## Subsection 2.-Principal Commodities Imported and Exported

Canada's Principal Imports.-In the interpretation of the trends in imports, it should be borne in mind that no individual year is entirely free of abnormalities in some particulars. In the matter of price fluctuations, which affect the significance of trade figures when expressed by value, the Bureau of Statistics index number of wholesale prices, on the 1926 base, was $59 \cdot 3$ in the calendar year 1889, 52.1 in 1899, $59 \cdot 5$ in 1909, $134 \cdot 0$ in 1919, $86 \cdot 6$ in 1930, $82 \cdot 9$ in $1940,90 \cdot 0$ in 1941, $95 \cdot 6$ in 1942 and $100 \cdot 0$ in 1943.

The effect of both long- and short-term fluctuations on the trends of trade is summarized at pp. 425-426 of the 1941 Year Book and a table at pp. 426-427 of that volume gives comparative figures of imports for five decades to 1939, the latest year for which comparisons can be made upon a peacetime basis.

At pp. 463-464 of the 1942 Year Book, the impact of the War on the trade of 1940 is discussed. In that year the five leading imports were machinery (except farm), rolling-mill products, coal, crude petroleum and automobile parts. In 1943 the five leading imports were composed of the same groups, although the order had changed, machinery (except farm) again stood in first place, followed by coal, automobile parts, crude petroleum and rolling-mill products. This would indicate that Canada's requirements in the way of machine tools required for war production had been great and that production for war purposes was in full swing in 1943; the value of such imports was highest in 1941, although the 1943 figure was $48 \cdot 2$ p.c. above 1940. The increase in the value of coal imports in 1943 over 1940 was 104 p.c. and automobile parts showed an increase of $41 \cdot 1$ p.c., a little below the peak of 1942. Although normal civilian driving was severely restricted in 1943, military and commercial requirements of gasoline necessitated the importing of crude petroleum to a point 37 p.c. above the value recorded in 1940. Cotton goods and electrical apparatus advanced to sixth and seventh places from twelfth and eleventh, respectively, in 1940, showing increases in value of $172 \cdot 1$ p.c. for cotton goods and 128.4 p.c. for electrical apparatus.

All of the remaining commodities, imports of which were valued at $\$ 5,000,000$ or over in 1943, registered increases with the following exceptions, arranged in order of value in 1943 and showing the percentage decrease as compared with 1940 in parentheses: sugar and products ( $11 \cdot 0$ ); rubber products (34.7); farm implements (34-1); furs (3•1); noils, tops and waste wool (44-6); and unmanufactured wood (19.5).

## 13.-Leading Imports Over Three Decades, 1920-43

Notr.-Commodities are arranged in order of importance in 1943, and include only those valued at $85,000,000$ or more.

| Commodity | $1920{ }^{1}$ | 1930 | 1940 | 1941 | 1942 | 1943 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^167]Canada's Principal Exports.-In the interpretation of the figures of the commodities exported, as shown in Table 14, the same qualifications apply regarding price changes and business fluctuations as in the case of imports. Furthermore, factors influencing world trade have an important bearing upon trends in Canadian exports. Since agricultural products are still an important element in Canadian exports, variations in crop conditions here and in other parts of the world cause important fluctuations in the year-to-year volume and value of exports.

At pp. 427-428 of the 1941 edition of the Year Book the effect of long- and short-term fluctuations in Canada's exports is discussed. The effect of the first year of war on Canada's exports is treated at p. 465 of the 1942 Year Book. In comparing the trade of 1943 with that of 1940 , the most notable change was the advance in the export of automobiles from sixth to first place, the increase in value being no less than 343.4 p.c., an indication of the way in which Canadian-made transport is finding its way to the battlefronts of the world. Wheat, the leader in 1940, took second place with an increase of $96 \cdot 1$ p.c. Automobile parts, in sixteenth place in 1940, rose to third in 1943, showing an increase of $1,979 \cdot 2$ p.c.; newsprint, however, showed a decline of 4.4 p.c. bringing this commodity from first place to fourth in 1943. Meats occupied fifth place showing an increase of 106.7 p.c. in the three years, reflecting the continued and increasing overseas demand for foodstuffs. Aluminum in bars, ctc., still occupied sixth place with an increase in value of 277.5
p.c. All other commodities shown in Table 14 registered increases with the exception of copper (in forms), machinery (except farm), cattle (all kinds), shingles (wood), copper ore and blister, paper board, silver ore and bullion.

## 14.-Leading Exports (Excluding Gold) Over Three Decades, 1920-43

Nore.-Commodities are arranged in order of importance in 1943 and include only those valued at $\$ 5,000,000$ or more.

| Commodity | $1920{ }^{1}$ | 1930 | 1940 | 1941 | 1942 | 1943 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Detailed Imports and Exports.-Detailed statistics of all commodities of any importance imported into Canada from all countries, from the United Kingdom and from the United States during the calendar years 1940-43 are given in Table 15, while corresponding statistics for domestic exports appear in Table 16. Wartime restrictions, imposed in 1942, prevented the publication in the 1942 and 1943-44 Year Books of detailed figures for the United Kingdom and the United States. The present series therefore links up with Tables 17 and 18, pp. 430-461, of the 1941 Year Book, where figures for 1936-39 appear.

15.-Principal Imports into Canada for Consumption from All Countries, Nore.-Dashes in this table indicate no imports recorded.

${ }^{1}$ Totals include other items not specified.
the United Kingdom and the United States, CaIendar Years 1940-43
Nors.-Dashes in this table indicate no imports recorded.

## Subsection 3.-Comparison of the Volume of Imports and Exports

The statistics of the external trade of Canada are analysed in this Subsection to reveal changes in the physical volume of external trade as well as in the dollar value of that trade. Since value figúres alone may be somewhat misleading when used to show the physical growth of production and external trade, it is desirable to secure a record of the fluctuations in the volume of the country's trade as distinguished from the value thereof. A description of the method used in ascertaining such fluctuations is given at p. 462 of the 1941 Year Book.

In Table 17 the imports and exports for 1941, 1942 and 1943, are first shown at the values at which the trade was recorded; the same imports and exports are then shown at the value they would have had if the average price or unit value had been the same in each year as it was over the average of the years 1935-39. In other words, the figures on the basis of the average values over the base period enable a comparison to be made of the imports or exports for the given years on the basis of variations in quantity only, variations due to different prices having been eliminated. Index numbers of declared values, that is, the total declared values of the imports or exports in each year expressed as percentages of 1935-39 are then given. These are followed by the index numbers of average values, which show the prices at which goods were imported or exported in each year expressed as percentages of the prices in 1935-39. Finally, the index numbers of physical volume show the relative quantity of merchandise imported or exported in each year expressed as a percentage of the quantity of the same merchandise in 1935-39.

The declared value of imports showed an increase from $\$ 1,448,792,000$ in 1941 to $\$ 1,644,242,000$ in 1942 , a rise of $13 \cdot 5$ p.c.; a further rise of $5 \cdot 5$ p.c. was recorded for 1943. However, if the price level of 1935-39 had prevailed in these years, imports would have amounted to $\$ 1,105,221,000$ in 1941 and $\$ 1,080,245,000$ in 1942 and $\$ 1,104,816,000$ in 1943 . This indicates that the effect of rising prices was beginning to be shown in the trade returns for 1942.

While all groups of imports show increases in value with the exception of "miscellaneous" only six showed increases in volume.

Exports also increased in 1943, both in value and in volume. On the basis of price levels prevailing during the period 1935-39, exports would have been valued at $\$ 1,387,900,000$ in $1941, \$ 1,740,220,000$ in 1942 and $\$ 1,991,546,000$ in 1943. The index of unit values of iron and its products continued its rapid rise, increasing from $180 \cdot 5$ in 1941 to 221.8 in 1942 and to $252 \cdot 4$ in 1943.

The index numbers of unit values of total imports increased from 130.8 in 1941, to $151 \cdot 8$ in 1942, to $156 \cdot 7$ in 1943, while the index of unit values of exports showed a lesser increase from $115 \cdot 5$ to $134 \cdot 3$ to $147 \cdot 5$. This would indicate a slightly less favourable position of Canada's barter terms in 1942 than in 1941, as the prices of imported goods increased to a greater degree than did those of the exports exchanged for them: some importance in this position was evident in 1943.
17.-Comparison of the Values and Volumes of Imports and Exports, by Main Groups, 1941-43

## Subsection 4.-Proportions of Trade in Raw and Manufactured Products

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. In the early years of Canada's development, imports were made up chiefly of manufactured products and exports of raw and semi-manufactured products. Since the beginning of the twentieth century this position has been almost reversed; a large percentage of imports into Canada now consists of raw material and semi-manufactured products to be used in Canadian manufacturing industries, while exports consist, to a great degree, of products that have undergone some process of manufacture. With the growth of population and the establishment of industries using mass-production methods, it has become profitable to import raw materials such as rubber, cotton and sugar for processing in Canadian factories; such industries can easily produce more finished products than the domestic market can absorb and, therefore, an export trade in these finished goods has become established.

In trade with countries possessing highly developed manufacturing industries, Canada's imports consist of manufactured products and her exports to those countries are made up largely of raw materials and semi-manufactured products. On the other hand, in trade with countries of South America and Africa, whose industrial development is not so advanced, the reverse is true, imports being predominantly raw materials, while by far the larger part of exports consists of fully manufactured goods.

Analyses of Canada's trade, from the angle of degree of manufacture of imports and exports with leading countries, are of value to the student of economic relationships because they present, in summary, a picture with significant meaning in the complementary relationship of manufacturing and commerce between continents and countries.

The data of Table 18 have been specially tabulated to show at a glance this information for all countries of any importance that trade with Canada. Table 19, on the other hand, gives historical statistics that clearly indicate the fluctuations in imports for home consumption of important raw materials used in Canadian manufacture, irrespective of their source. In a broad way, the data reflect the development of Canadian manufactures, although the dislocations in trade caused by the Axis invasions that cut off supplies of essential commodities must be borne in mind in making comparisons with the corresponding tables in earlier Year Books.

${ }^{1}$ Includes hair of the camel, alpaca, goat, etc.

## Subsection 5.-Origin and Purpose Groupings of Imports and Exports

In the origin classification of imports and exports appearing in Table 20 the commodities comprising such trade are grouped according to the origin of the raw material of which the commodities are composed. A further classification according to degree of manufacture is carried out simultaneously.

The purpose classification given in Table 21, divides the commodities that enter into external trade according to the purpose for which the commodities are suitable. It is to be noted that this classification is for the calendar year 1943;
the only previous compilations of this nature, on a calendar-year basis, were those for 1939 and 1940 that appear at pp. 506-507 of the 1942 Year Book and those for 1941 and 1942 given at pp. 487-493 of the 1943-44 Year Book.

Since the Bureau of Statistics analyses manufacturing production and wholesale prices in Canada according to origin and purpose, the statistics given here for external trade provide a basis for a study of production, prices and trade according to origin or purpose.

## PART III.-SUMMARY OF EXTERNAL TRANSACTIONS

## Section 1.-Canadian Balance of International Payments*

Canada's external economic relations are revealed in outline by statements of the Canadian balance of international payments. The statements present, in statistical form, a summary of the commercial and financial transactions occurring between Canada and other countries. They furnish, therefore, an over-all view of the external relations of the Canadian economy just as national income studies provide an outline of its internal structure. In an economy such as Canada's where external sources of income and demand furnish an important dynamic element to activity within the country, the balance of payments focuses attention upon the impact of external demand upon the Canadian economy, the expenditure of income outside of Canada, and the resulting financial and exchange aspects.

When the statements of Canadian international balance of payments for the pre-war years are contrasted with wartime years, the comparison shows that wartime developments have, in many respects, been an accentuation of a single pattern. But underlying the similarity in structure there have been outstanding differences in the mechanism of making international settlements which have been at the core of the financial problems arising out of developments in international payments during the War.

Before the War, particularly in the trade between the British Commonwealth of Nations and the United States, free exchange markets were the characteristic channel of international settlements between the principal trading nations of the

[^178]world. Canada's international accounts provide an excellent example of how the system of multilateral settlements operated. In the years before the War, Canada's balance of sterling income, which mainly originated from Canadian exports to the United Kingdom, was freely convertible into United States dollars, so that the Dominion was able to settle the deficit arising out of commercial and financial relations with the United States. Triangular settlements, such as those arising from Canada's trade with the United Kingdom and the United States, were a basic part of the framework of world trade and had the effect of broadening the sphere of trading between nations by going far beyond the limited scope of bilateral trade.

The War, however, has interrupted the operation of the system of multilateral settlements by creating conditions under which sterling is no longer freely convertible into United States dollars. In addition, the current accounts of the belligerent nations have become distorted by wartime demands which have produced greatly augmented current balances for which new methods of settlement have had to be devised. In the case of Canada, the new conditions have produced problems with respect to the balances of payments with both the Sterling Area and the Nonsterling Area.

With the Sterling Area, the problem has been one of finding means of financing the growing British shortage of Canadian dollars resulting from the extraordinary wartime needs of the United Kingdom for Canadian munitions, food and raw materials. These needs, of course, have increased to unprecedented proportions as the United Kingdom is a principal base of operations against the Axis. In the earlier years of the War, this shortage was principally met by the Canadian Government repatriating Canadian securities owned in the United Kingdom and by the accumulation of sterling balances by the Foreign Exchange Control Board. Some settlements have also been effected by purchases of gold from the United Kingdom which has, in turn, been sold in the United States to settle Canadian deficits there. In 1942, however, besides some additional repatriations, a new method of meeting the growing needs of the United Kingdom for Canadian dollars was introduced when a contribution of $\$ 1,000$ million was made to the Government of the United Kingdom for expenditure on war supplies in Canada. In the same year the major part of the accumulation of sterling balances by Canada was converted into a loan of $\$ 700$ million to the United Kingdom. In 1943, a further development in the methods of financing the wartime needs of the Allied Nations was the appropriation by the Canadian Parliament of $\$ 1,000$ million for Mutual Aid, for the production and transfer of Canadian war supplies to the United Nations. In 1944 there was a further appropriation of $\$ 800$ million for Mutual Aid (see p. 461). There were also special receipts of United States dollars from the United Kingdom in 1943. Increasing current payments by the Canadian Government to meet the overseas expenditures of the Canadian Forces have also provided a very substantial source of Canadian dollars for the United Kingdom. In short, the United Kingdom has been able to obtain such a large volume of commodities from Canada for the prosecution of the War only because of special receipts of Canadian dollars such as have been outlined above. The special sources of dollars which have made this possible are mostly outlays of the Dominion Government arising from the wartime financial organization of the Dominion in which government expenditures represent a large part of the national income. (See Finance Chapter.)

In the case of the balance of payments with the Non-sterling Area, the central problem has also been one of scarcity-in this case a Canadian shortage of United States dollars. The customary deficits in Canada's current account with the United

States were greatly augmented during the early years of the War, principally because of the rapid rise in Canadian imports from the United States. At the same time, net credits from other foreign countries whose currencies are convertible into United States dollars have sharply contracted with the decline in exports to Continental Europe and Asia. It has therefore been necessary to conserve United States dollars for the more essential purposes of the War, and to develop new sources of United States dollars. Exchange control (with the control of capital movements) has provided the principal means of conserving United States dollars. Government measures have also limited expenditures on Canadian pleasure travel and nonessential commodities in non-Empire countries. As a result of the Agreements entered into at Hyde Park in April, 1941, new sources of United States dollars were produced with the sale of munitions on a large scale to the United States Government and further development of the production of raw materials in Canada. The sale in the United States of gold and United States dollars purchased from the United Kingdom has also been a factor in meeting deficits in the United States. Another factor of increasing importance in alleviating Canada's shortage of United States dollars has been the growing volume of imports of capital arising, mainly, from the purchase of outstanding Canadian bonds by United States investors.

There were other unusual receipts of United States dollars in 1943. United States Government expenditures on defence activities in Canada, such as the construction of the Alaska Highway, the Canol project and the airfields in Northern Canada gave rise to large non-recurring receipts. Greatly expanded United States demands for grain and other commodities resulting from temporary wartime shortages also contributed large receipts of United States dollars. As a result of various developments such as these, the shortage of United States dollars was alleviated in 1943 and the current account with the United States alone showed a debit balance of $\$ 19$ million only for the year as a whole. As a result of this improved situation it was announced by the Minister of Finance in the House of Commons on Apr. 21, 1944, that certain payments were being made by Canada to the United States Treasury in connection with the termination of the financial aspects of the Hyde Park Agreements. Among other things, these included payments for certain past purchases of United States equipment and supplies for which bills had not yet been presented. The Canadian Government also undertook to reimburse the United States for the airfields constructed by the United States Government in Canada and for the telephone line from Edmonton to the Alaska boundary which was built by the United States Government. In so far as these special settlements were for liabilities incurred in 1943 or earlier, or were reimbursements for United States expenditures in Canada in 1943 or earlier, they would, from some points of view, represent additions to the current account incurred with the United States in the same years, but since the balance of payments statements reflect cash payments, the special payments to the United States in 1944 will be included in the statement for that year rather than in previous years.

Current Account Transactions.-Current account transactions between Canada and all countries are given in Table 1. In order to reveal the financial and foreign exchange aspects of the international accounts produced by wartime changes, it is necessary to divide the balance of payments statements into two clearly defined divisions: the balance of payments between Canada and Empire
countries, and the balance of payments between Canada and the rest of the world with which Canada's dealings are on a United States dollar basis. In the period before the introduction of exchange control by the nations of the British Commonwealth in September, 1939, the division into the two areas had less significance from a currency point of view, being only a division between Empire and non-Empire countries.

Empire Countries.-The dominant characteristic of the balance of payments between Canada and the Sterling Area, a large excess of Canadian exports and other sources of balance of payments credits over imports and other debits, was again pronounced in 1943. Total credits in the account with Empire countries continued to expand in 1943. The principal change in credits occurred in merchandise exports which again increased considerably, but less rapidly than in 1942. While the gains were distributed among most commodities, there was more concentration of the increases in munitions and food than in raw materials or other commodities. It should be noted, however, that these exports did not all give rise to British payments to Canada as the figures include not only cash purchases, but substantial amounts of munitions, food and other commodities supplied as Mutual Aid to the United Kingdom and Australia in 1943. For purposes of accounting, goods and services provided as Mutual Aid are included as credits in the current account of the balance of payments, and offset as debits in the special item representing expenditures by the Canadian Mutual Aid Board. Credits on account of freight and shipping also increased in 1943, a general reflection of a larger movement of commodities which resulted in larger payments for inland freight on exports and heavier shipping expenditures in Canadian ports. Other expenditures on war services in Canada were slightly less than in 1942. Reduced cash contributions for air training were partly offset by larger payments on account of internment operations and various other services.

Current payments to Empire countries increased more sharply in 1943 than in any earlier year, being $\$ 850$ million compared with $\$ 557$ million in 1942 and $\$ 326$ million in 1939. The increase was almost entirely due to the expansion in the expenditures overseas on account of the Canadian Forces abroad which more than doubled in 1943, being $\$ 499$ million compared with $\$ 191$ million in 1942. A large element in the increase arose from the assumption by Canada in 1943 of the capital cost and maintenance of 35 additional overseas squadrons of the Royal Canadian Air Force. Other expenditures also were higher as the number of men overseas increased. Imports from Empire countries which had formerly been the principal source of debits declined to $\$ 200$ million in 1943 and were evenly divided between the United Kingdom and other Empire countries. Payments to Empire countries on account of freight and shipping were at about the same level in 1943 as in 1942 but higher than before the War, reflecting increased costs of ocean transportation. Interest and dividend payments of $\$ 52$ million in 1943 were likewise at about the same level as in 1942. This marks a sharp decline from the pre-war level, however, when interest and dividends paid on British investments in Canada ranged from $\$ 87$ million in 1937 to $\$ 80$ million in 1939 . The decline is principally
a reflection of the elimination of interest payments on the Canadian bonds which have been repatriated since the start of the War, as payments of dividends to shareholders in the Sterling Area have not varied much during the period.

Non-Empire Countries.-A marked change occurred in the current account with the United States dollar area in 1943. In contrast to the debit balances of $\$ 314$ million in 1941 and $\$ 168$ million in 1942, the account was virtually in equilibrium in 1943, net debits amounting to $\$ 10$ million. While gross debits continued to rise as has been the case in each wartime year, there were even sharper gains in gross receipts. As these gains were most pronounced in the last half of the year because of large sales of grain, the transition in the current account took place mainly in that period. In each year from 1937 to 1943 there have been deficits in the current account with the United States which have been partly offset by credit balances from transactions with other countries. These credit balances, arising mainly from trade with other foreign countries, have been greatly reduced by the elimination of exports to most areas of Continental Europe and Asia. The deficit with the United States in 1943 of $\$ 19$ million was relatively small in relation to the deficits in earlier years of the War.

The rapid and continued rise in the value of imports from the United States during the War has been a primary factor in the growth of the debit balance with the United States dollar area. The demand for imports is, of course, closely related to the war-production program. Imports of capital equipment have been an important element, especially in the earlier years of the War. As munitions production has expanded, imports of materials, fuel, and components have also grown and represent a major part of the increases. An important part of these United States dollar requirements arises from the United States dollar content of production in Canada for the United Kingdom. Direct Government purchases in the United States of aircraft and other equipment for the Armed Forces have also been substantial and were particularly large in 1943.

Although exports to the United States dollar area have increased each year during the War there has been less regularity in the increases than in the case of imports. The greatest expansion occurred in 1942 and 1943 and this increase is, of course, to a large extent a result of transactions under the agreements entered into between the Canadian Prime Minister and the President of the United States at Hyde Park in April, 1941. Sales of war supplies to the United States resulting from the agreements first became substantial in 1942 when deliveries of munitions, metals and war production rapidly expanded. It is notable, however, that although Hyde Park receipts provided a very large new source of credit in 1942 and 1943 these receipts represented only a minor part of the total receipts from exports to the United States in each year. Receipts from the sale of raw materials and other civilian commodities still constituted the major part of export receipts being at record levels for both years. In 1943 a large portion of the receipts originated in the extraordinarily large sales of Canadian wheat and feed grains to the United States: these had attained unprecedented volume by the end of the year.

Net exports of non-monetary gold produced $\$ 142$ million in 1943 compared with $\$ 184$ million in 1942. Gold production in 1943 declined as a result of manpower transfers and higher costs.

Tourist and travel expenditures produced net credits of $\$ 52$ million in 1944 compared with $\$ 53$ million in 1943 (see Table 6, p. 565 and Table 4, p. 562).

There was a slight reduction in net payments to the United States dollar area on account of interest and dividends in 1943. There were some declines in receipts of income, principally from reduced receipts from direct investments in the United States which had been unusually heavy in 1943. Some of the decline was also due to somewhat lower payments of interest and dividends on investments in Canada owned by residents of the United States dollar area.

A further expansion occurred in the net debits on account of freight and shipping with the United States dollar area in 1943. The volume of imports which has risen each year of the War is one of the chief reasons for the steady expansion in payments. Besides the freight on imports for Canadian consumption, there has been freight on goods imported in connection with United States activities in northwestern Canada, such as the Alaska Highway and Canol projects. Payments for ocean freight have also increased with the rise in costs of ocean transportation. Partly offsetting the increased payments have been the growing earnings of Canadian railways from freight on exports and the substantial receipts for freight on goods carried to northwestern Canada for the United States Army.

All other current transactions resulted in a credit balance of $\$ 149$ million in 1943 compared with a credit balance of $\$ 43$ million in 1942 and substantial debit balances in preceding years. As it includes some non-recurring items, the composition of this group of transactions varies in different years. Wartime factors were responsible for the credit balance in 1943. The expenditures by the United States Government on the construction of the Alaska Highway, airfields, the Canol project and other undertakings in Canada were particularly heavy. It should be noted that part of the United States Government expenditures in Canada were paid back in 1944 when Canada reimbursed the United States for the airfields and telephone line in the settlements terminating the financial aspects of the Hyde Park Agreements announced by the Minister of Finance on Apr. 21, 1944.

Capital Account Transactions. -Empire Countries.-Capital receipts by Canada from Empire Countries in 1943 amounted to $\$ 20$ million. The principal part of this was made up of repayments by the Government of the United Kingdom on the $\$ 700$ million loan. Private capital receipts were relatively small and represented transactions such as distributions of estates and trusts.

Gross capital debits amounted to $\$ 586$ million in 1943 exclusive of Mutual Aid and the special purchase of United States dollars. Of this amount $\$ 71$ million represents privately financed capital payments by Canada. Private retirements of securities, purchases of securities, repayments of mortgages and loans, settlements of estates, and trusts and insurance company transactions make up most of this $\$ 71$ million.

Mutual Aid, of course, was the principal means of meeting the residual needs of Empire countries in 1943. This aid took the form of shipments of food and munitions to the United Kingdom and Australia, the costs of which were met out of the Mutual Aid Appropriation. Expenditures by the Mutual Aid Board in 1943 for goods and services allocated to the United Kingdom and Australia were $\$ 502$ million. But besides Mutual Aid there were the substantial capital debits on government account, totalling $\$ 515$ million, which also contributed towards financing the residual needs of the United Kingdom. The largest part of this total originated in the payments to the United Kingdom Government in connection with the repatriation of production assets. Payments for the British equity in the fixed capital of munitions plants constructed during the War amounted to $\$ 205$
million. In addition, there were cash repayments of $\$ 190$ million of working capital which the United Kingdom had formerly advanced to the Department of Munitions and Supply and contractors. The official repatriation of securities resulted in a further transfer of only $\$ 4$ million in 1943 in contrast to $\$ 296$ million in 1942 and a total of $\$ 701$ million to the end of 1943 . Other special payments in 1943 amounted to $\$ 116$ million. This item is made up of a number of different official transactions which were mainly for the purpose of adjusting intergovernmental transactions and various currency settlements adjusting special transactions. In addition, there were special receipts of United States dollars from the United Kingdom amounting to $\$ 143$ million in terms of Canadian dollars. These receipts were a means of settling part of the British deficit in Canada comparable to the special gold transactions in the earlier years of the War.

Non-Empire Countries.-Capital payments by Canada to non-Empire countries, are, of course, subject to restrictions imposed by foreign exchange control. While, in generai, payments were allowed only in the case of maturing contractual commitments, certain other capital transfers were permitted. Most important among these in 1943 was the calling for redemption of two Dominion of Canada bond issues held in the United States. Among the other transfers permitted in 1943 were some non-resident withdrawals of Canadian funds acquired from the liquidation of certain direct investments in Canada.

Gross capital debits in the account with non-Empire countries in 1943 amounted to $\$ 774$ million. Redemption of Canadian bonds held in the United States represents a large part of this. There were also substantial debit entries reflecting the refinancing of Canadian bond issues in the United States. Repayments of mortgages, loans and advances and other contractual obligations constituted another part of the cash payments along with some liquidations of non-resident direct investment in Canada. The repayments of some prepayments and capital advances arising out of the Hyde Park Agreements are included. In 1943, there were also debits in connection with changes in private balances and other short-term assets as well as debit entries reflecting an increase in Canada's official reserves of gold and United States dollars. As pointed out elsewhere, a concentration of unusual receipts of United States dollars in 1943 from various extraordinary sources, contributed to this increase and, in 1944 a series of measures were undertaken by Canada in connection with the termination of the financial aspects of the Hyde Park Agreements, which involved substantial payments out of accumulated balances.

Capital credits with non-Empire countries totalled $\$ 657$ million in 1943. The proceeds from the purchase of securities by investors in the United States was the largest single source of capital credits. Transactions in outstanding Canadian bonds represented the largest part of this import of capital. These sales to the United States were much heavier than in 1942, the previous record year. As in 1942, the net sales were concentrated in Dominions, Dominion guarantees and Provincials. The high prices for these securities prevailing in United States bond markets in 1942 and 1943 were a factor in this movement of securities from Canada. Sales of refunding issues of Canadian bonds in the United States in 1943 were also substantial, totalling more than in any year since 1939. A Dominion refinancing issue of $\$ 90$ million was the most prominent of these issues, but there were some new provincial and corporation issues as well. Sales of Canadian domestic securities to non-residents for Canadian dollars were substantial. The liquidation of Canadian
holdings of United States securities was heavier in 1943 than in immediately preceding years; most of these took the form of sales of United States stocks.

Capital credits also originated in various increases in other forms of United States investments in Canada and decreases in other forms of Canadian assets in the United States and elsewhere. These credits were in connection with direct investments, insurance transactions, estates and trusts, real estate, short-term financing, repayments, etc. There were also credits to account for various exchange adjustments arising, mainly, out of transactions with the Sterling Area.

There were special receipts of United States dollars from the United Kingdom amounting to $\$ 143$ million on balance in terms of Canadian dollars in 1943. These receipts were a means of settling part of the British deficiency of Canadian dollars.

Statistics of the balance of international payments have been revised back to 1938 and the revisions are shown in the following tables. These replace statistics for 1938-40 appearing in earlier editions of the Year Book. A subdivision of tourist expenditures is shown in Table 5 at the end of the series.

## Section 2.-The Tourist Trade of Canada*

The growth of tourist travel in Canada, to the point where it has become one of the nation's great 'service' industries, was a remarkable development in pre-war years. It represents in economic terms the disposition of national assets in which Canada is particularly rich - scenic beauty, invigorating climate, opportunities for summer and winter sports of all kinds, religious shrines and places of historical interest-and for the exploitation of which large capital expenditures have been made on hotel accommodation, improved highways, national parks and other attractions.

The place of the tourist trade as one of the 'invisible' items in Canada's balance of international payments is seen from the tables at pp. 559-562. The expenditures in Canada of travellers from other countries have the same effect, in so far as they influence the balance of payments, as the export of additional commodities and, similarly, the expenditures of Canadian travellers in other countries are comparable to the import of goods from abroad.

During recent years, it has been possible to introduce wide-spread improvements in estimating tourist expenditures. These have been referred to in earlier Year Books.

United States Travel Expenditures in Canada.-The important place which United States travel expenditures occupy in the Canadian economy in normal times has been more fully recognized since the outbreak of war, as a result of unprecedented demands for U.S. dollars to pay for much-needed war materials. Sterling income from exports to the Sterling Area can no longer be converted into U.S. dollars to pay for purchases in the United States, and thus direct sources of United States exchange, such as the tourist trade, have been of importance in the furtherance of Canada's war effort.

As a large part of the traffic from the United States customarily travels to Canada by motor-car, the curtailment in the use of automobiles in recent years has had the effect of reducing the volume of international expenditures. The effects of the decline in motor traffic first became pronounced in 1942 when the expenditures of United States motorists in Canada were $\$ 26,000,000$ compared with $\$ 54,000,000$ in 1941. Total United States expenditures in Canada in 1942 are estimated at $\$ 79,000,000$ compared with $\$ 107,000,000$ in 1941 . In 1943 there were further contractions in the expenditures of motorists but these were more than offset by much heavier expenditures by persons travelling by rail than in former years and, as a result, United States expenditures in Canada in 1943 totalled $\$ 87,000,000$. In 1944 there were gains shown in each class of traffic and total expenditures in Canada are estimated at $\$ 109,000,000$. These expenditures in the United States during the War compare with pre-war levels indicated by revised estimates of $\$ 149,000,000$ in 1937, $\$ 134,000,000$ in 1938 and $\$ 137,000,000$ in 1939.

[^183]It should be noted that the new estimates for the pre-war years point to much lower levels of expenditures than the estimates originally published. The revisions have been made by relating the increased information on expenditures obtained during the war years to the volume of traffic in the pre-war years. Although the estimates for the pre-war years have therefore a less substantial basis than the data for the more recent years, it is believed that they are fairly representative of expenditures before the War.

Canadian Travel Expenditures in the United States.-The most significant factors influencing Canadian travel in the United States since the outbreak of war have been the restrictive measures introduced by the Dominion Government in order to conserve U.S. dollar exchange. Together with the efforts to increase the number of United States visitors to Canada, these measures were designed to increase the net favourable balance accruing to Canada as a result of the tourist trade and thus to release U.S. dollars for vital war needs.

In July, 1940, by action of the Government under the Foreign Exchange Control order, virtually all Canadian pleasure travel involving the expenditure of U.S. dollars was eliminated, and total travel declined to a low level for several years During this period of the War the Government was faced with the problem of deciding on the relative importance of the uses to which Canada's limited supply of U.S. dollars might be put, and it was considered essential that the purchase of war material, the servicing of the national debt and the meeting of contractual obligations in the currency of the contract should have first call on such U.S. dollar resources. Later in the War, however, the United States dollar situation improved as a result of sales of munitions to the United States Government and other unusual receipts of U.S. dollars. Consequently, it became possible to lessen the restrictions on travel. Since May, 1944, when the restrictions were modified, Canadian travel to the United States has increased considerably.

In 1941 the first full year in which the travel restrictions were in force, total expenditures of Canadian travellers in the United States are estimated to have been $\$ 18,250,000$ as compared with nearly $\$ 40,000,000$ in 1940 . Canadian expenditures in the United States are estimated at $\$ 24,400,000$ in 1942 and $\$ 33,700,000$ in 1943. Mainly as a result of the change in travel restrictions in the spring of the year Canadian expenditures in the United States increased to $\$ 56,700,000$ in 1944 . These expenditures compare with the pre-war level of Canadian expenditures in the United States indicated by the revised estimates of $\$ 65,000,000$ in $1937, \$ 66,000,000$ in 1938 and $\$ 67,000,000$ in 1939.

Travel between Canada and Overseas Countries.-It is estimated that travellers from overseas countries spent approximately $\$ 2,900,000$ in Canada in 1944, while Canadian expenditures overseas were $\$ 2,800,000$ in the same year. As pleasure travel between Canada and overseas countries has been largely eliminated by wartime conditions, it may be presumed that the great bulk of these amounts represented expenditures by persons travelling on Government or other business.

The diverse resources of the various parts of the country have led to a vast exchange of products and the task of providing goods and services where they are required for consumption or use by a population of $11,975,000$ (1944 estimate) accounts for a greater expenditure of economic effort than that required for the prosecution of Canada's great volume of external trade, high though the Dominion ranks among the countries of the world in this field.

Internal trade is broad and complicated: it encompasses all value added to commodities traded in provincially and interprovincially by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services including those directed to the amusement of the people, such as theatres, sports, etc. In fact, in a broad interpretation, internal trade covers a large part of those activities of the people that add to the 'form' utilities, dealt with in the various preceding chapters, the utilities of 'place', 'time' and 'possession', and the personal and professional services referred to in the Survey of Production and other chapters. However, the arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles and cross reference to other chapters is essential. The Index will be found useful in this respect.

## PART I.-GOVERNMENT AIDS TO AND CONTROL OF INTERNAL TRADE

## Section 1.-Wartime Controls Affecting Distribution and Trade*

The pressure of war production and the high level of consumer demand continued to produce shortages of consumer goods during 1944: these necessitated special steps to ensure equitable distribution of supplies to wholesalers, retailers and to the public. The "equitable distribution policy" $\dagger$ of the Wartime Prices and Trade Board, i.e., the allocation of goods in short supply by manufacturers and wholesalers to their customers in proportion to sales in 1941, has worked fairly well in distributing to retailers a wide variety of scarce goods and thus affording consumers a reasonable opportunity of filling their requirements. The distribution of a few important goods is controlled more strictly through permit rationing, by coupon rationing, or through a system of priorities. To assure an even flow of raw materials into war production, the Controllers of the Department of Munitions and Supply in almost all instances have found it necessary to exercise their controls not only over the uses but also over the distribution of the materials under their jurisdiction. This has been true of the Steel Control, Metals Control, the Timber Control, the Rubber Control, the Coal Control, the Oil Control, the Chemicals Control and others. (The development of distribution controls up to 1944 is described in the Canada Year Book 1943-44, pp. 521-526.)

## Licensing

In November, 1942, the establishment of a new business or the undertaking of a new line of business was prohibited, except under permit issued by the Wartime Prices and Trade Board. This control was of particular importance in the field of wholesale and retail distribution. It facilitated the policy of equitable distribution and prevented unnecessary dispersion of scarce goods.

By the summer of 1944, however, a number of considerations had arisen which made it possible and desirable to relax this control. There was some indication that increased supplies of materials would be released for civilian uses, which would make possible a small expansion of civilian production and of the number of distributive outlets. Where supplies were still short, Board techniques for controlling the distribution of goods in short supply had been developed to the point where it seemed unlikely that new businesses would be able to procure supplies at the expense of established businesses. At the same time, existing restrictions on new businesses had become particularly difficult to administer, since they put the Board in the position either of refusing all applications or of discriminating between one type of new business and another, or between one applicant and another. In these circumstances the Board's decisions would have had a significant bearing on future employment opportunities. Decisions of this kind were becoming particularly difficult in view of the increased number of applications coming forward from exservicemen.

In view of these considerations the regulations were revised in June, 1944, and since then permits for new businesses or new lines of business have been issued quite freely. The only occasions for refusal arise where the applicant will require a

[^185]quota or ration of some commodity under strict distribution control (e.g., sugar) or where production of the article to be manufactured is prohibited under the wartime regulations. Since goods which are in short supply continue to be distributed in accordance with the pattern of distribution in 1941, new enterprises (e.g., retail stores) are not entitled to a share of scarce items. New entrants into business are advised of this consideration, and of their obligations with respect to the price ceiling, when the permit is issued.

## Rationing

Rationing has been introduced for commodities in short supply which are essential to all or certain definable groups of consumers and when a ration system is necessary to ensure fair distribution. Two types of ration schemes have been used-coupon and permit. Coupon rationing is used for articles in general use which may be purchased regularly in approximately equal quantities by all users. Other articles, particularly durable goods, which are essential only to certain groups in the community and are purchased infrequently, have been rationed by permit.

Rationing of automobiles, trucks, gasoline and tires, and permit distribution of steel, non-ferrous metals, rubber, chemicals, oil, coal, wood fuel, and other raw, semi-processed and processed materials, are under the jurisdiction of the Department of Munitions and Supply. All other consumer rationing is administered by the Ration Administration of the Wartime Prices and Trade Board through its central, regional and local offices. Local ration boards, numbering about 600 in all and consisting largely of voluntary personnel, assist the Administration by dealing with consumer problems requiring knowledge of local conditions.

Under rationing it is necessary to control supplies through the various stages of distribution as well as sales to consumers. Retailers and wholesalers, therefore, may obtain supplies of rationed goods only by handing back coupons, permits, or equivalent ration documents to their suppliers. The actual handling of coupons has been very much reduced by the use of bank accounts for ration coupons, introduced in March, 1943. Ration banking applied only to foods until April, 1944, when it was extended to include gasoline coupons. When primary producers sell direct to consumers they are required to collect coupons.

The general policy has been to introduce rationing only when it is the one and appropriate solution, because of the additional use of manpower that is required, and because of the administrative burden on the Board's limited staff, on the banks handling the coupon banking plan, and particularly on manufacturers, wholesalers and retailers. The limited and relatively simple range of rationing now in effect involves the services of about 680 full-time employees in the Ration Administration of the Prices Board and a staff of about 6,000 in the local ration boards (mostly part-time voluntary workers), as well as a large volume of time-consuming work on the part of the distributive trades.

Coupon Rationing.-Gasoline.--A coupon rationing plan for gasoline was introduced, effective Apr. 1, 1942, and regional oil control offices were established to administer it. Each vehicle owner was required to register the vehicle with the Oil Controller and to obtain a gasoline allowance and ration book.

A new plan went into effect on Apr. 1, 1943, and with only miner changes this same system remained in effect during the rationing year 1944-45. This plan provided a basic allowance for every passenger car, plus an extra allowance tailored to meet the proved individual needs of car owners eligible for a special category.

Each passenger car was allowed a basic category "AA" ration book. Those eligible, who could prove their need of a special category, were allowed extra coupons for their vocational needs. Two cars in the same category did not necessarily receive the same allowance. Some owners in a special category might be allowed only a portion of a special ration book, others might be granted two or more books or portions of books, according to their proven needs. Motorcycles, commercial vehicles and water-craft were also provided with gasoline under various categories.

Meat.-Rationing of meat was inaugurated in 1943 both because of developing shortages and because it was necessary to set a limit upon what was consumed in Canada in order to make sufficient quantities available to the United Kingdom. Unusually heavy marketings of live stock, combined with a shortage of storage and shipping space, led to the suspension of meat rationing on Mar. 1, 1944. While record production of live stock made it possible to continue suspension throughout the year, the machinery for rationing is being retained for prompt re-introduction if necessary.

Tea and Coffee.-Owing to improved shipping conditions, the tea and coffee ration was increased by 40 p.c. on May 1, 1944, each coupon being made good for either 4 oz . of tea or 16 oz . of coffee and two coupons becoming valid each month. The continued favourable outlook and the substantial stock position led to the termination of rationing on Sept. 19, 1944. Limitations on the serving of tea and coffee by restaurants were cahcelled, but because of restricted cream and sugar supply, regulations as to servings of cream and sugar remained in force. When rationing began, in 1942, the consumption of tea had dropped off severely and of coffee only slightly but, since rationing was lifted, the consumption of tea has increased at an equal rate to that of coffee. By the end of the year the monthly consumption of tea had almost reached the 1939-41 level, but the consumption of coffee was considerably higher than that average.

Butter.-Increased requirements of fluid milk for domestic consumption and of cheese for shipment to the United Kingdom resulted in a reduction in domestic butter supplies during 1944. Because of the shortage, the validity of one coupon was postponed in March, 1944. However, with production still lagging in the peak period (the summer) it was not feasible to continue the full 8 oz . ration and it was found necessary to reduce the ration for the last seven months of the year by postponing the validity of one coupon every eight weeks, bringing the ration to about 7 oz . a week. In December, it was announced that one coupon would be postponed every four weeks during the first part of 1945, making an over-all ration of about 6 oz . per week. This was raised to 7 oz . in March, 1945, due to a slight improvement in stocks.

Sugar.-The sugar supply situation remained tight throughout 1944 but no change was made either in the half-pound ration allowed to ration-book holders or in allocations to industrial users. In December, it was announced that for the first quarter of 1945 industrial users (with some exceptions) and restaurants, etc., would be cut from 80 p.c. to 70 p.c. of their 1941 usage. The ration to consumers will also be slightly reduced during 1945 by having two coupons come due each calendar month instead of every four weeks.

The 1944 canning sugar ration was very much simplified. Instead of the 1943 scheme by which householders made special application to their local ration boards, every ration-book holder was given the right to buy 10 lb . of sugar for canning with
specially designated coupons, five of which became valid on May 25 and five on July 6 . This scheme was much more satisfactory than the method used in 1943, and virtually every household used all its coupons for sugar; the option of exchanging them for preserves coupons was exercised only by a trifling number. The same amount of canning sugar is being provided in 1945 as in 1944 but, instead of using special coupons, additional preserves coupons are declared valid during the various home canning seasons. At a value of one-half pound per coupon, these provide a total of 10 lb . of home canning sugar per ration-book holder with the alternative of using the coupons to buy preserves.

Preserves.-A number of changes were made in the preserves ration. In February, 1944, improved supply conditions made it possible for the Board to double the coupon value of most of the products on the preserves ration though not the sugar alternative which remained unchanged. The coupon value of jam, jelly, marmalade, molasses and canned fruit was doubled. In order to facilitate arrangements between the primary producer of maple syrup and the purchaser who normally buys in quantity and direct from the producer during the production season, one coupon was good for 40 oz . of syrup between Feb. 3 and May 31, after which the coupon value was reduced to 24 oz . Other minor adjustments were made, but the sugar alternate was left at one-half pound per coupon. A large number of householders used this alternative to obtain additional sugar, especially in rural areas.

Evaporated Milk.-To control the distribution of evaporated milk, a priority plan was introduced in October, 1943, whereby sales in areas with adequate supplies of fresh milk were restricted to infants and invalids and the extra quantities were allocated to areas deficient in fresh milk, with first priority given to infants and invalids. Quota arrangements were made for hospitals and other essential users in all areas. This method of distribution conserved stocks of evaporated milk to such an extent that in June, 1944, it was possible to remove the controls in all areas deficient in fresh milk. A further relaxation was announced, effective Feb. 1, 1945, whereby all restrictions were lifted in Manitoba, Saskatchewan, Alberta and British Columbia.

The food-rationing regulations were reviewed during 1944 with a view to clarify$\mathrm{i}_{\mathrm{n}}$ the provisions and facilitating enforcement. Revised regulations were issued in December and, while they involve no change in Board policy, they will enable the Board to keep a more effective control over available supplies.

Permit Rationing.-Permit rationing, as mentioned above, is used to control the distribution of goods that are essential to certain groups in the community or are purchased infrequently, and has been applied chiefly to durable goods.

Under a tire rationing order made on May 15, 1942, a tire rationing representative was appointed for the Rubber Controller at each of the Wartime Prices and Trade Board regional and local offices throughout Canada. The function of the representative was to investigate all applications for new and re-treaded tires, retreading services and new or used tubes. Each such application had to be supported by a certificate from an authorized dealer to the effect that the turnin tire was so worn that it could not give the required service. Tire ration permits were issued only to those whose vehicles were included in a specified list of eligible vehicles. Late in 1943, with the advent of fair supplies of buna-S rubber, it became possible to provide more camelback for re-treading and rationing of retreading services came to an end. Sales of new and used tires and tubes remained under permit.

Early in 1942, the production of automobiles was stopped (see Chapter XIV). To take care of the needs of physicians, nurses, fire-fighting and police departments and other users in essential classifications, 4,480 new cars were set aside in a government "bank". Cars from this reserve pool have been released only for essential purposes on a permit from the Motor Vehicles Control, Department of Munitions and Supply. By an order issued in July, 1944, by the Wartime Prices and Trade Board, purchases of passenger cars were restricted to one per year except in the case of fleet operators who are allowed to purchase one vehicle per year for every five in operation. The order also required dealers to sell used cars in their stocks to persons presenting an essentiality certificate (issued by the tire rationing officer) without requiring a trade-in or any consideration other than the selling price in cash. Manufacturers of trucks have been permitted to divert from military schedules certain models which are stripped of all military equipment and produce them for commercial purposes. All new trucks for civilian purposes are released only when the prospective purchasers have proven their essentiality to the Motor Vehicle Control.

In the case of electric stoves, the supply position in 1944, though far from plentiful, improved enough to dispense with permit requirements, and rationing was discontinued in March. Hot-air furnaces were subject to permit control for a period of six months, from July until December, 1944, after which the permit system was removed.

During the year, small-arms ammunition, which had been previously reserved for essential users, was made available in small quantities for hunting.

As a result of the expanded production program for farm machinery, seven items were removed from rationing. Rationing of most types of farm machinery and equipment will be continued until supply is more in line with demand, so as to ensure delivery of available machinery to farmers most urgently in need of it.

## Priorities

The Priorities Officer of the Department of Munitions and Supply has directed the movement of many materials and products into essential channels. Where controls have been established with respect to particular commodities such as rubber, steel, non-ferrous metals and timber, the Priority Officer works in conjunction with the various controllers of the Wartime Industries Control Board and the handling of priority assistance has often been left to the controller concerned.

The Coal Control has found it necessary to issue orders to restrict consumption of coal and to direct available supplies to the points most needed. The restrictions on consumption by householders and by industry have been on a percentage basis related to previous consumption. To prevent hardship, delivery priorities were granted wherever necessary.

## Section 2.-Combinations in Restraint of Trade*

Dominion legislative measures for aiding and regulating trade include specific prohibitions of operation against the public interest by monopolies and similar commercial combinations. Monopolistic trade arrangements tending to eliminate competition in price, supply or quality of goods, and thereby to unduly increase costs or prices, are illegal under laws including the Combines Investigation Act and Section 498 of the Criminal Code. These laws are designed to assist in achieving

[^186]the fullest desired use of the nation's economic resources by promoting reasonable competitive opportunities for the expansion of production, distribution and employment.

The first Dominion legislation making statutory provision against unlawful restraint of trade was the Act for the Prevention and Suppression of Combinations Formed in Restraint of Trade, passed in 1889 and now effective in ámended form as Section 498 of the Criminal Code. Legislation providing special facilities for the investigation of trusts or combines was first enacted in 1897 and was included in the Customs Tariff. In 1910 a separate Combines Investigation Act was provided, administered under the Minister of Labour. Succeeding Combines Investigation Acts were enacted in 1919 and 1923. Summaries of public proceedings respecting combinations in restraint of trade, including principal prosecutions and investigations, have appeared since 1900 in the Labour Gazette published monthly by the Department of Labour.

The Combines Investigation Act.-The Combines Investigation Act (R.S.C. 1927, c. 26, as amended in 1935 and 1937) provides for investigation of trade combinations, mergers, trusts and monopolies alleged to have been formed or operated in restraint of trade and to the detriment of the public. Participation in the formation or operations of such combines is an indictable offence. Methods of unlawfully lessening competition and controlling trade include arrangements among competitors or others to enhance prices, to fix common selling prices or resale prices, to exclude competitors from business or otherwise to unduly limit production or facilities for manufacturing or distribution. Business combinations and associations for most other purposes are not contrary to public policy, including associations to assemble and supply information on trade operations or to effect useful standardization or simplification of products or services.

Court proceedings following investigations under this statute, completed since the commencement of the War, have included prosecutions of alleged combines of manufacturers and wholesalers of tobacco products, and manufacturers of corrugated and solid fibreboard shipping containers and materials for the manufacture of such containers. In the shipping container cases a total of 21 companies and one individual were sentenced at Toronto to pay fines amounting in all to $\$ 176,000$. All 22 accused were found guilty of offences relating to undue lessening or prevention of competition in the manufacture and sale of corrugated and solid fibreboard boxes or shipping containers, or of liner board and other materials used in the manufacture of shipping containers. Appeals against a number of these convictions were dismissed by the Supreme Court of Canada in 1942.

Thirty-six companies and individuals engaged in the tobacco business, including wholesalers and 7 manufacturers, were convicted by a jury at Edmonton in 1941, of offences of participation in a combination to fix and enhance prices of tobacco products and in operations of a merger, trust or monopoly allegedly controlling tobacco distribution throughout Canada to the detriment of the public. Fines imposed by the Alberta Supreme Court totalled $\$ 221,500$ and ranged in individual amounts from $\$ 250$ to $\$ 25,000$. Appeals against conviction by 35 of these accused were allowed by 4 members of the Alberta Court of Appeals in 1942 on the ground that certain of the accused had been previously charged under Section 498 of the Criminal Code and' on other grounds of procedure at the trial. Reductions of some 10 p.c. in prices of a number of leading brands of tobacco products, exclusive of tax changes, became effective after institution of these proceedings.

Fields of industry and trade to which the Combines Investigation Act is applicable have been placed during the War under direct price and supply controls of the Wartime Prices and Trade Board, the Department of Munitions and Supply and other Government wartime agencies. Accordingly, matters which in time of peace would have been subjects for investigation under the Combines Investigation Act have been commonly referred to and dealt with by the various appropriate wartime authorities. A study of the nature and operations of international trade combinations, including cartels and international patent arrangements, and their relationships to domestic trade combinations and measures existing for their control was undertaken during 1945 under direction of the Minister of Labour.

## Section 3.-Patents, Copyrights and Trade Marks*

Patents.-Letters patent, which in England have been in the gift of the Crown from the time of the Statute of Monopolies (1624) and earlier, are a statutory grant in Canada and have always been so. An Act was passed in Lower Canada in 1824 wherein provision was made for the granting of patent rights to inventors who were British subjects and inhabitants of the Province. Upper Canada passed its Act in 1826, and Nova Scotia and New Brunswick passed theirs at later dates. In 1849, after the Union, a consolidating Act was passed applying to both Upper and Lower Canada, and the B.N.A. Act assigned the granting of patents exclusively to the Parliament of Canada. The Dominion Patent Act of 1869 repealed the provincial Acts and has formed the basis of all succeeding legislation.

Letters patent are now issued subject to the provisions of c. 150, R.S.C., 1927, as consolidated in c. 32,1935 , and application for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa, Canada.

The Patents, Designs, Copyright and Trade Mark (Emergency) Order, 1939, was passed to deal with conditions arising out of the present war. The Order confers on the Commissioner of Patents power to extend the time for doing anything prescribed by the Patent Act, the Design Act and the Copyright Act; to grant licences to manufacture under enemy-owned patents, designs and copyrights; to vary existing agreements; to hold secret or to withhold from publication any disclosure that might be of service to the enemy; and to grant permission to file patent applications abroad. The main object of the licensing provisions under the Order is to permit and encourage the working in Canada of inventions protected by enemyowned patents, which for that reason could not be utilized during the War.

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 12,542 in 1923 and has remained between 7,000 and 8,500 for the past ten years. Of the 7,803 patents granted in 1944, 6,265 or 80 p.c. were from inventors resident in the United States, 480 from Canadian residents and 690 from residents of Great Britain and Ireland, while residents of Germany applied for 86 , of Switzerland for 88 , of Holland for 54 , of France for 18 , of Sweden for 41 and of other countries for 81 .

[^187]
## 1.-Patents Applied for, Granted, etc., in Canada, Fiscal Years 1939-44

| Item | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 |

| Fees received, net............... . § | 365,672 | 350,607 | 333,646 | 351,553 | 348,036 | 366,254 |

During the fiscal year 1943-44 there was increased activity in the chemical arts. New synthetic resins and plasticizers for them were developed. The production of new motor fuels and lubricants received a great deal of attention. Processing of vegetable oils both for foods and for paint vehicles was active. Many new insecticides were invented and inventions of contact masses and catalysts were numerous. In the therapeutic field, many applications dealt with penicillin and vitamin production, particularly synthetic vitamins. In metallurgy, new light alloys and powder metallurgy were the principal lines of invention. Heat treatment of metals and alloys was also prominent. Induction heating and electric welding were very active with the trend towards more efficient condenser welding systems. There was considerable development in small compact fluorescent lamp starters, also in switches and circuit-breakers of all types. Printing telegraph inventions were numerous but there was a falling-off in television applications. In telephony, automatic switching and toll-call registering and billing continued active. War machines maintained the activity of 1942-43. Machine tools, gauges and other apparatus for the production of war material greatly increased in number. In many other classes of invention, also, there were marked increases in applications.

Copyrights, Industrial Designs and Timber Marks.-Registration of copyright is governed by c. 32, R.S.C., 1927, and applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Copyright Act of 1921 (consolidated in c. 32, R.S.C., 1927) sets out, in Sect. 4, the qualifications for a copyright and, in Sect. 5, its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the (Berne) Convention and the additional Protocol . . . or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union, and the United States of America, as well as in Canada.

Protection of industrial designs and of timber marks is afforded under the Design Act (c. 71, R.S.C., 1927) and amendments, and the Timber Marking Act (c. 198, R.S.C., 1927) and amendments. Registers of such designs and marks are kept under the Copyright Branch of the Patent Office, and information regarding them is published in the Patent Office Record.

## 2.-Copyrights, Industrial Designs and Timber Marks Registered in Canada, Fiscal Years 1939-44

| Item | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 |

Trade Marks and Shop Cards.-Since Apr. 1, 1938, the Trade Marks Office has been functioning as a Branch under the Department of the Secretary of State and therefore as an entity separate from the Patent Office with which it had been associated previously.

The Trade Marks Office is charged with the administration of the Unfair Competition Act, 1932, which repealed all previous Acts governing trade marks, and also with the Shop Cards Registration Act, which came into force on Sept. 1, 1938. Applications for registration of trade marks and/or shop cards should be addressed to the Registrar, Trade Marks Office, Ottawa, Canada.

A Register of Trade Marks is kept, in which, subject to the provisions of the Act, any person may cause to be recorded any trade mark he has adopted, and notification of any assignments, transmissions, disclaimers and judgments relating to such trade mark. In order that the public may be kept informed in the matter of trade-mark registration, a list of marks registered appears in the Patent Office Record which is issued weekly.

The Shop Cards Registration Act is designed to afford a measure of protection to organizations, such as trade unions, that formerly were able to register their particular designations as Union Labels under the Trade Mark and Design Act. Registrations under the Act may be renewed every 15 years.

## 3.-Trade Marks and Shop Cards Registered in Canada, Fiscal Years 1939-44

## Section 4.-Weights and Measures*

The object of weights and measures administration is to maintain uniformity and accuracy in the use of legal standards of the country in industry and commerce. An outline of the principal legislation and legal standards is given at p. 527 of the 1941 Year Book.

[^188]Since 1918 the Weights and Measures Service has been administered by the Department of Trade and Commerce. For purposes of administration, the Dominion is divided into 19 districts, each in charge of a District Inspector. The chief rules of administration are given at p. 527 of the 1941 Year Book.

The total revenue collected by the Service in the fiscal years 1943 and 1944 amounted to $\$ 405,790$ and $\$ 410,458$, respectively, while the expenses, including salaries, amounted to $\$ 409,359$ and $\$ 418,752$, respectively.

## Section 5.-Electricity and Gas Inspection*

The Electricity and Gas Inspection Branch of the Department of Trade and Commerce administers three Acts: the Electricity Inspection Act (c. 22, 1928), the Gas Inspection Act (c. 82, R.S.C., 1927) and the Electricity and Fluid Exportation Act (c. 54, R.S.C., 1927).

The Gas Inspection Service was inaugurated on July 1, 1875, and the Electricity Inspection Service in 1894, at which time these two Services were merged to form the Electricity and Gas Inspection Sertices and constituted as a Branch of the Department of Inland Revenue. When the Department of Inland Revenue was merged with other Departments in September, 1918, the Electricity and Gas Inspection Services became a Branch of the Department of Trade and Commerce.

For the purpose of this administration, Canada is divided into 3 divisions and 20 districts: the total staff is 106 . The nature of the work performed by these Services is entirely technical and comprises the control of all types of electricity and gas meters used throughout Canada, and the testing and stamping of every meter used for billing purposes, the object being to ensure the correct measurement of electricity and gas sold. Manufactured gas is also tested to determine its heating value wherever sold in Canada.

The latest report of the Branch shows 444,992 electricity and gas meters tested in the fiscal year 1944, as compared with 502,014 in the preceding year. The total revenue derived from electricity and gas inspection was $\$ 302,988$ as compared

[^189]with an expenditure of $\$ 272,604$. The Branch also collected $\$ 641,953$ as export duty and licence fees under the provisions of the Electricity and Fluid Exportation Act.

Related statistics collected in the administration of the Electricity and Fluid Exportation Act will be found in the Power Chapter of this volume, p. 354.
5.-Electricity Meters in Use, Fiscal Years 1922-44

Notr.-Figures for 1915-21 are given at p. 561 of the 1942 Year Book.

| Year | Number | Year | Number | Year | Number |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Section 6.-Bounties

In cases where it is considered advisable to encourage the production of a particular commodity, bounties paid by the Government are recognized substitutes for protective duties. In the past they have been made use of by Canada to a considerable degree but the only bounties that involved payments in the past few
years were those on copper bars and rods, hemp, and bituminous coal mined in Canada and used in the manufacture of iron or steel. The total amounts paid in bounties on the various commodities between 1896 and the date of expiration and on bituminous coal from 1931 to 1941 are given at pp. 562 and 563 of the 1942 Year Book.

Since the outbreak of war, and especially in recent months, wartime bonuses have been introduced which also encourage the production of particular commodities and therefore have an effect similar to that of bounties. These wartime bonuses are dealt with in the various sections of the Year Book where they have a direct relationship to production, particularly in the Manufactures Chapter.

## Section 7.-Control and Sale of Alcoholic Beverages*

A brief historical outline of Dominion and provincial legislation passed from time to time concerning the control and sale of alcoholic beverages is given at p. 563 of the 1942 Year Book.

The provincial liquor control Acts have been framed to establish provincial monopolies of the retail sale of alcoholic beverages, with the practical elimination of private profit therefrom. Partial exception is made in the retail sale of malt liquor by brewers, or others which certain provinces permit while reserving regulative rights and taxing such sales heavily. The provincial monopoly extends only to the retail sale and not to the manufacture of alcoholic beverages. The original liquor control Acts have been modified from time to time as deemed advisable.

One of the most important Federal wartime restrictions $\dagger$ on the importation and sale of alcoholic beverages was passed in 1942 (P.C. 11374). It provided for the prohibition of the advertising of spirits, wine and beer and limited their importation and sale. The quantity of proof spirits which a distiller might sell in the twelve months ended Oct. 31, 1943, was limited to 70 p.c. of the amount sold in the corresponding previous twelve months. Import for consumption of proof spirits during the same period was also limited to 70 p.c. The quantity of domestic wine which a manufacturer might sell was limited to 80 p.c. of the amount sold in the previous year, and similarly the quantity which might be imported was limited to 80 p.c. Brewers' sales of domestic beer were limited to 90 p.c. of those in the previous year, and the quantity of imported beer which might be entered for consumption was limited to 90 p.c. The sale of alcoholic spirits of strength greater than 70 p.c. proof spirit was prohibited with the exception of spirits which were out of bond or bottled prior to the date on which the Order came into force. The distilling of spirits for use in fortifying wines was also prohibited. The publication of advertisements respecting any spirits, wine or beer, and the advertisement of any person as a distiller, manufacturer or brewer of spirits, wine or beer, or of any person who sells spirits, wine or beer, was prohibited, with the exception of labels or information on the containers.

For the calendar year 1942 the production of beverage spirits in Canada was approximately $9,000,000$ proof gal. and there was also produced $9,800,000$ proof gal. of industrial alcohol: in 1943 the beverage spirits totalled only $2,700,000$ proof gal. whereas the industrial alcohol production rose to $20,300,000$ proof gal. These figures show the profound effect of the War upon the distilling industry. Actually, the alcoholic beverage industry occupies a relatively small place in Canada's in-

[^190]dustrial life. Only about 2 p.c. of the total capital invested in all manufacturing industries is shown to be in the alcoholic beverage group while the number at present employed is less than 1 p.c. of all employees in manufacturing. The production of spirits has been greatly stimulated by war needs, especially for the production of synthetic rubber and other munitions.

Net Revenue from Liquor Control. -In connection with the provincial figures of net revenue shown in Table 8, it is essential to note that they include not only the net profits made by Liquor Control Boards or Commissions, but also additional amounts of revenue received for permits, licences, etc., which are often paid direct to Provincial Governments. In addition to these figures, the Dominion Government, for the fiscal year ended Mar. 31, 1944, collected excise duties amounting to $\$ 31,943,700^{*}$; excise taxes of $\$ 1,710,217$; excise duties on malt amounting to $\$ 35,080,381$; and customs duties of $\$ 9,939,619$.

Apparent Consumption of Liquor in Canada.-It is not possible to obtain accurate figures on Canadian consumption of liquor. Certain Liquor Boards do not publish figures to show sales on a gallonage basis, and even were such data available for all provinces they would not necessarily represent total consumption. For example, the quantities consumed by tourists reach a considerable amount. Further, there is no definite information regarding the illegal traffic in liquor, though inquiry has revealed that such illicit business has, at times, reached fairly large proportions.

Obviously, figures of consumption are subject to error for the reasons mentioned above, and also because no consideration has been given to increases or decreases in the quantities held in stock by the Boards or by licensees.

[^191]Spirits.-Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown as "entered for consumption" are released from warehouses, duty paid, presumably for consumption for beverage purposes in Canada. However, part of these may be exported.

Malt Liquors.-Only a small part of the output of malt liquors is placed in warehouses. The available supply is, therefore, made up of (1) production; (2) changes in warehouse stock; and (3) imports.

Wines.-The apparent consumption of native wines is obtained by dividing the rates of excise tax into the total tax collections. This is believed to furnish a better measure of consumption than the method formerly used (i.e., subtracting exports from production) since part of the product is not consumed in the year of production but is placed in storage for maturing.

## 9.-Apparent Consumption of Beverage Spirits in Canada, Fiscal Years 1934-44

Note.-Figures for the years 1924-33 are given at p. 532 of the 1941 Year Book.

| Year | $\begin{aligned} & \text { Entered } \\ & \text { for } \\ & \text { Consump- } \\ & \text { tion } \end{aligned}$ | Add <br> Exports in Bond | Add Imports | Deduct Re-Exports of Imported Spirits | Deduct Total Domestic Exports | Apparent Consumption |

| 1940. | 2,032,987 | 1,876,964 | 1,612,906 | 38 | 1,704,410 | 3, 818,409 |
| 1941. | 2,371,633 | 3,327, 365 | 1,479,606 | 42 | 3,463,772 | 3,714,790 |
| 1942. | 2,944,391 | 2,096,392 | 1,390, 192 | 3,077 | 2, 879,458 | 4,348,440 |
| 1943. | 3,445,872 | 1 | 1,284,116 | 69 | 1 | 4,729,850 |
| 1944 | 2,620,297 | 1 | 823,422 | 3 | 1 | 3,443,716 |

${ }^{1}$ The large quantities of non-potable alcohol produced and exported for war uses in 1943 and 1944 necessitated a change in the method of estimating the consumption of beverage spirits. The exports in bond and the domestic exports do not now enter into the calculations. Details of the change are given in the report on "The Control and Sale of Liquor in Canada", published by the Bureau of Statistics, price 50 cents.

## PART II.-THE MOVEMENT AND MARKETING OF COMMODITIES

## Section 1.-Interprovincial Freight Movements*

Statistics on interprovincial trade are difficult to collect because there are no barriers to this trade. The only comprehensive statistics available are the loadings and unloadings of freight carried by the railways. The railway traffic is segregated into 76 classes of freight and the differences between loadings and unloadings are the imports and exports by rail for the respective provinces. But freight might be imported by rail and exported by water, such as western grain moved to the Ontario ports of Fort William and Port Arthur. Consequently, the statistics of Table 1 must not be taken as a measure of total interprovincial trade: they indicate only the interprovincial movement of railway freight which is one aspect of that trade.

${ }^{1}$ The freight originating and that terminating will not agree because that which originates within a certain year does not all terminate within the same year. On the other hand, some that terminated in 1941, for instance, originated within the previous year.

## Section 2.-Food Consumption of the Civilian Population, 1935-44

The importance of food consumption in the war years compared with the immediately preceding five-year period has been the subject of special study in the Agricultural Branch of the Dominion Bureau of Statistics owing to its significance on so many aspects of internal economy and to the fundamental value of these statistics. Such consumption figures have been desirable and for commodities such as wheat, alcoholic beverages, meats, etc., have been compiled for a considerable period on a total basis. The War, however, has made it more necessary than ever to establish consumption data on a comparable basis and the foundation has now been laid to build the figures up on a sound base which can be carried into the postwar period.

The series given in Table 2 presents official estimates of supplies of food moving into civilian consumption in pounds per capita, per annum, for the five pre-war years, 1935-39, as an average for comparison with the individual years, 1943 and 1944 (the estimates for 1944 are preliminary and subject to later revision). For those foods rationed under government control, the data have been checked by officials of the Wartime Prices and Trade Board. As pointed out, the figures include supplies moving into civilian consumption only after adjusting total production for imports, exports, changes in stocks, marketing losses, industrial uses and supplies going to the Armed Forces. Per capita figures are derived by dividing the supplies by the estimated total civilian population. All calculations are made at the retail stage of distribution except for meats where figures are worked out at the wholesale stage. The amounts of foods actually eaten would be somewhat lower than the figures cited because of losses and wastes occurring after the products reached the hands of consumers. It should also be pointed out that there are minor discrepancies in certain of the figures since storage stocks in the hands of retailers and consumers were not available for certain commodities. In the main, however, the figures represent the best picture of food consumption data that has been compiled for Canada.

All basic foods have been classified into fourteen main commodity groups. Totals for each group have been computed by using a common denominator for that group (such as milk solids-dry weight-in the case of the milk and milk
products group; fat content in the case of oils and fats; and fresh equivalent in the case of fruits). All foods have been included in their basic form, that is, as flour, fat or sugar, rather than in more highly manufactured forms.

Table 2 replaces the table published at p. 507 of the 1943-44 Year Book so far as the average for $1935-39$ is concerned. A few re-groupings and a number of very minor changes were made, although changes for the individual years so published in the previous table for 1940 to 1942, inclusive, are insignificant.

## Section 3.-The Grain Trade

## Subsection 1.-Governmental Agencies Regulating or Co-operating with the Grain Trade

The agencies exercising control of the grain trade in Canada are: the Board of Grain Commissioners, which administers the provisions of the Canada Grain Act, 1930; and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act, 1935. An article on the Canadian Wheat Board and its operations down to February, 1939, was specially prepared for the 1939 Year Book by T. W. Grindley, Ph.D., Secretary of the Board, and appears at pp. 569-580 of that edition. An account of the organization and functions of the Board of Grain Commissioners, prepared by J. Rayner, Secretary of the Board, appears at pp. 481-482 of the 1941 Year Book.

## Subsection 2.-Distribution, Storage and Inspection of Principal Field Crops

A feature of the disposition of Canadian wheat during the crop year ended July 31,1944 , was the increased export of this grain and the continued heavy animal feeding. A large surplus still existed in the Prairie Provinces and because of the poor crop of feed grains produced in Eastern Canada, especially in Ontario, there were increased quantities of wheat shipped east under the Freight Assistance Policy. The Dominion Government introduced a Freight Assistance Policy in October, 1941, which enabled farmers in the five eastern provinces and in British Columbia to secure western wheat and other grains for feeding purposes. The Dominion Government absorbed the freight cost in moving such grains from Fort William-Port Arthur eastward and from points in western Canada to the Pacific Coast province. As stated above, exports of wheat showed a substantial increase due principally to increased demands from the United States; their imports for consumption reached the large amount of almost $150,000,000 \mathrm{bu}$. during the crop year.
3.-Production, Imports, Exports and Domestic Use of Canadian Wheat and Wheat Flour, Crop Years Ended July 31, 1939-44
(Millions of Bushels)

| Domestic use | 123.5 | $130 \cdot 7$ | 129.4 | 148.9 | $170 \cdot 9$ | $179 \cdot 7$ |
| Totals, Disposition | 283.5 | $323 \cdot 4$ | $360 \cdot 6$ | $370 \cdot 9$ | $385 \cdot 6$ | 523.5 |
| Carryover July 31. | 102.9 | $300 \cdot 5$ | $480 \cdot 1$ | 424.0 | $594 \cdot 5$ | $355 \cdot 9$ |

The domestic and export trade in Canada's five principal grain crops is shown in some detail in Table 4. Further increases took place in the export of all the grains including flaxseed over those of the previous year; practically all this increased export went to the United ${ }_{\alpha}$ States.
4.-Distribution of Canadian Grain Crops, Crop Year Ended July 31, 1944
(Millions of Bushels)

${ }^{1}$ Includes dockage in flaxseed.
Licensed Grain Elevator Capacity in Canada, Dec. 1, 1944.-In the early months of the War the total licensed capacity of grain elevators in Canada was approximately $423,000,000$ bu., but on Dec. 1, 1940, the addition of almost $86,000,000 \mathrm{bu}$. in the form of annexes had raised the storage capacity to $508,700,000$ bu. The erection of new storage buildings continued in 1941 and included the building of a number of large annexes at Fort William-Port Arthur, with a combined capacity of nearly $53,000,000$ bu. Some new storage was put up also in Eastern Canada, and a summary of licensed elevators made at Dec. 1, 1944, indicated that total storage in Canada had risen to $596,000,000$ bu., an increase of $173,000,000$ bu. or approximately 40 p.c. in the storage capacity over 1939.

Wheat Flour.-Per capita consumption of wheat flour in Canada has been well maintained, while export shipments have increased sharply and include a substantial movement to Russia. In 1942 there were 1,171 flour and feed mills operating in Canada as compared with 1, 129 in 1941; there were also 894 chopping mills. The capacity of the flour mills in barrels per day was 98,562 in 1942 and 98,739 in 1941. During the crop year 1943-44 the mills operated very close to the limits of their capacity to produce wheat flour, having reached as high as 97 p.c. in the month of November. Statistics of employees, power installation, value of products, etc., for flour and feed mills for 1942 are given in Table 9 of the Manufacturers Chapter at pp. 392-393.

## Section 4.-Marketing of Live Stock and Live-Stock Products*

Since the outbreak of war there has been a great increase in the demand for live stock and live-stock products in the form of meats, dairy products, poultry and eggs. These products have not only been required in greater volume to meet requirements of Britain and other United Nations, but also the demand in Canada has expanded sharply as a result of greater purchasing power in the hands of the consumers. Live stock thus makes a very important contribution to farmers' income and also provides the basis for a large slaughtering and meat-packing industry in Canada.

[^195]Live-Stock Marketings, 1943.-Total marketings of cattle in Canada in 1943 were $1,243,888$ as compared with $1,288,617$ in 1942. Marketings of calves totalled 643,569 as compared with 771,690 . The declines in these two classes of live stock in 1943 as compared with 1942 were largely the result of the holding back of stock on the part of farmers for the building up of herds. Marketings of hogs through commercial channels in 1943 totalled $7,149,917$ as compared with $6,232,087$ in 1942. Marketings of sheep and lambs were 887,199 in 1943 as compared with 833,147 in 1942.

The interprovincial and export movement of live stock in 1943 showed very little change as compared with 1942. Total shipments in 1943 with revised figures for 1942, in parentheses, were as follows: cattle $460,024(494,115)$; calves 182,156 (219,773); swine $1,582,979(1,175,657)$; and sheep $296,694(274,084)$.

In Table 10 are given the statistics of the grading of animals marketed through stockyards and direct shipments to packing plants for the years 1939 to 1943. In recent years the practice developed of grading an increasing proportion of hogs by the carcass after they have been dressed at the packing plant until finally, at the end of September, 1940, live grading was discontinued. Consequently the figures in this table for hogs graded alive during that year are for nine months only.

Slaughtering and Meat Packing.-The growth of this industry has been accompanied by a concentration of the major part of the production of the industry into a comparatively small number of large establishments, thereby facilitating greater efficiency of operation and the utilization of by-products. There has been a large increase in the number of establishments since 1930, only 76 firms having reported in that year, whereas in 1931 the number was 147, owing to the inclusion of wholesale butchers operating small plants engaged in slaughtering only. The inclusion of these small establishments did not affect materially the value of production of the industry, which increased from $\$ 3,799,552$ in 1870 to $\$ 7,132,831$ in 1890 and to $\$ 22,217,984$ in 1900 . In the next decade it more than doubled, attaining a value of $\$ 48,527,076$ in 1910 , and by 1920 a value of $\$ 240,544,618$ was reported. In 1943 it was $\$ 437,228,577$ (the highest on record), as compared with $\$ 228,500,487$ in 1940 . The principal statistics of the industry for 1942 appear in Chapter XIV, Table 9 at pp. 392-393. The slaughterings reported by establishments in the industry in 1943 were: cattle $1,111,861$, calves 616,959 , sheep and lambs 878,816 , and hogs $7,260,174$.

Establishments that prepare meat products for export are subject to inspection under the Meat and Canned Foods Act. In practice these include all the principal packing establishments but do not include local wholesale butchers included in the slaughtering and meat-packing industry above, nor slaughtering by retail butchers and by farmers for their own use and local sale.

Meat Consumption.-The estimates of per capita meat consumption shown in Table 12 represent the consumption of the civilian population only. In order to arrive at a proper comparison of meat consumption during the war years with the years before the War, figures of supply have been revised to eliminate the amounts of meat used for non-civilian purposes. These deductions include purchases by the Department of Munitions and Supply for the Army, Navy and Air Force, supplies for ships' stores, Red Cross parcels and other similar uses.

The Canadian population figures used to arrive at the per capita consumption estimates have been adjusted for the members of the Armed Forces serving outside of Canada and living in barracks in Canada. Another change from the previously published figures is the separation of canned meat and offals from the fresh meat estimates. All estimates in Table 12 are on a carcass weight basis except canned meats which are in terms of the product.

[^196]Export and Import Trade in Live Stock and Live-Stock Products.-The exports of live stock and live-stock products from the Dominion to the United Kingdom, the United States and all countries, are shown for the calendar years 1940-43, in Table 16 of the chapter on External Trade, at p. 534, and imports in Table 15 at p. 516.

## Section 5.-Cold Storage

Cold-Storage Warehouses.-Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6 ; now consolidated as c. 25 , RSC., 1927), subsidies have been granted by the Dominion Government to encourage the construction and equipment of cold-storage warehouses open to the public, the Act and regulations made thereunder being administered by the Department of Agriculture.

## 13.-Cold-Storage Warehouses in Canada, by Provinces, 1944

Nore.-The figures in this table, which do not include creameries with mechanical refrigeration, were supplied by J. F. Singleton, Associate Director of Marketing Services, Dairy Products and Cold Storage, Dominion Department of Agriculture.

Cold-Storage Stocks.-Since 1917 statistics of stocks on hand of food commodities in cold storage have been published but throughout the years the data have been expanded by many subdivisions of the products and by the inclusion of more foods. Monthly and annual reports issued by the Agricultural Branch of the Dominion Bureau of Statistics give detailed information on cold storage holdings. (See Chapter XXX under "Production".)
14.-Stocks of Food of Canadian Origin on Hand in Cold-Storage Warehouses, in Other Warehouses and in Dairy Factories, 1944

## Section 6.-Merchandising and Service Establishments*

Two comprehensive surveys of the business carried on by retail and wholesale trading establishments in Canada have been made. The first census of this type was undertaken in 1931 in connection with the Seventh Decennial Census. This Census related to the business transacted in 1930 and covered the operations of service establishments; including hotels, in addition to retail and wholesale trading firms. The results for 1930 are contained in Volumes X and XI of the Census of 1931. A second Census of Merchandising and Service Establishments, taken in 1941 as part of the Eighth Decennial Census, related to the business transacted in the census year. The final results of the 1941 Census are now available and are

[^197]summarized in this edition of the Year Book. Volume X of the 1941 Census Report, giving the complete results in so far as retail trade is concerned, has been issued. Volume XI, containing the results for wholesale and service establishments is in course of preparation.

The Census of Merchandising and Service Establishments was taken by mail, the basic mailing list for the purpose having been prepared by the census enumerators at the time the population census was taken. Lists of firms thus secured were supplemented by checking them against the names of firms licensed to operate under the authority of the Wartime Prices and Trade_Board.

While the general scope of the 1941 Census was similar to that for the earlier period there were certain changes in coverage, in definition and in methods of compilation which render exact comparisons between the two years impossible except for particular trades. This is especially true of the wholesale trade and service establishments. In the case of the retail trade, the figures for 1930 have been revised wherever possible in order to bring them to a comparable basis with the results of the more recent census.

## Subsection 1.-Wholesale Merchandising

The concept of wholesale trading is not clearly defined. In its most restricted sense wholesale trading could be taken to include the activities of only the wholesale merchants who buy from producers or other suppliers for resale to the retail trades. From the broader point of view it could be taken to include all trading operations excepting only those incurred in the final stage of distribution to the ultimate consumer. Since most manufacturers sell through intermediaries of one kind or another rather than directly to the final user, this broader concept of wholesaling would include most manufacturing plants within its scope.

The scope of wholesaling as covered in the Census of Merchandising is intermediate between the two extremes. It does not include manufacturing plants as such although it does include sales branches or offices maintained by manufacturers at locations apart from the plant. The wholesale census includes the bulk tank stations operated by the wholesale distributors of petroleum products. It includes grain elevators, marketing co-operative associations, country and city buyers and other assemblers of farm produce. It includes commission houses and various types of agents and brokers in addition to wholesale merchants who transact business on their own account.

Almost 25,000 wholesale establishments were recorded in the results of the 1941 Census and these required the services of 94,627 male and 22,844 female employees to whom $\$ 189,449,000$ was paid in salaries and wages. In addition there were 13,656 proprietors of unincorporated firms working on their own account. Aggregate sales as reported by all types of wholesalers amounted to $\$ 5,290,751,000$, of which $\$ 4,278,342,000$ represented sales made on the account of the firms reporting and $\$ 1,012,409,000$ represented sales made on commission for others. Some types of wholesalers and particularly agents, brokers and some assemblers of primary products transact a considerable proportion of their total business with other types of business in the wholesale field. There is, therefore, a considerable amount of duplication in the total sales figure for the wholesale trade. And, even if this were not so, the total volume of wholesale trading could not be related to the value of retail sales as recorded in the retail section of the census. A large portion of the
business of wholesale establishments is transacted with industrial, commercial or institutional users and never enters the retail channels of trade. Furthermore, an additional proportion of the wholesale trade is transacted with buyers in other countries.

Wholesale Trade by Type of Operation.-Wholesale trading establishments are classified on two bases, first by type of operation according to the functions performed and secondly by kind of business, that is, according to the kind of merchandise carried. The wholesale trade is divided into 31 classes according to type of operation and these are grouped into six major types of which the group known as "wholesalers proper" is the most important. This group is comprised largely of the regular wholesale merchants who perform the full functions of wholesalers, buying and selling on their own account, warehnusing the goods in which they deal and extending credit and delivery service. Included here are also a number of closely related types such as import merchants who deal chiefly in goods of foreign rather than domestic origin, export merchants engaged in the export trade, and voluntary group wholesalers, that is, wholesale merchants more or less closely associated with groups of retail merchants who have come together for advertising or buying purposes. A detailed analysis of the wholesale trade by type of operation is given in Table 15.

## 15.-Bulk Merchandising (Wholesale and Other Non-Retail), by Type of Operation, 1941

Note.-Due to differences in classification and coverage, the figures of this table are not strictly comparable with those for 1930 appearing at pp. 670-672 of the 1934-35 Year Book.

Wholesale Trade by Kind of Business.-In addition to the analysis by type of operation, the wholesale trade is divided into 149 kind-of-business classifications according to the main commodity or commodity groups handled. These 149 individual classes are summarized to form the 25 major groupings shown in Table 16. Among wholesalers proper, firms carrying either a general or specialized line of grocery products came first in point of view of annual sales followed by firms specializing in other food products such as fruits and vegetables, dairy and poultry produce, confectionery and soft drinks. Manufacturers' sales branches or offices transact a substantial volume of business for firms specializing in the metals and metal work trade, the dry goods and apparel trade and the electrical goods trade. They are also important in the distribution of petroleum and petroleum products, groceries and other food products, chemicals, drugs and allied products and machinery, equipment and supplies. Agents and brokers are most numerous in the dry goods and apparel field but transact their greatest volume of business in raw products from the farm.

[^198]Provincial Distribution of Wholesale Trade.-The proportion of the total trade transacted in each province varies for the different major types into which the wholesale field is divided. For wholesalers proper, Quebec came first in 1941 with 36.0 p.c. of the total trade followed closely by Ontario with 34.7 p.c. The Prairie Provinces accounted for 15.4 p.c., British Columbia for 8.1 p.c. and the Maritime Provinces for the remaining $5 \cdot 8$ p.c. Apart from a slightly greater concentration in Quebec and Ontario, the distribution of sales for manufacturers' sales branches was similar to that for wholesalers proper. On the other hand, the Prairie Provinces occupied a much more important role in the other categories. They accounted for $29 \cdot 3$ p.c. of the total sales of all petroleum bulk tank stations, $34 \cdot 2$ p.c. of the sales of all agents and brokers and 66.4 p.c. of the total business done by all assemblers of farm products. The wholesale trade of each province analysed by major type of operation is shown in Table 17.

## 17.-Wholesale Trade by Major Type of Operation, by Provinces, 1941

Nots.-Due to differences in classification and coverage, the figures of this table are not strictly comparable with those for 1930 appearing at pp. 670-672 of the 1934-35 Year Book.

Wholesale Trade in Urban Centres.-The wholesale trade for 1941 in urban centres of over 30,000 population according to the 1941 Census is shown in Table 18. Almost one-half of the total trade was transacted in the two great distributing centres of Montreal and Toronto. These two cities together with Vancouver and Winnipeg transacted 64 p.c. of the total trade while the proportion for all cities of over 30,000 population taken together was 81.8 p.c.

Wholesale Trade by Number of Employees.-In Table 19 the wholesale trading establishments are grouped according to the average number of persons employed in the business during the year. There were 7,053 wholesale establishments in 1941 , or about 28.5 p.c. of the total, which operated without the aid of paid employees. These represent mainly agents and some assemblers of primary products such as country buyers of farm produce, the work in these cases being carried on by the proprietor alone. There were only 90 establishments with as many as 100 employees and these transacted $8 \cdot 7$ p.c. of the total business.

## Subsection 2.-Retail Merchandise Trade

Extent of the Known Retail Trade.-The total known retail merchandise trade in Canada for 1941 as recorded in the results of the Merchandising Census was valued at $\$ 3,667,715,600$ or an average of $\$ 319$ per person. By far the greatest proportion of this business was transacted through retail stores. The total volume of business transacted by retail stores in 1941 was $\$ 3,440,901,700$ but included in this figure are certain components that cannot be considered as retail merchandise sales. Some retail stores secure a minor proportion of their total revenue from repair work while others sell merchandise on a wholesale basis to a limited extent. On deducting these subsidiary amounts from the over-all turnover of $\$ 3,440,901,700$, there remains a figure of $\$ 3,354,499,100$ which represents retail merchandise sales through retail stores.

In addition to the business done by retail stores, sales of merchandise at retail are made by some other types. Hotels sell meals, alcoholic beverages, tobacco, magazines, etc. Wholesale establishments transact a small volume of retail business. Some manufacturing plants and manufacturing bakeries and dairies in particular sell directly to the ultimate consumer. Co-operative associations and line elevator companies are engaged in the retail distribution of farmers' supplies. Retail sales are made by itinerant operators and also by persons carrying on a retail business from their homes as a minor activity in conjunction with their main occupation.

The retail business of the types mentioned above was measured in the census and is summarized in Table 20. The two chief unmeasured elements in the total retail trade are the sales made on farmers' markets in urban centres and the sales made direct to householders by producer-distributors of dairy products.

## 20.-Total Known Retail Merchandise Trade, 1941

Retail Stores and Sales.-The remainder of this section is confined to an analysis of the operations of retail stores as considered in the broader sense to include not only stores but also filling stations, restaurants, lumber yards and all other types of outlets engaged chiefly in the sale of merchandise at retail. Including all such types, there were 137,331 retail outlets recorded in the 1941 Census. These required the services of 297,047 full-time and 95,561 part-time employees to whom $\$ 314,438,000$ was paid in salaries and wages. In addition, there were 131,823 proprietors of unincorporated firms working on their own account. Annual sales totalled $\$ 3,440,902,000$ and year-end stocks were valued at $\$ 540,864,000$.

Retail Trends, 1930-41.-The scope of the 1941 Census varied slightly from that of 1930. On reducing the results of the two surveys to a comparable basis increases of 14.8 p.c. in the number of retail outlets and 25.6 p.c. in the dollar volume of business transacted were recorded between the two census periods.

The $25 \cdot 6$ p.c. gain in dollar sales between 1930 and 1941 under-estimates the increase in the physical quantity of goods sold because prices were lower in the latter than in the former period, the Bureau's retail price index averaging 8 p.c. lower in 1941 than in 1930. Although the method used in constructing the retail price indexes does not warrant their use in deflating the dollar sales figures, it is apparent that the increase in the physical volume of goods purchased in 1941 compared with 1930 exceeded the $25 \cdot 6$ p.c. increase in dollar volume.

The trend in sales between 1930 and 1941 was not uniform for all provinces. Trends for five provinces-New Brunswick, Quebec, Ontario, Alberta and British Columbia-were similar, with increases ranging from 20 to 30 p.c. Saskatchewan sales were practically unchanged while, on the other hand, a marked increase of 67.0 p.c. in Nova Scotia reflected the intense wartime activity in that Province.

The results for individual trades also reveal varying trends. An outstanding development in retail trade during recent years has been the marked increase in the business of stores selling both groceries and fresh meat and classified as combination stores. A pronounced increase both in the number and business of filling stations also took place between 1930 and 1941. Marked developments took place in the restaurant and the variety-store trades. Comparative figures showing the number of stores and value of sales in 1930 and 1941 are given in Table 22.

[^200]Commodity Distribution of Consumer Dollar.-The first of the two diagrams shown below illustrates the relative proportions of the consumer's dollar spent for various groups of commodities through all types of retail outlets. That is
to say, these percentages are based on the sales made not only through retail stores but also on the retail sales made through other channels such as manufacturing bakeries, dairies and the other outlets to which reference is made on p. 604.

In 1941 food products came first in point of view of dollar sales accounting for 26.79 p.c. of the total expenditure. Automotive products, including not only purchases of new and used motor-vehicles but also gasoline and oil, tires and tubes, parts and accessories, came second forming $15 \cdot 22$ p.c. of the total. Clothing and shoes came next with 14.59 p.c. followed by household effects with 8.26 p.c. Included in household effects are all such items as household appliances, house furniture and furnishings, radios, stoves and ranges. Included also are such items as china, glassware, silverware, soaps and other cleaning compounds. Alcoholic beverages, including sales made by hotels in addition to those by all other retail outlets, amounted to 6.57 p.c. of the grand total retail sales.

Large-Scale Merchandising.-The development of large-scale merchandising in Canada, as in other countries, has followed two main lines of growth. There has been the marked development of large individual establishments such as department stores in which many commodities are sold under one roof. In the second place there has been the growth of the chain-store system of distribution.

Although large-scale merchandisers occupy an important place in the retail marketing structure of Canada, nevertheless the bulk of the trade is still in the hands of independent merchants. Nor has there been any increase in the proportion of the total business transacted by chain and department stores during recent years. In fact, the proportion of the total retail trade transacted by independent stores increased from 68.83 p.c. in 1930 to 70.33 p.c. in 1941. Comparative figures for independent stores, chains and department stores are given in Table 23.

24.-Retail Merchandise Trade in All Stores by Selected Kinds of Business and Types of Operation, 1930 and 1941-concluded

[^202]Chain Stores.-For census purposes chains are taken to mean all groups of four or more stores (except department stores) under the same ownership and management and carrying on the same kind of business. All department stores are considered as independents irrespective of the number of stores operated by any one company.

There were 533 chain companies operating in Canada in 1941 and these had 8,011 stores and $\$ 643,000,000$ sales, an amount which formed $18 \cdot 7$ p.c. of the total retail trade in the census year. In 1930 the corresponding ratio was $18 \cdot 3$ p.c. The proportion of the total retail trade transacted by chains increased between 1930 and 1941 for combination stores and shoe stores. The chain ratio for drug stores remained unchanged while marked decreases in the proportion of the total trade transacted by chains were recorded for grocery stores and for filling stations. The decrease in the former instance may be attributed to the development of many chain retail outlets from grocery to combination stores through the addition of a meat department. The decline in the importance of the chains in the filling-station trade resulted from the transition of many stations formerly operated by the large petroleum distributors to outlets of the leased-station type in which the premises were owned by the wholesale distributor but were operated by an independent proprietor.

Retail Merchandise Trade in Urban Centres.-The retail merchandise trade for 1930 and 1941 in urban centres of over 10,000 population, according to the 1941 Census, is shown in Table 25. A notable feature of these figures is the wide variation in different centres in the relationship between population and retail sales, per capita sales standing highest for cities that act as distributing centres for populous areas and lowest for industrial satellite cities adjacent to larger centres. In this connection it should be noted that, in the census, mail-order sales are attributed in whole to the city in which the mail-order office or house is located rather than being spread over the territory from which that mail-order business is drawn. This procedure has the effect of inflating the figures for certain cities in so far as per capita business is concerned.

Retail Merchandise Trade, by Size of Business.-Retail stores vary between wide limits when classified on the basis of volume of annual sales. Of the 137,331 retail stores in operation in 1941 there were 43,292 or $31 \cdot 6$ p.c. of the total which had annual sales of less than $\$ 5,000$ each and these transacted only $2 \cdot 9$ p.c. of the total business. At the other end of the scale there were 413 stores each with
annual sales of half a million dollars or more in 1941 and these transacted 18.9 p.c. of the total business. Distribution of stores according to amount of annual sales in 1930 and 1941 is shown in Table 26.

## 26.-Retail Merchandising Establishments Grouped According to Annual Sales, 1930 and 1941

| Group | Stores |  |  |  | Annual Sales |  |  |  |

[^203] sales for each store. Figures for such stores were omitted from this table.

Retail Merchandise Trade, by Number of Employees.-In Table 27 the retail stores are classified on the basis of the average number of paid employees used in the business during the year. More than 41 p.c. of the stores operated without the aid of paid employees, the work being carried on entirely by the proprietor or by the proprietor with the assistance of family members not carried on payroll. There were only 135 stores employing as many as 100 employees each but these accounted for 12 p.c. of the total volume of retail sales.

## 27.-Retail Merchandising Establishments Grouped According to Number of Employees, 1941

Norz.-Most of the figures in this table have been revised since the publication of the 1943-44 Year Book.

| Group | Stores |  | Sales |  | Total Employees |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Number | P.C. | Amount | P.C. | Number | P.C. |
|  |  |  | \$'000 |  |  |  |
| Stores ReportingNo employees. | 56,907 | 41.4 | 297,279 | $8 \cdot 6$ | - |  |
| 1 employee.... | 27,578 | 20.1 | 305, 295 | 8.9 | 27,578 | 7.0 |
| 2 employees. | 16,987 | $12 \cdot 4$ | 323,248 | $9 \cdot 4$ | 33,974 | 8.7 |
| 3 employees. | 10,479 | 7.6 | 282,381 | $8 \cdot 2$ | 31,437 | 8.0 |
| 4 employees. | 6,732 | $4 \cdot 9$ | 225,400 | $6 \cdot 6$ | 26,928 | 6.8 |
| 5-9 employees | 12,303 | $9 \cdot 0$ | 631,188 | 18.3 | 78.381 | 20.0 |
| 10-19 employees. | 1,118 1 | $3 \cdot 0$ | 417, 041 | $12 \cdot 1$ | 52,720 | 13.4 |
| 20-49 employees. | 1,779 313 | 1.3 0.2 | 390,544 | 11.4 4.5 | 50,982 19 | 13.0 5.0 |
| 100 employees or over | 135 | $0 \cdot 1$ | 151,683 413,844 | 12.5 12.0 | 19,567 71,041 | 5.0 18.1 |
| Totals, All Store | 137,331 | 100.0 | 3,440,902 | 100.0 | 392,608 | 100.0 |

Gredit and Instalment Sales.-Not all stores were able to give separate figures for cash and credit sales. Based on the proportions of cash and credit sales for stores reporting, total retail sales on a credit basis are estimated at $\$ 977,216,000$
for 1941 or 28.4 p.c. of the total volume of business transacted. This credit business includes open account or charge account credit sales valued at $\$ 666,596,000$ and another $\$ 310,620,000$ worth of instalment business. The total retail trade may thus be divided in the proportions 71.6 p.c. cash, 19.4 p.c. charge or open account credit and 9.0 p.c. sales on the instalment plan. Instalment sales are most important in trades specializing in the sale of durable merchandise such as motor-vehicle dealers, furniture stores and household appliance or radio dealers. Nevertheless, a considerable volume of instalment business is transacted by stores specializing in the sale of men's or women's apparel.

## 28.-Credit and Instalment Sales, by Kind-of-Business Groups and for Selected Kinds of Business, 1941

| Kind of Business | All Stores |  | Stores Reporting Extent of Credit Facilities |  |  | Instalment Sales Reported |

## 28.-Credit and Instalment Sales, by Kind-of-Business Groups and for Selected

 Kinds of Business, 1941-concluded
${ }^{1}$ Includes kinds of business for which separate figures are not shown.
${ }^{2}$ Includes second-hand group.

Retail Sales by Commodities.-Not all stores were able to give an analysis of their annual sales on a commodity basis but a large number did furnish this information. From the commodity figures thus obtained percentage distributions of total sales by commodities were computed for eachkind-of-business classification. These percentage distributions were then applied to the total sales of all stores in the corresponding classification in order to extend the commodity data to cover the entire field including both the reporting and non-reporting firms. While the commodity totals thus secured must be regarded as estimates, they are considered to contain a fair measure of accuracy especially when taken by the broad commodity groups shown in Table 29.

## 29.-Estimated Sales of Commodities in Retail Merchandising Establishments, 1941

Norg.-The figures in this table have been revised since the publication of the 1943-44 Year Book.

## Subsection 3.-Retail Service Establishments

The Census of Merchandising and Service Establishments included in its scope not only firms engaged in the retail and wholesale merchandise trades but also a large number of different types of service establishments in which the annual revenue represented receipts from services performed rather than from the sale of merchandise. A considerable number of firms overlap these two functions, being engaged partially in selling goods and partially in providing services. Establishments were assigned in their entirety to either the merchandising or service section of the census on the basis of their major activity as measured in terms of annual receipts.

There were altogether 49,271 service establishments coming within the scope of the 1941 Census which had annual receipts of $\$ 254,678,000$. These employed an average of 62,781 full-time and 21,647 part-time employees who received $\$ 62,984,000$ in salaries and wages. In addition there were 50,224 active proprietors.

A marked increase in the number of hairdressers or beauty parlours operating in Canada took place between 1930 and 1941. Results of the census for the former year show 2,385 beauty parlours with receipts of $\$ 6,109,300$. In 1941 there were 5,619 beauty parlours with receipts of $\$ 12,844,000$. Results of the 1941 Census also show 8,306 barber shops and 604 combined barber shops and beauty parlours with total annual receipts of $\$ 17,719,000$.

Hotels.-Results of the Census of Hotels for 1941 show 5,646 hotels in Canada with annual receipts of $\$ 147,488,156$, of which $\$ 78,695,770$ or 53 p.c. represents the sale of alcoholic beverages, $\$ 57,706,350$ or 39 p.c. was obtained from room rentals and the sale of meals while the remaining 8 p.c. represents receipts from miscellaneous sources. The 5,646 hotels included 4,844 establishments which were open for
twelve months of the year and these had receipts of $\$ 140,612,327$. The total number also included 802 hotels which operated only during certain months, generally from May to September, and these had receipts of $\$ 6,875,829$.

The 5,646 hotels had a total of 128,980 guest rooms. They employed an average of 25,277 male and 20,725 female employees who received $\$ 31,736,551$ in salaries and wages. In addition there were 4,606 proprietors of unincorporated firms who were actively engaged in the business.

Motion Picture Statistics.-There were 1,269 motion-picture theatres in Canada in 1943 and these had a total of 205,826,197 paid admissions and box office receipts (exclusive of amusement taxes) of $\$ 52,567,989$. In addition there were 99 itinerant operators and these had $1,051,065$ admissions and $\$ 308,557$ receipts. Dominion and provincial amusement taxes amounted to $\$ 13,381,361$.

## Subsection 4.-Annual Estimates of Retail Trade

Intercensal Estimates, 1931-40.-The taking of a complete census of all retail trading establishments is a major undertaking, involving the securing of reports from some 137,000 retail stores. It is impossible to make a complete survey of this kind on an annual basis. In order to provide some measure of the extent of retail merchandise trade in the intercensal years, annual surveys were undertaken for the years 1931 to 1940 for which reports were secured from a sample of some 25,000 stores representing various trades and located in different parts of the country. The year-to-year trend as derived from this sample was applied to the census figure for 1930 in order to give estimated total sales for subsequent years. When these annual estimates were extended to 1941 it was found that the estimate for that year deviated by about 10 p.c. from the total figure secured for the census. This deviation has been spread back over the intercensal years in order to bring the estimated and census figures for 1941 into line. The revised indexes of sales are given in Table 32.

[^207]Estimated Retail Sales, 1942 and 1943.-The annual estimates of retail sales, when extended to 1942 and 1943, serve to give some indication of the developments that have taken place in retail purchasing since the latest census year.

A marked contraction in the retail automotive trade, following the cessation of new car production for civilian use in March, 1942, forms the most outstanding feature in these trade statistics. Sales for this group of establishments, including not only motor-vehicle dealers but also filling stations and stores specializing in the sale of automotive parts and accessories, are estimated at $\$ 311,331,000$ for 1943 , a decline of 47.7 p.c. below the 1941 level. Restrictions on the production of radios and household appliances resulted in sales for stores specializing in these commodities standing 25 p.c. lower in 1943 than in 1941. Furniture store sales were down by 6.5 p.c.

On the other hand many trades recorded substantial gains between 1941 and 1943. The restaurant trade was up by $44 \cdot 1$ p.c. Gains ranging from 20 to 30 p.c. were recorded for the food group of stores, for country general stores, for the apparel group of stores, for drug stores, jewellery stores and government liquor stores. Sales for all retail stores are estimated at $\$ 3,753,874,000$ in 1943 , up $9 \cdot 1$ p.c. over the census figure of $\$ 3,440,902,000$.
33.-Retail Merchandise Sales, 1941, and Estimated Sales, 1942 and 1943, by Provinces and by Kinds of Business

## Section 7.-Co-operation in Canada*

An outline of the growth of co-operative activity in Canada and of the legislation passed in connection therewith, is given at pp. 543-545 of the 1942 Year Book, and brought up to date at pp. 536-541 of the 1943-44 edition.

## Subsection 1.-Trends in the Field of Co-operation in 1943

Co-operative business organizations in Canada occupy an important position in the marketing of agricultural products, purchasing of farm supplies, and in operating co-operative stores. A new development is the expansion of co-operative housing in Canada. Houses have been built on the co-operative plan in a number of cities where the housing shortage is acute.

During 1943, returns were received from 1,675 active co-operative associations, 853 of which marketed farm products, and 1,248 purchased supplies for their members, or operated co-operative stores. This larger number of co-operatives purchasing supplies for their members is explained by the fact that many marketing co-operatives purchase supplies for their members as well. For example an association marketing fruit may also purchase fertilizer and spray material for the members, and an association marketing live stock may also purchase feed.

[^209]Shareholders and members financially interested numbered 585,826 and patrons were estimated to number 608,680. Total assets, after making provision for bad debts and depreciation, amounted to $\$ 187,888,195$ of which the book value of plant and equipment was $\$ 37,273,480$. The members' equity amounted to $\$ 62,850,226$ consisting of paid-up share capital of $\$ 13,325,560$ and reserves and surplus of $\$ 49,524,666$. This was an increase of $\$ 4,810,155$ in net worth over 1942 . From 1942 to 1943 total working capital increased from $\$ 20,442,155$ to $\$ 25,576,746$. The relation of net worth to total assets decreased from 45 p.c. in 1942 to 33 p.c. in 1943. This was due mainly to the large borrowings that were made to offset the stocks of grain in storage.

Sales of farm products amounted to $\$ 295,499,274$, sales of supplies and merchandise $\$ 55,689,141$ and other revenue $\$ 1,597,183$, or a total business of $\$ 352,785,598$.

Marketing.-Sales of grain and seed by grain co-operatives amounted to $\$ 134,000,000$ for the year ended July 31, 1943, in comparison with a total of $\$ 87,000,000$ for the previous year. Sales value of marketings of grain, dairy products, live stock, fruits and vegetables, and poultry increased from $\$ 189,000,000$ in 1942 to $\$ 272,000,000$ in 1943 or by 44 p.c.

A useful measure of co-operative activity on a regional basis is obtained by dividing the total amount of co-operative marketings for an area by the number of farms which it contains as reported in the latest census. On this basis British Columbia led all provinces for the crop year 1942-43 with average marketings of $\$ 642$ per farm, Saskatchewan was in second place with $\$ 621$ per farm, Manitoba $\$ 553$, and Alberta $\$ 461$. The average for Canada as a whole was $\$ 403$. During the years 1932-43, the annual average for all of Canada was $\$ 233$ per farm. Farm products marketed co-operatively in Saskatchewan in the twelve years have averaged $\$ 383$ annually per occupied farm. British Columbia ranked second with $\$ 338$, Alberta was third with $\$ 315$, and Manitoba stood in fourth place with $\$ 268$ of co-operative marketings per farm.

The grain growers are the most completely organized of the commodity cooperative marketing groups. Approximately 43 p.c. of all commercial marketings of grain were handled through co-operatives. Organizations of live-stock producers handled 17 p.c. of the total commercial marketings of cattle, calves, hogs, and sheep and lambs. Co-operatives are credited with handling about 14 p.c. of the total sales of fluid milk and manufactured dairy products and roughly 35 p.c. of the fruits and potatoes marketed. Marketing co-operatives handled approximately 24 p.c. of the main farm products entering commercial channels of trade.

Merchandising.-Sales of feed, fertilizers or spray material amounted to $\$ 19,000,000$ in the crop year ended July 31,1943 . Of this amount $\$ 13,000,000$ was purchased for members of co-operatives in Quebec and Ontario. Sales of food products amounted to $\$ 12,600,000$, Nova Scotia, Saskatchewan, and Ontario having a combined sales value of $\$ 7,200,000$. Sales of petroleum products and auto accessories amounted to $\$ 9,900,000$ with Saskatchewan handling $\$ 6,600,000$ of this amount.

Fishermen's Co-operatives.-In addition to co-operatives marketing agricultural products, there were 67 fishermen's co-operative associations operating in 1942 with an estimated membership of 4,826 . The total volume of business amounted to over $\$ 2,600,000$.

Credit Unions.-At the end of 1943, almost 1,800 credit unions were chartered in all the provinces of Canada. This was an increase of approximately 20 p.c. in the number of credit unions since 1942. During 1943 Canadian credit unions loaned $\$ 16,900,000$ for "provident and productive purposes".

Insurance.-For the year ended Dec. 31, 1942, 400 farmers' mutual fire insurance companies carried insurance risks amounting to more than $\$ 1,306,655,800$. These companies are purely mutual companies. They are controlled and directed by their farmer members for mutual benefit. All companies are incorporated under either Dominion or Provincial legislation.

Miscellaneous and Service-Type Co-operatives.-Several kinds of services are rendered by co-operative associations such as telephone systems, housing, medical and hospital service plans, and burial societies. At the end of 1942 there were 2,387 telephone systems and 105,075 connected telephones. The total investments in these systems was over $\$ 22,000,000$.

In recent years there has been rapid expansion in medical and hospital plans with an increasing enrolment of participants. Complete statistics concerning these plans are not as yet available.

The housing co-operative movement is a new enterprise in Canada and is making good progress. In the Nova Scotia Housing Commission Report for the year ended Nov. 30, 1942, it is stated that homes in seven housing communities were either completed or are in process of completion at that time. These houses were built by the members themselves and financed by the Housing Commission. In Alberta, four co-operative building associations have been incorporated since 1942. One association has already built 40 houses and 5 more are under construction. Two associations have not yet started operations but intend to build homes immediately, and the members of one of those associations propose also to make improvements on their homes. Members of another association are collecting their savings now so that they may be ready to operate and build new homes as soon as the War ends. Co-operative housing projects have been undertaken in approximately 18 towns or cities in the Province of Quebec, one of which comprises 125 houses. At least 10 more projects are under consideration in that Province.

Co-operative principles have also been applied to transportation-members' transportation by bus to and from work, or trucking farm products- restaurants, seed cleaning, printing and publishing, electrification, and room and board facilities.

## PART III.-COMMERGIAL FAILURES

According to Sect. 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was actually passed by the Dominion Parliament in 1869, applying to the four original provinces. This Act was renewed by c. 46 of the Statutes of 1874 . In 1875 a new Insolvency Act ( 38 Vict., c. 16) applicable to the whole Dominion was passed, but was repealed in 1880. After this there was no Dominion legislation on the subject of bankruptcy until 1919. During the interval of nearly 40 years, commercial failures were handled under provincial legislation, and the statistics relating to such failures during this period were compiled and published by two commercial agencies, R. G. Dun and Co., and the Bradstreet Co. Statistics of commercial failures dealt with under the Dominion Bankruptcy Act of 1919 have been compiled and published by the Dominion Bureau of Statistics since 1920. (See pp. 629-631.)

The three Sections of this Part, although closely related so far as subject matter is concerned, cover different aspects of the field and the statistics presented in each Section are not comparable.

Statistics of industrial and commercial failures in Canada, given in Section 1, are compiled by Dun and Bradstreet, Inc. This concern is a mercantile agency interested primarily in credit information, and it is not to be expected that their data would be compiled on the same basis as figures of the Dominion Bureau of Statistics or the Superintendent of Bankruptcy. Their statistics are established on a broader basis than those of Section 2, inasmuch as they include, as well as bankruptcies in general, insolvencies under provincial companies' Acts and such proceedings as bulk sales, bailiffs' sales, landlords' seizures, etc., when loss to creditors results. On the other hand, they do not include assignments of farmers (under the Farmers' Creditors Arrangement Act) or of wage-earners, so that, as a general rule, their totals run lower than those in Section 2. As pointed out, between 1875 and 1919 the agencies, now Dun and Bradstreet, Inc., were the only source of figures of commercial failures, and their statistics have an added value because they present an unbroken historical series, though not on a comparable basis since 1934 (see text preceding Table 1). Dun and Bradstreet, Inc., have ceased to publish statistics of assets since 1940 .

Section 2, on the other hand, is limited to bankruptcies and insolvencies made under Dominion legislation, such as the Bankruptcy Act (including the Farmers' Creditors Arrangement Act), the Winding Up Act and the Companies' Creditors Arrangement Act, but not failures, sales, or seizures carried out apart from such Dominion legislation. In the field covered, however, Section 2 is broader than Section 1, inasmuch as the Dominion Bureau of Statistics figures include failures of individuals such as wage-earners and farmers.

A word should be added as regards the value to be placed upon figures of assets and liabilities. Such values are estimates made by the debtor and, unfortunately, are not made uniformly. The human equation enters into them to a considerable degree and they must be accepted with this qualification.

Section 3 is limited to the administration of bankrupt estates by the Superintendent of Bankruptcy, under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that
values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can be assumed that this applies in even greater degree to the extended fields covered in Sections 1 and 2.

## Section 1.-Industrial and Commercial Failures from Private Sources

An historical table giving failures for Canada and Newfoundland, by classes, for the years 1915 to 1935 is given at p. 969 of the 1936 Year Book. Early in 1936, however, Dun and Bradstreet, Incorporated, from whose reports these figures were taken, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises previously included in manufacturing and a new class for commercial service. Real estate companies, holding and other financial companies and agents of various kinds were dropped. These changes have had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities are reduced more in proportion to the number of failures since the companies eliminated usually ran high in indebtedness. The present figures of Table 1 are not comparable with those given at p. 969 of the 1936 Year Book, because of the above reasons and because the earlier statistics cover Canada and Newfoundland whereas these are for Canada only.

## 1.-Industrial and Commercial Failures in Canada, by Classes, 1934-44, and by Provinces, 1944

| Totals, 1944. | 33 | 1,042 | 12 | 242 | 33 | 514 | 15 | 265 | 3 | 56 | 96 | 2,119 |

In 1944 Quebec and Ontario accounted for 64 p.c. and 19 p.c., respectively, of the total failures in the Dominion. As regards liabilities, Quebec accounted for 65 p.c. of the total as compared with 13 p.c. registered for Ontario.

# 2.-Industrial and Commercial Failures in Canada, by Provinces, 1942-44 

(From Dun and Bradstreet, Incorporated)
Note.-Comparable figures for 1934-41 are given in the corresponding table of previous Year Books.

| Province | Failures |  |  | Liabilities |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1942 | 1943 | 1944 | 1942 | 1943 | 1944 |
|  | No. | No. | No. | \$'000 | \$'000 | \$ 000 |
| Prince Edward Ysland. | ${ }_{11}^{3}$ | $\mathrm{Nil}_{4}$ | Nil | ${ }_{148}$ | $\overline{5}$ | - |
| Nova Scotia....... | 11 | 4 3 | 2 1 | 146 76 | 53 80 | 55 19 |
| Quebec......... | 327 | 100 | 61 | 4,590 | 1,149 | 1,369 |
| Ontario.. | 129 | 42 | 18 | 1,178 | 1,750 | 280 |
| Manitoba. | 34 | 8 | 2 | 315 | 180 | 210 |
| Saskatchewan | 56 | 20 | 3 | 381 | 63 | 7 |
| Alberta... | 20 | 1 | 3 | 148 | 7 | 57 |
| British Columbia | 18 | 8 | 6 | 472 | 352 | 122 |
| Totals. | 609 | 186 | 96 | 7,344 | 3,634 | 2,119 |

According to Dun and Bradstreet, Incorporated, the number of commercial failures during the war years has shown a steady decrease year by year, and whereas before the War the great majority of failures were in retail trading establishments, the proportion in that group has also shown a steady decrease during the past five years. In 1939, out of a total of 1,299 failures, 874 or 67 p.c. were in retail trade, while in 1944 of the 96 failures, 33 or 34 p.c. were in retail trade.

## Section 2.-Commercial Failures as Compiled by the Dominion Bureau of Statistics

Under the Bankruptey and Winding Up Acts (R.S.C. 1927, cc. 11 and 213) certain documents relating to estates administered under these Acts have, since July, 1920, been forwarded to the Dominion Statistician for statistical analysis. However, changes in the Acts effective in 1923 affected the comparability with 1921 and 1922, the two earliest full years for which statistics are compiled. The series, therefore, begin with 1923, except for the analysis by branches of business, in which case 1924 is the first year compiled. The statistics of this Section cover all bankruptcies and insolvencies that fall under Dominion legislation including assignments of individuals and farmers.

## 4.-Commercial Failures in Canada, by Provinces, 1934-44

Note.-Figures for 1923-33 will be found at p. 570 of the 1942 Year Book.

| Year | P.E.I. | N.S. | N.B. | Que. | Ont. | Man. | Sask. | Alta. | B.C. | Total |

## Section 3.-Administration of Bankrupt Estates

The administration of bankrupt estates is now supervised by the Superintendent of Bankruptcy (appointed in 1932) with the object of conserving so far as possible the assets of bankrupt estates for the benefit of the creditors. Figures from the first report are given at p. 1039 of the 1934-35 Year Book, and those for subsequent years are to be found in later editions.

[^211]The Farmers' Creditors Arrangement Act came into effect Sept. 1, 1934. Assignments are made only in those cases in which the farmers are hopelessly insolvent and in many cases the assignments follow the rejection of proposals submitted to the creditors. Receiving orders are made only in cases in which the farmers have failed to fulfil the terms of their proposals as accepted by the creditors and approved by the court. Table 9 shows only statistics of estates closed by assignments or receiving orders and does not indicate the proposals that have been approved and are being carried out under the Farmers' Creditors Arrangement Act.

Canada, nearly 4,000 miles in length from east to west, with the main topographic barriers running in a north-south direction, and a relatively small population of $11,975,000$ (1944 estimate) thinly distributed along the southern strip of this vast area, presents unusual difficulties from the standpoint of transportation. Different parts of the country are shut off from each other by areas of rough, rocky forest terrain, such as the region lying between New Brunswick and Quebec, the
areas north of Lakes Huron and Superior, dividing the industrial region of Ontario and Quebec from the agricultural areas of the prairies, and the barriers interposed by the mountains of British Columbia. To such a country with a population so distributed and producing mainly for export, as do western agriculturists or, like manufacturers, largely for consumption in distant portions of the country itself, cheap transportation is a necessity of life.

In order to appraise the value of each of the agencies of transportation, this Chapter of the Year Book, after treating of Government control over agencies of transportation and communication in Part I, deals with the four main agencies, namely, carriers by rail, road, water and air, in Parts II, III, IV and V, respectively. In each Part the arrangement is intended to show: (1) the plant, equipment and facilities available; (2) the cost to the Canadian people; and (3) the traffic carried or services performed, in so far as statistics are available for each agency.

Scarcely less important, from the social and economic viewpoints, is the development of communications in a country so vast and with population centres so scattered. The Post Office has been a great though little recognized factor in promoting solidarity among the people of different parts of the Dominion, and this same desirable object is now being further aided by radio, while telegraphs and telephones have done much to annihilate distance-the rural telephone, in particular, having been of great social and economic benefit in country districts. The press, assisted by cheap telegraph and cable rates, and by low second-class mail rates to all parts of the country, has been helpful in developing national sentiment. These means of communication are dealt with in Parts VI, VII, VIII and IX.

## PART I.-GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION

## Section 1.-Government Control over Agencies of Transportation

## Subsection 1.-Permanent Controls

With the modern development of new forms of transportation, it is becoming increasingly important to realize that the several agencies of transportationcarriers by rail, road, water and air-are, or should be, inter-related parts of an integral whole where each agency has its place in the efficient provision of necessary transportation in Canada. The Dominion Department of Transport was organized on Nov. 2, 1936, under authority of c. 34 of the Statutes of 1936, to unify in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation and radio.

The business of transportation and communications is, generally speaking, a 'natural monopoly', i.e., a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. For this reason there has been a strong tendency toward consolidation and amalgamation over the past half century. The outstanding example of these consolidations in Canada in recent years is the concentration of control of the railways of the country in the hands of the Canadian Pacific Railway Company and the Canadian National Railways.

Such control inevitably brings with it elements of monopoly and possible overcharge, and it has been deemed advisable in Canada, as in other countries, to set up authorities to control the rates to be charged and the other conditions under which services to the public are to be rendered by common carriers. This control, so far as the railways within the jurisdiction of the Dominion Government are concerned, is now in the hands of the Board of Transport Commissioners. From time to time the regulatory authority of the Commission has been extended to a limited extent to other utilities (see below).

Besides the Board of Transport Commissioners, there exist, in several of the provinces, bodies that undertake among their duties the supervision and control of local public utilities operating under the jurisdiction of the provinces, and the regulation of their rates for service. Among these are the Ontario Department of Municipal Affairs (formerly the Railway and Municipal Board of Ontario, established in 1906), the Quebec Commission of Public Utilities established in 1909, the Nova Scotia Board of Commissioners of Public Utilities and the Public Utilities Commission of Manitoba. In the three most westerly provinces these same duties are performed by provincial Departments of Railways.

The Board of Transport Commissioners for Canada.*-Introductory paragraphs explaining the situation that led to the introduction of railway regulation by commission in Canada, as well as other information relating to the organization of the Board, procedure, judgments, etc., are given at pp. 633-634 of the 1940 Year Book.

Powers of the Board.-With regard to transport by rail, these cover matters relating to the location, construction and operation of railways. The most important of these powers has to do with rate regulation. Passenger rates are divided into standard and special; freight rates into standard, special and competitive. Standard rates are maximum rates and the only ones that must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval, provided that a change of rates has been advertised. But important rate adjustments usually come to the notice of the Commission, for a changed rate alters the extent of the territory in which a shipper can compete and on this account he is apt to appeal the case to the Commission.

By an amendment to the Railway Act, the regulation of telephone, telegraph and express rates was given to the Commission, but with narrower powers than were given to it in dealing with railways. By the Transport Act, 1938, as amended by 8 Geo. VI, c. 25 (1944), and since Jan. 15, 1939, following a proclamation of the Governor in Council to that effect, the Board has also the power to issue licences to ships engaged in the transportation of passengers or goods on the Great Lakes, as defined in Sect. 2, Subsection 1 (f), of the Transport Act, 1938. The Board is required to perform the functions vested in it under the Transport Act and the Railway Act with the object of co-ordinating and harmonizing the operations of all carriers engaged in transport by railways and ships. The Board may require every applicant for a licence under the Transport Act to establish public convenience and necessity to its satisfaction and take into consideration the financial responsibility of a licensee or applicant. The Board may, in the licence, state the ports between which the ships named therein may carry goods or passengers and the schedule of services which shall be maintained; every standard tariff and every amendment and supplement thereto shall require the approval of the Board before it becomes effective.

[^213]The powers of the Board with regard to air transport were transferred to the Air Transport Board on Sept. 11, 1944, following a proclamation of the Governor in Council which put into force the Act of Parliament, 8 Geo. VI, c. 28 (1944), which amends the Aeronautics Act and creates the Air Transport Board.

## Subsection 2.-Wartime Controls*

The extensive transportation systems of Canada were, in peacetime, capable of handling a much greater volume of traffic than conditions required. However, since the outbreak of war in 1939, the vastly increased movements of raw materials to the factories, and of munitions, troops, etc., to the theatres of war, have placed a heavy burden on existing transportation facilities. Early in the War, the Government took steps to ensure that the vital transportation requirements of the war effort would be met and since then many important measures have been put into effect. The chief agencies of transportation control are the Canadian Shipping Board, and the Controllers of Ship Repairs, Transport and Transit and the Administrator of the Wartime Prices and Trade Board.

## Control of Interior Transportation

Transport.-A Transport Controller, responsible to the Minister of Transport, was appointed in November, 1939, to facilitate the orderly and expeditious transit of war materials, troops, etc., and to prevent congestion at freight terminals and at the seaboard. The Transport Controller has ex officio membership on: the Canadian Shipping Board, the United Kingdom Ministry of War Transport, the Shipping Priorities Committee, Wartime Industries Control Board, the Fairmont Co., Ltd. (the Crown company dealing in rubber for wartime industries) and of various committees dealing with the movement of essential and critical materials, and acts as Transport Adviser to the various Government Departments, including Munitions and Supply, National Defence, Transport, Agriculture, etc.

The Transport Controller exercises control of goods, including civilian and defence materials, moving between points in Canada, and to the various ports for export, and also supervises the movement of civilian passengers and military, naval and air force personnel.

The work has grown to the point where a division of duties between. the Executive Office and the actual supervision of rail and ship movement has become necessary. The Executive Office, assisted by committees of railway traffic and operating officials, deals with the more general questions and has issued orders curtailing the movement of civilian passenger traffic by the abolition of cheap fares for excursions, holidays, weekends and large parties. Improvement in the handling of Armed Forces personnel travelling in Canada has also been studied and, in conjunction with the Transit Controller, efforts have been made to induce employers to arrange staff vacations so that the stress of this travel is more evenly distributed. Other activities of the Controller are the regulation of the use of tank and refrigerator cars and of the maximum loading of freight cars and the chartering of passenger and freight vessels for essential war projects.

The supervision of ship and rail movement, which is done in combination with the U.K. Ministry of War Transport, has necessitated the organization of the work into 10 divisions, 5 of which deal directly with the export of : (1) Foodstuffs

[^214]to the order of the U.K. Ministry of Food; (2) Army vehicles and landing craft; (3) Explosives, guns, aeroplanes and general Government cargo; (4) Ammunition and agricultural implements; (5) Canadian military stores for overseas. The other 5 divisions deal with: (a) Office of Defence transportation permits, aluminum and general average matters; (b) Transportation arrangements for projects in Labrador, Newfoundland, etc., and the chartering of vessels for such projects; (c) The Maximum Carloading Division; (d) The Carloading Inspection Bureau; (e) The Superintending Sea Transport Officer.

Civil Transit of Passengers.-Local transportation facilities, such as buses, street cars and taxicabs, in many congested urban centres have been required to handle record traffic as a result of the War. Faced with an emergency situation, the Department of Munitions and Supply appointed a Transit Controller in August, 1941.

In peacetime any increase in public transit traffic can be handled by a corresponding increase in vehicles. But with the manufacturing facilities, raw materials, and manpower of North America concentrated on the output of war supplies, only a limited number of new passenger vehicles have been available for replacement and expansion of civilian services. However, much of the excess load is being handled by private automobile. Under a scheme, known as the Wartime Industrial Transit Plan, approximately 53,000 employee-owners are given special gasoline and tire privileges in return for transporting fellow employees to and from work. Designed not only as a partial solution of the transit problem, but also as a conservation measure, the plan has proved a success. Under it, fewer cars are being driven by employees going to work; as of Oct. 31, 1944, a total of 209,566 passengers were being carried each working day. The gasoline saving has been substantial.

Since the autumn of 1941, the Transit Control has placed all buses, street cars, taxis, drive-yourself cars and ferries under strict regulation. The Control has staggered hours, reduced street-car stops, assisted in improving the repair facilities of transit operators, sponsored the rearrangement of seating in existing vehicles, helped hard-pressed operators to obtain new equipment, endeavoured to solve parking problems, restricted non-essential bus operation and reallocated the buses thus made available.

At the end of August, 1944, in some 19 centres all across Canada the hours of approximately 424,000 office, factory and store employees, including 39,000 Government employees in Ottawa, were staggered.

In an effort to meet war needs, drastic curtailments were made in duplicative and comparatively unessential city and inter-urban bus services. The restrictions on the inter-city lines alone resulted in the diversion of one-third of the total annual mileage to direct services for war industries and the Armed Forces. By the end of September, 1944, it had been possible to establish 248 new bus services for the employees of war industries, and 94 for the Armed Services, as well as to add some 800 vehicles to runs already serving war industries and concentrations of Armed Forces.

As a result of arrangements made by the Control, a new ferry was purchased to serve North Vancouver war industries, and an additional ferry was put into service between Halifax and Dartmouth, N. S.

Wartime transit committees have been set up in nearly all the large cities in Canada to advise the Controller on local conditions.

Truck Control.-Within recent years the development of commercial-truck transport has been of great importance, both for local and for inter-urban transportation of goods. With the War, manufacture of new trucks was cut off and the use of tires and gasoline restricted. These factors, taken together with the increased traffic produced by the War and the fact that other transportation agencies such as the railroads were also over-loaded, made it necessary to introduce controls over trucking.

To conserve trucks, gasoline and rubber, jurisdiction over truck transport was first lodged with the Administrator of Services of the Wartime Prices and Trade Board who, early in 1942, was given power to regulate and control transportation of goods by vehicle, rates to be charged, routes to be followed, loads to be carried, empty or dead running time and the kinds of goods that might be transported as well as to direct or arrange for the pooling of facilities. Immediately thereafter, orders were issued by the Wartime Prices and Trade Board restricting retail and wholesale deliveries generally and deliveries by various specialized types of operators such as laundries, ice, bread, milk and cream pick-up, construction supplies, etc. In July, 1942, it was ordered that no private commercial vehicle, with specified exceptions, could be operated more than 35 road miles from its normal home station except under permit.

In September, 1944, control over certain truck deliveries was transferred to the Transit Controller, Department of Munitions and Supply, in a move towards centralizing, under the same authority, the control over motor-vehicle transportation of both passengers and goods. Transit Control, in co-operation with Oil Control, fixes gasoline and mileage ceilings for all trucking categories, and investigates and reports to Motor Vehicle Control on applications for new trucks, trailers, buses, passenger cars and all other motor-vehicle equipment.

## Control of Shipping

The Canadian Shipping Board.-The Canadian Shipping Board was established in December, 1939, as an autonomous wartime body reporting to the Government through the Minister of Trade and Commerce. The former Ship Licensing Board, which had been set up on Sept. 5, 1939, was incorporated in it as the Ship Licensing Committee. In March, 1945, the headquarters of the Board were transferred from Ottawa to Montreal. This change is expected to facilitate the Board's work, since the Transport Controller, Park Steamship Company, the British Ministry of War Transport, and many steamship operators, exporters and importers have their offices in Montreal.

The Board consists of the Chairman, who is also Director of Shipping, the Transport Controller, and senior representatives of the Royal Canadian Navy and the Departments of External Affairs, National Revenue, Trade and Commerce and Transport. The day-to-day operations of the Board are conducted by its Chairman and Technical Advisers, most of whom are executives drawn from private shipping companies, serving for a nominal salary of $\$ 1$ per year.

To facilitate its close liaison with the United Kingdom Ministry of War Transport and with the United States Government shipping authorities (i.e., the United States Maritime Commission, the War Shipping Administration and the Office of Defence Transportation), the Board has representatives at London, England, and Washington, D.C. There are also representatives at Bombay, India, Vancouver, B.C., Halifax, N.S., and Saint John, N.B., to assist the Board in matters relating to local shipping.

The principal functions of the Board are to control and direct all Canadian ocean, coastal and inland waters shipping in order to see that it is used to maximum efficiency in the war effort; to advise the Government on matters relating to water transport; to maintain essential sea and inland waters commerce; and to administer, not only its own regulations governing Canadian vessels, but, in co-operation with the United Kingdom Ministry of War Transport and the United States War Shipping Administration, other measures designed to encourage neutral shipping to operate in the interests of the United Nations.

In the field of international shipping the Board assumed new responsibilities during 1944. In August, an "Agreement on Principles, having reference to the continuance of co-ordinated control of merchant shipping" was signed in London by representatives of the Governments of the United_Kingdom, the United States, Norway, the Netherlands, Canada, Belgium, Greece and Poland, and subsequently by France, India and Australia. The chief purpose of the Agreement is to ensure that adequate merchant ship tonnage will be available for all military and other tasks necessary for and arising out of the completion of the war in Europe and the Far East, and for the supplying of all liberated areas, as well as of the United Nations generally and the territories under their authority. The Agreement becomes effective on the conclusion of hostilities with Germany, and will expire six months after the suspension of hostilities with Japan. It provides for the establishment of a United Maritime Authority, consisting of a United Maritime Council, which will meet at intervals to consider questions of policy, and of a United Maritime Executive Board, with two branches, one in London and the other in Washington.

Since the establishment of the Board in 1939, its work has greatly increased in scope and in volume, as a result of the rapid wartime expansion which has taken place in the size of the Canadian merchant marine and the creation of the United Maritime Authority.

Ship Repairs and Salvage Control.-Because much of the construction work on the facilities required for the quick handling of ship repairs has been completed, the Ship Repairs and Salvage Control is able to meet the increased demands made upon it by all types of naval and merchant vessels of the United Nations. These demands are, in many instances, the result of direct enemy action and sometimes extensive repairs are necessary. In addition, ship salvage operations are being conducted and valuable cargoes are being re-shipped to original destinations or diverted to Canadian war industry.

The Controller of Ship Repairs and Salvage, operating with the U.K. Ministry of War Transport, ship owners, ship agents, shipyards, dry-dock operators, machine shops, foundries, ship salvage operators, cargo salvage operators and ship insurance agencies, assures quick action in the event of repairs being required in Canadian ports. To reduce delays to a minimum, members of the engineering staff of the Control are constantly in attendance at each important port.

## Control of Civil Aviation

Immediately after the War of 1914-18 it became apparent that aviation was destined to play an important part in Canadian development and that it would therefore be necessary to introduce legislation both to encourage and to control flying. The Aeronautics Act, 1919, which is still the bulwark of Government control over civil aviation, was passed for that purpose. Briefly, it makes the Dominion Government responsible for: study and research in conjunction with other bodies;
the construction and maintenance of airports and the naming, of air routes; the conclusion of international agreements on civil aviation; the preparation and enforcement of regulations governing aviation; the licensing of technical personnel, aircraft and airports; the investigation of accidents; and in general, the supervision of all matters connected with aeronautics.

The question of Dominion Government versus Provincial Government control over aeronautics was placed before the Privy Council on Oct. 22, 1931. The Privy Council handed down the unequivocal decision that the Dominion Government has control over all matters pertaining to civil aviation and aerial navigation in Canada.

The Aeronautics Act, 1919, placed the control of civil aviation with the Air Board in 1919 and under the Department of National Defence in 1922. The steady increase in operations made it necessary to bring civil aviation under civil control, and the Department of Transport Act, 1936, transferred the control of the Civil Aviation Branch of the Department of National Defence to the Department of Transport.

By the Transport Act of 1938 the powers of the Board of Transport Commissioners were extended to cover air transport.

The Air Regulations, 1938, passed pursuant to the Aeronautics Act, prescribe the conditions under which civil flying in Canada may be carried out. All aircraft operators licensed in Canada are subject to these regulations, whether flying in Canada or abroad.

Aircraft are required to fly on the right side of a recognized airway, and at different elevations, in order to avoid the risk of collision. A separation in time is also provided; and a system of control, which records and reports all the movements of all aircraft on a particular airway, has been set up. Control centres have been established at Toronto and Montreal; and the airways controlled by these centres extend from Windsor to St. John's, Newfoundland and as far north as North Bay, Ont. The Canadian system fits into and is completely co-ordinated with a similar system in the United States.

On Apr. 2, 1943, a statement was made in the House of Commons by the Rt. Hon. W. L. Mackenzie King outlining the official Air Policy of Canada (see Canada Year Book 1943-44, pp. 572-574).

Air Transport Board.-The Aeronautics Act was amended in 1944 making provision for setting up an Air Transport Board to license all civil air carriers and to advise the Government on questions of policy with regard to the development of new air routes.

The Minister of Munitions and Supply, in a statement to the House of Commons on Mar. 17, 1944, announced that Trans-Canada Air Lines would be given the task of operating all trunk air lines in Canada and all international air lines. He stated that steps would be taken to ensure that the control of any civil air transport company was divorced from association with any surface transport company within one year after the end of hostilities in Europe. The amended Aeronautics Act makes provision for putting this policy into effect. The Minister also stated that the licensing of new air routes would be deferred until such time as the men serving overseas were in a position to participate in them.

The Transport Act under which the licensing of civil air routes had been placed in the hands of the Board of Transport Commissioners was amended by deleting from it all reference to the control of aviation since such licensing now rests with the newly created Air Transport Board.

Air Priority Control.-Pressure of war business necessitated the establishment of a priority system on all domestic air lines in order to ensure the movement of essential passengers and goods. Order in Council P.C. 3556 of Apr. 30, 1942, gives the Minister of Munitions and Supply, to whom the Air Services Branch is responsible, authority to direct an air carrier to give priority in the movement of such passengers or goods as may be necessary to the war effort. One control office is established in the Airways Section of the Civil Aviation Division at Ottawa and another at Edmonton.

## INTERNATIONAL AIR CONFERENCES*

Canada has built a world reputation as an efficient operator of civil air services. and has contributed extensively to combat air services and in the training of air pilots.

As long ago as the spring of 1942, Canadian Government officials undertook a study of international aviation and that study is still being continued.

Commonwealth Meetings.-At London in October, 1943, Canada participated in a preliminary exchange of views among members of the Commonwealth with respect to international discussions on air transport policy. The Minister in Charge of Air Services reported to the House of Commons on Mar. 17, 1944 (see Canada Year Book 1943-44, pages 574-75), and tabled a tentative and preliminary draft of an International Air Transport Convention upon which Canadian officials and the Government had been working.

Further exchanges of views on international aviation between members of the Commonwealth were held in Montreal in October, 1944, preceding the International Conference on Civil Aviation held in Chicago, and again immediately following this Conference. Exchanges of views related to air connections between the various regions of the Commonwealth.

It was agreed to establish an advisory body to be known as the Commonwealth Air Transport Council to keep under review the progress and development of Commonwealth air communications, serve as a medium of exchange of views and recommendations between Commonwealth nations on civil aviation, and to consider and advise on such civil aviation matters as any Commonwealth gevernment may desire to refer to it. It will meet from time to time in the various countries represented on the Council.

In a public statement, the Minister in Charge of Air Services stated: "The basis upon which Canada desired to proceed had already been brought forward in the Commonwealth conversations in London, October, 1943, namely, that in services connecting the various parts of the Commonwealth, each member government should operate the services, or sections of services, adjacent to its own territory, and that out of these co-operative efforts a broad pattern of connecting links, joining the areas of the Commonwealth, would emerge. As a result of the discussions in Montreal, plans were outlined which are now under consideration by the Commonwealth governments concerned, and which are the subject of continuing negotiations."

International Conference.-The International Conference on Aviation opened in Chicago on Nov. 1, 1944, with fifty-four of the United Nations represented. The Permanent Convention agreed upon covers the general field of air navigation

[^215]and also deals with matters of commercial air transport. It establishes a permanent international agency to be known as the International Civil Aviation Organization. Member States agree not to use civil aviation for purposes inconsistent with its objectives, which are to:-
(a) Ensure the safe and orderly growth of international civil aviation throughout the world;
(b) Encourage the arts of aircraft design and operation for peaceful purposes;
(c) Encourage the development of airways, airports, and air navigation facilities for international civil aviation;
(d) Meet the needs of the peoples of the world for safe, regular, efficient and economic air transport;
(e) Prevent economic waste caused by unreasonable competition;
(f) Ensure that the rights of contracting States are fully respected, and that every contracting State has a fair opportunity to operate international airlines;
(g) Avoid discrimination between contracting States;
(h) Promote safety of flight in international air navigation;
(i) Promote generally the development of all aspects of international civil aeronautics.

The International Civil Aviation Organization.-This Organization is to be composed of an Assembly on which all member States will be represented, and a Council composed of representatives of twenty-one States designated by the Assembly. The Assembly will act upon reports of the Council or matters referred to it by the Council, will vote on the annual budget and financial arrangements of the organization, deal with amendments to the Convention, and with any other matters not specifically assigned to the Council.

The Council is to be chosen every three years and will elect its own President. The Council is to collect, examine and publish information regarding air navigation and the operation of air services, including operational costs and subsidies. It will . consider any matter relating to the convention which may be referred to it by a member State, and report any infractions of the Convention or any failure to carry out recommendations or determinations of the Council. Where a State fails to take appropriate action after notice of infraction, the infraction is to be brought to the attention of the Assembly.

In the event of any disagreement between member States relating to the interpretation or application of the Convention, the dispute is to be decided by the Council whose decision is to be binding unless reversed on appeal to the Permanent Court of International Justice, or to an arbitral tribunal set up for the purpose. Member States undertake not to allow the operation over their territory of any airline which has failed to conform with a decision reached under this procedure.

Pending the ratification and final establishment of the I.C.A.O., an interim agreement was adopted and an Interim Organization will be established. This organization and agreement by which it is established, has the same general form as the permanent organization. The Interim Organization is to remain in existence until the Permanent Convention has come into force or until another international aviation conference has agreed on other arrangements, but in no case for more than three years.

The Conference selected Canada, which of course has signed the Interim Agreement, as the seat of the Interim Organization which will in turn, at its last meeting, choose the seat for the permanent body. The first Council of the Interim Organization was also elected at Chicago in accordance with principles embodied in both the

Permanent Convention and the Interim Agreement. Under these principles, the Council will have 21 members, including Canada, and must give adequate representation to:-
(1) The principal States of chief importance in air transport;
(2) Those principal States, not otherwise included, which make the largest contribution to the provision of facilities for international civil air navigation;
(3) Those principal States, not otherwise included, whose election will ensure that all major geographical areas of the world are represented.
The Chicago Conference also produced two supplementary agreements, the Air Transit Agreement (the Two Freedoms Agreement) and the Air Transport Agreement (the Five Freedoms Agreement). These Agreements give the following rights:-
(1) The right to cross a foreign country non-stop.
(2) The right to land in a foreign country for fuel and for servicing.
(3) The right to carry passengers, freight and mails from the country of origin of the aircraft to any place in the world.
(4) The right to bring passengers, freight and mails back to the country of origin from any place in the world.
(5) The right of an aeroplane to pick up passengers, freight and mails in a foreign country, for conveyance to another foreign country.
(6) The right of an aeroplane to pick up passengers, freight and mails in a foreign country for delivery to another point in the same country. This right is commonly known as 'cabotage'.
Canada has signed the Air Transit Agreement to assist in opening up the airways of the world but has not signed the Five Freedoms Agreement, thus retaining full control over all rights to pick up and set down traffic in Canada. The Dominion retained its rights to enter into bilateral agreements with other countries as Canadian interests may indicate.

Bilateral Agreements.-Delegates from Canada and the United States met at New York City on Jan. 25, 1945, for the purpose of agreeing on services between the two countries and supplementing the Chicago Agreement. This bilateral agreement on regular air services supersedes the agreements made between Canada and the United States in 1939 and in 1940.

Under the new bilateral agreement the following routes are designated as United States routes, to be operated by carriers designated by the Government of the United States: Boston to Moncton; Boston to Montreal; New York or Boston to Quebec; New York to Montreal or Ottawa, but not to both on the same flight; Washington to Montreal or Ottawa, but not both on the same flight; Buffalo to Toronto; Fargo to Winnipeg; Great Falls to Lethbridge; Seattle to Vancouver; Seattle to Whitehorse; Fairbanks to Whitehorse.

Carriers designated by the Government of Canada may operate on the routes: Halifax to Boston; Toronto to New York; Toronto to Cleveland; Toronto to Chicago; Port Arthur to Duluth; Victoria to Seattle; Whitehorse to Fairbanks.

## Section 2.-Government Control Over Agencies of Communication*

The Development and Control of Radio-communication in Canada.First radio-communication (or ""wireless"," "as it is sometimes called) in Canada took the form of radiotelegraphy and was established in 1901 between Chateau Bay, Que., the terminus of the Government north shore telegraph line on the north side of Belle Isle Straits, and Belle Isle, Newfoundland. The stations were erected by the

[^216]Marconi Wireless Telegraph Company of London, England, for the Telegraph Division of the Department of Public Works. Their purpose was to replace the existing cable service between the island and the mainland, which was continually being interrupted by ice. The first transatlantic radio message was transmitted from Glace Bay, N.S., to Clifden, Ireland, in 1903. The rapidity with which this new science expanded soon called for some kind of control, both domestic and international.

The first legislation under which radio-communication was controlled in Canada was the Wireless Telegraph Act of 1905 (c. 49, Edw. VII). In the Revised Statutes of Canada, 1906, this Act became "Part IV-Wireless Telegraphy" of the Telegraphs Act, being c. 126, R.S.C. 1906. In June, 1913, Parliament passed the Radiotelegraph Act, and radio-communication in Canada and in ships registered in Canada, was thereafter administered under the provisions of this Act and of the Regulations that were issued thereunder from time to time. The administration of the Act was vested in the Minister of the Naval Service at that time and subsequently in the Minister of Marine and Fisheries, and still later in the Minister of Transport. Owing to the rapid development in radio-communication during the years that followed its passage, this Act was eventually repealed and replaced by the Radio Act, 1938, which became effective on July 1, 1938. In the interim, however, the Canada Shipping Act had already been revised (see 1936 Year Book, pp. 11071108), and those sections of the former Radiotelegraph Act pertaining to radio equipment in ships had been deleted from the latter and embodied in the revised Canada Shipping Act, 1934.

The first measures to govern radio-communication having international scope were embodied in the "Radiotelegraphic Convention" which was drawn up at Berlin in 1906, and which was adhered to by the Dominion Government in 1907. Keeping pace with development, a revised International Radiotelegraph Convention was signed at London, in 1912, by nearly all the principal countries of the world, including Canada. The War of 1914-18 contributed to the delay in another international conference being held and it was not until 1927 that the International Radiotelegraph Convention of Washington was signed replacing the London Convention of 1912. Again, with a view to consolidating international control of the various types of communication services, the International Telecommunication Convention of Madrid, 1932, was drawn up and regulations governing all classes of communications were annexed thereto. Up to this time, international telegraph and telephone communication services had been governed by the International Telegraph Convention of St. Petersburg, 1875. Although this Convention had never been revised until its fusion with the Radiotelegraph Convention at Madrid, the service regulations issued in accordance with its provisions had been amended at frequent intervals in order to keep pace with developments.

In this connection, it is interesting to note that in the majority of countries, particularly in the old world, the domestic telegraph and telephone services are State-owned and -operated, whereas in Canada and in the United States practically all such services are owned and operated by private enterprise. For this reason, neither Canada nor the United States subscribed to the St. Petersburg Convention.

For the same reason neither of these two countries is an adherent to the Telegraph and Telephone Service Regulations issued under the Telecommunication Convention of Madrid, 1932, as revised from time to time. The latest revision of
the Radio-communication Regulations annexed to the said Convention, and to which Canada subscribes, was effected at an administrative conference held at Cairo, Egypt, in 1938.

Transmission of the human voice by radio (radiotelephony) first came into being in Canada in 1918. Apart from its many applications in the field of marine and commercial communications, its value as a means of entertainment and of rapid communication with the public soon became apparent. The Marconi Wireless Telegraph Co. of Canada, Ltd. (now the Canadian Marconi Co.) was licensed by the Department to establish an experimental broadcasting station at Montreal with call letters XWA. After an experimental period, regular organized programs were begun in 1920 by the same Company. In 1922 the establishment of broadcasting stations on a general scale had commenced and 52 private commercial and amateur broadcasting licences were granted during the fiscal year 1922-23. The matter of Dominion jurisdiction was questioned by certain of the provinces on different occasions, but on Feb. 9, 1932, the judicial committee of the Imperial Privy Council ruled that the control and regulation of radio-communication rested within the jurisdiction of the Dominion Parliament. Following this ruling, the Canadian Radio Broadeasting Act was passed in 1932 and power was vested in the Canadian Radio Broadcasting Commission to control and regulate radio broadcasting in Canada. Without the use of transcontinental transmission wires and broadcasting stations of its own the Commission did not, at the outset, engage in national broadcasting on a substantial scale. In April, 1933, the nucleus of a national network of stations was secured by the acquisition and operation of the three stations of the Canadian National Railways situated at Moncton, Ottawa and Vancouver.

A further phase of national radio broadcasting in Canada was entered upon in 1936, when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission (see pp. 731-735). The new Act gave the Corporation much wider powers in the operation of the system, and was modelled very largely along the lines of the Act governing the British Broadcasting Corporation. The technical control of all broadcasting stations reverted to the Minister of Transport, who was also empowered to make regulations for the control of any equipment liable to cause interference with radio reception.

However, pursuant to the provisions of the Public Service Rearrangement and Transfer of Duties Act and of the War Measures Act, the duties, powers and functions vested in the Minister of Transport under the Radio Act, 1938, and the Canadian Broadcasting Act, 1936, were transferred to the Minister of Munitions and Supply by Orders in Council passed in July and September, 1940. An Order in Council, passed in June, 1941, transferred jurisdiction over the broadcasting activities of the Canadian Broadcasting Corporation to the Minister of National War Services. Further Orders in Council in October and November, 1944, transferred the duties, powers and functions in respect to radio, previously vested in the Minister of Munitions and Supply, to the Minister of Reconstruction.

In addition to being subject to the provisions of the Radio Act, 1938, and of the regulations issued thereunder, the administration of radio in Canada, including broadcasting, is subject to the International Telecommunication Convention (Madrid, 1932) and the Radio-communication Regulations annexed thereto (Revision of Cairo, 1938) as well as to regional agreements such as the Inter-

American Radio-communications Convention, the North American Regional Broadcasting Agreements, Havana, 1937, and the Inter-American Arrangement respecting Radio-communications, including the Revision thereto, of Santiago de Chile, January, 1940.

Wartime Control of Radio Messages.-Under the supervision of the Chief Radio Censor, Department of Transport, responsibility for observing censorship regulations governing message content is placed upon the licensees of more than 1,000 public and private commercial radio stations throughout the Dominion. All services in connection with inland point-to-point radio censorship are undertaken on a voluntary co-operative basis without expense to the Government.

Wartime Control of Radio-Broadcasting.-In May, 1942, the five branches by which Censorship functions were previously performed, which were in five different Departments, were brought together in the Department of National War Services under a Director of Censorship. In the same month, the staffs of Radio and Press Censorships were amalgamated to form a new branch under the name of Censorship of Publications. Three Assistant Directors of Censorship to be known as Chief.Censors of Publications were created, one of whom acts as Chief Censor of Publications-Radio.

The aim of radio-broadcasting censorship is twofold: (a) to prevent the release of information of value to the enemy; (b) to prevent the release of material intended or likely to impair Canada's war effort or to prejudice Canada's relations with foreign powers.

The broadcast of public meetings is no longer prohibited. Any public gathering may be broadcast provided the radio station in charge of such broadcast accepts full responsibility for observance of Defence of Canada Regulations.

While spoken-word broadcasts are generally restricted to the English, French, Welsh and Gaelic languages, nevertheless, broadcasts in other languages are not limited, if initiated, sponsored or approved by a Dominion Government Department, initiated by the Canadian Broadcasting Corporation, or approved by the Chief Censor of Publications-Radio.

## PART II.-RAILWAYS

The treatment of rail transportation is divided into three sections dealing, respectively, with steam railways, electric railways and express companies.

## Section 1.-Steam Railways*

The steam railway is the most important transportation agency from the standpoint of investment and of traffic handled. The statistical field is more completely covered for this form of transportation than for any other, since there are fairly complete figures dealing with steam railway mileage, equipment, finances and traffic.

Historical.-A brief historical sketch of the development of steam railways in Canada is given at pp. 635-638 of the 1940 Year Book. Further details are given at pp. 616-623 of the 1922-23 Year Book, at pp. 601-603 of the 1926 Year Book and at pp. 694-698 of the 1934-35 Year Book.

[^217]
## , THE WARTIME ROLE OF THE STEAM RAILWAYS OF CANADA*

Since the advent of steam transportation, railways have played a role of great economic and strategic importance during periods of hostilities. Contributions to Canada's war effort by the Canadian National Railways and the Canadian Pacific Railway are but another though an outstanding example of this fact. The transportation services provided by them have made possible the expansion of this country's war production on a scale far in excess of anything ever thought possible. Despite all the pre-war criticism of over-expansion, had this Dominion's transportation systems been developed on a more restricted scale it would have been an economic impossibility for her industries to have expanded along lines which have enabled them to supply this country's own war requirements as well as fulfilling all commitments to the Allies under direct purchase or Mutual Aid.

Canada's extensive railway mileage ( 42,346 miles of single track), which is exceeded only by Soviet Russia and the United States both of which have populations far in excess of the Dominion, can be considered as having been one of this country's most efficient peacetime measures of defence. The railways have been the principal conveyers of raw material to war factories and of finished products from such plants to seaboard for shipment to the war fronts of the world. Railways have likewise played an important part in the mobilization and movement of the Armed Services and the transportation of war workers to industrial centres.

The war at sea has had the effect of diverting to the railways much of the freight previously carried in coastal shipping, and gasoline rationing has had the effect of greatly limiting motor trucking as a competitor in short-haul traffic, thus further complicating distribution facilities for domestic requirements. Shipping casualties on the high seas have been heavy and as a result it has been necessary to reduce ocean hauls to a minimum. Railway transportation to East Coast ports has, therefore, continued at a high rate at all seasons throughout the year and much of the ocean shipping on the St. Lawrence River has been discontinued. Many ships on Canadian coastal and inland waterways have been diverted to war use thus throwing an additional burden upon railway transportation.

The volume of both passenger and freight traffic carried in 1944 was more than double that of immediate pre-war years: the freight carried was three times that of 1933. Compared with the peak year of the War of 1914-18, freight carried to-day is more than twice as great, and the average movement of a ton of freight has increased from 30 to approximately 50 miles, or by 65 p.c., reflecting the industrial expansion of the country and the greater responsibilities of the transportation systems.

The Canadian railways found themselves at the outbreak of war with not only an actual shortage of rolling-stock but with much of their equipment outdated and showing signs of hard wear following the retrenchment necessary during the years of depression and the period of readjustment which followed. Much of the equipment in operation was older than would have been the case in times of peaceful prosperity and most of the rolling-stock was not designed to transport the heavy and bulky pieces that make up the "sinews of war". To this initial condition was added the difficulty of securing new equipment and obtaining replacements and parts for repairs. The urgent needs of the war fronts brought about the necessity for restrictions and regulations being imposed governing the manufacture of articles

[^218]not immediately of service on the battlefield or on the sea. While these restrictions were administered wisely and leniently in so far as railway needs were concerned, the volume of such material was of necessity limited.

Early in the War it was realized by the Dominion Government that existing railway equipment, while adequate for peacetime requirements, would be insufficient to provide facilities for movement of the abnormal traffic arising out of war conditions. It was also appreciated that the financing of the necessary expenditures by the railways without the aid of the Government would be costly and difficult. Arrangements were therefore made through the Department of Transport for the acquisition by the Government of required quantities of rolling-stock and equipment as needed from time to time and these were made available to the railways on a hire-purchase basis. Up to the end of 1944, 139 locomotives and 14,215 cars were provided at a cost of $\$ 82,026,454$.

The railway companies themselves have carried out programs of rehabilitation and rebuilding of existing rolling-stock, including much equipment that had been discarded. For instance, old switching-engines which were considered obsolete for several years prior to the outbreak of war have been overhauled and brought back into operation to give veteran service wherever needed. Freight cars that were awaiting the scrap heap have been repaired, strengthened, painted and placed into operation. Passenger cars, coaches and sleeping cars have been converted to meet the requirements for the handling of thousands of troops, and new-type restaurant cars have been placed into operation to accommodate maximum numbers of patrons with a minimum of staff. All such repair, conversion or new construction had to be undertaken in the workshops of the Canadian railroads inasmuch as outside industries were themselves engaged in war-production activities.

In meeting wartime transportation requirements, Canadian railways have been operating with fewer but more powerful locomotives than in 1917 and more capacious but fewer freight cars. The Canadian National Railways reported that the vastly increased war traffic handled by them in 1943 was moved with $16 \cdot 6$ p.c. fewer locomotives and 15.4 p.c. fewer freight cars than in 1917. The Canadian Pacific Railway reported that 26.8 p.c. fewer locomotives and 16.6 p.c. fewer freight cars were required to handle the 1944 traffic of that Company than in 1917.

The average tractive power of modern Canadian locomotives is 32 p.c. higher than that used in 1920 and the average carrying capacity of freight cars has been increased from $35 \cdot 141$ to $43 \cdot 419$ tons per car with corresponding improvements in loading methods. The speed of freight trains between terminals has been increased by 60 p.c. as compared with 1917, thus making possible a quicker turn-around of freight trains. These combined factors have increased the utilization of freight cars by 70 p.c.

Many highly intricate problems have arisen in respect to the transportation of war equipment as much of this is bulky and exceptionally heavy. In order to move landing barges it has been necessary in some places to depress the railway tracks to permit the loads to pass under the bridges. Some pieces of machinery, boilers and towers have been so large that they have required two and sometimes three freight cars to accommodate them and have necessitated careful re-scheduling of trains on the lines over which they were being moved. Freight cars have had to be remodelled to permit the carriage of the unusual implements of war and special gondola-type flat cars have been designed and constructed to meet special needs.

During immediate pre-war years, the operating personnel had been reduced to a minimum so that the railways of Canada faced the wartime emergency with greatly reduced staffs of skilled employees. The tremendous up-surge of passenger and freight traffic made it absolutely essential that the most rigid inspection of road-beds and railway equipment be maintained to ensure the maximum of safety. The personnel required to patrol, examine and maintain the right-of-way had to be increased to meet the heavier wartime demands and to ensure against sabotage activities. Day and night shifts had to be put into operation in the roundhouses, motive-power and car shops to give the particular care to locomotives and cars which were required to haul greater loads and operate for longer hours at a stretch. Office staffs likewise were expanded to deal with the additonal work created by increased war operations.

The railway manpower situation has, therefore, been a difficult one, yet the number of employees has increased by only 33 p.c. since 1938 while traffic has more than doubled. At the same time 40,716 or 20 p.c. of the trained railway personnel had enlisted in the Armed Forces by the close of 1944, many of them with the First Canadian Army Railway Operating Group which distinguished itself in maintaining the lines of supply on the fighting fronts. In addition, many technical men with experience in specialized and administrative work have been lent by the railways to the Government to assist in the operation of special regulatory bodies necessary to the successful prosecution of the War.

To achieve the results noted, railway employees have been retained after reaching retirement age, key men who had already retired have been recalled, women have replaced men where possible, and unskilled labour has been employed under the supervision of experienced men. Women have taken up the strenuous duties connected with railway work, with its long hours and arduous labour, without flinching in order to release men for war duties. The car-cleaning departments are now almost exclusively handled by women. In addition they are engaged in engine cleaning, station snow-clearance, track work, yard checking, telegraphmessenger work and in some cases are employed as assistant agents, traffic officers, ticket clerks, crew clerks, pumpmen, gardeners, janitors and even baggage porters.

According to Dominion Bureau of Statistics records (see Table 16, p. 664), there has been no noticeable increase in the number of railway accidents or the number of railway passengers killed during the war years as compared with the immediately preceding period although the volume of traffic is heavier, equipment is being used for longer and heavier hauls, and the operating staffs in many cases are not as experienced. The number of passengers injured in train accidents in 1943. was 417 as compared with an average of 500 a year during the period 1926-30. On the other hand, in times of national urgency trainmen are subjected to greater hazards than other civilian employees and the number of railroad employees killed in train accidents shows an increase. Trainmen are working a greater number of hours than in pre-war years but even on a man-hour basis the four-year period of $1940-43$ records an increase of only 23 p.c. killed and 38 p.c. injured over the preceding four-year period.

The Canadian National Railways have been authorized by the Government to undertake the development of certain oil fields at Vermilion, Alberta, with a view to providing their western lines with a local supply of fuel oil for operational purposes. This has been made necessary to replace supplies previously imported, the volume of which has been curtailed by wartime conditions. This railway has likewise been
authorized to construct a railway spur to facilitate the development of the new ironore deposits near Atikokan, 150 miles west of Port Arthur, and to construct an ore dock at that port to facilitate the loading of the iron ore to lake boats.

Creation of the Northwest Air Staging Route (see p. 705), the construction of the Alaska Highway and the Canol pipeline out of Fort Norman, and the development of northern navigation has brought into prominence the strategic importance of the thousand miles of railway tracks which branch northward from the city of Edmonton. These lines are jointly owned by the Canadian National and Canadian Pacific Railways and are operated by the Northern Alberta Railways. The importance of these railway lines in the development of Canada's northwestern defences is indicated by the fact that in the ten-month period, March to December, 1942, more than 7,500 carloads of freight were shipped to Dawson Creek, the southern end of the Alaska Highway, and 2,000 carloads to Waterways, the terminal for northern navigation to Fort Norman.

In addition to maintaining the equipment necessary for handling the largest volume of traffic known in their history, Canadian railways have been actively engaged in the manufacture of war material other than transportation material in their own car-repair shops, locomotive works and other plants.

Canadian National Railways Munitions, Limited, at Point St. Charles, Montreal, where 1,200 men and women are employed in the manufacture of naval guns and field artillery gun carriages, has developed into one of the most important war industries in Eastern Canada. Munitions have been manufactured in three other Canadian National shops. The Company's shipbuilding yard at Prince Rupert, B.C., with a staff of approximately 1,500 , is engaged in the construction of large cargo vessels and minesweepers.

The Canadian Pacific Railway Angus Shops at Montreal, employing approximately 11,000 persons, have been engaged in the production of large tanks, marine engines and condensers valued at more than $\$ 115,000,000$. At the C.P.R. Ogden Shops at Calgary, which employ nearly 2,000 people, naval guns, anti-aircraft gun mounts, gun barrels, sights and breach-housing mechanism, etc., have been manufactured with an aggregate value of more than $\$ 20,000,000$.

Following the period of retrenchment during the depression of the 1930's, when railway revenues were at a low level, the railway companies reported a new high record for revenue in 1943, amounting to nearly $\$ 779,000,000$, an increase of $131 \cdot 2$ p.c. over 1938 . Operating expenses reached a record total of $\$ 560,600,000$, an increase of 89.6 p.c. As a result of such increases, the Canadian National Railways have been able to show a net income credit balance for the first time since 1938, while the Canadian Pacific Railway resumed payment of dividends on preferred and ordinary shares after a lapse of approximately 10 years.

## Subsection 1.-Mileage and Equipment of Steam Railways

Although construction was begun in 1835 on the first railway in Canada-the short link of 16 miles between Laprairie and St. Johns, Que.-there were only 66 miles of railway in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and Great Western railways, as well as numerous smaller lines, were built. The building of the Intercolonial and the Canadian Pacific railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last great period of railway building from 1900 to 1917 the Grand Trunk Pacific, National Transcontinental and Canadian Northern were constructed.

22115-42 $\frac{1}{2}$

Construction has been most active in Manitoba, Saskatchewan and Alberta during the past decade, while there has been a tendency for mileages to decline slightly in the other provinces, because of the abandonment of unprofitable lines. Of the 42,346 miles of single track operated in 1943, 21,603 were part of the Canadian National System.

## 1.-Record of Steam-Railway Mileage

Nore.-Corresponding figures of total mileage of single track for the years 1835 to 1899 are given at p. 546 of the 1941 Year Book.

${ }^{1}$ As at June 30 for this and previous years.
${ }^{2}$ As at Dec. 31 for this and later years.
Rolling-Stock.-The figures in Table 2 may be supplemented by the statement that between 1920 and 1943, the average capacity of box cars increased from 34.799 tons to $42 \cdot 214$ tons, of flat cars from $33 \cdot 459$ to 42.707 tons, of coal cars from 43.404 tons to $55 \cdot 243$ tons, and of all freight cars from $35 \cdot 141$ tons to $43 \cdot 419$ tons. The average tractive power of the locomotives increased 33 p.c. between 1920 and 1943 .

## Subsection 2.-Finances of Steam Railways

The tables in this Subsection deal with capital liability, capital invested, earnings, operating expenses, employees and their earnings and Government aid to steam railways. However, the presentation of the financial statistics of railways in Canada would not be complete without some detailed consideration of the finances of the Government-owned railways. This is given in the latter part of the Subsection. Some further statistics of revenue are included in Table 13, where they are shown in relation to traffic. Statistics of individual railways, covering singletrack mileage, capital, earnings and operating expenses, may be found in the "Annual Report of Railway Statistics", published by the Bureau of Statistics.

Capital Liability.-The great increase after 1922 in the capital liability of the steam railways of Canada is due to the inclusion of all Government loans to railways and investment in road and equipment of Government railways as part of the capital liability of the railways. The reduction after 1937, brought about by the Canadian National Capital Revision Act (c. 22, 1937), is explained at p. 644 of the 1939 Year Book.

## 3.-Capital Liability of Steam Railways, 1926-43 ${ }^{1}$

Norz.-Figures for the years 1876 to 1925, inclusive, are given at p. 649 of the 1927-28 Year Book.

[^220]Capital Investment.-The capital structure of the Canadian National Railways, changed by the Capital Revision Act, 1937, was reduced by $\$ 262,770,972$ (see p. 644 of the 1939 Year Book). The excess of capital liability as shown in Table 3 over the investments in road and equipment shown in Table $\mathbf{4}$ is accounted for by loans and advances from the Government to cover deficits of the Canadian National Railways and by the fact that some railway stock issues represented little actual investment in physical property. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property to other Government Departments, etc.
4.-Capital Invested in Road and Equipment of Steam Railways, 1938-43

I Details of this item are given in the "Annual Report on Steam Railway Statistics" issued by the
Transportation and Public Utilities Branch of the Bureau of Statistics. ${ }^{2}$ Includes $874,728,521$ trans-
erred to depreciation reserve and a credit of $\$ 34,534,220$ transferred to premium on capital and debenture
stocks.

Earnings and Expenses.-The operating ratio, or ratio of expenses to revenues, of Canadian railways increased from around 70 p.c. to above 90 p.c. between 1917-20, and remained high thereafter. The United States Government took over the operation of the United States railways and increased the rates of pay of the railway employees when that country entered the First World War. The Canadian railways were also obliged to make corresponding increases and these have been the chief factor in increased operating ratio. Declining revenues without corresponding reductions in expenses during the depression period also maintained the high ratio. The period after 1938 showed a sharp decline in this ratio, due primarily to the greatly increased freight traffic occasioned by the War, and a subsequent acceleration in gross earnings.

## 5.-Earnings and Operating Expenses of Steam Railways, 1936-43

Note.-Gross earnings and operating expenses for the years 1875 to 1914 are given at p. 434 of the 1916-17 Year Book. The analyses per mile of line and per train mile go back to 1908 only and are given for 1908 to 1916 at p. 435 of the 1916-17 Year Book. Corresponding figures for the years 1915 to 1925 are given at p. 550 of the 1941 Year Book and for 1926 to 1936 at p. 585 of the 1942 Year Book.

Railway Salaries and Wages.-The number of railway employees fluctuates with the volume of traffic, but not to the same extent. Salaries and wages are affected by the number of employees, by rates of pay and by the time worked. Since 1939 the influence of the War has resulted in a sharp upward swing in both the number of employees and the average earnings.

## 7.-Steam Railway Employment and Salaries and Wages, 1936-43

Note.-Corresponding figures for the years 1912 to 1935 are given at p. 551 of the 1941 Year Book.

| Year | Employees | Total Salaries and Wages | Average Salaries and Wages | Ratio of Operating Salaries and Wages to- |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| 1943. | 169,663 | 323,801,645 | 1,908 | 37-8 | $52 \cdot 5$ |

Government Aid to Railways.-In order that the private railways of Canada might be constructed in advance of settlement, as colonization roads, or through thinly settled districts where little traffic was available, it was necessary for Dominion and Provincial Governments and even for municipalities to extend some form of assistance. The form of aid was generally a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land other than for right-of-way were also made.

As the country developed, the objections to the land-grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that system, except those for
rolling-stock, have been guaranteed by the Dominion Government. No new land grants or cash subsidies have been advanced by either the Dominion or Provincial Governments since 1939 and the situation, as it existed at Dec. 31, 1940, is set out at pp. 587-588 of the 1942 Year Book.

During the era of railway expansion before the War of 1914-18, Provincial Governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railways. As these bonds mature they are paid off by the Canadian National Railways in large measure through funds raised by the issue of new bonds with Dominion Government guarantee. In this manner bonds guaranteed by the Governments of Ontario, Manitoba and Saskatchewan have been eliminated in recent years.

## 8.-Rallway Bonds Guaranteed by Dominion and Provincial Governments, as at Dec. 31, 1943

[^221]
## Financial Statistics of Government-Owned Railways

A description of the origin and growth of Government-owned railways in Canada is given at pp. 601-603 of the 1926 Year Book. That article describes their consolidation under the Canadian National Railways in 1923. The Hudson Bay Railway is a direct liability of the Dominion Government and has been operated by the Canadian National for the Government since Apr. 1, 1935, but is not included in the data for Canadian National Railways. To Mar. 31, 1944, the total cost of this railway was $\$ 23,596,059$, exclusive of the expenditure of $\$ 6,274,150$ on the terminal at Nelson and a loss of $\$ 2,585,558$ on operation. The operating deficit for the fiscal year 1943-44 was $\$ 347,873$.

The major portion of Dominion Government investments in railways consists of construction costs of the Intercolonial System, the National Transcontinental Railway and the Hudson Bay Railway, and the purchase price of small railways in the eastern provinces. The terminals at Churchill consisting of a grain elevator, a warehouse and docks have been transferred to the National Harbours Board and the investment removed from the railway account. Loans and advances to the Canadian National Railways for payment of operating deficits were charged to the Consolidated Revenue Account of the Dominion and also cleared from the railway account and other adjustments were made under the Canadian National Railways Capital Revision Act, 1937.
9.-Assets of the Canadian National Railways System, as at Dec. 31, 1922 and 1943

Operating Finances of the Canadian National Railways.*-Gross revenues, operating expenses and net revenues include only those from steam railway and commercial telegraph operations, but the deficits are for the entire system, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Under the Canadian National Railways Capital Revision Act (c. 22, 1937), interest on Dominion Government loans, amounting to $\$ 530,832,598$, and Government claims for interest, amounting to $\$ 43,949,039$, were cancelled as liabilities of the Railway and these have been eliminated from Table $\mathbf{1 0}$.

[^222]
## 10.-Gross Revenues, Operating Expenses, Net Revenues, Fixed Charges and Deficits of the Canadian National Railways, ${ }^{1}$ 1936-43

Norz.-Appropriations, etc., for the Hudson Bay Railway are not included with these data; although the railway was returned to the Government while under construction, it is not now a part of the Canadian National Railways. For figures for the years 1911-25, see p. 660 of the 1936 Year Book and for 1926-35, see p. 590 of the 1942 Year Book.

| Year | Gross Operating Revenues | Operating <br> Expenses | Income Available for Fixed Charges | Total Fixed Charges | Net Income Deficit ${ }^{2}$ | Cash Deficit |

[^223]Capital Revision of the Canadian National Railways.-The Canadian National Railways Capital Revision Act (c. 22 of the Statutes of 1937) is dealt with at p. 644 of the 1939 Year Book. In the same edition, a table at pp. 644-645 shows a condensed consolidated balance sheet as at Dec. 31, 1936, adjustments authorized by the Capital Revision Act and the revised balance sheet as at Jan. 1, 1937.

Capital Structure and Debt of Canadian National .Railways.-The share capital on Dec. 31, 1922, consisted of $\$ 165,627,739$ stock of the Grand Trunk Railway held by the Dominion Government and $\$ 100,000,600$ of the Canadian Northern Railway stock also held by the Dominion Government. There was also outstanding $\$ 4,591,975$ stock of constituent lines held by the public, of which $\$ 178,165$ has been retired. Table 11 shows the capital liabilities of the Canadian National Railways other than shareholders' capital. The amounts shown under "Active Assets" represent largely temporary loans and explain the large increases during the war years.
11.-Debt of the Canadian National Railways, as at Dec. 31, 1937-43

Nore.-Figures for the years 1922-36 are given at p. 591 of the 1942 Year Book.

## Subsection 3.-Steam Railway Traffic

In addition to an analysis of passenger and freight traffic statistics for all steam railways, a separate analysis is given of the operations and traffic of the Canadian National Railways, since, being controlled by the Dominion Government, the information is considered of special interest.

Passenger and Freight Traffic.-The average haul for freight, as shown in Table 13, is for all railways, which eliminates the effects of consolidation of railways and of interchanging freight between Canadian railways.

## 13.-Statistics of Passenger and Freight Services and Revenue Receipts, 1936-43

Nore.-Corresponding figures for 1910-15 are given at pp. 628-629 of the 1922-23 Year Book, for 1916-30 at pp. 652-653 of the 1937 Year Book and for 1931-35 at pp. 592-593 of the 1942 Year Book.

13.-Statistics of Passenger and Freight Services and Revenue Receipts, 1936-43-concl.

${ }^{1}$ Includes express, baggage, mail, etc., cars. ${ }^{2}$ Duplications included. ${ }^{3}$ Includes caboose miles and excludes miles made in passenger and non-revenue trains. ©Duplications eliminated, see Table 15 for details of freight carried.

Mileage and Traffic of the Canadian National Railways.-At Dec. 31, 1943, steam mileage of the Canadian National (including lines in the U.S.A. but exclusive of the Northern Alberta Railways and Toronto Terminals Railway, which are controlled jointly by the Canadian National and the Canadian Pacific Railways) was 23,562 . Including the Thousand Islands Railway, $4 \cdot 51$ miles, and the Muskegon Railway and Navigation Co., $5 \cdot 25$ miles, controlled but separately operated, the total steam mileage was 23,572 . Including $115 \cdot 4$ miles of electric lines, the grand total was 23,687 miles.

1 Excludes electric lines. $\quad 2$ Work service excluded. $\quad:$ Revised since the publication of
the $1943-44$ Year Book.

Commodities Hauled.-Total tonnage of freight hauled by the railways during 1943 was by far the greatest handled in any year. It amounted to $153,314,264$ tons as compared with $134,674,537$ tons in 1942 and $84,631,122$ tons in 1939. This was an increase over 1939 of 81 p.c. and over 1928, the pre-war peak, of 29 p.c., but due to longer hauls the ton miles increased by $112 \cdot 6$ p.c. over 1939 and $150 \cdot 4$ p.c. over 1928.

Agricultural products loaded increased from 25,704,840 tons in 1941 to $30,977,238$ tons in 1943. Loadings of animal products, mine products, forest products and manufactures and miscellaneous freight all showed substantial increases. Bituminous
coal received from foreign connections increased from $4,410,773$ to $7,001,787$ tons. Crude petroleum from foreign connections increased from 31,085 to 4,156,904 tons and gasoline and petroleum oils showed similar increases; the greater part of this tonnage entered Canada from United States points.

## 15.-Commodities Hauled as Freight on Steam Railways, 1939-43

Nots.-In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National System, but the link of the C.P.R. line across Maine is included, as are the Canadian sections of United States railways.

Railway Accidents.-All injuries to passengers are included in Tables 16 and 17 but only injuries that keep the employee from his work for at least three days during the ten days following the accident are recorded for employees. "Others" in Table 16 include trespassers walking along tracks, stealing rides, etc., also persons crossing tracks at level crossings.

## 16.-Passengers, Employees and Others Killed or Injured on Steam Railways, 1936-43

Note.-For the years ended June 30, 1888 to 1900, see Canada Year Book, 1910, p. 378; for the years 1901 to 1919, the 1922-23 edition, p. 635; for 1920 to 1935, the 1938 edition, p. 662.

| Year | Passengers |  | Employees |  | Others |  | Totals |  |

| 1942. | 44 | 779 | 120 | 10,008 | 279 | 743 | 443 | 11,530 |
| 1943. | 9 | 546 | 130 | 12,667 | 202 | 706 | 341 | 13,918 |

These accidents include all accidents in which railway trains were involved and accidents on railway property. The classification of accidents used in the Bureau's vital statistics treats collisions between motor-vehicles and trains as motor-vehicle accidents; provincial statistics also class them as motor-vehicle accidents and, consequently, adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor-vehicle.

## Section 2.-Electric Railways*

Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. Before many years their safety and convenience resulted in the discarding of the older systems. The first electric railway line in Canada and probably the first in North America, which ran between Windsor and Walkerville, was established early in June, 1886 (it is recorded that it was in active operation before June 11).

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life. In the cities of Eastern Canada, electric street railways are generally operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the street railways are owned and operated by the municipalities.

The single overhead-trolley system is used by all electric railways but Edmonton. Montreal and Winnipeg have begun using also a double overhead trolley and trackless trolley-buses ( 41 of these buses being in service in 1943). Of the 34 systems,

[^225]24 operated both electric cars and buses in 1943, the buses numbering 1,329. The main advantage of the motor bus is that it is not confined to a fixed route, and, in the case of both motor buses and trolley buses, the expense of track maintenance is eliminated.

## Subsection 1.-Equipment of Electric Railways

A summary of the equipment operated by electric railway companies is given in Table 18.
18.-Equipment of Electric Railways, 1940-43

## Subsection 2.-Finances of Electric Railways

When electric railways have ceased to operate because of either a decline in traffic or the substitution of motor-buses, their statistics have been excluded from the following tables. Consequently, fluctuations in revenues, etc., have been affected by variations in traffic and also by changes in the mode of local transportation. Despite these changing conditions the gross revenues of electric railways have continued to increase since the low point reached in 1933, and very marked increases have been shown each year since 1940.

## 19.-Financial Statistics of Electric Railways, 1936-43

Notr.-Available figures for the years 1901 to 1907 are given at pp. 608 and 609 of the 1926 Year Book; for the years 1908 to 1918 at pp. 681 and 682 of the 1936 Year Book; and for 1919 to 1935 at p. 665 of the 1938 Year Book.

| Year | Capital Liability |  |  | Investment in <br> Road and Equipment | Gross Earnings | Operating Expenses | Ratio of Expenses to $\mathrm{Re}-$ ceipts | $\underset{\text { ployees }}{\text { Em- }}$ | Salaries and Wages |

## Subsection 3.-Electric Railway Traffic

The passenger mileage travelled by electric cars in 1943 amounted to $124,454,463$, by trackless trolley-buses $1,780,768$ and by motor-buses $37,815,126$. The number of passengers carried by electric railways in the years since 1939 showed an especially sharp rise over previous years due to increased traffic resulting from improved con-
ditions, and the curtailment of passenger automobile traffic as a result of the War. The $1,177,003,883$ passengers carried in 1943 amounted to by far the greatest traffic ever handled by these systems, the increase over 1942 being 18 p.c.
20.-Statistics of Electric Railway Operations, 1936-43

Nore.-Figures will be found at p. 676 of the 1933 Year Book for the years 1901 to 1910; at p. 681 of the 1936 Year Book for the years 1911 to 1918; and at p. 667 of the 1938 Year Book for 1919 to 1935.

## Section 3.-Express Companies*

"Express service is an expedited freight service on passenger trains"; but express companies do not own the means of performing their services; they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have had close relations with the railways practically from the beginning. - A brief history of the various express companies will be found at pp. 611-612 of the 1926 Year Book.

Goods are sent by express for quick transit, so that express rates do not generally compete with freight rates. Thus in its first tariff the Dominion Express Co., in pursuance of its contract with the Canadian Pacific Railway, gave a rate of $2 \frac{1}{2}$

[^226]times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue. The rates paid by the shipper are subject to the approval of the Board of Transport Commissioners. Express companies are all organized under powers conferred by Acts of the Dominion Parliament and their business consists in the expeditious shipment of valuable live stock, and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels and baggage, and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper.

Express Company Operations.-Four express organizations operate in Canada-three Canadian and one American. The Canadian Pacific Express Co., formerly the Dominion Express Co., is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National system and Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency, Inc., operates over the Canadian sections of United States railways and over the route from Skagway to points in Yukon. No statistics are available regarding the volume of traffic carried by express. Much of the traffic, of course, consists of parcels and small lots which would make statistical classification and measurement very difficult. However, there is also an important movement in car lots of live stock, fresh fish, fruit, vegetables and other perishable commodities.

The amounts paid by express companies to the carriers, i.e., railways, steamship lines, etc., for transporting express matter, are shown in Table 22 under the heading "Express Privileges".

## 22.-Revenues and Expenses of Express Companies, 1936-43

Note.-Corresponding figures for the years ended June 30, 1911 to 1918, are given at p. 673 of the 1927-28 Year Book, and for the years 1919 to 1935 at p. 669 of the 1938 edition.

| Year or Company | Gross Earnings | Operating <br> Expenses | Express Privileges | Net Operating Revenues |

## PART III.-ROAD TRANSPORTATION*

Since the recent development of highways in Canada has been almost exclusively for the purpose of providing roadbed for motor-vehicle traffic, highways and motorvehicles are treated as related features of transportation. After an introductory section, which briefly summarizes provincial regulations regarding motor-vehicles and motor traffic, the whole subject of road transportation is dealt with under the headings of facilities, finances and traffic, similar to the treatment extended to other forms of transportation.

## Section 1.-Provincial Motor-Vehicle and Traffic Regulations $\dagger$

Norz.-In this Section, it is obviously impossible to include the great mass of detailed regulations in force in each province. The purpose in view is to provide only the more important general information. The sources of information for detailed regulations for specific provinces are given at pp. 670-671. See also "The Highway and Motor-Vehicle in Canada", an annual bulletin published by the Dominion Bureau of Statistics, price 25 cts .

General.-The licensing of motor-vehicles and the regulation of motor-vehicle traffic lies within the legislative jurisdiction of the Provincial Governments in Canada. Regulations that are common to all the provinces are summarized here:-

Operator'sLicences.-The operator of a motor-vehicle must be over a specified age (usually 16 years) and must carry a licence, obtainable only after prescribed qualification tests and renewable annually. Special licences are required for chauffeurs and, in some cases, for those granted licences who have not reached the specified age.

Motor-Vehicle Regulations.-In general, all motor-vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back, in the case of trailers). In order to conserve metal for war purposes, most of the provinces and both territories have issued only one licence plate for each vehicle each year since 1943. Gasoline rationing for motor-vehicles began on Apr. 1, 1942, and is described at p. 568. A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days) in any year to visiting private vehicles registered in another province or a State that grants reciprocal treatment. Further regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes, and provide that equipment include nonglare headlights, a proper rear light, a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

[^227]Traffic Regulations.-In all provinces, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. In line with other measures to conserve gasoline and rubber in wartime, a speed limit of 40 miles per hour was put into effect over the whole of Canada, beginning May 1, 1942. Slower speeds are always required in cities, towns and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motorvehicles must not pass a street car that has stopped to take on or discharge passengers except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and any driver involved must not leave the scene of accident until he has rendered all possible aid.

Penalties.-These ascend in scale from small fines for minor infractions of any of the regulations to a suspension of the operator's driving permit, impounding of the car, or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting, while intoxicated, to operate a motorvehicle.

There is such a wide variation in the different provinces regarding the basis of licences and fees, the regulation of public commercial vehicles, details of traffic rules, speed, and the use of motor-vehicles, that it is impossible even to outline them satisfactorily in the space available here. The most important features are summarized in the annual bulletin referred to in the headnote to this Section. The authorities responsible for the administration of motor-vehicles and the legislation governing vehicles and traffic are given below for each province.

Prince Edward Island.-Administration.-The Provincial Secretary, Charlottetown. Legislation.-The Highway Traffic Act (c. 2, 1936) and amendments.

Nova Scotia.-Administration.-Motor Vehicle Branch, Department of Highways and Public Works, Halifax. Legislation.-The Motor Vehicle Act (c. 6, 1932) and amendments and the Motor Carrier Act (c. 78, R.S.N.S. 1923) as amended by c. 29, 1937.

New Brunswick.-Administration.-Motor Vehicle Division, Department of Public Works, Fredericton. Legislation.-The Motor Vehicle Act (c. 20, 1934) and amendments.

Quebec.-Administration.-Motor Vehicle Bureau, Provincial Revenue Offices, Treasury Department, Quebec. Legislation.-The Motor Vehicle Act (c. 142, R.S.Q. 1941) and amendments.

Ontario.-Administration.-Motor Vehicles Branch, Department of Highways, Toronto. Legislation.-The Highway Traffic Act (c. 288, R.S.O. 1937) and amendments.

Manitoba.-Administration.-Provincial Treasurer, Winnipeg. Legislation.The Highway Traffic Act (c. 93, R.S.M. 1940) and amendments.

Note.-In 1945, the Manitoba Legislature passed new legislation amending the Highway Traffic Act. Part VII, dealing with financial responsibility for accidents by public liability and property damage insurance or otherwise, was repealed. Under the new legislation, generally speaking, it is necessary for a motorist to furnish safety responsibility (by insurance or otherwise) in virtually all cases where he is involved in an accident. There are also drastic provisions for the impounding of his car and the cancellation of his licence. It is expected that the new legislation will be proclaimed and come into force as of Jan. 1, 1946.

Saskatchewan.-Administration.-Treasury Department, Taxation Branch, Highway Traffic Board, Revenue Building, Regina. Legislation.-The Vehicles Act (c. 275, 1940) and amendments.

Alberta.-Administration.-Motor Vehicle Branch, Department of the Provincial Secretary, Edmonton, and Alberta Highway Traffic Board, Edmonton. Legislation.-The Vehicles and Highway Traffic Act (c. 275, R.S.A. 1942) and amendments, and Public Service Vehicles Act (c. 276, R.S.A. 1942), and Rules and Regulations. The Vehicles and Highway Traffic Act is administered by the Department of the Provincial Secretary, and the Public Service Vehicles Act by the Alberta Highway Traffic Board, Department of Public Works.

British Columbia.-Legislation.-The Motor Vehicle Act (c. 195, R.S.B.C. 1936), and the Highway Act (c. 116, R.S.B.C. 1936) and amendments thereto, as well as the Motor Carrier Act (c. 36, 1939). Administration and enforcement of the Motor Vehicle Act and enforcement of the Highway Act and the Motor Carrier Act is vested in the Commissioner of Provincial Police, Victoria, B.C., while the Highway Act is administered by the Minister of Public Works, Victoria, B.C., and the Motor Carrier Act by the Public Utilities Commission, Victoria, B.C.

Yukon.-Administration.-Territorial Secretary, Dawson, Yukon. Information regarding regulations may also be obtained from the Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa. Legislation.-The Motor Vehicle Ordinance, No. 14, 1914, and amendments.

Northwest Territories.-Administration.-Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa. Legislation.-The Motor Vehicle Ordinance, assented to Mar. 26, 1941, and amendments.

## Section 2.-Roads and Vehicles

## Subsection 1.-Roads and Highways

Historical.-A brief description of the early colonization roads in Canada is given at p. 733 of the 1934-35 Year Book.

Recent Highway Development.-With the rapid increase in the percentage of motor-car owners to population (see p. 673), the demand for improved roads has become more and more insistent since the War of 1914-18. Furthermore, the advantages to be gained by attracting touring motorists have been a powerful incentive to governing bodies to improve trunk roads and scenic highways within their jurisdictions. One sphere where the motor-car and truck has been of special economic advantage has been in rural areas. As a result, according to the Census of 1941, there was one motor-vehicle for every 1.8 farms. This widespread rural ownership of automobiles and trucks has, in turn, brought about an improvement of secondary rural roads.

The table of road mileages (p. 672) includes all roads under provincial jurisdiction and local roads in the Maritime Provinces and Ontario and estimates of local roads in the four western provinces. There are great stretches of country in the northern portions of Quebec, Ontario, the Prairie Provinces and British Columbia with very few people and very few roads, but the southern portions are well supplied. The Trans-Canada Highway provides a strategic link between Eastern and Western Canada that permits motorists to traverse the Dominion without entering United States territory.

The Alaska Highway, a 1,600-mile roadway, 24 to 36 feet wide, extends from Fort St. John, B.C.,* through Whitehorse, to Fairbanks, Alaska. It was virgin territory, and a pioneer air route, in the spring of 1942; on Nov. 20, 1942, it was officially opened for wheeled traffic. About 10,000 United States engineer troops and 4,000 civilians, of whom half were Canadians, hewed their way through the bush, bridged the rivers, overcame mountain grades and surfaced a roadbed, to permit a continuous journey by car.

The maximum grade in hill country is 10 p.c.; in foothill country, 5 p.c. The Dominion Government supplied the right-of-way and exempted all shipments of construction equipment and material from customs duty and the United States Government carried out the work and will maintain the Highway for six months after the War. The United States Government will then remove such equipment and installations as it wishes and the remainder in the Canadian sections will then revert to Canada. At present, travel over the Highway is restricted to those given permits by the United States military authorities.

Statistics of urban streets have been collected since 1935 from cities and principal towns; the small municipalities omitted would increase the totals very little. For 1943 the total number of miles of street reported was 13,679 , composed of: 3,226 miles of bituminous pavements; 948 miles of portland cement concrete; 1,730 miles of bituminous surfaces; 3,329 miles of gravel and crushed stone; and 395 miles of other surfaces; making a total of 9,628 miles of surfaced streets and 4,051 miles of earth roads. These figures for urban streets or roads are not included in the table of highway mileage.

[^228]
## 1.-Classification of Highways, by Provinces, 1943

Note.-The date for which the mileage was reported is indicated for each province. The figures for Canada are the sums of the mileages so reported. Urban streets are not included in the figures. Dashes indicate that no mileages were reported under the corresponding stub items.

## Subsection 2.-Motor-Vehicles

Registration.-The average population per vehicle registered was $7 \cdot 8$ in 1943. Total registrations numbered $1,511,845$, a decrease of 12,308 , or less than one per cent as compared with 1942.

## 2.-Motor-Vehicles Registered in Canada, by Provinces, 1936-43

Nors.-Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for $1904-35$ are given at p. 668 of the 1937 Year Book.

[^230]Apparent Consumption of Automobiles in Canada.-The apparent consumption of automobiles in Canada in any year may be computed by deducting the number exported from the sum of the production and imports; figures for the years 1931-40 are given at p. 607 of the 1942 Year Book. During the war years military vehicles constituted practically the whole output of the automobile factories; the apparent consumption of civilian passenger motor-vehicles in 1943 was 23,143. The inclusion of military trucks prohibits an estimate of the consumption of commercial trucks.

Wartime Control of Motor-Vehicles.*-Early in 1942 the production of automobiles was stopped (see Chapter XIV). To take care of the needs of physicians, nurses, fire-fighting and police departments, and other users in essential classifications, 4,480 new cars were set aside in a Government "bank" Cars from this reserve pool have been released only for essential purposes on a permit from the Motor Vehicle Control, Department of Munitions and Supply. In his capacity as Administrator of the Wartime Prices and Trade Board, the Controller, in August, 1944, issued an order restricting purchases of passenger cars to one per year, except in the case of fleet operators who are allowed to purchase one vehicle per year for every five in operation. The order also compelled dealers to sell used cars in their stock to a specified list of essential users without requiring a trade-in or other consideration. Manufacturers of trucks have been permitted to divert from military schedules certain models which are stripped of all military equipment and produced as commercial units. All new trucks for civilian purposes are released only when the prospective purchasers have proven their essentiality to the Motor Vehicle Control.

## Section 3.-Finances of Road Transportation

The cost of road transportation to the people of Canada may be summarized under the following headings: expenditures on roads and highways; expenditures of individuals and corporations on owned motor-vehicles; expenditures for freight and passenger services rendered by motor-vehicle public carriers such as taxi, bus and motor-transport companies; and expenditures on garages, service stations, etc. Since expenditures on roads and highways are made almost entirely by governmental bodies, fairly complete statistics are available regarding them but, owing to the tremendous number of individuals and organizations that would have to be canvassed and the difficulties involved, complete statistics are not available under the other headings. Sales of gasoline are given at p. 680, and revenues of motor carriers at p. 677.

Expenditures on Roads and Highways.-Roads in Canada, except in the Territories and the National Parks are under the jurisdiction of provincial and municipal authorities. The Dominion Bureau of Statistics made a compilation of expenditures on highways, bridges, ferries and footpaths, for the period 1919-37. This compilation included expenditures by the Dominion on roads, bridges, etc., in the National Parks, and by the provinces and rural municipalities in Ontario on unemployment road projects. It also covered the bulk of the expenditures on rural roads and on bridges and ferries, which are links in the road systems. The present extensive provincial highway systems have been developed almost entirely since the War of 1914-18 to meet the requirements of motor traffic. However, old gravel and water-bound macadam roads formed foundations in many places for new concrete and bituminous surfaces.

Total expenditures during the nineteen years (1919-37) were $\$ 780,571,155$ for construction and $\$ 326,401,275$ for maintenance; expenditures for plant and general items were divided between construction and maintenance on a pro-rata basis,

[^231]where not allocated by the authorities. A table at p. 666 of the 1939 Year Book summarizes these expenditures on roads for the whole period 1919-37; Table 4 shows such expenditure during recent individual years.

## 4.-Capital, Maintenance and General Expenditures on Rural Highways, Bridges and Ferries in Canada, by Provinces, 1939-43

Nore.-Provinical expenditures are for their respective fiscal years.

${ }^{1}$ Includes 1,500 in the Northwest Territories.
${ }^{2}$ Includes payments from railways re elimination of grade crossings, etc., formerly operated under Dominion.

Provincial Funded Debt Incurred for Highways.-By far the greater portion of the highway expenditure has been made by the provinces and consequently must be paid out of provincial taxes. Payment for much of the construction costs has been deferred and this has accounted for part of the rapid increase in provincial funded debt since 1919. In 1919 the net funded debt of all the provinces was $\$ 270,338,092$; in 1943 it had reached $\$ 1,502,203,000$, the portion chargeable
to highways being $\$ 811,363,847$ or more than three times the net debt for all purposes in 1919. As already explained at p. 671, the provincial systems of modern motor roads have been developed almost entirely since 1919 and prior to that time the provincial expenditures on highways were relatively small.

${ }^{1}$ Not reported. $\quad{ }^{2}$ Treasury notes included.
Provincial Government Revenues from Motor-Vehicles.-The taxation of motor-vehicles, garages, chauffeurs, etc., is an important source of Provincial Government income. In every province the following licences or permits, duly issued by the provincial authorities, are required: motor-vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. A sales tax on gasoline is also levied by each province,* the rates being 10 cents per imperial gallon in the three Maritime Provinces, 8 cents in Quebec and Ontario and 7 cents in the four western provinces. The more important sources from which provincial revenues from motor-vehicles are derived are shown in Table 6.- Dominion Government revenues from import duties, excise and sales taxes are not included.

[^232]

[^233]Motor Carriers.*-The lack of statistical information in regard to the increasing amount of passenger and freight traffic on the highways of Canada led to the institution of a census of motor carriers in 1941. The carriers were divided into two main classes: (1) passenger and (2) freight; each of these was sub-divided into two sub-classes: (a) carriers with revenues less than $\$ 20,000$, and (b) carriers with revenues of $\$ 20,000$ or over. Bus companies handling urban traffic exclusively were compiled as a class. Many street railway systems operate motor buses, but the statistics of such systems are not included here; they are included in electric railway statistics. Licensed carriers doing highway construction work building air fields, etc., were excluded from the compilations. Taxi operators and urban delivery trucks also were excluded, except where their operations included interurban business. Reports of some 400 small operators were discarded because they were too incomplete but this exclusion did not materially affect the statistics. Carriers operating as both passenger and freight carriers were classed as passenger or freight according to the preponderance of the revenue. The passenger revenue of trucking companies and the freight revenue of bus companies were small percentages of their total revenues.

In the compilations for 1942 and 1943, figures of which are given in Tables 7 and 8, adjustments were made in the light of experience gained in 1941. Thus operators with revenue of less than \$8,000 in 1941 were excluded from the 1942 compilations. The figures given below are therefore not comparable in all respects to those for 1941 published at pp. 602 and 603 of the 1943-44 Year Book.

[^234]
## 7.-Capital, Revenues, Employees and Equipment of Motor Carriers, 1912 and 1943

Note.-Large freight carriers include those with annual revenues of $\$ 20,000$ or over; small freight carriers those with annual revenues of from $\$ 8,000$ to $\$ 20,000$.

trailers.

## Section 4.-Road Traffic

Up to the present the motor-vehicle has affected passenger traffic of the steam and electric railways more than freight traffic. This diversion of passenger traffic has been effected largely by the private automobile, although the motor-bus is rapidly becoming more important and now operates between all large centres. The motor-truck also carries a considerable amount of freight.

As explained at p. 677, certain statistics in regard to motor carriers were collected for 1942 and 1943, and those relating to freight and passengers carried are presented in Table 8. Traffic data were not available for the majority of the small operators and about a third of therlarge truck companies had no reliable records of tons of freight handled; consequently, the freight statistics are incomplete. A difficulty in compiling weights, which is quite understandable, is that much traffic was carried on a load basis and not a weight basis. Records of passengers appeared to be fairly complete, possibly because tickets were sold and accounted for, and the unit was not so complex as for freight carried.

## 8.-Traffic Carried by Motor Carriers, 1942 and 1943

Note.-Large freight carriers include those with annual revenues of $\$ 20,000$ or over; small freight carriers those with annual revenues of from $\$ 8,000$ to $\$ 20,000$.

Motor-Vehicle Accidents.-Motorists are required to report accidents but comprehensive statistics are not available for all provinces. The Vital Statistics Branch of the Bureau of Statistics compiles statistics on all deaths from motorvehicle accidents and these are shown in Table 9. A direct comparison of such statistics between the provinces is of little value due to differences in size, population, motor-vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor-vehicles has also been tabulated. These data still give no weight to differences in use of motor-vehicles, differences in climate, roads, tourist cars, etc., all of which are factors in accidents.

Table 10 shows the number of persons killed or injured in automobile accidents as reported by the motor-vehicle branches of the Provincial Governments. It is quite possible that the latter reported some persons as injured who subsequently
died from the injuries and these would be included in the fatalities of the vital statistics shown in Table 9, also accidents that occurred late in December and resulted in deaths would be charged to December by the provincial authorities but to January of the next year in the vital statistics. Consequently, the figures of fatalities of Tables 9 and $\mathbf{1 0}$ are not in complete agreement.

## 9.-Deaths Resulting from Motor-Vehicle Accidents in Canada, by Provinces, 1936-43

Nort.-This table is compiled in the Vital Statistics Branch, Dominion Bureau of Statistics. Figures for the years 1926 to 1935 will be found at p. 578 of the 1941 Year Book.

${ }^{1}$ Preliminary.

## 10.-Motor-Vehicle Accidents, 1943

Nots.-Figures are as reported by provincial motor-vehicle authorities for the calendar year.

[^235]10.-Motor-Vehicle Accidents, 1943-concluded

${ }^{1}$ Not segregated.
${ }^{2}$ No record.
${ }^{3}$ Incomplete.
Gasoline Consumption.-All provinces require retail sales of gasoline to be reported and a tax is imposed on all gasoline consumed by motor-vehicles using the highways and streets and also on that used for an increasing number of other purposes. However, the taxable gasoline is still largely consumed by motor-vehicles and indicates in a general way the increase or decrease in their use. Net sales are the differences between the total or gross sales reported and the quantities on which the tax is refunded in whole or in part, or on which the tax is not imposed at the time of sale.

Figures to the end of 1940 show a steady increase in gasoline sales since depression years. Later figures are, of course, materially affected by the conservation measures taken in 1941, and the system of gasoline rationing effective on Apr. 1, 1942 (see pp. 568-569).

## PART IV.-WATERWAYS*

The Canada Shipping Act.-Legislation regarding all phases of shipping was consolidated under the Canada Shipping Act (c. 44, 1934). The Act was a sequel to the passage of the Statute of Westminster in 1931, under which the Parliament of Canada accepted full responsibility for the regulation of Canadian shipping. The Canada Shipping Act is a comprehensive piece of legislation and constitutes, in fact, the incorporation in the shipping law of Canada of features of international agreements and of British and previous Canadian legislation. A brief summary of the Act is given at pp. 681-683 of the 1938 Year Book.

## Section 1.-Equipment and Facilities

The developments and equipment to facilitate water traffic are classified under the sub-headings of shipping, aids to navigation and miscellaneous works, canals and harbours. A subsection is added giving figures of administrative activities regarding pilotage service, steamship inspection, personnel and accidents to shipping.

## Subsection 1.-Shipping

Since all waterways, including canals and inland lakes and rivers, are open upon equal terms, except in the case of the coasting trade, to the shipping of all countries of the world, the commerce of the Dominion is by no means entirely dependent upon Canadian shipping. However, a large part of the inland and coast-wise traffic is carried in ships of Canadian registry.

Canadian Registry.-Under Part I of the Canada Shipping Act, every ship that falls under the definition of "British Ship" given in Sect. 6 of the Act and is controlled as to management and use in Canada, must, unless registered elsewhere in the Empire, be registered in Canada. An exception is made in the case of ships not exceeding 10 tons register and engaged solely in coastal or inland navigation. A ship (whatever her qualification for British registry) that is not registered in any part of His Majesty's dominions, is not entitled to the privileges accorded to British ships. Vessels about to be built may be recorded, and vessels being built or equipped must be recorded, by a registrar of British ships under the Act. The procedure for the registration in Canada of British ships and the issuance of certificates is covered in Sects. 9-36. Sects. 64-70 govern the registry of alterations (or the registering anew if such be required) and lay down penalties for non-compliance with the requirements. The conditions governing transfer of registry are also laid down. A table showing the number and tonnages of vessels of Canadian shipping registry, by provinces, 1935-39, is given at p. 581 of the 1941 edition of the Year Book. Wartime restrictions preclude the publication of these data for later years.

[^237]22115-44

For a record of the number and tonnage of ships engaged in the carrying trade of Canada, see the tables under Sect. 3 ( $\mathrm{pp} .695-702$ ) of this Part of the Chapter. The tables are included there under traffic statistics because they relate more directly to traffic and services than merely to the shipping available. For an account of the shipping services operated by the Dominion Government, see pp. 685-687.

## Subsection 2.-Aids to Navigation and Miscellaneous Works

Included under this heading are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the inland rivers and lakes, and at the entrances to harbours-a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described under marine services at p. 685. As a further aid to safe navigation, there are chains of radio signal and directionfinding stations which are described under radiotelegraphy, at p. 728.

Aids to navigation, excepting very minor ones, are listed in three annual publications of the Department of Transport covering the Atlantic Coast, Inland Waters and Pacific Coast, respectively. A summary table showing marine danger signals maintained in Canada during the fiscal years 1929-40 is given at p. 581 of the 1941 Year Book.

A great deal has been done to improve navigable waters by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Probably the largest task of this nature has been the St. Lawrence River Ship Channel. An extensive floating plant is in service to maintain and improve the deep-water channel from Montreal to the sea for ocean-going shipping. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and also the control of roads and bridges that cross navigable channels. In order to prolong the season of navigation in important waters that freeze over in winter, ice-breaking operations are carried on at both the beginning and end of winter. This is particularly the case in connection with sea-going shipping from Montreal: these operations are primarily intended to prevent flood conditions during the spring ice break-up.

## 1.-Duration of the Season of Open Navigation on the St. Lawrence Ship ChanneI, 1931-44

Note.-For the years 1882 to 1911, see the Canada Year Book, 1934-35, p. 756, and for 1912-30, p. 615 of the 1942 edition.

## Subsection 3.-Canals

Before the period of extensive railway construction, which commenced for Canada in the 1850 's, the water routes, more especially the St. Lawrence, the Great Lakes, and the Ottawa, were the chief avenues of transportation. These routes were interrupted at certain points, necessitating portages and, to eliminate the toil of unloading, transporting and reloading at the portages, canals were constructed.

The earliest mention of canals in Canada is in connection with the Lachine Canal, begun by early French settlers in 1700 . Only after the conquest of Canada by the British, however, were improvements of the main water routes made. In the early part of the 19th century increased internal and foreign trade and the introduction of steam navigation resulted in more attention being given to this work. Although some of the early canals were constructed primarily for military purposes, they soon became essential to the commercial life of the country. However, since the development of railways in Canada and, even more, since the growth of motorvehicle traffic, the canals, with the exception of those on the Great Lakes-St. Lawrence River route, are playing a minor part in the transportation activities of the country.

The principal canals of Canada are under the jurisdiction of the Dominion Department of Transport and each is accessible from the Atlantic Ocean. They serve six routes: (1) Montreal to Port Arthur and Fort William, via the St. Lawrence River and Great Lakes; (2) Montreal to the International Boundary near Lake Champlain, via the Richelieu River; (3) Montreal to Ottawa, via the Ottawa River; (4) Ottawa to Perth and Kingston, via the Rideau and Cataraqui Rivers; (5) Trenton, at the mouth of the Trent River on Lake Ontario, to the mouth of the Severn River on Lake Huron, and (6) St. Peters, Nova Scotia, on the Atlantic Ocean, to the Bras d'Or Lakes. The aggregate length of these six routes is 1,890 miles, the total of actual canal being 509 miles.

The names of the various canals along these routes, their locations and lengths, together with the number and dimensions of the locks thereon and other information will be found at pp. 626-629 of the 1926 edition of the Year Book, and in the pamphlet of the Department of Transport "Canals of Canada". A table showing the length and lock dimensions of canals as at the end of 1941 will be found at p. 583 of the 1941 edition of the Year Book.

Under the jurisdiction of the Dominion Department of Public Works are the St. Andrews Lock (length, width and draft, respectively, 215, 45 and 17 feet) at Selkirk on the Red River, Man., and two or three smaller and widely separated locks in other provinces. There are also a few small isolated locks, each controlled under the authority of the province in which it is situated.

## Subsection 4.-Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for
such bulk freight as lumber, coal, oil, grain, etc. Facilities may include coldstorage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, dry-dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board, seven others by commissions that include municipal as well as Dominion Government appointees, and the remainder by harbour masters directly under the authority of the Department of Transport.

At most ports, in addition to the harbour facilities operated by the National Harbours Board or other operating commission, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil, sugar industries, etc. At a number of ports there are also graving docks which are dealt with separately.

## 2.-Facilities of Six of the Principal Harbours of Canada, as at Dec. 31, 1944

Note.-The facilities include those under the control of other organizations as well as those of the Board at these ports.

National Harbours Board.-A description of the origin and functions of the National Harbours Board is given at pp. 679-681 of the 1940 Year Book. The Board is responsible for the administration and operation of the following properties (representing a capital investment of approximately $\$ 225,000,000$ ): port facilities such as wharves and piers, transit sheds, grain elevators, cold-storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal and the Second Narrows Bridge at Vancouver. Operating revenues and expenses for these properties are given in Table 12, p. 693.

Public Harbours and Harbour Masters.-In other ports, the Governor in Council may create public harbours by proclamation (Part X of the Canada Shipping Act c. 44,1934 ), and the Minister of Transport may from time to time appoint harbour masters for these ports, who will administer them under rules and regulations approved by the Governor in Council. Remuneration of these harbour masters will be made from fees levied on vessels under the terms of the Act.

Graving Docks.-The Department of Public Works of the Dominion Government has constructed five dry docks and assisted in the construction of seven others by means of subsidies. Tables at p. 618 of the 1942 Year Book give the dimensions of these docks and the amount of subsidy paid to the privately owned ones.

## Subsection 5.-Marine Services and Operations of the Dominion Government

The services covered by this Subsection are those dealing with steamship inspection, pilotage service, sea-faring personnel and accidents to shipping, and the operations are those of the Canadian Government Merchant Marine, and the Canadian National (West Indies) Steamships.

Steamship Inspection.-The Steamship Inspection Service provided for under Part VII of the Canada Shipping Act, 1934, consists of a headquarters staff, at Ottawa, and staffs of inspectors at the principal ocean and inland ports. The Act provides for a Board, known as the Board of Steamship Inspection, which decides on questions arising out of the administration of the Act. The Steamship Inspection Service is responsible for the administration and carrying out of the provisions of Part VII of the Act respecting the periodic inspection of power-driven ships and the issue of inspection certificates, the assignment of load lines, the conditions under which dangerous goods may be carried in ships, and the protection against accident of workers employed in loading or unloading ships. The Steamship Inspection Service is also responsible for the administration and carrying out of the provisions of Part II of the Act relating to the certification and employment of marine engineers.

Pilotage.-This service functions under the provisions set forth in Part VI of the Canada Shipping Act (c. 44, 1934). Qualified pilots may offer their services to the stranger in local and confined waters. At the same time, pilotage might also be considered as a method of insurance.

There are 42 pilotage districts in Canada, 9 of which (Sydney, Bras d'Or Lakes, Halifax, Saint John, Quebec, Montreal, St. Lawrence-Kingston-Ottawa, British Columbia and Churchill) are under the Minister of Transport as pilotage authority. The Pilotage District of New Westminster, B.C., is under a local authority. The other districts function under local pilotage authorities appointed by the Governor in Council under the provisions of the Canada Shipping Act.

A table showing the number and aggregate tonnage of ships using pilots for the major Canadian ports during the fiscal year 1940, is given at p. 586 of the 1941 edition of the Year Book. Later figures are not available for publication due to wartime restrictions.

Seamen Shipped and Discharged.-In previous editions of the Year Book the numbers of seamen shipped and discharged at Canadian ports under the provisions of the Canada Shipping Act (R.S.C. 1927, c. 186 and c. 44, 1934) are given. Figures for the years 1908 to 1917 will be found at p. 690 of the 1938 edition, and for the years 1918 to 1939, at p. 587 of the 1941 edition. The publication of this information has been discontinued for the war years.

Wrecks and Casualties.-The 1911 Year Book, at p. 381, gives details of the numbers of wrecks, their net tonnage, the number of lives lost and the amount of stated damages, for the years 1870 to 1910. The series is continued at p. 691 of the 1938 Iear Book for the years 1911 to 1920 and at p. 620 of the 1942 Year Book for 1921-40. As the publication of these statistics is not permissible during the War, the series has been discontinued.

Canadian Government Merchant Marine.-The circumstances under which the Canadian Government became possessed of, and responsible for, the operations of a merchant marine are explained at p. 776 of the 1934-35 Year Book. A table showing the operating results from 1919 to 1936 is given at p. 689 of the 1937 Year Book.

The original fleet of the Canadian Government Merchant Marine Ltd. consisted of 66 vessels with a total deadweight tonnage of 391,212 . The original cost of the fleet was $\$ 79,661,921$ and the capital loss thereon was $\$ 74,239,356$, the total capital recovery of $\$ 5,422,565$ being made up as follows: (1) the sale of 56 vessels for $\$ 2,378,018$; (2) the proceeds of insurance on 4 vessels lost, amounting to $\$ 2,111,475$; (3) the sale of 6 vessels to the Canadian National (West Indies) Steamships, Ltd., for $\$ 933,072$.

The charter of the Canadian Government Merchant Marine, Ltd., and its subsidiary companies, although inactive since 1936 , had not been surrendered and in 1940 the Company was reconstituted and is now operating on behalf of the Canadian Government certain ships seized in prize and either requisitioned for use of the Canadian Government or condemned by the Court as prize.

These operations are due to the War and for the present it is not possible to publish information concerning them.

Canadian National (West Indies) Steamships.-In conformity with the Canada-West Indies Trade Agreement Act of 1926 (16-17 Geo. V, c. 16), the Dominion Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships, Ltd. Due to war conditions, no information later than that published at p. 588 of the 1941 Year Book has been made available.

## 4.-Financial Statistics of Canadian National (West Indies) Steamships, Lfd., 1937-43

Note.-Statistics for 1929-36 are given at p. 620 of the 1942 Year Book.

| Year | Operating Revenues | Operating Expenses | $\begin{aligned} & \text { Operating } \\ & \text { Net } \end{aligned}$ | Depreciation | Interest | Book <br> Loss or Surplus |

## Section 2.-Financial Statistics of Waterways

The principal statistics available that give any idea of the cost of waterborne traffic consist of the record of public expenditures on waterways. Such expenditures may be classified as capital expenditures, or investments and expenditures for maintenance and operation. Revenues from operation are also recorded. Undoubtedly, in so far as capital expenditures for the permament improvement of waterways are concerned, those of the Dominion Government cover the major part. There has been some expenditure by municipalities on local harbour facilities, and private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian Government Merchant Marine and the Canadian National (West Indies) Steamships, has come almost entirely from private sources. No figures are available regarding private investments in shipping except those appearing in the reports of the operating companies which cover only a portion of the field. Neither are there statistics showing the revenues of ship operators from passenger and freight traffic.

Capital Expenditures.-So far as capital expenditures on Canadian waterways are concerned, the only figures available are those compiled from the Balance Sheet of the Dominion or the annual reports of the Departments of Transport, Public Works and Finance, but such investments or capital expenditures cannot be regarded as any indication of the present worth of the undertakings represented. The costs of building canals and other waterways and permanent works to facilitate water transportation in Canada are represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of earlier works where they had been superseded, as in the first Welland Canals for instance. To this extent such figures are an overstatement of the present value of the works in use. There is a further limitation that should be noted in regard to such figures: they do not include the costs of maintenance and improvements or the operation of these works, such charges having been made to the consolidated fund as annual expenditures and not to capital account. Table 5, which shows capital expenditures on canals, marine services and miscellaneous water transport facilities to have reached the grand total of over $\$ 381,000,000$, must be interpreted with the above qualifications in mind. In Table 6 the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1943 and 1944: they are in addition to the capital expenditures of Table 5. These figures reflect the capital situation in regard to the national harbours of Canada far better than do those of Table 5
in the case of waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they have also been subject to deductions for depreciation and the scrapping or abandonment of plant and more nearly approach the present value of the properties under the administration of the National Harbours Board.

## 5.-Capital Expenditures of the Dominion Government on Canals, Marine Services and Miscellaneous Water Transport Facilities, as at Mar. 31, 1943 and 1944

Notz.-Compiled from the Annual Reports of the Department of Transport, the Department of Finance and the Department of Public Works.

${ }^{1}$ These are works not covered elsewhere in these tables, as shown in the "Public Accounts", Schedule " N " to the Balance Sheet.
6.-Capital Values of Fixed Assets Administered by the National Harbours Board, as at Dec. 31, 1943 and 1944

Nors.-Compiled from the Annual Reports of the National Harbours Board.

Waterway Expenditures and Revenues on Consolidated Fund Account.Expenditures under this heading are mainly for the operation and maintenance of various facilities for water transport, but unfortunately the line between operation and maintenance expenditure is not as finely drawn as is desirable in Tables 8 to 10 .

In addition to the recurrent expenditures to facilitate water transportation shown here, the Dominion Government annually expends a considerable amount to cover deficits of the Canadian National (West Indies) Steamships, Ltd., and of the National Harbours Board, for mail subsidies and steamship subventions as shown in Table 13, and for the maintenance and operation of radio stations to aid navigation as shown in Table 3 of Part VII at p. 726. Operating expenditures and revenues of facilities administered by the National Harbours Board are shown separately in Table 12. The National Harbours Board operates as a statutory corporation. The improvement in the financial results since control was unified under the Board, is indicated by the increase of consolidated operating income from $\$ 2,452,000$ in 1935 to $\$ 5,525,994$ in 1943 and $\$ 6,307,066$ in 1944.

## 8.-Expenditures on Canals Charged to Consolidated Fund Account, Fiscal Years 1943 and 1944

Note.-Compiled from the Annual Reports of the Department of Transport. The annual figures are exclusive of transfers between departmental accounts.

## Section 3.-Water Traffic and Services

Complete statistics, comparable with those given for the railways, showing all the freight carried by water, are not available. Indeed it would be very difficult to obtain a record of the traffic handled by small independent coasting vessels. However, there is a record of the number and tonnage of ships calling at all ports at which there are customs collectors, of cargoes of vessels trading between Canadian and foreign ports and of all cargoes that pass through the canals.

## Subsection 1.-Shipping

A brief description of the early development of Canadian shipping is given at pp. 597-598 of the 1941 edition of the Year Book. Shipping statistics are compiled from reports collected by customs officers at customs ports: consequently they are affected by customs regulations and include only data for vessels trading in and out of ports at which such officers are employed.

For years prior to and including the fiscal year 1937, the statistics were summarized by the customs officer at each port and compiled by the Department of National Revenue; for subsequent years, compilations were made by the Dominion Bureau of Statistics. Effective Apr. 1, 1940, each vessel departing from port makes a statistical report which is forwarded to the Bureau and from these reports all compilations of shipping statistics are made.

With this change of procedure, changes have been made in the recording of the data. Cargoes are required to be reported in tons of $2,000 \mathrm{lb}$. or in tons of $40 \mathrm{cu} . \mathrm{ft}$. Although previous reports did not define the ton, it is quite probable that the long ton of $2,240 \mathrm{lb}$. was used. Reports are not made now for vessels of less than 10 net tons and the tonnage of tugs is the gross ton and not the net ton used for cargo vessels. Fishing vessels are not required by customs regulation to report when operating from certain ports; consequently, the data are not on the same basis as data for cargo vessels.

Vessels in coasting service and vessels fishing in Canadian waters are not required by customs regulations to report any details of cargoes loaded or unloaded so that cargo data are available only for vessels in foreign service. The cargoes are not cargoes on board but cargoes unloaded and loaded at the respective ports.

## Subsection 2.-Canal Traffic

Since the canals of Canada are open to the vessels and traffic of all nations upon equal terms, United States traffic constitutes an important part of the total carried through certain canals, especially the Welland Ship Canal. This is shown in Tables 17 and 19. A table showing the principal commodities carried through Canadian canals during the navigation seasons 1936-40 is given at p. 603 of the 1941 edition of the Year Book. More complete details of the traffic through canals may be found in the annual report "Canal Statistics" published by the Dominion Bureau of Statistics.

## 17.-Traffic Through Canadian Canals, by Nationality of Vessels and Origin of Freight, Navigation Seasons, 1936-44

Nore.-Figures include duplications where cargoes use two or more canals For Canadian canal traffic from 1886 to 1899, see the 1902 Year Book, p. 398; for the figures of 1900 to 1910, the 1933 Year Book, p. 697; and for 1911 to 1935, p. 703 of the 1938 edition.

[^244]The figures in Tables 17, 19 and 19A include duplications where the same freight passés through two or more canals, but in Table 20 duplications in the traffic passing through the St. Lawrence and Welland Ship Canals and the Canadian Lock at Sault Ste. Marie, which amounted to $2,883,206$ tons in 1943 and $3,098,981$ tons in 1944, have been eliminated.

Grain transhipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne or other transhipping port.

${ }^{1}$ Through both Canadian and United States locks at Sault Ste. Marie.
Traffic through the Sault Ste. Marie canals, Canadian and United States, has been approximately twice as heavy as the traffic through the Panama Canal during the last ten years for which records are available, and in 1940 was almost three times as heavy. It has varied from a low of $20,484,000$ tons in 1932 , which was less than the Panama traffic, to a total of $120,200,814$ tons in 1944. The dominant traffic, from a tonnage aspect, is iron ore. During the past 50 years this bas fluctuated from 4,901,000 tons in 1892, a low of $3,607,000$ tons in 1932 and an average of
$50,000,000$ tons in the 1920 's to a total of $94,326,578$ tons in 1944. Although wheat has ranged as low as only 7 p.c. of the iron-ore tonnage, its value has generally been greater than that of the iron-ore traffic, and has been the most valuable single commodity passed through the canals; in 1928 the value of wheat passed through the canals was 40 p.c. of the value of all traffic. Other grains have been about a quarter to a fifth of the wheat tonnage and a smaller ratio of the value.

Bituminous coal has generally been second in tonnage to iron ore and a large part of it is carried by the ore vessels when returning for a cargo of ore.

The tonnage of the three principal commodities and the tonnage of all freight passed through the canals for the years 1913 to 1944, inclusive, are plotted in the following chart.

The Panama Canal.*-The Panama Canal, which was opened to commercial traffic on Aug. 15, 1914, has been a waterway of great importance to British Columbian ports, from which vessels leave direct for British and European ports throughout the year. As an alternative route to that of the transcontinental railway lines, such a passage by water is of vital importance in the solution of the larger transportation problems of the continent, and while its influence is perhaps more potential than actual, such a check on transcontinental rail rates is a valuable one. During the War of 1914-18 the great expectations based upon the opening of the Canal were not realized, owing to the scarcity of shipping. However, with the

[^245]post-war decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe took place, and, while the proportion carried in vessels of Canadian registry was comparatively small, the cargo tonnage nevertheless assumed considerable proportions. The outbreak of war in September, 1939, has again reduced the supply of shipping for the ordinary commerce of the nations involved. It is probable that under these circumstances transcontinental rail transportation has been substituted in Canada for some of the traffic formerly passing through the Panama Canal.

## 21.-Traffic To and From the East and West Coasts of Canada via the Panama Canal, Years Ended June 30, 1929-40:

Note.-Figures for the years 1921 to 1928 are given at p. 707 of the 1938 Year Book.

| Year | Originating on- |  | Destined for- |  | Year | Originating on- |  | Destined for- |  |

| 1932. | 2,383,211 | 89,443 | 167,855 | 529,317 | 1938 | 1,962,220 | 391,906 | 213,781 | 398,710 |
| 1933. | 2,896,162 | 121,875 | 134,511 | 328,038 | 1939 | 2,873,452 | 348,410 | 163,526 | 296,881 |
| 1934. | 2,201,180 | 196,204 | 189,227 | 498,706 | 1940 | 2,272,450 | 313,118 | 185,540 | 108, 648 |

${ }^{1}$ Wartime restrictions preclude the publication of data for 1941 and later years.
A table at p. 636 of the 1942 Year Book shows the total commercial traffic through the Panama Canal during the years 1929-40.

## Subsection 3.-Harbour Traffic

The freight movement through a large port takes a number of different forms. The overseas movement, i.e., the freight loaded into or unloaded from sea-going vessels, frequently constitutes a surprisingly small part of the total. Usually the volume coming in and going out by coastwise vessels is larger. Then there is the 'in transit' movement of vessels that pass through the harbour without loading or unloading. Finally there is the movement from one point to another within the harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled in all the ports and harbours of Canada, as many of them are small and are without the staff necessary to obtain a detailed record of freight handled. Similarly |statistics of cargo carried by vessels in coastwise and inland international shipping are"not'available. The National Harbours Board administers a number of the principal ports of Canada and for the years 1936-39, has published a record of the principal commodities in water-borne cargo handled at the ports under its control. These are shown for 1939 at pp. 701-702 of the 1940 Year Book. Owing to wartime restrictions the publication of later statistics has been suspended.

## PART V.-CIVIL AIR TRANSPORTATION*

Nors.-The treatment of military activities and organization falls more properly under the subject of National Defence (see "Air Force, Royal Canadian" in the Index).

## Section 1.-History and Administration

## Subsection 1.-Historical Developments

Historical Sketch.-A brief historical outline of the development of aviation in Canada appears at pp. 710-712 of the 1938 Year Book.

Trans-Canada Airway.-An article describing this Airway appears at pp. 703-705 of the 1940 Year Book.

Transatlantic Air Service.-The work done to establish an air service between Canada, the United States and the British Isles via Newfoundland up to the outbreak of war is described at pp. 705-707 of the 1940 Year Book.

Pre-War Civil Aviation and the Defence Program.-An article dęscribing the developments of importance in civil aviation prior to the outbreak of war in 1939, and also the contribution that civil aviation has made to the air defence program, is given at pp. 608-612 of the 1941 edition.

Administration.-The 1942 Year Book, at pp. 638-639, outlines the administrative arrangements for the control of civil aviation. Later developments are given in the Section on Wartime Control of Transportation, at pp. 640-644.

## Subsection 2.-Recent Developments

Before the War, civil aviation in Canada was playing an ever-increasing part in the daily life of the nation. The aeroplane was taking a leading part in mail delivery both in outlying and inter-urban areas; in transportation of passengers and goods to the outposts of civilization; in photographing and mapping uncharted areas; in exploration and prospecting; in the movement of hunters and trappers to otherwise inaccessible areas; and in carrying tourists into the wilds of Canada for hunting, fishing or the sheer joy of escaping from civilization. Along with all this was the development of inter-city traffic on a large scale from the Atlantic to the Pacific.

The War has necessitated the dropping of all these activities in the interest of national defence but during the interim the position of Canada in the air has been enormously strengthened by improved technology and a vast increase in the number of trained personnel, by the strong organization built up and by greatly increased experience in operation.

The progress of the War in Europe in 1944 made possible a curtailment of the British Commonwealth Air Training Plan which, in turn, resulted in a considerable number of airports being turned over to the Department of Transport for use in civil flying. Many of these airports will be useful to both commercial and private pilots but for the present the shortage of fuel makes any large-scale resumption of civilian flying impossible.

The shifting of combat areas in the Pacific together with the completion of the Alaska Highway and Canol Projects gave a breathing spell which enabled the Canadian and United States Governments to clarify the position of control of

[^246]the northern airports that had been constructed to meet emergency war conditions. The Royal Canadian Air Force is now responsible for the operation and maintenance of the airports of the Northwest Staging Route while the landing fields constructed by the United States Army Air Force down the Mackenzie River as far as Norman Wells and Canol have been turned over to the Department of Transport and steps have been taken to provide for their maintenance in accordance with Joint Defence Board agreement and subsequently for civil purposes. (See the article on "Canada's Northern Airfields", pp. 705-712.)

## Canadian Scheduled Air Transport Services

Trans-Canada Air Lines in 1944.-The volume of traffic on the Trans-Canada Air Lines has steadily increased and, in an attempt to meet the increased demand, a third flight was inaugurated between Toronto and Winnipeg in 1944, with the possibility of it being extended to Vancouver in the near future. Like all commercial air lines, the Company is short of flying equipment. During the year, steps were taken by the Department of Munitions and Supply to build DC 4 aircraft at the Victory Aircraft Plant in Montreal in order to provide Trans-Canada Air Lines and other Canadian operators with equipment suitable both for domestic and foreign air-line services at the earliest possible moment after the cessation of hostilities.

Trans-Canada has created at Winnipeg one of the most complete aircraft engineering and maintenance shops on the continent. Here, trained staffs keep the fleet of twenty-six transports in the finest flying trim and provide shop service for military aircraft.

Routes now in operation total 5,299 miles, made up as follows: Moncton to St. John's, Newfoundland, 751 miles; Halifax to Sydney, 201 miles; Halifax to Blissville, 172 miles; Halifax to Victoria (via Moncton and Toronto), 3,303 miles; Toronto to New York, 365 miles; Toronto to London and Windsor, 206 miles; Lethbridge to Calgary to Edmonton, 301 miles.

In 1944, Trans-Canada carried $3,739,105 \mathrm{lb}$. of mail, an increase of $12,498 \mathrm{lb}$. over the previous year; an express load of $856,016 \mathrm{lb}$., an increase of $34,410 \mathrm{lb}$.; and 158,884 revenue passengers, an increase of 16,608 .

A high percentage of the male personnel of T.C.A. has enlisted in the Armed Forces and manpower is one of the serious problems confronting the Air Line. The policy of employing women and ex-servicemen was continued during the year. More than 33 p.c. of the staff is now female.

Canadian Government Transatlantic Air Service.-Trans-Canada Air Lines is operating a service from Montreal to Prestwick, Scotland, on behalf of the Canadian Government, the primary purpose of which is to carry mail to and from the Canadian troops overseas. This service is now on a firm footing and operating three round trips a week on schedule.

Canadian Pacific Air Lines.-The Canadian Pacific Air Lines, formed early in 1942 by the consolidation of the many independent commercial operators chiefly servicing northern Canada, is now operating a network of north-south air routes. The Company has rendered essential air transport service in connection with the Alaska Highway, the Canol oil project, airport construction, and the development of wartime minerals.

Besides supplying air transport services directly related to the war effort over a large section of northern Canada, the company operated seven air training schools in 1944 on a non-profit basis for the British Commonwealth Air Training Plan. Five engine-overhaul and aircraft-repair plants are operated under contract with the Department of Munitions and Supply for the overhaul and repair of R.C.A.F. equipment. These air training schools and aircraft-repair plants are located across Canada.

In addition to providing these essential wartime air services in Canada, the Canadian Pacific Railway, in co-operation with the British Ministry of Aircraft Production, pioneered the Atlantic ferry bomber service in 1940, now the R.A.F. Transport Command.

A number of officers and employees of Canadian Pacific Air Lines have received citations for meritorious wartime service and the Company's honour list includes one O.B.E., four U.S. Air Medals, and other marks of recognition from the R.C.A.F., the R.A.F. and the U.S.A.A.F.

The component companies of the C.P.A. in 1944 flew more than $6,000,000$ miles, carried more than 100,000 passengers and close to $9,000,000 \mathrm{lb}$. of freight and express as well as $1,500,000 \mathrm{lb}$. of mail. This represents a 40 p.c. increase in passengers carried, a slight decrease in air cargo, and a larger decrease, approximately 35 p.c., in mail transported. The latter two decreases were due to the completion or closing of many war projects in northern Canada, reducing traffic. Employees in 1944 numbered 1,100 .

Independent Air Lines.-Although many of the principal operating companies have been absorbed by C.P.A., there still remain independent organizations in this field. Typical of these are Maritime Central Air Lines which operates a mail, passenger and express service between Moncton and Saint John in New Brunswick and Summerside and Charlottetown in Prince Edward Island; the M. and C. Aviation Company which operates a licensed air-mail, passenger and express service from Prince Albert to northern Saskatchewan points and, in addition, an engine and overhaul shop under contract with the Department of Munitions and Supply.

## CANADA'S NORTHERN AIRFIELDS*

## Introduction

Canada's northern position in the Western Hemisphere is of the greatest importance from the standpoint of air transport. The shortest airways between North America and both Europe and Asia pass over the Dominion and her co-operation is necessary for their efficient development.

When Canada went to war in 1939 immediate steps were taken to ensure the defence of her territory and, subsequently, of key points in the Western Hemisphere. Since the Ogdensburg Agreement of Aug. 17, 1940, which resulted in the creation of the Canada-United States Permanent Joint Board on Defence, these defensive measures have been co-ordinated with those undertaken by the United States and the two countries have worked out joint plans for the defence of their parts of the Western Hemisphere.

The plans for the defence of vital areas of northwestern and northeastern Canada are outstanding examples of effective co-operation between the United Kingdom, the United States and Canada. The primary purpose of these defence installations

[^247]was to close the North American approaches to attack by Germany and Japan, but they have now become links in the offensive plans of the Allies. Aircraft fly across northwestern Canada to the Pacific theatre of war and across the northeast to Europe, and in post-war plans the routes hold promise of providing greater freedom for the movement of air traffic in the general scheme of international air transport.

## Development of the Northwest Airways System

The Northwest Staging Route.-The northwest staging route is one of the most important in the world, being the main artery for air traffic between the United States and Alaska, and beyond Alaska to northeastern Asia.

The Route is Canadian property, owned and operated by the Canadian Government. It was initially built, developed and put into operation by Canada, and subsequently improved with the co-operation of United States army engineers and workmen. The total cost of the wartime development will be about $\$ 58,500,000$ and, in final settlement, will have been borne wholly by the Government of Canada.

The possibilities of an airway connecting with the Trans-Canada system at Edmonton to give access to all parts of northwestern Canada and Alaska had long been realized. Pioneering for such an airway was done by Canadian bush pilots who first operated in seaplanes in that part of the country in the 1920's. In 1935 a survey to determine the best route from Edmonton to Yukon and Alaska was made by the Department of Transport. Detailed engineering work was authorized in 1939 and aerodromes were planned at Grande Prairie, Fort St. John, Fort Nelson, Watson Lake and Whitehorse. Landing strips $3,000 \mathrm{ft}$. in length by 500 ft . in width with provision for future extension and radio range stations to provide a radio beam were constructed at intervals of 100 miles according to standard airway practice. Thus this initial wartime development of strategic importance-the Northwest Staging Route-was commenced.

The survey parties were still in the field at the outbreak of war, and some consideration was given to the advisability of abandoning the project in favour of more immediately pressing defence needs. It was decided, instead, to expedite completion of the route, a decision that was fully justified by subsequent events. This Canadian decision was fully supported when the Canada-United States Permanent Joint Board on Defence met in November, 1940, reviewed the defence position of the two countries and recommended to the respective Governments that the plans, then being put into effect by the Canadian Government, were satisfactory from the standpoint of both parties as regards the air route from Edmonton to Fairbanks, Alaska. Later on in the light of events, additions to the original plans were made to meet conditions that could not possibly have been foreseen. As regards costs, as explained below, the Canadian Government undertook to bear these for the whole undertaking.

By Sept. 1, 1941, work was so far advanced that the airway from Edmonton, Alta., to Whitehorse, Yukon Territory, was usable by daylight in fine weather, and radio range stations were in operation at 200 -mile intervals from Edmonton to the Alaska Boundary by the end of the year. The route thus provided an airway to Alaska which was removed from the Pacific Coast and relatively free from the danger of enemy attack and coastal weather influences. It was equipped with modern navigational aids, and connected with established air and ground communications at Edmonton and Vancouver.

By the wise decision to rush forward construction, Canada was in a position to offer to the United States, when that country entered the War in December, 1941, the free use of an airway to Alaska.

Although Canadian airway facilities were in operation at the time of the Japanese attack on Pearl Harbour on Dec. 7, 1941, it soon became apparent that war traffic would necessitate substantial additions to the original program and acceleration of the long-term peacetime plans. Military steps taken against Japan on the Pacific Coast made necessary a much more comprehensive plan than the air route. These military plans called for extensive developments involving an immense amount of construction work connected with the enlarging of airports, the improvement of facilities, the provision of living accommodation, etc.

By special arrangement with the United States Government made in the early months of 1942, Canada agreed to pay for the construction of new landing strips or other permanent works of continuing value to the Airway and the United States agreed to pay for such additional facilities over and above Canadian standards and requirements that were needed solely for United States military purposes. More recently the Canadian Government, after reviewing the probable future requirements of air transport in this area, has informed the United States Government that it will not expect payment for the construction of even those improvements carried out by the Canadian Government at the request of the United States and that Canada will also reimburse the United States Government for its own expenditures on construction of a permanent nature in connection with the Northwest Staging Route.

By February, 1942, the United States, having obtained permission of the Canadian Government, decided to build the Alaska Highway to meet the requirements of a military artery capable of handling a flow of heavy vehicular traffic. This highway followed the general route of the airway (see map on p . 707). The fact that the airway was then operating greatly facilitated the construction of this highway and, similarly, the existence of the highway has greatly aided the operation of the airway. The two projects, one carried out by Canada and the other by the United States, are complementary to each other.

By July 12, 1943, the Canadian Government, having virtually completed its own program of construction at the main fields of the Northwest Staging Route, closed out its contracts and withdrew its construction forces.

As an extension to the original highway project, flight strips were constructed by United States authorities at suitable intervals adjacent to the highway. These, however, are used only for 'contact' flying where the highway can be used as a guide by the pilot. They provide facilities for the rapid movement of construction and maintenance personnel and equipment, as well as emergency landing areas along the highway.

The Northwest Staging Route is now operated by the Royal Canadian Air Force from headquarters at Edmonton. The Department of Transport provides meteorological services, operates and maintains the radio range stations, and temporarily services communications facilities. Departmental engineers for coordinating any new work with that already done by Canada are also retained at each aerodrome along the route. Control towers are staffed by the R.C.A.F., which is responsible for maintenance and repair work at all aerodromes. The R.C.A.F. is solely responsible for security.

Expenditures on the Northwest Staging Route have amounted to $\$ 37,320,226$ U.S. funds, of which $\$ 31,311,196$ in U.S. funds were for permanent assets; $\$ 14,535,071$ in Canadian funds were also spent by Canada up to Mar. 31, 1944. In addition Canada, during 1944, spent a further $\$ 5,161,000$ at the request of the United States. Expenditures are analysed in the table at p. 712.

The Mackenzie River Route.-Canadian bush pilots have long followed the general course of the Mackenzie River northward as far as Aklavik with seaplanes and skiplanes, but once the United States Government had decided to proceed with the Canol oil project far greater payloads were available for the carriage of Canol freight to augment shipments over the Mackenzie River water route, which has very definite limitations. Twin-engined transport aircraft were decided on as the most suitable carriers, and landing facilities became necessary. These were provided by the development of landing strips at McMurray, Embarras, Fort Smith, Fort Resolution, Hay River, Fort Providence, Mills Lake, Fort Simpson, Wrigley, Norman Wells, Camp Canol, Peace River, Metis and Upper Hay River Post. A cut-off route running between Peace River, Alta., and Mills Lake in the Northwest Territories, used mainly during the winter months, is included in the system and military transport flying is also conducted from Fort Nelson to connect with the Mackenzie System at Fort Simpson.

Service flights are now operated along the route to as far north as Norman Wells by the R.C.A.F., and civil operations extend to Aklavik. Department of Transport personnel are stationed at each location to maintain the airports, service aircraft, obtain weather reports and operate the radio ranges. Royal Canadian Corps of Signals personnel are also stationed at various points along the route to gather and transmit weather information and supplement radio communications.

Survey parties of the R.C.A.F. and the Department of Transport have conducted surveys in the field with the purpose of setting out sites against the possibility of future extension of the route to the north and northwest through Good Hope, Arctic Red River, McPherson, Bell-Porcupine and Blue Fish-Porcupine. Material and supplies are flown to these parties by float-equipped aircraft from Norman Wells.

A closely integrated network of weather observation posts and forecast stations has been established throughout the Canadian Northwest by both Canadian and United States agencies. Telephone and telegraph lines, built by the United States Government, with a capacity of 6 -voice and 13 teletype communications, supplemented by several circuits added by the R.C.A.F. for Airway Traffic Control and ground line communications, are now in operation between Edmonton and Fairbanks, a total distance of 1,993 wire miles. A telephone line has been strung along the 110 miles of pipeline involved in the supplementary Canol project, and a line is being strung along the main Canol pipeline from Norman Wells to Whitehorse.

## Development of the Northeast Airways

The Northeast Staging Route.-The need for a northeast staging route was originally suggested to Canada by the United Kingdom in August, 1941, with the suggestion that the matter be discussed with the United States. Long-range bombers of which the United Kingdom was greatly in need were already being ferried across the Atlantic through the Newfoundland airport at Gander, which was established to assist civil aviation by the Government of Great Britain in September,
1939. There were no facilities for ferrying short-range bombers or fighters, which were beginning to come off United States assembly lines in considerable volume, and the United States investigated the possibilities of establishing airfields in Greenland and Iceland. For many months prior to United States involvement in the War, Canadian and United States troops had been manning co-ordinated defence posts. The Armed Forces of both nations were stationed in Iceland and in April, 1941, the United States assumed responsibility for the defence of Greenland and constructed airfields which were to be available to other "American Nations", which term included Canada.

## THE MAIN CONNECTING LINKS OF THE NORTHEAST STAGING ROUTE

Since aeroplanes could not be transported across the Atlantic in sufficient numbers or safely through the sea lanes, it was imperative that, with the least possible delay, an air-base be opened from which aircraft arriving direct from the assembly lines of the United States and Canada could be flown across the short North Atlantic route by way of air bases in Greenland and Iceland to the United Kingdom. In June, 1941, a site was discovered at Goose Bay, Labrador, and a preliminary survey was made. By agreement with the Government of Newfoundland, construction was begun by Canada almost immediately, and the field was in
use before winter closed in. Considering the isolation of the site from the then existing communications, and the time available for planning and transporting equipment and personnel, this was an outstanding achievement.

It was subsequently agreed by the Governments of Newfoundland and the United Kingdom that from Sept. 1, 1941, Canada should be given a 99 -year lease of the Goose Bay Air Base for defence purposes; that this air base should be available to the Royal Air Force and to the United States Air Forces for the duration of the War and for such time thereafter as the parties might agree to be necessary or advisable in the interests of common defence; that the question of civil air use should remain over for settlement after the War (discussions to take place between the United Kingdom, Newfoundland and Canada within twelve months after the War) but, in any event, civil and military aircraft owned by the Government of Newfoundland should have rights to use the base on terms not less favourable than aircraft owned by the Government of Canada.

With the completion of the Goose Bay air base by Canada and the Greenland and Iceland airfields by the United States, a staging route was available for relatively short-range aircraft.

With the entry of the United States into the War on Dec. 7, 1941, the strain on the existing ferry routes became even heavier. In May, 1942, the United States Army Air Forces proposed to the Canada-United States Permanent Joint Board on Defence the establishment of air routes over northeastern Canada to ferry long-, medium- and short-range aircraft to Europe, and on June 2, 1942, the Permanent Joint Board on Defence approved and recommended immediate construction of airfields on Canadian territory either by the Canadian or by the United States Government with the approval of the Canadian Government. Facilities of the new routes were to be made available to the Royal Air Force.

From the factories of the United States Pacific Coast, aircraft would be ferried across the Canadian prairies to The Pas and Churchill, Man. From this Hudson Bay port they would fly to Southampton Island, N.W.T.; Frobisher Bay, Baffin Island; Greenland; and Iceland and from there to their destination.

This channel was to be in addition to the overland ferry route already established from eastern United States plants to the United Kingdom by way of Goose Bay, Greenland and Iceland. (See map on p. 710.)

## Summary of Total War Expenditures on Canada's Northern Airfields and Policy Governing Their Apportionment

Details of the expenditures and the existence of the previously undisclosed airfields in northeastern Canada were revealed when Prime Minister King, on Aug. 1, 1944, tabled in the House of Commons an excharige of notes between Canada and the United States dated June 23 and 27, 1944.

In explanation of the Agreement by which Canada will reimburse the United States for works of a permanent nature constructed in Canada, Prime Minister King said:
"The Government had two considerations in mind. In the first place it is believed that, as part of the Canadian contribution to the War, this country should take general responsibility for the provision of facilities in Canada and in Labrador required for the use of Canadian, United Kingdom and United States forces.
"In the second place, it was thought that it was undesirable that any other country should have a financial investment in improvements of permanent value, such as civil aviation facilities, for peacetime use in this country.
"I am happy to say that our views on this subject were understood by the Government of the United States, and the agreement which I have tabled is the result of this understanding."
Existing arrangements for the duration of the War for the maintenance, operation and defence of these projects are not disturbed.

The following table shows in column 2 the amounts Canada will pay to the United States for construction of airfields up to Apr. 24, 1944. Costs incurred by Canada on United States account to Mar. 31, 1944, will be found in column 3.

## Section 2.-Airports and Aircraft

## Subsection 1.-Summary Statistics of Civil Aviation

From commercial operators of aircraft, aeroplane clubs, etc., the Bureau of Statistics collects and compiles civil aviation statistics, with the exception of data on licences and accidents, which are reported by the Civil Aviation Division of the Department of Transport. To preserve as much continuity with earlier statistics as possible, figures for certain important items are given in Table 1 for the years 1938-43. However, statistics collected since 1936 have been somewhat enlarged and consequently for some items in Table 1 and for much of the data in the following tables no figures are available prior to 1936.

The commercial companies are divided into two classes, those engaged principally in international flying between Canada and the United States and those engaged exclusively or almost exclusively in flying between Canadian stations. A small amount of strictly Canadian flying is done by the international companies.

Regular flying on the Montreal to Vancouver portion of the Trans-Canada Airway began toward the end of 1938. Therefore the statistics for 1939 were the first to include extensive operations of the Trans-Canada Air Lines. This company is in a class by itself in Canadian aviation at present, and its inclusion somewhat distorts comparisons with data of previous years. The long journey and relatively heavy passenger traffic raises the average journey and average passenger per aircraft mile, although the business of other companies may be practically unchanged. The companies operating in the north country carry passengers, freight and supplies into and out of the mines and account for the large volume of freight carried by air in Canada. Because of this feature of civil aviation in Canada, it is difficult to make comparisons with other countries where the traffic is principally inter-urban passenger traffic between well-established airports.

${ }^{1}$ Compiled upon a different basis from those of the Post Office shown at p. 736. ${ }^{2}$ For Canadian carriers only. ${ }^{3}$ Not available.

## Subsection 2.-Ground Facilities

Early ground facilities for civil aviation in Canada consisted chiefly of municipal or flying-club airports adjacent to the larger urban centres, and of numerous terminals from which commercial flying services operated, mainly into the northern
mining regions. A large air terminal was built at St. Hubert, seven miles south of Montreal, with immigration, customs and postal facilities available. These earlier airports formed the nucleus which, with many additions and improvements, became the chain of aerodromes constituting the Trans-Canada Air Lines. The development of this airway and the use and expansion of the ground facilities for military purposes since the outbreak of war have affected the status and facilities of many former municipal airports.

## Subsection 3.-Aircraft

The construction in Canada of aircraft and equipment is essential to the development of flying. Before the War several manufacturers were producing original types especially suited to operation in Canada, and a number of manufacturers from England and the United States formed branches in Canada for the assembly and servicing of their products. There were also a number of plants for the manufacture of landing gear, especially skis and pontoons, designed to meet the particular requirements of Canadian conditions. Since the beginning of the War, plants equipped to manufacture civil aircraft and parts have been changed over to the production of military types and the industry has been expanded by many additional plants and firms. A brief description of the wartime manufacture of aircraft in Canada appears in the Manufactures Chapter, p. 368. Pre-war figures are given at p. 617 of the 1941 edition of the Year Book.

## Section 3.-Finance and Employees

## Subsection 1.-Dominion and Other Expenditures and Revenues

The status of civil aviation in Canada has changed considerably in recent years as regards both civil and military requirements. Until the institution of the TransCanada Air Lines, the development of civil aviation was limited to the provision of private, commercial and administrative services for the more remote sections of Canada, chiefly in the northern mining, forestry and trapping regions. Recently, however, the Dominion Government has improved existing airports and constructed others for civil and for military purposes. In addition to direct expenditures, the Department of Transport has given assistance to municipalities for the development of airports, such contributions, as shown in Table 3, probably including expenditures for both capital and operating purposes.

## 3.-Capital and Ordinary Expenditures and Revenues of the Dominion Government In Connection with Civil Aviation, Fiscal Years 1942-44

Note.-Compiled from Department of Transport records.

The capital expenditures made by commercial air carriers for property as reported for the end of 1943 are shown in Table 4. Dominion Government expenditures on airports across Canada included in the Trans-Canada Airway are not included in property account, nor are expenditures on military aerodromes. Statistics are not available regarding the investments in airports by municipalities and the figures given in Table 4 are therefore restricted.

No statistics are available regarding expenditures on flying operations by the Dominion and Provincial Governments or by private individuals.

## 4.-Cost of Property, Revenues and Expenditures for Licensed and Unlicensed

 Commercial Air Carriers in Canada, 1943

## Subsection 2.-Employees and Salaries and Wages

The numbers of civil air personnel licensed in recent years is shown in Table 1, p. 714. However, those figures include pilots and engineers in the employ of the Dominion Government and of private individuals as well as those not employed at all in the ordinary sense; licensed personnel of these classes are not included in the classes shown in Table 5.
5.-Employees and Salaries and Wages in Civil Aviation in Canada, 1943

## Section 4.-Aerial Traffic

Table 1, p. 713, shows large increases in 1941, 1942 and 1943 in passenger traffic as indicated by the passengers carried one mile. The amount of freight carried by aircraft grew rapidly, increasing from $2,372,467 \mathrm{lb}$. in 1931 to a record of $24,317,610 \mathrm{lb}$. in 1937; it has since decreased to $16,559,611 \mathrm{lb}$. for 1941 and $13,853,563 \mathrm{lb}$. for 1943. The decline in air traffic since 1939 has been closely connected with the decline in the gold-mining industry and the restrictions in the use of aircraft for trapping and other operations. In the years before the War a large part of the air freight was mine machinery and supplies to gold-mining companies. Many of these mines, located in the northern parts of Quebec, Ontario and the western provinces and in
the Northwest Territories, were accessible only by canoe in the summer and dog team in the winter or by aircraft, and aircraft transportation was the cheapest and most effective method of transportation. Further information regarding air-mail services appears in Part VIII of this Chapter, p. 736.

Some countries include in their statistics traffic between two foreign stations of companies incorporated in the reporting country. In Table 6 statistics of companies operating regular routes between points in Canada and the United States are shown separately. These statistics include only those of traffic between the two countries that originates or terminates in Canada and, therefore, exclude traffic carried by these lines between foreign stations, except a small amount of through traffic flown over Canadian territory, as covered by the footnotes to Table 6. Reported miles flown are those flown over Canadian territory only and the same mileage is used in computing passenger-miles and ton-miles.

## PART VI.-WIRE COMMUNICATIONS*

## Section 1.-Telegraphs

The early history of telegraphic communication in Canada is given at p. 778 of the 1934-35 Year Book.

Dominion Government Telegraph Service.-This service is operated by the Telegraph Branch of the Department of Public Works. Its general object has been to furnish wire communications for outlying and sparsely settled districts where the amount of business is so small that commercial companies will not enter the field but where the public interests require that there should be communication. Thus these facilities include: telegraph and telephone services to scattered settlements around the coast of Cape Breton Island; cable services to Campobello, Grand Manan, and other islands in the Bay of Fundy, to Prince Edward Island, Magdalen Islands, and Anticosti Island in the Gulf of St. Lawrence; telegraph services along the north shore of the Gulf of St. Lawrence from Quebege to the Straits of Belle Isle; cable connections with Pelee and Manitoulin Islands in Ontario; some lines to northern outlying districts in Saskatchewan; lines from Edmonton to the Athabaska and Peace River country in Alberta; telegraph or telephone communications around the coast of Vancouver Island and to fishing, lumbering and mining settlements along the coast of the mainland of British Columbia, as well as to isolated mining centres in the interior; and finally the overland telegraph line from Ashcroft, B.C., to Dawson and other settlements in Yukon.

Telegraph Systems.-The Canadian telegraph systems are composed of lines owned by the Dominion Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world, and are operated under great climatic and geographical disadvantages.

[^250]
## 1.-Statistics of All Canadian Telegraphs, 1933-43

Note.-Figures for the years 1920-30 will be found at p. 722 of the 1938 Year Book and for 1931-32 at p. 637 of the 1943-44 edition.

[^251]Submarine Cables.-Sixteen transoceanic cables have termini in Canadafourteen of them on the Atlantic Coast and two on the Pacific. In addition, there are eight cables between Atlantic coastal stations in Canada and the United States. The year in which the cable was first demonstrated to be of commercial value was 1866, and up to the present its use has greatly increased. The Atlantic cables are controlled by English and United States interests. The Pacific cable, from Canada to Australia and New Zealand, has been in operation since 1902, and was owned by a partnership of the Governments of Great Britain, New Zealand, Australia and Canada. As a result of the recommendation of the Imperial Wireless and Cable Conference of 1928, in view of increased wireless competition, it was decided to dispose of the Pacific and West Indian Islands cable systems to the Imperial and International Communication Co., a company formed to take over all Empireowned cables, and lease the Empire-owned beam wireless systems. The necessary legislation was passed by the United Kingdom in February, 1929, and by Canada in June, 1929.

## Section 2.-Telephones

A brief historical account of the early development of telephones in Canada is given at p. 781 of the 1934-35 Year Book.

## Subsection 1.-Systems and Equipment

Telephone Systems.-The 3,187 telephone systems existing in 1943 included the three large provincial systems in Manitoba, Saskatchewan and Alberta, and smaller governmental systems in Ontario, Quebec and New Brunswick, together with the system operated by the Dominion Department of Public Works and National Parks of Canada, Department of Mines and Resources. They also included 26 municipal systems, the largest operated by the cities of Edmonton, Fort William and Port Arthur. Of the 2,383 co-operative telephone companies, no fewer than 1,131 were in Saskatchewan alone, 792 in Alberta and 212 in Nova Scotia. The largest among the 540 stock companies operating telephone systems in 1943 were the Bell Telephone Co., and the British Columbia Telephone Co. Over 59 p.c. of the total telephone investment in Canada belongs to the Bell Telephone Co., and their telephones in Quebec and Ontario constitute 57 p.c. of the total for Canada.

Telephone Equipment.-During the years 1933-43 there has been an increase of nearly half a million $(499,832)$ in the number of telephones in use, representing an increase in telephones per 100 population of 3 p.c.

Of the 1,692,162 telephones in Canada in 1943, 961,036 or 57 p.c. were operated from automatic switchboards. The remainder were operated from manual switchboards. Automatic switchboards have completely displaced manual switchboards in the principal cities of the Prairie Provinces and are displacing them in the other provinces.

## 2.-Mileages of Pole Line and Wire, and Telephones in Use, as at Dec. 31, 1933-43

Note.-Figures for the years 1911-30 will be found at p. 724 of the 1938 Year Book and for 1931-32 at p. 639 of the 1943-44 edition.

| Year | Systems | Pole-Line Mileage | Mileage of Wire | Telephones in Use |  |  |  |  |  |

${ }^{1}$ Includes telephones on rural exchange lines and urban exchange lines that have more than four parties.

The density of telephones in the different provinces is naturally influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.

## Subsection 2.-Telephone Finances

Important trends for the telephone industry in Canada are indicated in Tables 4 and 5. There were setbacks in revenues, operating expenses, salaries and wages, etc., during the depression years, but these were not so marked as in most other b:anches of industry.

## 4.-Financial Statistics of Telephones in Canada, 1933-43

Nore.-Figures for the years 1911-30 will be found at p. 725 of the 1938 Year Book and for 1931-32 at p. 640 of the 1943-44 edition.

${ }^{1}$ Includes salaries and wages chargeable to capital account. $\quad{ }^{2}$ Includes Bell Telephone Co. in Ontario and Quebec. ${ }^{3}$ Financial Statistics of Bell Telephone in Ontario included under Quebec.

- Excludes employees and wages for rural systems in Saskatchewan.

## Subsection 3.-Telephone Calls

Systems operating almost 90 p.c. of all telephones in Canada made estimates by actual count on days of normal business and, after adjustment for incompleted calls, holidays, Sundays, etc., the average was multiplied by 365 . The longdistance calls in practically all cases were the actual long-distance calls put through or completed.

## 6.-Local and Long-Distance Calls and Averages per Telephone and per Capita, 1936-43

Note.-Statistics for 1928-35 are given at p. 718 of the 1939 Year Book.

| Year | Local Calls | Long- <br> Distance Calls | Total Calls | Total Calls per Capita ${ }^{1}$ | Averages per Telephone |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ Per capita figures are based on official estimates of population given at p. 128.

## PART VII-RADIO-COMMUNICATIONS

The Canada Year Book, 1942, at p. 650, gives an outline of the development of administrative control over radio-communication in Canada and of the legislative enactments by means of which this was effected.

## Section 1.-Administration

## Subsection 1.-Technical Control and Licensing

All radio stations within the Dominion of Canada are required to be licensed, whether used for transmission or reception, or both. The issuance of all classes of licences, the assignment of call signs and frequencies, and the inspection and monitoring of radio stations in Canada is carried out by the personnel of the Radio Division. There were 61,191 radio stations of all classes inspected by departmental radio inspectors during 1943 and 82,651 during 1944. Examinations for certificates of proficiency in radio are conducted by the inspection staff of the Radio Division. Certificates of all classes to the number of 11,562 were issued up to Mar. 31, 1943, and 12,183 up to Mar. 31, 1944.

The Radio Regulations for ship stations issued under the Canada Shipping Act, 1934, lay down the specifications of radio equipment to be carried on certain classes of vessels, and also designate the qualifications of the operators required.

To ensure safety of life at sea, certain passenger steamers and cargo vessels, by international regulation, must carry radio equipment manned by competent operators holding certificates of proficiency in radio. The Department maintains a complete radio inspection service to enforce this regulation. Inspectors, located at major ports throughout the Dominion, are responsible for checking the efficiency of the radio equipment on ships calling at Canadian ports, regardless of their nationality, and for seeing that only competent operators are carried. Under the Canada Shipping Act, 1934, ships of foreign and Canadian registry, while in Canadian ports, gre surveyed with a view to the issuance of safety certificates.
1.-Radio Stations in Operation in Canada, by Class, as at Mar. 31, 1940-44

[^253] 8,896 in 1944, 7,465 in 1943, 6,998 in 1942, 6,796 in 1941 and 5,862 in 1940.

According to the number of private receiving licences shown in Table 2 as having been issued in each province in the fiscal year 1944, the estimated population per receiving licence was: Prince Edward Island, 8.6; Nova Scotia, 7.7; New Brunswick, 8•7; Quebec, 7•7; Ontario, 6•1; Manitoba, 6•6; Saskatchewan, 6.6; Alberta, 6.3; British Columbia, 5.9; Yukon and Northwest Territories, 34; and Canada, 6.8.

[^254]
## Subsection 2.-Expenditures and Revenues of Radio Administration

Prior to Apr. 1, 1939, the licence fee for private commercial broadcasting stations was $\$ 50$. Since that date, however, the fee has been determined by the power of the station and the density of population within its service radius and varies from $\$ 50$ per annum in the case of low-power, short-wave, and non-commercial university stations, to $\$ 10,000$ per annum in the case of 50 kw . commercial stations.

## 3.-Expenditures and Revenues of Radio Services, Department of Transport, Fiscal Years 1941-44

Nore.-Figures for 1938, the first year for which they are available on the present basis, and 1939, will be found at pp. 652-653 of the 1942 Year Book.

[^255]There are two classes of private receiving licences, one for battery-operated receivers (fee $\$ 2$ per annum), and the other for electrically operated receivers (fee $\$ 2 \cdot 50$ per annum). Free licences are issued for crystal receiving sets and to blind persons, schools, hospitals and charitable institutions; also for receiving sets installed in barracks, mess-halls, canteens or recreational rooms for the gratuitous entertainment of members of His Majesty's naval, military or air forces or Allied Forces in Canada or merchant seamen belonging to a manning pool; and sets operated by persons whose names appear on the diplomatic list of the Department of External Affairs and consuls general of career as listed in the Annual Report of the Department of External Affairs.

Exact figures of revenues received from private receiving licences are not available by provinces. This is partly due to the fact that commissions paid for the issuance of licences vary according to the classification in which the issue falls, that is, post office, radio dealer, house-to-house vendor, etc. In Table 4, therefore, total revenue received from the sale of private receiving licences has been estimated according to the number of licences issued in each province.

## 4.-Revenues from Private Receiving Licences Issued in Canada, by Provinces, Fiscal Years 1938-44

Nors.-The figures in this table are approximations only. Comparable figures from 1933 will be found at p. 722 of the 1940 Year Book.

## Subsection 3.-Investigation and Suppression of Inductive Interference

As a consequence of the reduction in appropriation and staff, and also the fact that the remaining staff has been largely employed on war work, it has been necessary to reduce materially the interference suppression service.

Twenty-four cars equipped with sensitive apparatus for the investigation of interference to radio reception operate from permanent inspection offices located in 21 cities across the Dominion. The inspectors in charge of these cars interview broadcast listeners who have reported interference, and determine the actual source. Tests are then made to ascertain whether or not the interference can be suppressed effectively and economically. The owners of the interfering apparatus are advised of the results of the tests carried out and are given full information regarding the most effective means of suppressing or eliminating the interference.

On Jan. 1, 1942, restrictions against the operation of interfering electro-medical equipment of the spark type were put into effect under the Regulations for controlling radio interference. Investigations show that the majority of practitioners are now using spark apparatus for surgery only and that the interference from sources of this type is almost negligible.

The Radio Division co-operates with the Canadian Engineering Standards Association in drafting specifications for Part IV of the C.E. Code on radio interference and, since the outbreak of war, the Headquarters Staff has continued to work closely with the Department of National Defence, the Inspection Board of the United Kingdom and Canada, and the Royal Canadian Air Force on problems of interference in army vehicles and aircraft. Many special types of interference suppressors have been developed and have proven superior to those previously used.

## 5.-Investigations of Inductive Interference, Fiscal Years 1940-44

## Section 2.-Operation of Radio-Communications

## Subsection 1.-Dominion Government Radio Stations

Department of Transport, Marine Service.-Four distinct networks of stations provide a complete radio aids-to-navigation service for ships. These networks serve the following areas: Great Lakes; Gulf of St. Lawrence and Atlantic Coast; Hudson Bay, Strait, and sub-Arctic; and Pacific Coast. The first three networks are interlocking. The Department of Transport maintains communication between Ottawa and the east and west coasts, and Hudson Bay and Strait by means of high-frequency stations.

During the fiscal year 1942-43, Government radiotelegraph stations on the east coast, west coast, the Great Lakes, and Hudson Bay and Strait handled 423,393 messages or $12,688,642$ words, compared with 365,839 messages or $9,022,096$ words handled during 1941-42, and the cost of maintenance was $\$ 664,370$ compared with $\$ 626,796$ in the previous year. During the fiscal year 1943-44, 456,503 messages or $15,873,102$ words were handled and the cost of maintenance was $\$ 662,890$.
6.--Type of Service Performed and Areas Served by Marine Radio Stations, as at
Mar. 31, 1944

| Totals | 16 | 42 | 6 | 22 | 86 |

Department of Transport, Aeronautical Service.-The radio services provided for aviation may be divided into two categories: first, those furnished on behalf of aircraft flying trans-Canada and Newfoundland routes; and secondly, those intended for aircraft flying transatlantic routes. This phase of radio in Canada is being rapidly developed. Aviation radio range stations now extend from coast to coast providing aid to air navigation for the Government-owned Trans-Canada Air Lines as well as for any other aircraft flying such routes.

## 7.-Type of Service Performed and Routes Served by Aeronautical Radio Stations, as at Mar. 31, 1914

| Service Performed | Routes Served |  |  | No . of Stations |

| Grand Total. |  |  |  | 77 |

Department of National Defence.-The Royal Canadian Corps of Signals operates, in addition to stations established for military purposes, 11 permanent stations and 2 summer stations situated along the Mackenzie River and in Yukon on behalf of the Bureau of Northwest Territories and Yukon Affairs, Department of Mines and Resources.

Department of Public Works.-Twelve stations are operated to provide emergency communication between the mainland and certain islands, and 9 stations to provide emergency links in existing landline circuits.

Department of Mines and Resources.-This Department operates one private commercial station and one experimental station at the Dominion Observatory for the transmission of time signals, and 26 private commercial stations in the National Parks of Canada, together with 3 other private commercial stations.

## Subsection 2.-Provincial Government Radio Stations

Provincial Governments operate radio stations as follows: New Brunswick, 2; Quebec, 11; Ontario, 202; Manitoba, 26; Saskatchewan, 47; Alberta, 103; and British Columbia, 251 (including 35 operated by the British Columbia Provincial Police).

Police Radio Services.-The British Columbia Provincial Police Department operates 36 radio stations to provide communication between police headquarters and the various units of the force. The Municipal Police Departments of 64 municipalities throughout the Dominion also operate radio stations for the same purpose.

## Subsection 3.-Privately Owned Commercial Stations

From Table 1 it will be noted that there were 6 limited coast stations, 52 public commercial stations, and 1,346 private commercial stations in operation in the Dominion at Mar. 31, 1944. A public commercial station situated at Drummondville, Que., provides transoceanic radiotelegraph and radiotelephone services to the United Kingdom and Australia, and a radiotelephone service to Newfoundland. These stations are similar in one respect, in that they are owned and operated by private individuals or companies incorporated under the laws of the Dominion, or of one of the provinces.

The limited coast stations are, as a rule, privately owned and provide a ship-to-shore communication service with ships owned or operated by the licensees only. Two such stations are, however, owned and operated by the Canadian Marconi Company, one situated at Louisburg, N.S., providing a long-range radiotelegraph service to ships at sea, and the other situated at Drummondville, Que., providing a long-range radiotelephone service to ships at sea. The facilities of these two stations are open to the general public. The services performed by commercial stations, both public and private, are many and varied. Generally speaking, these stations are located in areas not served by telephone, telegraph, or other means of telecommunication. The majority perform point-to-point radiotelegraph or radiotelephone service, although an increasing number are being utilized for ground-toplane communication. These stations provide an invaluable means of contact with mining camps, lumber mills, exploration and survey parties, trading posts, and many points that would otherwise be cut off from the more settled parts of the Dominion.

Private commercial stations may be used only for the handling of messages relative to the private business of the licensee, whereas public commercial stations may be used for the handling of messages for the general public.

## Section 3.-Program Broadcasting and Regulation under the Canadian Broadcasting Corporation*

## Subsection 1.-Administration of the Canadian Broadcasting Corporation

The Canadian Broadcasting Corporation succeeded the Canadian Radio Broadcasting Commission on Nov. 2, 1936. This-the first nationally owned and controlled broadcasting corporation in North America-has done much to further the aim of providing as complete a service as possible to residents of every part of Canada. The Corporation operates under the Canadian Broadcasting Act, 1936, which provides that the Corporation shall consist of a Board of nine Governors

[^256]chosen to give representation to the principal geographical divisions of Canada. In practice, the Board of Governors determines and supervises policy, but actual administration and operations are under the direction of the General Manager. The by-laws of the Corporation approved by the Governor in Council provide a formula for general administration. The administrative organization of the CBC consists of the following Divisions: Executive, Personnel and Administration, Finance, Engineering, Program, Press and Information, Commercial, and Station Relations.

Under the Canadian Broadcasting Act, the CBC is charged with the responsibility of formulating regulations controlling the establishment and operation of networks, the character of any and all programs broadcast in Canada and the proportion of time that may be devoted to advertising in broadcast programs. The CBC's regulations were drawn up to ensure a certain standard in all broadcast programs. The CBC neither exercises, nor authorizes any private station to exercise on its behalf, censorship on any matter broadcast on the air. The responsibility of seeing that the regulations are observed rests with the station management.

## Subsection 2.-Operations

Broadcasting Facilities.-Under Sect. 24 of the Act, the CBC is required to review all applications for licences for new stations as well as applications for increases in power and changes in frequency or changes in location. Under these provisions the licensing of extensions in broadcasting facilities involves two considerations: the first is non-interference with the present and proposed facilities of the CBC; and the second is that high-power transmission facilities, on both longand short-wave bands, are reserved for use by the CBC. Within these limitations it is the policy of the Board to serve community interests by giving every practical encouragement and assistance to local stations.

CBC operates the Trans-Canada network, the Dominion network, and the French network in Quebec. The Trans-Canada network is made up of 23 stations; 7 CBC-owned and 16 privately owned. The Dominion network is made up of 29 basic stations of which 28 are privately owned. The French network has 3 basic stations all CBC-owned and 5 privately owned supplementary stations.

The Dominion network was inaugurated on Jan. 2, 1944, and provides expanded distribution facilities for programs of national importance, including many dealing with Canada's war effort, together with a number of top-ranking sponsored shows.

The total power of CBC stations, which includes four 50,000-watt transmitters, is 218,100 watts and of the privately owned network stations, 65,250 . In the achievement of the extensive coverage of the CBC network, designed to be as effective to the entire Dominion as possible, the needs of the rural population are considered as well as those of the urban population. Quebec Province is equipped with both English and French outlets.

Subsidiary hookup broadcasting is controlled by the CBC, and all hookups must have the authorization of the Corporation. Contractual arrangements with stations for commercial hookups. are handled by the Corporation's Commercial Division.

## 8.-Broadcasting Stations of CBC Networks, as at Mar. 31, 1945

(Basic Stations)
Norz.-The stations marked with an asterisk ( ${ }^{*}$ ) are CBC owned.

[^257]Short-Wave International Service.-The CBC's new short-wave International Service transmitters inaugurated Feb. 25, 1945, are located near Sackville, N.B., a mile or so from the shore of the Bay of Fundy. In this position they lie almost directly on the Great Circle route to Europe which constitutes the most efficient way for radio waves as well as aeroplanes to reach the continent.

Special directional antennæ have been developed to concentrate the radio power over a relatively narrow area and thus direct a very strong signal from Canada towards any given segment of the globe. Reports from the BBC indicate that the new transmitters in conjunction with this special antennæ have resulted in Canadian broadcasts being the strongest now received in Europe from North America.

About 65 p.c. of the time at present is devoted to broadcasts to Canadian troops in the European area. In addition, half an hour daily is devoted to broadcasts to the people of France, 15 minutes daily to Germany and another 15 minutes daily to European Allies. Canadian news is broadcast at regular intervals throughout the day in both English and French.

When in complete order, the International Service will employ 11 frequencies, each with a corresponding set of call letters. For the present, however, only one, CHTA, $15 \cdot 22$ megacycles or 19.71 metres, is used. The studios and program headquarters are at Montreal.

Program Service and Development.-During the fiscal year ended Mar. 31, 1944, the CBC broadcast, on its various national, regional, and French networks, a total of 52,721 commercial and sustaining programs, which consumed 15,966:47 broadcasting hours. Of the total operating hours $83 \cdot 3$ p.c. consisted of sustaining programs and $16 \cdot 7$ p.c. commercial. Most of the broadcasting is confined to various regional networks, 55 p.c. of the annual operations being scheduled on Englishlanguage networks as against 16.4 p.c. on the national network. It is only through the presentation of programs on regional networks that the CBC is able to render to the different parts of Canada complete service on news bulletins, and institutional, educational and specialized programs at times when they coincide best with listening habits throughout the day. The fact that there are five time zones further complicates broadcasting problems.

Since a counterpart of English language broadcasts is required for Frenchspeaking listeners, $28 \cdot 6$ p.c. of the year's programs are designed especially for and devoted exclusively to French network broadcasting.

Apart from minor adjustments, CBC program classification structure has not changed appreciably in the past few years; $52 \cdot 1$ p.c. of all sustaining programs are musical and 47.9 p.c. are spoken-word broadcasts. Light music, embracing program categories such as semi-classical, light, dance, old-time and band, consumes 40 p.c. of time. The next largest individual program category is news commentaries, events and résumés, accounting for 19 p.c. Serious music takes up 8.5 p.c. The foregoing classifications are followed in decreasing order by talks, agriculture programs, drama and feature, variety, educational, worfen's, religion, children's and sport.

In the commercial field, drama takes the lead, occupying $52 \cdot 2$ p.c. of all commercial time. Variety programs follow with $16 \cdot 1$ p.c. and none of the other program categories occupy as much as 10 p.c. of the total time consumed.

Programs are presented through one of three media: by live talent, recordings, or by transcriptions. Of all sustaining program hours, $66 \cdot 3$ p.c. are occupied by live talent, $27 \cdot 1$ p.c. by recorded programs and the remaining time by transcribed programs. Recorded programs are composed of domestic recordings such as dance bands, vocal organizations, etc. Transcribed programs are those that have been transcribed for rebroadcast at a more suitable time than when the original broadcast was given.

## 9.-Classification of CBC Programs, Fiscal Year 1943-44

Note.-Dashes in this table indicate that no programs were reported under these particular sub-items.

| Class of Program | Sustaining |  |  | Commercial |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Programs | Hours | $\begin{gathered} \text { Percentage } \\ \text { of } \\ \text { Hours } \end{gathered}$ | Programs | Hours | Percentage of Hours |
| Musical | No. | No. |  | No. | No. |  |
| Opera..... | 55 | 49:10 | 0.4 | 24 | 81:55 | 3.0 |

## Subsection 3.-Finances

The Corporation's income for the year ended Mar. 31, 1944, totalling approximately $\$ 5,232,000$, showed a satisfactory increase of about $\$ 260,000$ over the previous year. Expenditures on operation and on capital account remained well within budget estimates.

## PART VIII.-THE POST OFFICE*

The Post Office Department, in addition to the several administrative branches at Ottawa, is divided into fifteen districts each in charge of a District Director or Superintendent of Postal Service. The territory it serves is more extensive in area than that of any other country save the U.S.S.R. or the United States, with a relatively small population compared with the vast area served. Its railway mail service is one of the largest in the world-the rural mail delivery service operates over 4,000 rural mail routes-and in its air-mail system it has answered the problem of supplying a widely scattered population with postal service in the shortest possible time.

A brief account of the development of postal services in Canada is given at pp. 789-790 of the 1934-35 Year Book.

Mail Transportation.-The conveyance of mail by land, water, and air entailed a total expenditure of $\$ 23,339,866$ during the fiscal year ended 1944 ; railway carriage cost $\$ 7,960,760$, land transportation $\$ 7,755,900$, conveyance by steamship $\$ 2,250,882$, and conveyance by air $\$ 5,372,324$. These amounts were paid solely for services rendered as carriers. Special subsidies are granted to assure the maintenance of certain steamship services. Since these subsidized services provide transportation for passengers and freight as well as for mail, the subsidies are included with other expenditures on water transportation given at pp. 693-694.

Air Mail.-With the emphasis on speed in war production, the Trans-Canada Air Mail System has proven an invaluable asset and air-mail volume continued to expand. Over the main Trans-Canada route in the last month of the fiscal year $1943-44,326,907 \mathrm{lb}$. of air mail were carried. Swift connections are made to the United States and other air-mail networks of the world.

The air-mail service has been improved considerably of late years, especially since the beginning of the War. During the latest fiscal year, 1944-45, direct airmail service to Saint John and Fredericton, N.B., was inaugurated, one flight per day each way, stopping at Blissville where Central Airways meet Trans-Canada Airways for the mails to Moncton.

In many other respects air-stage service to outlying points has been improved. For instance, the James Bay area, where a number of non-post office points along the shores of James Bay were formerly connected only by surface transport, has now an air-stage service, which operates on a semi-annual basis at present.

During 1945 a third transcontinental air-mail service was brought into being by extending the former T.C.A. service between Winnipeg and Vancouver which is now on a tri-daily basis. The Lethbridge-Calgary-Edmonton air-mail service has also been increased to three flights per day to connect with this transcontinental schedule.

The growing "air-mindedness" of Canadian citizens is reflected in the expanding use of Canada's air-mail services:-

[^258]The Post Office in Wartime.-Although not listed as a wartime Department, the Canadian Post Office holds a key position in the national war effort, not only in maintaining ordinary postal services under extremely difficult conditions, but in the field of the military mails and in its co-operation with other Government Departments. Because of the nature of its service, it is filling an indispensable role in the maintenance of the morale both of civilians in this country and of the Armed Forces here and abroad, to whom "letters from home" are of utmost importance.

Wartime conditions have brought a continuing and enormous expansion of postal business of all kinds; war industry, the Government and the private citizen are utilizing postal facilities as never before. This is revealed in the gross postal revenues that have increased annually from $\$ 42,896,179$ in $1938-39$ to $\$ 73,004,399$ in the fiscal year 1943-44. Coupled with this great increase in business, the Post Office Department has been faced with the depletion of postal staff due to enlistments; this necessitated the use of inexperienced help and of women to fill the gaps. The problem of obtaining adequate transportation facilities for the mails has also been acute.

In liaison with other Government Departments, the Post Office Department has undertaken many special activities and, through its post offices, is Canada's leading agency for selling war savings stamps and certificates. The value of war savings stamps thus sold was $\$ 12,227,916$ in the fiscal year 1943-44 and millions of dollars worth of war savings certificates were sold and delivered to purchasers by the Postal Service. In the distribution end, millions of forms, pledges, etc., have been delivered to householders in Canada and to business firms.

Also handled through the 12,234 Canadian post offices are the sale of unemployment insurance stamps, the distribution of income tax forms, ration books, gasoline ration forms, etc.; the National Registration, the registration of enemy aliens, registration for military service, registration of nurses, the registration of women, etc. Co-operation is given in foreign exchange examination work.

Military Mails.-The Canadian Postal Corps was recruited, in 1939, from executives and personnel of the Canadian Post Office and is serving all branches of the Armed Forces.

During the year 1944, the Base Post Office in Canada despatched to the Armed Forces overseas the record volume of over $58,500,000$ letters, over $10,500,000$ parcels and over $1,400,000 \mathrm{lb}$. of news.

Members of the Armed Forces overseas have been granted free mailing on ordinary letters and a special reduced rate of 3 d . on Air Letters to Canada. In the case of mail from Canada, special reduced rates have been granted on both letters and parcels mailed to the Armed Forces overseas. Postal money remittances to them have been facilitated and special methods of supplying cigarettes and tobacco have also been introduced.

Facilities have been established to expedite correspondence to the Armed Forces. The Airgraph system-letters on film transported by air-is providing a fast and space-conserving method of communication. Airgraph messages are processed on rolls of micro-film, flown to the United Kingdom, certain Mediterranean areas, India, Ceylon, Australia or New Zealand as the case may be, and then enlarged and delivered. Airgraph service is operated on a two-way basis between Canada and the above-mentioned countries and has been extended to facilitate inter-civilian correspondence. The rate is 5 cents per message.

The Canada Air Letter-a combined light-weight letter and envelope-is also available for corresponding with members of the Armed Forces overseas regardless of their address, and also for communicating with civilians in Empire countries. The postage on the Canada Air Letter is 10 cents and it is proving a popular medium for speedy air correspondence.

Special arrangements are in effect for communication with prisoners of war, persons interned abroad, and civilians in enemy-occupied countries. "Air Letter Cards" and "Personal Postal Message" forms may be obtained at any post office.

Free postage is allowed ordinary letters, postcards and parcels to prisoners of war and interned persons, air mail, however, being prepaid at rates applicable.

[^259]Postage. -The net revenue receipts shown in Table 3 are received mainly in the form of postage. This is indicated by the following gross figures:-

The gross value of the postage stamps, post cards, etc., sold during each of the latest nine fiscal years, was: $\$ 27,341,608$ in $1936, \$ 28,179,323$ in $1937, \$ 28,808,513$ in $1938, \$ 28,836,457$ in $1939, \$ 29,530,247$ in $1940, \$ 31,425,593$ in $1941, \$ 35,716,908$ in $1942, \$ 38,959,795$ in 1943 and $\$ 50,062,214$ in 1944 . Receipts from postage paid in cash were as follows: $\$ 9,277,072$ in $1936, \$ 10,203,389$ in $1937, \$ 10,865,895$ in $1938, \$ 11,065,527$ in $1939, \$ 11,792,311$ in $1940, \$ 13,459,526$ in $1941, \$ 15,777,816$ in $1942, \$ 16,057,366$ in 1943 and $\$ 18,728,050$ in 1944.

Auxiliary Services.-The auxiliary postal services include the issuing of money orders (including postal notes) and the facilities offered by the Post Office Savings Bank. In 1868, there were 515 money-order offices in operation, issuing orders to an amount of $\$ 3,342,574$; the following tables show the magnitude of operations in recent years. Statistical tables showing deposits with the Government Savings Banks and the business of the Post Office Savings Bank are included in the chapter on Currency and Banking (Chapter XXV).

## 4.-Operations of the Money-Order System in Canada, Fiscal Years 1937-14

Note.-For figures for 1868-1900, see the 1911 Year Book, p. 289; for 1901-31, see the 1932 Year Book, p. 622 and for $1932-36$, p. 666 of the 1942 edition.

## PART IX.-THE PRESS

An article on the development of the press in Canada is given at pp. 737-758 of the 1939 Year Book.

## THE DEMOCRATIC FUNCTIONING OF THE PRESS*

Much of the vitality of democracy depends upon a free press-this means freedom to comment fairly on all domestic questions and a free exchange of news at the international level. One of the tragic lessons that the War has taught is that the greatest safe-guard to freedom lies in the unfettered ability to report unbiased day-to-day news. For five and one-half years and on many fronts, the Military Forces of the Allies have been, and still are, trading lives for victory. Just what this victory, when achieved, will mean to the peoples of the world will depend upon how it is translated into the post-war policies of the respective nations: in this work the constant task of the press will be to keep the peoples informed and alert and to crystallize public opinion.

The transition from war to peace will be slow and costly. But already the phase of international conferences-on relief, rehabilitation, aviation, and many other subjects affecting the lives and well-being of the nations of the world-is launched. Problems of great magnitude will undoubtedly be encountered in the face of differing ideologies, and with national views inevitably conflicting and cutting across one another, so that the task of uniting the nations for peace offers to be even greater than that of uniting them for war.

Four years ago a great Allied leader described this deadliest of all wars as a fight for four freedoms-freedom of speech, freedom of worship, freedom from want and freedom from fear. He pointed out in those few simple words a goal, attainable

[^260]only through the co-operation and understanding of all nations. The first of these freedoms, namely freedom of speech, is indissolubly tied in with freedom of the press for without either one of these, the other could not exist.

In the establishment of the basic international co-operation and understanding upon which the four freedoms must rest lies the great challenge to the news associations of the free countries of the world. Very soon these great news agencies will be organizing exchanges of news with liberated countries. This news should be as free as it is possible to make it and that freedom should be guaranteed by the Great Powers. Only then will foundations of an enduring peace be truly laid. In final analysis the responsibility of the news associations falls individually and jointly on every honest publisher of news. The weekly newspaper, the radio station, the large and influential dailies-all must unite in a crusade to further this cause of freedom and of true democracy. If a glance backward be taken to conditions as they existed in the years prior to the War, it is impossible to escape the thought that this catastrophe might have been avoided if news had been free in the 'dictator' countries. There was no free press in Germany. The German news agencies, DNB and Transocean, were intent only on issuing propaganda, always biased and seldom honest, to an unwary world. Instead of trying to report the facts, they were primarily intent on shaping German minds for the war that had been planned. They were also systematically building fear of the Reich in the hearts of neighbouring peoples-in Austria, Hungary, and the Balkans and wherever their connections reached. The theme of their propaganda was that the democracies were decadent, unprepared and quite helpless and by constant repetition and clever planning they were very successful in 'putting across' this idea.

In Italy the situation was much the same. Stefani, the official Government news agency, knew no freedom. All the news was moulded to meet Mussolini's twisted psychology-the psychology of passionate belief in Italy and her destiny and of derision and contempt for democratic countries. The actual functioning of this policy was seen at an early date. During the Abyssinian crisis, the Fascist press screamed that the League of Nations was weak, that Britain was decadent, and powerless. There can be no doubt at all that such distortion of the news and the use of the news-gathering machine for the self-aggrandizement of the dictators was one of their most important instruments and an underlying cause of the War.

Japan's news agency, Domei, has been no less culpable. The helpless peoples of Asia were barred from knowledge of each other by high walls of ignorance and prejudice and the news-gathering machinery here was also used to condition the Japanese nation for war.

Never having experienced it, it is almost impossible for Canadians to realize how the life and thought of a country can be so warped by controlled news. Subject only to military security in wartime, Canadians have been used to getting 'the whole story' both in newspapers and on the air. The habitual policy of public criticism is understood and accepted whether it be of Hong Kong or Dieppe or of more domestic aspects of the War or on any other matter. Such criticism could not have happened in any of the dictator countries. It would have been suppressed before it had had time to find expression.

What ought to be of interest, and yet is not widely enough known to Canadians, is how this freedom grew and ripened in Canada and how the Canadian Press actually operates to-day. This is touched on in the following paragraphs.

The Growth of Co-operation between Canadian Newspapers for NewsGathering and -Distribution.-While association between Canadian newspapers for interests connected with the business and social end of newspaper work antedates Confederation, this relationship did not include the function of newsgathering and -distribution-the most fundamental and important part of newspaper work, yet one in which co-operation was most difficult in a country of Canada's dimensions and sparse population. The extensive organization and world-wide connections required for the proper performance of this function, and the fact that the daily press alone was mainly concerned, gave rise eventually to the organization of separate machinery.

Yet the first step in co-operative news-gathering and -distribution in Canada did not come until 1907. Previous to that year the small town dailies and many of the larger papers had to be satisfied with news services from commercial sources, supplemented by occasional and spasmodic telegraph bulletins. Control was, up to that time, vested in the railways-the Canada Pacific Railway, and the Great North Western Telegraph Company, an affiliate of the Grand Trunk Railway. The services provided were cheap enough but poor, and papers had to be satisfied with what they provided.

Opposition to this system first manifested itself in the West, but there was general agreement among publishers throughout the country that it was unsatisfactory. In 1907 the Western Associated Press, organized as a co-operative newsgathering association, came into being at Winnipeg. Arising from small beginnings, it gathered support in the Prairies, even though it was in direct competition with the Canadian Pacific Telegraphs. Its members were content for several years to put up with service inferior even to that supplied commercially (although this placed them at a disadvantage with their non-member competitors) in defence of the principle at stake. The Western Associated Press later gained the support of the established dailies of Vancouver and Victoria and grew in strength and importance.

The ultimate success of the Western Associated Press experiment in co-operation was due primarily to the efficiency of the services rendered by the late Wallace Dafoe, one of the great newspaper correspondents of that day, and the skill of the late J. F.B. Livesay, as well as to subsequent cheapening of telegraph costs. The Western Associated Press became a model for the later Canadian Press.

In 1909 the Eastern Press Association was organized in the Maritime Provinces. Ontario and Quebec each established its own organization two years later, so that there were four independent news-gathering bodies covering different sections of the Dominion. The year 1910 marked a turning-point in the fight of the cooperative press associations. In that year the Western Associated Press appealed to the Railway Commission against the exorbitant and inequitable rates charged to its members for use of the Canadian Pacific telegraphic facilities as compared with the rates charged for its own news service. Eastern and western co-operative associations all combined on the issue, which was eventually won. The principle was recognized that the railways had no business in the news-agency field and the Canadian Pacific Railway voluntarily surrendered to the Canadian papers the Canadian rights to the Associated Press, the great co-operative association of

American daily newspaper publishers. In 1911 Canadian Press, Limited, was organized to take over these rights on behalf of Canadian publishers as a whole, and became the first co-ordinating link between the four sectional associations. These were all co-operatives with memberships limited to daily newspapers which had to be members also of Canadian Press, Limited.

In the immediately ensuing years, the then President of Western Associated Press worked tirelessly toward the ideal of a Dominion-wide national co-operative news association. But there stood in the way the apparently insuperable difficulty of covering, by costly leased wires, the geographical 'gaps', lacking population to support daily newspaper publication, necessary to knit these four associations into a single entity. These gaps lay between Saint John and Montreal, Ottawa and Winnipeg, and Calgary and Vancouver. The urge of war, however, supplied the necessary impetus. Realizing that the unification in a news sense of all Canada was essential to the successful prosecution of the war effort of 1914-18, the Borden Government in 1917 made an annual grant to Canadian Press, Limited, of $\$ 50,000$ for the express purpose of binding these gaps by leased wire. Accordingly, on September 1 of that year the four sectional co-operatives were merged into one national news-gathering and -distributing agency which became known as the Canadian Press, operating under Dominion charter.

In 1924 the grant was withdrawn, but the Canadian Press by that time was able and willing to shoulder the added burden and felt that, by so doing, it would free itself from even a suspicion of government control. The annual meeting of 1925 went on record that "never again must the Canadian Press accept a grant or subsidy from any source".

The Canadian Press has built up alliances with the Associated Press, Reuters and Havas, through which it exchanges news it gathers for that of the rest of the world. Its head office is at Toronto but bureaus are maintained at London, New York, Halifax, Montreal, Ottawa, Winnipeg, Edmonton, Regina and Vancouver. With minor exceptions it includes within its membership every Canadian daily newspaper. Over the private wires of CP from coast to coast goes news to member papers of every major political stripe-Liberal, Progressive Conservative, Cooperative Commonwealth Federation or Independent. Its news goes also to the Canadian Broadcasting Corporation and to private radio stations.

The fact that all papers, without regard to political affiliation, receive the services of the Canadian Press explains how the suppression of vital truth is made practically impossible. Suppose, for example, that some member of the staff of Canadian Press chose to suppress a criticism of the Government over a vital issue. The newspapers of the opposing political complexion, which are part owners of the Canadian Press, would be up in arms immediately against such suppression. Indeed, even the papers supporting the Government would probably object strongly. The democratic way allows for and accepts an honest difference of opinion, and this principle as exemplified in Canada is in operation in other democracies, such as the United Kingdom and the United States, through agencies similar to the Canadian Press.

Imperial and United States News Agencies and Efforts Toward Free International Interchange of News.-The Empire's news agency is called Reuters. It is the oldest of them all and it extends to every corner of the earth. Reuters was once a commercial organization subsidized by the British Govern-
ment and operated for profit but was always motivated by the democratic ideal. In 1941 Reuters came under the control of the British Press and is now operated entirely for the newspapers of Britain on the same basis as the Canadian Press operates in Canada.

Across the Border, in the United States, the three national news associationsthe Associated Press (this is a co-operative on the lines of the Canadian Press), the United Press, and the International News Service-are quite free of Government domination. The Associated Press has, through the persistence and vigour of its Executive Director, placed the United States in the forefront of the fight for world news-freedom. The struggle started immediately following the War of 1914-18, but success did not attend efforts to get the free-news principle incorporated in the peace treaties at that time. This stand, however, now has the full support of the United States Congress. As recently as September, 1944, the Congress unanimously expressed its belief that news services should have the right to interchange news without discrimination and said that this right should be protected by international treaty. The General Manager of Reuters, while realizing that Reuters and the Associated Press are keen competitors in the foreign news field, has also placed that agency on record in favour of the free interchange of news.

Canada has not held back but has fully supported this united stand and in September, 1944, when the directors of the Canadian Press met to discuss the world news situation, they spoke with a very firm voice in support of the principle voiced by Reuters and the Associated Press. Thus, Canadian newspapers are in the world-wide fight for the freedom of news and are in favour of having this freedom written into the Peace Treaties. All the political leaders in Canada have expressed approval of the movement. However, the legislation of the free countries must jointly take a stand in definite and unquestionable terms before results can be achieved. Freedom of the press within a country is one thing which the people within that country can themselves decide: international freedom, where groups of nations are involved, is another and, because it requires the united action of the several nations, is a very involved problem. Yet the only permanent guarantee of the former lies in the establishment of the latter wider freedom.

Statistics of the Press.-The Dominion Bureau of Statistics does not collect statistics regarding the circulation of newspapers and periodicals in Canada, but certain figures, compiled from Mc Kim's Directory of Canadian Publications, have been published in former editions of the Year Book. As the publication of that Directory was suspended for the duration of the War, no later figures are available than those for 1941. Table 1 gives the circulations of daily, semi-weekly and weekly publications, 1934-41, and by provinces for 1941. Circulations of such publications in cities of 20,000 population or over in 1941 and the circulations of French language publications by provinces in 1940 and 1941 are given at pp. 659660 of the 1943-44 Year Book. A table at p. 669 of the 1942 Year Book enumerates the periodical publications in Canada by frequency of issue.

The publication of this more detailed information in the Year Book will be resumed as soon as the series is re-established by McKim's.

## 1.-Circulations ${ }^{1}$ of Daily, Semi-Weekly and Weekly Publications in Canada, 1934-41, with Details by Provinces, 1941

Note. - Figures for circulation are given to the nearest thousand as some publications are not exactly reported. Compiled from McKim's Directory of Canadian Publications; only those papers for which circulation figures are there given are included. Figures for 1921-33 are given at p. 670 of the 1942 Year Book. As the publication of McKim's Directory has been suspended for the duration of the War, no later figures than those shown are available.

## Section 1.-The Government in Relation to Labour

## Subsection 1.-The Dominion Department of Labour

The Department of Labour of the Dominion Government was established in 1900 to administer the Conciliation Act which was designed to aid in preventing or settling disputes, to enforce the Government's fair-wages policy for the protection of workmen employed on Dominion Government contracts and on works aided by grants of public funds, and to collect, compile and publish statistical and other labour information.

At the present time, the Minister is responsible for the administration of the following: Conciliation and Labour Act; the Fair-Wages Policy; Fair Wages and Hours of Labour Act; Government Annuities Act; Combines Investigation Act; Youth Training Act, 1939, and the War Emergency Training Scheme; Vocational Training Co-ordination Act, 1942; Unemployment Insurance Act, 1940; Reinstatement in Civil Employment Act, 1942; and certain wartime regulations (made under authority of the War Measures Act, 1917) including the Wartime Wages Control Order, the Wartime Labour Relations Regulations and the National Selective Service Regulations.

The Wages Order and the Labour Relations Order are administered by the War Labour Board and the Wartime Labour Relations Board, respectively. While the Labour Relations Regulations, 1944, remain in effect, the operation of the Industrial Disputes Investigation Act is suspended. Information concerning this Act, enacted first in 1907, and its extension to war industries may be found in earlier Year Books.

[^263]Fair-Wages Policy.-Wages and hours for work on contracts for the manufacture of equipment and supplies for the Dominion Government and for construction were governed for some years by a Resolution of the House of Commons (1900) which was later incorporated in an Order in Council and amended from time to time.

Contracts for construction are now regulated under the Fair Wages and Hours of Labour Act, 1935, and to some extent, by an Order in Council of June 7, 1922, as amended Apr. 9, 1924. Hours on such work are limited to 8 per day and 44 per week except when declared exempt by Order in Council and the wages to be paid are those current for the type of work in the district concerned, or, if there are no current rates, fair and reasonable ones as determined by the Minister.

Wages and hours for work on contracts for equipment and supplies are regulated by the Order in Council of 1922 as amended on Dec. 31, 1934, and on Oct. 4, 1941. The hours on such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable and may not in any case be less than 35 cents and 25 cents per hour, respectively, for men and women over 18 years of age. Lower minimum rates are fixed for workers under 18 years of age and for learners. In both construction and supplies contracts, the term "current wages" and in the latter contracts, the term "hours fixed by the custom of the trade" mean the standard conditions fixed by agreement between employers and unions or, failing agreements, the actual conditions prevailing.

Wartime Control of Wages.-This policy is part of the Government's general anti-inflationary program and was adopted first in 1940 as an advisory policy. In October, 1941, it was made mandatory. As revised from time to time, the policy is set out in the Wartime Wages Control Order (Order in Council P.C. 9384, Dec. 9, 1943, as amended). Wage rates are stabilized at the level in effect on Nov. 15, 1941, but the cost-of-living bonuses payable under the previous Orders are added to and form part of the basic wage rates. No bonus is payable under the present Order on account of changes in the cost of living. The Administrative Boards are empowered to adjust rates so as to remove any "gross inequality or gross injustice".

A National War Labour Board and nine Regional War Labour Boards have been set up to administer the Order. The National Board consists of three independent members and it is advised by a committee of employers' and workers' representatives. The Provincial Ministers in charge of labour matters are the chairmen of the Regional Boards and the members are employers' and workers' representatives. In order to ensure uniformity in interpreting the Order, the National Board has power to review decisions of the Regional Boards and, after notice, to vary or revoke any decision. The inspection staffs of the Unemployment Insurance Commission and of the Provincial Departments are used for enforcement purposes.

Wartime Labour Relations Regulations.-Like the regulations stabilizing the wage-level and those providing for the distribution of manpower, the Dominion regulations to promote collective bargaining and to settle labour disputes deal with subjects which are, in large part, normally within provincial legislative jurisdiction. There is therefore considerable co-operation between the Dominion and the provinces in making them effective.

The Labour Relations Regulations (P.C. 1003) of Feb. 17, 1944, have as their main principles compulsory collective bargaining, compulsory arbitration of disputes concerning matters arising out of a collective agreement if not settled by the procedure set out in the agreement, and compulsory investigation of other disputes. The Industrial Disputes Investigation Act is suspended while the Regulations are in force. The Regulations are administered by the Wartime Labour Relations Board consisting of a chairman, a vice-chairman and four representatives each of employers and trade unions. The National Board is assisted, in some provinces, by Provincial Boards. An appeal to the National Board may be taken from a decision of a Provincial Board.

An employer or employers must negotiate with the representatives of a trade union or employees' association which has as members a majority of the employees of such employer or employers. Bargaining representatives must be certified by the Board. Where an agreement between the parties is not reached within 30 days, a conciliation officer or Board may be appointed by the Minister of Labour. There may be no stoppage of work due to a dispute until 14 days after a conciliation board has reported to the Minister. Disputes arising from the interpretation or violation of a collective agreement must be settled through the machinery provided by the agreement or, lacking such machinery, by arbitration arranged by the Labour Relations Board. Discrimination against trade-union members is an offence.

These Regulations apply: (a) to navigation and shipping, transport and communication agencies extending beyond the limits of any one province and to works declared by Parliament to be for the general advantage of Canada; (b) by authority of the War Measures Act, to industries essential to the prosecution of the War; (c) if a Provincial Legislature so enacts, they apply to other industries which are ordinarily within the jurisdiction of the province concerned. By agreement between the Dominion and the provinces, Provincial Boards, except in Alberta and Prince Edward Island, administer the Regulations as they affect the industries in (b) above. By enabling legislation, British Columbia, Manitoba, Ontario, New Brunswick and Nova Scotia have applied the Regulations to the industries in (c) above.

Up to Mar. 31, 1945, the National Board had certified representatives in 133 cases, rejecting 28. The Provincial Boards had issued 1,334 certificates and rejected 110.

## Subsection 2.-Provincial Labour Departments

Labour legislation in Canada is, for the most part, a matter for the Provincial Legislatures since it usually governs, in some respect, the contract of service between employer and employee or regulates conditions in local work-places. The right to contract is a civil right and the British North America Act, which distributes legislative powers between the Parliament of Canada and the Provincial Legislatures, grants to the provinces power to enact laws in relation to "civil rights" and with certain exceptions "local works and undertakings".

In each province, except Prince Edward Island, a special Department or Bureau is charged with the administration of labour laws. The agricultural province of Prince Edward Island has enacted little labour legislation. In Alberta the Board of Industrial Relations under the Minister of Trade and Industry administers statutes concerning wages and hours and factory inspection. Other provinces have Departments of Labour. Legislation for the protection of miners is administered by Departments dealing with mines.

Factory legislation in eight provinces, and shops legislation in several provinces, prohibit child labour, regulate the hours of women and young persons, and provide for safety and health. Other labour statutes in most provinces include minimumwage legislation and maximum-hours laws, laws for the settlement of industrial disputes, legislation to ensure freedom of association and promote collective bargaining, and laws to provide for apprenticeship and the licensing of certain classes of workmen. The Industrial Standards Acts in Alberta, Saskatchewan, Ontario, New Brunswick and Nova Scotia, and the Fair Wage Act in Manitoba enable the wages and hours of work agreed upon by representatives of employers and employed to be made legal throughout the industry concerned. The Quebec Collective Agreement Act permits agreements between employers and trade unions to be made binding on all in the industry. Workmen's compensation laws in all provinces except Prince Edward Island are administered by independent boards.

For information regarding individual Provincial Departments of Labour, reference should be made to the annual reports of the Departments concerned, or to the Deputy Ministers of Labour of the Provincial Governments.

## Subsection 3.-Provincial Labour Legislation in 1944

Certain subjects received attention from several Provincial Legislatures during the year: labour relations, apprenticeship and workmen's compensation.

Apprenticeship Acts providing for a provincial system of training and supervision were enacted in Alberta, Manitoba, New Brunswick, Prince Edward Island and Saskatchewan. Similar statutes are in force in British Columbia, Nova Scotia and Ontario, and in all cases the provinces may receive financial assistance to provide apprenticeship under the Dominion Vocational Training Co-ordination Act, 1942.

By statutes in British Columbia, Manitoba, New Brunswick, Nova Scotia and Ontario the Dominion Wartime Labour Relations Regulations, 1944, are applied to industries normally within provincial jurisdiction and not essential to the prosecution of the War. A Saskatchewan statute was enacted to the same effect but was repealed later in the year by a statute dealing with labour relations in the Province. In Alberta the Government has been empowered to apply the Dominion Regulations to all industries. In Quebec, new statutes provide machinery for labour disputes in industry generally and in public services. In the following statement no reference is made to the provincial Acts enabling the application of the Dominion Regulations to labour relations in a province.

In New Brunswick, Nova Scotia and Saskatchewan, workmen's compensation benefits were raised.

Prince Edward Island.-The Apprenticeship Act, to come into force on proclamation, provides for a provincial system of apprentice training and supervision in connection with the building trades and other trades added by Order in Council.

Nova Scotia.-Amendments in the Workmen's Compensation Act stipulate that persons receiving compensation at the rates of 55 or 60 p.c. of average earnings as provided before 1930 and 1938, respectively, will be entitled from May 1, 1944, to $66 \frac{2}{3}$ p.c. of such earnings, the rate adopted in 1938. Minimum compensation for disability occurring after Aug. 6, 1944, was raised from $\$ 8$ a week or average earnings to $\$ 10$ or average earnings. Medical aid is to be furnished as the Board
considers necessary. Formerly, such aid was given for 30 days or longer if the Board considered it advisable. Dermatitis venenata due to handling irritants was made compensatable.

The Blind Workmen's Compensation Act, like similar Acts in Ontario and Quebec, authorizes the Province to reimburse the Workmen's Compensation Board for compensation in excess of $\$ 50$ paid to a blind workman, provided his employment was approved by the Canadian National Institute for the Blind or other organization designated for the purpose.

The Apprenticeship Act now applies to female as well as to male apprentices, provides for amending the list of trades within its scope, requires an apprentice to give 2,000 hours of productive labour and authorizes a levy on employers and em. ployed to defray expenses. The Engine Operators Act provides for the examination and licensing of stationary engineers and firemen.

New Brunswick.-Provision is made for a Minister of Labour holding no other portfolio. Amendments in the Workmen's Compensation Act increase the maximum earnings on which compensation is based from $\$ 1,500$ to $\$ 2,000$ a year, raise compensation to a widow from $\$ 30$ to $\$ 40$ a month and allow $\$ 125$ where the bọdy of the workman has to be transported for some distance. For permanent. and temporary total disability, the compensation is $66 \frac{2}{3}$ p.c. of average earnings for the duration of the disability with a minimum of $\$ 8$ a week, or average earnings, if less. Compensation for temporary partial disability is two-thirds of the diminution in earnings.

The Apprenticeship Act is generally similar to that of Prince Edward Island but gives to the Provincial Apprenticeship Committee power to designate appropriate trades.

Provision is made, in the sections of the Labour and Industrial Relations Act dealing with minimum wages, for the appointment of investigators, and for making general wage-orders or orders fixing different rates for different classes of workers or for different parts of the Province.

Quebec.-Two statutes were enacted to deal with industrial relations and disputes-the Labour Relations Act, a compulsory investigation measure applying generally but, during the War, not applying to war industries, and the Public Service Employees' Disputes Act, a compulsory arbitration measure which prohibits a stoppage of work due to a dispute in public services and provides for the settlement of the dispute.

The Labour Relations Act applies to all employees in the Province except representatives of the employer, members of the professions, domestic servants, farm workers and those employed by railway companies under Dominion jurisdiction. The Act requires employers or employers' associations to negotiate with the representatives of one or more associations of which at least 60 p.c. of their employees are members.

If negotiations fail to bring about an agreement, a conciliation officer must be appointed and, if he fails, a council of arbitration is to be established under the Quebec Trade Disputes Act. A strike or lockout is prohibited until these provisions have been complied with and until 14 days after an arbitration council has reported. A stoppage of work is also prohibited during the life of a collective agreement unless the dispute has been referred for settlement in accordance with
the agreement or, failing any provision in the agreement, in accordance with the Trade Disputes Act, and for 14 days after report has been made. No association, or person acting on its behalf, may order or support a slackening of work designed to limit production.

An association of not less than 20 employees constituting at least 10 p.c. of the group covered by an agreement made by another association may complain to the employer concerning a violation of the Act or the agreement. Other sections forbid attempts to dominate or interfere with employers' or employees' associations or to discriminate against anyone on the ground of union membership; forbid intimidation or threats concerning membership or non-membership in an association and the solicitation of workers for union membership during working hours without the employer's consent.

No association that has signed a collective agreement, and no group of employers or employees who are members of such association may take steps to join another association except during the 60 days before the expiry or renewal of the agreement. Every association must file with the Board a copy of its constitution and by-laws, a statement of fees and assessments, and the names and addresses of its officers.

The Public Service Employees' Disputes Act prohibits strikes or lockouts in the following public services: municipal and school corporations, the Provincial Civil Service, public charitable institutions, insane asylums, the operation of telephones and telegraphs, transport, railways other than those under Dominion jurisdiction, tramways, navigation, and the production, transmission, distribution or sale of gas, water or electricity. The Labour Relations Act is to apply to employees of these services with certain modifications. Except in the Civil Service, where the Civil Service Commission is to act as a council of arbitration, disputes are to be submitted to arbitration in accordance with the collective agreement or, failing such provisions, under the Trade Disputes Act. The award may be executed under authority of a court of competent jurisdiction on application of an interested party or of the Labour Relations Board. No award fixing labour conditions is to be binding for more than one year. Members of Provincial or municipal police and civil servants may remain or become members only of an association which consists solely of persons in the same category and which is not affiliated with another association.

An amendment in the Workmen's Compensation Act provides that where a workman engaged in water transport resides or was hired in the Province and is obliged to work both within and without the Province, compensation is payable if the vessel is registered in a Canadian port or if the owner or charterer has his domicile or principal place of business in the Province.

Ontario.-The Labour Relations Board Act repeals the Collective Bargaining Act, 1943, and authorizes the Lieutenant-Governor in Council to suspend the operation of the Ontario statute enabling the application in Ontario of the Dominion Industrial Disputes Investigation Act. The new Act enables the Government to apply the Dominion Wartime Labour Relations Regulations to industries within provincial jurisdiction and to continue them in force notwithstanding their termination under the War Measures Act, subject only to a provincial Order in Council. The Labour Relations Board Act, however, does not apply to farming, domestic service, police, municipal corporations or school boards or to other municipal boards or commissions unless such board or commission has declared the Act to apply.

The Rights of Labour Act re-enacts those provisions of the repealed Collective Bargaining Act which declared that a trade union and its acts should not be unlawful by reason only that one or more of its objects are in restraint of trade; that an act done by two or more members of a trade union in contemplation or furtherance of a trade dispute should not be actionable unless done without agreement or combination; that a trade union might not be made a party to an action nor a collective agreement be made the subject of such an action unless this could be done irrespective of this Act or of the Labour Relations Board Act; and that the Dominion Reinstatement in Civil Employment Act, 1942, is to have effect in Ontario notwithstanding the termination of the War or the repeal of the Act by the Parliament of Canada.

The Hours of Work and Vacations with Pay Act applies to every establishment and undertaking in any industry and also to any establishment or work in any business, trade or occupation which may be prescribed by the regulations. The Act fixes maximum working hours at eight per day and 48 per week and grants a holiday of at least one week with pay to employees each year. The maximum hours provision does not apply to persons employed in a managerial, supervisory or confidential capacity. The Industry and Labour Board may authorize longer hours where these are agreed upon in writing by the organization or representatives of the employers and workers concerned, and also in cases of emergency, and may suspend such provisions in industries essential to the war effort.

Amendments made to the Factory, Shop and Office Building Act broaden the definitions of "factory" and "shop".

The Workmen's Compensation Act was made applicable specifically to the Crown in the right of the Province, but its former application to school boards was changed to exclude rural school boards. Any farming industry may now be brought within Part I of the Act on application of the employer. In the case of accidents after Apr. 6, 1944, the Board may supply necessary services and attendance for a workman rendered helpless by permanent total disability. In cases of silicosis, the period of exposure to silica dust necessary for compensation was reduced from five to two years, and a workman is no longer required to establish his claim within five years of leaving employment.

Manitoba.-The Manitoba Wartime Labour Relations Regulations Act, which may be suspended at any time, applies the Dominion Regulations to industries normally within provincial jurisdiction. The Act repeals the Industrial Disputes Investigation Act (Manitoba) and suspends the operation of the Strikes and Lockouts Prevention Act.

The Apprenticeship Act is generally similar to Acts of like title in the other provinces. It will apply to such of the 71 specified trades as the Government may designate.

Saskatchewan.-Two legislative sessions were held in Saskatchewan in 1944. At the first session were enacted the Labour Relations Act and the Apprenticeship Act, and workmen's compensation benefits were increased. The minimum age for boys in the workings of a mine was raised from 14 to 16 , and in fire-departments of cities of over 10,000 population, provision was made for a three-platoon system of eight hours each. At the second session, a separate Department of Labour was provided for, and the Trade Union Act and Annual Holidays Act were passed. The Trade Union Act repealed the Labour Relations Act enacted earlier in the year.

The Labour Relations Act, repealed at the second session, applied the Dominion Regulations to industries ordinarily within provincial jurisdiction. The Act suspended the Freedom of Trade Union Association Act, 1938, and also the Industrial Disputes Investigation Act, which made effective in the Province the Dominion statute of that title.

The Apprenticeship Act is generally similar to the Acts of the other provinces of the same title. It applies to 13 trades and to any others added by Order in Council.

Amendments in the Workmen's Compensation (Accident Fund Act) increase benefits to dependent children from $\$ 10$ to $\$ 12$ a month, or, if they are orphans, from $\$ 15$ to $\$ 20$. Maximum compensation in fatal cases was raised from $66 \frac{2}{3}$ to 100 p.c. of average monthly earnings. The Workmen's Compensation Act, 1911, which still applies to men in train and engine service and to others not within the Accident Fund Act, was extended to non-manual workers earning up to $\$ 3,500$ a year instead of $\$ 3,000$ as previously.

The Trade Union Act, 1944, repeals the Labour Relations Act, the Industrial Disputes Investigation Act and the Freedom of Trade Union Association Act, 1938.

The Trade Union Act applies to all industries normally within the Provincial field but while the Dominion Labour Relations Regulations remain in force it does not apply to such industries as are essential to the prosecution of the War. It applies to employers of three or more and to those having less than three workers if one is a member of a trade union including employees of more than one employer. "Trade union" means a labour organization which is not company-dominated.

Provision is made for a board on which employers, employees and, if the Government considers it advisable, the general public are equally represented. The Board may determine agencies appropriate for bargaining, require employers to bargain with such agencies, direct reinstatement of employees discharged contrary to the Act, require the disestablishment of company unions, and order any person to refrain from any unfair labour practice defined in the Act. An order of the Board is enforceable as a judgment of a Court. There is no appeal from the Board and if an employer disregards or disobeys an order the Government may seize and operate his business.

The Board may direct that a ballot be taken to determine the bargaining agency and must do so on request of a union whose members include at least 25 p.c. of the employees concerned. If a majority of those eligible vote, a majority of the votes determines the bargaining agency.

Provision is made for conciliation and investigation of any dispute by a board established by the Minister, or, on request of both parties, by the Labour Relations Board.

The Annual Holidays Act provides for a holiday each year of two weeks with pay for all employees except those on farms, ranches or in similar work, or in undertakings employing only members of the employer's family.

Alberta.-In this Province, the Government was authorized to declare the Dominion Wartime Labour Relations Regulations in effect with respect to nonwar industries under provincial control. If such an arrangement is made, the Industrial Conciliation and Arbitration Act is to be suspended. Certain changes are made in the latter Act. A "collective bargaining agency" excludes a companydominated union. Sections are revised to make collective bargaining require a
secret ballot where more than one bargaining agent is nominated, to permit such a vote on any other question, and to provide for an appeal from a decision as to the bargaining agent. A new section declares a collective bargaining agency and its acts may not be unlawful by reason only that one or more of its objects are in restraint of trade. Authority was given for deductions from wages for union dues on written order from the employee.

The Apprenticeship Act is generally similar to the statutes regarding apprenticeship in other provinces.

The revised Child Welfare Act makes it an offence to employ a girl under 18 in a restaurant or hotel without written consent of her parent or guardian and forbids the employment of children under 16 between 9 p.m. and 8 a.m. instead of between 9 p.m. to 6 a.m. as formerly.

British Columbia.-The Wartime Labour Relations Regulations Act, in force until terminated by proclamation, applies the Dominion Regulations to all industries ordinarily within provincial jurisdiction and suspends the Industrial Conciliation and Arbitration Act except as to matters not covered by the Dominion Regulations.

The Control of Employment of Children Act applies to manufacturing, shipbuilding, electrical industries, logging, construction, catering, places of public amusement, and such shops or stands for the sale of fresh fruit, vegetables, soft drinks, cut flowers and dairy products as are exempt from the Weekly Half-holiday Act. Industries may be added to or removed from this Act by regulation. The Act forbids the employment of a child under 15 except with the permission of the Minister of Labour, who fixes the number of hours and the conditions of employment.

The Vocational Training Co-ordination Enabling Act authorizes the Provincial Government to make agreements with the Dominion for the purposes of the Dominion Vocational Training Co-ordination Act, 1942.

## Section 2.-Occupations of the Gainfully Occupied Population

A special review of occupations of the Canadian people, based on final figures from the 1941 Census, will be found at pp. 1062-1073 of the 1943-44 Year Book.

## Section 3.-Employment and Unemployment

## Subsection 1.-Employment and Unemployment Statistics of the Census

Preliminary figures of unemployment as at June 1, 1941, will be found in Bulletin U-1 of the 1941 Census. Preliminary data of unemployment during the census year will be found in Bulletin E-1 of the Census; these data are subdivided by counties or census divisions.

## Subsection 2.-Employment and Payrolls as Reported by Employers*

For a lengthy period, the Dominion Bureau of Statistics has made monthly surveys of the employment situation as reported by establishments ordinarily employing 15 persons or over in the following main industrial divisions: manufacturing, logging, mining, communications, transportation, construction and

[^264]maintenance, services (chiefly hotels and restaurants and laundries and dry cleaning plants), trade and finance. The more important industries excluded from the monthly surveys are agriculture, domestic and personal services, governmental, educational and certain other professional services. Commencing with June 1, 1941, the data on employment have been complemented by statistics of payrolls.

An indication of the extent to which Canadian industry is represented in these monthly surveys is given by a comparison with the figures of the Decennial Census of June 1, 1941. Such a comparison shows that of the 2,693,119 male and female wage-earners enumerated at the census date, practically 59 p.c. were employed

by the firms furnishing statistics at June 1, 1941. A further and more significant comparison reveals that in the industries included in the monthly surveys, as mentioned above, the coverage exceeded 79 p.c.

A summary of the situation as reported by the leading establishments during 1944 shows that the fifth year of warfare was characterized by a greater degree of stability in industrial employment as a whole than had been indicated in any earlier period for which statistics of employment are available, i.e., since 1920. This situation was an obvious development in view of the stage reached in the progress of the European War itself, and in the production for military needs, considered in conjunction with the depletion of the Dominion's reserves of manpower since the outbreak of hostilities as a result of these factors. The level at which employment was maintained in 1944 was extremely high. Although the annual index was slightly lower than that for 1943, it was otherwise the highest in the record of 25 years.

There was a moderate contraction in manufacturing in the year under review as compared with 1943, a reversal of the trend which had been indicated almost
without variation from the commencement of the War. Most of this falling-off took place in the production of heavy manufactured goods, there being a small advance in the non-durable manufactured goods industries. Expansion was also reported during 1944 in logging, communications, transportation, services, trade and finance; in certain of these industries, the increases over the preceding year were partly due to the employment of greater numbers of part-time workers. On the other hand, mining was less active, largely as a result of continued curtailment in the metallic-ores division. The construction and maintenance group was also quieter, being seriously affected by wartime shortages of labour and materials.

In spite of the fact that there was a slight recession in employment on the whole in 1944 as compared with the preceding 12 months, the reported payrolls showed a further upward movement, the latest annual index being over 2 p.c. higher than that in 1943. The weekly earnings of the typical individual in recorded employment rose from an average of $\$ 30.79$ in that year to $\$ 31.85$ in 1944; the 1942 mean had been $\$ 28 \cdot 61$.

During the year under review, monthly returns on employment and payrolls were tabulated from an average of 14,641 firms in the eight leading industries, exclusive of finance; including the latter division, information was received from an average of 15,441 establishments. The persons on the staffs of the respondents in the eight leading industries for which records are available since 1920, numbered $1,850,851$, while the average in the nine industrial divisions was $1,916,180$. Based on the 1926 average as 100 , the index of employment in the eight major industries was $183 \cdot 0$, a figure 0.6 p.c. lower than that of 184.1 in 1943 . The latest index was higher by 5.4 p.c. than in 1942, and exceeded by over 60 p.c. the annual index of 113.9 in 1939 ; it was also 53.8 p.c. above that of 119.0 in 1929 , the pre-war maximum.

The weekly salaries and wages paid by the co-operating establishments in the nine major industrial groups during 1944 averaged $\$ 61,033,381$; in spite of the loss in employment as compared with 1943, referred to in preceding paragraphs, the reported disbursements during the year under review were over 2 p.c. higher than in the preceding 12 months. From the institution of the current record of payrolls at June 1, 1941, there was an increase of $19 \cdot 3$ p.c. in the 1944 index of employment, while the index of payrolls advanced by $47 \cdot 1$ p.c. in the same comparison. The main factors contributing to the substantially greater rise in the salaries and wages than in the numbers in recorded employment may be stated as follows: (1) the concentration of workers in the heavy manufacturing industries, where rates of pay are above the average and, in addition, there has been a considerable amount of overtime work, (2) the payment of cost-of-living bonuses to the majority of workers; the rates at which these allowances were calculated were increased on more than one occasion before their incorporation in the basic wage-rates as from Feb. 15, 1944; (3) the progressive up-grading of employees as they gain experience in their work; and (4) the payment of higher wage rates in a great many cases. Witb the conclusion of the European War, these factors may become of diminishing importance, the peak of payrolls probably having been reached in the year under review, as the high point of employment was recorded in 1943.

The accompanying chart depicts the general trends of employment, payrolls and per capita weekly earnings in the period from June 1, 1941; the current record

of payrolls commenced only at that date, although, as already stated, the monthly statistics of employment are available from 1920. The decidedly upward movement of employment from the institution of the payroll statistics until the latter part of 1943, together with the relatively stable situation existing during 1944, are clearly illustrated in this graph, which also shows the continued expansion in the payrolls and in the average earnings auring the year under review. It will also be noted, however, that the advances in the aggregate disbursements and the per capita earnings in 1944 were on a decidedly smaller scale than those reported in 1943 over 1942, being also less than those indicated in 1942 as compared with 1941.

[^265]1.-Average Number of Employees, and Average Weekly Payrolls Reported by the Co-operating Firms in 1943 and 1944, Together with Per Capita Weekly Earnings at Stated Dates in those Years-concluded.

Employment and Payrolls by Economic Areas.-The year 1943 marked the high point in wartime employment as a whole for, although in the Maritime Provinces and the Prairie Provinces higher indexes are shown for 1944 than for 1933, in the great industrial provinces of Ontario and Quebec, which together account for 72.2 p.c. of the 'weight' of the total index, production has now passed the wartime peak. Industrial activity declined during 1944 in Nova Scotia, Quebec, Ontario and British Columbia, while employment in the remaining provinces reached new high levels. In most cases, the changes as compared with 1943 were moderate. In all provinces except British Columbia, the reported salaries and wages were generally higher in the year under review than in any earlier period for which data are available, i.e., since the spring of 1941.

## 2.-Index Numbers of Employment as Reported by Employers in Economic Areas, by Months, 1943 and 1944, with Yearly Averages since 1921

Nors.-These indexes are calculated as at the first day of each month, on the base 1926-100. The relative weights show the proportion of employees reported in each economic area to the total reported by all employers making returns in Canada at Dec. 1. 1944.

${ }^{1}$ Since the average for the calendar year 1926, including figures up to Dec. 31, 1926, is the base used in computing these indexes, the average index here given for the 12 months Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.
${ }^{2}$ Percentages of Dominion total.
Employment and Payrolls by Cities.-Monthly statistics have been segregated for a lengthy period for the eight cities whose populations exceed 100,000 , while commencing in 1944, data are also being prepared for the 12 centres with populations ranging from 35,000 to 100,000 . The information furnished during 1944 showed relatively little change from 1943 in the eight cities taken as a unit, there being a reduction of only $0 \cdot 1$ p.c. in the composite index, as compared with
that of 0.6 p.c. in the Dominion as a whole. As may be seen from Table 3, however, activity in most of these centres slackened in the latter months of 1944. On the average, the index numbers of employment in Montreal, Toronto and Winnipeg reached new peaks in 1944, while those in Quebec, Ottawa, Hamilton, Windsor and Vancouver were reduced.

The index numbers of payrolls in the eight cities as a whole averaged 2.6 p.c. higher in the year under review than in 1943, the increase exceeding that of 2.3 p.c. reported in the Dominion as a whole. However, in Hamilton, Windsor and Vancouver the reported disbursements in weekly salaries and wages were lower than in the preceding 12 months. In all eight cities the general average earnings per person in recorded employment reached new high levels during 1944.

## 3.-Index Numbers of Employment as Reported by Employers in Leading Cities, by Months, 1943 and 1944, with Yearly Averages since 1929

Nors.-These indexes are calculated as at the first day of each month, on the base $1926=100$. The relative weights show the proportion of employees reported in each city to the total reported by all employers making returns in Canada at Dec. 31, 1944. Averages for 1921-28, inclusive, are given at p. 772 of the 1938 Year Book.

| Year and Province | Montreal | Quebec | Toronto | Ottawa | Hamilton | Windsor | Winnipeg | Vancouver |

Employment by Industries.-Table 4 clearly illustrates the extremely marked expansion which has taken place in several important industries as a result of the War, manufacturing having been particularly affected by wartime factors. However, as the European War approached its conclusion, there was a moderate curtailment in employment therein during 1944 as compared with 1943, nevertheless, the level of activity in this important group of industries continued at an extremely high level in comparison with earlier years of the War, and especially in comparison with pre-war years. Most of the recent contraction took place in the durable manufactured goods division, notably in non-ferrous metal and iron and steel plants. On the other hand, there was a small advance in employment in the production of non-durable manufactured goods as compared with 1943, in spite of continued losses in chemical, textile and some other factories.

Among the non-manufacturing industries, further expansion was reported during 1944 in logging, communications, transportation, services, trade and finance. In several of these divisions, new all-time highs were established; in some cases, the advances were due to employment of increasingly large numbers of part-time workers. Mining was less active, largely as a result of continued curtailment in the metallic-ores group and construction and maintenance afforded considerably less employment, as a result of growing shortages of labour and supplies.

The payrolls reported during 1944 in each of the main industrial groups except construction were higher than in any preceding year for which current statistics are available.

## 4.-Index Numbers of Employment, by Industrial Groups and by Months, 1943 and 1944, with Yearly Averages since 1929

Notr.-These indexes are calculated as at the first day of each month, on the base $1926=100$. The relative weights show the proportion of employees reported in each industry to the total reported by all employers making returns in Canada at Dec. 31, 1944. Averages for 1921-28, inclusive, are given at p. 773 of the 1938 Year Book.

## Subsection 3.-Unemployment as Reported by Trade Unions

Quarterly statistics on unemployment are compiled and published in the Labour Gazette by the Dominion Department of Labour, based at the present time on returns received from about 2,300 local trade unions, having an aggregate membership of more than 425,000 workers. "Unemployment" means involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or idle because of illness, are not considered as unemployed, while union members retired and in the Armed Forces and unions involved in industrial disputes are excluded from the tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentages of unemployment are based, it should be understood that the figures for each month have reference only to the reporting organizations.

## 5.-Percentages of Unemployment in Trade Unions, by Provinces, Half-Yearly, 1931-43 and Quarterly, 1944

Nore.-For percentages of unemployment at June 30 and Dec. 31 from December, 1915, to December, 1930, see p. 827 of the 1934-35 edition of the Year Book. For data by months from 1921 to 1943, see successive issues of the Year Book commencing with the 1922-23 edition.

## Section 4.-Unemployment Insurance*

Unemployment insurance, which came into operation on July 1, 1941, applies to all employed persons with the following exceptions: workers in specified industries or occupations such as agriculture, forestry, fishing, lumbering and logging, transportation by air or water, stevedoring, private domestic service and workers on a contractual basis greater than a week, e.g., monthly or semi-monthly, who earn more than $\$ 2,400$ per year (and, except by consent of the Commission, employment in a hospital or charitable institution not carried on for gain). Formerly, no person who received more than $\$ 2,000$ per year was covered, but by an amendment effective Sept. 1, 1943, all employees paid on a contractual basis of an hourly, daily, weekly or piece rate (including a mileage rate) are now included in insurable employment regardless of the amount of their earnings, together with all other employees who receive $\$ 2,400$ or less per year. This amendment also extends the coverage with regard to public utilities, and makes possible the inclusion of employees of hospitals and charitable institutions.

Unemployment Insurance Fund.-Employers and employees contribute amounts that will bring approximately equal totals from each group. A grant amounting to one-fifth of these contributions is added by the Dominion Government, which also assumes the cost of administration. From July 1, 1941, to Mar. 31, 1944, employers and employees paid $\$ 155,593,007$ into the Fund and the Dominion added $\$ 31,118,801$. Reserves of the Fund have been invested in Dominion of Canada bonds and at the end of the fiscal year Mar. 31, 1944, the par value of these investments amounted to $\$ 178,108,000$. The accrued interest was $\$ 1,913,786$.

[^267]Benefit first became payable on Jan. 27, 1942, and from that date to Mar. 31, 1944, of the 98,274 claims filed at local offices, 93,041 were forwarded to the regional and district offices for adjudication and 45,287 persons were paid benefit, 251,993 benefit cheques were issued and $\$ 2,465,432$ was paid out of the Fund.

Contributions and Benefit.-The rates of contribution and benefit are indicated in the following statement.

No benefit is payable during the first nine days of unemployment in a benefit year. After that time, the duration of benefit is related to the employment and contribution history of the employee, the number of days' benefit being equal to onefifth the number of contribution days during the previous five years, less one-third the number of benefit days in the previous three years. Insurance benefit is paid as a right on fulfilment of four statutory conditions:-
(1) The payment of not less than 30 weekly (or 180 daily) contributions within two years, while in insured employment.
(2) Proper presentation of the claim, and proof of unemployment.
(3) Evidence that the contributor is capable of, and available for work, but unable to obtain suitable employment.
(4) Proof that the contributor has not refused to attend a course of instruction or training if directed to do so.
Disqualifications for benefit include: loss of work due to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or an institution supported out of public funds; the earning of less than 90 cents per day while in employment. Disqualification of a claimant for a period not exceeding six weeks may be made if an employee is discharged by reason of his own misconduct, or leaves his employment voluntarily without just cause.

WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT

[^268]Statistics of Unemployment Insurance.*-The number of persons insured under the Unemployment Insurance Act (Table 6) was assumed to be those working in insurable employment as at Apr. 1. All those for whom an insurance book was exchanged or to whom a new book was issued for the first time during April, were included. The term "insured person" is susceptible of a variety of interpretations: t'i 2 figures presented here are especially useful as an indication of employment in insurable employment at a given time.

Table 7 presents information on the persons for whom current benefit years were in existence during 1943. A benefit year is established under the Unemployment Insurance Act when an insured person, upon becoming unemployed, submits a claim and proves that at least 180 daily contributions have been made in his behalf during the preceding two years. Because of other statutory provisions or because he may regain employment before he actually receives benefit, the setting up of a benefit year does not necessarily result in the receipt of benefit payments. When a benefit year is established it means merely that the elaimant's right to receive benefit at a certain rate at any time during the succeeding twelve months is determined. Thus, although 33,558 persons held benefit years current in 1943, only 16,592 actually drew benefit in that year.

In almost all cases (i.e., excluding death, etc.) a benefit year remains in existence either until the authorized benefit rights are exhausted or until twelve months have passed since the date of its establishment, whichever occurs first. Some benefit years established in 1942 were carried over into 1943, so that, although 19,588 persons established benefit years in 1943, a total of 33,558 persons held benefit years currently available in 1943.

The amount of benefit paid, as presented in Table 7, is secured by multiplying each daily rate of benefit by the number of days paid at that rate on the cards representing benefit years upon which benefit was drawn in 1943. Errors and omissions resulting in adjustment of payments are, therefore, not included so that this does not represent the exact amount paid out of the unemployment insurance fund. It is presented here, nevertheless, as the comparable figure to the number of days paid and persons drawing benefit.

In Table 8 the persons with current benefit years in 1943 are classified according to the number of benefit days paid. Table 9 classifies those who drew benefit by the daily rate at which they were paid. The daily rate of benefit is determined by the amount of the daily average contribution paid on behalf of the claimant during the past two years and upon whether or not he has a dependant within the meaning of the Act.

The persons who established benefit years in 1943; those whose benefit years terminated in 1943; and those whose benefit years terminated by exhaustion of rights are classified by age groups in Table 10. In Table 11 the persons who established benefit years in 1943 and the benefit days paid on those benefit years are presented by industrial group and age. The industrial groups used here are identical with those used to classify the insured population in Table 6.

A more detailed analysis of these data, by sex and province, is available in the publication "Annual Report on Current Benefit Years Under the Unemployment Insurance Act" issued by the Dominion Bureau of Statistics.

[^269]
## 6.-Persons Insured under the Unemployment Insurance Act, Classified by Industrial Groups and Sex, 1943 and 1944

Nors.-These figures include only those who exchanged an unemployment insurance book or were issued a book for the first time in April. They therefore represent an estimate of the number employed in insurable employment as at Apr. 1.

[^271]Employment Service.-The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act, 1940. The public employment offices, which had functioned under a joint DominionProvincial arrangement for more than two decades, were taken over, on Aug. 1, 1941, and added to by the Commission in all provinces except Quebec. The Commission also established offices in Quebec and the Provincial Government thereupon reduced the number of its own offices. (See 1942 Year Book, p. 689.)
12.-Applications for Employment, Positions Offered and Placements Effected by Employment Offices, 1933-44, and by Provinces, 1943 and 1944
Note,-For figures by provinces from 1920 to 1942, see corresponding table of previous Year Books, commencing with the 1926 edition. Totals for the years $1920-32$ are given at p. 766 of the 1938 edition.

Administrative Organization.-The Unemployment Insurance Act is administered by a Commission of three members, whose head office is at Ottawa. The field organization consists of five regional offices, four district offices, which perform some of the functions of the regional offices, and over 200 local offices. The last-mentioned, which are now called Employment and Selective Service Offices, are both employment offices and the offices at which insured workers register their claims for benefit when they become unemployed. In addition, they are responsible for the local administration of the National Selective Service program (see p. 777). About 250 Inspectors of Insurance Revenue examine insurance books and employers' records to ensure compliance with the Act. The machinery for appeals and references on disputed benefit claims consists of courts of referees and an umpire.

A National Employment Committee and regional and local employment committees provide assistance in regard to the employment service. An Unemployment Insurance Advisory Committee gives advice on questions connected with the insurance side of the Commission's work and also reports annually to Parliament on the financial condition of the Unemployment Insurance Fund. For further details, see the 1942 Year Book, p. 690.

## Section 5.-War-Emergency Training and Youth-Training Programs, 1943-44

The Vocational Training Co-ordination Act, 1942, gives authority to carry on any type of training needed in connection with the prosecution of the War, either for tradesmen for the Armed Forces or for workers in industry. The Act also provides for rehabilitation training for persons discharged from the Armed Forces, the continuation of any projects formerly carried on under the Youth Training Act (see p. 694 of the 1942 Year Book), and for training that may be desirable in the post-war period. All projects are carried on by the Dominion Department of Labour in co-operation with the Provincial Governments, but with the Dominion Government bearing practically the entire direct cost of war-emergency training and rehabilitation training.

Under this Act, an Advisory Council of seventeen members was appointed, representing employers, workers, technical education, veterans' and women's organizations, and agriculture. Table 13 shows the allotments of Dominion funds to the provinces for the fiscal year 1943-44, and the claims paid up to Apr. 1, 1944.

| Totals.. | 407,000 | 213,081 | 6,740,000 | 4,529,630 |

Youth Training.-During the fiscal year 1943-44, 19,442 persons were given training under this program, which consisted for the most part of physical training, agricultural training and training of rural young people, a few projects for urban young women and assistance to university students.

Student Aid.-During the year assistance was given to 2,467 students mainly in the faculties of medicine, dentistry, engineering and science. Assistance was given on the basis of academic merit plus financial need to students who agreed to make their services available for the war effort as required in the capacity for which they had been trained. For the most part, the cost of this assistance was shared equally between each province and the Dominion, but a special Dominion appropriation was available for selected types of students who were not eligible for provincial assistance.

War-Emergency Training.-This program (fully described at pp. 694-698 of the 1942 Year Book) was continued during the fiscal year 1943-44. The scale of subsistence allowances paid trainees ranged from $\$ 7$ to $\$ 18$ per week.

Continued use was made of vocational shops in technical schools and additional training centres were opened early in the year. There was a decrease in the enrolment in pre-employment classes most of which were of comparatively short duration, i.e., from two weeks to two months. Several more-specialized types of training were also provided, such as laboratory technicians, industrial chemists, instrumentmakers and draughtsmen.

There was no difficulty in finding work for trainees on the completion of their courses, but it became increasingly difficult to secure enough trainees to meet the demand. As the supply of trainees decreased sharply there was a corresponding decrease in the full-time pre-employment classes. This decrease became very marked in the last few months of the fiscal year and certain training centres were closed.

The gross enrolment in full-time pre-employment classes was 11,564 men and 5,959 women, of whom 7,898 men and 4,957 women are known to have been placed in jobs during the year.

## Training in Industry

Men and women were given special training in industrial establishments, usually for occupations for which no suitable training could be given in the regular vocational schools. The Department of Labour helped draw up the syllabi and, in some cases provided instructors in technical subjects. It also reimbursed the employer for the salaries of instructors selected from the working force of the employer and for the usual subsistence allowances to trainees.

During the year 44 additional plant schools were approved with a gross enrolment of 8,587 men and 11,329 women, of whom 6,966 men and 9,345 women completed their training during the year and were transferred to productive work.

Part-time classes were continued for workers in war industries with a view to their upgrading and promotion. The bulk of the instruction given was classroom work in technical subjects. The enrolment in these was 14,926 .

There was increasing interest in the training of foremen and supervisors. Through a series of five-day institutes, each covering three distinct courses, trainees were enabled to return to their industries as trainers of other foremen and supervisors. The courses were in job instruction, job relations and job methods. Through the courtesy of the Training within Industry Branch of the United States War Manpower Commission, material for these courses and the services of an instructor were made available to the Department for the first institute. Total enrolment in the three courses during the year was 27,391 .

## Training for the Armed Forces

Air Force.-During the year classes for the Royal Canadian Air Force (see p. 697 of the 1942 Year Book) were extended. Personnel referred to these classes were enlisted by the Air Force with full pay and allowances and the whole program was much more closely and officially linked with the R.C.A.F. The gross enrolment of R.C.A.F. personnel during the year was 32,152 .

Pre-aircrew educational classes were held in a number of schools, the course lasting 12 weeks. Instruction was given in English, mathematics, science, aircraft recognition and in the progress of the War. In the technical trades, the course lasted from four to six months and included wireless operators (ground), wireless mechanics, radio mechanics, aero-engine mechanics, airframe mechanics, and clerks for the R.C.A.F. Women's Division.

Army.-Classes for army tradesmen had a gross enrolment of 13,538 . The syllabi were drawn up by the Army and each course lasted three months. It included the provision of trades training for young soldiers of $17 \frac{1}{2}$ years of age. This took the form of a three-month general preliminary course after which the trainees were selected for a ten-month trade training course as electricians, motor mechanics, instrument makers, fitters, draughtsmen or clerk-stenographers.

Navy.-Enrolment in the classes of enlisted men for the Navy showed very little change from the previous year, the gross enrolment being 3,941 . The courses of from two to eight months covered training as engine-room artificers, clerks, electrical artificers, motor operators or cooks.

Rehabilitation Training for Discharged Members of the Forces.-As arranged in the previous year with the Department of Pensions and National Health (now Department of Veterans Affairs), provision was made for Vocational Training for men and women discharged from the Armed Forces. The gross enrolment during the year showed a substantial increase and amounted to 2,056 , of whom 197 were women. Training was given in special rehabilitation centres (adapted from War Emergency Training), private trade and commercial schools, and the regular vocational schools of the provinces and municipalities. Arrangements were also completed by which training was given on the job in industrial and commercial establishments. This method was used chiefly for occupations for which no adequate training could be given in a school.

## Section 6.-Manpower and Selective Service

The responsibility for carrying out Government policies in respect to the utilization of manpower for the security, defence, peace, order and welfare of Canada and for the efficient prosecution of the War is vested in the Minister of Labour by authority of the Governor General in Council.

Manpower policy in Canada developed gradually. During the first years of the War a mere absorption of unemployed into productive work through the normal operation of the labour market was sufficient to meet most manpower requirements. Positive action by the Government, however, soon became necessary and the program expanded steadily until it applied to the whole labour force, active and potential; it is designed to secure the most effective distribution of that force both within industry and between industry and the Armed Forces. This was brought about by two sets of regulations, the National Selective Service Civilian Regulations and the National Selective Service Mobilization Regulations.

The administration of these regulations is vested in the Director of National Selective Service who is responsible to the Minister of Labour. The Director of National Selective Service is assisted by a Board known as the National Selective Service Administration Board. This Boärd includes in its membership Associate Directors who have been appointed in charge of the separate divisions of National Selective Service with a representation from the Employment Service and Unemployment Insurance Commission. The function of the Board is to formulate plans to meet the problems of mobilization, stabilization and utilization of manpower.

The Minister of Labour and the Director of National Selective Service are also assisted, particularly on matters of policy, by a National Selective Service Advisory Board which consists of representatives of Government Departments and agencies such as veterans organizations, industry and labour. There are also Regional Advisory Boards in the Maritime, Quebec, Ontario, Prairie and Pacific areas with equal representation to deal with problems peculiar to their own areas.

Under the Mobilization Regulations all men born in any of the years 1913 to 1926, inclusive, and single men born in any of the years 1902 to 1912, inclusive, were designated as liable for compulsory military training. However, no man was to be called for military service until he reached the age of $18 \frac{1}{2}$ years. In order to aid in the prosecution of the War and to ensure that war and essential civilian production were maintained, postponement orders, deferring a man from military service, were granted to men under certain circumstances.

For the administration of the military call-up, the country is divided into 13 divisions in each of which there is a Registrar. Mobilization Boards in these 13 divisions act as independent units and are responsible for determining whether or not a man should have postponement from military service under the regulations.

On the purely civilian side, there are two aspects of the policy; control over the movement of workers and direction of certain groups of workers into more essential employment. The basis of the program is a carefully drafted schedule of labour priorities which shows exactly what establishments should be given first call on available labour in any locality. Control over the movement of workers is possible because, with few exceptions, all employers and workers are required to use the local Employment Office. These offices are the local offices of the Unemployment Insurance Commission which, along with the other facilities of the Commission, have been placed at the disposal of the Minister of Labour for the duration of the War. No worker can quit or be released from his job without giving or receiving seven days notice of separation in prescribed form, a copy of which goes to the local Employment Office. Similarly, no employer may interview or engage any worker, and no worker may seek or accept employment unless he has a permit from the local Employment Office. Except in the name of Selective Service, employers may not normally advertise for help and they must requisition all the labour they need from the local Employment Office. Moreover, since Sept. 20, 1943, no worker in an establishment with a high labour priority rating has been able to quit or be released from his job without permission. A considerable number of workers have been compelled to leave their jobs to take more essential jobs elsewhere. Workers unemployed for two weeks or more may be directed into any job considered suitable. All men between the ages of 18 and 64 who have experience in coal mining and all men in Nova Scotia and New Brunswick who were formerly longshoremen may be directed to employment in the mines or on the docks, as the case may be. Any man between the ages of 16 and 64 may be directed to accept employment in cutting fuelwood, in fishing or fish processing.

Special provisions apply to agriculture. No farm worker may seek or enter employment outside agriculture without a permit, except short-time employment in related seasonal industries. Moreover, under agreements between the Dominion
and the provinces, farm workers from one province may be moved either temporarily or for an indefinite period to provinces where they are more urgently needed. Soldiers, prisoners-of-war and Japanese are used in farm work. Mennonites, Doukhobors and conscientious objectors who are relieved from the obligation to undertake military service have been directed into agriculture. Students also, during their holidays, have been used extensively to assist on farms and during the harvest. Apart from local forces, the Armed Services have rendered great assistance by permitting soldiers to work during the harvest period or, under special circumstances, to work the year around.

## Section 7.-Organized Labour in Canada

Information concerning trade unions in Canada is published in the annual report on "Labour Organization in Canada" issued by the Department of Labour.

At the close of 1943 there were 664,533 members of trade unions in Canada. The membership of the Trades and Labour Congress of Canada was reported as 249,450 in 2,041 local branches of affiliated unions and federal unions. The membership of the Canadian Congress of Labour was reported as 245,812 in 710 branch unions and local unions; the Canadian and Catholic Confederation of Labour, 68,576 in 268 branches; the independent railroad brotherhoods, 34,590 in 364 branches; other central organizations, 56,819 in 294 branches; and independent local units, 9,286 in 58_branches.

Trades and Labour Congress of Canada.-The Congress is the oldest of the central labour organizations in Canada. After the disbanding of the Canadian Labour Union, which had drawn together local unions in Ontario and which had met annually from 1873 to 1877 , inclusive, there was no central organization until 1883, when the Trades and Labour Council of Toronto called a conference of local unions and plans were made to establish a federal organization which was formally set up in 1886 .

Affiliated with the Trades and Labour Congress at the present time are "international" trade unions which are also affiliated with the American Federation of Labor, a number of Canadian or "national" unions and a number of directly chartered federal labour unions.

Canadian Congress of Labour.-This Congress was organized in September, 1939, when the All-Canadian Congress of Labour, formed in 1927, amended its constitution to permit affiliation with international unions, that is, unions with members in both Canada and the United States. In addition to Canadian unions and international unions, which, in the United States, are affiliated with the Congress of Industrial Organizations, the Canadian Congress of Labour has a number of directly chartered locals.

Canadian and Catholic Confederation of Labour.-National Catholic Unions in Canada date from 1901. In 1921 these local Catholic Syndicates, which are groured in federations according to industry so far as possible, formed a central organization, the Canadian and Catholic Confederation of Labour. Except for a few in eastern Ontario, these unions are confined to the Province of Quebec.

## 14.-Membership of Trade Unions in Canada, 1911-43

Canada and the International Labour Organization.*-The International Labour Organization of the League of Nations was set up in 1919 under the Treaties of the Peace to improve labour conditions by international action. It consists of the International Labour Conference, the Governing Body and the International Labour Office. The Conference normally meets annually and is composed of four delegates from each Member State, two representing the Government and two representing employers and workers. The Governing Body, which consists of 16 government, 8 employer and 8 worker representatives, is responsible for the administration of the Organization and is in direct charge of the International Labour Office. The Office collects and publishes information and acts as the secretariat of the Conference.

The Office is normally located at Geneva, but because of the War it was moved in 1940 to Montreal at the invitation of the Canadian Government. The War caused the suspension of the annual meetings of the Conference and the quarterly meetings of the Governing Body. The Conference did not meet in regular session until May, 1945, when the 26th session was held at Philadelphia. A special session was held, however, in 1941 at New York and Washington. The Governing Body has held four sessions since the outbreak of war, the latest, the 94th session, at London in January, 1945. In the intervals its duties have been performed by an Emergency Committee set up in February, 1939, and reconstituted in November, 1941. In addition, the Joint Maritime Commission, established by the Governing Body in 1920, held sessions in June, 1942, and January, 1945, both at London. The Office sponsored several meetings between representatives of Canada and the United States

[^273]to discuss wartime labour and manpower problems, and assisted materially in the organization and work of the first Inter-American Conference on Social Security which was held in September, 1942, at Santiago de Chile.

The annual Conference has adopted 67 draft conventions and 73 recommendations and, in spite of the War, the number of ratifications had increased from 882 at the time of the Philadelphia Conference. The subjects dealt with in these conventions and recommendations and the action of Canada in regard to them are described in the 1941 Year Book at p. 684.

The Philadelphia Conference was attended by representatives of 41 Member States. Canada's delegation included among the Government advisers, representatives of five Provincial Governments. The Conference adopted a resolution (the Philadelphia Charter) re-affirming the fundamental principles on which the Organization is based and setting out certain principles of social justice and objects sought to be achieved. Seven recommendations were approved for adoption by Member States. They are concerned with income security, social security for persons discharged from the Armed Forces, medical care, minimum standards of social policy in dependent territories, employment in the transition from war to peace, the Employment Service, and national planning of public works.

Fuller information concerning the International Labour Organization is contained in the Labour Gazette published monthly by the Department of Labour.

## Section 8.-Industrial Accidents and Workmen's Compensation

## Subsection 1.-Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the Dominion Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners for Canada and various other governmental authorities; from departmental correspondents; and from press clippings.
17.-Fatal Industrial Accidents in Canada, by Industries, 1941-44

| Industry | Numbers of Fatal Accidents |  |  |  | Percentages of Total Fatal Accidents |  |  |  |

[^274]Causes of Fatal Accidents.-The largest number of fatal accidents to employees in 1944, 392, were caused by "moving trains, vehicles, etc.". This group includes accidents caused by cars or engines, including mine and quarry cars, and by automobiles and other power vehicles and horse-drawn vehicles, as well as by moving implements, water craft and civil aircraft.
"Falling objects" caused 170 fatalities, and "falls of persons" 166 fatalities. Other fatalities were: 140 caused by dangerous substances, 39 by hoisting apparatus, 33 by striking against or being struck by objects, 30 by prime movers and 30 by handling of objects. Included in the category "other causes" were 116 fatalities of which 90 were due to industrial disease, strain, etc.

Numbers of industrial accidents, fatal and non-fatal, dealt with by the various provincial Workmen's Compensation Boards, are shown in Subsection 2.

## Subsection 2.-Workmen's Compensation*

In all provinces, except Prince Edward Island, legislation is in force providing for compensation for personal injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease, except where the workman is disabled for less than a stated number of days. To ensure payment of such compensation, each provincial Act provides for an accident fund, administered by a Board, to which employers are required to contribute at a rate determined by the Board, in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation, as determined by the Board, and pay a proportion of the expenses of administration. A Dominion Act provides for compensation for accidents to Dominion Government employees according to the conditions laid down by the Act of the province in which the accident occurs. In Prince Edward Island, where there is no provincial Act in effect, compensation is paid to Dominion Government employees according to the provisions of the New Brunswick Act.

Necessary medical aid is given to workmen during disability, except in Nova Scotia where it is provided for thirty days only unless the Board extends this period. In British Columbia, workmen contribute to the cost of medical aid; elsewhere it is borne by the accident fund. Where the employer is individually liable for compensation, he must also furnish medical aid.

Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus. In all, except New Brunswick, silicosis is compensated under certain conditions. The other diseases compensated vary according to the industries of the provinces.

Scope of the Acts.-The Acts vary in scope, but, in general, they cover construction, mining, manufacturing, lumbering, fishing, transport and communication and the operation of public utilities, undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta and British Columbia. Nova Scotia requires persons employing men in fishing and dredging to carry insurance.

[^275]Benefits.-Under each Act, a fixed period must elapse between the date of the accident and the date when compensation begins but in all cases medical aid is given from the date of the accident. This waiting period varies from three to seven days and in some provinces compensation is paid for the waiting period, if disability continues beyond it.

At present, compensation in fatal cases is paid as follows:-
Burial expenses, $\$ 100$ in Nova Scotia and New Brunswick, $\$ 150$ in Manitoba and $\$ 125$ in the other provinces. In certain cases costs of transporting the body are also allowed.

To a widow or invalid widower, or to a foster-mother as long as the children are under the age limit, a monthly payment in Ontario of $\$ 45$ and in the remaining provinces $\$ 40$; in addition a lump sum of $\$ 100$ is paid in New Brunswick, Quebec, Ontario, Saskatchewan, Alberta, and British Columbia.

For each child in the care of a parent or foster-mother receiving compensation, a monthly payment of $\$ 10$ in New Brunswick, Nova Scotia, Quebec, Ontario, and British Columbia, but in the latter province $\$ 12 \cdot 50$ is paid to children between 16 and 18 years of age attending school; in Manitoba $\$ 12$ for the eldest child, $\$ 10$ for the second, $\$ 9$ for the third, and $\$ 8$ for each additional child; in Alberta and Saskatchewan, $\$ 12$ for each child. To each orphan child $\$ 20$ per month is paid in Nova Scotia, Saskatchewan, Alberta and British Columbia and $\$ 15$ in the other provinces with a maximum of $\$ 80$ per month to one family in Nova Scotia and British Columbia.

Except in the case of invalids, payments to children are not continued beyond the age of 16 in Nova Scotia, Ontario, Manitoba and Saskatchewan, 18 in Quebec, Alberta and British ${ }_{j}$ Columbia, and 16 for boys and 18 for girls in New Brunswick. In Manitoba, Ontario, Saskatchewan and British Columbia payments for children may be made up to the age of 18 if it is desirable to continue their education. In British Columbia and Manitoba payments to invalid children are continued until recovery, while the other provinces make payments only for the length of time the Boards consider that the workman would have contributed to their support.

Where the only dependants are persons other than consort or children, all the Acts provide that compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly sum to be paid to all such dependants is limited to $\$ 40$ in Manitoba, $\$ 70$ in Alberta, $\$ 45$ in Nova Scotia and $\$ 55$ in British Columbia. In British Columbia, however, if there are also dependants such as widow, invalid widower or children the maximum payable to other dependants is $\$ 40$ per month. In all provinces compensation to dependants other than consort or children is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Alberta and British Columbia, maximum benefits payable to dependants in case of death of the workman are two-thirds of the earnings. The minimum payable to a consort and one child in Quebec is $\$ 50$ per month or $\$ 12.50$ per week if there is more than one child; in Manitoba and Saskatchewan the minimum is
$\$ 12 \cdot 50$ per week ( $\$ 15$ per week in Manitoba if there is more than one child). In Ontario the minimum for a consort and one child is $\$ 55$ per month, irrespective of the workman's earnings, with an additional $\$ 10$ per month for each additional child unless the total compensation exceeds the workman's average earnings in which case compensation is an amount equal to such earnings or $\$ 55$, whichever is greater.

The rate for permanent total disablement in all provinces is a weekly payment for its duration equal to $66 \frac{2}{3}$ p.c. of the average weekly earnings; except in New Brunswick, the Acts fix a minimum weekly sum that must be paid unless earnings fall below that minimum, in which case a sum equal to the earnings is paid.* This minimum is $\$ 10$ in Nova Scotia, $\$ 12 \cdot 50$ in Quebec, Ontario, Saskatchewan, Alberta, and British Columbia, and $\$ 15$ in Manitoba. For partial disablement similar provision is made in all provinces except New Brunswick and Alberta, i.e., twothirds of the difference in earnings before and after the accident. In New Brunswick and Alberta, the amount is determined by the Board according to the impairment of earning capacity, but in New Brunswick two-thirds of the diminution of earnings is payable for temporary partial disablement. In Nova Scotia, if there is little or no difference, in New Brunswick in any case, or in the other provinces if the difference is 10 p.c. or less, a lump sum may be given.

The average earnings on which compensation is based must be computed in the manner best calculated to give the rate per week or per month at which the worker was remunerated but must not exceed $\$ 1,500$ a year in Nova Scotia, $\$ 2,500$ in British Columbia and Ontario, and $\$ 2,000$ in the other provinces. If the workman's earnings at the time of the accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. The rate of compensation of workmen under 21 may be later increased if it is probable that their earning power, had the injury not occurred, would have increased.

The statistics of workmen's compensation published by the provincial boards are not on a comparable basis and are therefore presented as a series of tables.

[^276]

## Section 9.-Strikes and Lockouts

Statistics of strikes and lockouts in Canada have been collected by the Dominion Department of Labour since its establishment in 1900.

Summary tables of the figures with details as to strikes and lockouts during 1943 will be found in the Labour Gazette, March, 1944, at p. 315 and for 1944 in the March, 1945, issue at p. 383.

Strikes and Lockouts in Recent Years.-The expansion of employment since the outbreak of war has been much greater in manufacturing than in other industries. Strike activity has been greatest also in this group of industries in recent years. In 1944, three-fifths of the strikes and four-fifths of the time-loss were in manufacturing, while strikes in coal mining caused less idle time than in any year since 1931, with the exception of 1938. Five of the largest strikes during the year caused more than 78 p.c. of the total time loss and two strikes involved 62 p.c. of the total workers.

## 26.-Strikes and Lockouts, 1932-44

[^278]Causes and Results of Strikes and Lockouts.-In each year since the record was begun in 1901 the most important cause of strikes has been the demand for changes in wages but since 1936 union questions (chiefly union recognition, the discharge of workers for union activity or membership, the employment of union members only) have caused many strikes, resulting in a large proportion of the time
loss. In 1944 strikes over demands for increased wages, reduced hours and other changes caused only 14 p.c. of the total time loss, while strikes over union questions were responsible for about 70 p.c. of the total, two strikes alone causing more than 300,000 days' loss.

Since 1935 the proportion of strikes and lockouts settled by conciliation has increased. Up to that time about half were settled by direct negotiations of the parties involved. In 1944, 60 p.c. of the total strikes were settled by various government agencies, federal and provincial. The improvement in employeremployee relations, as indicated by the decline in strike activity during 1944, reflects the co-operation of both management and workers in the application of the Wartime Labour Relations Regulations, which went into effect on Mar. 20, 1944. In 1944, about 25 workers in every 1,000 were involved in strikes, as compared with 72 in 1943, 39 in 1942, 33 in 1941, 27 in 1940 and 20 in 1939.

## Section 10.-Wage Rates and Earnings

## Subsection 1.-Wage Rates and Hours for Various Classes of Labour in Canada*

Statistics of rates of wages and hours of labour have been collected for many years by the Dominion Department of Labour and published in a series of reports supplementary to the Labour Gazette. Report No. 1 of this series was issued in March, 1921. The records upon which the statistics are based begin, in most cases, with the year 1901. Index numbers show the general movement of wage rates for the main industrial groups.

In the most recent Report of the series (No. 26), the index number has been revised back to 1939 and placed on the base $1939=100$ for the entire period since 1901. The percentage changes for the period 1939 to 1943 shown by the revised index for the principal groups of industries do not differ materially from the percentage changes shown by the previous index which was last published in the Labour Gazette for October, 1944. This Report contains tables showing average rates for selected occupations along with the predominant ranges of rates and the standard or normal hours of labour per week. The statistics are given by provinces or regions and, when possible, for Montreal and Toronto. Tables 28 and 29 show the index numbers of wage rates by main industrial groups and by industries.

From 1930 to 1933 there was a general decrease in wage rates but several groups showed increases in 1934 and increases were general each year since that time, averaging 3 p.c. in 1940,10 p.c. in $1941,7 \cdot 7$ p.c. in 1942 and $7 \cdot 8$ p.c. in 1943 . Some of the increases in 1940 and many in subsequent years were made in the form of a cost-of-living bonus to be adjusted from time to time according to the official cost-of-living index number and by order of the National War Labour Board. (Since Nov. 15, 1941, no change may be made in wage rates without authorization of the National Board or a Regional War Labour Board-see p. 751.)

Wages of Farm Labour.-Current rates of wages paid to male hired help on farms have more than doubled since 1940, the year in which the series of wage rates shown in Table 31 was begun. Average wage rates are shown on the basis of rates paid with board provided by the employer and without board. The information is provided by farm correspondents located in all provinces. Although rates of wages during the winter period are normally somewhat lower than those paid during the harvesting season, wage rates at Jan. 15, and also at May 15, rose sharply in all provinces during the period under review.

## 31.-Average Wages of Male Farm Help per Day and per Month as at Jan. 15, May 15 and Aug. 15, 1941-44

Norz.-Figures for 1940 are given at pp. 732-733 of the 1943-44 Year Book.

## Subsection 2.-Earnings in the Census Years 1931 and 1941

A table at p. 789 of the 1937 Year Book gives statistics of wage-earners, by sex, and their earnings, for the census years 1911, 1921 and 1931. Certain preliminary figures on earnings of wage-earners during the twelve months ended June 2, 1941, are given in Bulletin E-1 of the 1941 Census. These data are, for the first time, subdivided by counties. Bulletin E-2 gives occupations by earnings for the provinces.

## Section 11.-The Regulation of Wages and Hours of Labour

Except as an emergency measure, the regulation of wages and hours of persons in private employment in Canada is within provincial jurisdiction, and all the provinces, except Prince Edward Island, have legislation on the subject. In New Brunswick, however, wage orders apply only to particular establishments or to particular industries in certain areas.

In Nova Scotia, the minimum wage law applies only to women, while in Ontario, though the Act applies to both sexes, there is only one order (relating to the textile industry) which applies to men. In Alberta and British Columbia, separate orders are issued for men and women, and in Manitoba, Quebec and Saskatchewan orders apply to both sexes in so far as both sexes are employed in the industries covered.

In Quebec, under the Collective Agreement Act, hours and wages established through collective agreements have been generalized by Orders in Council in given districts or throughout the Province. The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta and Part II of the Manitoba Fair Wage Act provide that schedules of wages and hours drawn up by conferences of employers and employees called by the Minister of Labour may be made binding on all employers and employees in the industries concerned. In Nova Scotia, New Brunswick and Manitoba, however, the Acts can be applied only to specified industries.

Legislation in all provinces, except Prince Edward Island, which applies to mines, factories and, in some cases, to shops, restricts the hours of work of women and young persons, or, in some provinces, of all workers. In Quebec, Alberta and British Columbia, there are also statutes dealing only with hours of work, but in Quebec some provisions have been suspended for the duration of the War. Several Minimum Wage Acts give authority for the regulation of hours as well as wages.

## Subsection 1.-Minimum Wages

Table 32 shows the rates in effect in December, 1944, for several classes of establishments in the principal cities of Canada. In Alberta, except for hotel, restaurant and telephone employees, and in British Columbia, the rates shown apply throughout the Province. In other provinces, and in Alberta in the occupations mentioned, lower rates are in effect in all or part of the remainder of the Province. The rates given in the table apply to the hours specified or, except in Montreal and Toronto, to the normal work-week of the establishment if less.

The rates in effect under provincial minimum wage legislation at the end of 1941 are summarized in the 1942 Year Book, pp, 714-716 and changes made in 1942 are given at p. 734 of the 1943-44 edition. Revisions made in 1943 and 1944 are as follows: in Saskatchewan in 1944 revised Orders raised the minimum rate in cities to $\$ 16 \cdot 80$ per week for all classes of experienced workers within the scope of the Act. Former Orders fixed a minimum of $\$ 12$ a week for places of amusement, $\$ 13$ for factories, laundries, offices and beauty parlours, and $\$ 14$ in shops.*

In Alberta an Order of 1944 fixed a weekly minimum of $\$ 15$ for experienced women workers not exempted by special Orders or agreements. The former minimum was $\$ 12 \cdot 50$ a week in factories, laundries, shops, hotels and restaurants, and $\$ 14$ in beauty parlours, offices and places of amusement.*

[^281]In British Columbia, the Order under the Female Minimum Wage Act applying to fish-curing and -packing was extended in 1943 to fish-canning. A minimum wage of 33 cents an hour replaced the former rate of $\$ 15 \cdot 50$ a week.

In Quebec a new Order sets minimum rates for several classes of workers in charitable institutions and hospitals.

## Subsection 2.-Wages and Hours under Quebec Collective Agreement Act, Manitoba Fair Wage Act and Industrial Standards Acts of Other Provinces

The Collective Agreement Act of Quebec provides that collective agreements voluntarily entered into by representatives of employers and trade unions or groups of employees may be submitted to the Minister of Labour and if, in his opinion, the terms of an agreement that relate to wages, hours and apprenticeship determine these conditions for a preponderant proportion of the industry, they may, by Order in Council, be made compulsory for the industry affected in the district covered by the agreement or throughout the Province. The terms are enforced by joint committees of employers and the trade unions in the industry.

The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta provide that, following a petition from employers or employees in an industry, either in a particular area or throughout the Province, the Minister of Labour for the Province may call a conference of representatives of employers and employees, at which a schedule of wages and hours for the industry, in the area specified, may be agreed upon. Such a schedule, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may be made binding by Order in Council in a designated zone. The Minister may also establish an advisory committee, on which employers and employees are represented, to assist in carrying out the provisions of the schedule. The Nova Scotia Act applies only to construction work in Halifax and Dartmouth and the New Brunswick Act to construction work exceeding $\$ 25$ in value and to work on motor-vehicles.

Part II of the Manitoba Fair Wage Act provides similar machinery for fixing wages and hours in barbering and hairdressing, printing and engraving, shoe-repairing, wood-sawing, baking, laundering and dry cleaning, road trucking and hauling, and any other industry brought within its scope by Order in Council.

A list of the industries and occupations governed by Orders in Council under the above Acts at the end of 1939 was published in the 1940 Year Book, p. 793, and later changes are to be found in subsequent editions. In 1943, agreements for retail stores at Chicoutimi, clockmakers at Montreal and municipal employees at Jonquière were approved and extended, in the Province of Quebec, while in Alberta schedules for the dairy industry in Calgary and for barbers at Medicine Hat were made binding. In 1944, in Quebec, agreements for the aluminum industry at La Tuque, retail stores at Windsor, the wholesale food and hay and grain trade at Quebec City, municipal employees at Joliette and Sherbrooke, and hospital employees at Quebec and Sherbrooke were extended, while the agreement for municipal employees at St. Joseph d'Alma was repealed. In 1944, also, schedules for carpenters at Brockville, Ont., and for barbers at Calgary, Alta., were made binding, while the schedule for taxi drivers at Regina, Sask., was repealed.

## Subsection 3.-Regulation of Hours

The limitations on hours which are imposed by statute or under statutory authority are summarized in the Canada Year Book, 1942, pp. 717-718. In Ontario the Hours of Work and Vacations with Pay Act, 1944, provides for an 8-hour day, a 48 -hour week and also for one week's holiday with pay for each year of service for employees in "industrial undertakings", which include every establishment and undertaking and all work in or about any industry and in or about any business, trade or occupation prescribed by the regulations. The Act does not apply to persons employed in a managerial, supervisory or confidential capacity. The Ontario Industry and Labour Board may authorize longer hours if agreed upon by organizations or representatives of employers and employees, in cases of accident or urgent work and in war industries.

In Saskatchewan the Annual Holidays Act, which has not been proclaimed in force, provides for an annual holiday of two weeks with pay for all employees except those working at a farm, ranch, market garden or where only members of the employer's family are employed.

## CHAPTER XX.-WELFARE SERVICES

## CONSPECTUS

From a historical as well as a constitutional point of view, the responsibility for social welfare in Canada has rested on the provinces, which, in turn, have delegated a large share of this responsibility to the municipalities. It is but recently, relatively speaking, that the concept of public welfare has grown to include more than poor relief, sanitation and institutions of confinement and that the provinces have undertaken to meet these expanding needs by maintaining institutions of one kind or another, child welfare services, and other specialized programs. Thus the provinces themselves have latterly assumed the major role in public welfare and, even though the municipalities have continued to carry substantial burdens, the Provincial Governments have taken a direct part in co-ordinating the work and assisting by subsidies and other means. At the same time, an increasing measure of responsibility on the part of the Dominion has been in evidence: this was especially noticeable, during the pre-war depression decade, in the fields of unemployment relief, agricultural relief and old age pensions. While constitutional authority has not changed, except with respect to unemployment insurance, the pressure of events in the depression decade obliged the Dominion Government to help the provinces to shoulder their financial burdens by grants-in-aid, etc. To-day, therefore, the responsibility of the Dominion Government for problems arising in these fields has become fairly well established by custom rather than constitutional change, although what remained of unemployment relief after the introduction of unemployment insurance was turned back in 1941 to the provinces. A real effort was made by the Rowell-Sirois Commission (see the Canada Year Book 1940, pp. 1157-1163) to bring about the necessary redistribution of administrative and financial responsibility essential to the proper functioning of the Dominion and Provincial authorities in the complicated economic circumstances that are an outgrowth of the present century. This effort has still to be carried forward to a conclusion and, meantime, some degree of constitutional friction and difficulty is perhaps unavoidable.

Historically, welfare work begins with the care of the most needy and the care of the indigent, aged and infirm, homeless orphans, dependent, neglected and delinquent children, and the dependent deaf and blind. These classes have been recognized as a public responsibility since the earliest days, but the actual work of caring for them was, in great degree, undertaken by religious and philanthropic bodies, of which many were incorporated during the latter part of the nineteenth
century. In many cases, government aid was granted, with official inspection as the natural corollary. As early as 1752 an orphanage was opened at Halifax, N.S., for orphans and deserted children and in Upper Canada an Act was passed, towards the end of the century, to provide for the education and support of orphan children. In the different colonies before Confederation, under various Acts of the Legislatures, houses of refuge, homes for the aged, orphanages and other charitable institutions were provided. The most serious welfare problems, particularly in Upper and Lower Canada, were those connected with immigration. Many immigrants were destitute on their arrival and were dependent on charity. In 1822, an immigrant hospital was opened at Quebec for the care of the indigent sick. Throughout the colonies before Confederation an interest in child welfare found expression in the incorporation of numerous institutions for friendless orphans and physically incapacitated children. These orphanages were largely supported by the philanthropy of societies or individuals and, if grants of public money were received, the management was subject to government supervision. During this period, the orphanage was all that was available to the child who lacked normal home care.

Since Confederation, the principle has become generally recognized that the indigent, aged and infirm, orphans, dependent and neglected children, the deaf and dumb and the blind should be the responsibility of the State. Numerous Acts of the Provincial Legislatures have recognized municipal and provincial responsibility for these classes of the population by establishing institutions, welfare services, or other provisions for their care. In every province of Canada, public welfare organizations now exist to look after their protection and well-being. Child-welfare work as it is known to-day was not recognized as a special field for case work until toward the close of the nineteenth century. Now, noteworthy contributions are being made in this field by the Departments of Child Welfare of the Provincial Governments, the Children's Aid Societies, Juvenile Immigration Societies and Day Nurseries. Even to-day, although government inspection is now universal, much of this work is carried on by other than official agencies. Of the 468 institutions that reported at the Census of 1941, 76 are controlled by provincial and county governments, 61 by municipalities, 104 are under private auspices and 227 are under religious and fraternal organizations.

The field of welfare work is a very wide one and includes the work of many organizations. The Canadian Welfare Council gives national direction to, and co-ordinates the work of, the local welfare agencies; specialized organizations, such as the Canadian National Institute for the Blind and the Canadian Federation of the Blind, occupy a somewhat similar role in their particular fields. The various Community Chest organizations and service clubs assist welfare work by helping to finance local organizations, and the great work of the Young Men's Christian Association, the Young Women's Christian Association, the Catholic Youth Organization and the Young Men's Hebrew Association, the Boy Scouts, Girl Guides and similar youth organizations in what may be described as preventive, rather than curative, work cannot be overlooked. Day nurseries have proved of increased value under wartime conditions, enabling many mothers to play their part in increasing Canada's output of war material. Most of the activities of these organizations are not susceptible to statistical measurement. In the case of the Canadian Red Cross, the Victorian Order of Nurses, and the Saint John Ambulance Association, their fields of effort are more closely related to public health and are therefore treated in Chapter XXI.

An outline of the welfare work being carried on by the Dominion Government and by each of the Provincial Governments follows. Details and statistics under each heading are presented later.

## Section 1.-Dominion and Provincial Welfare Services*

## Subsection 1.-Dominion Welfare Services

As pointed out at p. 799 general relief and public welfare in Canada remained with the provinces until relatively recent times.

The earliest entry of the central government into the sphere of welfare work was coincident with the earliest days of British rule, the welfare of the Indian inhabitants as accepted wards of the Government having been at first the concern of the military authorities and, after 1845, of the central civil government. Statistics regarding the administration of Indian and Eskimo affairs are given in the Miscellaneous Administration Chapter of this volume. The Dominion Government extended its responsibilities in the welfare field after the War of 1914-18, when it was found necessary to supplement the earlier schemes of re-settlement, limited to land grants or scrip in lieu thereof, by the establishment of a Department of Soldiers' Civil Re-establishment, which looked after the welfare of ex-service men and fitted them into the general economic scheme. With the general ageing of the ex-service men and the outbreak of the present war, welfare services have been developed as outlined in the succeeding paragraphs. Also, the severe depression in the early 'thirties, with the consequent drain upon the financial resources of the provinces and municipalities, forced the Dominion Government into the relief field and finally led to the establishment of a nation-wide plan of unemployment insurance.

Family Allowances.-The Family Allowances Act, 1944, was introduced for the purpose of equalizing opportunity for the children of Canada. The allowances are paid monthly to mothers and must be spent exclusively towards the maintenance, care, training, education and advancement of the child. If it is satisfactorily shown to the authorities that the money is not being spent for this purpose, payment can be discontinued or made to some other person or agency on behalf of the child. It is further set out in the Act that if any person is dissatisfied with a decision as to his right to be paid an allowance or as to the amount of an allowance payable to him or as to any other matter arising under this Act, he may appeal against such decision to a tribunal established for that purpose.

All children under sixteen years of age are eligible for an allowance, including Indians and Eskimos. To be eligible, children must have been born in Canada or have lived in this country for three consecutive years except the children of men or women who have served in the Armed Forces. Children of members of the three Armed Services are eligible even though born outside the country. A further important clause in the eligibility regulations concerns education. The allowance is not payable to a child who, being above the age of six years and physically fit to attend school, fails to do so or to receive equivalent training.

[^283]The allowances, which are tax free, are paid by cheque monthly at the following rates:-
Children under 6 years of age. ..... $\$ 5$
Children from 6-9 years of age. ..... $\$ 6$
Children from 10-12 years of age. ..... \$7
Children from 13-15 years of age ..... $\$ 8$

The allowances are reduced after the fourth child as follows: one dollar reduction for the fifth child, two dollars each for the sixth and seventh child and three dollars for each additional child.

It is expected that a gross disbursement of over $\$ 250,000,000$ will be distributed annually under the Family Allowances Act. The net additional cost to the country is estimated at $\$ 200,000,000$. For statistics of family allowances, see Appendix III at the end of this volume.

Unemployment Insurance.-In 1940, by an amendment to the British North America Act, the Dominion Government was given complete jurisdiction in the field of unemployment insurance and since that time a national system of unemployment insurance administered by the Unemployment Insurance Commission has been in operation. (See Labour Chapter, pp. 768-771.)

Veterans Allowances.-In addition to war pensions, allowances are paid to certain non-pensionable veterans at 60 years of age, or earlier if the veteran is permanently unemployable, or eligible veterans who, having served in a theatre of actual war, are incapable and unlikely to become capable of maintaining themselves because of economic handicaps combined with disabilities. (See pp. 872-873.)

Dependants Allowances.-The Dependents' Allowance Board is charged with the payment of allowances to dependants of members of the Armed Forces, the main purpose of which is to promote the well-being and efficiency of His Majesty's Forces by relieving financial anxieties with respect to the domestic welfare of their dependants.

The Board consists of a civilian chairman and representatives from the three Armed Forces and the Treasury, and administers all allowances. Where investigation is necessary, it is carried out through the field staffs of the Department of National Health and Welfare, the Soldier Settlement Board, provincial welfare services, and private welfare organizations such as Children's Aid Societies and Family Welfare Bureaus.

A special Family Welfare Section has been instituted by the Board to administer allowances when the recipient is infirm or where domestic difficulties necessitate the intervention of a third party. In some cases the wife of a service man may request administration of her allowance in case of illness or of her financial affairs becoming involved. The Section maintains the closest co-operation with the various welfare agencies.

Supplementary Grants Fund.-A Dependents' Board of Trustees has been set up to administer this fund, which is designed to give supplementary assistance in special cases of difficulty and hardship where it can be shown that the regular allowances are inadequate. The Board operates with the assistance of Regional Dependents' Advisory Committees that have been established in the chief cities of the Dominion.

Veterans Unemployment Assistance.-The Department of Veterans Affairs does not place veterans in employment, but works closely with the Department of Labour in connection with veterans' problems. Out-of-work benefits are authorized in certain cases as outlined at p. 874.

Government Annuities.-For thirty-six years the Dominion Government has carried on a service that permits and encourages Canadians, during the earning period of their lives, to make provision for their old age. The necessary legislation was passed in 1908 as the Government Annuities Act (c. 7, R.S.C., 1927, amended by c. 33,1931 ). This Act is now administered by the Minister of Labour, and provides that any person resident or domiciled in Canada may purchase an annuity from the Government of Canada. For statistics of annuities, see pp. 812-814.

The Dominion Government in Co-operation with the Provinces.-Each of the provinces, as indicated below, has adopted the Dominion Old Age Pension Act which has been extended to cover the needy blind. Statistics for all provinces are given at pp. 810-812.

## Subsection 2.-Provincial Welfare Services

Prince Edward Island.-The welfare services operated by the Province include:-
(1) Children's Protective Service.
(2) Home for the Aged.

The Province maintains two institutions for orphans and destitute children, one Protestant and one Roman Catholic, together with two Children's Aid Societies. The Provincial Infirmary for the Aged is operated in connection with the Provincial Hospital for the Insane; many of the inmates of the Infirmary are old age pensioners and their pensions help to finance the cost of maintenance, but there are many inmates under 70 years of age whose care is a provincial liability.

There is no system of workmen's compensation or mothers' allowances in the Province, but persons employed under the Dominion Government are provided for under the schedules of the New Brunswick Workmen's Compensation Act.

Old Age Pensions and Pensions for the Blind.-The Province has co-operated in the Dominion-Provincial Old Age Pension plan since July 1, 1933, and with the amendment to the Act providing for the payment of pensions to blind persons since Dec. 1, 1937. For statistics see pp. 811-812.

Nova Scotia.-The Public Welfare Services are carried on under a Minister of the Crown in the Department of Public Welfare, who works in very close co-operation with the Department of Public Health and the private welfare agencies of the Province, and is specifically concerned with the following matters:-

Child and Family Welfare.-This branch of the Department includes:-
(1) Child protection.
(2) Assistance to and supervision of Children's Aid Societies.
(3) Supervision of children in adoptive and foster homes.
(4) Family case work.
(5) Psychiatric service for children and families under (3) and (4), and for the public schools on request of the Education Department.
(6) Inspection of all child-caring institutions and ownership of, and responsibility for, the operation of the Nova Scotia Training School for Mentally Deficient Children.

A considerable volume of work is also done for the Dominion Government in connection with soldiers' families.

These Services embrace six juvenile courts and probation officers; financial aid and technical advice, given to twelve Children's Aid Societies; inspection of foster homes and shelters; inspection of and per capita financial assistance to reformatory institutions. The larger percentage of the wards of the Children's Aid Societies are in either free foster homes or family boarding homes. Some wards, however, are in the regular child-caring institutions. Maintenance is paid on a $40-60$ p.c. basis between the Province and the municipalities. Financial provision for the maintenance of children in reformatory institutions is at the rate of $\$ 175$ per annum from the municipality and an equal amount from the Province. For children in the Training School for the Mentally Defective, the municipality pays $\$ 200$ per child per annum, all other expenses being borne by the Province.

Mothers' Allowances.-Enabling legislation was passed in 1930 and became effective on Oct. 1 of that year. Statistics under the Act are given at p. 816.

Public Charities.-These services are varied and include aid to persons who have no legal claim on any municipality in the Province or any specific poor district but who require public assistance.

Old Age Pensions and Pensions for the Blind.-The Province has co-operated with the Dominion-Provincial Old Age Pension plan since March, 1934, and with the amendment to the Act providing for the payment of pensions to blind persons since Oct. 1, 1937. For statistics see pp. 810-812.

In addition to the above matters, the following subjects, though not part of the public welfare program proper, are controlled by the Province.

Homes for the Aged.-No provincial grants are paid to homes for the aged which are operated by municipalities, religious or private bodies and are subject to provincial inspection. Many of these homes, however, receive public funds indirectly as in cases where old age pensioners, boarding in some of these homes, may pay their pension directly to the institution or by private agreement pensions are paid to the institution by the Pension Board of the Department, when the pensioner is incapable of managing his own affairs.

The Workmen's Compensation Board.-This legislation was passed in 1915, but did not come into operation until Jan. 1, 1917. The subject of workmen's compensation is not as directly related to welfare as the other services dealt with. The Province in its control of trade and industry enacts compensation legislation and supervises its administration, but workmen's compensation is financed by and is essentially the responsibility of industry. See also pp. 784-786.

New Brunswick.-The welfare services provided by the Government of New Brunswick consist of:-
(1) Children's Protective Service.
(2) Mothers' Allowances.

The administration of the Children's Protection Act has been transferred from the Attorney-General's Department to the Department of Health. As a result a Child Welfare Officer has been appointed. This appointment has given rise to a renewed interest in Children's Aid Societies and all counties have organized active societies, some of them employing full-time paid agents. Orphanages are under
the auspices of religious or private bodies, but there are certain municipal institutions that receive adults and children: they are subject to provincial inspection.

Mothers' Allowances.-An Act was passed in 1930 which did not become effective until Aug. 18, 1943. A new Act was passed on Apr. 6, 1944. See p. 815.

Old Age Pensions and Pensions for the Blind.-The Province has co-operated with the Dominion-Provincial Old Age Pension plan since July 1, 1936, and with the amendment to the Act providing for the payment of pensions to blind persons since Sept. 1, 1937. For statistics see pp. 810-812.

Homes for the Aged.-These are operated under municipal, religious, fraternal or private auspices and are subject to provincial inspection.

Workmen's Compensation.-The Workmen's Compensation Act was passed in 1918 and came into force on Jan. 2, 1919. See also pp. 784-786.

Quebec.-The Quebec Department of Health and Public Welfare administers a comprehensive plan of social welfare, including aid to, and the supervision of, the numerous welfare institutions operated by religious orders or private charity. In Quebec the administrative policy of welfare services is somewhat different to that of other provinces in that the responsibilities ordinarily assumed by the public authorities are in many cases delegated to recognized religious and private welfare agencies, with substantial grants from public funds. The Provincial Relief Act provides for assistance without undue interference with the life of the family.

A noteworthy feature in the line of preventive work is that carried out by the Family Registry Office, whereby children from tubercular families, who have not been infected but for whom there is reason to be apprehensive, are boarded out with rural families. This Office works in conjunction with local ministers and doctors, as regards the moral and physical supervision of these children.

Another aspect in the welfare program in this Province is the colonization scheme, whereby needy families are settled on the land in newly opened districts, and are supervised and granted financial aid until they become self-supporting.

The Speech from the Throne at the 1945 Session of the Quebec Legislature indicated that measures would be brought down affecting health and social welfare. At the time of going to press with this Section, such legislation had been prepared but had not been enacted.

Mothers' Allowances.-The Needy Mothers' Assistance Act, 1937, became effective in December, 1938. For statistics of operations under the Act, see p. 817.

Workmen's Compensation.-The Quebec Workmen's Compensation Commission was established in 1928 by authority of cc. 79 and 80 of the Statutes of that year. The Act was brought into force by proclamation on Mar. 22, 1928, operations of the Commission commencing as of Sept. 1, 1928. Under this Act, the Quebec Commission did not insure employers against their liability. On Apr. 4, 1931, a new Act ( 21 Geo. V, c. 100), effective Sept. 1, 1931, provided for such insurance, along the lines of the Workmen's Compensation Act of Ontario. See also pp. 784-786.

Old Age Pensions and Pensions for the Blind.-The Province has co-operated with the Dominion-Provincial Old Age Pension plan since Aug. 1, 1936, and with the amendment to the Act providing for the payment of pensions to blind persons since Oct. 1, 1937. For statistics, see pp. 810-812.

Ontario.-The Department of Public Welfare administers the following forms of assistance:-

Youth and Child Welfare Division.-In this Division are included:-
(1) The Children's Aid Branch, which is responsible for the administration of the Children's Protection Act, the Children of Unmarried Parents Act and the Adoption Act; supervision of 53 Children's Aid Societies in the Province. It also co-operates with the Dominion Government in certain war services-Dependents' Allowances, Supplementary Grants, Compassionate Leave, and other family welfare problems.
(2) Day Nurseries Branch.-Day Nurseries and School Care projects are operated to care for children of mothers engaged in war industries.
(3) British Child Guests.-Placement and supervision of British children evacuated from Great Britain.
(4) Supervision of Institutions for Children.

Mothers' Allowances.-Since 1920 allowances have been paid by the Province to widows and other necessitous mothers. In addition to basic allowances, free medical services, including necessary drugs, are provided, as well as a 20 p.c. cost-of-living bonus. In addition, the Commission has discretionary authority to increase any beneficiary's allowance, up to $\$ 10$ per month, where need is shown.

Soldiers' Aid Commission.-Through the Commission, advice and emergency assistance is extended to ex-service men of the present war and the War of 1914-18, and their families.

Old Age Pensions and Pensions for the Blind.-The Province has co-operated in the Dominion-Provincial Old Age Pension plan since Nov. 1, 1929. Benefits reach a maximum of $\$ 25$ per month, plus a $\$ 3$ maximum cost-of-living bonus paid by the Province, which also provides free medical services including drugs. In 1937, Ontario became the first province to pay pensions to the blind under provisions of the Old Age Pensions Act and providing the same benefits. For statistics see pp. 810-812.

Homes for the Aged.-Homes for the Aged are incorporated under the Houses of Refuge, the Houses of Refuge in Districts, and the Charitable Institutions Acts, and operated by cities, counties, districts and religious or benevolent societies under provincial supervision.

Unemployment Relief.-The Unemployment Relief Act of Ontario authorizes contribution on the part of the Department of Public Welfare toward alleviation of distress of unemployable persons. The municipalities of the Province are reimbursed 50 p.c. of the expenditures, while in the unorganized areas the Province administers and pays the total cost of aid rendered.

Workmen's Compensation.-The Workmen's Compensation Act came into force on Jan. 1, 1915. See pp. 784-787.

Manitoba.-For the organization of the Department of Health and Public Welfare of the Province see pp. 823-824. The Welfare Division of the Department of Health and Public Welfare consists of thee subdivisions:-
(1) Child Welfare, which includes Mothers' Allowances, with an expenditure amounting to approximately $\$ 400,000$ per year.
(2) Child Care and Protection, which has to do principally with the supervision of Children's Aid Societies covering practically the whole of the Province.
(3) Legal Supervision, which is responsible for the work in connection with unmarried mothers and adoptions.
Mothers' Allowances.-Manitoba was the first province to enact this type of legislation, the Act having come into force on Mar. 10, 1916. As stated above, the Act is administered by the Child Welfare Subdivision and statistics of operations are given at p. 817.

Charitable Institutions.-Grants to these institutions come under the control of the Welfare Supervision Board.

Social Assistance.-This is concerned with the provision of assistance to unemployable persons in unorganized territory and the maintenance of aged and incurable persons in and outside institutions.

Old Age Pensions and Pensions for the Blind.-As at May 1, 1945, the Welfare Divisio has assumed responsibility for administration of Old Age Pensions and Pensions for the Blind. For statistics see pp. 810-812.

Workmen's Compensation.-The Workmen's Compensation Act came into force on Jan. 1, 1917. See also pp. 784-788.

Saskatchewan.-Welfare activities of the Province come under the jurisdiction of the Department of Social Welfare which has three main branches:-
(1) Child Welfare Branch.
(2) Old Age Pensions Branch.
(3) Social Aid Branch.

Child Welfare.-This work is carried out under the direction of the Child Welfare Branch and through Children's Aid Societies of the four larger cities, three of which maintain shelters. The Child Welfare Branch also provides for the payment of Mother's Allowances.

Old Age Pensions and Pensions for the Blind.-This Branch provides for the payment of Old Age and Blind Pensions. For statistics see pp. 810-812.

Social Aid.-Indigent persons are provided for by the Social Aid Branch in co-operation with the various municipal units in the Province. Persons who fall within this category of assistance are not eligible for assistance under the Mothers' Allowance or Old Age Pension schemes. A field staff of 29 social welfare officers and 14 child welfare workers are attached to this Branch.

Other Activities.-The Department administers an Industrial School for Boys which was formerly the joint concern of the Bureau of Child Protection, the Department of Education and the Department of Public Works. Delinquent girls are sent to Homes in Manitoba and Alberta as occasion requires.

The Department also operates a Home for the Infirm and has supervisory powers over all privately operated homes for the aged and infirm in the Province. A farm project is operated for the rehabilitation of the Métis population; plans are being made to enlarge the scope of operations.

Mothers' Allowances.-Mothers' Allowances are paid in Saskatchewan under authority of the Child Welfare Act originally enacted in 1917 as the Mothers' Pensions Act. For statistics, see p. 818.

Workmen's Compensation.-The Workmen's Compensation Act came into force July 1, 1930. See pp. 784-788.

Alberta. - The Department of Public Welfare administers a comprehensive program of welfare activities, many of which were originally administered by other Departments. Among the activities of the Child Welfare Branch are listed:-
(1) The Care of Neglected and Dependent Children.
(2) Homes for Aged Single Men.
(3) Care of the Single Unemployed without municipal domicile and Improvement District domicile.
(4) Improvement of Economic Conditions of the Métis Colonies.

Child Welfare.-The care of children is carried out in foster homes or by grants-in-aid to religious or charitable institutions: the Province does not maintain a reform school but employs the foster-home system, placements being chiefly on farms and carefully supervised.

The education of deaf and blind children is the responsibility of the Department of Education, which maintains children in special schools outside the Pronce and grants are made to sight-saving classes and classes for sub-normal children in the larger cities.

Adult Welfare.-Homes for the aged, operated by municipalities or religious bodies, are granted financial assistance.

Persons suffering from paralysis following poliomyelitis are aided to rehabilitate themselves by financial aid for business and vocational training.

Two hostels for men are maintained at Edmonton and Calgary where destitute single men, without permanent municipal domicile, are cared for and two welfare depots are maintained in the country. Single ex-service men are cared for in Calgary and Edmonton without being institutionalized. The Department has also been successful in the rehabilitation of families by resettling them on the land.

The rehabilitation of the Métis-those of mixed Indian and White blood who do not qualify under the Indian Act-has been carried out by the setting aside of tracts of land as Métis Settlement Areas, where the colonists have exclusive fishing, hunting and trapping rights and where they are encouraged to engage in lumbering, agriculture and stock-raising. Educational and social services are provided and government-operated stores sell goods at cost price.

Mothers' Allowances.-The Mothers' Allowance Act was passed in 1919 and became effective in that year. For statistics of payments under the Act, see p. 818.

Old Age Pensions and Pensions for the Blind.-The Province has co-operated with the Dominion-Provincial Old Age Pension plan since Aug. 1, 1929, and with the amendment to the Act providing for the payment of pensions to blind persons since Mar. 1, 1938. For statistics see pp. 810-812.

Workmen's Compensation.-The Workmen's Compensation Act of 1918 became effective Aug. 1, 1918, as regards mining, and Jan. 1, 1919, in respect of all other industries except agriculture, retail trade and offices, teachers, etc. Amendments in 1919 and 1928 brought all railway trades except conductors and trainmen under the scope of the Act. See also pp. 784-788.

British Columbia.-Health and Welfare Services operated by the Province come under the administration of the Provincial Secretary's Department. Welfare Services include:-
(1) Child Welfare.
(2) Mothers' Allowances.
(3) Social (family and individual) Allowances.
(4) Industrial Schools.
(5) School for the Deaf and Blind.
(6) Home for the Aged and Provincial Homes.
(7) Provincial Infirmaries.
(8) Psychiatric and medical-social services for Mental, Tuberculosis and Venereal Disease Divisions.
(9) Old Age Pensions.

In British Columbia all social workers-general, medical and psychiatric-are employed by, and come under, the direction of the Social Assistance Branch and are included in the Field Service Division. The general worker in the field is trained to do case work for all of the services mentioned above with specialized workers assigned to mental institutions, tuberculosis sanatoria and clinics. *

Medical services and prescribed drugs are provided for all types of social assistance cases. In organized municipalities the Province bears half the cost and in unorganized territory the whole cost.

Child Welfare.-The Child Welfare Division of the Social Assistance Branch is responsible for Child Welfare work and covers the protection of children, adoptions, placements in foster homes, children of unmarried parents, juvenile delinquency, etc. In Vancouver and Victoria the work is carried out in co-operation with Children's Aid Societies but elsewhere all activities are directly administered by the Branch.

Mothers' Allowances.-Mothers' Allowances are administered by the Social Assistance Branch, the Act being in force since July, 1920.

Social Allowances.-Social Allowances are administered by the same Branch under the Social Assistance Act that came into force on Apr. 1, 1945. Under this Act provision is made for all those categories that are not otherwise dealt with. The Province contributes 80 p.c. of the cost for municipal cases.

Old Age Pensions and Pensions for the Blind.-Old Age Pensions are administered by a Board under the jurisdiction of the Provincial Secretary's Department and all social work is done by the Field Service Division of the Social Assistance Branch. Supplementary assistance is also being given to old age pensioners for the protection of their health and comfort. Pensions have been paid to blind persons since Dec. 1, 1937. For statistics see pp. 810-812.

Homes for the Aged.-The Province operates a Home for the Aged and a Provincial Home, together with three Provincial Infirmaries. The cities of Vancouver and Victoria also operate homes for the aged. Social Services in cities and municipalities have been amalgamated in order to do away with dual administration and combined services act in close co-operation with the health services.

Workmen's Compensation.-The Workmen's Compensation Act, effective Jan. 1, 1917, provides compulsory accident insurance in almost every industrial occupation carried on in the Province. See pp. 784-789.

22115-52

## Section 2.-Welfare Statistics

## Subsection 1.-Unemployment Insurance

Because of its close relationship to labour and the fact that unemployment insurance is administered with selective service and manpower it is considered advisable for the present to continue to carry these statistics in the Labour Chapter. They will be found at pp. 770-773.

## Subsection 2.-Family Allowances

Owing to the fact that Family Allowances came into operation July 1, 1945, it has not been found possible to include statistics on this subject at this place in the Year Book. To have done so, would have meant holding up the later chapters unduly. Such statistics on this subject as are available at the time of going to press will be found in Appendix III at the end of this volume.

## Subsection 3.-Workmen's Compensation

Workmen's Compensation can be regarded from two standpoints, viz., (a) the industrial and (b) its relationship to the broad field of public welfare. It is perhaps one of those border-line cases where either point of view is justified (see Subsection 8 for others). Nevertheless, because Workmen's Compensation (unlike unemployment insurance for instance) is entirely the responsibility of industry and is closely associated with labour and the compensation of the worker, it is felt that the statistics regarding it are more logically dealt with in the Labour Chapter where they will be found at pp. 784-789. The welfare aspects of payments made to workers injured in the course of their duties should not, however, be overlooked.

## Subsection 4.-O1d Age Pensions and Pensions for Blind Persons*

The Old Age Pensions Act, 1927.-Legislation respecting Old Age Pensions (R.S.C., 1927, c. 156) was adopted by the Dominion Parliament in 1927. Under the provisions of this statute the Dominion Government reimbursed each province participating in the Dominion scheme to the extent of one-half of the provincial expenditure for old age pensions. An amendment passed at the 1931 session of Parliament (c. 42, Statutes of 1931) provided that the Dominion contribution to the provinces be increased from 50 p.c. to 75 p.c. of the provincial disbursements for old age pensions. The Dominion contribution of 75 p.c. of provincial disbursements was made effective from Nov. 1, 1931; the provinces have since been reimbursed on this basis.

By Orders in Council passed under the authority of the War Measures Act the maximum pension has been increased from $\$ 240$ to $\$ 300$ a year and the maximum income (including pension) from $\$ 365$ to $\$ 425$ a year.

The Dominion Old Age Pensions Act is now operative in all provinces and in the Northwest Territories.

Conditions under which pensions are granted and the qualifications required of applicants are set forth at p. 705 of the 1941 Year Book.

[^284]1.-Summary of Old Age Pensions, by Provinces, as at Dec. 31, 1944

The administration of the Old Age Pensions Act was transferred to the Dominion Department of Finance in 1935; Table 2 shows the Dominion's contributions to the expenditures of the provinces on this account for the calendar years 1938-44. The total contribution of the Dominion, since the inception of the Act, is given by provinces in Table 1.

Pensions for Blind Persons.-By an amendment to the Old Age Pensions Act in 1937, provision was made for the payment of a pension to every blind person who, at the date of the proposed commencement of pension, complied with certain conditions. These are set forth at pp. 706-707 of the 1941 Year Book. The amendments made under the War Measures Act also apply to blind pensioners. The maximum income (including pension) is, however, higher in the case of a blind pensioner: The amounts in different cases are covered in the Old Age Pensions Act, c. 156, R.S.C. 1927, as amended.

At Dec. 31, 1944, the average pension received in each province was as follows: P.E.I., $\$ 22 \cdot 33$; N.S., $\$ 24 \cdot 29$; N.B., $\$ 24 \cdot 60$; Que., $\$ 24 \cdot 75$; Ont., $\$ 24 \cdot 59$; Man., $\$ 24 \cdot 67$; Sask., $\$ 24 \cdot 94$; Alta., $\$ 24 \cdot 46$; B.C., $\$ 24 \cdot 69$.

## Subsection 5.-Government Annuities

For over thirty-six years the Dominion Government has carried on a service that permits and encourages Canadians to make provision for their old age during the earning period of their lives. The necessary legislation was passed in 1908 as the Government Annuities Act (c. 7, R.S.C. 1927, amended by c. 33, 1931). This Act is now administered by the Minister of Labour.

A Canadian Government Annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in quarterly instalments (unless otherwise expressly provided) for life and may be guaranteed for ten,
fifteen, or twenty years in any event. The minimum amount of annuity obtainable on the life of one person or on the lives of two persons jointly is $\$ 10$ a year and the maximum amount is $\$ 1,200$ a year.

Annuity contracts are of two classes, deferred and immediate, under each of which there are various plans available. Deferred annuity contracts are for purchase by younger persons desiring to provide for their old age, purchase being made by monthly, quarterly or yearly premiums, or by single premium. Immediate annuity contracts are for purchase by older persons who wish to obtain immediate regular incomes through their accumulated savings.

The property and interest of the annuitant in a contract for a Government annuity is neither transferable nor attachable. In the event of the death of the annuitant before the date fixed for the annuity to begin, all money paid is refunded to the purchaser or his legal representatives with interest at the rate of 4 p.c. per annum, compounded annually.

Although in the vast majority of cases annuities issued on the lives of individuals are purchased by the individuals themselves provision is made in the Act whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members. In the latter case the purchase money required may be derived partly from the wages of employees and partly from employers' contributions.

From Sept. 1, 1908, the date of the inception of the Government annuities system, up to and inclusive of Mar. 31, 1944, the total number of annuity contracts and certificates issued was 109,704. Of these, 10,274 have been cancelled, leaving in force on Mar. 31, 1944, 99,430 contracts and certificates. The total amount of purchase money received during the same period was $\$ 238,749,783$.

Up to Mar. 31, 1944, 154 corporations, institutions and associations had entered into agreements with the Government to purchase annuities, and on that date approximately 27,000 employees or members were purchasing deferred annuities thereunder. The agreements were drawn up according to specific requirements in each case. Interest in this type of annuity increased in the year 1943-44. The number of annuities for that year included 13,568 deferred annuity certificates issued under the system whereby one group contract is issued for each group, the employee or member receiving a certificate.

## 5.-Government Annuities Contracted for, and Purchase Money Received, Fiscal Years 1925-44

Notz.-Figures for the years 1909 to 1924 will be found at p. 873 of the 1942 Year Book; they are included in the totals below.

| Year | $\begin{gathered} \text { Contracts } \\ \text { and } \\ \text { Certificates } \end{gathered}$ | Purchase Money Received | Year | $\begin{gathered} \text { Contracts } \\ \text { and } \\ \text { Certificates } \end{gathered}$ | Purchase Money Received |

## Subsection 6.-Mothers' Allowances*

Eight of the provinces of Canada provide for allowances to mothers who are widowed or who, under certain other circumstances, are without means of support. Manitoba passed necessary legislation in 1916 and was the first to make such provision. In 1924 the Manitoba Mothers' Allowances Act was repealed and its

[^285]provisions included in the Child Welfare Act, which is the consolidation of all child welfare legislation for the Province. Prince Edward Island is now the only Province in which there is no such legislation.

Each of the Acts stipulates that the applicant must be a resident of the respective province and was such when considered eligible for an allowance. In addition, each province except Alberta, requires applicants to have resided in the province for a certain period. In Manitoba, however, provision is made for a shorter period, or for no residence immediately prior to application, providing eligibility for assistance has not been acquired elsewhere. In Alberta the only requirement is that the husband had established his home in the Province at the time of his death, committal or desertion. All the statutes, except those of Saskatchewan and Alberta, require the applicant to be a British subject or the widow or wife of a British subject, and in Quebec she must have been a British subject for fifteen years or by birth. In Nova Scotia, the applicant herself must be a British subject. In Manitoba, the child or children to benefit from the allowance must have been born in Canada or the father (if he is dead, the mother) must be a British subject (if both are dead, the later to die must have been a British subject). A mother may, on showing reasonable grounds, obtain an Order of the Court presuming the death of the child's father for purposes of the Act. In British Columbia, a woman may be eligible if born a British subject, even if she has later lost her citizenship. In most provinces, limits are fixed on the assets that may be possessed by a beneficiary. There is no fixed limit in Alberta and Saskatchewan but the woman must be unable to support her children. In 1944, a Mothers' Allowance Act was passed in the Province of New Brunswick; no statistics will be available for the Province, however, for another year. In this Province a child or its mother seeking benefit must be a British subject. No allowance is payable for a child who is not attending school as required by the School Attendance Act.

An applicant must be a widow or, except in Nova Scotia, a wife whose husband is mentally incapacitated or a permanent disability or, except in Alberta,* New Brunswick and Quebec, the wife of a physically disabled man. In New Brunswick the Act also makes a mother eligible whose husband is a patient in a sanatorium for tuberculosis or has deserted her at least two years prior to her application. A foster-mother caring for children whose parents are dead or disabled is also eligible. In Quebec, an allowance may be granted to a mother who is the wife of a totally disabled man, whether in an institution or not, or to a wife or widow of a British subject, as well as to a British subject by birth. An allowance is also provided for a deserted mother. In Alberta, British Columbia, Ontario and Saskatchewan, 'deserted' wives who meet the conditions of the Acts are paid allowances and in British Columbia and Saskatchewan the wives of inmates of penal institutions are eligible. The period that must elapse after desertion varies from two years in British Columbia to seven in Saskatchewan. In British Columbia allowances are granted to mothers who have been divorced or legally separated for two years. A foster-mother who fulfils all the requirements is eligible to receive the allowance in all provinces, except Nova Scotia and Alberta; but in Nova Scotia allowances may be paid in respect of a legally adopted child. In Ontario, Manitoba and British Columbia allowances are paid in some cases for children born out of wedlock. In Saskatchewan, allowances are payable for children whose mother is dead and whose father is unable to support them on account of mental or physical disability or because of confinement to prison.

[^286]Mothers of one or more children are eligible in New Brunswick, Ontario, Saskatchewan, Alberta and British Columbia. In Quebec, the number was reduced from two to one by a 1940 amendment. In Nova Scotia and Manitoba, an allowance is payable in respect of one dependent child, if the mother is incapacitated, and also in respect of a child over the age for allowance who is dependent because of physical or mental disability. Children must be under the age of 16 except in Manitoba where they must be under 15 and in Alberta where the age-limit for boys is 16, and in British Columbia an allowance may be paid in respect of a child between 16 and 18 years of age and to a child living apart from its mother, on conditions to be fixed by the regulations.

Rates of Allowances-In Nova Scolia, a maximum of $\$ 80$ is fixed by statute, but in the other provinces the administrative authority may fix the rate.* In New Brunswick, the maximum allowance for a mother and child is $\$ 60$ per month. The Quebec Commission allows $\$ 25$ to a woman with one dependent child, in cities or towns of over 10,000 population, and $\$ 20$ in other localities, with $\$ 5$ for each additional child, the total not to exceed $\$ 45$. An extra $\$ 5$ is allowed when the beneficiary is unable to work. In Ontario, the maximum for a mother and one child is $\$ 35 \mathrm{per}$ month in a city, $\$ 30$ in a town of over 5,000 population and $\$ 25$ in a rural district with $\$ 5$ for each additional child. The maximum in Manitoba for a mother and two children is $\$ 50$, excluding winter fuel, with additional allowances for other children, up to $\$ 89$. In addition, provision of $\$ 9 \cdot 50$ is made for a disabled father in the home. There is also an increase of 10 p.c. in the food allowance since January, 1940. In Saskatchewan, maximum monthly payments range from $\$ 8$ to a mother with one child to $\$ 44$ to a mother with ten or more children. The allowance in Alberta is determined by the special circumstances in each case but is not to exceed $\$ 25$ per month to a mother with one child and rises to $\$ 50$ where there are five children. In British Columbia, the maximum monthly allowance is $\$ 42.50$ for a mother with one dependent child, $\$ 7 \cdot 50$ for each additional child under 16 and a further $\$ 7 \cdot 50$ for a totally disabled husband living at home. Since 1933, the amount allowed for a mother and one child has been reduced to $\$ 35$.

Except in Alberta, where 25 p.c. of the allowance is borne by the municipality, the whole cost is provided from provincial funds. In Quebec, a 1940 amendment, not yet proclaimed, provides that a contribution, not exceeding 5 p.c. of the allowances paid, may be imposed on municipalities.

Pending the compilation of statistics on a comparable basis as between provinces, separate tables are presented.

[^287]8.-Mothers' Allowances in Nova Scotia, Years Ended Nov. 30, 1937-43

Note.-Figures for 1931-36 are given at p. 709 of the 1941 Year Book.

## Subsection 7.-Care of Dependent and Handicapped Groups

In view of the recent organization of the new Department of National Health and Welfare and the avenues of welfare work, such as Family Allowances, that are now being developed, the basic statistics of this Section are under revision. The figures published on pp. 677-682 of the 1943-44 Year Book are, therefore, the latest that will appear until the results of the 1946 Census of Institutions (based on data for the year 1945) are made available. In order to conserve space the statistics previously published are not reproduced in this edition.

## Subsection 8.-The Canadian Red Cross; the Victorian Order of Nurses; and the Saint John Ambulance Association

Each of these organizations carries on important welfare work but their major activities are related more directly to public health than to welfare and for this reason the data regarding their operations are given in the Public Health Chapter of this volume, pp. 838-842.

## Section 1.-Administration

In Canada public health is administered by Dominion and Provincial Governments through their respective Health Departments.

The Dominion has jurisdiction only respecting such public health matters as are exclusively international, national and interprovincial. The Dominion Government makes grants to Provincial Departments of Health and to voluntary organizations engaged in public health work. Treatment for members and exmembers of the Armed Forces is provided by the Department of Veterans Affairs in veterans, services, and public hospitals.

The Department of National Health and Welfare Act authorized the establishment of the Dominion Council of Health which is responsible for correlating and co-ordinating the activities of Provincial Departments of Health. The Dominion Council of Health was created originally in 1919 and comprises the Deputy Minister of Health of each of the provinces as well as a representative of agriculture, labour, and urban and rural women, respectively. The personnel includes a scientific adviser on public health. The Deputy Minister of National Health is the Chairman.

## Subsection 1.-Public Health Activities of the Dominion Government

The Act of Parliament ( 8 Geo. VI, c. 22, 1944) creating the Dominion Department of National Health and Welfare, clearly defines its functions. The Department is divided into two Branches as indicated by the title. The chief functions of the National Health Branch are: to protect the country against the entrance of infectious disease; to exclude immigrants who might become charges upon the country; to treat sick and injured mariners; to see that men employed on public construction work are provided with proper medical care; to set the standards and control the quality of food and drugs; to control proprietary medicines; to control the importation and exportation of habit-forming drugs such as morphine, cocaine, etc.; to care for lepers; to promote and conserve the health of civil servants and other Government employees; to co-operate with the provinces with a view to preserving and improving the public health; to carry on investigation and research into public health; and, through the National Council on Physical Fitness, to assist the provinces in the field of physical fitness.

At present the Health Branch of the Department of National Health and Welfare is undergoing reorganization that will lead to an extension of old and the adoption of new activities.

The work of the Welfare Branch is dealt with in Chapter XX.

## Subsection 2.-Public Health Activities of the Provincial Governments*

Prince Edward Island.-The supervision of public health matters in Prince Edward Island was placed, on July 1, 1931, under a specially created Department of Public Health. The Province is divided into five Districts: a public health nurse is assigned to each District and is responsible for the inspection of school children, home visiting, home-nursing classes, immunizing and vaccinating clinics, etc. One nurse specially trained in venereal diseases and another specially trained in tuberculosis have the entire Province as their field of operation.

A full-time Provincial Sanitary Inspector, makes periodic inspections of the food-manufacturing plants, school premises, hotels, boarding houses, restaurants, etc., throughout the Province. In addition the city of Charlottetown has a Milk and Food Inspector and a City Sanitary Officer.

A Provincial Bacteriological Laboratory is operated by the Department of Health with a certified technician and an assistant. The Laboratory provides free service for all provincial physicians in respect to the analysis of bloods, spinal fluids, waters and sputa, etc.

The compilation of the vital statistics of the Province is also handled by the central organization and recently all birth certificates for the past twenty years have been micro-filmed for the Dominion Bureau of Statistics.

The Provincial Government operates a Provincial Sanatorium under a Board of Commissioners and an annual grant is made to assist ex-sanatorium patients where needed, and to help other indigent tubercular persons awaiting admission and their families. Field work in regard to tuberculosis is a public health responsibility and clinics are held periodically at central points throughout the Province.

The Prince Edward Island Tuberculosis League, a voluntary organization supported by Christmas Tuberculosis Seal Funds, works in close co-operation with the staff of the Provincial Sanatorium and the Department of Health. This organization has recently purchased a mobile X-ray diagnostic clinic.

Provision for an annual grant is made to the general hospitals which, in turn, accept as free patients all indigent persons requiring hospital treatment; the expenses for the operation of a hospital for the insane are borne practically in full by the Provincial Government.

The Department of Health operates two venereal disease clinics, one at Charlottetown and the other at Summerside. All necessary medication is supplied free of charge to persons who are not within reach of public health clinics.

Nova Scotia.-In Nova Scotia the Department of Public Health directs its energies to communicable disease control; pre-natal, post-natal, and school hygiene; sewage disposal; safety of milk and water supplies; collection of vital statistics; mental hygiene; and health education. The Department acts in an advisory capacity to local boards of health; makes regulations respecting any

[^288]matter relevant to the public health; maintains a field force that provides a consulting service in tuberculosis and other health activities; supports a public-health nursing service with specially trained nurses, who work both in the schools and in the homes; gives a free public-health laboratory service that extends throughout the Province; supervises the provincial hospitals, both general and special; provides inspection of public general hospitals and humane institutions; stocks and dispenses sera and vaccines; and distributes literature on all phases of health.

In 1940 the Province was divided into five health districts or Units and a qualified medical health officer was placed in charge of each. Each Unit has its office with clerks, a staff of public-health nurses, portable X-ray equipment and a depot for the distribution of sera and vaccines. In addition, a competent health officer has been engaged to administer the health activities of Halifax city. This represents a marked public health advance. With the existing organization, as outlined, it has been possible to more completely correlate and standardize health work throughout the Province.

The Defence Forces and the Health Department have problems of mutual interest, and the closest co-operation between these two bodies has been maintained.

A unique development of the year 1942 was the opening of a "Kenny" treatment clinic for infantile paralysis.

New Brunswick.-The Department of Health, under the administration of a Minister of Health, was established in 1918. It provides the following services: general sanitation, including supervision of water supplies and sewage disposal; control of communicable diseases, including tuberculosis and venereal diseases; public health laboratory and the supply of biologicals; medical inspection of schools; collection of vital statistics; public-health nursing and child welfare; health education; and general supervision and co-ordination of the work of the sub-district boards of health. Under the Minister, the Department is directed by the Chief Medical Officer who is also Registrar General of Vital Statistics. The staff consists of a Director of Laboratories, 11 full-time Medical Health Officers, a Director of Public Health Nursing Service and, in addition, a part-time Director of Venereal Disease Clinics. The Province assumes all of the costs of sanatorium care for tubercular patients, all hospital care for poliomyelitis patients, and about 60 p.c. of the costs of hospital care for mental patients.

Quebec.-The Provincial Government, by legislation passed in 1941 (5 Geo. VI, c. 22), established a Department of Health and Social Welfare to deal with the administration of all matters concerning health, preventative medicine and social welfare (for the social welfare work undertaken by the Province see p. 805). From 1936 to 1941 provincial health matters were under the Department of Health which, in the former year, replaced the Health Service that operated under the Provincial Secretary. Since 1926 the system known as "County Sanitary Units" has been in operation. The purpose of the system is to provide a regular full-time service for each county or group of two or three adjoining counties that are included in the scheme. There are now 55 units of this kind, covering 65 counties. The Sanitary Officers of the old districts, whose number is now reduced to 11 , supervise the few counties not organized into sanitary units. Many municipalities, such as Montreal and Quebec, have their own Health Bureaus,

The Department of Health and Social Welfare maintains, in addition to its administrative service, the following divisions: Laboratories, Sanitary Engineering, Demography, Mental Health, Public Almshouses, Sanitary Districts and Units, Epidemiology, Industrial Health, Food (including Maternal Health and Child Welfare), Venereal Diseases, Tuberculosis, Educational Health, Dental Educational Health, Advertising, etc.

Service is rendered in the form of consultations, public lectures, scheol inspections, itinerant clinics of pediatry and tuberculosis, inquiries of all kinds, immunizations, sanitation improvement, etc. Twenty-seven anti-tuberculosis dispensaries have been established and 70 clinics of pediatry, including those sponsored by the Provincial Government.

The Speech from the Throne of the 1945 Session of the Quebec Legislature indicated that measures would be brought down affecting health and social welfare. At the time of going to press with this Section, such legislation had been prepared but had not been enacted.

Ontario.-The Department of Health of Ontario is under a Minister of the Government. In the direction of the departmental program, he is assisted by a Deputy Minister and the Chief Medical Officer of Health. The activities of the Department are divided into the following Divisions: Hospitals, Tuberculosis Prevention, Venereal Disease Prevention, Preventable Diseases, Laboratories, Maternal and Child Hygiene, and Nurse Registration including Inspection of Training Schools for Nurses. Two new Divisions were created during 1944: Public Health Nursing, the need for which arose through increased demands made upon this Department for public health nursing personnel and widened public interest in this vital work; and Public Health Administration. The latter deals with the expanding interest in, and the setting up of, larger units of public health administration, particularly County Health Units.

The local health work was carried on, in 1943-44, by a Board of Health and a Medical Officer of Health in each of the 900 municipalities. Seventeen municipalities now have full-time health officers.

The Department has attempted to meet the added responsibilities of the official health agency in time of war, despite the very substantial loss of trained personnel to the Armed Forces. Particular emphasis has been placed on the more effective control of venereal disease and the promotion of a more acceptable form of community public health administration. The problems of hospitalization are increasing in the Province but they are kept constantly under review and everything possible is being done to find an adequate solution.

Municipal Health Services and Cancer. Foundation.-In the Municipal Health Services Act, 1944, provision was made for the appointment of a Board to assist municipalities in the establishment of plans for pre-paid medical, hospital, dental and nursing care.

During the year 1944 a statutory body known as the Ontario Cancer Treatment and Research Foundation was appointed. The Foundation is vested with wide powers in respect of diagnosis, treatment and research in cancer.

Manitoba.-Manitoba has an organized Department of Health and Public Welfare. The Health and Public Welfare Act states that the Minister shall preside over, and have the management and direction of the Department, and the Department shall have administrative jurisdiction over all matters in the Province that relate to health and public welfare,

The Department of Health and Public Welfare of the Province is organized into three main Divisions: Executive Division; Health Division; and Welfare Division.

The Executive Division includes the general administrative offices, administration of estates of mentally incompetent persons, fiscal supervision of public institutions, health education, statistics and provincial laboratories.

The Health Division of the Department of Health and Public Welfare is divided into three Sections:-
(1) Environmental Sanitation, which consists of the Bureaus of Public Health, Engineering, Industrial Hygiene, and Food and Milk Control. The Bureau of Industrial Hygiene was started in 1943 to take care of the many hazards now appearing in industries, particularly those that have to do with the production of war materials.
(2) Preventive Medical Services, which consists of the Bureaus of: Disease Control, responsible for the control of acute communicable disease, venereal disease and tuberculosis; Maternal and Child Hygiene, with subsections of maternal health, infant health, pre-school health, and school health; and Public Health Nursing.
(3) Psychiatry and Hospitalization, which has two Bureaus. The Bureau of Psychiatry supervises and controls the four mental institutions-the Psychopathic Hospital, Winnipeg, the Hospitals for Mental Diseases at Selkirk and Brandon, and the Manitoba School for Mentally Defective Persons at Portage la Prairie. This Bureau also provides for the mental hygiene activities of the Province. The Bureau of Hospital Care is responsible for the supervision of hospitals and the payment of Provincial Government grants to them.

A new over-riding Division known as the Section of Local Health and Welfare Services has been set up. This Division cuts across all the activities of the Department and is responsible for the control of local part-time health officers, the establishment and supervision of local health units, and consultative services to local or municipal Health Departments throughout the Province. This work is to be extended to include the same type of service in the welfare field.

Saskatchewan.-The Department of Public Health has been organized since 1923 under a Minister and a Deputy Minister and consists of thirteen Divisions: (1) The Division of Administration co-ordinates the activities of the Department as a whole. (2) The Division of Public Health Nursing conducts a generalized program which includes all phases of public-health nursing; infant and maternal welfare, school work, venereal disease epidemiology, etc. This Division also supervises maternity grants and nursing homes. (3) The Division of Communicable Diseases administers provisions of the Public Health Act relating to control of communicable diseases, and also regulations relating thereto: (a) prevention, notification and control; (b) prepares morbidity and mortality tables; (c) makes investigations; (d) enforces isolation and quarantine; (e) traces disease carriers. It distributes free vaccines and sera to doctors and hospitals, supervises anterior poliomyelitis clinics, supervises boards of health and medical health officers, supervises medical examination of food handlers, burial, disinterment and transportation of the dead and promotes immunization programs. (4) The Division of Sanitation has supervision of water-works, sewerage systems and drainage; food supplies including milk; urban and rural sanitation. (5) The Division of Laboratories does routine public-health work in bacteriology, serology, chemistry and pathology and provides clinical diagnostic
laboratory service for rural physicians. (6) The office of the Registrar General administers the Vital Statistics Act and the Marriage Act. The system used in classifying vital statistics has been decided upon in co-operation with other provinces and the Dominion Bureau of Statistics. (7) The Division of Mental Services administers the Mental Hygiene Act. Its duties and responsibilities include the transportation and admission of patients to mental hospital; the care and treatment of patients in institutions for the mentally ill and mental defectives, and in the psychopathic ward in Regina. The division will develop and supervise mental hygiene clinics in connection with the preventive work of mental hygiene. The care and maintenance of patients in provincial institutions is at the expense of the Province. (8) The Division of Venereal Disease Control administers a program for the control of venereal disease, which is divided into the following functional sections: diagnostic and treatment services; epidemiology; welfare and rehabilitation; education. (9) The Division of Hospital Administration is responsible for all matters pertaining to hospital administration and all "approved" hospitals of the Province are under its supervision. (10) The Division of Health Education conducts a wide program of education for the purpose of modifying public opinion and attitudes in favour of higher standards of personal and community health. (11) The Division of Nutrition is largely educational in function, creating interest in better food habits; emphasis is placed on nutrition of children with special attention to school lunches. (12) The Division of Medical Services supervises payment of grants to physicians, dentists and approved hospitals for adequate medical services to needy residents in any part of the province outside municipal jurisdiction, including a group known as "northern settlers". Insulin is supplied free to diabetics who are unable to purchase it. On Jan. 1, 1945, the Health Services Act came into effect, and its administration is partly under this Division. Medical, hospital and drug services are provided to old age and blind pensioners and their dependants, and to recipients of mothers' allowances and their children at the expense of the Province. Approximately 24,000 persons receive benefits under this Act. (13) The Division of Physical Fitness and Recreation stimulates, organizes and assists social, cultural and athletic activities.

Health Services Planning Commission.-This Commission is charged with the task of preparing plans for providing all types of health services and facilities. It assesses costs of these services and the needs of the different areas for various kinds of services. It also must approve of by-laws and agreements entered into by municipalities or other organizations for medical and hospital services. The Commission is also an advisory and consultative body to local regions wishing to provide services for their residents. The Commission is assisted by a voluntary advisory committee of representatives of some 25 lay and professional associations in the Province.

Cancer Commission.-This Commission, created in 1930, has established consultative, diagnostic and treatment clinics for cancer at Regina and Saskatoon. Radon is manufactured at a plant in Saskatoon. The cancer services, including surgery at either clinic, are given at the expense of the Province.

Poliomyelitis.-Free treatment of cases is available at Saskatoon and Regina.
Tuberculosis.-Free diagnostic and treatment services are available in three sanatoria and a number of clinics operated by the Saskatchewan Anti-Tuberculosis League and financed by government grants and per capita charges on municipalities. Annual surveys are carried out throughout the Province, areas where the incidence is highest being given priority, and are financed by voluntary subscription.

Alberta.-The Department of Public Health administers all public health matters in the Province and includes the following Divisions: Communicable Diseases; Sanitary Engineering and Sanitation; Public Health Education; Laboratory; Tuberculosis Control; Public Health Nursing; Municipal Hospitals; Hospital Inspection; Social Hygiene; Vital Statistics; Mental Hygiene; Dental Hygiene; Entomology; and Cancer.

The following institutions are administered by the Department: Central Alberta Sanatorium; the Provincial Mental Hospital, Ponoka; the Provincial Training School, Red Deer; the Provincial Auxiliary Hospital, Claresholm; the Provincial Auxiliary Hospital, Raymond; the Provincial Mental Institute, Edmonton.

Free clinics for venereal disease are maintained at the following centres: Edmonton, Calgary, Medicine Hat, Lethbridge, Peace River, High Prairie, McLennan, and in the two provincial gaols. Arsenicals are provided free of charge to all private physicians treating venereal disease. Educational work on social hygiene is carried on by means of lectures, moving pictures, bulletins and radio talks.

Free treatment for infectious types of tuberculosis is provided for any bona fide resident, i.e., for any person who has resided in the Province for at least one year immediately preceding admission for treatment in the sanatorium. In addition to this service, two mobile X-ray clinics are in operation. These are made available through the co-operation of the Alberta Tuberculosis Association. The personnel is supplied and the mobile X-ray clinics are maintained by the Provincial Department of Public Health and the equipment is furnished by the Alberta Tuberculosis Association.

The Division of Public Health Entomology of the Provincial Department of Public Health was organized in May, 1944. Alberta has the distinction of being the first province in Canada to set up such a Division.

Under the authority of the Poliomyelitis Sufferers Act, 1938, provision is made for the free treatment in special hospitals of patients suffering from this disease. Provision is also made for academic instruction, vocational training, and rehabilitation of those suffering from paralysis resulting from this disease.

The Department of Public Health has inaugurated a cancer service in the Province. Diagnostic cancer clinics have been established at Edmonton and Calgary and are conducted weekly. Provision has been made whereby patients, referred to the diagnostic clinics by their own physicians and after examination found to require deep X-ray or radium therapy or surgery, are treated free of charge.

An Act to provide free hospitalization for maternity patients came into force on Apr. 1, 1944. Any woman: (a) who has been a resident of the Province for twelve consecutive months out of the twenty-four months immediately preceding her admission to hospital as a patient; (b) who by reason of circumstances arising out of the war-wives of men in the Armed Services-or by reason of other exceptional circumstances as declared by Regulations made under the Act, shall be entitled to free hospitalization for herself and her new-born infant or infants for a maximum period of twelve days and shall be entitled to all public-ward maternity services provided by the hospital.

Alberta's Rural Health Districts have been operating successfully since 1931 so that their value is now well recognized and the various services available have become well organized. There are now sixteen of these Health Districts.

In sparsely populated, outlying areas, thirty-six Provincial District Nurses provide a diversified medical and public health service. These District Nurses are required to have special qualifications in obstetrical work.

British Columbia.-The Provincial Health Services of British Columbia are organized as a Branch of the Provincial Secretary's Department. The Provincial Health Officer who is in charge of the administration of the technical details of the service has direct access to the Minister on all technical matters. The Lieutenant-Governor-in-Council functions as the Board of Health on all legislative matters dealing with the rules and regulations.

The Provincial Health Services are divided into two Bureaus-the Bureau of Administration and the Bureau of Local Health Services-and six Divisions.

The Bureau of Local Health Services is a part of the central office of the Provincial Board of Health and is under the direct supervision of the Assistant Provincial Health Officer. In addition to correlating the services of the various Divisions, it is responsible for technical supervision of all local health services. Such public health specialities as maternal and child welfare, communicable disease control, public health dentistry, public health nursing and some phases of industrial hygiene are all part of the responsibilities of this Bureau.

Different types of local health service have been developed in the Province of British Columbia. These include large City Health Departments, Health Units of which there are five in addition to those included in the Vancouver Metropolitan Area, public health nursing services and areas where part-time health officers and school medical inspectors are appointed from the practising physicians. A Health Unit consists of a full-time Medical Director who is a physician trained in public health, a number of public health nurses determined by the population served, one or two trained sanitarians, and a statistical clerk.

The entire Province has been divided into Health Unit areas on a geographical basis and it is planned to organize three or four new units per annum. Substantial grants-in-aid toward public health nursing and Health Unit services are paid by the Provincial Board of Health in addition to other services provided by the Board to the people. Special studies are being made of cancer and rheumatic fever with a view to developing programs to meet these problems. A nutrition consultant service has been established as part of the Bureau of Local Health Services. Close collaboration is maintained by the Nutrition Service with the Provincial Department of Education and Agriculture.

The Division of Public Health Engineering is responsible for all matters of environmental sanitation, including water supplies, sewage disposal, food and milk control, swimming pools, the supervision of the sanitation in lumber, mining, construction and cannery camps, certain phases of garbage disposal, shell-fish supervision, and housing.

The Division of Tuberculosis Control is responsible for the diagnosis and treatment of tuberculosis in the Province. This Division operates two tuberculosis hospitals-one at Tranquille and another adjacent to the Vancouver General Hospital at Vancouver. Three other hospital services are operated by the Division in conjunction with the Royal Jubilee Hospital and St. Joseph's Hospital in Victoria and St. Joseph's Oriental Hospital in Vancouver.

Tuberculosis diagnostic clinics are provided in the form of stationary clinics in the larger centres and four travelling clinics. In addition, two Survey Chest Clinic Units utilizing $4 \times 5$ film-equipment mounted in buses, provide free X-ray service to the larger centres and to all industries. Out-patient treatment and pneumo-thorax refills are available at all the stationary clinics and by specially instructed physicians throughout the Province at strategic points utilizing pneumo-thorax equipment provided by the Division. These services are paid for by the Division. In addition special allowances, over and above other welfare assistance, are made to aid those patients suffering from tuberculosis and their families, and consultative and advisory service is furnished to local Health Departments, physicians and hospitals.

The Division of Laboratories is under the direction of a trained bacteriologist and serologist. In addition to the large main laboratory in Vancouver, it buys branch laboratory public-health service from hospitals in Victoria, Nanaimo, Prince Rupert, Kamloops, Nelson, and Kelowna. Laboratory service and biological products are provided free to all physicians and Health Departments throughout the Province.

The Division of Vital Statistics is responsible for the registration of all births, deaths and marriages in the Province. It collects, compiles, tabulates, analyses and publishes statistics on adoptions and divorces, as well as on vital statistics.

The Division of Venereal Disease Control operates diagnostic and treatment clinics in Vancouver, Victoria, Trail, Oakalla Gaol, New Westminster and in Prince Rupert and the Peace River area in co-operation with the local Health Units. Physicians are paid for venereal disease treatment of indigents where no clinic service is available. Free drugs, consultative and advisory service, including public health education, is available throughout the Province. The case finding and case holding is the duty and responsibility of local Health Service but the Division provides Public Health Nurses specially trained in epidemiology to assist the Local Health personnel.

The Division of Public Health Education is now being organized: in the meantime public health educational programs are developed by all the Divisions and Bureaus.

## Section 2.-Institutional Statistics*

Under authority granted by the Dominion Government in 1930, the Dominion Bureau of Statistics has, since that date, co-operated with the provincial authorities through the Census of Institutions, and now collects, on a Dominion-wide basis, statistics for the following types of institutions: (1) Hospitals-institutions primarily engaged in the prevention and cure of physical sickness and disease, such as hospitals for the sick, sanatoria, and institutions for incurables and those under the heading "Dominion" in Table 1. Statistics are not available for hospitals under the control of the Department of National Health and Welfare. (2) Mental and neurological institutions-such as asylums for the insane, institutions for the feeble-minded, epileptic, etc., devoted to the treatment and care of mental ailments. (3) Charitable and benevolent institutions-caring for the poor and the destitute of all ages, such as homes for the aged, county refuges, orphanages, etc. (see p. 819). (4) Penal and corrective institutions-having for their purpose the reclamation of criminals and the reformation and training of delinquent boys and girls. Institutional statistics, as summarized in Table 1, may, therefore, be regarded as dealing with the four main types of social pathology, viz., physical, mental, economic and moral.

## Subsection 1.-Statistics of Hospitals, Other Than Mental*

From Table 1 it is seen that in 1943, in addition to the 592 public hospitals for acute diseases, there were 264 private hospitals, 19 hospitals for incurables, 39 tuberculosis sanatoria and 36 units for tuberculosis patients in other hospitals.

[^290]
## 2.-Summary of Reporting Public and Private Hospitals in Canada, 1939-43

Nors.-Figures include hospitals and homes for incurables, but do not include Dominion, mental, or tuberculosis hospitals.

## 3.-Reporting Public and Private Hospitals, by Provinces, Showing Staff, Facilities, and Movement of Population, 1943-concluded

[^291]Organized Services in Public General Hospitals.-Organized services, which are analysed in Table 4, may be defined as specialized hospital departments or services in charge of specialists with up-to-date equipment and a technical staff specially devoted to problems in the indicated fields. Facilities available in a hospital merely for the use of general practitioners are not considered as organized services. Only organized services in public general hospitals are considered here and not such organized services in public hospitals other than general (as shown in the first part of Table 1) nor those in private, Dominion, tuberculosis and mental hospitals. It is, however, in the larger public general hospitals that the majority of such organized special services are to be found. Many of the smaller public general hospitals have facilities for study and treatment in the fields indicated here, but since they are not organized services as defined above, such facilities are not included in the figures. In 1943, of the 592 public hospitals for acute diseases, 267 had organized medical staffs with 9,182 staff doctors.
4.-Organized Services and Staffs in Public General Hespitals, by Rrovinces, 1943

Nors.-Dashes in this table indicate that no organized service has been reported in the case so indicated.

Out-Patient Departments.-Out-patient departments are operated in connection with hospitals or other institutions, and treat patients who do not occupy beds in the hospital. The extension of out-patient services to patients of modest means has far-reaching and beneficial effects. It may replace admission to hospital, or may serve to secure necessary and beneficial hospitalization. As a general rule out-patient departments are subsidized from the funds of the general hospital and separate records are not kept. Until a uniform system of accounting is adopted, it will not be possible to give the average cost per patient.

The statistics of Table 5 are rendered more complicated than is desirable because of lack of uniformity in the methods of reporting patients and treatments. The majority of hospitals report both patients and treatments.

## 5.-Out-Patient Departments of Public Hospitals, by Provinces, 1943

Norz.-Figures of tuberculosis sanatoria and government and municipal clinics held in hospitals are not included.

[^292]Hospitals under the Department of Veterans Affairs.-Previous to the organization of the Department of Veterans Affairs in 1944, veterans hospitals were administered by the Department of Pensions and National Health. The bed capacities of such hospitals have been greatly increased since casualties of the present war have begun to require care and the program of expansion will continue for some time. Tables 6, 7 and 8 show the position as at Mar. 31, 1945.

In order to provide maximum facilities and make fullest use of the limited number of highly trained specialists in the various fields, Special Treatment Centres have been functioning in many Departmental Hospitals. These services cover such specialties as orthopædic surgery, plastic surgery and neuro-surgery. In addition, Special Treatment Centres have been set up in the fields of arthritis, neuro-psychiatry and tuberculosis.
6.-Hospital Accommodation in Institutions Administered by the Department 0 Veterans Affairs, by Districts and Provinces, as at Mar. 31, 1945

[^293]Tuberculosis Institutions.-The statistics regarding institutions for the treatment of tuberculosis shown in Table 9, include special units for the treatment of tuberculosis in general hospitals as well as the specialized sanatoria shown separately in Table 1. The deaths in these institutions from tuberculosis in 1943 were only $37 \cdot 6$ p.c. of the total deaths from the disease in Canada as shown under Vital Statistics at p. 153 of this edition. However, the death rate from this disease has shown an encouraging decline since 1926.

## Subsection 2.-Statistics of Mental Hospitals

At Dec. 31, 1943, there were 46,631 patients in mental institutions in Canada and 4,440 on parole or otherwise absent, making a total of 51,071 , whereas the normal bed capacity was only 42,454 , showing a seriously overcrowded situation if the patient population on Jan. 1, 1943, and the admissions and separations during the year are considered. This overcrowded condition was specially marked in British

Columbia, Manitoba, Saskatchewan, Ontario and Quebec. Of the 46,631 resident patients in $1943,35,515$ were insane, 10,135 were mentally deficient, 681 were epileptic and 300 mental cases were otherwise classified.

The number of patients in mental institutions per 100,000 population on Dec. 31, 1943, was $394 \cdot 8$, as compared with $394 \cdot 2$ on the same date of $1942,392 \cdot 5$ in 1941, $388 \cdot 0$ in 1940, $348 \cdot 2$ in 1935 and $305 \cdot 4$ on June 1, 1931.

Data are not available to indicate to what extent the increasing trend of patients per 100,000 population is due to more complete diagnosis and care than formerly, or to what extent there is an actual increase in the proportion of the population requiring treatment for mental diseases.

## Subsection 3.-Corrective and Reformative Institutions

On June 1, 1941, there were 28 corrective and reformative institutions in Canada with a total inmate population of 4,051 ; of this number 3,118 were males. and 933 were females. Of the total number of institutions, 14 were for males and 14 for females. Detailed statistics of crime and delinquency (which are presented on an annual basis) as distinct from these institutional statistics are given in Chapter XXVIII.

## Section 3.-The Victorian Order of Nurses for Canada

The Victorian Order of Nurses is a voluntary public-health agency, national in scope and having as its primary object the care of the sick in their own homes by visiting nurses. In 1943 there were 99 branches of the Order distributed as follows: Nova Scotia, 16; New Brunswick, 7; Quebec, 5; Ontario, 55; Manitoba, 1; Saskatchewan, 3; Alberta, 2; and British Columbia, 10. The affairs of each branch are directed by a local committee, which raises the money necessary to carry on the work. However, the policies and professional standards set by the national organization are accepted by the local committees. The Board of Governors of the national organization is made up largely of representatives appointed by the branches.

Registered nurses are employed by the Order and have, in addition, postgraduate training in public-health nursing. All appointments are approved by Headquarters at Ottawa, which also assumes responsibility for the supervision of the nurses' work in the field, thus ensuring a uniform standard of service.

The practical result of nursing care and health education given to maternity patients is seen in the low maternal death rate among those under care. The rate per 1,000 live births attended by the Order during the years 1939-43, inclusive, was 1.45 compared with a rate of $3 \cdot 3$ for Canada as a whole in the same period.

During 1943 approximately 400 nurses in the field gave nursing care to 92,945 patients. Health teaching is an important function of the visiting nurse, and her entry into so many homes provides an unparalleled opportunity to make a worthwhile contribution toward the upbuilding of the health of the Canadian people.

The Order provides a community service, available to everyone in the area served, regardless of race, creed or economic status. The nurses give care on a visit basis to medical, surgical and maternity patients under medical direction and thus care for a large group of people who would otherwise be neglected. The budget of the average man makes very little allowance for the cost of illness. The patient is expected to pay the cost of the visit, but the fee is adjusted to suit the family income and service is never refused because of inability to pay. Of the 714,764 visits made in 1943, 52 p.c. were free, 19 p.c. were paid and 17 p.c. were partly paid. The cost of the service to those unable to pay is provided for by municipal grants and funds collected by means of campaigns.

In smaller centres where the Victorian Order nurse is the only public-health nurse, the program of work is usually enlarged to include school nursing service, child hygiene and other public health nursing services.

The nurses also care for soldiers' families and help keep up the morale of the people. The Victorian Order was instituted and has been maintained for over forty years with one definite purpose-home nursing service-in time of war no less than in time of peace.

## Section 4.-The Canadian Red Cross Society

The Canadian Red Cross Society is closely allied with the Dominion and Provincial Governments in both its extensive wartime and peacetime undertakings. The Society was founded in 1896 and incorporated in 1909, its purpose being to furnish volunteer aid to the sick and wounded of armies in time of war, and, in time of peace or war, to carry on and assist in work for the improvement of health, the prevention of disease and the mitigation of suffering throughout the world. The total membership is $2,727,130-1,853,000$ seniors and 874,130 juniors.

The Canadian Red Cross Corps of uniformed, volunteer, trained women numbered 5,676 members in 84 detachments throughout Canada, at Dec. 31, 1943, with reserves reported of about 20,680 . Some 500 Corps members are on duty with the Society overseas.

Peacetime Services.-Since the inception of its peacetime program in 1920 the Canadian Red Cross Society has established an outpost hospital service that provides medical and public-health services in isolated communities. In the 46 hospitals and nursing stations operating throughout Canada during 1943, 29,321 patients were treated, 5,005 operations were performed and 2,016 children
born. There were 551 clinics held and the Red Cross nurses examined 19,035 children. The Red Cross has also prọvided aid to ex-service men; nutritional and visiting housekeeper services; highway first-aid posts, etc.; and conducted home-nursing and first-aid courses in co-operation with the St. John Ambulance Association.

The Junior Red Cross, an organization devoted to the promotion of the principles of health, good citizenship and international friendliness, has helped 23,613 crippled children since its inception. At the end of 1944, it had a membership of 874,130 pupils in 30,515 branches in Canada and Newfoundland. Contributions to the Junior Red Cross Fund amounting to $\$ 521,736$ at Dec. 31,1944 , have financed 14 mobile kitchens, 6 ambulances, 8 carrier canteens, 5 utilicons, 2 station wagons, 1 mobile canteen, 1 utility car, and 14 war nurseries in Britain, as wcll as relief for child war victims in Europe, and many other services.

War Services.-The work accomplished by the Red Cross up to the end of December, 1943, is summarized in the following paragraphs.

Overseas Work.-A 600-bed military hospital has been built in England, furnished and fully equipped at a cost of $\$ 840,000$ and turned over to the Canadian Department of National Defence. This hospital is considered to be one of the finest military hospitals in Britain and is giving the best of medical treatment to Canada's sick and wounded. Thirty-nine mobile kitchen units, each equipped to feed 250 workers at a time, and 32 trailer kitchen canteens, have been presented to Britain's Fire Fighters and Home Guard. A vast organization of Canadian Red Cross "hospital visitors" has been built up around hospitals, ready on call to act as "friends from home" and to provide special diets, extra comforts and personal services to Canadian patients; the Maple Leaf Clubs have become exceptionally popular with the Forces and provide excellent accommodation, recreation and entertainment. Inquiry bureaus have been organized in Britain and Canada to obtain information regarding relatives and friends who are missing, wounded, or prisoners of war.

Overseas Shipments.-Shipments up to Dec. 31, 1943, consisted of: 311 ambulances and other motor-vehicles; 28,713,282 articles of hospital supplies, comforts for the troops and relief clothing; $6,500,016$ prisoners of war food parcels; distribution of supplies was made, not only to Canadian Armed Forces but to those of all the Allied Nations; $1,400,000 \mathrm{lb}$. of jam and honey ( $1,800,000 \mathrm{lb}$. to the end of 1944) were provided to civilian war sufferers in Britain, particularly children in war nurseries and orphanages, women's institutes and other organizations participating in this work.

Canadian Work.-The packing of food parcels for prisoners of war, begun in 1941, reached a total of 100,000 a week in the five packing depots at Montreal, Toronto, Hamilton, Windsor and Winnipeg. By the end of 1943 over $7,800,000$ parcels had been packed. Up to Dec. 31, 1944, with six plants operating to a capacity of 140,000 parcels per week, $13,460,000$ had been packed.

Through the Red Cross Volunteer blood-donor clinics, 750,032 blood donations were received and processed into serum up to the end of December, 1943, $(1,800,000$ to the end of 1944). An objective of 15,000 donations per week was exceeded in 1943 and the objective raised to 20,000 which was also exceeded in 1944. The serum has been used in bombed areas and battlefields on fighting fronts.

Since the beginning of the War, 4,737,183 comforts and supplies have been given to the Armed Forces in training or stationed in Canada as well as to hospital patients.

Disaster relief organizations for shipwrecked seamen and casualties have been set up at seaboards and other vulnerable points in Canada. Soldiers and dependants arriving from overseas have received personal service and supplies from the Red Cross upon arrival and throughout the journey to their Canadian homes.

Financing of Red Gross Activities.-From the outbreak of war to Dec. 31, 1943 , voluntary contributions from all sources to the Society amounted to $\$ 46,344,330$. The two major items of expenditures were for hospital supplies, comforts for the Armed Forces and hospital patients, clothing for civilian war sufferers, and for prisoners of war food parcels.

## Section 5.-The St. John Ambulance Association

The origin of the St. John Ambulance Association goes back to the Crusades and the Knights of St. John and of Malta. His Majesty the King is supreme head of the Order which has headquarters at London and units in all parts of the British Empire. In Canada, the Governor General is the Knight Commander and meetings of the Order are held at Government House. At the head of the Canadian Branch is the Commandery of the Grand Priory of the British Realm of the Venerable Order of the Hospital of St. John of Jerusalem, usually referred to as the Order of St. John.

The Canadian Branch has its headquarters and national offices in St. John House, Ottawa, with branches in every province and local centres in hundreds of cities and towns throughout Canada. There are two distinct branches : the Association whose members train instructors, conduct classes and issue various certificates; and the Brigade, members of which are in uniform under a form of military discipline receive constant supplementary training, and are available for call whenever the need arises. The Brigade strength is approximately 15,000 persons, about equally divided between the Ambulance Division (men) and the Nursing Division (women), and organized into about 300 divisions from coast to coast.

The primary purpose of the Association is to teach First Aid and Home Nursing to both civilians and the Armed Forces and to provide trained and organized personnel to help in time of disaster or national emergency. This work was started in Canada in 1895 and, since then, about 900,000 persons have received certificates, and other awards. Since 1940 the number has been close to, or above, 100,000 a year. During 1942, 118,490 certificates were issued and in 1943, 109,313. Many thousands of these went to members of the Armed Forces to which trained instructors and textbooks have been provided in large numbers. In 1942 an order was issued providing that every member of the Royal Canadian Air Force (men and women) must take St. John First Aid instruction. The railways of Canada and many large industrial concerns maintain their own St. John centres. The training of personnel of Air Raid Precaution in First Aid work has been a large wartime undertaking.

22115-54

The uniformed Brigade performs a very special function in wartime. At port cities it assists the regular R.C.A.M.C. doctors and nurses, helps in hospitals and merchant seamen's hostels and shipwrecked seamen. It largely staffs the First Aid Posts for A.R.P. Early in 1943 when Voluntary Aid Detachments were made an integral part of the Army Nursing Service the Brigade instituted a recruiting campaign to enlist V.A.D. or nurses' aides and many are now on duty in Army hospitals. Others are helping short-staffed civilian hospitals. All wear the grey and white uniform with the eight-pointed cross of St. John. Uniformed St. John Brigade members are to be found at all exhibitions, large demonstrations or wherever crowds gather. The training of Brigade members as blood-typing technicians was commenced in 1943. The entire personnel of large war industries are being typed so that, in the event of serious accident, blood transfusions may be given in the quickest possible time.

Early in 1943 an agreement was entered into between the Canadian Red Cross Society and the St. John Ambulance Association whereby future training would come under a joint board consisting of representatives of both organizations and a chairman appointed by the Minister of War Services. Certificates are to be issued under the joint name. The object was to avoid duplication, pool instructors and make training available to as large a number of persons as possible. Further, under this arrangement, which has been approved by Order in Council, the finances necessary to carry on the St. John Association activity in Canada will come from the annual public appeal of the Red Cross.

In Chapter XXI of the 1943-44 Year Book the foundation that had been laid for exploring the field of Reconstruction by the Dominion and Provincial Governments was described, and the various Parliamentary and other committees that had been established to advise Dominion and Provincial Governments were dealt with in some detail. Out of this extended preliminary work, which was co-ordinated to a large extent through the Advisory Committee on Economic Policy (see p. 743 of the 1943-44 Year Book), there has emerged a program for the immediate period following the victory over Germany. In April, 1945, a White Paper* on Employment and Income was presented to Parliament by the Minister of Reconstruction which set forward an important over-all statement of policy that has resulted from two or more years study of the problems involved. This Paper is, in fact, a statement of the objectives and working plans of the Department of Reconstruction and, because of its bearing on the ways by which it is proposed to face the anticipated problems of the next few years, a summary of the most important points is given below.

## PART I.-RECONSTRUCTION PROGRAMS OF THE DOMINION AND PROVINCIAL GOVERNMENTS

## Section 1.-Dominion Government Machinery for Post-War Reconstruction and Rehabilitation

## Summary of the Government White Paper on Employment and Income

The ultimate aim of all reconstruction policies is the extension of opportunity, welfare and security.

[^295]Reconstruction must start from the circumstances existing in Canada that have resulted from nearly six years of war: it is, therefore, a complicated task of combining the demobilization of the Armed Services and war industry with the rebuilding of an ample and stable Canadian economy by a process of smooth, orderly transition and the maintenance of a high and stable level of income and employment. This task will require the active co-operation of all governments and all groups within the country.

The future, so far as reconstruction is concerned, falls logically into two periods. The first of these, which may be called Stage II of the War, begins at the cessation of hostilities in Europe and extends to the time when complete victory has been won in the Pacific. This period will mark the beginning of the transition period to a peace economy. The specific applications of reconstruction policies are set out for this period only, since, apart from immediate urgency, this is a time concerning which it is possible to speak with some degree of certainty.

This transition involves the speedy settlement of war contracts and clearing of plant, arrangements for which have been made already.

During this period, continuing needs for war production together with the demand for civilian goods will result in high employment, but with delays in some localities where wartime demands have necessitated heavy concentration of war orders and abnormal wartime population. The Department of Reconstruction is responsible for plans to meet these local situations, which shall include the speedy re-establishment and development of civilian industry and the encouragement of housing in such areas. Where necessary, they will be supplemented by special housing and public works programs. Controls will be used to see that materials are available. The co-operation of both provincial and municipal authorities will be sought both as regards the preparation and the implementation of these plans.

No such degree of certainty exists for the period that will begin when final victory in the Pacific has been achieved. Certain long-term policies of reconstruction will be put into effect but such policies will be vitally affected by later international economic arrangements. Above all, such a long-term program will depend upon the financial and administrative agreements reached by the Dominion and Provincial Governments in conference and at the present time it is impossible to do more than outline the long-term reconstruction policy.

The Employment Problem.-On the basis of calculations set out in the White Paper, it is established that the employment of less than 900,000 persons over the level of 1939 would provide a high level of employment for the population of June, 1944. This figure should be increased by about 60,000 annually as the result of natural increase and the ageing of the population.

At present, more than sufficient jobs are provided by Government war expenditures, but these will be curtailed just as soon as the requirements of war permit. It will be possible, also, in Stage II to release part of the Armed Forces and part of the workers and capacity in war industry.

The first early task of reconstruction will be to facilitate and encourage an expansion of private industry. The rate of release of personnel from the Services will be governed by the exigencies of war but, so far as is practicable, manpower so released will be directed to:-
(1) Contributing, through international arrangements, to the relief and rehabilitation of devastated countries.
(2) The maintenance and resumption of exports to Canada's historic markets and, as supplies and shipping permit, to the development of new continuing markets.
(3) The re-conversion of industrial capacity released from war use and to the carrying out of desirable industrial expansion and modernization.
(4) The replacement and modernization of the equipment of agriculture and other primary industries and to the provision of additional facilities for production and marketing services.
(5) Providing for as large a housing program, both rural and urban, as available labour and materials will permit.
(6) Providing for increases in consumer goods produced for the civilian market, as the demobilized Service personnel pass into the civilian population, and, as circumstances allow, to meet deferred civilian demand.

It is not considered feasible to give any absolute priority to any of these competing uses for available manpower but, in the interests of employment and welfare, a balance will be preserved between them.

For the period extending between the cessation of hostilities in Europe and victory in the Pacific, the demands for labour and material are expected to exceed available supplies but, even with over-all demands unsatisfied, dislocation and delays of various kinds will be inevitable during a transition period of such proportions.

The Sources of Employment and Income.-Expenditures that provide remunerative employment and income are classified according to the channels through which they flow, viz., (a) export trade; (b) private investment in durable goods and goods in stock; (c) consumption expenditures; (d) public investment and expenditures. In maintaining a high and stable level of employment and income, sppropriate means are proposed to influence expenditures in all these channels.

Export Trade.-During the War, export shipments, financed in part by the Dominion Government, have become highly abnormal in size and composition. For post-war exports, it is considered that a figure of not less than $\$ 1,750,000,000$ annually at current prices for merchandise and non-monetary gold is a practical and desirable goal. This would be about one-half the current swollen wartime exports, about 60 p.c. above the pre-war level in dollar value, but only about 15 p.c. higher in the amount of goods exported.

During Stage II of the War, the problem of maintaining the desired level for exports, other than munitions, will be one of supply and finance. It is proposed to recommend a continuation of Mutual Aid (see pp. 461-462) where necessary, until the end of the Japanese War and to use the Export Credits Insurance Act (see pp. 482-483), where necessary, to restore and maintain historic markets and develop new ones.

In the post-war period, an expansion of total world trade is anticipated within which other countries as well as Canada can increase their exports. Since the conditions which govern international trade are not in any large degree under the direct control of the Canadian Government, collaboration with other Governments is essential. The policy to be followed is one of reciprocal reduction and removal of trade barriers and to press for agreements to promote stability in international food and raw-material markets.

Private Investment.-Through the Department of Reconstruction the speedy conversion and expansion of industries will be encouraged and assisted. There will be plenty of incentive for private investment; the demand for consumer goods will be high; buildings and equipment will be worn out or obsolete; new products and new processes will require new capital investment. Taxation will be lowered as rapidly as possible and private investment at a high and stable level will be
encouraged. Continued low interest rates will stimulate the investment of funds contributing to employment. The facilities of the Industrial Development Bank (see p. 994) will be of particular importance for small and new enterprises on the development of which much future employment will depend. The Farm Improvement Loans Act provides, through the chartered banks under limited government guarantee, loans for a wide range of improvements. Finally, in the field of housing, expenditures have been deficient for the past fifteen years and there is need, as soon as the exigency of war permits, for investment in housing on a scale far exceeding the immediate pre-war levels.

Consumption.-In Stage II of the War, consumption expenditures may be expected to rise to the full degree to which goods and services can be made available. Unemployment insurance, family allowances and the support of farm and fishery prices will help maintain income. Indeed, the danger in this period is that consumption expenditures will tend to outrun goods and services available. Social security and other measures for supporting and stabilizing such expenditures will continue to operate. Furthermore, the Government has indicated willingness to institute contributory old age pensions and health insurance as soon as financial and administrative arrangements with the provinces can be agreed upon.

Public Investment.-In the circumstances of the War, Government expenditures have become the dominant factor in determining the level of employment and income. During Stage II of the War, the proposal is for the Dominion to press ahead with the planning of its own deferred works. The co-operation of the Provincial Governments, the municipalities and of the industries engaged in the use of natural resources will be sought and it is recognized that many of the plans outlined under this heading in the White Paper require, for their full implementation, a new definition of the financial arrangement between the Dominion and the provinces.

In the post-war period, the deliberate use of public investment expenditures as a permanent instrument in employment policy, to be undertaken experimentally, is set forward but it will be necessary to frame policy to fit the facts of the Canadian economy and to administer it in accordance with the Constitution. A substantial beginning along two lines is advocated:-
(1) The advance planning of a 'shelf' of necessary and desirable projects by the Dominion and Provincial and Municipal Governments. These are to be kept ready for execution when prospective employment conditions make it desirable to increase public investment expenditures.
(2) The implementation, in co-operation with the provinces, of a new Dominion policy of expenditures on the development and conservation of natural resources. While some of these expenditures must be continuous, a substantial portion of them may be varied according to employment and income levels.

With this beginning, the Dominion Goverment would seek to enlarge the scope of its public investment program as rapidly as experience warrants.

Yukon and the Northwest Territories and the field of civil aviation will be of particular importance as fields of public investment.

Scientific and Industrial Research.-The work of the National Research Council will be continued and expanded and will be co-ordinated more closely and effectively with the research work of the universities, other government laboratories and industry. By co-operative endeavour, the whole technical level of Canadian industry must be raised. So far as the immediate future is concerned, however, few research facilities can be released from war work.

Placement and Training of Workers.-In Canada, at its stage of development and with its climatic conditions, a high degree of mobility of labour is essential to economic efficiency. During the War, highly important experience has been gained in the placement and training of workers. After the War, the placement services, training and forward planning in the employment of the labour force will be expanded in scope and improved in quality on the basis of wartime experience and post-war requirements. Payments to workers undergoing approved training are to be at higher rates than unemployment insurance benefits.

Wartime Controls.-During the War, it has been necessary to impose many restrictive controls. The occasion for these controls has been acute scarcity of manpower and other economic resources. As wartime scarcities disappear, wartime controls will be relaxed and discontinued. It is probable, however, that many such controls will continue to be needed for a time after the close of the European phase of the War to ensure the effective prosecution of the Japanese phase, to guarantee the provision of essential civilian needs, to aid in meeting the more urgent requirements of reconstruction, and to prevent inflation.

Government Finance.-The broad proposals summarized above will call for government expenditures and revenues at higher than pre-war levels. Nevertheless, they are held to be consistent with post-war taxation at substantially lower levels than at present. Despite the great increase in the national debt during the War, the cost of carrying the debt is down to about the same relative weight to national income that it had in 1939. If income and employment can be maintained at high levels, the relative burden after the War is likely to be little more than it was in 1939. Therefore, when unemployment threatens, deficits and consequent increases in the national debt will be incurred to give effect to the above stated employment and income policy. Conversely, in periods of buoyant employment and income, the budget plans will call for surpluses. As during the War, fiscal policy will be based on economic, as much as purely financial considerations.

## Subsection 1.-New Administrative Departments

The Department of National Health and Welfare.-This Department, which has absorbed the national health work of the former Department of Pensions and National Health, has a direct connection with the general program of reconstruction. This is now under the Deputy Minister of National Health while the Deputy Minister of Welfare acts in co-operation with the Dominion and municipal authorities to seek means of improving the standards of social welfare generally. The most important scheme which this Department is now organizing is the Family Allowances Program. Fundamentally, the nature of the Department's work is broader and deeper than reconstruction and rehabilitation since public health has been a concern of Government since the earliest days of the Dominion's history. The work of the Department is dealt with in Chapters XX and XXI of this volume.

The Department of Veterans Affairs.-This Department was established in June, 1944, and charged with the responsibility of the care, treatment, training or re-establishment in civil life of any person who served in the naval, military or air forces of His Majesty, any person who has engaged in pursuits relating to war, and of any other person designated by the Governor in Council. During the same session of Parliament several measures were passed for the assistance of veterans and other persons coming under the Act. Among them are Acts providing war
service gratuities and re-establishment credits, the latter to be available for the purchase of housing, furniture or instruments and implements needed in a given occupation; special insurance at low rates convertible into annuities; legislation to expand and improve land settlement facilities and to provide for farm improvement projects. All these matters are dealt with, and progress recorded in detail at pp. 862-884.

Interdepartmental committees representing the Defence Departments and the responsible civilian Departments have been organized to give effect to these policies. One of these committees, the Interdepartmental Committee for the Co-ordination of Rehabilitation Information, is of special interest to veterans. It has the responsibility of keeping veterans informed by press, radio, motion pictures and other means of new changes in Government policy, economic opportunity and health matters affecting their welfare.

The Department of Reconstruction.-This Department was established by statute in June, 1944, following several concurrent recommendations from various reconstruction committees, such as the House of Commons Committee and the Advisory Committee on Reconstruction. The Minister, who is also the Minister of Munitions and Supply, was charged with the following responsibilities:-
(1) To inform himself fully of the needs for new employment of the men and women in the Armed Forces and in industry and the opportunities that will be available to meet those needs as men and women are demobilized from the Armed Forces and as war production declines.
(2) To co-ordinate the actions of other Departments and agencies of the Government of Canada for the purpose of ensuring that the transition from a wartime to a peacetime economy shall be effected as quickly and as smoothly as possible.
(3) To formulate plans for industrial development and conversion, public works and improvements, housing and community planning, research and the conservation and development of natural resources, and with the authorization of the Governor in Council, to provide for carrying out such plans.
(4) To correlate information relating to plans for reconstruction.

To assist in the attainment of these purposes a Cabinet Committee on Reconstruction was established on Oct. 13, 1944, by Order in Council to examine and take steps to implement approved reconstruction proposals.

The Department of Reconstruction is designed primarily to serve as an agency for the over-all review of the fields of reconstruction and rehabilitation. Its purpose is to ensure that the various programs from other Departments are properly fused to see that each specific Department or agency is charged with the fulfilment of necessary duties falling within the reconstruction program, and to see that reconstruction plans are carried out.

The Department is organized in the following Divisions:-
Industrial Reconversion.-The changeover of industry from a wartime to a peacetime basis must be accomplished with as little disturbance as possible to the normal flow of employment and income in Canada. While industry itself must take the primary initiative in this matter, the Department of Reconstruction provides, through this Division, means to assist industry to develop a high degree of economic activity and stability. Information will be furnished regarding the most economical uses of pre-war plants and of new plants developed for specific war purposes, also the most profitable use that can be made of productive techniques that have proved efficient during the War. Every assistance will be given to industries in the solution of their problems.

Surplus War Assets.-During the past five years, the Government has acquired title to large quantities of war goods and by the end of the War these will constitute the greatest single inventory ever held by one body in Canada. Power to deal with these surpluses under the Surplus Crown Assets Act is exercised by the Minister of Reconstruction through the Crown Assets Allocation Committee, the Director General of War Surplus and the War Assets Corporation.

The Allocation Committee has the duty of recommending to the Government, through the Minister, those policies which will dispose of various surpluses to the best advantage of Canada as a whole. The Committee has adopted a general priority rule, which is subject to variation, in accordance with circumstances and proven essentiality as regards public interest, in the following terms:-

> "That priority be given to any Federal Government Department or agency, Provincial Government Department, municipal body or public, organization, in the order stated, which has raquested any of the said equipment."

Once the policy has been determined, the War Assets Corporation carries out the actual process of disposing of the surplus. The Corporation consists of a President, Vice-President and Board of Directors representative of the business, industrial, labour and consumer interests of the entire country.

The Director General of War Surplus makes arrangements for speedy clearance of surplus from plants that are to be swung back into civilian production and, in addition, conducts negotiations with industry for the acquirement and operation of Crown-owned plants, with the object of providing facilities that will benefit the economic development of the country. In this connection the Director General gives consideration to the proposed use of the property and equipment in the following ways: increasing employment; providing for new types of manufacture in Canada; improving working conditions; bringing about less costly operations than those previously used; providing increases in output needed in the domestic or export markets; and in having a desirable effect on the location of industry and employment.

Industrial Research.-In order to assist Canadian business and enterprise, the Government has established a Director General of Research and Development whose duties fall into three related fields:-
(1) The development of a technical and scientific information service to disseminate sound technical information to business and enterprise of all kinds in Canada.
(2) To promote research for the assistance of special industrial and development projects.
(3) The co-ordination of long-term scientific programs.

The Director General has established research libraries with staffs large enough to carefully canvass research activities in private enterprise, scientific associations and universities. The National Research Council, formerly under the Minister of Trade and Commerce, has now been brought under the jurisdiction of the Minister of Reconstruction.

Depreciation Allowances.-During the War it was necessary to discourage ordinary private investment activities by very high taxation. As the period begins during which it is desired to encourage new investment the Government has, under the Budget of 1944, made provision for special depreciation allowances on new capital expenditures on plant and equipment. These allowances are granted by the Minister of National Revenue upon the advice of the Minister of Reconstruction who in turn is advised by a Depreciation Committee.

Co-ordinator of Controls.-During the War a great variety of materials, commodities and services have come under more or less stringent control. Some of these have now been abandoned or relaxed but others, more particularly the control of prices and those commodities which will continue to be in short supply, may be retained up to, and possibly after, the end of the war with Japan. The most severe inflationary pressure came not during but immediately after the War of 1914-18, and in order to avoid sharp and unfortunate inflation the stabilization program is to be maintained until it is safe to remove controls. It is the duty of the Coordinator of Controls to advise the Minister of Reconstruction on these problems.

Public Works.-It is not planned to solve the post-war employment problem by huge expenditures on public works. However, the functions of a wise program of public expenditures as an adjunct to, but not as a substitute for, private investment are fully appreciated. Public expenditures may be made for public projects already planned but deferred during war years; for example, permanent improvements in highway and other transportation facilities might be made with benefit to the industries which they serve in order to take up periodical slacks in employment.

The planning and implementation of public works projects will require stimulation and continuous consultation between Dominion, provincial and municipal authorities. These functions in the Department of Reconstruction are to be performed by the Co-ordinator of Public Projects.

Natural Resources Development.-Natural resources development will make use of a greater portion of private than public capital, while public works projects use only public capital. In certain cases, where the resources to be developed belong to the Crown whether in right of Dominion or Provincial Governments, the necessity for stimulation, planning and close consultation with provincial authorities will arise. A Co-ordinator of Resources Development has been appointed and made responsible for these matters. Among the types of projects which can be planned are waterpower development, forest conservation, and the development of new mining resources.

Civil Aviation.-One of the great potential contributions to Canada's post-war welfare is the proper development of civil aviation. The wartime advances of aviation, the large number of airfields constructed in Canada for military or civil use, and the decisive significance that transportation has always had in Canadian development emphasize the importance of civil aviation in Canada's future. The Director General of Air Development, the Air Transport Board, the Air Services Branch of the Department of Transport and Trans-Canada Air Lines, all under the Minister of Reconstruction, will develop civil aviation along lines contributing to the economic well-being of the entire country.

Liaison.-Effective liaison with other branches of the Dominion Government, such as the Department of Trade and Commerce and the Department of Labour, has been established by the appointment of liaison officers. Similarly, contact with regional groups and with provincial and municipal authorities is provided by Regional Councils, of which each province has one, except Ontario and Quebec which have two each.

## Subsection 2.-Special Legislation Relating to Reconstruction

Agriculture and Fisheries.-The Agricultural Prices Support Act of 1944 established a Board under the Minister of Agriculture with power to determine prices for agricultural products, to pay subsidies where necessary, to purchase agricultural products for government purposes, and to appoint committees of inquiry as they may be required. The Fisheries Prices Support Act of 1944 established a similar body for the fishing industry.

Housing.-The National Housing Act of 1944 was passed to stimulate investment in construction, to provide assistance to persons desiring to build their own homes and to provide loans for private corporations for the construction of low-rent housing projects. It is administered by the Minister of Finance and covers both rural and urban housing. The Act also gives the Minister power to make plans for slum clearance and to underwrite loans for home improvement or extension. (See pp. 445-446.)

Export Credits.-The Government passed in 1944 the Export Credits Insurance Act under which the Minister of Trade and Commerce acting through an Export Credits Insurance Corporation may make contracts of insurance with an exporter for the purpose of developing foreign trade. It also empowers the Government to guarantee obligations assumed by a country other than Canada or its agency to buy foreign securities and to make loans to other governments in order to assist them to purchase Canadian goods. (See p. 482.)

Loans for Industrial and Farm Development.-An Industrial Development Bank was established in 1944 to provide financial assistance to deserving enterprises, especially small enterprises which find it difficult or impossible to obtain the necessary credits through existing financial institutions. Similarly, assistance to farmers has been provided by the Farm Improvements Loan Act.

Employment.-The problem of employment during the War has been given particularly careful study by the Government Departments concerned. Important experience has been gained in the placement and training of workers. Under the Unemployment Insurance Act, 1940, the Employment Offices and Placement Service was established and since 1942 has administered the National Selective Service Program under the Minister of Labour. It is intended to relax restrictive regulations as soon as they no longer serve a useful purpose but the placement service will be retained and expanded in order to provide a smooth transition from wartime to peacetime employment both for veterans and persons displaced from war industry. In so far as veterans' problems are concerned, the Department of Labour works in close co-operation with the Department of Veterans Affairs.

Vocational training facilities have been improved and extended throughout Canada during the war years. In 1942 the Vocational Education Co-ordination Act suthorized the expenditure of $\$ 20,000,000$ over a period of ten years. It is intended to provide effective training to fit men and women for productive roles in a modern industrial system. The Armed Forces co-operate in these plans by their system of personnel selection in which individual attention is given to each person discharged from the service in order to provide the Department of Labour with an accurate and complete picture of his ability, experience and preferences.

## Section 2.-Reconstruction Programs of the Provincial Governments*

The provinces are planning reconstruction measures for the post-war period. Schemes have been formulated for stimulating post-war employment and utilizing natural resources.

In addition, steps are being taken within the provincial field to supplement the Dominion program for the rehabilitation of former members of the Armed Services. All provinces are co-operating in the Canadian vocational training program.

The following outlines give the main features of provincial reconstruction activities to Mar. 31, 1945. A complete list of official publications dealing with these matters is appended at pp. 860-862. Progress to Mar. 31, 1944, is outlined at pp. 748-755 of the 1943-44 Year Book.

Prince Edward Island.-To promote and co-ordinate plans for provincial development and post-war employment, a Department of Reconstruction was established in 1944. During the year 1944 an agricultural survey of the Province was begun, to be completed in 1945.

By authority of the Provincial Government, a Provincial Advisory Reconstruction Committee was appointed to assist the Government in formulating policies for the economic betterment of the Province and to organize, in advance of the end of hostilities, work projects that would create employment and employment opportunities. Nine technical committees are working under the direction of the Advisory Committee with special studies being made on education, tourist and transportation problems, rural electrification, housing, finance and revenue, fisheries, agriculture, public health and welfare, and forestry. The Committee is expected to report to the Government in June, 1945.

The 1945 Legislature has enacted measures relating to town planning, the supplying of electric power, and the purchase by the Province of surplus war assets from the Dominion Government.

Nova Scotia.-In 1943, a Royal Commission on Provincial Development and Rehabilitation was appointed to study problems relating to the post-war expansion of industry and markets, and to the re-employment of ex-service men and war workers. Its report was tabled in the Legislature late in March, 1945.

A Committee on Rehabilitation of Agriculture for Nova Scotia was set up in 1944. This Committee is studying rural electrification, land conservation and improved land use, flood control, and certain technical aspects of provincial agriculture.

The Government has presented to the Legislature a detailed post-war plan for expenditures on highways, public buildings, education, rural electrification, and the development of natural resources. The Province will raise $\$ 40,000,000$ and, if Dominion assistance to an equal amount is forthcoming, the projects will be completed in five years. Without Dominion aid, the plan will be carried out on a ten-year basis.

[^296]New Brunswick.-The following organizations have been established by the Province of New Brunswick to offer recommendations and to prepare plans for post-war reconstruction: (1) New Brunswick Committee on Reconstruction; (2) New Brunswick Natural Resources Development Board; (3) Department of Industry and Reconstruction.

New Brunswick Committee on Reconstruction.-The Committee has presented a report in which it proposes a long-term reconstruction program based on the further development of existing primary industries and the development and creation of secondary industries. Specific recommendations were made in the fields of natural resources, manufacturing, labour, education, health and welfare, housing, and Dominion-Provincial relations.

In addition to the long-term program, the Committee recommends immediate plans for the post-war period relating to public works, forestry products, flood control, and rural electrification.

New Brunswick Natural Resources Development Board.-This Board is now making numerous investigations, particularly with a view to the further development of the forest resources of the Province.

Department of Industry and Reconstruction.-This Department has recently been organized and is making a series of studies on demobilization and rehabilitation. It is also energetically engaged in a campaign of business stimulation-the promotion of new industries and the revival of old ones-and is endeavouring to induce manufacturers to add new lines to those already being produced, with particular emphasis on wood and wood products.

Quebec.-Various Departments of the Provincial Government have prepared plans relating to reconstruction in the post-war period, many of which are based on a provincial inventory of natural resources.

Department of Lands and Forests.-This Department is preparing considerable forest development and full advantage will be taken of modernized forestry control and exploitation. The industry will be encouraged to extend to the public the benefits of the newest methods for the scientific and economic use of wood.

Department of Labour.-This Department is planning retraining centres for the following purposes: (1) the rehabilitation of workmen injured in industrial accidents; (2) the training of returned soldiers to fit them for a place in industry; (3) the training of apprentices for the building trades.

Department of Roads.-A $\$ 30,000,000$ program of new road construction to be spread over a four-year period has been approved by the Legislature.

Department of Trade and Commerce.-The Department has adopted an aggressive policy to attract foreign capital for the estatlishment of new industries. Steps are also being taken to develop markets for Quebec's products.

Other Government post-war plans have been prepared in relation to land settlement, reforestation, housing, public works, rural electrification and fisheries.

Ontario.-In the Province of Ontario, post-war matters are receiving the particular attention of all Departments of Government. The Department of Highways plans to spend $\$ 192,000,000$ on a road-building program in the four immediate
post-war years, while plans for later years are also being laid. The Department of Public Works has already made or is completing plans for construction projects, including the building of provincial hospitals, at a proposed cost of $\$ 62,000,000$. A comprehensive forestry scheme will be undertaken by the Department of Lands and Forests, covering forest protection and management, and fire control. In this connection, a preliminary start was made in the war period so that the program could be fully implemented soon after the end of hostilities.

A key agency of post-war reconstruction is the Department of Planning and Development, established in March, 1944. Three branches are now operating: (1) Conservation-which deals with all natural resources except coal, oil, gas and minerals; to date, it has been concerned primarily with the problems of the farming areas of southern Ontario. (2) Town and Community Planning-which co-operates with the Department of Municipal Affairs in assisting municipalities in handling problems of growth and administration. (3) Trade and Industry-which supplies industrial engineering services to all communities and industries in the Province. In conjunction with Ontario House at London, England, this Branch seeks to foster post-war trade with European countries.

Surveys.-A number of important investigations and surveys have been undertaken. The Interdepartmental Committee on Conservation and Rehabilitation cooperated with the Dominion Advisory Committee on Reconstruction in completing a survey of the Ganaraska River region. The final report, made public on Oct. 15, 1944, recommended a comprehensive program of soil conservation, reforestation, and flood control, based on the entire river system. The work of this Committee has been taken over by the Conservation Branch of the Department of Planning and Development.

The Ontario Agricultural Commission of Inquiry was established in September 1943, with wide representation from farm groups. In March, 1945, it reported on the subjects of soil conservation, agricultural credit, education, rural organization, live stock and dairying, and agricultural floor prices. Its recommendations in regard to marketing problems are still forthcoming. The Commission of Inquiry largely superseded the Ontario Committee on Agricultural Policy, set up in April, 1943.

The report of the Royal Ontario Mining Commission, appointed on Oct. 27, 1943, was presented on Oct. 5, 1944. A number of basic changes were recommended, not necessarily related to post-war problems, such as more generous depreciation allowances and income tax exemptions in the industry, and the retention of a larger share of mining tax revenues by the mining municipalities. The Department of Mines has since opened a technical school for the mining industry-the Institute of Mines, at Haileybury.

A Committee on Planning, Construction and Equipment of Schools in Ontario was appointed in November, 1944. It will make recommendations after inquiring into the planning and equipment of schools; standard methods of construction; standards for mechanical services; and the useful physical life of school buildings.

A Royal Commission on Education is currently conducting hearings.
Rural Electrification.-The Hydro-Electric Power Commission of Ontario has planned "A Five-Year Plan for Post-War Rural Hydro Development", involving an expenditure of about $\$ 22,000,000$ by the local Hydro Commissions on labour and materials, with the Ontario Government providing a grant-in-aid to cover

50 p.c. of the cost. Additional rural power lines will be built to the extent of 7,000 miles; some 57,900 new rural customers will be served; and total expenditure by Hydro and power consumers is expected to amount to over $\$ 63,000,000$.

Rehabilitation.-The Social Security and Rehabilitation Committee, originally set up in April, 1943, now operates under the Department of Planning and Development. It has been chiefly concerned with the training program for ex-service personnel. A staff is maintained at the Ontario Training and Re-establishment Institute at Toronto to deal with veterans' problems.

The Apprenticeship Board of the Department of Labour performs related functions. Trades organizations have been set up to appraise and give credit for trade experience; to recommend school or shop training for personnel referred to this Department by the Dominion Department of Veterans Affairs; and to place in employment veterans who qualify.

Manitoba.-A number of agencies co-operate in formulating post-war plans for the Province:-

Sub-Committee of the Cabinet.-Under the chairmanship of the Premier, the Sub-Committee receives and considers reports from the Post-War Reconstruction Committee. The Chairman delivered a brief to the Dominion House of Commons Special Committee on Reconstruction and Re-establishment in June, 1943.

Post-War Reconstruction Committee.-Consisting of all Deputy Ministers and an Economic Adviser, the Committee co-ordinates post-war reconstruction activities of all Government Departments and initiates further studies, several of which have been published.

Advisory Committee on Co-ordination of Post-War Planning.-Representing various economic groups from urban and rural Manitoba, the Committee was set up by Order in Council on Apr. 18, 1944, to consider submissions and undertake research. Its aim is the integration of the provincial reconstruction program. Interim reports were submitted to the Premier on Dec. 15, 1944, and Feb. 4, 1945, covering the Committee's recommendations to the latter date.

Special Select Committee of the Legislature.-At the 1944 Session, and re-empowered at the 1945 Session, a Special Select Committee of all the Members of the Legislative Assembly was constituted for the purpose of reviewing, criticizing, and formulating proposals and plans and advising and assisting the Government in the formulation of its post-war program.

Joint University Studies.-At the request of the Governor of Minnesota and the Premier of Manitoba in 1941, the University of Minnesota and the University of Manitoba have together investigated the effects of alternative peace settlements upon the economies of the Canadian Prairie Provinces and the central northwest region of the United States. Two reports have been published.

Manitoba Electrification Enquiry Commission.-Established in June, 1942, the Commission reported in favour of an extensive program of farm electrification. The Advisory Committee has considered this report and has recommended that 1,000 experimental installations be made. The Committee has also pointed out that it is essential to the success of the plan that adequate appliances be made available at the lowest possible cost. The Government has directed that the 1,000 installations be made in experimental districts, the work to commence as soon as the necessary priorities on equipment, merchandise and labour can be obtained.

Advisory Committee on Rehabilitation Training.-Representing government, employers, labour, and certain other interested groups, the Committee advises the Minister of Education on training schemes undertaken under the Dominion Vocational Training Co-ordination Act, 1942.

An extensive program of post-war projects has been prepared by the Government. These projects could serve the purpose of assisting private enterprise in maintaining a high level of employment, and of expanding the provincial and municipal system of social services. The Premier has pointed out, however, that neither of these purposes can be achieved without an over-all national program, nor without a complete overhauling of Dominion-Provincial financial relations because "provincial post-war finances on the present basis will not support the provincial share of the post-war program", as determined within the framework of the Canadian Constitution.

Details of the post-war program announced by the Government are as follows:-
(1) A flexible ten-year budget of $\$ 76,000,000$ for high priority projects, which could be commenced as soon as men, materials, and moneys are available, or could be delayed in accordance with the employment situation. Included are $\$ 25,000,000$ for roads, $\$ 17,000,000$ for rural electrification, and a similar amount for irrigation, conservation, and the development of the natural resources of the Province. It is planned to proceed with rural electrification in any event.
(2) A $\$ 113,000,000$ pool of useful works in similar fields, to be drawn on only if required to fill in the employment gap in the Province. These projects, of course, would be largely contingent on the receipt of Dominion §nancial aid.
(3) $\$ 89,000,000$ for hydro-electric power development, which might be undertaken if expanding markets are required.
(4) Expansion of the provincial and municipal system of social services. A Health Services Act was passed at the 1945 Session of the Legislature. It sets up a system of Rural Health Units, diagnostic services, prepaid medical care and improved hospital facilities.

Saskatchewan.-Saskatchewan Reconstruction Council.-In October, 1943, this Province established a Reconstruction Council, under the chairmanship of a member of the staff of the University of Saskatchewan, to study and investigate conditions and problems likely to arise after the conclusion of the War.

In August, 1944, the Council presented its Report to the Minister of Reconstruction, Labour and Public Welfare. This Report gives careful analysis to the problems of reconstruction as they exist for Saskatchewan, and concludes with a series of specific recommendations, in the following fields: constitutional adjustments, national development program, standard of living, provincial development and intangible values.

In addition to the main report, several appendices were prepared on particular subjects. With the presentation of its report the duties of the Council were complete and it has, in effect, ceased to exist.

Department of Reconstruction and Rehabilitation.-A Department of Reconstruction, Labour and Public Welfare was set up in 1944 but was replaced on Nov. 2, 1944, by the Department of Reconstruction and Rehabilitation. This Department has two divisions--Reconstruction and Rehabilitation.

The Division of Reconstruction has the function of co-operating in any program that may be under consideration by the Dominion Government, and of initiating projects contemplated by the Government of Saskatchewan looking to the permanent development of the Province and to the raising of the standard of living of the people. Under this Division are: (a) Committee on Rural Housing, which will
report on a program for the development and improvement of rural homes and farm buildings. Plans are being prepared to show the type of home most suitable for farming conditions; methods of improving farm homes that are presently constructed; proposed water supply and sewage dispoal systems. (b) Committee on Rural Electrification, which will study the whole question of rural electrification and the distribution of power to small hamlets and villages not yet provided with this service. (c) Committee on Co-operative Farming, which will report on a practical program of co-operative farm development. (d) An investigational laboratory has been established to test the various natural resources of the Province for industrial use.

In addition to the establishment of the Department of Reconstruction and Rehabilitation, other legislation in the field of reconstruction was passed at the 1944 Sessions of the Saskatchewan Legislature including measures concerning health, labour, education and agriculture.

Industrial Reconstruction.-A Department of Co-operation and Co-óperative Development was established which is setting up a research service to enquire into the methods of operation of co-operative enterprise.

The Minister of Natural Resources and Industrial Development is empowered to take over any mine or quarry; mining machinery; lumber mill; or building machinery, dam, etc., which are or can be used for the development of water power, and to operate them in the interest of the Province; also to develop and utilize the resources of the Province which are still Crown property. The Government has already purchased a power company and other basic manufacturing enterprises and is planning to increase the scope of its activities.

The Provincial Treasurer is empowered to create a Reconstruction and Rehabilitation Fund of up to $\$ 5,000,000$ (in addition to amounts that may be appropriated by the Legislature for reconstruction and rehabilitation) to meet capital expenditures. A $\$ 1,000,000$ issue of 3 p.c. industrial development bonds has been over-subscribed.

Housing.-Recent amendments to the City and Town Act permit municipalities to enter into agreements with Wartime Housing Limited to assist in the construction of houses in the period following the War, and also permit municipalities to reduce the taxes that ordinarily would be assessed against properties. A further amendment to both Acts permits the city or town to make expenditures out of its general funds for the construction of houses or the renovation of existing dwellings, or for providing any other suitable accommodation if the need should arise after the War. In all of the foregoing instances, the consent of the Local Government Board is required.

An Act was passed at the 1945 Session of the Legislature permitting cities, towns and villages in the Province to carry out such acts as are contemplated by the National Housing Act of 1944 and which may be performed by municipalities. These powers are largely restricted to the clearance of slum areas.

Rehabilitation.-It has been the primary aim of the Division of Rehabilitation of the Department of Reconstruction and Rehabilitation to facilitate and supplement the rehabilitation program of the Dominion Government. It has set up
voluntary citizens' committees in many communities throughout the Province, to assist local servicemen in their return to civil life. In addition, the Province itself is making efforts to aid in the rehabilitation of its ex-service men and women.
(1) In the field of education, a grade-eleven streamlined course given under the Domin-ion-Provincial Canadian Vocational Training Program has been approved.
(2) In the field of land settlement-(a) The sale of Crown lands has been frozen until the men come home in order that those overseas shall have first choice. (b) The Provincial Government is trying to arrange for the clearing of large tracts of wooded land for the settlement of veterans. (c) In the case of veterans wishing to settle on Crown lands the Province is endeavouring to make arrangements with the Dominion Government whereby the Province would lease the land to the veteran on a 33 -year renewable lease with the option to purchase, the price to be determined by the productive behaviour of the land over a period of years. (d) The Province is trying to make arrangements with the Dominion Government so that a veteran wishing to settle on a co-operative farm would receive the same help as he would get under the Veterans' Land Act if he were buying a farm individually.
(3) In the housing field, under amendments to the City Act and the Towns Act the council of a city or town is authorized to enter into an agreement with the Director of the Veterans' Land Act, limiting for a period not exceeding 25 years the amount of any taxes which may be levied annually by the city on land or buildings held by the Director or by a veteran under an agreement of sale with the Director.
(4) The Provincial Government proposes to set up veterans' workshops at the larger centres. These workshops would be for the employment of partially disabled veterans whose disability prevents their steady employment; the opportunity of earning reasonable wages in spite of their disability will enable them to regain their confidence and to acquire skill.
Alberta.-The Alberta Post-War Reconstruction Committee, set up on Mar. 30, 1943, conducted an investigation of the provincial economy and its post-war problems, in co-operation with the Research Council of Alberta. Based on the work of its eight sub-committees, an Interim Report was presented to the Legislature on Mar. 10, 1944, recommending a variety of developmental projects and an extensive social welfare program. Reforestation, land policy, irrigation, education and teaching, municipal works projects, industrial expansion, housing, and agricultural and industrial markets were among the subjects covered. The work of the Committee ended in April, 1945, with presentation to the Legislature of a final report.

Implementation of the Committee's recommendations will be the responsibility of a new Department of Economic Affairs, established by Act of the 1945 Session. The Department is given power to initiate and sponsor projects designed to aid in rehabilitation and reconstruction. It will serve also as a co-ordinating organization within the Government to speed plans and programs involving the various other Departments, and assist generally in the creation of a balanced agri-cultural-industrial economy in the Province. The Act further provides for the establishment of an advisory .or administrative Commission.

In a brief to the Dominion House of Commons Committee on Reconstruction and Re-establishment, the Premier outlined a potential $\$ 250,000,000$ program that might be undertaken covering expenditures for roads, public buildings, irrigation projects, and social services. As a solution for the key financial problem, he proposed a National Finance Commission that would control all money and credit. The Premier also pointed out the extent to which Dominion post-war trade, taxation, railway and civil aviation policies would affect Alberta.

At the recommendation of the Post-War Reconstruction Committee, the Alberta Power Commission was created in 1944 as the basis for a provincial system of hydro-electric power generation, transmission, distribution and sale. It has authority to acquire existing properties and to set up rural power districts. A study of rural electrification is now in progress.

In an effort to discover existing plans for reconversion and reconstruction, the provincial Post-War Survey Management Committee, in January, 1945, commenced a survey of households, farms, business and industrial establishments, municipal governments and public utilities. The findings are expected to give a valuable indication of post-war production facilities and consumer demand.

The 1944 Session of the Alberta Legislature passed considerable social welfare legislation including free hospitalization for maternity patients, a Child Welfare Commission, and a separate Department of Public Welfare. An Order in Council of June 30 set up the Veterans' Welfare and Advisory Commission under this Department to assist returned service men, maintain contact with Dominion agencies, and administer the Alberta Land Settlement Scheme. If Dominion authorities agree, that scheme will provide veterans with clear title to a half section of land after 10 years occupancy, subject to certain low charges during that period.

The 1945 Session has now under discussion measures to refund and ultimately retire the provincial debt, enable taxation to be imposed on the output of certain freehold mineral right properties, assist agriculture, and encourage the post-war housing industry.

The Alberta Post-War Reconstruction Fund was established in 1943, at which time an initial sum of $\$ 1,000,000$ was voted for use in post-war projects; a further $\$ 1,000,000$ was voted in 1944.

British Columbia.-The following organizations have been established by the Government of British Columbia in the field of reconstruction: the Bureau of Post-War Rehabilitation and Reconstruction, which in 1944 replaced the Post-War Rehabilitation Council; the Interdepartmental Advisory Committee on Industrial Development and Rehabilitation; and the British Columbia Industrial and Scientific Research Council.

Bureau of Post-War Rehabilitation and Reconstruction.-This Bureau has been set up by the Province to co-ordinate all provincial services concerned in post-war activities; and to collaborate with Dominion Departments and other provinces, with municipal councils, and with private enterprise, with a view to formulating plans to create and maintain productive employment and to develop the human and material resources of the Province. An Interim Report and a Supplementary Report prepared by the Post-War Rehabilitation Council and also a Summary of Recommendations contained in the Reports have been published.

The Supplementary Report considers and makes recommendations in the following fields: co-ordination of post-war activities and conversion of war industry, regional planning, industrial development, research, land settlement, forests and parks, public works, returned men and displaced war workers, vocational training, and Dominion measures.

As a result of these recommendations, a Regional Planning Division of the Bureau has been established for the purpose of co-ordinating information both in the Departments and in the ten Regional Divisions of the Province regarding the resources and requirements of the various regions. This work is now under way. Plans have been formulated by the Bureau of Economics and Statistics to prepare three informative handbooks for industry on the basis of information gained from this study.

Interdepartmental Advisory Committee on Industrial Development.-This Committee functions as a clearing house for administrative problems in the field of industrial development in which the interests of the various Departments of Government are concerned. It works with the Bureau of Post-War Rehabilitation and Reconstruction in an advisory capacity. It has appointed the Sub-committee on Reconversion of Industry which has sponsored special surveys in various industries to study the problems of reconversion.

British Columbia Industrial and Scientific Research Council.-The Council acts as a clearing house to: (1) co-ordinate the work of research units and avoid duplication; (2) initiate and generate new research work; (3) relate research work to other problems of industrial rehabilitation in the post-war period; (4) apply the results of research to the creation of new industries and trade expansion programs. Research problems studied by the Council are undertaken on the recommendation of one of five Technical Advisory Committees, namely, Agriculture, Forestry, Fisheries, Mining and Metallurgy, Power and Irrigation. An Industries Advisory Committee has been formed to ensure industrial application for the research projects of the Technical Advisory Committees, to provide assistance for existing secondary industries, and to aid in the establishment of new industries in the Province.

Post-War Program.-Some of the specific projects already approved or now under consideration are as follows:-

Electrification.-A Rural Electrification Committee has been established to study the problem of the expansion of electrical services in rural areas. The Committee presented a Progress Report in 1944 and a Final Report in January, 1945. The 1945 Session of the Legislature has passed a Bill to establish a Hydro-Electric Commission. The Commission is authorized to acquire and consolidate companies now serving various communities, and to develop electric power throughout the Province.

Agriculture.-Soil surveys have been carried out over more than $3,651,000$ acres and 275,000 acres have been mapped and surveyed in a continuing Land Utilization Survey. The Government has been authorized to reserve 1,000,000 acres of Crown lands which will be granted to British Columbia veterans settling on farms under the Dominion Veterans' Land Act.

Mining.-The Department of Mines is authorized to make grants of up to $\$ 500$ to prospectors. In addition the Government is authorized to establish training schools for prospectors.

Forestry.-The Government has approved a special vote of $\$ 50,000$ for forestry research.

Financial Provisions.-The Government is authorized to borrow up to $\$ 15,000,000$ for the creation of a fund to be used for post-war reconstruction in the Province and $\$ 5,000,000$ for expansion of facilities at the University of British Columbia.

## PART II.-VETERANS AFFAIRS

## Section 1.-The Work of the Department of Veterans Affairs

The Department of Veterans Affairs was established in October, 1944, to deal exclusively with matters of interest to veterans. Formerly the work was divided among several Government Departments with the major share being handled by the Department of Pensions and National Health. Since its inception in 1928 this latter Department had dealt with matters concerning veterans. Until the beginning of the present war these matters consisted chiefly of pensions, treatment, and War Veterans Allowances. The basis of the earlier organization and the problems that were faced and met after the War of 1914-18 are dealt with at pp. 755-758 of the 1943-44 Year Book.

As the number of veterans of the present war and the legislation concerning them grew to greater proportions, the work of the Department of Pensions and National Health increased and became more varied and in November, 1940, a rehabilitation section was set up under the direction of an Associate Deputy Minister.

It soon became evident, however, that the work of re-establishing the veterans in civil life and, at the same time, guarding the national health, was too much for one Department. This led to the division of the former Department of Pensions and National Health into two new Departments-the Department of Veterans Affairs and the Department of National Health and Welfare. (See Chapter XII.)

While the Department of Veterans Affairs deals exclusively with matters of interest to veterans, certain legislation concerning them is, of necessity, dealt with by other Departments. Part I of the War Service Grants Act relating to gratuities, for instance, is administered by the Paymaster-General of the appropriate Branch of the Department of National Defence. As the calculation of gratuities is based upon the length of service, it is logical that only that Department would have the records necessary to calculate such gratuities accurately.

Similarly, the Department of Veterans Affairs does not place veterans in employment, although it does find opportunities for the seriously disabled. The Department of Labour, charged with the administration of the Reinstatement in Civil Employment Act, has Employment and Selective Service Offices strategically located in every part of Canada. These offices co-operate closely with the Department of Veterans Affairs in placing veterans in employment.

Facilities for training also are provided by the Department of Labour in co-operation with provincial Departments although the grants and fees are paid through the Department of Veterans Affairs which also approves the veterans program and the courses of study.

With these exceptions, the rehabilitation legislation is administered through the Department of Veterans Aff airs and its decentralized offices strategically located throughout the Dominion.

Briefly, the Department deals with matters relating to pensions, treatment (medical and dental), training and education, the Veterans' Land Act, re-establishment credits, veterans insurance, war veterans allowances and the dual-service pension, the social security provisions of the Post-Discharge Re-establishment Order, employment opportunities for the seriously disabled and the counselling of exservice men and women.

In the following sections the work of the Department is discussed from a subject standpoint.

## Section 2.-Discharge Gratuities and Rehabilitation Allowances in the Present War

Upon his discharge from the Armed Forces an ex-service man, with six months or more of service, is given an amount equal to one month's pay and allowances for dependants, which were paid during his service, as a rehabilitation grant. A clothing allowance of $\$ 100$ (increased from $\$ 65$ with effect Aug. 1, 1944, and payable to all ranks) is provided also to aid in re-establishment in civil life. In addition, he receives any balance of pay due him and any deferred pay. These payments, made by the Department of National Defence, are not operative in the cases of those who are discharged for reasons of misconduct.

War Service Grants Act.-Since October, 1944, as a part of discharge procedure, service men and women have completed application forms for the gratuities to which they are eligible under the War Service Grants Act of August, 1944.

Part I of this Act provides a basic gratuity of $\$ 7 \cdot 50$ for each 30 days qualifying service and an additional 25 cents for each day of qualifying service outside the Western Hemisphere. The Western Hemisphere is defined as: "the continents of North and South America, the islands adjacent thereto and the territorial waters thereof including Newfoundland, Bermuda and the West Indies, but excluding Greenland, Iceland and the Aleutian Islands"

In addition there is a supplementary gratuity, payable at the rate of seven days pay and allowances of the rank held upon discharge, for each six months of service overseas.
"Overseas service" is defined as "any service involving duties required to be performed outside the Western Hemisphere and includes service involving duties required to be performed outside Canada and the United States of America and the territorial waters thereof in aircraft or anywhere in a seagoing ship of war"

In computing the benefits under this Act, no period during which a service man was not drawing Active Service rates of pay is counted nor is any service man eligible for these benefits:-
(1) If he has been cashiered or dismissed from the Service by sentence of a courtmartial.
(2) If he has been deprived of his commission or warrant by reason of misconduct.
(3) If he has been called upon to retire or to resign his commission or warrant by reason of misconduct.
(4) If his resignation is accepted by reason of misconduct.
(5) If he has been sentenced to be discharged with ignominy or, in the Naval Service, to dismissal with or without disgrace.
(6) If he has been discharged by reason of having been convicted by the civil power or by court martial during his service.
(7) If he has been discharged for misconduct.

Payment of the basic and supplementary gratuities is made by monthly cheque not exceeding the amount of the pay and allowances drawn for the last clear month while in service.

Dependants of service men killed on Active Service are eligible for any gratuities earned by the deceased service man for his service, and if no dependants qualify the gratuities become a part of the service man's estate and are administered by the Estates Branch of the Department of National Defence. The calculation and payment of gratuities is also the responsibility of that Department.

Re-establishment Credit.-Part II of the Act provides for an additional amount equal to the basic gratuity, which is known as the re-establishment credit.

A statement of gratuities is forwarded to the ex-service man with his first gratuity cheque and a copy is also forwarded to the Department of Veterans Affairs which immediately sets up a ledger sheet crediting that ex-service man or woman with an amount equal to the basic gratuity shown on the statement.

All or any part of the re-establishment credit may be used by the veteran within a period of ten years from the date of his discharge, provided the veteran is resident in Canada and the Minister is satisfied that the credit will be used for his re-establishment in Canada for one or more of the following purposes:-
(1) The acquisition of a home-
(i) under the National Housing Act, 1944, in an amount not exceeding two-thirds of the difference between the lending value of the home and the amount of the loan made under that Act; or
(ii) if not under the National Housing Act, 1944, in an amount not exceeding twothirds of the difference between the appraised value of the home as approved by the Minister or the purchase price, whichever is the lower, and the amount of the encumbrance or encumbrances thereon, if any.
(2) The repair or modernization of his home, if owned by him.
(3) The purchase of furniture and household equipment for his domestic use in an amount not exceeding two-thirds of the cost thereof.
(4) The provision of working capital for his profession or business.
(5) The purchase of tools, instruments or equipment for his trade, profession or business.
(6) The purchase of a business by him in an amount not exceeding two-thirds of the equity fund required for such purpose.
(7) The payment of premiums under any insurance scheme established by the Government of Canada.
(8) The purchase of special equipment required for his educational or vocational training.
(9) Any other purpose authorized by the Governor in Council.

Application for all or part of this credit for one or more of the specified purposes is made through the offices of the Department of Veterans Affairs.

Benefits received by an ex-service man or woman for vocational training, higher education or under the Veterans' Land Act are charged against re-establishment credit. This, however, does not mean that the amount of re-establishment credit governs the amount of benefits available to a veteran under the Veterans' Land Act, or for training or education.

## Section 3.-Post-Discharge Treatment

## Subsection 1.-Treatment Facilities

Statistics of veterans hospitals administered by the Department of Veterans Affairs are given in the Public Health Chapter at pp. 834-835 of this volume. A program of extensive alterations and additions at the various hospitals has been actively pursued and the prospective bed capacities at the various centres when this program is completed are listed in Table 7. The following paragraphs of this Subsection explain the main features of this program.

A new 250 -bed hospital of permanent construction is ready to be commenced at Camp Hill, Halifax. A 160-bed unit was added to Lancaster Hospital at Saint John. A new mental hospital, of 250 beds, fireproof and of permanent construction, is nearing completion at St. Anne's Hospital at St. Anne de Bellevue. A unit of 235 beds was opened at Ottawa. At Toronto, a 360 -bed pavilion to supplement the bed capacity at Christie Street Hospital, was commenced, and considerable progress was made with the plans and details of the large 1,450-bed new hospital at Sunnybrook. At London, Ont., a new mental infirmary of 300 beds was approved, together with a new mental reception centre of 150 beds, for the active treatment of cases of acute psychosis. Two mental colonies to provide occupational activity for chronic mentals were established at Westminster Hospital, London, with a total accommodation of 300 beds. The active treatment pavilion at that point was enlarged to provide an additional 40 beds, together with additional operating room, X-ray, and laboratory facilities. A Nurses Home for 200 nurses was also approved.

At Winnipeg, the construction of two pavilions of 216 beds each was commenced during the year, and the new clinical wing, providing adequate operating room and clinical facilities, together with a well-equipped laboratory, was completed. Construction is nearing completion of a unit of 186 beds at Regina. In Calgary, extensions to the new Colonel Belcher Hospital were commenced to provide additional beds and facilities. In Edmonton, two additional pavilions were erected to provide 240 beds. In Vancouver, construction was commenced on the new Chest Pavilion to provide 160 beds, together with adequate diagnostic and treatment facilities for chest cases and the extension to the new Shaughnessy Hospital to provide an additional 276 beds was also commenced.

Health and Occupational Centres.-In order to provide adequate facilities for active convalescence, approval was obtained to establish Health and Occupational Centres in connection with most Departmental hospitals. Work was commenced on the Centres at Ottawa and London, and sites were selected at Toronto, Montreal, Saint John, Halifax and Vancouver, for similar types of units. The complete program is expected to provide 1,800 beds.

Veterans Care.-While the Department provides facilities within its departmental hospitals for domiciliary care of veterans who are permanently or temporarily incapacitated, a program was commenced to establish ex-service men in comfortable homes in reasonably close proximity to departmental hospitals, rather than in the hospitals themselves. Such homes are now available in Vancouver, Calgary, Edmonton, Winnipeg, Toronto, Saint John and Halifax.

Mental Reception Units.-In order to provide active remedial treatment for mental cases, the Department has embarked on a program to establish this type of unit in most of the provinces. In Toronto, Montreal and London, they are being
erected with the view to being staffed and maintained by the Department. In Vancouver, Edmonton, Saskatoon, Winnipeg and Halifax, negotiations are under way with the universities and the provincial mental health authorities for the staffing and running of this type of centre. Preliminary arrangements state that the Department would erect and equip the buildings and turn them over to the proper provincial authority for administration, with the proviso that the Department would retain priority on that number of beds required to meet departmental needs.

The problem of providing service to the neuro-psychiatric case, of which large numbers have been discharged from the Services, has been actively dealt with. A special unit designed on the pattern of the Neurosis Centres in Great Britain, was set up at Scarboro Hall (the Guild of All Arts) about fifteen miles from Toronto. In addition, the psychiatric services in all departmental hospitals have been supplemented as completely as the short supply of trained psychiatrists will permit.

## Subsection 2.-Prostheses and Surgical Appliances

The Orthopædic and Surgical Appliances Division of the Department of Veterans Affairs, set up in August, 1918, has, as its first responsibility, the provision of prostheses and surgical appliances. It operates a main manufacturing centre at Toronto and eleven district depots from coast to coast with facilities for measuring, fitting, altering and repairing artificial limbs, orthopædic boots, splints, braces and artificial eyes. In addition, minor orthopædic appliances such as trusses, glasses, elastic hosiery, etc., are supplied through purchase from private manufacturers.

Under P.C. 4465 the Division supplies prostheses and surgical appliances free of charge to veterans who are eligible and also supplies, on a repayment basis, other Government Departments [such as the Department of National Defence and the Department of Mines and Resources (Indian Affairs)] the Canadian National Railways and, under P.C. 2311, provincial Workmen's Compensation Boards.

The Division carries out considerable research on prostheses, co-operates in this work with the National Research Council, and keeps abreast of developments in other countries. Glass for artificial eyes had been a pre-war German monopoly, but glass of equal quality has been developed which has adequately replaced the formerly imported product.

The Division previously supplied the prosthetic needs of veterans of the War of 1914-18, including 2,411 leg amputations and 967 arm amputations. This number has been increased by more than 1,700 amputation casualties of the present war. The total number of patients receiving prosthetic attention is in excess of 30,000 per year.

The Division is also the liaison office between the Department and the Canadian National Institute for the Blind, which gives care to blind veterans, of whom over 70 cases have been reported from the present war. The Division also maintains lisison and co-operates with the National Institute for the Deaf and the Hard of Hearing, and the War Amputations of Canada.

## Subsection 3.-Dental Services

Like the parent Department of Soldiers Civil Re-establishment, the Dental Branch of this Department was created following the War of 1914-18 in order that ex-members of the C.E.F. might be given this all-important service during the transitional period of their return from army life to civilian occupations.

In the late summer of 1919 the establishment of the Dental Branch was authorized and in October, 1919, the Director of Dental Services was appointed and the formation of the Dental Branch was undertaken. This involved the setting-up of dental clinics in the various hospitals and sanatoria then operated by the Department, also independent dental clinics in strategic centres of population throughout Canada. In some instances, fully or partially equipped clinics were taken over from the Department of Militia and Defence and for others the necessary equipment had to be obtained and installed, and personnel for the operation of all clinics selected and appointed. In July, 1920, the Department had in operation approximately thirty clinics where dental treatment was available for ex-members of the C.E.F. eligible under the various qualifying classifications. In addition to these clinics the services of civilian dentists in the towns, villages and rural areas were utilized, providing authorized treatment on a fee basis. Until Mar. 31, 1921, the services supplied by the Branch were limited to vocational students, pensioners for direct dental injury or diseases incurred during service, and those undergoing courses of authorized treatment as in- or out-patients who were certified to require dental attention for the efficacy of such treatment. On that date responsibility for the completion of post-discharge dental treatment, for which all ex-members of the C.E.F. were eligible, was transferred from the Department of Militia and Defence to the Department of Soldiers Civil Re-establishment. Within the next two years this latter treatment and that for vocational students was practically completed and there was a gradual lessening in the demand for dental treatment; many of the dental clinics were closed and the personnel, to a large extent, released.

Between the years 1923 and 1938 the demand for services fluctuated very little; however, during this period at the request of the Department of Justice the responsibility of the administration and supply of dental treatment for all members of the Royal Canadian Mounted Police was undertaken, which arrangement is still in effect.

With the declaration of war in September, 1939, the demands made on the Dental Division of the then Department of Pensions and National Health again increased and in the winter of 1939, following new legislation, many ex-members of the C.E.F. became eligible for dental treatment with the result that it was again necessary to expand facilities for adequate treatment. To-day, besides dental treatment for ex-members of the C.E.F. of the War of 1914-18, and the R.C.M.P., treatment is provided for all ex-members of the Active Force following discharge or retirement, and for members of the Canadian Armed Forces engaged in the present war who, at the request of the Department of National Defence or the government of any other Allied country, are hospitalized for medical or surgical treatment by this Department. These include members of the armies, air forces and navies of the United States, Poland, Norway, the Netherlands, also Imperials, New Zealanders and Australians of the British Commonwealth Air Training Plan who are training or stationed in Canada. Treatment is also supplied to the Merchant Marine, Alternative Service Workers, Prisoners of War, Forestry Project Personnel and numerous other cases when requested.

During the past two years many clinics were established and more have been authorized which will be fully equipped and manned when sufficient dental equipment and experienced personnel are available.

The following ex-members of the Canadian Armed Forces are eligible for free dental treatment:-
(1) All who are shown to have dental requirements listed on examination by the Canadian Dental Corps at the time of discharge or retirement.
(2) Trainees and those entitled to training or other benefits under the Post-Discharge Re-establishment Order who must have dental treatment in order to avoid any interference with their training because of an adverse dental condition.
(3) Pensioners for direct dental injury or disease, gastric ulcer, duodenal ulcer, gastritis, and allied conditions; hand, and hand-and-arm amputees.
(4) Pensioners hospitalized for pensionable disabilities.
(5) Pensioners being treated as out-patients.
(6) Non-pensioners with meritorious service.
(7) Pensioners requiring institutional care.
(8) Ex-members of the Armed Forces who served in the present war providing such treatment is authorized and commenced within one year of discharge.

Classes (1), (2) and (8) above refer only to ex-members of the Armed Forces and those of auxiliary units who served in the present war with the German Reich, while Classes (3) to (7) include ex-members of the C.E.F. and the Active Force.

## Section 4.-Pensions

## Subsection 1.-The Pension System as it has Developed in Canada

Background of Canadian Pensions Legislation.-The Pension Act of 1919 established a Board consisting of three members vested with exclusive power and authority to adjudicate upon pension claims and to award pensions for disability or death related to military service in the War of 1914-18. The statute, with appropriate amendments, has been made applicable to claims arising out of the present war.

The Canadian Pensions Legislation as it developed following the War of 1914-18 is outlined at pp. 759-760 of the 1943-44 Year Book. The machinery which then took form has been adapted and applied to present circumstances.

In 1941, Parliament appointed a select committee to consider the general provisions of the Pension Act and ex-service men's problems and to make suitable recommendations in regard thereto. After consideration of the Committee's report, which was framed to meet present-day conditions and based on experience gathered in the administration of the Pension Act since the War of 1914-18, Parliament decided to make the provisions of that statute, with appropriate amendments, applicable to claims arising out of the present war.

Summary and Procedure in Regard to Application.-The provisions of the Pension Act, as originally enacted in 1919, although wide and generous in their scope as compared with pension legislation in other countries, have been considerably
broadened and extended by various amendments enacted from time to time during the past twenty-five years. Amendments to the statute since 1919 have:-
(1) substantially increased the actual amounts of pension payable;
(2) widened the grounds on which pension might be awarded;
(3) authorized certain additional benefits, such as clothing allowances for pensioners compelled to wear artificial appliances, allowances for parents, and made special provisions for disability due to tuberculosis;
(4) introduced the principle of personal appearance and public hearings for applicants;
(5) with respect to the present war, provided that service anywhere outside of Canada should be regarded as service in a theatre of actual war.
The procedure at present to be followed in dealing with applications for pension arising out of the War of 1914-18 is laid down in Sects. 51 to 61 of the Act. Briefly, it consists of three stages for applicants whose claims are not previously granted. On first application, the evidence presented is considered at what is known as a first hearing. If the Commission's decision is adverse to the applicant, he is entitled to a second hearing, provided he applies within ninety days of the first hearing. When presenting his claim for second hearing, he is required to include all disabilities which he claims to be due to his military service. Prior to second hearing, the applicant is furnished with a complete and detailed summary of all evidence available in the departmental records pertaining to his case. He is given every opportunity to review this evidence to include any additional evidence he can secure, and is allowed six months, from the date of mailing the summary of evidence, in which to prepare his claim. When notified by the applicant or his representative that the claim is ready for hearing, the Pensions Commission then gives a decision on second hearing. If this decision is adverse to the applicant, he then has the right to appear before an Appeal Board of the Commission sitting in his district and to call witnesses if he desires. The judgment of the Appeal Board is final and the application cannot be considered again, except by special permission of an Appeal Board when it is shown, to the satisfaction of such a Board, that an error has been made by reason of evidence not having been presented or otherwise.

This procedure has proved eminently satisfactory for claims arising out of the War of 1914-18. Not only is the applicant made fully aware of the reasons which preclude entitlement to a pension, but he is given adequate expert assistance by the Veterans' Bureau or by the service bureaus of ex-service men's organizations in the preparation of his claim. It has resulted in bringing to a finality many claims in which applicants have realized that the evidence of continuity with service of the condition causing disability or death was insufficient.

The procedure affecting cases of the present war, however, has been revised. Under P.C. 9553 of December, 1944, the time limits for the preparation and presentation of applications for current cases have been suspended for the duration of the War and one year afterwards. When a claim has not been wholly granted, the applicant is advised of his right, under the new legislation, to renew his application without the imposition of any time limits and, when he is ready, he may inform the Commission of his intentions relating to the further prosecution of his claim, either by renewed application or by appeal. The procedure followed is very much in line with that followed in cases of the War of 1914-18 other than that there is no time limit imposed and an applicant may by-pass the "renewal hearing" and take his case before an Appeal Board sitting in his district.

The Canadian Pension Commission is also responsible for the administration under the Pension Act of a number of Orders in Council which provide for awards to merchant seamen, salt-water fishermen, civil defence workers, Corps of Civilian Fire-Fighters, Auxiliary Service personnel, Dominion Government employees and Special Constable Guards of the Royal Canadian Mounted Police.

## 1.-Pensions in Force as at Mar. 31, 1918-45

| Year Ended Mar. 31- | To Dependants |  | For Disability |  | Totals |  |

| 1943 | 2,748 | 1,949,128 | 3,917 | 1,362,110 | 6, 665 | 3,311,238 |
| 1944 | 5,332 | 3,794,258 | 7,231 | 2,693,855 | 12,563 | 6,488,113 |
| 1945 | 11,419 | 8,333,406 | 15,506 | 5,382,842 | 26,925 | 13,716,248 |

Gallantry Awards.-Gallantry awards, such as the Victoria Cross, Military Cross, Distinguished Flying Cross, Distinguished Conduct Medal, Conspicuous Gallantry Medal and Distinguished Flying Medal, which carry with them pecuniary grants, were formerly paid by the United Kingdom Government. However, by Order in Council, P.C. 4736 dated June 17, 1943, the Canadian Government, through the Canadian Pension Commission, assumed the payment of these grants out of Canadian funds for all awards arising out of the present war and the United Kingdom was reimbursed for such awards already paid.

Veterans' Bureau.-As the years went by, following the War of 1914-18, more and more apparent became the need for some agency charged with the duty of advising veterans regarding pension rights, assisting them in procuring evidence relevant to their claims and presenting their cases before the pension adjudicating
bodies. Applicants who had been refused pension were unable in most cases to understand the reasons for such refusal and felt that, if they had proper legal assistance, they would be able to present their cases in such a way as to ensure favourable decisions. Many solicitors gave time gratuitously to this work but in these cases, as well as in the cases where services were charged for by solicitors, the result was usually unsatisfactory, because the preparation and presentation of pension cases is a highly specialized professional art requiring knowledge of one of the most difficult Acts on the Statute Books, knowledge of the interpretations placed upon the Act by the Canadian Pension Commission and, above all, long medico-legal experience. The vast majority of contentious pension cases arise out of disease or a complication of diseases rather than out of wounds, for in the case of wounds the disability is obvious and its connection with service certain and, therefore, pension is granted as a matter of course without contest.

The Veterans' Bureau was established in 1930 as a Branch of the Department which is now the Department of Veterans Affairs. Many of the original appointees as Pensions Advocates are still on the staff of this Branch of the Department.

The Canadian Pension Commission, as well as the Veterans' Bureau, is under the Minister of Veterans Affairs, but has its own deputy head and, apart from the incidence mentioned, the relationship between the Veterans' Bureau and the Commission is practically the same as exists between the members of the Bar and the Judiciary. The function of the Veterans' Bureau is to represent the applicant for pension and present his claim in every legitimate way to the extent of opposing Commission decisions, not only in individual cases but generally in the interpretation placed upon sections of the Pension Act.

The Veterans' Bureau maintains a Head Office staff and a District Pensions Advocate in each district throughout Canada who is responsible to the Chief Pensions Advocate. The duties of a District Pensions Advocate in regard to a particular applicant originate usually through advice to the applicant to consult him, given after an unfavourable decision upon first hearing, but the services of the District Pensions Advocate are nevertheless open to any applicant for pension whether directed to him or not. He prepares the applicant's case for second hearing or renewed hearing as the case may be, and, if the case is carried to Appeal Board, attends upon the hearing, examines the applicant and his witnesses and argues any relevant issues before the Appeal Board. Upon request of the applicant or upon his own motion, if he is dissatisfied with the decision, he reviews the case and considers whether a motion should be made to reopen the decision of the Appeal Board. He is at all times encouraged to consult, and secure the advice of, the medico-legal experts at his Head Office. His services are free of all charge to the applicant.

## Subsection 2.-War Veterans Allowances

The War Veterans' Allowance Act of 1930 provides an allowance to veterans of the South African War who were members of the Canadian Forces, or members of the Forces of His Majesty, who were domiciled in Canada at time of enlistment, provided they landed in South Africa prior to June 1, 1902, and to veterans of the Canadian Expeditionary Force of any of His Majesty's Forces or the forces of any Allies who were domiciled in Canada at the time of enlistment for the War of 1914-18.

Under the terms of amendments enacted during the year 1944 these benefits are also available to ex-members of the North West Field Force (1885 Rebellion) and to veterans of the present war.

The allowance is provided for three classes of veterans:-
(1) The veteran who has attained the age of 60 years.
(2) The veteran of any age who because of disabilities is permanently unemployable.
(3) The veteran who served in a theatre of actual war, and who is incapable of maintaining himself because of economic handicaps combined with physical or mental disability or insufficiency.

Classes (1) and (2) must have served in a theatre of actual war, or be in receipt of pension or have received a final payment in commutation of pension. Class (3) applies only to veterans who served in an actual theatre of war.

Other conditions of eligibility are as follows:-
(1) Applicants must have been domiciled in Canada for the six months immediately preceding date of commencement of allowance.
(2) Allowance is not payable outside the Dominion of Canada.
(3) Old Age Pension and War Veterans Allowance cannot be paid at the same time.
(4) Reduction in allowance may be made when the recipient is admitted to an institution for treatment.

The amount of allowance payable is discretionary with the Board, but may not exceed:-
(1) Twenty dollars per month to a single veteran, whose total income, including the allowance, must not exceed $\$ 365$ per annum.
(2) Forty dollars per month to a married veteran or a widower with children, whose total income including the allowance must not exceed $\$ 730$ per annum.
Nore.-Application for the allowance should be made to the nearest district office of the Department of Veterans Affairs. Final decisions are made by the War Veterans' Allowance Board, Ottawa, but aplications must be made through the nearest office of the Department.

In addition to the above rates, the amending legislative measures of 1944 authorize supplementary allowances up to $\$ 10.41$ per month in the case of single men, and $\$ 20.83$ in the case of married beneficiaries. These supplements, when there is no income from other sources, bring the total income to $\$ 365$ and $\$ 730$, respectively, per annum.

Legislative measures were enacted in 1944 authorizing similar allowances to veterans' widows and veterans' orphans on practically the same basis as to rates and the condition of eligibility in these cases is that the veteran himself was eligible during his lifetime.

Under the terms of snother legislative measure, the veterans who do not meet the requirements of eligibility in respect of military service in either the War of 1914-18 or the present war but who have served in both wars may be admitted to similar benefits as those described above; likewise, their widows and theirorphans.

Since the enactment of the legislation a total of 37,275 awards have been made by the War Veterans' Allowance Board.

As at Feb. 28, 1945, the annual liability was $\$ 10,096,139$ and the number of beneficiaries under the above legislation was 26,262 , made up as follows: veterans of the N.W.F.F., 89; veterans of the South Africa War, 533; veterans of the War 1914-18 (C.E.F.), 23,494; veterans of the present war, 15; widows, 2,098; orphans, 12; and pensioners under Dual Service Pension Order, 21. Of the total number, 15,018 have been awarded a supplementary allowance.

## Section 5.-Post-Discharge Re-Establishment Grants and Benefits

The backbone of the rehabilitation program is the Post-Discharge Re-establishment Order P.C. 5210, of July 13, 1944. This Order in Council replaces P.C. 7633 of Oct. 1, 1941.

Under this Order the Minister of Veterans Affairs, subject to certain provisions of the Order, may authorize the payment to a discharged person of one of the following benefits:-
(1) Out-of-Work Benefit.-For any period during which a discharged person is capable of, and available for work, but unable to obtain suitable employment. Available for length of service up to one year within eighteen months following discharge.
(2) Vocational or Technical Training.-Where a discharged person is pursuing vocational or technical training or other educational training which has been approved by the Department as training which will fit him, or keep him fit for employment or re-employment, or will enable him to obtain better or more suitable employment. Available, if applied for, within one year after discharge or one year after cessation of hostilities, whichever is the later date.
(3) Awaiting Returns from Enterprise.-Where a discharged person has established himself in a farm or business enterprise on his own account from which sufficient income to maintain himself and his family is not immediately forthcoming. Available for length of service up to one year. Applications must be submitted within one year following discharge or cessation of hostilities, whichever is the later date.
(4) Temporary Incapacitation.-Where a discharged person is unable through temporary illness to accept work or to take training, but is not entitled to care under the Department's treatment regulations. Available for length of service up to one year within eighteen months following discharge.
(5) University Training.-Where a discharged person obtains admission to a recognized university for a course, either undergraduate or post-graduate, approved by the Department. Available for length of service, subject to satisfactory progress. Education normally expected to begin within fifteen months of discharge.

The Post-Discharge Re-establishment Order permits the Minister of Veterans Affairs to authorize maintenance grants with additional allowances for dependants on the following scale, while taking vocational or technical training, or continuing education:-

> Basic grant, $\$ 60$ per month for a single veteran; $\$ 80$ per month for a married veteran.
> Additional monthly allowance for person in lieu of a wife....................... \& 18.20
> Additional monthly allowance for one child........................................ \& 12
> Additional monthly allowance for second child.................................... 12
> Additional monthly allowance for third child................................... \& 10
> Additional monthly allowance for each subsequent child (not in excess of three). $\$ 8$
> Additional maximum monthly allowance which may be authorized for de-
> pendent parent or parents.
> \$ 15

For those out of work, temporarily incapacitated, or awaiting returns from - private endeavour, the rate is $\$ 50$ and $\$ 70$ a month, respectively, with the same allowances for dependants.

Under the provisions of the Order all pensioners will continue to receive the full amount of their pension, and any additional pension allowances from the Canadian Pension Commission. However, when the pension, with these allowances, is less than the amount of the benefit or grant provided under the Post-Discharge Re-establishment Order, the pension is supplemented by a grant to bring the pensioner's income at least to the level of a non-pensioner. In the case of a pensioner who is receiving vocational training or continuing his education, a special grant is paid based on his pension rate, the grants increasing proportionately with the increased percentage of disability. This has the effect of bringing the
income of all pensioners taking vocational training or continuing education above that of non-pensioners and above the amount of their own pensions. A pensioner's right to vocational training does not cease, as does a non-pensioner's, within one year of discharge or the cessation of hostilities, whichever is the later date.

Should it be necessary for a married person, or a person to whom an allowance for dependants is being paid, to leave his home community for a vocational or technical training course, a living allowance of $\$ 5$ per week may be paid, or, under certain circumstances, transportation and other travelling expenses may be allowed.

The Post-Discharge Re-establishment Order also provides that ex-service men can benefit quickly under the National Unemployment Insurance Act on the same basis as those who had continued in private industry since the Act came into effect. According to the Order, when an ex-service man has spent 15 weeks in insured employment and has paid the contribution for that period, he shall be entitled to benefits under the Act as great as if the entire time of his military service, since the Act became effective, July 1, 1941, had been spent in the insured employment.
2.-Total Number of Awards Granted and Expenditure Made Under Post-Discharge Re-Establishment Order, Including Transfers from Inception at Oct. 1, 1941, to Feb. 28, 1945.

${ }^{2}$ Eleven months, April to February.

Awaiting Returns Benefit.-The rehabilitation program, chiefly through the War Service Grants Act and the Veterans' Land Act, encourages veterans to reestablish themselves in private enterprises. Few of these enterprises are such that they provide a living from their inception. It was to provide the veteran and his family with a sustenance allowance, until such time as his farm or business would provide sufficient income for that purpose, that this benefit was made part of the Post-Discharge Re-establishment Order.

This benefit, is payable, if necessary, up to a period equal to the veteran's service with the maximum of a year and may be applied for within the year following discharge or cessation of hostilities, whichever is the later date. The rates are as set forth in the Section dealing with the Post-Discharge Re-establishment Order.

As will be seen from Table 2, 947 veterans have received this benefit since the Order became law. The same table also indicates that the number is increasing rapidly. This is due to increased discharges and the fact that veterans are now considering the future on a permanent basis rather than wartime employment.

## Section 6.-Rehabilitation of Veterans

## Subsection 1.-Vocational Training

After the War of 1914-18 vocational training was given only to those whose disabilities prevented them from following their previous occupations and to those who joined the Forces too young to have learned a trade. Less than 8 p.c. of those who served in the Forces completed vocational training after the War of 1914-18. In marked contrast this time, the Department has authority to grant training to any discharged person, provided he has the aptitude and inclination. Terms of allowances both for the trainee and for his dependants are as set out in the Post-Discharge Re-establishment Order, P.C. 5210.

Opportunities for training apply to men and women alike, and the function is to prepare the trainee for permanent employment in a suitable occupation. In order that the training may be adapted to the needs and qualifications of each individual, occupational counsellors interview each applicant for training and advise and assist him in selecting his course.

Short try-out courses are available, if necessary, to assist in choosing a proper vocation, while reconditioning centres are being established to assist certain cases temporarily unfitted for training or employment. Seriously disabled veterans and those suffering from serious handicaps are supervised by Casualty Rehabilitation Officers from the time of hospitalization until established in occupations and care is taken that suitable vocational courses are decided upon for these persons. Co operation of the Canadian National Institute for the Blind, the Canadian Institute for the Deaf and the Hard of Hearing, and the War Amputations of Canada has been secured to assist cases coming under those three categories.

Since individuals differ widely in abilities, skills, experience, education and personal characteristics, the scope of the vocational training program has been designed to meet the needs of all. The policy has been laid down that, wherever
possible, part or all of the training should be given in industry itself. Facilities already existing, such as technical schools, private schools, and training centres established under the War Emergency Training Program, are being used and, if necessary, other special training establishments will be set up as required. Provision is made for instruction in evening or part-time classes where trainees are actually receiving their training in industrial employment, while correspondence courses may be approved for trainees who are regularly employed. To provide continuity of employment in every case possible, arrangements are made that persons trained on the job are placed in the establishment where they will be employed on completion of training, otherwise, steps are taken to arrange for final employment of the trainee in industry before his training is completed. In approving training in skilled trades, arrangements for such training are made, wherever possible, through established Apprenticeship Boards. Where possible, in all highly organized trades, the training is is.given only with the approval and co-operation of the trade union concerned.

Training is available also for those planning careers on farms, but steps are taken to avoid overlapping and misunderstanding in connection with administration of the Veterans' Land Act. The applicant is referred first to the District Advisory Committee which'deals with the Veterans' Land Act and, if he is found acceptable, arrangements are then made for training. The same policy is followed with those contemplating taking advantage of the provisions for small holdings under the Veterans' Land Act.

To assist speedy and orderly re-establishment, a program of pre-discharge training in the Armed Services is being laid down for use while troops are awaiting return to Canada. Summaries of educational, occupational and service background are prepared. Vocational counsel and occupational information is given, and the Armed Services plan to provide in-service training of a basic vocational nature.

Before discharge, each prospective trainee is made thoroughly familiar with the provisions of the Post-Discharge Re-establishment Order. The following procedure has been authorized for persons being discharged from the Army. The District Administrator is given at least ten days' notice before personnel being discharged are turned over to the Department of Veterans Affairs. Persons being discharged from district depots are referred to the Veterans Welfare Officer who arranges to have each person interviewed before leaving the depot. No person is discharged until his documents have been completed and forwarded to the District Administrator of the Department of Veterans Affairs. Each discharged person is informed of the available facilities for rehabilitation and directed to the appropriate official or office for further action. The District Rehabilitation Board decides the nature and duration of the training to be given, and admission to the school centre or to training on the job is arranged through the Dominion-Provincial Training Program. Reports are submitted to Head Office immediately on completion of training, while each case is followed up for at least six months after commencement of employment.

\section*{NUMBER OF DISCHARGED PERSONS FROM THE FORCES APPROVED FOR VOCATIONAL TRAINING INCLUDING TRANSFERS FROM OTHER BENEFITS AND THEIR DIS. POSAL, OCT. 1, 1941 TO FEB. 28, 1945. <br> | Individuals approved for training. | 7,233 |

University Training.-The policy has been laid down that the young men of to-day who are in the Armed Services will provide Canada's leaders of the future and, as a result, plans have been made under the Post-Discharge Re-establishment Order (P.C. 5210) for the fullest opportunity for university education for those Service personnel who are qualified. Eligibility regulations provide that the applicant must have been in university, or be in a position to fit himself for university entrance within fifteen months after discharge.

Educational standards of the present war indicate that the number of Service personnel in a position to pursue university education will be much higher than that prevailing at the conclusion of the War of 1914-18. In that War, 84 p.c. of the fighting personnel had only elementary school education; 13 p.c. had high or technical school training and 1.5 p.c. had attended university. An occupational history survey of 350,000 men who had enlisted up to Aug. 1, 1942, indicates that in this War 40 p.c. have had only elementary school education, 47 p.c. have had high or technical school training and over 3 p.c. are university graduates.

Service personnel through the Directorates of Education in each of the Armed Services, are already fitting themselves for civilian life while actually in the Service. The facilities for in-service education are provided through the Canadian Legion Educational Services.

The opportunity for university training is governed by length of service and scholarship. For instance, Service personnel who have served two years and who have completed the entrance requirements to the particular university they wish to attend, or who can obtain such admission within fifteen months after discharge, may be assisted for twenty-four months (three academic years) in university and, if their scholastic record is exceptionally high, they can be carried through to graduation. Where special scholarship is demonstrated, the ex-service man may be assisted to a post-graduate degree.

In addition to the maintenance grants, explained under the Post-Discharge Re-establishment Order (see p. 874), tuition, student and athletic fees may be paid.

The Post-Discharge Training Program is now well under way; 1,000 ex-service men and women were attending university in degree courses at the end of the fiscal year 1944-45. In addition, 93 have either completed or discontinued training.

## Subsection 2.-Veterans' Land Act

The principles embodied in the Veterans' Land Act are the result of a realistic study of the utilization of land in the re-establishment of war veterans in civil life. Provision is made whereby a substantial part of the cost of each establishment, other than a mortgage loan on land already owned by a veteran, is borne by the State. The underlying reasons are: first, to bring ownership and a debt-free home within the vision of the veteran, before advanced age and resultant disability overtake him; and secondly, because past experience has shown that the average veteran operating under typical conditions cannot successfully cope with the repayment terms of an indebtedness which represents approximately the full cost of estab-
lishment. At the same time the average veteran is not possessed of sufficient capital to enable him to establish at the outset the margin of equity that is generally recognized as essential to the soundness of such credit operations.

Bearing in mind that members of the Armed Services represent many occupations in addition to agriculture, provision is made in the Act to assist four different groups of veterans:-
(1) Those who have had practical farming experience and who wish to farm on purchased lands as full-time occupation.
(2) Those who have reasonable assurance of a steady dependable income and who wish to obtain a small holding settlement of an acre or more in a suburban, semi-rural or rural area, outside high-taxation districts. These small holdings may provide much of the domestic food supply, but-of equal importance-they provide a better place to rear a family than crowded urban areas.
(3) Those who have had practical experience in commercial fishing, whose normal occupation is in that industry, and who wish to obtain a small holding settlement coupled with commercial fishing in coastal and inland areas where commercial fishing is a recognized industry.

The Director of the Veterans' Land Act may contract with any veteran who has been officially certified to be qualified to participate in the benefits of the Act for the sale to such veteran of land and permanent improvements thereon, live stock, farming equipment or fishing gear, up to a total cost to the Director of $\$ 6,000$. Not more than $\$ 1,200$ of the $\$ 6,000$ may be used for the purchase of such chattels. The veteran must pay in advance 10 p.c. of the cost of land and improve-ments-plus any cost in excess of $\$ 6,000$. He then contracts to pay two-thirds of the cost to the Director of land and permanent improvements only, on an amortization plan over a period not exceeding 25 years, together with interest at $3 \frac{1}{4}$ p.c. per annum.

By the terms of this settlement contract, the veteran is relieved at the outset of $23 \frac{3}{3}$ p.c. of the cost to the Director of the land and buildings and 100 p.c. of the cost of the chattels supplied to him by the Director. It is provided, however, that the veteran may not sell or otherwise dispose of the land and buildingsor the chattels within a period of 10 years following the date of his agreement, and realize for his own benefit the difference between the cost to the Director and the amount which he contracts to pay. At the end of 10 years, if he has complied with the terms of his agreement, he will be granted title to the chattels, and title to the land and buildings when he has completed payment of the balance owing under the terms of his agreement.
(4) Those who wish to resume farming operations on land already owned by them, and who want to borrow funds to adjust their debts or re-equip or improve their farms. In such a case the advance is limited to $\$ 4,400$ with interest at 3$\}$ p.c., and to not more than 60 p.c. of the approved value of the land. No more than $\$ 2,500$ of the loan may be used for the purchase of live stock and farming equipment, and the loan for this purpose must not exceed 50 p.c. of the approved value of the land.

The administration of the Act is being progressively de-centralized. Seven District Offices and 35 Regional Offices have been opened up. The veterans point of contact is the Regional Office. At each Regional Office an Advisory Committee has been created to assist in assessing the qualifications of applicants and to approve the suitability and value of lands.

Settlements under the Veterans' Land Act up to and including 1944 were purposely restricted-due principally to shortages of farming equipment and building materials, and to good employment opportunities throughout the Dominion. Arrangements were made to secure an adequate supply of farm machinery, a large quantity of seasoned lumber, certain items of building hardware and plumbing fixtures for 1945 operations.
4.-Summary of Operations Under the Veterans' Land Act, 1942, as at Mar. 31, 1945

## 5.-Summary of Operations Carried Out under the Provisions of the Soldier Settlement Act, 1919, as at Mar. 31, 1945

| Province | Applications Made | Persons Established | Still in Scheme | Repaid Cash | Repaid <br> by Time Sale | Adjustment Cases |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | No. | No. | No. | No. |
| Maritime Provinces. Quebec. | 4,553 2,796 | 1,556 494 | 277 32 | 453 96 | 62 23 | 764 343 |
| Ontario. | 8,462 | 1,972 | 323 | 662 | 84 | ${ }_{903}$ |
| Manitobs. | 10,123 | 3,715 | 446 | 431 | 57 | 2,781 |
| Saskatchewan | 15,165 | 6,164 | 1,612 | 1,158 | 216 | 3,178 |
| Alberta. | 15,285 | 7,158 | 1,654 | 1,395 | 326 | 3,783 |
| British Columbi | 11,131 | 3,734 | 617 | 833 | 291 | 1,993 |
| Totals. | 67,515 | 24,793 | 4,961 | 5,028 | 1,059 | 13,745 |

The establishments referred to above involved an initial expenditure of $\$ 109,085,321$. Total cash recoveries as of Mar. 31,1945 , were $\$ 80,664,996$ and accounts receivable stood at $\$ 14,838,659$. Loans to the extent of 898 were paid off by soldier settlers during the fiscal year ended Mar. 31, 1945.

Having regard to the financial provision of the Veterans' Land Act, and the flexibility of applications in carrying out alternative forms of establishment, the number of veterans who will be assisted will greatly exceed the number established under the Soldier Settlement Act.

## Subsection 3.-Other Rehabilitation Facilities

During the past year considerable reorganization has taken place in the Department of Veterans Affairs to permit greater flexibility in providing the ex-service man with rehabilitation facilities.

In addition to the Veterans Welfare Officer, who continues to function in Employment and Selective Service Offices at strategic points across Canada, there have been established in the Districts, Rehabilitation Centres wherein all rehabilitation services are gathered under the initial authority of the District Administrator who holds the Superintendent of Rehabilitation responsible for implementing the provisions of the Post-Discharge Re-establishment Order and the War Service Grants Act in so far as they pertain to the re-establishment credits. There is also collaboration with Pensions, Treatment, Veterans' Land Act and the facilities of the Department of Labour. A comprehensive counselling service given by highly trained personnel is available at Rehabilitation Centres to advise and assist dischargees in drawing up and implementing a personalized re-establishment program.

In addition to these facilities for the fit dischargee, a Casualty Rehabilitation Section has been formed to operate primarily in hospitals of the Department and to "formulate plans to ensure that no disabled veteran suffers any preventable economic disadvantage" There are a few services that cannot be carried out by one government alone, or by one Department alone, and in order that all services should be welded together so as to result in efficient rehabilitation programs for each disabled veteran, the Casualty Section is procuring and training a number of Casualty Rehabilitation Officers whose duties will be to supervise and assist with the rehabilitation of not more than fifty disabled veterans at any one time in all phases of rehabilitation. The active rehabilitation process of a disabled veteran starts when he is received into a Veterans Affairs hospital and is not completed until he is placed in suitable employment.

Most important among the functions of the Casualty Rehabilitation Officers are: to assist in the selection of suitable job objectives; and by counsel and advisement, and with the co-operation of the Employment Service, to ensure placement in suitable employment. Each such officer is required to establish the best personal and professional co-operation with all other agencies concerned.

Working closely with the facilities for both the fit and the unfit are the volunteer citizens' committees operating in about 400 centres in Canada, and this assistance is augmented by aids from organized social agencies such as service clubs, welfare agencies, etc.

The employment of dischargees, with the exception of the seriously disabled, is now handled entirely by Employment and Selective Service, and the Veterans' Welfare Officers collaborate and assist where possible.
6.-Employment Placements of Ex-Service Men and Unemployment Assistance to Pensioners of the War of 1914-18, by Months, September, 1943, to February, 1945

${ }^{2}$ Includes "Clothing Received".

## Section 7.-The Veterans Insurance Act

When Canada entered the present war it was realized that men and women who went into uniform faced the possibility of returning to civilian life with their health impaired, or with some physical disability. It was realized also that, as a result of this impairment in health or disability, many ex-service men and women would be unable to provide protection for their families through the normal channels of commercial life insurance. To meet this situation, Parliament, at its 1944 Session, passed the Veterans Insurance Act.

The Department of Veterans Affairs has set up a definite program to apprise veterans leaving the Service of the value of life insurance and to make certain that no one be deprived of its benefits for lack of information.

The Department of Veterans Affairs has opened an office at each important centre where the services of a trained counsellor are available for individual interviews with each veteran in order to assist in the selection of the type of policy and the amount best suited to the individual veteran's needs after readjustment to civilian life.

The plans of insurance available are: 10 -payment life, 15 -payment life, 20 payment life, life paid-up at 65 and life paid-up at 85 , that is, premiums may be paid for 10,15 , or 20 years or until the age of 65 or 85 , respectively, is reached.

The longer the term of payment, the smaller the premium required. Term and endowment policies are not issued. The insurance is of the non-participating type, that is, no dividends are paid.

Any ex-service man or woman of the present war is eligible. In addition, widows or widowers of such veterans may apply for the insurance on themselves if the veterans were not insured under the Act. Merchant seamen entitled to receive a bonus under the Merchant Seamen Special Bonus Order, or if in receipt of a pension under the Pension Act and members of the Corps of (Civilian) Canadian Fire Fighters and Auxiliary Services Supervisors with service overseas, are eligible also.

Policies may be applied for in amounts ranging from $\$ 500$ to $\$ 10,000$. The amount of the policy is payable only in the event of the death of the insured.

After premiums have been paid for two full years, the policy may be surrendered for its cash surrender value, or it may be transferred to paid-up insurance or ex-tended-term insurance. There is no provision for loans against the policy.

## 7.-Monthly Premiums per $\$ 1,000$ Insurance

Some of the salient points concerning veterans insurance are as follows: (1) Premium rates are very low and premiums may be paid in monthly instalments at no extra cost; (2) No medical examination except in a very few special cases; (3) Premiums may be paid from re-establishment credit or from pension; (4) There are no extra premiums payable for any reason; (5) There are no restrictions as to residence, travel or occupation, including naval, military and air service. No extra premiums are charged when the veteran's occupation is unusually hazardous-such as mining, construction, commercial flying, etc.; (6) Premiums are waived in the event of total disability unless the veteran is entitled to a 100 p.c. disability pension under the Pension Act-there is no extra cost for this benefit; (7) All policies are automatically non-forfeitable and have a liberal cash value after they have been in force for two years.

A contract for veterans insurance may be entered into within three years from the date of discharge from Service or within three years from the effective date of the Act (Feb. 20, 1945) whichever is the later.

For purposes of statistical analysis, commodity prices are usually divided into two principal groups, wholesale prices and retail prices. The term 'wholesale' is not used literally, and primary producers, factory and jobbers quotations, as well as actual wholesale prices, are often included in this group. Markets in which this type of price is quoted are usually well organized, and frequently very sensitive. They are responsive to changing business and monetary conditions. Wholesale quotations are preferred, therefore, for sensitive index numbers of prices designed to reflect price reactions to economic factors.

Retail prices represent more diffused markets and are less sensitive. There is ordinarily a lag of several months between this type of quotation and its wholesale counterpart. Retail prices are important from a statistical point of view, however, because they indicate changes in living costs and, along with measurements of income, show fluctuations in the economic well-being of the community.

## THE ACTIVITIES OF THE WARTIME PRICES AND TRADE BOARD IN CONTROLLING PRICES, RENTS AND SUPPLIES $\dagger$

The functions of the Wartime Prices and Trade Board are to prevent prices and living costs from rising, and to assure a sufficient supply and orderly distribution of necessary civilian goods and services. The activities of the Board up to the end of 1943 are outlined at pp. 724-727 of the 1942 Year Book and pp. 776-783, 354-362 and 521-526 of the 1943-44 Year Book. The present article, dealing chiefly with developments in 1944, outlines the main problems of price control in Canada and briefly summarizes the Board's activities in maintaining civilian supplies. The Board's controls over the distribution of goods in short supply are described in the chapter on Internal Trade (pp. 567-571). A more comprehensive account of the Board's activities may be found in the three Reports to Parliament, covering the periods Sept. 3, 1939-Mar. 31, 1943; Apr. 1, 1943-Dec. 30, 1943; and Jan. 1, 1944Dec. 31, 1944, respectively.

Price Control.-Price control in Canada is based on the general principle that maximum (ceiling) prices should be in line with the prices prevailing in the basic period, Sept. 15 to Oct. 11, 1941. This principle has been applied either by holding each seller to the highest price he obtained for a particular article in the

[^297]basic period or (chiefly in the case of certain agricultural products, e.g., meat, canned goods, fuel wood) by setting standard maximum prices applicable to all sellers, with allowance made for regional differences and, in some cases, for seasonal fluctuations. Standard prices have usually been set at the wholesale level and controlled retail markups have been added.

The problems arising in the administration of this system of price control were chiefly the result of the pressure of rising costs of production against ceiling prices, of the pressure of increasing purchasing power against a restricted supply of civilian goods, and of the appearance of "new goods" that were not on the market in the basic period. The methods developed for dealing with these problems in the first two years of over-all price control are described in previous volumes.*

The Problem of Rising Costs.-Though the price level was practically stabilized during 1944, rising costs continued to exert strong pressure against ceiling prices. Since the beginning of the War, rising costs in civilian industries have resulted from the diversion of materials, plant and manpower to war activities. In a major war effort, civilian industry inevitably takes second choice of the available manpower, materials and machinery. Less efficient workers are hired, inexperienced workers have to be trained, substitute materials have to be used, bottlenecks in supplies develop and deliveries become less reliable, and machinery cannot be replaced. Labour turnover rises abnormally and labour costs, therefore, tend to rise, even if wage rates do not increase as, in fact, they did to a considerable degree during the present war. Working in the opposite direction are the high volume of production induced by war orders and by the ready civilian market, the rapid turnover of output and reduced selling expenses. These latter factors have generally made it feasible to maintain ceiling prices.

During 1944, war demands for manpower levelled off with the result that there was some abatement in the upward trend of labour costs. But at the same time the influences that had formerly worked to reduce costs were much less operative. The total output of the country was, for practical purposes, running at its peak, and the additional economies to be gained through increased volume and more rapid turnover were comparatively small or lacking. A number of producers, looking towards reconversion, requested increased prices on the grounds that declining war contracts were tending to increase their costs.

Faced with this persistent problem, the Board has continued to review and rule upon applications by manufacturers, importers and distributors for relief from excessive squeeze under established ceilings. As a rule, the Board looks at the over-all position of the applicant in order to determine whether financial need exists, and not at the profit in a particular line or department. The determination of the point at which relief may be given is not susceptible of precise definition and must depend upon the circumstances of the individual case. Increased costs in themselves do not justify granting relief. The mere fact that an applicant is not earning "standard" profits does not necessarily mean that relief should be granted. A price adjustment can be authorized only when an applicant can demonstrate real financial need on an over-all basis. In reaching a decision the Board considers not merely the current position of the applicant but such clearly important matters as the future prospects for sales volume and costs, the nature of the business and its strength and financial resources.

[^298]The Board has continued to authorize the payment of subsidies in certain cases where financial need is established. In other instances, limited price adjustments have been permitted where such adjustments could be absorbed without significantly affecting the cost of living. Where subsidy has been authorized, the purpose is to meet specified cost increases, or to offset higher operating costs, only to the extent required to ensure necessary production from the firm or industry concerned. Subsidies are not intended to assure profits at the pre-war or pre-ceiling level and rates of subsidy are determined with a view to providing the minimum necessary relief. The principle of limiting subsidies has been applied widely and is designed to ensure that fortuitous or special circumstances do not permit subsidy payments to raise profits above standard profits or whatever defined level is reasonable in the circumstances. As a further means of limiting subsidies to the greatest possible extent, the Board is continually reviewing existing subsidy arrangements to determine whether current circumstances and prospects permit a scaling down or removal of the payments under review.

Excess Purchasing Power and Black-Market Problems.-Throughout the year the public's buying power continued much in excess of available supplies of goods and services, providing a favourable background for price inflation. Though most of this excess spending power was absorbed by savings, through Victory Loans in particular, spending increased and in some lines production did not keep pace. Black-market activities were on the increase and special measures had to be taken to improve the enforcement of price control, particularly in the spheres of used goods and textiles. In the textile field, price control has been facilitated by an order requiring retailers to attach a price tag to practically every item of men's, women's and children's clothing. Under another order, retailers' markups allowed on women's, misses' and children's dresses, coats and suits, were specifically limited to 45 p.c. of the selling price, in addition to the continuing requirement that they must not exceed those taken in the basic period. This order was designed to check the excessive markups taken by some specialty shops and, together with price tagging, has been of considerable assistance in enforcement. Orders requiring manufacturers to show on each garment their name, license number or trade mark, as well as the style number (see p. 888 under "Quality Control") have also helped in checking black-market activities.

Pricing 'New Goods'. -The pricing of goods that had not been on the market in the basic period became a major problem in 1944. Three years had elapsed since the basic period and in that time there had naturally been a variety of changes in design and technique. In addition, a substantial number of new businesses were being established for all of which ceiling prices had to be determined, a number of restrictions on the manufacture of various goods were relaxed (see p. 891) and the ban against a variety of imports from the United States (originally imposed to conserve foreign exchange) was removed.

Procedures for establishing maximum prices for new goods and services were laid down in two orders that came into effect in October, 1944: Under the new regulations manufacturers must obtain a price fixation from their administrator before selling any goods for which they have no maximum price. The basis upon which maximum prices for such goods are fixed is one of appraisal by an expert or experts with the definite purpose of arriving at a price appropriate to the basic period price level for comparable or related goods. Where practicable, actual samples are inspected by an administrator or by a committee made up of experts in the
field. Where samples cannot be obtained, this appraisal is based upon detailed descriptions or specifications. In some instances, notably certain imported goods, surveys have been made to estimate or appraise the extent of the price increase in the country of origin since the Canadian basic period, in order to arrive at prices which properly discount or eliminate such price increases. Thus, current laiddown costs of imports do not serve as a basis for determining maximum prices. Similarly, current costs of domestic goods are not the basis for determining ceilings for such goods. In some cases where direct appraisal by comparison with goods having an established ceiling price is difficult, reference may be made as a guide in appraisal to estimated production costs at basic-period rates. The initial appraisal may be made of the retail price, as in the case of toys or of the manufacturer's selling price. In the latter case, maximum prices at other levels of sale will be determined through the application of restricted markups over cost, with the final objective of providing an appropriate retail price.

The Board has also set price ceilings for surplus merchandise released to the civilian market by the War Assets Corporation. Where maximum prices have not previously been established, the usual principles of pricing 'dissimilar' goods are generally applied with the War Assets Corporation as applicant.

Import and Export Price Problems.-Problems resulting from the existence of higher price levels in foreign countries occupied the Board increasingly during 1944. For example, some imported consumer goods now available to Canada have increased in price to such an extent that importation at a profit is not feasible, either for the importers or for all but direct importing retailers. However, essential imported consumer items are generally eligible for import subsidy, which offsets price increases in the country of origin. Thus necessary supplies are not being excluded and accordingly no deviation from the basic-period principle has been made.

In the case of exports, higher prices make foreign markets in some instances more attractive than domestic markets. The resulting drain on merchandise could be serious for goods in short supply and the higher export price constitutes a threat to the domestic ceiling. Hence the export of a variety of goods has continued to be controlled by a permit system.

Quality Control.-Rising costs and the need to use substitute materials have resulted in a tendency towards a deterioration in the quality of some products. The Wartime Prices and Trade Board is concerned with the problem of quality degradation since the maintenance of quality and serviceability in relation to price is a necessary part of a fully effective system of price ceiling control. Somechanges of quality have, of course, been unavoidable, owing to the shortage of certain materials-e.g., the substitution of reclaimed for natural rubber in the manufacture of children's play shoes. Moreover, the need to conserve materials and industrial facilities has led to the elimination of many "frills" in production and distribution. Apart from such necessary changes, however, manufacturers have been required to maintain the same relationships between quality and price as in the basic period. As indicated above, price-quality relationships are taken into account in setting maximum prices for new and modified goods. In addition a Standards Organization was set up early in 1943 to work specifically on the problem of quality control. This administration, with its staff of inspectors, has worked mainly in the apparel field and has conducted investigations at the factory level to see that manufacturers are maintaining the quality, with respect to materials and workman-
ship, of their products. Consumer complaints and information given by retailers often lead to investigation of an entire field, beginning with the manufacturing plants and extending through to selected distributors. To make this work possible the Prices Board has required that garments should be marked with the manufacturer's name, licence number, or registered trade mark and with the style number provided by the administrator pricing the article. This enables investigators to trace the article questioned at the retail level back to the manufacturer and his price authorization.

Consolidation of Food Price Orders.-The general food supply was better during 1944 than during 1943 and pressure on food prices was reduced. The general level of retail food prices actually showed a slight decline over the year, and for many products there were periods when prices fluctuated freely below the ceiling. Under these circumstances the Board further consolidated and standardized its food-pricing regulations. Probably the most significant development was the consolidation of the retail provisions of all food price orders into a single document which was issued early in November under the title "Item Index" The Item Index lists the order number and summarizes the retail provisions of all food orders. It also lists the items that are exempt from ceiling regulations. Items not mentioned on the Item Index are those on which the individual seller continues to be held to his own basicperiod ceilings. This consolidation was issued primarily for the convenience of retailers and made no fundamental change in the method of calculating any individual ceiling. It was, however, accompanied by a reference table which is used to determine, in cents per unit, the maximum margin which any retailer may take on any product. This table removes the need for retailers to perform the rather involved calculation entailed in determining margins expressed as percentages of selling price.

Trading Under the Ceiling.-In the pricing of fresh fruits and vegetables, an arrangement was introduced which has come to be known as "trading under the ceiling". During 1943, ceilings were placed on a large number of fresh fruit and vegetable items at the grower or shipper level, and wholesalers' ceilings were provided by setting percentage margins over actual cost. In an attempt to keep retail prices down, the margins specified in these orders were made as low as feasible. As a result, many wholesalers found themselves in difficulty. From time to time they suffered inventory losses when the market dropped below the ceiling and they were unable to recover these losses when the market rose, because they were required to calculate their markup on the actual cost of the particular commodity rather than on replacement cost.

During 1944, provisions were therefore introduced which set out the wholesaler's ceiling by adding a margin to the grower's or shipper's ceiling rather than to the wholesaler's actual cost. In this way, the wholesaler was given a specified ceiling price regardless of the cost of the particular shipment. This was an important simplification of ceiling structures and the possibility of a trading profit has the effect of encouraging wholesalers to buy and hold larger stocks of any product which is temporarily low in price, and to concentrate their sales efforts on such products. In this way surpluses are spread throughout the trade instead of concentrating in the hands of producers as would be the case if wholesalers operated on a day-to-day basis. It was felt that if supplies were so heavy that growers could not move their holdings at ceiling prices, that fact, in itself, was evidence that wholesalers
would be under strong competitive pressure and would not be able to realize the full ceiling on their sales. To prevent any abuse of this trading under the ceiling provision, industry committees, consisting of two or three leading wholesalers and the local Wartime Prices and Trade Board foods officer, were set up in the major centres to enlist the co-operation of the trade. These committees were given no enforcement powers but the trade was definitely informed that any abuse would lead to immediate cancellation of the privilege. On the whole, the scheme has worked quite well and throughout the year it has gradually been extended to additional products.

Control of Supplies.-The volume of goods and services available for civilians during the year was, on balance, slightly larger than in the previous year, but shortages persisted in a number of sections of the civilian economy. This was partly the result of the continued growth of consumer spending, which in some instances more than offset the effect of increased production. Scarcity of suitable skilled and able-bodied workers was a major restrictive factor in most industries, although there was some increase in the over-all supply of labour for civilian production. A number of changes in particular war programs, resulted in variations in the types and quantities of materials, plant facilities and labour that could be used in the civilian economy. Agricultural production exceeded the previous year's level and permitted substantially increased exports to Allied Nations. Various textile articles were in short supply owing to increased demand, decreasing labour efficiency and the difficulty of procuring adequate supplies from abroad. Building supplies, hardware and household appliances were produced in somewhat larger volume, but most of these articles, particularly building supplies, were still very scarce in relation to the greatly increased requirements. Demands for Canadian pulp and paper and their products continued to exceed available supplies which were slightly greater than in the previous year but were still restricted by the shortage of manpower.

Towards the end of the year the improvement that had appeared in the summer in various lines ceased, and the prospect changed for the worse. New war contracts halted the expansion in the output of civilian metal articles. The tendency for agricultural production in the West to shift towards wheat at the expense of feed grain and hogs, combined with high Allied and relief requirements of food, was reflected in a tightening of meat supplies. World textile supplies remained restricted and the requirements of liberated areas were increasing.

The Board's activities during 1944 reflected these general conditions. In view of the continued and, in some cases, intensified shortages of civilian goods, the Board had to take active measures to see that an adequate supply of essentials was produced. The production of certain articles of clothing was directed, a few household appliances were "programmed", and specific measures were continued to assure the largest feasible output of farm implements consistent with war needs. Scarce materials were allocated between different manufacturers and different uses to ensure sufficient supplies for essential production.

The Board kept the Wartime Industries Control Board informed as to civilian requirements for particular metals and, through the Interdepartmental Labour Priorities Committee, advised National Selective Service regarding labour requirements of civilian industry, requesting assistance when it was urgently needed to
sustain essential output. The Board also reported on domestic food requirements to the Food Requirements Committee, and kept the Department of Agriculture informed on relevant food problems both through this Committee and directly.

The problem of obtaining necessary materials from abroad remained a very important one and necessitated a variety of complicated negotiations. Such negotiations were usually with the Combined Boards or the appropriate United States or United Kingdom production authorities and covered a wide range of goods, including textiles, hides, foodstuffs, various metal products, and component parts required for Canadian production of finished articles.

Directed Production.-The policy of planning and directing the production of certain articles of clothing, begun in 1943, was extended during 1944. In directing such production, the Board states the total output required and, through the administrator concerned, allocates this total between the different manufacturers. Arrangements are also made for priority for materials and frequently for labour, in the latter case through National Selective Service. This system of "production directives" is regarded as the most direct and effective way of assuring needed production. It has been applied to such garments as knitted underwear of all kinds, children's autumn and winter garments, socks and stockings, worsted suitings, and so on. Production planning of a somewhat less formal type was necessary in certain other spheres, such as household appliances, where production had been small or lacking for some time and deferred needs both for replacements and new households had accumulated. In a few such cases, a limited production was authorized and steps were taken to obtain the materials through the Wartime Industries Control Board, either in the form of an authorized program or on an understanding from that Board that the planned production was not out of line with the existing supply position. Actually, increased war requirements did interfere with the fulfilment of such programs.

Allocations and Priority Systems.-Measures to allocate scarce materials and supplies were extended during the year, though a variety of restrictions and prohibitions concerning the manufacture of specified articles were revoked. The establishment of quotas and priorities for the distribution of materials was a more effective and flexible type of control than the restriction of non-essential end products and flexibility was of great importance in a period characterized by frequent changes in the types and quantities of materials that could be used for civilian production. For example, quotas and priorities for manufacturers using paperboard (such as firms making paper containers) were established during the year, based partly on the user's consumption in a base year and partly on the need for his particular kind of production. These quotas were varied in accordance with changes in available supplies, and their development made it possible to do without various restrictions on particular paperboard products and at the same time to assure essential production. Another example of this type of control was the controlled allocation to users of all types of containers and packing cases, following a shortage of containers early in 1944. Control was extended to all types of containers, since metal, glass, paperboard and wooden containers can be substituted for one another to a high degree. After the outbreak of war in the Pacific, glass and paperboard containers had been substituted for metal cans in many uses. During the early part of 1944, however, shortages of paperboard and of glass developed, together with some easing in the supply of steel sheet. The Board, therefore, permitted a return to the use of metal
cans in a few instances, and tightened the control over paperboard containers. By the autumn of 1944 the supply of paper and glass containers had improved, and quota restrictions on sale of glass containers were lifted.

Removal of End-Product Restrictions.-A number of orders restricting or prohibiting the manufacture of specific articles were revoked during the year. These orders had been issued during the period of extreme urgency just after Pearl Harbour and, at the suggestion of the United States authorities, closely paralleled restrictions in that country. As a measure of co-operation with the United States and at a very critical time, they were necessary, but as time went on they proved to be an inflexible form of control. Thus, when war production levelled off, they tended to prevent manufacturers from making use of the surpluses of materials and facilities resulting from changes in war programs and uncertainty regarding their duration obstructed planning for reconversion. Their removal did not open the way to diversion of materials from war and essential civilian production because of the direct controls exercised over materials by the Prices Board and the Wartime Industries Control Board.

Rentals and Shelter.-The continued demand of war workers, service men and their families for accommodation in congested areas, coupled with the difficulties of providing materials and labour for new construction, has placed a heavy strain on already inadequate housing facilities. The system of rent control established by the Wartime Prices and Trade Board, and the provisions for the protection of tenants against eviction were described at p. 780 of the 1943-44 Year Book.

During 1944 it became necessary to tighten the regulations protecting tenants against eviction. The revision of rentals regulations in the autumn of 1943 was followed by an unreasonably large number of eviction notices in certain areas of acute housing shortage, chiefly from landlords of apartment houses. The regulations were, therefore, amended in January, 1944, to provide that a landlord of a "multiple family building" (apartments, duplexes, etc.) could no longer evict a tenant on the grounds that he desired the accommodation for another member of his family. He could, however, subject to certain conditions, still evict a tenant on the grounds that he desired the accommodation as a personal residence. Regulations regarding the eviction of tenants of "single family dwellings" were also tightened.

Under the revised regulations established in 1943, the special protection against eviction had not been extended to tenants of rooms and flats (shared accommodation). It had been hoped that accommodation which had not previously been made available would be opened up if it were possible to recover early possession of the accommodation should the arrangements not prove satisfactory. A check of housing registries revealed that little, if any, new accommodation had been secured through these concessions. In many instances, landlords had taken advantage of the change and attempted to secure higher rentals by threatening eviction, tenants accepting these increases for fear of losing their accommodation. To check abuses, the protection against eviction enjoyed by occupants of houses and apartments was, therefore, extended to roomers, other than boarders. Special safeguards however, were provided to permit dispossession of incompatible tenants.

Evasion of maximum rental regulations had been possible through certain practices which had never been customary in leasehold transactions but which were encouraged because of the difficulty that tenants experienced in securing accommodation. The most prevalent of these abuses were those requiring pros-
pective tenants to purchase furniture at excessive prices, to pay special commissions, bonuses or rewards or to pay several months' rent in advance. The Board, therefore, issued an order, effective Nov. 30, 1944, under which no person letting accommodation may require a prospective tenant to pay more than one month's rent in advance, nor may he charge or receive any commission, bonus or reward. If furniture is rented or sold, the rental or selling price must be set by the local Rentals Appraiser. The Rental Administrator is given power to issue special directives if, in his opinion, any term imposed on a prospective tenant is unreasonable or unjust.

With the easing of pressure on the commercial rental ceiling, and as a first step in the decontrol of rentals, eviction control had been removed from commercial accommodation in the autumn of 1943 . Following this an abnormal number of commercial tenants were required to vacate, to enter into long-term leases which imposed onerous terms, or to purchase property to avoid eviction. Accordingly, the Board restored security of tenure to commercial tenants as of Jan. 2, 1945.

Emergency Shelter.-The shortage of accommodation in the larger cities has been presenting a more and more serious problem and has become increasingly acute with the arrival of each spring and autumn moving season. In 1942, the Department of Munitions and Supply introduced a form of control in Halifax, which was subsequently extended to include all Atlantic ports. In December, 1944, conditions in certain areas had developed to such a point that the Government decided to give to the Wartime Prices and Trade Board broad powers to co-ordinate "all activities relating to the transfer of population into such areas and to the control and use of available shelter therein". These powers were to be applied only with the expressed approval of the municipality concerned. Early in 1945, Emergency Shelter Administrators were appointed for Ottawa, Toronto, Vancouver, Victoria, Hamilton and Hull, but in Montreal the local authorities decided not to take part in the scheme. One of the principal duties of an administrator is "to co-ordinate the activities of all organizations at present concerned with the housing problem with a view to promoting the utilization of available dwelling space to the best advantage". The existing Housing Registries have been placed under the jurisdiction of the Emergency Shelter Administrators.

Conclusion.-The Board's activities are only one part of the Government's general stabilization program. There are also the controls over purchasing power, through taxation and public borrowing, and the controls on wages and manpower. Figures can indicate only imperfectly the effectiveness of a general stabilization program of this sort. However, some indication of the effect of the Government's stabilization policy is given in Sections 1 and 2 of this Chapter, which describe the movements of wholesale prices and of the cost of living. The changes in the official cost-of-living index and its component parts can be traced since the beginning of the War and since the introduction of the over-all price ceiling in December, 1941. A comparison of the changes in wholesale prices and the cost of living in the present war with the corresponding changes during the War of 1914-18 also illustrate the effectiveness of the controls applied in the present conflict.

## Section 1.-Wholesale Prices of Commodities

The broad movement in wholesale prices had been gradually upward for a period of sixteen years prior to the outbreak of war in 1914. From an average of $43 \cdot 6$ in 1897, the general wholesale index $(1926=100)$ advanced without appreciable interruption to $64 \cdot 4$ in July, 1914. By the end of the War in November, 1918, this index
had reached $132 \cdot 8$, and it continued upward to a post-war inflationary peak of $164 \cdot 3$ in May, 1920. The subsequent deflationary period lasted about two years, and between 1922 and 1929 price levels remained in comparative stability. Annual averages in this interval held between a high of $102 \cdot 6$ for 1925 and $95 \cdot 6$ for 1929. For the three years following 1930, depressionary influences were so severe that prices fell to the level of those of 1913. In February, 1933, the wholesale index touched an extreme low of 63.5 before turning upward again. Irregular recovery then continued until 1937, but the highest point reached, $87 \cdot 6$ in July, 1937, was substantially below the 1926 average. The collapse of the wheat market in 1938, along with fairly general depression in other markets, carried wholesale price levels just prior to the outbreak of war in 1939 down to about eleven points above the 1913

level. The August, 1939, index of $72 \cdot 3$ marked the extreme low of a two-year decline. The movement of prices prior to the outbreak of the present war was quite different, therefore, from that which preceded the War of 1914-18. The relatively low level of prices in August, 1939, probably influenced the sharper initial advance at the outbreak of war. However, during 1940 price levels steadied and showed no sign of a steep increase until 1941. By that time, great expansion in wartime production had made serious inroads into stocks of nearly all basic commodities and, at the end of 1941, wheat remained the only important commodity for which stocks exceeded predictable requirements. The introduction of general price control in Décember, 1941, followed a year in which wholesale prices had advanced $11 \cdot 2$ p.c. as compared with $3 \cdot 1$ p.c. in 1940 . The effectiveness of control is indicated by the fact that percentage increases in wholesale prices amounted to only 3.8 and 5.6 for the years 1942 and 1943, respectively, while the December, 1944, index remained the same as the December, 1943, figure.

## Section 2.-Cost of Living

A consolidation of official cost-of-living indexes was made in 1940 when the index shown at p. 898, on the base $1935-39=100$, replaced the Bureau of Statistics' preceding series on the base $1926=100$, and also the Dominion Department of Labour's index on the base $1913=100$. The Bureau's present index reflects changes
in a fixed budget covering retail prices of commodities, services and shelter costs based upon the expenditure experience of 1,439 urban wage-earner families in the year ended Sept. 30, 1938. The record completed by these families was especially designed to provide budget data necessary for the accurate compilation of a cost-of-living index. It must be kept in mind, however, that this index reflects changes in the cost of the same level of living from month to month and year to year. No account has been taken of shifting planes of living because of changes in economic circumstances, e.g., variations in income or direct taxation, or because of changing ages or variation in numbers of persons in the family. The basis of selecting families for the 1938 expenditure survey has been described in the 1941 Year Book at p. 723. Fuller particulars of the methodology employed and a summary of the results of the Nutrition and Family Living Expenditures Investigation are given at pp. 819-821 in the 1940 Year Book. The detailed findings appear in a report entitled "Family Income and Expenditure in Canada, 1937-38".

The cost-of-living index budget does not represent a minimum standard of living, it is a budget based upon actual living expenditure records of typical wage-earner families.

It is important to remember that the index measures changes in the costs of the same level of living from month to month and year to year. The significance of this is at once apparent after comparing the rise in the index during the three and one-half years ended June, 1944, with the rise in average weekly earnings of industrial workers. In that period the cost-of-living index has risen barely 2 p.c., while the average weekly wage received by workers in eight leading industries has advanced by more than 27 p.c. Greater earnings have been reflected in greater
spending despite heavier taxes and higher savings. This is borne out by figures of retail sales which were more than 29 p.c.* above corresponding 1941 levels in 1944.

Claims that the cost of living has risen substantially during the past three years are undoubtedly due in part to confusion between higher costs resulting from higher prices, and higher costs due to greater purchases. The cost-of-living index reflects the rise in prices, but not the increase in purchases.

The cost-of-living index budget is being kept up-to-date, although still measuring changes in the same general standard or level of living. As basic changes in wartime consumption have occurred, the index budget has been adjusted accordingly. For example, with the sharp reduction in pleasure driving, the budget allowance for motor-car operation was reduced and, correspondingly, the recreation budget allowance was increased. As certain foods have become very scarce or have been rationed, budget quantities for them have been reduced and a comparable allowance added to quantities of other foods. Fresh vegetables provide an illustration of new additions to the food index. Due to the scarcity of canned vegetables, arrangements have been completed for the addition of fresh carrots, turnips and cabbage to the food budget. Likewise the curtailment in supply of canned salmon and smoked fish will be made up by additions of fresh fish.

Concern regarding items in the index budget has been paralleled by efforts to make certain of the accuracy of price records used to calculate the budget cost. Close and continued scrutiny of retail price returns, which the Dominion Bureau of Statistics receives from its 2,000 price correspondents, has produced the belief that price reporting has been honest and that price returns are accurate. However, to remove all doubt on this point, several cost-of-living representatives have been assigned to important distributing centres across the Dominion. It is their duty to check price returns used in compiling the cost-of-living index, and to watch particularly for evidence of quality deterioration in goods for which prices are reported. It has been the Bureau's practice for many years to consider deterioration in quality as equivalent to a rise in price.

There is a tendency to think only of food when considering the cost of living. The index shows a wartime rise of $31 \cdot 2$ p.c. in food prices to December, 1944, although this percentage would be higher if it were not for the fact that prices of bread and milk are still close to pre-war levels. As bread and milk have served as restrictions on rising food costs, so have rents and miscellaneous items retarded the advance in total living costs. The miscellaneous group, despite its name, is very important, since it includes costs of health maintenance, transportation, personal care, recreation and life insurance. Due to rent control, the wartime rise in rents has amounted to only 7.9 p.c., while the miscellaneous index has risen 7.5 p.c. Considered together, these two groups are more important than food. If they had advanced by the same amount as food, that is by $31 \cdot 2$ p.c., the December, 1944, cost-of-living index would be $27 \cdot 5$ p.c. above the pre-war level instead of $17 \cdot 6$ p.c.

Cost of Living in 1943 and 1944.-The movements of the cost-of-living index $(1935-39=100)$ between December, 1943 , and December, 1944, is further evidence of the effect of price-control policy. During that period the index declined

[^299]by 0.8 (from 119.3 to 118.5 ) as contrasted with increases of 0.5 and 3.0 in the two preceding years. Changes in the different budget groups during 1944 are tabulated below. The decline in the fuel group is due largely to a reduction in electricity rates.

Regional Changes in Living Costs.-In 1941 the Bureau established wartime cost-of-living indexes for eight regional cities. These indexes, covering the cities shown in Table 4, have been patterned after the official cost-of-living series for Canada, and include group indexes for food, fuel, rent, clothing, home furnishings and services, and miscellaneous items. The budget quantities employed for these calculations have been computed from expenditure records of wage-earner families
in the year ended September, 1938 (see p. 896). The only differences between the city and Dominion indexes are the base period used and the frequency of the publication of data. For the city records, August $1939=100$ instead of the five-year period 1935-39 is used and these indexes have been published for alternate months only.

Regional movements in living costs since the outbreak of war have been closely comparable to movements in the Dominion index, which advanced $17 \cdot 6$ p.c. between August, 1939, and December, 1944. During this period increases in the eight city indexes ranged from 15.6 to 20.2 p.c.
4.-Index Numbers of Living Costs in Eight Cities of Canada, by Alternate Months, 1939, 1940, 1942, 1944 and 1945

Prices of Services.-Service costs comprise approximately 19 p.c. of the family expenditure budget used in compiling the Dominion Bureau of Statistics cost-of-living index numbers. Trends in rates for some of the more important of these services since the beginning of the base period, 1935-39, are shown in the following table. The most notable of these is the decline in electricity rates which began in 1942 and was considerably accentuated between 1943 and 1944. There has also been a gradual increase in hospital-room rates extending back to 1941 and carrying through 1944.

## 5.-Index Numbers of Domestic Service Rates, 1939-44

$(1935-39=100)$

| Item | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Domestic rates of fuel gas | 101.9 | $106 \cdot 7$ | 104-1 | 105-1 |  |  |
| Domestic electric-light rates | $103 \cdot 3$ | 103.5 | $103 \cdot 0$ | 102.8 | 105.1 | 105.1 94.4 |
| Domestic telephone rates. | $100 \cdot 6$ | 101.9 | $103 \cdot 3$ | 103.3 | 103.3 | $103 \cdot 3$ |
| Street-car fares. | $100 \cdot 1$ | $100 \cdot 1$ | $100 \cdot 1$ | $100 \cdot 1$ | $100 \cdot 1$ | $100 \cdot 0$ |
| Hospital-room rates. | 102.7 | 102.7 | 104.3 | 106.0 | 111.0 | 116.0 |

## Section 3.-Index Numbers of Security Prices

Security prices have long been utilized in statistical measurements related to economic phenomena. They are generally sensitive to changing business conditions, although this valuable characteristic is sometimes overshadowed by the fact that their movements may be influenced greatly by speculative interest very remotely associated with underlying economic conditions. Thus in 1928 and 1929, commonstock prices advanced far beyond levels indicated by business profits and prospects. Security-price trends have also been at variance with other business indexes during the War of 1914-18 and the present war.

The behaviour of Canadian common-stock prices since 1914 has been quite different from that of commodity prices. During the War of 1914-18 there was no advance in security markets paralleling the pronounced inflation in commodity values. Between 1926 and 1929, however, when commodity prices were declining gradually, common stocks more than doubled in price. Both sets of prices recorded sharp declines between 1929 and 1933, and both showed recovery urtil 1937. During the present war, common-stock prices moved predominantly downward until the middle of 1942.

Investors Index Numbers of Common Stocks, 1944.-Common-stock prices in 1944 record an unsteady recovery following the very sharp decline in the latter half of 1943. The Investors December, 1944, index of $86 \cdot 6$ was slightly below the mid-summer peak of $87 \cdot 5$ for July, but well above the December, 1943, index of $80 \cdot 5$. Gains in utilities were better maintained than those for industrials. Bank stocks showed practically no reaction from the mid-summer peak, and the December index of $88 \cdot 1$ was the highest in 1944.
6.-Investors Index Numbers of Common Stocks, by Months, 1944
$(1935-39=100)$

Preferred Stocks, 1944.-The movement of preferred stock prices in 1944 continued an almost unbroken rise, dating from the last quarter of 1942. During the year the preferred stock index increased 14.0 points to a December level of $129 \cdot 8$. This was the highest index of this series recorded since February, 1929.

## 7.-Index Numbers of Preferred Stocks, by Months, 1927-44

$(1935-39=100)$

Weighted Index Numbers of Mining Stocks.-Moderate gains in both gold and base metal stocks occurred during 1944. An index of gold stock prices advanced $5 \cdot 9$ points to $74 \cdot 4$, while base metals moved up $5 \cdot 1$ points to $91 \cdot 6$. A composite index of mining issues increased $5 \cdot 7$ points to $80 \cdot 6$. This increase was about one-quarter of that for 1943, and December indexes were at substantially lower levels than had obtained during the mid-summer months.

## Section 4.-Index Numbers of Bond Yields

The exceptional requirements of the war years of 1914-18 turned the Dominion authorities to the internal market, a field that had hitherto served mainly the needs of the provinces and municipalities. Historical records of long-term bond yields in the internal market prior to 1914 are obtainable, therefore, from provincial and municipal sources only. A record of Ontario issues from 1900 to date is available and was utilized for the first long-term bond-yield index constructed by the Bureau of Statistics. The relatively long period for which this record has been preserved makes this series of considerable value. At pp. 805 and 806 of the 1937 Year Book a statement is given showing the movements of Ontario bond yields since 1900.* Since the War of 1914-18, however, the growing importance of Dominion financing in the domestic market has made it advisable to supplement the Ontario series with the Dominion index of long-term bond yields shown in Table 9. In 1941, this series was shifted to the base period $1935-39=100$, and in 1942 it was revised back to January, 1937, on the basis of yields computed from a 15 -year 3 p.c. theoretical issue. Quotations for the theoretical yields are computed by the Bank of Canada.

## PART I.-NATIONAL WEALTH AND INCOME Section 1.-National Wealth

Owing to the abnormal economic conditions that have prevailed over the past ten-year period, no official estimate for national wealth has been made since that of 1933 which measured economic conditions at the lowest point of the pre-war depression. It is not considered desirable to establish another basis of national wealth until conditions have become normal. A short summary of the position is given at pp. 795-796 of the 1942 Year Book.

## Section 2.-National Income*

During the past decade estimates of national income have emerged as a fundamental basis of reference and are employed with increasing frequency in international comparisons. No other statistical approach is so fruitful in portraying the workings of the national economy. Formerly used as a general yardstick of economic welfare, national income statistics, as now developed and with the several breakdowns, afford an excellent analysis of the economic position. In wartime they furnish a basis for measuring the relative size of the war effort, the disposition of a nation's resources, the comparative severity of taxation, or the relative impact of war upon private consumption and capital accumulation.

Information as to the relative importance, trends and fluctuations of the industrial and service groups is furnished through the distribution by productive sources of income. A classification by types of payments to individuals discloses the numbers, rates and remuneration of the claimants of occupational income, as well as the flow of investment income in the form of dividends, interest and rent. A cross-classification of productive groups by types of payment and by provinces answers many questions of interest to the economist and sociologist.

[^301]Canada's national income is a composite of volume and price movements and is the best measure of the cyclical fluctuations that have taken place since the end of the War of 1914-18. The total, due largely to inflated prices, reached a high level of nearly $\$ 4,600,000,000$ in 1920 and fell off nearly 24 p.c. during the following year. The recovery was practically continuous until 1929 when a maximum of $\$ 5,273,000,000$ was recorded. The low point of the depression was experienced in 1933, when the national income was only 52 p.c. of the total for 1929. A temporary setback in 1938 (see Table 1) merely interrupted the advance.

The long-term trend of income was slightly upward during the years from 1919 to 1939, despite the unprecedented setback of the early 1930's when idle plant and personnel were much in evidence. During the war years, however, the upward trend has been much more pronounced.

Comparison with the national income of the United States is made in Table 1 in order to assist in placing the Canadian income in proper perspective. The position of the United States is more favourable in regard to per capita income and income per gainfully occupied, the money income per capita averaging about 36 p.c. greater in the United States. One reason for this is the greater relative predominance in Canada of the primary activities especially agrieulture. Tertiary industries including transportation, trade and service are, collectively, of greater relative importance in the Unifed States. The average return in the service groups, broadly interpreted, is normally much greater than in primary activities.

[^302]Description of Method.-The computation of the national income is, theoretically, a matter of accounting. The following formula presents a simple picture of the relationship existing in a closed economy:-
$\left.\begin{array}{c}\text { Gross Operating Revenues } \\ \text { less } \\ \text { Cost of Materials and Overhead } \\ \text { and Depreciation Charges }\end{array}\right\}=$ NATIONAL INCOME $=\left\{\begin{array}{l}\begin{array}{l}\text { Payments to Individuals (including: } \\ \text { salaries and wages, suplementary } \\ \text { labour income, net dividends, rents } \\ \text { and withdrawals of working pro- } \\ \text { prietors, etc.) }\end{array} \\ \begin{array}{c}\text { plus } \\ \text { Positive or Negative Savings of Enter- } \\ \text { prises }\end{array}\end{array}\right.$

Based on this formula, the income of the Canadian people is defined as the value of goods and services at current prices becoming available for consumption or investment during a given period to persons residing in the country, after providing for the replacement or maintenance of the goods and services employed in production. While individuals are normally paid by cheque or cash for their share in the productive process, fundamentally income consists of the goods and services purchased by means of such payments.

The work of housewives is excluded from the calculations, being classed as a non-market service in connection with a way of life rather than an economic activity. Remuneration for non-productive and illegal pursuits, useful to certain persons but disadvantageous to society, are also disregarded. Practices, such as gambling and robbery, come under this heading. Transfer payments, while included in income payments to individuals are automatically eliminated by the inclusion of the positive or negative savings of enterprises.

Capital gains and losses, eharity, gifts and direct relief payments add nothing to the general flow of economic goods. A few items, on the other hand, not passing through the market are included in estimates of national income. The most important of these are the value of home-produced food consumed on the farms and imputed net rentals on owner-occupied dwellings. The market counterparts, food consumed by non-farmers and net rentals paid for tenant-occupied dwellings are used as guides in estimating prices and rates.

Revision of Estimates.-Methods and concepts of national income estimation are under extensive revision at the present time. This work is in the hands of the Bureau's new Central Planning and Development Staff. In recent years the techniques of national accounting have grown both in usefulness and complexity and the revisions now under way are designed to take account of these developments. Co-operative arrangements have been made to secure the greatest possible comparability with the official estimates published in the United Kingdom and the United States. On the revised basis the estimates will present a set of balancing accounts for the country as a whole, showing the gross production of goods and services (Gross National Product) on the one side and the uses to which these goods and services are put (Gross National Expenditure) on the other side. Additional adaptations of these accounts will be made available for the analysis of economic problems.

Gross National Product at market prices represents the value of goods and services produced during a given year after elimination of duplication through sales of goods and services from one business to another. In other words, it evaluates the total of all end products of the economic system, including consumer goods and services and capital goods, allowing for change in inventories of raw materials and
goods. Gross National Product at market prices is measured by adding to the total earnings of all factors of production (Net National Income at Factor Cost) an estimate of current consumption of capital (depreciation), and the amount of indirect taxes paid during the year.

Gross National Expenditure is defined to add up to the same total as Gross National Product but is estimated independently. It shows the way in which total expenditures by the community for goods and services are divided as between the government and the private sector and as between consumer goods and capital goods. Thus Gross National Expenditure is the sum of government purchases of goods and services (both capital and current), private investment at home, net investment abroad (investment in foreign countries less foreign investment in Canada) and consumer purchases. Purchases of capital equipment are included with no deduction for current consumption of capital. The value of materials and services purchased by private industry and consumed in current production is already included in the market prices of finished goods and is not counted again.

Detailed descriptions of new methods and concepts are being issued by the Bureau from time to time.

By deducting indirect taxes less subsidies, depreciation charges and other items of a similar nature, the gross national expenditure is reduced to the net national expenditure at factor cost. The latter total is equivalent theoretically to the net national income.

Sources of National Income.-The flow of income is mainly a two-way process and cannot be said to commence at any one point. Yet, as income essentially results from production, it is of interest to know which particular industrial or service groups contribute the most to the nation's economy and income. The classification of national income by productive sources (Table 2) is, therefore, a logical starting point and furnishes important information.

Classification of Enterprises.-For purposes of study, thirty original classes were combined into the seven major groups, the Bureau's statistical classification with appropriate adaptations having been followed. Primary production comprises six industries. Agriculture includes fur farming, the woods operations of the farmer on his own property and dairy activities limited to the production of milk, butter and cheese on the farm.

Forestry includes the operations of the lumber and pulp and paper industries, as well as woods operations other than those of the farmer on his woodlot. Fishcanning and -curing plants in addition to primary operations are included in the fisheries group. The activities of trappers and hunters are considered in connection with the trapping industry to the exclusion of fur farming.

As the final product is the first to which a commercial value is ordinarily assigned, the processing industries of smelting, cement, clay products, lime and salt are included in mining. The electric power group coincides with central electric stations as annually reported by the Bureau.

Secondary production embraces construction, manufactures, n.e.s., and custom and repair. Construction covers operations as reported in recent years by the Bureau. Manufacturing production, n.e.s., is exclusive of processing activities closely connected with three primary groups. As intimated above, sawmilling, and pulp and paper operations are included with forestry, fish canning and curing is a part of the fisheries industry, while smelting, cement, clay products, lime and
salt are treated along with mining. These industries, for the purpose of avoiding duplication, are excluded from manufactures, n.e.s. Custom and repair includes thirteen industries of which dyeing, cleaning and laundry, and automobile garages are the most important. The industrial section of the Decennial Census furnishes periodical information in regard to employment in these industries. The Census of Merchandising and Service Establishments, 1930 and 1941, provided information for estimating the operating accounts.

Considerable information regarding the following industries in the transporta-tion-communication group is obtained from annual reports of the Bureau of Statistics: steam and electric railways, civil aviation, express, telegraphs, and telephones. As the railway companies also operate hotels, express and telegraph services, it is necessary to separate the records of these subsidiary activities, avoiding duplication with other groups. Water and road transport, warehousing and storage are also regarded as industries in this main group, the operating accounts being estimated on the basis of occupational data, furnished by the Decennial Census, and other relevant information. Trade is subdivided into wholesale and retail divisions, retail services being treated elsewhere.

Finance includes banking, trust companies, loan and mortgage, stock and bond dealers, insurance and real estate. Non-farm mortgage interest and net rentals, paid and imputed, are estimated for inclusion along with the real estate industry. Government income originating, including Dominion, provincial and municipal administration, is computed from the "Public Accounts". Educational, railway and other operations are eliminated so as to avoid duplication.

The service group consists of professional, educational and personal services. The latter is a composite of recreation, business service, barber shops and beauty parlours, undertaking, photography, hotels and restaurants, boarding and lodging houses, domestic and miscellaneous service.

The Relationship of the Seven Major Groups.-Two difficulties stand in the way of presenting an accurate measure of the relative importance of the seven major groups. Processing activities are combined with primary forestry, fisheries and mining in such a way that it is difficult to separate the primary and secondary phases. The practice has, therefore, been to combine processing activities with the primary industries and to report manufacturing with the duplication eliminated.

Another problem arises from the fact that Canada in the inter-war period was a heavy debtor nation and the income flowing out of the country in the form of dividends and interest was considerable. This so-called negative balance on dividends and interest has not been classified by productive sources, but is deducted from the total income produced to obtain the income realized. The result of this procedure is that primary production, which includes agriculture, the one large industry which pays no dividends or bond interest, is somewhat more important on this score in relation to the Canadian economy than the productive classification indicates.

The predominant position of commodity production is at once apparent. Primary production, including processing activities closely associated with forestry, fisheries and mining, accounted for an average of $25 \cdot 2$ p.c. of the income in the period 1919-42. Secondary production, including construction, manufactures, n.e.s., and custom and repair, was in second place with 20.5 p.c. Trade occupied third position, accounting for 11.7 p.c., while service, government, transportation and finance followed in the order named. Primary production, affected by price changes, recorded an early
decline from 1929 to 1932, while secondary production was more resistant to influences of depression. It is evident that finance responds tardily to cyclical fluctuations. Transportation corresponds closely with the fluctuations of the general total. The operations of government follow a more independent course than any of the other main groups, the correlation between the income originating in government and the national income being obviously low during the period. The fluctuations of trade and service conformed closely to the general pattern. Service, however, showed a lag during the declining phase from 1929 to 1933.

## 2.-National Income of Canada, by Industrial and Service Groups, 1915-42

Norz.-See footnote 2 to Table 1 regarding estimates for 1943 and 1944. See text p. 908 for brief explanation of the seven groups. The payments of dividends and interest to individuals in Canada holding stocks and bonds of external enterprises are deducted from the entire outward flow of such payments and the final column is obtained by deducting the balance from the total income originating.

| Year | Primary <br> Production | SecondaryProduc-tion tion | Transportation | Trade | Finance | Government | Service | Totals, All Industries |  |

${ }^{1}$ Revised since the publication of the 1943-44 Year Book.
Classification of Payments to Individuals.-The approach to national income from the viewpoint of payments to ultimate consumers involves many subsidiary studies relating to Canada's manpower. The volume of production, and consequently income, depends largely on the numbers at work.

The gainfully occupied may be segregated for analysis into three classes, the working proprietor, the employee and the unpaid labourer or "no-pay". The working proprietor or enterpriser is a person conducting an enterprise which he controls. Some enterprisers have other persons working for them. Others are independent workers, like many farmers, small retailers, and doctors. The essential fact distinguishing the enterpriser from the employee is that he takes the risk of the enterprise and does not receive for his services a fixed rate of compensation. The difference between the "employee" and the so-called "unpaid labourer" is that the latter receives no fixed remuneration in cash, the payment being limited to a living allowance mainly in kind.

For national income purposes, the number of employees is calculated on a full-time basis, that is, it is really a statement of the number of man-years worked by those employed rather than of actual numbers engaged on any particular date.

An average of slightly more than one-third ( $34 \cdot 1$ p.c.) of the population was gainfully occupied on a full-time basis during the period 1919-42.

As the growth in total population was more rapid, the proportion engaged in productive enterprises was considerably less in the central part of the period than in the years immediately following the War of 1914-18. From 1919 to 1929, the proportion of gainfully occupied ranged about 37 p.c., an important shift coming in the latest decade, with a percentage of only $31 \cdot 7$ p.c., in 1938. The relative increase in idle population had a significant bearing upon the problem of potential manpower for war activities, and by the end of 1942 a high percentage of the population actively participated in productive pursuits in addition to a heavy enlistment in the Armed Forces.

[^303]The main flow of money is from productive enterprise to individuals. Personal income is received in return for participation in the productive process. Salaries, wages and other labour income is paid for work performed and investment income in the form of dividends, interest and rents, is the remuneration for furnishing capital. The withdrawals of working proprietors represent a return from both work and ownership. Another important component is the undistributed profit or loss, retained by enterprise but regarded as an addition to, or deduction from, the income of the owners.

The amount of the income of an individual measures his power of demand for goods and services and, consequently, his control over the economic activity of society.

Remuneration of employees in the form of salaries and wages, averaging nearly 59 p.c. of the total, was the chief income payment during the period 1919-42. If living allowances of so-called unpaid labour and other labour income are added, the employee's share would be raised to 62 p.c. Salaries and wages were more than maintained in the second half of the period compared with the first, and a marked increase was shown in "other labour income" including direct relief and dependent's allowances.

The withdrawals of working proprietors, mainly farmers, retailers and professionals, constituted 23.8 p.c. of the total in the 24 years. Owing, in part, to the severe depression in agriculture, the withdrawals of employers and "own accounts" were 15 p.c. less in the second half of the period than in the first.

Investment income, including net dividends, interest from bonds, debentures and mortgages, net rentals and other returns from credit instruments, was computed at $14 \cdot 2$ p.c. of national income payments. An increase of 13 p.c. was shown in dividends and bond interest in the last 12 years of the period over the first, while other investment income recorded a gain of nearly 4 p.c. An increase of 4.4 p.c. occurred in income payments as a whole.

Salaries and wages were more sensitive to economic fluctuation than the remuneration of working proprietors; the latter, which receded from $\$ 1,316,000,000$ in 1920 to $\$ 994,000,000$ in 1922, recovered fairly continuously to 1929 , when an intermediate maximum of $\$ 1,112,000,000$ was reached. The low point of the second major depression of about $\$ 715,000,000$ was recorded during 1934 , successive gains then being shown until the end of the period under review.

Types of Payment.-Remuneration of employees in a large number of groups, is taken directly from the compilations of the annual census conducted by the Bureau of Statistics. The Decennial Census furnishes comprehensive information as to numbers, rates and remuneration of employees. Intercensal figures are estimated by means of indexes of employment and other data. Corporation and public accounts are of great assistance in estimating salaries and wages paid by finance and government.

More than one-quarter of a million persons were working as so-called unpaid labour during the census period of 1940-41 without receiving any regular remuneration in the form of salaries or wages. As many of the "no pays" were farmers' sons working at home, the income of at least a part of the group consisted of a living allowance paid principally in the form of food, clothing and housing. Apprentices in other industrial groups, while receiving no money wages, sometimes obtain appreciable compensation in commodities and services. As there is not the customary freedom of disposal, some restriction is implied in the nature of such income.

Compensation, Pensions, Special Allowances and Direct Relief.-Workmen's compensation (see pp. 784-789), an important constituent of labour income, is
provided in eight of the nine provinces for injuries suffered by employees while engaged in industrial occupations. Funds are accumulated by contributions from the firms, classified into industrial groups according to occupational hazards. Contributory pensions are regarded as a component in the national income account. If a pension is paid to a retired worker out of funds contributed in part by the employee, it is added to the record. Similarly, pensions in respect of war services, old age pensions, mothers' allowances, pensions to the blind and like payments are included.

Direct relief payments are disbursements to individuals and are not generally related to services currently performed by them. These payments, after allowance for general expenses, have also been distributed according to origin in the various government agencies.

The most reliable statistics of the number of working proprietors are given in the industrial section of the Decennial Census reports. Intercensal figures are estimated according to the number of establishments or smoothed data of employment. The rates are estimated for the census periods as a differential over employee rates in the same industrial and service groups. The fluctuations between census years are interpolated according to smoothed employee rates. The products of the numbers, by rates, are taken as the withdrawals of working proprietors.

Dividends paid by Canadian corporations contribute greatly to the income of individuals. For example, gross declarations amounted to about $\$ 400,000,000$ in 1930, but only a portion of the sum was received by individuals living in Canada. A considerable part was paid to other companies, and an even larger sum to shareholders living abroad. On the other hand, dividends earned and paid by external companies were received in considerable amount by Canadian shareholders. The amount of net dividends paid by Canadian companies is determined from the annual compilation of the Income Tax Division and the examination of a large sample of company accounts.

A similar procedure is followed in computing the amount of bond interest received by individuals. An adjustment for interest payments going abroad and for interest received by individuals from external sources is necessary. Unfortunately, it is not possible to allocate exactly these payments by industrial groups and the adjustment is mainly restricted to national totals.

Interest payments on mortgages are chiefly paid to three main groups making loans on real estate: (a) various government agencies, (b) financial corporations such as insurance, mortgage, trust, loan, banking and railway corporations and (c) individuals. It is possible to estimate the amount of mortgage interest paid to individuals by utilizing Decennial Census data, the annual reports of the Dominion and various Provincial Governments and the financial statenents of insurance, mortgage, trust, bank and railway companies. Interest on mortgages held by individuals is divided into liens on farms and on non-farm property. The latter cover business and industrial property as well as residential, the total being segregated under the industrial group of real estate.

Net rentals, whether for residential or business property, are an important form of return on investment. Offsetting expenses, such as taxes, interest on mortgages, fire insurance, repairs, depreciation and costs incidental to the ownership of property,
are deducted and allowances made for vacancies and non-collection of rents on rented properties to obtain the net return. An estimate of imputed rent for owner-occupied houses is also included. While such houses are consumption goods, the occupation of them involves an addition to the income of the owner-occupants.

## Section 3.-British and Foreign Capital Invested in Canada and Canadian Capital Invested Abroad

The latest information available under this Section is given at pp. 798-800 of the 1942 edition of the Year Book. So far as this subject relates to the balance of international payments, it is dealt with in the official report "Canadian Balance of International Payments-A Study of Methods and Results" obtainable from the Dominion Statistician, Ottawa. This report is summarized at pp. 552-562 of this volume.

## PART II.-DOMINION, PROVINCIAL AND MUNICIPAL FINANCE

## Section 1.-Combined Statistics of Public Finance for All Governments*

The purpose of this Section is to present combined statistics of public finance for all Governments of Canada-Dominion, Provincial and Municipal. While it was possible to publish current statistics of the combined debt of all governments, corresponding information concerning combined revenues and expenditures was not available at the time of publication. Consequently, Table 1 presents the combined debt of all governments as at the governmental fiscal year ends nearest Dec. 31, 1943, while the combined revenues and expenditures presented in Tables 3 and 4, respectively, are for governmental fiscal years ended nearest Dec. 31, 1942.

Combined Debt.-The statistics of provincial and municipal debt appear in greater detail in Tables 34 and 41, respectively. The Dominion debt has been assembled on the basis used for the statistics of the 1945 Dominion-Provincial Relations Conference. This involved the inclusion of certain liability items which were omitted from the statistics presented in this section of previous Year Books. Consequently, the figures of combined debt in Table 2 have been revised to the new basis.

The rapid growth of the combined debt during the war period 1940-43, as shown in Table 2, has been due to the fact that large increases in the Dominion debt have overshadowed considerable reductions in provincial and municipal debt. However, it should be noted that the Dominion has been able to finance the war without recourse to the issue of foreign pay bonds, and that the large increase in bonds outstanding represents additions to internal rather than external debt. Largely as a result of the repatriation of sterling issues, the amount of Dominion, direct and guaranteed foreign pay bonds outstanding has declined by more than $\$ 700,000,000$ in the period $1940-43$. As pointed out on $p$. 956 , the amount of provincial foreign pay bonds declined during the same period by approximately $\$ 100,000,000$.

[^304]
## 1.-Composition of Total Debt of All Governments in Canada, 1943, with Totals for 1942

Note.-These figures are as at the governmental fiscal year ends nearest Dec. 31, 1943.

| Grand Totals. | 9,260,634 | 10,585,100 | 12,538,333 | 15,420,790 |

Combined Revenues and Expenditures.-Tables 3 and 4 present an overall picture of Dominion, provincial and municipal finance by combining ordinary and capital account revenues and expenditures for each level of government. Since all expenditure-ordinary or capital-is included, amounts provided for debt retirement have been excluded to avoid duplication. The revenues and expenditures presented in these tables are on a "net" basis since the following revenues have been treated as offsets to their corresponding expenditures: shared-cost contributions of other governments, institutional revenue and certain other sales of commodities and services, and interest revenue exclusive of sinking fund earnings. Certain inter-governmental transfers such as the payments of the Dominion to the provinces for the vacation of tax fields are neither conditional grants nor payments for services and cannot, therefore, be offset against any specific expenditure. While intergovernmental transfers of this type appear in Tables 3 and 4 as revenue or expenditure of each level of government, they are, nevertheless, excluded from the combined total for all governments.

Discrepancies between the amounts shown in Tables 3 and 4 as inter-governmental transfers are due to variations in the fiscal year ends and accounting practices of governments.

## Section 2.-Dominion Public Finance*

Historical Sketch.-A sketch of public finance, from the French regime to the outbreak of the War of 1914-18, appears at pp. 742-743 of the 1941 Year Book. Up to that time, Dominion revenues had never reached $\$ 170,000,000$, while expenditures reached $\$ 186,000,000$ in the fiscal year ended Mar. 31, 1914, and even this figure was an increase of almost 29 p.c. over that of the previous year.

Pre-War Modifications in the System of Taxation.-A detailed sketch of the changes made in taxation from 1914 to 1926 will be found at pp. 755-759 of the 1926 Year Book, while similar information $r e$ tax changes from 1927 to 1929 is given at pp. 791-792 of the 1930 Year Book, for the years 1930 to 1935 at pp. 824-826 of the 1936 Year Book, for 1936 and 1937 at pp. 837-839 of the 1938 Year Book, and for 1938 at pp. 874-875 of the 1939 Year Book. A statement at pp. 811-817 of the 1937 Year Book gives complete details of the Dominion tax system as of July, 1936, and statements at pp. 836-837 of the 1938 edition give changes made in the sales tax and in the special excise tax on importations since the inception of these taxes in 1920 and 1931, respectively.

[^306]Wartime Modifications in the System of Taxation.-Changes in 1939 are given at pp. 830-831 of the 1940 Year Book, 1940 changes at pp. 744-745 of the 1941 Year Book and 1941 changes at pp. 747-748 of the 1942 edition. The salient wartime changes are brought together below.

The Financing of Canada's War Effort.*-At the emergency session of Parliament in September, 1939, an appropriation of $\$ 100,000,000$ was passed to cover war expenditures, and with this was lumped the unexpended funds of the Department of National Defence that had been voted at the first 1939 session. The first War Budget was brought down on Sept. 12, 1939, by the Minister of National Revenue. This Budget included moderate increases in income taxes and substantial increases in taxes on certain luxuries and semi-luxuries, notably beverages and tobacco. An excess-profits tax was enacted to divert to the Treasury a large part of increased profits arising from wartime conditions.

When Parliament assembled in May, 1940, a War Appropriation of $\$ 700,000,000$ was passed to meet the costs in 1940-41 of the greatly extended war effort. Estimates submitted to Parliament for other expenditures amounted to $\$ 448,000,000$, showing a substantial reduction from the corresponding figure of $\$ 525,000,000$ in the previous year. The second War Budget, brought down on June 24, 1940, provided for substantial increases in taxes to meet a portion of these additional costs of war. The graduated rates of the personal income tax were raised very substantially and exemption limits were reduced. A national defence tax was introduced applying broadly to all persons receiving incomes of more than $\$ 600$ per annum. So far as possible, this tax was deducted at the source. The excess profits tax was revived and made much more severe. In order to conserve exchange, a War Exchange Tax of 10 p.c. was imposed on all imports except those from the Empire. The excise tax on automobiles was made much more severe and steeply graduated in the upper brackets. The Minister of Finance estimated that these, and the other less important changes, would produce an increase of $\$ 280,000,000$ in tax revenue in a full year. Further details are given at pp. 744-745 of the 1941 Year Book.

War expenditures were relatively low during the first eight or nine months of the War, when war activities were in the organization phase. They rose rapidly thereafter and by the end of the first year of war were running at a rate of more than $\$ 700,000,000$ per year. For the fiscal year ended Mar. 31, 1941, total war expenditures amounted to approximately $\$ 778,000,000$ of which $\$ 26,000,000$ represented outgo for items treated as active assets in the Dominion accounts.

Financial assistance was provided to Great Britain on a rapidly rising scale as the War progressed. The British Government required Canadian dollars to meet the costs of essential supplies produced in Canada. Some of these were obtaincd

[^307]in the normal way from British exports to Canada, and Canadian tariffs on British goods were drastically reduced (in the War Exchange Conservation Acts) to make this easier. However, from Sept. 15, 1939, to Mar. 31, 1941, Britain's deficit in her balance of payments with Canada amounted to about $\$ 795,000,000$. Prior to 1941 Britain was able to send some gold to Canada for Canadian dollars; this gold was transferred to the United States in part settlement of Canada's deficit of payments with that country. The large balance of Canadian dollars that the United Kingdom needed was supplied by the Canadian Government or its agencies by two methods: about $\$ 337,000,000$, up to Mar. 31, 1941, was transferred to the United Kingdom in exchange for Canadian securities formerly owned there; the remainder was simply transferred to the United Kingdom in exchange for sterling balances accumulated to Canada's credit in London.

In the third War Budget (Apr. 29, 1941) it was necessary to make provision for war expenditures in the fiscal year 1941-42. Taxes were again increased very substantially, particularly personal and corporate income taxes and the national defence tax and a new tax in the form of a Dominion succession duty was introduced. Details are given at p. 747 of the 1942 Year Book.

To meet the rapidly expanding expenditures of the Dominion, on behalf of Britain and the other Allies, further steep increases in taxes and a plan of compulsory savings were introduced in the fourth Budget brought down on June 23, 1942. Total expenditures for the fiscal year 1942-43 were tentatively set at $\$ 3,900,000,000$-an amount considerably in excess of all expenditures made by the Government for the entire period during and immediately following the War of 191418. This amount included direct war expenditures of the Canadian Government in excess of $\$ 2,000,000,000$, and a credit to the United Kingdom of $\$ 1,000,000,000$ to enable her to make purchases of food and equipment in Canada. It was estimated that revenues from the existing tax system would be in the neighbourhood of $\$ 1,675,000,000$, leaving a gap of $\$ 2,225,000,000$ between receipts and expenditures. To partly fill this gap, new and higher rates of taxes were introduced to yield an estimated additional revenue of about $\$ 375,000,000$ (the principal tax increases were excise duties and taxes $\$ 66,000,000$; personal income taxes $\$ 115,000,000$; and excess profits tax $\$ 58,000,000$ ), and a form of compulsory savings designed to produce about $\$ 95,000,000$ in $1942-43$, leaving a deficit to be financed by other means of about $\$ 1,755,000,000$.

The main changes in the personal income tax were (a) the national defence tax lost its identity as a separate tax and was incorporated into the general income tax as a flat-rate "normal" tax, although at higher rates than the former rates of national defence tax; (b) the graduated rates of tax were steeply increased, and the credit for dependants was changed from a deduction from income to a deduction from tax; (c) it was provided that part of the total tax would be refunded after the War as a form of compulsory savings, although the taxpayer was required to pay this part only to the extent not offset by savings in other forms, such as life insurance premiums, principal payments on a residential mortgage and contributions to a pension or superannuation fund; (d) a plan was introduced for deduction of income
tax at the source from all salaries and wages paid after Sept. 1, 1942, and for compulsory payments of income tax on a quarterly instalment plan in the case of other forms of income; (e) certain other changes of a less general character were made, including exemption of pensions paid to members of the Armed Forces, allowance of a deduction from income in respect of medical expenditures in excess of 5 p.c. of the income of the taxpayer.

Under the Excess Profits Tax Act, rates of tax were considerably increased with the result that corporations having profits in excess of $1162 / 3$ p.c. of their standard profits (average 1936-39) pay a tax at the rate of 100 p.c. and no corporation is allowed to retain, after tax, profits equal to more than 70 p.c. of its standard profits. Provision was made, however, for a 20 p.c. refund after the War for corporations to which the 100 p.c. rate of tax applies.

In the field of indirect taxation, additional revenue was found by raising existing taxes on spirits, tobacco, cigarettes, soft drinks, passenger transportation, communications and miscellaneous other articles and services. Certain new taxes were introduced at the manufacturer's level (the normal point of levying sales and excise taxes under Dominion tax law), including taxes on candy, chewing gum, photographic films and supplies, luggage, fountain pens and pencils, and pipés and other smokers' accessories, while a radical departure was made with the introduction of taxes to be collected by stamps at the retail level on a list of luxury articles, including jewellery, cut glass and crystal ware, clocks and watches, articles made wholly or in part of certain materials, and chinaware other than that used in preparing and serving food and drink. There were other minor tax innovations.

The Budget of Mar. 2, 1943, provided for revenues and expenditures considerably increased over those of any previous year and carried the principle of "pay-as-you-go" to its logical conclusion. Total expenditures for the fiscal year $1943-44$ were estimated in this Budget at $\$ 5,500,000,000$. It was estimated that revenue on the basis of existing tax rates (including revenue from the refundable taxes) would amount to $\$ 2,601,000,000$ and tax changes were introduced to provide an additional $\$ 151,200,000$, bringing the revenue forecast up to $\$ 2,752,200,000$, or to almost exactly one-half of the estimated expenditure. The balance of the requirements, approximately $\$ 2,748,000,000$, was expected to be met through the sale of war savings stamps, certificates and Victory Bonds and, to some extent, through bank borrowing.

Tax changes introduced by this Budget were relatively limited. The rates on cigarettes, cigars, manufactured tobacco, raw leaf tobacco and cigarette papers and tubes were all increased. The duty on alcoholic spirits and the tax on cabarets and night clubs were raised and a one-cent increase in the postage rate was provided.

There were no changes in the general rates or exemptions under the income tax. Substantial concessions were made in the basis of taxing the oil industry, in order to encourage new development and production, and the special income tax allowances granted to members of the Armed Services were amended to provide further relief. Tax alleviation was also given to Canadian personnel of the Merchant Marine and
the R.A.F. Transport Command. Payments on a Dominion Government annuity, as a deduction from the savings portion of the tax, were also allowed. Changes made in the Excess Profits Tax Act and the customs tariff were of minor importance.

The "Pay-As-You-Go" Plan.-The adoption of the "pay-as-you-go" plan of income tax payment represented an important break with the traditional method of tax collection-a break that Canada was the first country to make. Under the system of deductions from income in the 1942 Budget, tax deductions were made at the source from salaries and wages, but these deductions did not relate to the current income but to the income of an earlier period. They were made from current earnings but not for current earnings. Thus, a taxpayer was, at all times, considerably in arrears to the Government for income tax, a situation that created a difficult problem for those suffering a reduction or loss of income through entering the Armed Forces, retirement from active earning or on death. In these circumstances a tax debt remained to be paid on the former higher income.

The basic step in wiping out this tax debt and bringing taxpayers up-to-date was the cancellation of 50 p.c. of the 1942 tax liability on earned income and on investment income up to $\$ 3,000$. Investigation had shown that owing to the deduction of national defence tax for the first eight months of 1942 and of the much larger amounts under the 90 p.c. plan in effect during the last four months of 1942, the majority of taxpayers had already paid at least 50 p.c. and, in many cases, considerably more than 50 p.c. of their 1942 liability. For the majority of taxpayers the 50 p.c. cancellation thus completely wiped out the tax arrears for 1942 and brought them up-to-date in their payments. All deductions made during 1943 were for the tax on income earned in 1943.

Taxpayers continued to file an annual return (in respect of 1943 income on or before Apr. 30, 1944) in which they took account of deductions withheld from their income during the year, and made up whatever belance was owing against their full annual liability or any other adjustment that was necessary. A new table of tax deductions introduced on Apr. 1, 1943, designed to withhold 95 p.c. of the full tax liability, left a smaller balance to be paid than under the 90 p.c. table previously in use.

Certain changes were also made affecting other groups. The quarterly plan of instalment payments for taxpayers, other than wage and salary earners, was made to coincide with the calendar year, while farmers are required to pay two-thirds of their tax by Dec. 31 and the balance before Apr. 30 of the following year.

The Budget for the fiscal year 1944-45 was presented to Parliament on June $\mathbf{2 6}, 1944$. The total expenditures for the year were estimated at $\$ 5,152,000,000$, about one-half of which was to be met from tax revenues. While expenditures at this figure were less than those of the previous year, it was pointed out that certain outlays of a class not definable as expenditures would be required during the year which would bring the total cash requirements to over $\$ 6,000,000,000$.

Tax changes announced in this Budget were numerous but were more in the nature of adjustments within the existing tax structure than a general revision or
relaxation. In the main they had reference to personal income taxes, corporation income and excess profits taxes, and other taxes.

Under the personal income tax the most important change was the reduction of the savings requirement by one-half for 1944 and its complete removal in 1945. It had been alleged that since, for most wage-earners, the savings requirement was as much as the pure tax deduction it contributed to absenteeism and unwillingness to work overtime, and that the nature of the savings requirement had been misunderstood and was adversely affecting production. In order to give an incentive to additional effort at a time when there was an acute manpower shortage the savings requirement was, therefore, withdrawn.

Several other changes were made affecting individuals, for the most part granting minor reliefs and adjustments. These may be summarized as follows:-
(1) The definition of 'dependants' was broadened to include in-laws and illegitimate children, previously excluded.
(2) The allowance for medical expenditures was made more generous.
(3) A special income deduction of 8480 a year was granted the blind.
(4) An allowance was given in respect of a housekeeper employed by a widow or widower for the care of dependent children.
(5) Taxpayers were granted the right to reduce their incomes by making a gift to the Crown in the last eight months of the year of taxation or the first four months of the following year.
(6) Lump sum gratuity payments on retirement in the future are to be spread over a five-year period rather than taxed in one year as formerly.
(7) Alimony payments were allowed as a deduction from income.
(8) The right of the Income Tax Division to re-assess or make additional assessments on a taxpayer was limited to a period six years after the date of the original assessment.
(9) A reduction was made in the interest penalties for late filing of returns and underpayment of taxes.

Under the corporation income tax and the excess profits tax several important changes were made of particular significance for the transition and post-war period. These changes may be summarized as follows:-
(1) Beginning with the taxation year 1944, losses incurred by corporations or individuals engaged in business, including farmers, may be offset against income of the previous taxation year or of the three succeeding taxation years. This replaced a previous provision allowing a one-year carry-forward (two years for farmers).
(2) Double the normal depreciation rates are to be allowed on assets purchased by a taxpayer after a date to be fixed by Order in Council. This date has since been fixed as Nov. 10, 1944.
(3) One-half of expenditures on maintenance and repairs incurred by a taxpayer, after a date to be fixed by Order in Council, may be carried back into income of any fiscal period of the taxpayer ending after Dec. 31, 1942.
(4) Scientific research expenditures are to be allowed as a deduction either in the year of taxation if of a current nature, or over a three-year period if of a capital nature.
(5) In order to give certainty to new businesses commencing after June 26, 1944, in respect of their excess profits tax liability, it is provided that in the first fiscal year of the business the rate of excess profits tax should be limited to 22 p.c.
(6) Under the excess profits tax it is also provided that the refundable portion of the tax may be assigned by a taxpayer as security when the Governor in Council is satisfied that the taxpayer will be enabled to make capital expenditures providing substantial employment and contributing to post-war reconversion.

In addition, other changes made under these taxes included the granting of the privilege, under the excess profits tax, of increasing the standard profit of a taxpayer by 5 p.c. of the increase in capital employed since 1939, and also the granting of a tax credit equal to 50 p.c. of expenditures incurred in drilling a deep-test oil well in the period between June 26, 1944, and Mar. 31, 1945, which proves to be an unproductive well.

The principal change in other taxes was the removal of the war exchange tax and customs duties on the importation of agricultural implements. The War Exchange Conservation Act, which had prohibited the importation of a long list of items in order to save dollar exchange, was also repealed in so far as these restrictions were concerned. No change was made in excise duties, and under the Special War Revenue Act the only amendment was a minor change in the schedule of tax rates applying to cigars.

Finally, in this Budget the Minister of Finance announced that a Royal Commission would be appointed to inquire into the taxation of annuities, pensions and similar forms of income, and also into the taxation of family corporations. This Commission was subsequently appointed and held public hearings at Ottawa; it submitted its report to the Government in March, 1945.

Borrowings.-It has been necessary for the Dominion to borrow large sums in order to meet that part of its own war expenditures which cannot be met even by heavy taxation, and also to provide funds to the United Kingdom and other countries. There have been regular borrowing operations in addition to the continuing and important War Savings Campaign and the receipts of non-interest-bearing loans from public-spirited citizens. These are summarized at p. 946, Table 23.

## Subsection 1.-The Current Balance Sheet of the Dominion

The composition of the Dominion Balance Sheet was revised in the fiscal year 1943-44. The aim has been to indicate more accurately the character of the asset and liability accounts.

Until this revision, the Dominion Balance Sheet had remained substantially unchanged in form since 1920. The changes of content during the past twenty-odd years have been great, especially those of the war years. The Balance Sheets for the years 1940-44 shown in Table 5 are presented on the basis of the 1943-44 revision. On the asset side, accounts that have been classified as active assets are shown; these represent cash or investments that are interest-producing or have a readily realizable cash value. On the liability side, such liabilities as have been ascertained and brought into the accounts are given. No liability is shown for interest accrued but not due, nor for current obligations incurred for supplies or services but not paid for at the end of the fiscal year. Indirect liabilities under guarantees are not reflected in the Balance Sheets, but are set out in a special schedule. (See p. 951.)

The excess of liabilities over active assets, designated the net debt, is analysed in a statement appended to the Balance Sheet, and is apportioned to non-active assets, which include capital expenditures and non-productive investments, and to accumulated deficits in Consolidated Fund.

## 5.-Balance Sheets of the Dominion of Canada, as at Mar. 31, 1940-44

## Subsection 2.-Revenues and Expenditures

In the year ended Mar. 31, 1944, both revenues and expenditures far exceeded those of any year in the history of the Dominion. Revenues increased over 1943 by $\$ 515,522,000$ to $\$ 2,765,018,000$ (excluding the refundable portion of the income tax and the excess profits tax), mainly accounted for by the increase in income tax and excise tax collections. Revenue from direct taxes represented about 60 p.c. of the total tax revenue, as compared with about 50 p.c. in the last pre-war year. Of the total expenditures of $\$ 5,322,254,000$, expenditures on the war amounted to $\$ 4,587,023,000$ or approximately 86 p.c. Ordinary expenditures, covering the normal operating costs of government, increased by $\$ 69,130,000$, owing largely to an increase of $\$ 59,590,000$ in debt charges. Expenditures designed to relieve unemployment and agricultural distress, shown in the table under "Special Expenditures" totalled $\$ 37,496,000$, slightly higher than the amount expended in the previous year. Expenditures under the heading "Government Owned Enterprises" amounted to only $\$ 1,307,000$. The over-all deficit for the year amounted to $\$ 2,557,236,000$ or $\$ 420,000,000$ higher than that of the previous year.

## 6.-Details of Revenues, Fiscal Years 1940-44

## Subsection 3.-Analysis of Revenues from Taxation

Table 13 gives a picture of the proportions of total expenditures that have been met by taxation and from all sources of revenue for each of the fiscal years since 1936. Prior to the War, and as Canada was pulling away from the depression of the early 'thirties, the record shows a substantial improvement and in 1938, 96.7 p.c. of all expenditures was being met from all revenue and almost 84 p.c. from taxation revenue. Subsequently, as is to be expected, the reverse was the case. The high level of the percentage figures for 1942 was the result of the early imposition of high taxation levels and the fact that at this time war expenditures were still relatively low.

As shown in Table 12, the revenues from customs and excise duties, the two most important sources prior to the War of 1914-18, now amount to only about onequarter of the revenue derived from taxation.

The analyses of taxation revenue below are confined to excise duties and war-tax revenue since customs receipts constitute a single item in the "Public Accounts" and cannot be further analysed here. Excise statistics cover distillation of spirits and alcohol and tobacco taken out of bond and those of war-tax revenues include income tax collections. These income tax figures are analysed at length at pp. 969-977.

Excise Duties.-Excise duties proper are presented here together with a summary of the excise tariff and statistics arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of excisable goods taken out of bond. Excise war taxes are shown under the heading "War-Tax Revenue"

Canadian Excise Tariff.-The following is a statement of the Canadian excise tariff, as existing at Apr. 1, 1944:-

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to any bona fide public hospital for medicinal purposes only.

Revenues from Excise Duties.-In the fiscal year 1944, tobacco, including cigarettes, supplied about 54 p.c. of the revenue from excise duties.
14.-Excise Duties Collected, Fiscal Years 1939-44
(As shown in the Report of the Commissioner of Excise)

Statistics of Licences and Distillation.-As a by-product of the collection of excise duties, statistics are compiled of excise licences issued and of distillation.
15.-Statistics of Licences and Distillation, Fiscal Years 1939-44

| Item |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from the low of $2,356,329$ proof gal. in that year to the high of $27,203,337$ proof gal. recorded in 1944.

- Alcohol and Tobacco Taken Out of Bond.-Record amounts of cigarettes and tobacco were taken out of bond for consumption in 1944, while amounts of spirits, malt liquor, malt and cigars were slightly below 1943 figures.

## 16.-Spirits, Malt Liquor, Malt and Tobacco Taken Out of Bond for Consumption, Fiscal Years 1922-44

Nots.-For years prior to 1900, see 1916-17 Year Book, p. 528; for 1901-10, see 1933 Year Book, p. 840 and for 1911-21, the 1938 Year Book, p. 855.

${ }^{1}$ Figures include snuff.
War-Tax Revenues.-Amounts received from the various war taxes imposed in 1915 and thereafter instituted are given in Table 17. The taxes imposed on banks, trust and loan companies and insurance companies are collected by the Department of Finance; excise taxes, income taxes and excess profits taxes are collected by the Department of National Revenue.

## 17.-War-Tax Revenues and Succession Duties Received by the Receiver General, Fiscal Years 1915, 1919, 1920 and 1926-44

Note.-Statistics for the intervening years from 1916 to 1925 will be found at p. 851 of the 1938 Year Book.

${ }^{1}$ The figures are for special taxation only, imposed in 1915. ${ }^{2}$ Exclusive of life and marine insurance companies. ${ }^{3}$ Although this tax was not charged upon profits accruing after Dec. 31, 1920 (see 14-15 Geo. V, c. 10), belated revenue therefrom continued to be received until 1933. In 1940 the tax was re-instituted as the Excess Profits Tax.

The income tax revenue shown in Table 16 represents collections made by the Income Tax Division of the Department of National Revenue under the authority of the Income War Tax Act (c. 97, R.S.C. 1927). The Act covers more than income tax proper, as corporation taxes are coming to be regarded in a different light to those on the income of individuals. Income tax on individuals and corporations is treated separately in Part III of this Chapter, at pp. 969-977.

The tax on dividends and interest (Sect. 9 B of the Act) is levied at the rate of 5 p.c. on interest paid by Canadian debtors (except provinces and municipal or public bodies) in a currency which is at a premium in excess of 5 p.c. over Canadian funds and at the rate of 15 p.c. on dividends received by persons who are non-residents of Canada and on interest received from or credited by Canadian debtors to nonresidents, except in the case of Dominion or Dominion-guaranteed bonds and also on interest received by a non-resident parent company from a Canadian subsidiary except where an agreement had been entered into prior to Apr. 1, 1933, for the payment of such interest in a currency other than Canadian. The tax also includes fees for copyrights and rights for the use of films, phonograph records and similar devices. The tax on rents and royalties (Sect. 27) is imposed at the rate of 15 p.c. on non-residents in respect of the gross amount of all rents, royalties, etc., for the use in Canada of real or personal property, patents or for anything used or sold in Canada. The gift tax (Sect. 88) is imposed at the rate of 10 p.c. on gifts up to $\$ 5,000$ and at rates varying from 11 p.c. to 28 p.c. on gifts from $\$ 5,000$ to $\$ 1,000,000$ or over.

The national defence tax was imposed in 1940 at the rate of 2 p.c. on the incomes of single persons earning over $\$ 600$ and at the rate of 3 p.c. on those earning over $\$ 1,200$. In the case of married persons the tax was 2 p.c. on incomes over $\$ 1,200$. In 1941 the rates were raised to 5 p.c. and 7 p.c., the exemption limit for single persons being raised to $\$ 660$. This tax was later consolidated with the individual income tax in the 1942 Budget.

${ }^{1}$ New tax imposed on cigarettes and tobacco. $\quad{ }^{2}$ Increase due largely to use of excise stamps in paying tax on places of entertainment. ${ }^{2}$ Includes refunds of $\$ 3,787,365$ in $1939, \$ 3,675,115$ in 1940 , $\$ 4,834,909$ in $1941, \$ 10,369,721$ in $1942, \$ 17,549,001$ in 1943 and $\$ 34,342,147$ in 1944.

## Subsection 4.-Subsidies and Loans to Provinces

Subsidies.-By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Dominion makes certain annual payments to the provinces: these are summarized as follows.

Interest on Debt Allowances.-By the terms of the union of the provinces at Confederation in 1867, the Dominion assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except in the case of Ontario and

Quebec, interest at 5 p.c. on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately $\$ 25$ per capita. On the subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Confederation indebtedness. From time to time, adjustments have been made in the basis of calculating the debt allowances of the provinces; moreover, the Dominion pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted. The aggregate annual payment from the Dominion to the provinces in respect of interest on debt allowances is $\$ 1,609,386$.

Allowances for Governments and Legislatures.-Under the terms of the Union, annual specific grants were made to the various provinces for the support of their governments and legislatures. These fixed amounts vary with the population of the provinces, according to the following scale, approved in 1907:-

| Where population is- |  |  |  | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Under 150,000... |  |  |  | 100,000 |
| 150,000 , but does not exceed 200,000 |  |  |  | 150,000 |
| 200,000, | " | " | 400,000. | 180,000 |
| 400,000, | " | " | 800,000. | 190,000 |
| 800,000 | " | " | 1,500,000. | 220,000 |
| Over 1,500,000. |  |  |  | 240,000 |

Aggregate annual allowances presently paid under this head amount to $\$ 1,750,000$.
Allowances per Head of Population.-Under the British North America Act of 1867, a grant of 80 cents per head of population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per head up to a population of $2,500,000$, and at the rate of 60 cents per head for so much of the population as exceeded that number. Such allowances paid to the provinces in the fiscal year 1944 reached $\$ 8,779,089$.

Special Grants.-In the case of certain of the provinces, grants have been added to the original scale of subsidies in view of special circumstances obtaining, which, for the fiscal year 1944, amounted in the aggregate to $\$ 2,280,880$ as set forth below:-

Prince Edward Island.-A special grant of $\$ 195,000$ less a deduction of $\$ 39,120$ (net grant of $\$ 155,880$ ).

New Brunswick.-An annual grant of $\$ 150,000$ since 1875 in consideration of the repeal of lumber duties reserved to the province by the B.N.A. Act of 1867.

Manitoba.-A special grant on the basis of population amounting at present to $\$ 562,500$ per annum.

Saskatchewan and Alberta.-An annual sum as compensation for loss of Public Lands revenue, based on their respective populations and amounting at present to $\$ 750,000$ for Saskatchewan and $\$ 562,500$ for Alberta.

British Columbia.-A special grant amounting at present to $\$ 100,000$ per annum.
20.-Subsidy Allowances to Provincial Governments, Fiscal Years 1939-44

${ }^{2}$ Allowances in lieu of debt.
${ }^{2}$ Does not include "Additional Special

Additional Special Grants.-In addition to the above, there were other special grants paid to the Maritime Provinces, Manitoba, Saskatchewan and British Columbia up to 1941 that were voted annually, aggregating, in the fiscal year 1941, $\$ 5,475,000$ as follows:-

| Prince Edward Island. | 275,000 |
| :---: | :---: |
| Nova Scotia. | 1,300,000 |
| New Brunswick | 900,000 |
| Manitobs. | 750,000 |
| Saskatchewan. | 1,500,000 |
| British Columbia | 750,000 |

These additional special grants were suspended with the coming into force of the Dominion-Provincial Taxation Agreements.

Dominion-Provincial Taxation Agreements.-The Dominion-Provincial Taxation Agreement Act, 1942, was the result of agreements between the Dominion and the individual provinces whereby the latter agreed to vacate the income and corporation
tax fields in favour of the Dominion for the duration of the War and a limited period thereafter and the Dominion agreed to compensate the provinces therefor. Two alternative methods of compensation were proposed and these are outlined at p. 748 of the 1942 Year Book.

Under the agreements the provinces have undertaken generally, subject to certain minor exceptions, that they and their municipalities will not tax personal or corporation incomes earned after Dec. 31, 1940, or collect any other corporation taxes (with certain exceptions) becoming due and payable after Sept. 1, 1941. The agreements will continue in force for a limited period after the cessation of hostilities when the Dominion agrees to reduce its ${ }_{2}^{\text {ctax }}$ rates so as to permit the provinces to re-enter the tax fields that they have vacated temporarily. Any province upon thirty days' prior written notice may terminate its agreement with the Dominion on the last day of the province's fiscal year.

Annual payments to British Columbia, Alberta, Manitoba, Ontario and Quebec are based upon the revenues which the provinces and their municipalities obtained from the personal income tax and corporation tax fields during the fiscal year ended nearest to Dec. 31, 1940. Annual payments to Nova Scotia, New Brunswick, Prince Edward Island and Saskatchewan are based on the net cost of servicing the provincial debt in the fiscal year ended nearest to Dec. 31, 1940 (not including contributions to sinking funds), less the revenues obtained by the province from succession duties in the said year. The agreements further provide for the payment of additional subsidies as follows: Prince Edward Island, $\$ 473,174$; New Brunswick, \$371,493; Manitoba, \$600,000; Saskatchewan, \$1,500,000; Nova Scotia, $\$ 325,769$; a total of $\$ 3,234,437$.

The total amounts of the above-described annual payments to the provinces provided for under the Act are shown in Table 22. It is provided, however, that in any year there are to be deducted from such payments any net collections (after refunds to taxpayers and certain collection charges) made by the provinces on account of the taxes renounced in favour of the Dominion. The agreements limit the aggregate amounts that may be so deducted. In each case an amount equivalent to the deductions so made is to be paid to the province within thirty days after the termination of its agreement with the Dominion.

In addition, the agreements provide that the Dominion shall pay, with respect to each year of the agreements to each province, the amount by which the net receipts from gasoline taxes for said year are less than the amount received from this source in the fiscal year ended nearest to Dec. 31, 1940.* The Dominion also guarantees provincial revenues from the sale of alcoholic beverages at the levels of the basic period, June 30, 1941-June 30, 1942.

Table 22 shows the amount of the annual payments to the provinces as compensation for their vacation of the income and corporation tax fields and also the gasoline tax revenues of each province in their respective fiscal years ended nearest to Dec. 31, 1940.

[^314]22.-Compensation to Provinces in Lieu of Income and Corporation Tax Revenue and Basis of Guarantees re Provincial Gasoline Taxes

${ }^{1}$ Provincial fiscal years ended nearest to Dec. 31, 1940.
Loans to Provinces.-All of the provincial loans recently advanced by the Dominion have been made to the western provinces under the authority of relief legislation beginning with the Unemployment and Farm Relief Act, 1931, and these have been secured by interest-bearing treasury bills of the respective provinces, the rate being 3 p.c. since July 1, 1936. The sum total of such loans outstanding as at Mar. 31, 1944, was $\$ 176,324,091$ less write-offs of $\$ 19,861,035$, making net loans outstanding $\$ 156,463,056$, divided by provinces as follows: Alberta $\$ 25,907,000$; British Columbia \$34,533,322; Manitoba \$24,774,950; Saskatchewan \$71,247,784. Details are given in Table 19, p. 830 of the 1943-44 Year Book.

Housing loans made to the provinces in the years following the War of 1914-18, on the authority of Orders in Council passed in 1918 and 1919, and of the Appropriation Acts of 1920 and 1921, were completely paid off in the fiscal year 1943-44. The Province of Ontario repaid the whole of the advances in 1928, the Province of Quebec repaid in full in 1937, New Brunswick in full in 1938, Manitoba and British Columbia in full in 1941, Prince Edward Island in full in 1943 and Nova Scotia in full in 1944. For statistics see Table 20, p. 831 of the 1943-44 Year Book.

## Subsection 5.-National Debt

The gross national debt of Canada on Mar. 31, 1914, was $\$ 544,391,369$, as against assets of $\$ 208,394,519$, leaving a net debt of $\$ 335,996,850$. This was a comparatively small debt; it was incurred almost altogether either for public works of general utility which, like the Intercolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets, of the nation, or was expended as subsidies to enterprises, which, like the Canadian Pacific Railway, though not government-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, it was a debt incurred for productive purposes. Also, it was mainly held outside the country, the principal of the Dominion funded debt payable in London being $\$ 302,842,485$ on Mar. 31, 1914, as against only $\$ 717,453$ payable in Canada.

The great changes brought about in the national debt during the 30 years from 1914 to 1944 have been: (1) the enormous increase in net debt from $\$ 335,996,850$
to $\$ 8,740,084,893$; (2) the gross debt, having been incurred largely for war purposes is not represented by corresponding assets; (3) the debt is now mainly held in Canada, $\$ 10,591,426,000$ of the funded debt (including refundable portion of personal income tax and excess profits tax) being payable in Canada at Mar. 31, 1944. The interest paid per capita has increased from $\$ 1.28$ in 1868 to $\$ 20 \cdot 27$ in 1944.

## 23.-Summary of the Public Debt of Canada and Interest Payments Thereon, June 30, 1900, to Mar. 31, 1944

Notr.-Statistics for the years 1867-99 are given at pp. 775-776 of the 1942 Year Book.

[^315]YIELDS OF DOMINION GOVERNMENT BONDS $1938-45$
PER CENT
TREASURY BILLS 1935-1945

Recent Funded Debt Operations.-Conversions and other national debt operations carried out between 1914 and 1930 are dealt with at pp. 842-843 of the 1933 Year Book; those between 1931 and 1934 at pp. 905-907 of the 1934-35 Year Book; those of the fiscal years 1936 to 1943 in the respective Year Books for those years.

War Savings Certificates, etc.-In addition to the Vietory Loans proper, it will be observed that other Dominion loan flotations, such as War Savings and NonInterest Bearing Certificates, are included at the end of Table 24. The Dominion initiated the sale of War Savings Certificates in May, 1940. These Certificates are sold at a discount and, if held to maturity, are equivalent to a yield of 3 p.c. compounded semi-annually. In July, 1940, the Government, in response to many public requests, authorized the issue of Non-Interest Bearing Certificates. These Certifcates are dated the 15th of the month in which payment is received and mature June 15, 1947, the registered holder having the option to redeem his Certificates at par at any time after six months from the date of issue.

Repatriation of Canadian Securities.-In addition to providing funds for war and general purposes, it has been necessary to furnish funds for the repatriation of sterling issues held in Great Britain. These repatriation operations have the ultimate effect of making available Canadian dollars to the United Kingdom for the purchase of Canadian primary commodities and manufactured products required for the prosecution of the War. An account of operations of this nature in the period April, 1940, to October, 1941, is given at pp. 777-778 of the 1942 Year Book.

Treasury Bills.-During the past decade a market for short-term treasury bills that has proven highly satisfactory has been built up in Canada. Each issue, with two exceptions (where the bills were sold direct to the Bank of Canada), has been offered for public tender. Lists of treasury bills sold by public tender for the fiscal years 1934-35 to 1941-42 appear in the respective Year Books beginning with the 1937 edition. Details of the issue in continuation of the list published at p. 778 of the 1942 Year Book may be obtained on request.
24.-Funded Debt and Treasury Bills of the Dominion, as at Mar. 31, 1944

Nore.-Certain qualifications as to redemption prior to maturity govern most of these issues; they
are explained fully in the "Public Accounts".

[^316]25.-Dominion of Canada Domestic Loan Flotations

from the Outbreak of War to Mar. 31, 1945

The Interest-Bearing Debt of Canada.-Despite the fact that since the outbreak of the present war the interest-bearing debt of the Dominion Government has risen to the unprecedented level of $\$ 11,352,476,746$, the average interest rate on this debt has continued to decline throughout the war period and the rate of $2 \cdot 6$ p.c. at Mar. 31, 1944, was the lowest for over three decades. This is in contrast with the experience of the War of 1914-18 when the average interest rate on the direct debt of the nation rose from 3.368 p.c. at Mar. 31, 1913, to a high point of $5 \cdot 164$ p.c. at Mar. 31, 1922.

During the last fiscal year before the outbreak of the present war, interest on the public debt absorbed about 25 p.c. of total government receipts. With the growth of expenditure on the War, however, interest on the debt has come to absorb a smaller portion of revenues, and in the fiscal year 1943-44 represented only about 10 p.c. of total receipts.

[^317]Guaranteed Debt of the Dominion.-Besides the direct debt of the Dominion, already dealt with, there are also large indirect obligations, arising mainly out of the guarantee of securities, by the Dominion, of the railway lines that now form the Canadian National Railways, and the subsequent extensions hereof. Together with these are other smaller indirect obligations, originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of its Harbour Commissions, issued in the main for harbour improvements. Since 1932 guarantees of certain bank loans have been made under the various Relief Acts. With the commencement of business of the Bank of Canada on Mar. 11, 1935, the guarantee [authorized by Sect. 27 (6) of the Bank of Canada Act] of the deposit required to be maintained in the Bank of Canada by every chartered bank, came into force. This guarantee will require to be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities, and if the Bank suspends payment of any of its liabilities".

For full details of other guarantees also outstanding at Mar. 31, 1944, see Schedule "V" to the "Public Accounts" for 1944.
27.-Guaranteed Debt of the Dominion Government (Amounts Held by the Public), as at Mar. 31, 1924-44
Nors.-Dashes in this table indicate that there were no guarantees of the type shown for the corresponding years. Figures for the years 1914-23 are given at p. 837 of the 1943-44 Year Book.

${ }^{1}$ First year data recorded.
2 Unstated advances re wheat marketing are not included.
${ }^{2}$ Does not include indeterminate amounts and amounts not yet determined. The main item in this category is the guarantee of bank advances to the Canadian Wheat Board.

## Section 3.-Provincial Public Finance*

## Subsection 1.-Provincial Revenues and Expenditures

On the whole the war period has been one of unprecedented prosperity for the provinces. In the four years 1940-43 $\dagger$ provincial net ordinary and capital revenues increased by almost $\$ 105,000,000$ to a record high of $\$ 366,623,000$. During both

[^318]1942 and 1943 the revenue of every province exceeded the total of its ordinary and capital expenditure and provincial over-all surpluses for these two years aggregated more than $\$ 100,000,000$. These large over-all surpluses are only partly the result of greatly increased revenues. Capital expenditures have been substantially reduced and the high employment of the war period has brought about a decline of more than $\$ 30,000,000$ in the cost of direct relief. This latter saving was slightly more than enough to offset substantial increases in expenditures on welfare, education and agriculture. The improvement of provincial finances is reflected in the fact that gross direct liabilities declined by $\$ 104,723,000$ ( 5 p.c.) between 1940 and 1943 while cash and investments increased by $\$ 70,308,000$.

Approximately 78 p.c. of the revenue increase between 1939 and 1943 occurred in the first two years of the war period-1940 and 1941. Initially, the quickened tempo of economic activity, coupled with the imposition of a few new or more severe taxes,* expanded provincial revenues. Following this, the Dominion-Provincial Taxation Agreement Act, 1942 and more recently the Dominion guarantee of provincial profits from the sale of alcoholic beverages, $\dagger$ stabilized a large part of provincial revenues at these higher levels. Under the provisions of the DominionProvincial Taxation Agreement Act each province agreed to discontinue the use of income and corporation taxes for the duration of the War and for a certain readjustment period thereafter, in return for a Dominion subsidy based on either (a) the cash collected on account of these levies in the fiscal year ended nearest Dec. 31, 1940, or (b) the cost of the province's net debt service, less succession duties collected, for the same period. As a result of these Agreements, and the guarantee of provincial revenue from gasoline taxation by a further provision of the same Act, the Dominion has become the major source of provincial revenue-a fact well illustrated by the shift in provincial revenue sources shown in Table 29.

There was no major change in the provincial revenue structure during the provincial fiscal years ended nearest to Dec. 31, 1943. Further declines in gasoline tax revenue and in amounts collected on arrears of provincial income and corporation taxes were offset by increases in the amounts received from the Dominion Government under the terms of the Dominion-Provincial Taxation Agreement Act. The revenue from liquor control, which is second in importance only to the tax agreement subsidies, increased by $8 \cdot 2$ p.c. to a new high of $\$ 64,986,000$, almost double the 1939 yield: increases were recorded in every province except British Columbia where there was a marked decline of 14.7 p.c. Quebec's retail sales tax and Saskatchewan's education tax both produced increased revenue in 1943. Revenue from the Saskatchewan education tax, which is ear-marked for educational purposes, exceeded the total expenditures for education of that Province.

The decline of $\$ 2,122,000$ ( $3 \cdot 3$ p.c.) in net debt charges during 1943, from the 1942 high of $\$ 64,140,000$, reflected an improvement in provincial finances. This reversal of a consistently rising long-term trend was due, for the most part, to debt retirement and a reduction in the average rate of interest paid. In Saskatchewan, however, gross debt charges were slightly higher but net debt charges declined by $\$ 616,000$ as a result of an increase of $\$ 736,000$ in interest received from the Farm Loan Board. Increased expenditures for education and public welfare were quite general and accounted for almost all the rise in "provincial expenditure in 1943. Educational expenditure declined only in Manitoba and welfare expenditure,

[^319]exclusive of relief, increased in all provinces. The marked increase of $\$ 3,152,000$ ( 25.4 p.c.) in the cost of old age pensions and pensions for the blind was due much more to the fact that pensions were increased to offset the rise in the cost of living than to the natural increase in the number of pensions paid.

Ordinary and Capital Revenues and Expenditures.-Tables 28, 29 and 30 present an over-all picture of provincial finance by combining ordinary and capital account revenues and expenditures. These tables provide a more valid basis for comparison than those based on ordinary account alone because they eliminate inter-provincial and inter-year incomparabilities that arise through variations from province to province, and from year to year, in the type of expenditure capitalized. Since all expenditures, ordinary or capital, are included in the combined picture, amounts provided through ordinary account for debt retirement have been excluded to avoid duplication. Sinking fund earnings are not included as revenue. These tables present the "net" cost of services to the provinces after the following revenues have been offset against the corresponding expenditures: shared cost contribution of other governments, institutional revenue and certain other sales of commodities and services, and interest revenue exclusive of sinking fund earnings.

${ }^{1}$ Exclusive of debt retirement.
Ordinary Revenues and Expenditures.-Table 31 indicates the great growth in provincial revenues and expenditures since 1871. While these figures provide an interesting historical series, their limitations as a basis for valid interprovincial or inter-year comparisons have been pointed out in discussing the overall picture presented in Tables 28, 29 and 30.

## 31.-Ordinary Revenues and Expenditures of the Provincial Governments for Their Respective Fiscal Years Ended in the Census Years 1871-1931 and in Each Year from 1932-43.

Note.-For provincial ordinary revenues and expenditures in all other provincial fiscal years since Confederation, see the 1932 Year Book, pp. 734-736. Figures for intervening years between 1916 and 1931 are given at p. 875 of the 1938 Year Book. For dates on which the fiscal years of the provinces end, see Table 34, p. 957.

${ }^{1}$ Includes expenditure on capital account, which is not separable. ${ }^{2}$ Nine months. ${ }^{3}$ Fourteen months. "To facilitate interprovincial comparisons, the ordinary revenues and expenditures as shown in the various Public Accounts have been placed on a gross basis and certain adjustments made. For reconciliation with various Public Accounts see "Financial Statistics of Provincial Governments in Canads for 1940'" and subsequent years. Statistics for the years shown below rule are for fiscal years ended neareat Dec. 31 of year stated.

5 Fifteen months.
6 Exclusive of interest paid by Hydro and other commissions. ${ }^{7}$ Five months. ${ }^{8}$ Excludes $\$ 7,136,000$ in 1941 and $\$ 1,510,000$ in 1943 implementing guarantees re Municipalities Seed Grain and Supply Act, 1937. - Six months.

## Subsection 2.-Provincial Debt

Bonded Debt.-As at the provincial fiscal year ends nearest Dec. 31, 1943, almost 84 p.c. of gross direct liabilities was represented by bonded debt. Gross provincial bonded indebtedness which totalled $\$ 218,870,000$ in 1916, increased steadily until 1940 and decreased significantly during 1941, 1942 and 1943 although this decrease was not common to all provinces. Table 32 indicates the trend in bonded indebtedness during the war period and shows also the general decline in the average coupon rate and changes in the term of issue.

## 32.-Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments,

Note.-Figures are as at provincial fiscal year ends nearest Dec. 31, of the year stated. Figures for years 1916-30 are given at p. 877 of the 1938 Year Book; for the years 1931-39 at p. 787 of the 1942 edition.

| Year | Bonded Debt | Average Coupon Rate | Average Term of Issue | Bonded | Average Coupon Rate | Average Term of Issue |

There has been a significant reduction in the amount of provincial foreign pay bonds as illustrated by the fact that provincial bonds, payable in Canada only, have increased by approximately $\$ 50,000,000$ during the period 1940-43 although there has been a concurrent decrease of approximately $\$ 50,000,000$ in gross bonded indebtedness.

Total Provincial Public Debt.-The statistics of Table 34 have been assembled on a comparable basis for each province and the analysis is on the same basis as the analysis of Dominion and municipal indebtedness shown in Tables 22 and 41, respectively. Table 35 presents a provincial summary of this information for the period 1940-43.

## Section 4.-Municipal Finance*

## Subsection 1.-The Organization and Growth of the Municipalities in Canada

Under the provisions of the British North America Act, the several provinces have jurisdiction and control over their respective organizations of municipal government. While the main types of municipalities are common to most provinces there is little or no similarity from the standpoint of prerequisites to incorporation, either as to area or population. $\dagger$ In fact, some provinces have no specified requirements in this regard. There are, nevertheless, two main divisions into which incorporated municipalities may be grouped-urban and rural-each of which displays more or less distinct characteristics. The former comprises the cities, towns and villages. The official designation of the municipalities in the rural group, however, varies widely as between provinces: Townships in Ontario; Districts in British Columbia; Municipal Districts in Alberta; Counties in New Brunswick; Municipalities in Nova Scotia; Parishes and Townships in Quebec; and Rural Municipalities in Manitoba and Saskatchewan.

[^321]In 1943 there were 3,996 incorporated municipalities in Canada, as compared with 4,014 in 1942 . This reduction is accounted for principally by amalgamations in Alberta in the course of establishing "larger municipal units". Some of the other provinces are also considering this plan as a means towards the development of more financially and economically sound units of self-government. The number of each different class or type of municipality, by provinces, for 1943 is shown in Table 36.

It should be noted that the counties in Ontario and Quebec, which are incorporated municipalities, are comprised of local towns or villages and rural municipalities situsted therein, which provide the necessary funds for the services falling within the scope of county administration. There are also 'counties' in the Provinces of Nova Scotia and New Brunswick, but these are basically the same as rural municipalities in the other provinces. In Saskatchewan and Alberta, there are areas very similar to rural municipalities except that they enjoy a lesser degree of local services and are not self-governing. These are called "Improvement Districts" The Provincial Governments administer the services provided in these areas and also levy and collect the necessary taxes.
36.-Municipalities in Canada, Classified by Provinces, 1943, with Totals for 1940-42

${ }^{1}$ Includes 5 units of self-government officially known as "suburban municipalities"
On the basis of the 1941 Census, over $10,689,000$ or 93 p.c. of the population of the nine provinces was in incorporated municipalities. Table 37, showing the comparable situation for each province, gives an indication of the development of self-government from the standpoint of the local population. The 800,000 persons excluded from the population in incorporated municipalities on this basis are comprised of those in Indian Reserves and in areas that have not yet reached the stage of development where self-government is felt necessary or desirable.
-37.-Population of Incorporated Municipalities, by Provinces, 1941

## Subsection 2.-Municipal Assessed Valuations

The revenue resources of municipalities are limited generally to direct taxation, based on assessed valuations of real and other types of property. In 1943 the total taxable assessed valuations on which taxes were levied was $\$ 7,906,825,502$ of which approximately $\$ 7,478,465,609$ or $94 \cdot 6$ p.c. was real property. The assessment of personal property has had its ups and downs particularly in the Prairie Provinces. The Maritime Provinces, Manitoba and Alberta are the only ones at the present time in which municipalities assess and tax personal property. In Alberta only a few municipal authorities still retain this basis for tax revenue while in Manitoba it is used generally by all classes of municipalities except cities. Aside from real property, the next important type of valuation for taxation purposes is business assessment, although not all provinces assess for business purposes separately and distinctly from real property valuations. A variation of methods, schedules and rates exists not only between provinces but also between municipalities within the same province. Some municipalities use the rental basis, others the value of floor space occupied and still others the capital value of the premises occupied. Most of the provinces have other miscellaneous types of assessment, the general nature of which will be noted from the footnotes to Table 38. It will also be noted that income assessment, which formerly was employed in Nova Scotia and New Brunswick only, practically disappeared in 1942. This is a result of the operation of the DominionProvincial Tax Agreements whereby the provinces and municipalities have abandoned the income-tax field for the duration of the War and a limited period thereafter, so as to leave it open to the Federal Treasury (see p. 952).

It should be noted that the figures in Table 38 are not entirely comparable, on an interprovincial basis, from the standpoint of relative values of properties taxable for municipal purposes. Each province operates under its own assessment laws which are not all similar, either in application or in effect. For instance, in British Columbia improvements cannot be taxed on a value in excess of 75 p.c. of taxable values in cities and municipal districts, or in excess of 50 p.c. of taxable values in villages; the values actually taxed in 1943 ranged from nil to 65 p.c. In the majority of cases, improvements were assessed for tax purposes at 50 p.c. of taxable values, but for all municipalities the total values actually taxed represented approximately 44.4 p.c. of total taxable values. It should also be noted that Table 38 does not include assessed valuations in Improvement Districts for either Saskatchewan or Alberta. In Saskatchewan these amounted to $\$ 30,370,599, \$ 30,390,068$,
$\$ 29,998,740$, and in Alberta to $\$ 73,192,965, \$ 69,829,495, \$ 69,222,473$, in 1941 , 1942 and 1943, respectively. In addition there are other intra-provincial inconsistencies between municipalities which, in turn, further affect interprovincial comparisons. These may be said to be due to the lack of integrated municipal assessment systems and uniform standards for establishing values on a provincewide basis, under the direction and control of a central authority. Some provinces, however, have made considerable progress along these lines in recent years, as in the case of Saskatchewan, the results of which are referred to in the text following Table 38.
38.-Municipal Assessed Valuations, by Provinces, 1941-43

| 1943 | 7,478,485,609 ${ }^{13}$ | 65,488,9291u | 332,435, $555{ }^{18}$ | 26,304,440 ${ }^{13}$ | 7,506,825,502 | 1,968,554,5844 |

[^322]While complete figures for tax-exempt properties are not available for each province, it will be noted from the information given that these have assumed relatively high proportions. Most provinces have shown consistent increases in taxable assessed valuations which may be attributed largely to the stimulus to business and industry in general, arising from the War. Saskatchewan, however, shows a major reduction in total valuations. This is the result of a province-wide plan of re-assessment of rural municipalities by the Department of Municipal Affairs and is "the first occasion in Canada where an assessment system of such extensive proportions has ever been undertaken".*

## Subsection 3.-Municipal Taxation

Table 39 shows, by provinces, the taxes levied by municipalities in comparison with collections in 1941, 1942 and 1943, and the total taxes outstanding at the end of those years. While these figures are as nearly comparable as may be obtained from existing published reports, they nevertheless reflect some inconsistencies due particularly to interprovincial variations in the division of responsibility for tax administration between municipalities and school authorities. In some instances school taxes are included in the municipal levies while in others they are not. In Prince Edward Island only 2 out of the 8 incorporated municipalities have their own individual school districts and levy and collect the school taxes. In Nova Scotia and New Brunswick cities, towns and villages only levy and collect the school taxes. Hence the figures shown for these provinces are, generally speaking, exclusive of rural school taxes particulars of which are not available from published reports. In Nova Scotia since 1942, however, under a program for establishing "larger school units" some municipalities have been levying and collecting the school taxes for and on behalf of the rural school boards situated therein. A similar program has since been inaugurated in New Brunswick, so that more complete figures should be available progressively in the future as the larger school units are gradually established. Prior to 1943 the figures for Alberta were incomplete because municipal taxes did not include certain school and hospital levies, which were not collected by the municipal unit or were regarded as "trust" taxes. This deficiency is corrected in the 1943 figures and reference to this fact is made in footnote 9, of Table 39, p. 963. In Quebec, while school taxes, with few exceptions, are levied and collected by the school corporations which function independently of municipal authorities, they are, nevertheless, included in this tabulation for purposes of greater interprovincial comparability. It will therefore be apparent from the foregoing that the figures in Table 39, except in the case of Quebec, represent only the amount of tax levies, collections and arrears of the municipalities, and include school taxes only to the extent that such are also levied and collected by the municipalities for and on behalf of local school authorities. Taxes for schools outside incorporated municipal organizations are not included.

[^323]
## 39.-Municipal Taxation, by Provinces, 1941-43

Nors.-See text on p. 962 for limitations on comparability of statistics in this table.

${ }^{1}$ Includes estimates in some instances as actual figures are not available.
${ }^{2}$ Not reported separately. ${ }^{3}$ Excludes $\$ 1,243,384$ in 1942 and $\$ 1,266,087$ in 1943 compensation through Provincial Government for loss of income tax (see pp. 952 and 960). ${ }^{4}$ Excludes cities and towns. ${ }^{5}$ Cities and towns only. ${ }^{-1}$ Includes certain provincial and other special taxes (see text following this table), but excludes taxes in "Improvement Districts". ${ }^{7}$ Cities only; not reported separately for other municipalities. ${ }^{8}$ See notes applying to the provinces. ${ }^{9}$ A large part of this increase is due to the inclusion of school and hospital levies formerly omitted because the municipal unit did not collect them or regarded them as "trust" taxes.

Because of these inconsistencies and the fact also that there are considerable differences in the division of responsibility for services between the Provincial Governments and their respective municipalities, extreme caution should be exercised in using these figures as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan and Alberta, municipalities are
required to levy certain taxes for and on behalf of the Provincial Government and for other special purposes for which there is no comparable situation in other provinces. The amount of such taxes included in the municipal levies in these two provinces, are as follows:-

There has been no marked fluctuation in the trend of municipal tax levies in Canada in the years 1941-43. While most provinces show increases, this does not necessarily mean an increased burden on the individual taxpayer in all instances, but is more the result, in part at least, of the increases reflected in assessed valuations. In Nova Scotia the increases in 1942 and 1943 are, to a considerable extent, due to the establishment of "larger school units" previously referred to in this Section, whereby some municipalities are now levying certain taxes which formerly were levied by rural school boards. The most significant change that occurred during this period was the increase in tax collections in relation to total levies; this in turn has resulted in substantial reductions in the amount of unpaid taxes outstanding at the end of these years although these are still relatively high in most provinces in relation to current year's levies. The situation for different classes of municipalities will, of course, vary considerably. Reference has heretofore been made to the Improvement Districts in Saskatchewan and Alberta, which although not being incorporated municipalities are, nevertheless, maintained by the Provincial Governments more or less as self-sustaining areas on the same basis. Taxation figures for these districts are excluded from Table 39 but by reason of the special significance attached thereto in relation to municipal organization in these provinces, and the fact that such may become incorporated, or part of existing municipalities at some future date, the corresponding information with respect thereto is shown in Table 40.

## Subsection 4.-Municipal Debt

The rapid growth experienced by municipalities in Canada coupled with increased demands and responsibilities for improvements, schools, utilities, and other services or facilities has resulted in the incurring of a heavy burden of debt. Debenture borrowings increased rapidly in the period 1900-12 and again during the 'twenties and early 'thirties. Since 1933, however, the trend has been downward. Several important factors have contributed to this decline in municipal indebtedness, not the least important of which has been the measure of control exercised by Provincial Government departments over capital expenditures involving the incurring of debt. In addition, there was a more or less orderly retrenchment during the depression years following periods of what proved to be unwarranted expansion which, along with widespread demands to ease the tax burden on real property, has resulted in capital undertakings and works requiring debenture financing being severely curtailed. A further significant factor in this regard is that the greater part of the municipal long-term debt is represented by serial or instalmenttype debentures, which require yearly repayments of principal. While the benefits of debt reduction are of course manifold, certain expenditures have been sorely needed in many communities for the rehabilitation of existing assets and for new improvements necessitated by the normal expansion and development that has taken place. These were sacrificed in the earlier years mainly in the interest of the taxpayer; and subsequently, with the advent of the present war, this policy of deferment has been continued, if not extended, to free the financial market to the needs of the Dominion Government in meeting its war financing requirements. Municipalities, however, will no doubt play an important role in post-war construction and reconstruction which should result in a resumption of capital expenditures on a fairly large scale. Having been denied, either voluntarily or otherwise, improvement programs for so long, it is anticipated that there will be a natural tendency to get these under way as soon as possible in correlation with master postwar plans of the Dominion and Provincial Governments. Table 41 shows figures of municipal indebtedness for 1943 and includes temporary loans and other liabilities in addition to debenture debt. Table 42 shows comparative figures for 1940, 1941, 1942 and 1943. The 1942 Year Book contains at pp. 792-793, a detailed description of the basis on which the information has been compiled. Reference should be made thereto, as well as to the footnotes to Table 41 in interpreting the information. A table at p. 791 of the 1941 Year Book shows the bonded indebtedness of municipalities from 1919 to 1938.

## 41.-Debt of Municipal and School Corporations for their Fiscal Years Ended in 1943

Norz.-Compiled from published reports of Provincial Departments of Municipal Affairs, auditors' reports and financial statements of municipalities, and information secured from other official sources. For a general explanation in regard to the items covered by this table, see text above.

| Totals, Indirect Liabilities (Iess sinking funds). | 53,280,356 | 50,773,404 | 49,830,446 | 48,496,783 |
| Grand Totals | 1,280,640,494 | 1,216,301,446 | 1,150,906,849 | 1,079,601,539 |

Net direct and indirect debt of municipalities decreased by $\$ 71,305,310$ in 1943 bringing the total decrease in the period $1940-43$ to $\$ 201,038,955$. Retirement of direct debenture debt accounted for the major portion of the decrease during this period, although there have also been substantial reductions in unfunded liabilities. The decreases in debenture debt are due to the factors mentioned elsewhere in this Section while improved tax collections have made it possible for municipalities to avoid heavy temporary borrowings and reduce other current liabilities. It is pointed out in this respect that debenture debt figures are- intended to represent only principal unmatured. Principal past due, whether in default or unpaid because of non-presentation, has been included with accounts payable and other liabilities. It is impossible to ascertain if this is a true statement of fact in all cases, however, as some reports do not indicate the exact situation. The more significant items available in this regard are given in Table 43.

## PART III. - OUTSTANDING DEVELOPMENTS IN THE TAXATION FIELD

Prior to the War of 1914-18, the Dominion Government was able to finance its expenditures through the imposition of such indirect taxes as customs and excise duties. There were minor direct taxes imposed for other purposes than revenue but these, in the fiscal year 1914, amounted to less than 1.5 p.c. of the total revenue from taxation collected by the Dominion Government.

To-day the significance of direct taxation is exemplified by the fact that direct taxation collected by the Dominion Government (not including the sales and other similar taxes in this category) accounts for about 60 p.c. of total taxation.

The unprecedented financial demands of the War of 1914-18 began to be felt by 1915 and between 1915 and 1917 the Dominion entered the direct-taxation field with the imposition of taxes on banks, trust and loan companies, insurance companies and business profits. The income tax was introduced in Canada in the latter year and has increased in importance until to-day it is the central feature of the direct-taxation program. The outbreak of War in 1939 led to the entry of the Dominion into the fields of succession duties and gasoline taxes (the latter are semi-direct), which had hitherto been imposed exclusively by the provinces. These new taxes were introduced in the Budget of April, 1941. Provision was made for compensating the provinces for losses in gasoline tax revenue caused by the Dominion Government's rationing program.

In 1941 the Dominion offered to compensate the provinces if they would vacate the personal income and corporation tax fields for the duration of the War, as outlined at pp. 941-942. The revenue received by the Dominion from such direct taxes of lesser importance as those on banks, insurance companies, and excess profits is shown in the table at pp. 936-937.

The Budget of June, 1942, imposed further semi-direct taxes by the imposition of a duty of 20 p.c., payable by means of excise stamps, on cover charges, charges for meals, etc., in night clubs and similar places of entertainment and of 25 p.c. on purchases of luggage, clocks and watches, jewellery, cut glass and china, fountain pens, photographic films and other luxury articles. The March, 1943, Budget raised the rates on tobacco, cigars and cigarettes. The duty on alcoholic spirits and the tax on cabarets and night clubs were raised and a one-cent increase in the postage rate was imposed. The most important taxation changes in the 1944 Budget dealt with corporation income tax and excess profits tax and were designed to relieve to some extent the pressure on corporations during the transition from war to peace production (see p. 380). Other taxation changes are outlined at p. 920.

The place that direct taxation has assumed in the general taxation picture and its incidence on the purse of the ordinary taxpayer has made it advisable to give this subject separate treatment but this should not detract attention from the important place that indirect taxation, through customs, excise and sales taxes, still holds in the taxation burden that the individual taxpayer is called upon to bear.

In order to present a clearer picture of the main elements of direct or semidirect taxation, Part III has been divided into three Sections, dealing with income tax, gasoline taxes and succession duties, respectively.

## Section 1.-Income Tax*

The income tax was instituted in 1917, as a part of what is still known as war-tax revenue. Table 16, p. 936, is the war-tax revenue table of Department of Finance, and shows the total receipts from income tax for the fiscal years 1919, the first year for which collections were made, to 1944.

It is now a war tax in name only, for even before the outbreak of the present war it had become a permanent and important part of the taxation structure, and the chief source of raising ordinary revenue. In many respects, it is an ideal form of direct taxation: in theory its incidence is admittedly fair and just, and the experience and machinery for the cellection of this tax has been built up over a long period of years. As pointed out at p. 859 of the 1943-44 Year Book, the War, with its increased burden of taxation which, in turn, has made necessary the prepayment of taxes on a "pay-as-you-go" basis, has necessitated changes in the presentation of the statistics. Previously, comparisons for individuals between income assessed and tax paid were subject to the important qualification that, while the income assessed related to the net income upon which assessments had been approved for the year designated although the income itself was earned two years previously, the figures of tax paid included arrears of taxes that were assessed in previous years and even prepayments of taxes not due in the year under review. Under the present system, large sums of money are being collected month by month from individuals or their employers during the taxation year to which they apply. Analyses of taxes paid have not the same significance now as formerly except as indicating the trend of general collections: analyses of taxes assessed for the taxation year have now more significance. This new system will permit a much closer comparison between the figures of assessed income and taxes levied thereon than did the former figures of incomes assessed and taxes actually received.

The task of transferring income-tax data to the new basis would be a tremendous one even in normal times but to be called upon to make the shift at a time when the income-tax field has been extended to cover practically the entire nation adds greatly to the difficulty. It is possible to present only the initial step in the transition in the following tables.

The decision to make the change is supported by the growing interest in incometax statistics from an economic and social standpoint. It is believed that the statistics are now of sufficient importance to be presented in the nature of a national report covering the income earned by, and the taxes levied on, all taxpayers in respect of a specific calendar or taxation year. On the new basis the statistics will be related to the year in which the income is earned by the taxpayer and all incomes earned in 1941 will be combined to form the 1941 taxation-year statistics regardless of when the assessments are made by the Department. This describes the change of basis in its broadest aspect.

## Subsection 1.-Collection Statistics

Collections on a Fiscal-Year Basis.-Collection statistics are gathered by the accounting section at the time the payments are made and, therefore, have the value of being very up-to-date. Their timeliness has been enhanced within the past few years by the adoption of the "pay-as-you-go" system which results in collecting tax substantially during the year in which the income is earned and, on the average, sbout ten months prior to the actual filing of an income tax return by the taxpayer.

[^328]The payments on behalf of most taxpayers, however, are made by their employers and a cheque from one employer may cover the tax payments of hundreds of employees. At this stage, therefore, it is not possible to link the monies received to the individuals who are, in the final analysis, contributing the tax. Collection statistics, as such, for this reason are not capable of being closely related to the persons who are being taxed and any statistical tables that attempt to describe the taxpayer, such as by occupation or income class, must be based on the income tax return which is filed by the taxpayer many months after the payment of his tax.

As pointed out at p. 969, however, collection statistics, if interpreted along with the tax rate, do serve the purpose of indicating the general trend of income upon which tax is levied well in advance of the assessment data.

The statistics given in Table 1 represent annual collections on a Government fiscal-year basis.
1.-Taxes Collected by the Taxation Division of the Department of National Revenue, Fiscal Years 1917-45

| Fiscal Year Ended Mar. 31- | Income Tax | Excess Profits Tax | Succession Duties | Total Collections |

Collections on a Taxation-Year Basis.-The previous collection tables reflected the total taxes collected during a Government fiscal year without regard to which particular taxation years the revenues applied. In Table 2 the collection of the more important taxes are re-arranged in order to reveal the revenues received for the account of each succeeding taxation year.

A taxation year is a period of time during which income is received and becomes subject to tax at rates laid down in the Act. In the case of an individual the taxation year is almost always the calendar year. In the case of a corporation the taxation year is the calendar year in which the company's fiscal period ends. Under the present system of collection, a substantial portion of the taxes is collected during the year in which the income is earned, that is to say, during the taxation year, and the balance is almost entirely collected in the two following years.

The general Head Office account for a taxation year is held open for statistical purposes for a period of three years. Thereafter, any taxes collected for a "closed" year are credited to a "Combined Years Account" As of Mar. 31, 1945, general Head Office accounts were open for the taxation years 1945, 1944, and 1943 and the Combined Account was known as 1917-42. All collections in the Combined Account are, in Table 2, credited to the last year in the Combined Account which in this case is 1942. In the succeeding year the Combined Account will be known as 1917-43 and all the collections in this account for a twelve-month period will be credited to 1943. The collections received in the Combined Account are relatively small and as each taxation year eventually receives the "combined" revenues for a twelve-month period it is not believed that this procedure in any way affects the comparative table and it has the advantage of permanently closing off a taxation year for general statistical purposes. It is not to be understood from the foregoing description that the account of an individual taxpayer is closed off for any taxation year until full payment is received.

Table 2 distributes the collections from individual and corporation income and excess profits tax on a taxation-year basis. It will be noted that the collections for the past three years are still open.

## 2.-Individual and Corporation Income and Excess Profits Tax Collections by Taxation Years, 1917-44 and Jan. 1 to Mar. 31, 1945

| Taxation Year | Income Tax |  | Excess Profits Tax |  | Total |

| 1941. | 329,333, 512 | 224,471,245 | 10,148,521 | 252,371,160 | 816, 324,438 |
| 1942. | 391, 194, 438 | 270, 204,989 | 18,543,654 | 396,478,331 | 1,076,421,412 |
| 19431. | 797,664,649 | 304,444, 456 | 19,587,528 | 421,940,217 | $1,543,636,850$ |
| 19441. | 692,439,775 | 212,163,325 | 7,741,335 | 287, 353, 971 | 1,199,698,406 |
| $1945{ }^{1}$. | 85,726,789 | 16,146,068 | 61,658 | 26,988,597 | 128,923,112 |

[^329]Adjusted Corporation Figures.-The Income War Tax Act and the Excess Profits Tax Act, 1940, each levy a separate tax on the same corporation profits in each year since 1940. The administration of the two Acts, the assessment of the two taxes and the collection of the two taxes is done concurrently by the Taxation Division. This has caused many corporation taxpayers to pay their taxes by means
of a single cheque combining the two taxes without sufficient advice as to how the remittance is to be allocated between income tax and excess profits tax. The result of this practice has been that too much revenue has been credited to income tax and too little to excess profits tax. For those who wish to study the productivity of the two separate taxes the collection figures as remitted by the taxpayer are somewhat misleading.

Because of the variable rates implicit in the excess profits tax, no precise correction can be made but an approximate adjustment based on a large sample of cases is included in Table 3. It should be emphasized that the adjusted figures involve no change in the total taxes collected from corporations but simply reduces the amount credited to income tax and correspondingly increases the amount credited to excess profits tax.

## 3.-Adjusted Corporation Tax Collections, Taxation Years 1940-45

| Taxation Year | Corporation Income Tax | Corporation Excess Profits Tax | Total |
| :---: | :---: | :---: | :---: |
|  | \$ | \$ | $\$$ |
| 1940. | 126, 604, 795 | 127,308, 154 | 253,912,949 |
| 1941 | 183, 009, 878 | 293, 332,527 | 476, 842,405 |
| 1942 | 225, 569,544 | 441, 113,766 | 666, 683,320 |
| $1943{ }^{1}$. | 217,915, 402 | 508,469,271 | 726, 384, 673 |
| 19441. | 144,322,814 | 355, 194,482 | 499, 517,296 |
| $1945{ }^{1}$ (three months) | 12,522,967 | 30,611,698 | 43,134, 665 |

${ }^{1}$ The accounts for these taxation years are not yet closed and the figures are therefore not yet complete; there will be a small change in the 1943 account and substantial additions to the 1944 and 1945 accounts.

## Subsection 2.-Assessment Statistics on a Fiscal-Year Basis

In the past the Department has issued assessment statistics on a Government fiscal-year basis. Such figures covered returns actually assessed during a Government fiscal year but the returns related to incomes earned several years earlier. The returns assessed in the 1942-43 fiscal year are distributed as follows by taxation years.

| Item | $\begin{gathered} \text { Tax- } \\ \text { payers } \\ \text { Assessed } \end{gathered}$ | Total <br> Income <br> Assessed | $\begin{gathered} \text { Total } \\ \text { Tax } \\ \text { Assessed } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
|  | No. | 8 | \$ |
| Individual assessments relating to the 1940 taxation year or earlier. | 316,468 | 788,769,066 | 67,959,268 |
| Individual assessments relating to the igit taxation year | 325, 126 | 636, 812,924 | 47, 935,098 |
| Individual assessments relating to the 1942 taxation year | 532 | 1,144,309 | 194,421 |
| Totals, Individual Assessments Made in the 1942-43 Fiscal Year. | 642,126 | 1,426,726,299 | $\underline{116,088,787}$ |
| Corporation assessments relating to the 1940 taxation year or earlier. | 6,573 | 378,706,862 | 59,629,407 |
| Corporation assessments relating to the 1941 taxation year. | 3,273 | 63,352,394 | 11, 187,810 |
| Corporation assessments relating to the 1942 taxation year | 109 | 960, 068 | 181,277 |
| Corporation assessments relating to the 1943 taxation year. | 1 | Nil | 100 |
| Totals, Corporation Assessments Made in the 1942-43 Fiscal Year. | 9,956 | 443, 019,324 | 70,998,594 |

It is to be noted that, although these figures are designated as the 1942-43 fiscal-year assessment statistics, they cover mainly incomes earned in the 1940 and 1941 taxation years. In future it is planned to supersede this method of presentation with one which combines all statistics for a given taxation year into a single table regardless of when the assessment is made.

## Subsection 3.-Assessment Statistics on a Taxation-Year Basis

Assessment statistics on a taxation-year basis are a compilation of all statistics drawn from the assessed tax returns for a specific taxation year and the resulting figures portray the tax conditions in Canada for that specific year. Hitherto, the Department of National Revenue has not issued statistics on a taxation-year basis but the first step has been made in that direction.

When the transition to a taxation-year basis is complete, the total number of taxpayers classified by income groups, together with the taxes payable and the refundable portion, will be shown along the lines of the estimate given for 1944 in Table 6. Such a table cannot be presented in final form until all the tax returns for a specific year are assessed which, owing to the enormous amount of work involved under present conditions, will require considerable time. In the meantime, the current statistical position is indicated on an estimated basis. The estimated number of individuals who paid income tax during the year 1944, classified by income class and by number of dependants and marital status is given in Table 7.

## 6.-Estimated Distribution of Individual Income Taxpayers by Income Classes, Taxation Year, 1944

| Income Class | Taxpayers | Taxable Income | Total Tax Payable | Total Amoun Refundable | Net Amount Retainable |

## Section 2.-Gasoline Taxes

The provincial gasoline taxes can be termed "direct taxes" only because the consumer knows exactly the amount of tax he is paying when purchasing gasoline. The Dominion tax is assessed against the producer or importer but the retail price was increased to cover the tax. These taxes have been brought together in this Section on account of the large number of Canadian motorists who are directly affected, while the non-motoring portion of the population is affected by the effect of higher gasoline taxes on delivery costs and bus transportation.

The present rates of gasoline tax, per gallon, are: Dominion, 3 cents; Prince Edward Island, 10 cents; Nova Scotia, 10 cents; New Brunswick, 10 cents; Quebec, 8 cents; Ontario, 8 cents; Manitoba, 7 cents; Saskatchewan, 7 cents; Alberta, 7 cents; British Columbia, 7 cents; Yukon, 3 cents.

There are certain refunds and exemptions allowed by the various taxing authorities and these are set out in the Bureau's publication "The Highway and the Motor Vehicle in Cansda".*

[^331]
## 8.-Provincial Government Receipts from Gasoline Taxes, Respective Fiscal Years Ended in 1923-43'

Note.-For statistics of gallonage on which these taxes are levied, see p. 680. For periods covered by fiscal years, see headnote to Table 9, p. 980. Receipts from the gasoline tax in Yukon, which became effective June 15, 1940, amounted to $\$ 4,341$ in 1941, $\$ 19,562$ in 1942 , and $\$ 23,505$ in 1944.

[^332]The Dominion Government, in the Third War Budget of Apr. 29, 1941, imposed a tax of 3 cents per gallon on gasoline. Proceeds from this tax amounted to $\$ 24,752,396, \$ 24,897,924$ and $\$ 24,930,255$ in the fiscal years 1942,1943 and 1944 , respectively.

## Section 3.-Succession Duties

The first imposition of succession duties in Canada was in 1892, when Nova Scotia, New Brunswick, Quebec and Ontario enacted legislation of this nature. The date of their introduction into the other provinces are given at pp. 981-990.

Succession duties have grown to be an important if fluctuating part of provincial revenues and Table 9 shows the receipts from this source from 1921.

In 1941, the Dominion, under pressure of war finance, entered this field of taxation. The Dominion Succession Duty Act was enacted as c. 14 of the session of 1940-41. Certain amendments were made to the Act by c. 25 of 1942 and by c. 37 of 1944. The Act is administered by the Department of National Revenue. Dominion receipts from succession duties for 1942 and 1944 are included in Table 9.

The entry of the Dominion into the field has complicated the problems as they present themselves to the executors and administrators of estates subject to duties. Not only do difficulties of the application of different schedules of rates to the same estates arise, but also questions of where assets are held, and whether and where they are transferable. Certain points have not yet been completely ironed out by the courts. Moreover, apart from the evident double succession duties chargeable by the Dominion and the province in which the owner lived and died, duties may be charged on the same property by more than one province.

The four classes of beneficiaries that are established under Dominion law (see p. 980) have, for example, specific rates that change with each classification. For Ontario, there are three different classes of beneficiaries (see p. 985) with quite different rates of duties attached to each class. It is common practice both in the Dominion and the provinces for an initial rate to be charged based on the total value of the estate and an additional rate based on the bequest received by each individual. Thus, in the case of the Dominion, a person who receives a bequest of $\$ 50,000$, say, out of an estate of $\$ 500,000$ is charged the rate for a $\$ 500,000$ estate plus an additional rate for $\$ 50,000$, and the total rate is then applied in calculating the tax on his bequest of $\$ 50,000$.

A recent decision from Osgoode Hall, Toronto, has declared that shares of an Ontario company owned in one State of the United States and transferable in another are not subject to Ontario duties. On the other hand, the United States imposes duties on all shares of companies organized in or under the laws of the United States or of any individual State. In order to relieve against the dual taxation that resulted from this practice as between the Dominion and the United States, a tax convention was signed on June 8, 1944, as between these two countries. One of the terms of this convention is that shares in a corporation organized in or under the laws of the United States or any of the individual States shall be deemed to be property situated within the United States and shares in a corporation organized in or under the laws of Canada or of the provinces or territories of Canada shall be deemed to be property situated within Canada.

Under these circumstances, the difficulties of working out succession duty* tables so as to show the combined effects of Dominion and provincial duties is realized. The best that can be done is to choose typical estates in the main classes laid down in the legislation and give a picture of the combined duties applicable in such cases. This has been attempted in the following series of tables in the hope that it will be useful in presenting to the student of this subject a general picture of the incidence of succession duties in Canada under conditions at present existing.

## 9.--Dominion and Provincial Receipts from Succession Duties, Respective Fiscal Years Ended in 1921-44

Nore.-The fiscal years of the provinces end on the following dates: P.E.I., Dec. 31; N.S., Sept. 30 prior to 1935 and Nov. 30 thereafter; N.B., Oct. 31; Que., June 30 to 1940 and Mar. 31 thereafter; Ont., Oct. 31 prior to 1935 and Mar. 31 thereafter; Man. and Sask., Apr. 30; Alta. and B.C., Mar. 31.

Dominion Duty.-Beneficiaries are divided into four classes, as follows:-
(1) Widow or dependent child or dependent grandchild.
(2) Husband; parent; grandparent; child over 18, not infirm; son- or daughter-in-law.
(3) Lineal ancestor other than parent or grandparent; brother, sister or their descendant; uncle or aunt or their descendant.
(4) Others.

No duty is payable on estates not exceeding $\$ 5,000$ or on bequests up to $\$ 1,000$ to any one individual, nor is duty levied on gifts to the Dominion or provinces, on residential property of certain diplomatic or consular officials, on pensions administered by the Canadian Pensions Commission or those payable by Allied Nations for war service nor on insurance moneys or annuities if the assured or person with whom contract was made was domiciled outside of Canada at the time of death. Provision is made for increased exemptions and reduced duties in the case of those dying as a result of war service and bequests to non-profit charitable organizations in Canada are exempt up to 50 p.c. of the aggregate net value of the estate.

Widows are exempt up to $\$ 20,000$, dependent children $\$ 5,000$ each and, in cases where dependent children do not benefit, the widow's exemption is increased by $\$ 5,000$ for each child who does not benefit. In the case of dependent orphan children, there is a further exemption of $\$ 15,000$ (in addition to $\$ 5,000$ ) divisible proportionately among such orphans according to the number of them and the value of each individual benefit. Duty is payable on the excess only when the limit is passed.

Gifts made during the lifetime are exempt if the transfer was carried out before Apr. 29, 1941, and the recipient of such gifts secured full possession at the time of the transfer and the donor (the deceased) thereafter did not retain any rights therein or secure any benefits therefrom.

If gift tax payable under the provisions of the Income War Tax Act has been paid in connection with the transfer made by a deceased person during his lifetime then no succession duty is payable in respect of such gift except to the extent that succession duty thereon is in excess of the gift tax.

Examples of the rates of duty and duty levied are given in the tables of the incidence of combined Dominion and provincial duties which follow.

The Incidence of Combined Dominion and Provincial Succession Duties.-The tables are intended to show, for each province, the effect of the combined Dominion and provincial duties on typical estates left to individuals, and in this way to present a comparison of the combined duties payable by such individuals for estates ranging from $\$ 20,000$ to $\$ 1,000,000$. The final rate of provincial duty shown is, in most cases, the result of the combination of two or more series of rates. In the following tables the beneficiaries under all the classes show the duties collectable where the estate of given value is left to one beneficiary only. It would be impossible in the Year Book to cover the many different classifications, exemptions and saving clauses to be found in the legislation of the nine provinces. The specific cases that have been worked out are selected to give a general picture of the effects of succession duty taxation across Canada. In every case the estate is assumed to be wholly situated within the province and the beneficiary domiciled therein to be the sole heir. The reader is referred to the legislation and to the taxing authority shown under each provincial heading for more complete information.

Prince Edward Island.-Succession duties were first imposed in 1894 by c. 5 of the Statutes of that year. The current legislation is c. 59 of 1940, as amended by c. 20 of 1941 and by c. 18 of 1942, and the authority administering the Act is the Succession Duty Officer, Tax Branch, Department of the Provincial Treasury, Charlottetown.

Beneficiaries are divided into three classes, as follows:-
(1) Widow with dependent child; dependent child under 21 or infirm.
(2) Widow without dependent children; child not dependent; father; mother; brother; sister; grandchild; son- or daughter-in-law; step-child.
(3) Others.

Estates passing to persons in Class (1) are exempt to the value of $\$ 10,000$ and to those in Class (2) up to $\$ 5,000$. Where nephews and nieces are the beneficiaries of an estate with an aggregate value not exceeding $\$ 20,000$, one-half of the ordinary duty is charged. Duty is payable on the whole amount when the ex-
emption limit is exceeded. No duty is levied on bequests for religious or charitable purposes to be carried out in the Province, or by a resident thereof or by a corporation with head office in any of the three Maritime Provinces which carries out charitable, religious or educational bequests in Prince Edward Island.

${ }^{1}$ The provincial age limit for dependent children is 21.
Nova Scotia.-Succession duties were first instituted in 1892 (c. 6, 1892). The latest consolidation of the provincial legislation appears in c. 18 of the Revised Statutes of 1923. Numerous amendments have been made since that time. Full information may be obtained on application to the Supervisor of Succession Duties, Department of the Attorney General, Halifax.

Beneficiaries are divided into four classes, as follows:-
(1) Widow with dependent child; or dependent child.
(2) Widow without dependent child; child not dependent; husband; parent; grandparent; grandchild; son- or daughter-in-law.
(3) Other lineal ancestor or descendant; brother, sister or their child or grandchild; uncle, aunt or their child or grandchild.
(4) Others.

Estates not exceeding $\$ 5,000$ are exempt from succession duty and this exemption is increased to $\$ 10,000$ in the case of beneficiaries falling into Classes (1) or (2) above. Bequests for religious, charitable or educational purposes within the province are subject to duty at the same rates as Class (2). In all cases, duty is payable on the whole amount when the exemption limit is passed.

${ }^{1}$ Exclusive of 10 p.e. surtax.
${ }^{2}$ Exclusive of provincial surtax.
New Brunswick.-Succession duties were first instituted in 1892 by c. 6 of the Statutes of that year. The current legislation is c. 12 of 1934, as amended, and a consolidation of the various Acts has been issued under date of May 1, 1942. Full information may be obtained on application to the Succession Duty Office, Department of the Provincial Secretary-Treasurer, Fredericton.

Beneficiaries are divided into three classes, as follows:-
(1) Wife; child; husband; parent; son- or daughter-in-law.
(2) Other lineal ancestor or descendant; brother, sister or their children or grandchildren; uncle, aunt or their children or grandchildren.
(3) Others.

No duty is payable on estates not exceeding $\$ 1,000$. This exemption is extended to $\$ 25,000$ where the beneficiary falls under Class (1) above and to $\$ 5,000$ in the case of those in Class (2). Duty is payable on the whole amount when these limits are passed. Bequests for religious, educational or charitable purposes within the Province are exempt from duty.

Quebec.-Succession Duties were first instituted in this Province in 1892 by c. 17 of the Statutes of that year. The current legislation under which they are collected is c . 18 of 1943 . As stated at p. 981, the following text and table can give only a broad outline of such duties as applied to comparable classes of beneficiaries in other Provinces. Full details regarding other cases may be obtained from the Act quoted or from the Collector of Succession Duties, Provincial Revenue Offices, Quebec.

Under the legislation, beneficiaries are divided into three classes, as follows:-
(1) Those in direct ascending or descending line between consort, between father- or mother-in-law, and son- and daughter-in-law, between step-father or step-mother and step-son and step-daughter. There is no limitation of degree in the direct ascending or descending line between these relationships.
(2) Those in collateral line including a brother or sister, or descendant of a brother or sister of the deceased, or to a brother or sister, or son or daughter of a brother or sister, of the father or mother of the deceased.
(3) Others.

No duty is payable when the aggregate value of the property passing to persons in Class (1) does not exceed $\$ 10,000$. This sum is increased by $\$ 1,000$ for each child who has survived or has left surviving descendants. To beneficiaries in Class (2) no duty is payable on bequests up to $\$ 1,000$ and the same exemption is extended to
beneficiaries in Class (3) who have been in the employ of the testator for five years or more. No duty is payable on legacies for religious, charitable or educational purposes in Quebec and the same privilege is extended to legacies for similar work outside the Province, provided that the Province or State within which the work is to be carried out $^{2}$ extends reciprocal privileges under its succession duty laws.

Ontario.-Succession duties were first instituted in 1892 by c. 6 of the Statutes of that year. The current legislation is c. 1 of 1939 (Second Session) as amended, and full information may be obtained on application to the Succession Duty Office, Treasury Department, Parliament Buildings, Toronto.

Beneficiaries are divided into three classes, as follows:-
(1) Widow; child; husband; parent; grandparent; grandchild; son- or daughter-in-law.
(2) Brother; sister; nephew; niece; uncle; aunt; cousin; child of nephew or niece.
(3) Others.

No duty is payable on estates not exceeding $\$ 5,000$ in aggregate value, nor on estates not exceeding $\$ 25,000$ devised to persons in Class (1), nor on those not exceeding $\$ 10,000$ devised to persons in Class (2). Where the aggregate value of an estate does not exceed $\$ 25,000$ the shares in such an estate passing to beneficiaries in Class (1) are exempt from duty. The same rule applies to shares of beneficiaries in

Class (2) where the aggregate value does not exceed $\$ 10,000$. Where the aggregate value does not exceed $\$ 5,000$ the estate will be exempt from duty regardless of what class or classes of persons inherit.

Where any person in Class (3) was in the employ of the deceased for at least five years immediately prior to his death, no duty shall be payable with respect to any benefits which such person derived from the deceased where the total value of such benefits is not in excess of $\$ 1,000$. Such benefits however, while exempt, are nevertheless taken in as a factor in fixing the rates applicable to the dutiable portions of the estate.

Bequests for religious, charitable or educational purposes to any religious, charitable or educational organization which carries on its work solely in Ontario are exempt from duty and are altogether ignored in the computation of duty on the portions of the estate which are not exempt. The same rule applies to the Canadian Nationall Institute for the Blind, the Canadian Red Cross Society and other approved patriotic organizations.

[^333]${ }^{2}$ Plus surtax on provincial duty.
${ }^{3}$ Plus a surtax of 20 p.c.

Manitoba.-Succession duties were first instituted in 1893 by c. 31 of the Statutes of that year. The current legislation is c. 201 of the Revised Statutes of Manitoba, 1940, as amended, and full particulars may be obtained on application to the Administrator, Succession Duties Division, Department of the Provincial Treasurer, Winnipeg.

Beneficiaries are divided into three classes, as follows:-
(1) Widow; husband; child; parent.
(2) Grandparent; grandchild; son- or daughter-in-law; brother or sister or child of such brother or sister.
(3) Others.

A general exemption of $\$ 5,000$ is allowed beneficiaries in Class (1), whether or not they reside in the Province, but this amount is extended to $\$ 25,000$ when the beneficiary is resident in the Province; duty is payable on the whole when the limit is passed. No duty is payable on estates not exceeding $\$ 1,500$, nor on bequests to individuals up to $\$ 300$. Property devised for religious, charitable or educational purposes within the Province, up to $\$ 2,000$ for any one of such purposes, is exempt and any surplus over $\$ 2,000$ for such purposes is subject to Class (2) rates. A further exemption of $\$ 5,000$ to a widow, or child under 18 , or both, and of $\$ 10,000$ to a widow with more than one child, or two orphan children under 18, is granted in the case of money received as the proceeds of an insurance policy.

[^334]Saskatchewan.-Succession duties were first instituted in the Province of Saskatchewan at the time of its origin in 1905. They were introduced in the former Northwest Territories by c. 5 of the Statutes of the Second Session of the Northwest Legislature in 1903 and the legislation was continued in force under the provisions of the Saskatchewan Act. The current legislation is c. 50 of the Revised Statutes of 1940, and full information may be obtained on application to the Director, Succession Duty Division, Revenue Building, Regina.

There are three classes of beneficiaries, as follows:-
(1) Widow; child; husband; parent; grandchild; son- or daughter-in-law.
(2) Other lineal ancestor; brother, sister or their descendant; brother or sister of parent or their descendant.
(3) Others.

Exemptions (with duty payable on the whole when limit is passed) are $\$ 15,000$ to those in Class (1), $\$ 2,500$ to those in Class (2) and $\$ 1,000$ in the case of others.

Additional rates of duty are imposed on the whole estate when the deceased was not a resident of the Province and on shares of individual beneficiaries not domiciled in Saskatchewan.

Alberta.-Succession duties were first instituted in the Province of Alberta at the time of its origin in 1905. They were introduced in the former Northwest Territories by c. 5 of the Statutes of the Second Session of the Northwest Legislature in 1903 and the legislation was continued in force under the provisions of the. Alberta Act. The current legislation is c. 57 of the Revised Statutes of Alberta, 1942, and full information may be obtained on application to the Collector of Succession Duties, Department of the Attorney General, Edmonton.

Beneficiaries are divided into four classes, as follows:-
(1) Widow; husband; child; parent; grandparent; son- or daughter-in-law; resident in the Province.
(2) Persons of the above degrees of affinity not resident in the Province.
(3) Other lineal ancestor; brother; sister or their lineal descendant; brother or sister of parent and their descendants.
(4) Others.

No duty is levied on estates the net value of which does not exceed $\$ 1,000$ and estates up to $\$ 15,000$ are exempt when the beneficiaries fall into Class (1), above. Gifts to the University of Alberta for educational purposes and property passing to that institution under the provisions of the ultimate Heir Act are also exempt from duty. Other bequests for religious, charitable or educational purposes within the Province are exempt up to $\$ 2,000$ for any one bequest.

[^335]British Columbia.-Succession duties were first instituted in 1894 by c. 47 of the Statutes of that year. The current legislation is c. 270 of the Revised Statutes of 1936, as amended, and a consolidation of the Act and its amendments to Apr. 1, 1940, may be obtained on application to the King's Printer, Parliament Buildings, Victoria.

Beneficiaries are divided into three classes, as follows:-
(1) Widow; child; husband; father; mother; grandchild; son- or daughter-in-law.
(2) Grandfather; grandmother; uncle; aunt; cousin; brother; sister; or descendant of brother or sister.
(3) Others.

An exemption of $\$ 20,000$ is granted where the estate passes to a beneficiary in the first class, duty being payable on the excess only when this limit is passed, and there is a further exemption to beneficiaries in this class on insurance up to $\$ 25,000$. No duty is payable on estates not exceeding $\$ 1,000$ in value and bequests for religious, charitable or educational purposes within the Province are likewise exempt from duty.

## PART I.-GURRENCY AND BANKING

## Section 1.-Historical Sketch

At pp. 900-905, inclusive, of the 1938 Year Book there appears a historical sketch of currency and banking in Canada, tracing certain features of the central banking system that finally led up to the establishment of the Bank of Canada. In chronological order these were:-
(1) Central Note Issue, permanently established with the issue of Dominion notes under legislation of 1868.
(2) The Canadian Bankers' Association, established in 1900 and designed to effect greater co-operation among the banks in the issue of notes, in credit control and in various aspects of bank activities.
(3) The Central Gold Reserves, established by the Bank Act of 1913.
(4) Rediscount Facilities, although originated as a war measure by the Finance Act of 1914, were made a permanent feature of the system by the Finance Act of 1923, which empowered the Minister of Finance to issue Dominion notes to the banks on the deposit by them of approved securities. This legislation provided the banks with a means of increasing their legal tender cash reserves at will.

## Section 2.-The Bank of Canada

## Subsection 1.-The Bank of Canada Act and Its Amendments

The Bank of Canada was incorporated in 1934 and commenced operations on Mar. 11, 1935. An account of the capital structure of the Bank and its transition from a privately owned institution to a wholly government-owned one is given at p. 800 of the 1941 Year Book.

The Bank is authorized to pay cumulative dividends of $4 \frac{1}{2}$ p.c. per annum from its profits after making such provision as the Board thinks proper for bad and doubtful debts, depreciation in assets, pension funds, and all such matters as are properly provided for by banks. The remainder of the profits will be paid into the Consolidated Revenue Fund of Canada and to the Rest Fund of the Bank in specified proportions until the Rest Fund is equal to the paid-up capital, when all the remaining profits will be paid into the Consolidated Revenue Fund.

The Bank may buy and sell securities of the Dominion and the provinces without restriction if of a maturity not exceeding two years, and in limited amounts if of longer maturity: short-term securities of the Dominion or provinces may be rediscounted. It may also buy and sell short-term securities of British Dominions, the United States or France without restriction, if maturing within six months, and such securities having a maturity exceeding six months in limited amounts. The Bank may buy and sell certain classes of commercial paper of limited currency, and, if endorsed by a chartered bank, may rediscount such commercial paper. Advances for six-month periods may be made to chartered banks, Quebec Savings Banks, the Dominion or any province against certain classes of collateral, and advances of specified duration may be made to the Dominion or any province in amounts not exceeding a fixed proportion of such government's revenue. The Bank may accept from the Dominion or Provincial Governments, or from any chartered bank or any bank incorporated under the Quebec Savings Banks' Act, deposits that shall not bear interest. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may deal in foreign exchange.

The provisions regarding the note issue of the Bank of Canada are dealt with at pp. 997998.

The Bank of Canada Act (c. 43, Statutes of 1934 and amendments) provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. Under the terms of the Exchange Fund Order, 1940, authorizing the transfer of the Bank's gold holdings to the Foreign Exchange Control Board, the minimum gold reserve requirement has been temporarily suspended. The reserve, in addition to gold, may include silver bullion; balances in pounds sterling in the Bank of England, in United States dollars in the Federal Reserve Bank of New York, and in gold currencies in central banks in goldstandard countries or in the Bank for International Settlements; treasury bills of the United Kingdom or the United States of America having a maturity not exceeding three months; and bills of exchange having a maturity not exceeding 90 days, payable in London or New York, or in a gold-standard country, less any liabilities of the Bank payable in the currency of the United Kingdom, the United States of America or a gold-standard country. In accordance with the terms of the Foreign Exchange Acquisition Order, 1940, the Bank of Canada sold foreign exchange with a Canadian dollar value of $\$ 27,734,444$ to the Foreign Exchange Control Board.

The chartered banks are required to maintain a reserve of not less than 5 p.c. of their deposit liabilities, payable in Canadian dollars, in the form of deposits with and notes of the Bank of Canada.

The Bank acts as the fiscal agent of the Dominion of Canada without charge and may, by agreement, act as banker or fiscal agent of any province. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The head office of the Bank is at Ottawa, and it has an agency in each province, namely, at Charlottetown, Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Calgary and Vancouver.

The Governor of the Bank is its chief executive officer and Chairman of the Board of Directors, and he is assisted by a Deputy Governor and an Assistant Deputy Governor. The first appointments were made by the Government. Subsequent appointments are to be made by the Board of Directors subject to the approval of the Governor in Council.

At the first meeting of the shareholders on Jan. 23, 1935, seven directors were elected with terms as follows: one director, until the third annual general meeting (1938); two, until the fourth (1939); two, until the fifth (1940); and two, until the sixth annual general meeting (1941). Former directors continued in office when the Government took over the management of the Bank but directors are now appointed by the Minister of Finance with the approval of the Governor in Council for terms of three years. There are now eleven directors. In the transaction of the business of the Bank each director has one vote.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor and one member of the Board, which must meet once a week. This Committee has the same powers as the Board but every decision is submitted to the Board of Directors at its next meeting. The Board must meet at least four times a year. The Deputy Minister of Finance is an ex officio member of the Board of Directors and of the Executive Committee, but is without vote.

The Governor alone, or in his absence the Deputy Governor, has the power to veto any action or decision of the Board of Directors or the Executive Committee, subject to confirmation or disallowance by the Governor in Council.

## Subsection 2.-The Bank of Canada and Its Relationship to the Canadian Financial System

An article under this title is given at pp. 881-885 of the 1937 edition of the Year Book. It deals with such subjects as the functions of the Bank, its control and regulation of credit and currency, the mechanism by which such control is exercised, the expansion and contraction of credit, the mitigation of general economic fluctuations, the control of exchange operations, the advisory function of the Bank and its duties as the Government's banker. An article on the wartime functions of a central bank appears at pp. 803-806 of the 1942 Year Book.

## Subsection 3.-Bank of Canada Operations

The expansion of Bank of Canada liabilities and assets has provided for incressed Bank of Canada notes in active circulation (as the chartered bank-note issue is limited and is gradually being retired) and has enlarged the cash reserves of the chartered banks. The principal changes in Bank of Canada assets since

April, 1938, have been the rise in investments, partly to replace the gold and foreignexchange holdings transferred to the Foreign Exchange Control Board under the terms of the Exchange Fund Order and Foreign Exchange Acquisition Order, dated Apr. 30, 1940, and the fluctuations in holdings of sterling exchange through which the Bank has temporarily financed Canadian dollar requirements of the Foreign Exchange Control Board.

[^337]
## Subsection 4.-The Industrial Development Bank

The Industrial Development Bank was incorporated by Act of Parliament during 1944, commencing its banking operations on Nov. 1, 1944. This Bank was established to perform certain functions which the preamble to the Act of incorporation describes in the following terms:-
"To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises."

The Industrial Development Bank is a subsidiary of the Bank of Canada. Its Directors are the Directors and Assistant Deputy Governor of the Bank of Canada and its President is the Governor of the Bank of Canada. The $\$ 25,000,000$ capital stock of the Bank of which $\$ 10,000,000$ is now paid up, was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises in Canada with respect to which it is empowered to:-
(1) Lend money or guarantee loans.
(2) Enter into underwriting agreements with regard to any issue of stock, bonds or debentures.
(3) Acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.

The Bank may accept any form of collateral security against its advances, including real property.

The Industrial Development Bank is intended to supplement the activities of other lending agencies rather than to compete with them and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. The Bank is specifically prohibited from engaging in the business of deposit banking.

The montbly statement of assets and liabilities of the Bank shows that as at June 30, 1945, there were total loans and investments (excluding Government securities) of $\$ 467,431$ representing the amount actually disbursed by the Bank up to that date; the total amount of such loans authorized by the Bank was $\$ 2,424,050$.

## Section 3.-Currency

## Subsection 1.-Canadian Coinage*

The present standard of Canada is gold of 900 millesimal fineness ( $23 \cdot 22$ grains of pure gold equal to one gold dollar). Under the Uniform Currency Act of 1871, gold coin has been authorized but only very limited issues were ever made. The British sovereign and half-spvereign, and United States eagle, half-eagle and doubleeagle are legal tender. Subsidiary coin consists of 50 -, 25 - and 10 -cent silver pieces, $\dagger 800$ fine (reduced from 925 fine in 1920). Such subsidiary silver coin is legal tender to the amount of ten dollars. The 5-cent piece is legal tender up to five dollars and the 1 -cent bronze coin up to twenty-five cents. There is no provision for the redemption of subsidiary coin. A table at p. 807 of the 1941 Year Book gives particulars of weight, fineness, etc., of current coins.

[^338]
## 2.-Circulation of Canadian Coin as at Dec. 31, 1926-44

Note.-The figures are of net issues of coin. Figures for the years 1901-25 appear at p. 858 of the 1927-28 Year Book. Per capita figures are based on estimates of population as given at p. 128.

| Year | Silver | Nickel | 'Tombac' | Steel | Bronze | Total | Per Capita |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | \$ | \$ | \$ | \$ | 8 | \$ |
| 1926. | 27,433,463 | 564,865 |  |  | 2,043,833 | 30,042,161 | $3 \cdot 18$ |
| 1927 | 27, 104, 534 | 813,784 |  |  | 2,080,196 | 29,998,514 | $3 \cdot 11$ |
| 1928 | 27, 737,963 | 1,063,627 |  | - | 2,171,657 | 30, 973, 247 | $3 \cdot 15$ |
| 1929. | 28,638, 195 | 1,330,498 |  | - | 2,290,789 | 32,259,482 | $3 \cdot 22$ |
| 1930. | 28,562,330 | 1,494,525 |  |  | 2,297,405 | 32,354, 260 | $3 \cdot 17$ |

| 1938 | 30,482,924 | 3,051,594 |  |  | 3,091,873 | 36,626,391 | $3 \cdot 28$ |
| 1939. | 32,236, 145 | 3,355,906 |  |  | 3,276,771 | 38,868, 822 | 3.45 |
| 1940. | 36,944,040 | 4,015, 232 |  |  | 4,092,234 | 45, 051,506 | $3 \cdot 96$ |
| 1941. | 40,339, 221 | 4,467,463 | - |  | 4,648, 567 | 49,455, 251 | 4.30 |
| 1942. | 44,011,038 | 4,827,596 | 169,424 |  | 5,422, 131 | 54,430, 189 | $4 \cdot 67$ |
| 1943. | 51,009,046 | 4,826,033 | 1,407,424 | 571, ${ }^{-}$ | 6,300,627 | $63,543,130$ | $5 \cdot 38$ |
| 1944 | 54,972,812 | 4,825,057 | 1,407,754 | 571,000 | 6,753,329 | 68,529,952 | $5 \cdot 72$ |

The Royal Canadian Mint.-The Ottawa Mint was established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan. 2, 1908. By 21-22 Geo. V, c. 48, it was constituted a branch of the Department of Finance, and by the Proclamation of Nov. 14, 1931, issued under Sect. 3 of that Act, it has, since Dec. 1, 1931, operated as the Royal Canadian Mint. At first the British North American provinces, and later the Dominion of Canada, obtained their coins from the Royal Mint in London or from The Mint, Birmingham, Ltd., and in its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation, of British sovereigns and of small coins struck under contract for Newfoundland and Jamaica. Previous to 1914 small quantities of gold bullion were refined, but during the War of 1914-18 the Mint came to the assistance of the British Government by establishing a refinery in which nearly twenty million ounces of South African gold were treated on account of the Bank of England. The subsequent great development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Gold coins have not been struck since 1919, most of the fine gold produced from the rough shipments from the mines being delivered to the Department of Finance (since Mar. 11, 1935, the Bank of Canada has acted as agent for the Government) in the form of bars of approximately 400 fine oz. each, the rest being sold in a convenient form to manufacturers. The fine silver extracted from the rough gold, when not required for coinage, is sold in New York or disposed of to local manufacturing firms.

An account of the organization, and operational methods of the Royal Canadian Mint is given at pp. 888-892 of the 1940 Year Book.

## 3.-Annual Receipts of Gold Bullion at the Royal Canadian Mint, and Bullion and Coinage Issued, 1926-44

Nors.-Although not presented in exactly the same form, figures for 1901-16 are given at pp. 857-858 of the 1927-28 Year Book and for 1917-25 at p. 894 of the 1936 edition.

| Year | Gold Received | Gold Bullion Issued | Silver Coin Issued | Nickel Coin Issued | Steel Coin Issued | $\begin{gathered} \text { 'Tombac' } \\ \text { Coin } \\ \text { Issued } \end{gathered}$ | Bronze Coin Issued |

## Subsection 2.-Canadian Note Circulation

Dominion Notes.-Dominion notes became established in 1868 and the legislation by which the issue was expanded with the growth of the country is given at p. 952 of the 1934-35 Year Book. A summary of the main features of the former Dominion note issue is given at p. 893 of the 1940 edition.

Bank of Canada Notes.-The Bank of Canada, when it commenced operations, assumed the liability for Dominion notes outstanding, which were replaced in public circulation, and partly replaced as cash reserves, by its own legal-tender notes in denominations of $\$ 1, \$ 2, \$ 5, \$ 10, \$ 20, \$ 50, \$ 100$ and $\$ 1,000$. Deposits of chartered banks at the Bank of Canada completed the replacement of Dominion notes as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce the issue of their own bank notes gradually during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced.

There has been little change in the circulation of denominations of notes under \$5. In the denominations from $\$ 5$ to $\$ 1,000$, where Bank of Canada notes have partially replaced chartered bank notes or Dominion notes, there has been a large increase. On the other hand, the special Dominion notes in denominations from $\$ 1,000$ to $\$ 50,000$ which were used almost exclusively for inter-bank transactions or bank reserves, are no longer in use.

## 4.-Denominations of Dominion or Bank of Canada Notes in Circulation, 1926, 1929, 1932 and 1942-44

Nore.-Annual averages of month-end figures. The totals outstanding are not always multiples of the denominations of notes because of adjustments made according to scale when parts of mutilated notes are turned in for cancellation.

${ }^{1}$ Three-month average; not shown prior to October, 1944. The grand total is, however, twelve-month average.

Chartered Bank Notes.-The developments by which bank notes became the chief circulating medium in Canada in the period preceding the establishment of the Bank of Canada are described at pp. 900-905 of the 1938 Year Book. The main steps of this development that remained as permanent features of the system are outlined at pp. 809-810 of the 1941 Year Book.

The provisions regarding bank notes were materially changed with the establishment of the Bank of Canada under the Bank Act (c. 24) of 1934. The authority for both seasonal expansion and additional issue secured by deposit in the Central Gold Reserves was then terminated. Provision was made for a gradual reduction in bank-note circulation over a period of years as explained at p. 997. As a result of these changes, current data on bank-note circulation are not comparable with those of earlier years. However, statistics of total notes in the hands of the general public are comparable. This public circulation includes chartered bank notes together with Dominion notes and Bank of Canada notes, exclusive of those held by the banks as reserves. Statistics on this basis are shown in Table 5.

## 5.-Annual Averages of Note Circulation in the Hands of the Public, 1926-44

Norz.-Figures of circulating media in the hands of the general public for the years 1900-35 appear at p. 900 of the 1936 Year Book.

| Year | Averages of Month-End Figures |  |  | Averages of Daily Figures of Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\underset{\text { Bank }^{1}}{\text { Charter }}$ | Dominion or Bank of Canada ${ }^{2}$ | Total | Amount ${ }^{3}$ | Per Capita ${ }^{4}$ |
|  | \$ | \$ | \$ | \$ | \$ |
| 1926. | 153,931, 898 | 26,314,706 | 180,246, 604 | 195,000,000 | $20 \cdot 63$ |

[^339]
## Section 4.-Monetary Reserves

## Subsection 1.-Bank of Canada Reserves

The composition of Canadian gold reserves held by the Government is presented in the 1936 edition of the Year Book, at p. 895, for the years 1905 to 1934. Since March, 1935, the gold reserves have been held by the Bank of Canada. By authority of the Exchange Fund Act (c. 60, 1935), effective in July, 1935, they are valued at the prevailing current market price of gold. The effect of the revaluation as from the above date is shown in the chart at p. 886 of the 1937 Year Book. The new data are now to be found under the item "Reserves" in the "Assets" section of Table 1, p. 994. As explained in footnote 2 of that table, under the Exchange Fund Order of Apr. 30, 1940, the gold reserves of the Bank of Canada were transferred to the Foreign Exchange Control Board and the requirement that the Bank should maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada was temporarily suspended.

## Subsection 2.-Chartered Bank Canadian Cash Reserves

Before the Establishment of the Bank of Canada.-Up to March, 1935, legal tender cash reserves in Canada were made up partly of Dominion notes; partly of gold coin and bullion, and subsidiary coin, including these forms of cash held by the banks themselves; and as deposits in the Central Gold Reserves. In so far as these reserves were in actual gold or were in Dominion notes backed by
gold, they were subject to the expanding or contracting influences of monetary gold imports or exports arising from Canada's balance of international payments, so long as Canada was on the gold standard.

Since the Establishment of the Bank of Canada.-When the Bank of Canada was established, the chartered banks turned over their reserves of gold in Canada and Dominion notes to the new bank in exchange for deposits with, and notes of, the Bank of Canada. It was provided that, henceforth, the chartered banks were to carry reserves in these forms amounting to at least 5 p.c. of their deposit liabilities in Canada. Since that time, therefore, the gold reserves against currency and bank credit have been in the custody of the central bank except as affected by the Exchange Fund Order, 1940, as explained under Bank of Canada reserves in Subsection 1.

## 6.-Annual Averages of Cash Reserves of the Chartered Banks in Canada, 1926-44

Norg.-Figures, to nearest millinn, supplied by the Bank of Canada. Cash reserves prior to Mar. 11 , 1935, include gold and coin and Dominion notes held by the banks in Canada and deposits in the Central Gold Reserves not earmarked; since that date, they include notes and deposits with the Bank of Canada.

| Year | Annual Average of Daily Figures | Annual Average of Month-End Figures | Year | Annual Average of Daily Figures | Annual <br> Average of <br> Month-End <br> Figures |
| :---: | :---: | :---: | :---: | :---: | :---: |

| 1935. | 213,000,000 | 216,000,000 |  |  |  |

## Section 5.-Commercial Banking

## Subsection 1.-Historical

Since one of the chief functions of the early banks in Canada was to issue notes to provide a convenient curreney or circulating medium, it has been expedient to cover both currency and banking in the one historical sketch, which is given at pp. 901-905 of the 1938 Year Book. A list of the banks at Confederation appears at p. 897 of the 1940 Year Book and bank absorptions since 1867 are given at pp. 812-813 of the 1941 edition. A table at pp. 894-895 of the 1937 Year Book shows the insolvencies since Confederation; there has been none since 1923.

The Bank Act Revision of 1944.-According to statute the charters of the commercial banks in Canada are renewable every ten years and, at the same time, the Bank Act itself is revised. The revision of 1944 resulted in the following principal changes:-

An important feature of the revision was the reduction in the par value of bank shares (Sect. 10) from $\$ 100$ each to $\$ 10$ each, the objective being to create a wider public distribution of such shares.

The banks will now report annually to the Minister of Finance in a prescribed form their earnings and expenses, and such statistics will be published for the banks as a group (Sect. 53). Statutory effect was also given to the practical responsibility of the Minister with regard to inner reserves [Sect. 56(9)].

The note circulation privileges of the chartered banks have been further restricted by statutory limitation whereby the Canadian note circulation of any chartered bank, already limited to 25 p.c. of its unimpaired paid-up capital on and after Jan. 1, 1945, will gradually decline as the right to issue or re-issue notes in Canada on and after that date has been cancelled, and will disappear completely after Jan. 1, 1950. Banks may not have outstanding in their own notes issued for circulation outside Canada an amount in excess of 10 p.c. of their paid-up capital (Sect. 61).

The desire to enlarge facilities for loans to farmers and fishermen was made possible by provision for "intermediate" credits to farmers and fishermen to increase the efficiency of their operations or to add to the amenities of life on the farm. The banks have expressed themselves as willing and anxious to facilitate loans of this character, those to farmers to come within the scope of the Farm Improvement Loans Act (one provision of which is that the rate of interest must not exceed 5 p.c. per annum) and the Dominion Government, under the terms of that Act, will guarantee the banks against losses up to 10 p.c. of their aggregate loans so guaranteed (Sect.88). Certain other amendments were made to this Section designed to ensure somewhat greater facilities for other types of borrowers and to simplify the process of taking security under the Section.

A statutory reduction was made in the maximum rate of interest or discount chargeable from 7 p.c. per annum to 6 p.c. per annum (Sect. 91 ). A proposal by the Minister of Finance that small loans might be made on the basis of an effective interest rate of $9 \frac{3}{4}$ p.c. per annum-considerably less than half the rate small-loan companies were then charging on similar loans-was ultimately abandoned by the Minister in view of the criticisms offered in the Banking and Commerce Committee, and the opinion of bankers that they would be able to expand such loans without exceeding the 6 p.c. maximum.

The liability of banks in respect of balances in Canada unclaimed during a period of ten years will be transferred to Bank of Canada in return for the payment of a like sum to that institution (Sect. 92). Previously unclaimed balances were reported to the Minister of Finance, but remained the liability of the bank concerned.

The Canadian Banks and the Dominion's War Effort.-Because for the most part they operate on a nationwide scale, the chartered banks of Canada have been, from the first, in a position to exercise an extraordinarily potent influence in the furtherance of Canada's war effort. The experience, resources and organization of these banks, with their thousands of branches throughout the country, have been placed unreservedly at the disposal of the Dominion Government, and have been of great assistance in carrying out much of the administrative work connected with the control of the numerous and complicated measures necessary for the maintenance of financial equilibrium. The services of banking experts have been enlisted to assist in large-scale financing operations in connection with the war effort.

To-day, the volume of business handled by the banks is on a level phenomenally higher than at any time in their history, yet their staffs of experienced men are much smaller than in peacetime, owing to the fact that many thousands of their younger men are serving in the Armed Forces. These men have had to be replaced by women, quickly and intensively trained for the work.

The most onerous war work devolving on the chartered banks has been the administration of the regulations of foreign exchange control. These regulations, which are numerous and complicated, entail much extra work by the staffs of the leading offices, involving as they do explanations to customers, advice as to procedure, the filling out of forms, and full responsibility for all the innumerable international transactions involved.

Other war work includes handling details connected with the offering and sale of Victory Bonds; selling war savings certificates and war savings stamps; rationcoupon banking; establishment of branches at military camps; cashing of hundreds of thousands of cheques for Government employees and members of the Armed Forces and their dependants; the cashing of coupons for the hundreds of thousands of holders of Victory Bonds; the administering of much detail of Canada's cheque stamp law; the collecting and clearing of millions of income-tax certificates relative to coupons; cheques and other items cashed and received for deposit.

All this extra work has become part of the routine of banking in Canada.

## Subsection 2.-Combined Statistics of Chartered Banks

In order to afford a clear view of the nature of banking transactions in Canada, bank liabilities have been classified in Table 7 in two main groups: liabilities to shareholders and liabilities to the public. Only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are divided into four groups, "other assets" being included in the total. Of interest to

students of banking practice, the relative rates of increase of capital and reserve funds may be noted, also the great increase in the proportion of liabilities to the public to total liabilities, and the gradually increasing percentage of liabilities to the public to total assets. The chart on p. 1002 showing the division of ownership of assets is of interest in this connection. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times. Holdings of Dominion and Provincial Government and municipal securities were relatively insignificant prior to the War of 1914-18.

## 7.-Development of Chartered Banking Business in Canada, 1916-44

Nors.-These statistics are yearly averages computed from the twelve monthly returns. Figures for the years 1887-1880 will be found at pp. 918-919 of the 1938 Year Book, and for the years 1881-1915 at pp. 815-816 of the 1941 edition.

| Year | LIABILITIES |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} \text { Liabilities } \\ \text { to } \\ \text { Shareholders } \end{gathered}$ |  | Liabilities to the Public |  |  |  |  |
|  | Capital | Rest or Reserve Fund | Notes in Circulation | Demand Deposits in Canada | Notice Deposits in Canada | $\begin{gathered} \text { Total } \\ \text { on } \\ \text { Deposit }{ }^{1} \end{gathered}$ | Total Public Liabilities ${ }^{2}$ |

Classification of Deposits and Loans.-As a result of an amendment to the Bank Act in 1934, deposits and loans are required to be classified each year according to size of the deposit, or purpose of the loan. Table 11 shows deposits in Canadian currency and in currencies other than Canadian.

## 11.-Deposits, According to Size and Currency, in Chartered Banks in Canada, as at Oct. 31, 1944

Note.-Figures of deposits in Canadian currency only for earlier years will be found in the corresponding table of previous editions of the Year Book.

| Class and Amount of | Deposits in Canadian Currency |  | Class and Amount of Deposit | Deposits in Currencies other than Canadian |  |

Cheque Payments.-In advanced industrial societies money is only "the small change of commerce". The great bulk of monetary transfers, particularly in the case of the larger transactions, is made through the banks. It has been estimated that about 6 p.c. of the business transactions of the continent of North America are financed by the use of money and the remaining 94 p.c. by the use of cheques. Accordingly, if the aggregate amount of the cheques paid through the banks and charged to accounts is known, there is an almost complete record of the volume of business transacted, and thus of the business activity of the country.

Bank Debits.-As the number of commercial banks has in recent years been steadily diminishing through amalgamations (see pp. 812-813 of the 1941 Year Book), there being only 10 in $1944^{*}$ as compared with 18 in 1923, inter-bank transactions are a steadily decreasing proportion of total business transacted, and bank clearings have ceased to be a satisfactory measure of general business. The Canadian Bankers' Association have secured from January, 1924, the monthly aggregate figures of the amount of cheques charged to accounts at all banking offices situated in the clearinghouse centres of Canada; monthly and annual figures of cheques charged to accounts (bank debits) have been published since that time by the Dominion Bureau of Statistics. Further, in order that an estimate might be made of the proportion of banking transactions outside the clearing-house cities to the total, the Canadian Bankers' Association secured, for the month of January, 1935, the grand total of all cheques charged to accounts at all branch banks throughout the Dominion. The results showed that in that month the transactions outside the clearing-house cities amounted to $12 \frac{1}{2}$ p.c. of the grand total in the clearing-house cities.

The dollar volume of cheques cashed in the 33 clearing centres during 1944 amounted to $\$ 60,677,000,000$, an increase of $\$ 6,880,000,000$ or $12 \cdot 8$ p.c. over 1943 and a larger amount than recorded for any other year. The seasonally adjusted index of bank debits was well maintained throughout the year, featured by abrupt rises in May and November when Victory Loan purchases added sharply to the amount of cheques cashed. When it is recalled that the debits of 1943 were $18 \cdot 2$ p.c. greater than during 1942, a slackening in the pace of expansion is apparent.

The expansion in cheques cashed was general in the five economic areas during 1944. The gain in the Prairie Provinces of nearly 25 p.c. was exceptional. Advances in British Columbia and Quebec amounted to 13.3 p.c. and 12.0 p.c., respectively. The gain in Ontario was $9 \cdot 0$ p.c., the Maritimes following with an increase of 6.7 p.c.

[^342]

${ }^{1}$ Eight-month figure only. First reported May, 1941.
Equation of Exchange.-The actual amount of currency held by the Canadian public constitutes only about 16 p.c. of the total money supply available. The remainder is made up of deposits held by the chartered and central banks.

The supply of circulating media, consisting of bank notes and coin in the hands of the public, showed an increase of 20 p.c. during 1944, the total as at the end of the year being $\$ 914,830,000$. The sum of deposits held by the banks showed a greater absolute increase than in any other year, rising to $\$ 4,773,000,000$ as compared with
$\$ 4,075,000,000$ in 1943. By far the greater part of this advance was recorded by notice deposits, which rose from $\$ 1,864,200,000$ in 1943 to $\$ 2,272,600,000$ in 1944, an increase far greater than any previously listed; notice deposits were 65 p.c. greater than in 1932, the low point of the last important depression. Demand deposits, which advanced year by year after the outbreak of hostilities, showed an increase in 1944 of 15 p.c. over the preceding year. Deposits held by the Dominion Government amounted to $\$ 464,500,000$ in 1944 an increase of $\$ 38,900,000$ over 1943; in 1938, the last full year of peace, such deposits were $\$ 49,000,000$.

Significance is attached to the relation between the cash and cheque payments and the money supply. The latter, as stated above, is made up of the sum of the deposits held by the chartered banks and the total amount of notes and coin in the hands of the public. The figure for "cash and cheque payments" denotes the total volume of all financial transactions in Canada, either by cash or cheque, during a given year.

By dividing the total volume of cash and cheque transactions for a certain year by the money supply in that year, it can be determined how many times the supply changed hands or was 'turned over'. This number is spoken of as the "velocity of money" during the period in question.

During 1944, cash and cheque payments rose substantially over the total for 1943, standing at $\$ 85,790,800,000$ as compared with $\$ 76,066,200,000$ in the preceding year. This total was the highest recorded for cash and cheque payments. The total money supply advanced from $\$ 4,837,000,000$ in 1943 to $\$ 5,688,000,000$ in 1944-a historical record. The percentage gain over 1943, however, was less for cash and cheque transactions than for money supply.

The velocity of money in 1944 was, therefore, lower than in the previous year, dropping from $15 \cdot 73$ to $15 \cdot 08$, and the turnover was not as great as in most other years since 1921.

The volume of commodities and services multiplied by the prices at which they are purchased should conform to the trend of cheque and cash payments. The index of national income shown at p. 905 is regarded as the best measure of the former.

The emphasis in recent years, consequently, has been placed on credit instruments rather than upon purely monetary factors. The development of deposit currency and of central banking permits a high degree of variation between the volume of the means of payment and the supply of cash. Fluctuations in total money income are more fundamental than the variation in the amount of deposits and circulating media or in the velocity of turnover. The means of payment are normally adjusted to the ebb and flow of economic conditions.

## Subsection 3.-Statistics of Individual Chartered Banks

Assets and Liabilities.-The statistics in column 2 of Table 14 represent, for the years 1935 (when the Bank of Canada was established) and 1941 to 1944, the total of Bank of Canada notes in the possession of the chartered banks together with their deposits at the Bank of Canada. For 1929 (before the establishment of the Bank of Canada) they represent the totals of the banks' holdings of gold and coin in Canada, Dominion notes, and that part of their deposits in the Central Gold Reserves not required against their note issues.

## 14.-Principal and Total Assets of Individual Chartered Banks, 1929, 1935 and 1941-44

Note.-The statistics in this table are averages computed from the twelve monthly returns in each year.

[^344]Earnings of Chartered Banks.-The chartered banks of Canada are for the most part Dominion-wide institutions, doing business in all parts of the country. Their earnings, therefore, reflect with very considerable accuracy the fluctuations of general business.

## 16.-Net Profits of Chartered Banks and Rates of Dividend Paid, for Their Business Years Ended 1939-44

Note.-These figures are not strictly comparable owing to variations from year to year in the practices of individual banks and between banks. With the exception of the Banque Provinciale du Canada, the profits are shown after deducting Dominion and Provincial Government taxes.

${ }^{1}$ Ten months only, due to change in Bank's fiscal year end.
${ }^{2}$ Not reported.
Branches of Chartered Banks.-During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same ( 36 in 1881 and 1891, and 34 in 1901), but during the present century there has been in banking, as in industry, an era of amalgamations, the number of banks having dropped to 25 in 1913 and to 10 in 1931. That this has been far from involving a curtailment of banking facilities is seen in Table 7, which shows the development of the banking business since 1916, and in Table 17, which compares the number of branch banks existing in Canada at different periods, and indicates a growth from 123 in 1868 to 4,676, inclusive of sub-agencies, at Dec. 31, 1920. As at Dec. 31, 1944, the total stood at 3,087 (exclusive of 132 branches and 3 sub-agencies in other countries) the reduction having resulted from the closing of some unprofitable branches, and also from contractions brought about by wartime conditions.

The number of branches of Canadian banks doing business outside Canada increased rapidly during the War of 1914-18 and the early post-war period, rising to a total of 206 in 1921. Since then the number gradually declined to 132 branches in 1944.
19.-Branches of Individual Canadian Chartered Banks Outside Canada, with their Locations, as at Dec. 31, 1943 and 1944

## Section 6.-Government and Other Savings Banks

In a comparatively new country where capital is relatively scarce, it is natural that the banks that finance the business institutions should also absorb the bulk of the people's savings for use in promoting the business of the country. Thus, in Canada the great bulk of the current savings of the people has been found in the savings or notice deposits of the Canadian chartered banks, the annual average figures of which are given in Table 7 of this Chapter, the 1944 average being $\$ 2,272,573,361$. This is not so true to-day, when the Government is absorbing a large proportion of current savings for the financing of the War. Further, the current savings of the Canadian people are going very largely into the purchase of life insurance, the total premiums paid in the single year 1944 aggregating $\$ 244,423,196$. Nevertheless, current savings as shown by deposits in the banks are large, although those in the special savings banks are comparatively small, but are none-the-less significant.

There are three distinct types of savings bank in Canada at the present time, in addition to the savings departments of the chartered banks, and of trust and loan companies. First, there is the Post Office Savings Bank, in which the deposits are a direct obligation of the Dominion Government. Secondly, there are Provincial Government savings banking institutions in Ontario and in Alberta, where the depositor becomes a direct creditor of the province. Thirdly, there are, in the Province of Quebec, two important savings banks, the Montreal City and District Savings Bank and La Banque d'Economie de Québec (formerly the Caisse d'Economie de Notre-Dame de Québec), established under Dominion legislation and reporting monthly to the Department of Finance. Other agencies for the promotion of thrift are the co-operative credit unions, which encourage the regular saving of amounts too small to deposit in a bank.

Dominion Government Savings Banks.-Prior to 1929 there were two classes of Dominion Government savings banks in Canada, the Post Office Savings Bank under the Post Office Department, and the Dominion Government Savings Bank attached to the Department of Finance. The former was established under the Post Office Act of 1867 ( 31 Vict., c. 10) in order to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the Dominion to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government Savings Bank proper, under the authority of the Finance Department, were established in the leading cities of Canada under the management of the Assistant Receivers General and at certain designated centres in Nova Scotia and New Brunswick, under managers appointed by the Governor in Council. From deposits of $\$ 1,483,219$ at June 30, 1868, increases were registered until 1887, $\$ 21,334,525$ being shown at the credit of depositors at June 30 of that year. Commencing about 50 years ago, the individual banks were gradually amalgamated with the Post Office Savings Bank, and at Mar. 31, 1928, bank deposits had fallen to $\$ 7,640,566$. The remaining banks finally were amalgamated with those of the Post Office in March, 1929.

## 20.-Deposits with Post Office and Dominion Government Savings Banks, Fiscal Years 1918-44

Nore.-Figures for Provincial Government savings banks are not included. Figures for 1868-1917 will be found at pp. $833-834$ of the 1926 Year Book. The Dominion Government Savings Bank was amalgamated with the Post Office Savings Bank in 1929.

Provincial Government Savings Banks.-Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta, while a similar institution was in operation in Manitoba from 1924 to 1932, when the depositors' accounts were taken over by the chartered banks.

Ontario.-In the session of 1921, the Legislature of Ontario authorized the establishment of the Province of Ontario Savings Office, and in March, 1922, the first branches were opened. Interest at the rate of 1 and $1 \frac{1}{2}$ p.c. per annum compounded half-yearly is paid on accounts. The deposits are repayable on demand. Total deposits on Mar. 31, 1945, were $\$ 42,851,000$, and the number of depositors at that date was approximately 105,000 . Twenty-two branches are in operation throughout the Province.

Alberta.-In Alberta the Provincial Treasury receives savings deposits and issues demand savings certificates bearing interest at 2 p.c., or term certificates for one, two or three years, in denominations of $\$ 25$ and upwards, bearing interest at 2 p.c. for one year and $2 \frac{1}{4}$ p.c. for two or three years. The total amount in savings certificates on Dec. 31, 1944, was $\$ 3,204,482$, made up of $\$ 2,184,144$ in demand certificates and $\$ 1,020,338$ in term certificates.

In addition savings deposits are accepted at 33 Provincial Treasury Branches throughout the Province. The total of these deposits at Dec. 31, 1944, was $\$ 5,672,949$ made up of $\$ 2,793,380$ bearing interest at $1 \frac{1}{2}$ p.c. and payable on demand, and $\$ 2,879,569$ bearing interest at 2 p.c. or $2 \frac{1}{2}$ p.c. and payable six months or one year, respectively, after deposit.

Penny Banks.-Provision is made by the Penny Bank Act (R.S.C., 1927, c. 13) for the institution of banks designed to encourage small savings by school children, although their facilities are not confined to children. Such banks are not deemed to be banks within the meaning of the Bank Act, but are savings banks within the meaning of the Winding-Up Act, and their powers are strictly limited. The only bank operating under this statute is the Penny Bank of Ontario.
22.-Assets and Liabilities of the Penny Bank of Ontario, Years Ended June 30, 1941-44

As at June 30, 1944, the Penny Bank of Ontario served a school population of 198,000 children in over 480 schools. The Public Schools Act (R.S.O., c. 357, Sect. 89-Y) and the High Schools Act (c. 360, Sect. 25-B) state that the Board of Trustees may provide books, stationery and other materials necessary in connection with the establishment and maintenance of a penny savings bank or any system introduced for the encouragement of thrift and the habit of saving. The great reduction in business in 1943 and 1944 was due to the decision not to accept any further deposits after February, 1943, for the duration of the War, in order that the school children might concentrate upon the purchase of War Savings Stamps and Certificates.

Other Savings Banks.-The ${ }^{\text {T }}$ Montreal City and District Savings Bank founded in 1846 and now operating under a charter of 1871, had on Mar. 31, 1945, a paid-up capital and reserve of $\$ 5,500,000$, savings deposits of $\$ 103,999,300$, and total liabilities of $\$ 111,861,533$. Total assets amounted to $\$ 112,224,122$, including over $\$ 89,000,000$ of Dominion, provincial and municipal securities. The Caisse d'Economie de Notre-Dame de Québec, founded in 1848 under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855, and given a Dominion charter by 34 Vict., c. 7, had on Mar. 31, 1945, savings deposits of $\$ 18,575,307$, a paid-up capital and reserve of $\$ 3,000,000$, and total assets of $\$ 22,279,144$. Under the new charter, effective Sept. 1, 1944, the name of this bank was changed to La Banque d'Economie de Québec.

## 23.-Deposits in the Montreal City and District Sarings Bank and La Banque d'Economie ${ }^{1}$ de Québec, Representative Fiscal Years 1868-1900 and 1905-45

${ }^{2}$ For 1907 and subsequent years the fiscal years ended Mar. 31; previous to 1907 the years ended June 30.

## Section 7.-Foreign Exchange

## Subsection 1.-Exchange Rates

The Canadian dollar, adopted as Canada's currency in 1857, was equivalent to $15 / 73$ of the pound sterling; in other words, the pound was equal to $\$ 4 \cdot 866$ in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of the War of 1914-18. During the first eleven years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date, the dollar in the two countries was equivalent at par, and variation was only between the import and export gold points or under $\$ 2$ per $\$ 1,000$.

At the outbreak of the War of 1914-18, both the pound sterling and the Canadian dollar were removed from the gold standard, and fell to a discount in New York. However, this discount was 'pegged' or kept at a moderate percentage by sales of United States securities previously held in the United Kingdom, by borrowing in the United States and, after the United States entered the War, by arrangement with the United States Government. After the War, when the exchanges were 'unpegged' about November, 1920, the British pound went as low as $\$ 3 \cdot 18$ and the Canadian dollar as low as 82 cents in New York. In the course of the next year or two, exchange returned practically to par, and the United Kingdom resumed gold payments in April, 1925, and Canada on July 1, 1926. From then until 1928 the exchanges were within the gold points, but in 1929 the Canadian dollar again fell to a moderate discount in New York. The dislocation of exchange persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points, however, only for a few scattered intervals.

The 1942 Year Book, at pp. 829-830, deals with the pre-war position of Canadiar exchange from September, 1931, to the outbreak of war and also with the wartime movement of Canadian exchange. In view of the practically static position of exchange under present conditions, this information has not been repeated here.

## Subsection 2.-Wartime Control of Foreign Exchange

An article outlining the reasons for control, the organization and administration of the Foreign Exchange Control Board and the establishment of the Exchange Fund through which purchases and sales of foreign funds are made, appears at pp. 833-835 of the 1941 Year Book. A further article, at pp. 830-833 of the 1942 Year Book, covers modifications in procedure down to July, 1942, and, as only minor changes have been made since that time, it is not considered necessary to repeat the information here. The latest regulations may be ascertained through any branch of the chartered banks, which have been constituted authorized dealers by the Board.

## PART II.-MISCELLANEOUS COMMERCIAL FINANCE

## Section 1.-Loan and Trust Companies*

The Canada Year Book, 1934-35, presents at p. 993 an outline of the development of loan and trust companies in Canada from 1844 to 1913.

The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. However, summary statistics for 1942 and 1943 of provincial companies have been supplied by those companies and are included in Table 1 in order to complete the picture for loan and trust companies throughout Canada. It is estimated that more than 90 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with Dominion registered companies. The statistics of Tables 2 and 3 refer only to those companies operating under Dominion charter, except that, beginning with 1925, the statistics of loan companies and trust companies incorporated by the Province of Nova Scotia, and brought by the laws of that Province under the examination of the Dominion Department of Insurance, have been included in Table 3 as well as those for trust companies in New Brunswick since 1934 and in Manitoba since 1938. In 1920 the Dominion Department of Insurance took over the administration of the legislation concerning Dominion loan and trust companies-the Department of Finance had previously exercised supervision of their activities.

As indicating the progress of the aggregate of loan company business in Canada, it may be stated that the book value of the assets of all loan companies increased from $\$ 188,637,298$ in 1922 to $\$ 213,649,794$ in 1931 , or by $13 \cdot 3$ p.c., but declined to $\$ 186,025,276$ in 1943 or by $12 \cdot 9$ p.c. since 1931 . The assets of trust companies (not including estates, trust and agency funds, which 'cannot be regarded as assets in the same sense as company and guaranteed funds) increased from $\$ 154,202,165$ in 1928 to $\$ 234,465,762$ in 1943 or by $52 \cdot 1$ p.c. In the former year, the total of estates, trust and agency funds administered amounted to $\$ 1,077,953,643$ and in the latter year to $\$ 2,842,024,096$.

[^348]Functions of Loan Companies.-The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings-department deposits. Of the loan companies operating under provincial charters, the majority conduct loan, savings and mortgage business, generally in the more prosperous farming communities.

Functions of Trust Companies.-Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits, but the lending of actual trust funds is restricted by law.

Statistics of Loan and Trust Companies.-The figures of Table 1 are of particular interest in the case of trust companies. On account of the nature of their functions, they are mainly provincial institutions, their chief duties being intimately connected with the matter of probate, which lies within the sole jurisdiction of the provinces.

## 2.-Assets and Liabilities of Loan Companies Chartered by the Dominion Government, as at Dec. 31, 1925-43

Nots.-For the years 1914-24, see p. 913 of the 1937 Year Book. The figures since 1924 appearing here include loan companies chartered by the Government of Nova Scotia, but inspected by the Dominion Department of Insurance. Figures given in this table do not include small loans companies (see Sect. 2 pp. 1025-1027).

## Section 2.-Licensed Small Loans Companies and Licensed Money-Lenders

There have been incorporated in recent years, by the Parliament of Canada, three companies that make small loans, usually not exceeding $\$ 500$ each, on the promissory notes of the borrowers and additionally secured in most cases by endorsements or chattel mortgages. While these companies, under their original charter powers, were permitted to make loans on the security of real estate, that power was withdrawn by the Small Loans Act, 1939.

On Jan. 1, 1940, the Small Loans Act, 1939 (3 Geo. VI, c. 23), passed by the Parliament of Canada, came into force, by which the above-mentioned small loans companies and money-lenders licensed thereunder making personal loans of $\$ 500$ or less, are limited to a rate of cost of loan of 2 p.c. per month on outstanding balances, and unlicensed lenders to a rate of 12 p.c. per annum, including interest and charges of every description.
5.-Assets and Liabilities of Small Loans Companies Chartered by the Dominion Government, as at Dec. 31, 1933-43

Nors.-Figures for the years $1928-32$ will be found at p. 838 of the 1942 Year Book.

${ }^{1}$ First year Small Loans Act in operation. $\quad{ }^{2}$ Not including balances other than small loans. ${ }^{5}$ Revised since the publication of the 1943-44 Year Book. $\quad$ Includee $\$ 200,000$ bonds, debentures and stock. $\quad$ Includes taxes. No unearned income, since from 1940 small loans have been on an earned basis. $\quad{ }^{7}$ Including business other than small loans.

The Small Loans Companies chartered by the Dominion Government show a substantial increase in business for 1943 as compared with the previous year. The number of loans made to the public during the year increased from 126,970 to 144,521 or by $13 \cdot 8$ p.c. and the amount of such loans rose from $\$ 16,797,124$ to $\$ 19,328,551$. The average loan was approximately $\$ 132$ compared with $\$ 134$. At the end of 1943 the loans outstanding were 99,522 to an amount of $\$ 9,768,506$ or an average of $\$ 98$ per loan.

Licensed Money-Lenders.-In addition to the above-mentioned small loans companies, 55 licensed money-lenders furnished annual statements of their business, showing, for 1943 , total assets of $\$ 11,372,306$, of which balances of small loans amounted to $\$ 5,231,360$, other balances to $\$ 3,691,675$, bonds, debentures and stocks to $\$ 805,125$, real estate to $\$ 333,364$, cash to $\$ 595,702$ and other assets to $\$ 715,080$. Liabilities amounted to $\$ 11,372,306$, of which borrowed money accounted for $\$ 5,662,056$ and paid shares and partnership capital for $\$ 3,807,667$. Loans made in 1943 numbered 66,005 , totalling $\$ 10,377,014$ and averaging $\$ 157$, an increase of $15 \cdot 2$ p.c. in number and of 18 p.c. in the gross amount; at the end of the year there were 48,783 loans outstanding with a total and an average of $\$ 5,231,360$ and $\$ 107$, respectively. About 42 p.c. of the number of loans made in 1943 were between $\$ 100$ and $\$ 200$. Further details of this type of business are given in the 1943 report "Small Loans Companies and Money-Lenders Licensed under The Small Loans Act, 1939", published by the Dominion Department of Insurance.

## Section 3.-Sales of Canadian Bonds*

Previous editions of the Year Book have traced the sales of Canadian bonds through the interesting period covered by the War of 1914-18 and the intervening years to the outbreak of hostilities in 1939. In 1940, the first complete year of the present war, total sales were far greater than in any previous year. There was a slight decrease in 1941 but in each of the years 1942 to 1944, sales were successively greater than in any previous year. The 1944 total was $9 \cdot 3$ p.c. higher than that of 1943. Owing to the concentration on Dominion Government loans, the proportion of all other types of financing to the total sales was the lowest on record. External markets were closed, with the exception of some private refunding which took place in the United States, and the country was faced with the necessity of raising all required funds within the Dominion.

The highlight of the year's bond issues in 1944 came in November with the successful flotation of the ninth war loan (Seventh Victory Loan). The growth of sales and applications from the time of the First War Loan of Feb. 1, 1940, to the Eighth Victory Loan of May 1, 1945, is as follows:-

| Date | Purchases by Individuals | $\begin{gathered} \text { Purchases } \\ \text { by } \\ \text { Corporations } \end{gathered}$ | Total Cash Sales | Applications |
| :---: | :---: | :---: | :---: | :---: |
|  | \$ 000 | \$ 000 | \$'000 | No. |
| War Loans- \$ |  |  |  |  |
| Feb. 1, 1940. | 132,000 | 68,000 | 200,000 | 178,363 |
| Oct. 1, 1940 | 113,000 | 187,000 | 300,000 | 150,890 |
| Victory Loans-- |  |  |  |  |
| June 15, 1941. | 279,500 | 450,900 | 730,400 | 968,259 |
| Mar. 1, 1942. | 335, 600 | 507,500 | 843,100 | 1,681,267 |
| Nov. 1, 1942. | 374,600 | 616,800 | 991,400 | 2,032,154 |
| May 1, 1943. | 529, 500 | 779,200 | 1,308, 700 | 2,668,420 |
| Nov. 1, 1943. | 599,700 | 775, 300 | 1,375,000 | 3,033,051 |
| May 1, 1944 | 641,500 | 763,500 | 1,405,000 | 3,077, 123 |
| Nov. 1, 1944 | 766,400 | 751,200 | 1,517,600 | 3,327,315 |
| May 1, 1945. | 836,300 | 732,600 | 1,568,900 | 3,178,275 |

Between 1919 and 1940, provincial bond issues were on a much larger scale than formerly, because of the development of provincially owned public utilities and of improved highways. Owing to additional demands on Canada's capital markets, however, the Provincial Governments expressed the intention in 1941 of

[^350]strictly limiting bond financing for the duration of the War. Consequently, the aggregate of provincial direct and guaranteed bond financing has shown a very decided drop since 1940. The 1944 figure was the lowest since 1919.

Sales of the bonds of Canadian municipalities were greater in 1913, towards the end of the 'land boom', than they were in any other year up to 1943, standing at $\$ 110,600,936$. Sales in 1930 almost reached the record when they totalled $\$ 109,648,063$. In spite of the increased urbanization of the population, however, there was a marked decrease in the annual sales of municipal bonds during the 1930's when municipalities were obliged to set their finances in order and curtail expenditures.

During 1942 and 1943, the new-issue municipal market was characterized by very low volume. Rising employment throughout the Dominion and greatly increased industrial activity has had a marked influence on municipal finances generally. Unemployment relief expenditures were down sharply and tax revenues were increasing. As a result, the municipalities found themselves in a more comfortable financial position and new debentures during the past two years were practically non-existent. In 1944, however, for the first time since 1930, municipal issues topped the $\$ 100,000,000$ mark, due not so much to new investments as to refunding operations.

Sales of corporation bonds, which from 1926 to 1930 had averaged over $\$ 357,000,000$ per year, dropped to $\$ 23,050,000$ in 1932 and to $\$ 5,385,000$ in 1933 , due to the unfavourable industrial outlook. Since then the trend has been toward the refunding and retirement of bonded debt. The War did not create any new volume of corporate borrowings since the costs of plant expansion for war production were borne mainly by the Dominion.

## 6.-Sales of Canadian Bonds, by Class of Bond and Country of Sale, 1926-44

(From the Monetary Times Annual)
Nore.-Figures for 1904-25, inclusive, are given at p. 921 of the 1933 Year Book. Since 1936 much of the borrowing for the Canadian National Railways has been done directly by the Dominion and since the War the Dominion Government has advanced money to both the Canadian National and Canadian Pacific Railway Companies for the purchase of equipment. For this reason the column heading "Railway" in previous Year Books has been omitted in this table and such small bond issues as have been made by the Canadian Pacific Railway have been included in the "Corporation".

| Year | CLASS OF BOND |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Section 4.-Operating Profits of Corporations and Net Income to Stockholders

The Bank of Canada has published a composite of the financial statistics of 678 companies for the years 1936 to 1943. Previous to 1945 the study was conducted upon more restricted lines but now the number of companies included in the survey has been extended to cover all those which in 1941 had assets of over $\$ 200,000$ and for which consistent reports were available in sufficient detail for the entire period of the study, namely, 1936 to 1943. The figures disclose how the sharply rising level of Dominion taxation has affected the business life of the country. Since every effort was made by those responsible for the study to show the aggregate results on a closely comparable basis and since the group of companies included is wide and includes those of low as well as of high tax status, the results can be accepted as closely representative.

It is of interest to note that the net income left to stockholders, including the refundable excess profits tax, which was $\$ 229,000,000$ in 1936 and $\$ 289,000,000$ in 1939 , reached a maximum of only $\$ 313,000,000$ in 1942 and in 1943 was actually only $\$ 294,000,000$. The cash dividends paid to stockholders were much less in 1942 and 1943 than they were in 1939, although undistributed profits were in consequence so much larger. Depreciation items, which one would naturally expect to be much heavier in view of the intensified operations and the much greater wear and tear on plant, did not show a trend unduly out of line. They showed a gradual upward movement from $\$ 118,000,000$ in 1939 to $\$ 189,000,000$ in 1943 and it should
be remembered that part of this increase was accounted for by the increased capital investment in plant during the war years. This latter item was $\$ 100,000,000$ in 1939 and $\$ 163,000,000$ in 1941 , after which it showed a rapid decrease to $\$ 80,000,000$ in 1943.

## 7.-Financial Statistics Showing Source and Use of Funds for 678 Industrial Companies, 1936-43

> (In millions of dollars)

Note.-The sample includes all those companies with 1941 assets over $\$ 200,000$ for which consistent reports were available in sufficient detail for the period 1936-43. This statement, compiled by Bank of Canada, is designed to show net cash received from all sources and paid out for all purposes: revaluations or purely bookkeeping transactions which affect items of the balance sheet, particularly plant, property and equipment, preferred and common stock outstanding and, in a few instances, funded debt, are not reflected in the statement. Figures are for the respective fiscal years ended nearest to Dec. 31 of the year stated.

[^353]Table 8, which shows taxation factors, is not absolutely comparable with Table 7: it is based on data from 665 companies in place of the 678 shown in Table 7 due to the fact that it was published a few months earlier but at the time of writing it embodied the latest data available.

It is seen in Table 8 that income and excess profits taxes, which absorbed an average of less than 18 p.c. of the net taxable profits in the pre-war years 1936 to 1938 , increased this proportion to no less than $51 \cdot 3$ p.c. in 1943. This wartime taxation has been quite effective in skimming off the surplus profits of wartime operations.

## 8.-Summary of Profit Statistics for $\mathbf{6 6 5}$ Industrial Companies, 1936-43

(In millions of dollars)
Notz.-Compiled by Bank of Canada. The sample includes all those companies with 1941 assets over $\$ 200,000$ for which consistent reports were available from 1936-43. The accounts of certain companies which were available in some or all of these years were not comparable throughout the period and had to be excluded. The material is, of course, subject to all the limitations and qualifications which apply to the basic accounting statements. Figures are for the respective fiscal years ended nearest to Dec. 31 of the year stated.

| Item | 1936 | 1937 | 1938 | 1939 | 1940 | 1941 | 1942 | 19431 |

| Undistributed income (excluding forced saving ${ }^{2}, 4$.. | 45 | 76 | 8 | 65 | 65 | 87 | 85 | 64 |

[^354]The net operating profits before depreciation were more than doubled during the seven years following 1936. Taking 1937 as a normal pre-war year and 1942 as the year of peak war production, there was a gain of $76 \cdot 1$ p.c. Deducting depreciation, investment and other non-operating income, and bond interest the aggregate amount left before taxation showed a gain of $75 \cdot 6$ p.c. but after income and excess profits tax provision the percentage of net income available to stockholders showed only $6 \cdot 1$ p.c. increase.

The following statement brings together for each of the years covered the proportion of tax to profits made and the trend of net profits. This clearly shows that wartime industry in Canada has not been permitted to benefit in the way of profits from the increased value of business brought on by the War.

| Year | $\begin{gathered} \text { Net } \\ \text { Profil } \end{gathered}$ | Income and Excess Profits Tax Provision ${ }^{2}$ | P.C. of Tazes Paid to Profits Shown | Net Profite after Taxes |
| :---: | :---: | :---: | :---: | :---: |
|  | s'000,000 | ''000,000 | p.c. | \$'000,000 |
| 1936. | 279 | 49 | 17.6 | 230 |
|  | 357 295 | ${ }_{53}^{62}$ | 17.4 17.9 | ${ }_{242}^{295}$ |
| 1939. | ${ }_{361}$ | 73 | 20.2 | 288 |
| 1940 | 463 | 175 | 37.8 | 288 |
| 1941. | ${ }_{581}^{581}$ | 271 | 46.6 | 310 |
| 1942. | 627 599 | ${ }_{307}^{314}$ | 50.1 51.3 | 3132 292a |
|  |  |  |  | $292{ }^{2}$ |

The net income left to stockholders is given in Table 9 analysed by industrial classification. Appreciable increases are shown in a few of the main industries such as, food, pulp and paper and machinery, while not much change is found over the period for such industries as leather, tobacco and printing and publishing. Gold mining has shown the greatest decrease since the War.

## 9.-Net Income by Industrial Classification for 665 Companies, 1936-43

## (In millions of dollars)

An introductory statement summarizing the salient features of the legislation covering insurance in general and the fields of Dominion and provincial jurisdiction appears at pp. 844-846 of the 1941 Year Book.

The 1942 Year Book, at pp. 842-846, contains a special article on the developments in fire and casualty insurance in Canada between 1931 and 1940, consequent upon the enactment of the three Insurance Acts of 1932.

## Section 1.-Fire Insurance

In Canada, fire insurance began with the establishment of agencies by British fire insurance companies. These were usually situated at the seaports and operated by local merchants. The oldest existing agency of such a company commenced business at Montreal in 1804. The first Canadian company dates from 1809 and the first United States company to operate in Canada commenced business in 1821. A short account of the inception of fire insurance in Canada is given at pp. 846-847. of the 1941 Year Book.

A feature of the fire insurance business, besides the large percentage of British and foreign companies, is the continued increase in the number of companies that are operating on the mutual or reciprocal plan. These companies, in which all profits or losses are directly received or paid by the policyholders, are making themselves felt as competitive factors in the fire insurance business. (See p. 623 re farmers' mutuals.)

## Subsection 1.-Grand Total of Fire Insurance in Canada

Of the total amount of insurance effected in Canada during each year, a part is sold by the companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation, but may be allowed to sell insurance in other provinces.

[^356]In the more detailed analyses of fire insurance in Canada dealt with in Table 2, the statistics cover only the operations of companies with Dominion registration, but, as shown in Table 1, such companies account for approximately 93 p.c. of the insurance in force.

## Subsection 2.-Historical and Operational Statistics of Dominion Fire Insurance Companies

Historical Statistics of Dominion Fire Insurance.-The report of the Superintendent of Insurance for the year ended Dec. 31, 1943, shows that at that date there were 267 fire insurance companies under Dominion registration; of these 59 were Canadian, 73 were British, and 135 were foreign companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada-11 Canadian, 13 British and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 78 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

The trend in the average rate payable for fire insurance has been steadily downwards, although the increase in fire loss experienced in 1944, may, when final figures are available, be found to check that tendency. The increase in value of insurable buildings and their contents tends to increase fire insurance premiums in spite of the trend of the average rate. Another factor is the renewal of large threeyear writings of mercantile property made in 1941 which had previously been insured on an annual basis.

The average cost per $\$ 100$ of insurance reached a maximum in 1904 and 1905; there has since been a steady decrease with the exception of the years 1921 and 1924 when temporary reversals of the downward swing were in evidence. It is noteworthy that the cost of fire insurance has decreased by 66.9 p.c. since 1905 .
2.-Fire Insurance, by Companies Operating under Dominion Registration, 1900-43

Nort.-Figures for the years 1869-1899 are given at p. 973 of the 1939 Year Book, and figures for the intervening years from $1901-29$ at p. 847 of the 1942 edition.

For some years the Department of Insurance has compiled, from information supplied by the fire insurance companies registered to transact business in Canada, tables of experience as to premiums and losses by 27 classes of risks agreed upon. This experience for the five latest years available is given in Table 4.
4.- Percentages of Net Losses Incurred to Net Premiums Written in Canada by
All Companies Operating Under Dominion Registration, by Classes of Risks,
1939-43, with Five-Year Averages, 1939-43.
(Registered reinsurance deducted)
Note.-Figures in this table have been revised since the publication of the 1943-44 Year Book.

Fire Losses.-Closely allied to the subject of fire insurance is the subject of fire losses. The Dominion Fire Prevention Association publishes, under the auspices of the Dominion Department of Insurance.and with the co-operation of the Association of Canadian Fire Marshals, a report of the loss of life and property caused by fire, from which the information shown in Tables 5 and 6 has been summarized. In addition to the data here shown, the report gives such information as: per capita losses by provinces and by type of building, numbers of fires reported, origins of fires, and criminal investigations arising from fires.

In 1944, the per capita loss was greatest in Nova Scotia, being $\$ 4 \cdot 64$ as against the Dominion average of $\$ 3 \cdot 39$. The uninsured losses amounted to $\$ 10,356,509$, or $25 \cdot 5$ p.c. of the total as compared with $22 \cdot 3$ in 1943. The 50,719 fires reported in 1944 , with total property loss amounting to $\$ 40,562,478$, resulted in 307 fatalities - 119 men, 70 women and 118 children.

## 5.-Fire Losses in Canada, 1926-44

Norz.-For fire losses from 1923-25, see Statistical Report of Fire Losses in Canada, 1926, published by the Dominion Department of Insurance. An estimate of losses from 1898-1922 is published in Statistical Bulletin No. 27 (1922), issued by the same Department.

| Year | Property Loss | Loss per Capita | Deaths by Fire | Year | Property Loss | Loss per Capita | Deaths by Fire |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | \$ | No. |  | \$ | \$ | No. |
| 1926. | 38,295,096 | $4 \cdot 15$ | 288 | 1936. | 21,549,484 | 1.95 | 347 |
| 1927. | 32,254,084 | 3-29 | 465 | 1937. | 22,746,058 | $2 \cdot 04$ | 246 |

${ }^{1}$ This amount was given as the total loss, no uninsured losses being reported for Saskatchewan in 1938.

## Subsection 3.-Finances of Fire Insurance Companies

The following tables show for recent years the assets, liabilities, income and expenditure of registered companies transacting fire insurance in Canada. The majority of fire insurance companies also transact miscellaneous forms of insurance (casualty insurance) dealt with in Section 3 of this Chapter. Owing to the fact that
it is impossible for such companies to allocate their assets and liabilities and their general income and expenditure among the various types of business transacted, totals only are given here. Table 25 under Section 3 gives similar information for a few registered Canadian companies whose transactions are confined to forms of insurance other than fire or life.

## 7.-Assets of Canadian Companies and Assets in Canada of British and Foreign Companies Transacting Fire Insurance, or Fire Insurance and Other Classes of Insurance, 1939-43.

## Section 2.-Life Insurance

The life insurance in force in companies registered by the Dominion in 1944 was over $\$ 9,139,000,000$, an increase of over $\$ 605,000,000$ over the figure for 1943. There has been not only an increase in new business, but a greater stability is noticed in business written compared with the depression in early war years. The effect of these factors is reflected in the ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year.

| Year | Net in Force at Beginning of Year | Gain in Force for the Year | Percentage Gain |
| :---: | :---: | :---: | :---: |
|  | \$ | \$ |  |
| 1930. | 6,157,000,000 | $335,000,000$ | $5 \cdot 4$ |
| 1935. | 6,221,000,000 | 38,000,000 | 0.6 |
| 1939. | 6,630,000,000 | 146,000,000 | $2 \cdot 2$ |
| 1940. | 6,776,000,000 | 199,000,000 | 2.9 |
| 1941. | 6,975,000,000 | 374,000,000 | $5 \cdot 4$ |
| 1942. | 7,349,000,000 | 527,000,000 ${ }^{1}$ | 7.2 |
| 1943. | 7,920,000,000 | 614,000,000 | 7.8 |
| 1944... | 8,534,000,000 | 605,000,000 | $7 \cdot 1$ |

[^359]At present the amount of life insurance in force calls for annual premium incomes of over $\$ 250,000,000$ of which much the larger part is combined with interest earnings and proceeds of maturing investments to make possible the large investments by these companies in the Dominion war issues. It is interesting to note the effects of the War on mortality rates. Even including war losses, the mortality rate has not greatly changed, not nearly so much as it did during the War of 1914-18. The improvement in civilian mortality in recent war years appears to have substantially counter-balanced the additional mortality brought about by war service. The following figures are derived from the annual statements filed with the Dominion Department of Insurance by life insurance companies.

| Year | Rate of Mortality Per 1,000 Lives Exposed to Risk | Year | Rate of Mortality Per 1,000 Lives Exposed to Risk |
| :---: | :---: | :---: | :---: |
| 1913... | 8.61 | 1920. | 7.93 . |
| 1914. | 8.41 | 1938. | 6.42 |
| 1915. | $8 \cdot 66$ | 1939. | 6.44 |
| 1916. | 10.45 | 1940. | 6.59 |
| 1917. | 10.85 | 1941. | 6.77 |
| 1918. | 13.90 | 1942. | 6.85 |
| 1919. | 8.08 | 1943. | $7 \cdot 15$ |

## Subsection 1.-Grand Total of Life Insurance in Canada

In addition to the business transacted by life insurance companies registered by the Dominion, a considerable volume of business is also transacted by companies licensed by the provinces. Statistics of these provincial companies have been
collected since 1915 by the Department of Insurance. Table 10 summarizes the volume of business transacted by Canadian, British and foreign life companies and fraternal societies, whether registered by the Dominion or licensed by the provinces.

## Subsection 2.-Historical and Operational Statistics of Dominion <br> Registered Life Insurance Companies

Historical Statistics of Life Insurance.-The net life insurance of all companies registered by the Dominion in 1869 was only $\$ 35,680,082$, while in 1944 it was $\$ 9,139,496,096$.* The amount per head of the estimated population of Canada has more than doubled since 1923-an evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. Notable also is the fact that in this field British companies, the leaders in 1869, have fallen far behind the Canadian and the foreign companies.

[^360]
## 11.-Life Insurance in Force and Effected in Canada by Companies Operating Under Dominion Registration (Fraternal Insurance Excluded) ${ }^{1}$, 1900-44

Note.-Figures for the year 1869-99 are given at p. 958 of the 1938 Year Book, and figures for the intervening years from 1901-29 at p. 855 of the 1942 edition.

#### Abstract

${ }^{1}$ For statistics of fraternal insurance, see pp. 1048-1050. ${ }^{2}$ Based on estimstes of population given at p. 128 . ${ }^{3}$ During 1937 approximately $\$ 85,000,000$, and during 1938 approximately $\$ 60,000,000$ were transferred from insurance in force in Canada. These amounts represent mainly transfers to business out of Canada of certain reinsurances previously classed as Canadian business. They also include transfers to annuities of contracts providing for combined insurance and annuity benefits or options. ${ }^{4}$ Subject to revision.

Life insurance business was transacted in Canada during 1943 by 41 active companies registered by the Dominion, including 28 Canadian, 3 British and 10 foreign companies; one of these foreign companies was registered only for the acceptance of reinsurance. In addition, there were 9 British and 5 foreign companies registered to write insurance but which had practically ceased to write new insurance.

The operations analysed in the following tables of this Subsection, with the exception of Table 15, cover only those companies under Dominion registration and are exclusive of fraternal organizations and provincial licensees. However, as indicated in Table 10, their operations cover about 95 p.c. of the insurance in force in Canada.

## Subsection 3.-Finances of Life Insurance Companies

The financial statistics of the following tables cover only life insurance companies with Dominion registration and do not include fraternal organizations and provincial licensees. In the cases of British and foreign companies, the figures apply only to their assets, liabilities and operations in Canada but, in the case of Canadian companies, assets and liabilities, income received and expenditure made, arise in part from business abroad.

## 16.-Assets of Canadian Life Companies with Dominion Registration and Assets in Canada of British and Foreign Life Companies, 1939-43

#### Abstract

Nors.-One British company transacting fire insurance in Canada transacts also life insurance in Canada, and inasmuch as a separation of assets has not been made between these two classes, the assets in Canada are not included here, but are included in the assets of British companies shown in Table 7, p. 1038.

${ }^{1}$ Includes expenditure on business outside of Canada.

## Subsection 4.-Life Insurance Effected through Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 19 gives statistics of life insurance effected with fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to the whole business of Canadian societies and to thebusiness in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries, London; of the Faculty of Actuaries in Scotland; of the Actuarial Society of America; or of the American Institute of Actuaries) and unless the actuary certifies to the solvency of each fund a readjustment of rates or benefits must be made. The statistics in the first part of this table relate to the 14 Canadian societies reporting to the Insurance Department of the Dominion Government, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain Dominion authority precedent to transacting business in Canada. However, any such societies which at that date
were transacting business under provincial licences, while forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies have since obtained Dominion authority to transact business, also some foreign societies that had not previously been licensed by the provinces. Of both classes of society, 30 transacted business in Canada during 1943, two of which do not grant life insurance benefits.

## Subsection 5.-Life Insurance in Force Out of Canada by Canadian Companies Registered by the Dominion Government

Tables 20 and 21 give summary statistics of insurance in force as at Dec. 31, 1943, in currencies other than Canadian, classified by companies and by the currencies in which business was written. The data given here are in Canadian dollars mainly at par rates of exchange for the countries concerned, but there are several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. More than 62 p.c. of all such business in force was written in United States currency and over 23 p.c. in sterling. From another standpoint, over 33 p.c. was written in currency of British countries outside Canada and over 66 p.c. in currencies of foreign countries.

Canadian life companies operating under Dominion registration had, at Dec. 31, 1943, life insurance in force in countries outside Canada amounting to $\$ 3,484,892,891$. As shown in Table 20, insurance in force in currencies other than Canadian amounted to $\$ 3,375,013,175$. The difference between these figures is presumably the net amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the British and foreign investments of Canadian life insurance companies as at Dec. 31, 1943, amounted to $\$ 1,087,579,301$. Since the business in force in Canada of these companies at Dec. 31,1943 , amounted to $\$ 5,586,515,285$, the total business on their books, Canadian and non-Canadian, amounted to $\$ 9,071,408,176$. Thus over 38 p.c. of the total business in force was out of Canada.
20.-Life Insurance Effected and in Force and Liabilities by Canadian Companies (Excluding Fraternal Societies) Operating Under Dominion Registration, in Currencies Other Than Canadian, by Companies, 1943.

Nors.-Figures are given in Canadian dollars, mainly at par rates of exchange.

## Subsection 6.-Grand Total of All Life Insurance in Canada and the Business of Canadian Organizations Abroad

The first part of Table 22 summarizes the business outside of Canada of Canadian life companies and fraternal benefit societies. If to these figures is added the business in Canada of these organizations, as shown in Table 10, the total business, internal and external, of all Canadian life insurance companies and fraternal societies may be obtained as in the second part of Table 22. Again, adding the business in Canada of British and foreign companies and fraternal societies, a grand total is obtained of all life insurance in Canada and of the life insurance business abroad of Canadian organizations.
22.-Business Abroad of Canadian Life Companies and Societies and Grand Total of All Life Insurance Business in Canada and Canadian Organizations Abroad, 1943.

Notr.-Figures for business in Canada will be found in Table 10, p. 1042.

## Section 3.-Miscellaneous Insurance

Since 1875 the growth of insurance business other than fire and life has been steady. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass and steam-boiler insurance-the only four classes of miscellaneous insurance then transacted-was 5, 3, 1 and 1 , respectively. The report for the year 1940 shows that miscellaneous insurance in Canada now includes various forms of accident and 24 other classes of insurance transacted by Dominion companies. In 1880, 10 companies transacted business of the miscellaneous kind, but in 1943 such insurance was issued by 267 companies, of which 58 were Canadian, 73 British and 136 foreign; 212 of these 267 companies also transacted fire insurance. In addition, 20 fraternal orders or societies carried on accident and sickness insurance as well as life insurance business and 2 fraternal orders or societies carried on accident insurance only.

Table 23, which shows the division of business in this field between Dominion and provincial licensees, indicates that, as in the cases of fire and life insurance, the bulk of the business (about 88 p.c. in this case) is transacted by companies with Dominion registration.

Since, as indicated above, most of the companies carrying on miscellaneous insurance in Canada also transact fire insurance, their assets, liabilities, income and expenditures for all operations are included in the financial statistics of fire insurance companies given in Section 1, Subsection 3, of this Chapter. Table 25 gives similar figures for the 10 Canadian companies whose transactions are confined to insurance other than fire and life. Similarly, in 1943, there were 3 British and 42 foreign companies whose operations were limited to the same field.

Automobile insurance has continued to show a favourable experience with a loss ratio of around 45 p.c., in spite of the effects of lessening traffic-the results, no doubt, of increased caution on the part of drivers.

Hail insurance in 1943 had an unfavourable experience which has been continued as far as the records show in 1944:a substantial underwriting loss has resulted.

Marine insurance has shown a very large increase in Canada during the war years and substantial profits have resulted. The results for the years 1941 to 1943, inclusive, are as follows:-

| Year | Premiums | Losses | Underwriting Profits |
| :---: | :---: | :---: | :---: |
|  | \$ | \$ | \$ |
| 1941. | 6,011,922 | 2,781,190 | 1,694,470 |
| 1942. | 14,295,543 | 7,983,963 | 3,855,415 |
| 1943... | 10,061,059 | 4,931,286 | 3,445,501 |

This class of insurance will, no doubt, figure more largely in the business of companies in post-war years, than it did before 1939.

## Section 4.-Insurance As It Affects the Balance of International Payments

The short article "Insurance as it Affects the Balance of International Payments" which appears at pp. 870-871 of the Canada Year Book 1942, has not been reprinted in this edition owing to the fact that only minor changes have taken place in this field since that date.

# CHAPTER XXVII.-EDUCATION AND RESEARCH* 

## CONSPECTUS

The field of public education in Canada is assigned to the provinces by the British North America Act, although schools for the education of the native Indian population (who are wards of the Dominion Government) are administered by the Indian Affairs Branch of the Department of Mines and Resources, Ottawa. Such schools, however, are the only educational institutions maintained by the Dominion Government, except that certain aspects of the education of returned veterans are a responsibility of the Department of Veterans Affairs. The special work being done by the Dominion Government in connection with the Armed Services is not of a permanent nature, although it has been very important during the war years and will play a significant part in the rehabilitation of the personnel back into civilian life.

Special Work in Connection with the Armed Forces.-During the war years particularly, there has been a good deal of educational activity,formal as well as informal, which is not recorded in this Chapter. Reference to work under the War Emergency Training Program is made in the Labour Chapter at pp. 775-777. Technical training within the Armed Services is additional to this again. The technical training of a Navy personnel of more than 96,000 , an Army personnel of more than 650,000 and an Air Force personnel of more than 220,000 , has been in reality an educational enterprise of great proportions. Educational work in the Services has not been only technical in character; provision was made for general education in the Navy by the establishment of a Department of Naval Education in 1941, in the Air Force by an Education Section established in 1942, and by a Directorate of Army Education in 1943. These, in effect, supplemented and extended work carried on by the Canadian Legion Educational Services from the early months of the War.

The typical 'education officer in the Services is a university graduate with teaching experience in secondary schools. Duties vary somewhat between the Services, but include in all cases the organization of discussion groups and some responsibility for making educational books available. Through the medium of Canadian Legion Educational Services, it is possible for the education officer to direct the men of his unit to correspondence.courses at all levels from the most elementary to university graduation. Provincial Departments of Education and universities in all parts of the country have co-operated to make this possible.

[^365]Provision for men and women who have been discharged from the Armed Forces, and for those who will be demobilized later, to resume their education is being administered by the Rehabilitation Branch of the Department of Veterans Affairs. This work is dealt with as a phase of the rehabilitation program at pp. 876-879 of Chapter XXII.

The War has also given an impetus to educational activity among the civilian adult population. It is difficult to report upon this in a statistical way, but interested persons may obtain information on trends and developments from the Canadian Association for Adult Education, 198 College Street, Toronto.

## Section 1.-Schools, Colleges and Universities

This Section summarizes the enrolment in all the educational institutions in Canada which include four types: Dominion Indian Schools, provincially controlled schools, privately controlled schools, and universities and colleges. The provincially controlled schools are, of course, under the constitution, the most important group and account for over 90 p.c. of the total enrolment shown in Table 1. A system of public elementary and secondary education, financed mainly by local school authorities but assisted by provincial grants, has developed in each province. There are private schools in all provinces (i.e., schools that are not conducted by publicly elected or publicly appointed boards and are not financed out of public money) but their enrolment is not large in comparison with that of the public schools. At the level of higher education, there is a provincial university in each of six provinces and one or more colleges supported out of provincial funds in the remaining three provinces. (Agricultural schools and colleges are dealt with at pp. 203-213 of the 1943-44 Year Book.)

Table 1 gives statistics of enrolment in four different categories of educational institutions including Dominion Indian schools. Indian schools are treated more fully in Chapter XXIX, Miscellaneous Administration, along with other information on Indian affairs.

## Subsection 1.-Dominion Indian Schools

In Chapter XXIX, the administration of Indian affairs by the Indian Affairs Branch of the Department of Mines and Resources is dealt with at pp. 1098-1101.

Educational work carried on by the Dominion Government for the benefit of Indians is now very extensive. In the fiscal year 1943-44, a total of 340 Indian schools were in operation, including 75 residential schools for Indians with an enrolment of 8,729 and 258 day schools for Indians with an enrolment of 7,858 Indian pupils, also 7 combined public and Indian schools with' 100 Indian pupils enrolled. The total enrolment of Indian pupils at school has increased from 12,799 in 1915-16 to 16,587 in 1943-44, and the average attendance from 8,080 to 13,257 ( $63 \cdot 1$ p.c. to 79.9 p.c. of the enrolment). Continuation and high-school work is now being taught in several of the day and residential schools. The amount spent on Indian education in the school year $1943-44$ was $\$ 1,929,083$.
2.-EnroIment and Average Attendance at Indian Schools, School Years ended 1936-44

Nots.-Figures for the years 1916-29 will be found at p. 1063 of the 1940 Year Book, and for 1930-35 at p. 929 of the 1942 edition.

| Year | Residential Schools |  | Day Schools |  | All Schools |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Enrolment | Average Attendance | Enrolment | Average Attendance | Enrolment | Attendance |  |
|  |  |  |  |  |  | Number | P.C. of Enrolment |
| 1936. | 8,906 | 8,061 | 9,127 | 5,788 | 18,033 | 13,849 | 76.8 |
| 1937. | 9,040 | 8,176 | 9,257 | 5,790 | 18,297 | 13,966 | 76.3 |
| 1938. | 9,233 | 8,121 | 9,510 | 5,978 | 18,743 | 14,099 | 75.2 77.4 |
| 1939. | 9,179 | 8,276 | 9,573 | 6,232 | 18.752 | 14,508 | 881.9 |
| 1940. | 9,027 | 8,643 | 9,369 | 6,417 | 18,396 | 15,060 14,353 | 81.9 82.4 |
| 1941. | 8,774 8,840 | 8,243 8,283 | 8,651 | 6,110 5,837 | 17,281 | 14,353 14,120 | 81.1 |
| 1942. | 8,840 8,830 | 8,283 | 8,441 8,046 | 5,837 5,395 | 16,876 | 13,441 | 79.6 |
| 1944. | 8,729 | 7,902 | 7,858 | 5,355 | 16,587 | 13,257 | 79.9 |

The enrolment by provinces for the year 1943-44 was as follows: Prince Edward Island, 23; Nova Scotia, 398; New Brunswick, 318; Quebec, 1,459; Ontario, 4,004; Manitoba, 2,168; Saskatchewan, 2,377; Alberta, 1,945; British Columbia, 3,589; Yukon, 90; and Northwest Territories, 216.

## Subsection 2.-Provincially Controlled Schools

Enrolment and Attendance.-An outline of the provincial systems of school administration is given at pp. 960-962 of the 1937 Year Book. Enrolment in provincially controlled schools is given in Table 1 and average daily attendance is shown in Table 3. The average daily attendance figures are more comparable, as between provinces, and probably more significant for most purposes than those of enrolment. Both figures have been practically at a standstill, or declining, in all provinces for several years becąuse of the annually decreasing number of younger children entering the schools.

## 3.-Average Daily Attendance in Provincially Controlled Schools, by Provinces, School Years ended, 1926-43

Note.-Figures for years prior to 1911 will be found at pp. 839-840 of the 1932 Year Book, and those from 1911 to 1925 at p. 963 of the 1937 edition.

| Year | P.E.I. | N.S. | N.B. | Que. | Ont. | Man. | Sask. | Alta. | B.C. | Total |

[^366]Age Distribution.-A record of the age distribution of pupils in the provincially controlled schools of all provinces is presented in Table 4. The ages of boys and girls are not shown separately, and it should be mentioned that there is a definite tendency for boys to leave school at earlier ages than girls.
4.-Age Distribution of Pupils in Provincially Controlled Schools, by Provinces, School Year ended 1943

Teaching Staffs.-The teaching staffs of day schools under provincial control in Canada consisted in 1943, of 74,315 teachers ( 15,622 males and 58,693 females). Table 5 summarizes statistics regarding rates of salary by provinces, except for Quebec for which comparable data are not available. A separate report, "Elementary and Secondary Education in Canada, 1940-42", deals in detail with the classification of teachers, rates of salary paid and their teaching experience.

## 5.-Teachers in Provincially Controlled Schools, Classified According to Salary, by Provinces, School Year ended 1943

Note.-Comparable figures for Quebec are not available.

Financial Statistics.-Table 6 presents records of the finances of the Boards operating provincial schools, in a comparable way, so far as this can be done with existing records.

## 6.-Financial Support of Provincially Controlled Schools in Canada, by Provinces, for Selected Fiscal Years 1926-43

Nore.-The receipts shown in the following table do not include any amounts raised by loans, or the sale of bonds or debentures, as all revenue of this nature must be repaid ultimstely with money raised by local taxation. With the exception of the Maritime Provinces, for which the information is not available, the total debenture indebtedness of the schools of each province is given annually, thus showing the net increase or decrease per year. Figures for 1914 to 1925 will be found at pp. 985-987 of the 1936 Year Book and those for intervening years from 1926 in the corresponding table of the 1937-42 editions.

${ }^{1}$ Includes tuition fees where these are recorded.
${ }^{2}$ Includes contributions to teachers' salaries in the Maritime Provinces and, in New Brunswick, grants made to schools by the Vocational Education Board. ${ }^{3}$ Not available. $\quad$ Includes the township grant towards the salaries of rural public school teachers. ${ }^{5}$ In the rural municipalities of Manitoba about three-fifths of the school support is equalized by a uniform rate levied over the whole municipality and in the greater part of rural Alberta there is equalization over the areas of more than forty school divisions.

## Subsection 3.-Private Schools

Private Elementtary and Secondary Schools.-There are numerous private schools in each province doing work similar to that of the ordinary provincially controlled schools, but they are not publicly financed or administered and are not therefore included in Subsection 1, except in Quebec. Table 7 shows their enrolment at intervals from 1921, the year in which the Education Branch of the Dominion Bureau of Statistics commenced the collection of reports from private schools. A directory of the schools is published by the Dominion Bureau of Statistics.

## 7.-EnroIment in Private Elementary and Secondary Schools in Canada, by Provinces, School Years ended 1921, 1926, 1931 and 1938-43

Nore.-Figures for the years 1932-35 are given at p. 970 of the 1937 Year Book and for 1936-37 at p. 881 of the 1942 edition.

| Year | P.E.I. | N.S. | N.B. | Que. | Ont. | Man. | Sask. | Alta. | B.C. | Total |

## Subsection 4.-Higher Education

Editions of the Year Book previous to 1938 include considerable information concerning universities and colleges, such as enrolment, graduates, teaching staffs, and finances. Later detailed and historical statistics of this nature are given in the report "Higher Education in Canada, 1940-42", published by the Dominion Bureau of Statistics.

Enrolment.-Comparison of enrolment figures for the year 1943 with those of pre-war years indicate that university attendance has been well maintained. On the basis of full-time undergraduate enrolment by faculties the decrease in male students was about 4 p.c., partly offset by a minor increase in women undergraduates. The major portion of the decrease was in the faculties of Arts and in such studies as law, education and theology. A significant increase was reported in Pure Science by those institutions which segregate this registration from the Arts faculty. This may be attributed to a demand for chemical warfare personnel and the increased emphasis placed on science by French-language institutions. Applied Science increased 30 p.c. since 1938, the enrolment in $1943(5,433)$ being the highest on record. Medicine remained in the vicinity of 3,000 which may be considered the maximum enrolment possible under wartime conditions of decreased teaching personnel. Maintenance of enrolment in the latter two schools and in related professions, to provide replacements for technical and medical manpower, increased in importance as the war progressed. Government financial aid to students, special grants to the universities to provide laboratory equipment, and postponement of military service until after graduation are factors that promoted registration within these schools.

Women students are still predominantly Arts and Science registrants. Two courses closely related to the rehabilitation of war casualties-occupational therapy and physio-therapy-have more than doubled their enrolment figures. New schools and courses in Social Science, Public Health and Military Nursing have increased the enrolment for these professional services more than 50 p.c. beyond that of 1938.

Post-graduate schools have experienced the greatest measure of depletion due to diversion of candidates to essential war work and responsible administrative positions within the Armed Forces. Registration in advanced courses of Arts and Science has dropped almost 15 p.c. from pre-war years.

## 9.-Financial Statistics of Universities and Colleges in Canada, for Selected Years 1921-43

Nots.-The larger universities and many of the colleges in Canada are included and represent an enrolment of approximately 80 p.c. of the full-time students of university grade throughout the period. The institutions omitted are mainly those conducted by religious orders, where teachers receive little or no salary, and the financial returns consequently do not represent a comparable record.

[^368]Graduates from Schools of Higher Education.-The number of university graduates since 1923 or 1924 has increased by about 50 p.c. Nearly 3 p.c. of the young people growing up in Canada to-day become university graduates-about 4 p.c. of the young men and 1.5 p.c. of the young women. The numbers receiving degrees in Engineering, Applied Science and Scientific Agriculture have doubled since 1930. A similar increase has occurred in the Social Service graduates. Graduates in Medicine and Surgery have increased since 1938 under the impetus of war demands. The years $1940-43$ have seen a material decrease in the graduates in Arts and Science, Law and Theology but the rate of increase in the other professions remains about the same as for previous years.

Women constitute about one-fourth of university graduates. There has been no tendency for them to increase in such professional lines of study as medicine, dentistry, pharmacy, law, theology or missionary courses. A few appear in the record of every branch of study into which enrolment can be divided, except forestry, but they have held in the main to Arts, including Science and Commerce, and to Education, Social Service and Public Health.

## Section 2.-Scientific and Industrial Research in Canada

The field of scientific and industrial research in Canada is covered, so far as the Governments are concerned, by the Dominion and Provincial Departments of Agriculture, Forestry, Fisheries, Mines, etc., together with such special research bodies as the National Research Council, the Ontario Research Foundation and the Research Council of Alberta. The field of private research is, of course, much broader; it covers all research work conducted at universities and sponsored by scientific societies and foundations, and also the vast field of technical and industrial research conducted by individual industries, which in many cases benefit from their affiliations with parent organizations in the United States or the United Kingdom. A complete survey of the work being carried on by all research organizations in Canada is given at pp. 979-1012 of the 1940 edition of the Canada Year Book. The work in connection with the war effort that is being done by the National Research Council in co-operation with other Departments, is summarized in the Introduction to this volume.

## Section 3.-Public Libraries

The program of post-war reconstruction, being planned for Canada, includes the expansion of services associated with the development of humanitarian and social attributes in the Canadian citizen. Among the factors that contribute to the development of these attributes, is a comprehensive public library system. The survey of public libraries in Canada in 1943 highlights the lack of public library facilities for one-half of the population and, except for a few individual cities, the inadequacy of the services that do exist. Analysis of the returns on the basis of population unit and service to the community shows less than 20 libraries that, by standards of population and per capita expenditure, approach the minimum standards recommended by international authorities. Libraries located in cities and towns of 10,000 population or over are responsible for 79 p.c. of the total expenditures. One-half of them spend from 60 to 92 cents per capita; the other half spends under 60 cents. The minimum standard set by authorities is one dollar.

The summarized statistics show an increase of $\$ 300,000$ in the financial assistance given by the Provincial Governments. About 10 p.c. of this was contributed by Quebec for the establishment and maintenance of a provincial library in Montreal, and assistance in the reorganization of a municipal library for Quebec city. Ontario provincial grants have increased by 16 p.c. and Alberta and Saskatchewan by 10 p.c.

The survey includes a geographical analysis of the service of individual libraries based on the population unit. This analysis includes such items as per capita circulation, volumes and expenditure; source of income and budgets; percentage of population that use the library; and types of reading material selected by home readers. In the latter case there is evidence of a consistent decrease in the demand for light reading.

A summarized review of the main features of provincial legislation governing the establishment of public libraries in Canada includes recent changes in Nova Scotia and Saskatchewan.

## Section 4.-Museums and Art

At pp. 1025-1026 of the 1939 Year Book a list of the 37 museums (including art galleries) in Canada employing full-time staff is published, showing floor space and average daily attendance at each.

A complete directory of museums is available in a report, "Museums in Canada",* published in 1938 by the Dominion Bureau of Statistics. See list of Articles at the front of this volume for material previously published.

Canadian Criminal Law and Procedure.-A review of the development of the Criminal Code in Canada is given at pp. 1085-1087 of the 1934-35 edition of the Year Book; it includes a résumé of procedure and an account of the jurisdiction of the various classes of judges and magistrates.

The statistics presented in this Chapter are summarized from the "Annual Report of Statistics of Criminal and Other Offences", and are collected directly from the criminal courts in the different judicial districts throughout the Dominion. There are 156 judicial districts, including 2 sub-districts, divided by provinces as follows: Prince Edward Island 3, Nova Scotia 18, New Brunswick 15, Quebec 25, Ontario 47, Manitoba 6, Saskatchewan 21, Alberta 12, British Columbia 8 and Yukon 1.

## Section 1.-General Analyses

Crime is divided into two definite classes, criminal or 'indictable' offences, which include all serious crime covered by the Criminal Code (see pp. 1077-1082), and summary or 'non-indictable' offences, which comprise breaches of municipal by-laws, traffic laws and other less serious crimes (see pp. 1082-1086). Generally, indictable offences are triable by jury, although in certain cases the accused is accorded the right of election as to whether he be tried by jury or before a judge without the intervention of a jury, but in other cases the jurisdiction of the magistrate as to trial is absolute and does not depend upon the consent of the accused. Non-indictable offences are usually dealt with summarily by police magistrates under the Summary Convictions Act. The term "indictable" applies to offences of adults, similar offences committed by juveniles $\dagger$ being termed "major" offences; what are termed non-indictable offences when committed by adults are referred to as "minor" offences when committed by juveniles.

During 1943, there were 512,735 cases of adult offenders handled by the courts as compared with 626,647 cases in 1942. Of this total 47,420 cases were of an indictable nature while 465,315 cases were non-indictable. The corresponding figures for 1942 were 45,283 indictable and 581,364 non-indictable cases. In the case of juvenile offenders (under 16 years of age) 12,225 young persons were brought before the courts of whom 1,929 were dismissed or had their cases adjourned sine die.

[^370]Convictions for all Offences.-Total convictions in 1943 numbered 517,363, a decrease of 115,068 or $18 \cdot 2$ p.c. as compared with 1942 . Of the total convictions, 10,296 were cases in which juveniles were found guilty of major or minor offences, a decrease of 1,462 or 12.4 p.c. as compared with 1942.

Ontario led the provinces in convictions per 100,000 population during 1943, the ratio being 5,749; Quebec was second and Manitoba third.

Adults.-Ontario led in the rate of convictions for indictable offences, Alberta was second and British Columbia third, with Quebec a close fourth. Quebec's rate of 5,248 convictions for non-indictable offences per 100,000 population was the highest. Ontario was second in this respect and Manitoba third.

Juveniles.-The ratios for juvenile crime are, of course, relatively small, but they are very important from a sociological standpoint. New Brunswick led in 1943 as regards major offences and Quebec as regards minor offences.

Wartime Trends.-During the four-year period from Sept. 30, 1939, to Sept. 30, 1943, convictions for all crime in Canada increased from 484,328 to 517,363 or by 6.8 p.c. During a similar period of time preceding the war, 1935-39, the increase was $19 \cdot 9$ p.c.-from 403,852 cases to 484,328 cases. Thus the rate of increase in the total number of convictions was lower by $13 \cdot 1$ p.c. during the four war years than it was during the four years immediately preceding the War. While decreased rates of convictions during the war years have occurred in adult crime, increased rates are shown for juvenile crime. It is significant that at no time since statistics of juvenile crime have been compiled separately (1922) has any period shown such a marked acceleration in the juvenile crime rate as during the first four years of the present war, although a definite improvement was shown in this respect in 1943.

In using the statistics of Table 1, it should be remembered that, while the Criminal Code undergoes little change over periods of time, the figures for summary convictions are greatly influenced by the changing customs of the people, and show a strong tendency to increase with the increasing urbanization of the population. Non-indictable offences as a class showed an increase in proportion to all offences during the first three war years, this increase being the result, mainly, of the application of the 40 miles an hour speed law throughout Canada, the addition of National Registration Acts, the stricter enforcement of the Radio Licence Act and other extensions of the field of non-indictable offences under wartime regulations. However, a decrease of nearly 20 p.c. was shown in 1943.

The most significant figures in Table 1 are those of indictable offences per 100,000 population. Indictable offences, which had decreased steadily since 1939 showed an increase from 1942 to 1943.
1.-Convictions for All Offences (Juveniles Included), Classified by Indictable and Non-Indictable Offences, Years Ended Sept. 30, 1931-43
Nots.-Figures for the years 1886 to 1930 will be found at pp. 1050-1051 of the 1939 Year Book.

Appeals.-In the calendar year $1943,13.6$ p.c. of the appeals in criminal or indictable cases resulted in the convictions being quashed. Appeals were dismissed in $60 \cdot 5$ p.c. of the cases, and new trials were directed in $7 \cdot 3$ p.c. In non-indictable cases, 58.2 p.c. of the appeals were dismissed.

## Section 2.-Offences of Adults

The statistics in Table 4 are comparable with those shown for juvenile offenders in Table 19. The separation between adult and juvenile offenders is available only for the years beginning with 1922, but totals of adult offences for the years 1931-38 may be obtained by subtracting those of Table 19 from those of Table 1.

Warime Trends.-There has been a marked decrease in convictions for indictable offences during the first four war years. "Offences against the person" which had increased 37.5 p.c. for the four years preceding the War, showed a 2.4 p.c. increase since 1939; "Offences against property with violence" increased $48 \cdot 2$ p.c. from 1935 to 1939 but decreased $31 \cdot 3$ p.c. during the four war years. The increase for "Offences against property without violence" in the former period was $32 \cdot 2$ p.c. as against a decrease of 27.8 p.c. in the latter. "Arson and other damage to property", convictions for which increased 72 p.c. from 1935 to 1939 increased only $14 \cdot 3$ p.c. during the war years; "Forgery and offences against currency", which showed an
increase of $133 \cdot 6$ p.c. during the four years preceding the War, showed a decrease of 50.9 p.c. during the War, while "Various other offences", which had increased by 55.2 p.c. in the pre-war period, have continued to increase at the slower rate of $19 \cdot 2$ p.c. during the war years.

## 4.-Convictions of Adults for Indictable and Non-Indictable Offences, by Class of Offence, Years Ended Sept. 30, 1939-43

Nore.-In this table "Offences against Property without violence" includes Classes III and IV, and "Other" includes Classes V and VI of Table 8, pp. 1079-1080.

| Class of Offence | NUMBERS |  |  |  |  |

## Subsection 1.-Convictions of Adults for Indictable Offences

The progress of a community, from a moral point of view, is often judged by the number of convictions for indictable offences, as these are less affected than non-indictable offences by extraneous circumstances and the varying methods of law enforcement in different areas and in different years. However, in the study of such statistics it is important to have comparable figures over a period of years. Table 5, along with the figures published in earlier editions of the Year Book (see headnote to table), provides the necessary background.

It may be stated that during the period from 1900 to 1943 the number of crimes increased from 5,768 to 41,752 or 624 p.c. The increase in the population during the same period was 120 p.c., revealing that the increase in the crime rate was five times that of the population.

Wartime Trends.-Convictions for indictable offences, which increased from 33,531 in 1935 to 48,107 in 1939 , or by $43 \cdot 5$ p.c., decreased during the four war years, despite an increase from 1942 to 1943. The 1943 total of convictions was 41,752 , a decrease of $13 \cdot 2$ p.c. from the 1939 total. The $6 \cdot 2$ p.c. increase from 1942 to 1943 was mainly due to increases in convictions for breaches of wartime Acts, due to more strict enforcement than was exercised prior to 1943.

## 5.-Convictions of Adults for Indictable Offences, by Provinces, Years Ended Sept. 30, 1931-43

Norz.-Figures for 1900-20 are given at p. 1016 of the 1933 Year Book and for 1921-30 at p. 908 of the 1942 edition.

| Year | P.E.I. | N.S. | N.B. | Que. | Ont. | Man. | Sask. | Alta. | B.C. | Yukon | N.W.T. | Canada |

| 1943. | 174 | 1,725 | 1,211 | 11,669 | 16,779 | 2,060 | 2,213 | 2,787 | 3,092 | 22 | 20 | 41,752 |

Multiple Convictions.-The total number of convictions for any one year must not be confused with the total number of persons convicted for the same period since an increasing number of persons tried for indictable offences have been convicted for more than one offence at the same trial. The trend of such multiple convictions is of value to students of sociology.
6.-Persons Convicted of More than One Crime at the Time of Trial Compared with Persons Convicted of One Crime, Years Ended Sept. 30, 1939-43

Acquittals in Relation to Convictions.-In 1943, Nova Scotia, New Brunswick, Quebec, Ontario, British Columbia and the Territories showed increases in number of convictions for indictable offences as compared with 1942. The percentage of acquittals to convictions in recent years is greatest in Ontario. The positions of the provinces, however, aside from Ontario, fluctuate widely.

Classes of Indictable Offences and Analyses of Convictions.-Convictions in 1943 were 6.2 p.c. higher than in 1942. Theft. aggravated assault, burglary, robbery, receiving stolen goods, forgery and uttering and gambling, which account for the greatest percentage of all indictable offences, were leaders in the decline of indictable crime during the war years. They were also the leaders in the heavy increase in indictable crime during the four years preceding the war. Convictions for theft increased $27 \cdot 2$ p.c. in the four pre-war years and decreased $17 \cdot 7$ p.c. during the first four years of the War. Theft comprises nearly one-fourth of all indictable crime.

Convictions of Females.-The number of females convicted of indictable offences increased 4 p.c. in 1943 over 1942, accounted for by increases in Quebec, Ontario and British Columbia. In all provinces except Ontario, Alberta and British Columbia, the percentages of women convicted to total convictions were lower in 1943 than in 1942.
11.-Convictions of Females for Indictable Offences, by Provinces, Years Ended Sept. 30, 1939-43

| Province or Territory | Numbers of Convictions |  |  |  |  | Percentages of Females Convicted to Totals Convicted |  |  |  |  |

Recidivism.-The number of offenders who relapse into crime after a first conviction decreased each year from 1939 to 1942 but increased slightly in 1943. However, the number of recidivists and the percentage of total convictions they represent have shown a general tendency to decline in recent years. The number of first offenders, which had also been declining since 1939, showed a slight increase in 1943.

## 12.-First Offences, Second Offences, and Reiterated Offences of an Indictable Nature, Years Ended Sept. 30, 1939-43

## Subsection 2.-Non-Indictable Convictions of Adults

The following statistics relate to non-indictable offences of adults (persons 16 years of age or over) and disposed of by police magistrates or other justices of the peace, under authority of the Summary Convictions Act. Such convictions during 1943 showed a decrease of 20 p.c. as compared with 1942 shared by all the provinces. Yukon and the Northwest Territories showed increases but the number of cases involved was negligible.

## 13.-Convictions of Adults for Non-Indictable Offences, by Provinces, Years Ended Sept. 30, 1931-43

Note.-Figures for 1900-12 are given at p. 1020 of the 1933 Year Book and for 1913-30 at p. 913 of the 1922 edition.

The marked increase in the past 20 years in non-indictable convictions has been due, almost entirely, to breaches of traffic regulations, which have risen from 60,063 in 1924 to 274,573 during 1943 or from 42 p.c. of the total in 1924 to $59 \cdot 0$ p.c in 1943. Breaches of the radio licence laws have increased rapidly during the past two years, due, perhaps, to stricter enforcement. The decline in convictions for non-indictable offences from 1942 to 1943 was due to a decrease in convictions for breaches of traffic laws; the first since 1936.

Offences Against the Liquor Acts.-Until the War of 1914-18, alcoholic liquors were generally sold under specified conditions by licensed hotels or licensed shops. Offences against the liquor Acts usually represented a breach of the conditions of sale. During the War, prohibition was generally established but in more recent years the Provincial Governments have taken over the sale of liquor through commissions. Eight of the nine provinces now have such liquor commissions, Prince Edward Island being the only province in which prohibition prevails. In 1929, the number of convictions for offences against the liquor Acts reached the highest figure on record, viz., 19,327; convictions in 1943 numbered 15,099.

## 16.-Convictions for Offences Against the Liquor Acts, by Provinces, Years Ended Sept. 30, 1931-43

Nors.-Figures for 1900-20 are given at p. 1022 of the 1933 Year Book and for 1921-30 at p. 915 of the 1942 edition.

Breaches of Traffic Regulations.-Convictions for breaches of traffic regulations which at the beginning of the century numbered only 185 in all Canada, have, as a result of the growing density and increasing use of motor-vehicles, become the largest element in the non-indictable offences. Such convictions showed an increase of 36 p.c. from 1939 to 1942, mainly due to the application of the 40 miles an hour speed law throughout Canada, and in the later year represented 68.8 p.c. of the total non-indictable convictions. In 1943, however, the reduction in the use of motor-vehicles resulted in a decrease in convictions, bringing them back to below the level of 1937 and 1938. Such convictions in 1943 represented $59 \cdot 0$ p.c. of the total for non-indictable offences.

## 17.-Convictions for Breaches of Traffic Regulations by Provinces, Years Ended Sept. 30, 1931-43

Nots.-Figures for 1900-20 are given at p. 1023 of the 1933 Year Book and for 1921-30 at p. 915 of the $1942^{\circ}$ edition.

${ }^{1}$ Since 1937 convictions for driving a car while drunk have been classed as indictable offences. In 1938 and later years dangerous and reckless driving was so classed and since the War the breach of Defence of Canada Regulations and leaving the scene of an accident have also been so classed. ${ }^{2}$ Includes one in the Northwest Territories. No convictions were reported for the Northwest Territories for other years.

For the year 1943, Ontario, which had $45 \cdot 7$ p.c. of the registrations of motorvehicles in Canada (see p. 673), had 56 p.c. of the total convictions; Quebec in the same year had 14.7 p.c. of the motor-vehicles and $30 \cdot 1$ p.c. of the convictions, and Manitoba 6.2 p.c. of the motor-vehicles and 6 p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. Thus, the above three provinces have large urban centres, while in provinces with lower degrees of urbanization such as the Maritimes, Saskatchewan and Alberta, convictions were low in proportion to the number of motor-vehicles registered.

Convictions of Females.-The number of females convicted of non-indictable offences in 1943 was 23,078 a decrease of $15 \cdot 5$ p.c. as compared with 1942.

Among the more important offences listed, breaches of street and traffic regulations were the most important single offences, accounting for 7,146 convictions as compared with 11,426 in 1942; drunkenness came next with 3,030 compared with 2,845 ; and 1,202 convictions as compared with 1,427 in 1942 were recorded as infractions of the liquor laws. Vagrancy accounted for 1,697 convictions as compared with 1,560 in 1942.

Among the total of 23,078 convictions in 1943 , no less than 3,846 were convictions for the relatively minor offence of operating a radio receiving set without a licence.

As a general rule the proportion of female convictions to total convictions tends to be greater in the western provinces although all provinces except Nova Scotia and Ontario showed higher rates in 1943 than in 1942. The very high rate in 1943 for Prince Edward Island is out of line with the previous record.

## Section 3.-Juvenile Delinquency

The terms indictable and non-indictable are applied only to offences of adults, similar offences committed by juveniles (persons under 16 years of age) being termed "major" offences and "minor" offences, respectively.

Table 19 shows the numbers of convictions of juveniles for all offences, classified as major and minor offences, for the judicial years 1931-43. No separation by class of offence is available for earlier years. The rates per 100,000 population in this table apply to the total population, estimates of population by age not being generally available for intercensal years. Between 1927 and 1938, there has been a definite upward trend in the percentage of major offences to all offences.

## 19.-Convictions of Juveniles, for Major and Minor Offences, by Class of Offence, Years Ended Sept. 30, 1931-43

Nore.-In this table "Property Without Violence" includes Classes III and IV, and "Other Major Offences" includes Classes V and VI of Table 8, p. 1080. For figures for 1922-30, see p. 916 of the 1942 Year Book.

While, officially, juveniles are persons under 16 years of age, in response to increased public interest in offences committed by young persons, the following table has been compiled, in which the convictions for indictable offences of persons aged 16 to under 21 have been added to the figures of juveniles found guilty of major offences. The rates per 100,000 population are the proportions of the offences committed by persons in any one age group, the figures of population being taken from the decennial censuses, except in 1939, 1940, 1942 and 1943 (where official estimates are used), the population in each age group is the officially recorded population for the Census.

It will be observed that the age group 16 to under 21 years shows a much higher crime rate than the juvenile group ( 7 to under 16 years) or the total young persons group ( 7 to under 21 years). After increasing steadily in recent years, the rate for this group dropped from 950 per 100,000 population in 1939 to 773 in 1942. However, an increase to 900 per 100,000 in 1943 is noted.

\end{tabular}

Major Offences.-From Table 22 it will be observed that theft and receiving stolen goods; breaking, entering and theft; and other wilful damage to property account for the great bulk of the offences. In 1943, 93.0 p.c. of the major offences were in these classes.

Wartime Trends.-Major offences for juveniles, which had decreased 9.0 p.c. during the four years immediately preceding the War, increased by 29.4 p.c. during the war years 1939-43. The increases were chiefly in theft, burglary and common assault. Convictions for theft, which had decreased $19 \cdot 3$ p.c. from 1935 to 1939 have shown an increase of $26 \cdot 6$ p.c. from 1939 to 1943 . Thefts of bicycles and automobiles have also shown a much faster rate of increase during the four war years than during the four years immediately preceding the war. The rate of increase for burglary, which had been $16 \cdot 3$ p.c. in the period 1935-39, advanced to 28.8 p.c. during 1939-43. Convictions for common assault which had declined $32 \cdot 7$ p.c. from 1935 to 1939 have shown an increase of $78 \cdot 8$ p.c. for the war years. Malicious damage to property showed a $3 \cdot 7$ p.c. decrease during the 1935 to 1939 pre-war period as compared with a 51.4 p.c. increase during the war years.

Wartime Trends.-An increase of 19.9 p.c. shown in the convictions of juveniles for minor offences during the four years preceding the War compares with an increase of $46 \cdot 6$ p.c. for the first four years of war. Breaches of various unclassified municipal by-laws account for the greater part of this accelerated increase, convictions under this heading have increased $270 \cdot 1$ p.c. during the four war years as compared with 43.9 p.c. during the four years preceding the War. Convictions for vagrancy and wandering away from home show greatly accelerated rates of increase in this comparison.

## Section 4.-Municipal Police Statistics

Police statistics were collected from 188 cities and towns of 4,000 or over population in 1943. The aggregate population of this group of cities and towns was $5,134,078$ and the total number of policemen was 5,904 or one for every 870 of population.

A total of 428,143 offences were reported to the police. Arrests numbered 116,003 and 213,828 summonses were issued. There was 320,947 prosecutions and 275,268 convictions.

Automobiles stolen numbered 8,762 with 8,818 recovered. Bicycles stolen numbered 18,957 with 14,253 recovered. The value of other goods reported to the police as stolen was $\$ 3,352,137$. Value of stolen goods recovered totalled $\$ 1,455,593$.

Automobile accidents numbered 41,022 as the result of which 495 persons were killed and 13,022 injured. Other accidents caused 723 killed and 7,781 injuries.

The number of doors found unlocked by the police was 38,$648 ; 33,547$ persons were given shelter in police stations and 9,702 stray children were returned to their homes.

## Section 5.-Penitentiary Statistics*

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries of Canada. Seven institutions are included in the system, the two largest of which are at Portsmouth, Ont., and St. Vincent de Paul, Que., while the other five are at Dorchester, N.B.; Prince Albert, Sask.; Stony Mountain, Man.; New Westminster, B.C.; and Collins Bay, Ont. During the fiscal year ended Mar. 31, 1944, the average daily population of

[^371]these institutions was 3,000 and the total net cash outlay for the year was $\$ 2,703,501$ or $\$ 2 \cdot 46$ per convict per diem, compared with 3,028 average daily population and $\$ 2,689,059$ total net cash outlay or $\$ 2 \cdot 43$ per convict per diem for the year 1941.

Female convicts committed to penitentiaries in the different provinces are sent to the penitentiary at Kingston, Ont., where special quarters and staff are maintained for their detention and supervision. Female convicts in custody on Mar. 31, 1944, numbered 43 compared with 52 in 1943 and 46 in 1941.

Movement of Population of Penal Institutions.-Penal institutions may be classified under three headings: (1) penitentiaries, with slow turnover, since prisoners have long sentences; (2) reformatories and training schools, also with rather slow turnover; and (3) common gaols, where the turnover is extremely rapid. If the average population for the year be taken as the average of the figures for inmates at the beginning and at the end of the year, and the number discharged be the turnover, the percentage turnover in 1943 was: in penitentiaries, 50 p.c.; in reformatories and training schools, 162 p.c.; in gaols, no less than 1,652 p.c. In dealing with these figures it must be borne in mind that the common gaol population changes from day to day, and is partly made up of accused persons awaiting trial who may be either liberated or sent to a penitentiary or reformatory.

## 26.-Population of Penal Institutions, 1941-43

Nore.-Penitentiary statistics are for the calendar year; for other institutions, the figures are for the years ended Sept. 30.

Tables 27 to 29 give the more important penitentiary statistics as reported to the Bureau of Statistics. The number of convicts in penitentiaries was 1,865 in 1911, rose to 2,118 in 1916 and declined to 1,468 in 1918. After demobilization and the depression of 1921, the number of convicts rose to 2,640 in 1922, declined to 2,225 in 1924 and then increased to 4,164 in 1932. The increase was particularly rapid after 1929,
amounting to 1,395 or 50.4 p.c. in three years. The number of convicts in 1936, at 3,098, was lower than in any year since 1929, but in 1937 there was an increase of 5.4 p.c. with further increases of 9.7 p.c. in 1938 and 6.2 p.c. in 1939. By 1943 a decrease of 21.9 p.c. over the 1939 figure was shown, but in 1944 there was an increase of 3.7 p.c. over the previous year. The number of paroles (ticket-of-leave) was 243 in 1944.

Table 28 shows the ages of convicts by groups. In 1944, of the total of 3,078 , 16 p.c. were under 21 years of age and 42 p.c. between 21 and 30 years of age; thus 58 p.c. were 30 years of age or less. In 1914, there were 2,003 convicts of whom $9 \cdot 3$ p.c. were under 20 and $44 \cdot 4$ p.c. between 20 and 30 , a total of $53 \cdot 7$ p.c. under 30 . In 1923 , there were 2,486 convicts and $11 \cdot 3$ p.c. were under $20,46 \cdot 6$ p.c. between 20 and 30 , or 57.9 p.c. under 30 years of age. Detailed statistics of the place of birth, conjugal state, sex and religion of convicts are presented in Table 29.

Nore.-Certain phases of Dominion Government activity, such as the operations of the International Joint Commission and certain scientific activities of the Department of Mines and Resources were dealt with in this Chapter of the 1930 edition of the Year Book (pp. 1014-17). These branches of the Miscellaneous Administration have not undergone wide change and, therefore, the material has not been republished since that time.

## Section 1.-Public Lands

In Table 1, summarizing the land area of Canada, items 3,4 and 5 are obtained from Dominion Government sources and items 1, 2 and 7 from Provincial Government sources. In the majority of cases the area of provincial lands (item 6), as calculated by balancing the figures, agrees with the area as estimated by the Provincial Departments concerned. Thus, any differences reported from year to year in the area of lands alienated or in process of alienation are compensated for by the adjustment of lands still remaining under the Crown in the right of the provinces concerned.

## 1.-Classification of Lands in Canada, by Tenure (circa) 1944

Note.-The land area of Canada classified by surface resources is shown at pp. 27-28.

| Tenure | P.E.I. | N.S. | N.B. | Que. | Ont. |

[^373]
## Subsection 1.-Dominion Public Lands*

The public lands under the administration of the Dominion Government comprise lands in the Northwest Territories, including the Arctic Archipelago and the islands in Hudson Strait and Bay and James Bay; lands in Yukon Territory; National Parks and historic sites (see pp. 28-33); Indian reserves (see p. 1099); Ordnance and Admiralty lands, and, in general, all lands held by the several Departments of the Dominion Government for various purposes connected with Dominion administration including the Tar Sands Reservation comprising 4 areas, amounting in all to 2,068 acres, in the Fort McMurray District of Alberta. The lands and other natural resources lying within the boundaries of the Provinces of Manitoba, Saskatchewan, Alberta and British Columbia that had formerly been administered by the Dominion Government, were transferred in 1930 to the administration of the provinces concerned. (See p. 1019 of the 1931 Year Book.)

The great bulk of the land areas under Dominion administration are those of Yukon and the Northwest Territories, amounting to about 1,463,563 square miles or 42 p.c. of the land surface of Canada. In general, the southern border of both Yukon and the Northwest Territories is $60^{\circ} \mathrm{N}$. latitude. In Europe, the cities of Oslo, Stockholm and Leningrad are near this line; about three-fourths of Norway, two-thirds of Sweden, Finland and a large portion of Russia are north of it. This northern part of the national domain is under the administration of the Lands, Parks and Forests Branch of the Department of Mines and Resources. The Royal Canadian Mounted Police maintain law and order throughout Yukon and the Northwest Territories.

The Northwest Territories.-At pp. 946-948 of the 1941 Year Book an account of the administration of the Northwest Territories is given. The following paragraphs bring that review up to date.

[^374]Important developments during the year 1942 included the drilling program undertaken at the Norman Wells oil-field in the Lower Mackenzie Basin as part of the Canol Project; the re-opening of the pitchblende-silver property of Eldorado Mining and Refining, Limited, at Labine Point on Great Bear Lake; and the improvement and extension of aeroplane landing fields in the Mackenzie District. In 1943 a shortage of labour resulting from war conditions brought about a decline in gold production in the Yellowknife District.

The Canol Project, more fully described at p. 316 of the 1943-44 Year Book, involved an extensive drilling program to determine the productive capacity of the Norman oil-fields; the construction of a four-inch pipeline from Norman Wells, N.W.T., to Whitehorse, Y.T.; and the erection of a refinery at Whitehorse. By the end of 1943 the productive capacity of the known field had been fairly definitely established, and the pipeline was completed and tested by Mar. 31, 1944. The pumping of oil through the line followed and the refining of oil products was commenced in May, 1944. In March, 1945, the suspension of drilling and production for the Canol Project was ordered by the United States Government. The pumping of crude oil from Norman Wells to Whitehorse, and operation of the refinery at Whitehorse was also discontinued. Production from the Norman Field, however, is being continued by Imperial Oil, Limited, to meet local requirements. As of Mar. 9, 1945, a total of 67 wells had been drilled under the Canol Project, of which 60 produced oil in commercial quantity. In addition, four producing wells had been developed prior to the Canol Project by Imperial Oil, Limited. The latest estimate of the recoverable reserve of the Norman oil field is from $29,000,000$ to $33,000,000 \mathrm{bbl}$.

The mining property of Eldorado Mining and Refining, Limited, closed temporarily in 1940, was re-opened in August, 1942. Wartime demands for concentrates from which radium and uranium salts are extracted have kept the mill at Great Bear Lake operating at capacity. Concentrates are shipped to the Company's refinery at Port Hope, Ont. In January, 1944, all assets of the Company were expropriated by the Government of Canada and are now operated by a Crown company, Eldorado Mining and Refining.

Wartime restrictions on new development work coupled with a shortage of labour resulted in the closing down of the mills of all producing gold mines in the Yellowknife District. In 1941 six mines were in production, but by Oct. 15, 1944, the remaining producer, Negus Mines, Limited, had stopped milling. Development work, however, is being continued at the Con and Negus mines. The total value of mineral production in the Northwest Territories to the end of 1944 was estimated at $\$ 22,898,599$, of which gold from the Yellowknife District accounted for $\$ 14,009,000$.

Excellent results obtained from drilling on properties of Giant-Yellowknife Gold Mines, Limited, in the winter of 1943-44 precipitated a major rush in the Yellowknife field during the summer of 1944, and by the end of the year nearly 4,000 claims had been staked and recorded. Developments also resulted in the formation of many new mining companies, and by the end of 1944 more than 100 companies or syndicates had acquired claims in the Yellowknife region or had an interest in their development.

Aerial transportation has developed into a major factor in the commercial life of northwestern Canada, and has assisted in the opening up of new mining areas. The construction of new landing fields at a number of the larger settlements in the

Mackenzie District in 1943 and 1944 permits the operation of wheel-equipped aircraft the year round to these points and affords a rapid and convenient service for the transportation of passengers, express and mail.

The fur trade continues to provide the native population with a dependable means of livelihood. While the cycle in numbers of fur-bearing animals approached the lowest ebb, higher prices paid for furs more than offset the smaller catches. In the year ended June 30, 1943, a total of 385,440 pelts valued at $\$ 3,165,107$ was taken.

The Dominion Government reindeer experiment in the northern Mackenzie District was continued. A serious set-back occurred in September, 1944, when the native herders in charge of the two native herds were lost in the wreck of a schooner off the Arctic Coast. Measures were promptly initiated to protect the herds. The main herd continued to thrive, and meat from surplus stock slaughtered periodically was sold at Aklavik.

Yukon Territory.-An account of the administration of Yukon Territory is given at p. 948 of the 1941 Year Book. The following paragraphs bring that review up to date.

The initiation of joint defence projects in northwestern Canada in 1942 was followed by a period of great activity in Yukon Territory. Work on the Alaska Highway commenced in March, 1942, and entailed the construction of 1,523 miles of road from Dawson Creek, B.C., to Fairbanks, Alaska. Of this distance 1,220 miles are in Canada, including 560 in Yukon Territory. The Highway was completed to pioneer-road stage in November, 1942, and during 1943 was developed to a condition meeting the standard requirements of a gravelled military route. In addition, cut-off road was constructed from Haines, Alaska, on Lynn Canal, to meet the Alaska Highway about 95 miles west of Whitehorse, Y.T. This.route, 154 miles in length, was completed late in 1943. Travel on the Alaska Highway and connecting roads is restricted, and a Joint Traffic Control Board, set up in 1943 with headquarters at Edmonton, deals with applications and issues permits for travel.

Access roads, totalling more than 200 miles in length, were constructed to link airports and intermediate aerodromes along the Northwest Staging Route with the Alaska Highway. Flight strips also were constructed along the route of the Alaska Highway to facilitate contact flying and for emergency landings between airports.

Developments associated with the Canol Project in Yukon Territory included the construction of a pipeline and access road from Norman Wells, N.W.T., across the Mackenzie Mountains to Whitehorse, Y.T., and erection of a refinery at Whitehorse. The pipeline was completed and tested by Mar. 31, 1944, and the refining of oil products commenced in May of that year. In March, 1945, the pumping of oil from Norman Wells was discontinued, and the operation of the refinery suspended.

Mining continued to be the principal industry of Yukon Territory, and up to the end of 1944 , the total value of mineral production exceeded $\$ 239,800,000$. Of this amount, gold accounted for $\$ 210,900,000$, and silver $\$ 21,000,000$. Practically all gold is recovered from placer-mining operations undertaken with the aid of electrically-powered dredges. Production for 1942 was valued at $\$ 3,200,000$, but labour shortages in 1943 and 1944 reduced the value of the output for these years
to $\$ 1,585,000$ and $\$ 936,000$, respectively. In the Mayo District the mining of silverlead ore from lode deposits was continued, but here, also, operations have declined as a result of labour shortages.

The fur trade continued to be a source of revenue for inhabitants of Yukon Territory, and in the year ended June 30, 1943, a total of 52,897 pelts, valued at $\$ 338,035$, was taken.

## Subsection 2.-Provincial Public Lands

In the Maritime Provinces and in Quebec, Ontario and British Columbia (except the Railway Belt and the Peace River Block) the public lands have been administered by the Provincial Governments since Confederation. Since the transfer by the Dominion Government of the natural resources of the Prairie Provinces and of sections of British Columbia (see also p. 1019 of the 1931 Year Book), public lands in all provinces have been under provincial administration. In Prince Edward Island, all of the land is alienated and there are no provincial public lands.

Information regarding provincial public lands may be obtained from the following officials of the respective provinces: Minister of Lands and Forests, Halifax, N.S.; Deputy Minister of Lands and Mines, Fredericton, N.B.; Deputy Minister of Lands and Forests, Quebec, Que.; Deputy Minister of Lands and Forests, Toronto, Ont.; Director of Lands, Department of Mines and Natural Resources, Winnipeg, Man.; Director of Lands, Department of Natural Resources, Regina, Sask.; Director of Lands, Department of Lands and Mines, Edmonton, Alta.; Deputy Minister of Lands, Victoria, B.C.

## Section 2.-Department of Public Works

The constructing department of the Dominion Government, since before Confederation, has been known as the Department of Public Works. The work of the Department is divided into three principal branches, viz., the Engineering Branch, the Architect's Branch and the Telegraph Branch. An account of the work of each of these branches is given at pp. 949-950 of the 1941 Year Book, and a description of the five dry docks constructed by the Department is given at p. 618 of the 1942 edition.

## Section 3.-The Indians and Eskimos of Canada

## Subsection 1.-The Indians of Canada*

The Indians of Canada, whose affairs are administered by the Indian Affairs Branch, Department of Mines and Resources, number 118,378 (according to a departmental census taken in 1939). The popular opinion that the race is disappearing is not in accordance with fact. Before the advent of the European, the number of Indians was undoubtedly larger, but little reliable information as to the aboriginal population, during either the French or the early British regimes, is available. The best estimate, however, of the aboriginal or Indian population of what is now Canada was slightly in excess of 200,000 or about double the present figure. During this twentieth century the trend has been upward with a gradual but fairly steady increase.

[^375]Administration.-Reserves have been set aside for the various bands of Indians throughout the Dominion and the Indians located thereon are under the supervision of the local agents of the Department. The activities of the Department, as administrator of the affairs of the Indians, include the control of Indian education and health, the development of agriculture and other pursuits among them, the administration of their lands, community funds, estates and the general supervision of their welfare.

The local administration of the Indian bands on the reserves scattered throughout the Dominion is conducted through the Department's agencies, of which there are 98 in all. The number of bands contained in an agency varies from one to more than 30 . The staff of an agency usually includes, in addition to the agent, various officials such as medical officer, clerk, farming instructor, field matron, constable, stockman, etc., according to the special requirements of the agency in question. The work of the agencies is supervised from headquarters at Ottawa and, in the field, by 'the Department's inspectors, each inspector having charge of a certain number of agencies; in British Columbia the supervision of the Indian agencies is under the direction of the Indian Commissioner for British Columbia. Expenditures for the assistance of destitute Indians on reserves are made by the Dominion Government, either from public funds or from tribal funds of the Indians.

The Government has undertaken a"number of special projects for the various sections of the Indian population in accordance with their needs, including fur development enterprises in selected areas; the promotion of Indian handicraft; and planned agricultural operations.

The Indian Act provides for the enfranchisement of Indians. When an Indian is enfranchised he ceases to be an Indian under the law and acquires the full status of citizenship. In the older provinces, where the Indians have been longer in contact with civilization, many are becoming enfranchised. Great discretion, however, is exercised by the Government in dealing with this problem, as Indians who become enfranchised lose the special protection provided by the Indian Act, so that it is necessary to guard against premature enfranchisement.

Treaties.-In the older eastern provinces, the history of the Indians has been one of slow development with that of the community. In Western Ontario, the Prairie Provinces and the Territories the situation has been different. There, the rapid spread of civilization made it necessary to take prompt and effective measures to protect the moral claims of the Indians, which are recognized "by the Government. Accordingly, treaties were entered into with the Indians whereby the latter ceded to the Crown their aboriginal title and interest in the country. In consideration of such cession the Crown agreed to: set aside adequate land reserves; make cash grants; provide per capita annuities; give assistance in agriculture, stockraising, hunting, trapping, etc., as particular circumstances might require; provide education for the Indian children; and otherwise safeguard the interests of the Indian population. These treaties were made from time to time as occasion arose and as new territories were opened up. No treaty has been made with the Indians of British Columbia, except in the Peace River Block, but their welfare has received no less attention from the Government on that account.

Government Expenditure.-At Mar. 31, 1944, the balance of the Indian Trust Fund, which a year earlier had amounted to $\$ 15,027,772$, had increased to $\$ 15,793,184$. The amounts expended from the Consolidated Revenue Fund were as follows: voted by Parliament for the purposes of the Department, $\$ 4,910,088$; annuities by statute, $\$ 268,700$; and special supplementary, $\$ 74,022$.

Population.-The Indian Affairs Branch takes a quinquennial census of the Indians under its control. The results of the latest of these censuses, taken in 1939, show a total of 118,378 Indians as compared with 112,510 in 1934 and 108,012 in 1929, an increase of 9.6 p.c. in ten years. Details are given in the Annual Report of the Department of Mines and Resources for 1940. The figures given in Table 2 are those of the eight Dominion Decennial Censuses since Confederation, and include some thousands of persons of Indian racial origin who are not on the reserves but are living as ordinary citizens of Canada.
2.-Indian Population of Canada at the Decennial Censuses of 1871-1941

## Subsection 2.-The Eskimos of Canada*

The Eskimos in Canada are found principally north of the tree-line on the northern fringe of the mainland and around the coasts of the islands in the Arctic Archipelago and in Hudson Bay. Most of the Eskimos are essentially coastal dwellers, obtaining much of their food and clothing from the mammals of the sea. However, there are bands of Eskimos living in the interior of Keewatin District on the west side of Hudson Bay, who are inland people and who subsist chiefly on fish and caribou.

The Decennial Census of Canada in 1941 established the Eskimo population at 7,205, of which 5,404 were located in the Northwest Territories, 1,778 in northern Quebec, and the remainder, 23 , in other provinces.

The administrative care of the Eskimos devolves upon the Lands, Parks and Forests Branch of the Department of Mines and Resources, which, by regulative measures-including the setting aside of game preserves where only natives may hunt, and the establishment of reindeer herds-conserves the natural resources necessary to their subsistence. An account of the Dominion Government's reindeer experiment, which was undertaken primarily to improve the economic condition of the native Eskimos, appears at pp. 17-23 of the 1943-44 Year Book. Contact with the Eskimos is maintained through permanent stations, at a number of which medical officers are located, in the Eastern, Central and Western Arctic; by patrols of the Royal Canadian Mounted Police; by radio communication; by means of the annual Canadian Eastern Arctic Patrol by steamship; and by auxiliary motor vessels.

[^378]
## Section 4.-Department of the Secretary of State*

The Department of the Secretary of State was constituted in its present form in 1873, through the merging of the previously existing offices of the Secretaries of State for Canada and for the provinces. The Secretary of State is the official mouthpiece of the Government, as well as the medium of communication between the Dominion and Provincial Governments, all correspondence between the Governments being conducted by him with the Lieutenant-Governors. He is also the custodian of the Great Seal of Canada and the Privy Seal as well as being the channel by which the general public may approach the Crown.

The Secretary of State is also the Registrar General, registering all proclamations, commissions, licences, warrants, writs and other instruments issued under the Great Seal and the Privy Seal. He is further charged with the administration of the Boards of Trade Act, the Companies Act, the Canada Temperance Act, the Copyright Act, the Naturalization Act, the Patent Act, the Trade Unions Act, the Ticket of Leave Act, the Unfair Competition Act (1932), the Bankruptcy Act, and with the collection and tabling of parliamentary returns. Other Acts and Regulations administered by the Secretary of State as a result of the declaration of war are: the Patents, Designs, Copyright and Trade Marks Emergency Order (1939), and the Revised Regulations Respecting Trading with the Enemy (1943). The Secretary of State deals with the organization and administration of the Office of the Custodian of Enemy Property (see the External Trade chapter of this volume, p. 474). Statistics regarding patents and copyrights appear in Chapter XVII at pp. 573-575.

Charters of Incorporation.-Statistics of companies incorporated under the Companies Act are given in Table 6.

## 6.-Numbers and Capitalizations of Compani's Incorporated Under the Companies Act and Amending Acts, Fiscal Years 1936-44

Nore.-Statistics for the years 1900-25 will be found at p. 1061 of the 1938 Year Book and for 1926-35 at p. 934 of the 1942 edition. Capitalization includes consideration of the amounts of capital received on the issue of shares without nominal or par value.

Naturalization.-The naturalizations effected under the Naturalization Act (R.S.C. 1906, c. 77) for the calendar years 1908-17, inclusive, are given at p. 594 of the 1919 Year Book. Since Jan. 1, 1918, the only method of obtaining naturalization has been under what is known as the "Imperial" Naturalization Act, which

[^379]came into force on Jan. 1, 1915. This Act was known under the title of the Naturalization Act, 1914, until July 7, 1919, when it was repealed and the Naturalization Act, 1919, came into force. On July 1, 1920, the Naturalization Act, 1919, was repealed, and the Naturalization Act, 1914, was revived and amended under the title of the Naturalization Acts, 1914 and 1920. By an amendment passed by Parliament in 1923, the restriction by which persons of alien enemy birth were ineligible to receive certificates of naturalization for a period of 10 years after the termination of the War was removed. All these Acts have been consolidated in R.S.C. 1927, c. 138. At the present time any alien, regardless of his nationality, may apply for naturalization, but, according to Sect. 4, Part II of the Act, the granting of a certificate of naturalization to the applicant is left entirely to the discretion of the Minister, who may, without assigning any reason, give or withhold the certificate as he thinks most conducive to the public good. Since Jan. 15, 1932, female British subjects, marrying aliens, retain British nationality, unless they, by marriage, acquire their husbands' nationalities, and the wives of aliens no longer become British subjects automatically through their husbands' naturalization. They must apply to the Secretary of State.

By Order in Council under the War Measures Act (R.S.C. 1927, c. 206) dated July 9, 1942 (5842) as amended by Order in Council dated Sept. 23, 1942 (P.C. 8499), effective Jan. 1, 1943, all aliens who are required to apply for naturalization by filing their applications through the courts must first file Declarations of Intention. They are not qualified to file applications for naturalization under Sect. 4 of the Naturalization Act until one year after the date of filing the Declarations of Intention.

By the terms of Para. I of the Regulations laid down in Order in Council P.C. 5842 of July 9, 1942, the Secretary of State may grant a certificate o. naturalization to any alien serving outside Canada with the Naval, Military or Air Forces of Canada who has satisfied the Secretary of State by the filing of such documents as may be prescribed by the Secretary of State and the Minister of National Defence, that he is a fit and proper person to be naturalized in Canada as a British subject. No fee shall be payable on such certificate of naturalization.

Table 7 shows the number of naturalization certificates issued to single persons or heads of families under these Acts during the calendar years from 1940 to 1943. The total numbers of persons naturalized during the same years, including (except as stated above) the wives and minor children of those to whom naturalization certificates were issued, are shown in Table 8.

Naturalized and Alien Population by Racial Origin.-Persons naturalized under the Naturalization Act are entitled to all the political and other rights, powers and privileges, and are subject to all the obligations, duties and liabilities of a natural-born British subject, and from the date of naturalization have the same status as a natural-born British subject.

Table 9 gives an analysis of the non-British and non-French naturalized and alien population of Canada for the two censuses, 1931 and 1941.

## Section 5.-Royal Canadian Mounted Police

The Royal C Canadian Mounted Police is a constabulary maintained by the Dominion Government. It was organized in 1873, and was known as the North West Mounted Police, whose duties were confined to what was then'known as the Northwest Territories. In 1904, its name was changed to Royal North West Mounted Police.

In 1905, when Alberta and Saskatchewan were constituted provinces, an arrangement was made whereby the Force continued to discharge its duties as formerly, each province making a contribution towards defraying the cost. This was continued until 1917. Soon after the close of the War of 1914-18, an extension of governmental activities made it obvious that the enforcement of Dominion statutes was assuming increasing proportions, and that it would soon be necessary to have a police force responsible therefor. In 1918, the Royal North West Mounted Police was assigned the duty of the enforcement of Dominion legislation for the whole of Western Canada, west of Port Arthur and Fort William, and in 1920 for the whole of Canada.

In 1920, the name of the Force was changed to the Royal Canadian Mounted Police, and the former Dominion Police with headquarters at Ottawa, whose duties were largely connected with guarding public buildings in that city and the Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., were absorbed by the Royal Canadian Mounted Police.

At the present time, the Royal Canadian Mounted Police Force is responsible throughout Canada for the enforcement of a great variety of wartime regulations for internal sezurity, the prevention of sabotage, the various regulations dealing with the mobilization of Canada's manpower, etc. This is in addition to its usual peacetime duties, which include the enforcement of a large number of Federal statutes, the Excise Act, the Indian Act, the Juvenile Delinquents Act, the Opium and Narcotic Drug Act, the Ticket-of-Leave Act, etc.-as well as the prevention of smuggling by land, sea and air. It assists many Departments of the Dominion Government in executing the provisions of their respective statutes and in some cases in administrative duties, especially in remote areas. It is responsible for the protection of a large number of Government buildings and of some of the Dominion Government dockyards. It is the sole police force operating in Yukon Territory and the Northwest Territories where it performs a large variety of services.

Under the Royal Canadian Mounted Police Act, any province may enter into an agreement with the Dominion Government for the services of the Royal Canadian Mounted Police, to enforce provincial laws and the Criminal Code, upon payment for its services, and at the present time such agreements are in force with the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta.

The Force is controlled and administered by a Minister of the Crown (at present, the Minister of Justice). From a Force of 300 in 1873, it had a strength on Mar. 31, 1944, of 4,470, consisting of 96 officers, 2,659 non-commissioned officers and constables, 113 ordinary special constables, 1,519 special constable guards, 28 security personnel (not including police personnel) and 55 men assigned from the National Selective Service. It has a Reserve strength of 599, located principally in the larger cities, such as Toronto, Winnipeg, Halifax, Montreal, Edmonton and Calgary.

The Force is organized into 13 Divisions of varying strength distributed over the entire country, and its means of transport consist of 141 saddle horses, 839 motor-vehicles and 302 sleigh dogs.

The term of engagement is five years for recruits, with re-enlistment for a period not exceeding five years. The training course, which is of six months' duration or longer, consists of drill, physical training-including instruction in wrestling, boxing and jiu-jitsu-and police duties, both Dominion and Provincial. The principal training centres are at Regina, Sask., and at Rockcliffe, Ont., at each of which there is an up-to-date scientific laboratory.

The Force furnished one Provost Company consisting of approximately 185 men to the Canadian Active Army overseas and, at the outbreak of the War, transferred its Marine Section, consisting of some 32 vessels and over 200 men, to the Royal Canadian Navy. Its small Aviation Section, consisting of 4 aircraft and personnel, was also handed over to the Royal Canadian Air Force.

## Section 6.-The Civil Service of Canada

Organization.*-An outline of the development of the Civil Service and the organization of the Civil Service Commission is given at pp. 960-961 of the 1941 Year Book.

Since the outbreak of war, many new departments and branches of Government have been formed which, being set up under the War Measures Act, are not automatically governed by the provisions of the Civil Service Act. Nevertheless, an Order in Council was passed on Apr. 19, 1940, providing that "the authority vested in the Governor in Council under the War Measures Act to make appointments and otherwise deal with personnel shall, unless the Treasury Board otherwise directs, be exercised subject to the approval of the Treasury Board and after investigation of need and rates of pay by the Civil Service Commission" The Order further

[^380]provides that, unless the Treasury Board otherwise directs, "every appointment shall be made by the_Civil_Service_Commission after such tests of qualifications as the Commission considers practicable and in the public interest". Even where the appointment is made by the Governor in Council, the Civil Service Commission is consulted as to the need for the position and appropriate rate of compensation. During the War practically all appointments are being made on a temporary basis and the permanent organization of the departments remains unchanged.

Civil Service Statistics.*-Since April, 1924, a monthly return of personnel and salaries has been made by each Department to the Dominion Bureau of Statistics, according to a plan that ensures_comparability between Departments and continuity in point of time. The institution of this system was preceded by an investigation covering all years back to 1912 .

From 1914 to 1920, the number of employees increased very rapidly, as a result of the extension of the functions of government and of the imposition of new taxes which necessitated additional officials_as collectors. New services, such as the Department of Pensions and National Health and the Soldier Settlement Board were also created during this period. In January, 1920, 47,133 persons were employed; this number was the highest reached prior to January, 1940, when employees numbered 49,700.

Between March, 1939, and March, 1944, there was an increase of 66,552 in the total number of permanent and temporary employees. The bulk of this wartime increase was accounted for as follows: Department of National Defence, $42 \cdot 4$ p.e.; new wartime Departments_and Boards_(Munitions_and_Supply, National War Services, Wartime Information Board, Wartime Prices and Trade Board) 17.2 p.c.; Unemployment Insurance, 8.6 p.c. Much of the remaining increase was due to the creation of new wartime branches, within old departments, e.g., National Selective Service in the Department of Labour.

Despite the large wartime increase in the total Civil Service employment, the number of permanent employees was less_in March, 1944, than in March, 1939. The number of temporary employees, however, increased steadily during the war years. Consequently, in March, 1944, temporary employees represented 74.0 p.c. of the total as compared with $30 \cdot 3$ p.c. of the total in March, 1939, and $34 \cdot 5$ p.c. of the total in March, 1925, the first year for which these statistics were published.

The following sequence of tables is condensed from a recently published historical series covering the years 1925 to 1944. Table 10 gives the total numbers and percentages of permanent and temporary Civil Service employees in the month of March over the period. Table $\mathbf{1 1}$ gives comparable information regarding salaries and wages paid during each of the fiscal years of the period. Tables 12 and 13 give parallel data to those shown in Tables 10 and 11 but limited to the permanent and temporary employees employed at departmental headquarters. Tables 14 and 15 give index numbers of permanent and temporary employees and of wages

[^381]paid to them for the same years of the series. Table 16 gives detailed information of employees and expenditures by Departments and Branches for the months of March 1943 and 1944.

${ }^{1}$ Statistics do not include the numbers of postmasters of revenue offices. It should also be noted that poet-office expenditures are balanced by receipts from the public.

## Section 7.-The Tariff Board

The Tariff Board was constituted by Act of Parliament in 1931 (c. 55, 21-22 Geo. V). A description of the duties of the Board appears at pp. 965-966 of the 1941 Year Book. During war years the staff has been almost completely engaged in the work of the Oils and Fats Administration of the Wartime Prices and Trade Board.

| of British Royal Commissions hav- |  |
| ga a Bearing on Can | 1148 |

The chief source of information on the current state of the country is the Dominion Bureau of Statistics, organized as the central statistical bureau for Canada, and described in Section 1. Section 2 contains a list of the Acts of Parliament administered by the several Departments of the Dominion Government, and Section 3 a bibliography of the publications of these Departments. This is followed, in Section 4, by a bibliography of the publications of Provincial Governments, and by a list of Royal Commissions appointed by the Dominion or the provinces as well as British Royal Commissions concerned with Canada, given in Section 5.

## Section 1.-The Dominion Bureau of Statistics

The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43).* The Act was a consolidation of all previous statistical legislation and was based on the report of a Commission on Statistics, appointed in 1912, which recommended (1) a series of specific reforms and enlargements in Canadian statistics, and (2) a policy of statistical co-ordination for the Dominion, under central direction. In 1915, following the recommendations in this report, the office of Dominion Statistician was created but it was not until 1918 that the recommendations of the Commission were embodied in legislation.

The 1941 Year Book, at pp. 968-969, gives salient features of the Statistics Act and outlines the growth, organization and purpose of the Bureau. A fuller account of the formation of the Bureau is given at pp. 961-964 of the 1922-23 Year Book.

Publications.-Items in the vote of the Bureau, passed by Parliament each year, provide limited funds for the printing and processing of reports and bulletins. Reports printed from type are set up by the King's Printer, but the Bureau itself operates its own offset printing presses and all processed reports and bulletins are completely printed as well as published by the Bureau of Statistics.

The present policy with regard to the distribution of publications is based on sales to the public at actual cost of paper and presswork only; compilation, editing and other overhead costs are not included. The object is to extend the service to the public as widely as possible and so spread the compilation and overhead, which are the big items in total costs. A special subscription rate of $\$ 30$ per year entitles the subscriber to receive a copy of each publication as issued, with the exception of news bulletins. Other special rates are set for series of publications in related groups; these are referred to in the respective sections of the following list.

[^383]Applications for reports should be sent to the Bureau of Statistics; they should indicate the individual publication or series of reports in which the applicant is interested and include the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada, Ottawa.

## ADMINISTRATION-

Annual Report of the Dominion Statistician. (Included in the Annual Report of the Department of Trade and Commerce, Price 25 cents.)

## POPULATION-

## 1. CENSUS

(A) Report of the Seventh Census of Canada, 1981:-

Vol. I. General-Administrative Report of the Seventh Census followed by a summary of the leading facts of the Censuses of Population and Agriculture, Institutions, Merchandising and Service Establishments, etc., and cross-analyses relating thereto. The Appendix gives a complete bibliography of census materials and reproduces the more salient figures for specified years, chronologically arranged, back to 1605. The volume also contains a series of life tables for the Dominion and each province. Price, Cloth \$1.50, Paper $\$ 1$.

Vol. II. Population by Local Subdivisions-Conjugal condition, racial origin, religion, birthplace, year of immigration, language, literacy, school attendance, etc. Price, Cloth $\$ 1 \cdot 50$, Paper $\$ 1$.

Vol. III. Ages of the People-Classified by sex, conjugal condition, racial origin, religion, birthplace, language, literacy, year of immigration, naturalization, etc. Price, Cloth \$1, Paper 75 cents.

Vol. IV. Birthplace, Racial Origin, and Year of Immigration of the People-Classified and cross-classified by conjugal condition, naturalization and citizenship, religion, language, literacy, school attendance. Price, Cloth 81, Paper 75 cents.

Vol. V. Earnings of Wage-Earners, Dwellings, Households, Families, Blind and Deaf-Mutes-Cross-classified by birthplace, conjugal condition, year of immigration, naturalization and citizenship, racial origin, religion, language, literacy, school attendance. Price, Cloth \$1, Paper 75 cents.
Vol. VI. Unemployment-Classified by industry, occupation, cause, age, sex, conjugal condition, period of idleness, birthplace, racial origin, year of immigration. Price, Cloth \$1, Paper 75 cents.
Vol. VII. Occupations and Industries-Cross-classified by birthplace, race, age, sex, etc. Price, Cloth \$1, Paper 75 cents.

Vol. VIII. Agriculture-Agricultural population, farm holdings and land area, tenure, value of farm property and farm products, acreage and yields of crops, live stock, mortgage indebtedness and farm expenses, farm machinery, facilities and roads, co-operative marketing, etc. Price, Cloth $\$ 1$, Paper 75 cents.

Vol. IX. Institutions-Hospitals for the Sick-Type, bed capacity, facilities, movement of patient population, personnel, capital investment, maintenance, receipts and expenditures, etc.; Mental Hospitals-Movement of patient population; their psychoses, age, nativity, racial origin, economic condition, conjugal condition, environment, literacy, religion, administration and personnel, etc.; Charitable and Benevolent Institutions-Type, movement and population, finance, inmates, age, sex, administration and personnel, etc.; Penitentiaries and Corrective and Reformative Institutions-Inmates, offences, sentences, age, birthplace, citizenship, racial origin, previous employment, environment, educational status, conjugal condition, social habits, overseas service, administrative staff, receipts and expenditures. Price, Cloth \$1, Paper 75 cents.
Vol. X. Merchandising and Service Establishments-Retail merchandise trade showing number of stores, employment and wages, operating expenses, sales and stocks, by provinces, with tables in lesser detail for incorporated places of 1,000 population or over. Price, Cloth \$1, Paper 75 cents.
Vol. XI. Merchandising and Service Establishments-Similar information to that given in Vol. X for retail service and for wholesale establishments. Special sections dealing with chain stores, hotels and the distribution of manufacturers' sales. Price, Cloth 81, Paper 75 cents.

## POPULATION-continued

## I. CENSUS-continued

(A) Report of the Seventh Census of Canada, 1931:-concluded

Vols. XII and XIII. Census Monographs-Consisting of a series of studies of outstanding Canadian problems as follows:-

Vol. XII. (1) The Canadian Family; (2) Fertility of the Population of Canada; (3) Housing in Canada; (4) Illiteracy and School Attendance in Canada; (5) The Age Distribution of the Canadian People; (6) Canadian Life Tables. Price, Cloth $\$ 1$, Paper 75 cents.

Vol. XIII. (7) Unemployment; (8) Dependency of Youth; (9) Rural and Urban Composition of the Canadian People; (10) Racial Origins and Nativity of the Canadian People. Price, Cloth \$1, Paper 75 cents.
(B) Report of the Quinquennial Census of the Prairie Provinces, 1986:-

Vol. I. Population and Agriculture. Price \$1.
Pt. I. Population-Age, conjugal condition, birthplace, racial origin, immigrant population, citizenship, naturalization, language and mother tongue, years at school, literacy, school attendance.

Pt. II. Agriculture-Farm population, farm workers and weeks of hired labour, area and condition of occupied farm land, farm values and value of farm products, farm revenues, farm expenses, mortgages, liens and rates of interest, size of farm; tenure, field crops, crop failure, live stock, stock sold alive, stock slaughtered and animal products, type of farm, farm machinery, co-operative buying and selling, non-resident farms, vacant or abandoned farms, age of farm operator, years a farmer and years on present farm, birthplace of farm operator, racial origin of farm operator, immigrant farm operators and period of residence in Canada, apiaries.

Vol. II. Gainfully Occupied, Wage-Earners, Unemployment on June 1, 1936, Earnings and Employment during the Census year ended June 1, 1936, Buildings, Dwellings. Households and Families-Occupation, age, conjugal condition, birthplace, period of arrival of immigrants, racial origin, status, years at school, industry, retired males, cause of unemployment on June 1, 1936, duration of unemployment, relief, potential wage-earners ( $14-24$ years), buildings, dwellings, all households, normal households, wage-earner households, tenure and sub-tenure, value of home, monthly rent, rooms occupied, kind of dwelling, size of household, families in household, lodgers, earnings of heads of households, all families, normal families, wage-earner families, female heads of families, earnings of heads of families. Price $\$ 1$.
[Nore.-Vols. I and II are published for each province, Price 50 cents each.]

(B)-(U-1) Wage-Earners Not at Work, June 2, 1941, for Canada and the Provinces, Rural and Urban and for Individual Urban Centres of 1,000 Population and Over. (HF-1) Buildings, Dwellings, Households and Families for Counties or Census Divisions, Rural and Urban, for Urban Areas by Size, and for Individual Urban Centres of 5,000 Population and Over. (HF-2) Value of Home and Monthly Rent paid for the "Greater Cities" of Halifax, Hamilton, London, Montreal, Ottawa, Quebec, Saint John, Toronto, Vancouver, Victoria and Winnipeg. (O-1) Gainfully Occupied by Occupation and Industry Groups for Canada and the Provinces, Counties or Census Divisions, Urban Centres of 5,000 Population and Over, and the "Greater" City Areas of Montreal, Toronto, Vancouver and Winnipeg. (O-2) Occupations of the Gainfully Occupied Population on June 2, 1941, for Urban Centres of 10,000 and Over and Gainfully Occupied by Occupation Groups and Age for Cities of 30,000 Population and Over. (O-3) Series-Occupations of the Gainfully Occupied Population on June 2, 1941, by Sex, Age, Conjugal Condition, Industrial Status, Schooling, Birthplace, Period of Immigration and Racial Origin. A bulletin has been issued separately for Canada and each province. (O-4) Series - Gainfully Occupied by Industry, Sex, Age, etc. A separate bulletin has been issued for Canada and each province. (O-5) Gainfully Occupied by Industry and Sex

## POPULATION-continued

I. CENSUS-continued
(D) Bulletins (rotarrinted) of the Eighth Census of Canaia, 1941:-continued
for Urban Centres of 10,000 and Over. (O-6) Occupational Trends, 1901-1941. (E-1) Earnings and Employment among Wage-Earners During the 12 Months; Period Prior to the Date of the Census, June 2, 1941, for Canada and the Provinces, Rural and Urban, Counties or Census, Divisions, Urban Centres of 5,000 Population and Over, and for the "Greater" Cities (having 100,000 Population and Over in the City Proper). (E-2) Earnings of Wage-Earners by Occupation classifying Male and Female Wage-Earners by Occupation to show Average Earnings and Average Weeks Employed and also Number of Male and Female Wage-Earners earning Specified Amounts.
(7) Housing-A series of bulletins on housing conditions in Canadian cities of 30,000 population or over, Price 10 cents each. (1) Regina. (2) Ottawa. (3) Victoria. (4) Halifax. (5) Windsor. (6) Hamilton. (7) Saskatoon. (8) Calgary. (9) Edmonton. (10) Vancouver. (11) Saint John. (12) Toronto. (13) Three Rivers. (14) London. (15) Winnipeg. (16) Fort William. (17) Kitchener. (18) Brantford. (19) Sudbury. (20) Verdun. (21) Sherbrooke. (22) Montreal. (23) Hull. (24) Quebec. (25) St. Catharines. (26) Kingston. (27) Outremont. (28) Summary Bulletin on Dwellings and Households in Cities of 30,000 Population and Over. (29) Crowding in Canadian Cities of 30,000 Population and Over. (30) Average Earnings per Person, and Rooms per Person Among Wage-Earner Private Families. (31) Canadian Farm Homes and Households. (32) Refrigeration Facilities in Canada. (33) Canadian Homes in Need of External Repair. (34) Automobiles, Radios, Telephones and Vacuum Cleaners. (35) Bathing Facilities in Canadian Dwellings. (MB-1) The Farm Dwellings of Canada. (36) Heating Systems and Heating Fuels in Canadian Cities. (37) Lighting Facilities in Canadian Homes. (D-1) Saskatchewan Housing Data-Electoral District Summary. (D-2) Manitoba Housing Data-Electoral District Summary. (D-3) Ontario Housing DataElectoral District Summary. (D-4) Quebec Housing Data-Electoral District Summary. (D-5) Maritime Provinces Housing Data-Electoral District Summary. (D-6) Alberta Housing Data-Electoral District Summary. (D-7) British Columbia Housing Data-Census Division Summary.
(8) Agriculture-Preliminary Bulletins (Price 10 cents each)-

A-Number of Farms.-(3) Manitoba: Number of Occupied Farms and of Fruit and Vegetable Farms by Census Division and Municipality. (4) Saskatchewan: Number of Occupied Farms and of Fruit and Vegetable Farms by Census Division and Municipality. (5) New Brunswick: Number of Occupied Farms and Fruit and Vegetable Farms by County and Parish. (6) Prince Edward Island: Number of Occupied Farms and of Fruit and Vegetable Farms by County and Township. (8) Alberta: Number of Occupied Farms and of Fruit and Vegetable Farms by Census Division and Municipality. (9) Ontario: Number of Occupied Farms and of Fruit and Vegetable Farms by County and Township. (12) British Columbia: Number of Occupied Farms and of Fruit and Vegetable Farms by Census Subdivision. (14) Quebec: Number of Occupied Farms and of Fruit and Vegetable Farms by County. (18) Nova Scotia: Number of Occupied Farms and Fruit and Vegetable Farms by County and Subdivision. (22) Canada: Number of Occupied Farms and of Fruit and Vegetable Farms by Province. (38) Quebec: Number of Occupied Farms and of Fruit and Vegetable Farms by County and Local Subdivision.
B-Farm Areas and Values.-(54) Canada: Farm Values and Farm Areas, 1941 and Rent Paid, 1940. (75) Canada: Area and Condition of Occupied Farm Land, 1941.
C-Abandoned or Idle Farms.-(76) Canada: Abandoned or Idle Farms, 1941.
D-Farm Population and Workers.-(31) Canada: Number of Farm Workers. (45) Canada: Farm Population 1941, Weeks of Hired Labour and Wages Paid, 1940.

E-Age of Farm Operators.-(72) Canada: Farm Operators Classified by Age Groups, 1941.
F-Live Stock.-Number and Value of Live Stock on Farms:-(24) Prince Edward Island; (25) Manitoba; (26) Ontario; (27) New Brunswick; (28) British Columbia; (29) Nova Scotia; (30) Saskatchewan; (32) Alberta; (33) Quebec; (34) Canada. (58) Canada: Live Stock Bought, Born or Hatched, Sold Alive and Slaughtered on Farms, 1940.

## POPULATION-concluded

I. CENSUS-concluded
(D) Bulletins (rotaprinted) of the Eighth Census of Canada, 1941:-conlcuded

G-Animal Products.-Animal Products of Farms, 1940: (39) Nova Scotia; (42) Prince Edward Island; (43) New Brunswick; (44) Manitoba; (46) British Columbia; (47) Alberta; (49) Ontario; (50) Saskatchewan; (56) Quebec; (66) Canada.

H-Field Crops.-Area of Field Crops, 1941:-(10) Manitoba; (11) Ontario; (13) Prince Edward Island; (15) New Brunswick; (16) Alberta; (17) Saskatchewan; (19) Quebec; (20) British Columbia; (21) Nova Scotia; (23) Canada. Area, Production and Value of Field Crops, 1940, and Area, 1941:-(77) New Brunswick; (78) Prince Edward Island; (79) British Columbia; (81) Manitoba; (82) Alberta; (83) Nova Scotia.

I-Fruit and Vegetables.-(1) The Number of Vegetable and Fruit Farms in Canada by Provinces. (2) and (7) The Number of Farms, the Number of Vegetable and Fruit Farms and the Acreage, Production and Value of Vegetables in certain Counties of the Province of Ontario. Area, Production and Value of Vegetables, 1940, and Area, 1941:- (36) Ontario; (40) British Columbia; (53) Quebec; (57) New Brunswick; (60) Nova Scotia; (62) Prince Edward Island; (63) Manitoba; (64) Alberta; (65) Saskatchewan; (73) Canada. Fruits and Nursery Products, Value of Production, 1940; Number of Trees, 1941:-(37) Ontario; (41) British Columbia; (55) Quebec; (59) New Brunswick; (61) Nova Scotia; (68) Prince Edward Island; (69) Manitoba; (70) Saskatchewan; (71) Alberta; (74) Canada.
J-Forest Products.-(35) Canada: Forest Products of Farms, 1940. (80) Canada: Forest Products of Farms, 1940.

K-Farm Indebtedness.-(52) Canada: Farm Mortgages, Agreements for Sale and Debts Covered by Liens, 1941.

L-Farm Machinery.-(67) Canada: Farm Machinery, 1941.
M-Size of Farm.-(48) Canada: Number of Occupied Farms by Size of Holding.
N-Tenure of Farm.-(51) Canada: Number of Occupied Farms by Tenure, 1941.
O-Type of Farm.-(84) Canada: Type of Farm, 1940.
P-Farm Revenues and Expenses.-(85) Canada: Gross Farm Revenues and Expenses, 1940.

## II. INTERCENSAL ESTIMATES OF POPULATION

III. VITAL STATISTICS

Annual Report on Vital Statistics of Canada, Price s1; Preliminary Annual Report on Vital Statistics of Canada, Price 25 cents; Preliminary Quarterly Report on Vital Statistics of Canada, Price $\$ 1$ per year; Monthly Report of Births, Deaths and Marriages Registered in Cities, Price \$1 per year; A Study in Maternal, Infant and Neo-Natal Mortality, 1926-43, Price 50 cents; Annual Report on Divorce, Price 25 cents; Deaths from External Violence and Due to Motor Vehicle Accidents, Price 25 cents.

## PRODUCTION

## I. Annual Survey of Production

Including and differentiating gross and net values of-(1) Primary Production (agriculture, forestry, fisheries, trapping, mining and electric power), (2) Secondary Production (general manufactures, custom and repair, and construction), and (3) Provincial and Per Capita Analyses, with explanation of method. Price 25 cents.
II. Agriculture (Subscription price for all publications of the Agricultural Branch, $\mathbf{\$ 1 0}$ per year.)
(1) General Publications-(a) Quarterly Bulletin of Agricultural Statistics with Annual Index. The official record of current and comparable statistical data pertaining to agriculture, summarized largely from the current reports listed below, Price s1 per year; (b) Reprinted from the Quarterly Bulletin of Agricultural Statistics:

## PRODUCTION-continued

II. Agriculture-concluded

The influence of precipitation and temperature on wheat yields in the Prairie Provinces, 1921-1940; Net Farm Income, Canada, 1940-43, Price 10 cents; (c) Semiannual Reports on Cash Income from the Sale of Farm Products, Price 10 cents; (d) Seasonal Reports on Farm Wages, Price 10 cents; (e) Annual Summary of Cold Storage Holdings, Price 25 cents; ( $f$ ) Wholesale Stocks of Food Commodities in Canada in Cold and Common Storage, 1920-1939, Price 25 cents.
(2) Field Crops-(a) Telegraphic Crop Reports, May-September, for the Prairie Provinces and for all Canada; (b) Monthly Crop Reports covering area, quality, yield and value of principal field crops and carry-over stocks of Canadian grains, Price \$2 per year; (c) Hay, Pasture and Vegetable Seed Crop Reports, Price 10 cents; (d) Seasonal Reports on the Tobacco Crop with estimates of area, yield and value, Price 10 cents each.
(3) Grain and Grain Products-(a) Annual Report on the Grain Trade of Canada, Price 50 cents; (b) Monthly Review of the Wheat Situation, Price \$1 per year; (c) Quarterly Review of Canadian Coarse Grains, Price \$1 per year; (d) Weekly Report on Supplies and Movement of Canadian Grain, Price \$2 per year; (e) Monthly Report on Milling Statistics, Price 50 cents per year; ( $f$ ) Location of Flour and Feed Mills with Capacity, annual, Price 81; (g) The Grain Situation in Argentina, monthly, Price $\$ 1$ per year; ( $h$ ) World Trade in Barley, 1927-1937, Price 50 cents; (i) World Trade in Wheat Flour, 1926-1938, Price 50 cents.
(4) Live Stock and Animal Products-(a) Annual Report on Live Stock and Animal Products Statistics, Price 50 cents; (b) June and December Surveys of Live Stock and Poultry, Price 10 cents each; (c) Annual Estimates of the Consumption of Meats, Price 10 cents; (d) Numbers and Values of Live Stock, 1906-43 and Production and Value of Shorn Wool, 1920-43, Price 10 cents; (e) Monthly Review on Cold Storage Holdings of Meat and Lard, Price $\$ 1$ per year.
(5) Dairy and Poultry Products-(a) Annual Report on Dairying Statistics of Canada, Price 25 cents; (b) Monthly Dairy Review of Canada, Price $\$ 1$ per year; (c) Annual Report on the Production of Poultry and Eggs, Price 25 cents; (d) Annual Report on Dairy Factories Statistics, Price 25 cents; ( $e$ ) Annual Report on the Production of Processed Cheese, Price 10 cents; ( $f$ ) Fhuid Milk Sales and Distribution, Annual Report, Price 10 cents; (g) Monthly Reports on Cóld Storage Holdings of Dairy and Poultry Products, Price $\$ 1$ per year; ( $h$ ) Advance Preliminary Statement, monthly, of Stocks of Butter, Cheese and Eggs in the Principal Cities of Canada, Price 50 cents per year; (i) Annual Review on the Dairy Situation in Canada.
(6) Fruit and Vegetables-(a) Monthly Condition Reports (seasonal) with Preliminary Estimates of Fruit Production, Price \$1 per year; (b) Monthly Reports on Cold Storage Stocks of Fruits and Vegetables, Price \$1 per year.
(7) Honey, Sugar and Maple Products-(a) Seasonal Reports on the Production and Marketing of Honey, Price 10 cents; (b) Monthly Reports on Sugar Production with Annual Summary, Price \$1 per year (not available for general distribution); (c) Annual Report on Maple Products, Price 10 cents.

## III. Furs

Advance Report on Fur Farms, Price 10 cents. Annual Report on Fur Farms, Price 25 cents. The Anticipated Pelt Production of Fur Farms, Canada, Price 10 cents. Advance Bulletin on Statistics of the Production of Raw Furs, Price 10 cents. Annual Bulletin on the Production of Raw Furs (comprising the pelts taken by trappers and those sold from fur farms), Price 25 cents.

## IV. Fisheries

Annual Report on Fisheries Statistics, Price 50 cents. Adyance Bulletins on Fish Caught and Marketed, by Provinces: Prince Edward Island, Price 10 cents; Nova Scotia, Price 10 cents; New Brunswick, Price 10 cents; Quebec, Price 10 cents; Ontario, The Prairie Provinces and Yukon, Price 10 cents; British Columbia, Price 10 cents; Canada, Price 10 cents. Monthly Reports on Cold Storage Holdings of Fish, Price $\$ 1$ per year.

## PRODUCTION-continued

## V. Forestry

Annual Summary of the Value, etc., of Forest Production (includes operations in the woods for sawmills, shingle mills, pulp and paper mills, etc., production of mining timber, production of poles and cross ties, and farm production of firewood, posts, etc.), Price 25 cents.
[See also Reports on Manufactures of Forest Products listed under "Manufactures", Section VII, Subsection (5).]

## VI. Mineral Production (Mining and Metallurgy)

Nots.-Subscription price for all Mines, Metallurgical and Chemical Reports [including Reports under groups (6), (7), (8) and (9), pp. 0000-0000.] 815 per year.
(1) General-(a) Annual Report on the Mineral Production of Canada (1939, 1940, 1941 and 1942 now available), Price $\$ 1$; (b) Preliminary Report on the Mineral Production of Canada, 1944, Price 25 cents; (c) Monthly Reports on Leading Mineralsreports on gold; copper-nickel; silver-lead-zinc; clay products and petroleum and natural gas production. Yearly subscription, \$1 per report.
(2) Coal-(a) Annual Report on Coal Statistics for Canada (1939, 1940, 1941 and 1942 now available), Price 50 cents; (b) Monthly Summary Report on Coal and Coke Statistics for Canada, Price \$1 per year.
(8) Annual Bulletins on Mining-Metals-The Gold-Mining Industry in Canada (including alluvial gold mining, auriferous quartz mining, copper-gold-silver mining, and tables showing Canadian and world production of gold), Price 50 cents. The Silver-Mining Industry in Canada (including silver-cobalt-arsenic mining and silver-lead-zine mining), Price 25 cents. The Nickel-Copper Mining, Smelting and Refining Industry, Price 25 cents. The Non-Ferrous Smelting and Refining Industry, Price 25 cents. The Complete Mining Series of Reports (with the exception of Coal), Price \$7.
Non-Metals-Abrasives, Price 15 cents; Asbestos, Price 25 cents; Feldspar and Quartz, Price 25 cents; Gypsum, Price 25 cents; Iron oxides, Price 15 cents; Natural Gas, Price 25 cents; Petroleum, Crude, Price 25 cents; Salt, Price 25 cents; Talc and Soapstone, Price 15 cents; Miscellaneous Non-Metallic Minerals (including barytes, fluorspar, magnesium sulphate, mineral waters, moss, peat, phosphate, silica brick, sodium carbonate, sodium sulphate), Price 25 cents.
Structural Materials-The Cement Industry, Price 25 cents; Clay and Clay Products, Price 25 cents; Lime, Price 25 cents; Sand and Gravel, Price 25 cents; Stone, Price 50 cents.
[See also Reports on Iron and Steel and Their Products, Manufactures of Non-Ferrous Metals, Manufactures of Non-Metallic Minerals, and Chemicals and Allied Products listed under "Manufactures', Section VII, Subsections (6), (7), (8) and (9).]

## VII. Manufactures

Nore.-For publications on water-power and central electric station statistics, see under heading "Electric Stations", p. 1125.
(1) General-General Report on the Manufacturing Industries of Canada, Price 50 cents. Geographical Distribution of the Manufacturing Industries of Canada, Price 25 cents; also Reports for the Provinces and Leading Cities: Quebec, Price 25 cents; Ontario, Price 25 cents; British Columbia, Price 25 cents; Prairie Provinces, Price 25 cents; Maritime Provinces, Price 25 cents. Quantity of Manufacturing Production in Canada, 1923-29; Weekly Earnings of Male and Female Wage-Earners Employed in the Manufacturing Industries of Canada. Price 25 cents. List of Manufacturing Establishments Employing 50 Hands or More, Price $\$ 5$.
(2) Manufactures of Vegetable Products (Biennial)-General Report on Manufactures of Vegetable Products, Price 50 cents. Annual bulletins as follows: (a) Miscellaneous Food including Coffee, Tea and Spices, Price 25 cents; (b) Fruit and Vegetable Preparations including Canning, Evaporating and Preserving, and Pickles, Sauces, Vinegar and Cider, Price 25 cents; (c) Flour and Grist Mill Products, Price 25 cents; (d) Bread and Other Bakery Products, Price 25 cents; (e) Biscuits and Confectionery, including Cocoa and Chocolate, Price 25 cents; (f) Macaroni, Vermicelli, etc., Price 15 cents; ( $g$ ) Distilled Liquors, Price 25 cents; ( $h$ ) Breweries, Price 25 cents; (i) Wine, Price 25 cents; ( $j$ ) Rubber Industry (including rubber footwear), Price 25 cents;' (k) Prepared Breakfast Foods, Price 15 cents; (l) Sugar Refineries, Price

## PRODUCTION-continued

## VII.-Manufactures-continued

25 cents; ( $m$ ) Tobacco Products, Price 25 cents; ( $n$ ) Vegetable Oil Mills, Price 15 cents; (o) Canned Foods, Price 25 cents; ( $p$ ) Ice Cream, Price 15 cents; ( $q$ ) Pack of Fruits and Vegetables (preliminary), Price 10 cents; $(r)$ Aerated Waters, Price 15 cents; ( $s$ ) Stock and Poultry Foods, Price 25 cents; ( $t$ ) Stocks of Unmanufactured Tobacco on Hand, (quarterly report), Price 50 cents; ( $u$ ) Stocks of Canned Fruits and Vegetables, (quarterly report), Price 50 cents.
(s) Animal Products and Their Manufactures-Annual Reports as follows: The Dairy Factory Industry, Price 25 cents. Advance Report on Production of Dairy Factories, Price 10 cents. Annual bulletins: (a) Slaughtering and Meat Packing and Sausage and Sausage Casings, Price 25 cents; (b) Processed Cheese, Price 10 cents; (c) Leather Tanneries, Price 25 cents; (d) Miscellaneous Leather Goods, Leather Belting, Leather Boot and Shoe Findings, Price 25 cents; (e) Leather Boots and Shoes, Price 25 cents; ( $f$ ) Leather Gloves and Mittens, Price 20 cents; ( $g$ ) Fur Goods and Fur Dressing, Price 25 cents. Monthly bulletin on Boot and Shoe Production, Price $\$ 1$ per year (including annual).
(See also Reports on Live Stock, etc., listed under "Agriculture".)
(4) Textile and Allied Industries (Biennial)-General Report on the Textile Industries of Canada, Price 50 cents. Annual Bulletins as follows: (a) Cotton Textiles (cloth, yarn, thread and waste), Price 35 cents; (b) Woollen Textiles (cloth, yarn, waste, carpets, and woollen goods, n.e.s.), Price 35 cents; (c) The Silk and Artificial Silk Industry, Price 25 cents; (d) Men's Factory Clothing, including men's furnishings, Price 25 cents; (e) Women's Factory Clothing, Price 25 cents; ( $f$ ) Hats and Caps, Price 25 cents; (g) Hosiery and Knitted Goods, Price 25 cents; (h) Oiled Clothing and Waterproofs, Price 15 cents; (i) Cordage, Rope and Twine, Price 25 cents; ( $j$ ) Corsets, Price 15 cents; ( $k$ ) Cotton and Jute Bags, Price 15 cents; ( $l$ ) Dyeing and Finishing of Textiles, Price 15 cents; ( $m$ ) Awnings, Tents and Sails, Price 15 cents.
(5) Manufactures of Forest Products-Printed Reports,* Price 50 cents each: (a) The Lumber Industry, 1938-39; (b) The Pulp and Paper Industry, 1938-39; (c) WoodUsing Industries, 1934-36; (d) Paper-Using Industries, 1934-37. Annual bulletins: (a) The Lumber Industry, 1938-39, Price 35 cents; (b) Lumber Distribution in Canada and the United States (biennial), Price 25 cents; (c) The Pulp and Paper Industry Price 80 cents; (d) Wood-Using Industries (Summary), Price 85 cents. Annual Preliminary Reports on Wood-Úsing Industries: (a) Planing Mills, Sash and Door . Factories, Price 20 cents; (b) Hardwood Flooring, Price 15 cents; (c) Furniture, Price 15 cents; (d) Boxes, Baskets and Crates, Price 15 cents; (e) Carriages, Sleighs and Vehicle Supplies, Price 15 cents; ( $f$ ) Cooperage, Price 10 cents; ( $g$ ) Coffins and Caskets, Price 10 cents; ( $h$ ) The Wooden Refrigerator Industry, Price 10 cents; (i) Boat Building, Price 10 cents; ( $j$ ) Lasts, Trees and Shoe Findings, Price 10 cents; ( $k$ ) Handles, Spools and Woodturning, Price 10 cents; (l) Wooden-ware, Price 10 cents; ( $m$ ) Excelsior, Price 10 cents; ( $n$ ) Beekeepers' and Poultrymen's Supplies, Price 10 cents; ( 0 ) Miscellaneous Wood-Using Industries, Price 10 cents. Annual Preliminary Reports on Paper-Using Industries: (a) The Printing Trades (comprising the following industries: Printing and Publishing; Printing and Bookbinding; Lithographing; Engraving, Stereotyping and Electrotyping; Trade Composition; and Blue Printing), Price 35 cents; (b) Paper Boxes and Bags, Price 25 cents; (c) Roofing Paper, Price 10 cents; (d) Miscellaneous Paper Goods, Price 10 cents. Monthly bulletins: (a) Asphalt Roofing Production, Price 10 cents per copy, or 50 cents per year; (b) Asphalt Roofing Sales, Price 10 cents per copy, or 50 cents per year.

## Nore.-Subscription price for all Forestry publications $\$ 5$ per year.

(6) Iron and Steel and Their Products-Biennial Report, Price 50 cents. Annual bulletins as follows: Preliminary Summary on the Iron and Steel Industry, Price 15 cents(a) Primary Iron and Steel, Price 25 cents; (b) Iron Castings, Price 25 cents; (c) Heating and Cooking Apparatus, Price 25 cents; (d) Boilers, Tanks and Platework, Price 25 cents; (e) Farm Implements and Machinery, Price 25 cents; (f) Automobile parts and Accessories, Price 25 cents; (g) Automobile Statistics for Canada, Price 50 cents; ( $h$ ) Railway Rolling-Stock, Price 25 cents; (i) Wire and Wire Goods, Price 25 cents; ( $j$ ) Sheet Metal Products, Price 25 cents; (k) Hardware, Tools and Cutlery, Price 25 cents; ( $l$ ), Bridge Building and Structural Steel, Price 25 cents; ( $m$ ) Machinery, Price 25 cents; ( $n$ ) Bicycles, Price 15 cents; ( 0 ) Shipbuilding, Price 15 cents; ( $p$ ) Aircraft, Price 15 cents; (q) Miscellaneous Iron and Steel Products, Price 25 cents; ( $r$ ) Iron and Steel and Their Products (final summary), Price 10 cents. Commodity bulletins on the production of pig-iron, steel, washing machines, cream
*These biennial reports were discontinued for the duration of the War.

## PRODUCTION-concluded

ViI. Manufactures-concluded
separators, warm air furnaces, galvanized sheets, wire nails, wire rope and cable, steel wire, wire fencing, stoves, etc. Monthly Reports: (a) Pig-Iron, Steel, and Ferro-Alloys, Price \$1 per year; (b) Steel Ingots, Price \$1 per year. Quarterly Report on Galvanized Sheets, Price $\$ 1$ per year.
(7) Manufactures of Non-Ferrous Metals-Biennial Report, Price 50 cents. Annual bulletins as follows: (a) Aluminum Products, Price 15 cents; (b) Brass and Copper Products, Price 25 cents; (c) White Metal Alloys, Price 25 cents; (d) Jewellery and Silverware, Price 25 cents; (e) Electrical Apparatus and Supplies, Price 50 cents; ( $f$ ) Miscellaneous Non-Ferrous Metal Products, Price 15 cents; ( $g$ ) Non-Ferrous Smelting and Refining, Price 25 cents; ( $h$ ) Manufactures of Non-Ferrous Metals (final summary), Price 15 cents. Quarterly Reports: Production and Sales of Radio Sets, Price \$1 per year; Sales of Storage Batteries, Price \$1 per year. Commodity bulletins on the production of batteries, silverware, vacuum cleaners, electric motors and generators, electric transformers, incandescent lamps, etc.
(8) Manufactures of Non-Metallic Minerals-Biennial Report, Price 50 cents. Annual bulletins as follows: Preliminary Summary on Manufactures of Non-Metallic Minerals, Price 10 cents-(a) The Asbestos Mining Industry and the Asbestos Products Industry, Price 25 cents; (b) The Cement Industry, Price 25 cents; (c) Coke and Gas, Price 25 cents; (d) Glass (blown, cut, and ornamental, etc.), Price 15 cents; (e) Gypsum Mining and Gypsum Products Industry, Price 25 cents; (f) Lime, Price 25 cents; (g) Petroleum Products, Price 50 cents; (h) Clay and Clay Products Price 25 cents; (i) Salt, Price 25 cents; (j) Sand-Lime Brick, Price 15 cents; ( $k$ ) Stone (primary and manufactures), Price 50 cents; (l) Abrasives, Price 15 cents; (m) Miscellaneous Non-Metallic Mineral Products (including carbon electrodesgypsum products-mica products-non-metallic minerals, n.e.s.), Price 15 cents. Non-Metallic Mineral Products (final summary), Price 15 cents. Special Report on the Consumption of Coke in Canada, Price 25 cents. Monthly Report on Coal and Coke Statistics, Price $\$ 1$ per year.
(9) Chemicals and Allied Products-Biennial Report, Price 50 cents. Annual bulletins as follows: Preliminary Summary on Chemicals and Allied Products, Price 15 cents; (a) Coal Tar Distillation, Price 15 cents; (b) Acids, Alkalis and Salts, Price 15 cents; (c) Compressed Gases, Price 15 cents; (d) Fertilizers, Price 15 cents; (e) Medicinal and Pharmaceutical Preparations, Price 25 cents; ( $f$ ) Paints, Pigments and Varnishes, Price 25 cents; (g) Soaps, Washing Compounds and Cleaning Preparations, Price 25 cents; ( $h$ ) Toilet Preparations, Price 25 cents; ( $i$ ) Inks, Price 15 cents; ( $j$ ) Adhesives, Price 15 cents; ( $k$ ) Polishes and Dressings, Price 15 cents; ( $l$ ) Hardwood Distillation, Price 15 cents; ( m ) Miscellaneous Chemical Products (including boiler compounds-plastics-insecticides-sweeping compounds-disinfectants-matches -dyes and colours-chemical products, n.e.s. ), Price 15 cents. Chemicals and Allied Products (final summary), Price 15 cents. Commodity bulletins on Sulphuric Acid, Ammonium Sulphate, etc. Special Reports-Fertilizer Trade in Canada, Price 25 cents; Directory of Chemical Industries in Canada as of Jan. 1, 1938, Price \$1; Consumption of Chemicals in Municipal Waterworks in Canada, 1942 and 1943, Price 25 cents.
(10) Miscellaneous Manufactures-General Report, Price 25 cents. Annual Bulletins as follows: (a) Brooms, Brushes and Mops, Price 15 cents; (b) Musical Instruments (including pianos, organs and phonographs) and Musical Instrument Materials and Parts, Price 15 cents; (c) Buttons, Price 15 cents; (d) Bed Springs and Mattresses, Price 15 cents; (e) Sporting Goods, Price 15 cents.

## Vili. Construction

Building Permits-Monthly and Annual Report, Price $\$ 1$ per year, Annual Report, separately, Price 25 cents. Annual Report on the Construction Industry in Canada, Price 25 cents. Preliminary Report on Construction, Price 25 cents.

## EXTERNAL TRADE-

## 1. Imports and Exports

(a) Monthly Trade Summaries-E.T.P.B. No. 1. Trade of Canada (totals), by Months, Four Calendar Years (comparative); No. 2, Monthly Summary of Canadian Exports, by Principal Commodities (comparative); No. 3, Monthly Summary of Canadian Imports by Principal Commodities (comparative); No. 4, Monthly Summary of Canadian Exports by Principal Countries (comparative); No. 5, Monthly Summary of Canadian Imports by Principal Countries (comparative).
Price for each series, 10 cents per copy, $\$ 1$ per year. Price for all series $\$ 3$ per year.

## EXTERNAL TRADE-concluded

(b) Annual Report of the Trade of Canada-Vol. I, Historical Tables, Summaries and Analyses, Calendar Years 1941, 1942 and 1943; Vol. II, Exports-Commodities by Countries in Detail, Calendar Years 1941, 1942 and 1943; Vol. III, Imports-Commodities by Countries in Detail, Calendar Years 1942 and 1943.
Price $\$ 2$ per volume or $\$ 5$ for three volumes in any year.
(c) Monthly Commodity Bulletins-E.T.P.B. No. 103, Imports of Rubber; No. 104, Exports of Rubber and Insulated Wire Cable; No. 111, Imports of Paints and Varnishes; No. 113, Imports of Lumber; No. 114, Exports of Lumber; No. 117, Imports of Farm Machinery and Implements; No. 118, Exports of Farm Implements and Machinery; No. 119, Imports of Pulp, Wood Pulp and Paper; No. 120, Exports of Pulpwood, Wood Pulp and Paper; No. 207, Imports of Stoves, Sheet Metal Products and Refrigerators; No. 208, Imports and Exports of Vegetable Oils; No. 210, Imports and Exports of Wire of Iron and Steel.
Price of each bulletin 10 cents per copy, $\$ 1$ per year.
2. Balance of International Payments, Capital Movements and International Investments
(a) Annual Reports-The Canadian Balance of International Payments, Revised Statements, 1937-42, and Preliminary Statement, 1943, Price 25 cents. British and Foreign Direct Investments in Canada and Canadian Direct Investments Abroad, 1937, Price 50 cents.
(b) Monthly Report-Sales and Purchases of Securities between Canada and Other Countries, Price $\$ 1$ per year, single copies 10 cents.

National Steamships (1927, c. 29); Maritime Freight Rates (79); Canadian National-Canadian Pacific (1933, c. 33) as amended (1936, c. 25; 1939, c. 37); Railway (170); Trans-Canada Air Lines (1937, c. 43); Aeronautics (3); Transport, 1938 (1938, c. 53 ); Radio, 1938 (1938, c. 50); An Act Respecting the Beauharnois Light, Heat and Power Co; (1931, ce. 19, 20; 1940, c. 20): Bridges (20); Montreal Terminals (1929, c. 12); Telegraphs (194, Part III); Canadian National Railways Pensions (1929, c. 4); Department of Transport Stores (1937, c. 28); Passenger Tickets (R.S. 1927 c. 174); Toronto Terminals Railway Company (1906, c. 170); Canadian National Capital Revision (1937, c. 22).

Veterans Affairs.-The Department of Veterans Affairs Act (1944, c. 19); Pension Act* (R.S.C. 1927, c. 157 and amendments); The War Veterans' Allowance Act (1930, c. 48 and amendments); The Returned Soldiers' Insurance Act (1920, c. 54 and amendments); Soldier Settlement Act (R.S.C. 1927, c. 188); The Veterans Insurance Act (1944, c. 49); The Veterans' Land Act, 1942, (1942, c. 33); The War Service Grants Act, 1944, (1944, c. 51).

- Adjudicated upon by the Canadian Pension Commission.

## Section 3.-Publications of Dominion Departments

## List of Principal Publications of the Departments of the Government of the Dominion of Canada as Compiled from Information Supplied by the Respective Departments

Nore.-The Department of Public Printing and Stationery issues an annual catalogue with quarterly supplements, containing titles and selling prices of official publications, Price 25 cents.

Intending purchasers should be careful to give the exact title of the publication desired and prepayment of charges is required with each order. Remittances by postal money order, express order or accepted cheque made payable to the Receiner General of Canada should be mailed to the King's Printer, Ottawa. The use of currency for this purpose is contrary to the advice of the postal authorities and entails a measure of risk. Postage stamps and foreign money will not be accepted. The Special War Revenue Act requires that no person shall issue a cheque payable at or by a bank unless there is affixed thereto an excise or postage stamp; cheques up to and including \$100, s-cent stamp and cheques over $\$ 100,6$-cent stamp.

No extra charge is made for postage on documents forwarded to points in Conada and the United States, but cost of postage is added to the selling price as indicated when publications are to be mailed to other countries.

There appears to be a widespread view that statutes, blue books and other publications are distributed free of charge by the King's Printer, and it is desirable to correct this impression. In the case of certain publications a limited free distribution is made by the King's Printer under authority of Order in Council.

Agriculture.-Annual Reports of the Minister, the Veterinary Director General, and Progress Reports of the Dominion Agrostologist, 1934-36, Dominion Animal Husbandman, 1930-36, Dominion Apiarist, 1934-36, Dominion Bacteriologist, 1937, Dominion Botanist, 1935-37, Dominion Cerealist, 1934-37, Dominion Chemist, 1934-36, Dominion Horticulturist, 1931-33, Dominion Poultry Husbandman, 1934-36, Economic Fibre Production, 1934-36, Tobacco Division, 1931-34, Illustration Stations, 1934-38. Divisions of the Experimental Farms Service. Progress Reports covering the work conducted on the Experimental Farms and Stations located at Agassiz, B.C., 1931-35, Brandon, Man., 1931-36, Farnham, Que., 193135, Fort Vermilion, Alta., 1931-38, Kapuskasing, Ont., 1936-40, Kentville, N.S., 1931-36, L'Assomption, Que., 1930-36, Lennoxville, Que., 1931-36, Manyberries, Alta., 1927-36, Nappan, N.S., 1932-36, Regina, Sask., 1931-36, St. Joachim Horse Farm, 1919-40, Summerside Fox Ranch, P.E.I., 1935-41, Swift Current, Sask., 1931-36. Bulletins and circulars of the Experimental Farms Service and Science Service on a great variety of agricultural subjects, including publications of the following Divisions: Field Husbandry; Animal Husbandry; Horticulture; Cereal; Chemistry; Forage Plants; Botany; Entomology; Animal Pathology; Poultry; Tobacco; Economic Fibre; Bacteriology; Bees; and Illustration Stations. Bulletins and circulars from the various Divisions of the Production Service and Marketing Service including publirations of the Dairy Products Division relating to the dairying and cold storage industries in Canada, the making of butter and cheese, dairying experiments, co-operation, etc. Reports, bulletins, circulars, etc., of the Live Stock and Live Stock Products Division on cattle, sheep, swine, and poultry, marketing of eggs, wool, etc. Bulletins of the Health of Animals Division with regulations as to: contagious abortion; rabies; sheep scab; actinomycosis; anthrax; glanders; hog cholera; tuberculosis; foot-andmouth disease; quarantine; and meat inspection. Bulletins and reports of the Plant Products Division as to seed-testing, the production and use of seed grains, the Seed Control Act, the Feeding Stuffs Act, and the Fertilizers Act. Bulletins and circulars of the Plant Protection Division and instructions to importers of nursery stock. Bulletins and reports of the Fruit and Vegetable Division relating to the marketing of fruits and vegetables and their preservation, the Fruit, Vegetables and Honey Act, and the Maple Sugar Industry Act.

A pamphlet entitled "List of Publications" contains a list of the publications of the Department, numbering more than 300 . These publications include reports, bulletins, and circulars on field crops, live stock, dairying, orchard and garden, animal, insect, and plant diseases, bee-keeping, poultry, and miscellaneous topics. With few exceptions, the publications of the Department are free on application to its Publicity and Extension Division.

Auditor General.-Annual Report-incorporated with the "Public Accounts of the Dominion of Canada".

Board of Transport Commissioners for Canada.-Annual Report. Pamphlet Containing Judgments, Orders, Regulations, and Rulings, issued fortnightly.

Civil Service Commission.-Annual Report. Regulations of the Civil Service Commission. The Classification of the Civil Service of Canada. Positions exempted from the Civil Service Act. Pamphlets dealing with examinations for various kinds of positions which are filled by the Commission including Clerks, Stenographers and Typists; Customs Services; Postal Services; Positions open to graduates and under-graduates in Agriculture and related courses. Also pamphlets giving some idea of the positions which are filled by oral examinations only; positions for which a written examination is required; and positions of a professional, technical or other special character.

External Affairs.-Annual Report. Annual Treaty Series. British and Foreign Government Representatives in Canada.

Finance.-Annual Report on the Public Accounts of the Dominion of Canada. Monthly Statements of the Chartered Banks of Canada. Estimates. Reprint of the Budget Speech of the Minister of Finance. Report on the Administration of Old Age Pensions in Canada. Report of the Royal Canadian Mint.

## Fisheries.-

Norz.-Publications of the Department of Fisheries are distributed at the discretion of the Department and applicants for any papers should indicate the purposes for which they are desired. In some cases charges may be made.
(Publications marked * are available in both English and French editions.) *Annual Report, including Fish Culture Report. Annual Statistical Report (contains both English and French Sections). Fish Culture Report. *Canada's Fisheries. Map of the Atlantic Coast Provinces showing the Inshore and Deep-Sea Fishing Grounds. Statistics of the Haddock Fishery in North American Waters-A. W. H. Needler. Statistics of the Catch of Cod off the East Coast of North America, 1926-O. E. Sette. Statistics of the Mackerel Fishery off the East Coast of North America, 1804 to $1930-$ O. E. Sette and A. W. H. Needler. Discoloration, Smut or Blackening of Canned Lobsters-Harrison and Hood. Historical Account of the Lobster-Canning Industry-R. H. Williams. ${ }^{*}$ Fish Canning in Canada (non-technical). *Fisheries News Bulletin (monthly). *The Salmon Fishery of British Columbia. Report on Fisheries Investigations in Hudson Bay, 1930. *Summary of the Report by Messrs. Cockfield, Brown and Company, Limited, on the Marketing of Canadian Fish and Fish Products. *Hardening Mud Bottoms for Oyster Culture (mimeographed). *Factors in the Shipment of Live Lobsters from Eastern Nova Scotia. *The Life of the Atlantic Salmon. *Proceedings No. 1 of the North Arrerican Council on Fishery Investigations, 1921-30, ${ }^{*}$ Proceedings No. 2, 1931-33, and ${ }^{*}$ Proceedings No. 3, 1934-36. ${ }^{*}$ Report of the Royal Commission Investigating the Fisheries of the Maritime Provinces and the Magdalen Islands, 1927. The Storage of Oysters-A. W. H. Needler. ${ }^{*}$ Memoranda dealing with certain methods of fish processing. (Correspondents asking for papers in this group must indicate the particular processing method about which they wish information; these memoranda are not intended for the general reader.) *Memoranda descriptive of some fish hatchery methods. *Mimeographed circular Fish in the Diet. A fish cookery booklet, ${ }^{*} 100$ Tempting Fish Recipes, is made available to women by the Department. No charge is made to women for single copies of the cookery pamphlet, but except under certain specific conditions, quantity lots are not supplied free. *Mimeographed circular Home Canning of Fish. *Mimeographed memoranda relative to several species of Canadian fish and shellfish. Oyster Farming in Eastern Canada, by A. W. H. Needler; to members of the general public the price of this bulletin in 70 cents a copy, to persons carrying on oyster farming in Canada 25 cents.

Insurance.-Annual Statement showing List of Registered Insurance Companies. Annual Abstract of Statements of Registered Insurance Companies (subject to correction). Annual Reports of the Insurance Department, Vol. I (Fire and Miscellaneous). Vol. II (Life Companies and Fraternal Benefit Societies). Annual List of Securities held by Insurance, Trust and Loan Companies, with Department's Valuation thereof. Annual Report of Loan and Trust Companies. Annual Report of Small Loans Companies and Money-Lenders. Classification of Fire Insurance Risks. Table of Bond Values. Statistical Report of Fire Losses in Canada.

Justice.-Annual Report of the Superintendent of Penitentiaries. Canadian Constitutional Decisions of the Judicial Committee, Price $\$ 5$.

King's Printer and Controller of Stationery--Annual Report; The Annual Statutes; The Canada Gazette (published weekly); Annual Catalogue with quarterly supplements. Official Reports of Parliament (prices per session)-The Senate-Debates ss, Minutes of Proceedings \$1; House of Commons-Debates $\$ \$$, Votes and Proceedings $\$ 1$, Orders of the

Day 81; Bills of the Senate and House of Commons (Public and Private) 83. Revised Statutes of Canada, 1927, 5 volumes, \$10. Annual Statutes, 1928 to 1943, $\$ 5$ each. Acts (Public and Private), with amendments to date, 10 cents to 81.50 per copy. Index of Local and Private Acts, 1867-1941, and Table of Public Statutes, 1907-1942, 82. British North America Acts and Selected Statutes, 1867-1943, paper edition \$1:50, cloth edition \$2. Annual Departmental Reports at various prices. Periodicals-Agricultural Statistics (Quarterly Bulletin), yearly $\$ 1$, single copies 25 cents. Bank Statements (monthly), yearly $\$ 1$, single copies 10 cents. Board of Transport Commissioners (Fortnightly Review of Judgments, etc.), yearly \$3, single copies 20 cents. Business Statistics (Monthly Review), yearly \$1, single copies 10 cents. Canada Gazette (weekly), yearly $\$ 8$, single copies 20 cents. Canada Law Reports (including Exchequer Court Reports) (monthly), yearly \$6, single Parts 75 cents. Canadian Official Postal Guide, cloth 81, Monthly Supplements, yearly 25 cents. Canadian War Orders and Regulations (weekly), yearly $\$ 5$, single copies 10 cents. Miscellaneous publications at various prices (quoted prices are for Canada and the United States only unless otherwise specified).

Labour.-Monthly.-The Labour Gazette (published in English and French), Subscription price 20 cents per annum, postage prepaid, to subscribers in Canada, the United States of America and Mexico, and \$1 per annum, postage prepaid, to subscribers in all other countries. Annual.- Report of the Department of Labour (separate reprints are issued of the chapters dealing with the administration of the following statutes: Industrial Disputes Investigation Act; Government Annuities Act; Employment Offices Co-ordination Act; Technical Education Act; Combines Investigation Act; Youth Training Act). Report on Wages and Hours of Labour in Canada. Report on Strikes and Lockouts in Canada and Other Countries. Report on Labour Organization in Canada. Report on Labour Legislation in Canada (from time to time there are issued consolidated reports, the most recent of which reproduces the text or a summary of all Dominion and provincial labour legislation in existence at Dec. 31, 1937). Report of Dominion-Provincial Youth Training Program and DominionProvincial War Emergency Training Program. General Reports.-Report of Canadian Government Delegates to the Twenty-Sixth Session of the International Labour Conference, Wages in the Primary Textiles Industry in Canada, 1943, Collective Agreements in the Pulp and Paper Industry in Canada, 1944. The Employment of Children and Young Persons in Canada. Trade Union Law in Canada. Wartime Orders in Council Affecting Labour. Workmen's Compensation in Canada. $\mathrm{Re}-$ commended Practice of Industrial Lighting. Final Report of the National Employment Commission. Reports of Investigations under the Combines Investigation Act.- (1) Report of Commissioner on Alleged Combine in the Distribution of Fruit and Vegetables in Western Canada, 1925; (2) Report of Registrar on Alleged Combine Limiting Competition in the Marketing of New Brunswick Potatoes, 1925; (3) Report of Registrar on Alleged Combine in the Manufacture and Sale of Bread in the City of Montreal, 1926; (4) Report of Commissioner on Alleged Combine in the Distribution of Fruits and Vegetables Produced in Ontario, 1926; (5) Interim Report of Registrar on the Proprietary Articles Trade Association, an Alleged Combine of Wholesale and Retail Druggists and Manufacturers, Established to Fix and Maintain Resale Prices of Proprietary Medicines and Toilet Articles. 1926; (6) Report of Commissioner on the Proprietary Articles Trade Association, 1927; (7) Report of Commissioner on the Amalgamated Builders' Council and Related Organizations, an Alleged Combine of Plumbing and Heating Contractors and Others in Ontario, 1929; (8) Report of Commissioner on the Electrical Estimators' Association, an Alleged Combine of Electrical Contractors in the City of Toronto, 1930; (9) Report of Registrar on Alleged Combine in the Bread-baking Industry in Canada, 1931; (10) Report of Commissioner on Alleged Combine in the Motion Picture Industry in Canada 1931; (11) Report of Registrar on Alleged Combine of Tobacco Manufacturers and Other Buyers of Raw Leaf Tobacco in Ontario, 1933; (12) Report of Registrar on Alleged Combine in the Importation and Distribution of British Anthracite Coal in Canada, 1933; (13) Report of Commissioner under the Inquiries Act on Anthracite Coal, 1937; (14) Report of Commissioner on Alleged Combine in the Distribution of Tobacco Products in Alberta and Elsewhere in Canada, 1938; (15) Report of Commissioner on Alleged Combine in the Manufacture and Sale of Paperboard Shipping Containers and Related Products, 1939; (16) Report of Commissioner on Alleged Combine of Wholesalers and Shippers of Fruits and Vegetables in Western Canada, 1939. Bulletins in Industrial Relations Series.- (1) Joint Councils in Industry; (2) Report of a Conference on Industrial Relations Held at Ottawa in 1921; (3) Report of Joint Conference of the Building and Construction Industries in Canada, 1921; (5) Canada and the International Labour Conference; (7) Canadian Railway Board of Adjustment No. 1, Second Report; (8) Report of National Conference Regarding Third Employment in Canada, 1924; (9) Canadian Railway Board of Adjustment No. 1, Canadian Railway Board of Adjustment No. 1, Fifth Report; (13) Canadian Railway Bard of Adjustment No. 1, Sixth Report; (14) Canadian Railway Board of Seventh Report; (15) Canadian Railway Board of Adjustment No. 1, Eighth Report.

Mines and Resources.-Mines and Geology Branch.-Annual Report Separate. Bureau of Geology and Topography.-Memoir 238 Carboniferous Rocks and Fossil Floras of Northern Nova Scotia; Paper 44-5, Northern Part of Pinchi Lake Mercury Belt, B.C.; Paper 44-6, Athabasca-Barrhead Map Area, Alberta; Paper 44-7, Geology and Coal Deposits of Hasler Creek Area, B.C.; Paper 44-8, Occurrences of Quartz Crystals, Leeds Co., Ont.; Paper 44-9; La Motte Map Area, Que.; Paper 44-10, Londonderry Iron Deposits, Colchester Co., N.S.; Paper 44-11, Drinnan to Brule Lake, Athabasca Valley, Alberta; Paper 44-12, Rare-Element Minerals in Pegmatites, Yellowknife, N.W.T.; Paper 44-13, Geology and Mineral Deposits at Ainsworth, B.C.; Paper 44-14, Whitehorse District, Yukon; Paper 44-15, Some Coal Deposits of Peace River Foothills, B.C.; Paper 44-16, Geological Reconnaissance along Ft. Nelson, Liard, and Beaver Rivers, Yukon; Paper 44-17, Revision of Lower Cretaceous of Western Interior of Canada; Paper 44-18, Alexo Map Area, Alberta; Paper 44-19, Dunlevy-Portage Mountain Map Area, B.C.; Paper 44-20, Nicola, B.C.; Paper 44-21, Hematite Deposit, Hincks Township, Gatineau Co., Que.; Paper 44-22, Mikanagan Lake, Manitoba; Paper 44-25, Geological Reconnaissance along Alaska Highway between Watson Lake and Teslin River, Yukon and B.C.; Paper 44-26, Tay River Map Area, Alberta; Paper 44-28, Geological Investigation along Alaska Highway from Fort Nelson, B.C. to Watson Lake, Yukon; Paper 44-30, Alaska Highway, Fort St. John to Fort Nelson; Paper 44-32, Revision of the Palæontology of the Lower Cretaceous of the Western Interiór of Canada; Paper 45-7, Snow Lake, Manitoba. National Museum of Canada.-Bulletin 98, Southern Half of the Alaska Highway and its Mammals. Vol. XV, Pt. B, Canadian Arctic Expedition, 1913-1918, Grammatical Notes on some Western Eskimo Dialects. Special Contribution 45-1, Emergency Food in Arctic Canada. Bureau of Mines.-Report of the Explosives Division for the Calendar Years 1939 to 1943; Petroleum Fuels-Deliveries for Consumption, Calendar Year 1943; List of Coal Mines, 4-1; Memorandum Series 84, Depots de tourbe de mousse dans la province de Quebec; Memo. Series 85, Industrial Waters of Canada (Interim Report No. 6); Memo. Series 86, Peat Moss Deposits in Western Canada; Memo. Series 87, A Rapid Laboratory and Field Method for the Determination of Bitumen Content of Bituminous Sands; Memo. Series 88, Properties of Asphalt made from Athabaska Bituminous Sands.

Lands, Parks and Forests Branch.-Annual Report Separate Lands, Parks and Forests Branch. Bureau of Northwest Territories and Yukon Affairs.-The Northwest Territories, 1944; The Yukon Territory, 1944; Yukon, Land of the Klondike; Conserving Canada's Musk-oxen; Regulations respecting Game in the Northwest Territories; Game Ordinance and Fur Export Tax Ordinance of Yukon Territory; An Outline of the Canadian Eastern Arctic; Mineral Resources and Mining Activity in the Canadian Eastern Arctic; Eskimo Population of the Canadian Eastern Arctic; Economic Wild Life of Canada's Eastern Arctic-Caribou; A Brief History of Exploration and Research in the Canadian Eastern Arctic; The Conquest of the Northwest Passage by the R.C.M.P. Schooner St. Roch. National Parks Bureau.-(Booklets)-Canada's Mountain Playgrounds (Banff, Jasper, Waterton Lakes, Yoho, Kootenay, Glacier and Mount Revelstoke National Parks); Playgrounds of the Prairies (Riding Mountain, Prince Albert, Elk Island, Nemiskam, and Wood Buffalo National Parks); Playgrounds of Eastern Canada (Cape Breton Highlands, Prince Edward Island, Georgian Bay Islands, St. Lawrence Islands, Point Pelee National Parks and National Historic Parks); Fort Anne National Historic Park; Guide to Fort Chambly; Guide du Fort Chambly; Fort Chambly National Historic Park; Le Pare historique national du Fort de Chambly; The Port Royal Habitation; Guide to Fort Lennox; Guide du Fort Lennox; Guide to Fort Wellington; The Lake Erie Cross; Geology of the National Parks of Canada in the Rockies and Selkirks, Price 10 cents; Catalogue of Films Produced by the National Parks Bureau of Canada; The Migratory Birds Convention Act and Federal Regulations for the Protection of Migratory Birds; L'Art d'Attirer les Oiseaux en leur offrant le Manger et le Boire; Maisons d'Oiseaux et Leurs Occupants; Lessons in Bird Protection; Lecons concernant la Protection des Oiseaux; The Blue Goose, Price 50 cents. (Descriptive Folders)-The National Parks of Canada; Banff National Park; Cape Breton Highlands National Park; Elk Island National Park; Georgian Bay Islands, St. Lawrence Islands, and Point Pelee National Parks; Jasper National Park; Kootenay, Yoho, Glacier, and Mount Revelstoke National Parks; Prince Edward Island National Park; Prince Albert National Park; Riding Mountain National Park; Waterton Lakes National Park.

Dominion Forest Service.-Research Notes-(No. 65) Site Types and Rate of Growth at Lake Edward; (No. 66) Development of Forest Site Classification in Quebec; (No. 67) Cleaning of Scattered Young Balsam and Spruce in cut-over Hardwoods; (No. 68) Improvement Cuttings in Intolerant Hardwood-Conifer Type; (No. 69) Silvicultural Operations, 1940-41; (No. 70) Some Growth Characteristics of Red Spruce; (No. 71) Forest Growth on the Upper Lièvre Valley, Que.; (No. 72) Dominant Height and Average Diameter as a Measure of Site in Untreated Even-aged Lodgepole Pine Stands; Silvicultural Leaflets Nos. 1-19; (No. 73) Empirical Stand Density Yield Tables-Mulloy, 1944; Aerial Forest Survey Research Notes-(No. 1) Determination of Tree Heights from Shadows in Air Photographs; Forest Fire Research Notes-(No. 10) Forecasting weather and forest fire hazard from local observations; Practical value of forest fire hazard records and forecasts; Application of meteorology to forest fire protection.

Forest Products Laboratories.-Thermoplastic Laminates Based on Kraft Paper and Phenolic Resins; The Effect of Kiln Drying upon the Strength of Sitka Spruce; The Effect of Moisture with Time on Casein Glues; Cost of Sawing Eastern Spruce Lumber; Production of Pine Tar by the Destructive Distillation of Canadian Softwoods; Investigation of Brown Streak in Western Hemlock used for Aircraft Purposes; Ethyl Alcohol from Wood Waste; Notes on Laminated Construction; A Comparison of the Strength of Plywoods Manufactured from Rotary Cut and Sliced Veneers; The Tension Normal to Glue-Line Plywood Test.

Surveys and Engineering Branch.-Annual Report Separate Surveys and Engineering Branch. Dominion Observatory, Ottawa-Seismological Bulletin (monthly); Wureless Time Signals (monthly); Vol. XIII, Nos. 15, 16, Bibliography of Seismology, Price 25 cents each; Recent Developments in Rockburst Research at Lake Shore Mines, Price 25 cents; The Cornwall-Massena Earthquake, September 5, 1944, Price 25 cents. Dominion Astrophysical Observatory, Victoria, B.C.-Line Intensities and the Solar Curve of Growth, Price 25 cents. Geodetic Service-No. 20, Precise Levelling in Ontario, North of Parry Sound, Price 50 cents. Dominion Water and Power Bureau-Water Resources Paper No. 85, Surface Water Supply of Ontario and Quebec, 1937-38 and 1938-39 (bilingual); Water Resources Paper No. 87, Surface Water Supply of New Brunswick, Nova Scotia and Prince Edward Island, 1938-39 and 1939-40; Water Resources Paper No. 90 , Surface Water Supply of British Columbia and Yukon Territory, 1938-39 and 1939-40. Hydrographic Service-Tide Tables for Atlantic Coast and Pacific Coast, Price 25 cents each; Tide Tables, regional abridged editions, Price 10 cents each. Sailing Directions for the Saint John River, Price 50 cents; Southeast Coast Nova Scotia and Bay of Fundy Pilot, Price \$1-25; Gulf of St. Lawrence Pilot, Price \$1-25; Sailing Directions for the Hudson Bay Route, Price 50 cents; Sailing Directions for Lake Melville, Price 50 cents; St. Lawrence Pilot (below Quebec), Price $\$ 1 \cdot 25$; St. Lawrence Pilot (Quebec to Montreal), Price 50 cents; St. Lawrence Pilot (Montreal to Kingston), Price 50 cents; Great Lakes Pilot, Volume I, Price \$1; Great Lakes Pilot, Volume II, Price \$1-25; Great Lakes Pilot, Volume III, Price \$1.25; British Columbia Pilot, Volume I, Price \$1.50; British Columbia Pilot, Volume II, Price \$1.50. Official navigation charts for Atlantic and Pacific Coasts of Canada, Hudson Bay, Great Lakes and other inland navigable waters. -Precise Water Level Reports (Great Lakes and St. Lawrence Waterway). Catalogue of Nautical Charts, Sailing Directions and Tidal Information.

Munitions and Supply.-The Industrial Front, English and French; (Vol. III, Jan. 1, 1943; Vol. IV, a Supplement to Vol. III, July, 1943; Vol. V, Jan. 1, 1944); Manuai of frocedure on Termination of Contracts, 1945; An office consolidation as of Jan. 1, 1945, of Orders in Council relating to, and orders made by the Wartime Industries Control Board controls.

National Defence.-Annual Report; Canadian Navy List; Naval General Orders; General Orders, Army; Canadian Army Routine Orders; Flying Regulations, R.C.A.F.; Air Force General Orders; King's Regulations for the Royal Canadian Air Force; Financial Regulations for the Royal Canadian Air Force on Active Service, 1945.

National Film Board.-(Publications marked * are available in both Enolish a.2. Fre ich.) Periodicals.-Canada in Action Study Guides (film notes for rural circuits); *National Fulm Board News (Distribution Information); *Fighting Films (film notes for industrial circuits); *Labour's Film Forums (film notes for Trade Unions); Rural Route (film notas for rural circuits). Special Publications. 16 mm Film Catalogue; 16 mm Catalogue Supplements (four supplements dealing with films on Education, Agricuiture and Consumer subjects, Social Planning, and Canada and the World at War); 16 mm Films in Spanish (leatiet on Canadian films distributed in Latin-American countries); *Facts About the National film Board. United States Editions.-16mm Film Catalogue; Films on Food and Nutrition; *The Arts in Canada and the Film (illustrated).

National Health and Welfare.-National Health: (1) Sanitation-Sewage Treatment for Isolated Houses and Small Institutions where Municipal Sewage is not Available; (2) The Canadian Mother and Child; (3) Infantile Paralysis; (17) Wells; (18) Home Treatment of Rural Water Supplies; (21) Housing; (23) Air Conditioning and Heating in relation to Health; (27) Prevention of Blindness in Babies; (29a) Goitre-Facts for the General Public; (30) How to Build Sound Teeth; (31) What You Should Know about Tuberculosis; (32) Smallpox and Vaccination; (34) The Rat Menace; (35) Middle Age-Your Arteries and Heart; (36) The Common Cold; (101) Artificial Respiration, a poster; (102) Holiday Healtha Guide for Campers and Cottagers; (108) Prevention of Diphtheria; An Industrial Nutrition Programme; Healthful Eating; Score Sheet for Each Day's Meals; Canada's Food Rules; Canadian Nutrition Notes; The Canadian Nutrition Programme; Nutrition in Industry; Nutrition in Wartime; Kitchen Wall Chart in Colours; posters: Meal Patterns; 1 ood to eat each day; Foods for Health; Buy Wisely. Some problems of industry are dealt with in booklets issued concerning T.N.T. poisoning, benzol poisoning, nitrous-fume poisoning, and skin protection for tetryl workers. A variety of pamphlets dealing with venereal disease control may be obtained through provincial departments of health. Welfare: Family Allowances-A Children's Charter.

National Research Council.-A list of publications issued by the National Research Council is available for free distribution on request. At the end of March, 1945, the number in the list was 1,280 . This list includes Annual Reports of the Council; Technical Reports Nos. 1-29; Bulletins Nos. 1-19; Mimeographed Reports not hitherto listed as Council publications; Papers reprinted from the Canadian Journal of Research which contains (i) Reports of experimental work carried on in the National Research Laboratories, (ii) Reports of work done elsewhere with financial assistance from the National Research Council. All of these reports have been arranged in chronological order of publication and numbered in sequence. This series of publications is preceded by the letters "N.R.C. No.".

The Canadian Journal of Research has not been included in the "N.R.C. No." series. Established as a medium for the publication in Canada of the results of original scientific research carried on in the Dominion, the Canadian Journal of Research is now published in six sections: A-Physical Sciences; B-Chemical Sciences; C-Botanical Sciences; DZoological Sciences; E-Medical Sciences; F-Technology. The Journal is to be found in the leading scientific libraries of the world. From its inception in May, 1929, to the end of Volume 12 in June, 1935, the Journal was issued in a single volume each month. Copies of these 12 volumes unbound are available at $\$ 1 \cdot 50$ each. An index of volumes $1-12$ is available at $\$ 1$. From July, 1935, to December, 1943, the Journal was published in four sections, each section being paged separately. Sections A and B were bound in one cover each month, and Sections C and D were likewise bound together. The issues from July to December, 1935, were included in Volume 13, Price $\$ 2$. Volume 14 contains the Journals issued in 1936 and one volume has been published each year since then. In January, 1944, two new sections were added, namely, Section E-Medical Sciences and Section F-Technology. Issue of the Journal was made bi-monthly, three sections appearing in each alternate month. Each of the six sections now appears under its own cover. Single numbers of the Journal are priced at 50 cents each; the yearly subscription rates are: one section \$2; two sections \$8; three sections \$4; four sections \$5; any five or all six sections \$6.

## Section 1.-Principal Events of the Year

The War.-The final act of unconditional surrender of the German Armed Forces took place at Reims, France, on May 7, 1945. Here Col. Gen. Gustav Jodl, German Chief of Staff, signed the surrender instrument at Gen. Dwight D. Eisenhower's Headquarters in a local schoolhouse. Unconditional surrender was simultaneously made, to the United Kingdom, the United States and the Soviet High Command. Thus the War in Europe was brought to a successful conclusion.

On July 4, 1945, Canadian military troops entered Berlin as part of the British garrison force to take over their assigned occupation zones of the German capital.

On July 17 to Aug. 2, 1945, representatives of the "Big Three" Powers met at Potsdam, Germany. The Conference was interrupted for the British general election. On July 28, the new British Prime Minister, Clement Attlee, replaced Mr. Churchill at the Conference.

On Aug. 6, 1945, the first atomic bomb dropped on the Japanese army base of Hiroshima wrought great devastation. Russia declared war against Japan on Aug. 8. Following warnings to the Japanese people, the second atomic bomb was dropped on the naval base of Nagasaki on Aug. 9. On Aug. 10, the Government of. Japan notified the Allied Powers that the Potsdam Declaration laying down the broad conditions of surrender for Japan would be acceptable to her, provided the Emperor be allowed to retain certain of his prerogatives. On Aug. 11, the United States, Britain, China and Russia accepted the Japanese proposal on the understanding that the Emperor should exercise his powers under instructions from the Supreme Commander of the Allied Forces. Aug. 14, Japan announced the acceptance of the Allied terms. On Aug. 21, Gen. Douglas MacArthur, Commander-in-Chief of the Allied Forces in the Pacific, arranged for the occupation of Japan by American Forces to take place Aug. 31, 1945.

Japan surrendered formally and unconditionally to the Allies on Sept. 1, $7 \cdot 18$ p.m., E.S.T. (Sunday, Sept. 2, $9 \cdot 18$ a.m., Tokyo Time), on board the battleship, U.S.S. Missouri anchored in Tokyo Bay, Japan. Gen. Douglas MacArthur, Supreme Commander of the Allied Powers, signed on behalf of the Nations at war with Japan. Canada's representative at the formal surrender was Col. L. Moore Cosgrave, Canadian Military Attaché to Australia.

The San Francisco Conference.-A United Nations Conference was held at San Francisco, Apr. 25 to June 26, 1945. Representatives from fifty Allied Nations attended, the purpose being to prepare a Charter for a general international organization for the maintenance of international peace and security.

Visiting Royalty.-Princess Juliana of the Netherlands, who made her home in Canada during the occupation of the Netherlands by the German forces and one of whose children was born in Canada, officially bid farewell to the Canadian people on July 14, 1945, and expressed thanks for the great hospitality and kindness to her and her three children during her residence in Canada.

Visiting Statesmen.-Field Marshal the Rt. Hon. Jan Christiaan Smuts, Prime Minister of the Union of South Africa, arrived in Ottawa on June 28, 1945, for an unofficial visit.

Gen. Charles de Gaulle, President of the Provisional Government of the Republic of France, made a State visit to Ottawa on Aug. 28 and 29, 1945. Dr. T. V. Soong, Prime Minister of the Chinese Republic arrived in Ottawa on Aug. 31, 1945, for a three-day visit.

Dominion-Provincial Conference.-A Dominion-Provincial Conference on Post-War Reconstruction opened at Ottawa, Aug. 6, 1945. The Dominion Government presented its brief as a basis for later discussion. Initial talks ended Aug. 10, with the decision that the Conference meet again in November, 1945.

Appointments.-Governor General.-Prime Minister King announced July 31, 1945, that His Majesty the King had approved the appointment of Field Marshal Sir Harold Alexander to succeed the Earl of Athlone as Governor General of Canada.

Diplomatic Appointments. - The personnel of Canadian Diplomatic representatives abroad and of British and foreign envoys to Canada, as at Feb. 28, 1945, is given at pp. 86-90 of this volume. Since the sending to press of Chapter IIIConstitution and Government - the following representatives of Canada's Allies presented their credentials to His Excellency the Governor General: The first Peruvian Ambassador to Canada, Dr. Alfredo Benavides, on Mar. 29, 1945; the Belgian Ambassador, M. A. Paternotte de la Vaillee, on July 20, 1945; the Chilean Ambassador, Pedro Castelblanco, on Aug. 13, 1945. Hon. Alfred Stirling, O.B.E., was appointed High Commissioner for Australia to Canada and arrived in Ottawa on July 13. Dr. P. R. Viljoen was appointed first High Commissioner for South Africa to Canada but to date (Sept. 1) has not arrived in Ottawa. Dr. Honorio Leguizamon Pindal was appointed first Ambassador for the Argentine to Canada, on Aug. 27. Pierre Dupuy, C.M.G., was appointed Canadian Minister to the Netherlands on Mar. 8, 1945, and presented his credentials to the Queen of the Netherlands on Apr. 7. Emile Vaillancourt was appointed first Canadian Minister to Cuba on Mar. 16, 1945, and presented his credentials to the President of Cuba on May 8. General the Hon. L. R. LaFleche, former Minister of War Services, was nominated Canadian Ambassador to Greece on June 7, 1945, but to date (Sept. 1) has not presented his credentials. Warwick F. Chipman, K.C., was appointed first Canadian Ambassador to the Argentine on Aug. 2, 1945.

Provincial General Election.-A general election took place in Ontario on June 4, 1945, when the Progressive Conservative Government of the Hon. George A. Drew, K.C., was returned to power with a strong over-all majority. The returns of the election were: Progressive Conservative 66, Liberal 11, Co-operative Commonwealth Federation 8, Liberal-Labour 3 and Labour-Progressive 2.

Dominion General Election.-A general election was held on June 11, 1945, when the Liberal Government of the Rt. Hon. W. L. Mackenzie King was returned to power, although with a reduced majority. A list of the new Members of the

House of Commons, showing the number of voters on the list and votes polled in each constituency, together with the party allegiance of each member, will be found in Appendix V to this volume.

Hon. R. L. Kellock, a Puisne Judge of the Supreme Court of Canada: to be a Commissioner under Part I of the Inquiries Act to inquire into the disorders at Halifax, N.S. and vicinity, during a celebration of the declaration of Victory over Germany on May 7 and 8, 1945. Robert Forsyth, K.C., Senior Advisor Counsel of the Department of Justice: to be a Commissioner under Part I of the Inquiries Act, to inquire into and report upon the publication of an article appearing in the Montreal Gazette on May 15, 1945, regarding the capture of a German spy in November, 1942. June 20, C. IV. Boyce, Acting-Assistant, House of Commons: to be a Commissioner to administer the Oath of Allegiance to Members elected.

National Day of Prayer and Dedication.-Sunday, Sept. 3, 1944, was appointed by proclamation as a "day of humble prayer and intercession to Almighty God and of special dedication to national service and sacrifice on behalf of the cause undertaken by Canada, by the United Kingdom and by* other Dominions of the British Commonwealth of Nations, and by Allied and Associated Powers and all those who are offering their lives for our cause, and for a speedy and favourable peace founded upon understanding and not hatred, to the end that peace shall endure"

Day of General Thanksgiving.-Monday, Oct. 9, 1944, was appointed by proclamation as a "day of general thanksgiving to Almighty God for the blessings with which the people of Canada have been favoured".

Days of Prayer and Thanksgiving for Victory over Germany.-Tuesday, May 8, 1945-This day was appointed by proclamation to be observed throughout Canada as a holiday for the Victories won by the Armed Forces of Canada and the other United Nations in the War against the German Reich. Sunday, May 13, 1945-This day was appointed by proclamation as a day of "Prayer and solemn Thanksgiving to Almighty God for the Victories won by the Armed Forces of Canada and the other United Nations in the War against the German Reich'; and as a day of "Remembrance of the heroism of the men and women of Canada ana the other United Nations who have given their lives in the War"; and also as a day of "Rededication under Almighty God for the attaining of final victory over the enemies of freedom and for the completion of the task by Canada and Powers associated with Canada of restoring, on a firm and enduring basis of justice and right, peace and accord among the nations of the world".

Days of Prayer and Thanksgiving for Victory over Japan.-Wednesday, Aug. 15, 1945-This day was appointed by proclamation to be observed throughout Canada as a holiday in celebration of the Victory over the forces of Japan. Sunday, Aug. 19, 1445 - This day was appointed by proclamation as a day of "Prayer and solemn Thanksgiving to Almighty God for the Victory granted to the cause of freedom against Japanese aggression and for the termination of active hostilities in the great War in which Canada and other of the United Nations have been engaged; and as a day of Remembrance of the heroism of the men and women of Canada who have given their lives in the War, and of those who have suffered wounds or have endured captivity in enemy hands, and of the courage and fortitude with which so many of our citizens have borne heavy burdens of bereavement and anxiety; and also as a day of Rededication under Almighty God in the effort for the restoration, on a firm and enduring basis of justice and right, of peace and accord among the nations of the world"

# Section 3.-Dominion Legislation, 1944 

## Legislation of the Fifth Session of the Nineteenth Parliament, Jan. 27, 1944 to Aug. 14, 1944.

Nore.-This classified list of Dominion Legislation has been compiled from the Statutes. Naturally, in summarizing material of this kind it is not always easy to convey the full implication of the legislation; The reader who is interested in any specific Act is therefore referred to the Statutes themselves. Adequate references are given in this summary.

The War Appropriation Act, No. 1, 1944 authorizes the payment, out of the Consolidated Revenue Fund, of a sum not exceeding $\$ 850,000,000$ for expenses incurred during the fiscal year 1944-45 in connection with the security, defence and welfare of Canada.

The Appropriation Act, No. 3, 1944 grants payment, out of the Consolidated Revenue Fund, of $\$ 46,331,283 \cdot 90$ for public service expenses for the fiscal year 1944-45, being one-sixth of the amount of the main estimates.
The War Appropriation (United Nations Mutual Aid) Act, 1944 makes available an additional sum of $\$ 800,000,000$, out of the Consolidated Revenue Fund, for the payment of expenses incurred in carrying out the provisions of the War Appropriation (United Nations Mutual Aid) Act, 1943, and also authorizes the raising of a loan of $\$ 800,000,000$ for the purposes of the Act.
The War A ppropriation Act, No. 2, 1944 authorizes the appropriation, out of the Consolidated Revenue Fund, of a sum not exceeding $\$ 3,650,000,000$, less the amount provided for in c. 6 for defraying expenses incurred during the fiscal year 1944-45 in connection with the security defence and welfare of Canada. Authority is also given for the raising, by the issue and sale of securities of Canada, of a sum not exceed ng $\$ 3,650,000,000$ as may be required for the purposes of the Act.
An Act to Amend the Bank Act (c. 24, 1934) continues the charters of the banks to Sept. 1, 1944. (See also c. 30 below).
An Act to Amend the Quebec Savings Banks Act (c. 14, R.S.C. 1927 and amendments) extends the charters of the Montreal City and District Savings Bank and of La Caisse d'Economie de Notre Dame de Québec to Sept. 1, 1944. (See also c. 47 below.)
An Act to Amend the Salaries Act (c. 182, R.S.C. 1927 and amendments) fixes the salaries of all Cabinet Ministers at $\$ 10,000$.
The Appropriation Act, No. 4, 1944 grants the payment out of the Consolidated Revenue Fund, of $\$ 23,165,641 \cdot 95$ for defraying the expenses of the public service during the fiscal year 1944-45, being one-twelfth of the items contained in the main estimates, together with an additional interim of $\$ 259,644 \cdot 50$, being one-sixth of the amount set forth in the Schedule to the Act.

The Bank Act, 1944, renews the charters of the chartered banks of Canada to July 1, 1954, specifies the type of business in which they may engage and lays down regulations to control the conduct of their operation. (See pp. 882-884 of the 1943-44 Year Book for detailed description of changes made.)
The Canada-Unted States of America Tax Convention Act, 1944 approves and brings into force a Tax Convention concluded between Canada and the United States to avoid double taxation and prevent fiscal evasion in the case of estate taxes and succession duties. 1944 to Aug. 14, 1944 -continued

An Act to Amend the Customs Tarif (c. 44 R.S.C. 1927 and amendments). This Act makes certain changes in Schedules A and B to the Customs Tariff.

An Act to Amend the Dominion Succession Duty Act (c. 14, 1940-41 and amendments) introduces revisions in respect to dispositions deemed to be included in a succession.
An Act to Amend the Excess Profits Tax Act, 1940 (c. 32, 1940 and amendments) makes important changes in the excess profits tax mainly in connection with the determining of standard profits, deductions allowable and regulations regarding the refundable portion of the tax.

## Synopsis

An Act to Amend the Income War Tax Act (c. 97 R.S.C. 1927 and amendments) makes numerous amendments in regard to procedure, especially in regard to service pay and allowances received by members of the Armed Forces; business and farm losses; deductions for alimony; expenditures for scientific researcb; deferred maintenance and repairs; expenditures on drilling of test oil wells. or prospecting for certain minerals.

The Industrial Development Bank Act is an act to incorporate the Industrial Development Bank, as a subsidiary of the Bank of Canada. The functions of this Bank are to promote the economic welfare of Canada by ensuring the availability of credit to industrial enterprises, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the fin ncing problems of small enterprises. (See pp. 876-877 of the 1943-44 Year Book and pp. 994-995 of this volume for details.)
An Act to Amend the Ouebec Savings Banks Act (c. 14, R.S.C. and amendo ents) renews the charters of the Montreal City and District Savings Bank and of La Banque d'Economie de Québec until July 1, 1954. The par value of bank shares , reduced from $\$ 100$ each to $\$ 10$ each and other amendments are made mainly in e nnection with loans and investments.

An Act to Amend the Special War Revenue Act (c. 179, R.S.C. 1927 and ame dments) enacts amendments relating mainly to the keeping of records. Certain sertions of the Act are repealed and a few changes made in connection with imports if furs, cigars and sugar.

An Act to Amend the War Exchange Conservation Act, 1940 (c. 2, 1940-41 and amendments) adds or removes certain items from the Schedules to the basic legislation.

The Appropriation Act, No. 5, 1944 grants payment, out of the Consolidated Revenue Fund, of $\$ 161,899,849 \cdot 17$ and $\$ 21,459,077 \cdot 59$ (less the amounts already authorized under cc. 1, 7 and 27) for public service expenses for the fiscal year 1944-45. Authority is also given for raising, by the issue and sale of securities of Canada, a sum not exceeding $\$ 200,000,000$ for public works and general purposes.

The Aqricultural Prices Support Act, 1944 provides for the establishment of an Agricultural Prices Support Board, under the Minister of Agriculture. The Board shall endeavour to ensure adequate and stable returns for agriculture by promoting orderly adjustment from war to peace conditions and to secure a fair relationship between the returns from agriculture and those from other occupations.

The Farm Improvement Loans Act, 1944. To encourage the provision of credit to farmers for the improvement and development of farms and improvement of living conditions, the Government is authorized, subject to the provisions of the Act, to guarantee such loans made by the banks.

An Act to A mend the Civil Service Superannuation Act (c. 24, R.S.C. and amendments) makes important amendments to that Act, including: the re-opening of the Act for one year from Aug. 15, 1944, to those on retirement who failed to elect in the previous open period; opportunity to include previous service for which contributions are not being made at present; provision for prevailing rate employees and other groups to come within the Act; the return of contributions to the estate of persons dying in the Service without dependants; provision for those on Active Service to be credited with paid-up service for the time spent in the Armed Forces.

Tke Fisheries Prices Support Act. 1944 is designed to assure an adequate standard of living for fishermen and those engaged in the fish-processing industry by the stabilization of fish prices during the transition from war to peace. The provisions of the Act will be carried out by a Fisheries Price Support Board, under the direction of the Minister of Fisheries.

An Act to ${ }^{\circ}$ Amend the Canadian and British Insurance Companies Act, 1982 (c: 46, 1932 and amendments) amends the Act by widening the list of investments for insurance company funds to include mortgages insured by the United States Federal Housing Administrator.

The Export Credits Insurance Act provides for the incorporation of the Export Credits Insurance Corporation for the purpose of facilitating and developing Canada's export trade after the War. A system of export credit insurance is introduced and the Corporation is authorized to provide direct credit assistance to governments of other countries for a three-year period during the transition from war to peace so that countries without sufficient funds may be able to obtain Canadian products. (See also pp. 482483 of this volume.)

The United Nations Relief and Rehabilitation Administration Act, 1944 gives the Canadian Government power to carry out the Agreement signed by the United Nations at Washington Nov. 9, 1943 to administer to the relief and rehabilitation of victims of war in areas under the control of any of the United Nations. Interim expenditures for this purpose, not exceeding $\$ 10,000,000$, are provided for under the War Appropriation (United Nations Mutual Aid) Act, 1943, all other expenditures to be defrayed out of moneys provided by Parliament. (See also pp. 79-85 of this volume.)

An Act to Amend the Exchequer Court Act (c. 34, R.S.C. 1927 and amendments) amends the constitution of the Court to include two Puisne Judges instead of one.

An Act to Amend the Judges Act (c. 105, R.S.C. 1927 and amendments) provides for the payment of the salaries of two Puisne Judges instead of one.

An Act to Amend the Crimina? Code (c. 36, R.S.C. 1927 and amendments) increases the penalties for theft of mail and for fraud in connection with sale, etc., of military stores.

An Act to Amend the Judges (Annuities) Act (c. 105, R.S.C. 1927 and amendments) makes provision for an annuity equal to two-thirds of pension to be paid to a judge if he so elects and for an annuity to the widow of a judge who dies while holding office.

The Technical Education Extension Act. 1944 amends the Technical Education Act (c. 193 R.S.C. 1927 and amendments) extending for 5 years from Mar. 31, 1944, the period during which unexpended balances of the Appropriation under the Act may be disposed of.

The Naval Service Act, 1944 replaces the Naval Service Act (c. 139, R.S.C. 1927) and also the Naval Discipline Act, 1866, and amendments, the Naval Discipline (Dominion Naval Forces) Act, 1911, both passed by the Parliament of the United Kingdom, and the King's Regulations and Admiralty Instructions in so far as they are part of the law of Canada. The present Act includes regulations concerning naval discipline, which were formerly included in the Imperial Acts.

Legislation of the Fifth Session of the Nineteenth Parliament, Jan. 27, 1944 to Aug. 14, 1944 -continued

| Chapter and Date of Assent | Synopsis |
| :---: | :---: |
| National Health and Welfare- |  |
| 22 July 24 | The Department of National Health and Welfare Act. By this Act the Department of National Health and Welfare is established. This Department will discharge such duties as relate to the promotion or preservation of the health, social security and social welfare of the people of Canada over which the Parliament of Canada has jurisdiction. It will administer the functions of the Health Branch of the former Department of Pensions and National Health. The Act also provides for the establishment of a Dominion Health Council. (See also Chapter XXI.) |
| 40 Aug. 15 | The Family Allowances Act, 1944. This Act makes provision for the payment of a monthly allowance, payable to the parents of each child who is a resident of Canada and less than sixteen years of age. The amount of the allowance will be graduated according to the number of children in the family and the age of the child. The purpose of the allowance is for the maintenance, care and education of the child. (See also pp. 801-802 of this volume.) |
| Reconstruction- |  |
| 18 June 30 | The Department of Reconstruction Act, 1944 provides for the establishment of a Department of Reconstruction to deal with the re-establishment in civil life and re-employment on demobilization of men and women of the Armed Forces and of persons released from war industries, together with the re-organization of industry in order to provide maximum production and full employment during and following the change-over from wartime to peacetime production. (See also Chapter XXII.) |
| Transportation- |  |
| 8 June 1 | An Act respecting the Appointment of Auditors for National Railways provides for the appointment of independent auditors for 1944 to make a continuous audit of the accounts of the National Railways. |
| 9 June 1 | Canadian National Railways Refunding Act, 1944. The Act provides for the refunding of matured and callable financial obligations of the Canadian National Railway Company and for the issue of substituted securities in respect of such refunding to an amount not exceeding $\$ 200,000,000$. |
| 14 June 23 | The Canadian National Railways Financing and Guarantee Act, 1944, authorizes the payment of a sum not exceeding $\$ 10,549,500$, out of the Consolidated Revenue Fund, to meet certain capital expenditures made and capital indebtedness incurred by the Canadian National Railways System during 1944, and also authorizes the guarantee by His Maiesty's Government in Canada of certain securities to be issued by the Canadian National Railway Company. |
| 25 July 24 | An Act to Amend the Transport Act (c. 53, 1938). The amendment removes the authority of the Board of Transport Commissioners in respect of transport by aireraft. |
| 28 Aug. 15 | An Act to Amend the Aeronautics Act (c. 3, R.S.C. 1927) establishes the Air Transport Board under the Department of Transport empowered to make investigations and surveys relating to the operation and development of commercial air services and to act as a licensing and regulating body in respect of civil aviation. |
| Veterans Affairs- |  |
| 19 June 30 | The Department of Veterans Afairs Act. This Act establishes the Department of Veterans Affairs whose duties and powers relate to the care, treatment, training or re-establishment in civil life of persons who have served in Canada's Armed Forces and to the care of their dependants. It will also administer pensions, war veterans allowances and the rehabilitation program formerly under the jurisdiction of the Department of Pensions and National Health and will take over the administration of the Veterans' Land Act, 1942, and the Soldier Settlement Act, formerly under the Department of Mines and Resources. (See also Part II of Chapter XXII.) |
| 49 Aug. 15 | The Veterans Insurance Act. Under the provisions of this Act, veterans will be enabled to secure life insurance up to $\$ 10,000$, at premiums lower than those of the majority of insurance companies. No medical examinations will be required except under special circumstances. |

# Legislation of the Fifth Session of the Nineteenth Parliament, Jan. 27, 1944 to Aug. 14, 1944 -concluded 

| Chapter and <br> Date of Assent | Synopsis |
| :---: | :---: |
| Veterans Affairs <br> -concluded |  |
| 51 Aug. 15 | The War Service Grants Act, 1944 provides for payment of war service gratuities to discharged members of the Forces, the amount of the gratuity to be in proportion to the length of service. A supplementary gratuity will be paid to ex-service personnel who have had overseas service. A re-establishment credit equal to the amount of cash gratuity will also be given for certain specified purposes. |
| Miscellaneous- |  |
| 11 June 1 | An Act to authorize an Agreement between His Majesty the King and the Corporation of the City of Ottawa (c. 15, 1920 and amendments) extends for one year from July 1, 1943, the agreement of Mar. 30, 1920, with the City of Ottawa for certain payments in lieu of part of rates and taxes for civic services and water, and in settlement of certain claims. |
| 13 June 1 | An Act to repeal the Water Meters Inspection Act (c. 209, R.S.C. 1927) repealed the legislation of the said Act, which laid down regulations concerning the inspection, by the Department of National Revenue, of meters for the measuring and recording of the volumes of water furnished to purchasers. |
| 21 June 30 | The Surplus Crown Assets Act provides for the disposition, by sale, exchange, lease, lend or other manner, of surplus Crown assets through the establishment of a War Assets Corporation under the Department of Munitions and Supply. No disposition of surplus Crown property may be made except through this Corporation and every Government Department is required to report from time to time such property to the Minister of Munitions and Supply. The Act also provides for the establishment of a Crown Assets Allocation Committee, which shall act in an advisory capacity on matters relating to the disposal or dealing with Surplus Crown assets. |
| 26 July 24 | An Act to Amend the Dominion Elections Act, 1938 (c. 46, 1938) provides regulations enabling Canadian War Service electors to exercise their franchise, and Canadian prisoners of war to vote by proxy at any general election held during the present war or within a period of six months thereafter. Amendments are also made to the Dominion Elections Act, 1938, consequential to such regulations, or made necessary by the advent of the War. |
| 33 Aug. 15 | An Act to Amend the Canadian Broadcasting Act. 1996 places the Chairman of the Corporation on a full-time basis at an annual salary to be determined by the Governor in Council. |
| 46 Aug. 15 | The National Housing Act, 1944 enacts legislation to provide $\$ 275,000,000$ for government assistance to persons wishing to build or repair their own homes, to aid in slum clearance projects and to stimulate the building of low-rent housing units. Provision is also made for loans to the value of $\$ 5,000,000$ to be made for rural housing improvement and equipment, and for a program of research into housing conditions generally. Government financial assistance will be provided through the medium of banks, lending and insurance companies. |

## APPENDIX I

## External Trade of Canada, 1944-45

Preliminary figures of the external trade of Canada for the fiscal year ended Mar. 31, 1945, show a grand total trade of $\$ 5,217,047,156$ as compared with $\$ 4,974,743,551$ for the previous fiscal year and $\$ 4,068,095,674$ for $1942-43$. The value of domestic exports showed an increase from $\$ 3,173,143,528$ in 1943-44 to $\$ 3,456,128,490$ in 1944-45. Imports decreased from $\$ 1,762,771,514$ in $1943-44$ to $\$ 1,717,917,175$ in 1944-45. Foreign exports were $\$ 43,001,491$ compared with $\$ 38,828,509$.

The following tables show: the imports and domestic exports of Canada, classified by industrial groups, by months, April, 1944, to March, 1945; the total trade of Canada, by months, January, 1944, to July, 1945; and an analysis of domestic exports for the calendar year 1944 by commodities and by countries to which the goods are exported.

## 1.-Imports and Domestic Exports of Canada (Excluding Gold), Classified by Industrial Groups, by Months, April, 1944-March, 1945

Note.-Figures for the months of April, 1942-March, 1944, are given at pp. 1057-58 of the 1943-44 Year Book.

# APPENDIX II <br> Survey of Production, 1942-43 

There has been a complete revision in the figures of the gross and net values of production in agriculture to remove duplication and so give an estimate of the value of production in agriculture appropriate for comparison with other enterprises in Canada. These figures for agriculture as included in the following tables are not comparable with figures previously published and as given in Chapter VII, p. 179 of this volume. A complete statement of method will be given in the 1946 Canada Year Book and in the meantime is available from the Agricultural Branch of the Bureau of Statistics.
1.-Gross and Net Values of Production in Canada, by Industries, 1942 and 1943

| Division of Industry | 1942 |  | 1943 |  | Percentage of Net Value to Total Net Production, 1943 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Gross ${ }^{1}$ | Net ${ }^{1}$ | Gross ${ }^{1}$ | Net ${ }^{1}$ |  |
| Agriculture. | $1,615,453,000$ | $\stackrel{\text { \% }}{\text { 1,351, } 606,000}$ | 1,524, 379,000 | ${ }_{1,245,843,000}^{\text {s }}$ | p.c. ${ }^{\text {P.70 }}$ |
| Forestry... | 763,988,245 | 429,079, 260 | 810,154,089 | 462,815,227 | 7-32 |
| Fisheries. | 103,118,177 | 64, 821,702 | 118,610,634 | 74,655,678 | 1.18 |
| Trapping. | 23, 801, 213 | 23, 801,213 | 21,579,615 | 21,579,615 | $0 \cdot 34$ |
| Mining.. | 946,021,397 ${ }^{2}$ | 514,109,951 | 974, 414,921 | 475, 529,364 | $7 \cdot 52$ |
| Electric power............ | 203, 835, 365 | 200,345,240 | 204,801,508 | 200,833,297 | $3 \cdot 17$ |
| Totals, Primary Production. | 3,656,217, 397 | 2, 583,763,366 | 3,653,939,767 | 2,481,256, 181 | $39 \cdot 23$ |
| Construction. | 635,649,570 | 310,917, 190 | 572,426,551 | 293,538, 167 | 4-64 |
| Custom and repair....... | 208,379,000 | 141,395, 000 | 213,622,000 | 144,952,000 | $2 \cdot 29$ |
| Manufactures ${ }^{3} . . . . . . . . .$. | 7,553,794,972 | 3,309,973,758 | 8,732,860,999 | 3,816,413,541 | $60 \cdot 34$ |
| Totals, Secondary Production ${ }^{4}$. | 8,397,823,542 | 3,762,285,948 | 9,518,909,550 | 4,254,903,708 | 67-27 |
| Grand Totals. | 10,983,532,442 | 5,920,576,613 | 12,023,952,501 | 6,325,458,373 | $100 \cdot 00$ |

${ }^{1}$ See Chapter VII for description of gross and net values of production. ${ }^{2}$ Gross value comprises industrial mineral production shown in Chapter XII, Table 1, plus the value of ores, etc., of the smelting industry.
${ }^{3}$ The item "Manufactures" includes sawmills, pulp and paper mills, etc., which are also included in other headings above. This duplication, amounting in 1942 to a gross of $\$ 1,070,508,497$ and a net of $\$ 425,472,701$, and in 1943 to a gross of $\$ 1,148,896,816$ and a net of $\$ 410,701,516$, is eliminated from the grand total. SSecondary production includes the above-mentioned duplication. The precentage of net manufactures, less duplication, to the total net production in 1943 was $53 \cdot 8$.
2.-Gross and Net Values of Production in Canada, by Provinces, 1912 and 1943

| Province | Gross Value | 1942 |  |  | Gross Value | 1943 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Net Value |  |  |  | Net Value |  |  |
|  |  | Amount | Percentage | $\left\lvert\, \begin{gathered} \text { Per } \\ \text { Capita } \end{gathered}\right.$ |  | Amount | Per- centage | Per Capita ${ }^{1}$ |
| P.E.I. | 25, ${ }^{\text {¢ }} 193,034$ | 15, ${ }^{\mathbf{8} 69,746}$ | 0.26 | ${ }_{170 \cdot 77}$ | ${ }_{32,320,752}^{\text {8 }}$ | ${ }_{19,955,547}^{\mathbf{S}}$ | $0 \cdot 32$ | 219.29 |
| N.S.. | 303, 544, 819 | 161,603,076 | $2 \cdot 73$ | 273-44 | 332, 485, 662 | 187,595, 481 | $2 \cdot 97$ | 309.05 |
| N.B | 210,531,689 | 116, 820,880 | 1.97 | 251.77 | 239, 555,462 | 133,799,469 | $2 \cdot 12$ | 288.98 |

| Totals. | $\overline{10,983,532,442}$ | 5,920,576,613 | 100.00 | 508.03 | 12,023,952,501 | 6,325,458,373 | $100 \cdot 00$ | 535-51 |

${ }^{1}$ Based on estimates of population given on p. 128.

## APPENDIX III

## Statistics of Family Allowances

Information regarding the payment of family allowances is given under the subsection on Dominion Welfare Services at pp. 801-802 of this volume.

The Act became effective on July 1, 1945. Tables 2 and 3 give statistical data for allowances paid in July, 1945, for the first month of operation. Figures for Yukon and the Northwest Territories were not available at the time of going to press. Table 1 has been compiled from the Census of 1941 and shows the age distribution of children under 16 years of age in Canada as at the date of that Census. Such Census data provided the basis of the estimates upon which family allowances were originally based.

## 1.-Population Under 16 Years of Age by Specified Age Groups, by Provinces and Teritories, 1941

| Province or Territory | 0-5 Years | 6-9 Years | 10-12 Years | 13-15 Years | Total <br> 16 Years |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Prince Edward Island. | 11,456 | 7,727 | 5,736 | 5,565 | 30,484 |
| Nova Scotia. | 69,083 | 44,371 | 33,516 | 32,589 | 179,559 |
| New Brunswic | 59,775 | 38,195 | 28,834 | 28,515 | 155,319 |
| Quebec. | 422,243 | 279, 132 | 218,274 | 212,739 | 1,132,388 |
| Ontario. | 357,033 | 242,406 | 195,091 | 194,735 | 989,265 |
| Manitoba | 73,853 | 50,030 | 39,780 | 41,021 | 204,684 |
| Saskatchewan | 102,195 | 70,991 | 56,772 | 56, 863 | 286, 821 |
| Alberta. | 90,036 | 60,713 | 47,201 | 45,597 | 243,547 |
| British Columbia | 70,378 | 44,049 | 36, 502 | 36,498 | 187,427 |
| Yukon.. | 546 | ${ }^{321}$ | 225 | 170 | 1,262 |
| Northwest Territories. | 1,969 | 1,172 | 772 | 650 | 4,563 |
| Canada. | 1,258,567 | 839,107 | 662,703 | 654,942 | 3,415,319 |

## 2.-Classification of Families by Number of Children, Based on Family Allowances Paid in July, 1945

(Figures subject to revision)

| Province | Numbers of Children per Family |  |  |  |  |  |  |  |

| Totals and Averages. | 1,237,754 | 2,956,844 | 14.18 | 5.94 | 17,560,934 |
| Estimated, August, 1945. | 1,300,000 | 3,104,400 | $14 \cdot 18$ | 5.94 | 18,440,136 |

${ }^{1}$ In the above table the figure $1,237,754$ represents the number of individual cheques issued at Family Allowances District Treasury Offices during the month of July, 1945, rather than the actual number of families benefited. The number of families benefited is actually slightly in excess of the figure shown, since in some cases payments to Children's Aid Societies and to Indian Agency Trust Accounts represent allowance payments in respect of more than one family group. This, together with the further fact that in Table 2 family groups of from three to eight children for the Province of Ontario are based on a 10 p.c. sample, accounts for the apparent discrepancy between the total number of cheques issued as shown in Table 3 and the total number of families as shown in Table 2. The same factors account for the variation in the number of children in respect of whom allowances were paid (Table 3) and the total number of children included in the "Classification of Families by Number of Children" (Table 2). Registrations received late in June, 1945, and incomplete registrations requiring additional information and correspondence were not all included in the July payments.

## APPENDIX IV

## Occupations and Citizenship

## Occupations of the Canadian People, Census 1941

In Appendix III of the 1943-44 Year Book tables are given at pp. 1068 and 1069 showing numbers and percentages of the gainfully occupied males and females 14 years of age or over, by provinces for occupational groups, Census of 1941 The headnote to the series (p. 1066) explains that the occupation-group analysis is made irrespective of the industry in which the persons might have been employed, and states further that all persons directly engaged in the making or repairing of goods, machines, or articles are classified under "manufacturing" whether they are employed in the manufacturing industry as generally defined or not. The same

${ }^{2}$ Not including Yukon and the Northwest Territor es.

[^389]principle is followed in other groups. Thus, a truck driver is listed under "transportation" whether he was employed at the census date by a trucking concern or by a factory or store for the delivery of goods sold by them. Such an occupational analysis naturally gives only one side of the picture and the table below is intended to present the same statistics rearranged by industrial groups, that is, all employees who make their livelihood out of a particular industry are grouped together whatever their occupations may be. For example, the group "manufacturing" in industry tables includes all persons employed by manufacturing firms, whether engaged in the processes of production, or in the sale or transport of the product, or in clerical, or other occupations associated with the industry. The student of occupational statistics should study the two tables in relation: by so doing he will obtain a fuller interpretation of the census data than he could from either table separately.

## Citizenship, 1941

The following two tables on citizenship have been published since the Population Chapter of this Year Book was prepared and are therefore being included in this Appendix.

In Chapter XXIX under the heading "Naturalization" a new table is included this year giving the naturalized and alien non-British and non-French population of Canada. This has a very definite relationship to Tables 2 and 3 below and should be referred to by the student of citizenship and naturalization.

## 2.-Population by Citizenship and Nativity, by Provinces and Territories, 1941

## APPENDIX V

Table 9, Chapter III on Constitution and Government, p. 59, gives the votes polled and Members of the House of Commons before dissolution of the House on Apr. 16, 1945. Since that Chapter went to press, the twentieth general election of June 11, 1945, has taken place and the following table is appended to give the complexion of the House of Commons as a result of that election.
1.-Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Twentieth General Election, June 11, 1945.

Notg.-This information, except the populations of constituencies, has been supplied by the Chief Electoral Officer, Ottawa, who publishes an official report giving the total vote cast for each candidate. Party affiliations are unofficial.

[^0]:    ${ }^{1}$ Figures are subject to revision.
    ${ }^{2}$ On farms only.
    ${ }^{3}$ Figures for the decennial census years 1881-1921 are for the next preceding years. In the Censuses of 1881 and 1891 values only were given of factory butter and cheese; quantities have been calculated by reckoning cheese at 10 cents per lb . and butter at 25 cents.
    ${ }^{4}$ Prior to 1921 this item does not include skim milk and buttermilk.

[^1]:    ${ }^{6}$ Fiscal years prior to 1926 . $\quad$ As from 1932 the values include exchange equalization. $\quad{ }^{7} 1887$. ${ }^{8}$ 1898. ${ }^{1889 .}{ }^{10}$ Short tons. ${ }^{11} 1874 . \quad{ }^{12} 1892 . \quad{ }^{13}$ Includes other items not specified.

    $$
    { }^{16} 1886 .
    $$

[^2]:    ${ }^{1}$ Figures are subject to revision. ${ }^{2}$ In thousands. $\quad{ }^{3}$ The statistics of manufactures in 1871 and 1881 include works employing fewer than 5 hands; those of 1891, 1901, 1911, and 1916 are for works employing only 5 hands or over except in the case of butter and cheese factories, flour and grist mills, slectric-light plants, lumber, lath and shingle mills, lime kilns, brick and tile works, and fish canneries. The figures shown are for the preceding year in each case. From 1922 statistics are exclusive of construction hand trades, repair and custom work. Figures for 1926-44 include non-ferrous metal smelting not included in earlier years.

    4 Includes all establishments irrespective of the number of employees.

[^3]:    Since 1924 the net value of production is computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products.
    ${ }^{6}$ Census figure for calendar year 1930. ${ }^{7}$ Estimated on basis of intercensal survey of larger establishments.

    - Exports of domestic merchandise only.
    ${ }^{10}$ Imports of merchandise for home consumption. ${ }^{11}$ Fiscal years 1921 and prior years; calendar years 1926-44. regulus, etc.

[^4]:    ${ }^{1}$ Figures are subject to revision.
    ${ }^{2}$ Fiscal year figures prior to 1941.
    ${ }^{2}$ Wartime restrictions preclude the publication of data. ${ }^{4}$ In foreign service, which includes sea-going and inland international after 1936. not included.
    ${ }^{5}$ Prior to 1941 Temiskaming and Northern Ontario Railway Commission was
    ${ }^{6}$ Excluding United States lines of Canadian National Telegraphs.
    ${ }^{7}$ As at

[^5]:    *The purpose of this Introduction is to co-ordinate the picture of Canada's war effort, which is dealt with piecemeal in the chapter material following. It also brings that material up-to-date to the time of going to press. It has been built up from material supplied by the wartime and permanent Departments to which reference is made in the text.

[^6]:    "The President and the Prime Minister also had an opportunity of discussing questions of international economic and trading policy which both their countries will have to face as soon as hostilities end. They agreed that the solution of these questions should be sought along bold and expansive lines with a view to the removal of discriminations and the reduction of barriers to the exchange of goods between all countries. They recognized a common interest in working toward these objectives."

[^7]:    ${ }^{1}$ Eighty-five officers and men taken prisoner before D-Day were liberated during the advance into Europe or following V-E Day.

[^8]:    *These are dealt with in detail in the appropriate chapters of this volume; see the various sections under "Controls" in the Index.

[^9]:    * Prepared by Sydney B. Smith, M.A., Chief, Business Statistics Branch, Dominion Bureau of Statistics.

[^10]:    * Revised by F. H. Peters, Surveyor General and Chief, Hydrographic Service, Department of Mines and Resources, Ottaws.

[^11]:    ${ }^{1}$ This is a salt-water lake.
    ${ }^{2}$ Elevation not available.
    ${ }^{3}$ High water figure-low water elevation is $1,055 \mathrm{ft}$.
    ${ }^{4}$ High water figure-low water elevation is $1,156 \mathrm{ft}$.

[^12]:    ${ }^{1}$ Areas are approximate and are exclusive, for all rivers, of those portions of their basins that lie in United States territory.

[^13]:    *This classification is that of the Dominion Water and Power Bureau, Department of Mines and Resources, Ottawa.

    22115-2

[^14]:    * Prepared under the direction of R. A. Gibson, Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

[^15]:    * Prepared under the direction of R. Meldrum Stewart, Dominion Astronomer, Dominion Observatory, Department of Mines and Resources, by Ernest A. Hodgson, Chief, Seismological Division.

[^16]:    * Prepared under the direction of R. A. Gibson, Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

[^17]:    ${ }^{1}$ Administered by the Bureau of Northwest Territories and Yukon Affairs of the Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

[^18]:    Note.-Events in the General Chronology from 1497 to 1866 are given at pp. 25-30 of the 1940 Canada Year Book.

    The Ministries and the dates of elections and lengths of sessions of Dominion Parliaments are given in Tables 2 and 5, respectively, of Chapter III. Changes in Provincial Legislatures and Ministries from Confederation to 1923 are given at pp. 75-84 of the 1924 Year Book, and from 1924 to 1937 at pp. 110-118 of the 1988 Year Book. References regarding these matters have therefore been dropped from the Chronology below. Changes since 1987 are included.

[^19]:    * See pp. $40-60$ of the 1942 Year Book for text of the original B.N.A. Act and notes regarding amendments and modifications thereto.

[^20]:    (205) of adjournment from Mar. 27, 1942, to Apr. 20, 1942; from Apr. 23, 1942, to Apr. 28. 1942; and from Aug. 1,

[^21]:    *The seasional indemnity of a member of the House of Commons is $\$ 4,000$. The remuneration of a Cabinet Minister is $\$ 10,000$ a year (and of the Prime Minister $\$ 15,000$ a year) in addition to the sessional indemnity. A Cabinet Minister is also entitled to a motor-car allowance of $\mathbf{\$ 2 , 0 0 0}$.

    ${ }^{8}$ Mr. Casselman died Mar. 20.
    1941, and Mrs. C. T. Casselman (L) was elected June 2, 1941.

[^27]:    ${ }^{1}$ Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1940, 24,397 voters on the list cast 39,196 votes. ${ }^{2}$ Each voter in the double-member constituency of Halifax, N.S., had two votes; in 1940, 68,422 voters on the list cast 89,020 votes.
    ${ }^{3}$ Each voter in the double-member c̣onstituency of St. John-Albert, N.B., had two votes; in 1930, 37,067 voters on the list cast 50,121 votes. ${ }^{4}$ Not including one electoral district in which the return was by acclamation. ${ }^{5}$ Each voter in the double-member constituency of Ottawa, Ont., had two votes; in 1930, 61,535 voters on the list cast 97,369 votes. $\quad 6$ Not including two electoral districts in which the returns were by acclamation.

[^28]:    ${ }^{1}$ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40). :Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45), and diminished in consequence of the Award of the Judicial Committee of the British Privy Council (Mar. 1, 1927), whereby some 112,400 square miles of territory, formerly considered as part of Quebec, were assigned to Newfoundland. ${ }^{2}$ Extended by Extension of Boundaries of Manitoba Act, 1881, and Manitoba Boundaries Extension Act 1912 (2 Geo. V, c. 32). ${ }^{4}$ Too small to be enumerated. ${ }^{5}$ Alberta and Saskatchewan now cover approximately the ares formerly comprised in the districts of Assiniboia, Athabaska, Alberta and Saskatchewan, established May 17, 1882, by minute of Canadian P.C., concurred in by Dominion Parlia ment and Order in Council of Oct. 2, $1895 .{ }^{6}$ By Order in Council, June 23, 1870, Rupert's Land, acquired under the Rupert's Land Acts of 1867 and 1868, and the undefined Northern Territories were admitted into the Confederation. The original Northwest Territories, mentioned in the Manitoba Act 1870, were established by the Northwest Territories Act, 1880 ( 43 Vict., c. 25), the District of Keewatin having been previously defined by an Act of the Dominion Parliament (39 Vict., c. 21). The provisional Districts of Yukon, Mackenzie, Franklin and Ungava were defined in an Order in Council of Oct. 2, 1895, their boundaries being changed by Order in Council of Dec. 18, 1897. By Order in Council of July 24, 1905, the area of Keewatin, not included in the Northwest Territories, was annexed to the latter from Sept. 1, 1905. By the Extension of Boundaries Act, 1912, Ungava was made a part of the Province of Quebec, and the remaining area of the Northwest Territories south of $60^{\circ} \mathrm{N}$. latitude was divided between Manitoba and Ontario.

[^29]:    ${ }^{1}$ Second term.

[^30]:    * Prepared in the Department of External Affairs, Ottawa, by F. H. Soward.

[^31]:    - Since goods will be received from all contributing countries that are in a position to contribute or sell them, it is estimated that this 10 p.c. of each Member's contribution will be sufficient to meet the over-all purchases that will have to be made for cash.

[^32]:    * The principle of UNRRA's administration is that priority should be given to those areas in greatest need. Russia advanced the propoeal that priority for assistance be given those nations which have suffered most under Axis rule and have offered greatest resistance. The reconciliation of these two points of view was one of the tasks of the Conference.

[^33]:    * Revised by the Department of External Affairs, Ottawa, in February, 1945. An annual report on the organization and activities of Canadian Government representation abroad is contained in the Report of the Department of External Affairs, which may be obtained from the King's Printer, price 10 cents.

[^34]:    * The League of Nations Society in Canada, 124 Wellington Street, Ottawa, is the anthorized agent for the publications of the League of Nations.

[^35]:    *This chapter, as recast, has been checked by O. A. Lemieux, M.S.A., Ph.D., Chief, Demography Branch, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXX, Section 1, under "Population"

[^36]:    ${ }^{1}$ Corrected as a result of the Boundaries Extension Acts, 1912.
    Labrador Award of the Privy Council, Mar. 1, 1927. The total for Royal Canadian Navy who were recorded separately in 1921 . ${ }_{3}$ Corrected by transfer of population of Fort Smith (368) to the Northwest Territories. 4 The decreases shown in the population of the Northwest Territories since 1891 are due to the separation therefrom of vast areas to form Alberta, Saskatchewan and Yukon and to extend the boundaries of Quebec, Ontario and Manitoba.

[^37]:    ${ }^{1}$ Includes persons with conjugal condition not stated.

[^38]:    For footnotes, see end of table, p. 105.

[^39]:    ${ }^{1}$ Includes the four original provinces of Canada only. ${ }^{2}$ Includes Bohemian, Bukovinian and Slavic. ${ }^{2}$ Included under Scandinavian. ${ }^{4}$ Includes Lithuanian and Moravian. ${ }^{5}$ Includes Bulgarian. ${ }^{6}$ Includes Finnish and Polish.
    ${ }^{7}$ Since 1921 Scandinavian has been divided into Danish, Icelandic, Norwegian and Swedish.

[^40]:    ${ }_{1}$ None reported.

[^41]:    ${ }^{1}$ Includes some hundreds of persons born at sea.
    "birthplace not stated".

[^42]:    ${ }^{1}$ Includes "birthplace not stated".

[^43]:    - In Saskatchewan the original legislation of 1908 provided that a community of 50 persons on an area not greater than 640 acres might be incorporated. Several amendments have since been made and as the Act now stands, 100 people resident on an area not greater than 240 acres may be incorporated. The Ontario law, on the other hand, requires that a village before it can be incorporated must have a population of 750 on an area not exceeding 500 acres.

[^44]:    ${ }^{1}$ Not included in Greater Cities in 1931.

[^45]:    * Prepared by N. Keyfitz, Social Analysis Branch, Dominion Bureau of Statistics.

[^46]:    ${ }^{1}$ Includes citizenship "not stated"

[^47]:    *Were the data tabulated by five-year age groups, one would find ample statistical support for this statement.

[^48]:    * This Chapter, with the exception of the material on the method of computation of estimates of population by age and sex, pp. 129-131, and also that on Life Tables, pp. 131-132 (which were contributed by N. Keyfitz, M.A., Social Analysis Branch), has been revised by J. T. Marshall, Chief of the Vital Statistics Branch, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXX, Sect. 1, under "Population".

[^49]:    *This corresponds to the result of comparing the immigration figures of Canada, the United States and the United Kingdom. The net movement between Canads and the United States was an emigration of 34,543 during the period from July 1, 1933, to June 30, 1939 (1943-44 Year Book, p. 186), and between Canada and the United Kingdom an emigration of 78,184 during the period from Jan. 1, 1931, to June 30, 1939 (1941 Year Book, p. 125).

    22115-91

[^50]:    ${ }^{1}$ Not available.

[^51]:    ${ }^{1}$ Quebec was not included in the registration area prior to 1926.

[^52]:    ${ }^{1}$ Data for the Province of Quebec not available for 1921 and 1922. 1921 were eatimated.

[^88]:    * Sections of this chapter that deal with forestry and forest administration have been prepared by the Dominion Forest Service, Department of Mines and Resources. Sections dealing with forest utilization and forest industries have been revised by L. J. Pouliot, B.A., Chief of the Forestry Branch, Dominion Bureau of Statistics. The Forestry Branch collects and compiles statistics relating to forest production. For a detailed list of publications of the Forestry Branch, see Chapter XXX.

[^89]:    ${ }^{1}$ There are no available estimates of the relatively small quantities of hardwoods in British Columbia.

[^90]:    ${ }^{1}$ In estimating the annual drain on Canada's forest resources, certain converting factors have been used, each of which represents in cubic feet the quantity of standing timber that must be cut in the forest to produce one unit of the material in question, based on the total cubic contents of the tree.

[^91]:    ${ }^{1}$ Includes production in British Columbia, Manitoba, New Brunswick and Nova Scotia.

[^92]:    * See Chapter XIV-Manufactures-and the Index for further particulars regarding the pulp and paper and paper-converting industries.
    $\dagger$ This figure does not agree with that given in the Manufactures Chapter owing to corrections subsequently made.

[^93]:    ${ }^{2}$ Includes all other sawmill products.

[^94]:    * Prepared in the Department of Munitions and Supply.

[^95]:    * Prepared largely from previously published material by Ian McArthur, Acting Chief, Agricultural Branch, Dominion Bureau of Statistics, in co-operation with W. M. Ritchie, Chief, Fur Inspection and Grading Service, Dominion Department of Agriculture, Ottawa.

[^96]:    *Revised in the Agricultural Branch, Dominion Bureau of Statistics.

[^97]:    ${ }^{1}$ The collection of this information was suspended after the year 1939.

[^98]:    ${ }^{1}$ Included with "Bear, unspecified" with wolf pelts.

[^99]:    * See footnote 2, Table 7, p. 290.
    $\dagger$ Revised under the direction of Dr. D. B. Finn, Deputy Minister of Fisheries, Ottawa.

[^100]:    *The material under this heading has been edited from contributions made by the respective Provincial Governments.

[^101]:    * Revised by W. H. Lanceley, Chief, Fisheries and Animal Products Branch, Dominion Bureau of Statistics. For a list of the publications of this Branch, see Chapter XXX.

[^102]:    ${ }^{1}$ Included with "boats".
    operations irrespective of the period of employment. The census figures for 1941, given at p. 276 , include only those whose main occupation was fishing.

[^103]:    ${ }^{1}$ Revised since the publication of the 1943-44 Year Book.

[^104]:    ${ }^{*}$ Except where otherwise noted, this chapter has been revised in co-operation with W. H. Losee, B.Sc., Chief of the Mining, Metallurgical and Chemical Branch, Dominion Bureau of Statistics. A complete list of the publications of this Branch appears in Chapter XXX.

[^105]:    * Revised by the Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.
    $\dagger$ Compiled from material supplied by the Provincial Governments.

[^106]:    *Contributed by the Department of Munitions and Supply.

[^107]:    ${ }^{1}$ Beginning with 1931, exchange equalization on gold production is included.

    ## revision.

[^108]:    ${ }^{1}$ Current values in Canadian funds.

[^109]:    ${ }^{1}$ Includes some talc.

[^110]:    ${ }^{1}$ Includes relatively large quantities used as chemicals.

[^111]:    ${ }^{1}$ Includes freight and smelter charges and cost of ores treated.

[^112]:    ${ }^{1}$ Includes ireight and smelter charges and cost of ores treated.

[^113]:    ${ }^{1}$ From 1926 to 1931, inclusive, values calculated on basis 1 fine $\mathrm{oz} .=\$ 20 \cdot 671834$; since then, at world prices in Canadian funds.
    ${ }^{2}$ First reported production in this Province.
    ${ }^{3}$ Includes value of production of the Northwest Territories amounting to 87,038 in 1935; $\$ 35$ in 1936; $\$ 239,190$ in $1938 ; \$ 1,876,224$ in 1939; $\$ 2,123,621$ in 1940; $\$ 2,977,359$ in 1941; $\$ 3,826,669$ in $1942 ; \$ 2,272,732$ in 1943 ; and $\$ 798,451$ in 1944. ${ }^{4}$ Subject to revision.

[^114]:    * Prepared under the direction of Charles Camsell, C.M.G., LL.D., Deputy Minister, Department of Mines and Resources, by T. L. Tanton, Ph.D., in March, 1944, for the 1943-44 Year Book. Due to pressure on space, it was found impossible to publish this article at that time.

[^115]:    ${ }^{1}$ Subject to revision.

[^116]:    ${ }^{1}$ Subject to revision.

[^117]:    ${ }^{1}$ Subject to revision.

[^118]:    ${ }^{1}$ The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees and coal used in making coke, etc., less the tonnage of coal exported.
    ${ }^{2}$ Includes small tonnages from countries other than the United Kingdom and the United States. Deductions have been made from this column to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores. ${ }^{2}$ Figures based on estimates of population given at p. 128.

    ## 23.-Coal Output, Exports, Receipts from Other Countries, and Made Available for Consumption in Canada, 1943

[^119]:    ${ }^{1}$ Coal reaching Canadian ports whether or not it is cleared from customs. publication of the 1943-44 Year Book.

[^120]:    ${ }^{1}$ Totals for Canada include small amounts consumed in Manitoba, Saskatchewan and the Northwest Territories. ${ }^{2}$ Subject to revision.

[^121]:    * Prepared from material and statistics taken from the Annual Review on the Oil Situation, compiled by J. L. Irwin, Supervisor of Publications for the Government of the Province of Alberta. The figuren of Alberta production used in this article are compiled on a somewhat different basis from the Bureau's figures shown in the mineral production tables, which accounts for the discrepancies between them.

[^122]:    ${ }^{1}$ 'Production' as used here means quantity and value of sales. 350 lb . or $3 \frac{1}{2} \mathrm{cwt}$.

[^123]:    ${ }^{1}$ Totals include minor items not specified.

[^124]:    * In this Chapter of the Year Book all information respecting power generation and utilization in Canada is co-ordinated; some sections, however, cannot be regarded as complete owing to the insufficiency of available data. Section 1 has been revised under the direction of $V$. Meek, Controller, Dominion Water and Power Bureau, Surveys and Engineering Branch, Department of Mines and Resources, and Sections 2, 3 and 4 (except as otherwise stated) by G.S. Wrong, B.Sc., Chief, Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

[^125]:    * Cheeked by the Publicity Division, Department of Munitions and Supply.

[^126]:    * The information included under the provincial headings of this Subsection has been revised by the various provincial commissions or authorities concerned.

[^127]:    ${ }^{1}$ Included in Niagara System.

[^128]:    - Legislation passed concerning rural power is as follows: The Power Commission Act (R.S.O., 1927, c. 57); The Rural Hydro-Electric Distribution Act (R.S.O., 1927, c. 59); The Rural Power District Loans Act, 1930 ( 20 Geo. V, c. 14); and The Rural District Service Charge Act, 1930 ( 20 Geo, V, c. 15).

[^129]:    ${ }^{1}$ The Commission's operations in the two towns served commenced in November, 1929. ${ }^{2}$ Information not available. not commence until late in the year.

[^130]:    ${ }^{1}$ Exclusive of auxiliary equipment.

[^131]:    ${ }^{1}$ In November, 1942, Cedars Rapids was transferred to the Montreal Light, Heat and Power Co., and in April, 1944, the latter was taken over by the Quebec Hydro-Electric Commission.

[^132]:    Nore.-Figures exclude central electric stations and include idle and reserve equipment. Figures for 1923-29 are given at p. 295 of the 1941 Year Book.

[^133]:    ${ }^{1}$ Not including fuel used in metallurgical operations, salt, cement, lime and clay products.

[^134]:    ${ }^{1}$ Not including fuel used in metallurgical operations, salt, cement, lime and clay products.

[^135]:    * The production data and many of the statistical statements appearing in this article have been worked up from material published from time to time by the Department of Munitions and Supply. Later statistics have been added and the article finally revised by that Department.

[^136]:    ${ }^{1}$ Includes contracts awarded under the Air Training Plan, some of which are chargeable to other Empire countries.

[^137]:    ${ }^{1}$ In addition, cartridge cases and other ammunition components have been produced and filled for export as components.
    ${ }^{2}$ In addition, to end of 1943 a total of 345 small craft with power and 3,199 small craft without power, were produced.

[^138]:    'In accordance with a resolution passed by the Conference of British Commonwealth Statisticians, 1935, the net value of production is now computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products. The figures for 1924 and later years have, therefore, been revised in accordance with this resolution. The revision could not be carried farther back as statistics for cost of electricity are not available for years prior to 1924.
    ${ }^{2}$ A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

[^139]:    ${ }^{1}$ See footnote 1, Table 1.
    ${ }^{2}$ See footnote 2, Table 1.

[^140]:    ${ }^{1}$ See footnote 1 , Table 1.

[^141]:    ${ }^{1}$ Includes excise taxes on tobacco products and prime cost of spirits.

[^142]:    ${ }^{1}$ Including overtime.
    ${ }^{2}$ Exclusive of dairy factories and "fish-curing and -packing" plants.

[^143]:    ${ }^{1}$ Including overtime. ${ }^{2}$ Figures are exclusive of those for "butter and cheese" and "fish-curing and -packing"; these are among the leading industries, but figures are

[^144]:    

[^145]:    ${ }^{1}$ The averages of wage-earners and earnings for the years 1931 to 1941 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years -as for the earliest-represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts only to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.
    ${ }^{2}$ The increase in the number of salaried employees in 1931 is due to the following changes in method: (1) Prior to 1931 working proprietors, such as bakers, sawmill operators, small clothing manufacturers, etc., were required to report themselves as wage-earners. In 1931 and subsequent years, however, all such proprietors reported themselves as silaried employees. (2) In 1931 travelling salesmen who were attached to the plant, and devoted all or the greater part of their time to selling the products of that plant, were included with salaried employees. Prior to this they were not reported at all.

[^146]:    ${ }^{1}$ Estimated on the basis of hours worked by female wage-earners in 1938 and 1939 as compared with those worked by male wage-earners in those years. $\quad 2$ Not available.

[^147]:    ${ }^{1}$ Exclusive of "butter and cheese" and "fish-curing and -packing" plants.

[^148]:    ${ }^{1}$ See footnote 1 to Table 3, p. 432. ${ }^{2}$ Statistics for sugar refining, which is also one of the leading

[^149]:    ${ }^{1}$ See footnote 1 to Table 5, p. 435.
    ${ }^{2}$ Includes other leading industries. statistics of which cannot be published because there are fewer than three establishments in each industry. Such industries are: aircraft, bridge and structural steel work, and non-ferrous metal smelting and refining.

[^150]:    ${ }^{1}$ Net value is derived from gross value by deducting the cost of materials, fuel and electricity.

[^151]:    ${ }^{1}$ Net value is derived from gross value by deducting the cost of materials, fuel and electricity.

[^152]:    ${ }^{1}$ Net value is derived from gross value by deducting the cost of materials, fuel and electricity.

[^153]:    * Prepared by the Publicity Branch, Department of Munitions and Supply.

[^154]:    - Prepared by the Publicity Branch, Department of Munitions and Supply.

[^155]:    ${ }^{1}$ Awarded by Wartime Housing Limited.

[^156]:    ${ }^{1}$ Includes subcontract work indicated in the lower part of the table.

[^157]:    *This Chapter has been prepared in close co-operation with the various branches of the Department of Trade and Commerce. The figures in Part II are compiled from the various reports of the External Trade Branch of the Bureau of Statistics. The information under Part III, and certain of the data in the General Review has been furnished by C. D. Blyth, B.A., Chief of International Payments Branch, Bureau of Statistics.

[^158]:    *This Agreement was terminated as from Jan. 2, 1938, but each country, in its own legislation, still grants tariff preferences to the other.

[^159]:    * Revised by C. M. Croft, Director, Commercial Intelligence Service, Department of Trade and Commerce.

[^160]:    * Statistics have been revised under the supervision of L. A. Kane, Chief, External Trade Branch, Dominion Bureau of Statistics. For a complete list of the publications of this Branch, see Chapter XXX, Sect. 1, under "External Trade".

[^161]:    - All figures for 1944 given in this Subsection are preliminary and subject to revision.

    22115-32

For more detailed information on this subject, see "Live Stock and Animal Products Statistics", published annually by the Dominion Bureau of Statistics; and the "Annual Market Review", published by the Live Stock Branch of the Dominion Department of Agriculture. Statistics of live stock and poultry are given at pp. 211-217 of this volume.

[^196]:    ${ }^{1}$ Includes edible offal of beef and veal.
    ${ }^{2}$ Customs data of exports to countries other than the United Kingdom together with Meat Board records of quantities booked or cleared for export to the United Kingdom in which allowance has been made for $56,900,000 \mathrm{lb}$. of boneless meat converted to carcass basis. ${ }^{3}$ Not available separately; quantity small and included with imports of beef.
    ${ }^{4}$ Not available.

[^197]:    * Revised by A. C. Steedman, B.A.. Chief, Census of Merchandising and Service Establishments, Internal Trade Branch, Dominion Bureau of Statistics.

[^198]:    ${ }^{1}$ Figures withheld to avoid disclosing individual operations but are included in totals,

[^199]:    For footnotes, see end of table, p. 607.

[^200]:    ${ }^{1}$ Figures for 1930 have been adjusted to exclude producer-distributors of milk, grain elevators and itinerant operators. These kinds of business were not included in the regular tables for 1941. ${ }^{2}$ Totals include Yukon and the Northwest Territories. figures are not shown. 4 Less than 0.05 p.c.

[^201]:    ${ }^{1}$ Leas than 0.05 p.c.

[^202]:    ${ }^{1}$ Less than 0.05 p.c.
    booths and stands.
    ${ }^{2}$ Figures for 1930 not available.
    ${ }^{3}$ Excludes refreshment grain elevators. These types of business were not included in the regular tables of the 1941 Census.

[^203]:    ${ }^{1}$ In some instances only the total sales for a group of chain stores were reported for 1930 rather than the

[^204]:    ${ }^{1}$ Included in credit sales.

[^205]:    ${ }^{1}$ Exclusive of sales of beer and wine in hotels which amounted to $\$ 78,695,700$ in 1941.
    ${ }^{2}$ In ad-
    dition, sales of motor-vehicles, accessories, gas, oil, etc., in service establishments amounted to $\$ 1,361,900$.
    ${ }^{2}$ Exclusive of retail sales made by manufacturing bakeries and dairies; also exclusive of retail sales of producer-distributors of dairy products.

[^206]:    ${ }^{1}$ Includes Yukon and the Northwest Territories.

[^207]:    ${ }^{1}$ Includes Yukon and the Northwest Territories.

[^208]:    ${ }^{1}$ Iacludes, Yukon and the, Northwest Territories.

[^209]:    * Prepared by A. E. Richards, Ph.D., and Lucienne Lalonde, Marketing Service, Economics Division, Department of Agriculture, Ottawa.

[^210]:    ${ }^{1}$ Including other revenue.

[^211]:    ${ }^{1}$ In addition to the payments by the trustee, secured creditors valued their security or realized on it themselves without the intervention of the trustee to an amount of approximately $\$ 2,596,068$ in 1942, $\$ 1,799,722$ in 1943 and $\$ 1,201,289$ in 1944 . ${ }^{2}$ Exclusive of the city shown separately.

[^212]:    ${ }^{1}$ In addition, land and chattels under mortgage or lien, of an estimated value of $\$ 41,258$ in $1942, \$ 18,853$ in 1943 and $\$ 26,044$ in 1944, were transferred to secured creditors.

    2 Does not include three estates in Saskatchewan and one in Alberta closed during the year but which would, if extended, alter the figures and affect the totals in such a way as to result in an unbalanced picture contrary to the actual state of affairs. These four cases had been held open or re-opened with a view to realizing on judgraents obtained pursuant to conditional orders of discharge granted to the farmers but in none was anything recovered from this source and the only additional expense involved was an item of $\$ 1$ paid by the Dominion Government.

[^213]:    * Revised by P. F. Baillargeon, Secretary, Board of Transport Commissioners for Canada, Ottawa.

[^214]:    *This material has been compiled in co-operation with the Department of Transport, the Canadian Shipping Board, and from reports published by the Department of Munitions and Supply. The data have been brought up to Apr. 30, 1945.

[^215]:    * Supplied by the Acting Director of Publicity, Department of Transport, Ottawa.

[^216]:    - Prepared in co-operation with the Department of Transport.

[^217]:    * Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public CUtilities Branch, Dominion Bureau of Statistics. This Branch publishes an "Annual Report on Steam Railways", as well as numerous other reports, a list of which is given in Chapter XXX of this volume. Certain of the financial statistics of steam railways are compiled in co-operation with the Department of Transport.

[^218]:    * This article has been prepared under the direction of the Deputy Minister, Department of Transport, in the Publicity Branch of that Department from material supplied by the railway companies.

[^219]:    ${ }^{1}$ Includes Pullman Co. cars in Canadian Service.
    ${ }^{2}$ Includes 3 auto-railers.

[^220]:    ${ }^{1}$ Does not include Canadian railway capital owned by Cansdian railways.

[^221]:    ${ }^{1}$ Does not include $\$ 9,835,543$ perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National System, on which interest and dividends are guaranteed by the Dominion Government.

[^222]:    * For detailed statistics of the operation and finances of the Canadian National Railways see the annual reports on "Steam Railway Statistics" and "Canadian National Railways" published by the Dominion Bureau of Statistics.

[^223]:    ${ }^{1}$ Includes the Central Vermont Railway, Inc.
    2 Net income deficit includes appropriations for insurance fund and excludes interest on Government loans eliminated by the Capital Revision Act, 1937. ${ }^{3}$ Contributed by Dominion Government.

[^224]:    ${ }^{1}$ Working capital, the remainder of the account being eliminated (see p. 591 of the 1942 Year Book). ${ }^{2}$ Includes Dominion Government Proprietor's Equity beginning at $\$ 676,327,701$ on Jan. 1, 1937; and capital stock held by the public amounting to $\$ 4,770,140$ on Dec. 31, 1943. ${ }_{3}$ Exclusive of $\$ 14.529,707$ for Hudson Bay Railway on Mar. 31, 1919.
    ${ }^{4}$ Jan. 1.

[^225]:    * Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. The annual report on "Electric Railways in Canada" published by that Branch, gives details of the operations of the individual railways.

[^226]:    * Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. The annual report on "Express Statistics", published by that Branch gives details of the operations of the individual companies.

[^227]:    ${ }^{*}$ Except as otherwise indicated, the material in this Part has been revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics.
    $\dagger$ The information in this Section has been revised from material provided by the officials in charge of the administration of motor-vehicle and traffic Acts and Regulations in the individual provinces.

[^228]:    * Dawson Creek, about 30 miles to the southwest, is the railhead from which supplies are trucked in to Fort St. John. The existing road between Dawson Creek and Fort St. John has been improved and to all intents and purposes forms part of the main highway.

[^229]:    ${ }^{1}$ Includes road allowances.

[^230]:    ${ }^{1}$ Includes taricabs. ${ }^{2}$ Includes tractors, road machines, flushers, municipal fire-engines, etc.
    ${ }^{\prime}$ Includes 961 tractors in Nova Scotia, 977 in New Brunswick and 374 in British Columbia.

[^231]:    * Revised in the Publicity Branch of the Department of Munitions and Supply.

[^232]:    * As from Apr. 30, 1941, there is, in addition, a Dominion tax of 3 cents per gallon. For details of gasoline. rationing in Canada, placed in operation on Apr. 1, 1942, see pp. 568-569.

[^233]:    ${ }^{1}$ Dominion Government paid $\$ 11,611,601$ of total, all provinces except Alberta receiving subsidies to bring revenue up to 1941 revenue. Some of this was not paid until after the end of the provincial fiscal years. Alberta's revenue was above 1941 revenue. $\quad 2$ Included with miscellaneous. $\quad$ Included with trucks.
    \& Tax not applicable.

[^234]:    * Statistics of traffic carried are given at p. 678, under Section 4, Road Traffic. For statistics by provinces see "Motor Carriers, Freight and Passenger", obtainable from the Dominion Statistician, Ottawa, st 10 cents per copy.

[^235]:    For footnotes, see end of table, p. 680.

[^236]:    ${ }^{1}$ Exclusive of $2,975,000 \mathrm{gal}$. of aviation gasoline purchased and placed in storage by the Dominion Government.

[^237]:    - Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and Government Merchant Marine, by the Department of Transport and the National Harbours Board; graving docks and part of the financial statistics, by the Department of Public Works; Panama Canal, by the Governor of the Panama Canal Zone; other canal traffic and statistics of shipping, by the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

[^238]:    ${ }^{1}$ "Channel Open" means it can be navigated although there may be floating ice still in the river.

[^239]:    ${ }^{1}$ War risk insurance.

[^240]:    ${ }^{1}$ Exclusive of harbours under the National Harbours Board as shown in Table 12.

[^241]:    ${ }^{1}$ Sea-going and inland international.

[^242]:    ${ }^{1}$ Sea-going and inland international.

[^243]:    ${ }^{2}$ Figures include a small percentage of vessels of other foreign nationalities.

[^244]:    ${ }^{1}$ Figures for the U.S. include a small percentage to or from ports of other foreign countries.

[^245]:    * Information supplied by the Governor of the Panama Canal Zone.

[^246]:    * Descriptive and administrative information has been prepared from material supplied under the direction of J. A. Wilson, M.E.1.C. Director of Air Services, Department of Transport, while statistics have been compiled by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics.

[^247]:    - This material has been revised in the Office of the Controller of Civil Aviation, Department of Transport.

    22115-45

[^248]:    ${ }^{1}$ Additional construction work undertaken by Canada in 1944 on the Northwest Staging Route at the request of the United States is estimated to cost $\$ 5,161,000$ in Canadian funds as follows: Edmonton $\$ 1,250,000$; Grande Prairie $\$ 1,500,000$; Fort Nelson $\$ 1,803,000$; Watson Lake $\$ 608,000$.

[^249]:    ${ }^{1}$ Includes both revenue and non-revenue. $\quad{ }^{2}$ Includes duplications of 14,035 tons interchanged between carriers.
    ${ }^{2}$ Includes duplications where mail is carried over more than one route.

[^250]:    * Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch issues annual reports dealing with telegraph and telephone statistics.

[^251]:    ${ }^{1}$ Excludes commission operators.
    ${ }^{2}$ Excludes messages relaved to the United States.

[^252]:    ${ }^{1}$ Includes salaries and wages chargeable to capital account.
    ${ }^{2}$ Excludes rural lines in Saskatchewan.

[^253]:    ${ }^{1}$ All licences for privately owned experimental stations and for all amateur experimental stations were suspended at the outbreak of war in September, 1939.

    2 Includes licences issued free, numbering

[^254]:    ${ }^{1}$ Inctudes licences issued free, numbering 8,896 in 1944, 7,465 in 1943, 6,998 in 1942, 6,796 in 1941, 5,862 in 1940, 4.557 in 1939 and 3,155 in 1938.

[^255]:    ${ }^{1}$ The Canadian Broadcasting Act, 1936 (c. 24), prescribes as follows: "14. (1) The Minister of Finance shall deposit from time to time in the Bank of Canada or in a chartered bank to be designated by him to the credit of the Corporation:-(a) the moneys received from licence fees in respect of private receiving licences and private station broadcasting licences, after deducting from the gross receipts the cost of collection and administration, such costs being determined by the Minister from time to time."

[^256]:    * Revised under the direction of the General Manager, Canadian Broadcasting Corporation.

[^257]:    ${ }^{1} 5,000$ watts during daytime; 1,000 watts at night.

[^258]:    * Revised by B. J. Farrell, Acting Director, Public Relations Branch, Post Office Department.

[^259]:    ${ }^{1}$ Exclusive of commissions and allowances to postmasters and some other smaller items. The gross revenue in the fiscal year 1938 was $\$ 42,998,349$; in $1939, \$ 42,896,178$; in $1940, \$ 44,208,369$; in $1941, \$ 48,143,410$; in 1942, 855,477,159; in 1943, 859,175,138; and in 1944, 873,004,399.

[^260]:    * Prepared for the Canada Year Book from material supplied by Senator the Hon. W. A. Buchanan, President of the Canadian Press, Lethbridge, Alta.

[^261]:    ${ }^{1}$ For newspapers-averages for 12 months ended Sept. 30; for periodicals-averages for 6 months ended Dec. 31 Includes the sum of morning and evening editions of the same newspaper. Also includes papers issued five times a week. ${ }^{\text {I }}$ Includes papers published two, three or four times a week.

    - Includes special Saturday and Sunday editions of daily papers.

[^262]:    ${ }^{1}$ Includes special Saturday and Sunday editions of daily papers.
    ${ }^{2}$ Bi-monthly, quarterly, annual or irregular. and 9,000 weekly.

[^263]:    * Except as otherwise indicated, the material in this Chapter has been prepared or revised under the direction of A. MacNamara, Deputy Minister of Labour, Ottawa.

[^264]:    * Revised by Miss M. E. K. Roughsedge, Chief, Employment and Payroll Statistics Branch, Dominion Bureau of Statistics.

[^265]:    ${ }^{1}$ Revised since the publication of the 1943-44 Year Book.

[^266]:    ${ }^{1}$ Except agriculture (see p. 759).

[^267]:    * A more complete account of the Unemployment Insurance Act, 1940, and of the administrative machinery set up by it appears in the 1941 Year Book at pp. 665-667 and in the 1942 Year Book at pp. 686-691.

[^268]:    ${ }^{1}$ The daily rate of contribution in respect of each class is one-sirth of the weekly rates.
    ${ }^{2}$ Unemployment insurance stamps combine both employer and employee contributions. ${ }^{2}$ Rates calculated on assumption that the person is in the same class for two years. Daily or weekly benefit for an insured person without dependants is 34 times his average daily or weekly contributions, and 40 times the average employee contribution for married persons mainly or wholly maintaining one or more dependants. - Workers in this class make no contributions and are not eligible for benefit. They may, however, accurnulate benefit rights on the basis of employer contributions.

[^269]:    * Statistics of Unemployment Insurance are compiled and published by the Social Analysis Branch of the Dominion Bureau of Statistics from material supplied by the Unemployment Insurance Commission.

[^270]:    ${ }^{2}$ Includes benefit years established in 1942 and carried over into 1943.

[^271]:    ${ }^{1}$ The total number of persons establishing benefit years was actually 19,588 since 11 persons whose ages were not given are not included in this table; 68 benefit days were paid to these 11 persons so that the total benefit days paid was actually 364,231 .

[^272]:    1 The figures for 1942 in this table differ somewhat from those shown previously, because changes have been made in the classification and several unions which were included under "All other industries" have been placed in their appropriate groups.

[^273]:    * See also the 1921 Year Book, pp. 607-609; 1922-23, pp. 704-707; and 1924, pp. 666-670.

[^274]:    ${ }^{1}$ Subject to revision.

[^275]:    * Fuller information concerning the provincial Workmen's Compensation Acts is given in a pamphiet issued annually by the Department of Labour of Canada.

[^276]:    * In Saskatchewan, when average earnings are below the minimum, an arbitrary rate of $\$ 9$ for those over 21 , and of 86 for those under 21, is paid.

[^277]:    ${ }^{1}$ Comprises employers individually liable.

[^278]:    ${ }^{1}$ None reported. $\quad{ }^{2}$ Includes non-ferrous smelting. $\quad{ }^{2}$ Includes erection of all large bridges.
    "Includes water service. ${ }^{5}$ Included in "business and personal" in $1944 . \quad{ }^{6}$ Total includes two protest strikes in Nova Scotia which involved workers of more than one industry.

[^279]:    *See pp. 774-783 of the 1927-28 Year Book for an article on the "Wages Statistics of the Census of 1921" and pp. 797-799 of the 1933 Year Book for "Earnings in the Census Year 1931".

[^280]:    ${ }^{1}$ Maximum rates for one-man car operators based on length of service; 5 cents less for two-man car

[^281]:    * Wherever these new Orders in Alberta and Saskatchewan have the effect of raising an hourly rate above 35 cents or raising it above any rate higher than 35 cents which was in effect on Nov. 15, 1941, payment of the new rate must be approved by the Regional War Labour Board in accordance with the Dominion Wartime Wages Control Order.

[^282]:    ${ }^{1}$ Applies to females only. apply to a 48 -hour week only. $\quad{ }^{2} 48$ for factories, except in specified cases, and for offices; 54 for shops,
    ${ }^{2}$ Except in offices and in theatres and amusement places where they beauty parlours, theatres and for women in laundries; 60 for hotels. 44 for offices. 'In shops, beauty parlours and hotels rates apply to 40 hours or more; in theatres and amusement places to 40 hours; and for office workers to $37 \frac{1}{2}$ hours. ${ }^{6}$ Hourly rates.

[^283]:    - The material in Section 1 is based on information and statistics obtained from the Dominion and Provincial authorities responsible for the administration of the various welfare services.

[^284]:    *Revised under the direction of Dr. W. C. Clark, Deputy Minister, Department of Finance, Ottawa,

[^285]:    *Revised from data obtained from the provinces concerned, under the direction of A. MacNamara, Deputy Minister, Department of Labour, Ottawa.

[^286]:    *This section of the Alberta Act relating to physically disabled husbands has not been proclaimed.

[^287]:    * In Saskatchewan, however, the provincial authority has no power to raise the maximum fixed by Order in Council.

[^288]:    *This material has been revised in co-operation with the Post-War Information Planning Section, Wartime Information Board, by the respective provincial authorities.

[^289]:    * Revised by J. C. Brady, M.A., Officer in Charge of the Census of Institutions, Dominion Bureau of Statistics, Ottawa.

[^290]:    * A complete list of all hospitals in Canada, giving name, location, type and bed accommodation for 1943, is obtainable on application to the Dominion Bureau of Statistics, Ottawa.

[^291]:    ${ }^{1}$ These institutions are classified in detail in Table 1.
    ${ }^{2}$ Includes 9 general hospitals in N.W.T. reporting: 4 salaried doctors, 16 graduate nurses, 71 total personnel, 4 X-ray and 1 clinical laboratory; 1,819 admissions, 81 live births, a total of 1,972 under care, 1,808 discharges, 63 deaths and 26,807 patient days. :Includes 1 private hospital in N.W.T. with 1 salaried doctor, 3 graduate nurses, 7 total personnel; 142 admissions, 29 live births, a total of 177 under care, 172 discharges, 3 deaths and 1,804 patient days.

[^292]:    ${ }^{1}$ One hospital in Nova Scotia, 5 in Quebec, 3 in Ontario, and one in Alberta did not furnish reports on their out-patient departments.

    22115-53

[^293]:    ${ }^{1}$ Incomplete.
    ${ }^{2}$ Includes 700 beds in St. Thomas District for orthopædic, plastic and arthritic treatments.

[^294]:    ${ }^{1}$ Includes other personnel.

[^295]:    * Employment and Income with special reference to the Initial Period of Reconstruction, April, 1945, King's Printer, Ottawa.

[^296]:    * The outlines of the provincial programs were collated by the Post-War Planning Information Section, Wartime Information Board, from material supplied by the respective Provincial Governments.

[^297]:    * Except as otherwise credited, the sections of this Chapter have been revised by H. F. Greenway, M.A., Chief, Prices Branch, Dominicn Bureau of Statistics. This Branch compiles and publishes statistics on: Wholesale and Retail Prices and Services; Cost of Living; Prices of Securities and Bond Yields. For a complete list of the publications of this Branch see Chapter XXX, Section I, under Internal Trade.
    $\dagger$ Prepared in the Research Section, Economics Branch, Wartime Prices and Trade Board.

[^298]:    * Canada Year Book 1942, pp. 724-727. Canada Year Book 1943-44, pp. 776-780.

[^299]:    - As indicated by records from stores dealing chiefly in foods, clothing and household requirements.

    22115-57

[^300]:    *This index of Ontario long-term bond yields may be found in the Bureau's monthly bulletin "Prices and Price Indexes", obtainable from the Dominion Statistician.

[^301]:    * Prepared by Sydney B. Smith, M.A., Chief, Business Statistics Branch, Dominion Bureau of Statistics, Ottawa. This subject is treated more fully in "National Income of Canada, 1919-1938, Part I" and the estimates are brought up to date regularly in "Economic Conditions". Other publications of the Branch are listed in Chapter XXX under the headings of "Finance" and "Business Inderes".

[^302]:    ${ }^{1}$ Preliminary eatimates of $\$ 8,700$ million and $\$ 9,200$ million for 1943 and 1944, respectively, are subject to change. ${ }^{2}$ Statistics from 1919-28 "National Income and its Composition", National Bureau of Economic Research, New York; frops 1929-42 "Survey of Current Business", U.S. Dept. of Commerce, April, 1944. $\quad$ ' Revised since the publication of the 1943-44 Year Book.

[^303]:    ${ }^{1}$ "Other Investment Income" is the sum of interest on savings deposits, interest from insurance and annuity contracts, pensions and annuities, mortgage interest and net rentals. $\quad{ }_{2}$ Preliminary estimates of $\$ 8,054$ million and $\$ 8,081$ million for 1943 and 1944, respectively, are subject to revision. ${ }^{3}$ Revised since the publication of the 1943-44 Year Book.

[^304]:    ${ }^{\bullet}$ Revised under the direction of J. H. Lowther, Chief, Public Finance Branch, Dominion Bureau of Statistics.

[^305]:    ${ }^{1}$ Includes provincial profits from liquor control. $\quad{ }^{2}$ As per Dominion-Provincial Taxation Agreement Act. $\quad$ Paid by Dominion to provinces re school lands and common school fund investments.

[^306]:    * Revised under the direction of Dr. W. C. Clark, Deputy Minister, Department of Finance, with the exception of those parts dealing with war-tar revenue and income-tax revenue at pp. 936-938, which were revised by the Department of National Revenue.

[^307]:    * For more detailed information, and interpretations of these financial matters, refer to the War Budget speeches of Sept. 12, 1939 (Hansard p. 135), June 24, 1940 (Hansard p. 1011), Apr. 29, 1941 (Hansard p. 2541), June 23, 1942 (Hansard p. 3570), Mar. 2, 1943 (Hansard p. 870 ) and June 26, 1944 (Hansard p. 4291 ) and to speeches or statements made by the Minister of Finance in the House of Commons on May 21, 1940 (Hansard p. 83), July 30, 1940 (Hansard p. 2125), Nov. 21, 1940 (Hansard p. 311), Dec. 2, 1940 (Hansard p. 605), Feb. 18, 1941 (Hansard p. 897), and Mar. 20, 1941 (Hansard p. 1867). Reference might also be made to the speech of the Prime Minister in the House of Commons on Mar. 25, 1941 (Hansard p. 2016), and in general to the debates on the Budgets mentioned above.

[^308]:    ${ }^{1}$ Includes pensions to blind persons.
    Mines and Resources in previous years.
    ${ }^{2}$ Included in Departments of Trade and Commerce and
    ${ }^{3}$ Included in Department of Munitions and Supply.
    ${ }^{3}$ Included in expenditures of the Department of Finance.
    ${ }^{5}$ Included under war expenditures.

    - Excludes civil pensions.
    ${ }^{\boldsymbol{T}}$ Included under National War Services.

[^309]:    ' Not comparable with previous years due to a change in the method of dealing with the item.

[^310]:    ${ }^{1}$ For detailed statement, see Table 17, p. pp. 936-937. ${ }^{2}$ Includes various smaller items of revenue receipts for most earlier years and special receipts since $1921 . \quad{ }^{3}$ First year in which tax imposed. ${ }^{4}$ Includes succession duties and other items. ${ }^{5}$ This amount represents return on investments, which includes interest on investments, profits of Bank of Canada, Central Mortgage Bank and other items.

[^311]:    1 Includes a write-down of assets amounting to $\$ 62,938,239$.
    ${ }^{2}$ Reserve against estimated losses
    ${ }^{3}$ Reserve against estimated losses on wheat marketing guarantees applicable to fiscal year 1938-39. on wheat marketing guarantees applicable to fiscal year 1939-40 to the extent of $\$ 27,000,000$. cludes $\$ 25,000,000$ as reserve against possible losses on assets.

[^312]:    For footnotes, see end of table, p. 937.

[^313]:    ${ }^{1}$ Received additional "Additional Special Grants", 1939-41, not included in this table (see text following Table 21).

[^314]:    - Provincial Government receipts from gasoline taxee for the fiscal years 1923-43 are given at p. 978 .

[^315]:    ${ }^{1}$ Based on the official estimates of population given at p. 128.
    ${ }^{2}$ The minus sign ( - ) denotes a decrease. $\quad$ Includes $\$ 3,305,450$, caused by the settlement of accounts with Ontario and Quebec. ${ }_{4}$ Takes into account $\$ 5,397,503$, allowed to Ontario and Quebec under 47 Vict., c. 6.
    ${ }^{5}$ Nine months, due to change in fiscal year. ${ }^{6}$ Active assets only. ${ }^{7}$ This amount represents return on investments, which includes interest on investments, profits of Bank of Canada and Central Mortgage Bank and other items.

[^316]:    ${ }^{1}$ This issue is redeemable at 1003 p.c. Amount outstanding includes $\$ 250,000$ redemption bonus. ${ }^{2}$ This issue is redeemable at 101 p.c. Amount outstanding includes $\$ 6,435,342.50$ redemption bonus. ${ }^{3}$ This issue is redeemable at 101 p.c. Amount outstanding includes $\$ 500,000$ redemption bonus. $\$$ This issue is redeemable at 101 p.c. Amount outstanding includes $\$ 6,696,589$ redemption bonus. $\quad$ This issue is redeemable at 101 p.c. Amount ontstanding includes $\$ 8,471,360$ redemption bonus.

[^317]:    ${ }^{1}$ Includes bonds purchased and held by the Treasury for sinking funds.
    2 In 1936 an amount of \$11,827, being compensation to seigneurs, previously included under Savings Bank Deposits, Trust and Other Funds, was transferred to Bonds, Debentures, and Treasury Bills.
    ${ }^{2}$ Includes refundable
    portion of income tax and excess profits tax.

[^318]:    *Revised under the direction of J. H. Lowther, Chief of the Finance Statistics Branch, Dominion Bureau of Statiatics. For further statistical detail see "Public Finance of Provincial Governments in Canada", Dominion Bureau of Statistics.
    $\dagger$ References are to provincial fiscal years ended nearest Dec. 31 of year stated.

[^319]:    *The most productive of these were the Quebec retail sales tax imposed in 1940 and the additional 2 p.c. levy on corporation profits imposed by Ontario following the 1939 Budget Speech.
    $\dagger$ Budget Speech of Mar. 2, 1943.

[^320]:    ${ }^{1}$ Includes railway aid certificates.
    ${ }^{2}$ Includes $\$ 2,325,000$ sinking funds held by Nova Scotia Power Commission in respect of bonds issued by the Province. ${ }^{\mathbf{3}}$ Includes $\$ 124,000$ sinking funds in respect of $\$ 213,000$ guaranteed drainage district debenture debt assumed by the Province. TIncludes $\$ 3,626,000$ net provincial guarantee of bonds issued by Niagara Parks Commission. $\quad$ Includes $\$ 1,027,000$ re Co-operative Credit Societies against which capital and reserves of $\$ 340,000$ of Alberta Rural Credit Corporation are considered as security. operated by C.N.R. and C.P.R.

[^321]:    * Revised under the direction of J. H. Lowther, Chief of the Public Finance Branch, Dominion Bureau of Statistics. For a list of publications, see Chapter XXX, Section 1, under "Finance".
    $\dagger$ A special bulletin, "Classification of Different Types of Local Government Units in Canada", was issued by the Public Finance Branch of the Dominion Bureau of Statistics, in October, 1940.

[^322]:    ${ }^{1}$ Includes the following: N.S.-Income Tax, Household Tax, the former withdrawn in 1942 and the latter in 1943; N.B.-Income Tax; Que.-Miscellaneous Stock-in-Trade, Tenants Tax, et al, not specified; Ont.-Income of Corporations derived from interest earnings on investments; Sask.-Special Franchise; Alta.-Franchise and Other Special. ${ }_{2}$ Includes estimated values for some municipalities. ${ }^{3}$ Total exemptions have been applied against real property valuations. Includes some other typea of valuations not specified. ${ }^{5}$ Not available from published reports. ${ }^{6}$ Rural municipalities only. ${ }^{7}$ Includes temporary exemptions: $\$ 87,687,736$ (1941); $\$ 81,572,103$ (1942); and $878,494,294$ (1943). ${ }^{3}$ Does not cross-add to total; see reports of Ontario Department of Municipal Affairs. Bities only; exemptions for other municipalities not published. ${ }^{10}$ Cities, with exception of Drumheller; exemptions for other municipalities not published.
    ${ }^{4}$ Includes $\$ 170,953,380$ (1941), $\$ 177,991,707$ (1942), and $\$ 184,383,801$ (1943) valuations of improvements, the total value of which was $\$ 385,753,558$ (1941), $\$ 101,168,674$ (1942) and $\$ 412,707,744$ (1943) and the maximum value at which they could be taxed was $\$ 241,196,431$ (1941), $\$ 250,989,749$ (1942) and $\$ 257,964,422$ (1943). ${ }^{12}$ Consists of $\$ 173,468,105$ (1941), $\$ 176,510,803$ (1942) and $\$ 185,280,087$ (1943) valuation of exempted properties, and $\$ 214,800,178$ (1941), $\$ 223,176,967$ (1942) and $\$ 228,323,040$ (1943) exemptions of tarsble improvements as referred to in Footnote 11. 12 Does not cross-add to total; see Footnote $8 . \quad 14$ See Footnotes 5, 7, 9, 10 and 12.

[^323]:    * Annual report of the Department of Municipal Affairs of the Province of Saskatchewan for the fiscal year ended Apr. 30, 1941.

[^324]:    ${ }^{1}$ Includes Public Revenue (Provincial) Taxes of $\$ 60,529$ (1941); $\$ 60,471$ (1942); and $\$ 59,786$ (1943). ${ }^{2}$ Includes Social Services, Educational and Wild Lands Taxes (Provincial) of $\$ 196,314$ (1941); $\$ 193,717$ (1942); and \$184,336 (1943).
    ${ }^{3}$ Not reported separately.

[^325]:    For footnotes, see end of table p. 966.

[^326]:    ${ }^{1}$ Includes $\$ 7,635,199$ net debenture debt (less sinking funds) and other capital liabilities of Separate School Boards and School Districts in unorganized areas (debenture payments in arrears are also included in this amount).
    ${ }^{2}$ Excludes liabilities of schools and other local boards and commissions but includes in lieu thereof amounts due by municipal revenue fund accounts to such schools and other local authorities (information required to make thenecessary eliminations on this account not available from published reports) (see Footnote 1). ${ }^{3}$ Excludes rural schools. ${ }^{4}$ None reported. ${ }^{5}$ Includes $\$ 1,892,221$ balance of annual grants payable to certain institutions. ${ }^{6}$ Includes Rural Telephone, Drainage District and Union Hospital District debentures. ${ }^{7}$ Includes $\$ 4,088,267$ treasury bills and $\$ 5,550,440$ other floating debt less $\$ 1,375,966$ sinking funds accumulated in respect thereof $r e$ city of Winnipeg. ${ }^{8}$ Includes $\$ 2,648,693$ treasury bills. ${ }^{\circ}$ Includes $\$ 518,253$ deferred liability due Civic Pension Funds by city of Winnipeg. $\quad{ }^{10}$ Includes $\$ 1,015,911$ tax prepayment deposits.

[^327]:    ${ }^{1}$ Not available from published reports.

[^328]:    $\bullet$ Revised under the direction of the Deputy Minister of National Revenue for Taxation by M. F. Sprott, B. Com., Chief Statistician.

[^329]:    ${ }^{1}$ The accounts for these taxation years are not yet closed and the figures are therefore not yet complete; there will be a small change in the 1943 account and substantial additions to the 1944 and 1945 accounts.

[^330]:    ${ }^{1}$ Figures for Yukon are not included in classification by income class but are included in totals. ${ }^{2}$ Total includes \$757,924 debit adjustment.
    ${ }^{3}$ Included in Canada totals.

[^331]:    - Obtainable from the Dominion Statistician, Ottawa, price 25 cents.

[^332]:    ${ }^{1}$ Figures below the rule are for the fiscal years ended nearest to Dec. 31 of the year stated. ${ }^{2}$ First year gasoline tax reported in this province. ${ }^{3}$ Eight months. ${ }^{4}$ Three months. ${ }^{6}$ Four teen months. ${ }^{6}$ Five months. ${ }^{7}$ Includes tax on fuel oil. ${ }^{8}$ Actual net receipts for fiscal years ended nearest Dec. 31, 1940. Provincial gasoline tax revenues of subsequent years are guaranteed at this level by the Dominion Government ( 6 Geo. VI, c. 13).

[^333]:    ${ }^{1}$ Plus a surtax of 15 p.c.
    4 Plus a surtax of 25 p.c.

[^334]:    ${ }^{1}$ Exclusive of surtax of 15 p.c. on amount of duty. ${ }^{2}$ Exclusive of surtax on provincial duty.

[^335]:    ${ }^{1}$ Exclusive of surtax of 20 p.c. $\quad{ }^{2}$ Exclusive of surtax on provincial duty.

[^336]:    ${ }^{2}$ Exclusive of surtax of 25 p.c.

[^337]:    ${ }^{1}$ Not shown prior to 1944.
    ${ }^{2}$ The Exchange Fund-Order, 1940, authorized the transfer of the Bank's gold holdings to the Foreign Exchange Control Board and temporarily suspended the requirement for a minimum gold reserve.

[^338]:    - Revised by the Royal Canadian Mint, Ottawa.
    $\dagger$ The Currency Act of 1910 made provision for a silver dollar and a 5 -cent silver coin. The former was not coined until 1935, when a limited issue was made as a jubilee coin. The 5 -cent silver coin was coined freely until 1921. It still has limited legal tender but has been replaced in the coinage by the nickel 5 -cent piece. In 1942 a new 5 -cent piece was coined from 'tombac', a copper-zinc alloy, in order to conserve nickel for war purposes, and this coin was replaced in 1944 by a 5 -cent coin composed of mild steel with a chromium finish.

[^339]:    ${ }^{1}$ Gross note circulation of chartered banks less notes of other chartered banks.

[^340]:    ${ }^{1}$ That portion of the Central Gold Reserves earmarked for additional bank-note issue. After the eatablishment of the Bank of Canada in 1935, the note issues of the chartered banks were severely restricted and gradually disappeared and this item is not in evidence after $1934 . \quad{ }^{2}$ Included in cash reserves. ${ }^{2}$ Not shown separately since August, 1944.

    4This total is not the exact sum of the individual items since the first two items in the column have been worked out to the nearest million only.

[^341]:    ${ }^{1}$ Supplied by the Bank of Canada.

[^342]:    - Barclays Bank, established in 1929, was the latest addition to the commercial chartered banks in Canada; the number has remained at 10 since 1931.

[^343]:    ${ }^{1}$ Excluding minor amounts of gold carried in such reserves. See also text immediately preceding this table. ${ }_{2}$ Revised since the publication of the 1943-44 Year Book. ${ }^{3}$ Absorbed by the Imperial Bank of Canads, May 1, 1931.
    1929. The grand totals for 1929 are, however, twelve-month averages for all banks.

[^344]:    ${ }^{1}$ Revised since the publication of the 1943-44 Year Book. $\quad{ }^{2}$ Absorbed by the Imperial Bank of Canada, May 1, $1931 . \quad{ }^{3}$ Four-month averages; bank commenced business in September, 1929. The grand totals for 1929 are, however, twelve-month averages for all banks.

[^345]:    ${ }^{1}$ Not reported.

[^346]:    ${ }^{1}$ Includes sub-agencies for receiving deposits for the banks employing them.

[^347]:    ${ }^{1}$ Exclusive of two sub-agencies. agencies.

[^348]:    *Revised under the direction of G. D. Finlayson, Superintendent of Insurance, Department of Insurance.

[^349]:    ${ }^{1}$ Book value of real eatate for companiea' use and other real eatate. ${ }^{2}$ Includee other assets. ${ }^{3}$ Includes other liabilities to shareholders. Includes other lisbilities to the public.

[^350]:    ${ }^{\bullet}$ Revised from information supplied by E. C. Gould, Assistant Editor, the Monetary Times.

[^351]:    ${ }^{1}$ Includes treasury-bill financing from 1934.

[^352]:    ${ }^{2}$ Not reported.

[^353]:    ${ }^{1}$ Includes depletion charges.
    ${ }^{2}$ Includes current interest due but not paid in cash, deferred development charges, amortization of bond discount, etc. ${ }^{2}$ Includes advance payments on government contracts.

    4 After adjustment relating to tax accruals and other transactions of previous years.

[^354]:    ${ }^{1}$ Preliminary figures. $\quad$ : For purposes of comparability any special capital charges made against income account in company reports have been added back as well as "contingent" and "general" reserves. Special inventory reserves (amounting to $0 \cdot 1,0 \cdot 7,0 \cdot 8,1 \cdot 8,4 \cdot 4,10 \cdot 1,6 \cdot 2$ and 3.3 in the years 1936-43, respectively), whether shown by the company in operating expenses or as an adjustment to earned surplus, have been deducted in arriving at net operating profit.
    ${ }^{2}$ Includes deferred development and depletion provision amounting to $6 \cdot 9,9 \cdot 5,9 \cdot 1,8 \cdot 8,9 \cdot 1,9 \cdot 3,8 \cdot 7$ and $7 \cdot 3$ in the years $1936-43$, respectively. ${ }^{\prime}$ Current bond interest owing but not paid in cash of 2.4 in the years $1936-40$ and of $2 \cdot 3,1.9$ and 1.5 in the years 1941-43, respectively, has been deducted from net income to stockholders.

[^355]:    ${ }^{3}$ Preliminary figures. $\quad 2$ Includes grain elevators.

[^356]:    *Revised under the direction of G. D. Finlayson, Superintendent of Insurance.

[^357]:    ${ }^{1}$ Or deposited with the Government.

[^358]:    ${ }^{1}$ Included with "interest" ${ }^{2}$ Income in Canada only. ${ }^{2}$ Includes $\$ 47,520$ dividends to policyholders in $1939 . \quad 4$ Includes $\$ 456,046$ income war tax, $\$ 517,522$ excess profits tax and $\$ 51,122$ dividends to policyholders. ${ }^{6}$ Includes $\$ 733,781$ income war tax, $\$ 844,949$ excess profits tax, $\$ 287,661$ British and foreign war taxes, $\$ 80,250$ dividends to policyholders, $\$ 100,000$ donation to Government, $\$ 100,000$
    preference stock redeemed and $\$ 187,790$ repaid to shareholders. preference stock redeemed and $\$ 187,790$ repaid to shareholders. ${ }^{6}$ Includes $\$ 771,028$ income war tar, $\$ 1,161,193$ excess profits tax, $\$ 271,602$ British and foreign war taxes, $\$ 261,004$ dividends to policyholders and $\begin{array}{ll} \\ \text { tax, } \$ 610,738 & \text { British } \\ \text { 2nder }\end{array}$ expense. $\quad 8$ Expenditure in Canada only. ${ }^{\circ}$ Includes $\$ 273,166$ income war tax and $\$ 440,184$ excess profits tax. ${ }^{10}$ Includes $\$ 293,115$ income war tax and $\$ 390,748$ excess profits tax. ${ }^{11}$ Includes $\$ 511,975$ income war tax and $\$ 920,426$ excess profits tax. ${ }^{12}$ Includes $\$ 312,253$ income war tax and $\$ 593,548$ excess profits tax. $\quad 13$ Includes $\$ 183,123$ income war tax and $\$ 218,515$ excess profits tax. ${ }^{14}$ Includes $\$ 155,349$ income war tax, $\$ 271,436$ excess profits tax and $\$ 777,266$ dividends returned to policyholders.
    ${ }^{15}$ Includes $\$ 183,101$ income war tax, $\$ 259,952$ excess profits tax and $\$ 721,576$ dividends or savings credited to subscribers.
    ${ }^{16}$ Includes $\$ 112,057$ income war tax, $\$ 185,894$ excess profits tax and $\$ 682,726$ dividends or savings credited to subscribers.

[^359]:    ${ }^{1}$ Excluding $\$ 44,000,000$ adjustment arising out of method of reporting juvenile insurance.

[^360]:    * This total does not include fraternal insurance.

[^361]:    ${ }^{1}$ Death claims, matured endowments and disability claims.

[^362]:    ${ }^{1}$ A detailed classification of assets showing investments of Canadian companies and giving the percentage of the total in each group and sub-group for 1942 and 1943 will be found at p. xxiv of the Report of the Superintendent of Insurance, Vol. II, for the year ended Dec. 31, 1943. ${ }_{2}$ Book values. The totals carried into the balance sheets, including some market (or authorized) values of these assets, wree: $\$ 2,348,857,928$ in $1939 ; \$ 2,454,714,133$ in 1940 ; $\$ 2,582,676,124$ in $1941: \$ 2,729,419,685$ in 1942 ; and $\$ 2,921,471,387$ in 1943.
    ${ }^{3}$ None reported.

[^363]:    ${ }^{1}$ Includes income on business outaide of Canada.

[^364]:    ${ }^{1}$ Whole business. ${ }^{2}$ Book values. The totals carried into the balance sheets, including some market (or authorized) values of these assets were $\$ 82,305,985$ in $\mathbf{1 9 3 9}, \$ 82,528,753$ in $1940, \$ 83,563,328$ in 1941, $\$ 85,137,561$ in 1942 and $\$ 89,820,188$ in 1943.

[^365]:    * Prepared or revised, except for those parts otherwise indicated, by J. E. Robbins, M.A., Ph.D., Chief, Education Statistics Branoh, Dominion Bureau of Statistics. This Branch is concerned with compiling and publishing comparable data relating to educational institutions throughout Canada, and to this end co-operates with the provincial Departments of Education. A list of the publications of this Branch will be found in Chapter XXX, under "Education".

[^366]:    ${ }^{2}$ Approximate: exact statistics lacking owing to change in method of reporting.
    ${ }^{2}$ Figure for Quebec not available at time of going to press.

[^367]:    ${ }^{1}$ Figure for Quebec not available at time of going to press.

[^368]:    ${ }^{1}$ Board and lodging not included.
    ${ }^{3}$ Site, buildings and equipment.
    ${ }^{2}$ Combined deficits or surpluses of schools reporting. - First year available.
