provides penalties for breaches of observance in all contracts for sale and delivery.

**Transportation.**—*General.*—By c. 53, a Board of Transport Commissioners for Canada is established with authority in respect to transport by railways, ships, and aircraft. Part I of the Act requires that the Board of Railway Commissioners

is in future to be known as the Board of Transport Commissioners and references to the former body are to be so interpreted in the Railway Act and any other Act. The Board of Transport Commissioners is to co-ordinate and harmonize the operations of all carriers by railway, ship, and aircraft. The Board is to decide whether public convenience or necessity requires such transport before granting licences and may accept certain evidence as set forth in the Act in proof of public convenience and necessity. Part II of the legislation relates specifically to transport by water and governs the issuance of licences and related matters in this respect. Part III enacts similar legislation for transport by air. Part IV governs matters of traffic, tolls, and tariffs. Part V stipulates that, notwithstanding anything previously enacted, carriers and shippers may agree between themselves on charges for transport of goods, but such agreed charge must have the approval of the Board. Details regarding the manner in which such agreed charges shall be made and approved are laid down. Part VI empowers the Board, when requested by the Minister of Transport, to inquire into the matter of harbour tolls and the matters to which the Board shall direct their attention in making such inquiries are set forth. If, as a result, harbour tolls should be amended, the Board shall make a corresponding recommendation to the Minister.

*Airways.*—By c. 15, the Trans-Canada Air Lines Act, 1937, is amended as regards the business and powers of the Trans-Canada Air Lines Corporation. The Corporation is empowered to purchase or dispose of shares of a new transatlantic aerial transport company to be organized jointly by nominees of the Government of the United Kingdom and the Government of Eire. The scope of operation of the Corporation is extended to cover routes partly within and partly outside of Canada.

*Radio.*—The Radio Act, 1938, is the subject of c. 50. Hereunder the Governor in Council is empowered to prescribe the tariff of fees to be paid for licences, etc., and the payments to be made from such fees for services rendered in connection with issuing such licences; to accede to any international convention on radio and make such regulations as may be necessary to carry out the terms of such convention; to regulate radio in case of war, rebellion, riot, or other emergency. The field in which regulations may be made by the Minister of Transport is also defined. Except in the case of motor cars and other vehicles temporarily in Canada, no person shall establish a radio station or private receiving station unless licensed. Only British subjects shall be employed as radio operators at coast, land, or mobile stations and such operators shall subscribe in the proper way as laid down to the Declaration of Secrecy set forth in the Schedule to the Act. Penalties are defined for transmitting false or fraudulent messages and for establishing stations without licence and warrants may be issued and powers of search given to any police officer or officer appointed by the Minister and named in the warrant.

*Railways.*—C. 3 relates to the appointment of auditors for the National Railways for the year 1938.

The Board of Railway Commissioners for Canada is empowered, under c. 12, to deal, upon application, with questions of unreasonableness or unjust discrimination in respect of telephone tolls resulting from changes in boundaries of base-rate areas or telephone exchange areas.

Refunding of maturing obligations for the Canadian National Railways is provided for in c. 22 and, subject to provisions laid down, the National Company may issue notes or other securities in respect to such refunding to the amount of \$200,000,000.

Further amendment to the Railway Act (c. 170, R.S.C.) is made by c. 40. Snow fences erected by a railway company along its route or line must, if damages are suffered, be compensated for either by mutual agreement, or, failing this, in the manner provided by law with respect to such railway or, alternatively, at the option of the claimant, by the Board of Railway Commissioners for Canada. Compensation by process of law alone was previously provided for.

The Canadian National Railways Financing and Guarantee Act, c. 43 of the Statutes, empowers the Canadian National Railways to issue securities for refunding to the extent of \$9,019,233 and for capital expenditures to an amount not exceeding \$8,555,000. Such securities may be turned over to the Minister of Finance in return for loans from the Consolidated Revenue Fund not exceeding the aggregate of the amounts mentioned. The National Company may use the proceeds of the securities or make advances to other companies comprised within the National Railways System. Stipulations as to the form of guarantee of principal, interest, and sinking funds are laid down.

*Shipping.*—Part V of the Canada Shipping Act, 1934, relating to sick mariners and marine hospitals is amended by c. 6 of the Statutes for 1938. The exempted classes of vessels subject to duty payments under s. 305 of the original legislation are now extended to include barges, scows, or lighters which do not carry crews and are not self-propelling.

By c. 17, the Winnipeg and St. Boniface Harbour Commissioners Act is amended. The harbour limits and waters are re-defined to take in 'municipalities' and waters belonging thereto which have been or may be brought under the provisions of the Act subsequent to the passing of the original legislation. Additional amendments cover such matters as appointment of additional Commissioners, surplus profits disposition, and inspection of accounts.

By c. 26 a new section, *viz.*, 703A, is added to Part XVI of the Canada Shipping Act, 1934, so as to prohibit the shipment or transhipping on the high seas of articles of war, by a ship registered in Canada, to countries in a state of war. The Governor in Council may make regulations designating such countries, prescribing times during which the provisions shall apply, exempting certain defined articles in the case of any designated country, and other matters.

Officers empowered to carry out the provisions of the Shipping Act or a consular officer or an officer as defined under the preventive measures provisions of the Customs Act are given additional powers under this legislation to enable them to carry out its provisions.

Under c. 34, an Act to amend the National Harbours Board Act, 1936, right of action against the National Harbours Board arising out of any contract entered into in respect of its undertaking or out of any death or injury to person or property resulting from the negligence of an officer of the Board while acting within the scope of his duties may be enforced in any court having jurisdiction for like claims between subjects. Particulars covering procedure, costs, etc., are laid down.

C. 37 amends the New Westminster Harbour Commissioners Act by re-defining the boundaries of New Westminster harbour and providing for the remuneration of the Commissioners.

*Miscellaneous.*—The Opium and Narcotic Drug Act, 1929, is amended in several minor respects by c. 9 of the 1938 Statutes. Dihydrocodeine (paracodeine) is added to the drugs listed under Part II of the Schedule to the Opium and Narcotic Drug Act as enacted in 1932 (c. 20, 1932).

By c. 10 the Agreement of Mar. 30, 1920, with the city of Ottawa for a cash payment in lieu of part of rates and taxes for civic services and water, and in settlement of certain claims, which has been extended annually, is further extended for another year as from July 1, 1937.

The powers and duties of the High Commissioner for Canada in the United Kingdom as well as the manner of appointment of himself, his officers, and clerks are re-enacted in c. 30. The High Commissioner's Act (c. 92, R.S.C.) is repealed.

To enable Canada to fulfil her part of the North Pacific Pelagic Sealing Convention (1911), c. 39, the Pelagic Sealing (Convention) Act, 1938, empowers the Governor in Council to make regulations for the purpose of carrying out the Convention. Classes of officers who may board and search vessels are described and seizure and detention of vessels for reasonable cause, the same to be held for later adjudication by the Exchequer Court of Canada, is authorized. The importation into, or possession within, Canada of skins taken in contravention to the Act is prohibited as well as of skins belonging to American, Russian, or Japanese herds. Conditions under which Indians may carry on pelagic sealing are stated and no national or inhabitant of Canada shall engage in, nor shall a vessel registered in Canada be used for, the killing or capturing or pursuing of sea otters in Convention waters beyond three miles from shore.

## Section 2.—Principal Events of the Year.

### Subsection 1.—The Economic and Financial Year, 1938.\*

Economic conditions showed improvement toward the end of 1938, after having been relatively steady during the first eight months. Productive operations rose in September and continued active for the rest of the year, the index of the physical volume of business averaging only 8 p.c. below the high level of 1937. The gain in the output of field crops was about 37 p.c., but the decline in prices resulted in a 5 p.c. reduction in value. Industrial employment was relatively well maintained, the index receding only 2 p.c. from the average of 1937. Tourist expenditures were estimated at over \$273,000,000, a decline of 6 p.c. from the preceding year.

The financial background continued strong, deposits of the banks reaching a new high point. Prices of Dominion bonds averaged higher than at any time since the early years of the century. Despite sharp fluctuations common stock prices were well maintained over the year, no important trend either in an upward or a downward direction having developed. Wholesale prices were reactionary, the downward movement which began in July, 1937, having been continued until the end of the year under review. The indexes of the physical volume of business for the latest three years are given below, the base year being 1926.

Month.	1936.	1937.	1938.	Month.	1936.	1937.	1938.
January . . . . .	106.2	118.9	111.8	August . . . . .	113.5	123.4	110.6
February . . . . .	104.8	115.0	106.7	September . . . . .	120.0	123.8	119.2
March . . . . .	104.0	118.7	108.8	October . . . . .	121.5	127.4	118.6
April . . . . .	111.0	124.0	112.4	November . . . . .	118.0	127.9	123.4
May . . . . .	107.6	122.0	110.7	December . . . . .	118.4	121.4	115.6
June . . . . .	111.1	126.0	108.4				
July . . . . .	110.8	126.5	109.1	AVERAGES . . . . .	112.2	122.7	112.9

\* Prepared by Sydney B. Smith, M.A., Business Statistician, Dominion Bureau of Statistics. See also the bulletin "Business Conditions in Canada, 1938", which may be obtained from the Dominion Statistician, Price, 25 cents.

**Agriculture.**—It is calculated that the principal field crops yielded over one-third more than in 1937, but in interpreting the significance of this statement it must be recalled that the crops of that year were at a minimum for the post-War period. The increased exportable surplus favoured railway and shipping interests and increased the volume of the export grain trade with consequent beneficial results. The recovery in production, however, was not fully reflected in proportionately greater net income. Increases in supplies and reduced demand combined to cause a steep decline in farm product prices.

The net value of agricultural production in 1938 was placed at \$728,000,000 compared with \$679,000,000 in the preceding year. Field crops were worth a gross of \$528,860,000, which was \$27,400,000, or 5 p.c., below the estimated value of the output of 1937. The low yield of that year and the reduced prices of 1938 resulted in successive reductions in the value of the crops of the two years. Cattle and hogs slaughtered during the year showed declines of 5.6 p.c. and 17.5 p.c., respectively, but the abundance of feed grains and fodder was an important factor as the year drew to a close. While prices were low, the availability of feed in substantial quantities was of decided advantage to the producers of live stock and live-stock products. The oat crop amounted to 371,000,000 bushels, an increase of almost 103,000,000 bushels over 1937. The dairy situation was dominated by the large stocks of butter on hand. Production increased sharply in 1938 due to relatively high prices early in the year. The dairy industry continued to show expansion and total milk production was estimated at close to 17,500,000,000 pounds.

**Mining.**—The mining industry advanced to a new high level, showing a gain of 2.6 p.c. in the volume of production and 1.8 p.c. in employment as compared with 1937. The gain in production was not sufficient to offset the decline in base metal prices, the total value having been about \$440,600,000 against \$457,400,000 in the preceding year. The excellent showing in the face of business recession clearly demonstrates the significance to Canada of the diversified nature of the production. The returns from the metal group would have been less impressive but for the notable improvement in the output of gold, and the almost three-fold increase in the output of petroleum which offset much of the loss in value recorded by some of the principal minerals of the non-metallic group.

**Forestry.**—Owing to over-stocking in the closing months of 1937 in anticipation of an increase in prices, and the considerable decline in consumption by United States publishers due to economic reaction, the output of newsprint at 2,624,580 tons showed a decline of 28 p.c. from the high level of 1937. The value of newsprint exports was \$104,600,000 against \$126,500,000, a decrease of 17.3 p.c.

The world's manufacture of rayon yarn doubled between 1932 and 1937, resulting in an increased demand for Canadian wood-pulp. The wood-pulp industry, however, showed reaction in 1938, responding to reduced demand due to the war activities of Japan and world-wide economic reaction. Exports of pulp of various kinds declined from 17,414,317 tons to 11,080,742 tons.

The lumber industry in Eastern Canada was beset with difficulties during 1938. Exports of planks and boards totalled 1,667,000,000 feet valued at \$35,900,000, against 1,858,000,000 feet valued at \$45,400,000 in 1937. The lumber industry of British Columbia, however, set a record last year with a new maximum in exports to the United Kingdom. Shipments to that market were 741,000,000 feet compared with 648,000,000 feet, the previous record established in 1937. Total shipments from the province to overseas markets were 1,036,000,000 feet against 999,000,000 in 1937.

**Electric Power.**—The output of electric power during 1938 showed a decline of 5·8 p.c. from the maximum of 27,600,000,000 kwh. reached in the preceding year. The reduction was largely accounted for in secondary power delivered to boilers, reflecting a lessened demand for this type of energy by the pulp and paper industry. The output less exports and deliveries to electric boilers was nearly maintained at 18,380,000,000 kwh. against 18,424,000,000, a decline of less than one-quarter of one per cent.

During 1938, a substantial increase was shown in new generating capacity of electric power and in transmission and distribution facilities. Water-power installation during the year was about 135,459 h.p., bringing the total for the Dominion at the end of the year to 8,191,000 h.p. The greater part of the increase was made up by extensions to existing stations in British Columbia, Manitoba, and Quebec. Canada is now the world's second largest per capita producer of electricity.

**Fisheries and Trapping.**—The fishing industry of the Maritime Provinces was rewarded with good catches in 1938. Difficult marketing conditions developed as demand slackened in several European countries and other outlets had over-abundant supplies. The exports of fish in the twelve months ended December declined over 5 p.c. in value from the preceding year. Salmon canned in British Columbia showed a good gain over 1937. The catch of sockeyes was one of the largest in years and prices were well maintained. As the output of furs is largely exported, the downward fluctuation in the outward movement indicates that the high level of the value recorded in 1937 was not repeated in the year under review. The value of exports in the twelve months ended December, 1938, was \$14,097,000 as against \$17,515,000 in the preceding year.

**Manufacturing.**—The prices of materials used in manufacturing plants showed a marked drop during the year and net revenues were consequently more favourable than was indicated by indexes of volume and employment. The manufactured output for the year showed a recession from the high level of 1937, but improvement was recorded over 1936 and other post-depression years. Expansion in operations was apparent after August, 1938. The index of the volume of manufactures, based on thirty factors, averaged 107·5 against 123·4. A better relative showing was made by the records of employment, the index having been 111·2 as compared with 114·4.

**Construction.**—Contracts awarded during 1938 were valued at \$187,300,000, a decline of 16·4 p.c. from the \$224,100,000 reported for the preceding year. Contracts placed for business structures rose 14·5 p.c. while the industrial and engineering divisions showed important decline. The gain in the value of apartments was 34·3 p.c., while residences declined 6·2 p.c. Loans under the National Housing Act amounted to \$14,600,000 in 1938, 17 p.c. above the combined totals for 1936 and 1937. Total Home Improvement loans reported to the Department of Finance to the end of the year amounted to \$24,500,000, numbering 61,299 different projects.

**External Trade.**—Canadian exports in 1938 were close to the billion-dollar mark. The decline of 15 p.c. from the preceding year was due mainly to the short supply of wheat during the early part of the year, the depressed conditions in external markets, especially the United States, and price reversals. Shipments of wheat in bushels were 37 p.c. less for the first seven months of 1938 than in the same period of the preceding year. Trade with the United Kingdom was practically equal to that of 1937, a gain in base metals and gold largely offsetting the decline in farm products.

Canada had a credit balance from external trade of \$279,000,000 in 1938 against \$316,000,000 in 1937. Exports of domestic products then totalled about \$913,000,000 and goods re-exported about \$43,000,000, while imports were \$677,000,000. Exports in 1937 were \$1,110,000,000, goods re-exported \$15,000,000, and imports \$809,000,000.

**Internal Trade.**—Except in the automotive and a few other lines dealing in durable or luxury merchandise, retail trade was well maintained. Monthly sales for twelve lines of retail business dealing in food, clothing, and household effects and requirements fluctuated within a limit of 8 p.c. from the same months of 1937, while dollar sales revealed a decline of only 2 p.c. for the year.

There were 121,411 new motor vehicles sold for \$135,300,000 in 1938, a decrease of 16 p.c. in number and 9 p.c. in value from the 144,441 units which retailed for \$149,200,000 in 1937. In the last quarter the unfavourable comparison was reversed, sales having shown advances of 11.4 p.c. and 6.1 p.c., respectively.

**Transportation.**—Railway operations reflected the general level of business activity. The scope of decline in the traffic movement was indicated by a drop of 7.8 p.c. in carloadings, the total having been 2,429,000 cars against 2,635,000 in 1937. The traffic in grain, ore, and pulpwood recorded increases, contrasting with declines in other main groups. The decline in gross revenues of the Canadian National was more than \$15,000,000, or nearly 5 p.c., and the decline in net revenue between ten and eleven million dollars. Gross operating revenues of the Canadian Pacific were \$142,300,000 against \$145,100,000, a decline of only 2 p.c.

The traffic passing through the Welland canal rose to a new high point during the navigation season of 1938. Large shipments of grain were the chief factors in the increased traffic, which amounted to 12,600,000 tons against 11,700,000 in 1937. The St. Lawrence system also created a new record with 9,236,000 tons against 9,195,000. The increases in grain, gasoline, sugar, and hard coal were the main factors in the general result. The marked decline shown in the downward movement of iron ore through the combined locks of the Sault Ste. Marie canal was one of the factors in the severe drop in the total movement on that canal during 1938.

**Employment.**—Employment averaged greater during 1938 than in any other year in the post-War period excepting 1937, 1930, and 1929. Most branches of factory employment reported that activity was reduced from the level of 1937 but afforded more employment than in 1936. The mining industry, as a whole, showed slight improvement over the previous maximum reached in the preceding year, the metal division recording the main increase. Logging was quiet following the exceptional activity of 1937. Highway work afforded more employment than in any other year since 1934, partly owing to unemployment relief projects. Building showed no general change from 1937.

It was estimated that the number of wage-earners employed in 1938 averaged 2,303,000 against 2,369,000 in the preceding year, while wage-earners unemployed numbered 401,000 against 337,000. Aside from 1937, the unemployment situation was better than in any other year since 1930.

The number receiving direct aid in 1938 averaged 870,100, a distinct improvement over the 965,900 recipients in the preceding year. The reduction was mainly limited to those receiving urban aid.

**Prices.**—The prospect of heavier field crops was a bearish influence leading to an accelerated decline in prices during July and August, 1938. Subsequently the decline was practically halted and fluctuations in the general average were insignificant in the weeks following the first of September. The increase in rearmament expenditures on a widespread scale was one of the main influences in supporting metal

prices, but the appearance of economic revival in the United States toward the end of the year also engendered an improved undertone on commodity markets. The general index of wholesale prices averaged 78·6 in 1938 against 84·5 in the preceding year, a decline of 7 p.c.

During 1938 the index of raw and partly manufactured products declined from 80·8 to 64·9. A marked drop was shown in Canadian farm products, the crop index receding from 83·9 to 53·8. The recession in animal products produced on Canadian farms was minor, the index being 82·8 as compared with 84·6 in the previous December.

Reaction on the stock markets at the end of the first and third quarters was counterbalanced by subsequent rallies. Stocks strengthened in the final week and year-end prices were close to the maximum for the preceding fifteen months. The expansion in industrial operations during the last four months of the year afforded support, but reaction in wholesale prices injected a note of caution. The depressing effects of almost continuous political uncertainty in Europe and Asia affected conditions. Dividend payments by companies in Canada were estimated at \$322,500,000 compared with \$323,700,000 in 1937.

**Banking and Insurance.**—A continuance of the tendencies in evidence during preceding years characterized banking operations in 1938. The official rate of discount remained at 2½ p.c. The central bank allowed its reserve ratio to fall during the year from 57·2 p.c. to 53·7 p.c. by devoting all but a small proportion of its additional resources to the purchase of Dominion and Provincial Government securities. Nearly half of the holdings was converted from long-term securities into short-dated ones. The bank experienced no difficulty in maintaining the exchange rate which, on the whole, moved with the United States dollar.

The demand for current loans showed improvement, the average gain amounting to 7·4 p.c. The sum of notice and demand deposits continued to increase, rising by about \$56,000,000 to \$2,321,000,000, which had the effect of augmenting the ratio of current loans to notice deposits from 43·6 p.c. to 48·2 p.c.

For the life insurance companies, 1938 was a progressive year. Sales of life insurance in Canada for 18 leading companies were \$375,500,000 against \$386,000,000 in the preceding year, a decline of only 2·7 p.c.

**Public Finance.**—Dominion revenues from Apr. 1 to the end of December were \$394,800,000 against \$402,300,000 in the first nine months of 1937, the increase in income tax collections tending to offset declines in customs and excise taxes.

Total ordinary expenditures were \$288,300,000 in the first nine months against \$283,500,000. Taking in additional disbursements under the headings of capital and special expenditures and government-owned enterprises, the comparison was \$366,900,000 against \$361,900,000.

## Subsection 2.—Other Principal Events of the Year.

### THE ROYAL TOUR OF CANADA.

**Preliminary Arrangements.**—Soon after the Royal Visit to Canada was definitely projected, that is, several months prior to the arrival of the Royal Party from the United Kingdom, an Interdepartmental Committee under the chairmanship of Dr. E. H. Coleman, Under-Secretary of State, was organized to take care of the preliminary arrangements, including the times and places where the Royal Train would stop, the complete itinerary across Canada, and all program details during each stop-over. The schedule was carefully drawn up by the close co-operation of this Committee with the Provincial Governments and Municipal authorities,

but the plans were disorganized at the last minute because of bad weather off Newfoundland which delayed the progress of the Royal Yacht *Empress of Australia* and caused her to be two days late at Quebec.

This unpredictable misfortune necessitated program adjustments at Quebec, Montreal, Ottawa, and Kingston, but the Committee and all who co-operated rose to the demands placed upon them, and the tour across Canada was carried out with unqualified success. His Majesty, in a farewell letter sent to Dr. Coleman just prior to his departure, expressed his pleasure and his "personal and most sincere thanks" to all concerned with the arrangements.

**Personnel of the Royal Party.**—The personnel of the Royal Party which arrived at Quebec on the *Empress of Australia* consisted of:—

HIS MAJESTY THE KING.

HER MAJESTY THE QUEEN.

Ladies in Waiting.....	LADY NUNBURNHOLME. LADY KATHARINE SEYMOUR.
Lord in Waiting to the King.....	THE EARL OF ELDON.
Lord Chamberlain to the Queen.....	THE EARL OF AIRLIE, G.C.V.O., M.C.
Acting Private Secretary to the King.....	A. F. LASCELLES, Esq., C.B., C.M.G., M.V.O., M.C.
Medical Officer.....	SURGEON-CAPTAIN H. WHITE, R.N.
Chief Press Liaison Officer.....	G. F. STEWARD, Esq., C.B.E.
Assistant Private Secretary to the King.....	CAPTAIN M. ADEANE.
Equerries to the King.....	LIEUTENANT-COLONEL THE HONOURABLE PIERS LEGH, C.M.G., C.I.E., C.V.O., O.B.E. COMMANDER E. M. C. ABEL-SMITH, R.N.

After the arrival of Their Majesties on Canadian soil, the Party was augmented by the following personnel:—

*Attached from Government House, Ottawa:*

From Quebec to Ottawa—

Secretary to the Governor General..... A. S. REDFERN, Esq.

At Quebec, Ottawa, and throughout the remainder of the Tour—

Comptroller of the Household..... LIEUTENANT-COLONEL E. D. MACKENZIE,  
C.M.G., D.S.O.

*Canadian Ministers:*

The Prime Minister of Canada..... THE RIGHT HONOURABLE W. L. MACKENZIE  
KING, P.C., M.P., LL.D.

(Other Ministers travelled on the train at various stages of the Tour.)

*Canadian Officials:*

Under-Secretary of State and Chairman  
of the Interdepartmental Committee  
on the Royal Visit.....

E. H. COLEMAN, Esq., K.C., LL.D.

Dominion Archivist and Historian of the  
Royal Tour.....

GUSTAVE LANCTOT, Esq., K.C., D.Litt.,  
LL.D.

Commissioner, Royal Canadian Mounted  
Police.....

BRIGADIER S. T. WOOD.

Adjutant-General.....

MAJOR-GENERAL H. H. MATTHEWS, C.M.G.,  
D.S.O.

Principal Secretary to the Prime Minister.  
Secretary, Interdepartmental Committee  
on the Royal Visit.....

A. D. P. HEENEY, Esq., M.A., B.C.L.

Member of the Secretariat.....

H. L. KEENLEYSIDE, Esq., M.A., Ph.D.  
BRIGADIER-GENERAL EDOUARD DE B. PANET,  
C.M.G., D.S.O.

Press Liaison Officer.....

W. J. TURNBULL, Esq.

Assistant Commissioner, Royal Canadian  
Mounted Police.....

COLONEL C. H. KING.

**Notable Incidents of the Tour of Canada.**—On May 17, 1939, for the first time in history, a British Sovereign set foot on the soil of one of his Dominions. In this case it was on soil that Frenchmen had discovered and then colonized about three hundred and thirty years ago.

From the moment when Their Majesties stepped from the Royal Yacht *Empress of Australia* at Quebec until their departure on the Royal Yacht *Empress of Britain* from Halifax on June 15, they were the centre of demonstrations of spontaneous loyalty and warm affection from every part of the Dominion, such as have never before been witnessed in British North America.

The purpose of the Tour was not solely to enable the King and Queen to see their Canadian subjects or the expanse of the Dominion from Atlantic to Pacific, nor yet to permit Canadians everywhere an opportunity of seeing Their Majesties. It had a far deeper significance to which the Queen herself gave expression in her speech, delivered in Ottawa in the early stages of the Tour, on the occasion of the laying of the corner-stone of the Supreme Court building. Her Majesty gracefully referred to her "fondest wish" to see "two great races with their different legislations, beliefs and traditions uniting more and more closely, after the manner of England and Scotland, by ties of affection, respect and of a common ideal".

The immediate effect of the Visit has been precisely that. It has brought to the surface a fundamental unity of feeling throughout Canada and between peoples differently moulded which, though it existed previously, was in some danger for want of tangible expression. This unity has now been strengthened and rests the more firmly for having found such expression, through the symbol of the Crown, in the actual persons of their Sovereigns.

The Tour itself centred around the attendance of the King and Queen at the Dominion Parliament Buildings and at the Legislative Halls of each province.

From the Chateau Frontenac at Quebec, the King made his first radio speech of the Tour, addressing greetings to his Canadian subjects in both English and French. In the metropolis of Montreal the warmth of the reception given to Their Majesties was particularly marked. Hundreds of thousands of visitors from neighbouring communities and the United States flocked into the city for the occasion.

At Ottawa the King presided in person over his Parliament of Canada; assented to specific legislation of the 1939 Session, including the Trade Treaty between Canada and the United States; received the credentials of the new United States Minister to Canada; and unveiled the National War Memorial in circumstances which will be hallowed in the memories of all who were privileged to take part in or attend the ceremony.

In Toronto the King and Queen touched all hearts by paying an unscheduled visit to the grounds of the Christie Street Military Hospital where they chatted with several of the patients. This tribute to 'returned' men was typical of Their Majesties' attitude on all occasions throughout the Tour. When in Ottawa they had mingled for a full half hour with the Veterans assembled for the unveiling of the National War Memorial and at all places where stops were made they showed a keen interest in the welfare of all who had served in the Great War. The broad humanity of the Royal couple was also shown in their private and quite unscheduled talks with many people from all walks of life. They seemed eager to know their Canadian subjects in an intimate way and not merely to meet and see them. At scores of places along the line, wherever crowds were assembled, the Royal Train was ordered by His Majesty to slow down or stop, and both the King and Queen did everything possible to satisfy the multitudes that thronged at all points along the route.

From Winnipeg, half way across the Dominion, the King, on the afternoon of Empire Day, May 24, spoke to his Empire over an international network arranged by the Canadian Broadcasting Corporation. As a prelude to the address of His

Majesty an impressive "Roll Call of Empire" was given. This embraced the Motherland, the Dominions, the Indian Empire, Colonies and Protectorates, Island Groups, and all parts of the world where the Union Jack flies; those who took part were mainly typical people representing the masses — each with a message of loyalty and appreciation for the freedom, tolerance, and understanding which, as citizens in the British Commonwealth, they enjoy and for which the Crown stands. At Winnipeg also, the Hudson's Bay Company "paid their rent" in the form of two elk heads and two black-beaver skins. The old and quaint ritual by which payment was made dates back to the seventeenth century and was another link with the past, recalling the exploits of those "Gentlemen Adventurers" who established the Hudson's Bay Company and conquered the vast northwest for England.

Everywhere Their Majesties saw that the 'daughter', now 'mistress in her own house', had developed fundamentally along the lines of British tradition as defined through the ages. In His Majesty's own words at the Guildhall on his return to England this sentiment is expressed as follows: "I saw flourishing as strongly as they do here, institutions which have developed century after century beneath the ægis of the Crown; institutions British in origin, British in their slow and almost casual growth . . . and I counted it a high privilege to be the first of my line to play some part in giving them practical effect"

When at Vancouver, His Majesty took part in the "Ceremony of the Mace" This Mace, presented to the city by a former Lord Mayor of London, is an exact replica of the Lord Mayor's Mace. No other Canadian corporation boasts one. The King and Queen enjoyed a drive of 51 miles—the longest single motor drive of the Tour—around the environs of this beautifully situated Pacific Gateway. On leaving Vancouver for Victoria by the S. S. *Marguerite* they were escorted as far as Point Grey by 16 Indian war-canoes and 500 flag-bedecked yachts and fishing boats. There they were picked up by H.M.C. Ships *Ottawa*, *Restigouche*, *St. Laurent*, and *Fraser* and an escort of the R.C.A.F.

Their Majesties had evidently been deeply touched by their outward trip from Quebec to Victoria. When the King spoke at Victoria he stated: "To travel through so grand a country is a privilege to any man; but to travel through it to the accompaniment of such an overwhelming testimony of goodwill from young and old alike, is an experience that has, I believe, been granted to few people in this world".

Before his departure from Halifax the King unveiled, in the Legislative Chamber, a portrait of his late father, King George V, which had been painted by Sir Wyly Grier. At the close of the Tour on June 15, His Majesty, again speaking in both English and French, broadcasted a farewell address to the Canadian people. On this occasion he summed up, in well-chosen phrases, the outstanding impressions of the Visit and the direction of Canada's destiny as he felt it to point. Her Majesty also spoke, addressing herself particularly to the women and children of Canada.

The Royal Party departed from Halifax on the Royal Yacht *Empress of Britain* amidst the cheers of 150,000 people who thronged the piers and crowded every point of vantage. A huge bonfire on Chebucto Head—visible long after the shouting and cheering of those on shore were lost to the Royal Yacht—was Canada's parting farewell to the Royal couple.

From the time it left Quebec until its arrival at Halifax the Royal Train, preceded by the Pilot Train (conveying representatives of the Press, the Canadian Broadcasting Corporation, the official photographers, etc.) travelled 9,510 miles, of which 8,411 were over Canadian railways and 1,099 over United States lines.

There follows a condensed itinerary of the trip. In recording this itinerary it should be mentioned that only at Provincial capitals were loyal addresses of welcome actually read, all civic addresses being simply handed to His Majesty. Again, no clearly marked distinction has been drawn between localities through which Their Majesties merely passed and those where a Royal Progress was made through the streets. The whole aim in preparing this summary is to do justice to the events in the provincial capitals and larger centres of population in chronological order.

#### ITINERARY OF THE ROYAL TOUR OF CANADA.

**Quebec.**—*Wednesday, May 17*—Their Majesties arrived at Quebec on the R.M.S. *Empress of Australia*, accompanied by a naval escort consisting of H.M.S. *Southampton*, H.M.S. *Glasgow*, H.M.C.S. *Skeena*, and H.M.C.S. *Saguenay*, and an air escort provided by the Royal Canadian Air Force. On landing, they were welcomed to Canada by the Prime Minister of Canada, who also acted as Minister in Attendance throughout the tour. The Dominion Cabinet also met Their Majesties, as did His Honour the Lieutenant-Governor of Quebec, the Premier of Quebec, His Worship the Mayor of Quebec, and a host of other Dominion, Provincial, and Municipal Officials.

Their Majesties spent the whole day in Quebec, the principal events being: the welcomes of the Provincial and Civic Governments, the luncheon given by the Dominion Government to which all members of His Majesty's Privy Council for Canada were invited, the demonstration by school children in the historic Battlefields Park, and the banquet given by the Provincial Government. His Majesty greeted his Canadian subjects in a speech delivered at the Dominion Government luncheon and broadcasted across the Dominion by the Canadian Broadcasting Corporation. Their Majesties stayed overnight at the Citadel.

**Montreal.**—*Thursday, May 18*—The Royal Party arrived at Montreal, after a short stop at Three Rivers. Their Majesties spent the afternoon driving around the city, when they viewed the recently-restored historic fortifications on St. Helen's Island, were received at the City Hall, and had tea at the Chalet on Mount Royal. In the evening they attended a dinner given by the City of Montreal at the Windsor Hotel.

**Ottawa.**—*Friday, May 19*—His Majesty's first official act at the Capital was to receive in audience the newly-appointed United States Minister to Canada, who presented his credentials. Following this, His Majesty received the Heads of Missions and the Accredited Representatives of the countries of the British Commonwealth. In the afternoon, Their Majesties proceeded to the Houses of Parliament, where His Majesty gave the Royal Assent to certain legislation passed in the current session and addressed the members of both Houses. In the evening a State Dinner was held at Government House. *Saturday, May 20*—Following the Trooping of the Colour in celebration of His Majesty's birthday, Her Majesty officiated at the laying of the corner-stone of the new Supreme Court Building, her speech being broadcast. Afterwards Their Majesties drove through the City of Hull. A garden party at Government House and a Parliamentary Dinner occupied the rest of the day. *Sunday, May 21*—The unveiling of the National War Memorial took place in the morning and His Majesty's speech was broadcast. Their Majesties left for Toronto, travelling via Coteau Junction, Cornwall, Brockville, Kingston, and Cobourg.

**Toronto.**—*Monday, May 22*—The welcome by the Civic and Provincial Governments, the presentation of Colours by Her Majesty to the Toronto Scottish Regiment (M.G.), and the attendance by Their Majesties at the running of the King's Cup at Woodbine Park were the most notable events in the Ontario Capital.

**Winnipeg.**—*Wednesday, May 24*—Travelling via Carley, MacTier, White River, Schreiber, Port Arthur and Fort William, Raith, Ignace, Busted (night), and Rennie, Their Majesties arrived in the Manitoba capital on the morning of the 24th. Following the civic reception at the City Hall and the Provincial Government reception at the Legislative Buildings, Their Majesties drove to Government House, where His Majesty broadcasted his first Empire Day speech. After the Lieutenant-Governor's luncheon, Their Majesties drove to Fort Garry Park, where the traditional tribute was received from the Governor of the Hudson's Bay Company. In the evening the Royal Train left for Portage La Prairie, Brandon, and Kemnay (night).

**Regina.**—*Thursday, May 25*—Arriving via Elkhorn and Broadview, Their Majesties received Civic and Provincial Government welcomes, had tea at the Royal Canadian Mounted Police barracks and dined at Government House. They left for Alberta via Moose Jaw and Waldeck (night).

**Calgary.**—*Friday, May 26*—Their Majesties arrived at Calgary, having travelled via Medicine Hat, Suffield, and Bassano. They were greeted by 2,000 Indians of the Black-foot, Blood, Peigan, Stone, and Sarcee tribes. In the evening Their Majesties left for Banff, where they spent the time in relaxation and sight-seeing until Sunday morning.

**Vancouver.**—*Monday, May 29*—Having spent the previous day travelling through the Rockies, via Field, Beavermouth, Stoney Creek, Glacier, Revelstoke, Sicamous, Monte Creek, Kamloops, and Keefers (night), the Royal Train arrived at Vancouver in the morn-

ing. Following the reception at the City Hall, where His Majesty performed the Ceremony of the Mace and attended a civic luncheon, Their Majesties were taken for a long drive through Vancouver and its environs. In the evening they left for Victoria escorted by H.M.C. ships *Fraser*, *Ottawa*, *Restigouche*, and *St. Laurent*, and by aeroplanes of the Royal Canadian Air Force, and stayed at Government House.

**Victoria.**—*Tuesday, May 30*—After receiving Civic and Provincial Government welcomes, Their Majesties attended a luncheon given by the Government of British Columbia; His Majesty addressed the gathering, his speech being broadcast by the Canadian Broadcasting Corporation. In the afternoon, the King presented a Colour to the Royal Canadian Navy, this being the first naval ceremony of this nature to be held outside the United Kingdom. The following day Their Majesties left Victoria and travelled *via* Vancouver, New Westminster, Mount Lehman, Chilliwack, Hope, Boston Bar, Mount Robson, and Red Pass Junction to Jasper, arriving on *Thursday, June 1*. Here Their Majesties enjoyed the beauties of Jasper National Park for half a day.

**Edmonton.**—*Friday, June 2*—Travelling *via* Edson, Their Majesties arrived in the capital of Alberta, and received official welcomes from the Provincial Government and the City of Edmonton. They were also greeted by 1,200 Cree Indians, who sang the National Anthem in their native tongue. A dinner was tendered by the Provincial Government, after which Their Majesties left for Clover Bar (night).

**Prairie Provinces and Ontario Points.**—*Saturday, June 3, to Wednesday, June 7*—The Royal Itinerary did not include any more official visits to provincial capitals until the Maritime Provinces were reached. The next five days were largely occupied in travelling, short stops being made at many points, at some of which drives were undertaken; at others, receptions were held at the station. The points covered are listed, as showing the course of the Royal route, and are presented in the order in which the localities were visited. *Saturday, June 3*—Wainwright, Artland, Biggar, Saskatoon, Watrous, Touchwood, and Melville. *Sunday, June 4*—Rivers, East Tower, Winnipeg, Decimal, Reddick, Niddrie, Sioux Lookout, Savant Lake. *Monday, June 5*—Hornepayne, Fire River, Foley, Gogama, Laforest, Capreol, Sudbury Junction, Sudbury, and South Parry (night). *Tuesday, June 6*—Zephyr, Toronto, Guelph, Kitchener, Stratford, St. Mary's Junction, Glencoe, Chatham, and Windsor. *Wednesday, June 7*—London, Ingersoll, Woodstock, Brantford (here Their Majesties autographed the historic Bible presented to Her Chapel of the Mohawks by Her Majesty Queen Anne), and Hamilton, where a demonstration of physical training was given by school children. Visits to St. Catharines and Niagara Falls completed the first portion of Their Majesties' Canadian visit.

**Visit to the United States.**—Their Majesties entered the United States at Niagara Falls on the evening of *June 7*, and were officially received at the United States end of the bridge by the Secretary of State, the Honourable Cordell Hull. They entrained again for Washington, arriving on the morning of *June 8*, and were received by the President, Franklin D. Roosevelt. The King and Queen visited Mount Vernon and Arlington National Cemetery. At the former point His Majesty laid a wreath on the tomb of George Washington and at the latter placed a wreath upon the grave of the Unknown Soldier. Their Majesties remained in Washington until the night of *June 9* and then proceeded to Red Bank, N.J. On the morning of *June 10*, Their Majesties motored to Fort Hancock, N.J., where they boarded the United States destroyer *Warrington*, which took them to New York. They landed at the Battery and motored to the World's Fair. From New York they motored to Hyde Park, N.Y., where they were the guests of the President until the evening of *June 11*, when they took train for the Eastern Townships and the Maritime Provinces.

**Quebec Province.**—*Monday, June 12*—Entering Canada from Rouse's Point, N.Y., Their Majesties visited Sherbrooke, Leeds Tank, Joffre, Lévis, St. Charles, L'Islet, Ste. Hélène, Rivière du Loup, and Trois Pistoles.

**Fredericton.**—*Tuesday, June 13*—On arrival at Newcastle, Their Majesties motored to Fredericton and received addresses from the Provincial Government and the municipality. A luncheon was given by the Lieutenant-Governor and the Government of New Brunswick at the University of New Brunswick, after which Their Majesties entrained for Fairville, a suburb of Saint John. From Saint John, the Royal Train left for Moncton and Cape Tormentine.

**Charlottetown.**—*Wednesday, June 14*—Arriving on board H.M.C. Ships *Skeena* and *Saguenay*, the Royal Party visited the Province Building, where addresses were received from the Provincial Government and the City of Charlottetown. A luncheon by the Lieutenant-Governor and a reception in Government House gardens completed the functions in Prince Edward Island.

**Halifax.**—*Thursday, June 15*—The Royal Party landed at Pictou the previous evening, and after visiting New Glasgow and Truro, Their Majesties reached Halifax and received the welcomes of the Province and the municipality. His Majesty unveiled a portrait of His late Majesty King George V and attended a luncheon given by the Government of Nova Scotia at the Nova Scotia Hotel, when His Majesty broadcasted his farewell address to the people of Canada. Her Majesty the Queen also spoke on this broadcast. In the evening Their Majesties, accompanied by a Naval and Air Force escort, left for Newfoundland aboard the R.M.S. *Empress of Britain*.

## OTHER PRINCIPAL EVENTS OF THE YEAR.

**The Royal Family.**—The death of H.R.H. Prince Arthur of Connaught, K.G., K.T., occurred on Sept. 12, 1938. H.M. Queen Maud of Norway died on Nov. 20, 1938.

**Visiting Rulers.**—The President of the United States visited Canada on Aug. 18, 1938, receiving an honorary degree from Queen's University, Kingston, Ont., and later in the day opening the Thousand Islands International Bridge.

**Diplomatic Appointments.**—Changes in the personnel of Canadian diplomatic representatives abroad and of British and foreign envoys to Canada, to the end of March, 1939, will be found in Part IV of Chapter III—Constitution and Government, at pp. 72-74.

The Hon. Daniel C. Roper, Envoy Extraordinary and Minister of the United States to Canada, presented his credentials to His Majesty at Ottawa on May 19, 1939.

**International Bridges.**—Two international bridges were opened during the year: the Thousand Islands International Bridge, between Ivy Lea, Ont., and Collins Landing, N.Y., was dedicated by President Roosevelt and Prime Minister Mackenzie King on Aug. 18, 1938, and the Blue Water International Bridge between Sarnia, Ont., and Port Huron, Mich., by Governor Frank Murphy of Michigan and Premier Mitchell Hepburn of Ontario on Oct. 8, 1938.

**Dominion-Provincial Relations.**—The Supreme Court of Canada, on Mar. 27, 1939, disallowed the Alberta Limitation of Actions Act.

The Supreme Court of Canada, on Apr. 5, 1939, ruled that Eskimos are "Indians" within the meaning of the B.N.A. Act, thus settling the liability for their care, a matter which had been in dispute between the Dominion Government and the Government of Quebec.

**Trade Agreements.**—Trade agreements between Canada and the United States and between the United Kingdom and the United States were signed at Washington on Nov. 17, 1938. Particulars of the Canada-United States Agreement will be found at pp. 468-469 of this volume.

Details of minor changes in, and extensions of, trade agreements will be found listed by countries at pp. 460-462 for countries of the British Commonwealth and at pp. 462-469 for foreign countries.

**Provincial General Election.**—A general election took place in Prince Edward Island on May 18, 1939, when the Liberal Government of Hon. T. A. Campbell was returned to power.

C. Hossie, Esq., Barrister, Shaunavon, Sask.: to be a Commissioner, pursuant to Part I of the Inquiries Act, to investigate charges of political partisanship against Government employees in the Province of Saskatchewan. Nov. 4, John Forbes MacNeill, Esq., K.C., Senior Advisory Counsel of the Department of Justice: to be a Commissioner to administer oaths and to take and receive affidavits, declarations, and affirmations in Canada for use in the Supreme and Exchequer Courts. Russell M. Paul, Esq., Barrister, Wakaw, Sask.: to be a Commissioner, pursuant to Part I of the Inquiries Act, to investigate charges of political partisanship against Government employees in the Province of Saskatchewan. Nov. 25, S. J. W. Thompson, Esq., K.C., Maple Creek, Sask.: to be a Commissioner, pursuant to Part I of the Inquiries Act, to investigate charges

of political partisanship against Government employees in the Province of Saskatchewan. Dec. 7, Ira Layton Holmes, Gordon Scott Howard, and Adam Douglas McCollum, Field Supervisors, Soldier Settlement, Saskatoon: to be Commissioners to take affidavits, oaths, statutory declarations, or solemn affirmations required to be taken under the Soldier Settlement Act. Dec. 22, Hon. Charles Stewart, Ottawa; Brigadier-General Thomas L. Tremblay, Quebec; J. M. Wardle, Esq., Dept. of Mines and Resources, Ottawa; Arthur Dixon, Esq., Dept. of Public Works, Victoria; and J. W. Spencer, Esq., Vancouver: to be members of the Commission to inquire into the engineering, economic, financial, and other aspects of the proposal to construct a highway through British Columbia and Northwest Territories to Alaska. 1939.—Jan. 6, Leslie Clare Moyer, Esq., D.S.O., K.C., Clerk of the Senate: to be a Commissioner to administer the Oath of Allegiance to persons called to the Senate of Canada as members thereof. Jan. 26, J. W. Thompson, Esq., K.C., Maple Creek, Sask.: to be a Commissioner under Part I of the Inquiries Act, to investigate such charges of political partisanship against Government employees in the Province of Saskatchewan as may be referred to him. Mar. 31, Lt.-Col. L. J. Adjutor Amyot, Manufacturer, Quebec: to be a Member of the National Battlefields Commission and also to be Chairman of the said Commission in the place of Sir George Garneau, resigned. Apr. 4, Patrick John Mulqueen, Esq., Toronto: to be a Commissioner of the Toronto Harbour Commissioners, for a further term of three years, effective from the date hereof. T. Frank Matthews, Esq.: to be a Commissioner of the Toronto Harbour Commissioners for a period of three years, to fill the vacancy caused by the resignation of J. E. Ganong, Esq. June 2, Professor A. M. MacKenzie, University of Toronto: to be sole arbitrator in the dispute between the Canadian Lake Carrier's Association and the Canadian Seamen's Union and to be also a Commissioner to make a full inquiry into the said dispute. June 15, J. S. MacDonald, Esq., First Secretary at the Canadian Legation in Paris, France: to be a Commissioner to administer oaths and to take and receive affidavits, declarations, and affirmations in France for use in the Supreme and Exchequer Courts of Canada. June 23, Hon. Gordon McG. Sloan, Puisne Judge in the Court of Appeal of British Columbia, to be a Commissioner under Part I of the Inquiries Act, to investigate the capture of salmon by trapnets in the Sooke area, B.C., and also to investigate whether purse-seines for the capture of pink salmon and 'late' sockeye salmon should continue in a portion of the gulf of Georgia, B.C. Edward Bannerman Ramsay, Esq., to be again Chief Commissioner of the Board of Grain Commissioners for Canada for a further period of ten years from Aug. 15, 1939. Charles McGill Hamilton, Esq., to be again a Commissioner of the Board of Grain Commissioners for Canada, for a further period of ten years from Aug. 15, 1939. Duncan Alexander McGibbon, Esq., Ph.D., to be again a Commissioner of the Board of Grain Commissioners for Canada, for a further period of ten years from Aug. 15, 1939.

**Day of General Thanksgiving.**—Monday, Oct. 10, 1938, was appointed by proclamation as a "day of general thanksgiving to Almighty God for the bountiful harvests and other blessings with which Canada has been favoured".

**Act of Grace and Mercy.**—At the conclusion of the visit of Their Majesties to Canada, the Royal Prerogative of Mercy was exercised in a Proclamation dated June 15, reducing by one month all sentences for offences against the Criminal Code or any other Dominion Statute.

## APPENDIX I.

## External Trade of Canada in the fiscal year 1938-39.

Preliminary figures of the external trade of Canada for the fiscal year ended Mar. 31, 1939, show a grand total trade of \$1,627,998,185, as compared with a figure of \$1,883,891,122 in the preceding year, or a decrease of \$255,892,937. The decrease in the imports was \$140,841,884. Domestic exports decreased by \$143,266,364 while foreign exports increased by \$28,215,311. Figures by industrial groups are given in the following table, where the figures of imports and exports may be compared with the totals given for previous years in the tables on pp. 502 and 510-511 of this volume.

## Imports and Exports of Canada, fiscal year 1939.

Industrial Group.	Imports.
	\$
Agricultural and vegetable products.....	121,266,523
Animals and animal products.....	24,399,286
Fibres, textiles, and textile products.....	84,984,145
Wood, wood products, and paper.....	31,941,864
Iron and its products.....	154,056,578
Non-ferrous metals and their products.....	36,254,270
Non-metallic minerals and their products.....	121,306,624
Chemicals and allied products.....	34,890,675
Miscellaneous commodities.....	49,128,069
<b>Total Imports.....</b>	<b>653,228,434</b>
Total Dutiable Imports.....	369,098,531
Total Free Imports.....	289,129,503
Duty Collected.....	89,273,006

Chemicals and allied products.....	20,583,506
Miscellaneous commodities.....	13,627,996
Total Domestic Exports.....	926,962,245
Total Foreign Exports.....	42,807,906
<b>Total Exports.....</b>	<b>969,770,151</b>
<b>Grand Total External Trade.....</b>	<b>1,627,998,185</b>

## APPENDIX II.

## Survey of Production, 1936-37.

Reflecting marked increases in price and volume, a gain of 13 p.c. occurred in the net value of production during 1937, compared with the revised figure for 1936. Eight of the nine main divisions of industry showed appreciable advances over the preceding year, while the net value of agriculture was practically unchanged. Encouraging gains were registered in mining, forestry, construction, and manufactures.

On a provincial basis, increases over 1936 were shown in seven of the nine provinces, the exceptions being Saskatchewan and Prince Edward Island.

1.—Gross and Net Values of Production in Canada, by Industries, 1936<sup>1</sup> and 1937.

Division of Industry.	1936. <sup>1</sup>		1937.		Percentage Change in Net Value 1937 from 1936.	Percentage of Net Value to Total Net Production, 1937.
	Gross. <sup>2</sup>	Net. <sup>3</sup>	Gross. <sup>2</sup>	Net. <sup>3</sup>		
	\$	\$	\$	\$	p.c.	p.c.
Agriculture.....	1,065,966,000	679,341,000	1,039,492,000	678,953,000	- 0.06	22.86
Forestry.....	400,292,122	231,937,561	494,355,587	284,504,031	+22.7	9.58
Fisheries.....	51,081,135	34,234,063	51,155,513	34,439,481	+ 0.6	1.16

Totals, Primary Production.....	2,159,751,476	1,380,260,695	2,401,657,815	1,522,133,549	+10.3	51.25
Construction.....	258,040,400	135,851,162	351,874,114	176,029,679	+29.6	6.92
Custom and repair <sup>5</sup> .....	109,549,000	70,930,000	113,067,000	79,055,000	+11.5	2.66
Manufactures <sup>6</sup> .....	3,002,403,814	1,289,592,672	3,623,159,500	1,506,624,867	+16.8	50.72
Totals, Secondary Production.....	3,360,993,214	1,496,373,834	4,088,100,614	1,761,709,546	+17.7	59.30
Grand Totals.....	4,862,126,649	2,628,419,977	5,658,877,071	2,970,617,519	+13.0	100.00

<sup>1</sup> Revised figures are here given for 1936 which were not available when Chapter VII—Survey of Production—went to press. See also the Bureau's bulletin "Survey of Production in Canada, 1937".  
<sup>2</sup> See Chapter VII for explanation of gross and net value of production. <sup>3</sup> Gross value comprises industrial mineral production shown in Chapter XII, Table 1, plus the value of ores, etc., of the smelting industry.  
<sup>4</sup> Custom and repair from special tabulation based on 1930 Census of Merchandising and Service.  
<sup>5</sup> The item "Manufactures" includes dairy factories, sawmills, pulp and paper mills, etc., which are also included in other headings above. This duplication, amounting in 1936 to a gross of \$658,618,641 and a net of \$248,214,552, and in 1937 to a gross of \$930,831,358 and a net of \$313,225,585, is eliminated from the grand total.  
<sup>6</sup> Secondary production includes the above-mentioned duplication. The percentage of net manufactures, less duplication, to the total net production in 1937 was 40.1 p.c.

2.—Summary Analysis of the Value of Production in Canada, by Provinces, 1936<sup>1</sup> and 1937.

Province.	1936. <sup>1</sup>				1937.			
	Gross Value.	Net Value.			Gross Value.	Net Value.
