## DOMINION BUREAU OF STATISTICS

DEPARTMENT OF TRADE AND COMMERCE, CANADA

# THE CANADA YEAR BOOK 1945 

THE OFFICIAL STATISTICAL ANNUAL OF THE RESOURCES, HISTORY, INSTITUTIONS, AND SOCIAL AND ECONOMIC CONDITIONS OF THE DOMINION

Published by Authority of
The Honourable James A. MacKinnon, M.P. MINISTER OF TRADE AND COMMERCE

> PUBLIC PRINTING and STATIONERY

FEB 221965
DOCUMENTS LIBRARY

## PREFACE

The Canada Year Book traces its beginning to 1867 -the first year of the nation's history. However, it did not become the broad medium it is to-day for interpreting the development of the resources, institutions and social and economic conditions of the country until after the reorganization that followed the Report of the Departmental Commission on Statistics in 1912, and the consequent establishment of the Dominion Bureau of Statistics in 1918.

The rapid social and economic strides that Canada has made, especially during these past three decades, are reflected in the expansion and growing prestige of the Canada Year Book, which has now come to be regarded, boṭh at home and abroad, as the indispensable reference work on Canada.

The present edition continues the policy of assigning such space as can be spared to feature articles of special importance. Such articles give additional meaning and substance to the purely statistical and analytical material that constitutes the basic chapter material. In a very real sense, as a perusal of the list of Special Articles that have appeared in former editions (pp. viii to xii) will show, they give to the Year Book Series an encyclopædic value apart from its function as a statistical abstract.

Among the special articles appearing in the present edition are: The Physical Geography of the Canadian Eastern Arctic, at pp. 12-19; Canada's Growth in External Status and Canada's Part in the Relief and Rehabilitation of the Occupied Territories, at pp. 74-85; Canadian Oil Production, at pp. 321-325; Changes in Canadian Manufacturing Production from Peace to War, at pp. 364-381; International Air Conferences, at pp. 642-644; The Wartime Role of the Steam Railways in Canada, at pp. 648-651; Canada's Northern Airfields, at pp. 705-712; the Democratic Functioning of the Press, at pp. 744-748; and the Activities of the Wartime Prices and Trade Board in Controlling Prices, Rents and Supplies, at pp. 885-893.

All these articles are sponsored by responsible authorities of the Dominion or Provincial Government Services with the exception of the article on the Press, for which material was supplied by the Hon. W. A. Buchanan, President of the Canadian Press.

Because of public interest in the articles published in former editions of the Canada Year Book, the policy of reprinting such articles as are of continuing value has been approved, and in future a number of these will be made available each year. Information regarding those that can be obtained will hereafter be indicated in the list appearing at the opening pages of each edition of the Year Book.

In addition to the Special Articles, the regular chapter material has undergone thorough-going revision and reflects latest developments.

The Canadian economy has, with the recent cessation of hostilities with Japan, definitely entered the transition period from war to peace. The necessarily rigid controls that have marked the past few years already show some relaxation and, in respect of Social Welfare and Reconstruction, definite plans have now been projected and in some cases are in actual operation. Although the statistical lag is necessarily such that for most chapters the record still lies in the period before V-E Day, yet the reader is kept abreast of developments by up-to-date textual analyses and discussions. This is more particularly the case in the Chapters on Social Welfare and Reconstruction, where developments such as Family Allowances,

Health Insurance, and Post-War Planning for Full Employment are still in the organization stage. Comparable statistics over a period of time are, of course, not available in such cases but where statistics of current operations have been compiled even on a preliminary basis, such as in the case of Family Allowances, they are included.

A five-year review of manufacturing developments for war needs is given at pp. 364-381. This serves as a general background for the Manufactures Chapter and places in proper perspective the industrial achievements and contributions of the Dominion to Victory.

Chapter XV-Construction-will take on added importance with the decline in munitions production. Easing of the manpower situation will permit the carrying out of undertakings of all kinds that have accrued since 1939. Government Aid to Civil Housing, including the National Housing Act of 1944, is described and the Chapter contains a review of the achievements of the construction industry during the war years.

The External Trade Chapter has been very considerably reorganized. The extended general review at the opening of the Chapter draws attention to the influences that will affect post-war world trade and Canada's relation to them. The organization that the Department of Trade and Commerce has planned to meet this new set of conditions is explained in detail at pp. 477-484. Further, in Part II-Statistics of External Commodity Trade - the series of detailed tabulations of principal imports and exports that, because of wartime restrictions, could not be published from 1942 to 1944, is now reinstated from the point where it was previously dropped.

The Chapter on Internal Trade contains several new features. The wartime controls affecting distribution and trade that are administered by the Department of Munitions and Supply and the Wartime Prices and Trade Board are apt to be confusing to the average citizen. At the beginning of the Chapter, therefore, a section explaining them is introduced. In Part II a section on the Consumption of Foods is given: this subject is one to which the application of statistical method is particularly useful at this time when the consumption of rationed commodities during war years as compared with their normal pre-war consumption is very much in demand. The final results of the Census of Merchandising and Service Establishments as derived from the Census of 1941 are given in this Chapter. This census differs from that of 1931 (the first such census taken in Canada) in the coverage of firms and more particularly in the improved methods of compilation and classification that experience over ten years has brought about. In order to bring the two sets of records in unison, it has been necessary to revise the 1931 Census data considerably.

The chapters dealing with primary resources have been brought up to date and attention is directed to all major trends. For instance, in Chapter VIII-Agriculture-a set of summary statistical tables has been included from the Census of 1941 showing: Types of Farms in Canada; Farm Population, Rural and Urban; Hired Workers on Farms; Farm Tenure, Values and Indebtedness; Farm Mechanization; and Farm Revenues and Expenditures. In Chapter XI-Fisheries -a section has been introduced, based on contributions made by the Provincial Governments, giving the administrative fields and the work these Provinces are doing in developing their fisheries resources.

A new section explaining the Manpower and Selective Service organization is introduced into the Labour Chapter.

The fight against inflation has been waged by Canadians with signal success so far, but it is not by any means over. Perhaps the severest test of the price structure will come in the years immediately ahead with the adjustment of the economy to peacetime conditions. Chapters XXIII and XXIV of the Year Book dealing with Prices and Finance, respectively, describe the machinery and technique by which the results have been achieved.

Appendices I and II give the latest figurès on external trade and production available at the time of going to press. Appendix III presents the first tabulations of Family Allowances that have been compiled. Appendix IV gives an analysis of occupations by industrial groups of the Census of 1941, additional to those given at pp. 1062-1073 of the 1943-44 Canada Year Book. Statistics of citizenship and nativity that were available at the time of going to press are also included, and Appendix V gives detailed results of the voting at the Dominion Election of June 11, 1945.

It has been found possible to include more than the usual number of maps and charts in this volume, due to the fact that many of the maps, designed for other reports of the Bureau, were economically printed from existing plates. Almost all the inserts, however, are in black and white in line with the continuing need for wartime economy.

The inclusion of all the special features outlined above is considered necessary to the fulfilment of the Year Book's function, viz., to keep the Canadian public abreast of the rapid developments that are taking place in the national economy, but they have made it necessary to extend the edition to approximately 1,250 pages, including Preliminary Matter and Introduction.

The present volume has been edited by A. E. Millward, Editor, Canada Year Book, assisted by Margaret K. Pink. The proof-reading and the careful checking of data carried out by the staff have been supervised by Catherine A. Freeth. Charts, graphs and layouts have been made by or under the direction of J. W. Delisle, Senior Draughtsman of the Bureau.

Acknowledgements are hereby tendered to the numerous officials of the Dominion and Provincial Governments, and to others who have contributed material. Whenever possible, credit is given to the various persons and services concerned by means of footnotes to the respective sections.

With a view to the improvement of future editions, the Bureau will be glad to hear of any errors that may have escaped notice, and to receive suggestions with regard to omissions or to methods of treatment.

S. A. CUDMORE,<br>Dominion Statistician.

## distances between principal points in canada.*

## Nore.-Generally, the distances given are the shortest by railway.

A knowledge of distances in miles between principal points constitutes very useful information in these days of wide travel, but when an attempt is made to compile such data difficulties are at once encountered. Railway distances are the logical choice, even though road distances are of increasing interest to a vast body of travellers by automobile and are a useful alternative. Railway distances represent usually the shortest practicable land distances between two points and even to-day the bulk of freight and passenger traffic is by rail. Again, distances by air (sometimes called 'bee-line' distances) are only useful in practice to those who travel by air. This is a growing phase of transportation, of course, but has not yet assumed such proportions that its tabulation should able to obtain railway distances easily. Even though it be decided to adopt railway distances as most useful, it is necessary to decide whether the most travelled route between two places or the shortest railway route should govern. In the tables given below, the distances between points are the shortest distances by railway and not necessarily the most travelled routes or the routes by which main trains travel. They are compiled principally from the railway time tables. The main table includes the capital of each province and some of the main shipping points chosen principally, but not altogether, by population; the subsidiary tables include distances of local importance. Included in the distances
from Charlottetown is the distance from Borden to Cape Tormentine, over which the trains are transported by ferry; similarly, the train ferry distance between Mulgrave and Point Tupper is included in the distance from Halifax to Sydney. In the main table all the distances from Victoria include the distance travelled by boat from Victoria to Vancouver. However, wherever possible, railway distances only are used. In certain distances from Three Rivers and from Quebec it is possible, by the use of ferries, to travel by shorter routes than those given in the tables, the rail route only being taken in these case

Where boat routes are given, the best approximation of the distance travelled is used.
 in good weather.

## ARTICLES AND MISCELLANEOUS TEXT MATERIAL (PUBLISHED IN FORMER EDITIONS) CLASSIFIED BY SUBJECT

Note.-It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions, and the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1945 Year Book with its predecessors in respect to matters that have not been subject to wide change. Those sections of chapters, such as Population, which are automatically revived when new material is made available from a later census, and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article takes in ground not covered in the later one. When articles cover more than one subject they are listed under each appropriate heading.

## STATISTICAL SUMMARY OF THE PROGRESS OF CANADA 1871-1944

#### Abstract

Nore.-In the following summary, the statistics of fisheries (1871-1911), trade, shipping, the Post Office, the public debt, revenue and expenditure, and the Post Office and Government savings banks relate to the fiscal years ended June 30 up to 1906; subsequently to years ended Mar. 31, except in the case of trade, where, as indicated by footnotes, calendar-year figures are given for certain later years. Agricultural, dairying, fisheries (from 1922), mineral, manufacturing, banking, insurance, loan and trust companies, construction, road transportation, vital, hospital, and immigration statistics relate to the calendar years, and railway statistics to the years ended June 30, 1871-1916, and to the calendar years 1921 and 1926-44. Canal statistics are those of the navigation seasons. The telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

## Comparative Expenditures for the First and Second World Wars

The following figures are presented of the comparative financial cost to Canada of the First and Second World Wars.

First World War.-For the fiscal years 1915 to 1920, direct expenditures on war and demobilization totalled $\$ 1,670,406,000$.

Second World War.-For the fiscal years 1940 to 1945, direct expenditures on war totalled $\$ 14,909,728,000$. The expenditures in the fiscal year 1944-45 alone were over two and one-half times the total war expenditures in the fiscal years 1914-15 to 1919-20. In addition, large disbursements of cash were necessary in the present war to provide assistance by way of loan to the United Kingdom and the repatriation of securities held in the United Kingdom.
xiv

## STATISTICAL SUMMARY OF THE PROGRESS OF CANADA

Area of the Dominion of Canada in square miles: Land, 3,466,882; Fresh Water, 228,307; Total, 3,695,189. Nore.-Dashes in this table indicate that comparable data are not available for the years so indicated.

${ }_{1}$ Figures are subject to revision. ticular years. For these, see the Population Chapter IV figures are not completely comparable owing to changes in classification in 1926 and 1938 .

STATISTICAL SUMMARY OF THE PROGRESS OF CANADA-continued
The length of the Canada-United States boundary is $3,986 \cdot 8$ miles, and that of the Canada-Alaska boundary is $1,539 \cdot 8$ miles. The Canada-Labrador boundary (not surveyed) is estimated at 1,260 miles; the total mainland coast line of Canada (not accurately computed) is estimated at 14,820 miles.

Nore.-Dashes in this table indicate that comparable data are not available for the years so indicated.

## INTRODUCTION*

## Section 1.-Canada and the War

The steps taken by Canada at the outbreak of war in September, 1939, and subsequent events up to early 1944 are dealt with in previous wartime editions of the Year Book.

The period between the spring of 1944 and the summer of 1945 witnessed many developments favourable to the United Nations in the conduct of the War. From their already mounted offensives the Allies attacked the enemy on all fronts and achieved on May 7, 1945, the unconditional surrender of Germany, which had been rendered helpless by ceaseless aerial bombing and crushing land attacks.

Canadian troops participated in several military operations, including the drive up Italy and the final Allied push in Western Europe. Canadians formed part of the invasion force in the landing in Normandy, and in August, 1944, it was announced that the First Canadian Army was in action in France. The Canadians in Italy after November, 1943, operated as a self-contained Canadian Corps attached to the British Eighth Army until their transfer in the spring of 1945 to the Netherlands, where they fought as part of the First Canadian Army.

In every war theatre, in virtually every air attack, Canadian fliers have hammered at the enemy and taken an important share in defeating him. Likewise, Canadian Navy personnel and ships have helped to keep the vital convoy lanes open and, more frequently in the later months of the European War, have taken part in offensive actions.

Strength of the Canadian Armed Forces at the end of 1944 exceeded 760,000 , of whom about 36,000 were women. Of this number more than 380,000 were serving afloat in the Navy or were overseas in the Army and Air Force. At the end of the European War, Canadian casualties totalled nearly 103,000.

The spring of 1945 saw the end of the British Commonwealth Air Training Plan and the last group of students complete their final training. .This scheme, perhaps Canada's most important single contribution to Allied victory, has trained 238,000 men from the United Kingdom, Australia, New Zealand, Canada and other Allied countries, of whom 55 p.c. of air crew and 97 p.c. of ground crew were Canadians. After completion of the plan on Mar. 31, 1945, limited numbers of additional air crew were trained for the R.A.F. on a contract basis.

After five years and eight months of war in Europe, Canadian Navy, Army and Air Force units turned to prepare for the final phase of the world struggle, the defeat of Japan. By the summer of 1945 troop movements from Europe and the United Kingdom had already begun, with thousands of service men landing almost dsily. On the home front, Canada was concentrating its resources and productive capacity on supplies for the Pacific war.

During the war years Canada has continued to mobilize and expand its productive capacity and has become the fourth largest producer of war supplies, third naval and fourth air power among the United Nations, as well as the world's second exporting and third trading nation. During 1944 Canada's external trade, excluding gold, reached $\$ 5,242,000,000$ in value, the highest annual total ever recorded. Large

[^5]exports of war supplies and foodstuffs have been possible because of Canada's great wartime industrial expansion and the fact that it is one of the foremost providers of food for the United Nations. A floor price for all agricultural and fisheries products has been assured for the transition period from war to peace.

At his regular press conference at Washington on Mar. 13, 1945, in the presence of Prime Minister King, the late President Roosevelt of the United States read a statement that said in part:-

[^6]Controls aimed at maintaining an adequate flow and orderly distribution of essential civilian supplies while holding down consumer prices have been enforced in the face of increasing war production and lessening available manpower. Efforts to prevent inflation in Canada, the first democratic country to introduce price control, have been an important aspect of the war effort. From the beginning of the war to October, 1941-the basic period for Canada's price ceiling-the cost-of-living index rose $14 \cdot 6$ p.c. Since then to June 1,1945 , there was a further slight increase which brought the total wartime rise to only 18.7 p.c. (compared to a 90.8 p.c. rise during the corresponding period of the War of 1914-18), an advance of only $3 \cdot 3$ p.c. since the introduction of the price ceiling in December, 1941.

During 1944 Canada's national income, as computed on a tentative basis, reached the highest level ever recorded, $\$ 9,186,000,000$, a $5 \cdot 3$ p.c. increase over 1943. To finance its unparalleled war effort, Canada has met all its war costs within the country, 62 p.c. by tax revenues and the balance in loans subscribed largely by the Canadian public.

Through the Mutual Aid Act, passed in May, 1943-Canada's method of providing its Allies with necessary war supplies-Canada has sent large amounts of raw materials, finished war products and foodstuffs to the United Nations. Each country receiving Canadian goods pays for as much as it can, and the remainder is delivered under Mutual Aid. Separate agreements have been negotiated by Canada with the United Kingdom, Soviet Russia, Australia, China, France, New Zealand and India. Canada's contribution to UNRRA is included in the $\$ 800,000,000$ Mutual Aid appropriation for the fiscal year ended Mar. 31, 1945. In the year ended Mar. 31, 1944, Mutual Aid expenditures exceeded $\$ 912,600,000$.

Several conferences of international importance took place during 1944-45 in which Canada took part. A Canadian representative attended the Bretton Woods conference in July, 1944, on world monetary policy, at which plans were drawn up for the stabilization of international currency and trade after the War.

Quebec was for a second time a meeting place for Prime Minister Churchill and President Roosevelt and their combined staffs in September, 1944, when the final assault on Germany and the stepped-up campaign against Japan were planned. Representing Canada as host at the Conference, Prime Minister King also attended. In order that Mr. Churchill, his advisers and the British and Canadian Chiefs of Staff could discuss Canada's participation in the Japanese war, a special meeting of the War Committee of the Canadian Cabinet was held at Quebec during the Conference.

Post-war civil aviation was the subject of two important conferences during the autumn of 1944. It was discussed at Montreal by officials of British Commonwealth Governments who considered problems relating to establishment of air routes between British Commonwealth countries and, the International Civil Aviation Conference at Chicago in November, Canada presented a draft International Agreement which was, in effect, a compromise between British and United States aims.

Plans for an international organization for the maintenance of peace and security were drafted at Dumbarton Oaks, near Washington, D.C., by delegations from United Kingdom, United States, Soviet Union and China, from Aug. 21 to Oct. 7, 1944. Although Canada was not separately represented at this Conference, the draft proposals received careful study and Prime Minister King commended them "to the careful and earnest study of the people of Canada".

In September, 1944, the second session of the Council of the. United Nations Relief and Rehabilitation Administration was held in Montreal. The Canadian Minister Plenipotentiary at Washington, head of the Canadian delegation at the session as well as Chairman of the Committee on Policy, was elected to permanent chairmanship of the session.

The close ties of understanding and co-operation which have marked the dealings of the three major powers, the United States, Russia and the United Kingdom, were further solidified when President Roosevelt, Marshal Stalin and Prime Minister Churchill met at Yalta in the Crimea in February, 1945, to discuss general outlines of peace terms to be imposed on Germany.

Canada was represented by a delegation headed by Prime Minister King at the San Francisco Conference on International Organization, Apr. 25 to June 26, 1945, which met to consider amendments to the Dumbarton Oaks Charter for the maintenance of world security. The Canadian delegation was largely responsible for the adoption of several important measures, including the complete revision of the chapter on the social and economic council, which thus became one of the most important organs of the organization.

Prime Minister King and Justice Minister St. Laurent signed the World Security Charter in respect of Canada with powers which for the first time were granted under the Great Seal of Canada. In the past, Canadians have signed treaties on behalf of Canada, but their full power has been granted under the Great Seal of the Realmthe Great Seal for the United Kingdom of Great Britain and Northern Ireland. Because Canadian representatives signed the Charter on behalf of Canada, under authority given them by the King as King of Canada, use of the Great Seal of Canada was the logical procedure in this instance. Use of the Seal in this manner was of historic importance as it marked a further step in the development of Canada as an autonomous member of the British Commonwealth of Nations.

Increased expansion of its diplomatic representation abroad reflects Canada's increased international stature. After the elevation to Embassy rank of the missions to the United States, U.S.S.R., China and Brazil in November, 1943, Ambassadors were also appointed during 1944 to Chile, Mexico and Peru. The Canadian mission at Paris received the status of an Embassy after official recognition was given the Government of General de Gaulle by the Government of Canada, along with the Governments of the United Kingdom and the United States. An Ambassador has also been appointed to Belgium, and a newly appointed representative to Greece holds the personal rank of Ambassador.

Since 1939, Canada's energy has been directed to the objective of total victory, but the task of directing its enlarged productive capacity towards the maintenance in peacetime of a continued high level of productivity and employment has been kept in mind. Virtually all important measures dealt with at the session of Parliament which adjourned on Aug. 15, 1944, aimed primarily at some aspects of the task of combining the demobilization of the Armed Services and war industry with the rebuilding of an ample and more stable Canadian economy. Acts were passed which sought to provide increased employment opportunities in the period after the War; to help business, industry, fishing and agriculture in the shift from a wartime to a peacetime economy; to provide additional measures of social welfare and improve the administration of those already in force; to broaden the veterans' rehabilitation and re-establishment program and, finally, to give an indication of Canada's willingness to make certain international commitments as a member of the United Nations.

Canada's rehabilitation program for service personnel, considered to be one of the most advanced and far-reaching ever planned, is already being put in operation. Advice on post-war training and positions available is given by personnel counsellors of the Armed Forces, and an extensive scheme for guiding demobilized persons has been arranged. A general and extensive system of war service gratuities, rehabilitation grants, re-establishment grants of special living allowances while taking further schooling or training of some kind, and equitable pensions for disabled veterans and for the dependants of members of the Armed Forces who lost their lives in the War are included in the plans.

Continuance, in varying measure, of many wartime controls will be necessary for considerable time, but are being removed as supplies justify. Changes in military demand have made possible revision or removal of restrictions on some machinery, household goods, metals and other articles. Under the following headings more detailed reviews of the various developments that have taken place in regard to the national war effort are given.

## National Defence

The Organization and Administration of National Defence.-No noteworthy changes have taken place in the basic organization of the Department of National Defence since those published at p. xxvi of the 1940 edition of the Year Book.

The Navy.-If any period is reckoned as the period of greatest Canadian naval achievement during the Second World War and possibly for years to come, it must be the months from early in 1944 until V-E Day, May 8, 1945. During those months, the Royal Canadian Navy reached its greatest expansion in men and ships, undertook its greatest responsibilities, scored its greatest successes and, regrettably, suffered some of its greatest losses.

The Royal Canadian Navy had attained heavy offensive striking power by the early months of 1944. The first evidence of this came with the pre-invasion sweeps in the English Channel, in which powerful Canadian destroyers took part, with a view to clearing German shipping from those waters.' The enemy suffered heavily in warships and merchant shipping as a result of these sweeps and Canada paid with the sinking of the Tribal class destroyer, H.M.C.S. Athabaskan, with heavy losses in dead, missing and prisoners-of-war.

With the arrival of D-Day, ships of the Royal Canadian Navy to the number of 109 were off the coast of Normandy, manned by about 10,000 officers and ratings. Canadian minesweeping flotillas moved into the coast to clear the coastal waters or the landings, Canadian motor torpedo boats helped to drive off enemy warships, Canadian destroyers hurled shells ashore to knock out enemy gun positions, and Canadian landing ships and smaller craft brought troops to the beaches.

It was significant of the growth of the Royal Canadian Navy that, despite its large commitments to direct participation in the invasion of Europe, it was able to undertake even a greater share of the protection of North Atlantic convoys than it had ever undertaken before.

Trade convoys were not discontinued until after V-E Day, when it was certain that U-boats would no longer take offensive action. In the preceding nine months, all trade convoys between North American ports and waters near Newfoundland were escorted by Canadian warships and three-quarters of all convoys going across the North Atlantic to the United Kingdom were protected by ships of the Royal Canadian Navy. In addition, the Canadian Navy provided about 30 p.c. of midocean striking forces.

During the period from April, 1944, until the middle of September, 1944, the Royal Canadian Navy undertook to escort all trade convoys between North America and the United Kingdom, although 60 Canadian escort ships had been sent to assist in invasion operations. In July, 1944, the largest trade convoy in history, made up of 167 ships carrying more than $1,000,000$ tons of cargo, crossed the Atlantic escorted entirely by Canadian warships. Not a single merchant ship was lost.

Figures compiled at the close of hostilities with Germany showed that Canadian warships escorted 25,343 merchant ships, carrying $181,643,180$ tons of cargo from North American ports to the United Kingdom during the course of the War. This was apart from the thousands of ships escorted on the return trip to North America and in coastal convoys along the shores of Canada and the United States and in the Caribbean Sea.

The Royal Canadian Navy had only 17 vessels ready for active service when Canada entered the War, of which but six were effective fighting ships. By March, 1945, the Canadian Navy had grown to a force of 939 ships, of which 373 were warships and the remainder auxiliary craft carrying out the various duties of supply and maintenance. Shortly after V-E Day there began the process of decommissioning ships not required for the War against Japan and by early August, 1945, almost all the corvettes which had played such an outstanding part in the Battle of the Atlantic were out of service.

The peak enrolment of personnel had been reached by Jan. 1, 1945. At that date the strength of the Royal Canadian Navy included male personnel of 8,920 officers and 78,221 ratings, while the Women's Royal Canadian Naval Service included 371 officers and 5,368 ratings, a total of 92,880 men and women. After that date discharges began to exceed intake and by midsummer of 1945 discharges were proceeding apace as the Royal Canadian Navy continued to bring its numbers down to the estimated 37,000 required to prosecute the War in the Pacific.

The first ship to represent the Canadian naval forces in the Pacific war, apart from the Aleutians campaign and early Pacific Ocean patrols, was the cruiser H.M.C.S. Uganda, which went into action with the British Pacific Fleet early in April and remained on station until she returned to Canada more than four months
later. Before she returned, however, other Canadian units were on their way to the battle zone and it was the intention of the Royal Canadian Navy that 60 warships should serve in that area. These were to include two cruisers, two light Fleet class aircraft carriers, an anti-aircraft cruiser, Tribal class, Fleet class and Crescent class destroyers, and frigates.

Canadian minesweepers continued to operate in European waters long after V-E Day and other ships continued their patrol of Canada's long Pacific coast line.

During the European War, Canadian warships destroyed or shared in the destruction of 23 enemy submarines; the probable destruction of eight submarines and the damaging of seven others. Twelve U-boats were known sunk or probably sunk in the year ended Mar. 31, 1945. Two U-boats surrendered to the Royal Canadian Navy after V-E Day. Canadian warships also took part in the sinking of at least 68 enemy surface vessels, the severe damaging of 41 others and the capture of one merchant ship and one armed trawler.

Losses suffered by the Royal Canadian Navy between Mar. 31, 1944, and the end of the European phase of the War included the destroyers Athabaskan and Skeena, the corvettes Regina, Alberni, Shawinigan and Trentonian, the frigate Valleyfield and the Bangor-class minesweepers, Clayoquot and Guysborough.

The Royal Canadian Naval College at Esquimalt, B.C., was in operation throughout the academic season. Forty-five cadets graduated in the spring of 1945 and are serving at sea with the Royal Canadian Navy, on loan to the Royal Navy, or as members of the Royal Canadian Navy Volunteer Reserve, as midshipmen. The Royal Canadian Sea Cadets throughout Canada continued during the year to receive training under the supervision of the naval service and large numbers of them joined the Navy during the year.

The following casualties had been sustained by the Canadian Naval Forces up to July 31, 1945:-

|  | Officers | Ratings | Total |
| :---: | :---: | :---: | :---: |
| Killed on Active Service | 176 | 1,493 | 1,669 |
| Other deaths. | 35 | 235 | 270 |
| Missing. | 4 | 3 | 7 |
| Wounded. | 52 | 384 | 436 |
| Prisoners of war ${ }^{1}$ | 2 | Nil | 2 |

[^7]The Army.-Canadian Army operations from D-Day to June, 1945, are covered in the following paragraphs. These connect up with earlier operations dealt with in former editions of the Year Book.

On June 6, 1944, the invasion of northwestern Europe began with Allied landings on the coast of Normandy, and the gradual reduction of the Nazi Fortress of Europe was under way. Of the Canadian Army, only the 3rd Canadian Infantry Division and the 2nd Canadian Armoured Brigade were in action in the initial stages as part of the 1st British Corps. The 2nd Canadian Infantry Division, the 4th Canadian Armoured Division and the 2nd Canadian Corps Headquarters arrived in France in July. These formations were welded into the 2nd Canadian Corps which, with the British and Allied formations, soon comprised the First Canadian Army under General H. D. G. Crerar, who was made responsible for the operations on the Allied left. The Canadian role was to smash the northern hinge of the German defences; cross the Seine and Somme rivers; clear the French and Belgian coasts of rocket installations; and recover the Channel ports.

From D-Day to Aug. 17, Canadian troops encountered stubbiorn opposition and bitter fighting. This was particularly true of the Carpiquet Airfield, the city of Caen taken on July 9, and the town of Falaise which fell to Canadian arms on Aug. 17. It was here that the Germans had massed the greatest concentration of armour ever achieved in such small space. The intensity of the operation can partially be measured by the attempt of a Canadian battalion to capture May-sur-Orne on the morning of Aug. 8. Failing in the initial attack, flame throwers were brought into action later in the day and, before this threat, enemy resistance was completely disorganized.

The crossing of the Seine and Somme Rivers and the recovery of the Channel ports became one of the fastest moving operations of the War. By Sept. 1, Dieppe had been occupied by troops who had been there two years before. Boulogne and Cap Gris Nez fell to the Canadians on Sept. 22 and 29, respectively. Again flame throwers went into action to dislodge stubborn opposition on Mont Lambert which consisted of a series of concrete bunkers covering the approaches to Boulogne. The closing days of September found Calais in Canadian hands.

Besides opening these ports, the swift operations along the coast cleared numerous enemy rocket-bomb sites, thereby nearly eliminating the robot bomb menace to the southeastern counties of England.

Antwerp, overrun in the rapid advance by British troops, was vital to Allied supply lines; but to make its use possible as a seaport the Scheldt Estuary had yet to be cleared. The task of removing this thorn from the Allied flank devolved upon the First Canadian Army. It was decided to launch a three-pronged attack: one would sweep the coast on the south bank of the West Scheldt; the second prong, striking along the northern bank of the West Scheldt towards Walcheren, would be combined with an attack from the sea; while the third was to operate north of the East Scheldt, striking in a northerly and northwesterly direction. Despite the exasperating and exhausting conditions of sodden ground, innumerable canals and dykes, half-flooded land and rainy weather, the First Canadian Army, by Nov. 7, established a line from the bridgehead at Nijmegen, along the Maas River, to Walcheren on the North Sea coast.

There followed a well-earned respite for the Canadian Army and its Allies from Nov. 9, 1944, to Feb. 8, 1945. Constant patrolling, however, was necessary and brisk local actions were frequent. Particularly was it essential to be on the alert during the critical days of the German break-through in the Ardennes in December, 1944.

Meanwhile, the Allied Armies to the south were pressing towards the Rhinethe main obstacle to be overcome during 1945: In order to provide a satisfactory take-off, it was decided that the strongly fortified area between the Maas and Rhine Rivers must be cleared. This operation was completed successfully in February and March by the First Canadian Army and its attached Allies which included British, American, Polish, Dutch and Czech troops. It is interesting to note that from D-Day to the capitulation of Germany, many formations and units served under Canadian command at various times. Included in these were components of the 1st and 30th British Corps; the 15th Scottish, 51st Highland, 52nd Lowland, 53rd Welsh, 3rd and 45th Infantry Divisions; the 49th West Riding, 50th Northumbrian and 43rd Wessex British Infantry Divisions served in some of the critical operations. In addition to this, the following British units served with the First Canadian Army; 6th Airborne Division; 7th Armoured Division; Guards Armoured

Division; 11th Armoured Division; the 1st and 4th Special Service Brigades; 33rd Armoured Brigade; the 47th and 48th Commandos; and miscellaneous infantry brigades. Other Allied formations included: the 1st Polish Armoured Division; the 82nd and 101st United States Airborne Divisions; the 104th United States Infantry Division; Belgian Brigade Group; Royal Netherlands Brigade; and the 1st Czech Armoured Brigade.

Subsequent operations, commencing on Mar. 23, were aimed to cross the Rhine and defeat the German forces in Holland and Northwestern Germany. For the Canadian role, the 1st Canadian Corps, consisting of the 1st Canadian Infantry, the 5th Canadian Armoured Division and the 1st Canadian Armoured Brigade, was withdrawn from Italy where it had taken part in the continuous northward drive up the Adriatic coast into the Valley of the Po.

The 1st Canadian Corps had left an indelible impression on the operations in the Liri Valley. Operating as part of the British Eighth Army, the Canadian Divisions took part in the assault that cracked the Hitler Line on May 23, 1944. The 1st Armoured Brigade, detached to British command, had previously led the assault against the Gustav Line on May 11 and 12. Despite stubborn resistance, all Canadian troops in Italy participated in the pursuit northward, and when the 5th Army entered Rome on June 5, 1944, the Canadian Corps went into Army Reserve.

After a two-month rest in southern Italy (with a brief interlude of the 1st Canadian Division before Florence), the Canadian Corps again moved north and became an important factor in breaking the Gothic Line early in September, in capturing the Fortunato features on Sept. 20 and in taking Rimini (by Greek troops then in the Corps) on Sept. 21. Prior to going into Army Reserve again (Oct. 28 until Dec. 1-2) the Canadians made decisive gains across the Ronca and Savio Rivers, and participated in the heavy fighting along the Lamone River and Naviglio Canal. Ravenna fell to the 1st Canadian Corps on Dec. 9. After the stiff engagement at Bonifacio, the 5th Armoured Division went into Corps Reserve early in January. In February, 1945, Canadian troops were preparing to move and join the First Canadian Army in Holland.

The re-grouped First Canadian Army included Army Field Artillery units armed with rockets which had been designed by Canadian Technical Officers to supplement guns and mortars, and Ram Tanks that had been stripped of their turrets and internal fixtures for use as personnel carriers, a conversion derived from a 2nd Canadian Corps attack in the Falaise area. The Canadian component of a joint Canadian-American Special Service Force (parachute) was disbanded upon completion of operations in southern France and the personnel transferred to the Canadian infantry and the Canadian Parachute Battalion in northwestern Europe. This latter battalion served in the 6th Airborne Division on D-Day and at the Rhine crossing.

With the successful crossing of the Rhine between Wesel and Emmerich on Mar. 23, there began a six-week period of incessant fighting and pursuit. The neighbouring United States Armies cleared the Ruhr and penetrated to Chemnitz; the British took Hamburg, and at Wismar met the Russians advancing eastward along the Baltic coast.

Covering the left flank with a frontage of over 250 miles, the First Canadian Army cleared the Dutch provinces of Gelderland, Friesland and Groeningen, and was closing in on Emden and Wilhelmshaven when German Armies surrendered unconditionally on May 8, 1945.

In the final ten months of hostilities, the Canadian Army had captured 190,000 prisoners. Since the initial landing on June 6, 1944, Canadian battle casualties numbered 43,000 .

The Canadian Occupational Force in Germany consists of 25,000 all ranks including replacements. These are selected from volunteers and recently arrived men. In the autumn of 1944 the disproportionate (though not unexpected) losses in infantry led to adjustments from other arms to infantry, and also the despatch to Europe of over 12,000 men recruited under compulsory service of whom over 4,000 saw service with field units. Earlier, a surplus of officers in certain corps led to a voluntary loan of nearly 700 Canadian officers to the British infantry, where they have been outstandingly competent and resourceful.

The Canadian Occupational Force in Germany and the strength of the Pacific Force are considerably smaller than the Canadian Forces from September, 1939, to June, 1945. As a result, repatriation plans are well advanced and Army personnel are being returned to Canada as transportation facilities become available.

Plans were completed for Canada's participation in the War against Japan. The Army component of the Canadian Pacific Force was set at 30,000 all ranks, which included an Infantry Division, a Tank Battalion and miscellaneous ancillary and other units to serve as part of the United States Army but with Canadian uniforms, insignia and badges.

In the meantime, and consequent on the changed strategical situation, Canadian Atlantic and Home Defence establishments, and to some extent Pacific Defences, have been reduced in strength or disbanded, releasing men for new duties overseas or for discharge.

The Air Force.-On Mar. 31, 1945, as originally planned in the 1942 Agreement, the British Commonwealth Air Training Plan was brought to a close. Since its inception on Dec. 17, 1939, the Plan had trained and graduated a total of 131,553 aircrew personnel of which 72,835 were R.C.A.F. The peak of production was reached in the spring of 1944, and the story since then was one of gradual reduction until the final termination. On Dec. 31, 1944, the number of Plan schools was reduced to 50 and the R.A.F. transferred to two. Efforts were made to close as many as possible of the remaining schools and ancillary units prior to Mar. 31, 1945. After that date, units still operating ceased to be part of the B.C.A.T.P. Two factors made possible the termination of the Plan on the originally scheduled date: (a) the fact that, due to Allied air supremacy, actual casualties were considerably less than anticipated; and (b) the fact that the end of hostilities in Europe was definitely in sight.

The total number of R.C.A.F. squadrons overseas as at Mar. 31, 1945, was 47, of which approximately one-third were heavy bomber units equipped with Lancaster or Halifax aircraft and operating in the R.C.A.F. Group of Bomber Command. R.C.A.F. units operating in Coastal Command from bases in the British Isles, Ceylon and Iceland, included general reconnaissance (flying boat and landplane) and fighter reconnaissance squadrons. Day and night fighter, ground attack, fighter reconnaissance, photographic reconnaissance and intruder squadrons operated in R.C.A.F. and R.A.F. wings of the 2nd Tactical Air Force, Allied Expeditionary Air Force, while day and night fighter and air-observer-post squadrons operated under Fighter Command. One fighter squadron was in Italy, a bomber reconnaissance squadron was in Iceland, two transport squadrons were operating in Burma and one
in England. During 1944, R.C.A.F. squadrons flew a total of 99,367 operational sorties and dropped 86,216 tons of bombs. As a result of these operations, 605 enemy aircraft were destroyed, 31 probably destroyed and 212 damaged. When Bomber Command commenced its offensive late in April, 1944, Canadian squadrons of the R.C.A.F. Group participated. Thousands of tons of high explosives and incendiaries were dropped on the invasion coast and great air armadas smashed at Nazi industrial and communication centres in a systematic campaign to paralyse Germany's transport facilities. In June, Canadian heavy bombers were used for the first time in daylight operations against enemy occupied territory. Later in the year, operations were directed against supply bases, flying-bomb launching sites, storage dumps, railway centres, etc., and tactical support for the Allied ground forces was provided. The bombing of petroleum supply plants and refineries, which was commenced in April, was continued for several months and enemy oil stores were reduced to a point far below requirements.

R C.A.F. flying-boat squadrons in Coastal Command were engaged on routine convoy escort coverage and anti-submarine patrols. Other units in the Command carried out naval escorts, air sea rescue searches and many successful attacks against enemy shipping. An important development in June, 1944, was the successful anti-submarine activities reported by an R.C.A F. squadron in Iceland. During its operations from that location, the squadron reported seven sightings and six attacks. One probable and three positive kills were claimed.

Day-fighter and ground-attack squadrons, equipped with Spitfire, Mustang and Typhoon aircraft, carried out a continuous offensive on supply trains, bridges, communications lines, locomotives, staff cars, lorries, flying bombs, etc. Squadrons with the Allied Expeditionary Air Force were active in covering landings of the Allied Forees in the invasion of the Continent on D-Day, while Coastal Command aircraft hampered any attempts of U-boats to impede the landings. After the invasion, attacks against tactical targets were carried out in direct support of the Army. On Jan. 1, 1945, when the Luftwaffe staged a surprise offensive against airfields and other military targets in Holland and Belgium, R.C.A.F. pilots accounted for 37 of the large number of enemy aircraft destroyed and for numerous others probably destroyed or damaged. In February, fighter and fighter-reconnaissance aircraft continued their attacks on communications with considerable success and the Tactical Air Force, of which R.C.A.F. squadrons formed a substantial part, was diverted from the British Second Army to direct support of the Canadian Army offensive. In addition to this direct support, R.C.A.F. squadrons were active when Bomber Command and the Allied Expeditionary Force co-operated in a drive to hamper German troop movements from the Western to the Eastern front and the movement of reserves from Denmark, Norway and the interior German provinces.

Fighter-reconnaissance, night-fighter and intruder squadrons were very active in attacks on enemy airfields, transportation facilities, etc., and in support of the Army. A record for R.C.A.F. intruder operations was established on May 16, 1944, when four Mosquito aircraft of one squadron destroyed seven enemy aircraft in air combat and one on the ground. This squadron alone accounted for 32 enemy aircraft destroyed during the month of May.
R.C.A.F. air transport, ferry and communications operations had increased to such an extent that a new group was formed early in February, 1945, with headquarters at R.C.A.F. Station, Rockcliffe, Ont. During the twelve months ended

Mar. 31, 1945, aircraft of air transport units flew 13,097,563 air miles in 95,227 hours, carrying 61,007 passengers, $13,831,951 \mathrm{lb}$. of general cargo and $4,118,911$ lb . of mail, a total payload of $28,721,748 \mathrm{lb} . ; 9,152$ aircraft of widely varied types were ferried. Regular mail service to the United Kingdom, Mediterranean and the Middle East was maintained and a daily service between the United Kingdom and the Canadian Army on the Western Front was initiated after the invasion of Western Europe. On these trips, mail, cargo and passengers were carricd on eastbound flights and evacuated casualties on the westbound flights. Towards the end of the year, a semi-weekly service was commenced to Iceland to service an R.C.A.F. squadron in that country.

The few submarines, which were always present off the Canadian east coast throughout the year, necessitated protective air coverage being given to convoys and coastal shipping at all times. In addition, anti-submarine sweeps were carried out in areas where the presence of a submarine was indicated. These searches were intensified with night patrols by aircraft equipped with the British Leigh light. With the introduction of this equipment, submarines were never secure from attack by our aircraft. One entire squadron and part of a second were eventually employed on hunting out the enemy in this manner. The re-equipment of an additional squadron of Eastern Air Command with four-engine, very long-range aircraft further strengthened the air cover which in the previous year had been extended to midAtlantic. The lack of submarine activity off the Pacific Coast reduced coastal operations in that area to routine reconnaissance and anti-submarine patrols and the occasional escorting of shipping. The constant possibility of Japanese activity also necessitated the maintenance of fighter and strike squadrons.

With the reduction in B.C.A.T.P. training, Nos. 2 and 4 Training Commands were amalgamated to form No. 2 Air Command in December, 1944, and Nos. 1 and 3 Training Commands merged to form No. 1 Air Command effective January, 1945.

Every effort was made during the period to release personnel as rapidly as the reduction in personnel requirements would permit. Aircrew graduates whose services were not required at the moment were transferred to a special aircrew reserve. In the five months ended Mar. 31, 1945, the release from Active Service of more than 37,000 personnel was authorized and a net reduction of over 4,000 in civilian strength was effected. Effective May 31, 1945, the total strength of the Royal Canadian Air Force on Active Service, including the Women's Division, was 167,858 composed of 35,799 officers and 132,059 other ranks.

Honours and Decorations.-The following tabulation shows the awards to Naval, Army and Air Force personnel and to civilians for the period from the outbreak of war to Mar. 31, 1945. At p. 871 a reference appears in regard to the Department of Veterans Affairs having, by Order in Council, assumed the payment of certain grants formerly paid by the United Kingdom Government to Canadians who have won gallancry awards.

HONOURS AND DECORATIONS AWARDED TO CANADIANS FROM THE OUTBREAK OF WAR, SEPTEMBER, 1939 TO MAR. 31, 1945

## The Economic War Effort and Its Organization

Modern war requires the full and effective mobilization of the nation's economic resources to equip and supply the fighting forces and to maintain the civil population while as much as possible of the national effort is devoted to the prosecution of the War. For Canada this implied not only the provision of men and materials for her own fighting forces but the furnishing of food, materials, munitions and equipment to the United Kingdom and other Allies. The self-denial of Canadians has not shown itself entirely in the high degree of taxation mentioned below, but it has involved the doing without of many commodities necessary to the established standard of living including butter, bacon, canned milk, canned fruits of all kinds, clothes, textiles, rubber goods, gasoline and almost everything made of metal. It has meant the freezing of rents, restrictions on travel and limitations on the consumption of real luxuries, such as wines, spirits, soft drinks and candy. In voluntary sacrifice also, Canadians have done much. Very many have given their spare time to the Red Cross and other organizations and tens of thousands of persons have donated blood to the blood banks that have been accumulated for overseas use.

Fortunately, so far as financial organization is concerned, the Canadian financial structure was already well developed before the War to a point where it had proved its suitability to the country's needs and its adaptability. The strain of war and Canada's accomplishment in meeting such a high proportion of the direct cost of the War, while at the same time providing the United Kingdom with very extensive financial assistance in obtaining war supplies in Canada, has been further evidence of this.

In the War of 1914-18 Canada's munitions output was limited to shells and rifles. Ships and aeroplanes, Bren guns, heavy machine guns, Browning guns, submachine guns, AA guns, anti-tank guns, trench mortars, 25 pounders, naval guns, tanks, universal carriers, etc., were but a few of the munitions supplied in quantity for use in almost every theatre of the Second World War.

Financing Canada's War Effort, 1944-45.-The financing of Canada's War effort from 1939 to 1943 is given in the previous wartime editions of the Year Book. At pp. 918-923 will be found an account. of Canada's war finances up to the end of the fiscal year 1943-44. This is a continuation of the story of previous years with high war expenditures, heavy taxations and great public borrowing campaigns. The adjustments made by the Budget of June 26, 1944, to the taxation program, especially with respect to corporate income tax and modifications in the excess profits tax, are dealt with in the same chapter.

The money value of Canada's war effort has been made up in two ways: by taxation and by internal loans. Canada has, during the war period, been among the most heavily taxed countries in the world. The small population of eleven and one-half million people in the fiscal year 1944 paid $\$ 810,000,000$ in personal income tax, $\$ 311,000,000$ in corporate tax and $\$ 429,000,000$ in excess profits tax to say nothing of a wide range of other taxes, including those on sales, so-called luxury goods (many of which can scarcely be considered in the luxury class), excise and other commodity taxes with rates very much higher in many cases than previous imposts.

Final figures for the year 1944-45 are not yet available, but the Minister of Finance presented a revised estimate of expenditures to the House of Commons on Apr. 3, 1945, which may be summarized as follows (excluding war expenditures charged to active assets):-

An estimate of revenue based on published figures for the first eleven months of the fiscal year shows the following figures after deducting the refundable portion of the personal income tax and the excess profits tax:-

|  | Millions of Dollars |
| :---: | :---: |
| Customs and excise revenue. | 814 |
| Personal income tax....... | 715 |
| Corporate income tax and excess profits tax. | 701 |
| Other tax revenue. | 53 |
| Total Tax Revenue. <br> Other revenue, including special receipts and credits | $\begin{array}{lr}\text {. } & 2,283 \\ . . & 415\end{array}$ |
| Grand Total Revenue. | 2,698 |

On the basis of these figures the deficit for the year will be approximately $\$ 2,734,000,000$. However, governmental activities require numerous outlays other than those that may be properly described as expenditures; there are numerous outlays by way of loans, advances, and payments which result in the acquisition of realizable assets. On the other hand, the Government is continually receiving repayments of loans previously granted, and also is a net receiver of funds to be held in trust for specific purposes. Thus the borrowing needs of the Dominion are not identical with the deficit. During 1944-45 the two principal loan campaigns were the Sixth and the Seventh Victory Loans. The Sixth, with an objective of $\$ 1,200,000,000$, raised $\$ 1,405,013,350$ from $3,077,123$ subscriptions between Apr. 24 and May 13, 1944; the Seventh, with a cash objective of $\$ 1,300,000,000$, raised $\$ 1,517,640,700$ in cash and $\$ 147,544,000$ from the conversion of maturing issues from $3,327,315$ subscriptions between Oct. 23 and Nov. 11, 1944.

With respect to 1945-46, the Minister of Finance on Apr. 3, 1945, asked only an interim war appropriation of $\$ 2,000,000,000$ pending the election of a new Parliament, to cover war expenditure (including Mutual Aid) for the five months of April to August. Under the circumstances no Budget was presented, though the estimates for non-war expenditures for the year were presented, totalling $\$ 1,023,621,598$. Some tax modifications were announced after the end of hostilities in Europe, in order that industry might be better able to plan for such reconversion to peacetime pursuits as the progress of the war in the Pacific permitted. These changes will not
have much effect on current revenues since, for the most part, they consist of the removal of taxes designed to restrict civilian production and consumption rather than to raise money, but it is expected that they will be of material help to industry in scheduling future production. Between Apr. 23 and May 12, 1945, \$1,568,927,350 was raised for the Eighth Victory Loan from 3,178,275 subscriptions; the objective was $\$ 1,350,000,000$.

Wartime Control of Foreign Exchange.-The restrictions on the use of foreign exchange have continued in effect very much as described at pp. xxxiii and xxxiv of the 1942 Year Book, though some further relaxation has been possible. There has been a further moderation of travel regulations, so that funds are available for practically all normal travel, and the prohibitions or restrictions imposed on imports under the War Exchange Conservation Act have been removed.

The Department of Munitions and Supply.-An account of the establishment and the administrative functions of the Department of Munitions and Supply appears in the Miscellaneous Administration Chapter of the 1942 Year Book, at pp. 942-943.

The Department was organized in order to centralize all purchasing functions on behalf of the Armed Forces, except for certain construction and like facilities, for which contracts continued to be let directly by other Departments, such as Transport, National Defence and Public Works. The Minister is empowered to examine into and to organize, mobilize, and conserve the resources of Canada for the purpose of furnishing munitions of war and supplies.

The Department does all the essential purchasing for the Canadian Armed Forces, as well as for the British Commonwealth Air Training Plan, the Enited Kingdom Technical Mission, the British Admiralty Technical Mission, and the governments of the Allied Nations. Through a system of Controllers* for coal, rubber, aircraft, oil, timber, steel, machine tools, power, metals, motor-vehicles, ship repairs and salvage, construction, transit, and chemicals, it has maintained a strict supervision over certain industries. The Controllers are organized into a Wartime Industries Control Board which acts as a mutual consultative agency and maintains direct liaison with the Wartime Prices and Trade Board for the coordination of orders affecting the several industries.

The need to extend and create new industrial facilities in Canada for purposes of war production led to the development of an extensive program of capital assistance to industry by the Government of Canada. Plants were built and machine tools purchased with Government funds, but in most cases, the operation of such new facilities was left to private interests under specified conditions and subject to the Department's supervision, ownership being retained by the Government. Moreover, the Canadian Government set up wholly owned Crown companies for the manufacture of small arms, precision instruments, synthetic rubber, ships and other war supplies, and other such companies to engage in special purchasing and supervisory functions.

The task of providing for the manufacture of modern mechanized equipment involved not only the expansion of production familiar to Canadian industry but also the production of equipment never before manufactured in Canada. The list of these items is impressive and includes war vessels, tanks, field, naval and antiaircraft guns and equipment, precision instruments for anti-submarine and anti-

[^8]aircraft defence, armour plate, bombs, ammunition, and various component parts of war equipment. The developments in these fields are referred to in the chapters dealing with the particular industries.

The total value of contracts awarded by the Department, and its predecessor bodies, since the beginning of the War to Mar. 31, 1945, exceeded $\$ 10,860,000,000$ while commitments for capital assistance to private industry and to Crown companies approximated $\$ 850,000,000$.

The Department of National War Services.-The Department of National War Services was established by Act of Parliament in July, 1940, to assist in carrying out the provisions of the National Resources Mobilization Act, 1940 (Recruits), concerned with the mobilization of all the effective resources, both human and material, of the nation, and was also empowered to promote, organize and co-ordinate voluntary war services and material contributions made for the prosecution of the War.

At pp. 943-945 of the 1942 Year Book, a statement is given of the establishment and purposes of the Department of National War Services and its place in the general plan of the national war effort. Since that time several important changes in function have taken place: for instance, the administration of National War Services Regulations, 1940 (Recruits) was transferred to the Department of Labour but, on the other hand, responsibility has been assumed for a number of other important activities. Now that the War with Germany has been brought to a close, it is inevitable that reorganization must be contemplated. The organization and functions of the component Branches of the Department, as they existed at July 1, 1945, are given below: this picture, when compared with that given in the 1942 Year Book, indicates the increase that has taken place in the functions of the Department to date.

Canadian Government Travel Bureau.-Although all advertising of direct tourist promotional work has been discontinued because of the decrease in tourist traffic during the War, the Bureau still receives and answers hundreds of enquiries relating to travel in Canada. A National Tourist Advisory Council, under the chairmanship of the Minister and comprising provincial cabinet ministers identified with the tourist industry of their respective provinces, is planning for post-war activities.

Directorate of Censorship.-The Directorate of Censorship is responsible for the censorship of publications of all kinds, including radio broadcasting and films, and also for the censorship of postal and telegraphic communications.

Citizenship Division.-The objective of the Citizenship Division is to promote better understanding between Canadian citizens of French and British extraction and those of other European origin and through contact with the latter to interpret their points of view to the Government and to the Canadian public. Weekly releases on Canadian topics are prepared for 78 foreign-language papers printed in 18 languages in Canada.

Corps of (Civilian) Canadian Fire Fighters for Service in the United Kingdom.At the request of the British Government, the Corps of Canadian Fire Fighters with a strength of over 400 was recruited early in 1942 to assist the National Fire Service in the extinction of fires and protection of life and property in the United Kingdom. When, on the advice of the British Government, at the end of 1944 it was decided that conditions no longer justified the retention of the Corps, arrangements were made for its return to Canada for demobilization.

Government Office Economies Control.-Created in 1942, this Division is charged with the duty of effecting throughout all Government Departments the greatest possible economy and saving in the use of printing, stationery, office appliance machines and furniture.

National Salvage Division.-The National Salvage Division co-operates with approximately $1 ; 700$ Voluntary Salvage Committees now in operation throughout Canada. The net proceeds from the sale of salvage material are contributed by Committees to recognized War Charity Funds for the benefit of Canada's Armed Forces.

Prisoners of War Next-of-Kin Division.-The Prisoners of War Next-of-Kin Division furnishes information concerning prisoners of war and is responsible for the issue of labels every three months to the next-of-kin, without which personal parcels may not be despatched. This service is also extended to the prisoners of war of Allied Nations and civilian internees whose next-of-kin reside in Canada.

Voluntary and Auxiliary Services.-The Voluntary and Auxiliary Services Division exercises budgetary and financial supervision in respect to the 6 national organizations that receive funds from public treasury for war auxiliary services, viz., Canadian Legion, Knights of Columbus, Salvation Army, Y.M.C.A., Y.W.C.A., Navy League of Canada for Hostels and Merchant Seamen Clubs; and also supervision of appeals to the public of Canada for voluntary contributions for war services objectives. It is responsible for development of voluntary war services generally and of Citizens Committees which act as co-ordinating agencies in approximately seventy urban centres, where off-duty and auxiliary services for Armed Forces personnel are necessary. This Division administers the War Charities Act, promulgated to ensure proper direction and control over war charity appeals to the public.

Women's Voluntary Services.-The Women's Voluntary Services Division, in an advisory capacity, seeks to prevent overlapping and duplication and promotes voluntary civilian war and peacetime services on a community basis. Voluntary Services Centres are organized with the primary purpose of acting as a central registry or a manning pool to recruit volunteers for wartime and peacetime services community work.

Voluntary War Relief Division.-The Voluntary War Relief Division is concerned with committees dealing with the relief of distressed civilian peoples in Allied countries and is the channel for purchase permits from Government controllers. The Director co-operates with other Government Departments interested, the United Nations Relief and Rehabilitation Association and the Mutual Aid Board, with respect to relief activities in order to avoid duplication of effort in the purchase of bulk relief supplies.

The National Film Board.-As the statutory film authority for the Canadian Government, the National Film Board produces or arranges for the production of films on behalf of all Dominion Government Departments. Production is both theatrical and non-theatrical. The two theatrical series, "World in Action" and "Canada Carries On", are shown commercially in nearly 600 theatres in Englishspeaking Canada and 60 theatres in French-speaking Canada. They are widely distributed in the United States, the United Kingdom, the British Dominions and Latin America. The backbone of non-theatrical distribution are the film repositories;
established in each of the nine provinces, there are now 40 regional centres where films may be borrowed for a nominal fee. In addition, on rural, industrial and trade-union circuits, now numbering more than 100, half a million Canadians see 16 mm . films regularly every month. Film productions are sent to all parts of the Allied world to everyone whose business it is to interpret Canada abroad.

The Film Board is concerned not only with film production but film strips, still photographs, posters and displays. The Photo Services and Displays Divisions have grown out of the Graphics Division of the Wartime Information Board taken over in 1943. Attached to the Displays Division is an active Art Department, and in the field of animation a group of artists has developed many new and witty techniques.

The Wartime Prices and Trade Board.-The Wartime Prices and Trade Board was constituted by Order in Council under the War Measures Act on Sept. 3, 1939, "to provide safeguards under war conditions against any undue enhancement in the prices of food, fuel and other necessaries of life and to ensure an aqequate supply and equitable distribution of such commodities". An outline of the administrative organization of the Board, its field of jurisdiction and its co-operation with other Government Departments is given at pp. xxxix-xl of the 1944-45 Year Book.

In its administration of the price ceiling, the Board has been faced with many problems resulting from rising costs, expanded consumer purchasing power, shortages of goods and related factors. The steps taken to ensure essential civilian supplies and orderly distribution are treated at pp. 895-903.

The Wartime Information Board.-The Wartime Information Board was established by Order in Council on Sept. 9, 1942, with the object of "ensuring an informed and intelligent understanding of the purposes and progress of the Canadian war effort". The Board, consisting of a Chairman, a Vice-Chairman and eight members, is responsible to the Prime Minister as President of the Privy Council and as Chairman of the War Committee of the Cabinet.

The powers relative to public information formerly vested in the Minister of National War Services were transferred to the Board. In particular, it is the duty of the Board to supervise Canadian information in countries outside of Canada, to co-ordinate other public information services of the Government, and to provide means and facilities for the distribution within and without Canada of Canadian war information. Operations of the Board are carried out under the direction of a General Manager responsible to the Board.

In addition to headquarters at Ottawa the Board maintains offices at New York, Paris, Washington, London and Canberra. Information work in the respective countries is done chiefly through these offices. In other countries information is distributed directly from Ottawa in some cases and through diplomatic Missions and Trade Commissioners' offices. The Board's representatives abroad work in close consultation with Canadian diplomatic representatives.

In Canada the Board is chiefly concerned with co-ordinating information of various government departments, and gathering and making this information available, particularly to persons and organizations directly concerned in the dissemination of information to the public.

In addition to the domestic and external branches of the Board there is a Reports Branch which collects and prepares reference material on various aspects of the war undertaking.

The Board provides certain information for members of the Canadian Armed Forces, through publications edited in consultation with the educational authorities of the Forces.

Labour.-In the Introduction of various wartime editions of the Year Book, the wartime functions of the Labour Department have been covered and related to the Labour Chapter where the permanent and fundamental work of this Department is described. This year, due to the fact that many of the wartime regulations on labour have now become consolidated with the permanent work, they have been fully dealt with in Chapter XIX to which the reader is referred.

War Assets Corporation.-War Assets Corporation is a Crown agency established for the orderly disposal of surplus Crown assets by authority of the Surplus Crown Assets Act (8 Geo. VI, c. 21) assented to June 30, 1944. On July 12, 1944, by the appointment of directors, the Corporation succeeded to the business and took over the assets and liabilities of War Assets Corporation Limited, which was incorporated under the Dominion Companies' Act by authority of Order in Council, P.C. 9108, of Nov. 29, 1943.

Two authorities were established by the Act, Crown Assets Allocation Committee and War Assets Corporation. The Crown Assets Allocation Committee reports to the Minister of Reconstruction and advises him on matters relating to the use, disposal of, or dealing with surplus Crown assets, and determines whether they shall be allocated to Departments of Government, to Mutual Aid, or for general disposal by War Assets Corporation. The Corporation, subject to general or specific instructions given by the Minister, may sell, exchange, lease, lend or otherwise dispose of or deal with surplus Crown assets. The Corporation may hold in storage, or restore to its original condition any property that has been made available and settle any claims in connection therewith, and may purchase or lease any property required for the purpose of its operations. Because many war materials have no peacetime value, the Corporation will also decide what surpluses may be reduced to scrap.

War Assets Corporation was organized in the manner of industrial companies with a Board of Directors (of twelve men) chosen to represent a cross-section of business, labour and agriculture and the country geographically. It has no share capital.

The administration is directed by a President who acts also as Chairman of the Board. The Corporation reports to the Minister of Reconstruction; its books are subject to audit by the Auditor General of Canada, and its income, less operating expenses, is turned over to the Receiver General of Canada.

The Head Office of the Corporation is at Montreal. Branch and sales offices have been established at Halifax, N.S., Moncton, N.B., Montreal, Que., Toronto, Ont., London, Ont., Port Arthur, Ont., Winnipeg, Man., Regina, Sask., Calgary, Alta., Edmonton, Alta., Vancouver, B.C., and St. John's, Newfoundland. To maintain contact in the United Kingdom and the United States, representatives are maintained at London, England, and Washington, D.C., and a special office at Ottawa provides direct contact with Crown Assets Allocation Committee and the main sources of surplus declarations.

The policy is to sell all Crown-owned materials declared surplus at existing market prices within the ceilings set by the Wartime Prices and Trade Board, and to obtain the highest possible return to the taxpayers of Canada. Every effort is made to control the price to the public, to reach the public through the shortest possible route, and to keep out of unfair competition with established business.

The Corporation seeks expert advice on price levels and marketing methods and acts in the public interest. Sales are distributed as uniformly as possible across Canada. To prevent interference with employment, the Corporation sells through established trade channels or where, in accordance with recognized business practice it is usual for negotiation to take place direct, between producer and user, this practice is followed.

Three priorities are observed: the Federal Government, Provincial Governments, and municipalities, including public and semi-public organizations such as educational and scientific institutions and hospitals.

From time to time, as miscellaneous used materials and equipment useful for domestic purposes appear in sufficient quantity, auction sales are organized, care being exercised to sell in small lots to attract the householder and keep away the speculator.

The sales organization operates through the following Divisions: Consumer Goods, Metals, Mechanical, Aircraft and Radio, Real Estate and Scrap. The Service Division includes Construction and Engineering, Warehousing and Traffic.

The Corporation established a Reclamation Depot at Valleyfield, Que., for the overhaul and repair of surplus military clothing, uniforms and boots, large quantities of which are in demand by the United Nations Relief and Rehabilitation Administration, the Canadian Red Cross and other international relief organizations. This operation began on a modest scale under the supervision of the Army Salvage and Disposal Board and is now a branch of the Corporation activities. The work has been expanding and it is anticipated that it will continue to do so for some time as rehabilitation progresses in Europe.

An agreement has been effected between the Governments of Canada and the United States regarding disposal of surpluses held in either country. By this agreement Canada buys immovables owned in Canada by the United States at an appraised valuation, and sells movables remaining in Canada for the account of the United States Government. The Corporation acts as appraiser of immovables for the Dominion of Canada; the United States appoints its own appraiser. Following acquisition, the Corporation becomes sales agent for the Crown. Negotiations are under way for a similar arrangement for the disposal of all types of Canadianowned surpluses in the United States.

For the period from the inception of the Corporation, July 12, 1944, to the end of the fiscal year, Mar. 31, 1945, gross sales amounted to $\$ 9,116,132$. Prior to July 12,1944 , sales by War Assets Corporation Limited produced $\$ 385,829$, a grand total of $\$ 9,501,961$ for sales by both organizations to Mar. 31, 1945.

The list of materials disposed of by War Assets Corporation is lengthy, comprising thousands of items, including clothing, camp and barrack equipment, tools and materials used in wartime production, ranging from chemicals to steel and nonferrous metals, and the thousands of items necessary in every type of industrial plant. Some surplus army vehicles have been sold, the majority being of civilian type; such sales have been made to dealers at established ceiling prices.

Sales include such unusual items as the damaged hull of a tanker which had lost its forepart when hit by an enemy torpedo. The afterpart contained engines in good condition and was purchased to be fitted with a new forward section and returned to service as a tanker. Surplus army and air force uniforms were dyed a dark blue, reconditioned and sold for relief purposes abroad. Army footwear was also repaired and disposed of for the same purpose.

Much of the Air Raid Precaution equipment assembled throughout Canada has been sold through the Corporation. Many portable power pumps have been acquired by small municipalities desirous of developing fire protection where none had previously existed or expanding existing systems. Some of the anti-gas clothing which had been distributed to men trained in decontamination methods has found new uses, such as protective covering when spraying orchards, and for fishermen.

In consumer goods the list of classifications is hardly less extensive. This Division deals largely with all the things required by the individual personally and, in or for the home.

The Department of Veterans Affairs.-In October, 1944, the Department of Veterans Affairs Act and the Department of National Health and Welfare Act were brought into force by proclamation of the Governor in Council. As a consequence the Department of Pensions and National Health ceased to exist; its functions concerning war veterans were assumed by the Department of Veterans Affairs and its functions in respect of national health by the Department of National Health and Welfare.

The Department of Veterans Affairs deals exclusively with matters affecting veterans of the Second World War, as well as those of the War of 1914-18 and previous campaigns, and the scope of its activities has been considerably widened. The new Department consists of an Administration Branch, a Rehabilitation Branch, a Treatment Branch, Prosthetic Services, the Veterans' Bureau, the Veterans Insurance Branch, and the Soldier Settlement and Veterans' Land Act Administration. Attached to the Department are the Canadian Pension Commission and the War Veterans' Allowance Board.

The activities of the Rehabilitation Branch have expanded to keep pace with the increased flow of discharges from the Armed Forces. With employment opportunities widespread across Canada, the majority of discharged service personnel are finding remunerative work.

Consequent upon the active participation of Canada's Armed Forces in the battle areas, the work of the Treatment Branch has increased considerably. The necessity for additional hospital accommodation was foreseen and new construction has been undertaken to increase the bed accommodation available to the Department. Construction is continuing and still further plans have been laid to meet eventualities.

The comprehensive and generous measures which the Department of Veterans Affairs is called upon to administer give rise to the confident expectation that the satisfactory re-establishment of Canada's Armed Forces will be achieved. These measures are fully dealt with in Chapter XXII.

Department of National Health and Welfare.-This Department was brought into existence by the Department of National Health and Welfare Act of July 24, 1944. Organization of the Department began officially with the proclamation of the Act on Oct. 18, 1944, under the direction of the Minister of National Health and Welfare, the Deputy Minister of National Health and the Deputy Minister of Welfare.

The Health Branch took over, in toto, all divisions and functions of "National Health" when the Department of Pensions and National Health was dissolved. The Divisions and Acts administered include: Child and Maternal Hygiene, In-
dustrial Hygiene, Food and Drugs Act, Opium and Narcotic Drug Act, Quarantine Act, Public Works Health Act, Leprosy Act, Proprietary or Patent Medicines Act, The National Physical Fitness Act, Venereal Disease Control, Laboratory of Hygiene, Medical Investigation (Civil Service). Nutrition Services, Civilian Blind, and Public Health Engineering. While most of the divisions have been geared to meet wartime problems, the new Department is laying a foundation for a long-term, co-ordinated peacetime program. Among the extensions to existing services now under consideration are: national health insurance, financial assistance to provinces for prevention and treatment of tuberculosis, blindness, mental illness, crippling conditions in children, the training of professional public health personnel and public health research. The Department operates in close co-operation with the Provincial Departments of Public Health. Co-ordination of effort is secured through the Dominion Council of Health, an advisory group comprising the deputy minister of health of each province, the Deputy Minister of National Health (chairman), and other appointed members. Dominion public health matters are fully dealt with in Chapter XXI of this volume.

The Welfare Branch, created to administer Family Allowances and to develop other social security measures of the Dominion Government had, unlike the Health Branch, no previously existing counterpart. Its main concerns at present, which extend beyond the social insurances per se, include the recent assumption of administration of the Physical Fitness Act and steps to encourage wider cultural and recreational opportunities through community centres. The substantial growth of this new Branch, now largely decentralized through nine regional Family Allowances administrative offices, will be further increased when anticipated transfers from other Government Departments of certain of the existing Dominion social welfare services take place. See also Chapter XX of this volume.

Agricultural Supplies Board.-The Agricultural Supplies Board is a wartime control body which has operated since the outbreak of war. It is the responsibility of the Board to ensure that Canadian agriculture is conducted during wartime in a manner to fulfil, so far as possible, the needs of Canada, the United Kingdom and the Allied Nations for food and other agricultural products. Combined with this, of course, is the responsibility of ensuring that the supplies needed for agricultural production in Canada, such as seeds, fertilizers, feeds, etc., are made available in sufficient quantities. In accomplishing its duties, the Board works in close cooperation with the Provincial Departments of Agriculture, most of whom in turn have Provincial Production Committees working with field officers and directly with the farmers. The work of the Board in the early years of the War is outlined in previous issues of the Year Book, and the present review brings that material up to date.

Despite the termination of hostilities in Europe, the demand for agricultural commodities continues in order to meet British requirements, and to supply the needs of liberated Europe. Dairy products, particularly cheese, bacon and pork products, meat and meat products, shell eggs and egg powder, dehydrated vegetables, flax fibre and seeds, the principal commodities which Canada has provided through most of the war years, are still urgently required in large volume.

An annual conference was held in December, 1944, with representatives of Provincial Departments of Agriculture, delegates of the Canadian Federation of Agriculture, and other interested organizations, to plan the farm production best suited to meet requirements during 1945. This marks the third annual conference
of this kind when a program for the succeeding year was planned in the light of known food, feed and supply requirements. It has been found from experience that such conferences go a long way toward directing production into farm enterprises most urgently needed for wartime requirements.

Assistance to Agriculture.-The need continued for the movement of large quantities of western feed grains to Eastern Canada and British Columbia for livestock feeding under the Freight Assistance Policy. Rail transportation continued to be particularly difficult throughout 1943-44.

Some measure of assistance was continued to enable farmers to obtain fertilizers at lower prices and a plan of zoning the fertilizer industry did much to ensure equality of supply and also to reduce the price to the farmer. The general object of the fertilizer program since the outbreak of war has been to increase the available supply and direct its use to essential food crops and feed crops which are so necessary in increasing the supply of meats, dairy and poultry products.

The Board has continued its activities in supervising and assisting plants engaged in the dehydration of vegetables for the United Kingdom and the Canadian Armed Forces. Nearly 6,000 tons dried weight, a very large increase over the previous year, of vegetables, including potatoes, cabbage, carrots, onions and turnips were dehydrated from the 1943 crop. The quantity required from the 1944 crop, that is during the year 1945, will be somewhat larger.

Assistance was continued to the apple growers of Nova Scotia and British Columbia in 1944 to offset the serious loss of the overseas market since the outbreak of war. Fortunately the United Kingdom was able to take comparatively large quantities of both fresh and dried apples from the 1944 crop which enabled the crop to be disposed of to better advantage than in previous years.

In 1944 the Board sponsored a wartime garden campaign. It was realized that the extra vegetables which would be grown in the home garden would not affect the commercial or market gardener but would, on the contrary, supplement the overall supply and help in some measure to relieve transportation of bulky vegetables. Reports indicate the campaign was most successful and it is estimated that 60,500 tons of vegetables were grown in 226,000 wartime gardens in Canadian cities and towns with a population of 1,000 or more.

The Board through its Technical Adviser, continued its activities in reviewing priorities received by the Department of Munitions and Supply for new buildıng construction in the agricultural industry and for priorities for new machinery for agricultural processing. Close contact was also kept with the office of the Administrator of Farm Machinery.

Whey for the Manufacture of Penicillin.-An interesting development during 1944 was the demand for whey for the production of milk sugar to be used in the preparation of the new drug "penicillin" Manufacturers of penicillin have found that increasing the quantity of milk sugar increases the yield and keeping qualities of the drug and the added sugar has a stimulating effect on the patients. During the year ended Mar. 31, 1945, about 1,500 farmers in Ontario and Quebec provided $65,000,000 \mathrm{lb}$. of whey through cheese factories. From this milk sugar for the manufacture of penicillin, and whey powder, a useful ingredient for poultry and livestock feed, was processed. Requirements in 1945 will be considerably higher.

Agricultural Food Board.-Canadian farmers have, during war years, met in large part the increased demand for food, although faced with a shortage of labour and higher costs of production. To ensure that production would meet the requirements of the Armed Forces and domestic requirements, and in order to maintain ceiling prices in Canada, subsidies have been paid to producers of essential foodstuffs. Originally these were paid by the Wartime Prices and Trade Board but, by an arrangement between the Ministers of Agriculture and Finance, the Agricultural Food Board was established on Mar. 1, 1943, and assumed the payment of producer subsidies two months later. Subsidies are paid by the manufacturer or distributor who purchases the raw product from the producer. The manufacturer or distributor is in turn reimbursed by the Government. The subsidy which is paid must be indicated on the statement of settlement furnished to the producer. In addition to paying subsidies, the Agricultural Food Board has wide powers and responsibilities in connection with the wartime production of food in Canada and its diversion to priority uses.

Under the wartime price and subsidy program, total milk production increased from $15,800,000,000 \mathrm{lb}$. in 1939 to $17,600,000,000 \mathrm{lb}$. in 1944. Subsidies at varying rates are used in combination with control of diversion to direct supplies into desired outlets. Production of milk for sale in fluid form has been subsidized in order to meet increased demand from army camps, from cities and towns where there has been an increase in population owing to the establishment of war industries, and in areas where greater purchasing power of the public generally has increased consumption. Subsidies have been paid on a selective basis in those market areas where it was evident that a shortage would otherwise occur. The Canadian people are consuming about 19 p.c. more milk than before the War.

Subsidies are also paid on butterfat used in the manufacture of creamery butter and on milk used in the manufacture of cheddar cheese and concentrated milk products. While it has been necessary to ration butter, more has been consumed in Canada than before the War, and large quantities of cheese and concentrated milk products have been exported to meet overseas requirements of the United Nations. Subsidy payments on milk and milk products in 1944 amounted to about $\$ 45,000,000$.

Producers of tomatoes, corn, peas, green and waxed beans who deliver these products for canning are entitled to subsidies in addition to a price equivalent to that paid for the crop in 1941, or any higher amount agreed upon. Producers of strawberries, raspberries, loganberries, gooseberries, and currants are entitled to subsidy on that part of their crop that is canned or manufactured into jam. By this means it has been possible to maintain and even increase production of these desirable food products for sale under domestic ceiling prices. Subsidy payments on these crops amounted to about $\$ 2,500,000$ in 1944.

Commodity Boards.-Working in close collaboration with the Agricultural Supplies Board and the Agricultural Food Board are three commodity boards which procure and forward Canadian farm products contracted for under agreements with other governments. The Meat Board (previously the Bacon Board) acts as the agency which implements the agreements with the British Ministry of Food for bacon and other meat products. The Dairy Products Board acts in a similar capacity with respect to Canadian cheddar cheese needed by the United Kingdom and takes such measures as will ensure needed supplies of other dairy products for
overseas and for Canadian markets. The Special Products Board is responsible for supplying Canadian farm products (other than meat and dairy products) such as eggs, fruit, vegetable products, flax fibre and seed to the United Kingdom or any Allied country.

The Dominion Bureau of Statistics.-The great and many-sided expansion of Canadian statistics in numerous fields during the past twenty years, and the work that the Dominion Bureau of Statistics has done to provide a statistical background for economic study, have greatly facilitated the conversion from a peace economy to a war economy. Far more is known about production, internal trade, prices, the balance of international payments, etc., than during 1914-18, and this knowledge has been extensively used by the Government.

Co-operation with the Wartime Prices and Trade Board.-After the creation of the Wartime Prices and Trade Board the Chief of the then Internal Trade Branch, afterwards the Assistant Dominion Statistician, was seconded thereto to act as liaison officer between the Board and the Bureau. A number of statistical undertakings were carried out, the staff being supplied by the Board but organized by the Bureau. Statistics on coal were collected and compiled for the Coal Administrator. (At a later date the same work was carried on for the Department of Munitions and Supply.) At the request of the Hides and Leather Administrator a monthly series of statistics of hides, skins, and leather was instituted. A more general monthly survey designed to reflect the current trend in retailers' inventories was also undertaken. The work on prices was expanded considerably, particularly as regards cost-of-living statistics, and extensive price records furnished regularly to the Board.

Under the Wartime Prices and Trade Board order to license persons and firms selling or buying for resale, commodities and specified services, the Bureau developed a Records Division for this work. Over 330,000 businesses were licensed and coded by kind of business. A complete classification was set up which served as a basis for sending out orders, bulletins, posters, circulars, etc., for the Board. This organization was completed under the direction of what is now the Merchandising Statistics Branch of the Bureau. After it had been thoroughly established on a routine basis it was taken over for direct administration by the Wartime Prices and Trade Board.

Co-operation with the Foreign Exchange Control Board and Other Departments.The work of the International Payments Branch has been closely co-ordinated with other Government departments to meet the increased official demands for balance of payments information with respect to both past record and future outlook. The complexity of the economic and financial organization of the Dominion during the War has created new requirements for statistical information with the necessity of frequent reviews of the balance of payments situation.

To make effective use of information produced by administrative controls, some officers of the staff of the International Payments Branch are working on the premises of the Foreign Exchange Control Board. Information produced from this and other official sources is co-ordinated for balance of payments purposes with statistics collected directly by the Dominion Bureau of Statistics.

National Research Council.-The National Research Council has three main functions. It operates laboratorics-at the present time eleven of them across Canada. It acts as adviser to the various Departments of Government, particularly
those of National Defence, Munitions and Supply, and Reconstruction. The third and most important function is in connection with the organizing and coordinating of national co-operative research programs in which various Departments and organizations have an active interest. This third function is performed generally through "Associate Research Committees", a distinctly Canadian mechanism of proven effectiveness. These committees are set up and convened by the National Research Council but they operate, not as committees of one Department or organization, but as associations of the leading experts in their particular research fields. The committees receive financial grants, lay out programs, and allocate problems to various laboratories. In addition to the many subjects under investigation in the National Research Laboratories, the Council is supporting 162 projects in the laboratories of 29 other institutions across Canada.

When the National Research Council was set up in 1916 its primary object was to foster, stimulate and co-ordinate scientific and industrial research in Canada. One of the first steps taken was to provide scholarships for research workers in an effort to built up a body of scientifically trained young men in Canada who would remain in this country and devote themselves to science and research. Since that time, approximately 1,200 awards, at an over-all cost of about $\$ 830,000$ have been made to about 700 different individuals. This activity has proved to be one of the greatest significance to science in Canada. Of the 700 individual grantees about 63 p.c. have proceeded to their doctorate degrees and, as is natural in a movement of this kind, an even greater number of students who were not holders of Council scholarships, proceeded to graduate work. The stimulation and assistance given by the National Research Council in this regard has had a most far-reaching effect in building up strong, scientific, graduate schools in Canada.

In addition to scholarships, the Council instituted a system of grants in aid of research to university professors and this again has been a most significant and constructive measure. Many departments and units in the various Canadian universities, particularly in the smaller institutions, have become active and permanent centres of research as the result of these grants.

Since 1939, the actual physical facilities of the Council have been extended greatly. The staffs of the laboratories have increased fourfold; the direct peacetime budget of under $\$ 1,000,000$ has grown to nearly $\$ 6,000,000$ and, in addition, the Council controls, indirectly, further expenditures of the same order of magnitude; the Associate Committee structure has been extended and strengthened; and the general advisory and liaison functions of the Council have really come into being in substantial form. For instance, the National Research Council has become the official rescarch establishment of the three Service Departments of Defence, and the President and other officers of the Council sit on innumerable committees and have important contacts with all the war Departments in an advisory capacity. The President of the National Research Council is a member of such Service organizations as the Army Technical Development Board, the Wartime Technical and Scientific Development Committee, the Test and Development Establishment, the Canadian Inventions Board and many other Government organizations and secret committees directly concerned with the conduct of the War.

Activities within the National Research Laboratories at Ottawa include the work of the aeronautical and hydraulic laboratories of the Division of Mechanical Engineering; investigations in foods and industrial utilization of agricultural products in the Division of Applied Biology; test and specification work and fundamental
studies in the Division of Chemistry; standardization, basic studies and applied research, especially for the Army and Navy, in the Division of Physics and Electrical Engineering. Physicists, chemists, biologists and engineers, trained in the art of making literature searches, work constantly in the library examining the hundreds of scientific journals and reports from all parts of the world. By this means needless duplication of laboratory work is avoided, and at the same time there are assembled and assessed the results of work done in other institutions by investigators whose researches may have a bearing on activities in the National Research Laboratories.

The National Research Council has devoted much time and thought to preparation for the post-war period, while concentrating all its present resources on matters pertaining to the prosecution of the War. Canada has hitherto been a research importer, and the pre-war per capita expenditure on research was far below that of other industrial nations. Under the pressure of war, Canada has been spending five times as much on research as in pre-war years. The tremendous impetus given to research and the excellence of the results secured through its application to large problems during the War, give assurance that in the future greater advances may be expected.

Other Agencies and Activities.-There are various other special agencies performing important economic functions, either of control or investigation. Matters of co-ordination, internal as well as international, have become more important in view of post-war problems to be met and solved. In May, 1945, a labour committee was established to co-operate with the Department of Reconstruction and gain the co-operation and assistance of organized labour in formulating and implementing the policies of the Reconstruction Department.

An Interdepartmental Committee of senior government officials to co-ordinate housing activities in Canada was also set up in May. The Committee's duties will include the tasks of overcoming the shortages of building materials and labour which have resulted from wartime demands and conditions, and of promoting the maximum co-ordination among the various Departments and agencies of the Government concerned with housing.

The External Trade Advisory Committee, established in May, 1944, as an agency for prompt consultation among the various Government Departments and agencies on matters of export and import trade policy, will investigate and make recommendations on matters relating to trade in the transition period as well as on those matters that concern Canadian goods and services for relief and rehabilitation.

Shipping policy is under close review by the Government. The Canadian Shipping Board, set up in July, 1942, controls the use of both lake and ocean ships of Canadian registry. In allocating ships to particular routes and in seeing that essential cargoes are carried, it co-operates with the United Kingdom Ministry of War Transport and the United States Maritime Commission. Canada iṣ represented on the United Maritime Authority which has taken over the functions of the Combined Shipping and Adjustment Boards. The Authority meets at intervals to consider questions of Allied shipping policy. Canada also sits on the United Maritime Executive Board (executive body of the United Maritime Authority) established to ensure that adequate merchant ship tonnage is made available for military uses in Europe and the Far East and to supply the United Nations and liberated areas.

Several joint committees are functioning between Canada and the United States. After the Hyde Park agreement of April, 1941, which provided for full
economic and material collaboration between the United States and Canada, Joint Economic Committees were set up to investigate and report on joint wartime economic problems not being currently studied by other agencies, as well as on problems of post-war adjustment. Development of other agencies of co-ordination made the continued operation of these committees unneccessary, and they were dissolved in March, 1944.

Early in 1945 the President of the United States and Prime Ministers of the United Kingdom and Canada announced their decision to maintain the Combined Production and Resources Board, the Combined Raw Materials Board and the Combined Food Board until the end of the Japanese War. Even though many materials and products will be in easier supply later, the continuing function of the Combined Boards will be to co-ordinate the war effort of the member countries and of the other United Nations in the production, allocation and supply of raw materials, foodstuffs and other products which require combined planning in order to meet military and essential civilian requirements. In many cases the Boards consult with other United Nations and with UNRRA before making recommendations. Canada is the only third nation represented on any of these United StatesUnited Kingdom combined boards.

New agencies set up during the past three years have been established not only to deal with the wartime situation but also to lay the foundations for handling post-war problems, especially those in connection with the transition period between war and peace.

Questions of post-war traffic have been considered during the past two years. An Interdepartmental Committee on Air Transport Policy was set up in June, 1943, to work on recommendations leading to a draft international air transport convention presented by Canada as a basis for bilateral air talks between the United Kingdom and the United States. In July, 1944, an Air Transport Board was established. It functions as a regulatory and advisory body to regulate civil aviation and advise the Government in laying out Canadian-operated routes within Canada and overseas. The United States and Canada concluded a new Agreement regarding civil air routes connecting the two countries in February, 1945. Under terms of the Agreement, pending the coming into force of the International Air Services Transit Agreement (Chicago, Dec. 7, 1944), aircraft of either country may use all airway facilities in the other country along the routes they are now flying, including the right to fly across its territory without landing and the right to land for non-traffic purposes.

## Section 2.-Economic Developments in Canada Since January, 1945*

Economic conditions were maintained at a relatively stable but high level in Canada during the first six months of 1945. The achievement of less than twelve millions of people in meeting the challenge of war during the latest six years has been outstanding. Even the most optimistic of observers could not have foreseen at the outbreak of war the magnitude of the Canadian industrial effort.

The advance in the national income, so much in evidence during more than five years of war, was curbed during 1945. The production of steel, indicating the

[^9]trend in the production of munitions and industrial equipment, recorded a slight betterment for January to June, 1945, compared with the first six months of 1944, and the export trade was almost maintained. The money supply, consisting of the deposit liabilities of the banks and circulating media in the hands of the public, averaged nearly 16 p.c. greater in the period for which statistics are available at the time of writing (August, 1945) than during the same period of 1944.

On the other hand, many lines of economic activity are showing a recession from the high levels of the early part of 1944. The influence of war conditions in accelerating employment and payrolls is now losing its force, the labour personnel being slightly less than at the same time last year. It has been evident for some time that the volume of economic activity has dipped below the maximum position of more than a year ago. Commodity production in the first six months of 1945 was at a somewhat lower level than in the same period of the preceding year, the index of the physical volume of business being nearly 8 p.c. less.

The balance between agriculture and industry within the Dominion has undergone a profound change. Most industries, stirred by heavy demand, have added immensely to their plant and equipment leading to a sharp increase in the number of skilled workers. A heavy backlog of demand for both producer and consumer goods has accumulated together with a stored-up purchasing power that was never greater in our history. These obvious advantages have a bearing on the prospects of a high and stable level of employment in the post-war period.

Although in the past five years the production of many lines of consumer goods has been restricted and the Canadian people have made a heavy contribution in the purchase of war bonds and taxation payments, an upward trend is shown in consumer purchases from retail stores. The increase of about 82 p.c. since the last year of peace is due mainly to an advance in the quantity of goods purchased, the upward movement in retail prices being of relatively lesser proportions. Retail sales during the first five months of 1945 averaged $6 \cdot 6$ p.c. over the same period of the preceding year. The estimate for 1944 was $\$ 4,069,000,000$ compared with $\$ 2,593,000,000$ in 1939.

The importance of capital formation on a physical basis as a feature of economic activity has long been recognized. The production of munitions and war supplies has a somewhat similar generating influence on the whole economy. While the investment money-flow is normally far less than that arising from payment for consumption goods, the wider fluctuation in the former is of greater significance in promoting economic activity.

Construction.-The initial expenditures on construction and similar activities necessarily lead in due course to additional outlay on living necessities. The operations of the construction industry measured by records of employment were at somewhat higher levels during the first half of 1945 than in the same period of 1944, and the situation in regard to the placement of contracts was also more favourable. The considerable new business placed in 1945 and the record of contemplated new contracts indicated heavy operations upon the removal of restrictions regarding men and materials. The construction industry was hampered in wartime through lack of supplies in meeting the needs of the expanding urban centres. With the removal of wartime restrictions a backlog of requirements will doubtless emerge. (See Chapter XV, pp. 444-458.)

External Trade.-The composition of Canada's exports during the War has had a distinctly wartime character, resembling in this respect the financial background making possible the large outward movement of commodities. Manufactured products, made up mainly of munitions in the broader sense, represented a latrge proportion of total exports. Export commodities normally assigned for civilian use such as food, non-ferrous metals, lumber, pulp and paper, were consigned outward in a volume considerably augmented by wartime conditions. Probably not more than a quarter of the exports during the period of heightened war activity represented commercial trade on a normal footing. The story of exports amounting to about $\$ 3,000,000,000$ in 1943 and $\$ 3,500,000,000$ in 1944 loses some of its significance, when the underlying conditions are kept in mind. (See General Review of External Trade, pp. 459-463.)

The high level of production was reflected in the export trade which even in the first half of 1945 reached a total of just over $\$ 1,745,000,000$ not including the net export of non-monetary gold amounting to $\$ 49,000,000$. Imports as compared with this total amounted to $\$ 798,700,000$ leaving an active balance of trade of more than $\$ 946,500,000$. The main changes in the export side from the early part of 1944 were declines in wheat and in iron and its products and a fairly large increase in non-ferrous metals. A more active trade has subsequently developed in foodstuffs, notably in wheat.

Finance.-Government expenditure has been a dominant factor in the eco' nomic expansion of the war period. The magnitude of the country's war effort in a financial sense becomes readily apparent from a glance at the Dominion budgets of the six-year period. (See Section on Dominion Public Finance of Chapter XXIV, pp. 917-943.) The financing of the transitional period from a wartime to a peacetime economy will be of heavier proportions than is generally realized, public policy aiming at an abundant supply of credit and a low level of interest rates.

War expenditures receded from $\$ 4,587,000,000$ in the twelve months ended Mar. 31, 1944, to $\$ 4,418,000,000$ in the latest fiscal year, the Mutual Aid appropriation showing a decline of 22 p.c. In April, May and June of 1945, Government expenditures; owing mainly to the increase in Mutual Aid payments, were nearly 14 p.c. greater than in the same period of 1944.

Among the sources of the money supplied to the national economy by the chartered banks, investments in government obligations remain by far the most important single item. Compared with them, commercial, industrial and agricultural loans are now relatively insignificant, more than one-half of the assets of the chartered banks consisting of Dominion, provincial and other securities.

The steady rise in demand for currency is reflected in the increase in deposits subject to cheque and in notes and coin. The further advance in money supply during the twelve months ended August, 1945, was 14 p.c., the turnover of deposits having been almost maintained. A special feature of recent developments in the monetary situation was the appreciable increase in currency outside of banks.

Whatever the credit requirements of the post-war period may be, there is every reason to believe that they can be met without difficulty. Interest has centred recently in the increased investments of the banks and the maintenance of a strong liquid position. It is estimated that the total payments by cash and cheque rose $3 \cdot 9$ p.c. in the twelve months, the amount in June, 1945 , having been $\$ 9,600,000,000$. The comparison clarifies the important position of the banks in facilitating the economic expansion occasioned by war operations.

Income Payments and Employment.-As income payments to individuals constitute the principal flow of money, the importance of these payments to the economy is readily realized. Salaries and wages represent from one viewpoint the greatest share in the distribution of the value which is prodiced in commerce and industry and from another the greatest single factor in the purchasing power which represents consumer demand for these values. (See Chapter XIX on Labour, pp. 750-798.)

The number of available workers and job vacancies was still out of balance upon the end of the War with Germany in May, 1945, but the easing of the supply situation enabled industry to speed the return to the manufacture of peacetime goods, opening up more employment opportunities in civilian manufacturing.

The release of workers in the higher-paid industries although there was increased employment of those in the lower-paid divisions, contributed to the recession in payrolls as of the first week of June, 1945, compared with the same period of 1944. The decline in the index of aggregate payrolls during the latest twelve months was 1.9 p.c. The index of aggregate weekly payrolls in the manufacturing receded from 166.7 in the period of June 1, 1944, to 157.4 as of the corresponding week of 1945. The recession in industrial employment in June from the preceding month was particularly interesting for the reason that a recession in that comparison is without parallel in the experience of the past 25 years. There is evidence that recession has occurred in the payment of salaries and wages notwithstanding the higher level of rates during the first half of the year.

The payment of dividends going partly to individuals in Canada was well maintained in the first seven months, while the disbursement of interest by the Dominion Government was at a considerably higher level due to the increase in the outstanding funded debt.

Agriculture.-Agriculture and industrial activities are complementary and interdependent. The attainment of a well-balanced and flourishing agricultural industry is necessary for the national prosperity. The farmer, favoured by bountiful crops in 1944, accomplished much in providing for the home market as well as meeting the extraordinary demands of the United Kingdom and liberated Europe. An ample harvest of coarse grains assisted in the continued production of meats and dairy products. High levels were reached in shipments of Canadian wheat during the year recently ended and stocks were reduced to a lower point than at any other time since 1939. (See Chapter VIII commencing on p. 188.)

In 1945, field operations and subsequent germination and growth were retarded over practically the whole of Canada by the cool backward spring, with the result that earlier plans were considerably adjusted both as to acreage and type of crop. The total planted area was probably reduced by a million acres from the level of 1944. With some improvement in weather conditions during June and July, the handicap imposed by earlier unfavourable conditions was partly overcome. The movement of cattle to market for the first half of the year was above that in the same period of 1944. Hog marketings declined sharply, particularly in the Prairie Provinces. Production of butter declined somewhat, while that of cheese made an excellent gain.

22115--E

Forestry, Fisheries and Trapping.-The output of essential requirements in forest products was more than maintained in the first half of 1945. Newsprint production in that period was about $1,545,000$ tons, slightly above that of the same six months of the preceding year and 15 p.c. greater than the tonnage in the same period of 1939. The main determinant is the scarcity of labour and wood supplies in which there has been as yet no pronounced betterment. The new lumber cut has fallen below the domestic and external requirements, which have recently expanded beyond previous levels. Costs of materials, labour and transportation are greatly in excess of pre-war years, although price control and rationing were a decided help toward keeping costs within bounds. The unprecedented destruction of property in Europe will ensure a wide market for Canadian lumber for a considerable period, (See also Chapter IX, pp. 247-268.)

The Canadian fishing industry, despite its reduced labour force and the inherent difficulties of operation, played an important part in adding to the wartime food supply both of Canada and of the United Kingdom. (See also Chapter XI, pp. 276-292.) During the pre-war period, domestic consumption of fish was small in relation to the output, and the industry must contend with the fact that for an indefinite period after the War the greater part of the production will need to be shipped to other countries. Exports of fishery products were valued at $\$ 33,777,000$ in the first half of 1945 , an increase of 22 p.c. over the same period of the preceding year.

Since the War began, the fur trade in Canada has been enjoying a considerabla measure of prosperity due to the general shortage of raw furs and to the high level of purchasing power contingent on full employment. With the shortage of trappers and personnel for the fur farms the supply of furs has been none too plentiful. Since the lifting of the restrictions on importation imposed upon the introduction of price fixing in 1941, the inward shipment of furs from other countries has shown a marked increase. Despite the closing of the British market, the value of exports in the first six months of the present year was about 65 p.c. greater than in the same period of 1939. (See also Chapter X, pp. 269-275.)

Mining.-Canada's role as the leading exporter of base metals gave the mining industry an opportunity of making a well-nigh indispensable contribution to the war effort. Base-metal mining was greatly extended in operational scope, both by expansion of existing mines and development of new properties including those with marginal and sub-marginal deposits. The value of the exports of non-ferrous metals, minerals and derivatives had, in the first half of 1945 , risen 42 p.c. as compared with the first six months of 1939.

Though headway was made in some directions, the total value of output at the turn of the first half of 1945 was running lower than in 1944. Coal, zinc and asbestos recorded increases, while most other metals and minerals receded to lower levels. Employment in the industry as a whole was lower.

From the commencement of hostilities developments in the industry have been governed largely by the changing requirements of the war effort. Operating under difficult conditions, the industry has maintained a high level of production sufficient to meet most of the Canadian requirements and a large share of those of the Allied sountries. (See also Chapter XII, pp. 293-330.)

Electric Power.-Production of primary electric power which had reached a maximum during 1944 showed recession in the first half of the present year. The output in 1944 was about $40,000,000,000 \mathrm{kwh}$. and the consumption of firm power surpassed all previous experience. Following the outbreak of war, all available power was speedily absorbed and a prompt realignment of the distribution was the first step toward providing the necessary energy for the varied activities of munitions production. As speedily as possible, new units were added to generating stations not fully installed and the construction of new developments commenced and rushed to completion, resulting in the addition of two million horsepower during the war years. Power demands for war purposes passed their peak in 1944, resulting in the virtual cessation of construction of new power projects and a limited relaxation of restrictions on the uses of power for domestic, commercial and industrial needs. (See also Chapter XIII, pp. 331-362.)

The net increase in hydro-electric facilities during 1944 was only $69,000 \mathrm{~h} . \mathrm{p}$. and no large power projects were under construction during 1945. The installation at the beginning of the year was $10,283,000 \mathrm{~h} . \mathrm{p}$. leaving about 80 p.c. of the country's water power resources available for future development as demand arises. Production of primary power in the first half of 1945 was $17,100,000,000 \mathrm{kwh}$. compared with $18,800,000,000 \mathrm{kwh}$. in the same period of 1944.

Manufacturing.-The impact of war has revolutionized the industrial life of the Dominion. The War of 1914-18 called upon Canada to build an industrial machine that subsequently gave this country a leading place in world commerce: the enlarged scope of industrial operations occasioned by the war demands of recent years will have an even greater influence. (See pp. 363-381 of Chapter XIV on Manufactures.) The magnitude of the transformation from September, 1939, is indicated by commitments to the end of May, 1945, of about $\$ 10,900,000,000$ by the Munitions Department alone.

A major factor in the levelling off of industrial production during the first half of 1945 was the decline in war production. A recession was shown in 1944 from the level of the preceding year and the decline was extended with the defeat of Germany. Shortages of labour and raw materials and other difficulties have limited and will continue to limit resumption of suspended production of civilian goods despite lifting of many wartime controls.

The index of employment in manufacturing plants showed a decline of $5 \cdot 7$ p.c. for the first half of 1945 compared with the same period of 1944: volume of production dropped 11 p.c. The first appreciable downturn of the war period took place during the six months, mainly through a marked decline in the iron and steel fabricating section of war industries which was not offset to any great extent by an increase in other groups.

Transportation.-The railways have been called upon to sustain without appreciable easement the tremendous effort which abnormal military and other wartime necessities placed upon them. (See pp. 648-651 of Chapter XVIII on Transportation and Communications.) The repatriation of personnel of the Armed Forces from Europe has taxed the passenger traffic facilities to the utmost. Combined gross earnings of the two large railways recorded a new high point in the first half of 1945 , the increase over the preceding year being of slight proportions. The total was $\$ 368,600,000$, which may be compared with the pre-war revenue of $\$ 149,500,000$ received during the first half of 1939.

## ERRATA

p. 146-Third paragraph should read Age at Marriage and Marital Status instead of "Martial" Status.
p. 305-Grand total for Manitoba should read 13, 412, 266 instead of $43,412,266$.
p. 325, Table 27 -Canadian 1943 petroleum production should read $10,125,320 \mathrm{bbl}$. instead of 10,123,205 bbl.; British Empire totals, 1943, should read 45,163,320 bbl. instead of $45,161,205 \mathrm{bbl}$.

## PART I.-GEOGRAPHY*

Main Geographical Features.-The Dominion of Canada comprises the whole northern part of the North American Continent with its islands, except the United States territory of Alaska and the territory of Newfoundland (with Labrador). It takes in the whole Arctic Archipelago between Davis Strait and the connecting waters northward to the 60th Meridian on the east and the 141st Meridian on the west.

The Dominion is bounded on the west by the Pacific Ocean and Alaska; on the south by the United States; on the east by the Atlantic Ocean, the waters between Newfoundland and the Gulf of St. Lawrence, Labrador, Davis Strait and the dividing waters between the Danish territory of Greenland and Ellesmere Island; northward it extends to the North Pole.

The southernmost point is Middle Island in Lake Erie, in north latitude $41^{\circ} 41^{\prime}$. From east to west Canada extends from about west longitude $57^{\circ}$ at Belle Isle Strait to west longitude $141^{\circ}$, the boundary of Alaska. Canadian territory thus extends over $48^{\circ}$ of latitude and $84^{\circ}$ of longitude.

The area of the Dominion is $\mathbf{3 , 6 9 5 , 1 8 9}$ square miles, a figure that may be compared with that of $3,735,209$ square miles for the United States and its dependent territories; 3,776,700 the total area of Europe; 2,974,514 the area of Australia; $3,275,510$ the area of Brazil; $1,581,079$ the area of India (excluding Burma); 120,849 the area of the British Isles. Canada's area is 28 p.c. of the total area of the British Empire, as it is shown at p. 141 of the 1943-44 Year Book.

The sea coast of Canada, one of the longest of any country in the world, comprises the following mileages:-

Mainland-Atlantic 3,068, Pacific 1,579, Hudson Strait 1,245, Hudson Bay 3,157, Arctic 5,771; total 14,820 miles.
Islands- Atlantic 1,518, Pacific 3,979, Hudson Strait 60, Hudson Bay 2,307, Arctic 26,786; total 34,650 miles.

[^10]The Canada-United States boundary is $3,986 \cdot 8$ miles long and that between Canada and Alaska is $1,539.8$ miles; the Canada-Labrador boundary has not been surveyed but is estimated at 1,260 miles.

The St. Lawrence-Great Lakes system of navigable waterways provides ship transportation from the sea into the very heart of the continent. From the Strait of Belle Isle at the northern entrance to the Gulf of St. Lawrence, the sailing distance to the head of Lake Superior is 2,338 miles; from Montreal to Fort William, the great Canadian grain-shipping port, the distance is 1,215 miles. Throughout its length the waterway gives access to a region rich in natural and industrial resources.

The potentialities of these inland waterways of Canada are enormous since modern canal systems by-pass the unnavigable portions of the St. Lawrence River, link up the various bodies of water of the Great Lakes and are bound to have a much greater economic influence on the future wealth and progress of the nation. There are no tides in these Lakes although considerable variation in water levels is sometimes occasioned by strong winds or heavy precipitation. At the Great Lakes ports and harbours, ships load and unload their cargoes to and from all points in the Dominion.
1.-Approximate Land and Fresh-Water ${ }^{1}$ Areas, by Provinces and Territories

Note.-For a classification of land area as agricultural, forested, etc., see pp. 27-28.

| Province or Territory | Land | Fresh Water | Total | Percentage of Total Area |
| :---: | :---: | :---: | :---: | :---: |
|  | sq. miles | sq. miles | sq. miles |  |
| Prince Edward Island. | 2,184 | 2 | 2,184 | $0 \cdot 1$ |
| Nova Scotia.. | 20,743 | 325 | 21,068 | 0.6 |
| New Brunswick | 27,473 | 512 | 27,985 | 0.8 |

${ }^{1}$ Salt-water areas are excluded. $\quad{ }^{2}$ Too small to be enumerated.

## Section 1.-Physical Geography

The physical features of Canada are considered under this heading in six natural divisions into which the country is divided, each of which is defined and shown in the map on p. 5.
(1) The Appalachian and Acadian Regions, comprising the Maritime Provinces and most of that part of Quebec lying south of the St. Lawrence River. It is a hilly or mountainous region and is made up largely of disturbed beds.
(2) The St. Lawrence Region, a lowland belt bordering the St. Lawrence River and extending westward through southern Ontario to Lake Huron. It is underlain chiefly by flat or gently dipping strata of Palæozoic age.
(3) The Canadian Shield, a vast V-shaped area of ancient rocks surrounding Hudson Bay.
(4) The Interior Plains Region of Manitoba, Saskatchewan, and Alberta, which stretches down Mackenzie Valley to the Arctic Ocean. It is underlain by only slightly disturbed Palæozoic and Mesozoic strata.
(5) The Cordilleran Region, including the mountainous country of the Pacific Coast which is developed on highly disturbed rocks.
(6) The Arctic Archipelago, with which is linked the Hudson Bay Lowland. The former includes the islands lying north of the Canadian Shield, while the latter is a broad, flat region, underlain by flat-lying Palæozoic beds.

The physiographic details of each Division are described as follows:-
Appalachian and Acadian Regions.-These regions embracing an extension northward of the Appalachian Mountains include the Maritime Provinces (New Brunswick, Nova Scotia, and Prince Edward Island) together with the southeastern portion of Quebec. Excepting the Notre Dame Mountains of Gaspe Peninsula, the terrain is not high and the comparatively low elevations are better described as hills. With the exception of the St. John, the rivers are of no great length in their courses down to the sea. It is a beautiful country of diversified character with areas of good farm lands. The broken coast provides many good harbours and the only ocean ports open throughout the whole year that Canada possesses on the Atlantic seaboard.

The rocks of the Appalachian and Acadian Regions include sediments, volcanics and intrusives, chiefly of Palæozoic age. In a few places rocks of Precambrian age are known and along the Bay of Fundy Coast are a few areas underlain by Mesozoic rocks. The lowland area of eastern New Brunswick is underlain by little-disturbed Carboniferous beds. Elsewhere, however, throughout the region, the rocks are nearly everywhere thrown into folds with axes trending in a northeast direction and are, in addition, broken by faults giving rise to a complex structure. During the Glacial Period the whole region, with the exception of the central part of Gaspe, was overridden by ice sheets.

The area has mineral deposits in great variety but the only substances mined in large quantity at present are coal, asbestos and gypsum. The coal industry is of exceptional importance and the area produces almost half of the coal mined in Canada. All of the asbestos and about 95 p.c. of the gypsum mined in Canada are also produced here.

St. Lawrence Lowlands.-South and east of Hudson Bay the predominating physical geographic feature is the very extensive depression containing the Great Lakes and the St. Lawrence River which connects them with the Atlantic Ocean. The bulk of the drainage basin of the Great Lakes and the St. Lawrence lies within the limits of the Canadian Shield with the same characteristics as already described. The very important exception is the valley of the St. Lawrence River from Kingston to Quebec and the peninsula of Ontario formed by the Great Lakes which together are generally known as the St. Lawrence Lowlands, about 35,000 square miles in area. At present containing the greater part of the population of Canada, this industrial area is of great economic importance; the climatic conditions and fertile soil combine to make it most suitable for mixed farming.

The underlying rocks are sediments, mostly little disturbed, ranging in age from Cambrian to Devonian. The Cambrian rocks consist of sandstones derived by the weathering of the old Precambrian surface. The Ordovician, Silurian and Devonian rocks consist largely of limestones and shales deposited during inundations by the sea. Since the Devonian, the history of the region has been one of erosion. The region was overridden by the ice sheets of the Pleistocene. In general the rocks dip gently away from the Canadian Shield. In places they are broken by faults and in some places they are gently folded.

The Lowlands contain no coal nor metallic mineral deposits of importance. The chief mineral resources are natural gas, petroleum, salt and gypsum; limestone, dolomite, shale and other rocks are quarried for various uses.

The Canadian Shield.-The Canadian Shield includes a vast area comprising all the mainland of Canada to the east of the Interior Plains excepting the relatively small St. Lawrence, Appalachian and Acadian Regions. The northern shore line of Canada's mainland is markedly affected by the great and deep indentation of Hudson Bay which, receiving rivers running in from west, south and east, has an enormous drainage basin mainly in Manitoba, Ontario and Quebec. Practically all of this great basin, excepting the Nelson River drainage, is included in the Canadian Shield, the surface characteristic of which is hard rock either exposed or overlain with shallow soil generally confining agriculture to the valleys or small basins. With only small areas in northeastern Quebec rising above 2,000 feet in elevation, there are no great eminences, but the surface is generally accidented by many hills and hollows with countless numbers of lakes and streams. On its south and west sides, Hudson Bay is bordered by a strip of low land under 500 feet in elevation and varying in width from one to two hundred miles; in the southerly part of these flat, low lands the rock is overlain with a considerable depth of soil sometimes referred to as the clay belt of northern Ontario.

The rocks of the Shield are mainly of Precambrian age. They form a continental mass which in Precambrian time extended out in all directions beyond the present limits of the Shield. Many times during the succeeding Palæozoic and Mesozoic Eras the Shield was at least partly flooded by seas which advanced over it and later retreated. The sediments that accumulated in these seas were largely swept away by later erosion. During the Pleistocene or Glacial Period, the Shield was heavily glaciated by huge glaciers of continental extent. One of these sheets had its gathering ground west of Hudson Bay and another in the heart of Labrador. From these centres the ice moved out in all directions. In its advance it scoured off the residual soil, smoothed down the topography, polished and striated the rock surface and, by scattering debris irregularly over the surface, completely disorganized the drainage. The result was the formation of the numerous lakes which are everywhere so characteristic a feature of the region. On the retreat of the glaciers, large temporary lakes were left in front of ice and, in these, clay and other fine stratified deposits accumulated forming what are known as clay belts. The mineral resources of the Canadian Shield are of great variety and immense value. In 1939, the latest prewar year, it produced 85 p.c. of the gold of Canada, 39 p.c. of the silver, 87 p.c. of the copper and all of the nickel, radium, platinum and cobalt. There are no deposits of coal or oil in the Precambrian rocks.

Interior Plains.-This Region of Canada is part of a great plains region in the interior of the North American continent stretching from the Gulf of Mexico to the Arctic Ocean. It. comprises the area bordering on the mountain system to

the west and extending eastward to the edge of the great Canadian Shield which commences on the Arctic Coast about three hundred miles east of the mouth of Mackenzie River and runs south and east through Great Bear, Great Slave, Athabaska and Winnipeg Lakes. Throughout most of the region the underlying Palæozoic, Mesozoic and Tertiary rocks are nearly flat-lying. In the northwestern part of the area, however, the Franklin Range, which lies between Great Bear Lake and Mackenzie River, is composed of folded strata. In western Alberta, also, the rocks are folded and faulted.

The southern portion of the plains region slopes gently to the east down to Lake Winnipeg and includes the Nelson River drainage emptying into Hudson Bay; representing the bulk of the presently settled part of Western Canada, it includes the treeless prairies and comprises the lands which, in the main, produce Canada's great wheat crops. This area is characteristically different from other parts of Canada in that any exposure of surface rock is rare. Generally, it is overlain by great depths of clay soil, through which the streams have cut themselves down into deep coulées and the rivers into deep wide valleys. Lakes of any considerable extent are infrequent and usually quite shallow. The terrain is generally smooth or gently undulating and, from an elevation of 3,400 feet at Calgary, falls away gradually to an elevation of 800 feet around Lake Winnipeg, 700 miles to the east.

Just north of Edmonton where the Plains have narrowed to a width of about 400 miles, a height of land turns the water. The northern portion of the plains region is drained by a river system flowing eastward from the high mountains and then turning north to discharge into the Arctic Ocean through the great Mackenzie River. The Mackenzie is over 2,500 miles long and its valley with its low elevation is the outstanding feature of the Northwest Territories. In this watershed the terrain becomes less smooth with prominent elevations in the Caribou, Horn, and Franklin Mountains and the clay soils of the prairies give way to more of sand and gravel. Great Slave and Great Bear Lakes, each half as large again as Lake Ontario and less elevated above the sea than Lake Erie, are notable features.

The Cordilleran Region.-The outstanding and predominant orographical feature in Canada is the great Cordilleran Mountain System which, extending up from the south, parallels the coast of the Pacific Ocean and, continuing on, comprises the bulk of the United States territory of Alaska. Throughout Canada this mountain system has a width of about 400 miles and, covering about 530,000 square miles in area, includes nearly all of British Columbia and Yukon. This area is definitely the most rugged and elevated in the Dominion, many of the summits reaching heights of 10,000 feet with occasional peaks over 13,000 feet above sea-level. The principal named peaks exceeding 11,000 feet in elevation are given in Table 6. The main mountain ranges forming the system are the Coast Mountains and the St. Elias Mountains on the Pacific side, the Selkirks and the Rockies on the east side of the system to the south, and farther north on the east side the Stikine and the Mackenzie Mountains. This great mountainous tract is a formidable barrier between the ocean and the interior of Western Canada; by precipitating a great part of the moisture out of the winds coming from the Pacific, it has a marked effect on the climate of the western country. On the west side, the Cordilleras are drained by mountain streams pitching swiftly down to the Pacific. The Yukon Territory is drained to the north by that remarkable river of the same name which runs through
a wide valley over 1,700 miles long before reaching the Bering Sea. On the east side of the mountains and their foothills, the land slopes gently away to the east and to the north.

The fundamental geology of this region is of highly disturbed rocks ranging in age from Precambrian to Recent. The Rocky Mountain Belt is composed of great thicknesses of Precambrian, Palæozoic and Mesozoic sediments, in most places unaccompanied by plutonic or volcanic rocks. The Coast Range consists essentially of complex batholiths of granite of late Jurassic or early Cretaceous age, cutting and enclosing sediments and volcanic rocks of earlier Mesozoic age, and fringed on both sides by pre-granite rocks and by isolated basins of younger rocks. The Interior Belt, of plateaus and mountain ranges, is underlain by Palæozoic, Mesozoic and Tertiary sediments and volcanic rocks. The pre-Tertiary beds are cut by numerous bodies of plutonic rocks and in several districts strata of Precambrian age are exposed. The Precambrian rocks of the region are almost entirely quartzites argillites, limestones, conglomerates and gneisses and schists derived from sedimentary rocks.

The Arctic Archipelago.-This remarkable archipelago lying in the Arctic Ocean sits like a.cap on the northern shore line of the mainland and extends northward as a great triangle with its apex at Ellesmere Island in latitude $83^{\circ} 30^{\prime}$ and in longitude almost due north of Ottawa, the capital city of the Dominion. These Arctic islands, which are treeless, are of vast extent, Baffin, Victoria and Ellesmere, the three largest, being approximately $201,600,80,450$, and 75,024 square miles in area, respectively, but Banks, Devon, Somerset, Prince of Wales, Melville and Axel Heiberg are each larger than Prince Edward Island. There are some high mountains in the northeastern islands and in Ellesmere Island an elevation of 10,000 feet has been recorded.

Little is known of the geology of the islands and the economic potentialities, beyond deposits of coal and other minerals, have not been fully established. Precambrian schists and granitoid gneisses occur on Baffin and Ellesmere Islands and probably elsewhere. Palæozoic strata occur on most of the islands and Triassic and Tertiary rocks on a few. Linked with the archipelago is the Hudson Bay Lowland underlain by flat-lying Ordovician, Silurian and Devonian strata. An area of Mesozoic rocks also occurs along the Moose River.

Gold has been reported from the head of Wager Inlet; native copper has been brought back from Baffin Island; mica and graphite have been found on the north side of Hudson Strait; bituminous coal is known to occur in Carboniferous strata on the islands north of Lancaster Sound and lignite occurs in Tertiary beds on the northern and eastern shores of Baffin Island as well as on Bylot Island. Lignite has been found in the Mesozoic rocks of Moose River. The possibility of finding oil in the Palæozoic strata of the Hudson Bay Lowland has been considered, but the probability is that the formations are too thin and lack the structure necessary for the accumulation of oil.

## Subsection 1.-Lakes and Rivers

The fresh-water area of Canada is unusually large constituting over 6 p.c. of the total area of the country. The outstanding feature is the Great Lakes, details concerning which are given in Table 2.

Particularly notable are the depth of Lake Superior and the shallowness of Lake St. Clair and Lake Erie.
2.-Areas, Elevations, and Depths of the Great Lakes

| Lake | Elevation Above Sea-level | Length | Breadth | $\underset{\text { Depth }}{\text { Maximum }}$ | Total Area | Area on Canadian Side of Boundary |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Superior. | ft. | miles 383 | miles 160 | ft. 1,302 | $\begin{gathered} \text { sq. miles } \\ 31,820 \end{gathered}$ | sq. miles |
| Michigan | $580 \cdot 77$ | 321 | 118 | -923 | 22,400 | Nil |
| Huron. | $580 \cdot 77$ | 247 | 101 | 750 | 23,010 | 13,675 |
| St. Clair | $575 \cdot 30$ | 26 | 24 | 23 | 460 | -270 |
| Erie. | $572 \cdot 40$ | 241 | 57 | 210 | 9,940 , | 5,094 |
| Ontario. | 245.88 | 193 | 53 | 774 | 7,540 | 3,727 |

Lake Superior, with an area of 31,820 square miles, is the largest body of fresh water in the world. As the International Boundary between Canada and the United States passes through the waters of Lakes Superior, Huron, St. Clair, Erie, and Ontario, only the areas of these lakes given in the final column of the above statement are Canadian, while the whole of Lake Michigan is within United States territory. The great obstacle to navigation on this waterway, the rise of 327 feet between Lakes Ontario and Erie, is surmounted by the Welland Ship Canal.
3.-Areas and Elevations of Canadian Lakes with Areas of 300 or More Square Miles, Exclusive of the Great Lakes, by Provinces

| Nueltin (total, 336) part...... |  | 76 | Nonach | 1,160 | 305 |

[^11]In addition to the Great Lakes there are many other remarkably large lakes as is shown by Table 3: it will be noted that there are eleven lakes over 1,000 square miles in area. Apart from these lakes, named as notable for their size, there are innumerable other lakes scattered all over that major portion of the area of Canada lying within the Canadian Shield. In an area of 6,094 square miles, accurately mapped, just south and east of Lake Winnipeg, there are 3,000 lakes; in an area of 5,294 square miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes. A table at pp. 12-13 of the 1938 Year Book gives a more extended list of the principal lakes of Canada, by provinces, with their elevations and areas.

The river systems of Canada, excluding the Arctic islands, are best studied by segregating the main drainage basins as shown in Table 4.*

> 4.-Drainage Basins in Canada

| Drainage Basin | Area Drained ${ }^{1}$ | Drainage Basin | Area Drained ${ }^{1}$ |
| :---: | :---: | :---: | :---: |
|  | sq. miles |  | sq. miles |
| Atlantic Basin |  | Arctic Basin |  |
| Atlantic or Maritime Provinces........ | 61,151 359,312 | Great Slave Lake. | 370,681 559,676 |
| Great Lakes and St. Lawrence River. . | 359,312 | Arctic | 559,676 |
| Total. | 420,463 | Total. | 930,357 |
|  |  | Pacific Basin |  |
| Hudson Bay Basin |  | Pacific. Yukon River. | $\begin{aligned} & 273,540 \\ & 127,190 \end{aligned}$ |
| Southwestern Hudson Bay. | 343,259 283,997 368182 | Total. | 400,730 |
| Western Hudson Bay.................... | $\begin{aligned} & 368,182 \\ & 383,722 \end{aligned}$ | Gulf of Mexico Basin | 10,121 |
| Total | 1,379,160 | Canada, Less Arctic Archipelago | 3,140,831 |

[^12]It is noteworthy that the greater part of the Dominion drains into Hudson Bay and the Arctic Ocean; the Nelson River drainage is exceptional in running through the most arable and the most settled part of the West, but, otherwise, the rivers run away from the settled areas towards the cold northern salt waters and this adversely affects their industrial utility. The Mackenzie, which drains Great Slave Lake, is, with its headwaters, the longest river in Canada ( 2,514 miles) and its valley constitutes the natural transportation route through the Northwest Territories down to the Arctic Ocean. From Fort Smith, on the Slave River, large river boats run without any obstruction down to Aklavik in the delta of the Mackenzie, a distance of 1,292 miles. In Eastern Canada it is the Great Lakes and St. Lawrence drainage basin that dominates, and has undergone the greatest degree of development. Apart from the plains region of the West, the rivers of Canada have a vast power potentiality well distributed over the country. Table 5 shows Canadian rivers and tributaries 300 miles or more in length, by drainage basins. A table at p. 15 of the 1938 Year Book gives a more extended list of the principal rivers with their tributaries classified according to the four major drainage basins.

[^13]
## 5.-Canadian Rivers and Tributaries 300 Miles or More in Length

Note.-In this table the tributaries and sub-tributaries are shown by indentation of the names. Thus the Winnipeg River is shown as tributary to the Nelson, and the English River as tributary to the Winnipeg.

| River | Length | River | Length |
| :---: | :---: | :---: | :---: |

## Subsection 2.-Mountains

As pointed out at p. 6 the outstanding and predominant orographical feature in Canada is the great Cordilleran Mountain System. The principal named peaks exceeding 11,000 feet in elevation are given in Table 6.

## 6.-Mountain Peaks over 11,000 Feet in Elevation, by Provinces and Mountain Ranges

Nove.-The highest point on the mainland of Eastern Canada (peaks of the Torngats in Labrador rise to about 5.50 f feet) is Mount Jacques Cartier, a peak of Tabletop Mountain in N. lat. $48^{\circ} 59^{\prime}$, W. long. $65^{\circ} 56^{\prime}$. Gaspe district, Quebec, the summit of which is 4,160 feet above sea-level.

${ }^{1}$ This peak is on the interprovincial border between Alberta and British Columbia. ${ }^{2}$ This peak is on the international boundary between British Columbia and Alaska. ${ }^{3}$ The enumerated peaks in Yukon are on or near the Yukon-Alaska boundary.

There are no elevations in the rest of Canada that come anywhere near rivalling those of the Cordilleran Region.

The Hudson Bay Drainage Basin, excepting the Nelson River drainage, is included in the Canadian Shield. Only small areas in northeastern Quebec rise above 2,000 feet in elevation; there are no great eminences, but the surface is generally accidented by many hills and hollows with countless numbers of lakes and streams.

South and east of the River St. Lawrence, the St. Lawrence Lowlands are bordered by extensions and outliers of the Appalachian Mountains. The Appalachian System, in fact, extends through the Maritime Provinces and the Gaspe Peninsula of Quebec. The whole area may be regarded as a peninsula jutting out with bold and broken coast line to separate the Gulf of St. Lawrence from the Atlantic. Peaks in this area, notably the Notre Dame and the Shickshock Mountains, reach elevations up to $4,000 \mathrm{ft}$.

## Subsection 3.-Islands

The islands of Canada are among its most remarkable geographic features. They include the very large group lying in the Arctic Ocean, the fringe of both large and small islands off the Pacific Coast, those of the Maritime Provinces and Quebec in the Atlantic Ocean and the Gulf of St. Lawrence, together with the islands of the Great Lakes and other inland waters. The Pacific Coast islands, with the exception of Vancouver Island and the Queen Charlotte group, are small and dot the coast of British Columbia from Dixon Entrance to the southern boundary of the Province. Vancouver Island is 285 miles long and from 40 to 80 miles broad, covering an area
of about 12,408 square miles; the mountain range which forms its backbone rises again to form the Queen Charlotte Islands farther north. These islands figure largely in the mining, lumbering and fishing industries of the West and, together with the bold and deeply indented coast line, provide a region for scenic cruises rivalling those of Norway.

On the eastern coast of the Dominion are the island province of Prince Edward Island, the Islands of Cape Breton (an integral part of Nova Scotia), Anticosti, and the Magdalen group (included in the Province of Quebec), and the Islands of Grand Manan and Campobello (part of the Province of New Brunswick) in the Bay of Fundy. Prince Edward Island is 2,184 square miles in area, Cape Breton 3,970 and Anticosti about the same. Fishing activities in these eastern islands are important, while agriculture on Prince Edward Island and mining on Cape Breton are the chief occupations of the inhabitants.

Manitoulin Island and the Georgian Bay islands in Lake Huron and the Thousand Islands group in the St. Lawrence River, at its outlet from Lake Ontario, are the more important islands of the inland waters.

## PHYSICAL GEOGRAPHY OF THE CANADIAN EASTERN ARCTIC*

The Eastern Arctic may be defined generally as that part of northeastern Canada, lying north of the tree-line, which is serviced from the Atlantic Ocean and Hudson Bay. It embraces much of the Northwest Territories, including most of the large and numerous Arctic Islands, as well as part of northern Quebec, and contains a land area of about 700,000 square miles or 19 p.c. of the total area of Canada. The District of Keewatin includès the mainland of Canada west of Hudson Bay and north of the 60th parallel as far west as $102^{\circ}$ west longitude. The islands in Hudson and James Bays also lie within Keewatin District. The District of Franklin comprises the remainder of the Arctic. Islands as far north as the North Pole, together with Boothia and Melville Peninsulas of the Canadian mainland. The Arctic mainland of northern Quebec, formerly the District of Ungava, also lies within the Eastern Arctic and, although its resources are under provincial administration, the Eskimo population at present is the responsibility of the Northwest Territories Administration. Within the Eastern Arctic, which is about twice the size of the Province of British Columbia or about equal to the areas of Quebec and Manitoba combined, live about 150 Whites and 6,000 Eskimo, the latter representing fourfifths of the entire Eskimo population of Canada.

Geology.-The foundations of the Eastern Arctic consist of two chief kinds of rock. Most of the area is underlain by Precambrian rocks of the Canadian Shield, which comprises the geologic base of two-thirds of Canada. Sedimentary rocks, ranging in age from Palæozoic to small local areas of Tertiary, form a belt through the central Arctic islands and include most of the far northern and western Arctic islands. In general, the areas of Precambrian rocks are more rugged and rounded, while sedimentary rocks more typically result in level or low-relief topography.

The ancient assemblages of sediments and volcanics which occur amid the predominant granites and gneisses of the Canadian Shield in the Eastern Arctic are similar to those that have yielded rich and abundant minerals in the betterexplored areas of the southern and western sections of the Shield. Since the later

[^14]sedimentary rocks were laid down after the last known period of widespread mineralization in Canada, they may be excluded as promising sources of metalliferous deposits. Such rocks, however, may still be considered as possible sources of coal, oil or gas.

Much or all of the Eastern Arctic was glaciated during the last Ice Age which covered most of Canada with ice several thousands of feet thick. This ice sheet had some of its centres and perhaps its main source of origin in the Eastern Arctic. Areas of permanent ice-caps, glaciers, or snowfields still cover several large sections of Ellesmere Island, much of Devon and Bylot Islands, and scattered areas along northeast Baffin Island. Such areas are thus excluded from any hopes for present economic development.

When the ice load decreased at the end of the Ice Age the land slowly began to rise. Ancient beach ridges and terraces, now found over 500 feet above the present water-level, have recorded this rise for geologists. Except in the mountainous areas, most of the present surface which was exposed after the ice melted back is subdued glacial topography. Bare, rounded hills of rock are separated by broad, drift-filled valleys. Post glacial frost action has caused disintegration of the exposed rock covering the surface with loose frost-riven debris.

Topography.-The region west of Hudson Bay is one of countless lakes and streams. Although there are no extensive areas of high relief, local rugged sections are to be found. In general the region consists of an interior plateau area where altitudes average about 1,000 feet, and an emerging coastal plain, covered by glacial drift, which slopes towards Hudson Bay and the Arctic Coast. The rolling plateau surface is marked by linear rock ridges which give it a furrowed appearance. Long, narrow lakes often occupy the intervening valleys:

The plain along the west coast is about 50 miles wide at Churchill and broadens northward to extend as far inland as Yathkyed and Baker Lakes. North of Chesterfield Inlet the country is more rugged, but gradually slopes down towards the broad, sandy valley of Back River to the west, and on the east, to a low, monotonous coast along Roes Welcome Sound. Melville Peninsula is a plateau area with a steep-sided west coast and a shelving, terraced area along the central and northern sections of the east coast. In winter, travel is fairly easy by dog team across the frozen, snowcovered surface of the low areas west of Hudson Bay, but in summer the myriads of lakes, swamps, and intervening spongy muskeg confine travel chiefly to the main rivers.

The permanently frozen ground of the Eastern Arctic prevents underground drainage, so that lakes collect in low areas and spill uncertainly from one to another. This and the disruptive effects of glaciation on drainage have combined to cause a poorly integrated drainage system. The three major rivers, Kazan, Dubawnt, and Thelon, which cut across the inner plateau, flowing northeastward at right angles to a general alignment of the bare, rocky ridges, finally empty into Baker Lake. All three rivers broaden out into lakes at several places along their courses. These rivers have been the routes of early explorations, and are fairly well mapped, but actually from the air they may be very difficult to pick out from the numerous un-mapped lakes and rivers that surround them.

Southampton Island has two distinct physiographic regions. The larger part, southwest of a line drawn roughly from Duke of York Bay in the north to South Bay and Seahorse Point, is low, flat limestone country. Sloping terraces that
mark ancient beach lines are the chief topographic features. Along the northeastern part of the Island rugged Precambrian hills rise abruptly above the limestone plain to altitudes of 1,000 to 1,500 feet.

Coats and Mansel Islands are composed chiefly of limestone and have flat or gently rolling surfaces. Local high areas do not exceed 500 feet in altitude. Nottingham and Salisbury Islands, at the western end of Hudson Strait, are part of the Precambrian complex. Their bare, rocky, indented coasts rise abruptly from the water and, when seen from a distance, present a level, peneplain surface with an altitude of a few hundred feet. Although the rock surface of these two islands is rounded, the local surface has a rugged character imparted by many valleys and rock ridges.

Ungava Peninsula of northern Quebec is a rolling plateau area of low, rocky hills of Precambrian age, dotted with innumerable lakes and drained by many streams. In general, the plateau rises fairly abruptly to altitudes of 1,000 to 2,000 feet along the Hudson Bay and Hudson Strait coast, on the west and north, and slopes gradually down towards Ungava Bay on the northeast, forming a horseshoeshaped upland around this Bay. The interior surface is composed mainly of rolling, bare, rocky hills separated by broad valleys containing lakes and glacial fills of boulders and gravel. Except for routes along a few major streams, the drainage of Ungava has not been mapped, so that very little is known about the accessibility of the interior by water.

Baffin Island is the largest of the Canadian Arctic Islands. Its area of 200,000 square miles is about equal to the size of the Province of Manitoba. In such a vast area a variety of topographic features are found, and some of them present the most spectacular scenery of Eastern Canada. Along the eastern coast of the Island, from Cumberland Sound on the south, to Lancaster Sound on the north, and including Bylot Island, a high, rugged mountain range of Precambrian age rises to altitudes of about 10,000 feet in places, and averages 5,000 to 7,000 feet. These mountains are therefore, together with those of northern Ellesmere Island, the highest ranges in Eastern North America. Jagged peaks and serrated ridges are partially buried under permanent snowfields and ice-caps in some areas. Long, twisting glaciers fill many valleys and discharge into the sea at several places. The whole coast, with its indentations and fiords, rises abruptly from the water, presenting a formidable barrier of rugged grandeur toward Davis Strait and Baffin Bay.

Southern Baffin Island has a drab, rounded coast of bare rock which rises to an altitude of about 1,000 feet. A belt of numerous small islands fronts the central part of the south coast. Most of the interior is a rolling plateau area, averaging 2,000 to 3,000 feet in elevation. This barren upland area slopes down to the north and west to a broad tundra plain which covers the area west of Amadjuak and Nettilling Lakes and extends along the Foxe Basin coast as far northward as the Hantzsch River. The lake-dotted and swampy plain there is somewhat similar in appearance to the tundra area along the west coast of Hudson Bay.

Northwestern Baffin Island is a plateau area underlain by sedimentary rocks of Palæozoic Age and surfaced by disintegrated slabs. The plateau itself is rolling, but the coasts along Admiralty and Prince Regent Inlets are vertical walls of stratified rock, rising to altitudes of 500 to 1,000 feet.

Devon and Ellesmere Islands are the largest of the most northerly group of Arctic Islands. Ellesmere Island alone is almost as large as England and Scotland. Both islands have steep rocky eastern coasts. Parts of their interiors are covered
by extensive ice-caps. The sedimentary rock of the western coasts gives low rolling areas which supply sufficient vegetation for roaming herds of caribou and musk-ox.

The Parry and Sverdrup groups of islands have a base of sedimentary rock, which has resulted in a generally low or rolling topography. Coasts are generally shelving terraces or low rounded hills. Large-scale topographic features are lacking in the interior, although occasional transverse valleys have been known to hinder winter travel.

Hydrography.-Including the islands of the Western Arctic, there are 17 major Canadian Arctic islands over 1,000 square miles in area, about 40 islands larger than 100 square miles, and large numbers of smaller ones. The straits, sounds, and channels which separate the Arctic islands vary in width from a few miles to over 100 miles, with the chief separating bodies of water averaging about 50 miles wide.

Arctic waters move eastward and southward from the basin of the Aretic Ocean through these islands and enter Baffin Bay via Smith and Lancaster Sounds. Another current passes through Fury and Hecla Strait into Foxe Basin, west of Baffin Island. . The waters from Baffin Bay flow southward past the east coast of Baffin Island through wide Davis Strait, along the coast of Labrador and into the North Atlantic. A northward-moving current from the Gulf Stream (North Atlantic Drift) merges with the current from East Greenland and flows northward along the west coast of Greenland through Davis Strait, finally joining the southwardmoving Arctic Current in northern Baffin Bay. A great contrast in climate is found on the opposite shores of Davis Strait, due to the temperature differences between the cold Arctic Current off Baffin Island and the relatively warmer current touching the west coast of Greenland. This fundamental fact of ocean currents explains a great deal of the past history of settlement and present possibilities of these two areas.

So far as is known, tides are not high in the far northern Arctic waters. Records have been taken only for short periods at a few stations. On the east coast of Baffin Island, in the fiords of Cumberland Sound and Frobisher Bay, the tides reach surprising heights of 20 to 30 feet, owing to the tidal waters being compressed into the narrow inlets.

At Hudson Strait the Arctic Current branches westward around Resolution Island and flows along the south coast of Baffin Island. Near the western end of the Strait this Current meets waters moving southeastward from Foxe Channel, and the combined current then drifts eastward along the north coast of Ungava Peninsula, finally joining the main southerly Labrador Current.

There is a counter-clockwise current in Hudson Bay. Waters move southward around Southampton Island through Roes Welcome Sound and Fisher Strait and along the west coast of the Bay. The current follows the general oval shape of Hudson Bay, flowing northward past the east coast and joining the eastward-moving stream in Hudson Strait.

The tides in Hudson Strait have an unusual range, owing to the Atlantic waters being funnelled into the narrower space of the Strait. Tides average 25 feet neaps and 30 feet springs at Ashe Inlet on the northern side of the Strait, and range from 20 to 35 feet neaps and springs at various places along the southern coast. The tidal range becomes less towards the western end of the Strait and in the more open areas adjacent to Hudson Bay. Such tidal ranges offer no serious problems to ocean-
going ships with experienced navigators in Hudson Strait, but present a real hazard to small coastal schooners or inexperienced pilots. A knowledge of the intricacies of the tides helps to explain some of the problems of servicing the tiny settlements of this region, where no permanent wharves are available, and where ships can often discharge cargo only at high tide, and then only by means of lighters.

In Hudson Bay the tides do not have so great a range as in Hudson Strait. Most of the harbours are open to the sea and thus have no constrictions to increase tidal rises. At Churchill tides average from 12 to 15 feet. The tidal undulation progresses in a counter-clockwise movement around Hudson Bay. At Port Harrison, on the east side of the Bay, the influence is almost spent so that tides are recorded as being only 3 to 4 feet.

Climate and Weather.-In climatic terms, an Arctic area is one where the average mean temperature for the warmest month is not above $50^{\circ} \mathrm{F}$. In Northern Canada the isotherm delimiting this area is generally slightly north of the tree-line. Thus the Eastern Arctic is a treeless area, except for small, stunted willows which grow in sheltered valleys. The general climatic conditions are those of long, cold winters and short, cool summers.

Owing to the large amount of water within the Eastern Arctic region, minimum winter temperatures are not so low as in some other areas of the interior of Canada or northern United States. The modifying marine influence delays the coldest period so that February is generally the coldest month at each station. Average winter monthly mean temperatures range from $-20^{\circ}$ to $-30^{\circ} \mathrm{F}$. at the most northern Eastern Arctic posts, and vary from $-10^{\circ}$ to $-20^{\circ}$ F. in the Hudson Bay and Strait area. Absolute extremes of about $-50^{\circ} \mathrm{F}$. have been recorded at most of the posts, with the record low of $-60^{\circ} \mathrm{F}$. having been reported at both Pond Inlet and Chesterfield. At most of the stations there is an average of $4 \frac{1}{2}$ months in which monthly mean temperatures are below $0^{\circ} \mathrm{F}$.

For the four months of June to September the average monthly mean temperature is above $32^{\circ} \mathrm{F}$. in most of the Eastern Arctic. During the short summer season vegetation comes to life in the valleys which contain soil; flowers blossom forth in colourful beauty; and myriads of mosquitoes swarm over the low, wet areas. Average daily summer maximum temperatures are in the cool 50 's, but extreme maximums of over $70^{\circ} \mathrm{F}$. have been known at most of the stations. A record high of $84^{\circ} \mathrm{F}$. has been recorded at Chesterfield, on the edge of the Barren Lands, while $81^{\circ} \mathrm{F}$. has been reached at Lake Harbour and Cape Hopes Advance on Hudson Strait. The Eastern Arctic stations have not recorded the same high summer temperatures that are known in the Mackenzie Valley in the western part of the Northwest Territories.

When the factors of a short summer season are combined with a general lack of developed soil, it becomes apparent that agriculture under natural conditions is not possible. The shortness of the growing season is illustrated at Chesterfield, where the longest average frost-free period of the Eastern Arctic stations is only 67 days. In addition, variability is a great hazard prohibiting an attempt to grow anything, for at Chesterfield first autumn frosts have occurred as early as August 1 and as late as October 3. Autumn frosts usually occur much earlier on the east side of Hudson Bay, where the marine influence of the cold waters of the Bay is more dominant-Port Harrison has an average of only 44 frost-free days. Similar conditions are found on Baffin Island where the average last frost occurs in late June

PREPARED AND PRINTED AT THE HYDROGRAPHIC AND MAP SERVICE, OTTAWA. 1945
and the average first frost comes in mid-August. At the far northern post of Pond Inlet there is an average frost-free period of only 29 days, with freezing temperatures having been recorded in every month.

Precipitation is not heavy in the Eastern Arctic, but because of slow evaporation snowfall remains on the ground throughout the winter. Southeastern Baffin Island receives the greatest amount of precipitation because moist winds blow in from the North Atlantic. In this area approximately 8 inches of rain is evenly distributed throughout the four summer months. Seventy to ninety inches of snow is the usual winter recording, with a maximum falling in the late autumn. The east coast of Hudson Bay has a greater amount of precipitation than the west coast owing to higher elevations and prevailing on-shore winds. At the far northern Arctic Islands posts an average of 2 to 4 inches of rain plus 30 to 60 inches of snow have been recorded.

Prevailing wind directions are difficult to determine for the whole region because most of the meteorological stations are located in sheltered areas and wind directions are controlled by some topographic influence. Winter winds appear to be predominantly from the north or northeast at the far north stations, and blow generally from the west or northwest in the Hudson Bay and Strait area. Arctic conditions and temperatures are thus extended towards the south by these generally northerly winds. During the summer months the southern half of the region is under the influence of weak cyclones which move eastward across the country and bring a variety of wind directions and no prevailing wind. Wind velocities are generally low during the summer and become stronger in the winter. Gales of several days' duration may occur at any time during the winter months, but are most common from October to December. Paradoxically, calms also occur most frequently in the winter as cold polar air masses settle over the region.

The prevalence of summer fog is one of the hazards of the coastal regions of the Eastern Arctic. When relatively warm air masses from the land come in contact with the cold waters of Hudson Bay and the Arctic islands, condensation occurs, causing fog and low clouds to be frequent. The meteorological stations in Hudson Strait have an average of 7 to 12 days in each of the four summer months in which fog is recorded, and as many as 15 to 25 days of fog in any one month. Fogs are less frequent during the winter when temperatures over land and sea are more nearly equal. The many foggy days of the summer present a problem to both water and air transportation in this region.

The climate of the Eastern Arctic thus is combined with the disadvantages of topography and lack of soil to make the region a difficult one for future hopes of exploitation. The climate itself is not so severe as in some other Arctic areas, but the southeasterly direction of movement of weather and ocean currents has extended this Arctic climate farther south into the mainland of Canada. The interplay of these natural factors has thus brought the Arctic as far south as latitude 60 on the west side of Hudson Bay, and to about latitude 57 on the eastern coast of the Bay. This is about ten degrees, or 700 miles, south of the Arctic Circle, and about the same latitude as the good farming region of the Peace River of Western Canada. Thus, much of northeastern Canada, comprișing about one-fifth of the Canadian land area, has limited chances for development because of unfavourable factors of climate and lack of soil.

Ice Conditions.-Sea Ice.-The direction of movement of drifting ice is the result of the interplay of the forces of ocean currents and winds. Ice floes drift along with the major ocean currents, but deviations from the normal may be caused at any time by changes in prevailing winds. Estimates of the usual times of appearances and direction of movement of the ice masses and bergs are thus possible through consideration of the known facts of hydrography and climate.

In the far northern Arctic Islands ice begins to set along the shores about the end of September. As the weather becomes colder this sea ice grows outward and if the islands are close together, they are linked by ice bridges which make travel easy from one island to another. The larger straits may not become completely frozen over, but they will be choked with drift ice from the sea of moving ice in the Arctic Ocean. The ice floes may freeze together to form temporary bridges which may break up again in the next storm.

In Baffin Bay and Davis Strait drifting ice from the channels between the Arctic Islands is supplemented by numerous bergs breaking off principally from the glaciers of Greenland and to a much lesser extent from those of the northern Eastern Arctic. These ice-fields begin to spread southward, first in narrow strings of ice and later in broad floes and masses. By November the pack-ice has blocked the entrance to Hudson Strait and is joined by more ice from the Strait, spreading southward along the Labrador Coast. By late December it appears off the coast of Newfoundland. The Baffin Bay pack-ice is reported to reach its greatest extent in March and April, with ice moving northward along the southwest coast of Greenland, a 'middle pack' moving southward into Davis Strait and the 'west' ice following the Labrador Current southward along the coast of Baffin Island.

In Hudson Bay and Strait the sea ice builds out from the shore for a distance of 5 to 7 miles on the average, generally starting to freeze towards the end of October. The harbour ice attains a usual thickness of about 5 feet during the winter, but outside the sheltered places storms may slide the masses over one another until such 'rafted' ice may have a thickness of several tens of feet. Recent aerial information shows that the central part of Hudson Bay freezes over during the winter, with possibly an open area between this mass and the shore ice. Although Hudson Strait does not freeze over from shore to shore, the centre of the channel is blocked throughout the winter by loose ice which moves east and west with the tidal currents.

In late June the sea ice begins to break up and joins the general drift of the currents towards Hudson Strait and the North Atlantic. During much of July, Hudson Strait remains unnavigable as this ice moves outward. Prevailing winds will influence the time of accessibility of most of the harbours. A westerly wind will tend to clear the ice out of the Strait earlier in the season, and a period of easterly winds will hold it back and block the western end of the Strait. Northerly winds will push the ice into the harbours on the southern shore of the Strait and delay their opening, and prevailing southerly winds will tend to block the north coast harbours. The route into Hudson Bay is generally free of ice during August, September, and most of October, so that ocean-going vessels may navigate with freedom. Toward the end of October or early November the sea ice again begins to form and the Eastern Arctic is cut off from outside communication by boat for another nine months.

River and Lake Ice.-The dates of break-up and freeze-up in the lakes and rivers of the Eastern Arctic are important in understanding further problems of accessibility, especially for ski- or pontoon-equipped aeroplanes. The river ice in the District of Keewatin usually breaks up in middle or late June, with southerly rivers generally being free of ice earlier than more northern ones. Floating ice will be found for several weeks after the beginning of break-up.

Size and depth of lakes are factors affecting the time of break-up with the smaller lakes clearing first. Most of the lakes are free of ice during the first half of July. However, the large ones may have considerable floating ice long after break-up if their outlets are not large enough to carry away the floes. Drifting ice has been known to remain in some of the lakes into early August before melting. Early in September the lakes and rivers begin to freeze over in the northern sections, and by early October they are usually all frozen throughout the Eastern Arctic.

Summary.-This brief summary of geographic conditions in the Eastern Arctic illustrates the fact that the vast region has a harsh natural environment. Many areas consist of ice-caps, glaciers and permanent snow-fields; other sections are constituted solely of barren bed-rock or glacial deposition. The whole land area is covered with snow for nine months of the year, and at the same time the surrounding seas are ice-bound. Temperatures rise during the short summer period and vegetation flourishes, but lack of developed soil combines with cool summer temperatures to prevent agriculture.

Although the limited possibilities of the Canadian Eastern Arctic have given little encouragement to white settlement, they have been able to support fourfifths of the Canadian Eskimo population. Wild-life resources of the land and sea, supplemented by white man's trade goods exchanged for white fox furs which are trapped during the winter, have adequately maintained this migratory and widely spread people. Their implements and customs have developed from centuries of battling the unfriendly geographic facts of their environment.

## Section 2.-Political Geography

Politically, Canada is divided into nine Provinces and two Territories. Each of the provinces is sovereign in its own sphere, as set out in the British North America Act (see pp. 40-60 of the 1942 Year Book) and, as new provinces have been organized from the Dominion lands of the Northwest, they have been granted political status equivalent to that of the original provinces. Yukon and the Northwest Territories with their boundaries of to-day are administered by the Dominion Government. The characteristics of each of the Provinces and of the Territories are reviewed below.

Prince Edward Island.-This, the smallest province of the Dominion, is about 120 miles in length, with an average width of 20 miles and has an area of 2,184 square miles. It lies just off the coast east of New Brunswick and north of Nova Scotia and is separated from both provinces by Northumberland Strait, from 10 to 25 miles wide.

The Island is almost trisected by the deep indentations of Malpeque Bay, north of the town of Summerside, and by the mouth of the Hillsborough River at Charlottetown, which nearly meets Tracadie Bay on the north side. Its rich, red soil and red sandstone formations are distinctive features, and no point on the Island attains a greater altitude than about 450 feet above sea-level. Its climate,
tempered by the surrounding waters of the Gulf of St. Lawrence and yet free from the rigours of Atlantic storms, combined with a fertile soil and sheltered harbours, offers great inducements to the pursuits of agriculture and fishing. The Province is noted for its relative predominance in the fox-farming industry, its lobster canneries, its oyster beds, and its production of seed potatoes.

Nova Scotia.-The Province of Nova Scotia is 381 miles in length by 50 to 105 miles in width and has an area of about 21,068 square miles (see p. 2), somewhat smaller than that of Eire. The mainland is connected with the Province of New Brunswick by the Isthmus of Chignecto; the Island of Cape Breton forms the northeast portion. The latter is separated from the mainland by the narrow Strait of Canso and includes the famous salt-water lakes of Bras d'Or.

Nova Scotia leads the provinces in the production of coal. The coal-fields are bituminous, of good quality, well adapted to the production of coke and excellent for domestic use and for steam-raising purposes. The chief coal-fields are at Sydney and Inverness on Cape Breton Island, and at Pictou and Cumberland on the mainland.

On the Atlantic side, the mainland is generally rocky and open to the sweep of Atlantic storms; it is deeply indented and has numerous harbours providing safety for the large fishing fleets that support the extensive fishing industry of the Province (see Chapter XI). The slopes facing the Bay of Fundy and the Gulf of St. Lawrence are sheltered from the Atlantic by low mountainous ridges not exceeding an altitude of 1,500 feet and running through the centre of the Province. In striking contrast to the Atlantic side, they present fertile plains and river valleys especially adapted by climate and situation to the growth of apples, pears and other fruits.

New Brunswick.-New Brunswick is nearly rectangular in shape and may be compared in size to Scotland with an area of 30,405 square miles (for area of Province see p. 2). The Bay of Chaleur at the north, the Gulf of St. Lawrence and Northumberland Strait at the east, the Bay of Fundy at the south, and Passamaquoddy Bay at the southwest, provide the Province with a very extensive seacoast. It adjoins the State of Maine on the west and the Province of Quebec on the north and northwest.

The conformation of New Brunswick is, in general, undulating, but to the east it attains its highest elevation of 2,690 feet in the vicinity of Grand Falls on the St. John River. In the northeastern half of the Province there are extensive areas of Crown lands carrying valuable stands of merchantable timber. Numerous rivers provide access to the extensive lumbering areas and to attractive hunting and fishing resources. The Province is watered to the west and south by the River St. John which, in its course of 400 miles, runs through country famed for its distinctive beauty.

While the forest resources are of first importance economically, large areas of rich agricultural land are found in the numerous river valleys, especially that of the lower St. John, and in the broad plains near the coast. Natural gas and petroleum are obtained in limited quantities and coal mining on a moderate scale is carried on in the Minto Basin at the head of Grand Lake.

Quebec.-Quebec is the largest province of the Dominion and occupies the area of British North America east of Hudson Bay, with the exception of the Maritime Provinces and Newfoundland (including the Coast of Labrador). It has an area (see p. 2) of about 595,000 square miles, equal to the combined areas of France,

Germany and Spain, but a large part of the surface is made up of Precambrian rocks of the Canadian Shield, which renders it unsuitable for agriculture. The Gulf of St. Lawrence and the River St. Lawrence penetrate across the entire width of Quebec and divide the Eastern Townships and the Gaspe Peninsula to the south from the larger area of the Province to the-north. North of the St. Lawrence the land takes the form of a ridge parallel to the river and rises from sea-level to the Height of Land at an elevation of from 1,000 to 3,000 feet from which it descends gently to sea-level at Hudson Bay and Hudson Strait.

With the exception of the treeless zone, extending north of latitude $58^{\circ}$, most of the Province supports a valuable tree growth varying from the mixed forests in the southwest to the coniferous forests in the east and north. In addition to extensive timber limits, which form the basis of a great pulp and paper industry (see Chapter IX), Quebec is the foremost of the provinces in the development of hydro-electric power (see Chapter XIII) and has available water-power resources, at ordinary minimum flow, almost equal to those of Ontario and Manitoba combined. Its asbestos deposits have long been known for their quality and extent and promise to become still more important as a possible source of magnesium as a by-product. Relatively recently, extensive developments of gold and copper in the western part of the Province have taken place and the mineralized area is being extended year by year. Quebec is in second place in mineral production among the provinces of the Dominion (see Chapter XII). Its fisheries in the St. Lawrence River and Gulf are an important resource. The climate and soil of the upper St. Lawrence Valley and of the Eastern Townships are well suited to general farming operations, including dairying and the production of vegetables on a commercial basis.

Ontario.-Lying between Quebec on the east and Manitoba on the west, Ontario is usually regarded as an inland province but its southern boundary has a fresh-water shore line on the Great Lakes of 2,362 miles while its northern limits have a salt-water shore line of 680 miles on Hudson and James Bays. There is a tidal port at Moosonee at the southern end of James Bay. The most southerly point in the Province is Middle Island at $41^{\circ} 41^{\prime} \mathrm{N}$. latitude (this is also the most southerly point in the Dominion) and the most northerly latitude of the Province is $56^{\circ} 50^{\prime}$.

As in Quebec, the surface of Ontario follows the conformation characteristic of the Precambrian Shield except in the Ontario Peninsula where the surface is low and level. The highest point in Ontario is 2,120 feet, on the promontory at the northeastern corner of Lake Superior. Northwest from the Height of Land, the slope descends very gently to Hudson Bay where a large marginal strip (the Hudson Bay Lowlands) is less than 500 feet above sea-level.

Mining is a very important industry in the wide-spread Precambrian area; as in the adjoining Province of Quebec, Ontario, although lacking in native coal, is rich in other minerals and contributes almost half of the total mineral production of the Dominion. Gold, silver, nickel, copper, zinc, magnesium, dolomite, gypsum and other metals are mined commercially. Petroleum, natural gas and salt are also produced on an important scale in the Ontario Peninsula (see Chapter XII).

The geographic position of Ontario on the Great Lakes waterways system permits coal to be economically transported from Pennsylvania and iron ore from Minnesota to provide the basis of a large iron and steel industry. A rich iron-ore development in the Steep Rock district west of Port Arthur has recently come into production. An abundance of natural resources has made Ontario the foremost industrial province (see Chapter XIV).

Possessed of excellent soil and a wide variety of climate, general farming is carried on extensively. In the Niagara Belt, fruit farming has been scientifically developed and is a highly specialized industry throughout the Ontario Peninsula.

Vast forest resources in proximity to hydro power (see Chapter IX) are the basis of large wood-using industries and the forests of the north are a rich fur preserve.

Manitoba.-Manitoba is roughly the size of France and is the most central of the provinces (see map facing p. vi). Together with the Provinces of Saskatchewan and Alberta it constitutes the famous Prairie Belt or Interior Plain section of the Dominion-world renowned for the quality of its wheat.

The Province has a considerable area of prairie land but is also a land of wide diversity combining 400 miles of sea-coast (on a rocky belt along its northeastern boundary, bordering Hudson Bay); great areas of northern mixed forests; large lakes and rivers covering an area of 26,800 square miles; a belt of treeless prairie extending to the southeastern corner of the Province; and patches of open prairie overlain by very fertile soil of great depth. The surface of the Province as a whole is comparatively level, the average elevation being between 500 and 1,000 feet; the greatest height of 2,727 feet is Duck Mountain northwest of Lake Dauphin.

About three-fifths of the Province, east and north of Lake Winnipeg, is underlain with Precambrian rock in which the presence of rich deposits of base metals has been confirmed, as in Ontario and Quebec (see Chapter XII).

The Province, although regarded as basically agricultural, possesses a wealth of water-power resources (Manitoba ranks after Quebec, Ontario and British Columbia in this respect) that, together with mineral and forest riches, have brought about an expanding industrial development.

Saskatchewan.-Saskatchewan lies between Manitoba and Alberta extending, like each of the Prairie Provinces, from the International Boundary on the south to the 60th parallel of latitude which divides it from the Northwest Territories (for area, see p. 2).

The northern half of the Province is abundantly watered by lakes and rivers and the topography is one of low relief. The Precambrian Shield, which covers most of Quebec, Ontario and Manitoba, penetrates over the northern third of Saskatchewan and has given evidence of potential richness of mineral wealth. This area is also rich in timber resources while the southerly two-thirds of the Province is generally fertile prairie with soil of great depth. In normal years there is sufficient moisture for rapid growth and the abundant sunshine during the long summer season in this northern latitude quickly ripens the crops.

Alberta.-This Province lies between Saskatchewan and the Rocky Mountains (see map facing p. vi). Like Saskatchewan, the southern part of the Province is comprised in the dry, treeless prairie belt, changing to the north into a zone of poplar interspersed with open prairie. This gives way to mixed forests covering the more northerly parts. The Precambrian rocks enter Alberta at its northeast corner, so that, excepting the fringe of mountainous country on its western border, practically the whole of the Province is overlain by arable soil of great depth. Alberta has two marked features: (1) the great valley of the Peace River, which has already resulted in the extension of settlement farther north than in any other part of Canada; and (2) the wonderful grazing lands in the foothills district which, rising sharply on the west, commence the ascent that continues to the very peaks
of the Rocky Mountains. The southern half of the Province, rising towards the west, lies at a general elevation of from 2,000 to 4,000 feet; but in the northern half, the slope descends until elevations of well under 1,000 feet are reached at Lake Athabaska in the northeast corner.

Alberta has the most extensive coal resources of any province of the Dominion and has become the leading producer of petroleum and natural gas. Lumbering is important in the more mountainous western parts and in the north, but ranching is still pursued in the less populous sections. In the southern prairies there are considerable areas where the quantity and distribution of the natural precipitation makes permanent agriculture precarious and, in these areas, a number of large irrigation projects have been developed, taking their water supply from rivers rising in the mountains which form the western boundary of the Province. The climate of Alberta is a particularly pleasant one, cooler in summer than more eastern parts of the country and tempered in winter by the Chinook winds.

The coal and oil resources have provided the basis of an industrial development and Edmonton has become the railhead for the north country.

British Columbia.-British Columbia, the third largest and the most westerly province of the Dominion, includes many islands of the Pacific, notably the Queen Charlotte Group and Vancouver Island, the area of the latter being about 12,408 square miles.

The predominant feature of the Province is the parallel ranges of mountains which cover all of it except the northeast corner and produce a conformation characterized by high mountain ranges interspaced with valleys many of which are extremely fertile, with climatic conditions well adapted to mixed agriculture or fruit growing. As a rule the agricultural areas of these valleys are relatively small and broken but there are two large areas in the Peace River Block and the Stuart Lake District that are rich and have great agricultural possibilities. The shore line of the Pacific is deeply indented with many inlets ideal for harbourage and has wonderful scenic aspects.

The wealth of forest resources supports the lumbering and pulp and paper industries and places British Columbia ahead of the other provinces in the production of lumber and timber (see Chapter IX). The Province also excels in fishery products, chiefly on account of its catches of the famous Pacific salmon. The mineral resources are remarkable for their variety and wealth. Production of the metals, gold, copper, silver, lead and zinc has played an important role in the economic life of the Province since its early days, while valuable coal deposits on Vancouver Island, and at Crowsnest and Fernie in the interior, have been worked for many years. In regard to water-power resources, British Columbia ranks after Quebec and Ontario (see Chapter XIII).

Yukon and the Northwest Territories.-North of the western provinces the Dominion of Canada extends over an area of $1,516,758$ square miles. This is largely an undeveloped domain, and for administrative purposes is divided into Yukon Territory and the Northwest Territories: the latter is subdivided into three Provisional Districts. This vast area is over twelve times the area of the British Isles and about half the area of the United States. Great rivers, like the Mackenzie and the Yukon, are found there, as well as great inland bodies of water, such as Great Slave and Great Bear Lakes. There are many indications of mineral wealth and the radium mines of Great Bear Lake yield the only radium produced on the Continent.

The Yukon-Alaska Highway, recently completed, links the entire northwest, through Edmonton, with the cities of the Prairie Provinces and the United States. Airports and other facilities have been provided over wide sections of the Mackenzie Valley and in future it is likely that travel and transport by air will have a great influence on the development of the Territories. In Chapter XXIX, Section 1, details regarding the resources and administration of these areas are given.

## PART II.-SEISMOLOGY

Seismology-that branch of science which treats of earthquakes-has received considerable attention in Canada during recent years. It has been generally recognized that earthquakes are frequent in regions of adjustment of strata and are characteristic of the newer mountain and coast regions where steep level-gradients occur. The energy radiated from an earthquake in the form of elastic waves in the earth is, however, recorded on sensitive seismographs up to great distances, even to the antipodes of the earthquake. Seismological researches, while regularly recording the routine statistical data regarding earthquakes, seek also to determine particular causes. Moreover, they endeavour to ascertain the physical properties of the earth's crust and interior as revealed by the peculiarities in the 'time-distance curves' for earthquakes. For further information on this subject, see pp. 7-9 of the 1943-44 edition of the Year Book.

The Cornwall-Massena Earthquake, Sept. 5, 1944.*-A moderately severe earthquake, the third largest in more than seventy years to occur in Canada, was felt over a large area in Eastern Canada and the United States in the early morning of Sept. 5, 1944. The tremors were reported from as far north as James Bay, as far south as New York City, as far west as Windsor and Detroit, and as far east as Quebec City. It was soon apparent from newspaper reports that the damage was confined to a small area about Cornwall, Ont., and Massena, N.Y., which lies about ten miles to the southwest of Cornwall.

The main shock was followed, as is usual, by aftershocks, of which the two largest occurred: (1) shortly before 5 a.m., E.W.T., Sept. 5, and (2) at about 7.25 p.m., E.W.T., Sept. 9. There were several smaller ones at intervals during the night and day of the main shock and they continued at increasingly longer intervals for some months. No damage was caused by any of the aftershocks.

The records obtained at the Dominion Observatory, Ottawa, showed the main shock and three of the aftershocks, of which the second was very well defined. The time at the focus (the point underground at which the earthquake originated) was determined as 12.38 a.m., E.W.T., Sept. 5, and the distance from Ottawa to the epicentre (the point on the surface vertically above the focus) as 59 miles (using the heavy aftershock as the source of the distance value).

The Ottawa records were supplemented within two or three days by the seismogram from Shawinigan Falls, Que. On this record the main shock was sufficiently attenuated by distance to make it a better source of data than the main aftershock. The focal time was determined, independently from the Shawinigan record, to be 12.38 a.m., and the distance from Shawinigan Falls to the epicentre was found to be 140 miles. The intersection of the distance circles about Ottawa and about Shawinigan Falls, the tentative location of the epicentre, lies a mile or so south of the international bridge crossing the St. Lawrence River at Cornwall.

[^15]A field study was undertaken by the Observatory. It was convenient to use an automobile for this work as the territory is well serviced by good roads and the weather was fine. The itinerary was as follows: On reaching Morrisburg, the field study began, working toward Cornwall. This town was well covered and the examination continued eastward for about five miles, at which point the damage had noticeably fallen off. On the south side of the river, a close study was made westward as far as Massena. To the east, the damage fell off rapidly but the examination was continued as far as Ft. Covington. On the return trip to Ottawa, the route chosen was the south shore to Ogdensburg, a close check being kept as far west as Waddington, which is directly across the river from Morrisburg.

The damage distribution was found to be decidedly spotty. In every case, in the vicinity of Cornwall and Massena and for some miles to the west of these places, where the damage was marked, it was found that the soil was deep, usually with some sand at no great depth. There was very little damage at Morrisburg, decidedly more at Farran Point, definitely less at Moulinette, with increasing amounts as one continued to approach Cornwall. In Cornwall itself, the damage varied considerably from point to point. On the eastern outskirts, near the river, it was quite marked and then fell off rapidly going east. On the south side of the river, the damage was very marked at Massena Center, about four miles east of Massena, and at Massena itself. Westward, the damage dropped off gradually, becoming almost negligible at Waddington. Except in or close to Cornwall and Massena, it was confined to broken chimneys, smashed china and glassware, cracked plaster, and damaged tombstones in cemeteries. In all, fourteen cemeteries were carefully examined during the field trip.

The tombstones in these cemeteries were damaged mostly by being rotated on their bases. At least 70 p.c. of those on the north shore which were so affected were turned in a counter-clockwise direction. In some places, notably at Farran Point, 20 to 30 stones were rotated, every one in a counter-clockwise sense. On the south shore a still higher percentage of the rotated stones were turned clockwise. The direction of fall for the stones which were overturned was too indiscriminate to be of much significance, but the violence with which small urns and crosses were thrown from the stones was higher at Cornwall than at Farran Point and greatest of all at Massena Center.

One of the most definite signs that a locality is close to the epicentre is the prevalence of chimneys which are not overthrown but which have been struck by blows so nearly vertical that the bricks, though separated from one another, are left lying on the chimney. A few such chimneys were noticed in the eastern side of Cornwall near the river. They were general in Massena Center and there were some in Massena.

Along the south shore of the St. Lawrence, not far from Massena Center, there were cracks in deep alluvium from which water welled to the surface, bearing fine silt. Some wells in the epicentral area which had been yielding went dry, and some which had been dry began to yield water.

The damage in Cornwall was marked. About 2,000 chimneys were damaged, the cornice walls at the high and public schools were thrown down damaging roofs and rooms, and stone and brick churches were badly cracked. The wall of at least one house caved. Several smoke stacks of mills were damaged, one quite noticeably;
in every case the damage was within 30 feet or less of the top. The damage at Cornwall was estimated at $\$ 1,000,000$ and the same estimate was made for Massena, though these figures are considered high.

As stated above, this is the third largest earthquake in Canada in over seventy years. In 1860 and again in 1870, there were severe shocks, presumably centering near Three Rivers, Que. On Feb. 28, 1925, a severe earthquake shook a wide area, from James Bay on the north to Virginia on the south, westward to Duluth and eastward to the Atlantic. It was located near the mouth of Rivière Ouelle on the south shore of the St. Lawrence about 30 miles below Quebec City. On Nov. 1, 1935, another occurred near Timiskaming, Que., at the southern tip of Lake Timiskaming, about 40 miles north of Mattawa, Ont. Of the three most recent earthquakes, that of 1925 was definitely the most severe, the one at Timiskaming in 1935 the next and that at Cornwall in 1944 the least. In each case, they were felt over such wide areas that the focus must have been relatively deep, possibly 20 miles.

A complete study of the Cornwall earthquake is being undertaken by the Dominion Observatory. The seismograms of all the seismograph stations in Canada and the United States have been requested. When these are in hand and the study is completed, the position of the epicentre and the depth of focus will be more precisely determined, but it is not likely that there will be much change from the tentative location of the epicentre near Massena Center, N.Y., and a depth of focus of 20 miles or less.

## PART III.-THE FLORA OF CANADA

See list at the front of this edition for special material, under this heading, published in previous editions of the Year Book.

## PART IV.-FAUNAS OF CANADA

See list at the front of this edition for special material, under this heading, published in previous editions of the Year Book.

## PART V.-LANDS, PARKS, SGENIC AND GAME RESOURCES OF CANADA

Canada is distinctly a new country and her resources are, for the most part, in the early stages of development. The fur, fishery and forest resources have, it is true, been the basis of trade for two or three hundred years, but exploitation on the present commercial scale is of relatively recent growth. Nevertheless, much effort has been directed to conservation in the cases of those resources that admit of such methods. Details of such policy are given in the chapters dealing with the individual resources.

Numerous surveys and investigations of the extent and value of the resources have been made from time to time and the results have been reviewed in special publications. Detailed information regarding individual natural resources will be found in the later chapters.

The treatment of resources considered below is concerned only with those summary phases of the subject that can be regarded as falling under the definition of physiography used in its wider interpretation. A classification of lands resources, information on the National Parks and resources in game and scenery properly fall under this head.

## Section 1.-Lands Resources

The figures of Table $\mathbf{1}$ are based on estimates from the latest Decennial Census in regard to agricultural lands, the Dominion Forest Service as regards forested lands, and from the Surveyor General and Chief of the Surveys and Engineering Branch as regards total areas of the Dominion and the Provinces; they show how the total land area of Canada is made up as between present and potential agricultural lands, present and potential forested lands, and lands that are unproductive as regards surface resources. Between the totals of present and potential agricultural lands and the totals of forested lands there is, of course, duplication to the extent of the agricultural lands under forest.

## 1.-Land Area of Canada, Classified as Agricultural, Forested or Unproductive

Nots.-The land area of Canada is shown classified by tenure in Chapter XXIX.

| Description | Prince Edward Island | Nova Scotia | New Brunswick | Quebec | Ontario | Manitoba |

| Net Productive Land ${ }^{3}$ | 184,143 | 218,065 | 222,144 | 70,069 | 1,523,988 |
| Waste and Other Land ${ }^{4}$ | 53,832 | 30,735 | 137,135 | 1,393,494 | 1,942,894 |
| Totals, Land Area. | 237,975 | 248,800 | 359,279 | 1,463,563 | 3,466,882 |

${ }^{1}$ These totals embrace present agricultural land of all possible classes and land that has agricultural possibilities in any sense. ${ }^{2}$ Very small or negligible
${ }^{3}$ Total agricultural land plus forested land minus forested agricultural land.
${ }^{4}$ Includes open muskeg, rock, road allowances, urban land, etc. $\quad \iota^{\text {An }}$ estimate from provincial sources places the total area of land suitable for tillage at 6,626 sq. miles.
${ }^{6}$ Includes 4 sq. miles of occupied land in Yukon and the Northwest Territories.

## Section 2.-National and Provincial Parks

National Parks of Canada.*-The Dominion Government maintains the National Parks of Canada as a means of preserving regions of outstanding beauty or marked interest. The parks are dedicated to the people of Canada for their benefit, education and enjoyment, for which they provide remarkable opportunities. In normal times the parks are of great value in furnishing vacationlands for the Canadian people and in attracting tourists, thus contributing to Canada's foreign exchange resources. During the War they have made an important contribution in the building of morale and in furnishing facilities for recuperation, not only to the civilian public, but to members of the Armed Forces. Differing widely in character, and varying in purpose, the park areas include: the scenic and recreational parks situated from the Atlantic Coast to the Rocky and Selkirk Mountains; the national

[^16]wild-animal parks or preserves-large fenced areas established for the protection and propagation of species once in danger of extinction; and the national historic parks. They are administered by the National Parks Bureau of the Lands, Parks and Forests Branch, Department of Mines and Resources. Under the supervision of this same body are the historic sites of national interest that have been acquired throughout the country. (See pp. 78-90 of the 1938 Year Book.)

In the national parks all wild life is rigidly protected, and primal natural conditions are maintained so far as possible. The local administration of the larger parks is carried out by resident superintendents, assisted by a warden service that is responsible for the necessary game and forest patrols. Opportunities for outdoor life and recreation have been increased by the provision of equipped camp-grounds, bath-houses and playgrounds, as well as by the construction of golf courses, tennis courts and outdoor swimming pools. Accommodation is provided in many of the parks by modern hotels, bungalow camps and chalets operated by private enterprise. Railways and motor roads serve the parks, and nearly 700 miles of motor highways and 2,500 miles of trails have been built to provide access to the outstanding scenic regions.

The scenic and recreational parks include regions of unsurpassed grandeur in the Rocky and Selkirk Mountains of Western Canada. Among these are: Banff, Jasper and Waterton Lakes National Parks in Alberta, on the eastern slope of the Rockies; Kootenay and Yoho Parks in British Columbia, on the western slope of the Rockies; and Glacier and Mount Revelstoke Parks (also in British Columbia), in the Selkirks. While these parks bear a general resemblance to one another, each possesses individual characteristics and phenomena, varying fauna and flora and different types of scenery. Banff Park contains the famous resorts, Banff and Lake Louise, and in Jasper Park is the well-known tourist centre, Jasper. Direct connection between these points is provided by the Banff-Jasper Highway, which was completed and opened for travel in 1940.

Eastward from the mountains are found Prince Albert National Park in Saskatchewan, a typical example of the forest-and-lake country bordering the northwestern plains region, and Riding Mountain National Park in Manitoba, a well-timbered area dotted with numerous lakes, and at a general altitude of 2,000 feet above sealevel. In Ontario are three small park units established primarily as recreational areas. They are Point Pelee, Georgian Bay Islands and St. Lawrence Islands National Parks.

The special animal parks were established for the protection of such species of mammalian wild life as buffalo, elk and pronghorned antelope, which, once in danger of extinction, now thrive under natural conditions in large fenced enclosures especially suited to their requirements. These reserves include Elk Island National Park in Alberta, 30 miles from Edmonton, which contains a large herd of buffalo and numerous deer, elk and moose. This park also includes a recreational development at Astotin Lake, where bathing, camping, tennis and golf may be enjoyed.

In the Maritime Provinces, two remarkable areas have been established as National Parks. Cape Breton Highlands National Park, situated in the northern part of Cape Breton Island, Nova Scotia, has an area of 390 square miles. Its rugged and picturesque shore line, indented by numerous bays and coves, and its rolling mountainous interior provide a delightful setting reminiscent of Scotland. Girdled on its eastern, northern and western sides by a spectacular highway called the Cabot Trail, and possessing such features as traila, beaches, tennis courts, and a
golf links, the park offers many diversions to the visitor. .Prince Edward Island National Park, containing an area of 7 square miles, extends for a distance of about 25 miles along the northern shore of the island province. Its chief attractions are magnificent sand beaches which permit salt-water bathing under ideal conditions. The Park also contains "Green Gables", the farmhouse made famous by the novels of L. M. Montgomery. A fine golf links, tennis courts, camp-grounds and marine drives enhance its attractions.

The National Historic Parks.-A further extension to the National Parks system was made in 1941 when seven areas, previously acquired and administered as historic sites, were designated as National Historic Parks. They are associated with events of outstanding interest in the early history of the Dominion and as such merit the distinction now conferred on them.

Of the National Historic Parks, one of the most interesting is Port Royal in Nova Scotia. This park area, situated on the shores of Annapolis Basin at Lower Granville, contains a replica of the Port Royal Habitation, a group of buildings constructed to shelter the first permanent European settlement in Canada. The present buildings stand on the exact site of the original Habitation erected in 1605 by DeMonts, Champlain, and Poutrincourt and destroyed by an English force in 1613.

The other new National Historic Parks are: Fortress of Louisbourg, Cape Breton Island, N.S.; Fort Chambly, Chambly Canton, Que.; Fort Lennox, Ile-auxNoix, Que.; Fort Wellington, Prescott, Ont.; Fort Malden, Amherstburg, Ont.; and Fort Prince of Wales, Churchill, Man. Fort Anne Park, at Annapolis Royal, N.S., and Fort Beauséjour Park near Sackville, N.B., previously established as National Parks, were also designated National Historic Parks.

National Historic Sites.-The National Parks Bureau is also charged with the preservation, restoration and marking of historic sites throughout Canada. In the work of acquiring and selecting sites worthy of commemoration, the Bureau has the assistance of the Historic Sites and Monuments Board of Canada, a group of recognized authorities on the history of the section of the country they represent. Of the total number of sites that have been considered by the Board, more than 300 have been suitably marked by the Department of Mines and Resources and many others recommended for future attention.
2.-Locations, Years Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1944

| Park | Location | Year Established | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
| Scenic and Recreational Parks |  |  | sq. miles |  |
| Banff................ | Western Alberta, on east slope of Rockies. | 1885 | 2,585.00 | Mountain playground containing famous resorts, Banff and Lake Louise. Typical example of central Rockies, with massive ranges, ice-fields, alpine valleys, glacierfed lakes and hot mineral springs. Biggame sanctuary. Recreations: climbing, motoring, riding, bathing, golf, tennis, fishing, skiing. |
| Yoho................ | Eastern British Columbia, on west slope of Rockies. | 1886 | $507 \cdot 00$ | Rugged scenery on western slope of Rockies. Contains famous Yoho Valley, with its numerous waterfalls; Kicking Horse Valley; Emerald, O'Hara, and Wapta Lakes; natural bridge. Alpine climbing centre. |

## 2.-Locations, Years Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1944-continued

| Park | Location | Year Established | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
| Scenic and Recreational Parks-conc. |  |  | sq. miles |  |
| Prince Edward Island. | North shore of <br> Prince Edward <br> Island.  | 1937 | 7.00 | Strip 25 miles long on north shore. Recreational area with magnificent beaches. Contains famed Green Gables farmstead. Recreations: bathing, boating, fishing, golf, bowling, camping. |
| Animal Parks and Reserves |  |  |  |  |
| Buffalo.............. | Eastern Alberta, near Wainwright. | 1908 | $197 \cdot 50$ | Fenced area originally set aside for the preservation of buffalo and other big game. Animal population since withdrawn; area now being utilized by Department of National Defence for war purposes. |
| Elk Island........... | Central Alberta, near Lamont. | $\begin{gathered} 1913 \\ \text { (Re- } \\ \text { served } \\ 1906) \end{gathered}$ | $51 \cdot 20$ | Fenced preserve containing a large herd of plains buffalo; also numerous deer, elk and moose. Recreational area at Astotin Lake; camping, boating, bathing, tennis and golf. |
| Nemiskam... | Southern Alberta, near Foremost. | 1922 | $8 \cdot 50$ | Fenced preserve established to protect pronghorned antelope, a species native to the region. |
| Wood Buffalo ${ }^{1}$. ...... | Partly in Alberta ( $13,675 \mathrm{sq}$. miles) and partly in Northwest Territories ( $3,625 \mathrm{sq}$. miles), west of Slave Rivers. | 1922 | $\begin{aligned} & 17,300 \cdot 00 \\ & \text { (approx.) } \end{aligned}$ | Immense unfenced area of forests and open plains, dotted with lakes and coursed by numerous streams and rivers. Contains a large herd of buffalo, developed from the native "woodland" type and surplus plains buffalo from Buffalo National Park; also bear, beaver, caribou, deer, moose and waterfowl. Area as yet undeveloped. |
| Historlc Parks |  |  | acres | - |
| Fort Anne........... | Nova Scotia (Annapolis Royal). | 1917 | 31 | Site of early Acadian settlement of Port Royal. Contains well-preserved fortifications of earthworks type; also museum housing a fine historical library and numerous exhibits relating to early periods. |
| Fort Beausejour...... | New Brunswick, near Sackville. | 1926 | 59 | Site of French fort erected in middle of 18th century. Renamed Fort Cumberland by British on capture in 1755; original name since restored. Contains museum with many exhibits relating to history of region. |
| Fortress of Louisbourg. | Cape Breton Island, N.S.. 25 miles from Sydney. | 1941 | 340 . | Old walled city and strategic military and naval station built by the French, $1720-40$. Captured by the British in 1758, it was destroyed in 1760. A museum on the site contains interesting mementoes of historic past. |
| Port Royal.......... | Lower Granville, N.S., 8 miles from Annapolis Royal. | 1941 | 17 | Reconstruction on the exact site of the Port Royal "Habitation" erected by DeMonts and Champlain in 1605 . The original group of buildings, which sheltered the first permanent European settlement in Canada, was destroyed in 1613. |

[^17]2.-Locations, Years Established, Areas and Characteristies of the National Parks of Canada and Dominion Reserves, 1944-concluded

| Park | Location | Year Established | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
| Historic Parks-conc. |  |  | acres |  |
| Fort Chambly....... | Chambly Canton, Que. | 1941 | $2 \cdot 5$ | French fort first constructed in 1665 on Richelieu River. Rebuilt of stone in 1711, it figured in several wars. Contains a museum housing many interesting exhibits. A military cemetery outside walls of fort is included in park area. |
| Fort Lennox. . . . . . . | Ile-aux-Noix, Que., near St. Johns. | 1941 | 210 | Miltary post constructed by British on site of early French fort, to command Richelieu River water route from south. Several well-preserved stone buildings together with the earthworks and moat remain. |
| Fort Wellington...... | Prescott, Ont. | 1941 | $8 \cdot 5$ | Contains well-preserved earthworks, blockhouse and other buildings constructed by British as base for defence of communications between Kingston and Montreal. The block-house contains a small museum. |
| Fort Malden........ | Amherstburg, Ont.. | 1941 | 3 | Situated on the banks of the Detroit River, the site of one of the principal frontier military posts in Upper Canada. A new museum building contains interesting exhibits of the region. |
| Fort Prince of Wales. | Northern Manitoba, near Churchill. | 1941 | 50 | Massive stone fort built 1733-71, to secure control of Hudson Bay for Hudson's Bay Company and England. The fort was captured and partially destroyed by a French force in 1782. |

SUMMARY OF THE AREAS OF NATIONAL PARKS, BY PROVINCES

| Province | Area | Province | Area |
| :---: | :---: | :---: | :---: |
|  | sq. miles |  | sq. miles |
| Prince Edward Island. ${ }^{\text {a }}$ | $7 \cdot 00$ | Saskatchewan. | 1,869.00 |
| Nova Scotia.. | $390 \cdot 60$ | Alberta. | 20,937.201 |
| New Brunswick | 0.09 | British Columbia. | 1,715.00 |
| Quebec. | 0.33 | Northwest Territories. | 3,625•001 |
| Manitoba. | 1,148-16 | Total | 29,704-10 |

${ }^{1}$ Including portion of Wood Buffalo Park.
Provincial Parks.-In addition to the national parks already described, most of the provinces have established provincial parks. The purpose is the same-to maintain areas of great scenic or other interest for the benefit of present and future generations. The provincial parks are administered by the Provincial Governments concerned, and in most cases they have not yet reached the degree of development which marks the national parks. Following are brief descriptions of the principal provincial parks, by provinces:-

British Columbia.--With its great scenic areas, no province lends itself more to the creation of parks than does British Columbia, and this condition is reflected in the large number of provincial parks that have been established. There are
three classifications of parks: Class A, with 16; Class B, with 3; and Class C, with 28 , representing a total of 47 units with a combined area of 11,480 square miles. In addition there are three parks, known as Special Act Parks, with a total area of 2,604 square miles.

Only a few of the Class A parks can be mentioned in this article. Tweedsmuir Park, 5,400 square miles in area, possesses outstanding mountain, lake and river scenery, and is of great interest to sportsmen, naturalists, mountaineers and photographers; it contains a fine chain of connected lakes. Hamber Park 3,800 square miles, .also has fine mountain and river scenery, and is traversed from the Big Bend to Golden by the Trans-Canada Highway. Wells Gray Park, 1,820 square miles due north from Kamloops, is a primitive wonderland in the heart of one of the finest scenic and big-game areas in the Province. Garibaldi Park, 973 square miles, immediately north of the city of Vancouver, is a rugged alpine area of peaks, glaciers and snowfields. Strathcona Park, 828 square miles, in the centre of Vancouver Island, another alpine area of outstanding beauty, is a game sanctuary but offers excellent fishing. Other parks serve almost every part of the Province.

Alberta.-Although Alberta has a larger area of National Parks than any other province, many small park areas have also been set apart by the Provincial Government. These include:-

Aspen Beach Park, 17 acres on the shore of Gull Lake, west of Lacombe, primarily for bathing, outing and picnic purposes; Saskatoon Island Park, 250 acres reserved mainly for picnic purposes, west of Grande Prairie; Gooseberry Lake Park, 320 acres on the shore of Gooseberry Lake north of Consort, has a sports ground and a number of cottages, and accommodation for transients is available in the town of Consort; Lundbreck Falls Park, $13 \frac{1}{2}$ acres, a pleasant little beauty spot on the Crow's Nest Pass highway west of Macleod, popular with fishermen and motorists; Sylvan Lake Park, $8 \cdot 6$ acres on the shores of Sylvan Lake, 11 miles west of Red Deer, a popular bathing place; Hommy Park, $5 \frac{3}{4}$ acres in the vicinity of Albright, established to serve residents of the district with picnic and outing facilities; Ghost River Park, $535 \frac{1}{2}$ acres on a beautiful artificial lake on the Ghost and Bow Rivers west of Calgary; Park Lake Park, $37 \cdot 2$ acres set aside to provide picnic facilities for the districts north and west of Lethbridge; Assineau Reserve, on the Assineau River south of Lesser Slave Lake, set aside to preserve a fine stand of large spruce; Dillberry Lake Reserve, $78 \cdot 4$ acres on the Alberta-Saskatchewan boundary near Chauvin, to preserve the natural beauty of a picturesque lake; Writing on Stone Reserve, 796 acres on the Milk River east and north of Coutts, to preserve natural obelisks on which appear hieroglyphics which have never been deciphered; Saskatoon Mountain Reserve, 3,000 acres preserving a fine lookout point in the Grande Prairie district; Little Smoky Reserve, $34 \cdot 7$ acres, a picnic ground and big-game hunting base on Little Smoky River, 12 miles south of Falher; Bad Lands Reserve, 1,800 acres north of Drumheller, established to stop unauthorized removal of fossilized remains of pre-historic animals; Wapiti Reserve, 21.8 acres on a canyon in the Wapiti River ten miles south of Grande Prairie, established as an outing centre for the rural district and also used by big-game hunters.

Saskatchewan.-Saskatchewan's seven permanent park reserves are distributed over the southern part of the Province. They are well treed and contain many beautiful lakes providing facilities for quiet recreation, camping, hiking, fishing and boating. They are: Cypress Hills Park, south of Maple Creek and a few miles from the United States boundary, beautifully located in the heart of a provincial
forest area; this park has modest bungalow, lodge and cabin accommodation, and an auto camp equipped with camp kitchens, spring water, and wood for fuel. Moose Mountain Park, an area of 192 square miles honeycombed with lakes and thickly covered with poplar and white birch, is located about 15 miles north of Carlyle, and is popular with visitors from the United States because of its fine scenery and good fishing. Katepwe Park, about 60 miles northeast of Regina, on the famous Qu'Appelle Lakes, has camp kitchens and bathhouses and offers boating, fishing and safe bathing. Good Spirit Lake Park, 20 miles west of Canora, also offers good fishing and bathing, and has excellent camp and pienic grounds with kitchen and bathhouse. Greenwater Lake Park is an area of 35 square miles in the forest belt north of Kelvington; it consists mainly of virgin forests and lakes affording good bathing and fishing. Little Manitou Park is an area of about 4 square miles on Manitou Lake, renowned for its medicinal qualities: chateau, cabin, and tourist camp accommodation are available. Duck Mountain Park, 15 miles northeast of Kamsack, presents a well-forested area and beautiful Madge Lake, which has a shore line of 47 miles, densely wooded and with sandy beaches. Wild life is plentiful and the lake is well stocked with fish.

Manitoba.-Although Manitoba has many areas attractive to the sightseer and vacationist, the Province has as yet established officially, only one which may be described as a provincial park. This is the area set aside in 1930 as the Whiteshell Forest Reserve, a rugged section of the Precambrian part of eastern Manitoba covering 1,088 square miles. The physical characteristics of this area account for its distinctiveness as a recreational, fishing and hunting reserve. More than 200 lakes and rivers are interlaced among islands and mainland, providing a fine network of canoe routes throughout the park. Volcanic rock cliffs, overhung with moss and small brush, rise steeply from the water. Much of the land is rough, hilly and thickly forested with the contrasting green of poplar, birch and tamarack. Although much of the northern Whiteshell remains in its primitive state, several southern lakes have been developed as resorts. West Hawk, Falcon, Caddy, Brereton, and White Lakes have become most popular. Fishing is an outstanding attraction of the Whiteshell, with northern pike, pickerel, lake trout, bass and perch the most prevalent species. A large new sport fish hatchery with a capacity of 500,000 eggs was constructed in 1942. Game-bird and big-game hunting have long been popular in the northern Whiteshell, though much of the southern portion has been set aside as a game preserve. Early maps show that La Verendrye was the first white man to explore what is now the Whiteshell Provincial Park. In 1734 he followed the turbulent Winnipeg River, which roughly outlines its northern boundary. Manitoba's "Land of the Granite Cliffs" has had a colourful past. Proposed post-war development promises it an interesting future.

Ontario,-There are six provincial parks in Ontario. With the exception of Ipperwash Beach Park, which is maintained exclusively for camping, picnicking and swimming, they were all dedicated primarily to the preservation of the forests, fish, birds, and all forms of wild life. The recreational possibilities which they provide are varied and extensive.

Algonquin Provincial Park, 2,741 square miles, is a wilderness area available by highway from the southern boundary. There are good camping facilities, with good fishing and attractive canoe trips. Quetico Provincial Park, 1,720 square miles, also a wilderness area, provides good camping facilities, fishing and canoe
trips. Lake Superior Provincial Park, 540 square miles, is another wilderness area. Camping facilities have not yet been provided but there is good fishing. Canoe trips have not yet been defined or routes improved. Sibley Provincial Park, 61 square miles, is a wilderness area as yet without camping facilities. Rondeau Provincial Park, 8 square miles, is partly cultivated, with fine timber stands and highly improved camping facilities. There are some enclosed animals and others running wild: fishing is fair and special duck shooting licences are obtainable. There are no canoe trips in this park. Ipperwash Beach Provincial Park consists of 109 acres of sandy beach and woodland area with highly developed camping facilities. There are no wild animals, but the fishing is fair. Special fishing licences are available in all but Sibley Provincial Park.

Quebec.-There are four provincial parks in this Province, located in distinctive areas which enables each to offer some special interest. Like those in the other provinces they have been established in order to preserve natural beauty and to protect the fauna and flora.

Laurentide Park is an area of about 4,000 square miles, beginning a short distance north of the city of Quebec, and has an altitude of about 3,000 feet. It is remarkable for its numerous lakes and tumultuous rivers and its fine speckled trout. Moose, deer, black bears, wolves, and all the fur-bearing animals of the Province abound, but no hunting is permitted. There are two well organized hotels and about twenty fishing camps. Mount Orford Park has an area of 9,425 acres, located on Orford Mountain, with an altitude of 2,860 feet. The slope of the mountain makes it one of the best skiing tests in Canada, and it also has a picturesque nine-hole golf course. Gaspe Park, 350 square miles, has a flora dating back to an era prior to the Great Continental Glacier. The main object of this park is to preserve the last herds of cariboo on the south shore of the St. Lawrence. Speckled trout affords fishing in the lakes and rivers of the park. The Mount Laurier-Senneterre Highway Reserve, 2,600 square miles, in the western part of the Province, is crossed on its full length by the road leading from Montreal to the Abitibi region. It is remarkable for its numerous lakes and rivers which provide favourable conditions for long canoe excursions. Fish include grey trout, northern pike, pickerel, black bass, and, in a limited number of lakes, speckled trout. There are two establishments for the accommodation of travellers, also a stopping place maintained by the Department of Game and Fisheries where cabins and boats may be rented.

Maritime Provinces.-There are National Parks in Prince Edward Island and Nova Scotia, and many civic parks, but none in any of the Maritime Provinces which comes within the classification of provincial parks.

## Section 3.-Game and Scenery

Game and Scenery.-The resources of Canada from the standpoints of the sportsman and tourist are both unique and varied. In the wooded and unsettled areas of each province there are many moose, deer, bear and smaller game, while in the western part of the Dominion there are also wapiti, caribou, mountain sheep, mountain goat, grizzly bear and lynx. Mountain lion, or cougar, are found in British Columbia and in the mountains of Alberta, while in the Northwest and the Far North there still exist herds of buffalo and musk-ox, which are given absolute protection by the Dominion Government.

Ruffed and spruce grouse are found in the wooded areas of Canada from coast to coast. Prairie chicken and Hungarian partridge inhabit the open prairies and the partly timbered areas of the three mid-western provinces. The Franklin grouse
is native to the mountains of the West and the ptarmigan, an Arctic grouse, lives in the treeless northern plains and is also found in the high mountains of Alberta and British Columbia.

Canada is the natural habitat of many kinds of waterfowl which abound in the myriad lakes that form so large a feature of Canadian scenery. This is particularly true of the three mid-western provinces, where the lakes are of the shallow, surface type that furnishes the most abundant feed for waterfowl.

The valleys of Nova Scotia and New Brunswick, the broken lake-country of northern Quebec, Ontario, Manitoba and Saskatchewan, as well as the mountain districts of British Columbia and Alberta, offer a variety of attractions including innumerable game preserves that have won for the Dominion a reputation as a paradise for sportsmen and campers. And not only is this possible for those who travel by land; the series of lakes and rivers that form a network over the eastern part of the country particularly, has made water travel in smaller craft both feasible and attractive. Further, facilities for winter sports, the unusual attractions of winter scenery and the bracing though rigorous winter climate, have done much to add to the reputations of resorts formerly noted for their advantages in the summer season. In both Dominion and provincial parks, while angling is permitted, the hunting of game is forbidden, and the wild-life resources preserved. Elsewhere, however, there is available for the hunter, at proper seasons, a wealth of game species.

Migratory Birds Treaty.-This Treaty and the legislation making it effective throughout Canada are administered by the National Parks Bureau of the Department of Mines and Resources and the Royal Canadian Mounted Police. The Treaty, which has been effective since 1916, has as its object the protection of the valuable migratory bird life of Canada and the United States. Information concerning the Treaty, and regulations enacted for its enforcement, may be obtained from the Controller, National Parks Bureau, Department of Mines and Resources, Ottawa.

## PART VI.-CLIMATE, METEOROLOGY, ETG.

## Section 1.-The Climate of Canada

From time to time articles pertaining to weather, temperature and precipitation in Canada have been published in previous editions of the Year Book. These articles are listed at the front of this edition under the heading "Climate and Meteorology".

## Section 2.-The Meteorological Service of Canada

Sec list at the front of this edition, under the heading "Climate and Meteorology", for special material published in previous editions of the Year Book.

## Section 3.-Standard Time and Time Zones in Canada

See list at the front of this edition for special material, under this heading, published in previous editions of the Year Book.

The Government of the Dominion of Canada was established under the provisions of the British North America Act of 1867.* This Statute of the Imperial Parliament, as from time to time amended, forms the written basis of the Constitution of Canada. Subsequent sections of this chapter describe in some detail the processes by which the Constitution has developed and the institutions, as at present constituted, by which Canada is governed.

The several stages in the development of the status of the Dominion have been authoritatively described in the reports of successive Imperial Conferences including that held at London in 1926, which defined the group of self-governing communities consisting of the United Kingdom and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that, as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs" Simultaneously, with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations, there developed, as complementary aspect of nationhood, the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations, the exercise of treaty-making

[^19]powers and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of the Dominion of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931, which provided for the removal of the remaining limitations on the legislative autonomy of the Dominions.

## PART I.-THE CONSTITUTION AND GENERAL GOVERNMENT OF CANADA

The Dominion of Canada is the largest in area and the most populous of the great self-governing Dominions of the British Empire, which also include the Commonwealth of Australia, the Union of South Africa, the Dominion of New Zealand, Southern Rhodesia and the island colony of Newfoundland (with Labrador). Because of the inability of the Government of Newfoundland to meet the interest charges upon its obligations, the constitution of that colony was suspended in 1934 on the petition of the Legislature. The island is now administered by six Commissioners appponted by the Crown, three from Newfoundland and three from the United Kingdom. For the present there is no Legislative Council and no House of Assembly. The Dominions enjoy responsible government of the British type, administered by Executive Councils (or Cabinets) acting as advisers to the representative of the Sovereign, themselves responsible to and possessing the confidence of the representatives elected to Parliament by the people, and giving place to other persons more acceptable to Parliament whenever that confidence is shown to have ceased to exist.

Of these Dominions, Canada, Australia and South Africa extend over enormous areas of territory, the first two approximating Europe in area. Each section has its own problems and its own point of view, so that a local Parliament for each section, as well as the central Parliament for the whole country, is required. The local Parliaments, established when transportation and communications were more difficult and expensive than at present, were chronologically prior to the central body, to which on its formation they either resigned certain powers, as in the case of Australia, or surrendered all their powers with certain specified exceptions, as in Canada and South Africa. Of such local Parliaments, Canada at the present time has nine, Australia six and South Africa four.

Besides the Dominions above enumerated, the great Empire of India in its internal administration has been placed on the road, formerly traversed by the Dominions that are now fully self-governing, towards responsible government. Indeed, the whole evolution of the Empire, throughout all parts that are more than mere fortresses or trading stations, is in the direction of responsible government, to be attained in the dependencies as it has been in what used to be called the Colonies, by the gradual extension of self-government in proportion to the growing capacities of their respective populations. It has been and is the recognized aim of British administrators, by the extension of educational facilities and by just administration, to develop these capacities to the utmost.

## Section 1.-The Evolution of the Constitution of Canada Down to Confederation

The process of the development of free government in the Dominion of Canada down to Confederation is given in an article appearing at pp. 34-40 of the 1942 Year Book. Also in an Appendix to that article, pp. 40-60, the text of the British North America Act is presented.

## Section 2.-The Development of the Constitution Since Confederation

A specially prepared article bringing the developments since Confederation up to date is published at pp. 41-47 of the 1943-44 Year Book. See also list of Special Articles under "Constitution and Government" at the front of this volume.

## PART II.-LEGISLATIVE AND EXECUTIVE AUTHORITIES

## Section 1.-Dominion Parliament and Ministry

The Dominion Parliament is composed of the King (represented by the Governor General), the Senate and the House of Commons. As a result of the working out of the democratic principle, the part played by the King's Representative and the Upper Chamber of Parliament in the country's legislation has been, in Canada as in the United Kingdom, a steadily decreasing one, the chief responsibilities involved in legislation being assumed by the House of Commons.

## Subsection 1.-The Governor General of Canada

The Governor General is appointed by the King as his representative in Canada, usually for a term of five years, with a salary fixed at $£ 10,000$ sterling per annum, which is a charge against the consolidated revenue of the country. The Governor General is bound by the terms of his commission and instructions (which he must communicate to the King's Privy Council for Canada) and can exercise only such authority as is expressly entrusted to him. He acts under the advice of his Ministry, which is responsible to Parliament, and, as the acting head of the Executive, summons, prorogues and dissolves Parliament, and assents to or reserves bills. In the discharge of these and other executive duties, he acts entirely by and with the advice of his Ministry (the Governor General in Council). The royal prerogative of mercy in capital cases, formerly exercised on the Governor General's own judgment and responsibility, is now exercised pursuant to the advice of the Ministry. The practice whereby the Governor General served as the medium of communication between the Canadian and the British Governments has been given up; since July 1, 1927, direct communication has been conducted between His Majesty's Government in Canada and His Majesty's Government in the United Kingdom.

## 1.-Governors General of Canada, 1867-1945

## Subsection 2.-The Ministry

A system of government based upon the British, by which a Cabinet or Ministry (composed of members of the House of Commons or the Senate), responsible to Parliament, holds office while it enjoys the confidence of the people's representatives, is found in Canada. The Cabinet is actually a committee of the King's Privy Council for Canada. Without enlarging upon the features of the system, it may be sufficient to note that the Cabinet is responsible to the House of Commons, and, following established precedent, resigns office when it becomes evident that it no longer holds the confidence of the people's representatives. Members of the Cabinet are chosen by the Prime Minister; each generally assumes charge of one of the various Departments of Government, although a Minister may hold more than one portfolio at the same time, or may be without portfolio.

## 2.-Prime Ministers Since Confederation

Note.-A complete list of the members of Dominion Ministries from Confederation to 1913 appears in the 1912 Year Book, pp. 422-429. Later Ministries will be found in the corresponding tables of subsequent editions of the Year Book.

| Ministry | Prime Minister | Length of Administration |
| :---: | :---: | :---: |
| 1 | Right Hon. Sir John A. Macdonald | July 1, 1867 - Nov. 6, 1873 |
| 2 | Hon. Alexander Mackenzie. | Nov. 7, 1873 - Oct. 16, 1878 |
| 3 | Right Hon. Sir John A. Macdonald | Oct. 17, 1878 - June 6, 1891 |
| 4 | Hon. Sir John J. C. Abbotr. | June 16, 1891 - Dec. 5, 1882 |
| 5 | Hon. Sir John S. D. Thompson | Dec. 5, 1892-Dec. 12, 1894 |
| 6 | Hon. Sir Mackenzie Bowkll.. | Dec. 21, 1894 - Apr. 27, 1896 |
| 7 | Right Hon. Sir Charles Tupper | May 1, 1896 - July 8, 1896 |
| 8 | Right Hon. Sir Whiprid Laurier. | July 11, 1896 - Oct. 6, 1911 |
| 9 | Right Hon. Sir Robert L. Borden | Oct. 10, 1911 - Oct. 12, 1917 |
| 10 | Right Hon. Sir Robert L. Borden | Oct. 12, 1917-July 10, 1920 |

## Subsection 3.-The Senate*

From an original membership of 72 at Confederation the Senate, through the addition of new provinces and the general growth of the Dominion, now has 96 members, the latest change in representation having been made in 1915. The growth of representation in the Senate is traced at pp. 47-49 of the 1940 edition of the Year Book and is summarized, by provinces, in Table 6.

* A senator's sessional indemnity is $\$ 4,000$.

## Subsection 4.-The House of Commons*

In Section 37 of the original British North America Act of 1867 (30 Vict., c. 3), it was provided that "The House of Commons shall . consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, sixty-five for Quebec, nineteen for Nova Scotia, and fifteen for New Brunswick" Further, under Section 51, it was enacted that after the completion of the Census of 1871 and of each subsequent decennial census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time, as the Parliament of Canada provided, subject to and according to the following rules:-
"(1) Quebec shall have the fixed number of Șixty-five Members;
"(2) There shall be assigned to each of the other Provinces such a Number of Members as will bear the same Proportion to the Number of its Population (ascertained at such Census) as the Number Sixty-five bears to the Number of the Population of Quebec (so ascertained);
"(3) In the Computation of the Number of Members for a Province a fractional Part not exceeding One Half of the whole Number requisite for entitling the Province to a Member shall be disregarded; but a fractional Part exceeding One Half of that Number shall be equivalent to the whole Number;
"(4) On any such Re-adjustment the Number of Members for a Province shall not be reduced unless the Proportion which the Number of the Population of the Province bore to the Number of the aggregate Population of Canada at the then last preceding Re-adjustment of the Number of Members for the Province is ascertained at the then latest Census to be diminished by One Twentieth Part or upwards;
"(5) Such Re-adjustment shall not take effect until the Termination of the then existing Parliament."

[^21]Again, in Section 52, it was enacted that "the number of members of the House of Commons may be from time to time increased by the Parliament of Canada, provided the proportionate representation of the Provinces prescribed by this Act is not thereby disturbed".

Later on, by the British North America Act of 1886 (49-50 Vict., c. 35), provision was made in Section 1 that "the Parliament of Canada may from time to time make provision for the representation in the Senate and House of Commons of Canada, or in either of them, of any territories which for the time being form part of the Dominion of Canada, but are not included in any province thereof".

Again in 1915, an amendment to the British North America Act (5-6 Geo. V, c. 45) was passed by the Imperial Parliament, providing that "notwithstanding anything in the said Act, a province shall always be entitled to a number of members in the House of Commons not less than the number of senators representing such province".

Readjustments in Representation.-As set out in the above-mentioned provisions of the British North America Act, the first Dominion Parliament of 1867 consisted at its commencement of 181 members, 82 for Ontario, 65 for Quebec, 19 for Nova Scotia and 15 for New Brunswick. To this number were added, under the Manitoba Act of 1870 ( 33 Vict., c. 3), 4 members to represent the newly created Province of Manitoba; also, according to the agreement under which British Columbia entered Confederation (ratified by Imperial Order in Council of May 16, 1871), 6 members were added to represent the new Province, making a total of 191 members at the end of the First Parliament of Canada.

Arising out of the first census of the Dominion in 1871, a readjustment of representation took place in 1872 (c. 15 of 1872) increasing the representation of Ontario from 82 to 88, of Nova Scotia from 19 to 21, and of New Bruṇswick from 15 to 16 members, the 9 additional members bringing the total number of representatives up to 200 . To these were added in 1874 , as a result of the agreement under which Prince Edward Island entered Confederation (ratified by Imperial Order in Council of June 26, 1873), 6 members representing that Province-bringing the membership of the House of Commons to 206.

Results of the second census, that of 1881, necessitated the passage of a new Representation Act ( 45 Vict., c. 3), increasing the representation of Ontario from 88 to 92 and that of Manitoba from 4 to 5 , thus bringing the membership of the House of Commons to 211 members. To these were added, under the provisions of 49 Vict., c. 24 , passed in 1886, 4 members for the Northwest Territories ( 2 for the then Provisional District of Assiniboia and 1 each for the then Provisional Districts of Alberta and Saskatchewan), bringing the total membership to 215.

The third census, of 1891 , was followed by another readjustment of representation, reducing the representation of Nova Scotia from 21 to 20 , of New Brunswick from 16 to 14, of Prince Edward Island from 6 to 5, and increasing the representation of Manitoba from 5 to 7, the representation of the other provinces remaining as before. The net result was a reduction in the number of members of the House from 215 to 213 .

The fourth census, of 1901, resulted in a readjustment in 1903, reducing the representation of Ontario from 92 to 86, of Nova Scotia from 20 to 18, of New Brunswick from 14 to 13, of Prince Edward Island from 5 to 4 . On the other hand, the representation of Manitoba was increased from 7 to 10 , of British Columbia from 6 to 7, of the Northwest Territories from 4 to 10 . By c. 37 of the Statutes of 1902, a member was added for the Yukon Territory, so that the net effect of the changes was to keep the membership at 214 in the early years of the present century. The extremely rapid growth of the Northwest Territories, however, led to their division and the admission to Confederation in 1905 of the Provinces of Alberta and Saskatchewan. In the Acts admitting them - the Alberta Act (4-5 Edw. VII, c. 3) and the Saskatchewan Act (4-5 Edw. VII, c. 42)-it was provided that their representation should be readjusted on the basis of the results of the Quinquennial Census of 1906. The Representation Act of 1907, implementing this pledge, increased the representation of Saskatchewan from 6 to 10 and of Alberta from 4 to 7 members, thus raising the total membership of the House of Commons to 221.

The Census of 1911, with its very large but very unevenly distributed increase of population, led to considerable changes in representation, enacted by the Representation Act of 1914. The representation of Ontario was reduced from 86 to 82 , of Nova Scotia from 18 to 16, of New Brunswick from 13 to 11, of Prince Edward Island from 4 to 3. On the other hand, the representation of Manitoba was raised from 10 to 15 , of Saskatchewan from 10 to 16, of Alberta from 7 to 12 and of British Columbia from 7 to 13 . The net result was an increase of 13 members in the total membership of the House of Commons, bringing the figure to 234. However, in the following session the amendment to the British North America Act, already referred to, resulted in the retention by Prince Edward Island of her fourth member (since she had 4 senators). (See also 5 Geo. V, c. 19.) The total membership, therefore, of the House of Commons in the Thirteenth and Fourteenth Parliaments (elected in 1917 and 1921, respectively) was 235.

As a result of the smaller increase of population shown by the Census of 1921, the changes in representation were less far-reaching. Nova Scotia lost 2 members and the West gained 12, 2 of these being added to Manitoba, 5 to Saskatchewan, 4 to Alberta and 1 to British Columbia. The representation of the remaining four provinces was unchanged. Prince Edward Island retained its 4 members because of the provisions of the amendment of 1915 to the B.N.A. Act of 1915, to the effect that the members of the House of Commons returned by a province shall never be fewer than its senators. Ontario, again, retained its 82 members because (under Subsection 4 of Section 51 of the British North America Act) the proportion which its population bore to the aggregate population of the Dominion had not declined by one-twentieth. Further, by the Quebec Boundaries Extension Act of 1912, it had been stipulated that the population of the added area (Ungava) should not be included for the purpose of determining the unit of representation, so that the 1921 population of Quebec, within its 1911 boundaries, viz., $2,358,412$, divided by the fixed number of 65 seats for that province, became the new unit of representation, 36,283 .

The population of Quebec in 1931, exclusive of the population $(2,584)$ of the territory added to Quebec by the Boundaries Extension Act of 1912, was 2,872,078, which, divided by 65 , gave a unit of representation of 44,186 . The populations of the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Ontario and Manitoba each showed a decrease in the rate of growth as compared with the rate for Canada as a whole, but because that decrease in Ontario and Manitoba was less than one-twentieth the representation of these two provinces remained the same as in 1921. The proportion for each of the other provinces diminished by more than one-twentieth and as a consequence Nova Scotia lost 2 members. The representation of Prince Edward Island and of New Brunswick on a strict basis of population would have been reduced by 2 members each but, because of the provision that members of the House of Commons returned by a province shall never be fewer than its senators, the representation of the former province remained unchanged at 4 and that of the latter was reduced from 11 to 10 . The representation of Saskatchewan remained at 21, while Alberta gained 1 member and British Columbia 2.

A table showing, the representation of the provinces and territories of Canada in the House of Commons, as determined by the Censuses of 1911, 1921 and 1931 is given at p. 76 of the 1934-35 Year Book.

The number of representatives of each province elected at each of the nineteen general elections since Confederation is given in Table 8.

Redistribution for 1941 Postponed.-For the first time since Confederation, the redistribution of parliamentary constituencies required by the B.N.A. Act after each decennial census, has been postponed A resolution to that effect was presented to Parliament and forwarded to London in the form of an address to His Majesty the King. His Majesty caused a Bill to be laid before the Parliament of the United Kingdom for the enactment of the provisions of the resolution; this was duly passed through all stages by July 22, 1943. The Bill provides that "notwithstanding anything in the British North America Acts, 1867 to 1940, it shall not be necessary that the representation of the provinces in the House of Commons be readjusted, in consequence of the completion of the decennial census taken in
the year One Thousand Nine Hundred and Forty-One, until the first session of the Parliament of Canada commencing after the cessation of hostilities between Canada and the German Reich, the Kingdom of Italy and the Empire of Japan".

## 9.-Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Nineteenth General Election, Mar. 26, 1940, Revised to Feb. 1, 1945.

Nors.-This information, except the populations of constituencies and party affiliations, has been supplied by the Chief Electoral Officer, Ottawa, who publishes an official report giving the total vote cast for each candidate. Party affiliations are as shown in the Canadian Parliamentary Guide (unofficial).

## Subsection 5.-The Franchise at Dominion Elections

It was provided by the British North America Act, 1867, that, until otherwise directed by Parliament, elections to the House of Commons should be governed by the electoral laws of the several provinces. The qualifications of electors throughout the Dominion consequently varied but remained the same for both Dominion and provincial elections in any one province until, in 1885, Parliament legislated on the subject by passing the Electoral Franchise Act (47-48 Vict., c. 40). That Act defined a uniform qualification for voters throughout Canada for Dominion purposes, the basis of this new franchise being the ownership or occupation of land of a specified value, although the sons of owners, and particularly farmers' sons, were given the right to vote on special conditions. This Dominion franchise remained in force for thirteen years, but between 1898 and 1920, under the Franchise Act of the former year (59-60 Vict., c. 14), the provincial franchises were again made applicable at Dominion elections. The adoption of the provincial franchise laws for Dominion purposes was temporarily modified by the War-time Elections Act (7-8 Geo. V, c. 39), which admitted certain near female relatives of members of the military forces, or of the naval forces, to vote at Dominion elections. Three years later, on the adoption of a New Dominion Elections Act (10-11 Geo. V, c. 46), the provincial franchises were again wholly abandoned and a new electoral qualification was established for Dominion elections throughout Canada. The right to vote was conferred by the new Act upon all British subjects, men and women, of 21 years and upwards, who had resided in Canada for a year, and for two months in the electoral district in which they desired to vote. Women were granted general franchise in Canada in 1918 (8-9 Geo. V, c. 20), and have voted at all Dominion elections held since that date.

Franchise Legislation now in Force.-The right to vote is at present provided for in the Dominion Elections Act, 1938 (2 Geo. VI, c. 46) as amended by 6 Geo. VI, c. 26. The franchise is conferred upon all British subjects, men or women, who have attained the age of 21 years and who have been ordinarily resident in Canada for 12 months prior to polling day at a Dominion election, and ordinarily resident in the electoral district on the date of the issue of the writ for such election. Lists of electors are prepared afresh for use at each Dominion election. Those denied the right to vote are:-

1. Judges appointed by the Governor in Council;
2. The returning officer for each electoral district;
3. Persons undergoing punishment as inmates of any penal institution for the commission of any offence;
4. Indians ordinarily resident on an Indian reservation who did not serve in the War of 1914-18, or in the War that began on Sept. 10, 1939;
5. Persons restrained of their liberty or management of their property by reason of mental disease;
6. Eskimos, whether born in Canada or elsewhere;
7. Persons who are disqualified by reason of race from voting at an election of a member of the Legislative Assembly of a province in which they are residing, and who did not serve in the War of 1914-18, or in the War that began on Sept. 10, 1939;
8. Doukhobors, residing in the Province of British Columbia, whether born in Canada or elsewhere;
9. Persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices;
10. Inmates of an institution which is maintained by any government or municipality for the housing of the poor, if such persons are disqualified from voting at an election of a member of the Legislative Assembly of the province, and did not serve in the War of 1914-18, or in the War that began on Sept. 10, 1939;
11. Every Japanese who resided in the Province of British Columbia on July 1, 1938, and on Dec. 7, 1941, who did not serve in the War of 1914-18, or in the War that began on Sept. 10, 1939.

According to a special procedure prescribed by the Canadian War Service Voting Regulations, 1944, every Canadian on war service in any of His Majesty's Naval, Military, or Air Forces, man or woman, irrespective of age, and whether stationed within or without Canada, is entitled to vote by ballot for the candidate of his choice at a general election held during the present war, and such votes will be applied to the electoral district in which such War Service elector ordinarily resided prior to his enlistment, enrolment, appointment, or call-up on war service.

According to the Canadian Prisoners of War Voting Regulations, 1944, any person eligible to vote under the Canadian War Service Voting Regulations, 1944, who became a prisoner of war, or interned in a neutral country, is entitled to vote by proxy at a general election held in Canada during the present War, such proxy being his or her next of kin, as officially recorded at Headquarters and such vote will be cast in the polling division in which such next of kin is entitled to vote as a civilian elector.

## 11.-Voters on the Lists and Votes Polled at the General Elections of 1926, 1930, 1935 and 1940

Nore.-Corresponding statistics for the general elections of 1911, 1917, 1921 and 1925 will be found at p. 82 of the 1926 Year Book.

## Section 2.-Provincial Governments

In each of the provinces the King is represented by a Lieutenant-Governor appointed by the Governor General in Council and governs with the advice and assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body. The
legislatures of all the provinces with the exception of Quebec are now unicameral, consisting of a Legislative Assembly elected by the people. In Quebec there is a Legislative Council as well as a Legislative Assembly. A detailed description of the Provincial Governments is given at pp. 101-115 of the 1922-23 edition of the Year Book.

## 13.-Lieutenant-Governors of Provinces, 1867-1944, and Present Ministries as at Dec. 31, 1944

Note.-The Lieutenant-Governor of a province is styled "His Honour" and is also styled "Honourable" throughout his life. Where a knighthood or other honour was conferred during the term of office, it is shown. Many Lieutenant-Governors were knighted after their term had expired. Legislatures and Ministries from Confederation to 1923 will be found at pp. 75-84 of the 1924 Year Book, and for 1924-37 at pp. 110-118 of the 1938 Year Book. When two or more dates are shown for the appointment of a Minister, the first denotes the original appointment to the Ministry and the second or last to ṭhe portfolio held at present.

## THE NORTHWEST TERRITORIES

Note.-In 1888, the Districts of Alberta, Assiniboia, Athabaska, and Saskatchewan, then called the Northwest Territories, with their capital at Regina, were given responsible government, and the former Northwest Council was replaced by the Northwest Legislature, which existed until Ang. 31, 1905. When the area included in these Districts was formed into the Provinces of Alberta and Saskatchewan on Sept. 1, 1905, these provinces were given systems of government similar to the other provinces of the Dominion. The prevailing form of government for the remaining part of the Territories was discontinued in 1905 and the office of Lieutenant-Governor abolished. In its place, government was vested in a Commissioner and a Council, now composed of six members, one of whom may be appointed Deputy Commissioner. The administration of the various Acts, Ordinances, and Regulations pertaining to the Northwest Territorica is supervised by the Director of the Lands, Parks and Forests Branch, Department of Mines and Resources, who is also Deputy Commissioner. The seat of government is at Ottawa,

Lieutenant-Governors ${ }^{1}$

${ }^{1}$ This office was abolished in 1905, see headnote. ${ }^{2}$ Second term.

## Territorial Councti <br> (Appointed by the Governor General in Council)

Commisgioner-Charlzs Cambzll.
Deputy Commissioner-Roy Alexander Gibson.
Members of the Council-Augtin Louis Cumaing; Kenneth Robingon Daly; Harold Wigmore McGma; Stuart Tayior Wood.
Secretary-David Livingatone McKerand.

# 13.-Lieutenant-Governors of Provinces, 1867-1944, and Present Ministries as at Dec. 31, 1944-concluded 

## YUKON TERRITORY

Note.-The Yukon, formerly a District of the Northwest Territories, was made a separate Territory in 1898. The Yukon Act provides for a local government composed of a Chief Executive, styled Commissioner but since classified as Controller; also an elective Legislative Council of three members having a three-year tenure of office. The Yukon Territorial Council performs much the same functions as do the Provincial Governments. The Controller functions in lieu of the Provincial Cabinet and the three members of the Territorial Council function in lieu of the Provincial Parliament. The seat of local government is at Dawson, but the Controller acts under instructions from the Governor General in Council or the Minister of Mines and Resources at Ottawa.

## PART III.-CANADA'S INTERNATIONAL RELATIONS <br> Section 1.-Canada's Growth in External Status*

The evolution of Canada in its external relations is reflected in the growth of its Department of External Affairs.

In 1909, when this Department was set up, Canadian representation abroad was confined to a High Commissioner in London (since 1880) and an Agent General in France (since 1882), neither of whom possessed diplomatic status.

Canada's negotiations with foreign powers on such matters as trade and boundaries were conducted through the medium of the British Foreign Office with Canadian Ministers or officials taking part on occasion in the negotiations. Dealings with other parts of the Empire proceeded through the Colonial Office. With the British Government, the normal channel of communication was the Governor General who at that time represented both the Crown and the Government of the United Kingdom. It is true that there were Canadian officials abroad serving as trade commissioners and immigration agents, but they represented individual Departments of the Federal Government and did not act on behalf of the Government as a whole.

The establishment of a Department of External Affairs was first proposed in 1907 by a veteran civil servant, Joseph Pope (later Sir Joseph Pope). In his opinion the time had come for "a more systematic mode of dealing with what we may term, for want of a better phrase, the external affairs of the Dominion". The subsequent incorporation of that phrase in the title of the Department paralleled its use in

[^30]Australia for the same reason, namely, that one Department should be charged both with correspondence of an international or intra-imperial character. Two years later when the Canadian Parliament enacted legislation to set up the Department it was attached to the office of the Secretary of State under the supervision, as Under Secretary of State for External Affairs, of Sir Joseph Pope.

At the time no special significance was attached to the appearance of the Department, which was merely regarded as a helpful method of improving departmental procedure and facilitating more efficient conduct of government correspondence with other countries. The first significant advance came in 1912 when the Department was placed by statute under the direct supervision of the Prime Minister, as Sir Joseph had originally planned. At that time the Prime Minister also assumed the additional title of Secretary of State for External Affairs.

First Phase.-The early years of the Department were ones of quiet and inconspicuous development. Only one of its officers was called upon to serve with the Canadian delegation to the Peace Conference in Paris in 1919. It was two years later that the Department was charged with the supervision of the High Commissioner's Office in London. Nevertheless the War of 1914-18 altered the conduct of Canadian policy as Canadian troops bought with their blood on European battlefields the title deeds to Canadian nationhood. Because of their achievement from Ypres to Mons, Sir Robert Borden, then Prime Minister of Canada, could claim for Canada a share in the making of the peace; the right to separate signature to the Treaty of Versailles; and separate membership in the League of Nations.

Only by degrees did a puzzled world begin to appreciate that Canada, Australia, New Zealand, South Africa and subsequently the Irish Free State, had reached a position vis-d-vis the United Kingdom which led to them being described in 1926 as "autonomous communities . . . equal in status and in no way subordinate one to the other in any aspect of their domestic or external affairs . . ."

It is not surprising that an early manifestation of this change of status came in the relations of Canada with its mighty neighbour, the United States. During the War of 1914-18 the Canadian Government had found it advisable to establish a Canadian War Mission in Washington to deal with the numerous problems caused by war that affected the relations of the two countries.

The success of this Mission, which acquired virtual diplomatic powers, convinced Sir Robert Borden that it would be in the best interests of both the U.K. and Canada for the Canadian Government to have separate representation in Washington. His views prevailed in London, and as early as 1920 it was announced that the King, on the advice of his Canadian Ministers, would appoint a Minister Plenipotentiary to the United States who would be the channel of communication with the Government of that country, acting under instructions from, and reporting directly to, the Canadian Government.

Three Years' Rapid Growth.-However, no appointment was made until 1926 when Hon. Vincent Massey (now the High Commissioner for Canada in the United Kingdom) was designated Envoy Extraordinary and Minister Plenipotentiary in Washington "with the special object of representing in the United States of America the interests of our Dominion of Canada" In February, 1927, he formally presented his credentials to President Coolidge. Shortly afterwards the United States appointed William Phillips, who had been their ambassador in Belgium, to serve as their first Minister to Canada.

In the meantime another Canadian official, Dr. W. A. Riddell, the present Canadian High Commissioner in New Zealand, had been appointed in 1925 to take charge of the Canadian Advisory Office in Geneva. It"was his duty to keep the Government informed of developments in the League of Nations and the International Labour Office and to represent Canada at some of the many international conferences which met under League auspices. As a former official of the International Labour Office, Dr. Riddell was well qualified to represent Canada on the governing body of that institution, of which Canada was a permanent member as one of the eight largest industrial states. In 1938 the title of the appointee was changed to Permanent Delegate to the League of Nations in accordance with the usual practice in Geneva. The office was maintained in Geneva until the events of May, 1940, necessitated the withdrawal of Canadian representation.

At the Imperial Conference of 1926 it had been agreed that the Governor General of a Dominion should no longer act as the formal channel of communication between His Majesty's Government in the United Kingdom and the Dominion of which he was Governor General. By the new arrangement the Governor General became, so far as Canada was concerned, in the words of Prime Minister Mackenzie King, "in the truest and largest sense of the word the personal representative of the Sovereign" From July 1, 1927, correspondence from the United Kingdom Government or from other countries to the Canadian Government was to be addressed to the Secretary of State for External Affairs. A natural consequence of this arrangement was the decision of the United Kingdom to be represented by a High Commissioner in Ottawa. The first appointee was Sir William Clark, who took up his residence in the capital in the autumn of 1928. The fact that this position is at present held by a former member of the United Kingdom Cabinet, Right Hon. Malcolm MacDonald, is an indication of how important the duties of this office have become.

The appointment of a Canadian Minister to France in 1928 was a logical development in view of the fact that almost 30 p.c. of the Canadian people were descendants of the little group of Frenchmen who had laboured to build New France overseas. The Minister designated was Hon. Phillippe Roy, who had served Canada for 17 years as Commissioner General in Paris.

At the same time the Canadian Government also stated that Canada and Japan had agreed to an exchange of ministers. This decision was based on the increasing importance of the Orient for Canadian trade and the advisability of having a Canadian diplomat available in Tokyo for discussions of the thorny problem of Japanese immigration to Canada. The Government of Japan welcomed the proposal and in fact had opened its Legation in Ottawa before the first Canadian Minister to Japan, Hon. Herbert Marler (later Sir Herbert), assumed his duties in 1929.

The rapid expansion of three years was followed by a decade of consolidation and recruitment of personnel for the Department. The leadership and wide range of interests of Dr. O. D. Skelton, a distinguished Canadian scholar who assumed the position of Under Secretary of State for External Affairs in 1925, greatly contributed to the prestige of the Department and made him, until his death in 1941, probably the most influential civil servant of his day.

Further Diplomatic Representation.-Not long before the present war, Belgium proposed an exchange of ministers and Baron Silvercruys, accordingly, arrived in Ottawa in 1937. In return the Canadian Government
accredited Jean Desy, at present Canadian Ambassador in Brazil, as the first Minister to Belgium. It was also decided to have him serve simultaneously as Canadian Minister to the Netherlands. Mr. Desy presented his credentials to King Leopold of Belgium in January, 1939, and to Queen Wilhelmina of the Netherlands the next month. The Netherlands Minister to Canada established the Legation in Ottawa in October, 1939. An interesting development in intra-imperial relations was the appointment to Canada of an Accredited Representative by the Union of South Africa. For this position the South African Government selected D. de Waal Meyer, who had previously served in Canada as a tiade commissioner.

Canada Declares War.-In September, 1939, the Canadian Government issued a separate declaration of war on Germany from that of the United Kingdom as befitted its advancement in nationhood in the quarter century between wars. The day after this declaration (September 10) it was announced that the Government would send High Commissioners to Australia, New Zealand, South Africa and Ireland. Such appointments were designed to develop closer co-operation between the members of the Commonwealth. This development proved of particular value when the War spread into the Pacific area after Pearl Harbor. The Commonwealth Governments reciprocated.

Canada and the United States.-With the United States, the number of contacts and special arrangements rapidly increased. The formation of a Permanent Joint Board on Defence in August, 1940, the rapid emergence of some half dozen joint committees for the co-ordination of the war effort of the two countries, and the despatch to Washington of representatives from various Government Departments greatly increased the work of the Canadian Legation in Washington and expanded its personnel. Among its new officers appeared attachés from the Armed Services and a financial attaché. A further innovation in Canadian-United States relations arising from the War was the establishment of a Canadian Consulate-General in New York in May, 1943.

This was not the first consular office to be opened by Canada. The occupation of Denmark in April, 1940, posed the question of the future disposition of its territorial possession, Greenland. From Greenland came Canada's important supply of cryolite which was used in the production of aluminum. Greenland was also a key area for obtaining reports on weather conditions and has proved of great importance in furthering transatlantic air navigation. For these reasons Canada and the United States acted on parallel lines of policy in sending consuls to that country in the summer of 1940. The appointment of a High Commissioner to Newfoundland in July, 1941, was likewise a recognition of the importance of Newfoundland for the defence of Canada. In August, 1941, also for defence reasons, it was decided to establish. a Consulate on the islands of St. Pierre and Miquelon which was maintained for three years.

Latin-American Exchanges.-The opening of Canadian Missions in Latin America was not only based on the development of intra-American trade and the increasing sense of hemispheric solidarity, but also on the fact, as the Prime Minister told the House of Commons in February, 1941, that "South American problems will become increasingly our problems as the situation comes to be changed for better or for worse . . . and the Government feels that we owe it to the people of our country to be able to get first-hand knowledge of the changing situation in South America".

For that reason the Government included in the financial estimates for the fiscal year 1941-42 appropriations for the establishment of Legations in Brazil and Argentina. These countries sent their first ministers to Canada in May and June, respectively. The Canadian Minister to Brazil, Mr. Desy, reached Rio de Janeiro in September, 1941. A month later the former Chief Justice of Saskatchewan, Hon. W. F. A. Turgeon, assumed his duties in Argentina.

Originally Mr. Turgeon was also accredited to the Government of Chile and presented his Letters of Credence to President Rios in January, 1942. This appointment was intentionally a temporary one, and in November of the same year a leader of the Montreal bar, Warwick F. Chipman, K.C., accepted the nomination as Minister to Chile.

These successive nominations of ministers to the "A.B.C." countries were not intended to complete the roster of Canadian diplomats in Latin America, but the demands of the War and the increase in the work of the Department, which was not paralleled by a corresponding increase in staff, prevented as rapid an expansion as would have been desired. In July, 1943, the Prime Minister told the House of Commons that Canada could not delay much longer the extension of its diplomatic representation in Latin America and mentioned Mexico as "a case particularly at point". Six months later Mr. King announced that an agreement had been reached on an exchange of Missions with Mexico and Peru. For its first representative in Mexico the Canadian Government designated Mr. Turgeon, who was transferred to Mexico City from Buenos Aires in 1944. At the end of September, 1944, Dr. Henry Laureys, formerly High Commissioner for Canada in South Africa, left Canada to resume his duties in Lima as first Canadian Ambassador to Peru. At present there are five Missions in Ottawa from Latin America.

War Expands Co-operation.-In 1942 the increasing magnitude of Canada's war effort and the desire to emphasize the concept of the United Nations by sympathetic gestures of co-operation resulted in an unusually rapid expansion in the exchange of diplomatic Missions. On November 4 the appointments of L. D. Wilgress as Minister to the U.S.S.R., and Major-General Victor W. Odlum to China were announced. At the close of the month Major-General George P. Vanier was designated as Canadian Minister to the Allied Governments of Belgium, the Netherlands, Czechoslovakia, Greece, Norway, Poland and Yugoslavia.

Relations with the Vichy Government, which had been maintained rather tenuously since the summer of 1940, were terminated after the Allied Forces landed in North Africa. The new Minister to the Allied European Governments established in London was authorized to consult with representatives of the French National Committee in London on matters of mutual interest relating to the conduct of the War. Subsequently, when the French Committee established its headquarters in Algiers, General Vanier was sent there as Canadian representative with the personal rank of Ambassador. Each of the Allied European Governments sent a Minister to Canada during 1942, while the French Committee of National Liberation established its office in the next year. When France and Belgium were liberated, General Vanier transferred his headquarters to Paris, and presented his credentials to the Provisional Government of France on Dec. 20, 1944. Almost a month later Mr. Turgeon assumed his third diplomatic post as Canadian Ambassador to Belgium. He was also accredited as Canadian Minister to Luxembourg.

In addition to the Allied European Governments, two of the chief neutral countries, Sweden and Turkey, also approached Canada with a view to establishing diplomatic relations. The Canadian Government agreed to the exchange of minis-
ters, but, because of the difficulties of representation and personnel, explained that it was not in a position to send ministers to Stockholm and Ankara at present. Both the Swedish and Turkish Ministers have established their Legations in Ottawa.

Missions Become Embassies.-The most recent event of significance in the history of Canadian external relations was the decision in November, 1943, to elevate Missions to embassy rank on a reciprocal basis with the Governments of the United States, the U.S.S.R., China and Brazil. In 1944 the same policy was adopted with Chile, while the new Missions to Mexico and Peru were of embassy status at the outset. The Belgian Legation in Ottawa also assumed embassy rank.

Personnel.-Unlike many other Departments, the coming of peace will accentuate rather than lessen the burdens placed on the Department of External Affairs. To meet its increased duties in wartime the problem of personnel has been partly met by recruiting from the universities and elsewhere a number of assistants whose appointments are intentionally provisional. As men can be released from the Services, new recruits are being obtained from the Armed Forces.

In peacetime the Department will resume its practice of selecting candidates by competitive examination. During the past three years the departmental work has been organized on a divisional basis. Three political divisions are administered by the Associate Under Secretary, who, like the legal adviser, holds the same status as an ambassador. Other divisions, including the legal, diplomatic, economic and information, are on a functional basis.

It is a far cry from the appointment of a High Commissioner in London more than 60 years ago to the exchange of Missions with some 24 countries. This development is proof positive of Canada's growth of importance as a "middle" power and sobering evidence of the increased responsibility which Canada must be prepared to assume in the post-war world.

## Section 2.-Canada's Part in the Relief and Rehabilitation of the Occupied Territories

Introduction.-One of the greatest problems with which the United Nations have been faced since the fortunes of war have turned and final victory has come into view is the relief and rehabilitation of the liberated peoples of Europe and Asia. Countries that have been occupied by the Nazis or Japanese for years and subjected to wide devastation must be brought back into production as rapidly as possible; millions of people torn from their homes and families, and transported to enemy territory, there to toil under degrading conditions inimical to their health and wellbeing will have to be sympathetically cared for until such time as they are enabled to again care for themselves. The planning of such relief and rehabilitation measures is complicated by two unknown factors: (1) The time and season when liberation of the countries and peoples involved will take place; (2) The speed with which some degree of self-sufficiency of production in these countries can be restored, depending, of course, on the varying degree of devastation wrought by the enemy.

While an inter-Allied committee on post-war requirements was set up in London as early as September, 1941, the early work done by the military administration of the Allies (A.M.G.), the Governments-in-exile of the occupied countries, and voluntary organizations such as the Red Cross was important. Naturally, in territory still in the zone of fighting, the military authorities must be responsible for the
necessary relief of civilians and it is only as the military forces advance forward that the civil authorities can take over. On the other hand, the stupendous nature of the tasks to be faced was not fully grasped at the beginning of early inter-Allied discussions, and it was not until recently that the United Nations were able to take steps to organize their resources to meet the full force of the problem. The impulses that had drawn the Allied Powers together in the prosecution of the War itself, such as expressed in Lend-Lease and Mutual Aid, have doubtless played their part in uniting them in regard to immediate and post-war relief and rehabilitation. At the opening of the Second Session of UNRRA at Montreal, September, 1944, the Prime Minister of Canada, the Right Honourable W. L. Mackenzie King, said "The supreme task of UNRRA, it seems to me, is to make the benefits of Mutual Aid so apparent to all Nations as to render enduring the new world order which we so fervently pray may succeed the old"

## The First UNRRA Conference (Atlantic City)

The Organization and Policy of UNRRA.-UNRRA (the United Nations Relief and Rehabilitation Administration) was organized and its general policies formulated on Nov. 10, 1943, at Atlantic City, New Jersey, U.S.A. Representatives of 44 United and Associated Nations had met in Washington on Nov. 9, 1943, to sign an Agreement establishing UNRRA. In this Agreement the nations expressed their determination to bring relief to the victims of war immediately upon the liberation of the countries enslaved by the enemy.

The scope of relief and rehabilitation under UNRRA was confined to practical and necessary limits. The Administration is not a permanent international relief organization but is designed to cope with an emergency, and to make available food and supplies considered essential to alleviate conditions of starvation and disease, whether these exist to-day or develop in the course of the War.

Executive and administrative functions are assigned by the Agreement to a Director General, whose position is analogous to that of the general manager of a corporation. A capable and outstanding American, Governor H. H. Lehman of New York, was appointed to this office.

A Council composed of one member from each of the 44 member countries was established. Its immediate tasks were:-
(1) To outline the nature and scope of relief activities to be undertaken;
(2) To define the relationship of UNRRA with existing inter-governmental supply and shipping agencies, so that effective prosecution of the War would not be impeded;
(3) To decide the policies to be followed in distributing relief supplies in liberated areas, and to ensure that supplies should be equitably apportioned;
(4) To establish methods of determining the needs of liberated peoples;
(5) To prescribe the procedures for obtaining supplies;
(6) To work out a method for the equitable sharing of the burden among the contributing nations;
(7) To frame the rules that are to govern the conduct of UNRRA itself, to give interested nations effective representation in the development of policies, and to facilitate the work of the Director General in carrying out these policies.
These tasks, all involving decisions of considerable difficulty, were approached in an encouraging spirit of co-operation and with a minimum of emphasis on prestige. There was no attempt during the conference at domination. by the large powers or obstruction on the part of the small. Consequently, it was possible in all matters to find satisfactory and workable solutions.

Aside from the Council itself, the policy-making organs of the administration, which advise the Council, consist of the Central Committee; the Standing Regional Committees for Europe, and the Far East; the Standing Committees on Supplies, and Financial Control; and the Standing Technical Committees on agriculture, displaced persons, health, industrial rehabilitation, and welfare.

The Central Committee, on which the United States, the United Kingdom, China and Russia are represented, makes emergency decisions between Council sessions (it is laid down in the Agreement that the Council must meet at least once every six months), but all decisions of the Central Committee must be confirmed by the Council at the earliest possible moment.

A considerable part of the session at Atlantic City was devoted to defining the relationships and the division of responsibility between the Council, the Director General and the Standing Committees of the Council. The Canadian delegation took an active part in working out a satisfactory system of organization. The 'functional' principle of international representation, suggested by Canada, was found to be a highly appropriate principle, and received widespread support. By this system, countries having most to contribute to certain aspects of the work of UNRRA are given corresponding responsibility in the development of policy with regard to those aspects. For instance, the Regional Committee for the Far East is under the Chairmanship of the representative of China and consists of representatives of all Member Governments in that region. The United Kingdom representative is Chairman of the Committee for Europe, which is composed of the representatives of all the Member Governments in Europe together with the representatives of Brazil, Canada, and the United States.

The Chairmanship of the Committee on Supplies was voted to the Minister (now Ambassador) in the Canadian Embassy at Washington. This Committee will play an important part in the affairs of the Administration. The countries represented on this Committee are: Australia, Belgium, Brazil, Canada, China, the French Committee of National Liberation, India, the Netherlands, New Zealand, Russia, the United Kingdom and the United States. The Committee will advise the Council, the Central Committee and the Director General on general policies regarding the provision, financing and transport of supplies. The Chairman will participate in meetings of the Central Committee when supply matters are being considered and he, together with the Director General, will sit in with the Combined Boards when the interests of his Committee are discussed.

It was agreed that the activities of UNRRA in obtaining relief supplies must be co-ordinated with the existing wartime arrangements for the allocation of both supplies and shipping. Consequently all requirements for relief and rehabilitation that have been drawn up or approved by UNRRA are to be brought before the United Nations Combined Boards in Washington which have the duty of allocating Allied supplies of food, munitions, shipping, raw materials, etc., in a way that will contribute most effectively to the prosecution of the War. These requests are to be considered as an additional claim on available supplies, and to be balanced
with military requirements and the needs of the civilian populations in the supplying countries. In cases of scarce commodities which the Combined Boards wish to control, the Boards will consult with the Director General of UNRRA and the Chairman of the Supplies Committee, and then determine the amounts that may be devoted to relief. This will ensure that the flow of supplies necessary for the war effort will not be impeded and that countries which pay for their own supplies do not receive any priority over those which do not.

Several of the occupied countries, including France, the Netherlands, Norway and Belgium have indicated that they intend to pay for the whole or part of their relief needs. In order to achieve an equitable sharing of available supplies, it is provided that all Member Governments keep the Administration fully informed of their intentions concerning the importation of relief and rehabilitation supplies, regardless of how these are to be financed. On the basis of this information the Director General may present to the Combined Boards such recommendations or objections as he may think necessary to obtain a fair distribution of supplies among all the liberated areas. In this way supplies will be equitably distributed, whether or not the receiving country is in a position to pay for them.

The Standing Technical Committees are intended to be expert bodies to advise the Council, the Regional Committees and the Director General on technical matters in their fields.

The Extent of the Problem.-UNRRA officials estimate that about $130,000,000$ Europeans will require relief. The problem in Asia is not so capable of being summarized but there are about $230,000,000$ Chinese now under Japanese domination.

In Europe, live stock has been sadly depleted and fertilizing of the soil has been reduced by a forced program of intensive cultivation. It is known that, before the War, China consumed about $176,000,000$ tons of food annually and that the War has caused a large annual deficit.

The magnitude of the problem definitely limits what can be done in the way of relief. At first funds will not be available to do more than prevent starvation in war-devastated countries and supply such clothing, medical facilities, etc., as are absolutely necessary.

Much immediate civilian relief in liberated areas will have to be initiated by the Army through the Allied Military Government organization. Once the immediate military necessity has passed (it is estimated that the period during which relief will be administered by the military will be about six months), UNRRA steps in. Actually UNRRA officials work with the military, learn the problems to be faced and the best way to handle them so that when the time to take over arrives they are equipped to deal with the situation.

Responsibility for the distribution of relief within a receiving country will be borne by the recognized government exercising administrative authority in that area. UNRRA may not operate in that area without the consent of the recognized government or, if such a government does not exist, the military command.

Finance.-At Atlantic City, first financial contributions to UNRRA were set as follows: Each Member Government whose home territory has not been occupied by the enemy makes a contribution approximately equivalent to 1 p.c. of its national income for the year ended June 30, 1943, as determined by the Member Government. It was not thought desirable to establish a fixed and over-all formula, and each country is left free to decide for itself whether there are special circumstances which would make the 1 p.c. of national income contribution excessively burdensome. As much as possible, but not less than 10 p.c. of the contribution, should be in the form of currency that can be expended outside the country, with the balance in the form of a credit in local currency available for the purchase of the contributing country's goods.*

Canada's contribution amounts to $\$ 77,000,000$. This appropriation was authorized by the Canadian Parliament, in the following manner: $\$ 10,000,000$ was appropriated from the unexpended part, that remained at the end of the fiscal year, of the $\$ 1,000,000,000$ voted in 1943-44 for Mutual Aid; on June 21, 1944, $\$ 6,886,936$ (U.S. funds) was paid over to UNRRA by the Canadian Government which, together with a preliminary contribution of $\$ 55,000$ towards administrative expenses, represented the 10 p.c. in free funds of Canada's total contribution of $\$ 77,000,000$.

Chief contributors to the fund are the United States and the United Kingdom together with Canada and certain other Dominions. The United States contribution is estimated at $\$ 1,350,000,000$ and the United Kingdom contribution of between $£ 76,000,000$ and $£ 77,000,000$ has been met by the appropriation of $£ 80,000,000$ (about $\$ 352,000,000$ ) by the British Government.

It is intended that altogether a fund of between $\$ 2,000,000,000$ and $\$ 2,500,000,000$ will be provided for UNRRA. If this fund proves insufficient the question of further contribution will have to be considered at a later meeting of the Council.

The United States representative is Chairman of the Committee on Financial Control, set up to deal with matters concerning the administrative budget and the auditing and accounting control of the Administration's operations.

## The Second UNRRA Conference (Montreal)

The Second Session of the Council of the United Nations Relief and Rehabilitation Administration was held in Montreal, Canada, from Sept. 16 to Sept. 26, 1944. Fifty nations were represented at that Session and the Canadian Minister Plenipotentiary (now Ambassador) to Washington was appointed Permanent Chairman of the Session.

The position taken from the start was that the preliminaries had been decided at Atlantic City and that progress in grappling with the actual problems could be proceeded with. In the interval between the Atlantic City Session and the Montreal Session, UNRRA had already taken action in the Near East, where about 50,000

[^31]refugees were placed in camps. A smaller UNRRA camp had also been established near Casablanca. As of June 30, 1944, the organization that had been built up consisted of 985 persons, representing nationals of 20 countries and located at Washington, London, Cairo, Chungking, Algiers, Casablanca and Geneva. The authorities at Washington had laid out a comprehensive relief supply program, with the proviso that relief orders should not be allowed to affect the fullest prosecution of the War. Supplies of all kinds had been purchased in vast quantities in anticipation of operation ( $\$ 12,000,000 \mathrm{had}$ been spent in Canada alone). Orders placed by UNRRA in Canada are handled by the Procurement Division of the Mutual Aid Board and are subject to the same controls as domestic orders, to avoid any upset to the Canadian supply position. However, the main tasks for which UNRRA was organized lay ahead.

Among the resolutions adopted by the Council were:-
(1) Inclusion in UNRRA benefits of any United Nations area under the control of any of the United Nations which is of importance to their military operations and which is stricken by famine or disease. (This resolution was framed with India chiefly in mind.)
(2) Special weight and urgency to be given to the relief of those United Nations that have suffered most grievously from the War.
(3) Inclusion of displaced persons in United Nations territories never occupied by the enemy within the jurisdiction of the administration when they are necessitous and lack the resources to return to their homes.
(4) Removal of intruded persons of enemy or ex-enemy nationality to their country of origin from liberated areas when requested by the governments concerned.
(5) Care and repatriation of displaced persons found in enemy or ex-enemy territory and of other persons who have been obliged to leave or have been deported from their country by action of the enemy because of race, religion or activities in favour of the United Nations.
(6) Care and return to their homes of persons of other than United Nations nationality or stateless persons, displaced under similar circumstances, who are found in liberated territory.
(7) Operations in enemy territory for the control of epidemics for the purpose of preventing their spread to United Nations areas or to displaced persons of United Nations nationality found in enemy or ex-enemy areas.
(8) Extension of UNRRA benefits to inhabitants of the Dodecanese Islands.

Work Accomplished by the Committees.-One of the earliest technical committees to organize and get down to business was the Committee on Displaced Persons.

This Committee had to struggle with some of the most complex problems in UNRRA administration. The basic principle as defined at Atlantic City was to repatriate only those persons that their countries desired. Further, only congregated refugees (for example, those in UNRRA camps), not individuals as such, were to be considered. Other displaced persons who had reached a non-invaded area of United Nations territory were to be cared for by government assistance or private relief, not by UNRRA. It was soon seen that the matter was not so simply dealt with. At Montreal the Cuban representative pointed out that his country and others in South America had temporarily opened their doors to thousands of refugees who would wish to return to their own countries as soon as conditions would permit. The Committee was sympathetic to the Cuban proposal that a subcommittee of the technical standing committee of the Council be created to determine the status and define possible help for such displaced persons.

Another side of the picture was the attitude towards "intruded" persons, that is, enemy nationals, particularly Germans, who have been sent to colonize United Nations territory. This report showed: 200,000 Germans sent in to replace French driven from Alsace-Lorraine; Prague full of Germans; hundreds of thousands of Germans sent to colonize the lands from which Poles had been forced in western Poland. Many other cases are on the records and in all it is estimated that between $2,000,000$ and $2,500,000$ Germans have been settled on United Nations territory. The Committee on Displaced Persons recommended that UNRRA be authorized to remove to their homes any enemy or ex-enemy subjects so intruded into United Nations territory.

The Balkans loomed up as the first field of major activity.* The Director General, addressing the Montreal Session requested a statement of policy from the Council on the care to be given displaced persons in United Nations territory which had never been occupied by the enemy. The cost would be great but there were urgent cases such as that of the Greeks and Yugoslavs in the Middle East which required assistance.

Representatives of UNRRA were sent to Italy to survey and report on conditions in that country. They pointed out that 75 p.c. of the population in liberated Italy were on a rationed diet which was only about half that necessary for normal existence. Near Rome, due to difficulties of transport, the diet was only 70 p.c. of the low average for the total liberated area; distress was rampant in many parts. The burden had fallen most heavily on the children and perhaps $2,000,000$ were in dire need. One serious result had been a sharp rise in infant mortality.

Authorization for UNRRA to undertake relief operations in Italy was provided by a resolution passed at the Montreal meeting. The scale and nature of these operations was strictly defined. The amount is not to exceed $\$ 50,000,000$. It is to be restricted to: (a) provision of medical and sanitary aid and supplies; (b) assistance in the care and return to their homes of displaced persons; (c) welfare services for children, and for nursing or expectant mothers.

Canada, being honoured by the Permanent Chairmanship of the Montreal meeting and being represented with the United Kingdom and the United States on the Combined Food Board and the Combined Production and Resources Board, has played an important part in setting the machinery of UNRRA to work and in moulding policy, for these and other Boards are round table conferences where each member speaks frankly, common problems are worked out, information obtained and given, and available supplies distributed in accordance with the most urgent need.

The international machinery offered by UNRRA is the most promising means by which the economic machinery of devastated Europe can be primed-not by indiscriminately supplying Europe with food and finished goods but by helping the liberated peoples to help themselves and, where the need is proved, to furnish the raw materials needed for relief and rehabilitation. All countries in a position to pay will, of course, be expected to do so but countries unable to make payment and in dire need will be eligible for relief. The alternative would be the rapid exhaustion of such reduced foreign exchange assets as were available to the European countries, followed by unbalanced budgets, depreciated currencies and, finally, the imposition of burdensome exchange and trade restrictions.

[^32]
## PART IV.-REPRESENTATIVES OF CANADA IN OTHER COUNTRIES*

## Section 1.-High Commissioners Within the British Commonwealth of Nations

United Kingdom.-The present High Commissioner for Canada in the United Kingdom is the Rt. Hon. Charles Vincent Massey, who was appointed on Nov. 8, 1935. His office is in Canada House, Trafalgar Square, London, S.W.1.

Following is the list of previous High Commissioners:-
Sir Alexander Galt, 1880-83
Sir Charles Tupper, 1884-87, 1888-96
Lord Strathcona and Mount Royal, 1896-1914
Sir George Perley, 1917-22 (Acting High Commissioner 1914-17)
The Hon. P. C. Larkin, 1922-30
The Hon. G. Howard Ferguson, 1930-35

Australia.-The present High Commissioner for Canada in Australia is the Hon. Thomas C. Davis, who was appointed on Nov. 4, 1942. His office is in Canberra.

Following is the list of previous High Commissioners:-
Mr. Charles J. Burchell, 1939-41
Major-General Victor Odlum, 1941-42
New Zealand.-The present and first High Commissioner for C'anada in New Zealand is Dr. W. A. Riddell, who was appointed on Feb. 1, 1940. His office is in Wellington.

South Africa.-The first High Commissioner for Canada in the Union of South Africa was Dr. Henry Laureys, who was appointed on Feb. 1, 1940. The High Commissioner's office is in Pretoria. He has been succeeded by Mr. Charles J. Burchell, K.C.

Ireland.-The present High Commissioner for Canada in Ireland is Mr. J. D. Kearney, K.C., who was appointed on July 31, 1941. His office is in Dublin. The previous High Commissioner was Mr. John H. Kelly, who died in Dublin in 1941.

Newfoundland.-The first High Commissioner for Canada in Newfoundland was Mr. Charles J. Burchell, K.C., who was appointed on July 31, 1941. He has been succeeded by Mr. J. Scott Macdonald. His office is in St. John's.

[^33]
## Section 2.-Representatives in Foreign Countries

United States of America.-The first Canadian Ambassador to the United States was the Hon. Leighton Goldie McCarthy, K.C., who was appointed Minister Plenipotentiary on Feb. 24, 1941, and presented his Letter of Credence as Ambassador on Jan. 12, 1944. He resigned on Dec. 31, 1944, and was succeeded by Mr. L. B. Pearson, who presented his Letter of Credence as Ambassador on Jan. 22, 1945. The address of the Canadian Embassy is 1746 Massachusetts Avenue, Washington, D.C.

Following is the list of previous Ministers:-
The Hon. Charles Vincent Massey, 1927-30
The Hon. W. D. Herridge, 1931-35
The Hon. Sir Herbert Marler, 1936-39
Mr. Loring C. Christie, 1939-41
Canadian Consulzte General in New York City, N.Y.-The Canadian Consulate General in New York City is in charge of Mr. Hugh Day Scully, Consul General, who was appointed to that post Apr. 8, 1943. The Consulate General is situated at 620 Fifth Avenue, New York, N.Y.

Belgium.-Mr. Jean Desy was appointed as the first Canadian Minister to Belgium in 1939. The Legation has been raised to the rank of Embassy and the Hon. W. F. A. Turgeon presented his Letter of Credence as Ambassador on Jan. 16, 1945.

Luxembourg.-Hon. W. F. A. Turgeon, Canadian Ambassador to Belgium also represents Canada in Luxembourg as Minister. He presented his Letter of Credence on Jan. 3, 1945.

Czechoslovakia, Greece, Netherlands, Norway, Poland, Yugoslavia.(Temporary address-London, England). Major-General George P. Vanier was appointed on Nov. 30, 1942, as Minister to the Allied European Governments in London. During the absence of General Vanier in Algiers and until the liberation of Belgium, Mr. Pierre Dupuy was Chargé d'Affaires, who has been appointed Canadian Minister to the Netherlands.

Brazil.-The first Canadian Ambassador to Brazil is Mr. Jean Desy, who was appointed Minister Plenipotentiary June 24, 1941, and presented his Letter of Credence as Ambassador on Jan. 18, 1944. The Canadian Embassy is at Rio de Janeiro.

Argentina.-The first Canadian Minister to Argentina was the Hon. W. F. A. Turgeon, who was appointed July 31, 1941. He has been transferred to Brussels. Mr. K. P. Kirkwood is Chargé d'Affaires. The Canadian Legation is at Buenos Aires.

Union of Soviet Socialist Republics.-The first Canadian Ambassador to the Union of Soviet Socialist Republics is Mr. L. D. Wilgress, who was appointed Minister Plenipotentiary Nov. 4, 1942, and presented his Letter of Credence as Ambassador on Feb. 29, 1944. The Canadian Embassy is at Moscow.

China.-The first Canadian Ambassador to China is Major-General Victor W. Odlum, who was appointed Minister Plenipotentiary Nov. 4, 1942, and presented his Letter of Credence as Ambassador on Mar. 15, 1944. The Canadian Embassy is at Chungking.

Chile.-The first Canadian Minister to Chile was the Hon. W. F. A. Turgeon, who presented his Letter of Credence on Jan. 2, 1942. He was succeeded on Nov. 4, 1942, as Minister by Mr. Warwick Chipman, K.C., who presented his Letter of Credence as Ambassador on July 8, 1944. The Canadian Embassy is at Santiago.

Mexico.-The first Canadian Ambassador to Mexico was the Hon. W. F. A. Turgeon, who presented his Letter of Credence on Apr. 27, 1944. He has been succeeded by Dr. H. L. Keenleyside, who presented his Letter of Credence on Feb. 15, 1945.

Peru.-Dr. Henry Laureys presented his Letter of Credence as the first Canadian Ambassador to Peru on Oct. 21, 1944.

France.-After the formation of the French Committee of National Liberation in Algiers, Major-General George P. Vanier, who had been Canadian Representative to the Committee in London, was appointed at Algiers in a similar capacity, with the personal rank of Ambassador. General Vanier is now accredited to the President of the Provisional Government of the French Republic as Canadian Ambassador in France, and presented his Letter of Credence on Dec. 20, 1944.

Greenland.-The Canadian Consulate at Greenland is in charge of Mr. Trevor Lloyd as Vice Consul and Acting Consul.

## PART V.--REPRESENTATIVES OF OTHER COUNTRIES IN CANADA

## Section 1.-Representatives of the Governments of the British Commonwealth of Nations

High Commissioner for the United Kingdom: (Office established 1928.)
The present High Commissioner is the Rt. Hon. Malcolm MacDonald, M.P., who assumed office in 1941. The previous High Commissioners were:Sir William H. Clark, 1928-34
Sir Francis Floud, 1935-38
Sir Gerald C'ampbell, 1938-41
Address: Earnscliffe, Ottawa.
High Commissioner for the Commonwealth of Australia: (Office established 1939.)

The first High Commissioner was Major-General the Hon. Sir William Glasgow, K.C.B., who assumed office in 1940. He has been succeeded by Mr. Alfred Stirling.

Address: 114 Wellington St., Ottawa.
High Commissioner for New Zealand: (Office established 1942.)
The present High Commissioner is the Hon. David Wilson, who assumed office in 1944.

Address: 105 Wurtemburg Street, Ottawa.
Accredited Representative of the Union of South Africa: (Office established 1938.)

The first Accredited Representative was Mr. David de Waal Meyer, who assumed office in 1938. Pending the appointment of a successor, Mr. Robert Jones is Acting Accredited Representative.

Address: 56 Sparks Street, Ottawa.

High Commissioner for Ireland: (Office established 1939.)
The present and first High Commissioner is the Hon. John J. Hearne, who assumed office in 1939.

Address: 140 Wellington Street, Ottawa.

## Section 2.-Diplomatic Representatives of Foreign Countries

United States of America: (Established 1927.)
Ambassador Extraordinary and Plenipotentiary: His Excellency the Hon. Ray Atherton (Nov. 19, 1943).

Address: Wellington Street, Ottawa.
Belgium: (Established 1937.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Paternotte de la Vaillee (nominated).

Address: 395 Laurier Avenue East, Ottawa.
China: (Established 1942.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Dr. Liu Shih Shun (Feb. 26, 1944).

Address: 201 Wurtemburg Street, Ottawa.
Brazil: (Established 1941.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Cyro de Freitas-Valle (Apr. 6, 1944).

Address: 140 Wellington Street, Ottawa.
Mexico: (Established 1944.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Dr. Francisco del Rio y Cañedo.

Address: 87 Sparks Street, Ottawa.
.Union of Soviet Socialist Republics: (Established 1942.)
Ambassador Extraordinary and Plenipotentiary: His Excellency G. N. Zaroubin (June 8, 1944).

Address: $\mathbf{2 8 5}$ Charlotte Street, Ottawa.
France: (Established 1928.)
Ambassador Extraordinary and Plenipotentiary: His Excellency J. M. F. de Hauteclocque (Feb. 21, 1935): IM4i,

Address: 42 Sussex Street, Ottawa.
Peru: (Established 1944).
Ambassador Extraordinary and Plenipotentiary: His Excellency Alfredo Benavides (nominated).

Charge d'Affaires ad interim: Dr. Luis Alvarado G.
Address: Chateau Laurier, Ottawa.
Ngrway: (Established 1942.)
Envoy Extraordinary and Minister Plenipotentiary: Hon. Daniel Steen (Apr. 2, 1942).

Address: 192 Daly Avenue, Ottawa.

Czechoslovakia: (Established 1942.)
Envoy Extraordinary and Minister Plenipotentiary: Hon. Dr. Frantisek Pavlasek (Aug. 14, 1942).

Address: 171 Clemow Avenue, Ottawa.
Sweden: (Established 1943.)
Envoy Extraordinary and Minister Plenipotentiary: Hon. Per Wijkman (Aug. 4, 1943).

Address: Rockcliffe Park.
Argentina: (Established 1941.)
Envoy Extraordinary and Minister Plenipotentiary: Hon. Dr. Eduardo L. Vivor (Dec. 14, 1943).

Address: 18 Rideau Street, Ottawa.
Turkey: (Established 1944.)
Envoy Extraordinary and Minister Plenipotentiary: Hon. Şevki Alhan (Mar. $6,1944)$.

Address: Chateau Laurier, Ottawa.
Netherlands: (Established 1939.)
Envoy Extraordinary and Minister Plenipotentiary: Hon. Jonkheer J. W. M. Snouk Hurgronje (Apr. 13, 1944).

Address: 213 Laurier Avenue West, Ottawa.
Poland: (Established 1942.)
Envoy Extraordinary and Minister Plenipotentiary: Hon. Waclaw Babinski (Sept. 8, 1944).

Address: 333 Chapel Street, Ottawa.
Yugoslavia: (Established 1942.)
Chargé d'Affaires ad interim: Dr. Pero Cabric.
Address: 259 Daly Avenue, Ottawa.
Chile: (Established 1942.)
Charge d'Affaires ad interim: Dr. H. Diaz-Casanueva.
Address: 56 Sparks Street, Ottawa.
Greece: (Established 1942.)
Chargé d'Affaires ad interim: Mr. Pierre Depasta.
Address: Chateau Laurier, Ottawa.

## PART VI.-CANADA AND THE LEAGUE OF NATIONS*

An account of Canada's relationship with the League, and an outline of its organization, is given in the Year Books from 1931 to 1940. See the list of Special Articles at the front of this edition.

[^34]

The records accumulated at the decennial censuses of Canada, since the creation of the Dominion in 1867 to the latest census to date, 1941, make a valuable contribution to the demographic history of the nation. Each successive decade has added to the vast scope of the material; the detailed statistical analyses and the numerous monographs and studies available under the several aspects of demography and agriculture have made the census the most important statistical milestone of accomplishment and progress.

The salient aspects of population growth under each main heading shown in the conspectus above are covered but not necessarily in any one edition. The policy adopted is to maintain the skeleton of the chapter and the historical tables as a permanent feature and build up each section as statistics are available following each census. Therefore, much material for the 1941 Census is given in the following pages and data not yet available will be published in subsequent editions. The Canada Year Book can do no more than summarize the broad results of the Census. More detailed information may be obtained from the Census puplications.*

The main legal reason for a periodic census under the Constitution of Canada is to determine representation in the House of Commons: this, according to the British North America Act, is based on population (see p. 55). The payment of provincial subsidies on a per capita basis is adjusted annually on population estimated from the census data. In view of this the de jure principle of enumeration is used, i.e., each person is counted as belonging to the locality of his regular domicile, rather than to the place he may be at the date of enumeration, a method followed in some other countries.

Yet the modern Dominion-wide census, however important this redistribution purpose, has a much wider sphere of usefulness. It constitutes, through the data collected directly from the people, a true measure of the social and economic progress of the country and can therefore be used in the regulation of general administration and public affairs, social security and post-war rehabilitation programs, etc. For instance, achievement can be measured from the census records by examination of how progressively modern machinery and household equipment, radios and motorcars have been introduced into industry and into home life over a series of decades.

[^35]The changing complexion of the population can be traced in each area or locality, and the influences of age, sex, occupation, etc., shown. Comparative standards of living are indicated by data concerning employment, earnings, housing accommodation, etc. (especially when supplemented by consumption and price data). Changing social and economic conditions are reflected by the movement of population from rural districts to urban municipalities and, vice versa, by the growth of industry, the numbers and status of farm mortgages, taxes and a hundred and one other factors. Many other items of information upon which the Government must depend to conduct the business of the country are made available by this periodical stocktaking of the people.

Growth of Population in Canada.-A brief résumé of the population history of Canada from the first census in 1666, when it numbered 3,215 persons, to the eighth Dominion census of 1941, when the figure was $11,506,655$, places Canada among the leading countries of the British Empire in the rate of population growth. The inflow of capital and the opening up of new and vast areas with the consequent stimulation of immigration began with the opening of the twentieth century and was the latest episode in the transformation of the central prairie region, which, in the course of forty years, has been organized into provinces and developed with such promise. While at the end of the nineteenth century the population of the Dominion of Canada was approximately $5,400,000$, it had about doubled this figure by 1931. The general increase in the population of European countries during the entire nineteenth century was approximately three-fold; Canada equalled this rate of progress during the sixty years from 1871 to 1931.

In the decade 1900-10 immigration, alone, totalled $1,800,000$. This figure was the main factor in the gain of $34 \cdot 17$ p.c. which the total population of Canada registered in that decade and which was relatively larger than the growth of any modern country during the same period.

The next decade started out with an intensification of this immigration movement, but with the outbreak of the First World War a recession set in. The effects of the First World War upon the Canadian population were both direct and indirect. Nearly 60,000 Canadians died overseas and approximately 20,000 took their discharge in the United Kingdom. To these may be added 50,000 deaths from the war plague, influenza. In addition large numbers of British residents in Canada, most of them recent immigrants, left Canada to join the forces of the United Kingdom and did not return, and the same is true of enemy nationals who passed in considerable numbers into the United States immediately before and after the declaration of hostilities. The fluidity of the Canadian population accordingly rendered the War costly in personnel far beyond actual casualties. However, the net result over the ten years was a population increase of 21.94 p.c. or the largest increase for any modern country with the exception of Australia where an increase of 22.01 p.c. was recorded.

The Census of 1931 showed a further increase of $18 \cdot 08$ p.c. on 1921 . Natural increase and immigration contributed $1,325,256$ and $1,509,136$, respectively, although the net gain was only $1,588,837$ since estimated emigration was $1,245,555$, for the ten years. Census returns of Great Britain for 1921-31 showed an increase of 4.7 p.c., equalling that of the previous decade. New Zealand in the ten-year interval between 1911-21 showed an increase of 19.8 p.c. and between 1921-31, $19 \cdot 3$ p.c. A census of Australia was not taken in 1931, but the official estimate
of population based on the Census of 1933 gives an increase of $19 \cdot 8$ p.c. as against 22.0 p.c. for the period 1911-21 (Official Year Book of Australia, 1940, p. 519). Census figures for the United States show an increase of population of 14.9 p.c. between $1910-20$ and $16 \cdot 1$ p.c. from 1920-30.

The eighth Census of Canada as of June 2, 1941, gives the population as $11,506,655$ as compared with $10,376,786$ as of June 1, 1931, an increase of $1,129,869$ or 10.89 p.c. in the decade. During the greater part of this decade Canada along with all other countries was face to face with a prolonged and severe economic depression; immigration was still further restricted by government regulations as well as by economic necessity. The figures for immigrant arrivals were actually reduced from $1,166,004$ in the ten-year period $1921-31$ to 140,361 in 1931-41. The natural increase for this period showed a reduction of about 7 p.c. and, since immigration was reduced more than 88 p.c. over the decade, the net increase in population was due almost entirely to the still favourable birth and death rates of the established population.

## Section 1.-Census Statistics of General Population

Since the creation of the Dominion of Canada in 1867, decennial censuses have been taken as of the dates Apr. 2, 1871, Apr. 4, 1881, Apr. 5, 1891, Apr. 1, 1901, June 1, 1911, 1921, 1931 and June 2, 1941. Summary figures are given in Tables 1-4.

## 1.-Population of Canada, by Provinces and Territories, Census Years 1871-1941

Note.-The populations of the Prairie Provinces in 1906, 1916, 1926 and 1936, are shown at p. 147 of the 1937 Year Book. For intercensal estimated populations, see table at p. 128.

| Province <br> or <br> Territory | 1871 | 1881 | 1891 | 1901 | 1911 | 1921 | 1931 | 1941 |

${ }^{1}$ Revised in accordance with the Labrador Award of the Privy Council, Mar: 1, 1927. The total for Canada includes 485 members of the Royal Canadian Navy who were recorded separately in 1921. ${ }^{2}$ The decreases shown in the population of the Northwest Territories since 1891 are due to the separation therefrom of vast areas to form Alberta, Saskatchewan and Yukon and to extend the boundaries of Quebec Ontario and Manitoba.

${ }^{1}$ The populations of Ontario, Quebec, Manitoba and Northwest Territories were adjusted for 1911 according to the provisions of the Boundaries Extension Acts, $1912 . \quad{ }^{2}$ Populations of Northwest River Arm and Rigolet on Hamilton Inlet have been deducted from Quebec, as these parts were awarded to Newfoundland by decision of the Judicial Committee of the Privy Council, Mar. 1, 1927. The grand total for Canada also contains 485 members of the Royal Canadian Navy who were recorded separately in 1921.
4.-Area and Density of Population, by Counties or Census Divisions, 1941

## 5.-Densities of Population in Various Countries in Recent Years

Note.-In the past, this table has been based on census data. Owing to the incidence of the War and the postponement of regular census-taking in most countries, it has been decided to substitute density figures based on estimated population in those cases marked with an asterisk (*), rather than give census data that is not representative of existing conditions. Total area is used, except in the cases of Canada, the Netherlands, Norway, Sweden and the United States, where figures of land area are available.

| Country | Year | $\begin{gathered} \text { Persons } \\ \text { per } \\ \text { Sq. Mile } \end{gathered}$ | Country | Year | $\begin{aligned} & \text { Persons } \\ & \text { per } \\ & \text { Sq. Mile } \end{aligned}$ |

${ }^{1}$ Subject to adjustment as later data are made available.

## Section 2.-Sex Distribution

The sex distribution of the Canadian people is characterized, as is that of any 'young' population, by a preponderance of males, although this condition has been greatly modified in recent times, especially since the rigid control of immigration following the First World War. In 1666, during the early years of settlement by the French-speaking immigrants, $63 \cdot 27$ p.c. of the population were males. In 1784, when the English-speaking immigration to Canada was commencing, there were 54,064 males and 50,759 females and by the middle of the nineteenth century there were 449,967 males to 440,294 females in Lower Canada, and 499,067 males to 452,937 females in the more newly settled Upper Canada. Since Confederation the newer sections of Canada-the west and the northwest-have shown the greatest excess of males.

From 1871 to 1941, for Canada as a whole, the percentage of males never dropped below 51 p.c. of the total population, whereas for western Canada it varied between 53 p.c. and 59 p.c.
7.-Sex Distribution of the People of Canada, by Provinces, 1871-1941

${ }^{1}$ Includes 485 members of the Royal Canadian Navy, who were recorded separately in 1921.
Immigration has influenced the sex distribution of the population, as between provinces, in widely different degree. In the older settlements of Quebec and parts of New Brunswick and Ontario, where the populations are of French basic stock, immigration has not played as great a part in upsetting the normal distribution of the sexes as it has in the other provinces. Even in Ontario immigrants from Continental European countries do not settle as readily and are not assimilated as completely as in the newer western provinces.

A characteristic of population distribution since 1911 has been the rapid growth of urban centres due to the far-reaching developments in manufacturing that have entirely changed the economic picture. In 1911, $54 \cdot 6$ p.c. of the population was classified as rural and 45.4 as urban. Of the rural population of $3,933,696,2,143,893$ or 54.5 p.c. were males and $1,789,803$ or 45.5 p.c. were females: of the urban population of $3,272,947,1,678,102$ or $51 \cdot 3$ p.c. were males and $1,594,845$ or $48 \cdot 7$ p.c. were females. In $1941,45 \cdot 7$ p.c. of the population was rural and $54 \cdot 3$ p.c. urban. Of the rural population of $5,254,239,53 \cdot 7$ p.c. were males and $46 \cdot 3$ p.c. were females, while $49 \cdot 2$ p.c. of the urban population of $6,252,416$ were males and $50 \cdot 8$ p.c. were females, showing quite clearly the marked trend toward urbanization of both males and females.

Table 8 gives the position of Canada among other countries of the world in regard to masculinity.

## 8.-Masculinity of the Populations of Various Countries in Recent Years

Note.-The minus sign ( - ) indicates a deficiency of males.

1 White population only.

## Section 3.-Age Distribution

The age distribution of a population is fundamental to most, if not all, other analyses, for the age factor influences employment, marriage, birth rates and death rates, education, immigration, criminology and a multitude of events and activities that are of great importance in the national life.

Immigration has a strong influence on age distribution: it does not directly affect the very young sections of the population except to a very small degree, but it immediately affects the age groups between the 'teens' and the 'twenties' and its effects are carried to the older groups as time goes by. Thus, the influence of the very heavy immigration of the early years of the century (1900-11) is described in the text at p. 92 . In 1901, $175 \cdot 1$ persons'per thousand of the total population were in the age group 20-29 years and $130 \cdot 5$ persons per thousand in the group 30-39 years: a decade later, $190 \cdot 3$ per thousand were in the former group and $142 \cdot 6$ in the latter. This movement was cut down very severely after the outbreak
of war in 1914 and therefore the influence of these earlier accretions to the population would be expected to creep through the upper age groups year by year, and it has already reached those of the population in the 'fifties'.

## 9.-Male and Female Populations of Canada, by Age Periods, 1921-41

Note.-For comparable data for 1881-1911, see the 1934-35 Year Book, p. 118.

Between 1931 and 1941 a more pronounced general ageing of the population is shown owing to practically non-existent migration and a lower birth rate-factors that were emphasized during the depression years. In 1921 the number per thousand of total population between 40 and 59 years of age was $183 \cdot 0$; it was $201 \cdot 1$ in 1931 and 209.5 in 1941. Greater proportional increases, however, are shown by the group 60 years of age and over; this group represented $75 \cdot 1$ per thousand of the total population in 1921, $83 \cdot 8$ in 1931 and no less than $102 \cdot 2$ per thousand in 1941.

More detailed tables on this subject are given at pp. 94-96 of the 1943-44 edition of the Year Book.

## Section 4.-Conjugal Condition

Next to the sex and age distribution of a population, that of conjugal condition is probably the most fundamental. Its incidence is twofold: 'vital' and 'economic and social'.

The vital basis lies in the influence of the marriage state on the fertility of a population and, from this angle, close analyses of conjugal condition, by age, are important. The ages of females (see Table 9), especially between 15 and 45 years, have more significance than those of males; if the proportion of females in this group is small, the expected proportion of births will also be small. It has been shown that for the Canadian population the combined influences of age
of the population, age of the married females, and proportion of females married has become steadily more favourable to the birth rate from 1871 to 1921 but that, since the latter date, the trend has been less favourable.
10.-Conjugal Condition of the Population, 15 Years of Age or Over, by Sex, 1911-41

${ }^{1}$ Includes conjugal condition not stated; percentages are based on stated condition.
In Table $\mathbf{1 0}$ the summary statistics of conjugal condition of the population are based on the population 15 years of age or over, for censuses from 1911 to 1941. Figures for conjugal condition for censuses previous to 1911 are not comparable. In Canada as a whole there are more married males than married females because of the excess of married male immigrants. As between provinces, however, the difference in the proportions of married males and females in either urban or rural areas is, in part, caused by married males sometimes residing at their places of work rather than at their homes. Other striking statistics of conjugal condition are the great preponderance of widows compared to widowers and the large and increasing numbers of divorced or legally separated, but the reasons for these figures are more apparent.

## Section 5.-Racial Origins

A population composed of divers racial stocks gives rise to political, economic and social problems quite different in nature from those of one with a small admixture of foreign elements, although, to the extent that certain racial stocks are more readily assimilated than others, the problems are mitigated. It is equally true that the different educational, moral, economic, religious and political backgrounds of a people of mixed origins lend variety and diversity to the national life.

The two basic stocks of the Canadian people are the French and the English: historically the French is much the older (see under "Growth of Population", p. 92) and, excepting for the Census of 1921, has exceeded in numbers any one of the basic British Isles stocks.

It will be seen from Table 12 that, at the time of Confederation, the largest of the groups comprising the British Isles races was the Irish and that the Irish and the Scottish together outnumbered the English by almost two to one. The English, however, exceeded the Irish after 1881, while the Scottish took second place after 1911. From 1881 to 1901, those of Irish origin increased only $3 \cdot 3$ p.c.: the smaller proportion of Irish to English and Scottish was due not alone to a decline in immigration but to their emigration from Canada. The relative gains from 1911 to 1921 of the British Isles races as a group brought them to over one-half ( $55 \cdot 4$ p.e.) of the total population. The English (with 28.96 p.c.) ranked first in 1921 of all races in Canada, the French were second ( $27 \cdot 9$ p.c.), the Scottish were third ( 13.35 p.c.), and the Irish fourth ( 12.61 p.c.). In 1931 the French again assumed the premier position and the English ranked second, outnumbered by 187,000, yet there were only 54 French to every 100 persons of English, Scottish, Irish and Welsh descent combined. There was a relative reduction in the British Isles races from $57 \cdot 03$ p.c. of the total population in 1901 to $49 \cdot 7$ p.c. in 1941. The causes for this relative decrease were mainly: declining immigration from the British Isles, emigration to the United States of the Anglo-Saxons, repatriation of large numbers of French Canadians from the United States, and the generally higher rate of increase on the part of the French as compared with the various Anglo-Saxon peoples. The factors of immigration and emigration are transitory and change rapidly but the rate of increase has been persistently favourable to the French.

For the British Isles races the inter-decennial increases have fallen consistently from 1911 to 1941. Between 1911 and 1921 the increase was 869,657 ; for the following decade it was 512,333 ; and from 1931 to 1941, 334,833 .

The British Isles and French groups taken together constituted 80 p.c. of the population in 1941, as was the case in 1931; this compares with 83 p.c. in 1921, 84 p.c. in 1911, 88 p.c. in 1901,89 p.c. in 1881 and no less than 92 p.c. in 1871 . This pronounced decline has been due, in the main, to immigration of Continental Europeans to Canada during the past 40 years.

From the beginning of the present century the proportion of the European races (other than the French) increased from 8.53 p.c. in 1901 to 17.76 p.c. in 1941. The rate was such as to more than double the numbers of the European stocks in one decade (1901-11) and was much higher for specific origins: for instance the Belgians and Scandinavians trebled; the Jews and Italians increased more than fourfold; the Poles and Finns, respectively, were numerically five and six times stronger in 1911 than in 1901.

The second decade of the century showed declining rates of growth; this period included three years of the heaviest immigration in the history of the Dominion and four years of war. The net result was that the European stocks increased from 944,783 to $1,247,103$ or 32 p.c. There were certain exceptions where the rates recorded for 1921 exceeded those for the previous decade.

Several significant changes occurred in the third and fourth decade, the increase for the European stocks, other than British and French, rose from 1,247,103 in 1921 to $2,043,926$ in 1941 or by $63 \cdot 9$ p.c. With the resumption of moderate immigration from Continental Europe in 1921 and the relatively higher birth rate among earlier Continental European immigrants, foreign European stocks increased nearly four and one-half times more rapidly than the British in 1921-31.

Table 13 shows the composition of the population, as recorded by the 1941 Census. The principal stocks in Canada arranged in descending order of numerical importance, are as follows:-

| Racial Origin | Rank | Racial Origin | Rank |
| :---: | :---: | :---: | :---: |
| French. | 1 | Ukrainian.. | 6 |
| English. | 2 | Scandinavian | 7 |
| Scottish | 3 | Netherlands | 8 |
| Irish. | 4 | Jewish.... | 9 |
| German.. | 5 | Polish.. | 10 |

Several interesting changes have occurred during the past three decades. Besides the changing numbers in the English and French stocks, an important change was the moving up of the Ukrainians from tenth place with 107,000 in 1921 to sixth place in 1931 and 1941 with 225,000 and 306,000 , respectively. This may be attributed to a high birth rate rather than to immigration. The German race ranked fifth in 1921, 1931 and 1941, but the figures, which increased from 295,000 in 1921 to 474,000 in 1931, decreased to 465,000 in 1941. Since Netherlands origin has shown an abnormal increase between 1931 and 1941, it is possible that many families of German origin were included in this latter racial group. This tendency was also in evidence during the decade of the First World War, 1911-21.

It is of interest to find how the leading racial origins are represented in the populations of leading Canadian cities and in Table 14 the total populations of nine cities of Canada are analysed from this standpoint. The predominantly French complexion of Montreal and Quebec contrasts with the British Isles racial majorities of the other cities.

## Section 6.-Religions

At each census the actual numbers attached to any religious denomination, as reported by the persons enumerated, have been recorded. The development of the different denominations from an early date is traced statistically in Table 15.

Over the period from 1871 to 1941 something like 40 p.c. of the population of Canada has been of the Roman Catholic faith. This proportion has been remarkably constant over the 70 years. The 1941 percentage (inclusive of Greek Catholics) was 43.34 p.c. Methodists were $15 \cdot 67$ p.c. of the population in 1871 but fell to $13 \cdot 19$ p.c. in 1921 . Presbyterians increased from $15 \cdot 57$ p.c. in 1871 to 16.04 p.c. in 1921; they were reinforced by the considerable immigration from Scotland after the beginning of the century. The organization of the United Church of Canada in 1925 left the Presbyterians and the Congregationalists much weaker in membership. Almost all Methodists, the main body of Congregationalists and a large number of Presbyterians united to form that Church. The denominations specified (except for "other") include about 95 p.c. of the population. The reason for omitting the details of the smaller denominations is that comparable figures for earlier censuses are practically impossible to obtain because of the numerous changes of nomenclature and regrouping that have taken place over the years. Tables 16 and 17 give the information for leading religions by provinces and for nine principal citics.

Among some of the numerically larger European races in Canada the leading religious denominations at the 1941 Census were: German- $32 \cdot 0$ p.c. Lutheran, $25 \cdot 0$ p.c. Roman Catholic and $14 \cdot 2$ p.c. United Church; Ukrainian- 62.3 p.c. Roman Catholic and $29 \cdot 1$ p.c. Greek Orthodox; Scandinavian-60 p.c. Lutheran, 17.0 p.c. United Church and 6.8 p.c. Anglican; Netherlands- 30.5 p.c. Mennonite, 28.1 p.c. United Church, 11.4 p.c. Anglican and $7 \cdot 6$ p.c. Baptist. About 81 p.c.
of the people of Polish origin were Roman Catholic and 91 p.c. of the Italians reported this religious denomination. It is interesting to note that $13 \cdot 6$ p.c. of the Chinese stated that they belonged to the United Church and 7 p.c. to the Presbyterian Church, while 21.4 p.c. of the Japanese reported United Church as their religious denomination.

## 15.-Religions of the People, 1871-1941, with Percentage Distribution for 1941

## Section 7.-Birthplaces

The population of Canada by broad nativity groups, Canadian born, other British born and foreign born, is shown in Table 18. This table indicates that the proportion of the Canadian born to the entire population has declined during the 70 years from 1871-1941.

The effects of the large immigration at the beginning of the century are seen in all columns of the percentage figures after 1901 . Whereas in $1871,83 \cdot 30$ p.c. of the total population were Canadian born, 14.06 p.c. other British born, and 2.64 p.c. foreign born, the corresponding proportions in 1941 were 82.46 p.c., 8.72 p.c. and 8.82 p.c., respectively.

The smallest element in the population, viz., the foreign born other than United States born, actually shows the greatest percentage increase. These other foreign born increased rapidly from 0.85 p.c. in 1871 to 7.50 p.c. in 1931 , more than doubling in absolute numbers from 1901. The declines of the group indicated for 1921 and 1941 are attributable to restricted immigration policies. (See Chapter VI.)

[^41]${ }^{2}$ Includes six provinces only.
${ }^{3}$ Includes
Table 27, p. 113 of the 1943-44 Year Book gives, for 1941, the above information analysed by sex and provinces.

Table 19 gives the total population by country of birth for census years 18711941. The census, under birthplace, collects information on both the country of birth of the immigrant arrivals in Canada and the province of birth of the nativeborn population. These data provide information respecting the interprovincial movement of the Canadian-born population (see p. 120).

Comparative figures for country of birth for census periods to 1921 and those taken more recently are difficult to obtain because of the many geographical changes in Europe after the First World War; for instance, a person who early in the century migrated to Canada from a certain part of Austria or Hungary might not realize that in 1931 he should have been recorded as of Polish or Roumanian birth in line with the new national boundaries. In comparing the census figures of several decades these facts have to be considered and a regrouping of certain European countries whose boundaries were changed in later censuses is carried back to earlier censuses to maintain comparability. Table 19 is probably as far as the census can go in supplying strictly comparable figures along these lines. In this table no change has been made affecting the census figures themselves: they have been merely regrouped.

COMPARISONS OF CANADIAN BORN, OTHER BRITISH BORN, UNITED STATES BORN, CONTINENTAL EUROPEAN, (AND OTHER), 1871-1941 COMPARAISONS DES NES CANADIENS, AUTRES NES BRITANNIQUES, NES AMERICAINS, EUROPEENS CONTINENTAUX, (ET AUTRES), 1871-1941

Table 20 gives for all urban centres of over 30,000 the numbers and proportions that are of Canadian birth and those born outside Canada. As is to be expected, the percentages of those born outside Canada are in general much greater in western than in eastern cities.

[^42]
## Section 8.-Rural and Urban Population

For the purposes of the Census, the population residing in cities, towns and incorporated villages has been defined as 'urban' and that outside of such localities as 'rural'. The distinction between rural and urban populations in Canada, therefore, is a distinction of provincial legal status rather than of size of aggregation of population within a limited area. Since the laws of the various provinces differ in regard to the population necessary before a municipality may be incorporated as urban,* the line of demarcation between rural and urban population is not at all uniformly drawn throughout the Dominion.

This basis of comparing rural and urban populations, which is adhered to throughout the census analyses, is, then, adopted for Canada, not because it is hest, but because the necessary comparable data over a long period of years required for comparison by degree of urbanization does not exist. Obviously, the populations of villages of less than 1,000 cannot be regarded as truly urban, although there is reason, for certain purposes, to distinguish them from the surrounding rural populations, in that they enjoy definite cultural advantages not possessed by the strictly rural municipalities.

To overcome some of the difficulties involved, and to provide a basis for comparison by size with other countries, Table 21 has been prepared. These data enable places outside any required size limits to be readily excluded. Similar data, by provinces, will be found in Volume II of the Census of 1941.

On the basis of the census classification, it is apparent from Table 22 that from 1931-41, as in the previous decade, urban communities absorbed nearly $60 \cdot 22$ p.c. of the total increase in population with the result that the urban population of Canada in 1941 exceeded the rural by 998,177 . Out of every 1,000 persons in the country, 457 were resident, on June 2, 1941, in rural and 543 in urban communities, as compared with 463 in rural and 537 in urban communities on June 1, 1931; 505 in rural and 495 in urban as on June 1, 1921; 546 in rural and 454 in urban on June 1, 1911.

It is seen that during the latest four decades there has been a radical shifting in the distribution of the Canadian population as between rural and urban districts. The change has been continuous throughout the period. During the decade ended 1941 the proportion has increased from 53.70 p.c. to $54 \cdot 34$ p.c. In this urban flow of population Canada is by no means unique. The same change has characterized virtually all western nations to a greater or lesser degree during the past century.

The information regarding rural and urban residence was enlarged upon in the Census of 1941. Every person stated not only his province of birth, but also whether he was born in a rural or urban municipality, the length of residence in the rural or urban municipality in which he was enumerated, the province or country of previous residence, and whether this was in a rural or urban municipality. This information will enable a closer study to be made of urbanization and its causes.

During the past decade, the continual growth of manufacturing and industrialization has accounted for the movement of population, the extent of which is shown in Table 23. Of all provinces in the Dominion, Quebec shows the largest urban percentage followed by Ontario; Prince Edward Island has the largest percentage of rural population.

[^43]Summary figures showing the disparity between the sexes in the matter of urban concentration in 1921, 1931 and 1941 in the total population are given in the following tabulation. Where the percentage of urban males is large the percentage for the females is also large. Each decade emphasizes the greater opportunities for female employment in urban centres as compared with rural.

| Item | 1921 | 1981 | 1941 |
| :---: | :---: | :---: | :---: |
| Excess of all males to all females per 100 of total population. | 3.09 | $3 \cdot 59$ | $2 \cdot 56$ |
| Percentage of females in urban centres to all females. | - 51.78 | 55.98 | 56.61 |
| Percentage of males in urban centres to all males. | $47 \cdot 41$ | 51.57 | 52.18 |
| Excess of urben females | 1.32 | $0 \cdot 52$ | $1 \cdot 52$ |

Table $\mathbf{2 5}$ shows the distribution of urban population in Canada by size of urban centres, the rural-urban trend is very strongly indicated by the increased size of the larger cities and towns at a time when immigration, which in former decades, (especially that of British origin) tended to concentrate in urban centres, was negligible.

Montreal, the largest city in Canada, increased by 84,430 in the decade 1931-41, from 818,577 to 903,007 ; Toronto, the only other city of over half a million population, increased by 36,250 from 631,207 to 667,457 . Vancouver and Winnipeg went up to 275,000 and 222,000 , respectively; Hamilton, Ottawa and Quebec were all over 150,000 ; Windsor over 100,000 ; and the western cities of Edmonton and Calgary over 93,800 and 88,900 , respectively. These latter cities exceeded London, which also came in the 75,000 to 100,000 class in 1941 .

All the larger cities have in their neighbourhoods growing 'satellite' towns or other densely settled areas in close economic relationship with the central municipality. It has, therefore, been advisable to calculate the total populations for the metropolitan areas of these greater cities. Table 24 shows comparative figures for 1931 and 1941.

# 25.-Urban Centres having Populations of Over 5,000, Decennial Censuses 1871-1941 

Nore.-Urban centres in which a Board of Trade exists are indicated by an asterisk (*), and those in which there is a Chamber of Commerce by a dagger ( $\dagger$ ). In all cases the populations for previous censuses have been re-arranged to cover the same area as in 1941.

| Urban Centre and Province | Populations |  |  |  |  |  |  |  |

26.-Urban Centres having Populations of between 1,000 and 5,000 in 1941, Compared with 1901, 1911, 1921 and 1931-concluded

${ }^{1}$ Includes 572 in Alberta.

## Section 9.-Movement of Population*

The east to west movement of the centers of population which previously characterized population growth in Canada and which has been described for earlier censuses in previous editions of the Year Book has been checked according to data for the decade 1931-41. The deceleration which has latterly been apparent in the growth of the three mid-western provinces of Manitoba, Saskatchewan and Alberta became pronounced-the total increase in the decade from 1911 to 1921 of $47 \cdot 28$ p.c. and of $20 \cdot 32$ p.c. in the decade from 1921 to 1931 , dropping to 68,376 or 2.91 p.c. in the decade from 1931 to 1941 . This increase $(68,376)$ in the latest decade comprised increases in Manitoba and Alberta of 29,605 and 64,564, respectively, and a decrease in Saskatchewan of 25,793. Improvement in position was shown in 1941 by the five eastern provinces as a whole and by British Columbia. Increases of population in the decade from 1931 to 1941 were $12 \cdot 78$ p.c. lower for the five eastern provinces and 17.80 p.c. lower for British Columbia than in any previous decade of the century, but they clearly indicate the direction of movement when compared with 2.91 p.c. for the Prairie Provinces.

Table 27 indicates the net migration between the nine provinces of Canada during the latest decade. No direct use of immigration figures was made in the calculation but immigration and emigration as well as gross movements between

[^45]provinces are implicit in the resultant migration data. Movements of personnel of the Armed Forces do not influence the result since for the purposes of the 1941 Census all such personnel were enumerated as at their homes.
27.-Migration in Canada, by Provinces, 1931-41

An interesting sidelight on the internal movement of population in Canada is provided by the results of a special study based on a count of the turn-in cards from Ration Book No. 3. This study was made at the Bureau of Statistics during 1944 for the Wartime Prices and Trade Board, on the basis of the issue of Ration Book No. 4.

The value of the results as related to population movement is that they have provided an opportunity to make a count of the population of Canada by small areas three years after the 1941 Census date and this has furnished an important indication of the heavy internal migration that war conditions have brought about. There are, of course, important differences between the census statistics and the ration-book figures for which it has been necessary to make allowance. The following are examples:-
(1) The Census allocates persons to their place of legal residence, whereas individuals entitled to ration cards may apply at any place of issue that happens to be convenient.
(2) The Census allocates members of the Armed Forces to their place of legal residence; the ration-card count does not include members of the Armed Services.
(3) Certain areas of Canada do not come under the rationing scheme and therefore no surrender cards were received for such parts.

A special bulletin issued by the Social Analysis Branch of the Bureau of Statistics explains the method followed and the adjustments made and gives the results of this study in detail.

The changes in population that have taken place since the Census of 1941 are striking. After rough adjustments are made for the allocation of the Armed Forces and other factors, comparison with census data is possible and it is found that Montreal and Jesus Islands, Quebec; York County, Ontario; and Division 4, B.C.; have each gained to the extent of 50,000 or more persons. Halifax, N.S.; Chicoutimi, Que.; Carleton, Essex, Wentworth, Ont.; Division 6, Man. (containing Winnipeg); and Division 11, Alta. (containing Edmonton); have increased by 10,000 to 25,000 persons each. Corresponding losses have taken place in the counties that are
primarily rural. The extent of the change, as between rural and urban population for the period 1941-44 related to census data back to 1911, is given in Table 28 where counties are classified as: 'Metropolitan', containing cities of 100,000 or over; 'Other Urban', 'Farm' and 'Rural Non-Farm' according to the classification of the greater part of their populations.

${ }^{1}$ Exclusive of Yukon and the Northwest Territories.
It is seen that between 1941 and 1944 the metropolitan counties of Canada gained 345,000 persons, of whom 237,000 came from other counties and 108,000 were 'natural increase'. Counties which were most largely 'farm' lost a net 126,000 persons; since their natural increase was 159,000 , their out-migration must have been 285,000 . The movement is not merely a compensation by migration for the differential natural increase rates of city and country; far more than the total natural increase of the farm areas moved to urban places. For the first time in the history of Canada the total population of farm counties seems to be falling. This may arise partly from declines in rural fertility rates, which no longer balance out-migration, and partly from the unprecedented magnitude of such out-migration.

The general direction of movement in the decade 1931-41 was from farm to metropolitan places, but it took place much less consistently. The movement from 1941-44 showed an acceleration of the trend from farm to large city which was proceeding at an average rate throughout the period 1931-41.

## Section 10.-Citizenship

The basic legal definition of Canadian nationality is to be found in the Immigration Act, which defines a Canadian citizen as a person included in one of three categories: (1) a person born in Canada, who has not subsequently become a citizen of a foreign State; (2) any British subject who has been domiciled for five years in Canada; (3) any subject of a foreign power who has become naturalized and has not subsequently become an alien or lost Canadian domicile (R.S.C. 1927, c. 93; 21-22 Geo. V, c. 39).

The part that Canada played in the negotiating of the Peace Treaty and the subsequent enrolment of Canada as a member of the League of Nations necessitated an enlargement of the terms of the Immigration Act. In other words, there arose the need of an official definition of the term "Canadian citizen" as distinct from "British subject"-a definition that would be internationally recognized. An Act was accordingly passed entitled "An Act to Define Canadian Nationals and to Provide for the Renunciation of Canadiän Nationality" (R.S.C. 1927, c. 21).

This Act defines a Canadian national as (1) any British subject who is a Canadian citizen within the meaning of the Immigration Act; (2) the wife of any such person; and (3) any person born out of Canada whose father was a Canadian national at the time of such person's birth, or, with regard to persons born before the passing of the Act, any person whose father at the time of such birth possessed all the qualifications of a Canadian national as defined in the Immigration Act.

It will be seen from this that Canadian nationality has several bases. No one can now be a Canadian citizen without being a recognized British subject in any part of the world, although there was a time when persons were admitted to naturalization in Canada who could not qualify as British subjects outside of Canada. (See also statistics of naturalization, Chapter XXIX on Miscellaneous Administration.)

[^46]
## Section 11.-LLanguages and Mother Tongues

Official languages are not to be confused with mother tongues. Mother tongue, being used in the home, is natural to a person even if he is unable to speak it on account of youth, infirmity or for some other reason, whereas the official language or languages are those recognized by statute for general use. Thus the immigrants to a new country bring with them their mother tongues and continue to use them in their homes, but these have no relation to the official languages in the country of their adoption.

Canada is officially bilingual, the two languages being English and French. In the Census of $1941,1,474,009$ persons were reported as speaking both the official languages, 7,735,486 speaking English only of the two official languages, 2,181,746 speaking French only of the two official languages and 115,414 as unable to speak either English or French.

Table 31 shows the extent to which the people of foreign origin have related themselves to the languages spoken by those of British and French origins in Canada. The public school system is responsible for most of the progress. It is true that many of the adult immigrants, especially in urban parts, do acquire a working knowledge of one or other of the official languages, provided they are not too old to do so and they have an adequate economic or other incentive.*

All children in Canada are required by law to attend school to at least 14 years of age and teaching in the schools is carried on in either English or French. Consequently, in an origin group with high fertility the percentage unable to speak either of the basic languages of the country may be expected to decline with a fair degree of rapidity provided current immigration is not heavy.

Persons of Scandinavian origin speak either English or French in the largest proportions. Most of them speak English; comparatively few speak French. The Germans follow the Danes, Norwegians and Swedes, with only a slightly larger percentage unable to speak either of the basic languages.

[^47]31.-Population Speaking One, Both or Neither of the Official Languages of Canada, by Racial Origin, 1941

## Section 12.-School Attendance

Statistics under this heading for the Census date of 1941 will be found at p. 138 of the 1943-44 Year Book.

## Section 13.-Blind and Deaf-Mutes

Detailed statistics of the blind and of deaf-mutes are given for the 1941 Census in bulletin form. For previous censuses, earlier editions of the Year Book should be referred to.

Blind.-A general test which took the form of a block of large blackfaced letters on the Census schedule* was used to determine the blind. In the case of children under 10 years of age, or older persons who were illiterate, inability to distinguish or count the fingers of one hand at a distance of twelve feet was alternatively adopted. Those who had lost the sight of one eye only were not regarded as blind. The blind in the nine provinces in 1941 numbered 9,962 or $8 \cdot 7$ per 10,000 of the population as compared with 3,266 or $6 \cdot 1$ in 10,000 at the beginning of the century.

Deaf-Mutes.-Deaf-mutism, unlike blindness, is preponderantly an infirmity originating at birth or an early age. The number of deaf-mutes in the nine provinces of Canada increased from 5,368 in 1881 to 7,194 in 1941. The number of blind deaf-mutes in Canada is $158,39.9$ p.c. of whom are in Quebec; 29.8 p.c. in Ontario; 8.2 p.c. in Nova Scotia; $5 \cdot 7$ p.c. and $5 \cdot 1$ p.c. in Alberta and British Columbia; 3.8 p.c. in each of the provinces of Prince Edward Island and Manitoba and 1.9 p.c. in the provinces of New Brunswick and Saskatchewan.

* See Census schedule Form 8, 1941 Census.

## Section 14.-Occupations of the Canadian People

For a summary of the occupations of the Canadian people for the 1941 Census, see Appendix III, pp. 1062-73, of the 1943-44 Year Book.

## Section 15.-Dwellings and Family Households

Final figures under this heading were not yet available from the 1941 Census at the time of going to press.

## Section 16.-Quinquennial Census of the Prairie Provinces

The reader is referred to pp. 146-152 of the 1937 edition of the Year Book and to pp. 110-112 of the 1939 Year Book for results of the latest quinquennial census, or to Volumes I and II of the 1936 Census.

## Section 17.-Annual Estimates of Population

The exact statement of the population of Canada given at ten-year intervals by the Census must be supplemented by estimates for intervening years. These are essential for the calculation of per capita figures in production and trade, and particularly for use as a base in birth and death comparisons. Since such studies are very often by provinces, it is important that the estimates show each province separately.

The calculation for Canada is easier than that for its component parts. The number of births and immigrants each year is known as well as the number of deaths, and reasonably accurate estimates may be made of the amount of emigration from the immigration reports of the countries to which Canadians most frequently move, principally the United States and the United Kingdom.

The Analysis according to provinces normally involves a large error, particularly in the time of rapid movement of population within the country. Some idea of the movement may be secured from a study of births, deaths, marriages, school attendance, etc., in the different provinces but, in view of the fact that the main purpose of the estimate is to calculate rates for these, their use in estimating population involves some circularity. The period since 1941 has been characterized by particularly heavy movements of population, but fortunately ration-book figures available provide a very satisfactory means of ascertaining these (see pp. 120-122). It was necessary to add members of the Armed Forces whose homes were in each of the provinces to the rationed population, in order to secure the total number of persons legally resident in each province-the figure comparable with the Census.

Figures for 1931-41 have been revised, taking account of certain important new information, which enables the allocation of the movement during the period between the censuses to be made more accurately than was possible at the time it was taking place. Use was made of a census question asking everyone enumerated in 1941 when they had moved into their province of present residence, and from which province they had come. Table 35 includes the revised figures from 1931-41, as well as current estimates up to 1944.
35.-Estimates of the Population of Canada, by Provinces, Intercensal Years, 1900-44

Nore.-At every census the previous post-censal data are adjusted to the newly recorded population figure. Figures for 1867-99 will be found at p. 141 of the 1936 Year Book.

${ }^{1}$ These estimates are subject to adjustment as later data are made available.

## Section 18.-Area and Population of the British Empire

Statistics showing the latest official estimates of the area and population of the British Empire by continents and countries are given at Table 52, pp. 141-42 of the 1943-44 Year Book.

## Section 19.-Area and Population of the World

Statistics showing the areas and the populations of the various continents and details of each country, as in 1931, are given in a table at pp. 168-169 of the 1934-35 Year Book. The lack of statistical data and the dislocations caused by the War preclude the compilation of later information.

## CHAPTER V.-VITAL STATISTICS*

## CONSPECTUS

Page
Section 1. Births ..... 132
Section 2. Marriages and Divorces. ..... 146
Subsection 1. Marriages. ..... 146
Subsection 2. Dissolutions of Marriage ..... 150
Section 3. Deathe ..... 151

A short historical outline of the early collection of vital statistics in Canada is given at pp. 104-105 of the 1940 edition of the Year Book. Co-operation of the provinces in the collection of comparable statistics was finally effected as a consequence of the establishment of the Dominion Bureau of Statistics, under the Statistics Act of 1918. From 1921 to 1925 vital statistics were compiled by the Bureau on a comparable basis for all provinces with the exception of Quebec. Quebec has been included in the registration area only as from Jan. 1, 1926, from which date statistics have been on a comparable basis in all provinces.

The main tables of Sections 1-4.that follow cover statistics for all the provinces. Section 5 deals with those of Yukon and the Northwest Territories and reasons for this separation are given at that place.

An important factor should be borne in mind by the student who uses either the tables that follow or the detailed reports issued by the Bureau of Statistics for comparative purposes. The variation in the age and sex distribution of the population in different provinces makes crude rates between them not strictly comparable.

Method of Computation of Estimates of Population by Age and Sex.For the calculation of vital statistics rates, it is important to know each year not only the total population but the distribution by age and sex. Hitherto calculations requiring this information have been, for the most part, restricted to the years about the census date as it was felt that the use of census age distributions for periods more than two or three years later than the census involved too much inaccuracy. The estimates presented in the statement on p. 130 cover the period from 1931 to 1944 and are calculated from the Censuses of 1931 and 1941, the births and deaths of each year, of the period, immigration to and known emigration from the country, and certain cross-classifications available in the 1941 Census on interprovincial migrants.

Inter-Censal Estimates, 1931-41.-The 1931 Census population was the starting point in the calculation. The original figures by sex and single years of age were used up to age 25, and graduated figures (preserving 5 -year totals) from age 25 onwards. The decision to use graduated figures was made after a study of the concentrations on even ages; it may be seen that these concentrations are greatest at middle and older ages. The sharp fluctuations at younger ages were traceable to disturbances in births occurring during and after the War of 1914-18, which should not be smoothed out.

From among the children born in each census year the deaths occurring in that period were subtracted, the number living at age 0 at each anniversary of the census being so obtained. At each other single year of age the deaths were subtracted from the census figures to give a first approximation to the number at the next higher age in the following calendar year. The process was carried through successive years to 1941, and gave what might be called an "expected" figure for that year. This expected figure for 1941 was compared with the actual and the difference noted at each year of age. The official estimates of population were compared with the total of all ages and both sexes at each anniversary of the Census and the discrepancy distributed in the same way as the difference between actual and expected at 1941. This difference, numbering about 90,000 persons in all ages for the 10 -year period*, is largely attributed to migration into or out of the country, and seems a satisfactory age-sex distribution to use for the discrepancy each year.

Post-Censal Estimates, 1941-44.-After the 1941 Census, exact births and deaths were not available when the calculation was made and accordingly some degree of estimation was used in respect of both. For the births, it was necessary to use preliminary vital statistics records. For the deaths, the 1940-42 Life Table seemed to provide an appropriate set of rates and avoided the necessity of awaiting official breakdowns.

A similar calculation will be made giving the age and sex for inter-censal years according to provinces.

Canadian Life Tables, 1941.-Life Tables have now been calculated on the basis of the deaths of $1940-42$ and the population of 1941. These are the second official Life Tables to be published for Canada, the first having been calculated on the basis of the deaths of $1930-32$ and the population of 1931.

The present tables show for males an expectation of life at age 0 of almost 63 years, and for females of over 66 years. Just over half the males reach the age of 70 and among the females more than half reach 73. These figures show material increases over 1930-32 mortality when the expectations of life at age 0 were 60 and 62 years for males and females, respectively.

[^49]Male mortality is heavier throughout life. This is particularly true at age 0 ; 62 out of every 1,000 boys born die before one year of age, but only 49 out of every 1,000 girls. In 1931 male mortality dropped below female through the childbearing ages of life but in 1941 this did not happen. The expectation of life of a boy who reaches working age, say 15 , is 54 years, and of a girl, 56 years. Expectation of life at age 25, a common age of marriage, is 45 years for males and 47 years for females. The average expectation of life of persons at age 70, (when eligibility for old-age pensions is attained) is 10 years for males and 11 years for females.

The expectation of life at age 0 is less than that at age 1 ; males who have passed through the hazardous first year of life may anticipate 66 years on the average, and females 69 years.

## Section 1.-Births

The history of birth rates in most countries in the years just prior to the War was one of decline, although consequent reductions in the rates of natural increase have been partly offset by synchronous declines in the death rates. Since 1939, however, available statistics would seem to indicate that the rapid and consistent decline in birth rates generally has been arrested.

The crude birth rate for England and Wales, for example, was $25 \cdot 1$ in 1910 and, though it ròse to 25.5 in 1920, it fell quite rapidly by almost continuous stages to $14 \cdot 4$ in 1933. The lowest figure recorded was $14 \cdot 2$ in 1941, since then it has risen to $15 \cdot 8$ in 1942 and $16 \cdot 5$ in 1943.

In France the crude birth rate moved from $19 \cdot 6$ in 1910 to $21 \cdot 4$ in 1920, $18 \cdot 0$ in 1930 and $13 \cdot 0$ in 1941. It is rather surprising that there the rate rose to $14 \cdot 3$ in 1942 and $16 \cdot 0$ in 1943.

In Germany the crude birth rate was $29 \cdot 8$ in 1910, $25 \cdot 9$ in $1920,17 \cdot 6$ in 1930. Following the rise of Nazi domination the birth rate rose quite sharply and in 1940 the rate was $20 \cdot 0$ per 1,000 population. In 1941 it dropped to $18 \cdot 6$ and in 1942, the latest year for which figures are available, it had slumped to $14 \cdot 9$. (The rate given for 1943 was for the Greater Reich and included Austria, Sudeten Territory, Memel and Danzig and was $16 \cdot 1$ ).

In the United States the crude birth rate was 23.7 in 1920, 18.9 in 1930 and in 1933 reached the low point of $16 \cdot 6$. It rose to $17 \cdot 9$ in 1940 and to $21 \cdot 9$ in 1943.

In Canada when the registration area was established in 1921, the crude birth rate was $29 \cdot 4$; by 1931 the rate had declined to $23 \cdot 2$ and by 1937 to $20 \cdot 2$. In 1941 and 1942 the rate stood at the comparatively high figures of $22 \cdot 2$ and $23 \cdot 4$, respectively, and in 1943 increased slightly to $24 \cdot 0$. The recovery during the past few years has been fairly general in all provinces, with variations ranging from the low rate in British Columbia of 20.9 to the high rates of 28.3 in New Brunswick and 28.6 in Quebec in 1943.

The relative positions occupied by Canada and its individual provinces among various countries of the world with respect to crude birth rate (the annual number of births per 1,000 of population) are given in Table 1.
1.-Crude Birth Rates of Various Countries of the World and of Provinces of Canadain Recent Years

${ }^{1}$ Within the boundaries of the Treaty of Trianon.
The birth statistics indicate that there is a tendency towards greater hospitalization and medical attendance at births and that the numbers of births in the urban areas of Canada (cities and towns of 1,000 population or over) are increasing more rapidly than births in the rural parts. Live births in cities, towns and villages of 10,000 population or over are given in Table 2.

[^50]Sex of Live Births.-Every province shows an excess of male births for the years or averages shown in Table 3. Out of every 1,000 children born alive in Canada in 1942 there were 516 males and 484 females, and in 1943 there were 514 males and 486 females. In other words, the number of males born to every 1,000 females during the period 1926-43 has ranged from 1,047 in 1935 to 1,067 in 1942.

## 3.-Live Births by Sex, and Ratio of Males to Females, by Provinces, 1941-43, with Five-Year Averages, 1921-40

Notg.-Comparable figures for the single years $1921-40$ will be found in previous Year Bonks commencing with the 1927-28 edition.

${ }^{1}$ Quebec was not included in the registration area prior to 1926.
Nativity of Mothers.-The influence of the limited immigration in recent years is reflected in the figures of Table 4. In the Prairie Provinces of Manitoba, Saskatchewan and Alberta, the percentages born to foreign-born mothers in 1933 were $25 \cdot 9,36 \cdot 3$ and $40 \cdot 4$, respectively; in 1943 they were $9 \cdot 9,13 \cdot 2$ and $17 \cdot 3$, respectively. Thus there is a heavy percentage decline in the number of firstgeneration children born in the West.

${ }^{1}$ Exclusive of the Territories.
Fertility Rates.-The crude birth rate of a young country is subject to influences that vitiate comparison with older lands. These influences are the result, to some extent, of differences in age or sex constitution or in conjugal condition. For this reason birth rates are frequently based on the number of births per thousand women within suitably chosen age groups. Such rates are commonly known as fertility rates. See also the article at pp. 100-115 of the 1942 Year Book.
5.-Specific Fertility Rates of Married Women 15-49 Years of Age, by Provinces, 1921, 1922, 1930-32 and 1940-42

${ }^{1}$ Data for Province of Quebec not available for 1921 and 1922.
${ }^{2}$ The figures for Alberta for 1921 are estimated.

Multiple Births in Canada.-During the eighteen-year period 1926-43, out of a total of $4,348,866$ recorded confinements, 51,258 or one in $84 \cdot 8$ were multiple confinements. Of these 50,791 were twin and 463 were triplet confinements, while one, in British Columbia in 1931, was a quadruplet confinement from which all the children died within a few hours of birth. A multiple confinement resulted in the birth of quintuplets in 1934. In 1937 there were 2 quadruplet confinements in Quebec, all children being born alive.

In the years 1942 and 1943 one confinement in every 92 and 91 , respectively, was a twin confinement, a proportion that is fairly representative for the other years of the period. There were 26 triplet confinements in 1942 and the same number in 1943. In 1942 and also in 1943, of the children born (alive or dead), one child in every 46 was a unit of a multiple birth. Children born alive numbered one in 47 in both years, while for stillborn children the proportions were one in 26 and one in 21, respectively. Stillborn children resulting from multiple confinements formed $4 \cdot 5$ p.c. in 1942 and $5 \cdot 1$ p.c. in 1943 of the total children born, as against $2 \cdot 5$ p.c. and 2.3 p.c. in single confinements.

## 6.-Live Births and Stillbirths Classified as Single and Multiple, by Sex, 1942 and 1943

Note.-Statistics for the years 1926-41 will be found in previous Year Books commencing with the 1938 edition.

| Year and Sex | Total Births |  | Single Births |  | Twins |  |  | Triplets |  |  |

Ages of Parents.-The numerical distribution of legitimate live births by ages of parents for the years 1942 and 1943 is shown in Table 7. Nearly 34 p.c. of the births in 1942 and nearly 33 p.c. in 1943 were to married mothers under 25 years of age, while less than 5 p.c. were to mothers who had passed their 40th birthday. Of the fathers $12 \cdot 8$ p.c. and $12 \cdot 7$ p.c. were under 25 years in 1942 and 1943 and 15.5 p.c. in both years were 40 years or over. The percentages of both fathers and mothers under 25 years were $23 \cdot 0$ and $22 \cdot 7$, respectively, in the years 1942 and 1943.

${ }^{1}$ Less than one-tenth of one per cent.
Birthplaces of Parents.-Table 8 furnishes some idea of the extent that the coming generation of Canadian born will be the offspring of Canadian-born, Britishborn or foreign-born parents. The term "country not specified", under country of birth, includes for the father illegitimate births and births of incomplete record, while for the mother it includes births of incomplete record only. The percentage of births for which both parents were born in Canada rose from 61.4 in 1926 to $75 \cdot 7$ in 1941, 76•6 in 1942 and $77 \cdot 3$ in 1943.

## 8.-Numbers and Percentages of Live Births to Fathers and Mothers Born in Specified Countries, 1926 and 1941-43

Nore.-Comparable statistics for earlier years, after 1926, will be found in previous Year Books commencing with the 1929 edition.

${ }^{1}$ Less than one-tenth of one per cent. ${ }^{2}$ Includes the Ukraine.
${ }^{3}$ This figure gives the number of children whose fathers and mothers were born in the same country. The difference between this figure and the total number of births represents the number of children whose fathers and mothers were born in different countries.
${ }^{4}$ This excludes the percentage of mixed parentage, i.e., where the two parents were not born in the same country.

Origins of Parents.-Table 9 gives the numbers and percentages of births in 1926, 1941, 1942 and 1943, contributed by the principal racial groups. The table indicates the part played by each racial group in the production of the births of each year and shows the comparison of the figures for father and mother with those in which both parents were of the same origin.

## 9.-Numbers and Percentages of Live Births to Fathers and Mothers of Specified Origins, 1926 and 1941-43

Note.-Comparable statistics for earlier years, after 1926, will be found in previous Year Books commencing with the 1929 edition.

${ }^{1}$ Less than one-tenth of one per cent. gives the number of children whose fathers and mothers have the same origin. The difference between this figure and the total number of births represents the number of children whose fathers and mothers were of different origins.
${ }^{4}$ This excludes the percentage of mixed parentage, i.e., parents not of the same. origin.

Illegitimacy.-The steady increase of illegitimacy that is noticeable in recent years is due, in some measure, to the more complete registration of children born out of lawful wedlock. This has been brought about through the co-operation of and by an intelligent human approach to the problem of illegitimacy by the social welfare agencies and provincial registration officials.

Of the 272,313 live births in the nine provinces of Canada in 1942, 11,088, or 4.07 p.c., were registered as the issue of unmarried mothers. Figures for 1943 show a total of 283,580 live births, of which 11,474 , or $4 \cdot 05$ p.c., were registered as the issue of unmarried mothers. Out of this number, 5,881 were males and 5,593 females-a ratio of 1,051 males to every 1,000 females, as compared with 1,081 males per 1,000 females in 1942, and a general 1943 rate for all live births of 1,057 males to 1,000 females.

## Section 2.-Marriages and Divorces

Subsection 1.-Marriages

The marriage rate in most countries is influenced appreciably by the general economic prosperity level. Immediately following the declaration of war, sudden abnormal rises were apparent all over the world. These high marriage rates, for the most part, have been maintained under existing war conditions with its impetus of full employment and high ratio of enlisted population.

In Canada, marriages reached a peak in 1929 after which recession was steady until 1932; in 1933 the decline was arrested slightly (by 2 p.c.); in 1934 a definite improvement was apparent ( 17 p.c.), and was maintained until 1939 when the marriages jumped 66 p.c. over those occurring in 1932. In 1941, 1942 and 1943 the increases were 95 p.c., 104 p.c. and 77 p.c., respectively, over the 1932 low point. Provincial marriage trends have been consistent with that for the whole Dominion.

Age at Marriage and Martial Status.-The average age of all bridegrooms in the Dominion in 1941 was $28 \cdot 9$, in 1942, $29 \cdot 0$ and in $1943,28.9$, while that for all brides was $25 \cdot 1$ in 1941 and $25 \cdot 2$ in 1942 and 1943. The average excess of the bridegroom's age, was therefore, $3 \cdot 8$ years in 1941 and 1942 and $3 \cdot 7$ in 1943. Out of each 1,000 bridegrooms in 1942, 951 were bachelors, 38 widowers and 11 divorced men; out of each 1,000 brides 960 were spinsters, 28 widows and 12 divorced women, while in 1943 there were 943 bachelors, 44 widowers, and 13 divorced men and 955 spinsters, 33 widows and 13 divorced women. The distribution of marriages by sex, age and marital status for 1942 and 1943 is given in Table 12. A comparison between the figures of divorces granted, as shown in Table 16, and the number of divorced persons re-married shows that divorces granted in 1941, 1942 and 1943 numbered $2,461,3,089$ and 3,263 , respectively, while there were $1,269,1,414$ and 1,436 divorced males and $1,213,1,489$ and 1,420 divorced females, respectively, married again. This, of course, does not mean that these were the same persons as were divorced in those years.

Nativity of Brides and Bridegrooms.-When the registration area was established in 1921 the majority of marriages solemnized in the western provinces were between persons born outside of Canada. This situation has rapidly reversed as the percentage of foreign-born bridegrooms and brides show a general reduction (see Table 13). Both Canadian-born brides and bridegrooms are now in the majority in each province, while in the Maritime Provinces, Quebec and Ontario they show a marked predominance. Taking Canada as a whole, 88 p.c. of all bridegrooms and 92 p.c. of all brides in 1941, 1942 and 1943 were born in Canada; the 1943 figures are the highest percentage shown for any year of the period covered by the statistics.

## 13.-Percentage Distribution of Grooms and Brides, by Nativity and Provinces, 1941-43, with Five-Year Averages, 1921-40

Nors.-For figures for single years 1921-40, see previous editions of the Year Book beginning with the 1929 edition.

${ }^{1}$ Quebec was not included in the registration area prior to 1926.
Marriages by Religious Denominations of Contracting Parties.-The distribution of the marriages solemnized in 1942 and 1943, respectively, according to religious denominations, is roughly the same as that for the total population. The figures in Table 14 indicate the very strong influence that religious belief has on brides and grooms. The ratio of grooms marrying brides of the same denomination in 1943 was over 50 p.c. with the exception of Anglicans, Baptists, Lutherans and Presbyterians, which showed percentages of $49 \cdot 25,43 \cdot 04,42 \cdot 78$ and $34 \cdot 64$, respectively. On such a percentage basis, the Jewish faith ranks first with 93.01 p.c. of the grooms marrying Jewish brides, the Roman Catholics are a close second with $90 \cdot 42$, while Greek Catholics, United Church and Eastern Orthodox have each between 60 p.c. and 70 p.c.

Subsection 2.-Dissolutions of Marriage (Divorces)
For many years subsequent to Confederation, the number of divorces granted in Canada was very small, 1883 , with 13 divorces, being the first year in which the number attained two figures, while 1903, with 21 divorces, was the record year up to that time. Thereafter the numbers grew more rapidly, 1909 showing 51 divorces and 1913, the last pre-war year, 60 divorces. This number was, however, less than one per 1,000 of the marriages contracted in Canada in each of these years.

One effect of the War of 1914-18 was to increase divorce. The causes were the generally unsettling psychological influences of the war period, and the long separations between men on active service and their wives. The provision of new facilities for obtaining dissolution of marriage was another factor in the numerical increase of divorces granted. A decision of the British Privy Council in 1918 gave jurisdiction to the Prairie Provinces for granting dissolutions of marriage, so that Ontario, Quebec and Prince Edward Island were then the only provinces in which the applicant for divorce had to secure a private Act of Parliament. In 1930 an Act of the Dominion Parliament (20-21 Geo. V, c. 14) gave jurisdiction in divorce matters to the Supreme Court of Ontario.

In 1918 there were 114 divorces granted in Canada and from then on they grew steadily in number to 608 in 1926, 700 in 1931, 1,570 in 1936, and 2,369 in 1940. In 1941 divorces granted in Canada numbered 2,461; in 1942, 3,089; and in 1943, 3,263. These numbers, for the most part, cover final decrees of dissolution of marriage which alone constitute divorce. Annulments and legal separations have been eliminated. Coincident with the transfer of jurisdiction in divorce matters in Ontario from the Parliament of Canada to the Supreme Court of the Province there was a decrease in the number of divorces. This was occasioned by the delay between the granting of the decree nisi and the decree absolute. In 1938, however, the number of divorces granted passed the two-thousand mark, the increase, for the most part, was in Ontario and British Columbia. From 1921 to 1941, 1942 and 1943, respectively, there were increases of 341 p.c., 454 p.c. and 485 p.c.

Statistics of dissolutions of marriage granted were revised in 1941 through the co-operation of the provincial authorities and the Clerk of the Divorce Committee of the Senate of Canada.
16.-Dissolutions of Marriage (Divorces) Granted in Canada, by Provinces, 1941-43, with Five-Year Averages, 1921-40

## Section 3.-Deaths

Disregarding the effects of wars and their aftermath, the past century has seen a decline in the death rate in most countries of the world. Perhaps the most impressive index of this decline is found in the mortality statistics of Sweden, where the crude death rate declined from an average of 27.4 per 1,000 in the decade 1751-60 to $14 \cdot 3$ in the decade 1911-20, and to 11.7 in 1931-40.

In England and Wales, the crude death rate which was 18.2 per 1,000 in the 90 's of the past century, declined to 15.4 in the first decade of the present century and $12 \cdot 1$ in the third; in 1941 it was $12 \cdot 9$, in $194211 \cdot 6$ and in $194312 \cdot 1$. In Scotland the average rate was $22 \cdot 1$ in the 60 's, $18 \cdot 6$ in the 90 's, $15 \cdot 1$ in the first decade of the present century, and 13.7 in the third; it was 14.5 in 1941 and 13.3 in 1942 and 1943. International comparisons of crude death rates for different countries are shown in Table 21, p. 156.

There will always be years of specially high mortality, for instance 1918, when the death rate in Ontario, the most populous of the provinces of Canada, was $15 \cdot 3$ per 1,000 owing to the influenza-pneumonia epidemic, as against 12.0 in 1917 and 11.9 in 1919. Over a period, however, these abnormalities are reduced to negligibility.

## Subsection 1.-General Mortality

Deaths in Canada as a whole declined steadily for the period 1931-34, but for 1935,1936 and 1937 there were substantial increases. The figure for 1937 was 113,824, an increase of more than 9,000 over 1931. For 1938 there was a noticeable reduction to 106,817 , but increases were again shown for the next three years, to 114,639 in 1941. In 1942 there was another decrease to 112,978 but 1943 increased to 118,635 .

There has been a similar definite downward trend from the crude death rate of 11.5 per 1,000 population in 1921 to $10 \cdot 7$ in 1930, and 9.8 in 1940. The rate rose slightly to $10 \cdot 0$ in 1941, dropped in 1942 to $9 \cdot 7$ and in 1943 rose again to $10 \cdot 1$. Six of the provinces showed increases in death rates, the exceptions being the three Maritime Provinces. The increase in the number of deaths, and the death rate in 1941 and in 1943 was due to a higher mortality rate for certain communicable diseases.

Age and Sex Distribution of Decedents.-Numerically speaking, for both sexes, the greatest number of deaths occur during the first year of life, although some startling reductions have been made in recent years. It will be seen in Table 17 that the average ages of decedents have been increasing steadily and that, for the most part, the ratios of deaths over 60 years have not diminished. On the other hand striking reductions have been apparent in the earlier years of life, particularly under 30 years of age. While much has been accomplished through the methods of therapeutic and preventive medicine, it must be remembered that the declining death rate in the younger ages is in a large measure responsible for the ageing of the population in Canada.

## 17.-Deaths by Sex, for Specified Age Groups, 1942 and 1943, with Five-Year Averages, 1926 -30

| Age Group | Numbers |  |  |  |  |  | Percentages |  |  |  |  |  |

| Totals, All Ages.. | 58,351 | 63,013 | 66,013 | 50,574 | 49,965 | 52,622 | - |  | - | - | - |  |

The table shows that out of every thousand deaths in Canada in 1942 and 1943, respectively, 558 and 556 were males and 442 and 444 were females, or a ratio of 1,261 and 1,254 males, respectively, to every thousand females. The table indicates the percentage changes in the age and sex groupings for all deaths.

Standardized Death Rates.-While crude death rates give the actual mortality per 1,000 of population, death rates in infancy and old age are much higher than in middle life, hence, differences in the sex and age composition of the population in different communities and the variations in the proportions of infants and elderly
people to the total population and to total deaths make the use of crude death rates unsatisfactory for purposes of comparison. It is expedient, therefore, when comparing death rates of countries and communities to eliminate the influences of such factors and to determine what the death rates would be if the age and sex composition of the several populations corresponded to that of a particular community taken as a standard. The method is described briefly on p. 90 of the 1941 Year Book and has been applied to the population of Canada for the years 1931-43. The rates for the individual years have been calculated directly from populations for each sex and age group at the Census years 1931 and 1941 and estimations (made by the Social Analysis Branch) for each group for the intercensal and postcensal years.
18.-Crude and Standardized Death Rates in Canada, by Sex, 1931-43

| Year | . | Crude |  |  | Standardized |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Male | Female | Total | Male | Female | Total |
| 1931. |  | $10 \cdot 5$ | $9 \cdot 6$ | $10 \cdot 1$ | $10 \cdot 1$ | $9 \cdot 0$ | 9-5 |
| 1932. |  | 10.3 | $9 \cdot 5$ | $9 \cdot 9$ | $9 \cdot 7$ | $8 \cdot 8$ | $9 \cdot 2$ |
| 1933. |  | 10.0 | $9 \cdot 2$ | $9 \cdot 6$ | $9 \cdot 3$ | $8 \cdot 4$ | $8 \cdot 8$ |
| 1934. |  | 10.0 | $8 \cdot 9$ | $9 \cdot 5$ | 9.2 | $8 \cdot 1$ | $8 \cdot 7$ |
| 1935. |  | $10 \cdot 2$ | $9 \cdot 2$ | $9 \cdot 7$ | $9 \cdot 4$ | $8 \cdot 3$ | $8 \cdot 8$ |
| 1936. |  | $10 \cdot 2$ | $9 \cdot 3$ | $9 \cdot 8$ | $9 \cdot 3$ | $8 \cdot 2$ | $8 \cdot 7$ |
| 1937. |  | 10.9 | $9 \cdot 7$ | $10 \cdot 3$ | $9 \cdot 9$ | $8 \cdot 6$ | $9 \cdot 2$ |
| 1938. |  | $10 \cdot 3$ | $8 \cdot 9$ | $9 \cdot 6$ | $9 \cdot 1$ | $7 \cdot 7$ | $8 \cdot 4$ |
| 1939. |  | $10 \cdot 4$ | $9 \cdot 0$ | $9 \cdot 7$ | 9.0 | $7 \cdot 6$ | $8 \cdot 3$ |
| 1940. |  | 10.5 | $9 \cdot 0$ | 9.8 | 9.0 | $7 \cdot 5$ | 8.2 |
| 1941. |  | $10 \cdot 8$ | $9 \cdot 1$ | $10 \cdot 0$ | $9 \cdot 3$ | $7 \cdot 5$ | 8.4 |
| 1942. |  | $10 \cdot 6$ | 8.8 | $9 \cdot 7$ | 8.9 | $7 \cdot 2$ | 8.0 |
| 1943. |  | 10.9 | $9 \cdot 1$ | $10 \cdot 1$ | $9 \cdot 0$ | $7 \cdot 4$ | $8 \cdot 1$ |

Causes of Death.-Of the deaths recorded in Canada in the years 1941-43, 89 p.c. were due to the 28 specified causes named in Table 19. In this table the groupings are in accordance with the revision of the International List in 1938. This revision was first appiied to Canadian vital statistics for the year 1941. Each revision of the International List creates special difficulties in preserving continuity. For purposes of comparison with the years before 1941 the figures would have to be adjusted in accordance with the various revisions. In any analysis of the relative importance of the causes of death the effects of the ageing of the Canadian population should be considered. These effects are described briefly at pp. 91-92 in the 1941 Year Book.
19.-Deaths and Death Rates per 100,000 Population in Canada, by Principal Causes,

| International List Number ${ }^{1}$ | Cause of Death | Numbers of Deaths |  |  | Rates per 100,000 Population |  |  |

${ }_{1}$ The numbers given in this column refer to the International List of Causes of Death, as revised in 1938 by the International Commission on the Classification of Diseases and Causes of Death. This classification, in its detailed, intermediate or abridged form, is accepted by almost all civilized countries.

Deaths in Canadian Cities and Incorporated Centres.-The proportion of deaths to the population in the cities of Canada listed in Table 20 remained fairly constant at about 1 p.c. throughout the period 1926-40. Taken on the basis of resident deaths to resident population the single years shown reveal proportions of 1 p.c. of total deaths.
20.-Deaths in Urban Centres of $\mathbf{1 0 , 0 0 0}$ Population or Over, by Place of Residence, 1941-43, with Five-Year Averages, 1926-40, by Place of Occurrence

[^57]Crude Death Rates of Different Countries.-Of the countries shown in Table 21, Uruguay, the Netherlands, the Union of South Africa (Whites) and Denmark are the only ones with death rates under 10.0 per 1,000 population. The rate for Canada in 1943 was $10 \cdot 1$. The low death rates in the Prairie Provinces, to a great extent, are responsible for the low death rate for Canada. This is due, for the most part, to a favourable age distribution of population in all three provinces.

## 21.-Crude Death Rates of Various Countries and of the Provinces of Canada in Recent Years

(Sources: League of Nations Year Book and other official sources. In certain cases final figures are not available and provisional data are shown.)

| Country or Province | Year | Crude <br> Death <br> Rate | Country | Year | Crude <br> Death <br> Rate |

## Subsection 2.-Infant Mortality

In recent years a great part of the energy designed to effect a decline in the general death rate has been directed at infant mortality and with a large measure of success. That Dominion, provincial and municipal health authorities, together with the private welfare agencies, have all taken part in the struggle to reduce infant mortality is reflected in the figures for the period 1921 to 1943, which show a fairly constant improvement each year. In fact any fluctuations in the general downward trend have been caused by the presence of epidemic diseases. .In 1921
the infant death rate for Canada was 102 per 1,000 live births. Figures for 1942 and 1943 show the lowest rate since the registration area was established, viz., 54 per 1,000 live births. New Brunswick had the highest rate, Quebec the second highest and Nova Scotia the third. In other words over 13,000 young Canadians were added to the population of Canada in 1942 and in 1943 who, under conditions prevailing in 1921, would have died before their first birthday.

## 22.-Infant Mortality and Rates per 1,000 Live Births, by Provinces, 1941-43, with Five-Year Averages, 1921-40

Norz.-Figures for individual years from 1921-40 will be found in previous editions of the Year Book, beginning with the 1931 edition.

Infant Mortality by Causes of Death.-Nine prinicpal group causes of death accounted for between 92 and 89 p.c. of the infant mortality in the Dominion during the years 1931 to 1943. These are shown in Table 23 and it is worthy of note that four diseases present at birth, viz., premature birth, injury at birth, congenital debility and congenital malformations, accounted for over 46 and 49 p.c. of the infant deaths in 1942 and 1943, respectively. The percentage was 41 in 1926 and 42 in 1930, but the rate of infant deaths has declined over 18 p.c. in the interval between 1936 and 1943. The decline in infant death rates is indicative of the improvement in pre-natal, intra-natal and post-natal care.

Infant Mortality at Age Periods.-During the years 1942 and 1943, $52 \cdot 2$ p.c. and $55 \cdot 1$ p.c. of all infant deaths occurred before the children had reached one month of age, and 38.3 p.c. and 41.4 p.c., respectively, before they had completed one week of life. The chart facing p. 166 illustrates very dramatically not only the great reductions in infant deaths but also that as the Canadian child ages during its first year of existence its expectation of life becomes much greater.

Infant Mortality in Canadian Cities and Incorporated Centres.-It should be remembered that a very low infant mortality rate for cities and towns for any particular year means very little and that wide annual fluctuations are the rule. Moreover, since maternity hospitals in urban centres draw patients from surrounding areas, rates "by place of occurrence" reveal considerable variation from rates "by place of residence" This is particularly true in the case of Westmount, where the average numbers of infants "by place of occurrence" given in Table 24 are considerably higher than the numbers for single years "by place of residence". Among the large cities, Vancouver has maintained a splendid record, Montreal has shown a steady improvement and Winnipeg and Toronto have very low rates. Sorel, Three Rivers, Quebec City and Hull all had very high rates prior to 1940, well over 100 per 1,000 live births, but here too are found indications of general improvement for by 1942 the rates "by place of residence" had dropped to 85 , 64,103 and 73 , respectively.
24.-Deaths and Death Rates of Children Under One Year of Age (Exclusive of Stillbirths) in Urban Centres of 10,000 or Over, by Place of Residence, 1941-43, with Five-Year Averages, 1926-40, by Place of Occurrence.

${ }^{1}$ Not available.

Infant Mortality in Various Countries.-New Zealand for many years has had a low record for infant mortality; in 1942 the rate was only 29 per 1,000 live births as compared with 68 in 1905, 51 in 1920, and 34 in 1930. Indications of the general improvement during the present century are to be found in England and Wales where the rate has been reduced from 128 per 1,000 live births in 1905 to 80 in 1920, 60 in 1930 and 48 in 1943, while the rate in Germany has declined from 196 in 1904 to 85 in 1930 and 66 in 1942. In the Netherlands the rate has declined from 131 per 1,000 live births in 1905 to 51 in 1930 and 40 in 1942.

## 25.-Infant Mortality per $\mathbf{1 , 0 0 0}$ Live Births in Various Countries of the World and in the Provinces of Canada in Recent Years

(Sources: League of Nations Year Book and other official sources. In certain cases final figures are not available and provisional data are shown.)

${ }^{1}$ Within the boundaries of the Treaty of Trianon.
Infant Mortality in Certain Cities of the World.-One of the greatest triumphs of medicine and public health of modern times has been the reduction of infant mortality in the metropolitan areas of the world.

To give particular examples, the rate of infant mortality for New York was 29 per 1,000 births in 1942, as against a rate of 40 per 1,000 for the Birth Registration Area of the United States. For 1938, Berlin had an infant mortality rate of 58 per 1,000 live births, as compared with 60 for Germany; Paris had a rate of 61 in 1939, compared with a rate of 63 for France and, in 1942, London had a rate of 51 compared with 49 for England and Wales.

In Canada, in 1941, 1942 and 1943 Montreal had infant mortality rates of 66 , 54 and 61 per 1,000 live births, respectively, as compared with 76,70 and 67 for the Province of Quebec. Toronto, in 1941, 1942 and 1943, had infant mortality rates of 37,35 and 37 , as against 46,40 and 42 for the Province of Ontario, while Winnipeg and Vancouver had much lower infant mortality rates than their respective provinces. Since 1921 Vancouver and Victoria have recorded two of the lowest rates of infant mortality in the world.

## Subsection 3.-Maternal Mortality

Closely allied with infant mortality are those deaths accidental in character which occur among our Canadian mothers during the period of childbirth. This maternal mortality is shown in Table 26 to be the lowest among mothers under 25 years of age and highest from 30 to 39 years of age. It will be seen in the chart facing p. 166 that there is very little variation between the age groups $25-29$ years, $30-34$ years and $35-39$ years and that roughly 64 p.c. of all maternal deaths are to be found within these three age groups.

Maternal Deaths by Causes of Death.-The chart facing p. 166 reveals that while from 1926 to 1943 the two chief causes of maternal deaths were puerperal sepsis and toxæmias of pregnancy, since the introduction of sulpha drugs in 1936 there has been a very marked decline in the death rates from these two causes of death.
27.-Maternal Deaths in Each Province, by Causes of Death, 1941-43

## Section 4.--Natural Increase

The rate of natural increase of the population of Canada declined steadily from $17 \cdot 9$ in 1921 to $13 \cdot 3$ in 1926 and to $12 \cdot 2$ in 1929. In 1930 the rate increased to $13 \cdot 2$, but from then to 1937 it declined steadily to $9 \cdot 9$. In 1938 the rate was $11 \cdot 0$, in 1941 it was $12 \cdot 2$ and in 1943 it reached its highest point since 1925, viz., $13 \cdot 9$.

Among the provinces the trends, generally, followed that of Canada with minor variations. The Province of Quebec is considered to have one of the highest rates of natural increase per 1,000 population of any civilized area. The rate for Quebec in 1921 was 23.4 and while it gradually reduced in line with common experience to a low point of 12.8 in 1937, it has since recovered and stood at 16.5 in 1941, $18 \cdot 0$ in 1942 and $18 \cdot 5$ in 1943, the highest point since 1925. Saskatchewan has usually approached Quebec in the matter of natural increase; in fact for the years 1926-30, 1934 and 1935 the rates for this prairie province actually exceeded those of Quebec, although for later years the recovery has been less pronounced, with a rate of $14 \cdot 1$ in 1942 and $14 \cdot 1$ in 1943. Alberta has followed Saskatchewan fairly closely, except that the recovery since 1938 has been more pronounced with a rate of $15 \cdot 8$ in 1942 and of $16 \cdot 2$ in 1943. The high rates of natural increase in the two prairie provinces are largely due to their relatively younger populations and lower crude death rates. The chart facing p. 166 portrays the effects of variations between the birth and death rates in the Dominion and the provinces upon the rates of natural increase.

Rates of Natural Increase in Various Countries.-Canada compares quite favourably with most countries in the matter of rates of natural increase. In 1943 the rate in Canada was $13 \cdot 9$, in Denmark 11•7, in the United States $11 \cdot 0$, in Northern Ireland 10.8, in New Zealand 10.7, in Australia 10.4, in Eire 7.6, in Scotland $5 \cdot 6$ and in England and Wales 4.4.

Natural Increase in Canadian Cities and Incorporated Centres.Statistics of natural increase in urban centres of 10,000 population or over are given for the period 1926 to 1943 in Table 28. Rates per 1,000 population are not shown, though the census populations in 1931 and 1941 are given to furnish some guide to such rates.

${ }^{1}$ Exclusive of the Territories.

## Section 5.-Vital Statistics of Yukon and Northwest Territories

The vital statistics of Yukon and the Northwest Territories have been collected and compiled since 1924. They are not, however, presented with those of the nine provinces in the tables of this chapter because the figures are not regarded as complete. The details are in many cases not available, and the small and varying population is not known with sufficient accuracy for each year to enable the rates to be calculated. As these Territories contain less than $1 / 700$ th of the population of Canada, their vital statistics are a negligible factor in the total.

## CHAPTER VI.-IMMIGRATION AND COLONIZATION*

## CONSPEGTUS

## Section 1.-Statistics of Immigration

In 1851 the population of Upper and Lower Canada, Nova Scotia and New Brunswick totalled 2,312,919 and in 1941 the population of the Dominion was $11,506,655$. During that period no fewer than $6,703,891$ persons were admitted as immigrants, not all of whom stayed in the Dominion, for numbers eventually found their way to the United States while others returned to the land of their birth.

The present war has not affected immigration to the same relative extent as did the First World War. The year 1913 witnessed the greatest immigration in Canada's history, 400,870 persons having been admitted; the greatest number admitted during the war years was 72,910 in 1917. At the outbreak of war in 1939, Canada had been going through a period of restricted immigration and the figures for 1940, 1941, 1942, 1943 and 1944 showed decreases of only 34 p.c., 46 p.c., 56 p.c., 51 p.c. and 26 p.c., respectively, as compared with the last complete pre-war year 1938, while the decrease between 1913 and 1917 amounted to 82 p.c.

Immigration is naturally at a low ebb in time of war; therefore the outline of immigration policy and entry requirements formerly appearing in this Section has been omitted from this edition. Full information regarding the Immigration Regulations may be obtained from the Immigration Branch, Department of Mines and Resources, Ottawa. (See also p. 110 of the 1941 Year Book.)

## Subsection 1.-Growth of Immigration

The wide fluctuations in the immigration movement since 1891 are shown in Table 1. The heavy movement between 1902 and 1914 was cut down severely between 1915 and 1918. Beginning with 1932 the figures have been the lowest since 1897.

[^64]

## Subsection 2.-Sex and Conjugal Condition of Immigrants

Females constituted $64 \cdot 9$ p.c. of the total immigrants to Canada in 1944, as compared with 61.3 p.c. in 1943 . Prior to 1931 males normally exceeded females.

## Subsection 3.-Languages and Racial Origins of Immigrants

Languages of Immigrants.-At the Census of 1941, only 115,414 persons or 1 p.c. of the total population was unable to speak either English or French, but the percentages, by racial origins, of those speaking neither official language varied greatly. A short discussion of this subject will be found at p. 124.

The Immigration Branch does not record the ability of immigrants to speak the official tongues of the Dominion; the statistics appearing in Table 5 relate only to the mother tongue of the immigrant. The great majority of those coming from the United States naturally give English as their mother tongue, regardless of their racial origin. In the calendar year 1944, 309 persons (10 years of age or over) coming from the United States, many of whom were undoubtedly of FrenchCanadian origin, gave French as their mother tongue. In that year, persons from all countries giving English as their mother tongue constituted 94.5 p.c. of the total and those giving French 3.5 p.c.

Racial Origins of Immigrants.-The great bulk of Canadian immigration of the past generation has been drawn from the English-speaking countries and from those Continental European countries where the population is ethnically closely related to the British, though for some years there was an increasing immigration of Slavs. Since the outbreak of war, the predominant racial origins of immigrants have been British, French and Jewish.

## 6.-Racial Origins of Immigrants into Canada, 1940-44

#### Abstract

Nors.-Dashes in this table indicate that no immigrants were reported for the corresponding stub items. Figures for 1926-39 will be found in the corresponding table of previous Year Books beginning with

${ }^{1}$ Reported as "Swiss" origin but are evidently one of the constituent races such as German, French, Italian, etc.

Assimilation of Immigrants.-The latest information showing the percentages of each origin born in Canada and in other countries and also the leading races with which the males have intermarried, as found at the Census of 1931, were presented at pp. 159-160 of the 1939 lear Book and at pp. 144-146 of the 1940 edition. Data for the 1941 Census are not yet available.

## Subsection 4.-Nationalities of Immigrants

In the calendar year 1944, $71 \cdot 1$ p.c. of total immigrants into Canada were British subjects and $28 \cdot 1$ p.c. were citizens of the United States.

## 7.-Nationalities of Immigrants into Canada, 1940-44

Note.-Dashes in this table indicate that no immigrants were reported for the corresponding stub items. Figures for $1930-39$ will be found in the corresponding table of previous Year Books beginning with the 1936 edition.

## Subsection 5.-Ports of Arrival, Destinations and Occupations of Immigrants

Ports of Arrival of Immigrants.-Throughout the greater part of Canada's history, Quebec has been the port at which the greatest number of immigrants have landed. In recent years there has been a tendency for a larger percentage of immigrants to arrive at the Port of Halifax. This appears to have been due to increasing immigration in the early spring months before the St. Lawrence is open for traffic. Arrivals for the calendar years 1931-37 are given at p. 164 of the 1939 Year Book. Statistics on a fiscal-year basis will be found in the Report of the Department of Mines and Resources.

Destinations of Immigrants.-Immigrants entering the Dominion are required to give the province of intended destination, but it does not necessarily follow that this is the province of eventual residence. It is believed, however, that the figures for later years give a truer picture of actual residence than did those for the earlier years, when 'boom' conditions tended to create a class of 'floaters' who flocked to new jobs, quite possibly in other provinces, as soon as the ones on which they were originally employed ended. Of the provinces, Ontario has received the largest number of immigrants in each year since 1905. In 1929 and 1930, Manitoba was in second place, while in the latest years Quebec has stood second as the immediate destination of new arrivals.

## 8.-Destinations of Immigrants into Canada, by Provinces, 1930-44

Nore.-The 1934-35 edition of the Year Book gives similar information for the fiscal years 1901 to 1934.

| Year | Maritime Provinces | Quebec | Ontario | Manitoba | Saskatchewan | Alberta |  | N.W.T. | Total |

${ }^{1}$ Includes 2 persons whose destinations were not given in 1930 and 1 such person in 1933.

## Subsection 6.-Rejections of Immigrants

Prohibited Immigrants.-The immigration of certain classes of persons to Canada is prohibited. These classes include persons who are physically or mentally unable to earn a living, criminals, beggars, persons who believe in the overthrow of government by revolutionary influence, etc. The particular subsection of the Immigration Act defining this class is worded as follows:-
(n) Persons who believe in or advocate the overthrow by force or violence of the Government of Canada or of constituted law and authority, or who disbelieve in or are opposed to organized government, or who advocate the assassination of public officials, or who advocate or teach the unlawful destruction of property.
Section 3 of the Immigration Act (R.S.C. 1927, c. 93), dealing with prohibited immigrants, was quoted in extenso in the editions of the Year Book published between 1934 and 1940.

The Act provides for the rejection and deportation of immigrants belonging to the probibited classes, and also for the deportation of those who become undesirables within five years after legal entry.

## 9.-Rejections of Prospective Immigrants upon Arrival at Ocean Ports, by Principal Causes and by Nationalities, 1933-44

Note.-Statistics for the fiscal years 1903-34 will be found at p. 222 of the 1934-35 Year Book.

While the majority of persons included in the figures of Table $\mathbf{1 0}$ have been previously shown in the statistics of immigration, a certain number of deserting seamen are included who have, of course, never been included in the immigration statistics. This situation has become intensified during the war years.

## 10.-Deportations of Immigrants, Including Accompanying Persons, after Admission, by Principal Causes and by Nationalities, 1933-44

Note.-Statistics for the fiscal years 1903-39 will be found at p. 160 of the 1940 Year Book.

## Subsection 7.-Juvenile Immigration

Juvenile immigration, apart from children accompanying their parents, has not been a large factor since 1931, when the Dominion Government ceased to grant financial assistance for this particular form of immigration. An outline of juvenile immigration, including those children brought to Canada under the British Empire Settlement Agreement, is given at p. 121 of the 1941 Year Book.

Evacuated or 'guest' children, temporarily resident in Canada as a result of war conditions in the United Kingdom, are not included in the figures of Table 11.

## 11.-British Juvenile Immigrants, Fiscal Years 1921-44

Note.-Juvenile immigrants are, of course, included in the total number of immigrants recorded else where. Figures for 1901-20 appear at p. 164 of the 1942 Year Book.

| Year | Juvenile Immigrants | Year | Juvenile Immigrants | Year | Juvenile Immigrants |
| :---: | :---: | :---: | :---: | :---: | :---: |

British 'Guest' Children.-An account of British guest children coming to Canada for the duration of the War is given at pp. 164-165 of the 1942 Year Book.

## Subsection 8.-Refugee Immigration

An account of this movement, in so far as it can be distinguished from normal immigration, is given at pp. 165-166 of the 1942 Year Book.

## Subsection 9.-Oriental Immigration

Under present conditions, Oriental immigration has ceased to be a problem and the economic effect of the presence of persons of Oriental origin can best be studied from census figures. An outline of the background and legislation connected with the immigration of Orientals into Canada is given at pp. 122-124 of the 1941 edition of the Year Book, and the table below presents statistics of Oriental immigration by sex since 1906, the earliest year for which these figures are available.

## Subsection 10.-Expenditures on Immigration

About 65 p.c. of Canada's expenditure on the encouragement and control of immigration was spent in the three decades 1901-1930. Expenditures for the five latest years will be found in the Public Finance chapter of this volume, while yearly details may be obtained from the "Public Accounts", published annually by the Department of Finance.

## Section 2.-Emigration and Returning Canadians

Emigration from Canada is an important factor tending to offset the immigration activities of the past and the movement from Canada to the United States has attained considerable proportions at certain periods. The two main factors have been the immigration to the United States of Europeans originally immigrating to Canada and the emigration of native-born Canadians.

Since 1924 immigration officers have recorded the number of Canadians returning to Canada from the United States after having left Canada to reside in that country. Statistics of that movement are given in Table 13.
13.-Canadians ${ }^{1}$ Returned from the United States, 1925-44

${ }^{1}$ Not including aliens with Canadian domicile.
A question of considerable interest to Canadians is that of the permanent movement of population between Canada and the United States. In view of the lack of Canadian statistics on emigration, the following table has been compiled from figures supplied by the Immigration and Naturalization Service of the United States Department of Justice. Not all of the statistics are available by months, so that it has not been possible to present the figures on a calendar-year basis; they are, therefore, shown on that of the United States fiscal year, July 1 -June 30. The column headed "Deportable Aliens Destined to Canada" covers persons permitted to return to Canada in lieu of deportation proceedings.

${ }^{1}$ Estimated.

Statistics of the permanent migration between Canada and the United Kingdom published by the British Board of Trade, are available from Jan. 1, 1924, to June 30, 1939. These were given at p. 169 of the 1942 Year Book.

Commencing on Apr. 1, 1938, an enumeration was made of returning Canadians and other non-immigrants entering the Dominion from Newfoundland. The table below gives details of this movement for the calendar years 1942-44.
15.--Returning Canadians and Other Non-Immigrants Entering the Dominion from Newfoundland, 1942-44

| Item |  |  |
| ---: | ---: | ---: | ---: |

${ }^{1}$ Revised since the publication of the 1943-44 Year Book.
The classification of returning Canadians and other non-immigrants, by classes of travel, formerly shown in this Section, has been dropped owing to the incompleteness and unreliability of information under wartime conditions.

Section 3.-Colonization Activities
Information on this subject is given at pp. 201-202 of the 1936 edition of the Year Book.

## GHAPTER VII.-SURVEY OF PRODUCTION*

## CONSPECTUS

| ection 1. Leading Branches of Pro- | Page | Section 3. Leading Branches of Pro- | Page |
| :---: | :---: | :---: | :---: |
| duction, 1941 and 1942 . | 180 | duction in each Province, 1942, |  |
| Section 2. Provincial Distrimution of |  | Compared with 1941. | 182 |
| Proditction, 1941 and 1942 . . . . . . . . | 182 |  |  |

Canadian production showed a notable expansion in 1942 as compared with the preceding year. The total net output of the nine main productive industries, after deduction of the cost of materials, rose from $\$ 4,720,000,000$ to $\$ 6,258,000,000$. The consequent gain was $\$ 1,500,000,000$ or 33 p.c. Production in 1942 was greater than in any previous year, the standing in 1929, the culmination of the previous major prosperity period, having been $\$ 3,658,000,000$.

The evidence points to further advance in commodity production during the two subsequent years. Statistics indicate that the upward trend of Canadian production was extended and progress made toward new records under the continuance of war demands. The magnitude of the expansion is indicated by the percentage increase of 11 p.c. in the net value of manufacturing production in 1943 over the high level of the preceding year. An advance was shown in the indexes of the physical volume of business and in wholesale prices during 1943 over 1942. A considerable increment in farm cash income was shown in 1943 over the preceding year and this position was decidedly more favourable in 1944.

The figure of net production compiled by the Dominion Bureau of Statistics represents an estimate of the amount contributed to the national economy by the leading industrial groups occupied with commodity production. "Net" production represents the total value less the cost of materials, fuel, purchased electricity and process supplies consumed in the production process. For purposes of ordinary economic discussion, the net figure should be used in preference to the gross, in view of the large amount of duplication that the latter includes.

A description of the general method used in computing the statistics shown in this chapter is given in corresponding sections of previous Year Books and also in the appendix to the "Survey of Production", a bulletin issued annually by the Dominion Bureau of Statistics.

[^65]
## Section 1.-Leading Branches of Production, 1941 and 1942

Primary Production.-With marked increases being recorded by the basic industries of agriculture, electric power and mining, the net value of primary production showed an outstanding gain of 38 p.c. over the preceding year. The total primary output stood at $\$ 2,924,000,000$ or $\$ 803,000,000$ above the figure recorded for 1941.

Agriculture, the leading industry in the primary group, rose by $\$ 741,000,000$, a percentage gain of 78 p.c. Manufacturing industries in the secondary group recorded the next greatest advance of $\$ 705,000,000$ or 27 p.c.

The output of the forestry group recorded an expansion of 1.8 p.c., standing at $\$ 429,000,000$, or $\$ 8,000,000$ above the total for 1941 .

Production in the fisheries group ros: $\$ 13,000,000$ to $\$ 65,000,000$, a gain of 25 p.c. Trapping receipts mounted by nearly $\$ 9,000,000$, with the percentage increase of 57 p.c. being the highest in the group.

Mining was next in importance to agriculture among the primary industries, producing 23 p.c. of the aggregate. The gain in 1942, despite minor change in prices, was 3 p.c. The net total, which had been $\$ 498,000,000$ in 1941, rose to $\$ 514,000,000$. Due in part to the marked development during the past quarter century and to the war demand of the year, the production of the mining industry reached an historical maximum in 1942.

The output of the electric power industry was fourth in importance among the primary industries, reaching a new high point in history. The net value was $\$ 200,000,000$ in 1942 , a gain of 9 p.c. over the preceding year. The industry has achieved marked expansion since the end of the War of 1914-18. The net revenue was slightly more than $\$ 45,000,000$ in 1919 and steady gains were recorded until an intermediate maximum of $\$ 125,000,000$ was reached in 1930 . The advance was resumed in 1934 and marked gains have been shown annually since that time.

Secondary Production.-For the three groups engaged in secondary production expansion was recorded in 1942 over the preceding year. The aggregate net production of manufactures, construction, and custom and repair rose about onequarter in this comparison. The total was $\$ 3,760,000,000$ compared with $\$ 3,010,000,000$ in 1941. After eliminating the production of the processing industries, the net output of manufacturing was $46 \cdot 1$ p.c. of total commodity production, the relative importance of 1941 having been 46.5 p.c.

The value of output in the construction industry increased by 15 p.c. to $\$ 311,000,000$ as compared with $\$ 270,000,000$ in the preceding year. Custom and repair stood at nearly $\$ 140,000,000$, an advance of $\$ 4,000,000$ over the total of $\$ 135,000,000$ recorded in 1941.

## 1.-Gross and Net Values of Production in Canada, by Industries, 1941 and 1942

Norz.-Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and process supplies consumed in the production process.

| Industry | 1941 |  | 1942 |  | PercentageChangein NetValue,1942 from1941 | Percentage of Net Value to Total Net Production 1942 |

$$
{ }^{1} \text { Comprises fuel, electricity, etc., and net sales shown in Table } 7 \text { of Chapter XII. }{ }^{2} \text { Includes }
$$ sawmills, pulp and paper mills, fish-processing, and certain mineral industries, which are also included in other headings above. This duplication, amounting in 1941 to a gross of $\$ 957,448,976$ and a net of $\$ 410,298,515$ and in 1942 to a gross of $\$ 1,070,508,497$ and a net of $\$ 425,472,701$, is eliminated from the grand total. ${ }^{3}$ Includes duplication mentioned in footnote 2 . The percentage of the net manufactures, n.e.s., to the total net production in 1941 was $46 \cdot 50$ and in 1942 was 46.09 .

Table 1 classifies industry into primary and secondary production, but naturally many stages of the manufacturing industries are closely connected with the primary resources. Fish-curing and -packing plants, for instance, are operated in close relationship to the fishing fleets; sawmills with forestry, and smelters and refineries with metal mines. The gross and net values of production of such processing industries are given separately in Table 2.

## Section 2.-Provincial Distribution of Production, 1941 and 1942

Each province of the Dominion showed an advance of net production in 1942 over 1941; the total of this advance amounted to $32 \cdot 6$ p.c. The Prairie Provinces showed the greatest relative improvement, commodity production in Saskatchewan having increased more than 116 p.c. Prince Edward Island, Alberta and Manitoba followed with increases of 62 p.c., 59 p.c., and 44 p.c., respectively.

With regard to the relative importance of the provinces as commodity producers, Ontario held first place among the nine provinces in the creation of new wealth, producing 40.4 p.c. of the Dominion total. Quebec followed with an output of $26 \cdot 6$ p.c. against $27 \cdot 1$ p.c. in the preceding year. British Columbia and Saskatchewan were in third and fourth places, respectively, the contribution in each case being about 8 p.c. Alberta, Manitoba, Nova Scotia, New Brunswick and Prince Edward Island followed in the order named.
3.-Gross and Net Values of Production in Canada, by Provinces, 1941 and 1912

| Province | 1941 |  |  |  | 1942 |  |  |  |

| Yukon and N.W.T. | 9,497, 928 | 8,246, 282 | $0 \cdot 17$ | 486-74 | 11,166, 898 | 9,630, 295 | 0.15 | 566.49 |
| Totals. | 9,250,795,729 | 4,720,073,033 | 100.00 | $410 \cdot 20$ | 11,501,593,442 | 6,258,464,613 | 100.00 | 537-02 |

${ }^{1}$ Based on 1942 estimated population figures as given at p. 128.
Per Capita Production.-The Dominion total of net commodity production at $\$ 537$ per capita was $\$ 127$ above the figure for 1941 , the estimated increase in the population having been only 1 p.c.

Each of the nine provinces showed per capita betterment in 1942 over the preceding year. Ontario, with its pre-eminent industrial position and diversification, was in first place in this respect, with a net commodity output of $\$ 651$ per capita, a gain of approximately $\$ 100$ over the level of 1941. Saskatchewan ranked second and British Columbia third.

## Section 3.-Leading Branches of Production in Each Province, 1942 Compared with 1941

Maritime Provinces.-Net production in the Maritime Provinces in 1942 increased 28 p.c. over the preceding year. The greatest gain was recorded in agriculture, the net production rising from $\$ 50,000,000$ to $\$ 88,000,000$. The only decrease shown was in custom and repair.

Quebec.-Manufacturing was again the principal industry in Quebec, contributing, without duplication, nearly 54 p.c. of the net value of provincial production. In comparison, agriculture accounted for only 14 p.c. and forestry 9.9 p.c. of the total net value. Construction registered a slight gain, showing an advance from 6.0 to 6.7 p.c., while mining decreased from 10.0 to 8.3 p.c. of the provincial total.

Ontario.-This province held the leading position in the net value of manufacturing production in 1942, which, without duplication, contributed 61 p.c. of the provincial total. Mining and construction were relatively less important than in 1941.

Prairie Provinces.-Agriculture naturally predominated in the Prairie Provinces, contributing about 72 p.c. of the net production in 1942. The increase over 1941 was $113 \cdot 3$ p.c., gains having been general in each of the three provinces. Manufacturing accounted for more than one-seventh of the regional output-a remarkable development of the past quarter century in an area generally regarded as predominantly agricultural.

British Columbia.-The net output from forestry in British Columbia during 1942 , was over $\$ 97,000,000$ or nearly one-fifth of the provincial production. Manufactures, n.e.s., eliminating duplication, contributed the highest proportion, viz., $37 \cdot 3$ p.c., while mining comprised nearly 13 p.c. of the net value.

## 4.-Gross and Net Values of Production, Classified for Each Province, by Industries, 1941 and 1942

Note.-For Dominion totals, see Table 1.

Agriculture, including stock raising and horticulture, is the most important single industry of the Canadian people, employing, according to the Census of 1941, $25 \cdot 2^{*}$ p.c. of the total gainfully occupied population and $30 \cdot 5^{*}$ p.c. of the gainfully occupied males. In addition, it provides the raw materials for many Canadian manufactures, and its products in raw or manufactured form constitute a very large percentage of Canadian exports. For a statement of the occupied and the available agricultural lands in Canada, see pp. 27-28 of this volume.

An introductory outline of the historical background of Canadian agriculture is given at pp. 187-190 of the 1939 Year Book. As now presented this chapter treats of current governmental activities-Dominion, by special authoritative articles prepared in the Department of Agriculture but not repeated from year to year unless changes warrant; and Provincial, by an outline of the work of each provincial department. Comprehensive statistics of agriculture, collected and compiled by the Agricultural Branch of the Dominion Bureau of Statistics and covering Canada as a whole, close the chapter. These include data on farm income, values of agricultural production and farm capital, field crops, farm live stock and poultry, dairying, fruit, special crops, prices and miscellaneous statistics. The review of world statistics, compiled from the publications of the International Institute of Agriculture, has not been included in recent editions of the Year Book; these statistics are not now available because of war conditions.

## THE WAR AND CANADIAN AGRICULTURE $\dagger$

At the close of 1944, Canadian agriculture was believed to have reached the peak of its wartime production. Encouraged by subsidies and other forms of government assistance, Canadian farmers have succeeded in producing quantities of live stock and live-stock products. At the same time wheat production has been maintained to the point of meeting wartime requirements and reserves. Despite the security of two-year export contracts for many of Canada's agricultural products,

[^68]farmers appear to have more than reached the limit of their present productive capacity. Throughout five war years, farmers have continued to meet the challenge of ever-increasing production. This has been accomplished despite the shortage of farm labour and difficulties of obtaining needed farm machinery. In the Prairie Provinces, however, where much of the increased production of live stock and livestock products has originated, there has been recent evidence of some return to the less arduous production of wheat.

An important development in Canadian agriculture during 1944 was the passage of the Agricultural Prices Support Act. This provides for the setting up of a Board which will come into active operation at the conclusion of the War to tide farmers over the transition period of adjusting production back to a peacetime basis.

Farm Labour.-Almost from the start of the War, young men and women have gone from farms to the Armed Services and to industry in such numbers that those on the land have been obliged to toil longer and harder than ever before. At June 1, 1944, the number of males working on Canadian farms was only 1,000,000 as compared with $1,210,000$ on June 1, 1939. Of the current million agricultural workers, many are not constantly on the land but are employed part time in packing plants and in lumber woods. In 1944, farmers continued to receive some assistance from high school students during an extended summer vacation, and this assistance of unskilled but youthful helpers will probably be available in 1945. Home defence troops who have helped to harvest fruit and tobacco crops are not likely to be available again during the course of the War.

Grain Crops.-Encouraged by acreage payments on land taken out of wheat production, the area sown to this crop declined appreciably in the three years prior to 1944. In the latter year, however, wheat acreage was sharply increased, contributing factors being the important export demand and better prices. In the autumn of 1943 the initial price rose from 90 cents to $\$ 1 \cdot 25$ per bu. No. 1 Northern, in store at Fort William. Increase in wheat acreage was made at some expense to the production of flaxseed, and was followed by a slight shift away from live-stock production. The estimated acreage sown to wheat in 1944 was $23,284,000$ acres, and for 1945 a reduction is sought to a figure of $21,500,000$ acres, coupled with an increase of about 500,000 acres in summerfallow.

Oilseed crop production in Canada in 1944 showed a substantial reduction. Although acreages for soybeans, sunflowers and rapeseed were maintained or increased, the flaxseed area was reduced to about $1,300,000$ acres, compared with 2,900,000 in 1943.

In the crop year 1943-44 a record volume of western wheat and feed grains was moved into the eastern provinces and British Columbia under the Dominion Freight Assistance Policy. The poor crop harvested in many sections of Eastern Canada in 1943 and the high levels of live-stock production created an emergency which would have been serious had not large surplus grain stocks existed in grain elevators and on western farms. In 1944, the eastern harvest was much improved over the previous year and requirements for western grain will be considerably reduced in 1944-45.

Bacon Hogs.-With a two-year bacon contract with United Kingdom giving them assurance of a steady demand, hog producers marketed in 1944, through inspected plants, an all-time high number of hogs, estimated at $8,800,000$ compared
with $7,149,860$ in 1943. Encouragement to produce quality hogs was enhanced by the payment of Dominion Government bonuses on hogs of the most desirable grades, beginning early in 1944 . These premiums were $\$ 3$ on Grade A carcasses and $\$ 2$ on Grade B1 carcasses.

The British bacon contract called for the delivery of a minimum of $900,000,000$ lb. of bacon and pork products in the calendar years 1944 and 1945, but deliveries in 1944 alone were estimated to be in the vicinity of $755,000,000 \mathrm{lb}$. and at the end of 1944 Britain indicated a desire for a minimum of $600,000,000 \mathrm{lb}$. in 1945. Hog producers have been asked to maintain their production, although some decline in marketings is expected, particularly in the Prairie Provinces, where wheat production competes strongly with hogs for the farmers' effort.

Beef Cattle.-Slaughterings of cattle in 1943 were larger than for any previous year, with a total of $1,044,744$ head. It was estimated that 1944 marketings will reach a new high of $1,300,000$. This increase in slaughterings of cattle together with those of other kinds of live stock put great strain on packing-plant facilities, and there was considerable agitation on the part of producers that beef cattle again be allowed to enter the United States and so relieve crowded stockyards. The Government is committed to remove all restrictions on the shipment of beef cattle to the United States as soon as the British, Canadian and United States war needs are met. It was decided, however, to continue prohibiting beef exports to the United States for the present because it had already been agreed that, in the best interests of the United Nations, Canada should export all surplus beef to the United Kingdom and because marketing channels were similarly congested in the United States with cows and unfinished cattle. A large outlet for beef producers was opened in the United Kingdom when a two-year contract for all surplus beef in Canada for both 1944 and 1945 was signed. It was estimated that about $140,000,000$ lb. would be shipped to Britain in 1944. Agricultural authorities stated that, while every effort should be made to maintain beef marketings in 1945, a further expansion in production was not recommended.

Dairy Products. - Milk production in 1944 was estimated at about $17,600,000,000 \mathrm{lb}$., and Canada's agricultural program for 1945 calls for a 3-p.c. increase to $18,100,000,000 \mathrm{lb}$. In making this recommendation agricultural authorities recognize that, even though the basic industry of dairying has an assured market for its products, it may not be possible to continue its expansion.

In 1944, production of creamery butter was $298,252,000 \mathrm{lb}$. as compared with $311,700,000$ in 1943; but cheddar cheese production rose from the 1943 figure of $164,553,000 \mathrm{lb}$. to $178,200,000 \mathrm{lb}$. in 1944 . The British cheese contract calls for delivery of $125,000,000 \mathrm{lb}$. of cheddar cheese for each of the two years ending Mar. 31, 1945, and Mar. 31, 1946. The recommended production for 1945 was for an amount equal to that of 1944.

The production of evaporated whole milk increased to $179,500,000 \mathrm{lb}$. in 1944 from the 1943 output of $178,368,000 \mathrm{lb}$; while condensed whole milk advanced from $26,915,000$ to $33,700,000 \mathrm{lb}$.; whole milk powder from $15,000,000$ to $16,700,000$ lb.; and skim-milk powder from $22,400,000$ to $30,000,000 \mathrm{lb}$. in 1944.

Eggs and Poultry.-The poultry industry continued to expand, with 1944 egg production estimated at $380,900,000 \mathrm{doz}$. compared with $333,000,000 \mathrm{doz}$. in 1943. To the end of October, 1944, purchases by the Special Products Board for
export to Britain in the form of dried egg powder were $80,000,000$ doz., some $46,000,000 \mathrm{doz}$. greater than for all of 1943 ; of these $57,768,000$ doz. were exported during the calendar year.

Under the two-year egg contract with the British Ministry of Food covering 1944 and 1945, the Ministry undertook, in addition to a specified minimum of 7,500 long tons of dried eggs (approximately $50,000,000 \mathrm{doz}$.), with the option of taking 600,000 cases of eggs from storage in the autumn of 1945 , to use its best endeavours to accept such additional quantities as might be available. The Ministry later advised that it wished to take up its option of 600,000 cases of storage eggs for shipment in the autumn of 1945 and also asked that a similar quantity of 600,000 cases be shipped as fresh eggs in the winter and spring months of 1944-45 apportioned as follows: 200,000 cases each in January and February and 100,000 cases each in March and April. It asked, too, that all available shell eggs in the Grades A Large and A Medium available up to the end of December, 1944, be shipped in the shell and asked for an indication of the quantity of fresh eggs which were likely to be available from September to December, 1945.

Production of poultry meats rose from $265,308,000 \mathrm{lb}$. in 1943 to an estimated $315,000,000 \mathrm{lb}$. in 1944. .This increase, caused in part by the sale of baby chicks in 1944 being 2 p.c. greater than those of 1943, threatened to glut the domestic market. However, an outlet for some surplus dressed poultry at ceiling prices was obtained in the United Kindgom which bought 2,000,000 lb., and in the United States, which by early December, 1944 , has taken in excess of $24,000,000 \mathrm{lb}$., most of this quantity being bought by the United States army.

Fruit and Vegetables.-A bumper year for apple growers resulted in an estimated production of $16,487,000 \mathrm{bu}$. compared with $12,892,000 \mathrm{bu}$. in 1943. A probable reduction of 15 p.c. in the apple crop is expected for 1945.

Potato production reached an estimated $80,400,000 \mathrm{bu}$. compared with $72,568,000 \mathrm{bu}$. in 1943. For 1945 a crop of $72,000,000 \mathrm{bu}$. is considered to be sufficient to meet all demands without giving rise to problems of surplus or shortage. The 1944 crop could be disposed of only by considerable increases in exports of both table stock and certified seed and by use of dehydration. Incidentally, the dehydration of all vegetables was believed to have reached its peak with the processing of 1944 crops.

In 1944 acreage of each of the four subsidized vegetable crops for canning showed a large increase over 1943. Growers are being asked to confine their 1945 plantings to the point of maintaining this acreage in beans and corn and making slight reductions for peas and tomatoes.

An assured domestic and export market for dried beans raised the 1943 acreage of 85,200 to 99,500 acres in 1944. If the competition of corn, together with inability to obtain special machinery for bean harvesting, can be overcome, a 26-p.c. increase in acreage to 125,000 is recommended for 1945. The 1944 acreage of dried peas amounting to 83,600 acres should be adequate for 1945 needs.

## Section 1.-Government in Relation to Agriculture

It is provided in Sect. 95 of the British North America Act that "in each province the legislature may make laws in relation to agriculture in the province"; it is also declared "that the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture . . shall have effect in and for the province as long and as far only as it is not repugnant to any Act of the Parliament of Canada"

As a result of this provision, there exist at the present time Departments of Agriculture, with Ministers of Agriculture at their heads, in the Dominion and in each of the nine provinces.

## Subsection 1.-The Dominion Government

Subjects dealt with under this heading in previous editions of the Year Book are: the Functions of the Dominion Department of Agriculture; Agricultural Progress in Canada and the Dominion Experimental Farms System; the Prairie Farm Rehabilitation Program; the Historical Background of Canadian Agriculture; and Agricultural Marketing Legislation, 1939. See list of special articles at the front of this edition.

## THE CANADIAN FARM LOAN BOARD*

This Board was appointed by the Governor in Council under the provisions of the Canadian Farm Loan Act (c. 66, R.S.C. 1927, as amended by c. 46, Statutes of 1934 and c. 16, Statutes of 1935) and, as an agency of the Crown in the right of the Dominion, administers a system of long-term mortgage credit for farmers throughout Canada.

The Board is empowered to loan money to farmers for the payment of debts, for the purchase of farm equipment and live stock, to assist in the purchase of farm lands, for farm improvements or for any other purpose considered as improving the value of the land for agricultural purposes.

Loans may be granted on the security of first mortgages on farm lands actually operated by the borrower up to an amount not exceeding 50 p.c. of the appraised value of such farm lands, but, in any event, not in excess of $\$ 5,000$ and such loans are repayable on an amortized plan of repayment over a period not exceeding 25 years.

In virtue of amendments to the Act enacted in 1935, the Board is also empowered to make additional advances to farmers, who, having obtained a firstmortgage loan from the Board, require additional funds. The amount of such additional advance is not to exceed 50 p.c. of the amount of the first-mortgage loan, nor the aggregate of first- and second-mortgage loans to exceed two-thirds of the appraised value of the farm lands mortgaged as security for the loan, nor in any event an aggregate amount of $\$ 6,000$. The current rate of interest on loans made by the Board is 5 p.c. on first-mortgage loans and 6 p.c. on second-mortgage loans. Operations are now carried on in all provinces of Canada.

Particulars regarding the capital requirements of the Board, rates of interest charged and other details appear at p. 185 of the 1940 Year Book.

[^69]1.-Applications for Farm Loans Received, Loans Approved and Loans Disbursed, Fiscal Years 1933-44

## Subsection 2.-Provincial Departments of Agriculture*

Prince Edward Island.-The Department of Agriculture is presided over by a Minister, assisted by a Deputy Minister, a Dairy Inspector, a Pathologist and Veterinarian, a Soil Assistant, two County Representatives, a Superintendent of Women's Institutes and an Assistant.

[^70]Assistance is rendered by the promotion of co-operative marketing of farm products, the promotion of the live-stock industry, encouragement of exhibitions, the payment of part of the cost of ground limestone, the growing and marketing of wild fruits, the formation and establishment of boys' and girls' clubs, and other efforts directed to the welfare of agriculture generally.

Since the outbreak of war, special emphasis has been placed on the development of the bacon, dairy and poultry industries, with the result that production in these branches has been increased to a very high level. Special policies have been promoted to encourage these branches of farm industry, and also in the development of seed potato production.

Nova Scotia.-Provincial agricultural policies in Nova Scotia are administered by the Department of Agriculture and Marketing, with the Minister's Office and those of the Director of Marketing, Statistician and Superintendent of Immigration, Publicity Representative, Forest Products Representative and Provincial Exhibition Commission, situated at Halifax. Many of the technical officials and the Land Settlement Board are located at the Agricultural College and Farm, Truro. Divisions of the Department include: extension service, agricultural societies, associations and exhibitions; dairying; poultry; live stock; entomology and botany; agronomy; animal husbandry; soils and fertilizer; horticulture; apiculture; animal pathology; agricultural engineering; and women's institutes.

New Brunswick.-The divisions of the Department of Agriculture of New Brunswick are as follows: live-stock and agricultural societies; dairying; herd improvement; soils and crops; poultry; horticulture; women's institutes; extension; industry, immigration and farm settlement; field husbandry; beekeeping; agricultural engineering; fur; and credit unions and co-operatives.

Quebec.-The Department of Agriculture of Quebec is divided into the following branches: rural economics; extension; animal husbandry; horticulture; field husbandry; information and research. Each branch is divided into sections dealing with particular problems. There are also many other special activities such as the Farm Credit Bureau, the Drainage Bureau, the Dairy Industry Commission, and the Agriculture Merit Competition for junior and senior farmers. A provincial entomologist and a botanist are also included on the staff of the Department.

Co-operation is the key-note of better farming in the Province and takes practical form in 462 agricultural co-operatives, 93 agricultural societies, 668 farmers' clubs, 136 young farmers' clubs and 850 farm women's clubs.

Agricultural instruction is given in 3 Colleges of Agriculture leading to the B.S.A. Degree, in 17 secondary Schools of Agriculture and in 6 Agricultural Orphanages.

Ontario.-The Ontario Department of Agriculture includes the following branches: statistics and publications; agricultural and horticultural societies; live stock; women's institutes; dairy; fruit; agricultural representatives; crops, seeds and weeds; co-operation and markets, including administration of the Farm Products Control Board and the Act re credit unions; and the Milk Control Board. The Department is responsible for the administration of the Ontario Agricultural College, the Ontario Veterinary College, the Kemptville Agricultural School, the experimental farms at Guelph, Ridgetown and Vineland, and demonstration farms at New Liskeard and Hearst.

Manitoba.-The Department of Agriculture of Manitoba serves through the following Branches: agricultural extension; live stock; dairy; agricultural publications and statistics; weeds administration; farm labour; debt adjustment; and provincial veterinary laboratory.

The Extension Service deals with agronomy, horticulture, poultry, agricultural engineering, beekeeping, junior live stock, boys' and girls' clubs and women's work, with specialists devoting their attention to these subjects. Meetings, field days, and short courses are held throughout the Province. There are 19 agricultural representative offices in Manitoba, each representative serving from 1 to 5 municipalities.

The Dairy Branch administers the Dairy Act, supervises the grading of cream, inspects creameries and cheese factories, gives instruction in cheese- and buttermaking, issues licences to makers of dairy products and to cream graders, furnishes plans and specifications in connection with the establishment of new creameries and cheese factories, etc.

The Agricultural Publications and Statistics Branch publishes and distributes, annually, approximately 100,000 bulletins, circulars, posters, leaflets, etc.

The Weeds Administration Branch directs the activities of 15 municipal weedcontrol units comprising 70 rural municipalities engaged in eradicating deep-rooted, persistent perennial weeds, supervises weed demonstrations, investigates weed problems, conducts weed surveys and prepares weed literature, radio addresses, articles, pictures, mounted weed specimens, etc.

The Veterinary Laboratory operates a diagnostic laboratory for animal diseases, the services of this laboratory being available to veterinaries and live-stock owners.

Saskatchewan.-The Department of Agriculture of Saskatchewan includes Divisions with duties as follows: (1) The Field Crops Division promotes good cropping and tillage practices, encourages the use and distribution of good quality seed, operates a seed-cleaning plant and provides measures for suppressing insect and weed pests; (2) The Live Stock Division encourages the use of suitable animals for breeding purposes through establishment of pure-bred sire areas, examines and licenses stallions, arranges for exhibits of live stock, registers brands, bonds and licenses live-stock dealers and agents, and promotes warble control; (3) The Veterinary Division investigates conditions with a view to safeguarding the health of live stock, and co-operates with Dominion officials and practicing veterinarians in disease control; (4) The Poultry Division maintains flock-culling and turkey-grading and banding services, administers an approved hatchery policy, licenses wholesalers and first receivers of poultry products and also licenses hatcheries and hatchery agents, bonds produce dealers and poultry buyers, and promotes flock improvement; (5) The Dairy Division licenses and bonds dairy manufacturing plants, licenses cream graders and milk and cream testers, and promotes herd improvement through cow-testing centres and organized Herd Improvement Associations; (6) The Statistics Division, in co-operation with the Dominion Bureau of Statistics, maintains a crop-reporting service and gathers data regarding crops and live stock, including production, marketing and income; (7) The Apiary Division registers beekeepers, inspects apiaries and promotes better management practices.

Grants to agricultural societies are paid through the Department, but activities are directed by the College of Agriculture. The Land Utilization Board, composed of representatives of several interested departments of government, endeavours to bring about the withdrawal from arable farming of lands not suitable for such use,

22115-13 $\frac{1}{2}$
and to have said lands made available for grazing, if suitable for that purpose. Under the Agricultural Representative Service, the Province is divided into districts where qualified men carry on promotional and educational work.

Alberta.-The Alberta Department of Agriculture serves the rural people of the Province through a number of branches, each concerned with a particular phase of the industry.

The Field Crops Branch includes the following divisions: crop improvement; soil conservation and weed control; pest control; horticulture; and a farmstead planning service.

The Live Stock Branch assists in maintaining the quality of Alberta herds and flocks through sire exchange and assistance policies. The Stallion Club Policy is still in operation and an Artificial Insemination Laboratory has been established at Olds. The Branch has also increased the feeding of beef cattle through its Live Stock Feeder Associations Policy. The establishment of cattle tuberculosis restricted areas continues with 12 districts accredited as at the end of 1943 . The work of the Branch also includes the administration of Acts relating to stock inspection, brands, domestic animals and the sale of horned cattle.

The Dairy Branch administers several provincial dairy promotion policies. Educational work is carried on through the cow-testing service, short courses and other means of instruction. Emphasis is placed upon quality production. Prescribed standards in construction and sanitation practices are required of all dairy manufacturing, milk distributing and frozen-food locker plants, such standards being enforced through licence and inspection. The Branch operates a laboratory in which chemical and bacteriological analyses are made on samples of dairy products and creamery water supplies.

Higher egg and poultry-meat production in the Province has increased the work of the Poultry Branch. In addition to the production program and the operation of an up-to-date demonstration and breeding plant (located at Oliver), regulations dealing with egg and poultry grading, the conduct of hatcheries, and blood testing for pullorum disease are enforced.

The Veterinary Branch and Veterinary Laboratory have been required to assume a heavy burden in connection with the health of greatly increased numbers of all classes of live stock in wartime. The Laboratory conducts pathological and post-mortem examinations on specimens submitted and findings are reported to the shipper. This service has done much to help producers to understand disease problems and their control.

The Apiculture Branch administers the Bee Diseases Act, involving the registration of all beekeepers and the maintenance of an inspection service.

Alberta junior farm and home clubs provide programs of activities designed to arouse in farm young people an appreciation of farming as a vocation and to train them in the essentials of good citizenship. In 1944, 225 clubs included projects in beef and dairy cattle, swine, poultry, grains, forage crops, gardening and home economics. Seasonal short courses in agriculture and farm mechanics are conducted at selected country points for the training of farm youth. A two-year course is offered at the Olds School of Agriculture providing training in the principles and practices underlying successful farming and homemaking. During the summer months short courses are conducted for students connected with the junior clubs and for groups of farm men and women.

Under the Agricultural Extension Service, 29 district agriculturists work among the rural people, assisting them with their many problems and carrying to them the various Departmental policies designed to improve the general standard
of agricultural practices throughout the Province. Under the Dominion Provincial Farm Labour Agreement, which became effective Apr. 1, 1943, the services performed by the district agriculturists and farm labour supervisors were combined, providing a single field force to deal not only with agricultural production but with farm labour as well.

The Women's Division of the Extension Service, through the appointment of 5 district home economists in 1944, has begun the task of providing a comprehensive service in home economy to meet the needs of homemakers, particularly those in rural areas. Special attention is paid to supervision of girls' club work, and to meet adult needs, winter study courses are provided.

Agricultural statistics are collected by the Extension Service, and publications, etc., prepared by the various Branches or in co-operation with the University of Alberta, are made available through its facilities.

In 1943 an Office of Agricultural Information was established, the purpose of which is to make available to the technical and administrative personnel of the Department data pertaining to the science, practice and possibilities of agriculture.

British Columbia.-The Department of Agriculture consists of three main Divisions: (1) The Administrative Division is responsible for the general direction of agricultural policies; administration of legislation affecting agriculture; supervision of extension programs; collection of agricultural statistics; compilation of reports and publications; preparation of material for agricultural exhibitions; supervision of farmers' and women's institutes; direction of junior-club projects; and markets extension. (2) The Animal Industry Division supervises live-stock work including: promotion and improvement of animal production; brand inspection; inspection of beef grading; control of contagious diseases of animals; eradication of insect pests detrimental to live stock; and field extension connected with animal nutritional work. This Division consists of general live-stock, veterinary, dairy, and poultry Branches. (3) The Plant Industry Division includes: horticulture, field crop, plant pathology, entomology and apiculture Branches; fruit, vegetable and seed production and surveys dealing with orchards, small fruits, flowering bulbs and greenhouse areas are supervised; suppression of insect pests and plant diseases inspection with control of noxious weeds and general promotion of crop production is under this Division.

Extension officials of the Department are located in 16 agricultural centres of the Province.

## Subsection 3.-Provincial Agricultural Colleges and Schools

A recently revised treatment of this subject appears at pp. 203-213 of the 1943-44 Year Book.

## Section 2.-Statistics of Agriculture*

Crop-Reporting Service.-Through the voluntary crop-reporting service of the Dominion Government, accurate, timely and independent reports on crop conditions throughout the Dominion are published; up to the entry of Italy into the War, periodic reports were made to the International Institute of Agriculture

[^71](to which Canada is an adhering country) at Rome, in return for reports on the production of other countries and of world totals that influence prices and consequently affect the interests of Canada.

Census Statistics.-In addition to the statistics collected annually, which are the subject of this section, valuable information is published following each decennial census of the Dominion and each quinquennial census of the Prairie Provinces. Details of such census statistics, published following the Censuses of 1931 and 1936, are given at p. 152 of the 1941 Year Book while the more important data, at present available from the 1941 Census are given at pp. 236-245.

## Subsection 1.-Farm Cash Income

In 1944 . Canadian farmers received, in cash, from the sale of their farm pro ducts a total of $\$ 1,752,000,000$. This compares with $\$ 1,402,000,000$ in 1943 and $\$ 722,000,000$ in 1939.

Increased prices, together with a substantial increase in the volume of production were responsible for the increased cash income. In addition to the above amounts, farmers, mainly in the Prairie Provinces, received $\$ 65,300,000$ in 1944 from Government payments under the Wheat Acreage Reduction Act, Prairie Farm Assistance Act, Prairie Farm Income Act and against Participation Certificates on the wheat crops of 1940, 1941 and 1942. The comparable figure for these payments in 1943 was $\$ 32,000,000$.

Cash income estimates do not include income accruing to farmers from outside sources nor the value of products consumed in the farm home. Farm cash income, together with these latter amounts, represents what farmers have available to meet living and farm operating costs, new capital expenditures, payments against indebtedness and so forth.

4.-Cash Income from the Sale of Farm Products, by Provinces, 1926-44

## Subsection 2.-Value of Agricultural Production and of Farm Capital

Value of Agricultural Production.-It is important to note that the figures of value of commodities produced on Canadian farms shown in Table 5 represent gross values of production. They are not net farm income as no distinction is made in crops used as materials for other kinds of production, such as feeding of live stock, and no allowance is made for the cost of production. In 1943 the yields of crops were not as satisfactory as in the preceding year but the output of live stock and live-stock products was greatly increased; consequently there was an over-all increase of $5 \cdot 2$ p.c. in the gross value figure. In 1944 every item showed an increase over the previous year with the exception of fruits and vegetables. The value of field crops showed an increase of 13.5 p.c., while the output of live stock and livestock products increased $14 \cdot 1$ p.c. The over-all increase amounted to $12 \cdot 4$ p.c.

## 5.-Estimated Gross Values of Agricultural Production, Itemized by Provinces, 1942-44

Nots.-Final figures or later estimates may be given for certain individual items in other sections of this Chapter.

## ${ }^{1}$ Subject to revision.

Value of Farm Capital.-The items included in the term "farm capital" as used in Table 6 are: lands and buildings; implements and machinery, including motor-trucks and automobiles; and live stock, including poultry and animals on fur farms. Values of lands, buildings, implements and machinery were reported at the Decennial Censuses of 1931 and 1941. Changes in the total value of lands and 22115-14
buildings for the years 1942 and 1943 have been based on the value of occupied farm lands reported annually by crop correspondents, while those in the annual values of farm implements and machinery have been estimated on the basis of sales reported each year.

## 6.-Current Values of Farm Capital in Canada, by Provinces, 1942 and 1943

Average Values of Farm Lands.-Although the value of farm lands as reported by crop correspondents shows a considerable rise since 1940, the present values are substantially below those recorded prior to the collapse in land values in 1929 and no serious inflation of land values similar to that which followed the First World War is yet in evidence. Higher average values for land were reported during the inflation year of 1920. A decline from the high values of that time occurred prior to 1926. A second sharp decline followed 1929 and values per acre reached their lowest point in 1934 at $\$ 23$ per acre. For 1943 the average value indicated was $\$ 28$ per acre. Land values as reported by crop correspondents represent the average value per acre of all occupied land and include a considerable percentage of unimproved land. Consequently, these values are considerably below current market prices for improved farm land.

## Subsection 3.-Acreages, Yields and Values of Field Crops

In framing agricultural policy for 1944, an effort was made to maintain the acreage devoted to coarse grains and to summerfallow and, therefore, to keep wheat acreage down to a level approaching that reached in 1943. Canadian farmers did not accept this recommendation and the acreage planted to wheat expanded by more than $6,000,000$ acres. As a result, the areas devoted to the production of oats and barley each declined by over a million acres. Payments which had been made under the Wheat Acreage Reduction Act in 1943 for the purpose of encouraging farmers to shift wheat acreage to coarse grains and summerfallow were discontinued.

Generous summer rainfall in most areas made possible the realization of aboveaverage yields. The wheat crop of $435,500,000$ bushels ranks fourth in volume with the six crops harvested during the present war period. The increased average yield of oats proved sufficient to offset the decreased acreage and the crop slightly exceeded that of 1943. Although barley yields were on an average about 1 bushel higher than in 1943 this was not sufficient to overcome the decrease in acreage. A substantially smaller area of $1,300,000$ acres was seeded to flax in 1944. This compared with a seeded area of $2,900,000$ acres in 1943 and a recommended acreage for 1944 of $2,800,000$ acres. This contraction in the production of flaxseed has coincided with a correspondingly small crop in the United States, the combined result of which has been a very tight supply position for this important oilseed in North America. Fortunately the area summerfallowed during the summer of 1944 was maintained at the fairly satisfactory level of $19,400,000$ acres.

An encouraging feature of the 1944 crop season was the greatly improved production of wheat and coarse grains in Ontario. This Province experienced a very poor season in 1943 and the deficiency in feed supplies had to be made up by shipments from the west. Some loss of yield and grade occurred in the Province of Manitoba, however, as a result of flooding during the late summer.

The total gross farm value of all the field crops produced on $62,732,550$ acres in 1944 was $\$ 1,288,058,000$ compared with $\$ 1,134,399,000$, the estimated value of crops produced on 59,705,500 acres in 1943.
8.-Acreages and Values of Field Crops in Canada, by Provinces, 1939-44

Note.-For earlier figures, see Statistical Summary at the beginning of this volume.

## 9.-Acreages, Yields and Values of Principal Field Crops Grown in Canada

Nore.-Comparative figures for the Dominion as a whole for the years 1908-28 are given in the 1929 Canada Year Book, pp. 230-232 and for 1929-38 in the 1939 Canada Year Book, pp. 203-204. For certain figures for earlier years on acreage, production and value, see Statistical Summary of the Progress of Canada at the beginning of this volume. For the majority of crops, the long-time average covers the years 1908-40.

[^77]Stocks of Grain in Canada.-Table 11 shows the stocks of Canadian grain on hand on July 31, for the years 1935-44, in both Canada and the United States as well as the amounts held on farms at that date. Figures of farm stocks show amounts for Canada and the Prairie Provinces separately, while an additional column indicates the amounts held in country elevators in the Prairie Provinces.

| Swine. | 1,366,083 | 1,207,619 | 1,733,850 | 2,353,828 | 3,634,778 | 3, 404,730 | 4,774,828 | 6,174,309 |

${ }^{1}$ Cows in milk or in calf. $\quad{ }^{2}$ Cows and heifers, two years old or over, kept mainly for milk purposes.

Live stock on farms cannot be separated from the total numbers except for the past three census years. Table 13 gives the numbers of live stock on farms for those years.
13.-Live Stock on Farms in Canada, Censuses of 1921, 1931 and 1941

| Item | 1921 | 1931 | 1941 |
| :---: | :---: | :---: | :---: |
|  | No. | No. | No. |
| Horses. | $3,451,752$ $8,369,489$ | 3,113,909 | $2,788,7 ¢ \cdot$ $8,517,34$ |
| Milk cows | $3,228,633^{1}$ | 3,523,0011 | ${ }^{8,623,942}{ }^{2}$ |
| Other cattle. | $5,140,856$ | 4,450,030 | 4,893,401 |
| Sheep. | 3,200,467 | 3,627,116 | 2,840,092 |
| Swine. | 3,324,291 | 4,699,831 | 6,081,389 |

[^79]${ }^{2}$ Cows and heifers, two years old or over, kept mainly for milk

Live stock and animal products statistics have recently undergone a revision back to 1906 to bring them to a comparable basis. The completely revised series of indexes showing the numbers of animals on farms is given in Table 14. These indexes are the numbers of live stock for the respective years expressed as percentages of the average numbers on farms during the period 1935 to 1939.

## 14.-Index Numbers of Animals on Farms in Canada, 1906-44

(Average $1935-39=100$ )

| Year | Horses | Milk Cows | Other Cattle | $\begin{aligned} & \text { All } \\ & \text { Cattle } \end{aligned}$ | Sheep and Lambs | Hogs |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1906. | $69 \cdot 3$ | 71.5 | $91 \cdot 1$ | $82 \cdot 6$ | $82 \cdot 5$ | 85.8 |
| 1907. | 74.3 | 71.1 | 90.5 | $82 \cdot 1$ | 76.2 | 94.0 |
| 1908. | 79.4 | $70 \cdot 3$ | 87.9 | $80 \cdot 3$ | 77.2 | 90.0 |

Table 15 shows, for the latest five years only, revised figures for the actual numbers of live stock on farms, by provinces, and Table 16 gives the average values per head for the same years. The revised data for years prior to 1940 back to 1906 are published in the Report of Live Stock and Animal Products Statistics, 1943.

## 16.-Average Values per Head of Farm Live Stock in Canada, by Provinces, 1940-44

Nors.-Values shown in this table are not strictly comparable; for 1941 they are census data, for 1942 they are based on the 1941 figures, and for other years they are derived from reports of crop and live-stock correspondents.

| Province and Item | 1940 | 1941 | 1942 | 1943 | 1944 | Province and Item | 1940 | 1941 | 1942 | 1943 | 1944 |

Wool Production.-Shorn-wool production in Canada for 1944 totalled $15,128,000 \mathrm{lb}$. with a value of $\$ 4,106,000$. This was the highest production established and the increase in price due to the War resulted in a total value higher than any other on record. Pulled-wool production amounted to $4,151,000 \mathrm{lb}$., making total wool production in Canada $19,279,000 \mathrm{lb}$. Increases in the numbers of sheep on farms in all provinces except Manitoba and Nova Scotia were responsible for the increased production of shorn wool, and increased slaughterings of sheep and lambs resulted in an increase in the production of pulled wool.

The apparent consumption of wool in Canada was sharply lower in 1944 as compared with that of the three preceding years but as figures of stocks of wool in storage are not available, the figures of actual consumption in any individual year may be quite different from the apparent disappearance.

The greater production of shorn wool resulted in a higher gross value of production and a corresponding increase in the cash ineome to producers. Cash income from the sale of wool in 1944 amounted to $\$ 3,767,000$ as compared with $\$ 3,380,000$ in 1943.
17.-Estimated Production, Exports, Imports and Apparent Consumption of Wool in Canada, 1930-44

Nore.-All estimates are on a 'greasy' basis. Comparable statistics of production for the years 1920-29 are given at p. 219 of the 1939 Year Book.

| Year | Shorn |  |  |  | Pulled ${ }^{1}$ | $\begin{gathered} \text { Total } \\ \text { Pro- } \\ \text { duction }{ }^{1} \end{gathered}$ | Exports | Imports | Apparent Consumption ${ }^{1}$ |

${ }^{1}$ Figures for 1930 to 1943 have been revised since the publication of the 1943-44 Year Book.

## Subsection 5.-Poultry and Eggs

Farm egg production in 1944 reached the unprecedented level of $360,948,000$ doz., representing an advance of well over 45,000,000 doz. between 1943 and 1944 . Although the prices received for eggs were not quite as high as in the previous year, the huge increase in values contributed an additional $\$ 6,000,000$ to the national income of Canada.

The story behind this spectacular achievement in wartime production is worthy of recognition. For many years the Dominion and Provincial Governments have been doing a great deal of flock improvement work among farmers, the results of which are now beginning to be realized. Furthermore, under exigencies of a wartime economy, many more people have become engaged in poultry and egg producion and, likewise, general farmers have been giving poultry a more important place in the farm program. Some indication of this trend is indicated by farm income figures for 1944 , which show that eggs and poultry meat represented $7 \cdot 4$ p.c. of the total farm income of the Dominion.

Gains in egg production were recorded in all provinces, the greatest percentage increase being shown in Quebec, with New Brunswick, Nova Scotia, Saskatchewan and British Columbia coming next in order. Several provinces also showed an increase in the production of eggs per hen, although the average for the Dominion remained, as in the previous year, at 116. The figures shown on Table 19 do not include urban egg production which advanced from $15,000,000$ doz. in 1942 to $17,500,000 \mathrm{doz}$. in 1943 and to $20,000,000 \mathrm{doz}$. in 1944 (see Table 20). Exports in 1944 amounted to $57,074,274$ doz., including approximately $56,000,000$ doz. $(18,952,000 \mathrm{lb}$.) exported to the United Kingdom in the form of egg powder. Owing to a shortage of shipping space the demand for powdered products has greatly increased, and in 1944 the total production amounted to approximately $21,000,000$ lb . as compared with about $13,000,000 \mathrm{lb}$. in the previous year.

The domestic disappearance of eggs shown in Table 20 was estimated at $292,171,870$ doz., or approximately $12,417,000$ doz. more than that of the previous
year. The per capita disappearance showed a steady increase since 1941, moving from $20 \cdot 3$ doz. to 24.4 doz. in 1944. These figures, of course, are based on the total population, so that if the calculations were made on the actual resident population of Canada the gains would be even more evident.

Egg prices were well maintained during 1944. The average price was 29.4 cents per doz., being slightly lower than that of the previous year when 31.9 cents was the average for all grades sold. This reduction in price was general in all provinces. The paying price for Grade A Large during the season was $35 \frac{1}{2}$ cents f.o.b. Montreal. In 1943 the Government price at the beginning of the year was 37 cents, although it was subsequently reduced to 36 cents, and to 34 cents in the early spring. From Apr. 19 to Dec. 31, the average was only 35 cents. During the latter part of the 1944 season the market price rose above the Government quotation of $35 \frac{1}{2}$ cents.

Poultry on farms as at June 1, 1944, numbered $91,669,000$ as compared with $79,228,000$ in the previous year. This increase of nearly 16 p.c. was distributed among the nine provinces, the greatest advance being shown in Saskatchewan, followed by lesser increases in Quebec, Nova Scotia and Alberta. Hens and chickens showed a percentage advance comparable to that of total poultry, while turkeys increased slightly over 14 p.c. Ducks and geese showed increases of approximately 5 p.c. and 23 p.c., respectively.

The production of poultry meat in 1944 was the highest on record, showing a total of $315 ; 176,000 \mathrm{lb}$. or approximately $50,000,000 \mathrm{lb}$. more than that produced in 1943.

Domestic disappearance of poultry meat advanced from $269,871,000 \mathrm{lb}$. in 1943 to $315,157,000 \mathrm{lb}$. in 1944 . This gain is all the more striking when it is remembered that the rationing of other meats was discontinued during the year, giving the consumer a greater latitude in the selection of meat products. The gain in domestic disappearance was accompanied by a reduction of approximately 750,000 lb. in stock holdings as between Jan. 1, 1944 and Jan. 1, 1945. In 1943, on the other hand, stocks increased by almost $10,000,000 \mathrm{lb}$. between the beginning and the end of the year. In every case there was an increase in per capita consumption over 1943, total poultry showing an advance of approximately 4 lb .

## Subsection 6.-Dairying

Historical Sketch.-From the very early days of Canadian colonization it was recognized that successful settlement would depend to a great extent on the facilities provided for the production of food products; and that dairying must of necessity occupy an important place in this self-sufficing economy. When the Acadians came to settle along the shores of Nova Scotia, they brought a few cows with them from Europe. Likewise, when the first attempts were made to transplant French immigrants to the lower St. Lawrence Valley, dairy cows were imported at the same time to provide milk and other products for the settlers. The first cows imported into Canada in 1606 were destroyed in the English raids on the Acadian colony, but 30 years later other importations were made which appear to have survived. When the English drove out the Acadians in 1755 about 1,500 cows were found in the Minas Basin of Nova Scotia, and thee formed the nucleus for building up dairy herds during the era of colonization which followed. The same problems faced the struggling Selkirk settlement on the shores of the Red River about 130 years ago. The destruction wrought by Indian marauders made it necessary to send several shipments of cows through the Hudson Bay and overland from York Factory to permit the people of Kildonan to produee their own milk supply. These early importations made an important contributoin to the extension of dairying enterprises in the Prairie Region, although it was a loag time before this branch of farming was given very much recognition.

The first efforts in connection with dairy production were exceedingly primitive. Cheese and butter were made on farms to provide food for the occupants, and limited quantities were sold to others in nearby towns and villages. Improvements in technique were developed, however, which improved the quality and gave the producers a wider sale for the product; although the lack of transportation and inadequate storage facilities continued to limit its distribution. Since cheese made on farms could be more conveniently stored, the production of this commodity was rapidly extended. In 1764, six tons of cheese were exported from Nova Scotia and the census records of 1861 show a production of $3,000,000 \mathrm{lb}$. in Upper Canada. In 1865, farm-produced cheese from this section of the British colony won a silver medal at the world exhibition in Paris. The first cheese factory was built in Oxford county in 1864, and by 1867, 234 factories were manufacturing cheddar cheese, a product which was destined to give the Canadian dairying industry an important place in world commerce. By 1891, the census reported 1,565 cheese factories in operation in the Dominion, 893 of which were located in Ontario and 617 in Quebec. According to the Census of 1901 this number had increased during the intervening years to 2,389 , and in addition there were 558 making both butter and cheese. The production for the previous year was estimated at $220,000,000 \mathrm{lb}$.

Butter production owes its development to the invention of the cream separator (1880), the Babcock system of testing cream (1890) and the introduction of pasteurization at the beginning of the present century. The fact that the creamgathering system permitted skim milk to be kept at home for live-stock feeding, gave it immediate favour among farmers; for at a time when the western expansion was at its height, the demand for meat products could not be overlooked by farmers in the older sections of the Dominion. The Census of 1911 showed the effect of creamery competition. Indeed, judging from the export movement which reached its peak ( $234,000,000 \mathrm{lb}$.) during the fiscal year ended Mar. 31, 1904, it would appear that this must be regarded as the turning point in cheese production. During the period 1910 to 1920 this transitory movement from cheese to butter was definitely in evidence and, with the exception of the war years of 1916 to 1918 when there was an increased demand for cheese in Britain, the trend in cheese manufacture was continually downward.

Milk Production and Utilization.-The dairy industry of Canada made its greatest development after the close of the War of 1914-18, when the demand for food products, following the cessation of hostilities in Europe, gave birth to new outlets for dairy products. From 1920 to 1925 the numbers of cows kept mainly for milking purposes advanced from $2,986,000$ to $3,273,000$. Likewise, the production of milk moved up from $10,976,000,000 \mathrm{lb}$ : to $13,421,000,000 \mathrm{lb}$. A continuous decline in the dairy cow population was shown during the next five years, although milk production did not reach its peak until 1926. An interesting fact revealed by these statistics is that the upward trend in dairying took place during a time when other lines of farming were suffering reverses. . This was particularly evident after the fall in prices of grains and live stock, late in 1920. When abundant grain crops were haryested in subsequent years (1926 to 1928) a slump in dairy production occurred. This downward trend continued from 1926 to 1929, when
the depression years produced another change in the economic situation. Although dairying was at a low ebb, because of unemployment and small payrolls, it became a more important factor in relation to total farm production. After 1932 milk output began to increase, moving from less than $14,000,000,000 \mathrm{lb}$. to approximately $15,800,000,000 \mathrm{lb}$. in 1939 . From then onward, the influence of the War began to make itself felt in increasing the demand for dairy products. During the fiveyear period, terminating with 1944, the production of milk increased approximately $1,800,000,000 \mathrm{lb}$., and the industry as a whole has made an immense contribution to the food resources of both Canada and the United Kingdom.

A notable feature of the dairy situation is the shift in production which has given Western Canada a larger share of the expansion in dairying enterprises. In 1920, Ontario and Quebec contributed approximately 67 p.c. of the total milk production of the Dominion; the Prairie Provinces produced 22 p.c. of the total milk supply, while the Maritimes and British Columbia shared to the extent of 9 p.c. and 2 p.c., respectively. In 1925 increases were recorded in Western Canada, the Prairie Provinces contributing 26 p.c. and British Columbia 2.5 p.c., whereas the production of Ontario and Quebec fell to 63 p.c. and the Maritimes to 8 p.c. A further shift in favour of the Prairie Provinces was recorded in 1932, and by 1944 Ontario and Quebec were supplying only 60 p.c. of the milk production while the Prairie Provinces produced 30 p.c., the remaining 10 p.c. being divided between the Maritimes and British Columbia in the relationship of approximately 6 to 4 .

Sales Income.-Farmers have been receiving large incomes from the sale of dairy products during the war years as a result of the subsidies and bonuses now being paid by the Government. In 1944 the income from dairying amounted to $\$ 264,000,000$ as compared with $\$ 148,000,000$ at the commencement of the War in 1939. The relationship of dairy sales income to that of total farm income was only 8 p.c. in 1920; but during the course of the next five years it moved up 12 p.c., and reached the high point of 31 p.c. in 1932. As other lines of farming became more profitable, declines began to develop. In 1936 this relationship fell to 26 p.c. and, regardless of important advances in dairy production and prices, the 1944 income represented only 21 p.c. of the total farm income of Canada.

Prices of Dairy Products.-Butter prices at the factory, which had averaged approximately 23 cents and 25 cents a lb. in 1939 and 1940, advanced to nearly 33 cents in 1941 and 34 cents in 1944. The former prices were comparable with those paid during the early stages of the War of 1914-18, but were considerably lower than those paid in 1919 and 1920 when the average was 54 cents and 57 cents, respectively. Factory cheese prices moved up from 12 and 14 cents in 1939 and 1940 to nearly 21 cents in 1944; whereas in 1916 and 1917, cheese prices averaged 18 and 21 cents, respectively. In 1920 , however, the prices advanced to 26 cents. Sales income figures have shown a steady increase since the beginning of the War. -In 1944, the average was $\$ 1.87$ per hundred lb . of milk as compared with $\$ 1.27$ in 1939. These were lower than those of 1920 , however, the average for that year being $\$ 2 \cdot 17$. Plant cost of milk in 1944 was $\$ 1 \cdot 64$ while the farm value of milk was $\$ 1.82$ and the total value of dairy products averaged $\$ 2.22$ per hundred. In 1939, the same items averaged $\$ 1 \cdot 14, \$ 0.92$ and $\$ 1 \cdot 37$, respectively.
21.-Production and Utilization of Milk in Canada, 1920-44, and by Provinces, 1943 and 1944

## 26.-Values of Production, Cost of Milk at Plants, and Income from Dairying,

 1920-44, and by Provinces, 1943 and 1944Nors.-The first two columns of this table represent values based on total production, the entire milk supply being accounted for in each case. The third column is the cost of milk delivered for fluid and for manufactured purposes; while the fourth column represents the income received from the sale of milk, butterfat and dairy butter.

| Province and Year | Total Value of Dairy Products | Farm Value of Milk Production | Cost of Milk Delivered at Plants | Sales <br> Income from <br> Dairying | Per Hundredweight of Milk |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Total Value | Farm Value | Plant Cost | Sales Income |

${ }_{1}$ Includes malted milk and cream powder; items that do not appear separately in this table $\quad \mathbf{2}$ Includes four items not separately listed, namely, condensed buttermilk, powdered buttermilk, sugar of milk and casein. capita basis the 1944 disappearance amounted to 1.48 gal . of the product and $23 \cdot 17 \mathrm{gal}$. expressed as milk.

## Subsection 7.-Horticulture

Annual statistics of commercial horticulture are now confined to production and value of fruits. Until 1943 a survey of the floriculture and nursery stock industry was conducted annually, but as a wartime measure the collection and publication of this information has been suspended. No estimates of the area and annual production of vegetables is as yet available but an attempt is now being made to collect this information for the major crops. Details of area, production and value of all the common vegetables grown in 1940 and the year-end cultivation in 1941 will be found in a series of bulletins issued by the Census Branch. The processing of fruits and vegetables is closely allied with production and the total value of Canadian produce used by the fruit and vegetable preparations and wine industries amounted to $\$ 12,347,000$ in 1941 and $\$ 14,513,000$ in 1942.

Fruit Production.-From the standpoint of total weight of fruit produced, British Columbia, with very few exceptions, has been the leading province every year since 1926 when the records were first kept. Ontario is next in importance, closely followed by Nova Scotia, although for the five-year period prior to 1939 and in 1943 Nova Scotia held second place. During the five years 1935-39 the relative position of the producing provinces in descending order of importance was: British Columbia 35 p.c. of the Canadian total; Nova Scotia 32 p.c.; Ontario 28 p.c.; Quebec 4 p.c.; and New Brunswick 1 p.c. During the three years 1940-42 Nova Scotia occupied third place, producing approximately 20 p.c. of the total weight of fruit, while Ontario's crops were relatively better and increased the proportion grown in that province to approximately 33 p.c. British Columbia continued to hold first place among the producing provinces with an average of 39 p.c. of the Canadian total. During 1943 the position of the provinces was as follows: British Columbia 32 p.c.; Nova Scotia 30 p.c.; Ontario 29 p.c.; Quebec 7 p.c.; New Brunswick 2 p.c.

A fuller discussion of fruit growing in Canada is given at pp. 242-247 of the 1931 edition of the Canada Year Book.

## Subsection 8.-Special Agricultural Crops

Maple Syrup and Sugar.-The Canada Year Book, 1924, contains at pp. 247-248 a description of the process of making maple sugar.

Table 32 shows that there was a substantial increase in the 1944 crop of maple syrup over that of the previous season, while maple sugar production was somewhat reduced. The 1944 "make" is estimated at $2,869,600$ gal. of syrup and 2,207,700 lb . of sugar or a total of $3,090,400 \mathrm{gal}$. expressed as maple syrup.

For the second consecutive year the crop moved rapidly at higher prices. Dealers in Quebec, the major producing province, report, however, that a larger proportion of the crop was sold to processors than in 1943. The quality of the crop was better and a larger percentage of the syrup graded "Canada light"

32:-Estimated Quantities and Values of Maple Sugar and Maple Syrup Produced in Canada, by Provinces, 1942-44

Sugar Beets and Beetroot Sugar.-A brief account of the development of the beetroot sugar industry in Canada will be found in the Canada Year Book, $1925, \mathrm{pp} .255-256$. At the present time four companies are operating in Canada: the Canada and Dominion Sugar Co., Ltd., with factories at Chatham and Wallaceburg, Ont., the Canadian Sugar Factories, Ltd., with plants at Raymond and Picture Butte, Alta., the Manitoba Sugar Company, Ltd., at Fort Garry (Winnipeg), Man., and a new company opened at St. Hilaire, Que., in 1944.

${ }^{1}$ Revised since the publication of the 1943-44 Year Book.
Fibre Flax.-Table 34 shows that under the stimulus of the wartime demand for fibre-producing crops, the area devoted to this crop increased from 10,536 acres in 1939 to 47,070 acres in 1942. Through action of the Agricultural Supplies Board the entire industry is on a mechanized basis and mill-processing machinery as well as mechanical pullers and lifters for field work are now manufactured in Canada. Products from Canadian mills are finding a ready market in Great Britain and the United States. The need for fibre and tow in Great Britain is urgent in view of the fact that the War has closed several sources of this valuable raw material. At the request of the British Ministry of Supply, a Canadian goal of 75,000 acres was set for 1943 , but weather conditions at seeding time were so unfavourable that the acreage planted in the spring of 1943 was lower than in the previous year. Some increase in acreage occurred in 1944 but yields were somewhat lower than in 1943.

## 34.-Acreages, Yields and Values of Flaxseed, Fibre and Tow in Canada, 1937-44

Note.-Figures for the years 1915-30 will be found at p. 284 of the 1934-35 Year Book, and for 1931-36 at p. 224 of the 1942 edition.

${ }^{2}$ Includes estimated production from 8,040 acres carried over from ${ }^{3}$ Subject to revision.

Tobacco.-For some years prior to the War the acreage planted to tobacco steadily increased although production fluctuated owing to weather and other conditions. The peak was reached in 1939 when the highest acreage was planted yielding the highest production. In 1940, owing to difficulties due to the War, exports dropped, as did farm prices, and there was a sudden decline in acreage and production.

In the following two years the rising price to growers resulted in increased acreages but in 1943, because of unfavourable weather conditions at the time of planting, restrictions on supplies of fertilizer, and difficulty in obtaining sufficient labour the acreage was again reduced. There was also a lower yield per acre consequent on this lack of fertilizer and a heavy September frost. The farm price, however, was the highest for many years. This price, together with the recommendations of the Dominion-Provincial Conference on Agricultural Objectives and an improved fertilizer situation, resulted in the highest acreage and production in 1944 since 1939.

The demand for tobacco has improved in the later years of the War due to increased supplies to the troops overseas, to fuller employment with its greater distribution of money and to augmented exports.

## 35.-Acreages, Production and Values of the Commercial Crop of Leaf Tobacco in Canada, 1938-44

Notz.-Figures for representative years 1900-28 are given at p. 228 of the 1939 Year Book, and for the years 1929-37 at p. 225 of the 1940 Year Book.

| Year | Planted Area | Average Yield per Acre | Total Production | Average Farm Price per Pound | Gross <br> Farm Value |

${ }^{1}$ Subject to revișion.
Apiculture.-The 1943 Canadian honey crop totalled $39,492,100 \mathrm{lb}$. compared with $28,048,700 \mathrm{lb}$. in 1942 , an increase of 40.8 p.c. There was an increase in both numbers of beekeepers and total number of colonies over the previous year and the average yield per colony for the Dominion was 88 lb . compared with 66 lb . The greatest expansion of the industry took place in the Prairie Provinces, especially Alberta where there were almost twice as many beekeepers in 1943 as in the previous year and producing colonies numbered 42,800 compared with 27,500 in 1942. The quantity of beeswax in 1943 was estimated at $592,400 \mathrm{lb}$. compared with $420,700 \mathrm{lb}$. in 1942.

The 1943 honey crop sold at prices generally higher than were paid to producers in 1942, the average price for all Canada being $15 \cdot 4$ cents compared with $13 \cdot 7$ cents per lb. The honey crop did not move into marketing channels as quickly as in the autumn of 1942. While considerable amounts of new crop honey, in some provinces as much as 50 p.c. of the crop, had been sold prior to the 'freezing' of stocks and the imposition of rationing early in September, only two-thirds of the total crop was marketed by Dec. 1,1943 , as compared with 95 p.c. of the 1942 crop at the corresponding date in 1942.

Prices paid for beeswax were higher and averaged $46 \cdot 6$ cents per lb . as compared with $44 \cdot 3$ cents per lb . in the previous season.

Seasonal Condition and Quality of the 1943 Crop.-The wet, cool spring retarded beekeeping activities in all provinces. In the Maritimes adverse weather conditions prevailed throughout almost the entire season. There was very little clover honey produced in Prince Edward Island and Nova Scotia where almost the entire flow
occurred in the autumn and the honey, though of excellent quality, graded mostly light and dark amber. All districts in Ontario, except those bordering on the eastern end of Lake Erie and Grey-Bruce Peninsula produced normal, or better than normal, crops of good quality honey. Spring and early summer weather in Manitoba were the most unsatisfactory in the history of the industry. From early July, however, the situation improved and the autumn flow was excellent. In Saskatchewan the honey flow did not commence until mid-July and was over by mid-August. In spite of the lower average yields, owing to the very large increase that had taken place in the number of colonies, production exceeded the 1942 crop. Cool, wet weather prevailed in Alberta as well with the result that production varied from 140 lb . per colony in the irrigated districts to 50 lb . in other parts of that Province. In British Columbia, too, the season was one of the poorest on record but a 25 p.c. increase in the number of beekeepers made up for the below average yields per colony and the crop was of normal size.

The western honey crop was practically all white honey of excellent flavour and quality, mild and heavy bodied. Approximately 87 p.c. of the total Canadian crop was light honey.

## 38.-Beekeepers and Colonies, Production and Values of Honey and Beeswax in Canada, 1938-43

Note.-Statistics by provinces are shown in the "Quarterly Bulletin of Agricultural Statistics". Dominion totals for 1924-37 are given at p. 227 of the 1940 Year Book.

Index Numbers of Agricultural Prices.-Index numbers of prices of field crops, based on the five-year pre-war average (1935-39) prices, are shown for the years $1935-36$ to 1944-45 in Table 42. The series relates to average prices received by farmers during the crop-marketing season Aug. 1 to July 31 of the following year.

In addition to the price indexes shown here, index numbers of the yields of the various crops have also been calculated. The combined data on prices and production have also been used to calculate a series of weighted index numbers of the values of the individual crops, and of all field crops. Index numbers of prices, yields and values in detail by provinces will be found in the "Quarterly Bulletin of Agricultural Statistics', January-March, 1945.

## 42.-Index Numbers of Farm Prices ${ }^{1}$ of Field Crops, for Canada, Crop Years Ended July 31, 1937-45

Nort.-For the formulae used in the calculation and for index numbers by provinces, see "Quarterly Bulletin of Agricultural Statistics", January-March, 1942. Indexes for the years 1931-32 to 1939-40 based on average prices, 1926-27, are given at p. 230 of the 1940 Year Book. Indexes on the present base, for the years 1909-10 to 1935-36. are given at pp. 180-181 of the 1941 Year Book.

## Subsection 10.-Agricultural Statistics of the Census

The more important miscellaneous agricultural statistics at present available from 1941 Census data are included in this Subsection.

Farm Population.-According to the 1941 Census, the number of persons living on farms, as of June 2, 1941, was $3,152,449$, or $27 \cdot 4$ p.c. of the total population of the nine provinces.
43.-Farm Population, by Sex and Provinces, Census of 1941

Rural and Urban Farm Population.-In distribution of rural farms, Ontario, with 24.2 p.c., had the largest proportion; Quebec was second with 20.9 p.c. Of all persons living on rural farms in Canada in 1941, Quebec had 26.4 p.c., Ontario came second with 22.3 p.c., and Saskatchewan third with 16.5 p.c.

Of the 732,832 farms in the nine provinces, 7,812 , or $1 \cdot 1$ p.c., were located within the limits of incorporated cities, towns or villages. The population of 35,527 living on these urban farms represented 1.1 p.c. of the farm population and 0.3 p.c. of the total population of the nine provinces.

Quebec, with 36.1 p.c. of the urban farms and 42.4 p.c. of the urban farm population, had the largest proportion of any province. Ontario had 31.4 p.c. of the urban farms and $27 \cdot 4$ p.c. of the urban farm population. Alberta had $9 \cdot 2$ p.c. of the people living on urban farms and Nova Scotia had $7 \cdot 1$ p.c.

Farm Workers.-In Canada as a whole farm workers, male and female, who were members of the family constituted 31.8 p.c. of the total farm population.

Of the 732,832 farms in Canada, only 267,337 or $36 \cdot 5$ p.c. employed hired help. The percentage of farms employing hired help was highest in Ontario with 46.9 p.c. and lowest in Quebec with $26 \cdot 4$ p.c. On those farms reporting hired help there was an average of 26.7 weeks of such labour, and 3.7 p.c. of all farm workers in Canada were hired on a yearly basis. The average cost of hired labour was highest in British Columbia at $\$ 14 \cdot 62$ per week and lowest in Prince Edward Island at $\$ 8.58$ per week.

The above percentages for 1941 showed very little change over those for the 1931 Census. The 1931 census figures indicated that $33 \cdot 2$ p.c. of the total farm workers consisted of members of the family and that 38.6 p.c. of the farms of Canada employed hired help. According to that census, the percentage of farms in Ontario reporting hired help was $44 \cdot 7$, Prince Edward Island $43 \cdot 3$, Nova Scotia $27 \cdot 9$ and Quebec $28 \cdot 2$, and an average of $26 \cdot 2$ weeks of hired labour was reported for the whole of Canada.

[^85]Type of Farm.-The gross revenue from the sale of farm products in 1940 and the value of products consumed by the farm household during that year was computed for each farm. The chief product or products sold for revenue governed the class into which each farm was placed.

Of all the farms in Canada, $26 \cdot 6$ p.c. were classified as "subsistence and combinations of subsistence farms", $23 \cdot 7$ p.c. as "grains and hay farms" and $18 \cdot 4$ p.c. as "mixed farms" Subsistence farms are those on which the value of products consumed or used amounted to 50 p.c. or more of the gross farm value, and combinations of susbsistence farms are farms where the value of products used or consumed and the revenue from another main source, such as poultry, were required to produce 50 p.c. or more of the gross revenue.

In Prince Edward Island, Nova Scotia, New Brunswick, Quebec and British Columbia, subsistence and combinations of subsistence farms was the predominating type with $47 \cdot 1,53 \cdot 1,53 \cdot 7,40 \cdot 0$ and $27 \cdot 2$ p.c., respectively, of the farms in this class. Mixed farms was the predominating type in Ontario, while grains and hay farms predominated in the Prairie Provinces.

Farm Machinery.-According to the Census of $1941,41.0$ p.c. of the farms of Canada reported having automobiles, and 40.8 p.c. of all automobiles were on Ontario farms. Of the 178,204 occupied farms in Ontario, $66 \cdot 7$ p.c. reported automobiles. The greatest number of motor-trucks, tractors and combines were reported on Saskatchewan farms, while over one-third of the threshing machines were on Quebec farms.

It must be noted that, for several reasons, comparability between one census and another is influenced by several considerations. Thus the number of automobiles on farms in Canada is shown to have increased from 157,022 in 1921 (when trucks were included) to 321,284 in 1931 (for automobiles alone) but apparently had decreased to 315,461 in 1941. This must evidently be interpreted in the light of conditions in the depression years of the 'thirties, when agriculture was hit so hard, and from which conditions the industry had not fully recovered when war broke out. Of course, during the war years it has not been possible to purchase the number of cars that would normally have been bought with returning prosperity and at the same time many of the old cars that were retained through the depression were pretty well worn out. Futhermore farmers who had to choose between trucks and automobiles in the depression would be inclined to favour trucks rather than automobiles. This explains the anomalous position in 1941 when farm automobiles for Canada were actually fewer than in 1931.

The same circumstances apply to a greater or lesser degree in regard to agricultural implements and farm equipment generally, although automobiles, being perhaps not so much of a necessity in all cases, were the first to be sacrificed.

The figures for grain combines and threshing machines are inter-related and should be interpreted together. Thus, while the latter showed a reduction between 1931 and 1941, the former were not reported before 1931 and showed an outstanding increase for 1941. So far as their numbers go they undoubtedly replaced threshing machines. While Table 47 shows that there has been some increase in the purchase of farm machinery between 1931 and 1941 it does not give a full picture of the accumulated demand that now exists for agricultural implements and equipment. Electric motors and motor-trucks are the only items among those listed that have shown reasonable increases and the restrictions on supply have no doubt kept purchases on a level well under the normal demand.

Farm Tenure, Values and Indebtedness.-The tendency toward a decrease in the number of owned farms and an increase in farms "partly owned and partly rented" and "occupied by tenants", brought out by the figures of the 1921 and 1931 Censuses, is still prevalent according to the Census of 1941. The percentage of all farms fully owned, for the whole of Canada, has decreased from 86.52 in 1921 to $80 \cdot 47$ in 1931 and $75 \cdot 55$ in 1941. Percentage decreases in the number of owned farms since 1931 were greatest in Saskatchewan at 19 p.c., Nova Scotia at 18 p.c. and

Alberta at 12 p.c., while increases were shown in Quebec and Manitoba. The large acreage in the "partly owned and partly rented" type in the western provinces is due to the fact that most ranches are composed of small acreages actually owned and additional large acreages of pasture leased from the governments. In Saskatchewan the acreage of farms of this type showed an increase from 1931 to 1941 of $27 \cdot 0$ p.c., while the acreage of owned farms decreased by 20.7 p.c.

Farm values for the whole of Canada have shown a considerable decrease, amounting to $19 \cdot 2$ p.c. as compared with 1931 and $35 \cdot 2$ p.c. as compared with 1921. The value of land, buildings and implements and machinery contributed to the decrease between 1931 and 1941, while live stock showed an increase of $13 \cdot 2$ p.c. The major portion of the increase in live stock was recorded on Quebec, Ontario and Alberta farms.

The total mortgage debt reported on farms operated by the owner in Canada amounted to $\$ 607,187,100$ on June 2, 1941, a decrease of $9 \cdot 6$ p.c. from that of 1931 . Each province with the exception of Prince Edward Island and Quebec showed a decrease.

For the Dominion as a whole in $1941,38 \cdot 9$ p.c. of the fully owned farms reported mortgage debts as compared with $35 \cdot 7$ p.c. in 1931.

The ratio of the mortgage debt to the value of the mortgage debt on farms that are fully owned decreased from $40 \cdot 9$ p.c. in 1931 to $23 \cdot 1$ p.c. in 1941 .

[^87] holds the title to all land which he operates. It does not necessarily mean that the farm is free of debt.

Farm Revenues and Expenditures.-Total receipts from the sale of wheat amounted to $24 \cdot 6$ p.c. of the gross farm revenue, with $35 \cdot 8$ p.c. of all farms in Canada reporting revenue from this source. Revenue from the sale of dairy products accounted for 14.7 p.c. of the gross farm revenue; 58.9 p.c. of all farms reported revenue from the sale of dairy products. Of all farms in Canada 88.8 p.c. were reported as having consumed products produced on the farm. The total value of the products consumed was $12 \cdot 3$ p.c. of the gross farm revenue. The income from outside sources amounted to 9.4 p.c. of the gross farm revenue; $39 \cdot 4$ p.c. of all farms reported income from this source.

The average gross revenue per farm was highest in Alberta, with a provincial average of $\$ 1,484$. The average gross revenue per farm in Ontario was $\$ 1,344$, while the average per farm in British Columbia and in Manitoba was \$1,274 and $\$ 1,254$, respectively. The lowest gross revenue per farm, $\$ 716$, was reported in Prince Edward Island.

The amount expended for farm labour, which included cash payments and the value of room and board supplied was the largest single item of expense and accounted for 18.1 p.c. of the total farm expenditures reported in Canada; 36.5 p.c. of all farms reported an expenditure for farm labour. Purchases of new farm implements, parts and repair work to old equipment, reported by 54.9 p.c. of the farms in Canada, accounted for $15 \cdot 6$ p.c. of the total farm expenditures. The amount expended for feed was 13.7 p.c. of the total farm expenditures; 58.8 p.c. of all farms were reported as having purchased feed for live stock.

The total expenditures were highest per farm in Alberta, with an average of $\$ 854$. Saskatchewan, Ontario and British Columbia closely follow one another with average expenditures per farm of $\$ 728, \$ 719$ and $\$ 713$, respectively. New Brunswick reported the lowest average expenditures per farm, $\$ 325$, closely followed by Nova Scotia and Prince Edward Island, where average expenditures per farm were $\$ 326$ and $\$ 336$, respectively.

${ }^{1}$ Includes hides (other than cattle), fur-bearing animals and pelts sold. $\quad{ }^{2}$ Includes maple products of 1941. ${ }^{3}$ Products of farms reporting. ${ }^{4}$ Includes receipts from work performed off the farm, receipts from boarders, lodgers or campers and receipts from the sale of farm machinery and payments for hail or fire damage. ${ }^{5}$ Does not include fuel and oil for automobiles. . ${ }^{6}$ Reported on buildings and land operated by the owner. ${ }^{7}$ Includes estimated value of rent paid in kind or on a share basis. $\quad{ }^{8}$ Includes amounts paid for telephone, electricity, freight, express, pasturing, horseshoeing, veterinary fees, apiary equipment, fur-farming equipment, hail and fire insurance fees, etc.

## Subsection 11.-Agricultural Irrigation

Alberta.-The surface waters in Alberta are vested in the Crown and are administered by the Water Resources Office under the Water Resources Act. All matters affecting the control of water supply generally, as well as the inspection and authorization of works for the use of water for domestic, municipal, industrial, irrigation, water power and other purposes, and the granting of licences for such purposes, are dealt with by that Office. The Director of Water Resources at Edmonton is responsible for all field administration. The Irrigation Districts Act of Alberta (c. 98, R.S.A. 1942) provides for the formation of irrigation districts, and authorizes the raising of loans under by-laws adopted by voters of the district.

In 1943 the area to which water could be delivered by the works of the 13 major projects was reported as 535,000 acres and the area irrigated as 399,000 acres. In addition 623 private schemes have an irrigable area of 70,700 acres.

A table at p. 182 of the 1941 Year Book gives statistics for each of the major projects for 1938 and 1939. Further details may be obtained on application to the Director of Water Resources, Edmonton.

British Columbia.-The surface waters of British Columbia are vested in the Crown in the right of the Province and are administered by the Water Rights Branch of the Department of Lands under the Water Act, the Drainage Dyking and Development Act and the Ditches and Watercourses Act.

The administration of the Acts is vested in the Comptroller of Water Rights.
Irrigation projects in British Columbia are on a smaller scale than those of Alberta. In 1941, an irrigable area of 68,469 acres and 44,560 acres under irrigation were reported for 57 projects. A table at p. 236 of the 1940 Year Book gives particulars of each project and later information may be obtained on application to the Comptroller of Water Rights, Department of Lands, Victoria.

## Subsection 12.-International Agricultural Statistics

Owing to the unavailability of the compilations of the International Institute of Agriculture at Rome, the statistics of world production of cereals and potatoes, trade in wheat and flour and numbers of live stock in principal countries, which formerly appeared under this heading, cannot be brought up to date.

## CHAPTER IX.-FORESTRY*

| Subsection 3. Scientific Forestry . . . . . . | 253 |

The forests of Canada cover a vast region in the north temperate climatic zone, reaching from the Atlantic Ocean to the Pacific; they extend northward from the International Boundary to beyond the Arctic Circle. Wide variations in climatic, physiographic and soil conditions cause marked differences in the character of the forests in different parts of the country, hence more or less well-defined forest regions may be recognized. The principal regions are: Acadian, Great Lakes-St. Lawrence, Deciduous, Boreal, Sub-Alpine, Columbia, Montane and Coast.

## Section 1.-Forest Regions

At pp. 184-188 of the 1941 edition of the Year Book the forest regions of Canada are separately described, together with the dominant and associated tree species common to each.

## Section 2.-Important Tree Species

In Canada there are over 130 distinct species of trees. Only 33 of these are conifers or softwoods, but they comprise over three-quarters of the standing timber and supply nearly 80 p.c. of the wood used for all purposes. Of the deciduous-leaved or hardwood species, only about a dozen are of commercial importance as compared with twice that number of conifers.

A short description of the individual tree species is given at pp. 247-249 of the Canada Year Book, 1940. More detailed information on this subject is given at pp. 283-286 of the 1936 edition of the Year Book and in the Dominion Forest Service Bulletin No. 61, "Native Trees of Canada", published by the Department of Mines and Resources, Ottawa.

## Section 3.-Forest Resources

The forested area of Canada is estimated at $1,220,400$ sq. miles, or 35 p.c. of the total land area. In comparison, only 16 p.c. of the land area is considered to be of present or potential value for agriculture, and only 7 p.c. is now classed as "improved and pasture" The forested area within the boundaries of the nine provinces totals $1,160,405 \mathrm{sq}$. miles, or 58 p.c. of the provincial land area. About 450,000 sq. miles of the existing forests are classed as "unproductive" They are made up of small trees which cannot be expected to reach merchantable size because they are growing

[^88]on poorly-drained lands, or at high altitudes, or are subject to other adverse site conditions. These unproductive forests, however, perform valuable functions. They help to protect watersheds and conserve water supplies; they provide fuel and building materials to natives and travellers in remote areas; and they are the habitat of valuable fur-bearing and game animals.

The productive forests covering more than 770,000 sq. miles are considered to be capable of producing continuous crops of timber suitable for domestic and industrial purposes. A considerable proportion of these forests is not yet accessible to commercial operations, but constitutes a valuable reserve for the future. About 430,000 sq. miles of productive forests are considered to be economically accessible at the present time. One-half of the productive forest area bears trees large enough for use as sawlogs, pulpwood or fuel wood, and the other half is occupied by young growth of various ages, kinds and degrees of stocking.

The total stand of timber of merchantable size is estimated to be 389,000 million cu. ft ., of which 239,000 million cu. ft . is accessible. Expressed in commercial terms, the accessible timber is made up of 252,000 million bd. ft. of logs in trees large enough to produce sawlogs and 1,685 million cords of smaller material suitable for pulpwood, fuel, posts, mining timber, etc.

Forest inventory surveys are conducted by the Dominion and provincial authorities. Inventories for Manitoba and New Brunswick have been completed by the Dominion Forest Service and that of Nova Scotia is now in progress. Publications describing the forest resources of Ontario and British Columbia have been issued by the forest authorities of those Provinces.

[^89]
## Section 4.-Forest Depletion and Increment

Depletion.-The average annual rate of depletion of reserves of merchantable timber during the ten years $1933-42$ was 3,933 million $\mathrm{cu} . \mathrm{ft}$. Of this total, 71 p.c. was felled for domestic and commercial use, and 29 p.c. was destroyed by fire and pests. Of 2,789 million cu. ft. utilized, 34 p.c. was used in sawlogs, 30 p.c. for fuel, 31 p.c. for pulpwood, and 5 p.c. in miscellaneous products. Between 75 and 80 p.c. of the total cut was of softwood species. Losses by fire averaged 444 million cu. ft. annually, and insects and tree diseases destroyed about 700 million $\mathrm{cu} . \mathrm{ft}$.

Forest Fires.-The fire season of 1943 was the most favourable since national forest fire statistics began to be compiled in 1918. The losses were uniformly much below average in all provinces.

Summary statistics of fire losses are given in Tables 2 and 3, while fuller details by regions are given in the Annual Report of the Department of Mines and Resources for the fiscal year ended Mar. 31, 1944.

Increment.-From a long-term point of view it is believed that depletion of our forests can be replaced by an average rate of growth over the productive forest area of between 8 and $9 \mathrm{cu} . \mathrm{ft}$. per acre annually. This very low rate is almost certainly being maintained or exceeded. But practically all of the depletion
is in fact concentrated on the 430,000 sq. miles of productive forest which is classed as accessible, and replacement of normal depletion by this area alone requires an average growth rate of more than $14 \mathrm{cu} . \mathrm{ft}$. Complete estimates of the rates at which the forests of Canada grow are not yet available. The vast size of the country, the diversity of growing conditions, and the complex character of the forests themselves, place great difficulties in the way of estimating growth. Numerous studies have been made by the Dominion Forest Service which indicate, beyond reasonable doubt, that over considerable tracts annual growth exceeds 25,30 or even $40 \mathrm{cu} . \mathrm{ft}$. per acre per annum; but there are other areas classed as productive on which the growth is much less.

Natural reproduction of forest tree species in Canada is fortunately prolific, except in a few localities. After an area has been cut over or burned, young growth usually appears within a short time. Thus the re-establishment of some sort of forest growth is a less difficult problem than it is in many other countries. There is, however, no guarantee that the species reproduced will be of the kinds desired by industry. Most of the wood used in Canada is softwood and, in general, softwood reproduction is fairly good; but there are considerable areas in which a combination of overcutting and repeated fires have resulted, not in the permanent destruction of the forest, but in the replacement of valuable stands by new ones of inferior type.

There is no room for doubt that the introduction of better methods of forest management, including the provision of more adequate forest protection, can make the forests of Canada more productive than they have ever been. It is true that stocks of very large trees, whose growth required upwards of 300 years, are disappearing and will not be replaced; but, though the forest industries of the future must use smaller logs than did those of the past, good forest management can make possible a considerable expansion of those industries as and when market conditions warrant.

The potential capacity of many forest soils to produce more usuable wood in a given period than they have ever done in the past is already being demonstrated on such areas as the Dominion Forest Experiment Station at Petawawa, and on some of the better-managed farm woodlots.

## Section 5.-Forest Administration

## Subsection 1.-Administration of Dominion and Provincial Timber-Lands

Although the forest resources are, generally speaking, under the control of the provinces, forests of the National Parks, Forest Experiment Stations and the Northwest Territories and Yukon are administered by the Dominion Government.

In Canada the general policy of both the Dominion Government and the Provincial Governments has been to dispose of the timber by means of licences to cut, rather than to sell timber-land outright. Under this system the State retains ownership of the land and control of the cutting operations. Revenue is received in the form of stumpage bonuses (either in lump sums or in payments made as the timber is cut); annual ground-rent and Crown dues are collected as and when the wood is removed. Both ground-rent and Crown dues may be adjusted at the discretion of the governments.

The Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island practically all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia

87 p.c. of the forest land is privately owned; nearly half of this is in holdings exceeding 1,000 acres. In New Brunswick over 50 p.c. has been sold, and 20 p.c. is in holdings exceeding 1,000 acres. The percentage of privately owned forest land in the other provinces, exclusive of National Parks and Indian reserves, is as follows: Quebec, $7 \cdot 3$ p.c.; Ontario, $6 \cdot 6$ p.c.; Manitoba, $9 \cdot 1$ p.c.; Saskatchewan, $13 \cdot 6$ p.c.; Alberta, $7 \cdot 7$ p.c. and British Columbia, $3 \cdot 4$ p.c.
4.-Forest Reserves in Canada, 1914

| Province | Dominion Forest Experiment Stations | Provincial Forest Reserves | Total |
| :---: | :---: | :---: | :---: |
|  | sq. miles | sq. miles | sq. miles |
| Prince Edward Island Nova Scotia. | ${ }_{\text {Nil }}$ | $\mathrm{NiI}_{\text {u }}$ | - |
| New Brunswick | 35.00 | $92 \cdot 18$ | $127 \cdot 18$ |
| Quebec. | 7.25 | 32,186.00 | 32,193.25 |
| Ontario. | $97 \cdot 10$ | 19,606.00 | 19,703-10 |
| Manitoba | $25 \cdot 25{ }^{1}$ | 3,811.09 | 3,811.09 |
| Saskatchewan | Nil | 10,721-05 | 10,721-05 |
| Alberta. | $62 \cdot 60$ | 14,317-23 | 14,379-83 |
| British Columbia | Nil | 30,968.31 | 30,968-31 |
| Northwest Territories |  | Nil |  |
| Totals. | 201.95 | 111,701-86 | 111,903.81 |

${ }^{1}$ Under National Park reservation and therefore not included in total.

Forest Lands under Dominion Control.-The forests under Dominion control are administered by the Department of Mines and Resources. The National Parks Bureau has charge of the National Parks, and the Bureau of Northwest Territories and Yukon Affairs administers the timber in those areas. The Indian Affairs Branch administers, in trust for the Indians, the timber within their reservations. The Dominion Forest Service has charge of the Forest Experiment Stations.

Forest Lands under Provincial Control.-With the exception of relatively small areas owned by the Dominion Government, the Crown lands and the timber on them are administered by the provinces in which they lie. As new regions are explored, their lands are examined and the agricultural land disposed of. Land suitable only for forest is set aside for timber production, and the policy of disposingof the title to lands fit only for the production of timber has been virtually abandoned in every province of Canada. Efforts are being made, expecially in Quebec and Ontario, to encourage the establishment and maintenance of forests on a community basis. Information regarding forest administration in the individual provinces is given at pp. 234-236 of the 1942 Year Book.

## Subsection 2.-Forest Fire Protection

The Dominion Government administers the forests of the National Parks, Forest Experiment Stations and the Northwest Territories and Yukon, and is, therefore, responsible for fire-protection measures therein. Each of the Provincial Governments, except that of Prince Edward Island, maintains a fire-protection organization co-operating with owners and licensees for the protection of all timbered areas, the cost being distributed or covered by special taxes on timber-lands.

In each province, with the exception just mentioned, provincial legislation regulates the use of fire for clearing and other legitimate purposes, and provides for close seasons during dangerous periods. An interesting development in this connection in the Province of Quebec is the organization of a number of co-operative protective associations among lessees of timber-limits. These associations have their own staffs, which co-operate with those of the Board of Railway Commissioners and the Provincial Government. The latter contributes money grants, and also pays for the protection of vacant Crown lands lying within the area of the associations' activities.

In the matter of forest-fire protection along railway lines, the provincial services are assisted by the Dominion Railway Act administered by the Board of Transport Commissioners. This Act gives to that body wide powers relating to fire protection along railway lines under its jurisdiction. Certain officers of the various forest authorities are appointed ex-officio officers of the Board of Transport Commissioners and co-operate with the railway fire-ranging staffs which the railway companies are required to employ under the Dominion Railway Act.

In certain districts in Canada aircraft are used to good effect for the detection and suppression of forest fires. Where lakes are numerous, flying boats can be used for detection, and for the transportation of fire fighters and their equipment to fires in remote areas. Specially constructed aircraft equipped with wireless are employed on forest fire-protection operations; these enable the observer to report the location of a fire as soon as it has been detected.

In the more settled areas with better transportation facilities, fire detection is carried out by means of lookout towers fitted with telephone or radio for reporting fires. Field staff and equipment are maintained at strategic points ready to deal with fires when they are reported. These staffs, when not engaged on actual fires, are employed on the construction and maintenance of roads, trails, telephone lines, fire guards and other necessary improvements in the interest of fire protection.

Portable gasoline pumps, which weigh from 45 to a little over 100 lb . each, and linen hose are important equipment. These pumps can be carried to a fire by canoe, motor-boat, automobile, aircraft, pack-saddle or back-pack and can provide hose pressures up to 200 lb . per square inch, depending upon the elevation above and distance from the water supply. Hose lines over a mile in length are frequently used. Small hand-pumps supplied by 5-gallon portable containers are also used effectively in many cases.

In addition to these improved measures, the enactment of legislation has tended to reduce the fire menace. The establishment of close seasons for brush-burning, and seasons during which permits are required for setting out fires and for travel in the forests during dangerous dry periods, have been of enormous value as preventive measures.

Prepared lectures illustrated by slides and films are distributed to volunteer lecturers and other educational work is carried on in schools and at public meetings. The various governmental forest authorities also carry on forest conservation publicity work independently and in co-operation with the Canadian Forestry Association.

Another important advance in forest protection 'is the development by the Dominion Forest Service of methods for the daily measurement of the actual degree of forest-fire hazard. In the forest types and regions in which the necessary research has been completed the forest authorities are able, not only to gauge the trend of increasing hazard at any given time but; by the aid of weather forecasts, to anticipate the trend one or two days in advance and so regulate their activities to meet hazardous conditions as they develop.

Since its beginning in 1900, the Canadian Forestry Association has played an important part in securing popular co-operation in reducing the fire hazard. By means of its magazine, which has a large circulation, by railway lecture cars and motor-trucks provided with motion-picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of the Dominion. Special efforts are made through the schools by specially appointed junior forest wardens and other means, to educate the younger generation as to the value of forests, the devastation caused by fire and the means of preventing such destruction.

## Subsection 3.-Scientific Forestry

The great forestry problem is the management of Crown forests, first under provisional and later under more intensive working plans, so as to ensure a sustained yield. Forest research activities in this direction are now assuming great importance. The Dominion Forest Service operates five forest experiment stations with a total area of 227 sq . miles. Here investigations of the underlying principles governing the growth of forests are made and practical methods of management are tested.

About 600 technically trained foresters are employed by the Dominion, by provincial forest services or by paper and lumber companies. A considerable number of foresters are actively engaged in commercial logging operations. In addition to administrative work, these men carry on forest surveys either for the estimation of timber-stands and making of maps, or to determine natural growth and reproduction conditions and factors. An outstanding development of recent years has been the extensive use of aerial photography for forest surveys. With the co-operation of the Royal Canadian Air Force and the Hydrographic and Map Service, the Dominion Forest Service has taken a leading part in the development of means for the interpretation of the photographs for forestry purposes. Most of the provincial forest services and many of the timber-owning companies also make extensive use of aerial photographs. It is now possible not only to map the areas covered by the various forest types but to estimate the volume of standing timber with an accuracy that compares favourably with ground surveys. Photographic prints covering 850,000 sq. miles are now available in the air-photograph library, and about 123,000 sq. miles of forest area have been mapped and classified from air photographs.

Research Work in Forestry.-In a special article on Scientific and Industrial Research in Canada, which appears at pp. 979-1012 of the 1940 Year Book, a comprehensive review of all phases of scientific research work being undertaken by the various Government Departments is given. Specifically at pp. 993-995 research in forest economics, silviculture, forest-fire protection and forest products is covered.

## Section 6.-Forest Utilization

## Subsection 1.-Woods Operations

A short review of the differences in logging methods throughout Canada is given at pp. 195-196 of the 1941 Year Book.

In connection with operations in the woods it should be borne in mind that the forests not only provide the raw material for the sawmills, pulp-mills, wood distillation, charcoal, excelsior and other plants, but that they also provide logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway
ties, posts and fence rails, mining timber, piling and other primary products, which are finished in the woods ready for use or exportation. There are also a number of minor forest products, such as Christmas trees, maple sugar and syrup, balsam gum, resin, cascara, moss and tanbark, that go to swell the total.
5.-Values of Woods Operations, by Products, 1938-43

| Product | 1938 | 1939 | 1940 | 1941 | 1942 | 1943 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Wood Fuel.-A serious wood fuel shortage arose in the summer of 1942. Almost one-half of all Canadian householders depend on firewood to heat their homes; throughout the country 46 p.c. burn wood and 42 p.c. burn coal.

About nine-tenths of the fuel wood cut in Canada is felled by farmers or by small operators employing up to 10 men who do the cutting in their spare time or during the off-season of the agricultural year. Although such operations are small, they are so numerous that they add up to about $10,000,000$ cords in an ordinary year. Fuel wood accounts for about 37 p.c. of the total quantity of timber cut for all purposes.

In addition to fuel wood, Canadians also burn a substantial cordage of slabwood, which comprises the sides and pieces of logs cut in sawmills. In peacetime, thousands of cords of such wood could not be economically marketed in communities far removed from the sawmills, and were burned at the mills. However, in 1943 a Government transportation subsidy made it possible to distribute much of this wood for household and industrial use. In British Columbia about 25,000 householders burn sawdust, and thousands of others there and elsewhere burn mill waste.

Because of the manpower shortage, the wood cut during the winter of 1941-42 was insufficient to meet the demand in the following winter. When the supply of seasoned wood became exhausted in some sections, the green wood cut for the winter of $1943-44$ had to be burned and the wood-fuel shortage was projected into another year.

To stimulate fuel-wood production, the Government decided early in March, 1943, on the following measures:-
(1) A subsidy of $\$ 1$ per cord was to be paid to dealers on all commercial fuel wood contracted for, and cut on or before June 30, 1943 (this date was later extended), and held to the dealers' account on that date.
(2) A transportation subsidy was to be paid where necessary.
(3) The Government would, on request, repurchase from dealers at dealers' cost all commercial fuel wood on which the $\$ 1$ subsidy had been paid and which was still in dealers' hands on May 31, 1944.
(4) Assistance would be given in providing priorities for necessary equipment.
(5) Farmers who left their farms temporarily to engage in fuel-wood cutting would be deemed, by National Selective Service, to be carrying out their regular occupation, and would be given all the rights of deferment of military service which such an occupation entailed, but such temporary absence was not to interfere with agricultural production.

Until early in 1943 the jurisdiction over wood fuel was under the Coal Administration of the Wartime Prices and Trade Board. Shortly after the transfer of the responsibility for wood and coal from the Wartime Prices and Trade Board to the Department of Munitions and Supply in March, 1943, the Coal Control was relieved of the responsibility for wood fuel, and a separate Wood Fuel Control was established in the same Department early in June. In March, 1944, the Wood Fuel Control became a division of the Timber Control, also within the Department of Munitions and Supply.

One of the first acts of the Wood Fuel Control was to extend the period for payment of the $\$ 1$ per cord subsidy to Dec. 31, 1943, later to Mar. 31, 1944, and still later to Dec. 31, 1944.

The Wood Fuel Control also took immediate steps to arrange for cutting wood fuel under its supervision. Conscientious objectors, Japanese internees, and war prisoners were employed in a number of operations and, in two projects, pulp and paper companies under contract with the Government, utilized their facilities to fell and cut large quantities. It is estimated that from all these operations, which extended across the country, about 500,000 cords of wood were made available.

In addition to these measures, the Control undertook, through the Wartime Prices and Trade Board, to establish ceiling prices for the producer as well as the distributor, and arranged a new subsidy system under which the producer, dealer and consumer were all assured fair treatment. This had the effect of stimulating production and distribution through normal channels, and is likely to go far towards preventing a repetition, in the winter of 1944-45, of the shortage of the previous year.

## Subsection 2.-The Pulp and Paper Industry

The rapid development of this industry in Canada is traced briefiy at p. 265 of the 1940 Year Book. Summary statistics for the combined pulp and paper industry are given at pp. 260-263 of this volume.

There are three classes of mills in the industry. These, in 1943, numbered 28 mills making pulp only, 50 combined pulp and paper mills and 28 mills making paper only.

The industry in Canada includes three forms of industrial activity, the operations in the woods with pulpwood as a product, the manufacture of pulp and the manufacture of paper. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. In all provinces except Nova Scotia, pulpwood cut from Crown lands must be manufactured into pulp in Canadian mills unless a special permit to export is obtained. A large proportion of the pulpwood cut in Canada for export to the United States is taken from private lands. In 1908 almost two-thirds of the pulpwood cut in Canada was exported in the raw or unmanufactured form, but the proportion has now declined to less than one-fifth.

## 8.-Production, Consumption, Exports and Imports of Pulpwocd, 1931-43

Nore.-Figures for earlier years will be found in the corresponding table of previous Year Books. Figures of imports and exports are shown on a rough or unpeeled basis, and are not comparable with those shown in Tables 15 and 16 of the External Trade Chapter.

| Year | Apparent Total Production of Pulpwood in Canada |  |  | Canadian Pulpwood Used in Canadian Pulp-Mills |  | Canadian Pulpwood Exported Unmanufactured |  | Imported Pulpwood Used in Canada |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{2}$ All quantities are given in terms of rough or unpeeled wood.
${ }^{2}$ Less than one-tenth of one per cent.

The manufacture of pulp is the second stage in this industry. This is carried on by mills producing pulp alone and also by paper manufacturers operating pulpmills in conjunction with paper-mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species of wood for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulpmill, but there are in Canada a number of 'cutting-up' and 'rossing' mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for exportation. Pulpwood is measured by the cord ( $4^{\prime}$ by $4^{\prime}$ by $8^{\prime}$ of piled material). One cord of rough pulpwood contains approximately $85 \mathrm{cu} . \mathrm{ft}$. of solid wood, and one cord of peeled pulpwood $95 \mathrm{cu} . \mathrm{ft}$.

In Canada, four methods of preparing wood-pulp are used, one of which is mechanical and three chemical. Detailed descriptions of these processes are given in the 1931 Year Book, pp. 290-291.

Pulp Production.-Growth was steady up to 1920 , when $1,960,102$ tons of pulp were produced. With the exception of 1921 and 1924, each year up to 1929 showed consistent growth in the annual production, 1929 reaching a total of 4,021,229 tons. Figures from 1931 are given in Table 9.

## 9.-Pulp Production, Mechanical and Chemical, 1931-43

Nors.-Figures for earlier years will be found in the corresponding table of previous Year Books.

| Year | Mechanical Pulp ${ }^{1}$ |  | Chemical Fibre ${ }^{1}$ |  | Total Production ${ }^{2}$ |  |

| 1939 | 2,796,093 | 43,530, 367 | 1,370,208 | 53,601,450 | 4,166,301 | 97,131,817 |
| 1941. | $3,368,209$ $3,550,285$ | $56,017,547$ $61,749,788$ | $1,922,553$ $2,170,562$ | $92,987,720$ $113,689,763$ | $5,290,762$ $5,720,847$ | 148,005, 2657 |
| 1942 | 3,308,118 | 65,208,919 | 2,298,343 | 126,936,143 | 5,606,461 | 192, 145,062 |
| 1943 | 3,033,751 | 63,694,822 | 2,239,079 | 130,739, 380 | 5,272,830 | 194, 434, 202 |

${ }^{1}$ Includes screenings.
${ }^{2}$ Some of these totals include unspecified pulp.
During 1943, 78 establishments turned out $5,272,830$ tons of pulp valued at $\$ 194,434,202$, as compared with $5,606,461$ tons of pulp, valued at $\$ 192,145,062$ in 1942. Of the 1943 total for pulp, $3,575,915$ tons, valued at $\$ 86,920,929$ were made in combined pulp and paper mills for their own use in manufacturing paper. The remainder was made for sale in Canada or for export. As in the case of pulpwood, a part of the product at this stage of the industry provides raw material for the later stages, while the remainder has a definite market value as pulp.

Over 57 p.c. of the production in 1943 was groundwood pulp and over 21 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite, bleached and unbleached sulphate, soda fibre and groundwood and chemical screenings made up the remainder. A considerable market has developed for screenings in connection with the manufacture of rigid insulating boards.

The manufacture of the $5,272,830$ tons of pulp produced in 1943 entailed the use of $7,263,155$ cords of rough pulpwood valued at $\$ 92,308,272$, and the total value of materials used in the manufacture of pulp was $\$ 109,631,048$.
10.-Production of Wood-Pulp in Canada, by Chief Producing Provinces, 1932-43

[^91]Pulp Exportation.-A table at p. 201 of the 1941 Year Book gives the exports of wood-pulp from the principal producing countries for 1913, 1938 and 1939. The latter figures are incomplete, owing to exigencies of war, and consequently the table has not been continued. Total exports of wood-pulp from Canada in the years 1940-43 will be found in Table 16 of the Chapter on External Trade.

Paper Production.-During 1943, 78 establishments produced 3,966,344 tons of paper and paper board with a total value of $\$ 235,362,958$, as compared with $4,231,767$ tons, valued at $\$ 230,269,512$ produced in 77 establishments in 1942. Newsprint paper now forms 76.8 p.c. of the annual paper production in Canada. In 1943 the production decreased by 6.5 p.c. but the value increased by 4.9 p.c. as compared with 1942. The remainder of the production was divided as follows: $14 \cdot 3$ p.c. paper boards, $3 \cdot 7$ p.c. wrapping paper, $3 \cdot 1$ p.c. book and writing paper, and about $2 \cdot 1$ p.c. tissue and miscellaneous papers.

## 11.-Paper Production in Canada, 1931-43

12.-Paper Production in Canada, by Provinces, 1942 and 1943

| Province | 1942 |  | 1943 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Quantity | Value | Quantity | Value |
|  | tons | \$ | tons | \$ |
| Quebec. | 2,179,800 | 117,921,760 | 1,986,865 | 117,928, 840 |
| Untario. | 1,314,311 | 75,210,507 | 1,266,813 | 78,234,640 |
| British Columbia. | 313,242 | 15,983,588 | 281,042 | 15,968,062 |
| Nova Scotia, New Brunswick and Manitoba....... | 424,414 | 21,153,657 | 431,624 | 23, 231,416 |
| Totals. | 4,231,767 | 230,269,512 | 3,966,344 | 235,362,958 |

Quebec produced 50.1 p.c. of the total quantity in 1943 , Ontario 31.9 p.c., British Columbia $7 \cdot 1$ p.c. and Nova Scotia, New Brunswick and Manitoba the remaining 10.9 p.c.

World Production of Newsprint.-The world production of newsprint in 1939 has been estimated at $7,679,000$ short tons, of which North America supplied 54 p.c. and Canada alone 38 p.c. Owing to the War, statistics for later years are not available; a table at p. 203 of the 1941 Year Book gives figures of production in leading countries in 1938 and 1939, together with the average production in each country over the period 1928-39.

Exportation of Newsprint Paper.-In the fiscal year 1908, exports of printing paper were recorded separately for the first time, and were valued at $\$ 2,833,535$. This was largely newsprint paper. In the fiscal year 1913, when quantities were first shown, Canada exported 256,661 tons of newsprint valued at $\$ 9,980,378$; for the calendar year 1943, exports amounted to $2,810,288$ tons valued at $\$ 144,707,065$ and ranked fourth among the exports of the Dominion.

Since 1913 Canada has led the world in the exportation of newsprint. In 1938 the quantity of newsprint exported by the 11 principal newsprint-producing countries was $3,806,737$ short tons, of which Canada contributed $63 \cdot 7$ p.c. World comparisons for later years are not available.

Statistics of the Combined Pulp and Paper Industries.*-The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries, for they are frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into towels, stationery and other highly processed paper products are often combined in one plant. This further converting of paper within the pulp and paper industry itself represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper mills in this industry are now attributed to the particular industrial group of converting plants to which they properly belong. The figures for 1937 and subsequent years, therefore, exclude all information pertaining to paper converting, which tends to lower perceptibly all the principal statistics of the pulp and paper industry and to render these figures not strictly comparable with those of previous years. Including manufacturing operations as far as the basic paper-making stage, there were altogether 106 mills in operation in 1943 . The capital invested amounted to $\$ 667,458,143$, the employees numbered 37,020 and their salaries and wages amounted to $\$ 71,199,422$. If the pulp made for their own use in combined pulp and paper mills is disregarded, the total of materials and supplies used in the industry as a whole can be considered as amounting to $\$ 143,956,462$ in $1943, \$ 135,970,437$ in 1942 , and $\$ 125,437,012$ in 1941 ; the gross value of production as $\$ 345,653,470$ in $1943, \$ 336,697,277 \dagger$ in 1942 and $\$ 334,429,175$ in 1941 ; and net value of production, $\$ 165,485,944$ in 1943 , $\$ 164,500,420 \dagger$ in 1942 and $\$ 174,555,041$ in 1941.

[^92]

The pulp and paper industry, one of the leading single manufacturing industries in Canada, was first in wages and salaries paid from 1922, when it first exceeded the sawmills, until 1942, when it was surpassed by shipbuilding, miscellaneous chemical products and aircraft. It was the leading industry in gross value of production from 1925, when it replaced the flour-mills, until 1935, when it was overtaken by non-ferrous smelting and refining, and in 1942 by slaughtering and meat packing. It has been first for many years in capital invested and in net value of production; in 1942, however, the net value of production of the shipbuilding industry exceeded it by a small margin. After the War, the pulp and paper industry will undoubtedly resume its position as Canada's most important peacetime industry. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. If the $\$ 18,565,265$ worth of exported pulpwood be taken into consideration, the gross total contribution of the pulp and paper industry towards Canada's excess of exports over imports in 1943 amounted to $\$ 252,191,146$, representing the difference between exports and imports of pulpwood, pulp, paper and paper products.

The United States market absorbs, annually, practically all of Canada's pulpwood exports, over 80 p.c. of her pulp and more than three-quarters of her paper shipments. About half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

Newsprint Control.-The situation outlined on pp. 264-265 of the 1943-44 Year Book in an article entitled "The Influence of the War on the Pulp and Paper Industry" has not altered materially during the year 1944. Production and distribution of pulpwood are still under direction of the Timber Controller, and exports to non-Empire countries are subject to permit as previously outlined.

All pulp and papers are still under the control of the Wartime Prices and Trade Board with respect to both production and distribution. This control has been very beneficial both to the industry and its customers in securing the maximum production from the wood and other materials available.

There has been an improvement in the electric power situation during the year owing to reduction in war production demands for aluminum, etc. All mills, with the exception of those located at or near Thorold, Ontario, have had full power supplies during the year. On Oct. 1, 1944, regulations were removed from the Thorold mills. The large mill owned by the Ontario Paper Company placed an additional paper machine in operation on that date and planned for further increases in 1945.

The quota arrangement discussed in the 1943-44 Year Book is still in effect. There has been no further increase in the price of newsprint since the $\$ 4$ increase as of Sept. 1, 1943. Manufacturing costs have continued to increase during 1944 and considerable difficulty is being experienced in securing sufficient woods labour, so that pulpwood production is still below the required amount. The total production of Canadian newsprint mills has averaged 253,000 tons per month during 1944, of which 200,000 tons has been shipped to the United States and the balance to Canadian and overseas markets. Pulp shipments to the United States have been averaging at the rate of $1,100,000$ tons per year and pulpwood approximately $1,300,000$ cords per year.

As a matter of interest, requests are coming in for newsprint paper supply to various liberated European countries, such as France, Holland, Belgium, etc., and joint efforts between the United States consumers and the Canadian industry are being made to fill as much of this demand as possible.

During the year there has been a very high degree of co-operation between the members of the industry and customers, and the industry is looking forward to the post-war period with confidence. Owing to improvement in shipping facilities, Empire countries, such as South Africa, Australia and New Zealand, are securing a larger part of their newsprint requirements than was possible in the years 1942 and 1943, and England is still receiving large quantities of pulp and newsprint.

In general, Canada has been called upon to supply essential newsprint requirements to most of the United Nations and, in the face of labour and other shortages, has succeeded very well in this task.

## Subsection 3.-The Lumber Industry

The manufacture of sawn lumber is the second most important industry in Canada depending on the forest for its raw rnaterials.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills and mills for cutting-up and barking or rossing of pulpwood that reported in 1943 was 5,220 , as compared with 5,277 in 1942. The capital invested in these mills in 1943 was $\$ 115,273,788$, employees numbered 43,954 and wages and salaries amounted to $\$ 49,564,303$. The logs, bolts and other materials and supplies of the industry were valued at $\$ 101,021,760$ and the gross value of production was $\$ 195,885,336$. The net production in 1943 was $\$ 91,714,000$.

Lumber production in Canada reached its maximum quantity in 1911 with almost 5,000 million ft . b.m. The maximum value was reached in 1920. Average values were fairly uniform up to 1916, but increased rapidly from 1917 to 1920 , only to decline gradually during the following years to the lowest level for the entire period, which was reached in 1932. With the exception of 1938 increases took place each year from 1933 to 1943.
13.-Quantities and Values of Lumber and All Sawmill Products Made in Canada, by Provinces, 1942 and 1943

| 1940. | 4,628,952 | 105,988,216 | 4,420,240 | 9,600,497 | 216,465 | 688,167 |
| 1941. | 4,941,084 | 129,287,703 | 4,160,772 | 12,309,632 | 204,991 | 731,227 |
| 1942. | 4,935, 145 | 149, 854,527 | 3,720,482 | 13,191,084 | 181,994 | 737,874 |
| 1943 | 4,363,575 | 151,899,684 | 2,565,752 | 10,020,804 | 114,029 | 554,278 |

British Columbia came first in total production in 1943, contributing 44.5 p.c. of the total cut in lumber and $82 \cdot 6$ p.c. of the shingles. Quebec followed in second place, Ontario was third and New Brunswick fourth. In 1943 spruce was the most important kind of lumber sawn; it is produced in every province. Douglas fir, which is sawn almost entirely in British Columbia, came second, with hemlock, white pine, yellow birch and jack pine next in order of importance. Cedar was the most important shinglewood sawn. The conifers usually form about 95 p.c. of the total cut of all kinds of wood, only 5 p.c. being deciduous-leaved trees or hardwoods.

Lumber Exportation.-The hewn square-timber trade reached its maximum development in the '60's; thereafter it declined gradually and has now almost entirely disappeared. Simultaneously with its decline came the increased exportation of deals and other sawn lumber, first to the United Kingdom and later to the United States. From the first, trade with the latter country has been confined largely to planks, boards and dimension stock. During the American Civil War exports of forest products of all kinds to the United States for the first time exceeded those to the United Kingdom, but in late years this has become the rule. The total quantity of sawn lumber and square timber exported changed little from 1900 to 1929 , averaging about 2,000 million ft. b.m. per annum, but decreased considerably in the next three years, reaching its lowest level of $790,000 \mathrm{M} \mathrm{ft} \mathrm{~b} .$.m . in 1932. Since that time lumber exports have recovered; in 1940 they were $2,548,681 \mathrm{M} \mathrm{ft}$. b.m., in $19412,300,875 \mathrm{M} \mathrm{ft}$. b.m., in $19422,179,956 \mathrm{M} \mathrm{ft}$. b.m. and in $1943 \mathrm{1,741,276}$ M ft. b.m.

## Subsection 4.-Manufactures of Wood and Paper

Sawmills and pulp and paper mills draw their raw material directly from the forest in the form of logs and pulpwood, and produce sawn lumber, other sawmill products and pulp and paper. There are also a number of important industries that use these products as raw material for further manufacture. Some of them produce commodities made almost entirely of wood, wood-pulp or paper, some manufacture articles in which wood is the most important component, and others produce articles in which wood is necessary but forms only a small proportion of the value. There are, in addition, a number of industries that use wood indirectly in the manufacture of articles that do not contain wood as a component part. The first class includes the manufacture of paper, sash, doors, other mill work and planing-mill products; boxes, baskets, cooperage and other containers; canoes, boats and small vessels; kitchen, bakers' and dairy woodenware; wooden pumps, piping, tanks and silos; spools, handles, dowels and turnery. The second class includes the manufacture of furniture, vehicles and vehicle supplies, coffins and caskets, etc., and the use of paper in printing and the manufacture of paper boxes, bags, stationery and paper goods. The third class, where wood has a secondary importance, includes the manufacture of agricultural implements, railway rolling-stock, musical instruments, brooms and brushes, etc. The fourth class can be said to include practically every form of industrial activity, as few, if any, of these are entirely independent of the use of wood, directly or indirectly.

A classification based on the chief component material in the products of each manufacturing establishment is now largely used in compiling manufacturing statistics and for external trade purposes. Under this system most of the forest industries fall in the wood and paper group. In 1942, this group, comprising 10,222 establishments, gave employment to 186,106 persons and paid out $\$ 252,179,776$ in salaries and wages. Capital invested in the industries of the group amounted to $\$ 1,080,457,129$; the gross value of its products was $\$ 961,842,906$ and the net value, $\$ 488,433,355$.

22115-18

Exports of Wood and Paper Products.-The forests of Canada contribute substantially to her export-trade values. During the calendar year 1943 exports of wood and paper products amounted to $\$ 391,069,658$ and made up $13 \cdot 2$ p.c. of the total value of Canadian exports for the period, amounting to $\$ 2,971,475,277$. Domestic exports of wood and paper products were exceeded by those of agricultural (vegetable and animal) products, which made up 26.0 p.c. of the total, and by mineral products with 37.4 p.c. Wood and paper products are prominent among the individual items of export. Even more impressive is the contribution made by products of the forest and forest industries toward Canada's excess of exports over imports. In 1943 this excess from trade in all commodities (excluding gold) was $\$ 1,266,275,389$. In comparison, the gross total contribution from trade in "wood, wood products and paper" only, amounted to $\$ 351,166,355$.

## Section 7.-The Influence of the War on Forestry*

Because of the great and growing importance of wood, Canada's $500,000,000$ productive forested acres have taken on a new significance not only in the war program but in planning for the period of reconstruction that will follow.

Except in magnitude, a wartime timber contribution is not new for the Canadian forester. When Napoleon tried to defeat Britain by blockading her supplies from Europe in 1806, the ring of the axe was heard in Canadian woods, Canadian timbers became ships of the Royal Navy, and the blockade attempt was a failure. A little over a century later another would-be conqueror tried even more strenuously to blockade the British Isles, and once again the woodsmen of this country aided in the victory.

But providing enough timber for the Britain of Napoleon's day, or even for the War of 1914-18, was one thing; supplying the enormous quantities presently needed by the Allied Nations, is quite another. Demands have risen so high that production cannot keep pace, and Canada, one of the richest timber countries in the world, has had a deficit.

At the outbreak of the present war in 1939, the Canadian lumber industry was experiencing a period of reasonable activity. During the first winter the cut of logs was increased but, on the whole, the industry underwent no great dislocation until early in the summer of 1940.

To meet this emergency, the Department of Munitions and Supply established a Timber Control on June 24, 1940. Apart from applying the brakes to runaway prices, the heaviest task facing the Control during its first six months was the purchasing of lumber for Departmental account and making sure that deliveries were made on time.

At that time Royal Canadian Air Force projects were built under contract, and the function of the Control was to make sure that contractors could obtain quickly the lumber they needed. On the other hand, Army training camps were built by the Royal Canadian Engineers, and lumber for these was purchased by the Department.

By December, 1940, Government account purchases had exceeded 110,000,000 bd. ft . and contractors had taken an additional $260,000,000 \mathrm{bd}$. ft . In this period, several flying schools, each requiring six hangars and 33 other buildings, were erected in the amazingly short time of 100 days or less. More than 5,000 wooden buildings were built in 1940, and about 4,000 more the following year.

[^94]With the sudden expansion of the war effort, the railways were soon overburdened, and the Control found it necessary to eliminate cross-hauling where possible. Much large timber had to be secured from British Columbia, but otherwise the policy was to buy from the nearest source.

At the same time the Control undertook to scrutinize the specifications for buildings and for all articles made of wood so that the proper grades might be used wherever possible. In this way the Government has saved hundreds of thousands of dollars and much valuable material.

Enormous quantities of lumber are used in making boxes and crates for shipping munitions, food, automotive equipment, aircraft, and other war supplies and, at the instance of the Control, many types of containers were redesigned by the Forest Products Laboratories of the Department of Mines and Resources, effecting important savings in lumber and shipping space.

During the first six months of 1941 , the demand for lumber was sharply reduced, but by mid-summer a second very active period of war building got under way and continued into 1942.

To offset the shortage of structural steel during this period of greatest construction activity, new techniques in the use of wood were adopted. Huge structures were built without steel girders. This was made possible by the use of a recently invented ring connector, which spreads the load on a timber joint over virtually the entire cross-section of the wood. Over 700 hangars, drill halls, storage buildings, and other structures requiring a maximum area of unimpeded floor space have been built in Canada with structural grades of Douglas fir held together by these new connectors.

Because it has been necessary to channel most of the lumber output into direct and indirect war uses, and into exports, civilian requirements have been subject to severe restrictions. At first these were effected by informal direction of the Control, but in January, 1943, an order provided that no person could buy more than $\$ 1,000$ worth of lumber or mill work for construction or repairs at any plant, or more than $\$ 200$ worth for construction or repairs of a building other than a plant, unless a permit has been obtained from the Timber Control, or unless the project cost was such that it required and was granted a Construction Control licence; this order was rescinded on Feb. 22, 1944. Other orders, passed at various times, prohibit the use of veneer logs or Sitka spruce, of aircraft quality, for any purpose other than the manufacture of aeroplanes. Still other orders, most of which have been issued by the Wartime Prices and Trade Board, have fixed prices on lumber and pulpwood.

Aircraft Woods.-Aircraft manufacturers have been helped by the Timber Control. During the War of 1914-18, Sitka spruce, which grows only on the west coast of North America, was found to be the most satisfactory wood for structural components of aircraft. Large quantities were produced at that time, but the demand in the present war is much greater.

During the first two years of war virtually all the aero spruce produced in Canada was sent to Britain, but when Canada began building her own wooden aircraft, arrangements had to be made for the release of part of the spruce production intended for export.

In the spring of 1942, the British Ministry of Aircraft Production warned that British aircraft output would be reduced unless more Sitka spruce could be obtained. At the same time Canada was about to go into production of the speedy
wooden Mosquito bomber. These two demands constituted a challenge that was accepted by the Timber Control. In June, 1942, a Crown Company, Aero Timber Products Ltd., was established for the sole purpose of boosting the production of Sitka spruce.

The Company set up eight camps of its own and supervised private operations. As a result the output rose to $17,000,000 \mathrm{ft}$. in 1942 . In the following year the figure stood at $26,000,000 \mathrm{ft}$. About two-thirds of the production is going to the United Kingdom.

All production is allocated; United Kingdom, Australian, New Zealand, South African, and Canadian requirements are routed through Canadian Timber Control.

Selected yellow birch logs are most suitable for producing veneers to the exacting specifications required for aircraft plywoods. About 80 p.c. of Britain's requirements are provided by Canada and the balance by the United States. Pre-war exports to England which were about 10,000 tons a year, rose to 25,000 in 1940 , and 60,000 tons in 1941.

In May, 1941, the British Timber Control asked for assistance in obtaining birch veneer logs, aircraft veneer and plywood, and the Canadian Timber Control took over all negotiations.

As the over-all demand for these forest products increased, it became necessary to establish, in August, 1942, a Crown Company, Veneer Log Supply Ltd. This Company, which surrendered its charter in May, 1945, supplied all British and Canadian veneer log requirements. Shipments of veneer logs to the United Kingdom in 1942-43 were approximately 35,000 tons, but dropped to 12,800 tons in 1944-45. Production and export of finished veneers and plywoods were expanded substantially in 1942-43 but, due to the discontinuance of the Air Training program in 1944, have dropped to approximately one-quarter of the maximum production in 1942-43.

Eight Canadian companies are now producing aircraft veneer; their combined annual capacity is about $300,000,000$ sq. ft. Four companies make approximately $35,000,000$ sq. ft. of aircraft plywood per year.

Since early in 1942 the demand for labour for all types of war industries has been rising rapidly and enlistments in the Armed Forces have been at a high rate. As a result, loggers have been difficult to secure, and this, coupled with the severity of the winter of 1944-45, has caused the drop in lumber output although it is still over 40 p.c. in excess of the pre-war volume.

During 1942 and 1943 the average number of men on the payroll in the woods was about 80,000 . In an effort to add to this number, the Government granted the industry a labour priority, and endeavoured to persuade farmers east of the Rockies to spend the winter in logging operations. In addition, the Government brought back a portion of the Canadian Forestry Corps, which had been employed in lumbering operations in Scotland. The men were directed to Canadian lumber operations.

# CHAPTER X.-FUR RESOURCES AND FUR PRODUGTION 

## CONSPECTUS

Page Page<br>Section 1. The Fur Trade.............. 269<br>Section 2. Fur Farming.

## Section 1.-The Fur Trade*

Historical Sketch.-The value of the fur trade to Canada cannot be measured on a dollars and cents basis. Like gold, spices and other highly desired products, furs were an important incentive to the voyages of exploration from Great Britain and Continental Europe in the early days of settlement in the Western Hemisphere.

From the earliest times the Basque and Breton fishermen operating upon the "banks" had traded for furs. As the French Court demanded more and more furs, adventurers came for the latter trade exclusively. Pont-Grave and Chauvin built Tadoussac in 1599 as a centre for this trade with the Indians of the Saguenay, and when trade routes were discovered farther inland, the founding of Quebec and Montreal followed. The French Government from the first granted monopolies to the fur trade, always on the condition that the company would bring to Canada a stated number of settlers. But settlement and the fur trade could never go together-settlement by driving fur-bearing animals farther afield made trading increasingly expensive, and the great profits of the fur trade, together with its freedom and romance, took the more adventurous minded from commonplace pursuits of the settler. Trade spread west and south by the river routes, convoys bringing the furs yearly to Montreal and Quebec. The de Caen Company in the seventeenth century sent yearly to France enormous quantities of pelts. The beaver pelt became the unit of Canadian currency and was so used for many decades.

In the meantime, English navigators had been seeking a Northwest Passage to the Orient. By 1632 their efforts came to an end with little practical result. Hudson Bay, however, had been navigated, so that when the first English furtrading ships came some years later, they sailed by known routes to a safe harbour. The first expedition (1668) came at the instigation of Radisson and Groseilliers, two French coureurs de bois who had travelled in the rich fur country north of Lake Superior. They had sought aid in France but, being refused, turned to England. In 1670 the charter of the "Adventurers of England trading into Hudson Bay" was obtained by Prince Rupert, who became the first Governor of the Company now known as the Hudson's Bay Company (whence the name Rupert's Land). On the granting of the charter a second expedition set forth, the ships well laden with merchandise to be used in barter with the Indians and with supplies for new trading posts.

[^95]Forts were built on Hudson Bay and James Bay, at the mouths of rivers, and here the Company bartered with the natives. From the first the relations with the Indians were friendly, and the Company soon won their confidence by fairness in barter and by help in time of need. As a result, the Indians carried to the Company's posts their harvests of pelts and the ships returned to England each year well laden with furs, the proceeds from which gave to the "Gentleman Adventurers" generous rewards for their vision and for the investment that had made possible the utilization of this rich domain. During the struggle between the English and the French, which commenced about 1685, the Company sustained heavy losses and no dividends were paid. With the English victory came a new era of prosperity; additional posts were built; more and more Indians came to trade; great cargoes of furs were sent to England; and the shareholders again received substantial dividends on their stock.

After the Seven Years' War the fur trade from the south passed out of the hands of the French, and until 1771 the English were busy rediscovering the old French routes to the west. The discoverer of a new fur district was followed by competitors and, in the competition that followed, many were ruined and left for new fields.

There have been great changes in the fur trade. The railway first revolutionized conditions throughout the country, then more recently the advent of the motorvehicle has influenced the extension of highways to the borders of settlement, and beyond. Boats ply the lakes and rivers, and the aeroplane is requisitioned for the transportation of furs from the more inaccessible districts. The advance of lumbering, mining and agricultural settlement, together with improved methods of capture, have driven fur-bearing animals farther and farther afield, and caused serious reduction in their numbers. To guard against further depletion and to ensure the prosperity of Canada's great wild-life heritage, the Dominion and Provincial Governments have adopted, in co-operation, a strong policy of conservation.

## Section 2.-Fur Farming*

Since the early days of the fur trade, it has been the practice in Canada for trappers to keep foxes alive until the fur was prime, and from this custom has arisen the modern industry of fur farming. The earliest authentic record of the raising of foxes in captivity comes from Prince Edward Island, where about 65 years ago a number of foxes were raised on a farm near Tignish. After 1890 there came a period of rising prices for furs, and the fox farming industry grew rapidly. The beauty of the fur of the silver fox and the consequent high prices realized from the sale of the pelts, caused attention to be directed chiefly to this breed, a colour phase of the common red fox, which had been established through selective breeding carried on by the pioneer fox farmers. While experiments were being carried on in Prince Edward Island, attempts at raising foxes in captivity were also being made in other provinces, the records showing that foxes were successfully bred in Quebec in 1898, in Ontario in 1905 and in Nova Scotia in 1906. Fur farming is now carried on in all provinces of the Dominion and the number of farms, until the outbreak of the War, showed a steady increase. The recognition of the importance of fox farming as a branch of the live-stock industry is indicated by the addition, during 1925, to the system of Dominion experimental farms and stations of an experimental fox ranch at Summerside in Prince Edward Island, where problems of breeding, feeding, housing and general care can be specially studied.

[^96]Although the fox was the first to be raised in captivity many other kinds of fur-bearing animals are now being raised-mink, raccoon, skunk, marten, fisher and rabbit. Mink farms are the most numerous of the miscellaneous class, raccoon farms coming next. From 1920 to 1939 there was a rapid expansion of fur farming in Canada and during that period there was a marked change in type of furs which were most acceptable to the market. Black fox was popular 25 years ago. A few years later the highest prices were being paid for quarter and half silvers and during recent years the full silver and new types have been setting the upper price limit. The development of a new-type fox and mink has proven to be a new incentive to the fur-farming industry. New-type fox such as platinum, platinum-silver, pearlplatinum and white-marked are meeting a ready market as are the new-type mink including silver-sable, platinum silver-blue, snow-white and a number of other colour phases. In 1939 the Dominion Government introduced the grading of furs under the Department of Agriculture. One of the Department's main objectives in grading is to secure uniformity. By accomplishing uniformity it offers an opportunity of buying by grade without the necessity of buyers from foreign countries personally examining the pelts.

Grading offers many benefits to the producer as well as to the trade in general: (1) it educates the rancher as to the proper value of his pelts, and creates an incentive to improve the quality of his product; (2) it furnishes much needed guidance in the planning of future matings; (3) it raises the standard of quality of the entire crop of pelts; and (4) it raises the level of prices for the higher quality pelts.

Statistics of Fur Farming.-The following tables give the numbers and values of the fur farms and animals, for recent years.
1.-Fur Farms, Land and Buildings, and Fur-Bearing Animals, by Provinces, 1940-42

| Province or Territory | Fur Farms |  |  | Values of Land and Buildings |  |  | Values of Fur-Bearing Animals |  |  |

${ }^{1}$ Based on estimates furnished by the operators of the farms. was suspended after the year 1939 .
:The collection of this information

The annual revenue of the fur farmer arises from two sources, the sale of animals and the sale of pelts. In the early years of the industry the value of animals sold from fur farms exceeded the value of pelts sold; in 1942 the latter figure was about sixteen times the former.

## Section 3.-Total Fur Production*

Early records of raw-fur production are confined to the decennial censuses, when account was taken of the numbers and values of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of rawfur production, basing its statistics on information supplied by the licensed fur traders. This survey was continued for some years. More recently, annual statements, based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are now used in the preparation of the statistics issued annually by the Bureau. In the case of Prince Edward Island, the statistics are based on returns supplied directly to the Bureau by the fur traders who deal in furs produced in the Province.
4.-Pelts of Fur-Bearing Animals Produced in Canada with Percentages Sold from Fur Farms, Years Ended June 30, 1922-43

In 1943 Ontario was the leading province in respect to value of fur production, replacing Alberta which was first in 1942. The relation that the value for each province bore to the total for Canada in the year ended June 30, 1943, was: Ontario, $20 \cdot 4$; Quebec, $16 \cdot 0$; Alberta, 15.9; Manitoba, 11.4; Northwest Territories, $11 \cdot 1$; Saskatchewan, 8.6; British Columbia, 6.5; Nova Scotia, 3.2; New Brunswick, 3.0; Prince Edward Island, 2.7; Yukon, 1-2.
*Revised in the Agricultural Branch, Dominion Burean of Statistics.
5.-Peits of Fur-Bearing Animals Produced in Canada, by Provinces, Years Ended June 30,1942 and 1943

| Province or Territory | Pelts |  | Values |  |
| :---: | :---: | :---: | :---: | :---: |

| Canada. | 19,561,024 | 7,418,971 | 24,859,869 | 28,505,033 |

The number of silver-fox pelts taken in 1943 was about 59 p.c. of the number taken in 1939, the peak season, although the average price for this fur jumped from $\$ 15 \cdot 43$ in 1940, the lowest on record, to $\$ 24 \cdot 84$ in 1943 . The total values of both muskrat and mink exceeded the value of silver fox for the first time in 1941 and in 1943 mink took the lead, with muskrat second, silver fox third and beaver in fourth place. The drop in the number of pelts in 1943 was due largely to the decrease in the number of squirrel and rabbit pelts taken. The average price of practically every fur showed an increase in 1943 over 1942.

[^98]${ }^{2}$ Coyote or prairie wolf pelts for Manitoba are included
Since the First World War, Montreal has been recognized as an international fur market, holding the first Canadian fur auction sale in 1920. Through the medium of the Canadian fur auctions, grading and marketing of furs have been placed on a scientific footing, resulting in more or less stabilized conditional prices to the benefit equally of trapper, breeder, manufacturer, distributor and consumer. Furauction sales are held also at Winnipeg, Edmonton and Vancouver.

During the past twenty years or so, immense improvements have been made in the dressing, dyeing and finishing of furs. In 1943, the 16 fur-dressing and -dyeing plants in Canada treated $8,440,998$ fur skins, the chief kinds being fabbit $(3,963,997)$, squirrel $(1,239,763)$, and muskrat $(1,073,032)$. The number of plants engaged in the manufacture of fur goods-coats, capes, scarves, muffs, etc.-numbered 495 with a total output valued at $\$ 39,131,614$.

Effect of the War on Trade in Furs.-Several branches of Canadian industry were adversely affected by the impact of war, and among them was fur farming. Because of the exigencies arising out of the conflict, the London market, which in normal times took about 80 p.c. of the total production of Canadian fox furs, was lost. With the loss of this market, other outlets had to be explored. The United States, fearing their market would become flooded with pelts from Canada and other countries, imposed a quota in 1939, limiting imports from all countries to only 100,000 units annually. Of this quota, Canada's portion was 58,300 units for the year, and not more than 25 p.c. of this quota was allowed entry in any one month. Under the original quota arrangement each piece, head, paw, tail, or finished article, was considered a unit for quota purposes.

During the first month of 1939 sufficient pelts, chiefly of inferior quality, pieces and tails, were presented for entry to fill the quota for the whole year. Although, as pointed out above, only 14,575 units were allowed entry in that month, the greater portion was held over and presented for entry at each opening day of the quota in subsequent months. In order to avoid recurrence of this situation in the 1940-41 season, government grading was established and qualitative restrictions were placed on the export of standard silver and black fox pelts to the United States and only pelts of the better grades were allowed to be exported to that country. This was most important because practically the only market left open was the United States market. The sale of pelts to that market brought back considerable foreign exchange needed under war conditions and at the same time proved an incentive to the producer who wished to ship pelts to that market to do considerable culling of his breeding animals as, prior to that time, the quality of the industry had been becoming somewhat inferior. In time it was noticeable in some of the provinces that the quality restrictions had had a good effect, and that an effort was being put forward to improve the standard of production. In the autumn of 1940 quota arrangements were amended, whereby Canada's portion of the 100,000 pelts allowed into the United States annually was increased to 70,000 pelts and not on a unit basis, for a separate quota was established for pieces and tails.

Recent breeding developments on fur farms and the active interest being shown in this phase of the industry indicate that there will be a further expansion of production on fur farms in the years immediately following the War.

## CHAPTER XI.-THE FISHERIES

## Section 1.-The Early Fisheries

Fishing may be considered the first industry to be carried on by Europeans in waters off the Canadian domain. Since the time of John Cabot's discovery of the mainland of North America in 1497, or very shortly thereafter, the exploitation of the fisheries of the country now known as Canada has gone on continuously. There is some evidence, indeed, that even before the days of Cabot fishermen from Europe had voyaged to the fishing grounds of this continent. According to the Census of 1941, of $3,676,563$ males gainfully occupied in that year (including persons on Active Service), 36,297 reported fishing as their principal occupation.*

More detailed reference to the history of the Atlantic fisheries will be found at p. 348 of the 1934-35 Year Book.

## Section 2.--The Canadian Fishing Grounds

The fishing grounds of the Dominion fall naturally into three main divisionsAtlantic, inland and Pacific. A detailed description of each, the fish obtained from it, and the methods of fishing, is given on pp. 222-225 of the 1932 Year Book. Suffice it to say, here, that the Canadian grounds are among the most extensive and prolific in the world.

## Section 3.-The Governments and the Fisheries

## Subsection 1.-The Dominion Government $\dagger$

At the time of Confederation, 1867, the administration of the Dominion's fisheries was assigned to the Department of Marine and Fisheries which, except for a comparatively short interval, continued to perform this duty continuously until 1930 when a separate Department of Fisheries, in charge of its own Minister, was established. The latter Department now administers all the tidal fisheries of the country (except in Quebec where, by agreement between the Province and the Federal authorities, all fisheries are under provincial administration), the non-tidal fisheries of Nova Scotia, and the fisheries of Yukon and the Northwest Territories. In New Brunswick, Prince Edward Island, Quebec, Ontario, the Prairie Provinces and British Columbia, the administration of the non-tidal fisheries is in the hands of the respective provinces but the Federal Department carries on certain protective

[^99]work in non-tidal waters of New Brunswick, Prince Edward Island and British Columbia. Although administration is carried on by different authorities in different parts of the country the right of fisheries regulation for all parts of the Dominion rests with the Federal Government (see the Fisheries Act, 22-23 Geo. V, c. 42).

The revenue obtained by the Dominion Government from the fisheries in the fiscal year $1943-44$ was $\$ 305,420$ and in the year $1942-43$ it was $\$ 320,032$. Dominion expenditure on the fisheries in 1943-44 (exclusive of special war expenditure, but including outlays in connection with the International Pacific Halibut and Pacific Salmon Commissions, departmental administration, etc.,) was $\$ 1,744,151$ and in 1942-43 it totalled $\$ 1,736,821$. Special war expenditures in 1943-44 amounted to $\$ 20,976,606$; in the main they represented fish supplied to the United Kingdom and other countries of the United Nations under various arrangements, although they included also several other items, such as subsidy payments of approximately $\$ 144,000$ (progress payments) toward the construction of additional vessels for the Canadian fishing fleet.

Conservation.-The maintenance and increase of the fish stocks of the country has been one of the chief objectives of the Federal fisheries authorities. Conservation is accomplished by the enforcement of close seasons; the imposition, in some cases, of size limits to prevent the capture of undersized fish and, in other cases, limitation of catch; the regulation of fishing operations generally, including control of types of gear; and the prohibition of pollution or obstruction of fishing waters. In addition a Federal system of fish culture has been carried on continuously for many years in areas where the fisheries are under Dominion administration, and for some time past a program for the establishment of commercial oyster culture or 'farming' in certain Atlantic areas has been in progress under arrangements between the Department of Fisheries and the Fisheries Research Board. In 1943 the Department operated 13 main hatcheries, 6 salmon retaining ponds, and several egg-collecting stations at a cost of approximately $\$ 170,600$. During the year, trout and salmon fry, etc., to the number of $26,279,870$ were distributed from the fish cultural establishments in suitable selected waters. Under the oyster culture program, begun in Prince Edward Island in 1928, commercial oyster farming has been developed both in that Province and in Nova Scotia where control of the oyster areas was transferred to the Dominion authorities by the respective Provincial Governments. In New Brunswick, the Provincial Government has retained control of the oyster areas except on two limited stretches of the coast which have been transferred to the control of the Federal Department so that oyster-farming investigations might be conducted in those districts. In British Columbia, the other oyster-producing province, the oyster areas are under provincial jurisdiction.

Direct Assistance to Fishermen.-Subsidy grants toward the construction of additional fishing vessels were continued by the Department of Fisheries during the past year; under the subsidy plan, begun in 1942-43, some 20 new vessels have been built on the Pacific Coast and a smaller number in the Atlantic provinces. To assist Atlantic Coast fishermen in applying improved methods of fishing, an experimental long-line vessel was constructed during the past year and put into operation. Instruction in the most efficient methods of fish processing is made available to fishermen by the Department, with the co-operation of the Fisheries Research Board, and information obtained by the Board through its investigation and experiments is put at the disposal of the fishing industry. In appropriate communities special instruction in fish handling and processing is given by trained

Departmental employees, both orally and by processing demonstrations. Under arrangements made by the Department with the University of St. Francis Xavier, Antigonish, N.S., the High School of Fisheries, Ste-Anne-de-la-Pocatière, Que., and the University of British Colunbia, Vancouver, B.C., fishermen are assisted by adult-education specialists in studying their problems and in developing means of dealing with those problems by joint action. Expense of this work is met by the Department.

Prior to the outbreak of the War weather forecasts and reports as to ice conditions and bait and ice supplies were broadcast regularly to Atlantic fishermen under a co-operative plan carried out by the Department of Fisheries and the Radio Division of the Department of Transport. For reasons of security, however, the broadcasting service was discontinued.

Indirect but useful assistance is given the fishermen through the Departmental lecture-demonstration program which has been carried on for some years. Home economists on the permanent staff of the Department give addresses in various centres of population on the nutritive values of Canadian fish foods, and demonstrate methods of fish cookery.

Scientific Research.-Federal fisheries research in Canada is carried on by the Fisheries Research Board, which is under the Minister of Fisheries and is, in effect, the scientific division of the Department of Fisheries. A special article on Scientific and Industrial Research, appearing at pp. 998-1001 of the 1940 Year Book, makes reference to fisheries research.

International Problems.-Fisheries questions of international importance have occurred at various times on both coasts of the Dominion as well as in the Great Lakes region where problems are made more complicated by the fact that Provincial and State Governments, as well as national administrations, may be concerned. One problem which in times past was a source of difficulty was the question of United States privileges in connection with Atlantic fisheries of the Dominion. Its history is outlined on pp. 351-352 of the 1934-35 Year Book. Since 1933, under the former modus vivendi plan, which grew out of the unratified treaty of 1888 , United States fishing vessels have again been permitted to enter Canadian ports to buy bait and other supplies. On the Pacific Coast for some years past Canada has likewise extended port privileges (privileges of buying bait, shipping crews, transhipping catches, etc.) to United States halibut fishing vessels and more recently to United States vessels fishing for black cod, ling cod, grayfish or sharks. The Government at Washington has extended similar privileges to Canadian vessels in United States Pacific ports.

The two major fisheries problems which have been the objects of joint action by Canada and the United States in recent years are the preservation of the halibut fishery of the North Pacific and Bering Sea and the restoration to its former size of the sockeye salmon fishery of the Fraser River system. Each problem is being dealt with by a commission equally representative of either country-the International Fisheries Commission, which deals with the halibut problem, and the International Pacific Salmon Fisheries Commission. Outlines of the agreements under which the commissions act will be found at p. 287 of the 1940 Year Book. In 1944, following intensive scientific and engineering studies carried on by the sockeye commission since its establishment in 1937, work was begun on fishway construction at Hell's Gate Canyon on the Fraser River which is expected to overcome the principal obstacle to the restoration of the run.

Fishing Bounty.-Under authority of legislation to assist in sea fisheries development and the encouragement of the construction of fishing boats and vessels ( 45 Vict., c. 18 , passed in 1882, and $54-55$ Vict., c. 42 , passed in 1891) an annual bounty totalling originally $\$ 150,000$ and later $\$ 160,000$, has been paid to fishermen and owners of fishing boats and vessels on the Atlantic Coast. The bounty represents interest on the Halifax Award. Payments are made under authority of the Deep Sea Fisheries Act (R.S.C. 1927, c. 74).
1.-Government Bounty Paid to Fishermen, by Provinces, 1942 and 1943

| Province | Bounties Paid |  | Amounts of Bounties Paid ${ }^{1}$ |  |

| Totals. | 18,319 | 18,458 | 159,931 | 159,399 |

${ }^{1}$ Amounts include payments to owners of vessels and boats.
Fisheries Statistics.-Canadian fisheries statistics are collected and published under an arrangement for statistical co-operation between the Dominion Bureau of Statistics, the Department of Fisheries and those provincial departments of government having jurisdiction with regard to fisheries.

## Subsection 2.-The Provincial Governments*

The Maritime Provinces.-The major responsibility for aid to the fisheries in the Maritimes is undertaken by the Dominion Government. Nova Scotia, however, has established a Fisheries Division within its Department of Industry and Publicity. This Division works in close co-operation with the Dominion authorities: it maintains an engineering service for development, a Fisherman's Loan Board, and a file of information, covering both plant and catching methods, for the benefit of intending operators.

Quebec.-The Minister of Game and Fisheries administers both the sea and inland fisheries of Quebec. The Ministry is divided into two separate Departments, the Department of Maritime Fisheries and the Department of Fish and Game, the latter being charged with the administration of the inland fisheries.

Sea Fisheries.-Quebec is the only province administering its own sea fisheries, including those of the Magdalen Islands, and is also the only province providing a government-owned and -operated system of cold-storage plants for the preparation and storage of fish. Since the erection of the first plant in 1932, the network has grown to a total of 39 with a daily freezing capacity of 166 tons of fish and a storage capacity of 6,173 tons. These cold-storage plants also perform an extremely valuable service to fishermen by the provision of frozen bait. In addition, the Department owns and maintains 92 snow houses, where fish may be chilled before being sent to the freezers or filleting plants; 35 culling sheds; and an artificial drying plant, where over 12 tons of semi-dried fish may be processed daily and where storage is provided for 750 tons of dried fish.

[^100]The Department maintains' a full staff of fisheries officers, inspectors, cullers and technicians for administrative, educational and inspection purposes. A central depot is maintained at Gaspe, where spare parts for the cold-storage plants are in stock at all times, thus enabling speedy repairs to be made to the refrigerating machinery at any of the plants. A field office of the Department is also located at Gaspe, where fishermen and producers may obtain information throughout the year. During the fishing season, statistics of production and marketings are collected from the Gaspe office.

Inspection of fish products under the Dominion Fish Inspection and Meat and Canned Foods Acts is carried out by the Provincial inspectors, who are vested with supplementary powers by the Dominion Government for this purpose.

Educational work among the fishermen and producers is also carried on by the Department, in order to teach the latest methods of fish preparation and so make the Quebec product equal to the best on the market. Another phase of educational work is the encouragement given to the co-operative associations of fishermen, through the Social-Economic Service of the Superior School of Fisheries at Ste-Anne-de-la-Pocatière.

Conventions for fish producers are held every two or three years and these have resulted in notable improvements throughout the industry.

Another, form of assistance is the Maritime Credit system whereby fishermen are enabled to obtain loans from the credit unions for the purchase of boats and gear, the Department paying part of the interest and also the premium upon the required life-insurance policy. The establishment of a marine insurance for the protection of the fishermen's boats and equipment is now under consideration and will be put into operation as soon as conditions permit.

An effective control of fishing nets and weirs, more particularly those used for the taking of salmon, is maintained through a system of licences. The locations of all licensed nets, weirs and traps are plotted on large-scale maps, and no more licences are issued than will permit operations of commercial fishing without detriment to the entrance of salmon to the famous salmon rivers of the Province.

Assistance to the fisheries is also extended through publicity campaigns in newspapers and by the efforts of expert demonstrators in fish cookery. The Department bears in mind that the present rate of exports may pass with the cessation of hostilities and is endeavouring to build up Canadian markets for Quebec fish.

Research is carried on within the Department itself, with particular reference to the utilization of the beluga, or white porpoise, and also through the Biological Station of the St. Lawrence of Laval University, the Superior School of Fisheries, the Quebec Salmon Commission and the Fisheries Experimental Station of the Gaspe Peninsula.

The Biological Station carries out research work in connection with lobster, herring, cod and smelts. The Superior School gives a four-year course leading to the degree of Bachelor of Science in Fisheries, and six-week courses to young fishermen on the subjects of navigation, fishing, the preparation of fish for the market and the organization and management of co-operative societies.

Research on the hydrology of the St. Lawrence and the location of new fishing grounds was carried out in 1943, together with tests as to the suitability of the dragnet over the rocky bottom of the river. The Salmon Commission is engaged in the study of the life history of that fish, particularly in regard to the 'parent stream theory', which assumes that the Atlantic salmon, like that of the Pacific, invariably returns to its natal river to spawn.

Inland Fisheries.-The Department of Fish and Game exercises jurisdiction over the inland waters and those of the St. Lawrence River west of Tadoussac, in Saguenay County and of Sandy Bay, in Matane County. Protection of the fish and game is in the hands of 140 full-time fish and game wardens.

Residents are required to purchase a licence for sport-fishing and the proceeds are applied to the betterment of fishing conditions. Commercial, non-resident, tourist and club sport-fishing licences are also issued.

Four hatcheries are maintained at strategic points throughout the Province. These establishments distributed over $2,600,000$ fry, fingerlings and older fish during the fiscal year 1943, the species propagated being speckled trout, Atlantic salmon and grey trout.

The Department administers four parks or reserves in which excellent fishing is obtainable. The Gaspe and Laurentides parks are already renowned for their trout fishing: the Fishing Reserve of the Mont Laurier-Senneterre Highway is a newer development. Situated on the height of land, it is eminently suited to canoe trips for doré, pike, and grey and speckled trout. The fourth, and newest, reserve is that of the Grand Cascapedia River, in Gaspe, where the Department, upon the expiration of the lease of the fishing rights, opened the river to public fishing and provided camping accommodation, canoes and guides, so that a salmon and seatrout fishing trip can be made in five days, from the head of the river to New Richmond, at a reasonable cost.

The Department co-operates with sportsmen through its Joint Committee composed of departmental officials and the directors of the larger fish and game associations. The Committee studies the problem of the maintenance of satisfactory fishing and hunting conditions and other questions that arise out of the ever-changing conditions of modern life and their eonsequent reactions on the wild life of the Province.

A Biological Bureau has been instituted, which studies the pollution problem, the efficiency of fishways, methods of increasing the productivity of fishing waters, and trout parasites.

Ontario.-Acting upon the recommendations of the Ontario Department of Game and Fisheries, the Dominion Government enacts regulations to govern fishing within the Province. Ontario is empowered to enforce these regulations and to collect licence fees. The administration of the fisheries in all non-tidal waters of Ontario is carried on by the Department of Game and Fisheries of the Provincial Government.

All commercial fishing is subject to licence, the revenue received from this source amounting to $\$ 74,355$ in 1943 . Licences are not required from residents for angling, except in certain restricted waters, but the sale of non-resident angling licences is a source of considerable revenue, $\$ 306,264$ being collected in 1943.

Commercial Fishing.-Commercial fishing is governed by necessary regulations for the purpose of protecting the fish from undue depredations and, in waters apart from the Great Lakes series, commercial fishing is greatly restricted and limited. For example, in Lake Simcoe while carp may be taken in draw seines in localized areas, gill netting is prohibited. In Lake Nipissing commercial fishing is restricted to sturgeon and whitefish, which are taken in pound nets in strictly localized areas of the Lake. Licensed operators are required to take coarse fish caught in their nets during their operations for sturgeon and whitefish. In Lake Nipigon, commercial fishing is controlled by close season, tonnage and the usual protection given by limiting the size and weight of the fish taken. Even in a lake the size of Lake Nipigon, with 1,530 sq. miles of water surface, no important species could be maintained except under moderate and restricted fishing, involving protection of fish to sexual maturity and propagational methods of a practical nature-tonnage of fish removed should equal that replaced by natural and artificial means.

The principal varieties of fish marketed from the commercially fished waters are lake trout, whitefish, herring or ciscoes, yellow pickerel or pike-perch, blue pickerel, sturgeon, pike, eels, catfish, carp and perch.

Angling.-Ontario's game-fish interests are vitally important to every person in the Province from recreational and health standpoints, and also from the direct and indirect benefits of a large and ever-increasing tourist trade, embracing as it does in one way or another, every branch of industry.

With the exception of a few inland lakes where commercial fishing is permitted, the majority of the inland waters are reserved for game-fishing. The principle of reserving inland waters for game-fishing has, fortunately, been supported by Dominion and Provincial Parliaments throughout the years.

The famous trout fishing in the Nipigon, and the bass and maskinonge fishing throughout the Province are well known. The abundance of the black bass, that famous fighting fish, undoubtedly accounts for the reputation which the Province enjoys for game-fishing, and one of the chief factors in the increase and development of the tourist trade.

Ontario has an extensive natural distribution of bass, maskinonge, pike, speckled trout, lake trout and pike-perch; brown and rainbow trout have been introduced.

Fisheries Research.-In 1929 the Department included within its organization a biological component known as the Biological and Fish Culture Branch, whose chief function is to apply the principles and facts obtained from research of fish culture and the fisheries. Biological findings cannot be forced, and years may pass before evidence of progress is seen; the structure is never complete but the scientific attitude is reflected in the results achieved.

Among the studies that have engaged attention is the survey of lakes and streams in advance of stocking to determine their suitability for the growth and reproduction of fish. Suitability varies directly with the food and shelter provided for the fish. As a result of these studies, information pertaining to a large number of lakes and streams, their individual conditions and requirements and regulatory and re-stocking methods has been obtained.

Then there is the burbot or ling problem. The Department has undertaken the removal of burbot from certain inland waters, where they were known to be numerous. The burbot, or ling, competes directly with lake trout for its food, and
also preys upon important food and game-fish. It is the only relative of the cod in fresh water and attempts are being made by research to evaluate its importance as food, the supply available and the development of useful by-products.

Provincial Hatcheries.-Artificial replenishment is supplementary to natural replenishment. This phase of the Department's work is carried out in hatcheries and in rearing stations (where fry are carried to yearling grade or longer) located at strategic points throughout the Province. The 26 establishments, classified on the basis of the species propagated, are:-

${ }^{1}$ Fry and fingerlings.
During a normal year the total distribution from all the hatcheries of all species, sizes, and ages is approximately $800,000,000$. Long-term investigations have been undertaken to determine the effectiveness or non-effectiveness of planting artificially reared whitefish fry in Lake Ontario and also the possibility of re-populating that Lake with Atlantic salmon by planting artificially reared fry.

Life-history studies of fish, and laboratory experimentation are undertaken by research workers in the Ontario Fisheries Research Laboratory of the University of Toronto. Studies of this nature are of immense value in the management of the fisheries. The closest co-operation exists between the Department and the Ontario Fisheries Research Laboratory.

The Prairie Provinces.-The administration of the fisheries of the Prairie Provinces, being inland fisheries, comes mainly within the purview of the Provincial Governments concerned, each of which maintains an organization for the work under a Provincial Minister. The Dominion Government exercises an indirect influence only in so far as national interests are concerned. The following outlines show for each of these Provinces the progress made during the past year.

Manitoba.-The Department of Mines and Natural Resources is responsible for the administration of the fisheries of Manitoba. During the year 1944 one whitefish hatchery at Dauphin River on Lake Winnipeg and 3 pickerel hatcheries, one on Lake Winnipegosis and 2 on Lake Manitoba, were operated by that Department. From these 4 hatcheries $53,400,000$ whitefish fry and $197,496,000$ pickerel fry were liberated in the commercially fished waters of the Province. In addition 17 sport-fishing lakes received allotments of pickerel fry amounting to $8,110,000$ in the aggregate.

The Whiteshell Trout Hatchery at the north end of West Hawk Lake in the Whiteshell Provincial Park was operated for the propagation of lake trout, rainbow trout, brown trout and speckled trout. In the 1943 season no rainbow eggs were available but three species of trout fingerlings were distributed in 10 lakes judged to be suitable for trout, as follows: lake trout, 83,357 ; brown trout, 45,063 ; speckled trout, 44,678.

Trout culture in Manitoba is of recent origin and it is as yet too soon to have results therefrom but many gratifying reports have been received, recording results from the older-established pickerel fry distribution.

In addition to fish-cultural work, the Department is endeavouring to bring commercial fishing under better control so that the number of fishermen operating upon a lake may be limited by law and their individual production limited to a set poundage. In this way it is hoped to ensure adequate escapement of parent fish for the propagation of the species. So far, such control has necessarily been limited by shortage of personnel but three major fishing operations are at the present time so controlled. These are Lake Winnipeg summer whitefish fishing, Lake Winnipeg summer pickerel and Lake Winnipegosis autumn pickerel fishing.

At its inception this control was not well received by fishermen. However, the system has been in operation for 6 seasons on Lake Winnipeg and its advantages to the primary producer have now become apparent. The fisherman now finds that, with competition removed, he can fish steadily with fewer nets, and that overproduction is avoided. He thus saves on equipment, feeds the market in quantities that are readily absorbed and realizes more for his catch than at any other time in the history of the industry. Needless to say, the fishermen themselves are now strong advocates of Manitoba's controlled commercial fishing.

Saskatchewan.-Administration of the Fisheries Act and Regulations comes within the purview of the Department of Natural Resources, under the immediate charge of the Supervisor of Fisheries. Sport fishing for such varieties as trout, pike, perch, pickerel and gold-eye accounts for the issue of about 6,000 resident and 1,500 non-resident angling licences annually. Black bass have also been introduced.

Commercial net-fishing returns over one million dollars annually to the fishermen. The Department assists by the operation of egg-collecting stations and a fish hatchery, whence the fry are distributed. In the spring of 1943 over 16,500,000 whitefish fry were placed in 20 lakes and $43,750,000$ pickerel fry were placed in 59 waters. Nearly 5,000 perch were transplanted from the more heavily stocked lakes to rivers and lakes where their introduction was desirable.

In addition to the ordinary commercial net licences, special licences were issued for domestic use (506), for fur-farmers (28) and for Indians ( 1,313 ). The estimated catch made under these special licences was valued at over $\$ 175,000$.

Besides the collection of the usual fishery statistics relating to weight and value of catch, Saskatchewan compiles figures showing the additional values of the industry to the Province in connection with the transportation of fish from the fishing grounds to the railway. These statistics are compiled on a man-day, etc., basis and show that the existence of this industry was responsible for the distribution of over $\$ 150,000$ to teamsters, truck-drivers, fishermen's and dealers' helpers, manufacturers of boxes, etc.

A fish hatchery, located at B-Say-Tah Point, Fort Qu'Appelle, was in operation during the autumn and spring seasons of 1943-44 and 17,620,000 whitefish eggs were collected in the autumn of 1942-43 at the Cochin Egg-Collecting Station, situated on the creek which connects Jackfish and Murray Lakes, 22 miles north of Battleford. These eggs were shipped to the hatchery and $16,520,000$ fry were hatched and distributed to 26 lakes in the Province. Pickerel eggs to the number of $66,550,000$ were collected in the spring of 1944 at the Makwa Lake Collecting Station, near Loon Lake, and shipped to the hatchery where $43,750,000$ fry were hatched and distributed to 60 lakes.

Alberta.-The Fish and Game Administration forms part of the Department of Lands and Mines, and the Fisheries Branch controls both commercial and game fishing. Provincial hatcheries replenish the natural stocks of both commercial and game fish, $72,850,000$ whitefish eggs being distributed in the fiscal year 1942-43, while trout fingerlings and yearlings were distributed to lakes and to rearing ponds maintained in co-operation with fish and game associations and public-spirited individuals. In addition, 242,800 adult perch were distributed in 8 lakes of the Province. Fishing permits and licences issued during 1942-43 numbered 7,832.

Biological research is carried out in co-operation with the University of Alberta. The most important project under way is an investigation of the infestation of commercial whitefish in Lesser Slave Lake by the pike tapeworm. This parasite has caused considerable concern to exporters of whitefish, as infected whitefish are refused entry to the United States.

British Columbia.-The Provincial Department of Fisheries was organized in 1901-02. Previous to that time there was no provincial office responsible to the Provincial Government in matters relating to fisheries, although the Provincial Government considered its fisheries largely a provincial affair. Shortly after organization the Provincial Department became very active in fish cultural work, building and operating fish hatcheries and instituting scientific research into various fishery problems.

Broadly speaking, it may be said that the administrative and regulative jurisdiction of British Columbia's fisheries in tidal waters rests with the Federal authority. When British Columbia entered Confederation in 1871 the Dominion Government undertook to protect, conserve and promote the fisheries of the Province. It is a most important function of the Provincial Department to observe how this undertaking is being carried out and to report to the Provincial Government through the Commissioner of Fisheries.

The ownership of the fisheries in the non-tidal waters of the Province is vested in the Crown in the right of the Province as are the shell-fisheries, such as oyster fishing and clam fishing in the tidal waters and, generally speaking, the authority to administer and regulate these fisheries is vested in the Province although the regulations covering these fisheries are made under Federal Order in Council on the advice and recommendation of the Province.

In British Columbia the non-tidal fisheries are of two kinds, namely, commercial and sport. The sport fisheries are regulated and administered by the Provincial Game Commission, while authority for administration and regulation of the nontidal commercial fisheries is the responsibility of the Provincial Department of Fisheries.

The Department of Fisheries is charged with the administration of the Fisheries Act and with such other duties as may be assigned to it by the Lieutenant Governor in Council. The Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish-processing plants under a system of licensing. Provision is also made in the Act for the settlement by arbitration of disputes regarding fish prices which may arise between the fishermen and operators of the various licensed plants. The administration of the Act under these headings involves the collection of revenue and the supervision of plant operations in conformity with regulations made under the Act, the collection and publication of certain statistics, and other pertinent data relative to the industry.

The Department condupts some scientific research on its own behalf and co-operates with and participates jointly in certain research work with the Dominion Fisheries Research Board.

## Section 4.-The Modern Fishing Industry*

## Subsection 1.-Primary Production

The latter half of the nineteenth century saw the commencement of expansion in the commercial fishing industry of Carada. In 1844 the estimated value of the catch was only $\$ 125,000$. It doubled in the following decade and by 1860 had passed the million-dollar mark. Ten years later it reached $\$ 6,500,000$ and this was again more than doubled by 1878. By 1900 it had reached almost $\$ 22,000,000$ and the growth continued with little interruption until 1918, when it reached $\$ 60,000,000$. This figure was not again reached until 1941, owing largely to lower prices rather than to smaller catches, but in that year a new peak of $\$ 62,258,997$ was reached. In the two latest years further increases were recorded, the 1943 figure of $\$ 85,594,544$ showing a gain of $37 \cdot 5$ p.c. over 1941. The figures given represent the total value of fish as marketed, whether in a fresh, dried, canned or otherwise prepared state.
2.-Values of the Products of the Fisheries of Canada, 1870-1943

| Year | Value | Year | Value | Year | Value | Year | Value |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1870 | $6,577,391$ | 1907 | $25,499,349$ | 1920. | $49,241,339$ |  |  |
| 1875 | 10,350,385 | 1908. | 25,451,085 | 1921. | 34,931, 935 | 1934. | $27,496,946$ $34,022,323$ |

| 1885 | 17,722,973 | 1910 | 29,965, 142 | 1923 | 42,565, 545 | 1936 | 39,165, 055 |
| 1890. | 17,714,900 | 1911 | 34,667, 872 | 1924 | 44, 534, 235 | 1937 | 38, 976, 294 |
| 1895. | 20,199,338 | 1912. | 33, 389,464 | 1925 | 47, 942, 131 | 1938. | 40,492,976 |
| 1900. | 21,557,639 | 1913 | 33, 207,748 | 1926 | 56, 360, 633 | 1939 | 40,075, 922 |
| 1901. | 25, 737, 153 | 1914 | 31,264,631 | 1927 | 49,123, 609 | 1940 | 45, 118,887 |
| 1902. | 21, ${ }^{2359,433}$ | 1915 | 35, 860,708 | 1928 | 55,050, 973 | 1941 | 62, 258, 997 |
| 1903 | 23, 2100,878 | 1916 | $39,208,378$ $52,312,044$ | 1929 | 53,518,521 | 1942 | 75,116, 933 |
| 1905 | 29,479,562 | 1918. | 60,259,744 | 1931. | 30,517,306 | 1030. | 85,594,544 |
| 1906. | 26,279,485 | 1919 | 56,508,479 | 1932 | 25,957, 109 |  |  |

In the early days of the industry Nova Scotia held the leadership among the provinces, but British Columbia now occupies first place with $37 \cdot 9$ p.c. of the total value of products, Nova Scotia second with $25 \cdot 3$ p.c., and New Brunswick third with 13.0 p.c.

[^101]3.-Values of the Products of the Fisheries of Canada, by Provinces, 1938-43

The cod of the Atlantic and the salmon of the Pacific were rivals for first place in the earlier years of the fishing industry; since 1895 salmon has definitely taken the lead, with lobster, in recent years and until the present war reduced the foreign market, in second place. In 1943 cod, with an increase over 1942 of 10.9 p.c. in the quantity caught, took second place in order of marketed value; herring was third.

In Table 4 the quantities given are those of primary products caught, but the values are those of all products marketed, both primary and secondary. The grand totals are subdivided to show the values of the sea fisheries and inland fisheries, respecitvely, as compared with the whole. More detailed tables of quantities and values of both sea and inland fish marketed may be found at pp. 9-16 of the "Report on Fisheries Statistics", published by the Dominion Bureau of Statistics.

## 4.-Quantities Caught and Values of All Products Marketed of the Chief Commercial Fishes of Canada, 1939-43

Nors.- The catch as shown in this table is in each case exclusive of the quantity of livers landed, but the value includes the value of the livers as marketed.

## Subsection 2.-The Fish-Processing Industry

A special article on Developments in Fish Processing, prepared by the Deputy Minister of Fisheries, Ottawa, appears in the 1941 Year Book, pp. 225-226.

Establishments, Capital, Employees, Materials Used and Products.Among the fish-processing establishments in operation in Canada in 1943, the salmon canneries comprised the principal group with an investment valued at $\$ 12,124,270$, or 39 p.c. of the total for all establishments. About 67 p.c. of the value of production of the establishments was in the form of fish canned, cured or otherwise prepared, and 33 p.c. fish marketed for consumption in a fresh state.

## 8.-Fish-Processing Establishments, 1942 and 1943

| Kind of Establishment | 1942 |  | 1943 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Number | Value ${ }^{1}$ | Number | Value ${ }^{1}$ |
|  |  | \$ |  | \$ |
| Salmon canneries. | 31 | 16,602,929 | 32 | 12,124, 270 |

Historical Sketch.-A short historical outline of the development of the mineral industry in Canada is given at pp. 309-310 of the 1939 Year Book.

Geology and Economic Minerals.-A special article on this subject appears at pp. 3-14 of the 1942 Year Book.

Statistics of Mines and Minerals.-The compilation and publication of statistics concerning mines and minerals in the Dominion is carried out by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, which works in close co-operation with the Mines Departments of the various Provincial Governments, collecting the data in collaboration with these Departments. Questionnaires sent to those engaged in mineral industries are designed to meet the requirements of both the Dominion and the provincial authorities, thus eliminating duplication of labour.

More detailed information on the mineral production of Canada is given in the various reports issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics.*

## Section 1.-Mineral Lands Administration and Mining Laws

The mineral lands of Canada, like other Crown lands, are administered by either the Dominion or the Provincial Governments. The Dominion Government administers the mineral lands of Yukon and the Northwest Territories as well as those in all Indian Reserves and in National Parks; all other mineral lands lying within the boundaries of the several provinces are administered by the respective Provincial Governments.

[^104]
## Subsection 1.-Mining Laws and Regulations on Dominion Lands*

Dominion lands to which these regulations apply are those administered by the Lands, Parks and Forests Branch, Department of Mines and Resources, and lie within Yukon and the Northwest Territories. Titles issued for Dominion lands, the property of the Dominion Government, in the Territories of Canada reserve to the Crown the mines and minerals that may be found on or under such lands, together with the right of operation.

The Acts and regulations governing mining and quarrying on Dominion lands are: Yukon and the Northwest Territories-Alkali Mining Regulations; Carbon-Black ${ }^{\text {'Regulations; Coal Mining Regulations; Potash Regulations; Petroleum and Natural }}$ Gas Regulations (which provide that no person shall explore for Petroleum or Natural Gas in Yukon or the Northwest Territories without first obtaining a permit to do so from the Minister of Mines and Resources); and Domestic Coal Permits. Yukon-Yukon Placer Mining Act (R.S.C., 1927, c. 216); Yukon Quartz Mining Act (R.S.C., 1927, c. 217); Dredging Regulations. Northwest Territories-Quartz Mining Regulations; Placer Mining Regulations; Dredging Regulations; Quarrying Regulations; and Permits to remove sand, stone and gravel from beds of rivers.

Copies of these regulations are available from the Lands, Parks and Forests Branch of the Department of Mines and Resources, Ottawa.

## Subsection 2.-Provincial Mining Laws and Regulations $\dagger$

The granting of land in any province, except Ontario, no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. Some early grants in New Brunswick and Quebec also included certain mineral rights. Otherwise mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (usually metallic ores), fuel (coal, petroleum, gas) and quarrying. Under these divisions of the provincial mining industry, regulations may be summarized as follows:-

Placer.-In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held and the royalties to be paid.

General Minerals.-These are sometimes described as quartz, lode minerals or minerals in place. The most elaborate regulations apply in this division. In all provinces, except Alberta, a prospector's or miner's licence to search for mineral deposits, valid for a year, must be obtained. A claim of promising ground of a specified size may then be staked. This claim must be recorded within a time limit, with the payment of recording fees. Work to a specified value per annum must be performed upon the claim for a period up to five years, when a grant or lease of the mining rights may be obtained, subject to fees or annual rental. The taxation most frequently applied is a percentage of net profits of producing mines.

Fuels.-In those provinces in which coal occurs, the size of holdings is laid down and the conditions regarding work and rental under which they may be held. In some cases royalties are provided for. In the cases of petroleum and natural

[^105]gas, a permit to drill on promising ground is usually first obtained. If oil or gas is discovered, the operator may obtain the lease or grant of a limited area subject to rental or fees. A royalty on production is sometimes payable.

Quarrying.-Regulations under this heading define the size of holding and the terms of lease or grant.

The legislation controlling mining and minerals in each province is given at pp. 278-279 of the 1942 Year Book. Copies of the legislation and regulations and details concerning them may be obtained from the following authorities:-

Nova Scotia.-Minister of Mines, Parliament Buildings, Halifax.
New Brunswick.-Department of Lands and Mines, Fredericton.
Quebec.-Minister of Mines, Quebec.
Ontario.-Department of Mines, Parliament Buildings, Toronto.
Manitoba.-Director, Mines Branch, Department of Mines and Natural Resources, Winnipeg.
Saskatchewan.-Department of Natural Resources, Regina.
Alberta.-Department of Lands and Mines, Edmonton.
British Columbia.-Department of Mines, Victoria.

## Section 2.-Summary of General Production

A special article on the Development of Canada's Mineral Resources in Relation to the Present War Effort, so far as this development had taken place by the middle of 1940, appears at pp. 298-309 of the 1940 Year Book.

The importance of mineral production as compared with other primary industries in Canada is indicated in Chapter VII while its part in the external trade of Canada is dealt with in Chapter XVI, Part II, especially Section 3, Subsections 2 and 5.

## Subsection 1.-Government Control of Metals and Fuels in Wartime*

Because the metal and war mineral supply situation had to be viewed from the standpoint of the Allied Nations as a whole, Canada has regarded herself as in the same position as other United Nations. Consequently this country has both stimulated production and curtailed non-essential consumption.

To co-ordinate the nation's efforts to meet war needs, a Metals Control was established by the Department of Munitions and Supply on July 15, 1940. A development division was set up by the Control with a staff of engineers, geologists and consultants; this division has been responsible for stimulating Canadian output of non-ferrous metals and strategic minerals. In addition, the Control has been responsible for obtaining from other countries those non-ferrous metals and minerals in short supply in Canada.

Various Government agencies, including Crown companies established for the purpose, have stimulated production of the major non-ferrous metals-copper, nickel, lead and zinc, as well as tungsten, molybdenum, chrome, mercury, mica, arsenic, fluorspar, graphite and cobalt. Six of these-mercury, tungsten, chrome, molybdenum, muscovite mica and fluorspar-were not produced in quantity in Canada before the War.

[^106]From 1923 to 1939 Canada produced no recorded output of iron ore. In 1937, as a result of legislation providing for an Ontario Government subsidy, development of the New Helen mine in the Michipicoten District was begun. First shipment of the sintered ore was made in July, 1939. Substantial production has since been maintained, and in 1945 a neighbouring property, the Josephine Mine, will come into production, its product to be marketed in conjunction with that of the New Helen Mine sinter. Another large iron-ore development, at Steep Rock Lake, west of Port Arthur, was begun in 1943 and the first shipment from this property was made in October, 1944 (see pp. 312-313). During 1943, an open-pit iron-ore mine at Bathurst, N.B., was operated, its product going to the blast furnaces at Sydney, N.S.; operations were suspended in November, 1943.

Petroleum development has been stimulated by the Oil Control of the Department of Munitions and Supply in co-operation with the Department of Mines and Resources, and by a Crown Company, Wartime Oils Limited, operating under the direction of the Control. The Company, incorporated on Apr. 4, 1943, with head office at Calgary, Alberta, has assisted in drilling marginal sites on the west flank in Township 19 of the Turner Valley, and so far has confined its activities to advancing money to operators for drilling. While it was intended that operators could supply a part of the necessary funds, the Crown Company has advanced all of the funds for the whole of the drilling and well equipment. The area being explored has been checked by a geologist of the Oil Control.

Still another Government agency, the Emergency Coal Production Board, operating in co-operation with the Coal Control of the Department of Munitions and Supply, has extended financial assistance to coal operators with a view to increasing production. In addition to this assistance to normal commercial producers, the Board has developed surface-stripping operations in Alberta. The Yominion Fuel Board (see p. 318) for nearly two decades has maintained a close study of the coal-mining industry and has administered various measures of governmental assistance; this Board and its staff are operating under the Coal Control for the duration of the War. Previous to March, 1943, the Dominion Fuel Board co-operated closely with the Coal Administrator of the Wartime Prices and Trade Board but, at that date, the Coal Administrator's functions were combined with those of the Coal Controller under the Department of Munitions and Supply.

To conserve petroleum and coal gas for war production, the Power Controller of the Department of Munitions and Supply issued a series of orders from February to September, 1942, which caused thousands of owners of buildings, including dwellings, to switch from gas to coal for heating and steam production.

## Subsection 2.-General Statistics of Mineral Production

Historical Statistics.-Definite records of the annual value of mineral production go back only to 1886 , although actual production began with the earliest settlements. The figures given in Table 1 are not strictly comparable throughout the whole period, minor changes having been adopted in methods of computing both the metallic content of ores sold and the valuations of the products. Earlier methods resulted in a somewhat higher value than those now in use would have shown. However, the changes do not interfere with the general usefulness of the figures in showing the broad trends in the mineral industry.
1.-Value of Mineral Production of Canada, 1886-1944

[^107]${ }^{2}$ Subject to

Current Production.-The depression beginning in 1930 had a profound effect upon the production of minerals in Canada. The decline in general commodity prices and the increased price of gold provided a two-fold stimulus to production and, as in the 1920's, output of gold was increased. This rise in the price of gold since 1931 ( $\$ 20.67$ per fine ounce in 1931 to $\$ 38 \cdot 50$, Canadian funds, in 1945) resulted in the mines being able to produce from ore that was hitherto unprofitable, and stimulated prospecting to such a degree that many new mines were discovered. In addition, parts of Canada not hitherto of commercial importance were opened up and new communities were established with resultant markets for consumer goods and mine supplies. Base-metal prices declined to low levels, but the improvements that low prices and competition had brought about in productive facilities during the 1920 's, together with the presence in the ores of small but appreciable quantities of precious metals, enabled the producing companies to carry on. After a period of readjustment, production expanded again. However, the serious reduction in industrial and construction operations materially restricted the production of coal, non-metallics other than fuels, and the various structural minerals.

The situation, therefore, prior to the outbreak of war in 1939 was that Canada's mineral industries were in a particularly strong position so far as their ability to make a substantial contribution to the country's war effort was concerned. Such a possible contribution had two aspects, namely:-
(1) The production at reasonable cost of those minerals that were essential for the manufacture of armaments, munitions and other war supplies as well as for non-war requirements.
(2) The creation of essential foreign credits by the production of gold and silver and of other minerals, surplus to national needs, for export sale to other countries.

The production of gold was reaching new high records each year so that in 1940 Canada stood second among the countries of the world with $13 \cdot 1$ p.c. of the total world production. Reliable world figures of gold production are difficult to obtain at present as accurate data are not available. As already indicated, developments in connection with base metals enabled Canadian companies to produce large supplies of copper, nickel, lead and zinc on a low-cost basis. The policy of the Department of Mines and Resources has been to encourage and assist in the location of deposits of other metals and minerals that were formerly imported, important among which were tungsten, manganese and magnesium. Metallurgical processes had been extended to include final refining operations of sufficient capacity to handle the

22115-20
major part of Canadian production. In this field, while no aluminum ores are mined in Canada, with the availability of low-cost hydro-electric power, metallurgical plants for the production, from imported ores, of refined aluminum on a large scale had been established. At the beginning of the War, producers of all these base metals entered into voluntary agreements with the British Government to sell the surplus above Canadian requirements at practically no advance on the low prices prevailing before the War, thus assuring to Great Britain a supply of these essential materials without the risk of advancing prices.

In the case of fuels, non-metallics other than fuels, and structural materials, productive capacity in Canada before the War for many essential minerals was more than sufficient to provide for the then-existing industrial and civil requirements. Thus the expanding demands of war industries and the construction operations necessitated by various features of the war program were readily met.

Canada's mineral production in 1944 was valued at $\$ 482,260,463$; this figure was much lower than that of $1943, \$ 530,053,966$, and was the lowest since 1939. The reduction was principally in the metals group. The total value of all metals produced was $\$ 307,336,217$, a decrease of 14 p.c. from the production in the previous year; fuels, including coal, natural gas, crude petroleum and peat, amounted to $\$ 99,375,445$, an increase of 7 p.c., mainly accounted for by the increased price of coal; other non-metallics showed a decrease of 12 p.c., the figure being $\$ 34,201,090$ in 1944 as against $\$ 38,716,568$ in 1943 ; and the production of other structural materials, including clay products, cement, lime, stone, sand and gravel, at $\$ 41,347,711$ was slightly lower than the preceding year when it amounted to $\$ 42,010,254$.

Analysis of Current Value and Volume.-In order to interpret more clearly and simply the trends in mineral production in Canada over the period since 1934, Table 3 gives the percentage of the total value contributed by each principal mineral in each year. Values upon which percentages in this table are based are the annual values of mineral production expressed in Canadian currency as published in Tables 1 and 2.

## 3.-Percentages of the Total Value of Mineral Production, by Principal Minerals, 1934-43

| Mineral | 1934 | 1935 | 1936 | 1937 | 1938 | 1939 | 1940 | 1941 | 1942 | 1943 |

Although the year 1926 was not a normal year in mineral production to the same extent as in some other productive fields, the rapid changes that have resulted from circumstances arising since 1926 can be seen more clearly by using it as a base year. Table 4 shows the indexes of volume of mineral production, using 1926 as the base year, by principal minerals, for the period 1932-43. The very large increases in the production of petroleum and platinum metals are especially noteworthy.
4.-Indexes of Volume of Mineral Production, by Principal Minerals, 1932-43
( $1926=100$ )
Note.-Indexes for 1927-31 will be found at p. 319 of the 1940 Year Book.

$21928=103$, previous vears not being comparable. ${ }^{3}$ Excluding clay products.

## Subsection 3.-Provincial Distribution of Mineral Production

Since 1907 Ontario has been the principal mineral-producing province of Canada. In 1940 Ontario's production was 49.4 p.c. of the total but it has since declined to $47 \cdot 7$ p.c. in $1941,45 \cdot 7$ p.c. in $1942,43 \cdot 9$ p.c. in 1943 and $43 \cdot 4$ p.c. in 1944. The rise in the price of gold has been especially favourable to Ontario's mineral production, while the Sudbury nickel-copper deposits are another outstanding feature in the mineral resources of the Province. For many years British Columbia, where most of the important metals are found and substantial quantities of coal exist, was in second place, but for the past seven years Quebec has held that position. A great part of Quebec's mineral production is made up of gold, copper and asbestos. Nova Scotia and Alberta are the most important coal-producing provinces. The discovery and development of the Flin Flon and Sherritt-Gordon orebodies resulted in the Provinces of Manitoba and Saskatchewan becoming important producers of base metals and gold and silver. Alberta, besides being a big producer of coal, is the most important province for the production of petroleum and natural gas, and this activity has shown a rapid increase in recent years.

## 5.-Mineral Production of Canada, by Provinces, 1926-44

Notr.-Figures for the years 1899-1910, inclusive, will be found at p. 345 of the 1933 Year Book, and for 1911-25, inclusive, and 1927-28 at p. 323 of the 1939 edition.

## 6.-Detailed Mineral Production of Canada, by Provinces, 1943

Nore.-Quantities and values of minerals produced during 1943 in Yukon were-gold, 41,160 fine oz., $\$ 1,584,660$; silver, 52,348 fine oz., $\$ 23,690$; tungsten concentrates, $12,083 \mathrm{lb} ., \$ 10,122$; lead, $195,715 \mathrm{lb} ., \$ 7,347$; total, $\$ 1,625,819$ : and in the Northwest Territories-gold, 59,032 fine oz., $\$ 2,272,732$; silver, 13,250 fine oz., $\$ 5,996$; natural gas, $1,500 \mathrm{M}$ cu. ft., $\$ 335$; petroleum, $293,750 \mathrm{bbl} ., \$ 400,201$; tungsten concentrates, 720 lb. , $\$ 729$; total, $\$ 2,679,993$. Wartime restrictions preclude the publication of data for pitchblende products found in these areas. For the Dominion totals of individual minerals, see Table 2. Dashes in this table indicate that no production was recorded. The ton referred to is the short ton of $2,000 \mathrm{lb}$.

## Section 3.-Industrial Statistics of Mines and MineralsCapital, Labour, Wages, etc.

Annual statistical reports on the mineral production of Canada have been published for many years, first by the Geological Survey, later by the Mines Branch of the Department of Mines and, since 1921, by the Dominion Bureau of Statistics. Prior to that year the annual statistics of mines were confined chiefly to a presentation of the quantity production of each of the minerals and their value at average market prices for the year. The scope of the statistics now includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc, and nickelcopper industries, as well as a section on metallurgical works. Additional data published at irregular intervals, include such features as capital employed, numbers of employees, wages and salaries paid and net value of sales.

The figures for "net income from sales" of industries given in Tables 7 and 8 are those reported by the operators, and are in each case the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table 2 of this Chapter where, in the cases of copper, lead, zinc and silver, the values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum where imported ore only is used. The net sales of these plants include, therefore, the net value of the metals recovered from these imported ores and, to this extent, the net sales shown in Tables 7 and 8 include products not of Canadian origin.

An explanation of what is included in the figures under the headings "Capital Employed" and "Employees" in Tables 7 and 8 is given at p. 244 of the 1941 Year Book.

${ }^{1}$ Includes freight and smelter charges and cost of ores treated.
A summary of the industrial statistics of the principal mineral industries operating in Canada in 1942 and 1943 is presented in Table 8. In spite of the difficulties imposed by the War through labour shortages, lack of new equipment and essential supplies necessary for the mines, the gross value of output for the entire auriferous quartz mining industry, including the value of recoverable metals, gold, silver, etc., totalled $\$ 116,833,847$ in 1943 compared with $\$ 160,564,783$ in 1942.

${ }^{1}$ Includes freight and smelter charges and cost of ores treated.

## Section 4.-Production of Metallic Minerals

The metals of chief importance in Canada are copper, gold, iron, lead, magnesium, nickel, those of the platinum group, pitchblende products, silver and zinc. These are dealt with in order below. In addition, there are a number of metals produced in minor quantities, principally as by-products in the treatment of metalliferous ores (see Tables 2 and 6).

## Subsection 1.-Copper

A brief outline of the development of the copper-mining industry in Canada is given at pp. 249-250 of the 1941 Year Book.

Copper is usually considered as second to iron in importance among war metals, more because of the large quantities, required in the application of ordinary industrial processes to war needs than for its specific military uses. Copper refineries at Copper Cliff, Ontario, and at Montreal East, Quebec, refine the greater part of Canada's output of copper, and the copper-mining industry is therefore in a position to make a major contribution toward meeting wartime requirements. Furthermore,
the industry, by its ability to produce this copper profitably at the low pre-war price of slightly over 10 cents per pound, is making a substantial contribution to the conservation of financial resources.

## 9.-Copper Produced in Canada, by Provinces, with Total Values, 1926-44

Note.-Figures for the years 1886-1910, inclusive, will be found at p. 272 of the 1916-17 Year Book; for the years 1911-25 and 1927-28 at p. 335 of the 1939 edition.

${ }^{2}$ Includes $42,628 \mathrm{lb}$. valued at $\$ 5,534$ produced in Yukon in 1930; $779,307 \mathrm{lb}$. valued at $\$ 73,855$ produced in Nova Scotia in $1936 ; 180,609 \mathrm{lb}$. at $\$ 23,620 \mathrm{in} 1937 ; 75,567 \mathrm{lb}$. valued at $\$ 7,535$ produced in N.W.T. in $1938 ; 1,269,179 \mathrm{lb}$. valued at $\$ 128,086$ produced in Nova Scotia and 42,382 lb . valued at $\$ 4,277$ produced in N.W.T. in $1939 ; 32,727 \mathrm{lb}$. valued at $\$ 3,301$ produced in N.W.T. in 1941; and $74,963 \mathrm{lb}$. at $\$ 7,561 \mathrm{in} 1942$.
${ }^{3}$ Subject to revision.

## Subsection 2.-Gold

The primary importance of gold production in connection with Canada's war effort is its function in strengthening the foreign credit position, particularly in relation to the United States. Gold is still by far the most important item on the mineral production list from point of value although the output for 1944 was the lowest since 1931 and 21 p.c. below that of 1943. This reduction was necessitated by increased need of base metals for war requirements rather than gold for foreign exchange.

A short review dealing with the development of gold mining in Canada and giving information concerning the principal gold-producing properties across Canada appears at p. 251 of the 1941 Year Book.

## 10.-Quantities of Gold Produced in Canada, by Provinces, 1926-44

Note.-Figures for the years 1862-1910, inclusive, will be found at pp. 268-269 of the 1916-17 Year Book; for the years 1911-25 and 1927-28 at p. 336 of the 1939 edition.

## Subsection 3.-Iron

The large iron and steel industry of Nova Scotia draws its requirements of iron ore from the easily accessible and abundant supplies of the high-grade Wabana deposit in Newfoundland. In Ontario, also, there has been a broad development of the primary iron and steel industry largely because cheap and high-grade supplies of iron ore are readily available from the Mesabi Range of Minnesota, while coal supplies are drawn from the nearby coalfields of Pennsylvania.

## 12.-Iron-Ore Shipments and Production of Pig-Iron, Ferro-Alloys and Steel Ingots and Castings, 1926-44

Note.-Figures for the years 1886-1910, inclusive, will be found at p. 373 of the 1936 Year Book; for the years 1911-25 and 1927-28 at p. 340 of the 1939 edition.

${ }^{1}$ Subject to revision.
Canada's Most Promising Iron-Ore Deposit.*-Canada has never been a great producer of iron ore, although a certain amount has been mined at intervals since the days of the French regime. Concentrations of iron-ore minerals have been found from time to time, but these were generally of a nature that required expensive processing, thus making it uneconomical to exploit them. A notable exception was the Helen mine, located in the Michipicoten area north of Lake Superior which produced nearly $3,000,000$ long tons of high-grade hæmatite between 1900 and 1918.

After the exhaustion of the Helen Mine, Canadian blast furnaces obtained their ore almost entirely from the United States and Newfoundland, although a sintering plant at Wawa, also in the Michipicoten area, opened in 1938, has been producing a good grade of sinter, a desirable charge for blast furnaces, from an extensive iron carbonate deposit which occurs in that district.

[^114]For over fifty years it has been known that there was a likelihood of finding good grade hæmatite near Steep Rock Lake. Geologists had found boulders of high-grade hæmatite as 'float' along the south side of the Lake and this led to the assumption that a body of high-grade hæmatite might be situated in the vicinity. Diamond drilling operations were conducted along the shores of the Lake but these were disappointing up to 1937 . In that year the lake bottom was explored by diamond drilling, with such satisfactory results that operations were continued through the next few years until it was ascertained that a proved ore body of $16,757,000$ long tons and a probable ore body of $14,000,000$ long tons, lay under an overburden of gravel and clay, which varied in depth from 40 to 310 feet and this overburden was in turn covered by more than 120,000 million gallons of water, varying in depth from 50 to 265 feet.

The deposit proved to be of a quality equal or superior to that of the Vermilion iron range in Minnesota, an analysis of the standard ore in the southern, or " B ", body showing $56 \cdot 25$ p.c. iron and $7 \cdot 00$ p.c. moisture as mined and, when dried, an iron content of 60.48 p.c., of phosphorus, 0.023 p.c., of silica, 3.40 p.c. and of sulphur, 0.043 p.c.

The proof of the existence of such a large body of valuable hxmatite ore with its high content of 'natural' iron and an extremely low content of silica led to the making of plans for its exploitation. It was evident that Steep Rock Lake would have to be drained but this was no simple proposition as the Lake received the drainage from Marmion Lake which in turn was an expansion of the Seine River. Marmion Lake was about 100 feet higher than Steep Rock Lake, and a third lake, Finlayson, lay about 35 feet higher than Marmion. It was decided to utilize Finlayson Lake as an alternative route for the waters of the Seine River and, in order to make this diversion, it was necessary to lower the waters of Finlayson Lake below those of Marmion. To adopt the simple method of opening the southwest end of Finlayson would have meant the flooding of a considerable area of country including the C.N.R. line and the town of Atikokan and it was, therefore, decided to drain the Lake from the bottom, by means of a tunnel below the moraine, or ridge of glacial boulders and gravel, which blocks the southwest end of the Lake. From the exit of the tunnel the water flows through a low-lying valley and will ultimately rejoin the Seine River at a point some miles west of its present junction with the west arm of Steep Rock Lake. For the present, however, the water is being allowed to re-enter the west arm of Steep Rock Lake, dams being constructed at the narrows to shut off this arm from the main part of the Lake. With a new channel thus established and the consequent lowering of the surface of Finlayson Lake by about 45 feet, or about 10 feet lower than the surface of Marmion Lake, the cutting of a small canal at each end of Raft Lake has permitted the waters of Marmion Lake and the Seine River to flow through Raft Lake into Finlayson Lake and thence through the tunnel and new channel. At the same time the dam at the entrance of Steep Rock Lake, which was operated in conjunction with the power plant of the Seine River Improvement Company, has been closed and the dewatering of Steep Rock Lake commenced on Dec. 15, 1943; this being done by means of giant pumps. Open-pit mining of the southern or " $B$ " ore body is to follow the pumping and stripping operations. This body alone is estimated to contain $15,233,000$ long tons which will suffice for several years to come. The property is to be equipped for an initial production of $2,000,000$ long tons per year. This should result in the development of a long-sought-for primary industry within the Dominion.

## Subsection 4.-Lead

Lead in Canada is obtained largely from the ores of British Columbia, where production began with $88,665 \mathrm{lb}$. in 1891. Bounties were paid on lead produced in Canada from 1899 to 1918 but the highest production of this period was $63,200,000$ lb. in 1900. However, the successful solving by the Consolidated Mining and Smelting Co. of the metallurgical problems connected with the separation and reduction of these lead-zinc ores accounts to a considerable extent for the rapid growth in lead production during recent years.

In the East and West Kootenay districts of British Columbia there are many important mines, the principal of which is the Sullivan lead-zinc mine near Kimberley. The ore averages about 11 p.c. lead, 7 p.c. zinc and 5 ounces of silver to the ton. As a result of the low prices prevailing from 1930 to 1935 for lead, zine and silver, many of the small silver-lead mines of the Slocan remained idle.

In the other provinces, occurrences of lead have been found in Gaspe Peninsula and in the Rouyn district of Quebec, but the only production of importance has come from the Notre-Dame-des-Anges district, Portneuf County, where the Tetreault mine produces lead and zinc concentrates. An important source of lead in recent years is the silver-lead ores of the Mayo district of Yukon. In 1935 production of silver-lead-zinc concentrates was resumed at the Sterling Mine, Richmond County, Nova Scotia, but operations ceased in 1939. Production by provinces in 1943 is shown in Table 6, p. 303.

The data in Table 13 represent the quantities of lead produced in Canada from domestic ores, together with estimated recovery from lead ores and concentrates exported.

## 13.-Quantities and Values of Lead Produced from Canadian Ores, 1926-44

Note.-Figures for the years 1887-1910, inclusive, will be found at p. 367 of the 1929 Year Book; for the years 1911-25 and 1927-28 at p. 341 of the 1939 edition.

## Subsection 5.-Magnesium

This metal, the lightest that is stable under atmospheric conditions, is in great demand for war purposes. It is used for the construction of aeroplanes and parts of aeroplane engines and, in addition, has wide uses in powdered form for flares and incendiaries.

So far as North America is concerned, Canada has pioneered in magnesium production. First commercial output on this continent was from United States raw materials processed by Shawinigan Electro Metals Company from 1915 to 1919.

In $1941,10,905 \mathrm{lb}$. valued at $\$ 2,944$, in the form of magnesium powder from magnesite obtained from deposits located at Marysville in the Fort Steel mining district of British Columbia, were produced at Trail, B.C. First production from Canadian materials by a new Canadian process developed at the National Research Council was from the Dominion Magnesium Limited plant at Haley's Station, Ont., in the summer of 1942. The United States Government later utilized the same process and other ferro-silicon methods for obtaining magnesium. Dominion Magnesium Limited is a private concern, operating without profit or fee, financed by the Dominion Government, and under the supervision of Wartime Metals Corporation, a Crown Company.

Total production in 1943 amounted to $7,153,974 \mathrm{lb}$. valued at $\$ 2,074,652$. By the end of 1944 Canada was producing more than 14 tons of magnesium per day, the major portion of which was being exported to Allied Nations.

## Subsection 6.-Nickel

The Canadian production of nickel has been derived almost entirely from the well-known nickel-copper deposits of the Sudbury district, Ontario. The ore is mined principally for its nickel and copper content but gold, silver, selenium, tellurium and metals of the platinum group, though present in relatively small quantities, are profitably recovered in the metallurgical processes. The proved reserves of nickel ore in Canada are estimated to be sufficient to provide for world requirements for many years, while in addition there are large indicated deposits as yet undeveloped.

After the War of 1914-18 the producing companies instituted varied researches to discover and encourage new peacetime uses for the metal. The success attending their efforts has accounted very largely for the marked increase in production made possible by extensive additions to their plants and facilities. The automobile industry, electrical machinery, cooking utensils, submarine cables and various nickel alloys have all helped to absorb this increased production. However, nickel requirements for armament production in the present war are high with the result that the peacetime market which took years to develop has had to give place to the wartime demands of Allied countries.

Nickel is very important in war because of its strictly military uses, such as armour plate, gun forgings, gun recoil springs and bullet jackets, and for its use in industrial nickel steels for the production of war equipment.

## 14.-Quantities and Values of Nickel Produced in Canada, 1926-44

## Subsection 7.-Metals of the Platinum Group

Metals of this group produced in Canada include platinum, palladium, rhodium, ruthenium, osmium and iridium. Platinum and palladium are of chief importance. Since the early days there has been a small recovery of platinum associated with the gold of the alluvial deposits of British Columbia and other small amounts have been recovered in the refining of base metals at Trail. However, the chief source of the platinum group in Canada is the nickel-copper ore of Sudbury, and the great increase in the output of this ore in recent years has resulted in greater production of the platinum metals, making Canada the leading producing country of the world. The next most important countries are Russia and Colombia.

## 15.-Quantities and Values of Platinum and Palladium Produced in Canada, 1926-44

Note.- Records of the platinum production in Canada go back to 1887 but, prior to 1921, the amounts were comparatively small and the basis of calculation was not comparable with that now used. Figures for the years 1921-25 and 1927-28 will be found at p. 340 of the 1940 Year Book.

| Year | Platinum |  | Palladium ${ }^{1}$ |  | Year | Platinum |  | Palladium ${ }^{1}$ |  |

${ }^{1}$ Includes also rhodium, ruthenium, osmium and iridium.
${ }^{2}$ Subject to revision.

## Subsection 8.-Pitchblende Products

A short description of the production of pitchblende products appears at p. 304 of the 1942 Year Book.

## Subsection 9.-Silver

A short review of silver production in Canada is given at pp. 258-259 of the 1941 Year Book.

Silver production attained its maximum of $32,869,264$ fine ounces in 1910 when the Cobalt silver camp was at its peak but production from that source has declined. At the present time, the Sullivan mine in British Columbia, primarily noted for its lead and zinc, is the largest producer of silver in Canada.

## 16.-Quantities and Values of Silver Produced in Canada, 1926-44

Note.-Figures for the years 1887-1910, inclusive, will be found at p. 361 of the 1933 Year Book; for the years 1911-25 and 1927-28 at p. 344 of the 1939 edition.

## Subsection 10.-Zinc

Information concerning the principal zinc-mining properties of Canada is given at p. 260 of the 1941 Year Book.

Canada is in the position of being a large producer, far in excess of domestic requirements, and thus a large exporter of zinc. Since May, 1941, Canadian consumption has been curtailed and all tonnages beyond such requirements are under sale contract to the United Kingdom.

## 18.-Quantities and Values of Zinc Produced in Canada, 1926-44

Note.-Figures for the years 1911-25 and 1927-28 are given at p. 347 of the 1939 Year Book.

## Section 5.-Production of Fuels <br> Subsection 1.-Coal

The fuel situation in Canada is somewhat anomalous as, in spite of the enormous resources of coal in the country, over 50 p.c. of the consumption is imported. The Canadian coal areas are situated in the eastern and western provinces, while
the areas of densest population and greatest industrial development, in Ontario and Quebec, are more easily and economically supplied with coal from the nearer coalfields of Pennsylvania and Ohio.

Dominion Fuel Board.*-The Board was created in 1922 to meet the need for a permanent organization responsible to the Government for a thorough and systematic study of the fuel situation and recurrent shortages experienced throughout Canada. It is composed of permanent members of the Dominion Civil Service and the staff of the Board constitutes a Division in the Bureau of Mines and Geology, Department of Mines and Resources.

In recent years the policy of the Government has been to extend the market for Canadian coal and to that end financial assistance in the form of subventions has been given to the coal industry since 1928, the Board being responsible for the administration of subvention payments. The amount of coal moved under these assisted rates increased from 146,126 short tons in 1928 to a maximum of $3,403,581$ short tons in 1939 and was $1,031,069$ net short tons in 1944 . Of the total moved under assisted rates in 1944, 800,369 short tons were from Nova Scotia and New Brunswick and 230,700 short tons from Western Canada.

The Dominion Fuel Board also administers the Domestic Fuel Act ( 17 Geo. V, c. 52) authorizing a bonus on Canadian coal converted to coke and sold for domestic use and, from Apr. 1, 1941, the Act ( $20-21$ Geo. V, c. 6) placing Canadian coal used in the manufacture of coke for metallurgical purposes upon a basis of equality with imported coal.

Coal Production.-Production in 1944 was 4 p.c. lower than that of 1943. The average price per ton, which had been $\$ 3 \cdot 63$ in 1928 , had dropped to $\$ 3 \cdot 02$ in 1933, and was about $\$ 4 \cdot 16$ in 1944. Alberta was the leading producer. The coal produced in Nova Scotia, New Brunswick and British Columbia is all classed as bituminous, while Alberta produces bituminous, sub-bituminous and lignite, and Saskatchewan and Manitoba lignite only.

* Prepared by F. G. Neate, Deputy Coal Administrator.

## 19.-Production of Coal in Canada, by Provinces, 1926-44

Note.-Figures for the years 1874-1910, inclusive, will be found at p. 419 of the 1911 Year Book; for the years 1911-25 and 1927-28 at p. 348 of the 1939 edition.

## 20.-Imports of Anthracite, Bituminous and Lignite Coal into Canada, 1926-44

Note.-Anthracite dust is included under anthracite coal. Figures for the years 1868-1910, inclusive, will be found at p. 420 of the 1911 Year Book; for the years 1911-25 and 1927-28 at p. 349 of the 1939 edition.

| Year | Anthracite |  | Bituminous ${ }^{1}$ |  | Lignite |  | Totals |  |

[^117]Coal Consumption.-The sources of coal consumed in Canada in the calendar years 1926-43 are shown in Table 22, detailed figures of coal made available for consumption in 1943 are given in Table 23; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not "cleared for consumption" until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally, the coal made available for consumption is greater than the apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond, but while remaining in bond at the port it is available for domestic consumption if required.

## 22.-Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, 1926-43

Note.-Figures for the years 1886-1910, inclusive, will be found at p. 354 of the 1921 Year Book; for the years 1911-25 and 1927-28 at p. 350 of the 1939 edition.

## Subsection 2.-Natural Gas

The producing natural gas wells in Eastern Canada are in southwestern Ontario, and near Moncton, N.B. The principal producing fields in Alberta are the Turner Valley (about 35 miles southwest of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost, Bow Island and Wetaskiwin. Wainwright is supplied with gas from the Maple Leaf Well in the Fabyan field. Near Lloydminster, in Saskatchewan, a well was brought into production during 1934 and is now supplying that town with gas. In 1944, Alberta was credited with over 54 p.c. of the total value and 81 p.c. of the total quantity, while Ontario consumed over 43 p.c. of the value and over 17 p.c. of the total quantity.

## 24.-Quantities and Values of Natural Gas Consumed in Canada, by Provinces, 1926-44

Note.-For the years 1892-1919, see the Annual Report on the Mineral Production of Canada, 1928, p. 188; for the years 1920-25 and 1927-28 see p. 347 of the Canada Year Book, 1940.

## Subsection 3.-Petroleum

A brief account of the development of the petroleum industry in Canada, with particular reference to the extensive operations in the Turner Valley field, is given at pp. 266-267 of the 1941 Year Book. At pp. 316-317 of the 1943-44 Year Book the developments of oil production in the Northwest Territories, particularly the Canol project, are covered.

## Canadian Oil Production*

The Canadian production is supplied by wells in Alberta, the Northwest Territories, Ontario and New Brunswick: by far the largest part, 88 p.c., came from Alberta. During 1944, the Northwest Territories alone among these regions showed substantially increased production.

The consumption of crude oil in Canada has increased substantially during the war years. In 1938, the last full year of peace, Canada used $41,000,000 \mathrm{bbl}$. of crude oil; in 1943 approximately $60,000,000 \mathrm{bbl}$. were consumed-an increase of about 36 p.c.

${ }^{1}$ Preliminary figure.
The Alberta Oil Fields.-The Turner Valley is by far the most important productive area in Alberta and yielded 99.7 p.c. of the oil produced in the Province in 1944. The years 1943 and 1944, however, have shown decreased production compared with the maximum of over $10,000,000 \mathrm{bbl}$. for 1942 . The developments under way during the latter months of the past year are promising and there are definite indications that results of the work will be realized in 1945. Even if Turner Valley should continue to show signs of decline, there are still several new wells to draw on from the centre of the field which will prolong its life. The extreme north end of the field is giving an encouraging performance and no limit to its production has yet appeared.

In 1944, established fields outside of Turney Valley were developed considerably and new fields came into production. The principal areas developed were:

Vermilion-Lloydminster.-This area is a very promising one. The more prominent of these two joint fields is Vermilion, 120 miles east of Edmonton. At the end of September, 1944, this field contained 51 producing wells with an average depth of about 1,900 feet. The produce is used as a fuel supply for the railways. A cleaning plant has been erected, from which the oil is conveyed by pipe-line to tank cars on a railway siding and from there to a railway divisional point. At Lloydminster, 30 miles to the east, a cleaning plant, similar to that at Vermilion, is being erected; this will encourage further drilling of the Lloydminster area.

Princess.-The Princess field, 120 miles east of Calgary, has come to the fore during 1944, by the bringing into production of the Princess C.P.R. No. 8 Well, now known as Princess C.P.R. 18-21-A Well. At a depth of from 3,937 to 3,983 feet in the Devonian lime, oil was struck of a gravity reported at $35^{\circ}$, lubricating stock around 23 p.c. Production from this Well is very steady, being just over 180 bbl. per day in January, 1944. It is the pioneer producer in the Devonian for the plains area and promises to open up a new chapter in prairie oil production.

Ram River.-This development is 100 miles west of Red Deer in the foothills region. Three wells have been put down so far, but results are not conclusive. No. 3 Well, however, has struck a major gas flow with good indications of oil. On Dec. 26, 1944, this Well was reported to be at a depth of 5,181 feet and was in the Devonian limestone. The gravity of the oil is high and success at No. 3 may introduce a new and valuable field in the foothills area.

Jumping Pound.-The most striking oil news of the year from Alberta came from the Jumping Pound field, 20 miles west of Calgary and 20 miles north of the northern producing wells of Turner Valley. The discovery well, Shell No. 4-24-J, came into action in December, 1944. The limestone was struck at 9,618 feet and a porous zone was encountered between 9,636 and 9,860 feet. After acid treatment, the Well was placed on experimental flow tests. On Jan. 5, 1945, a gas flow of $7,650,000,000 \mathrm{cu}$. ft. was recorded and 93 bbl . of oil with a gravity of approximately $48^{\circ}$ were reported. The particular interest of this development lies in prospect of the discovery of a new field so close to that of the famous Turner Valley and extensive drilling activity is expected during 1945.

The Bituminous Sands Development.-Alberta, in its bituminous sands deposit at McMurray, has the greatest known oil reserve on the face of the earth. Estimates vary between that of Canadian geologists at 100,000 million tons and that of the United States Bureau of Mines at 250,000 million tons. The yield at present is about one barrel of oil per ton of sands. The economic value of these reserves will depend upon many factors, including production at present price levels of United States, Latin America, and other Eastern fields. At all events, the bituminous sands are a valuable reserve and the Government of Alberta, in 1944, completed arrangements for the erection of an experimental pilot plant for the purpose of ascertaining the economic possibilities of oil separation from the sands.

Development in the Northwest Territories.-In the Northwest Territories intensive development of the Fort Norman oil field has taken place with the following interesting production record: $1941,23,664$ bbl.; 1942, 75,789 bbl.; 1943, 266,882 bbl.; 1944, $964,300 \mathrm{bbl}$.

This increased production from Fort Norman has offset, almost entirely, the reduced production from Turner Valley during 1943 and 1944, so that Canadian production (see Table 25) has been held at a fairly high level during the war years.

The Canol project-the largest defence undertaking authorized by the Government of Canada-has been the major undertaking in the Norman area. It was designed to increase oil production in the Northwest Territories to supply the requirements of the Armed Forces and for use along the Alaska Highway.

## World and Empire Production of Petroleum

Another record in world production of oil was achieved in 1944 with the enormous total of $2,561,570,000 \mathrm{bbl}$., an increase of $249,829,000 \mathrm{bbl}$. compared with 1943. This increase was contributed mainly by the United States, although Latin American fields and those of Iran also recorded greater productions. The actual consumption of petroleum has, of course, been much greater than the production figures given, since the production of synthetic petroleum has climbed considerably in the war years, especially in Axis countries. The British Empire now produces less than 2 p.c. of world production: in 1944 actually only $1 \cdot 66$ p.c. as compared with 1.95 p.c. in 1943 . Table 27 analyses the British Empire production by countries; the Island of Trinidad in the West Indies produces more than half the present Empire total and Canada comes second with $23 \cdot 3$ p.c.
27.-Petroleum Production in the British Empire, 1941-44

${ }^{1}$ Preliminary figures.

## Section 6.-World Production of Minerals

Since statistics for many countries are not available for the war years, complete figures of world production of minerals cannot be given. The latest available information on world production of gold, silver and coal will be found at pp. 317-319 of the 1943-44 Year Book, while those for such metals as copper, lead and nickel will be found in the 1942 edition under the respective Subsections.

## Section 7.-Production of Non-Metallic Minerals (Excluding Fuels)

The most important Canadian minerals included in this group are asbestos, gypsum, quartz, salt and sulphur, and for each of these a brief description of occurrence and production follows. A reference to Table 2 at p. 299 and Table 6 at p. 304 shows numerous other minerals, used chiefly for chemical and industrial purposes, which are classified under this group. Among these may be mentioned feldspar, graphite, iron oxides (ochre), magnesitic dolomite, mica, nepheline-syenite, silica brick, sodium sulphate, talc and soapstone. Statistics of production for recent years of these and other minerals of lesser importance appear in the tables mentioned above.

Asbestos.-Canada produces more asbestos than any other country. The value of the annual output of asbestos increased from less than $\$ 25,000$ in 1880 to $\$ 14,792,201$ in 1920 and $\$ 13,172,581$ in 1929 . During the depression years of the early 1930's, production was much curtailed, as will be seen from Table 28. However, since 1932, production has shown a distinct improvement. Production (mine sales) of asbestos in Canada during 1944 totalled 372,973 short tons valued at $\$ 18,172,302$, compared with 467,196 short tons worth $\$ 23,169,505$ in 1943 . Other countries producing relatively large quantities of asbestos are Russia, Southern Rhodesia, Union of South Africa, United States, and Cyprus.

The Eastern Townships of Quebec have for many years been the most productive asbestos-mining area in the world. The veins of chrysotile asbestos vary in width from $\frac{1}{4}$ inch to $\frac{1}{2}$ inch and occasionally fibre has been obtained several inches in length. The fibre is of good quality and well adapted to spinning. Both opencut and underground methods of mining are employed throughout the Canadian
asbestos fields. Nearly all the mining companies have installed machinery for the crushing, fibrizing, screening and grading of the mine product. Some development work has been conducted on an asbestos property at Rahn Lake, Bannockburn Township, Ontario. The increasing demand for short grades of fibre for use in newly developed asbestos-cement products and in moulded plastic articles are developments favouring the Canadian market. •

The world's largest market for asbestos is in the United States, and Canada's proximity to this market is a very real advantage to the asbestos industry in this country. Since September, 1939, the export of asbestos has been controlled by the Dominion Government.

## 28.-Quantities and Values of Asbestos Produced in Canada, 1926-44

Note.-Figures for the years 1896-1910, inclusive, will be found at p. 424 of the 1911 Year Book; for the years 1911-25 and 1927-28 at p. 354 of the 1939 edition.

| Year | Quantity | Value | Year | Quantity | Value | Year | Quantity | Value |

${ }^{1}$ Subject to revision.
Gypsum.-The production of gypsum, which is entirely dependent on the building industry, has shown a slight increase during 1944 over the preceding year. Although the use of gypsum products in the building trade has increased recently because of their lightness, durability and their fire-resisting and acoustic properties, it is probable that production will not be high during the war years. Gypsum is exported from Canada almost entirely in crude form and goes mainly to the United States for manufacture into gypsum products. Industrial conditions in that country and transportation facilities will continue to have an important bearing on the industry.
29.-Gypsum Produced in Canada, by Provinces, 1926-44

${ }^{1}$ Subject to revision.

Quartz.-This term is used to cover the production of crude and crushed dyke quartz, quartzite, sandstone, and natural silica sands and gravels. Production by provinces in 1943 is given in Table 6, p. 304. Silica production in Nova Scotia is used largely for the purpose of making silica brick in steel plants. In Quebec high-grade silica sands are produced for the manufacture of glass and chemicals, for sand blasting and for various other purposes, while in Ontario crushed quartzite or sandstone is produced for the manufacture of silica brick and ferrosilicon. Large quantities of low-grade natural silica sands and gravels are produced in Ontario and Saskatchewan for use as non-ferrous smelter flux.

Salt.-In 1944 salt was produced in Ontario, Nova Scotia, Manitoba and Alberta and of the total Canadian production Ontario contributed 625,894 tons or 87 p.c. Statistics of Canadian salt production represent the recovery of the mineral from brine wells with the exception of Nova Scotia where the output comes entirely from the underground mining of rock salt deposits. The quantity of Canadian salt produced in 1943 and 1944 was the greatest ever recorded, although the value was lower than in 1943.

Of the total salt sold or used by producers in $1944,387,567$ tons, or 54 p.c., was consumed directly by the producers themselves in the manufacture of caustic soda and other chemicals.

Sulphur.-Sulphur production statistics as published by the Dominion Bureau of Statistics represent the quantity and value of sulphur contained in iron pyrites shipped plus the quantity and value of sulphiur reclaimed for acid manufacture, etc., from smelter fumes. As thus defined, the commercial output of sulphur in Canada during 1944 totalled 248,465 short tons valued at $\$ 1,745,430$ compared with 257,515 tons worth $\$ 1,753,425$ in 1943 . Production in 1944 comprised 122,572 tons of sulphur in iron pyrites shipped and 125,893 tons recovered from smelter gases. Output by provinces was: Quebec, 118,000 tons valued at $\$ 447,700$; Ontario, 18,093 tons at $\$ 180,930$; and British Columbia, 112,372 tons at $\$ 1,116,800$.

Sulphur is used in Canada chiefly in the production of sulphide pulp and in the production of artificial silk and newsprint. It is used to a large extent also in the manufacture of sulphuric acid, explosives and rubber and in the production of fertilizers.

## Section 8.-Production of Clay Products and Other Structural Materials

Statistics in this Section include the output of those firms engaged in the production of clay products, Portland cement, lime, sand, gravel and stone, and the production of these materials is naturally dependent upon the activity of the construction industry as a whole. The output of such materials attained an all-time high value of $\$ 58,534,834$ in 1929 ; however, the output of structural materials suffered severe annual declines throughout the depression period of the early 1930's. The construction of defence projects during the war years resulted in a very pronounced expansion in the output of structural materials, the combined value in 1942 totalling $\$ 45,729,807$ as compared with $\$ 35,362,759$ in 1939 . However, the peak of such construction was passed in that year and the value in 1943 was somewhat lower at $\$ 42,010,254$. There has been an increasing consumption of stone and lime for other than building purposes. This has been particularly evident in recent years and is the result of expansion in certain industries where these materials are utilized in chemical processes.

Brick and Tile.-Although the brick and tile industry is established in every province of the Dominion, production is naturally greatest near the chief centres of population, that is, in Ontario and Quebec. Production reached its highest point in the year 1912. Since that time the gradual substitution of steel and reinforced concrete for brick has reduced the production of brick so that, while the value of construction undertaken in 1928 or 1929 is estimated to have exceeded that of 1912, the quantity of brick produced in the later years was only about half that of 1912. On the other hand, the production and consumption of cement in 1929 greatly exceeded that of 1912 or 1913. The production of building brick of various types in 1941, 1942 and 1943, is shown in Table 2 of this chapter, while the production by provinces in 1943 is given in Table 6. The estimated value of all clay products made in 1942 was $\$ 7,081,723$ and $\$ 6,608,193$ in 1943.

Cement.-The cement industry in Canada began with the manufacture of hydraulic or natural-rock cement. Production was probably first obtained at Hull, Que., between 1830 and 1840. The manufacture of Portland cement began about 1889. Owing to its superiority in uniformity and strength, it soon superseded the older product. Portland cement consists of an accurately proportioned mixture of lime, silica and alumina. The lime is usually furnished by limestone and the silica and alumina by clay or shale. The cement industry has naturally become established where these materials are situated and where fuel supplies and transportation are readily available. The largest production is in Quebec and Ontario, although there are also active plants in Manitoba, Alberta and British Columbia. As may be seen from Table 31, production declined greatly from 1930 to 1933,
but has recovered somewhat since then. Erection of new plants and office buildings for wartime service, together with the construction of air training centres and other military projects, has greatly stimulated production in the past four years. Production by provinces in 1943 is given in Table 6, p. 305.

## 31.-Production, Imports, Exports and Apparent Consumption of Portland Cement, 1926-43

Nors.-Figures for the years 1910-25, inclusive, and 1927-28 will be found at p. 356 of the 1939 Year Book.

[^122]${ }^{2}$ The barrel of cement equals

Sand and Gravel, and Stone.-The Mining, Metallurgical and Chemical Branch of the Bureau of Statistics presents details of production and organization of the stone industry separately from that of sand and gravel, but for the sake of brevity they are here discussed together. However, the figures of stone production shown do not include the limestone used to produce lime and cement, nor the quartz and other rock minerals, which are shown separately in Table 2, p. 300. The production of these materials increased greatly up to the world depression that began in 1930. The production of crushed stone in 1922 of $3,044,399$ tons had increased by 1930 to $8,062,330$ tons, while in the same period the production of sand and gravel increased from $11,666,374$ tons to $28,547,511$ tons. During the depression the output contracted sharply, but since 1933 there has been some recovery. Among the developments in Canada that resulted in increased production of these materials prior to the depression may be mentioned: (1) the tendency for brick to be replaced by reinforced concrete, cement blocks, etc., as indicated at p. 328, by a decline in brick production and an increase in that of cement; (2) the extensive improvement during that period in the mileage and character of roads and highways in Canada; and (3) the improvement of railway roadbeds.

The provincial distribution of the 1943 production of sand and gravel, and stone, is shown in Table 6, p. 305, while the chief purposes for which these materials were produced are shown in Table 32.

The quantities and values of stone produced, given in the following table, represent only the production of those establishments that actually quarry their own stone and are exclusive of the products of the stone-dressing industry comprising those establishments that buy rough stone and dress, polish or finish it; however, dressing operations are frequently carried on right at the quarry and to that extent cannot be separated from the primary production.

## Section 1.-Water Power

Canada's basic geological formations and their superimposed topographical features haye resulted in a fresh-water area officially estimated at 228,307 square miles. This is larger than the fresh-water area of any other country and more than double that of the whole land area of Great Britain and Ireland. As all of this freshwater area is above sea-level, and much of it at considerable altitudes, its outflow in its descent to the sea creates sources of potential energy at every rapid and fall along its course. By what may be regarded as a special dispensation of nature, more than half of this potential power occurs in that section of Canada comprising the Provinces of Ontario and Quebec, which is without commercial fuel deposits and in which is concentrated over 80 p.c. of the industrial development of the Dominion.

Water power is the mainspring of Canadian industry both in peace and in war. During the present century the utilization of water power has been a basic factor in enabling Canada to advance from a predominantly agricultural economy to an outstanding manufacturing country. Under peacetime conditions the progressive development of water powers and the construction of transmission line networks provided an ever-increasing flow of low-cost hydro-electric energy to industries throughout the Dominion. As a result there was built up a reservoir of power and an industrial background which was of vital importance to the organization of Canada's war effort at the outbreak of hostilities in 1939. In the ensuing five years and more of war, the widespread extension of industry and the tremendous achievement in the production of materials and munitions of war for the use of the United Nations in every field of conflict, has been made possible only by the development of new sources of power and the utilization to the greatest possible extent of those sources hitherto developed. During the war period more than $2,000,000$ h.p. has been added to Canada's water-power installation, bringing the total, at the beginning of 1945 , to $10,283,000 \mathrm{~h} . \mathrm{p}$. Virtually all of this new installation has been utilized for war production and in addition great quantities of power have been diverted from peacetime to wartime use. Although definite figures are not directly available, it is safe to say that about one-third of the developed water-power capacity

[^124]in the Dominion has been devoted to war purposes. To attain this achievement not only were great new developments made but many other measures were taken, chiefly under the direction of the Dominion Power Controller, to provide power for the needs of war production by: the interconnection of existing transmission systems; the curtailment of the use of power for civilian needs; the extension of daylight saving throughout the winter months; and by other expedients.

With the war in Europe approaching its final stage in 1944, the demands for power for war purposes began to slacken, owing chiefly to a reduction in the production of aluminum. This industry has been the greatest wartime consumer of power and used, at peak production, at least one-quarter of all electric energy generated in Canada. The power industry, therefore, has entered a period of transition in which there will be a gradual reversion from war to civilian use and, in the process of readjustment, power surpluses can be expected to develop in certain areas. For the most part these surpluses should be moderate and should be absorbed within a reasonable time as industries undertake the supply of the huge backlog of civilian needs. In the Province of Quebec, however, there will probably be a large power surplus centred in the Saguenay River district unless new uses for aluminum and adequate post-war export markets enable this Canadian industry to maintain operations at a high level, or unless other large power-consuming industries are attracted to the area.

The War has demonstrated the strength of Canada as an industrial country. The wide and favourable distribution of water-power resources and the versatility of low-cost hydro-electric power developed from these resources have been vital factors. In the vast world-wide program of reconstruction and rehabilitation which will follow the War this power asset has outstanding significance. In certain parts of the Dominion the power surpluses, which are in view, will be available to meet the needs of industrial re-conversion. In other parts the post-war pattern of industry may lead to the early development of new sources of power.

## Subsection 1.--Water-Power Resources of Canada and Their Utilization

An extensive discussion of Canada's water-power resources, a comparison of these resources with those of other countries and of problems in the development, distribution and merchandising of power is included in the 1940 Canada Year Book, pp. 353-364.
1.-Available and Developed Water Power in Canada, by Provinces, as at Dec. 31, 1943 and 1944

| Province or Territory | Available 24-Hour Power at 80 p.c. Efficiency, December, 1943 and 1944 |  | Turbine Installation |  |
| :---: | :---: | :---: | :---: | :---: |
|  | At Ordinary Minimum Flow | $\begin{aligned} & \text { At Ordinary } \\ & \text { Six-Month } \\ & \text { Flow } \end{aligned}$ | Dec. 31, 1943 | Dec. 31, 1944 |
| Prince Edward Island | h.p. ${ }_{\text {3,000 }}$ | h.p. 5,300 | h.p. ${ }^{2}, 617$ | h.p. ${ }_{2,617}$ |
| Nova Scotia. | 20,800 | 128,300 | 133,384 | 133,384 |
| New Brunswic | 68,600 | 169, 100 | 133,347 | 133,347 |
| Quebec. | $8,459,000$ | 13,064,000 | 5,847,322 | $5,848,022$ 2673,443 |
| Ontario.. | 5,330,000 | 6,940,000 | 2,673,443 | 2,673,443 |
| Manitoba | 3,309,000 | $5,344,500$ $1,082,000$ | 422,825 90,835 | 420,835 |
| Alberta....... | 390,000 | 1,049,500 | 94,997 | 94,997 |
| British Columbia | 7,023,000 | 10,998,000 | 796,024 | 864,024 |
| Yukon and Northwest Territories | 294,000 | 731,000 | 19,719 | 19,719 |
| Canada | 25,439,400 | 39,511,700 | 10,214,513 | 10,283,213 |

The figures listed in the first and second columns of Table 1 represent 24-hour power and are based upon rapids, falls and power sites of which the actual drop or the head possible of concentration has been measured or at least carefully estimated. Many unrecorded rapids and falls of undetermined power capacity exist on rivers and streams from coast to coast. These will become available for tabulation only as more detailed survey work is completed; this is particularly true in the lessexplored northern districts. Also, no consideration has been given to the power concentrations that are feasible on rivers and streams of gradual gradient, where economic heads may be created by the construction of power dams, unless definite studies have been carried out and the results made matters of record.

The third and fourth columns give the total capacity of the water wheels actually installed throughout the Dominion; these figures should not be placed in direct comparison with those in the first and second columns to deduce the percentage of the available water-power resources developed. The water-wheel installation throughout the Dominion averages 30 p.c. greater than the corresponding maximum available power figures for developed sites calculated as in the second column. The above figures, therefore, indicate that the at present recorded water-power resources of the Dominion will permit of a turbine installation of more than $51,350,000 \mathrm{~h} . \mathrm{p}$. In other words, the turbine installation at Dec. 31 , 1944, represents only 20 p.c. of the present recorded water-power resources and the figures in the first and second columns may be said to represent the minimum water-power possibilitios of the Dominion.

## Subsection 2.-Statistics of Water-Power Development

Growth of Water-Power Development.-The inception of long-distance transmission of electricity about the beginning of the present century rendered practicable the development of water-power sites remote from the point at which the power was to be utilized. This resulted in the hydro-electric central station installation increasing from $33 \frac{1}{2}$ p.c. of the total hydraulic installation at Jan. 1, 1900, to 90 p.c. at Jan. 1, 1945. The growth of hydraulic installation during the period 1931-44 is shown in Table 2, attention being called to the increased installation since the outbreak of war. In addition to the increase in power resulting from the adding of generating equipment to plants not completely installed and the building of new gencrating stations, much additional power was provided by greater diversion of water at Niagara Falls, by the continuance of daylight saving throughout the winter months, by the transference of secondary power to primary uses and by many other methods.

The only development of magnitude completed during 1944 was that of Brilliant on the Kootenay River in British Columbia by the West Kootenay Power and Light Company (Consolidated Mining \& Smelting Company of Canada). Two units of $34,000 \mathrm{~h} . \mathrm{p}$. each were brought into operation with provision being made for the installation of two similar units at a later time.

## 2.-Hydraulic Turbine Horse-Power Installed in Canada, by Provinces, as at Dec. 31, 1931-44

Nore.- Comparable statistics for the years 1900-19, inclusive, are given at p. 361 of the 1939 Year Book and those for $1920-30$ at p. 364 of the 1940 edition.

| Year | Prince Edward Island | Nova Scotia | New Brunswick | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British Columbia | Total ${ }^{1}$ |

|  | 2,617 | 133,384 | 133,347 | 5,848,022 | 2,673,443 | 422,825 | 90,835 | 94,997 | 864,024 | 10,283,213 |

${ }^{1}$ Includes Yukon and the Northwest Territories. Turbine horse-power in Yukon was 13,199 irom 1931 to 1934, and 18,199 from 1935 to 1942; the removal of a plant of $3,180 \mathrm{~h} . \mathrm{p}$. reduced this figure to $15,019 \mathrm{~h} . \mathrm{p}$, for 1943 and 1944. In 1941 a 4,700-h.p. plant was installed in the Northwest Territories.

PROGRESS OF WATER POWER DEVELOPMENT IN CANADA DECEMBER 31,1900 TO 1944
000.000
(1)

Analysis of Total Hydraulic Power Installations.-For the purpose of this review the present total installation of $10,283,213 \mathrm{~h} . \mathrm{p}$. is divided in Table 3 under three main headings: central electric stations, pulp and paper mills and installations in other industries.

The largest and most rapidly growing of these classes, viz., central electric stations (a detailed survey of which is included in Section 2) totalling $9,290,299 \cdot$ h.p., represents slightly more than 90 p.c. of Canada's present development and produces 98 p.c. of all electricity sold in or exported from Canada.

The pulp and paper industry has a hydraulic installation of $642,576 \mathrm{~h} . \mathrm{p}$. and is the largest individual purchaser of central station power, buying as much as 50 p.c. of all power sold for industrial purposes.

The "other industries" group has a hydraulic installation of $350,338 \mathrm{~h} . \mathrm{p}$. and provides a broad market for central station power.
3.-Developed Water Power in Canada, by Provinces and Industries, as at Dec. 31, 1944

| Percentages of total installation... | $90 \cdot 3$ | $6 \cdot 3$ | 3.4 | $100 \cdot 0$ |

${ }^{1}$ Includes only hydro-electric stations that develop power for sale. ${ }^{2}{ }^{2}$ Includes only water power actually developed by pulp and paper companies. In addition to this turbine installation pulp and paper companies have motor equipment for operation by hydro-electricity purchased from the central electric stations totalled in the first column, aggregating approximately $1,370,000 \mathrm{~h} . \mathrm{p}$., making a total of almost $2,020,000 \mathrm{~h} . \mathrm{p}$. actually developed for the manufacture of pulp and paper. Large amounts of electricity are also normally purchased for use in electric boilers rated at more than $1,750,000 \mathrm{~h} . \mathrm{p}$. Most of this is now diverted to primary war uses. ${ }^{2}$ Includes only water power actually developed in connection with industries other than the central electric station and pulp and paper industries. These industries also purchase power from the central electric stations totalled in the first column.
${ }^{4}$ All water wheels and
hydraulic turbines installed in Canada.
The figures of turbine installation, given in Table 3, must not be placed in direct comparison with those of the annual central electric station census nor those of the census of the pulp and paper industry, because of the different bases of compilation. The figures of hydraulic installation represent the cumulative totals of installation for the purposes named, adjusted by deducting the capacity of installations removed because of obsolescence or for other reasons. The Census of Industry data are computed on a different basis, representing only the sum of the installation in the plants actually in operation during the year dealt with at the census and not total installation. Also, data on installations are available as soon as equipment is installed, whereas census data are not available until some time after the end of the period.

## Section 2.-The Central Electric Station Industry in Canada

Government Control of Power in Wartime.*-All previous Canadian records for the installation of new electric power facilities for the production of electricity were surpassed in 1943 and Canada now ranks among the nations of the world as probably the greatest per capita consumer of electricity. This newly achieved position results not merely from the record capacity increase of 1942, but from the total wartime increase amounting to $2,000,000 \mathrm{~h} . \mathrm{p}$.

Because a majority of the large wartime industries are located within the borders of Ontario and Quebec, most power problems have obtained in those provinces.

Less than a year after Canada declared war, shortages of electricity in Ontario and of adequate capacity in Quebec loomed as probabilities. In August, 1940, the Department of Munitions and Supply, appointed a Power Controller.

The Control began a study of the power capacities and loads, both actual and potential, in each of the provinces. Provincial organizations in charge of power were consulted, their co-operation obtained and these organizations became the agents of the Control.

The first major conservation move was an Order in Council passed on Sept. 20, 1940, making daylight saving applicable all year round in those municipalities in Ontario and Quebec which had advanced their clocks during the summer of that year. More than two years later, on Jan. 26, 1942, the Order in Council was amended to extend daylight saving throughout the whole of Canada.

By arrangement, all use of electricity for space heating and to produce steam, was banned in the autumn of 1940, and in various localities control devices were installed on domestic water heaters so that the power would be shut off during peak hours. Thus secondary power was made available for immediate use in primary loads. At that time small surpluses of power were available in all the provinces, except Alberta, where it was necessary to provide a block for a large electro-chemical munitions industry. The problem was chiefly one of adequate water storage, which was solved by the construction of storage facilities at Lake Minnewanka and the erection of a power plant just below that site.

The peak requirements of the winter of 1940-41 were met without the need for further restrictions, but it was evident that, with war industry expanding rapidly, measures would have to be taken to provide large blocks of power if an alarming shortage were to be avoided in the winter of 1941-42. In conference with the provincial authorities, the power companies, the Ontario Hydro-Electric Power Commission, and the Quebec Streams Commission, it was decided to embark on certain large-scale projects.

These projects included the inter-connection of the power systems; the erection of an underground circuit across Montreal; the building of a new transmission line from Three Rivers to Quebec; the construction of additional storage dams; the diversion of more water for the Niagara plants; and the building of new units and new power stations in Quebec and Ontario.

At the same time the Co-ordinator of Production of the Department of Munitions and Supply was advised that no further arrangements should be made for warindustry expansion without prior consultation with the Power Control. This was

[^125]particularly important at that time, when material shortages were making it difficult to obtain transmission wire, generators, and other requirements. The shortage of transformers became so acute that it was necessary to halt the installation of rural extensions.

The enlarging aluminum program in the Province of Quebec also caused concern. Power for the pots at Beauharnois was made available by dredging the intake canal and enlarging the tailrace. Power for the LaTuque pots was provided by a new generator at LaTuque, a new generator at Rapide Blanc, and new storage facilities on the upper reaches of the St. Maurice watershed. Power for the additional pots at Arvida was provided by the new power plant at Shipshaw.

It became necessary to restrict certain civilian uses of power, with the approach of the winter of 1942-43. In the shortage areas of Quebec and Ontario, the Controller prohibited the use of electricity for advertising signs, show windows, certain outdoor lighting, and other non-essential purposes. Highway lighting was ruled out and street lighting reduced by 20 p.c. The public in these areas were appealed to to reduce domestic consumption by 20 p.c.; and in co-operation with the Metals Controller, new connections were limited. At the same time the Controller embarked on a broader policy of denying power to non-war industries.

The winter of 1942-43, which broke long-standing records for blizzards, freezing rain, sub-zero temperatures, and attendant conditions such as road blockage, electric wire breakage, and interruption of transportation and communication service, plus an unusually late ice breakup, tested power facilities almost to the breaking point. Although at one time during the winter no margin whatever was available, it was not necessary at any time to curtail war production for lack of power.

As a result of ice and water difficulties the generating capacity in the Cedars and Beauharnois areas in Quebec was severely reduced. To meet this situation, water storage in the Shawinigan and Saguenay areas was drawn upon to a dangerous extent. This, in turn, made it necessary to obtain power from the Ontario HydroElectric Power Commission for Quebec use, and to curtail the exportation of power to Massena, New York.

Without the inter-connection between the Ontario and Quebec systems, and without the savings achieved through mandatory and voluntary restrictions, the additional power would not have been available when needed. The experience of the winter indicated the advisability of further extension of the inter-connecting lines, and more such lines were built in the summer of 1943.

With the completion in 1943 of a record new capacity, it became possible to assist agriculture in its task of increasing food production by permitting the extension of electric service to certain farms and several hundred such installations had been made before the year was over.

By October, 1944, improvement in the power situation made it possible to discontinue the restrictions prohibiting the use of electric power for non-essential purposes.

Summary of Energy Generated by Type of Station, 1942 and 1943.Central electric stations are companies, municipalities or individuals selling or distributing electric energy, whether generated by themselves or purchased for resale. Stations are divided into two classes according to ownership, viz., (1) commercial-those privately owned and operated by companies or individuals, and
(2) municipal - those owned and operated by municipalities or Provincial Governments. These are subdivided according to the kind of power used into (a) hydraulic, (b) fuel, and (c) non-generating. This last sub-class purchases practically all the power it resells; a few of these stations have generating equipment that is held for emergencies. The hydraulic stations contain water turbines and wheels with around 88 p.c. of the total capacity of hydraulic installations in all industries in Canada and the generators driven by this hydraulic equipment generate 98 p.c. of the total output of all central electric stations.

## 4.-Electric Energy Generated, by Type of Station and by Provinces, 1942 and 1943

## Subsection 1.--Historical and General Statistics

The growth of the central electric stations industry, has been almost continuous since 1919 , when statistics of kilowatt hours generated were first made available. The depression that occurred in the early 1930 's resulted in decreased output of power for several years but output soon recovered, the increases in 1940 and 1941 being particularly large, owing to the effect of the War on production.

The central electric stations industry is one that is particularly suited to largescale operation, because of the huge outlays of capital necessary. Capital invested and total horse-power installed increased almost continuously even during the depression years, mainly because large power projects, planned before the depression, were in process of construction during the early years of the past decade. Off-peak and surplus power, used mainly in electric boilers of pulp and paper plants, grew steadily to a peak of $7,803,000,000 \mathrm{kwh}$. in 1937 but owing to war requirements for firm power it was reduced in 1940-43, and amounted to only $3,229,426,000 \mathrm{kwh}$. in 1943.

## 5.-Summary Statistics of CentraI Electric Stations, 1931-43

Note.-Figures for the years 1917-30 will be found at p. 369 of the 1940 Year Book.

| Year | Stations | Capital Invested | Revenue from Sale of Power ${ }^{1}$ | Power Equipment Capacity ${ }^{2}$ | Kilowatt Hours Generated | Customers | Persons Employed | Salaries and Wages |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ Excluding duplications.
${ }^{2}$ Not including auxiliary-plant equipment.

Although the amount of power used by domestic customers or for residential purposes has been between only 4 and 6 p.c. of the total production of central electric stations, this service is exceedingly important. Details of the number of domestic customers served, the kilowatt hours delivered and the costs to the customers, exclusive of direct Dominion, provincial and municipal taxes on such service, are shown in Table 6. The average consumption per customer and average cost per kilowatt hour vary considerably as between municipalities and also as between provinces; there are smaller differences between the average bills.
6.-Summary Statistics of Domestic Service Consumption of Electricity, 1931-43

| Year | Customers | Total Consumption | Average Consumption per Customer | Average Charge per Annum | Average per kwh. |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | '000 kwh. | kwh. | $\$$ | cts. |
| 1931. | 1,336,721 | 1,563,704 | 1,170 | 26.38 | $2 \cdot 25$ |
| 1932. | 1,357,462 | 1,639,498 | 1,208 | $26 \cdot 83$ | $2 \cdot 22$ |

| 1938. | 1,559,394 | 2,172,500 | 1,393 | 26.49 | 1.90 |
| 1939. | 1,623,672 | 2,310,891 | 1,423 | 26.97 | 1.90 |
| 1940. | 1,694,388 | 2,436,572 | 1,438 | 27.41 | 1.91 |
| 1941. | 1,755, 917 | 2,582,405 | 1,471 | 27.73 | 1.89 |
| 1942. | 1,803,708 | 2,716,895 | 1,506 | $28 \cdot 11$ | 1.87 |
| 1943. | 1,852,367 | 2,843,612 | 1,535 | $27 \cdot 70$ | 1.80 |

Equipment of Central Electric Stations.-Auxiliary equipment includes only thermal engines and generators operated by them in hydraulic stations and in non-generating plants and does not include spare equipment in thermal stations or spare hydraulic equipment in hydraulic stations. Such equipment is classed as
main-plant equipment. The capacities of the equipment are the manufacturers' ratings and, for water wheels and turbines, vary with the supply of water. The majority of the hydraulic stations are large, serving wide areas over transmission lines, whereas most of the plants with thermal engines are small, serving the needs of the local municipality in each case.

## 7.-Main-Plant Equipment of Central Electric Stations, by Provinces, and Total Auxiliary Equipment, 1943

Note.-kva. means kilo-volt-amperes.

Farm Service Furnished by Central Electric Stations.-A complete segregation of farm customers from other domestic customers is not made by all central electric stations. For 1930 only Ontario and Quebec stations reported farm customers almost equal in number to the farms supplied with electricity as recorded in the census.

## Subsection 2.-Public Ownership of Central Electric Stations*

Rivers and lakes, except very small ones, generally remain vested in the Crown and, naturally, the use of the water for development of power is a Crown right.

In some places in Canada the Crown has transferred this right to incorporated companies and in others the Crown itself has exercised the right and developed the water-power sites. Ontario was the first province to develop and distribute hydroelectric power. With one of the largest and most spectacular power sites in the world, at Niagara Falls, and with no coal mined in the Province, the urge to produce hydro-electric power was great. In 1906 a commission was formed to act as trustee for the municipalities in producing and distributing electric energy in the Province.

[^126]10.-Publicly Owned Central Electric Stations in Canada, 1930-43

Quebec public ownership had not made much headway until 1944 when the Provincial Government expropriated the plant of the Montreal Light Heat and Power Co., and created the Quebec Hydro-Electric Commission with powers to generate and distribute electric power.

The development of electric energy in New Brunswick also has been largely connected with the production of pulp and paper, and commercial companies still control a great deal of the power, although the New Brunswick Power Commission, established in 1920, has since organized public utility services on the same lines as those of Ontario, providing both hydro-electric and thermal-electric power. Nova Scotia, Saskatchewan and Manitoba also have established hydro-electric commissions on the model of the Ontario system.

In British Columbia the population is concentrated around the Fraser delta and Victoria. Hydro-electric power to serve their needs has been developed mainly by private corporations although smaller public utility corporations have contributed to some extent.,

Table 11 shows statistics of municipally or publicly owned central electric stations, by provinces, for 1943 . Table $\mathbf{1 8}$ at p. 353 shows comparable statistics for commercial stations.
11.-Publicly Owned Central Electric Stations in Canada, by Provinces, 1943

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. The governing bodies, their general regulations and their activities are summarized by provinces.

Nova Scotia.-In 1909 legislation was first enacted in Nova Scotia relating to the use of water power in "An Act for the Further Assisting of the Gold Mining Industry". This was the most advanced legislation until the development of water power within the Province of Nova Scotia was initiated under the Acts of 1914 and carried on in an investigatory manner in co-operation with the Dominion Government until 1919. The Nova Scotia Power Commission was created under the Power Commission Act. Certain investigatory work is still carried on in Nova Scotia by the Dominion Government through the Dominion Water and Power

Bureau with which the Nova Scotia Power Commission is closely associated. The control of the water resources of the Province is vested in the Crown and administered under the provisions of the Nova Scotia Water Act of 1919. The Commission pays the regular fees for water rights.

The function and policy of the Commission is the supply of electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service. It provides for financial assistance to equalize cost and revenue of extensions, the construction of which have been approved by Governor in Council as qualifying under the Act. In 1941, an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transformation, transmission, distribution, supply and use of power in the Province.

Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30,1944 , showed fixed assets of $\$ 17,648,178$, work in progress $\$ 192,384$, current assets $\$ 307,559$, contingency and renewal reserves $\$ 1,804,957$, sinking fund reserve $\$ 3,449,498$ and a general reserve of $\$ 291,475$.

The initial development of the Commission was an $800 \mathrm{~h} . \mathrm{p}$. installation on the Mushamush River, which went into operation in 1921 and delivered 192,000 kwh. in the first complete year of operation. This and later developments are shown in the following statement.
I.-PRESENT DEVELOPMENTS WITH INITIAL CAPACITIES OF UNDERTAKINGS OF THE NOVA SCOTIA POWER COMMISSION

${ }^{1}$ Minimum head. $\quad 2$ Distribution system only.
The nine systems comprise 1,491 miles of transmission and distribution lines and served 37 wholesale and 7,514 retail customers at Nov. 30, 1944. Nineteen generating stations and 38 generating units are in service with a total installed capacity of $77,924 \mathrm{~h}$. .p. and a total delivery to customers which is somewhat variable and has reached $249,449,505 \mathrm{kwh}$. per year.

New Brunswick.-The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. The Commission owns and operates the generating stations shown in Statement II.
II.-PLANTS OF THE NEW BRUNSWICK ELECTRIC POWER COMMISSION

| Plant | Type | Capacity |
| :---: | :---: | :---: |
|  |  | h.p. |
| Musquash... | Water power..... | 11,000 |
| Grand Lake.... | Steam........... | 26,800 |
| Kouchibouguac. | Water power.... | 200 |
| Grand Manan. . | Diesel........ | 200 |
| St. Quentin.. | Diesel. | 125 |
| Total. |  | 38,325 |

The Musquash, Grand Lake and Kouchibouguac plants are inter-connected and operate in parallel at all times.

Transmission Lines.-The transmission system consists of a 66,000 -volt line from Musquash to Moncton; and five lines from Grand Lake, viz., two 33,000-volt lines to Fredericton, one 66,000 -volt line to Newcastle, one 66,000 -volt line to Moncton, and one 66,000 -volt line from Coal Creek to Hampton.

Power is sold en bloc to the cities of Saint John, Moncton, Fredericton and the town of Sussex.

The statistical information given below shows the growth of the Commission's undertaking since 1924.

Quebec.-The National Electricity Syndicate, 1937 (Geo. VI, c. 24), was established to develop electricity generating plants and distributing systems in the Province. It was abolished in-1940 (4 Geo. VI, c. 22) and its powers, duties, and contractual obligations were then transferred to the Quebec Streams Commission.

The Quebec Streams Commission.-Created in 1910 by 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (see R.S.Q., c. 46), by 20 Geo. V, c. 34 and by 4 Geo. VI, c. 22, the Commission is authorized to ascertain the water resources of the Province, to make recommendations regarding their control, to construct certain storage dams and operate them so as to regulate the flow of streams, and to undertake the direct production of electric power. The Commission has assisted companies engaged in such work by the systematic collection of data on the flow of the
principal rivers and on the meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mainly by the regulation of the flow of the principal power streams through the construction of storage dams. In 1941, and at the beginning of 1942, the Quebec Streams Commission completed the construction of a $48,000 \mathrm{~h} . \mathrm{p}$. ( 3 units) generating plant at Rapid 7 on the Upper Ottawa River, at a cost of $\$ 9,600,000$ including interest during construction. About $16,000 \mathrm{~h} . \mathrm{p}$. has been supplied to the Noranda Mines since Oct. 18, 1941. A fourth unit is to be installed when warranted and when the flow of the drainage area above Rapid 7 has been regulated. Act 4 Geo. VI, c. 22, conferring on the Quebec Streams Commission powers to undertake the direct production of electric power, was abolished in 1944, and same powers granted to the Quebec Hydro-Electric Commission by 8 Geo. VI, c. 22. By the said Act, the administration of the Hydro-Electric Plant at Rapid 7, on the Upper Ottawa River, was entrusted to the Quebec Hydro-Electric Commission.

From 1912 to 1925, storage reservoirs were built or acquired and operated by the Commission, charges being made to benefiting companies to cover interest and amortization on the capital invested as well as the cost of operation. Since 1925, companies or persons have availed themselves of the latitude given them by R.S.Q., 1925, c. 46, s. 6, to build the necessary dams. Such storages have been transferred to and are operated by the Commission, the cost of operation only being charged annually, to the interested companies or persons.

There were 28 storage reservoirs in 1944, which have been built and are controlled by the Commission in Quebec. Among the rivers controlled by the Commission either by means of dams on the rivers themselves or by controlling the outflow of lakes at their headwaters, together with the horse-power now developed, are: the St. Maurice, $1,026,050 \mathrm{~h} . \mathrm{p}$.; the Gatineau, $504,000 \mathrm{~h} . \mathrm{p} . ;$ the Lièvre, 274,000 h.p.; the St. Francis, 100,000 h.p.; the Chicoutimi, 41,400 h.p.; and the Au Sable, $33,200 \mathrm{~h} . \mathrm{p}$. Most of these developments are capable of being extended to produce more power than is now installed.

Other storage reservoirs operated by the Commission are the Lake Mitis Reservoir, the Savane River and Lake Brûlé Reservoirs on Ste. Anne de Beaupré River, nine reservoirs on North River and one reservoir on Rivière-du-Loup (en bas).

Among storage reservoirs not controlled or operated by the Commission are the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River, and the Onatchiway on the Shipshaw River. Power developments on the Saguenay River, benefiting from the Peribonca and Lake St. John Reservoirs, amount to over $1.500,000 \mathrm{~h} . \mathrm{p}$. , since the Chute-a-Caron (Shipshaw) project has been completed.

The Quebec Hydro-Electric Commission.-The Quebec Hydro-Electric Commission was established by Act 8 Geo. VI, c. 22 with the object of supplying power to the municipalities, industrial or commercial undertakings and citizens of the Province of Quebec at the lowest rates consistent with sound financial administration.

On Apr. 15, 1944, in accordance with the provisions of this enactment, the Commission took over: (a) the undertaking of Montreal Light, Heat and Power Consolidated for the generating and distributing of electricity; $(b)$ the undertaking of Montreal Island Power Company for the generating and distributing of electricity;
and (c) all the shares of the capital stock of Beauharnois Light, Heat and Power Company. Thus Hydro-Quebec acquired the control, amongst other assets, of the following hydro-electric plants, transmission and diştribution systems:-

The Commission operates a public utility system which supplies electric light and power requirements to greater Montreal and surrounding districts embracing a population of nearly $1,500,000$.

From the Cedars Plant electric energy is supplied to the Messina, N.Y., potrooms of the Aluminum Company of America and, through Beauharnois Light, Heat and Power Company, power is sold to the Hydro-Electric Power Commission of Ontario. The quantities involved are in the neighbourhood of $100,000 \mathrm{~h} . \mathrm{p}$. to Messina and 250,000 h.p. to Ontario.

In addition to the ownership and operation of these generating and distribution systems, the Quebec Hydro-Electric Commission was entrusted with the administration of the 48,000 h.p. Upper Ottawa River Plant at Rapid No. 7 which was formerly operated by the Quebec Streams Commission.

Rural Electrification.-In order to promote agriculture, the Government has been empowered by the Legislature to make advances to the Commission to the extent of $\$ 10,000,000$, at a rate of interest of 2 p.c., for the construction of electric distribution lines for the service of any rural municipality.

Furthermore, the Commission may grant loans for the cost of electrical installations on any farm susceptible of being served by a line constructed by or through Hydro-Quebec.

Ontario.-The Hydro-Electric Power Commission.-An account of the inception and operations of the Commission is given at pp. 377-378 of the 1940 Year Book.

To meet the constantly expanding power demands of the undertaking, the Commission has constructed its own generating plants, and has acquired several privately owned generating plants. Of the 47 hydro-electric power plants operated by the Commission in 1943, the largest is the Queenston-Chippawa development on the Niagara River, which was constructed by the Commission and has a normal operating capacity of $500,000 \mathrm{~h} . \mathrm{p}$. Provision for present needs has been madeincluding existing plants and power under contract for present delivery-up to an aggregate of about $2,544,000 \mathrm{~h} . \mathrm{p}$., of which 62,500 will be discontinued after the War.

Hydro-Electric Power Commission Statistics.-The Annual Reports of the Commission present in great detail descriptions and statistics of operation, construction, municipal work and transmission and distribution. The Commission exercises supervisory functions over the electrical utilities owned and operated by the partnermunicipalities.

The initial capital expenditure required to serve about twelve municipalities amounted to approximately $\$ 3,600,000$. At Oct. 31,1943 , the total capital investment amounted to $\$ 487,022,998$, of which $\$ 354,706,924$ were investments by the Commission in generating plants, transmission systems, etc., including electric railway and other properties operated by the Commission for the major systems under their control, and $\$ 132,316,074$ were investments by municipalities in local distributing sytems of their own, including other assets. Similarly, total reserves of the Commission and of the municipal electrical utilities for sinking fund, renewals, contingencies and insurance purposes amounted to $\$ 313,824,873$ of which $\$ 200,603,040$ represented reserves of the Commission and $\$ 113,221,833$ of the municipalities.

## 13.-Growth of the Ontario Hydro-Electric Power Commission, Years Ended Oct. 31, 1931-43

Nots.-Statistics for 1910-29 are given at p. 288 of the 1941 Year Book.

| Year | $\underset{\text { Served }}{\text { Municipalities }}$ | Customers Served | Total Power Distributed | Capital of Commission and Assets of Municipal Utilities |
| :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | h.p. | \$ |
| 1931. | 721 | 600,297 | 1,107,227 | 373,010,000 |
| 1932. | 747 | 611,955 | 1,108,037 | 382,558,000 |

[^127]Statistics of Urban Municipal Electrical Utilities of Ontario Supplied by the Commission.-Statistics of the assets and liabilities of the electrical departments of urban municipalities served by the Hydro-Electric Power Commission show, for 1943 , total assets of $\$ 194,368,190$, as compared with liabilities of $\$ 19,094,241$. Of the difference, $\$ 99,619,542$ was allotted as reserves, leaving a surptus of $\$ 75,654,407$. In computing the percentage of net debt to total assets, the equity in Hydro systems is not taken into account. Between 1933 and 1943 total assets increased by $\$ 58,589,521$ while total liabilities decreased by $\$ 30,826,513$.

Rural Electrical Service in Ontario.*-During past years substantial progress has been made in Ontario in the field of rural electrification, and the Commission's rural operations are now an important feature of its work. Towards this rural work the Ontario Government, pursuant to its policy of promoting agriculturethe basic industry-contributes, in the form of 'grants-in-aid', 50 p.c. of the initial capital cost of distribution lines and equipment. In 1930 the Ontario Government passed legislation providing for advances up to $\$ 1,000$ to actual farm owners of lands and premises in rural power districts for the installation of electrical wiring and the purchase of equipment and providing for the fixing of low maximum service charges for all classes of rural service. For the duration of the War non-essential rural service has been suspended, unless such service will increase the production of foodstuffs.

${ }^{1}$ Included in "capital invested".
Manitoba.-The Manitoba Power Commission commenced its operations in 1919 under the authority of the Electrical Power Transmission Act. This Act empowered the Commission to make provision for generating electric energy, to enter into contracts for the purchase of power in bulk from generating agencies and for its transmission and sale to municipalities, corporations and individuals.

The Act was patterned after Ontario legislation governing the Hydro-Electric Power Commission of Ontario and, until 1932, the Commission in Manitoba functioned in much the same way; it owned and operated transmission lines and substations, and sold power in bulk to the municipalities which took care of the cost of distribution and retailed power to individuals.

The Manitoba Power Commission Act of 1931 permitted the re-organization of the administration of the utility by the establishment of a Commission of three men. This Commission decided that the policy of selling power direct to each con-

[^128]sumer would prove more satisfactory in Manitoba. Municipal contracts were cancelled and individual consumers were served directly. In 1940 the Act was amended to give the Commission control of its own finances.

The capital invested in the Province by the Commission is approximately $\$ 8,000,000$. At the close of the fiscal year 1943 the reserves, represented by firstclass securities, amounted to $\$ 4,191,256$.

The Commission enters actively into the appliance-merchandising field; it also operates a central steam-heating system and a gas plant at Brandon. As a result of sales and educational policies, together with the economies enforced, the Commission has been able to reduce rates for service progressively and has established a low uniform basic rate for all towns on the network.

Extension of Facilities to Municipalities. - The first municipality to make application for power was Portage la Prairie and the construction of a transmission line from Winnipeg was commenced in the autumn of 1919 and completed in August, 1920. Extensions have been made annually with the exception of 1933. Since 1939 construction to Army and Air Force training centres has taken priority over all other extensions. Hundreds of farmers have turned to the cheap power provided by the Commission to assist them in their wartime problem of increasing production with less manpower.

At present 157 cities, towns, and villages are served by a transmission network of over 2,154 miles. The Commission's plan to complete the basic grid by extension to an additional 200 communities was interrupted by the War. This will be continued when men and materials are available and will be carried out in conjunction with the implementation of a proposed farm electrification project.

Power is at present purchased from the Winnipeg Electric Company through substations at Fort Garry and Selkirk for towns on the main network and at East Selkirk, Seven Sisters Falls and St. Boniface for distribution to outlying districts.

Saskatchewan.-The Saskatchewan Power Commission was established in 1929 under the Power Commission Act (R.S.S. 1940, c. 33 ) which authorized the Commission to manufacture, sell and supply electric energy, to acquire and develop water-power sites, to acquire or construct steam and oil plants, to construct transmission lines, to purchase power and to enter into contracts with municipalities for the supply of energy.

The Commission's main system is centred on its generating plant at Saskatoon. North Battleford and Swift Current also have generating plants owned and operated by the Commission. Electric energy is furnished in bulk to the city corporations, which own and operate their own distribution systems. In the town of Battleford electric energy is supplied by the Commission, in bulk, by transmission line from the Commission's plant at North Battleford. In all the municipal corporations on its system (143 in number) the Commission supplies approximately 12,989 individual consumers directly and 15,982 indirectly. In 1944, 1,598 miles of transmission lines were owned and operated.

During the years 1929 to 1944 the Commission purchased certain generating plants, and constructed and purchased transmission lines and also distributing systems in towns and villages. These were improved, enlarged or supplemented. Particulars of acquisitions and constructions are given at p. 291 of the 1941 Year Book; further details are given at p. 382 of the 1940 Year Book. Acquisitions in

1942 included generating plants and distributing systems at Meadow Lake, Kelvington and Rose Valley. A transmission line and distributing systems were constructed in 1944 to provide service to Muenster, St. Gregor, Englefeld and Watson.

Of the seventeen generating plants owned and operated by the Commission in 1944, those at Saskatoon and North Battleford were steam plants, and the remainder were equipped with compression-ignition engines. The total installed capacity of the generating plants was $34,200 \mathrm{~h} . \mathrm{p}$. There are no hydro-electric plants in the Commission's system, the primary power being: steam-reciprocating engines 800 h.p.; steam turbines $38,700 \mathrm{~h} . \mathrm{p}$.; and internal combustion engines $9,680 \mathrm{~h} . \mathrm{p}$. The Commission purchases several blocks of power from, and contracts for the interchange of power with private interests.

The total revenue for the calendar year 1943 was $\$ 1,745,600$, and for 1944 $\$ 1,877,572$. Provision has been made for depreciation and replacement reserve to the amount of $\$ 3,748,753$. The total plant investment as at Dec. 31, 1944, was approximately $\$ 8,940,000$.

Regina and Weyburn, as well as several towns and villages, own and operate municipal plants and distributing systems. There are four private corporations owning and operating electrical generating plants, transmission lines and distributing systems in the Province. Control and regulatory powers regarding franchises for the supply of electric energy and the rates to be charged therefor are conferred upon the Local Government Board by Part III of the Public Utilities Companies Act (R.S.S. 1940, c. 118). The Power Commission is charged with the administration of the Electrical Inspection and Licensing Act (R.S.S. 1940, c. 261), and is given certain control and regulatory powers regarding electrical public utilities under Part III of the Power Commission Act.

[^129]Alberta.-Public ownership of power-generating and distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately owned systems is the Board of Public Utility Commissioners, which has jurisdiction over the distribution and sale of electricity. The Board has general power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates.

Two privately owned utilities are the chief sources of power for the municipalities. One has in operation four hydro-electric power plants totalling 91,000 h.p. on the Bow River and tributaries west of Calgary, with supplementary storage at Lake Minnewanka and Upper Kananaskis Lake totalling 240,000 acre feet. It operates, under lease, the city of Calgary's $14,000 \mathrm{~h} . \mathrm{p}$. steam plant, and has interchange arrangements and transmission line ties with the city of Edmonton and the city of Lethbridge. The other is located at the city of Drumheller, its power being generated by steam and it services a large number of towns to the north and northeast of Drumheller; in some communities not accessible to its lines, it operates individual diesel-engine plants.

Edmonton generates power from coal and operates its own distribution system; in addition, there is a reciprocal arrangement with one of the privately owned utilities for exchange of power at peak periods. Calgary and Red Deer own their distributing systems but purchase power from the same private source as Edmonton. Certain other large cities and towns such as Medicine Hat and Cardston own their power plants and those beyond reach of the two private utilities referred to above are served by small privately owned power plants.

British Columbia.-Public ownership of central electric stations in the Province of British Columbia has been limited to municipalities incorporated under the Municipal Act and to improvement districts incorporated under the provisions of the Water Act. Authority has been given to the Provincial Government by the Legislature to undertake the production, transmission and distribution of electric energy and it is expected that the Province will enter the public ownership field. Several cities have installed their own generating stations, mostly driven by water power, but the majority purchase the energy at wholesale rates from privately owned systems and distribute it in their respective areas.

The Public Utilities Commission regulates the rates charged by privately owned utilities but not those owned by municipalities.

## Subsection 3.-Private Ownership of Central Electric Stations

Summary statistics of privately owned central electric stations are given for the years 1930 to 1943 in Table 17.

## ${ }^{1}$ Exclusive of auxiliary equipment.

The predominant position of Quebec in the electric-power field can be seen from the column in Table 18 showing electric energy generated. Of the total power generated in Canada by all central electric stations, 53 p.c. was generated by privately owned or commercial stations in the Province of Quebec; practically all of this amount was hydro-power.

There are two important factors in this large production of hydro-electric power in Quebec: (1) the pulp and paper mills, located close to both the water power and the supply of pulpwood, which take about 40 p.c. of the Quebec hydro-electric power; and (2) the industries in eastern and southern Ontario that import about 18 p.c. of the Quebec output of power.

All stations in Ontario produce only about one-half as much power as the Quebec stations and only 25 p.c. of the total for Ontario stations is produced by privately owned stations.

${ }^{1}$ Power generation in Saskatchewan is entirely by fuel plants. There is one hydro electric station but the power is used in Manitoba and the statistics are included with those of Manitoba.

## Subsection 4.-Export of Electric Power

Electric energy is exported from Canada only under licence and an export tax of 0.03 cents per kwh. is levied. The export duties for the fiscal years ended Mar. 31, $1940,1941,1942,1943$ and 1944 were $\$ 443,783$, $\$ 560,047, \$ 598,038, \$ 618,953$, and $\$ 641,253$, respectively.

Exports for the calendar years 1941-43 are shown in Table 19. There are also large interprovincial movements of electric energy from Quebec to Ontario, and smaller movements from Quebec to New Brunswick and from British Columbia to Alberta.

The water allowed to be diverted at Niagara Falls for power purposes was increased by $5,000 \mathrm{cu} . \mathrm{ft}$. per second to the Canadian side in November, 1940, owing to a diversion of water from Long Lake and the Ogoki River from the James Bay watershed to the Great Lakes watershed. In 1941 a further increase of 9,000 c.f.s. to the Canadian plants and 12,500 c.f.s. to the United States plants was permitted. This increased water with greater development of plants on the St. Lawrence River made possible the increased export of both firm and secondary power to the United States, mainly to plants producing war materials ( 5,000 c.f.s. will produce around 150,000 h.p. at the Queenston, Ont., plant).

[^131]
## Section 3.-Evolution of Power Equipment and Utilization of Power in Industry

The Dominion Bureau of Statistics has compiled tables showing the power equipment installed in the manufacturing and mining industries of Canada from 1923 to 1942. Table 21 gives the combined statistics for both industries from 1930. The figures for the 13 years show that primary power has increased from $1,738,924$ h.p. to $2,230,298 \mathrm{~h} . \mathrm{p}$. or by $28 \cdot 3$ p.c. while the installation of electric motors operated by purchased power shows an increase of no less than $72 \cdot 3$ p.c. In considering the increase in the latter figures, it must be borne in mind that the shift from belts and shafting to individual motors at each machine does not necessarily mean that an amount of power is used equivalent to the increased capacity.

Of the increase in primary power installed, manufacturing establishments accounted for $84 \cdot 9$ p.c. and mines for $15 \cdot 1$ p.c., while of the increase in electric motors operated by purchased power, manufacturing accounted for $86 \cdot 1$ p.c. and mining for 13.9 p.c.

The mining industry shows an uninterrupted increase in the amount of equipment operated by purchased power from 1929 to 1941, the steepness of a curve depicting this growth would show no lessening of steepness even during the worst years of the depression. The total amount of power equipment installed showed a drop in 1932, but resumed the upward trend in 1933; the same is true of the capacity of electric motors installed but.that of motors operated by power generated within the establishment dropped sharply from 1930 to 1933 and did not attain a figure equal to the 1930 total until 1937, when a very sharp rise over the 1936 figures occurred. This would indicate a tendency of mining companies to rely more and more upon purchased power rather than to attempt to generate their own, a very natural tendency in northern Canada where water power is abundant and fuel scarce.

In manufacturing, a steady growth is indicated in total power equipment installed, total electric motors and in motors operated by purchased power. In the capacity of motors operated by power generated within the establishment, the figures fluctuated between 1929 and 1935 and from there rose steeply to 1942.

## 20.-Percentage of Electric Rating to Total Power Equipment in the Manufacturing and Mining Industries, 1930-42

## Section 4.-Power Generated from Fuel

Industrial Use of Fuel.-Fuel is used quite generally throughout the industrial field for the generation of power by means of steam- and internal-combustion engines. It is also used for the heating of plants, and for providing the heat necessary to some manufacturing processes. The most important industries where heat is applied to materials to facilitate or accomplish a desired transformation are: foundries and machine shops; brick, tile, lime and cement works; petroleum refineries; the glass industry; distilleries; food preparation plants; rubber goods industry; etc. The figures of Table 22 cover fuel used for such heating purposes, as well as for power; they do not include fuels that constitute the raw materials to be transformed, such as coal in the coke and gas industries and crude petroleum in the refining industry. Electricity used in metallurgical processes, such as in the electrolytic refining of non-ferrous metals, is also excluded.

The value of fuel consumed in the manufacturing and mining industries in 1942 showed an increase of $65 \cdot 9$ p.c. over 1940. Of the 1942 fuel account, the requirements of Ontario cost $47 \cdot 1$ p.c. of the total, of Quebec $30 \cdot 4$ p.c., of British Columbia $7 \cdot 1$ p.c. and of Nova Scotia $5 \cdot 7$ p.c.

The iron and its products group used 21.9 p.c. of the fuel consumed by manufacturing industries, wood and paper products 21.0 p.c., non-metallic mineral products 16.6 p.c., non-ferrous metal products 14.4 p.c. and vegetable products 9.6 p.c.

Gas.-In southwestern Ontario gas comes from natural gas wells, from light end gases sold by a Sarnia company which draws from a refinery in that city, and from the coke plants of the steel city, Hamilton. With the advent of greatly increased industrial activity in the Niagara Peninsula and the southern half of southwestern Ontario, the normal Ontario consumption of about $10,000,000,000 \mathrm{cu} . \mathrm{ft}$. of natural gas per year rose to nearly $13,000,000,000$ in 1940 . At that time some natural gas fields completely played out, and others showed signs of exhaustion. At this peak capacity, insufficient gas was available to continue supplying industrial requirements and at the same time provide enough for household use.

When a crisis appeared imminent in 1942, the Power Control of the Department of Munitions and Supply arranged for the installation of new manufacturing facilities. These new facilities included some propane plants and a new coke oven and gas plant at Hamilton. Thirty-six ovens were completed by the spring of 1943, but even this added capacity was not enough and 18 more ovens were installed. With the completion of the 18 additional ovens in December, 1943, the situation eased somewhat.

As a result of these various measures to expand production, the annual output of gas in southwestern Ontario rose by about $4,000,000,000$ cubic feet.

## 22.-Cost of Fuel Used in Manufacturing and Mining Industries, 1930-40, with Details by Provinces and Industrial Groups, 1941 and 1942

Note.-Includes fuel used for heating purposes, but not that used as raw material. Totals for 1922-30 are given at p. 300 of the 1941 Year Book.

This Chapter deals with manufacturing industries in Canada in two main Parts. Part I gives general analyses of manufactures in the Dominion including: the historical development of manufacturing in Canada in so far as statistical data are available; production by industrial groups and individual industries, i.e., a detailed treatment of current production under various groupings and individual industries; general analyses of the principal factors in manufacturing production under such sub-headings as capital, employment, salaries and wages and size of establishment. Part II deals with the provincial and local distribution of manufacturing production.

With regard to the first section of Part I, dealing with historical development, it is impossible to give absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, in so far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The far-reaching influence of the War of 1914-18 was, of course, the outstanding factor in the growth recorded prior to the war now being waged. It was during these years that Canadian manufactures began to develop on a really large scale. Munitions contracts placed by the Imperial Munitions Board of Canada in those years totalled well over $\$ 1,000,000,000$ and these did not include such fields of production as shipbuilding and aviation, which are very important to the present

Canadian effort. Shipbuilding construction alone during the War of 1914-18 amounted to $\$ 35,000,000$ in 1917, $\$ 75,000,000$ in 1918 and $\$ 86,000,000$ in 1919. In the same three years, employees in the shipbuilding industry numbered 12,000 , 22,000 and 25,000 , respectively.

Canada's effort in the present war has brought manufacturing production to a much higher level than ever before. The output of manufactured products in 1943 amounted to $\$ 8,732,860,999$ which represents an increase of $151 \cdot 3$ p.c. over the prewar year of 1939 , and an increase of 124.9 p.c. compared with the pre-war maximum attained in 1929. Great though the advance was up to the end of 1942, covered by the detailed statistics of this Chapter, the output of manufactured products had not then reached its peak. The urgent needs of Allied Nations assures the continuation of large-scale production as long as the War lasts. There is little doubt that the diversified development which has taken place during the war years will have a permanent effect on Canadian manufacturing production after the War. Undoubtedly, the effects of the thorough-going transformation in industrial production will be far-reaching and will complicate the post-war readjustment in industry.

The following special article reviews the developments that have taken place and the system of controls that have been imposed.

## CHANGES IN CANADIAN MANUFACTURING PRODUCTION FROM PEACE TO WAR 1939-44*

Note.-The following article describes the development of Canada's war industries and the activities of the Department of Munitions and Supply. It does not deal with those manufacturing industries which produce mainly, civilian goods-textiles, pulp and paper products, processed foods, wood products and others. Wartime controls in these industries are administered by the Wartime Prices and Trade Board, whose activities in controlling prices and civilian supplies are described in Chapter XXIII (see Index).

Even before the outbreak of war in 1939 Canada was the second largest manufacturing country in the British Empire and her vast natural resources of land, forests and minerals, together with ample supplies of conveniently located hydro-electric energy available at low cost, were important factors that enabled her to compete in world markets.

Canada's status as a manufacturing country may be said to have been definitely established during the War of 1914-18. Previous to 1914 Canada was mainly an agricultural nation and a primary producer, and what manufactures existed were very much closer to the primary industries than they are to-day. During the War of 1914-18, besides being the outstanding contributor of food products, this country played a noteworthy role in the production of munitions, in shipbuilding, in aeroplane construction and many other lines. Factory methods became more specialized, and a high degree of administrative and mechanical efficiency was attained; these under the competitive conditions of the post-war years were further improved. From 1914 to 1918 Canada mobilized about 10 p.c. of her economic resources for war. In the peak war production year 1943, about

[^135]64 p.c. of total productive capacity was used for war purposes. At the end of 1944 this figure had dropped to about 56 p.c. This is an amazing record for a democracy which is approximately 3,000 miles removed from the scene of actual combat.

When hostilities commenced in 1939, Canada, although producing almost no munitions of war, was in a unique position to help the Allied cause: plans were formulated for the speedy transition of Canadian industry to a war basis. Starting almost from scratch, Canada, within four years (1940 to 1943), developed a munitions industry that has not only met most of the needs of its own Armed Forces, but has also sent immense supplies of war goods to all the United Nations. Canadian munitions are being shipped to the Chinese_and the Russians; they are being used in the Near East and in the Far East, they are being employed by the United States, and, above all, they have gone and are going to Britain where their weight has manifested itself in the struggle against the Axis forces on sea, on land and in the air.

Productive Facilities Expanded.-After the Fall of France in 1940 the pressure on Britain was such that Canada was called upon to speed up her production to the limit. The British Commonwealth was facing the German onslaught alone. Canada rushed the construction of plants and factories, the gathering of war supplies, the re-direction of the nation's entire economic life.

It was at this time that Canada began the vast program of war-plant construction. Private interests in many instances financed their own plant expansions, with or without allowances for amortization, or built plants, writing off such expenditures with the aid of special depreciation allowances. Such deductible amounts are determined by a Government Board created for this purpose - the War Contracts Depreciation Board.

Where private industries were unable to finance their own expansion, the Government built plants and plant extensions and bought the necessary machinery. Where large production schedules and other needs could not be met by private industry, the Government also created companies wholly owned by the Crown to do the work. Several were organized not only to meet production problems, but also to surmount certain supply, purchasing and administrative problems. These Crown Companies have played and are still playing their part in the tremendous expansion of Canadian industry to the point where it is now a potent and major source of arms for the United Nations.

In the four years following the Fall of France, the Government created and still owns (April, 1945) plants and other productive facilities to a value approximating six times the capital employed in the pre-war primary iron and steel industries. Or, putting it another way, the munitions manufacturing facilities now owned by the Crown are about four times as great as the entire pre-war chemical and allied products industry. The productive facilities owned in this way by the people of Canada and operating under the Department of Munitions and Supply rose from a value of $\$ 30,000,000$ in 1940 to commitments of $\$ 856,000,000$ in 1943 . Of this total $\$ 600,000,000$ has been allocated to provide plant or equipment owned by the Crown but operated by private interests. The remainder has gone into plants owned and operated by Crown Companies-such as arsenals, synthetic rubber and optical glass plants.

During 1943 plant capacity reached the limits of the nation's ability to produce raw materials. The mines and forests were yielding record quantities of metals, minerals and lumber, and construction having passed its peak, contracts on Canadian account began to level off after 1942.

## Analysis of Canadian Account by Years

[^136]The result of the gigantic wartime mobilization of industry is seen in the thousands of ships, of motor transport, guns and 'planes that have been turned out of Canadian plants and shipyards during the first five years of war.

The following statement gives the estimated production from 1939-40 to 1943.
I.-ESTIMATED VALUES AND UNITS OF WAR PRODUCTION MADE UNDER CONTRACTS AWARDED BY THE DEPARTMENT OF MUNITIONS AND SUPPLY SINCE THE COMMENCEMENT OF THE WAR.

| Item | 1939-40 | 1941 | 1942 | 1943 | Total |

[^137]Government Regulation of Raw Materials and Supplies.-Production on so vast a scale could not have been established without rigid regulation of supplies of raw materials and services.

Early in 1940 the Government appointed controllers over the main branches of industry to restrict the non-essential use of certain materials or services on the one hand and to increase production for wartime purposes on the other. (See Introduction to this volume, also the Index.) The work of the various controllers is closely related and frequently interlocks. Arbitrary rulings have been avoided; when it became necessary to establish a regulation, the Wartime Industries Control Board gave opportunity to those affected to express their views.

Details of how the various controls are administered will be found under the various chapter headings of this and earlier editions of the Year Book published during war years.

Employment in Wartime Manufacturing. - It is not possible to give a clear picture of the increase in employment in the different divisions of manufacturing due to war needs, because of the various interpretations that can be placed on the term "war work". Moreover, some firms are carrying out war work under the sub-contracting plan, using their personnel interchangeably on normal and war production.

The annual Census of Industry reported a rise of 63 p.c. in employment in manufacturing as a whole from 1940 to 1943, while the gain in aggregate payrolls was 116 p.c. The sex distribution of manufacturing operatives also underwent considerable variation, partly resulting from the replacement of large numbers of recruits for the Armed Forces by female workers, and partly from the reorganiza-
tion of industrial processes to permit the work to be carried on by women, or by adolescents. The gain in the number of females engaged in manufacturing in 1943 as compared with 1939 was 142 p.c.; that reported for male employees was 74 p.c.

From the beginning, the development of war production brought with it shortages of skilled labour and materials; to cope with this situation, drastic curtailment of consumer goods was ordered by the Government, and steps were taken to regulate the labour market. Regulation and stabilization of wages and salaries were also decided upon to prevent important loss of production through industrial disputes, and to curb the inflationary tendencies inherent in a state of full, or practically full, employment accompanied by short supplies of consumer commodities.

By the end of 1941, the reserve of unemployed persons was virtually exhausted; the employment of women, and of the older and the younger workers, substantially increased, and there were important changes in the industrial distribution of the wage-earning population. In that period, the number employed in the production of durable goods more than doubled.

The next stage followed the outbreak of war in the Pacific in December, 1941. This period was characterized by increasing shortages of labour and materials, and by a considerable degree of co-ordination of Canadian production with that of United States industry. During this phase of the changing situation, the general advances in employment were at a rather retarded pace, owing to the great strides that had already been made in the mobilization of the resources -human and material-of a country with a relatively small population. In manufacturing, the movement continued steeply upward, although here, too, a tendency for the curve to flatten was discernible. The movement in the first five months of 1943 was almost continually unfavourable, partly owing to the reassertion of seasonal influences, while the expansion in succeeding months was limited in extent.

## Wartime Developments in Specific Industries

Aircraft.-Progress in the field of aircraft production in Canada has grown from a modest undertaking employing 1,000 workers turning out about 40 'planes annually before the War to the employment of more than 120,000 men and women producing over 4,000 'planes in 1943.

Twenty types of aircraft have, at one time or another, been manufactured in Canada for war, but to simplify and speed up output the number in mass production at the end of 1943 had been reduced to 8 types, as follows: Four world-famous types of service aircraft-the giant Lancaster bomber; the all-wood construction Mosquito; the twin-engined naval-patrol bomber, the P.B.Y. Catalina; and the Curtiss Hell-Diver, recognized as the latest and most powerful dive bomber in the world. Three trainers-the Cornell (a primary trainer); the Harvard (a secondary trainer), the most widely used aircraft under the Commonwealth Air Training Plan; and the Anson (a twin-engined navigational trainer). The Norseman, used earlier as a service craft but now detailed for use as a military transport.

Judged by civilian standards, one of Canada's biggest businesses of the peak war years was the repair and overhaul of aircraft and engines. This work has been carried out by the Department of Munitions and Supply in 20 major plants assisted by 65 smaller contractors and 50 ancillary firms strategically located across Canada. Many thousands of aircraft have been taken down and thoroughly overhauled annually.

Aircraft Control.-To prevent the unauthorized use of Government-owned facilities in the repair of civilian aircraft and to eliminate production delays from unwarranted design and construction modification, an Aircraft Controller was appointed in June, 1942. In addition to restricting the manufacture and assembly of aircraft, the Controller has regulated the material purchases of the aircraft manufacturers.

Ammunition.-During the War of 1914-18, shells were made in large quantities in Canada, but not until late in that conflict were the more difficult components and assemblies, such as fuses, produced in substantial quantities. In the present war, Canada has not only produced enormous quantities of shells and small-arms ammunition, but has created a new industry whereby shells are filled with various Canadian-made explosives and shipped overseas as complete rounds of ammunition.

Canada had produced $\$ 1,000,000,000$ worth of heavy ammunition up to the end of August, 1944. This output has comprised: 28 types of artillery ammunition; 32 types of bombs and special projectiles; 51 types of fuses, primers, gaines, etc.; 25 types of cartridge cases; and 52 types of steel and wooden boxes, cylinders and containers. In addition to $100,000,000$ shells and bombs produced to the end of August, 1944, Canada has turned out $4,000,000,000$ rounds of small-arms ammunition.

At the end of 1944, more than 130 plants engaged in making shells and in producing other ammunition components employed 85,000 men and women.

Aside from the expenditure of private capital, the Government has spent about $\$ 200,000,000$ in constructing plants for the output of ammunition of all kinds. This includes capital investment in chemicals and explosives, ammunition filling, component manufacture, and some raw material projects.

As shell manufacture expanded, management also underwent an evolution. Originally under the Department of National Defence, administration of this key part of the war program was transferred to the Department of Munitions and Supply. Late in 1940, when the British Commonwealth was standing alone, the Canadian munitions program was again expanded.

Working in close co-operation with the Ammunition Production Branch are the Chemicals and Explosives Production Branch of the Department and Allied War Supplies Corporation, a Crown Company, which built and supervises the Dominion's chemicals and explosives projects.

Ammunition does not merely consist of hollow pieces of steel loaded with an explosive. Many parts call for exacting workmanship and precision. Shells must be machined to the closest of tolerances and fuses are often extremely intricate.

As an example of the tremendous amount of work involved in the production of ammunition, it takes 574 operations to produce a complete round of $3 \cdot 7$-inch anti-aircraft ammunition boxed ready for shipment and 5.6 man-hours per round to produce the empty components, fill them and pack them in a service box. This does not take into account the raw materials and their handling to the primary contractors for fabricating into the finished article. To produce the shell itself, filled, requires 63 separate and distinct operations and the cartridge case, including loading, 54 operations.

Through technical improvements, greatly increased production has been possible with a relatively small amount of equipment. Conservation and substitutions in materials, redesigns of components and reductions in machining operations have contributed to the saving of many tons of material, and many thousands of dollars in operating costs.

The following figures show the unit production of ammunition, containers, etc. up to the end of June, 1944:-

|  | No. |  | No. |
| :---: | :---: | :---: | :---: |
| Shells, empty . . . . . . . . . . | 67, 245, 864 | Steel service packaging. | 13,882,231 |
| Sbells, filled............... | 49,080,000 | Wooden service boxes.. | 3,236,274 |
| Cartridge cases, empty..... | 116,491,866 |  |  |
| Curtridge primers, filled | 52,712,665 | Cylinders and containers.... | 52,058,857 |
| Fuses, primers............ | 170,014,382 | Small-arms ammunition |  |
| empty | 37,546,506 | boxes | 8,315,060 |
| Bombs and other projectiles, | 1,510,506 | Small-arms ammunition | 3,800,000,000 |
| filled. | 24,739,851 | Shipping containers | 6,801,729 |

Two-thirds of the $100,000,000$ projectiles produced were standard shells including armour-piercing shot, and practice and proof shells. The other one-third comprised bombs and other projectiles such as grenades, several types of depth charges, piat projectiles, and other rocket-like missiles. Canada had, by 1944, produced more than $7,500,000$ anti-tank mines and smoke generators, which come within the heavy-ammunition program but are not considered projectiles.

In addition to the production of heavy ammunition, Canada had made, to the end of August, 1944, a total of $4,000,000,000$ rounds of small-arms ammunition in several types, of which the most important is the $\cdot 303$-inch rifle and machine-gun bullet, but including more than $30,000,000$ complete rounds of 20 mm . ammunition. This 20 mm . ammunition is classified in the United States as heavy ammunition, and in Germany as heavy small-arms ammunition.

More than $116,000,000$ cartridge cases have been produced since the beginning of the War.

Automobiles and Equipment.-The Canadian automobile industry has played a great part in equipping the Armed Forces of the Empire. During the period September, 1939, to the end of 1940, nearly 80,000 army-type vehicles were produced. This period was, in essence, the first step in the tooling-up process. The lessons learned after the Battle of France were applied with considerable energy and Canada was well on its way to developing full productive capacity for the manufacture of such vehicles. By the end of 1943 , close to 600,000 units of military transport and fighting vehicles had been produced in addition to large numbers of bicycles, buses, tires, replacement parts and other items.

The Canadian automobile industry has now upwards of 30,000 employees, and is producing more than 100 types of military vehicles, including universal carriers, service workshops, wireless trucks, ambulances, fire trucks, scout cars, reconnaissance cars, armoured cars, troop and ammunition transports, artillery tractors and trailers. These various types of motorized military equipment were leaving Canadian assembly lines during 1943 at the rate of approximately 3,500 units of mechanized transport and 300 combat vehicles per week-in point of value, more than $\$ 400,000,000$ for mechanized transport and $\$ 125,000,000$ for combat vehicles, or a total of over $\$ 525,000,000$ for the year. This output far outranks any other production job in the nation's history.

The 'universal carrier' is, in reality, a baby tank; it has continued in production at the rate of 900 per month, and approximately 23,000 had been delivered by the end of 1943. This efficient little armoured combat vehicle travels at a speed of over 30 miles an hour on caterpillar tracks and is easily manœuvrable on almost any terrain.

The variety of vehicles built demanded the production of over 60 different types of bodies. When war broke out, the Canadian industry had very limited facilities and very little experience in this field. To meet the heavy demand of the automotive industry, manufacturers in this field co-ordinated their resources for the production of bodies and trailers and the resulting organization, known as the Steel Body Manufacturers' Association, achieved a degree of success which .could not have been realized by any other method.

When war was declared in 1939, very little preparation had actually been planned to facilitate the production of military-type tires. As military requirements for motor-vehicles expanded so did tire production, and from the beginning of the War up to 1943 , nearly $3,000,000$ tires were produced by the tire industry for military-type vehicles.

Motor-Vehicle Control.-In peacetime the automobile industry was one of the five largest Canadian industrial enterprises with many millions of dollars invested in plants and equipment. Supplies and materials to feed this vast industry came from hundreds of subsidiaries, employing thousands of employees. A nationwide organization of dealers and distributors handled the finished products, and an army of mechanics kept these products in running order.

To divert the facilities of the industry from civilian to war needs and to assist in the mechanical maintenance of essential passenger cars and trucks, a Motor Vehicle Controller was appointed on Feb. 13, 1941.

Three major problems confronted the Control: the provision, as quickly and economically as possible, of war supplies; provision for maintaining the supply of essential civilian requirements; and the determination of the rate at which conversion from peacetime to wartime needs could be accomplished in order to conserve materials, manpower, and manufacturing facilities.

Early in 1942, the production of passenger automobiles was stopped but to take care of the needs of physicians, nurses, firefighting and police departments, and other essential classifications, 4,500 new cars were set aside as a Government 'bank'.

By January, 1942, demands from the Armed Forces had increased to a point where drastic curtailment of civilian truck production became necessary. In November, 1941, the making of trucks and buses had been placed on a quota basis, and on Mar. 14, 1942, such manufacture was banned except by permit.

Later, careful study was made of the specifications of vehicles being produced for military equipment, and models were selected of such basic design that they would meet civilian requirements. Manufacturers were then permitted to divert from military schedules certain models which were to be stripped of all military equipment and produced as commercial units. Thus, all new trucks for civilian purposes were released at the expense of the Armed Forces. Prospective purchasers had to prove their essentiality to the Motor Vehicle Control before a truck could be released. Luring 1943 only 3,600 civilian trucks were manufactured and in the first ten months of 1944 the number was 7,500 .

Tanks and Railway Equipment.-It was something new for Canadian industry to embark upon so ambitious a program as tank production. Two types were produced, the Valentine and the Ram.

The Valentine is a medium light tank officially rated at 18 tons, driven by a diesel motor. It was designed for easy manœuvrability to move with attacking infantry where fixed positions had to be assaulted. Nearly 1,400 of these Valentine tanks were shipped to Russia.

The Ram tank was probably the first piece of armament of a specifically United States type to be produced in Canada. It was patterned after the commonly known General Lee which had been developed in 1939 in the United States. After actual combat in Libya, the design was materially modified. The newly designed Ram tank was so highly thought of, after tests in the United States, that it was used as a prototype of the new M-4 tank which was developed some months later by the United States. The Ram is heavily armed, has a maximum speed of 25 miles per hour and weighs approximately 32 tons. By the end of 1943, all orders for tanks were completed and the production facilities were shifted to the production of self-propelled gun mounts which operate. on a tank chassis, tank turrets and railway equipment. The former were being produced at the rate of 150 per month and locomotives for overseas shipment at the rate of 24 per month.

In addition to the vehicles mentioned above, several other types of vehicles which required the use of armour plate were produced. These vehicles were built of Canadian-produced armour plate, a commodity practically unknown prior to the War. The program to manufacture armour plate was instituted in Canada in 1940. Production since then has shown a steady rise to over 4,000 tons per month, and the quality is unsurpassed anywhere. Many of the armour-plate hulls for these vehicles are pieced together by automatic welding, a method of production which has been highly developed in Canada. The team work displayed by the manufacturers responsible for armour-plate manufacture, its heat treatment, and subsequent fabrication, exemplifies the resourcefulness of Canadian industry.

Chemicals and Explosives.-A vital link in the industrial war effort is the production of chemicals and explosives for Canadian filling plants and for shipment overseas. The range extends from high explosives, rifle and cannon propellents, and TNT, down to intermediary chemicals and raw materials. At its peak, production was at the rate of about 10,000 tons of chemicals and explosives each week, and more than $1,000,000$ tons have been made at Canadian plants since the beginning of the War.

Canadian science has contributed notably to the development of chemicals and explosives. Canadian chemists made major contributions to improved methods of manufacturing RDX, the new super-explosive. They have devised and improved important changes in the method of manufacture of TNT and have developed a process for large-scale manufacture of fuse powders.

Hundreds of thousands of signal cartridges, flame floats, flares, smoke generators, sea markers, signal rockets, thunderflashes, lights and igniters are being shipped to the R.C.A.F., the R.C.N., the Canadian Army, and to Britain and the Allied Governments.

Chemicals Control.-Early in 1941 it became apparent that shortages of chemicals both for war and civilian purposes made necessary a close regulation of supplies. In July, 1941, a Chemicals Controller was appointed. Since inception, the Control has gradually increased the scope of its operations.

In addition to providing for the needs of war industries, the Control, since early in 1942, has been able to allocate for civilian use some of the production of Government-owned chemical plants erected to meet war needs. On Nov. 1, 1942, the Chemicals Control, in order to meet war and essential civilian needs, took over the total production of all Canadian distilleries. The distillation of highproof alcohol for potable purposes was discontinued at that date.

The production of industrial alcohol in Canada has been more than adequate for all essential domestic requirements and large quantities have been shipped to war industries in the United States.

The civilian use of such products as chlorine, coal tar, glycerine and plastic bases has been restricted in order to provide the additional requirements that the war effort has demanded.

At the instance of the Chemicals Controller, two Government plants were established in 1944 to produce penicillin in this country. The output was all allotted to the Armed Forces. Quantities for civilian use in Canada were brought in from the United States.

Sulphuric Acid and Soda Ash.-Existing facilities for making sulphuric acid were doubled in capacity and at the same time the Chemicals Controller arranged for the transportation of acid from British Columbia to Eastern Canada. In addition new methods were introduced in the explosives industry for the recovery of weak and impure sulphuric acid which had previously been allowed to run to waste. During 1943 the demand eased somewhat and Government-owned plants began diverting substantial quantities to fertilizer plants and to other civilian industries.

Communications and Signals.-The value of production of this type of equipment in 1940 was $\$ 1,000,000$; in 1943 it was $\$ 136,000,000$. There are approximately 4,500 different items in production by approximately 50 prime contractors and several hundred sub-contractors. Wireless sets and their components make up the bulk of production, but contracts cover the entire range of communication devices from telephones and telegraph supplies to the latest secret apparatus.

Twenty major types of radar equipment have been developed for a variety of applications, ranging from a type for anti-aircraft defence having 60,000 components and 270 radio tubes mounted in several large trucks to small compact airborne units for submarine detection at sea and target location on land.

Besides supplying the Armed Forces of this country, Canada is sending signals and communication equipment and supplies to the United Kingdom, the U.S.S.R., China, India, Africa, New Zealand and Australia; even the United States, despite its great production facilities, depends on Canada. for large quantities of signal apparatus.

The Iron and Steel Industry.-The production of steel, the vital commodity of war, has been almost doubled in Canada since 1939. Although steel was so scarce after the Fall of France that the whole of the Canadian war program was threatened, at no time has the lack of it caused a single serious interruption of any phase of war production or service. At the close of 1943, with most large-scale construction projects completed, and offensive preparations nearly over, more than enough was available for war wastage.

## II.-OUTPUT OF IRON AND STEEL FROM CANADIAN MILLS, 1913-43

(Long tons)

| Year | $\underset{T}{\mathrm{Pig}}$ Iron | Ferro- <br> Alloys | Steel Ingots and Castings | Year | Pig <br> Iron | FerroAlloys | Steel Ingots and Castings |

| 1926. | 757,317 | 57,050 | 776,262 | 1942. | 1,773,337 | 186,608 | 2,787,067 |
| 1927. | 709,697 | 56,230 | 907,945 | $1943{ }^{1}$. | 1,610,000 | 194,800 | 2,708,000 |
| 1928. | 1,037,727 | 44,482 | 1,234,719 |  |  |  |  |

${ }^{1}$ Estimated.
It is within the period covered by the above statement that the making of iron and steel has become a major industry in Canada. The War of 1914-18 spurred the industry to great achievements; so great was the output in 1918 that it was not surpassed until 1940.

Since 1939 Ontario has entered the picture as a producer of iron ore. A specially rich deposit is now being developed at Steep Rock Lake near Port Arthur; blast furnace capacity has been greatly increased and five new furnaces now produce 2,800 tons per day.

The most important use for steel from the standpoint of tonnage has been shipbuilding which requires an ordinary, good grade of steel plate. In making steel for guns, tanks and armoured vehicles the problem was more difficult since gun barrels, breech blocks and other gun parts call for special alloy steels made in accurately controlled electric furnaces. The Canadian technicians responsible for this development used new methods and improved processes which have reduced costs and speeded up production. Steel in bar form represents about one-quarter of the output of the Canadian mills.

Steel Control.-On June 24, 1940, the Department of Munitions and Supply set up the Steel Control. Immediately thereafter, the Minister called together the primary steel producers and elicited full co-operation with the Control in boosting production and in maintaining existing price levels.

From the very beginning steel conservation has been achieved largely by control at the source. The rolling schedules at the mills have been supervised in such a way that non-essential orders have been squeezed out and hundreds of thousands of tons of steel have been saved by voluntary and mandatory substitution of less scarce materials. Controls on the use of iron and steel in the manufacture of a large variety of end products also were instituted by other Government authorities. The Construction Control, the Motor Vehicle Control, and the Wartime Prices and Trade Board co-operated by prohibiting the manufacture of hundreds of non-essential items, by curtailing the output or use of many essential items, and by simplifying manufacturing designs.

Guns and Small Arms.-Before 1939, except for the Ross rifle, the manufacture of guns in Canada was virtually unknown. To-day, Canada is not only a leading producer of guns but is producing them at costs comparing favourably with those of any country. Some of the guns and equipment now being produced in Canada are:-

25 -pounder field guns, with equipment, trailers and tractors<br>Bofors 40-millimeter guns<br>Bofors anti-aircraft gun barrels<br>Bofors anti-aircraft guns, mountings, equipment and predictors<br>3.7-inch anti-aircraft gun barrels<br>3-7-inch anti-aircraft guns complete with equipment<br>Anti-aircraft barrels of a third type<br>Tank guns and mountings<br>Anti-tank guns<br>Anti-tank gun carriages<br>2 -inch trench mortars<br>3 -inch trench mortars<br>Bren guns

> 100-round Bren-gun magazines
> Browning aircraft machine guns
> Browning tank type machine guns
> No. 4 rifles
> Safety fuse pistols
> 12-pounder naval guns
> -inch naval guns, 2 types
> Naval gun mountings, 12 types
> Depth charge throwers
> 4-inch smoke dischargers
> Sten machine carbines
> 'Boys' anti-tank rifles
> Naval pom-poms
> Secret equipment and weapons of various types
> Gun carriages, mountings and other types

Canada has machine-gun plants that compare in size with any similar units in the world. Deliveries of small arms are now numbered by hundreds of thousands. Great quantities of the Canadian Lee-Enfield rifles (No. 4) have been shipped from a Government-owned factory; as early as the summer of 1942 production was stepped up to 4,000 rifles a month. The plant manufacturing Bofors anti-aircraft guns came into full production in 1943. This plant, prior to making gun units, was producing barrels for the same gun. The output of tank and anti-tank guns has greatly exceeded expectations.

Particularly good results have also been obtained in the output of mountings and fittings; these have proved to be more of a mechanical problem than the guns themselves.

Machine Tools.-Machine tools are the basic tools of industry. They are used in 80 p.c. of the work involved in the manufacture of guns, ammunition, cartridge cases, bombs, diesel engines, instruments and countless other items required in the prosecution of the War.

Prior to 1939, Canada's machine tools industry was comparatively small and the demands of war were, from the first, a heavy strain on the source of supply. The extent to which demands were met is shown by the following figures of machinetool production during the past four years: 1939, $\$ 4,000,000 ; 1940, \$ 15,000,000$; 1941, $\$ 23,000,000 ; 1942, \$ 22,000,000 ; 1943, \$ 20,000,000$ (approximately).

In the development of the Canadian munitions program, precision gauges that control the dimensional factors of every type of munition have been of prime importance. The highest mechanical and engineering skill is necessary in the manufacture of these gauges and Canadian workers have proved equal to the task.

Machine Tools Control.-To increase Canadian production and to buy available tools from the United States, Citadel Merchandising Company Limited, was incorporated in May, 1940. In August of the same year, a Machine Tools Controller of the Department of Munitions and Supply was appointed to co-ordinate deliveries and allocate urgently needed machines.

The Machine Tools Controller was given the power to anticipate Canada's requirements regarding the purchasing of machine tools which might be required for future contracts.

The Controller has been responsible for setting up valuable machine-tool capacity in Canada. These plants are an asset to the country and will take care of the Dominion's requirements in the future. Meanwhile, the plants have supplied a substantial proportion of Canada's needs and, by the use of certain surplus capacity, substantial quantities of tools have been shipped to the United Kingdom, other parts of the Empire, the United States, and Russia.

In 1941, cutting tools and gauges came under the jurisdiction of the Controller, who set up new capacities to manufacture them. At the same time, he prohibited the exportation of any cutting tools until Canada's requirements were satisfied. On Nov. 14, 1941, another Crown Company, Cutting Tools Limited, later known as Cutting Tools and Gauges Limited, was formed to salvage and recondition worn-out cutting tools for use in war plants.

At the suggestion of the Controller, a Crown Company, known as Machinery Service Limited, was incorporated on Dec. 22, 1941, to overhaul and rebuild used machine tools, and to recondition equipment for contractors engaged in the production of war supplies. It is manned largely by skilled tool markers released for the purpose from refugee internment camps.

Non-ferrous Metals.-Canada is the greatest producer of nickel, asbestos, platinum and radium, the second greatest producer of gold, aluminum, mercury and molybdenum, the third greatest producer of copper, zinc, lead, silver and arsenic, and the fourth greatest producer of magnesium. Details of production will be found in Chapter XII, pp. 310-317. On the basis of mining operations a large metal-processing and -fabricating industry has existed in Canada for some time, and this has been greatly expanded since the W $\operatorname{War}$ began. Certain important metals whose production is in the nature of manufacturing and not mining operations are aluminum and brass.

The aluminum industry in Canada provides what is possibly the most spectacular story of wartime expansion of any industry in any country. Aluminum production in Canada is a manufacturing industry; the mining operations to procure the raw materials, bauxite and cryolite, are conducted in British Guiana, Greenland and elsewhere, Canada being the site of the refining and processing operations because of the availability of hydro-electric power. In 1943 about 25 p.c. of all power consumed in Canada was used in this one industry, and the industry itself has been responsible for the development of much of the power it consumes.

Aluminum production over the past six years has been as follows: 1939, $163,900,000 \mathrm{lb} . ; 1940,215,000,000 \mathrm{lb} . ; 1941,424,600,000 \mathrm{lb} . ; 1942,671,700,000 \mathrm{lb} . ;$ $1943,985,300,000 \mathrm{lb} . ; 1944,936,000,000 \mathrm{lb}$. (estimated).

To provide the enormous quantities of brass for cartridge cases for both gun and small-arms ammunition, and for other purposes, two Government-owned brass mills were built and went into operation in 1941. Erected at a cost of nearly $\$ 10,000,000$, these mills, one in Montreal East and the other in New Toronto, have helped to boost the output of this all-important alloy to a rate ten times greater than in 1939. The existing privately owned brass mills, and a small pre-war government plant, also contributed largely to this output.

Metals Controls.-On July 15, 1940, a Metals Controller was appointed in the Department of Munitions and Supply. His duties were to regulate the supply, distribution and use of non-ferrous metals, industrial materials and common
metal alloys, and to encourage the production of essential metals. The Controller restricted the use of aluminum, nickel, zinc, magnesium, tin, cadmium, copper and brass, and a large number of other metals and alloys in civilian industry. In addition, by co-operation with the Armed Forces and the Production Branches of the Department of Munitions and Supply, and by mandatory orders, he brought about the substitution of less scarce metals. Supplementing the restrictions on the use of metal in civilian production imposed by the Metals Controller, restrictions on end-uses were invoked by other control authorities, principally Administrators of the Wartime Prices and Trade Board. The first of the Metals Control restrictions were issued in 1940 and as the supply situation deteriorated the controls were drastically tightened. By the beginning of 1944 most of the major base metals were in easier supply and throughout the year the restrictions were gradually relaxed. By the end of 1944 no restrictions remained on the production or use of aluminum, magnesium, lead, zinc and some other metals in. wide industrial use.

Oil Refining.-In 1943 the oil industry in Canada had 36 refineries. Of the total of 148,000 barrels per day run by all Canadian refineries, about 94 p.c. was handled by the plants of 7 large oil companies. Independent refineries accounted for only 6 p.c. of the total. Canada's petroleum requirements are supplied largely from these refineries which, fortunately, have sufficient capacity to meet the Canadian civilian and war requirements as well as those of Newfoundland. In 1942, the refineries produced $48,000,000$ barrels of petroleum fuels as compared with importations of $3,350,000$ barrels.

The demand for aviation gasoline increased to the point where it was necessary for the Department of Munitions and Supply to undertake the construction of alkylation plants for the production of blending agents to produce highoctane aviation fuels. Under the jurisdiction of the Government-owned Allied War Supplies Corporation, the first of these plants was begun in Calgary in 1942 and went into operation in April, 1943. The second was built in Montreal East and went into production in June, 1944. In addition a cumene section went into operation on Sept. 17, 1944, at the Government-owned Polymer Corporation synthetic rubber plant near Sarnia, Ont.

Rubber.-The many chemical substitutes developed to take the place of natural rubber, the supply of which was cut off when Japan entered the War, fall roughly into two categories: vulcanized synthetic rubbers, such as buna-S, butyl and neoprene; and synthetic resins.

Development of synthetic rubber has centred around the vulcanized synthetic rubber materials, and Canadian production of buna-S and butyl rubber was begun in the Government-owned Polymer Corporation plant near Sarnia, Ontario, in 1942. During the first few months Canadian rubber processors employed the synthetic rubber solely for experimental work but in August, 1943, the Rubber Control ordered the substitution of buna-S in passenger, smaller truck and, to a certain percentage, in large truck tires. To make its annual output of 34,000 long tons of buna-S and 4,000 long tons of butyl rubber annually, Polymer requires approximately 400,000 tons of coal, more than $45,000,000,000$ imperial gallons of water, $19,000,000$ imperial gallons of light-ends petroleum, $25,000,000,000$ cubic feet of petroleum gas, $2,250,000$ gallons of benzol, and enough brine to contain $18,000,000$ pounds of salt. In addition great quantities of acids, soaps and other raw materials are used.

Rubber Control.-Still vitally necessary for the carcasses of large Army, Air Force, and essential civilian truck tires, for surgical equipment, for certain cements, and for other purposes, natural rubber is in seriously short supply. As compared with a consumption of 60,000 tons in 1941, Canada was obliged to make 10,000 tons suffice in 1944. The normal pre-war consumption was about 35,000 tons. In 1944 the total consumption of rubber and its substitutes was on this basis: natural rubber, 18 p.c.; reclaim, 27 p.c.; synthetic rubber, 55 p.c.

The existing supplies of natural rubber, as well as the output of synthetics, were earmarked for direct and indirect war and essential civilian purposes.

As a result of measures adopted by Rubber Control, consumption of crude rubber for civilian purposes averaged in 1943 about 10 p.c. of what it was before the War.

Restrictive orders were not alone responsible for this saving of the priceless rubber supply. Much of it has been achieved by the use of substitutes and reclaim in the manufacture of hundreds of essential articles, including war supplies.

At the end of 1944, crude rubber was permitted only for a continually diminishing list of the most essential articles. On the other hand, the use of synthetic rubber is being steadily and rapidly extended for all purposes.

While the raw-material problem has been relieved to a considerable degree by the development of synthetic rubber production, problems of the rubber processing industries are still acute. In addition to possessing different physical properties, synthetic rubber takes longer to process and, with the demand for military truck tires still near its peak, manufacturing facilities at the close of 1944 were inadequate to supply the full demand for civilian tires.

Shipbuilding.-The Canadian shipbuilding program is a major phase of the war effort of the United Nations. Including, as it does, the expansion of shipyards, the repair and the building of naval and cargo ships, both large and small, its cost has approximated $\$ 1,300,000,000$.

Much of the expansion of the industry resulted from capital expenditures of the Government. In 1939 there were 14 fairly large yards with limited facilities and about 15 smaller boatworks. Since then the industry has been built up to comprise 21 major shipyards, four major outfitting yards, and approximately 65 smaller boatbuilding organizations. Existing yards have been greatly expanded and graving docks, piers, machine shops, marine railways, ánd a large floating drydock capable of berthing two ocean-going vessels at the same time, have been erected for ship repairs. In 1943 and until late in 1944, the industry employed more than 100,000 persons, including workers in the component and ancillary industries, and it had more than 50 berths capable of handling large ships.

To make the program possible, mines, plants, and factories in every corner of the Dominion have contributed the thousands of tons of steel shapes and plates, the engines, boilers, instruments, armament, motors, wire and cable, machinery, furnishings, and thousands of other components.

Up to Oct. 21, 1944, 1,000 vessels had been launched, including 352 freighters, tankers, victualling ships and maintenance vessels; 500 combat vessels and naval craft ranging from torpedo boats to tribal destroyers; and 148 special vessels, such as transport ferries, base ships, salvage vessels, railway barges, and large steel tugs. More than 900 of the 1,000 ships have been delivered.

SHIPS LAUNCHED UP TO OCT. 21, 1944

| Cargo Vessels and Tankers |  |
| :---: | :---: |
| 10,000-ton freighters | 292 |
| 10,000-ton tankers. ......... | 12 |
| 10,000 -ton maintenance vessels. | 3 |

| $165-\mathrm{ft}$. naval auxiliary | 2 |
| Total | 352 |

(Approximate Breakdown)

## Spaclal Vessels

Base supply ships, gate vessels, boom vessels, derrick ships, supply and salvage vessels, railway and military ferries, large steel tugs, ete.

Grand Total........... $\overline{1,000}$

Analysis of the figures of ship production up to Oct. 21, 1944, shows that $\$ 619,000,000$ has been expended for freighters and tankers; $\$ 458,000,000$ for combat ships, $\$ 58,000,000$ for ship repair, and $\$ 42,000,000$ on the expansion of shipbuilding facilities. In addition many millions of dollars have been spent on the ship conversion and small craft programs.

Typical of the individual cost of Canadian-built ships are the following: frigate-more than $\$ 1,500,000$; Algerine minesweeper-in excess of $\$ 1,200,000$; new type corvette-close to $\$ 1,000,000$; large freighter - $\$ 1,700,000$; large tanker $-\$ 2,000,000$; medium freighter- $\$ 1,250,000$; medium tanker- $\$ 1,000,000$.

Under the direction of a Controller of Ship Repairs and Salvage, extensive facilities for ship repairs have been provided. Naval and merchant vessels damaged by enemy action or other cause put into Canadian ports for repair and are refitted and provided with the latest detection and other devices.

## The Adaptation of Wartime Manufacturing to Peacetime Conditions

It is no simple task to convert and expand a country's industrial capacity from the relatively simple needs of peace to the specialized and ever-changing demands of war. The worker who makes refrigerators must be taught new skills if he is to make machine guns, and the factory that turns out bicycles must be re-tooled if it is to produce aircraft parts. It is even more difficult once a wartime industry has been built up to adapt it again to a peacetime economy. It took four years to build up Canada's wartime industrial machine: 1940 was a year of planning and of small beginnings; 1941 a ẏear of construction, of conversion and expansion, of vastly broadening plans, and of quickening output necessitated by the urgencies of war; 1942 saw a rising production, with first objectives reached and passed in the face of difficult problems and perilous conditions; 1943 was a year of output so heavy that the industrial capacity and the entire national economy were extended to the limit. Canadian employment reached an all-time high and 1943 will stand out for a long time in the history of Canada's industrial development and will rank high in the records of war achievement. It will probably take more than four years after peace with Germany to bring about the transition back to normal. Already the Government has anticipated the situation and has set up machinery for the disposal of the huge wartime surpluses that will of necessity exist when hostilities are brought to a sudden close. It is realized that the retention of certain assets now owned by the Crown will no longer be necessary and machines of all kinds, which for four years have been used for war production, will be put to the manufacture of civilian trade products. This is one
of the first problems that the Government has faced directed to the transition period and with the object of putting labour and materials to work with as little dislocation as possible to the worker, his way of living and the economy of the country.

On Nov. 29, 1943, the Crown Assets Allocation Committee was established to obtain, from all Government Departments and agencies, information as to the actual and probable surplus assets or other material that would have to be disposed of and to authorize the transfer of such assets from one Department where they were surplus to another Department requiring them. The Committee must also advise the Cabinet on questions of general policy as to the holding, use or disposal of surplus assets. Their actual disposal is handled by a Crown Company —War Assets Corporation-established Dec. 8, 1943. The Board of Directors is assisted by an advisory committee of experts and specialists who will advise on the many problems as they arise and a working liaison is established with the Wartime Prices and Trade Board so that the sale of any war surpluses will be brought within the various price formulae under the price-ceiling policy.

Various lines of industry and business have, on their own initiative, continued a gradual process of readjustment of operations to increased civilian production. They have been encouraged to do this by various actions on the part of the Dominion Government. Business has carried a particularly heavy burden of war taxation. All profits of every corporation are first subject to an income tax of 18 p.c.; then to an additional flat rate profits tax of 12 p.c.; and finally to a rate of 100 p.c. on profits in excess of pre-war "standard" profits. Where the 100 p.c. rate applies, the corporation is entitled to a post-war refund of 20 p.c. There is also a proviso that the minimum tax must be at least 40 p.c. of total profits. In addition, profits reaching the shareholder in the form of dividends are subject to the personal income tax of the recipient. Lastly, it must be remembered that, at a time when costs are increasing all along the line, price control itself sets a limit on profits. The latest Budget presented to the House of Commons, namely that on June 26, 1944, contained a number of changes in the corporation income tax and the excess profits tax designed to meet the problem of conversion from war to peace production such as: (1) Provision to spread losses over a period of several years for taxation purposes; (2) Increased allowances for research expenditures; (3) Double depreciation on new capital investments made after a date to be set; (4) Permission in approved cases to assign the refundable excess profits tax as security for loans where such loans are to be used for capital expenditures in preparation for post-war business; (5) Permission to adjust standard profits upwards by 5 p.c. of increased capital employed since the excess profits tax was introduced; (6) Establishment of a flat rate of taxation for the first period of operations of a new business; (7) Provision for charging against profits income one-half maintenance and repair expenditures in a set period.

The Wartime Prices and Trade Board has removed many of its restrictions on the production of finished civilian articles in order to enable manufacturers to plan for the reconversion period and to resume production as soon as materials and labour are available. The Department of Munitions and Supply has rescinded the order (in force since 1940) requiring a machine-tool control permit for the making of a new model. This action will assist experimental work in the development of post-war models of automobiles, refrigerators, radios, dish-washing machines, etc. Despite these relaxations, manufacturers have been warned that fabrication of the commodities concerned will be conditional upon the availability of materials and
labour and that the Prices Board will not ask for the allocation of either labour or materials except in the case of certain essential goods. Further it has been made clear that the 1941 basic price must be observed in respect of goods manufactured for civilian consumption and that what would have been an appropriate price in 1941 will be applied to commodities for which a basic period is lacking.

## PART I.-GENERAL ANALYSES OF MANUFACTURING IN THE DOMINION

## Section 1.-Growth of Manufacturing in Canada

This section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials, and values of products. Other useful comparisons are made in Table 4 and figures of consumption are given in Table 5. Tables 6 and 7 show volume comparisons.

## 1.-Historical Summary of Statistics of Manufactures for the Dominion, 1917-1943

Note.-Statistics of manufacturing from 1870 have been published, but between that year and 1917 they are not on a comparable basis to the series given below. They will be found in Table 1 in former editions of the Year Book. Statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

| Year | Estab-lishments | Capital | $\underset{\text { Em- }}{\text { Eloyees }}$ | Salaries and <br> Wages | Cost of Materials | Net <br> Value of Products ${ }^{1}$ | Gross Value of Products |

GROWTH OF MANUFACTURING INDUSTRIES

## MILLION

Summary Statistics of Manufactures.-The figures in Table 4 trace the tendencies in Canadian manufacturing industries as clearly as possible through the latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values from 1914 through the immediate post-war period and the drop in prices of commodities during the depressions following 1921 and 1930, the figures for these periods are not completely comparable. One very important figure, however, which shows the trend of development clearly, is concerned with the use of power. The total horsepower employed increased from $1,658,475$ in 1917 to $6,062,020$ in 1942, an increase of about 265 p.c. in 25 years. In the same period, horse-power per wage-earner showed an interrupted trend from 3.06 to 10.82 in 1933 and 9.46 in 1939. With the large increase in the number of wage-earners on war production, and the more efficient utilization of the equipment available, the horse-power per wage-earner dropped to $6 \cdot 22$ in 1942. The significant feature is the increase in both the absolute figures of power employed and the averages per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 reduced the averages for the years 1934 to 1937 and again for 1940 to 1942. Other interesting comparisons are the trend of value added by manufacture, per employee, and of average salaries and wages paid since 1929.

Consumption of Manufactured Products.- One of the beneficial results of adopting the same classification for external trade and for production is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from these statistics. For example, the value of all manufactured commodities made available in 1943 was $\$ 7,594,000,000$, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports.

In past years there have always been large amounts of manufactured animal, wood and non-ferrous metal products available for consumption in Canada with considerable surplus left for export. Since the commencement of the War, however, it has been necessary to export more and more of such goods to the United Kingdom, and while this has been done mainly by increasing production, Government control of consumption at home is growing stronger as the War advances. In the case of manufactured vegetable products, the figures for 1943 show large excesses of exports over imports for such products as cereal foods (including flour), canned vegetables, etc. Excesses of imports were chiefly confined to cocoa, tea, coffee and preserved fruits and fruit juices, in which cases domestic production cannot be substituted.

On balance, Canada has, in the past, imported large quantities of iron and steel, textile and non-metallic mineral products in spite of large home production. The urgent requirements for munitions of war have brought about an expansion of the iron and steel, chemical and non-ferrous metals industries that will enable Canada to meet most requirements for home consumption in the future as these industries are adjusted for peacetime needs.

Imports and exports of munitions, equipment and supplies for the Armed Forces, regardless of their component materials, are credited to the miscellaneous group in the foreign trade statistics. On the other hand, in the statistics on production these items are allocated on the basis of chief component material. For this reason it becomes impossible to compute consumption statistics by types of commodities, as was done in the past and the analysis by industrial groupings followed in previous years is now dropped from Table 5.

${ }^{1}$ Imports and exports of manufactured and partly manufactured goods for the years 1928 to 1938 are for the fiscal years ended March 31 of the following years, while for 1939 to 1942 they are for the calendar year. Net imports are total imports less foreign products re-exported.

## Section 2.-Value and Volume of Manufactured Products

Value of Manufactured Products.-In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at $114 \cdot 3$ in 1917, $155 \cdot 9$ in 1920, $97 \cdot 3$ in 1922, $95 \cdot 6$ in 1929, $67 \cdot 1$ in $1933,84 \cdot 6$ in 1937, $75 \cdot 3$ in 1939 and $95 \cdot 6$ p.c. in 1942 . Index numbers of the prices of fully or chiefly manufactured goods were: 113.5 in 1917, $156 \cdot 5$ in 1920 , $100 \cdot 4$ in 1922, $93 \cdot 0$ in 1929, $70 \cdot 2$ in 1933, $80 \cdot 5$ in 1937, $75 \cdot 3$ in 1939 and 91.9 p.c. in 1942.

Volume of Manufacturing Production.-Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The index of volume (Table 6) is based on the quantities of manufactured products reported. The industry indexes are weighted according to the values added by manufacture. The indexes for the years 1923-31 are based on the values added in
1926. The weights and products were changed in 1931, 1936 and then again in 1941. By changing the weights and products used in the construction of the index every five years, current changes in production are thereby reflected more accurately.

The physical volume of manufacturing production increased $50 \cdot 2$ from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.1 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would therefore be about $11 \cdot 1$ p.c. Exports of partly and fully manufactured goods increased from $\$ 591,-$ 830,000 in the fiscal year ended Mar. 31,1924 , to $\$ 686,876,000$ in the fiscal year 1930, the increase in exports representing about $3 \cdot 6$ p.c. of the, 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

A similar analysis of the volume of manufactures since 1929 in relation to population and exports would show that the decline in the depression preceding the present War was due chiefly to reduced exports and a cessation in production of capital equipment. As a result of the expansion in production resulting from the demands created by the War, the physical volume of production increased by 69.2 p.c. since 1939 and by 77.4 p.c. since 1929 . The chemical and allied products group, with an increase of 239.4 p.c., reported the greatest expansion in output since 1939. This was followed by the iron and its products group with an increase of $183 \cdot 9$ p.c., non-ferrous metal products $92 \cdot 3$ p.c., miscellaneous industries $62 \cdot 8$ p.c., non-metallic mineral products 50 p.c., textiles and textile products $45 \cdot 2$ p.c., animal products $3 \check{5} \cdot 4$ p.c., wood and paper products $25 \cdot 7$ p.c., and vegetable products 25 p.c. There was also an increase in the volume of consumers' goods. As was to be expected, the increase was not as great as that for the output of equipment and supplies needed by the Armed Forces. Drink and tobacco increased by 53.3 p.c., clothing $31 \cdot 9$ p.c., and food $22 \cdot 1$ p.c. These increases compare with an increase of $69 \cdot 2$ p.c. for manufacturing in general.

## 7.-Indexes of the Volume of Manufacturing Production for the Groups of the Purpose Classification, Significant Years, 1923-42

$(1935-39=100)$

## Section 3.-Production by Industrial Groups and Individual Industries

For the purposes of the Census of Manufactures, the main detailed analysis is made under a classification in which industries are grouped according to the chief component materials of the goods manufactured. This is, therefore, the grouping used in Table 9, where the statistics of individual industries are presented in detail, and in the historical series shown in Table 3. However, there are also less detailed analyses under purpose groupings given in Table 10 and under origin groupings in Table 12.

## Subsection 1.-Manufactures Grouped by Chief Component Materials

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, a number of minor changes were made, the most important being the elimination of central electric stations and the dyeing, cleaning and laundry industry from the compilation in 1936. Revisions due to these changes have been carried back to 1917 in so far as possible.

Recent Changes in Manufacturing Production.-Table 8 shows the effects of the depression, the recovery since 1933, and the impact of the present War upon the main groups of industries with regard to the numbers employed, the salaries and wages paid, and the gross value of products. Owing to the price decline during the depression, money values of both wages and of products were naturally affected more than the number of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output than that of wage-earners. Therefore, there are a number of reasons why the variation in the number of employees should be less than that of money values. The figures of Table 8 are to be compared with those of Table 6 which show changes in volume of production. Compared with 1939, the number of employees in 1942 increased by $75 \cdot 1$ p.c. as compared with an increase of 69.2 p.c. in the physical volume of production. Salaries and wages paid were $128 \cdot 1$ p.c. higher and the gross value of production 117.4 p.c. higher. Another significant change is the increase in the proportion of women engaged in manufacturing. Whereas in 1939, there were 281 females to every 1,000 males employed, in 1942 this figure jumped to 347.
8.-Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups Compared for Significant Years, 1929-42 Nore.-The highest pre-depression year was 1929, while the lowest depression year was 1933.

Detailed Statistics by Groups and Individual Industries.-Table 9 presents for the year 1942 detailed statistics regarding the individual industries under which all industrial plants in the Dominion are classified. The industries are further assembled under nine main groups according to the principal component material of their products.

The incidence of the War resulted in a re-arrangement in the rank of many industries. Industries producing supplies and equipment for the Armed Forces naturally advanced while those industries producing for the domestic consumer market declined in importance. To supply the raw materials needed by the industries engaged principally in war production, it became necessary to restrict or prohibit the manufacture of many products such as pleasure cars, radios, washing

Materials, and Values of Products of Canadian Manufacturing Industries, 1942-con.

machines, electrical equipment, household appliances, agricultural implements, etc. Though these industries were forced to change over to wartime production, the changes did not affect the value of their output and consequently their importance as producers of manufactured goods did not alter drastically. To analyse the effects of the War on any industry, it is necessary to compare the nature of the products made before the War with that of the present. This should be borne in mind in making industrial comparisons with pre-war years. For example, the number of employees engaged in the agricultural implements industry increased by 4,996 between 1940 and 1942; this in spite of the fact that the output of agricultural implements remained at about the same level. The increase was due to a changeover of some of the plants to war production. It is therefore impossible to trace industrial trends from the principal statistics alone, as published in this Chapter.

## Subsection 2.-Manufactures Classified by the Purpose of the Products

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. On the basis of percentage to gross value of production, the most striking change is in the food group which showed a substantial decline, from $28 \cdot 2$ p.c. of the total in 1922 to $22 \cdot 6$ p.c. in 1939 and $17 \cdot 0$ p.c. in 1942 . The producer materials group, which took the lead from the food group in 1923, showed a steady increase up to 1939, since when it has remained at about 32 p.c. of the total. Due to the production of war equipment, vehicles and vessels have increased from $7 \cdot 7$ p.c. in 1939 to $13 \cdot 3$ p.c. in 1942 and industrial equipment from $15 \cdot 2$ p.c. to $17 \cdot 4$ p.c. The other groups with the exception of "miscellaneous" have shown slight declines during the war years.
10.-Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, Significant Years 1922-42, and in Detail for 1942.

${ }^{1}$ For the year 1922 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this Chapter.

## 10.-Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, Significant Years 1922-42, and in Detail for 1942-continued.

${ }^{1}$ Includes "infusions".
Table 11 has been included in order to give the amount and value of each of the principal commodities produced by the manufacturing industries of Canada. The list is not intended to be complete since a large number of commodities are produced in such small quantities that it would extend the table considerably without adding proportionately to its value to include them. The commodities listed, however, cover approximately 75 p.c. of total production.

## 11.-Quantities and Values of the Principal Commodities Produced by the Manufacturing Industries of Canada, Grouped by Purpose, 1942

| Item | $\begin{gathered} \text { Unit } \\ \text { of } \\ \text { Measure } \end{gathered}$ | Quantity | Value |

## 11.-Quantities and Values of the Principal Commodities Produced by the Manufacturing Industries of Canada, Grouped by Purpose, 1942-concluded

## Subsection 3.-Manufactures Classified by Origin of the Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to the non-ferrous metals, so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods. A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumer goods, exceeds that of the mineral group. In 1942 the industries of the mineral group had by far the greatest capital investment, employed the largest number of persons and paid out the highest amount in salaries and wages, the average capital per employee was $\$ 4,980$ and average salaries and wages $\$ 1,681$. For the industries of the farm origin group the respective averages were $\$ 4,289$ and $\$ 1,207$.

${ }^{1}$ For the year 1924 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this Chapter.

A prominent feature of Canadian manufacturing development in recent years has been the rapid growth of non-ferrous metal smelting. This industry, based upon the rich base metal resources of the country, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources. The incidence of the depression resulted in a re-arrangement in the ranking of many industries; in some cases this has proved to be temporary. Under the impetus of war production, the industries engaged in producing the equipment needed by the Armed Forces, such as shipbuilding, aircraft, automobiles, miscellaneous chemical products, and primary iron and steel, advanced to higher positions.

## 13.-Principal Statisties of the Forty Leading Industries of Canada, Ranked According to Gross Value of Products, 1943

Nore.-Principal statistics of the forty leading industries for 1942 are given in Table 13, p. 386 of the 1943-44 edition of the Canada Year Book.

## Section 4.-Principal Factors in Manufacturing Production

The subjects treated under this Section, in as much detail as limitations of space permit, include capital, employment, salaries and wages, size of establishments and power and fuel used in manufacturing.

## Subsection 1.-Capital Employed

The remarkable increase in capital employed in Canadian manufactures from the beginning of the twentieth century has, of course, run parallel with the rapid growth in industrial operations. From 1900 to 1905 the capital increased from $\$ 446,900,000$ to $\$ 833,900,000$, and advanced to $\$ 1,958,700,000$ in 1915 . During this period returns were received from establishments with 5 hands or over, and, while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1942 in all establishments, irrespective of the number of employees, but exclusive of central electric stations, was $\$ 5,489,000,000$ as compared with $\$ 2,334,000,000$ in 1917, an increase of 135 p.c. while wholesale prices have declined about 16 p.c. in the same period.
15.-Percentage Distribution of Capital Employed in the Manufacturing Industries by Provinces and Industrial Groups, Significant Years, 1917-42

## 16.-Forms of Capital Employed in the Manufacturing Industries, by Provinces and

 Industrial Groups, 1942, with Totals for Significant Years, 1924-41

Subsection 2.-Employment in Manufactures
Using a base and taking the percentages of the wage-earners and the total employees in each year, and dividing these percentages into the corresponding volumes of manufacturing production (see p. 389 for the index of volume), tentative conclusions are arrived at regarding the efficiency of production per wage-earner and per employee. These indexes of the efficiency of production are, of course,
affected by the changes in the method of computing the number of wage-earners adopted in 1925, and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. Comparability exists, however, between the figures prior to 1926 and subsequent to 1930 . Table 17 shows only the latter period. Unfortunately, the period covered is rather limited for the purpose in view, but it is suggested that the reader compare these data with the comparable figures for 1917-30 at p. 421 of the 1939 Canada Year Book. Up to the beginning of the War the indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. With the outbreak of war unemployed skilled workers were first absorbed into industry, with the result that the efficiency of production was slightly bettered. As the War progressed, however, manufacturers were forced more and more, to employ unskilled workers. The decline in the effiviency of production in 1942 may, therefore, be attributed to this cause as well a to absenteeism for various causes.

## 17.-Salaried Employees and Wage-Earners in Manufacturing Industries, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1931-42.

Monthly Record of Employment in Manufactures.-Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods, and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. After the setback of 1929, employment in 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment in June, 1929, when 575,693 wage-earners were on the payrolls, was surpassed in September, 1937, with 582,305 wage-earners. With the outbreak of war the improvement in employment became increasingly rapid. A new high record was attained in September, 1942, when 1,014,030 wage-earners were employed, an increase of 80 p.c. over the same month in 1939.

Hours Worked by Wage-Earners.-From 1932, the first year for which figures on hours worked per week by wage-earners are available, to 1942, each firm was required to report the number of hours worked by all its wage-earners during the month in which the greatest number had been employed, the only exception being the years 1938 and 1939 when one week in a month of normal employment was reported. In 1938 the number of hours worked per week were compiled by sex, and a change was also made in the analysis of the weekly hours worked. Since 1940 the hours worked per week include overtime while prior to that overtime was excluded. These changes make it impossible to measure accurately the changes in the number of hours worked per week. In any case, the figures in Tables 19 to 22 do not refer to any particular month, since the month of highest employment, might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is more significant as in this case it coincides for a great number of firms engaged in the same industry.

For all wage-earners, the hours worked per week declined from 48.9 in 1932 to $47 \cdot 2$ in 1939, and reached $50 \cdot 2$ in 1942, some of this increase no doubt being due to the inclusion of overtime. Female wage-earners in 1942 worked an average 4.4 hours per week less than their male co-workers.
19.-Wage-Earners in Manufacturing, Working Specifled Numbers of Hours ${ }^{1}$ per Week in the Month of Highest Employment, 1938-42

Notz.-For hours worked per week in 1932-37, see the 1942 edition of the Canada Year Book, p. 386, and in 1940, the 1943-44 edition, p. 392.

## Subsection 3.-Salaries and Wages in Manufacturing Industries

In 1942 the 27,862 establishments covered employed 177,187 salaried employees and 974,904 wage-earners, a total of $1,152,091$ persons. Out of every 1,000 persons employed in manufacturing, 154 were classed as salary earners and 846 as wageearners; the former earned 19.9 p.c. and the latter 80.1 p.c. of the total amount paid out as remuneration for services.

The percentages of salaries are usually relatively high in both Ontario and Quebec as compared with the other provinces. Ontario has a larger proportion of females among its salaried employees than the other provinces. The same situation prevails in Quebec with regard to wage-earners, due, no doubt, to the textile industries of the province. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that of all female wage-earners engaged in the manufacturing industries of Canada, 36 p.c. were found in the textile group. Normally the percentage is much higher. In 1942 large numbers of female wage-earners were employed in the aircraft and miscellaneous chemical industries. For this reason the percentage employed in the textile industries declined.

The average salary in 1942 amounted to $\$ 1,890$ which was $\$ 144$ or 8.2 p.c. higher than in 1939. Salaried employees in Ontario with $\$ 1,977$ received the highest salary. Quebec came second with $\$ 1,892$ and British Columbia third with $\$ 1,872$. The head offices of many large corporations being located in Montreal, Toronto, Vancouver and Winnipeg tend to raise the average salaries in the provinces in which these cities are located.

${ }^{1}$ For a subdivision of annual earnings of wage-earners, by sex, see Table 26.
The average wage in 1942 amounted to $\$ 1,383$ which was $\$ 408$ or 41.8 p.c. higher than in 1939. Manufacturing industries in British Cloumbia paid the highest average wages of $\$ 1,633$, followed by Ontario with $\$ 1,463$, Manitoba $\$ 1,298$, Nova Scotia $\$ 1,295$, Alberta $\$ 1,294$, Quebec $\$ 1,259$, efc. The high figures shown for Yukon and the Northwest Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative. Statistics on the distribution of employees by provinces and groups as well as average annual earnings are given in Table 23, and for a subdivision of wage-earners, by sex, see Table 26.

Average Annual Earnings in the Forty Leading Industries.-In only four industries did the average salary exceed $\$ 2,500$ in 1942; breweries, pulp and paper, woollen cloth and bridge and structural steel. In twenty-one they ranged between $\$ 2,000$ and $\$ 2,500$, in eleven they ranged between $\$ 1,500$ and $\$ 2,000$ and in the remaining four they were below $\$ 1,500$. The lowest salaries were reported by the sawmilling and butter and cheese industries each of which includes a large proportion of small establishments.

The highest wages, those above $\$ 1,800$, were paid in four industries, in all of which the proportion of skilled workers is high and the proportion of female workers is low. The automobile industry with $\$ 2,135$ was the highest in this group, followed by bridge and structural steel with $\$ 2,007$, shipbuilding and repairs $\$ 1,846$ and railway rolling-stock $\$ 1,839$. In eleven other industries average wages ranged between $\$ 1,600$ and $\$ 1,800$ in all of which the proportion of female workers is low. In nineteen other industries average wages ranged between $\$ 1,000$ and $\$ 1,600$, while in the remaining six they were below $\$ 1,000$. This last group includes industries made up of a large number of small establishments and in which the proportion of female workers is high. Employment by sex and average annual earnings in the forty leading industries is given in Table 24, and annual earnings by sex in Tables 27 and 28,

## 24.-Salaries and Wages Paid in the Forty Leading Industries, 1942, with Comparative Figures of Average Salaries and Wages Paid in 1941

Note.-Industries ranked according to the aggregate salaries and wages paid. For a subdivision of annual earnings of wage-earners, by sex, see Tables 27 and 28.

Average Annual, Weekly and Hourly Earnings.-In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has very definitely a regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in these latter industries naturally command relatively higher wages than those employed in industries whose employees are routine workers.

The ranking of provinces and industries as regards annual earnings is in many cases different to that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture. So that, while in general the same observations apply, a close study of the differences between the averages shown in Tables 23 and 24 will be of value to the student.

Average weekly earnings of male wage-earners for manufacturing as a whole amounted to $\$ 31.75$ in 1942 , an increase of $\$ 9.52$ or 42.8 p.c. as compared with 1939. Average hourly earnings advanced from $46 \cdot 2$ cents in 1939 to $61 \cdot 9$ cents in 1942. Due to an increase of $3 \cdot 2$ hours in the working week, the increase in hourly earnings was only 34 p.c. Annual earnings at $\$ 1,558$ were $44 \cdot 8$ p.c. higher.

Female wage-earners received on an average $\$ 17.41$ per week in 1942, an increase of $\$ 4 \cdot 63$ or $36 \cdot 2$ p.c. as compared with 1939 . Hourly earnings at $37 \cdot 1$ cents were $31 \cdot 1$ p.c. higher, while annual earnings at $\$ 854$ were 38 p.c. higher.

## 25.-Average Annual, Weekly and Hourly Earnings of Male and Female WageEarners, 1934-42

| Year | Average Earnings |  |  | Hours Worked per Week |

${ }^{1}$ Exclusive of "butter and cheese" and "fish-curing and -packing" plants.
Real Earnings of Employees in Recent Years.-When the index number representing the average yearly wages is divided by the index number of the cost of living, on the same base, a measure of "real" wages is obtained. Index numbers for 1931 to 1942 are given in Table 29. In 1933, the height of the depression, real wages were 88.3 on the $1935-39$ base. From then on they rose steadily and stood at 126.8 in 1942 , an increase of about 44 p.c.

## 29.-Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1931-42

#### Abstract

Nore.-Figures on the 1917 base, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

| Year | Wages Paid | Average WageEarners | Average Yearly Earnings | Index Numbers ( $1935-39=100$ ) |  |  |

Percentages of Salaries and Wages to Net Value of Products.-Table 30 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent and taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, due to decreased industrial activity, the percentage of salaries to value added was above normal. It should be borne in mind, however, that salaried employees increased 153 p.c. during the period 1924-42 while wage-earners increased but 133 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more rapidly adjusted to the activity of the industry and wage levels likewise may be more readily adjusted to the price levels of the products.

## 30.-Percentages of Salaries and Wages Paid to the Total Net Values of Manufacturing

 Production, 1924-42| Year | Value Added <br> by Processes <br> of Manufacturet | Salaries Paid | Wages Paid | Percentages- |  |  |

${ }^{1}$ Equivalent to "net value of products"; see footnote 1, Table 1, p. 381.

## Subsection 4.-Size of Manufacturing Establishments

The size of the manufacturing establishment is generally measured either by the value of product, or by the number of employees, but each of these methods has its limitations. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to an increase in production concurrently with a decrease in the number of employees. The former measure has to be adjusted for changes in the price level; and, as between industries, it makes those in which the cost of raw materials is relatively high, appear to operate on a larger scale.

Size as measured by Gross Value of Products.-While in 1922 the 420 establishments each producing over $\$ 1,000,000 \mathrm{had}$ an aggregate value of products of $\$ 1,268,056,129$ or 51 p.c. of the total production of all manufacturing industries, the 719 establishments producing over $\$ 1,000,000$ each in 1929 had an aggregate value of products of $\$ 2,516,064,954$, or 62 p.c. of the grand total for all manufacturing establishments-a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over $\$ 1,000,000$ dropped again to 482 , their output being valued at $\$ 1,451,658,954$, or 53 p.c. of the total. With the increased production resulting from war needs, the number of plants with a production of $\$ 1,000,000$ or over jumped to 1,201 in 1942 , and their output was about 73 p.c. of the total value of manufactures.
31.-Manufacturing Establishments, Grouped According to Gross Value of Products, with Totals and Average Values of Products in each Class, for Canada, 1929, 1939, 1941 and 1942.

${ }^{1}$ Includes central electric stations and dyeing, cleaning and laundry establishments.
${ }^{2}$ Exclusive of Yukon and the Northwest Territories.

Size of Establishment as Measured by Number of Employees.-In 1923, establishments employing 501 hands or over accounted for 21.4 p.c. of the total number of employees engaged in manufacturing. By 1929 the proportion had increased to $27 \cdot 3$ p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to $20 \cdot 5$ p.c. (central electric stations included). With the recovery in production since 1933 the percentage has risen again, and in 1939 stood at $25 \cdot 6$. The same also holds true for establishments employing 101 hands or over. In 1923 they employed $58 \cdot 6$ p.c. of the total, in $1929,61 \cdot 9$ p.c., in $1933,55 \cdot 7$ p.c., in $1939,61 \cdot 5$ p.c.

The impact of the War on the concentration of war industries into large units is illustrated by the increase in the number of establishments employing 500 hands or over. In 1939 such establishments numbered 172 and employed $25 \cdot 6$ p.c. of the total number of employees engaged in manufacturing. By 1942 the number had increased to 359 and the percentage of the total employees to $45 \cdot 9$. In a further subdivision of this last group in 1942, it was found that 217 establishments employed between 500 and 999 persons, 56 employed between 1,000 and 1,499, and 86 employed over 1,500 persons. The largest plant reported the employment of 14,000 persons, with the second largest reporting over 12,000 and the third largest 10,000 persons.

${ }^{1}$ Includes central electric stations, dyeing, cleaning and laundry establishments.
${ }^{2}$ Exclusive of Yukon and the Northwest Territories.

Size of Establishment in Leading Industries.-Table 34 summarizes the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of automobiles, railway rolling-stock, aircraft, cotton yarn and cloth, shipbuilding and repairs, miscellaneous chemical products, non-ferrous metal smelting and refining, and pulp and paper; whereas in the case of bread and other bakery products, women's factory clothing; butter and cheese, and sawmills, the degree of concentration is low. This concentration is analysed in detail at pp. 52 to 56 of the report on the Manufacturing Industries of Canada, 1942, obtainable from the Dominion Statistician, price 50 cents.

## 34.-Percentage Importance of Establishments, each Employing 200 or more Persons in the Twenty-Five Leading Industries, 1942

## PART II.-PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

This Part of the Chapter is introduced by a general analysis of the concentration of the manufacturing industries in the provinces. In the sections that follow, the principal features of the manufactures of each province are brought out and finally the distribution of manufacturing throughout the principal cities and towns of the Dominion is shown.

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1942 amounted to $\$ 6,150,700,000$ or over 81 p.c. of the gross value of manufactured products of the Dominion. The proximity of Ontario to the coalfields of Pennsylvania, the water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of textiles, but in each of the other groups Ontario has the greater production. The standing of these two provinces is most nearly approached by British Columbia in the case of the wood and paper products group, where the latter province accounts for 16.5 p.c. of the gross production compared with 37.2 p.c. for Ontario and 33.5 p.c. for Quebec; in each of the other groups the positions of Ontario and Quebec lead by a wide margin. Previous to 1941, Table 1 has shown the value of production in each province, by industry. With the establishment of many vital war plants throughout Canada, it is not now possible to publish this detail, and the provincial distribution by groups instead of by industries is now given. In this way the publication of figures relating to individual establishments has, in many cases, been avoided.

## 1.-Summary Statistics of Manufactures of Each Province, Classified by Industrial Groups, 1942-concluded

The degree of concentration of manufacturing production in large units is illustrated in Table 2. In the Province of Quebec $50 \cdot 1$ p.c. of all persons engaged in manufacturing were employed in establishments having 500 or more employees, as compared with $45 \cdot 9$ p.c. for Canada as a whole. Ordinarily, Ontario ranks second in the concentration of manufacturing production. In 1942, however, British Columbia with $47 \cdot 2$ p.c. came second, this being due to the large shipbuilding plants located there. Ontario ranked third with a percentage of $46 \cdot 7$, followed by Nova Scotia with 35.7, Manitoba $32 \cdot 9$, New Brunswick 29•5, and Alberta 14.4.

## 2.-Concentration of Manufacturing Production in Each Province, 1942

| Province | Number of Establishments Employing 500 or More Persons | Percentage of Total Number of Establishments in Province | Provincial <br> Percentage of Number of Employees Accounted for by these Establishments |

## Section 1.-The Manufactures of the Maritime Provinces, 1942

In Prince Edward Island the predominant agricultural and fishery resources make butter and cheese, fish-curing and -packing, and slaughtering and meat packing the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries, as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, shipbuilding and repairs, fish-curing and -packing, sawmills, pulp and paper, and butter and cheese. In addition to this, important petroleum refineries and coke and gas plants add to the diversification of manufacturing in the Province. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries, although fish and agricultural products add to the varied output. Sugar refining and the production of railway rolling-stock also forms an important branch of manufacturing production.

${ }^{1}$ Net value is derived from gross value by deducting cost of materials, fuel and electricity.
${ }^{2}$ Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island; cotton and jute bags, iron castings, slaughtering and meat packing, fertilizers, and sheet metal products; in Nova Scotia; sugar refineries, cotton yarn and cloth, wire and wire goods, coke and gas, and petroleum products; in New Brunswick; sugar refineries, railway rolling-stock, cotton yarn and cloth, and silk and artificial silk goods.

## Section 2.-The Manufactures of Quebec, 1942

Among the assets of Quebec that have tended to develop manufacturing industries in the Province may be mentioned its natural resources of forests, water powers, minerals, and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going shipping to reach its main centres of population. Added to these natural advantages, there is a stable and industrious population, which is an important factor in industries such as textiles, clothing, boots and shoes, etc., where a large labour force is required.

The most notable change among the manufactures of Quebec, in reçent years has been the development of the non-ferrous metal smelting industry. This industry first appeared among the forty leading industries of the Province in nineteenth place in 1927. It has been in second place since 1935, and was in first place in 1942.

Quebec, with about 31 p.c. of the Dominion output, is the second largest manufacturing province. The production of pulp and paper is normally the dominant industry, but in 1942 it was displaced by the non-ferrous metal smelting and refining industry for the premier position. In addition to supplying about 7 p.c. of the gross value of Quebec manufactures, the pulp and paper industry furnishes about 50 p.c. of the Dominion total for this industry. The value of tobacco products forms approximately 88 p.c., cotton yarn and cloth 76 p.c., women's factory clothing 68 p.c., leather boots and shoes 63 p.c., men's factory clothing 56 p.c., railway rolling-stock 52 p.c., and non-ferrous metal smelting and refining 44 p.c. of the Dominion totals of these products. The Province of Quebec is thus an outstanding manufacturing province rather on account of her large individual industries than because of the diversification of her industrial activities.

## Section 3.-The Manufactures of Ontario, 1942

The gross value of the manufactured products of Ontario in 1942 represented about 50.5 p.c. of the total for the whole Dominion, while that of Quebec amounted to about 31 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario, as the following percentages show: 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the Dominion.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible; the wide range of natural resources of forests, minerals, water powers, and agriculture; a large population and excellent water and rail transportation facilities to other parts of the country, have all encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment within the Province of branch factories of United States industries, as in automobile manufacturing.

Industries producing capital or durable goods, which constitute an important factor in the manufactures of Ontario, were particularly hard hit during the early years of the depression preceding the present war. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted in a lowering of the manufacturing production of the whole Province relatively to that of other provinces less affected by these influences. With the recovery since 1933 and the expansion in production resulting from the present war these industries in general have made good recovery, and Ontario, which accounted for 49 p.c. of the gross value of all products manufactured in the Dominion in 1933, had by 1942 increased the relative value to 50.5 p.c.

Ontario also has the greatest diversification of manufacturing production of any province. Outstanding among the industries in which this province is pre-eminent are those of automobiles, agricultural implements and starch manufacture which are carried on practically in this province alone. Other important industries in which Ontario leads, with the percentage which the production of each bears to that of the Dominion total, in 1942 are as follows: leather tanneries $88 \cdot 1$, rubber goods $81 \cdot 3$, electrical apparatus and supplies $69 \cdot 9$, primary iron and steel $68 \cdot 5$, iron castings $65 \cdot 6$, fruit and vegetable preparations $62 \cdot 8$, flour and feed mills $60 \cdot 1$, hosiery and knitted goods $57 \cdot 2$, and furniture $56 \cdot 3$.

## Section 4.-The Manufactures of the Prairie Provinces, 1942

The leading industries of these Provinces are those based on their agricultural resources-their grain-growing, cattle-raising, and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The widespread use of motor-vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other provinces. Its natural resources of accessible water powers, forests, and, more recently, minerals, have given rise to quite a diversification of industrial production.

Considering the three Provinces as an economic group, slaughtering and meat packing had the largest gross production in 1942 , amounting to $\$ 159,028,040$, followed by butter and cheese with $\$ 50,693,218$, flour and feed mills $\$ 44,659,802$, and petroleum products $\$ 38,523,597$. These four industries accounted for 52 p.c. of the total production of the Prairie Provinces. Other leading industries, in the order named, were: railway rolling-stock, bread and other bakery products, men's factory clothing, miscellaneous chemical products, breweries, sawmills, etc.

## 6.-Statistics of the Leading Industries of the Prairie Provinces, 1912

## Section 5.-The Manufactures of British Columbia, 1942

British Columbia in 1942 was again the third most important manufacturing province of the Dominion. Normally its rich forests give the wood industries a pre-eminence in the Province. Due to the exigencies of the War which resulted in the establishment of a huge shipbuilding industry on the Pacific Coast, the iron and its products group displaced wood and paper as the dominant factor in British Columbia manufacturing production. As a result, the shipbuilding industry with a gross value of production of $\$ 118,243,552$ contributed 21 p . c. of the total output of the Province. This industry was in sixth place in 1940 when the output was valued at only $\$ 9,943,941$. It furnished employment to 23,806 persons or $26 \cdot 6$ p.c. of the total number engaged in manufacturing in 1942. Emphasizing the importance of the forests in the industrial life of the Province, the sawmilling industry ranked second with a gross value of production of $\$ 90,695,092$, and the pulp and paper industry fourth with $\$ 27,804,218$. Third in importance was fishcuring and -packing, based principally on the estuarial salmon fisheries. British Columbia accounted for 63 p.c. of the total production of this industry in Canada. Other important industries were: slaughtering and meat packing, petroleum products, planing mills, fruit and vegetable preparations, sheet metal products, etc. The varied resources of the Province and its position on the Pacific Coast have resulted in a wide diversification of its manufactures.

## Section 6.-Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the west the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 8, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centers, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over $\$ 1,000,000$ each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns in 1942 accounted for $92 \cdot 9$ p.c. and 92.0 p.c., respectively, of the totals for those provinces, while in the Maritime Provinces and British Columbia, where sawmilling, fish-packing, and dairying are leading industries, the proportions fell to $65 \cdot 7$ p.c. and $77 \cdot 3$ p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.
8.-Cities and Towns Each with a Gross Manufacturing Production of Over $\mathbf{\$ 1 , 0 0 0 , 0 0 0}$, Number of Establishments and Total Gross Production in such Urban Centres as a Percentage of the Grand Total, by Provinces, 1942.
Note.-Statistics published in this table are in some cases higher than the figures published in Table 10, since, in the table below are included statistics of towns with less than three establishments and production of over $\$ 1,000,000$ each. It was not possible to publish this information, except in summary form in Table 10 without disclosing the operations of individual establishments.

| Province | Urban Centres with a Gross Production of over $\$ 1,000,000$ each | Establishments <br> Reporting in Urban Centres Producing over <br> $\$ 1,000,000$ each | Total Production in Urban Centres Producing over <br> \$1,000,000 each | Total Production in each Province | Production in Urban Centres as a Percentage of Total Production in each Province |

# CHAPTER XV.-CONSTRUCTION 

## CONSPEGTUS

| Section 1. The Government and the Construction Industry. .......... | Page |  | Page |
| :---: | :---: | :---: | :---: |
|  | 444 | Subsection 3. Construction for War Purposes. | 447 |
| Subsection 1. Government Control of Construction. | 444 | Section 2. Contracts Awarded and Building Permits Issued |  |
| Subsection 2. Government Aid to Civil Housing. | 444 | Section 3. The Annual Census of Construction. | 454 |

Section 1 of this Chapter deals with the Government controls made necessary by wartime conditions, Government aid to civil construction under the Dominion Housing Acts, and contains an outline of industrial, military and civilian construction undertaken for war purposes.

Section 2 gives the value of construction contemplated, as shown by contracts awarded and building permits issued, to the end of 1944 , and is therefore in the nature of a forecast of work still to be undertaken. Section 3 combines statistics of the Annual Census of Construction in summary form; these statistics cover the bulk of building and construction work actually completed to the end of 1943 and are comprehensive inasmuch as they include all types of construction dealt with in Sections 1 and 2 that were actually completed by the end of the year stated; they are not, however, all-inclusive as is pointed out at p. 454.

## Section 1.-The Government and the Construction Industry

## Subsection 1.-Government Control of Construction*

From the outbreak of war in 1939 to 1941, the rapid expansion of industry taxed the nation's resources to such an extent that Canada was forced to impose restrictions on new construction, repairs and alterations and, for this purpose, the Department of Munitions and Supply established a Construction Control.

The Control immediately placed on a permit basis almost all construction projects other than those of a minor nature. The dollar value of total cost below which new construction, repairs and alterations could be carried on without the requirement of a licence from the Controller of Construction were progressively lowered until early in 1944 when some slight relaxation was allowed.

Restrictions on construction were indirectly imposed by regulations limiting the use of various building materials, administered by such authorities as the Timber Controller and the Steel Controller of the Department of Munitions and Supply. These and other agencies worked closely with the Construction Control.

## Subsection 2.-Government Aid to Civil Housing

The construction industry, characteristically sensitive to general economic influences, suffered far more during the severe depression of 1929-36 than most sections of industry. To alleviate depressed conditions in such an important industry, and also in recognition of the widespread benefits that result directly and indirectly from construction activity, the Dominion Government did much after 1934 to stimulate building by encouraging private construction.

[^153]The Dominion Housing Act of 1935 is outlined at pp. 473-474 of the 1938 Year Book; Part I is the only section of that Act under which loaning operations are still carried on. The numbers of loans granted under the Government Home Improvement Plan, which was in existence from Nov. 1, 1936, to Oct. 31, 1940, are shown at pp. 370-371 of the 1941 Year Book. An outline of the provisions of the National Housing Act, 1938, appears at pp. 469-470 of the 1940 Year Book. Loans made under the Housing Acts and the Home Improvement Plan between 1935 and the outbreak of war aggregated about $\$ 100,000,000$ which, of course, represented only a part of the oapital actually spent, since the borrowers contributed large amounts on their own account.

The National Housing Act, 1944.-This Act, which was passed by Parliament on Aug. 11, 1944, is administered by the National Housing Administration, Department of Finance. The following is a summary of this legislation:-

Part I of this Act is similar to Part I of the National Housing Act, 1938, but has been modified and expanded in certain important details. Loans are still made by the Government and approved lending institutions, jointly, to prospective home owners or to builders of houses for sale to occupants.

Under the new Act, the minimum loan has, in all cases, been made 50 p.c. of the lending.value, i.e., the cost of construction or appraised value of the house, whichever is the lesser, together with the cost or appraised value of the land, whichever is the lesser. The maximum loan has been increased to 95 p.c. of the first $\$ 2,000$ of lending value, plus 85 p.c. of the next $\$ 2,000$, plus 70 p.c. of any lending value in excess of $\$ 4,000$. The interest rate has been lowered from 5 p.c. to $4 \frac{1}{2}$ p.c., calculated semi-annually.

The term of loan is usually 20 years; however, in an area adequately protected by community planning and appropriate zoning restrictions, a loan may be for a term exceeding 20 years, but not in excess of 30 years. Loans are repayable in monthly instalments of principal and interest. In addition, the borrower each month pays one-twelfth of the estimated annual taxes and the lending company then pays the taxes as they become due.

The new Act provides $\$ 100,000,000$ for loans to home owners and for paying losses in respect of these loans and those made under the Dominion Housing Act. 1935, and the National Housing Act, 1938.

Part II of the Act provides for two types of loans: (1) Loans for ordinary rental housing projects which are made generally upon the same conditions as loans under Part I of the Act, except that the maximum loan is 80 p.c. of the lending value and that, in properly planned and zoned areas, the maximum te m of the loan is 25 years; (2) Loans to limited dividend housing corporations for low-rental housing projects to ensure adequate housing for people of low income.

A loan to a limited dividend housing corporation is made directly by the Dominion Government and may be for 90 p.c. of the lending value of the project at an interest rate of 3 p.c. per annum. The term of the loan shall not exceed the useful life of the project as fixed by the Minister of Finance, or 50 years, whichever is the shorter period.

A corporation to be eligible must establish the need for the project, provide sufficient equity, limit its dividends to 5 p.c., set rents and operate the corporation in a manner acceptable to the Minister. The Minister is authorized to approve life insurance companies and other lending institutions, under the jurisdiction of Parliament, investing up to 5 p.c. of their assets in Canada in low-cost or moderatecost housing projects.

The amount appropriated for loans and guarantees under this Part is $\$ 50,000,000$.

If a city wishes to clear land of slums, the Dominion Government will, under certain conditions, give financial assistance. These conditions are: (1) The land acquired must be properly planned; (2) The approval of the Provincial Government must be obtained to the acquiring of the land; (3) The land must be sold to a limited dividend housing corporation or approved lending institution which will build a low- or moderate-cost rental housing project upon it; (4) The sale price must be low enough that the housing units in the project can be rented on a fair and reasonable basis. The Government's grant will be one-half the difference between the cost of acquiring and clearing the land and the sale price to the company building the project. The amount appropriated for this purpose is $\$ 20,000,000$.

Part III of the Act is designed to extend the provisions of Part I to rural areas. The Minister is authorized to pay a lending company up to $\$ 20$, together with travelling expenses, for making a loan in a rural or remote area. A farmer's mortgage may provide for periodic payments which will coincide with the times at which he receives his income. If the farmer already has a mortgage upon his farm with an approved lending institution, this mortgage may be consolidated with one to be made under the Act to assist in the construction of a house upon the farm. The Government's advance and share in any subsequent loss is limited to the joint loan.

Part IV of the Act provides for loans by banks or approved instalment credit agencies for home improvement and home extension loans. Loans bear interest . at 5 p.c. per annum. A home improvement loan must not exceed $\$ 2,000$ on a singlefamily dwelling or $\$ 2,000$ plus $\$ 1,000$ for each additional family housing unit in a multiple-family dwelling. A home extension loan must not exceed $\$ 3,000$ for the first family housing unit created in the house and $\$ 1,000$ for each additional family housing unit. These loans are from a maximum term of 3 to 5 years. The total amount of loans which may be guaranteed is $\$ 100,000,000$ and the Government's guarantee is 5 p.c. of the total amount of loans made by a bank or approved credit agency.

Part V provides for research into housing construction and materials and for a survey of housing conditions in Canada and also for assistance by the Dominion Government in community planning.

Part VI permits the establishment of a plan for reducing term insurance to pay a loan in the event of the death of the borrower.

## Subsection 3.-Construction for War Purposes*

During the war years, the construction industry in Canada has succeeded in the biggest job it has ever faced. Since the Nazis first crossed the Polish frontier in 1939 to Dec. 31, 1944, the Canadian Government has awarded contracts for construction projects and equipment installations to a total value of approximately $\$ 1,422,000,000$ (figures of actual expenditures are likely to be slightly lower). This total comprises commitments approximating $\$ 765,000,000$ for new or expanded industrial production facilities (including contracts for $\$ 63,000,000$ awarded by the Defence Projects Construction Branch); approximately $\$ 417,000,000$ in contracts for barracks, hangars and other projects for the Armed Services awarded by the Defence Projects Construction Branch; $\$ 80,000,000$ for projects of Wartime Housing Limited; $\$ 25,000,000$ for miscellaneous capital investment; $\$ 52,000,000$ for airports and runways; and $\$ 83,000,000$ for miscellaneous defence works. In addition, large sums have been spent by private companies for industrial expansion to undertake war contracts. The summary statistics given above include the figures shown in Table 2 and also cover $\$ 800,000,000$ worth of contracts let for plant expansion all over Canada as well as certain other items.

Construction has been for many years one of the important industries of Canada. At the beginning of the century, it was thriving; settlers and capital were rushing in and railways were under construction. In 1912, building contracts exceeded $\$ 453,000,000$, but the War of $1914-18$ brought sharp declines. It was a war in which Canadians did much fighting but relatively little building.

[^154]In the present war the need for men is just as pressing, but the need for machines of war is so much greater that no comparison with the War of 1914-18 is justified. To turn out such machines, through all the varied processes from obtaining the raw material to packaging the final product, many hundreds of new plants have been constructed and enormous quantities of new equipment manufactured. For the first time in more than a century, Canada's own shores were seriously threatened, creating a new and unfamiliar need for defence works to be built on Canadian soil.

Since the beginning of the War, more than 701 hangars and hangar-type buildings have been erected. In all, 195 airfields have been built. Paved runways on these fields equal a highway extending from the Atlantic to the Pacific and back as far east as the Rocky Mountains. The construction work for the British Commonwealth Air Training Plan, alone, involved the erection of more than 5,506 buildings. Aircraft plants, employing over 100,000 men and women, have been built up almost from nothing. Shipbuilding and munitions plants, dry docks, and other shiprepair facilities, and coastal defence batteries have sprung up. Millions of dollars have been spent on power development and transmission lines. A $\$ 51,000,000-$ plant, capable of turning out sufficient synthetic rubber to meet all Canada's wartime requirements, has been erected. More than 17,300 dwellings for war workers have been built in areas where congestion was acute, as well as 1,075 homes for families of men in the Armed Services. The tremendous construction work involved in the expansion of the chemical, mineral and metal-working industries is covered in Chapter XIV of this volume.

The Defence Projects Construction Branch, established by the Defence Purchasing Board a few months before the outbreak of war, was taken over by the Department of Munitions and Supply which came into being in April, 1940. The primary function of the Branch was to handle the business arrangements for defence construction contracts. In addition, it handled some of the industrial construction work done by or for the Department of Munitions and Supply. As the demand for munitions developed, the Branch arranged for the construction or enlarging of some manufacturing plants and factories, but most of the plant expansion has been arranged by other Branches.

Until the spring of 1940, the value of contracts awarded was comparatively small, but after the Fall of France the volume greatly increased. The construction of schools for the Air Training Plan went forward as fast as the drawings and specifications could be turned out; military training centres were ordered for completion within six weeks; aircraft factories were started; and work on munitions plants commenced.

After the initial rush, the volume of new contracts declined in the winter of 1940-41, and increased only slightly during the following spring. However, when the Japanese struck in the Pacific, construction projects climbed rapidly to an all-time high. Defence works were rushed to completion on the Atlantic and Pacific Coasts and new training schools were erected for the Navy and the Air Force.

In the winter of 1942-43 the volume of new work dropped off sharply but continued at a substantial level until the end of 1943 . During 1944 comparatively few new projects were handled for the Department of Munitions and Supply; up to the end of October commitments totalled only $\$ 41,000,000$.

By February, 1941, the Department of Munitions and Supply had decided upon definite measures to relieve housing pressure in congested areas. Wartime Housing Limited, a Crown Company, was created by Order in Council and charged
with the duty of finding accommodation for war workers and their families in areas where the need for government action was apparent. Where possible, the Company obtained lands from the municipality, always with a view to getting improved property. Where a property was improved, it was borrowed for the duration of the War; where it was not improved, new townsites had to be constructed. In this way, entire new communities were set up by the Company to accommodate plants located in remote areas. Up to May 31, 1944, Wartime Housing Limited had either erected or had under construction the following buildings in connection with war workers:-

17,344 Houses
69 Staff houses
15 Bunk houses
3 Men's centres
10 Women's centres
19 Dining halls
30 Schools
2 Manning pools
7 Administration buildings
1 Marine school

1 Port control building
20 Community halls
2 Chinese living quarters
1 Building for coloured people
2 Hospitals
1 General store
1 Help's quarters
1 Hiring hall
1 Wood camp
4 Waterworks buildings

The housing situation on May 1, 1944, had become very acute in a number of municipalities. While the situation affected the general population, it was found that the families of men in the Armed Services were under a handicap in securing proper housing accommodation because the head of the family was, in a large number of instances, overseas. It was therefore decided that, where a municipality could show a definite need for housing, the Government would proceed with the construction of houses for the families of persons in the Armed Services. Under this plan, up to Sept. 30, 1944, Wartime Housing Limited had built or was building the follow-ing:-

## 2.-Construction Contracts (Commitments) Awarded for War Purposes Through the Department of Munitions and Supply, 1940-44

Nore.-In addition to the totals shown, orders have been placed by the Department of Transport for defence construction work on account of the U.S. Forces and other agencies. The Department of National Defence had incurred expenditures for war projects not included above, largely where Service labour has been used. In addition, substantial construction work has been undertaken by private companies, notably the Aluminum Company of Canada Ltd.

## Section 2.-Contracts Awarded and Building Permits Issued

In this Section barometric statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the Census of Construction. Further, values of contracts awarded, and especially of building permits, are estimates (more often underestimates) of work to be done. Obviously, these statistics and those of Section 3 cannot be expected to agree, since much work contracted for towards the end of any one year is often not commenced until the next and, especially as regards big contracts or contracts undertaken late in any year, extends into more than one year. The figures here given are, therefore, supplementary to those of Section 3 and are valuable as showing from year to year the work immediately contemplated during the period.

Construction Contracts.-The value of construction contracts awarded during 1944 showed an increase of 41.7 p.c. over the 1943 total. The major share of the increased building activity was in residential construction, although the industrial classification also showed a sharp gain. Despite unprecedented difficulties in securing materials and an acute shortage of skilled and common labour, the industry as a whole experienced a busy year.

The building spotlight was on residential construction, which increased $65 \cdot 9$ p.c. over 1943. The easing of construction control restrictions during the year permitted a sharp upsurge in apartment building, and the pent-up demand for residential building continued to manifest itself as in previous years. This classification has been the strongest and the steadiest in the building industry throughout the war years.

Industrial construction showed an increase of $78 \cdot 7$ p.c. over 1943 , reversing the trend in 1943 when industrial construction dropped sharply from its wartime peak achieved in 1941 and 1942. Many permits were granted during the year to companies for the building of factories in preparation for post-war civilian production, both for the consumer market in Canada and for export.

Total business or commercial construction for 1944 was up $12 \cdot 5$ p.c. from the total for 1943. With one exception, every subdivision within this classification showed an increase of from 3 p.c. in hotel and club construction to 121 p.c. in store construction. The value of engineering construction was practically unchanged from the previous year, showing an increase of only 0.8 p.c.

Building Permits.-Statistics of building permits were first collected in 1910, when the series covered 35 cities; in 1920 it was extended to cover 58 municipalities, including unincorporated suburban areas as, with the advent of the automobile, a growing percentage of persons working in cities were residing outside the municipal boundaries of the cities in which they earned their living. In 1940 the series was again extended to cover 204 municipalities.

Building permits issued in 1944 registered an increase of 61.5 p.c. compared with 1943.

## 5.-Values of Building Permits Issued by 204 Municipalities in Canada, 1943 and 1944

Nore.-Statistics for these series covering years previous to 1943 will be found in the corresponding table of earlier editions of the Year Book. For the 35 cities marked - the record goes back to 1910; the 23 places marked o were added in 1920.

5.-Values of Building Permits Issued by 204 Municipalities in Canada, 1943 and 1944-
concluded

The indexes given in Table 6 show, as far as possible, the fluctuations in building costs and their effect upon construction work and employment. At various times attempts have been made to determine the relative proportions of material and wage costs in general building; such proportions vary with the type of building and the centres studied, and accurate and representative data are difficult to obtain. Pre-war experience, the result of a study made in 15 cities, indicates that the average proportions of materials to labour in all kinds of construction were about
two-thirds for the former to one-third for the latter. The increase in the cost of building operations in the war years has probably been much more than is indicated by the increase in the indexes of wholesale prices and wages shown in Table 6 and the proportions of these items to total costs have, no doubt, undergone some variation due to changes in types and methods of construction and to the greater use of machinery.

## 6.-Values of Building Permits Taken Out in 35 Cities and Index Numbers of the Building Construction Industries, 1930-44

Nore.-These cities are the 35 referred to ( $\bullet$ ) in Table 5. Figures for the years 1910-29 will be found at p. 422 of the 1942 Year Book.

Employment in Building Construction, 1944.-The Dominion Bureau of Statistics makes current surveys of the employment afforded by industrial establishments normally employing 15 or more persons. The index of employment in building construction, calculated (1926 average $=100$ ) from data furnished by some 1,110 employers, averaged $95 \cdot 3$ in 1944 a drop of $64 \cdot 9$ points from the 1943 index.

## Section 3.-The Annual Census of Construction

The annual Census of Construction undertaken by the Dominion Bureau of Statistics covers all construction, maintenance and repair work undertaken by contractors, builders and public bodies (except the smaller municipalities) throughout Canada. It does not include maintenance and repair work on steam and electric railways, telegraph and telephone systems and the lesser public utilities when such work is done by the employees of these concerns in the ordinary way: nor can it include a substantial amount of construction in the aggregate done by farmers and other individuals who might be otherwise unemployed, performing work on their own structures. It is doubtful whether a great deal of the work of railways and utilities is construction in the sense understood in the census: for instance, the routine "maintenance of way" expenditures, so far as they relate to inspection work, are not construction although, so far as they concern rebuilding of line for roadbed or structures, they might be said to fall in that category.

The following statement shows the expenditures by steam and electric railways, telegraph and telephone systems. Most of this work is done by employees but, as a proportion is also done by contractors, some duplications would result if these totals were added to the value of general construction as shown in Tables $\mathbf{7}$ to 10.

EXPENDITURES BY STEAM AND ELECTRIC RAILWAYS, AND TELEGRAPH AND TELEPHONE SYSTEMS ON MAINTENANCE OF WAY AND STRUCTURES AND MAINTENANCE OF EQUIPMENT, 1940-43.

${ }^{2}$ Includes value of additions and extensions.
Industrial Statistics of Construction.*-A census of construction was made by the Dominion Bureau of Statistics for 1934, but the basis of compilation was not standardized until 1935 so that, with the completion of the 1943 figures, comparable statistics are now available covering the years 1935-43. Summary statistics are given in Tables 7, 8 and 9.

No relationship exists between the total value of construction as shown in these tables, and the value of contracts awarded as indicated in Table 3 of Section 2, p. 450. In the latter case all values are included as soon as awards are made, irrespective of whether the contract is completed or even begun in that year, whereas the following tables cover construction work carried on and actually performed in the calendar year.

* Revised in the Construction Statistics Branch, Dominion Bureau of Statistics.

## 9.-Principal Statistics of the Construction Industry in Canada, by Provinces and Groups, 1943

Note.-Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

Table 10 classifies the various types of construction carried out in 1943. The item "Trade Construction" covers such items as brick laying, carpentry, plumbing, heating, electrical work, etc., reported by contractors who confine themselves to a specific type of work. Details by provinces and more complete information regarding the industry will be found in the Bureau's reports on the construction industry.

## 10.-Description, Classification and Value of Construction in Canada, 1943

Nots.-Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

In Tables 11 and 12 the employment figures, shown on a monthly basis, reflect the fact that the industry is not as decidedly seasonal as is sometimes thought. The month of highest employment in the industry as a whole, in 1943, was July with 154,462 wage-earners and the lowest was December with 104,054.

## General Review

External trade in commodities is only a part, though a very important part, of the broader field made up of the international exchange of values comprising goods, services, securities, etc. This relationship is shown in its proper proportions in Part III of this Chapter. However, since commodity exports and imports constitute the largest factor in Canada's international transactions, and the one in which the greatest majority of Canadians are most vitally interested, this Chapter is devoted chiefly to the consideration of commodity trade. During the war years, commodity movements and destinations have been quite abnormal and have given rise to a situation that is already causing some concern, in its bearing on post-war trade, but for which plans are being made. The salient aspects of this situation are summarized here.

When the volume of Canadian war production is reduced, both the size and composition of Canadian exports will undergo marked changes. In any attempt to analyse post-war conditions of trade, certain facts must be realistically examined. The national income of Canada for the latest pre-war year, 1938 , was $\$ 4,288,000,000$; in 1943 it is estimated to have reached $\$ 8,724,000,000$; and in 1944 about $\$ 9,186,000,000$. This high level has been attained under the impetus of all-out war and the almost unlimited demands for exports of foodstuffs and munitions. In order to maintain present standards of living in Canada, to keep employment at a high level, and to provide for the social legislation already on the statute books, it has been estimated that the national income in post-war years should be not less

[^157]than $\$ 6,000,000,000$. The actual amount of the national income will, of course, be influenced to a large extent by the general level of prices after the War, but to enjoy in normal times a national income of this size, it requires little reflection to see that exports, upon which the Canadian economy turns, must be maintained on a basis substantially in excess of the 1938 or 1939 level. In 1938 Canada exported $\$ 340,000,000$ worth of goods to the United Kingdom, while importing therefrom only $\$ 119,000,000$ worth. From the Unites States the Dominion purchased $\$ 425,000,000$ worth of produce, while selling to that country only $\$ 270,000,000$ worth. This, in broad outlines, was the pre-war picture-one which, by force of circumstances, may be greatly changed in the post-war period. The truth is that the impoverishment of Europe and especially the financial effects of the War upon Canada's best customer, the United Kingdom, has upset entirely the post-war balance of creditor and debtor nations and, therefore, will profoundly influence future movements of trade. The United Kingdom will emerge from the War with a large proportion of her foreign investments liquidated and a huge load of debt. Certain other countries that have been occupied by the enemy will be in a still worse position, and the need to buy from countries that buy from us will be an important consideration in trade.

In 1938 only 27 p.c. of Canadian exports went to countries outside the United Kingdom and the United States. If, in the years to come, export volume is to be maintained at the required level to sustain a national income of $\$ 6,000,000,000$ or more, then a great increase in Canadian trade with the countries of the world, outside the United Kingdom and the United States, must be the goal; Canada must also be prepared to import more goods from the United Kingdom; and imports and exports with the United States must be brought more closely into balance. The Department of Trade and Commerce has done much to prepare the way for the building up of Canadian post-war trade (see pp. 472-473) but plans to meet the post-war situation will depend as well, and largely, on the sort of international economy that will be set into operation by the United Nations. Whether this will permit of multilateral trading, under which nations will be able to spend their external incomes in countries of their choice under a system of free currency exchange, or whether the world will revert to the pre-war narrowing and constrictive aspects of separate bilateral arrangements remains to be seen. At any rate, there will undoubtedly be a transition period during which conditions will not permit of the immediate introduction of a freely functioning world system. The transitional problems themselves will prevent the working of any such ideal scheme. Those countries of Europe and Asia that have suffered serious damage from enemy occupation will need time and sympathetic assistance to rehabilitate themselves but the problem will be broadened by the widespread interference that the War has brought to world-wide basic economic relationships that may take many years to reestablish.

The transition years, therefore, hold no promise of easy adjustments. New problems, almost as challenging as those that have been successfully overcome during the War, will have to be met on the basis of financial perspectives broadened by the War and on entirely different lines to pre-war experience.

Since the United Kingdom and the United States have loomed so large on Canada's pre-war trade horizon, it is of special significance that the influences affecting post-war trade with these two nations should be analysed in more detail.

Influences Affecting Post-War Trade with the United Kingdom.-It is probable that sterling will not be freely convertible for a period after the War. If this proves to be the case, there must continue to be some special financial provisions for meeting the difficulties which this situation creates in Canada's international accounts. This inconvertibility of sterling, which first occurred at the beginning of the War, has required that close attention be given to the balance of all payments between Canada and the Sterling Area, and to means of settling that balance.

Pre-war trade with the United Kingdom and other parts of the Empire was very important because it provided an outlet for many of Canada's surplus commodities particularly in the field of agricultural and other primary commodities.

A large part of the munitions production of the Dominion has been for British account. The great expansion in agricultural production also has been mainly to provide the United Kingdom with food, some of which was formerly obtained from, other countries. The financial problems that have accompanied this contribution by Canada to the War have been successfully met by a series of specially designed financial measures which have been part of the wartime financial background of the Dominion. These are reviewed briefly.

Outstanding among these measures have been Canada's $\$ 1,000,000,000$ contribution of 1942 to the United Kingdom and the Canadian Mutual Aid program of the latter years of the War. The appropriations for these two forms of aid to all countries totalled $\$ 2,800,000,000$ by 1944 . During the earlier years of war the repatriation of Canadian securities from the United Kingdom totalling about $\$ 700,000,000$, and the accumulation of sterling balances, later converted into a $\$ 700,000,000$ loan to the United Kingdom, were among the prominent methods employed in balancing Canada's accounts with the United Kingdom. Another important contributing factor was the high level of overseas war expenditures of the Dominion Government in connection with the Canadian Forces operating abroad. Other wartime factors have also contributed to the successful financing of the record level of exports during the War.

The Mutual Aid program first introduced in 1943 is the most recent method of ensuring that the requirements of the Allies for Canadian war supplies will be met. It is a recognition of the necessity of providing a method of financing Allied needs for Canadian goods and services which it is decided should be supplied for the prosecution of the War. The Canadian Mutual Aid Board disburses the funds to the Canadian producers and arranges for the transfer of the goods or services to the Allies. A feature distinguishing Mutual Aid from earlier forms of Canadian financial assistance is that under Mutual Aid Canada makes arrangements directly with each nation receiving Canadian supplies, whereas earlier procedures were to assist Britain to obtain Canadian dollars to purchase her own requirements in Canada, and also to purchase some supplies in Canada which were later turned over to Russia and other countries.

The variety of commodities shipped to the Allies under Mutual Aid is very great. While the bulk of the commodities fall in the categories of food and munitions, there are also shipments of some of the materials that are essential in carrying
on a war. Details of the commodities shipped will be found in the reports of the Canadian Mutual Aid Board. A broad division of Mutual Aid by countries is revealed by the distribution of Mutual Aid expenditures up to Mar. 31, 1945 (preliminary figures), under the following headings:-

| The United Kingdom. | . $\$ 1,395,210,000$ |
| :---: | :---: |
| The Union of Soviet Socialist Rep | 104,862,000 |
| Australia ${ }^{1}$ | 66,623,000 |
| New Zealand ${ }^{2}$ | 2,256,000 |
| China ${ }^{1}$ | 20,967,000 |
| France..... | 14,866,000 |
| India..... | 38,034, $4,756,000$ |
| Total. | 81,648,174,000 |
| Expenditures for administration. | 78,699 |
| Total Expenditures | \$1,648,252,699 |

${ }^{1}$ These figures represent the accounts actually paid up to Mar. 31, 1945; the value of shipments up to that date substantially exceeds the accounts paid in the case of U.S.S.R., Australia and China. ${ }_{2}^{2 \mathrm{Be}-}$ came effective July 1, 1944.

When abnormal wartime demands subside, it is logical to expect that exports of Canadian commodities to the United Kingdom will decline sharply from the wartime peak, which includes such a large amount of munitions. There is the probability, however, that there will continue to be heavy British demands for some essential Canadian commodities. However, a high level of exports will be the main contributing factor to a large credit balance on current account with the United Kingdom, for exports are the predominant item in the accounts.

This will constitute a problem of financing the current account balance if sterling is not convertible. The problem will be relieved, of course, by the extent to which Canadian imports and other expenditures in the United Kingdom provide that country with Canadian funds, and the remaining gap in the current account will obviously have to be met by financial means of some kind if British purchases of Canadian merchandise are not to be curtailed.

The probable size of Canadian imports from the United Kingdom is more difficult to predict. Owing to the development of industries in Canada during the War, Canadian needs for imported goods of many types will be less than before the War. At least partly offsetting this factor, which would tend to reduce Canadian imports, is the general probability that the national income after the War will be at a considerably higher level than before the War. If this is the case, there should be larger Canadian demands for some British goods, particularly those in the quality class, which will be bought by a larger number of consumers than formerly. Canadian demands for British industrial equipment may also be heavy. The Department of Trade and Commerce has established the Import Division (see p. 473) with the object of exploring means by which imports from the United Kingdom and other countries can be increased after the War.

Under conditions of inconvertibility of exchange where bilateral balances must be settled, the amount which remains to be financed by some special means will be reduced if Canada purchases more British goods, obtains more British commercial and financial services, or if Canadians travel more in British countries. The larger the purchase of British goods or services, the larger will be the volume of Canadian exchange which will be available to provide a means of settlement for Canadian exports, and the smaller will be the remaining balance which must be settled or financed by capital or other means.

Influences Affecting Post-War Trade with the United States and NonEmpire Countries.-Canada's commercial and financial relations with countries outside the Sterling Area will have distinct characteristics and a separate significance if sterling should be inconvertible for an extended period after the War as seems probable. Under such conditions it would be necessary for Canada to reach either a balance in current transactions with this Area or to depend upon liquid reserves or other imports of capital to finance the probable current account deficits.

It would only be under exceptional conditions that there would not be a current account deficit with the United States in the immediate post-war years, since Canadian imports from the United States are likely to be substantial in relation to Canadian exports to the United States once the production of durable goods for civilian purposes on this continent has been resumed. The range of United States commodities normally purchased by Canada is very wide. There seem to be more limitations to the range of Canadian commodities for which permanent markets in the United States are likely to exist than in the case of Canadian imports from the United States. Nevertheless, the prospects are good for exports of many Canadian commodities to the United States, such as newsprint, lumber and other wood products, if the national income of that country should continue at higher levels than before the War. There will be an additional adverse factor if gold production does not regain its pre-war level for some time.

Net payments of interest and dividends to the United States after the War may also be higher than before the War, as there has been an increase in United States holdings of Canadian securities, arising chiefly from the heavy demand for Canadian bonds in the United States. At the same time Canadian holdings of United States securities have decreased.

This prospect of a current account deficit with the United States points to the need for other sources of convertible exchange as well, since the deficits would otherwise have to be met either from Canada's liquid reserves or by other imports of capital. Canada's export trade to areas like Central and South America and to certain European countries should contribute a considerable amount of the needed exchange, for the likelihood is that Canadian commodities will be required to a greater extent than before the War in a number of these nations with convertible exchange which have been traditional markets for Canadian goods. Trade of this kind should be an important contributing factor in alleviating the prospective current account deficits with the United States.

## PART I.-THE GOVERNMENT AND EXTERNAL TRADE

## Section 1.-The Development of Tariffs

The development of tariffs as affecting Canada is outlined here under two divisions: first, a historical sketch showing phases in the growth of Canadian trade that have influenced tariff development; and secondly, the present tariff relationships with other countries. Owing to the limitations of space in the Year Book, it has been necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships at present in force, and to summarize as much as possible historical data and details of preceding tariffs, giving references where possible to those editions of the Year Book where extended treatments can be found.

## Subsection 1.-Historical Sketch of External Trade and Tariffs

A short sketch of trade and tariffs prior to Confederation is given at pp. 480-482 of the 1940 edition of the Year Book. The 1942 Year Book, at pp. 427-428, traces the development from Confederation to the adoption of the present form of preferential tariff in 1904.

The present Canadian tariff structure is built on three levels and is summarized below.

As a result of strenuous efforts to maintain and expand trade relations within the Empire, British Preferential rates were established. These consisted at first (1898) of a remission of 25 p.c. of the duties ordinarily paid but later (1900) were advanced to $33 \frac{1}{3}$ p.c. and, after 1904, took the form of a specially low rate of duty on almost all imported dutiable commodities. This is the first broad category of the tariff structure and these rates are applied to specified goods from most British countries if shipped direct to Canada. On certain goods special rates may be applied under the British Preferential tariff; these special rates are lower on those goods than the ordinary British Preferential scale.

The second stage in the tariff edifice is the Intermediate rates. These rates apply to goods that have been accorded tariff treatment lower than the General Tariff but which are not entitled to the British Preferential rate. To certain nonBritish countries, a special concession under the Intermediate rates may be granted and rates lower than the Intermediate apply by agreement.

The third class of duties is the General Tariff. This is levied on all imports that are not covered by Preferential or Intermediate rates.

British Preferential rates apply to all countries within the Empire. They may, however, be modified downwards in their application to specific countries when trade agreements are being revised or discussed between Canada and other Dominions. The whole tariff structure is a very complicated piece of administrative machinery. Almost every budget that is brought down in the House of Commons changes the incidence of the tariff in some particulars. It would be impossible at this place to attempt to discuss the tariff schedules themselves. The schedules and rates in force at any particular time may be obtained from the Department of National Revenue, which is responsible for administering the Customs Tariff.

In all cases where the tariff applies, there are provisions for drawbacks of duty on imports of semi-processed goods used in the manufacture of products later exported. The purpose of these drawbacks is to give Canadian manufacturers a fair basis of competition with foreign producers of similar goods, where it is felt to be warranted. There is a second class of drawbacks known as "home consumption" drawbacks; these apply mainly to imported materials used in the production of goods manufactured for home consumption.

Too often one-sided competition arises out of unfair practices, such as dumping or the manipulation of exchange advantages. Wide powers have been given in certain instances to supplement tariff provisions. Thus the Minister of National Revenue or through him the Customs Officials have at times been empowered to take "a fair market valuation" as a basis of applying duties to be collected. The very term "fair market valuation" is vague and open to various interpretations and has been frequently criticized, but in exceptional cases for which they are designed such valuations have proved effective.

The exchange situation as it affects the Tariff is a different problem. A foreign currency that has become considerably depreciated in relation to the Canadian dollar enables the country concerned to export goods to Canada under a very definite advantage and customs officials have been given power under conditions such as these to value imports from such countries at a "fair rate of exchange", approximately the rate before depreciation took place. Much, of course, depends on the manner in which the above powers are applied by the administrative officials and their understanding of the reasons for their application, and, while the powers of fixing "fair market valuation" and "fair rate of exchange" have been applied to meet extraordinary conditions in the past, these powers have lately been modified by clauses in trade agreements drawn up with individual countries.

The Tariff Board was established under legislation enacted in 1931 to ensure that the changes made in the Canadian tariff structure would follow a well-ordered and scientific plan. The Board is constituted of the most experienced men in tariff matters and studies their effects upon all classes of Canadian producers and consumers. It publicises requests for tariff revisions and has largely removed the element of pressure from interested parties. Since the outbreak of war, the Tariff Board has dealt mainly with appeals against specific applications of Customs duty rates (under Part II of the Tariff Board Act).

## Subsection 2.-Tariff Relationships with Other Countries

Trade agreements entered into by Canada with the United Kingdom, Eire, Australia, New Zealand, Union of South Africa, Southern Rhodesia* and the British West Indies are dealt with at pp. 383-386 of the 1941 Year Book. Reciprocal tariff arrangements of Canada with Argentina, Brazil, Chile, and Ecuador are reviewed in the 1942 Year Book at pp. 429-431. Canada's trading position as affected by commercial agreements in respect of Bolivia, Colombia, Costa Rica, Dominican Republic, Guatemala, Haiti, Panama, Paraguay, Portugal, Salvador, Spain, Sweden, Switzerland, United States, Uruguày, Venezuela and certain Belgian and Netherlands Colonies, continues as outlined in the 1941 Year Book at pp. 387-393.

Canadian trade agreements and similar commercial treaty relationship, as defined in the 1941 Year Book, were terminated automatically or suspended with several countries and colonies by application of Enemy Trading Regulations. (See pp. 473-475.) The Canadian Trade Agreement with France was not suspended as regards other French Colonies. Reduced rates of the Canadian Tariff resulting from the Trade Agreements, with France and Poland apply as formerly to goods from countries entitled to most-favoured-nation treatment in Canada, in addition to the benefits of the intermediate tariff and any lower duties of the Canada-United States Trade Agreement.

At the present time, Canada's tariff relations are affected by trade agreements, conventions of commerce or participation in treaties made by the United Kingdom with foreign powers, listed as follows:-

[^158]Empire Countries

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| United Kingdom..... | Trade Agreement signed Feb. 23, 1937; in force Sept. 1, 1937. (Modified by United KingdomUnited States Trade Agreement of Nov. 17, 1938.) | Various concessions on both sides, increasing preference formerly granted. Also extends preferential system between Canada and the Colonial Empire. Made until August 20,1940 , and thereafter until terminated on six months' notice. |
| Eire | Trade Agreement signed Aug. 20, 1932; in force Jan. 2, 1933. | Canada concedes British Preferential Tariff in return for most-favoured-nation treatment in Eire. Made for five years and thereafter until terminated on six months' notice. |
| Australia............. | Trade Agreement signed July 8, 1931; in force Aug. 3, 1931. | Each country accords the other reduced rates on schedules of goods, and otherwise (with a few exceptions in Australia) exchange their British Preferential Tariffs with each other. Made for one year and thereafter until terminated on six months' notice. |
| New Zealand......... | Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. | Exchange specific preferences on scheduled goods and otherwise concede British Preferential Tariffs reciprocally. Made for one year, but kept in force by short-term extensions. Since Sept. 30, 1941, in force until terminated by six months' notice. |
| Union of South Africa. | Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932. | Agreement extends list of preferences formerly exchanged in absence of formal Agreement. Made for five years and thereafter until terminated on six months' notice. |
| British West Indies. | Trade Agreement signed July 6, 1925; in force Apr. 30, 1927. | Exchange of specific margins of preferences. Made for twelve years and thereafter until terminated on one year's notice. A Canadian notice of Nov. 23, 1938, terminating the Agreement, was replaced by one of Dec. 27, 1939, continuing the Agreement subject to termination on six months' notice. |

Non-Empire Countries

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| Argentina. | Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941. | Exchange of most-favoured-nation treatment. May be terminated on three months' notice. |
| Belgium and Luxem bourg and Belgian Colonies. | Convention of Commerce signed July 3, 1924; in force Oct. 22, 1924. | Exchange of most-favoured-nation treatment. Made for four years and thereafter until terminated on one year's notice. |
| Bouvia | Order in Council of July 20, 1935, accepted Article 15 of the United Kingdom-Bolivia Treaty of Commerce of Aug. 1, 1911. | Exchange of most-favoured-nation treatment. May be terminated on one year's notice. |
| Brazil. | Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. | Exchange of most-favoured-nation treatment. Made for two years from Apr. 16, 1943, and thereafter for one-year periods until terminated on six months' notice. |
| Chile | Trade Agreement signed Sept. 10, 1941; in force provisionally Oct. 15,1941 , and definitively on Oct. 29, 1943. | Exchange of most-favoured-nation treatment. Made for two years from Oct. 29, 1943, and thereafter until terminated on six months' notice. |
| Colombia. | Treaty of Commerce with United Kingdom of Feb. 16, 1866, applies to Canada. | Exchange of most-favoured-nation treatment. Exchange of Notes Dec. 30, 1938, continued Treaty in force until Sept. 30, 1939, and thereafter until terminated on three months' notice. |
| Costa Rica. | Exchange of Notes with United Kingdom of Mar. 1-2, 1933, and Canadian Order in Council of July 20, 1935. | Exchange of most-favoured-nation treatment. |
| Dominican Republic. | Trade Agreement signed Mar. 8, 1940; in force provisionally Mar. 15, 1940, and definitively Jan. 22, 1941. | Exchange of most-favoured-nation treatment. Made for three years from Jan. 22, 1941, and thereafter until terminated on six months' notice. |
| Ecuador. | Modus vivendi by Exchange of Notes of Aug. 26, 1941; in force Oct. 1, 1941. | Exchange of most-favoured-nation treatment. Made for an indefinite period subject to termination on three months' notice. |
| France and French Colonies. | Trade Agreement signed May 12, 1933; in force June 10, 1933. Exchange of Notes of Sept. 29, 1934 and additional Protocol of Feb. 26, 1935, extending concessions on both sides. | As regards scheduled goods, Canada's actual Intermediate Tariff or percentage reductions from Intermediate exchanged for French Minimum Tariff or percentage reductions from General Tariff, also quota arrangements. Made for one year and thereafter until terminated on three months' notice. |

Non-Empire Countries-continued

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| Guatemala. | Trade Agreement signed Sept. 28, 1937; in force Jan. 14, 1939. | Exchange of most-favoured-nation treatment. Made for three years and thereafter until terminated on six months' notice. |
| Haitr. | Trade Agreement signed Apr. 23, 1937; in force Jan. 10, 1939. | Exchange of most-favoured-nation treatment. Made for one year and thereafter until terminated on six months' notice. |
| Netherlands, Netherlands Indies, Surinam and Curaçao. | Convention of Commerce, signed July 11, 1924; in force Oct. 28, 1935. | Exchange of most-favoured-nation treatment. Made for four years and thereafter until terminated on one year's notice. |
| ?anama. | Order in Council of July 20, 1935, accepted Article 12 of the United Kingdom-Panama Treaty of Commerce of Sept. 25, 1928. | Exchange of most-favoured-nation treatment. In force until terminated on one year's notice. |
| Paraguay. | Exchange of Notes of May 21, 1940; in force June 21, 1940. | Canadian Intermediate Tariff exchanged for most-favourednation treatment in Paraguay. In force until terminated on three months' notice. |
| Poland. | Convention of Commerce signed July 3, 1935; in force Aug. 15, 1936. | Exchange of most-favoured-nation treatment and special reductions for limited lists of goods. Made for one year and thereafter until terminated on three months' notice. |
| Portugal, including Madeira, Porto Santo, and Azores. | Trade Agreements Act of June 11, 1928, accepted Article 21 of the United Kingdom - Portugal Treaty of Commerce of Aug. 12, 1914; in force Oct. 1, 1928. | Exchange of most-favoured-nation treatment. In force until terminated on one year's notice. |
| Salvador. | Exchange of Notes of Nov. 2, 1937; in force Nov. 17, 1937. | Exchange of most-favoured-nation treatment. Made for one year and thereafter until terminated on four months' notice. |
| Spain. | Spanish Treaty Act of June 11, 1928, sanctioned United King-dom-Spain Treaty of Commerce of Oct. 31, 1922 (revised Apr. 5, 1927); in force Aug. 1, 1928. | Exchange of most-favoured-nation treatment. In force until terminated on six months' notice. |
| Sweden......... | United Kingdom - Sweden Convention of Commerce and Navigation of Mar. 18, 1826, applies to Canada. | Exchange of most-favoured-nation treatment. In force until terminated on one year's notice. |
| Switzerland......... | United Kingdom Switzerland Treaty of Friendship, Commerce and Reciprocal Establishment of Sept. 6, 1855, applies to Canada. | Exchange of most-favoured-nation treatment. In force until terminated on one year's notice. |

Non-Empire Countries-concluded

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| United States. | Trade Agreement signed Nov. 17, 1938; provisionally in force Nov. 26, 1938; duty concessions provisionally in force Jan. 1, 1939; fully in force June 17, 1939. Supplementary Trade Agreement signed Dec. 13, 1940. | Terms include grant of reduced or fixed rates on scheduled goods by both countries and mutual exchange of most-favoured-nation treatment. Made for three years from Nov. 26, 1938, and thereafter until terminated on six months' notice. Supplementary Trade Agreement provides for quota on foxes and fox skins entering the United States. |
| Uruguay. | Trade Agreement signed Aug. 12, 1936; in force May 15, 1940. | Exchange of most-favoured-nation treatment. Made for three years and thereafter until terminated on six months' notice. |
| Venezuela. | Modus vivendi signed Mar. 26, 1941; in force Apr. 9, 1941. | Exchange of most-favoured-nation treatment. Made for one year subject to renewal or termination on three months' notice; renewed annually by Exchange of Notes, subject to termination on three months' notice. |

## Section 2.-The Commercial Intelligence Service*

The Commercial Intelligence Service, with headquarters at Ottawa and branch offices in various British Empire and foreign countries administered by Trade Commissioners, is designed to promote and maintain Canadian export trade. These normal trade promotion activities have been limited during war years by the various wartime controls in Canada designed to conserve strategic materials and shipping space and also by the wartime regulation and control of import trade in British Empire countries, the United States and other markets for Canadian products under the flags of the United Nations. Thus the number of these offices was reduced in 1940 and 1941, but began to increase in 1944.

Plans have been completed, and initial steps taken, for a considerable expansion of the Service, both at Ottawa and abroad, to meet anticipated post-war needs and in order to handle the increased volume of work resulting from the detailed tasks involved in export planning and the resumption of normal trade at the close of the War.

Organization at Ottawa.-The headquarters staff is composed of a Director, an Assistant Director and eight divisions. The Director administers and unifies the work of the Service, both at Ottawa and abroad. The eight divisions are as

[^159]follows: Commodity (four)-Foods, Metals and Chemicals, Forest Products, Miscellaneous Manufactures-which record and supply information regarding export markets for Canadian commodities under these respective groupings; Directorieswhich maintains directories of Canadian exporters and of import agents abroad, including commodities handled, ratings, cables and codes used, etc.; Export Planning (see p. 472)-which co-ordinates programming and allocation of exports of commodities under control or in short supply; and Editorial-which handles the publication of the Commercial Intelligence Journal, pamphlets and other printed matter relating to trade; Import (see p. 473)-created in 1944 to explore sources, and locate supplies, of raw materials required for Canadian industries.

The four Commodity Divisions handle correspondence falling within their respective classifications with Canadian exporters and manufacturers and generally provide a liaison service between these and Trade Commissioners. Under wartime conditions these Divisions have assumed a number of duties in addition to those for which they would be normally responsible in peacetime. These have included development of export programs, in co-operation with the Export Planning Division, for manufactured products involving raw materials in short supply; procurement of essential requirements in foodstuffs and manufactured products for areas dependent on Canadian supplies and allocation of shipping space for these products, in co-operation with supply missions for these areas; advance planning of transportation to overseas shipping point of programmed products in short supply in order to avoid loss of allocated cargo space; development of programs and clearances of materials for the information of various combined Boards in Washington; and co-operation with the Mutual Aid Board in the clearance of its supply programs.

Organization Abroad.-There were 26 offices administered by Trade Commissioners at the beginning of 1944 as compared with a pre-war establishment of 34; half being in British Empire and half in foreign countries. Each office is staffed by a Trade Commissioner or Acting Trade Commissioner and several have one or more Assistant Trade Commissioners. In countries where there is a Canadian Embassy or Legation, Trade Commissioners and Assistant Trade Commissioners are attached to the Embassy or Legation staffs and have Commercial diplomatic ranks up to Counsellor grade.

Trade Commissioners and Assistant Trade Commissioners seek to promote the export trade of Canada by securing and forwarding specific inquiries for Canadian goods from importers in their territories to headquarters office at Ottawa and to Canadian exporters by studying and reporting upon business conditions and import requirements in their territories, the particular types of goods wanted, competition to be met, methods of packing and shipping, etc. They make periodical reports upon trade and financial conditions and report, as occasion requires, on tariff changes, trade regulations and exchange conditions. Their services are at the disposal of all bona fide Canadian manufacturers and producers.

Under peacetime conditions, each Trade Commissioner makes a periodic tour of Canada in order to keep abreast of Canadian industrial development. During this tour he makes direct contacts with Canadian exporters and manufacturers and supplies them with first-hand information regarding conditions of trade and opportunities in his territory.

## CANADIAN GOVERNMENT TRADE COMMISSIONERS

Note.-This list was revised as at February, 1945. Cable address of Trade Commissioners is "Canadian" unless otherwise stated. Bentley's second-phrase code is used by Canadian Trade Commissioners.

Argentine Republic-(Territory includes Uruguay.)

## Australia-

Sydney (territory includes Australian Capital Territory, New South Wales, Queensland, Northern Territory and Dependencies).
Melbourne (territory includes States of Victoria, South Australia, Western Australia and Tasmania).

## Brazil

British India-(Territory includes Burma and Ceylon.)

## British West Indies-

Trinidad (territory includes Barbados, Windward and Leeward Islands, British Guiana and Dutch Guiana).
Jamaica (territory includes the Bahamas and British Honduras).
Chile-(Territory includes Bolivia.)

Colombia-(Territory includes Venezuela, Republic of Panama, Canal Zone, Nicaragua, Costa Rica and the Netherlands West Indies.)
Cuba-(Territory includes Haiti, the Dominican Republic and Puerto Rico.)

Egypt-(Territory includes the Sudan, Palestine, Cyprus, Iraq, Syria, Iran and Turkey.)
France-(Territory includes French Colonies in North Africa.)

Ireland

Mexico-(Territory includes Guatemala, Honduras and Salvador.)

Newfoundland
New Zealand-(Territory includes Fiji and Western Samoa.)

Peru-(Territory includes Ecuador.)
South Africa-
Cape Town (territory includes Cape Province and Southwest Africa, Natal, Tanganyika, Kenya, Uganda, Mauritius, Angola and Mada gascar)
Johannesburg (territory includes Transvaal, Orange Free State, the Rhodesias, Mozambique or Portuguese East Africa, Nyasaland and the Belgian Congo).
United Kingdom-
London

London (territory covers Home Counties, Southeastern Counties and East Anglia; also British West Africa).
London

London

Liverpool (territory includes North of England, Lincolnshire, North Midlands and North Wales).
J. A. Strong, Commercial Attaché, Bartolome Mitre 478, Buenos Aires (1).
K. F. Noble. Address for letters-P.O. Box No. 3952 V . Office-City Mutual Life Building, Hunter and Bligh Streets.
F. W. Fraser, 44 Queen St., Melbourne, C.1.
L. S. Glass, Commercial Attaché. Address for letters-Caixa Postal 2164, Rio de Janeiro. Office-Ed. Metrop6le, 7th Floor, Av. Presidente Wilson 165.

Paul Sykes. Address for letters-P.O. Box 886, Bombay. Office-Gresham Assurance House, Mint Road, Bombay.
G. A. Newman. Address for letters-P.O. Box 125, Port of Spain. Office-Colonial Life Insurance Building.
M. B. Palmer. P.O. Box 225, Kingston. OfficeCanadian Bank of Commerce Chambers.
M. J. Vechsler, Commercial Attaché. Address for letters-Casilla 771, Santiago. Office-Bank of London and South America Ltd. Building.
M. T. Stewart. Address for airmail-Apartado Aereo 3562; other letters, Apartado 1618, Bogota.
J. L. Mutter. Address for letters-Apartado 1945, Havana. Office-Royal Bank of Canada Building, Calle Aguiar 367, Havana.
Richard Grew. Address for letters-P.O. Box 1770, Cairo. Office-22 Shari Kasr et Nil, Cairo.
Yves Lamontagne, Commercial Secretary, Canadian Embassy, 62 rue Faubourg Saint Honore, Paris.
E. L. McColl, 66 Upper O'Connell Street, Dublin, Eire; and 36 Victoria Square, Belfast, Northern Ireland.
C. S. Bissett. Address for letters-Apartado Num. 126 -Bis, Mexico City. Office-Edificio Internacional Paseo de la Reforma 1, 13th Floor, Mexico City.
R. P. Bower, Circular Road, St. John's.
C. B. Birkett. Address for letters-P.O. Box 33, Auckland. Office-Yorkshire House, Shortland Street, Auckland.
W. G. Stark, Commercial Secretary. Address for letters-Casilla 1212. Lima. Office-Edificio Boza, Carabaya 831, Plaza San Martin, Lima.
J. C. Macgillivray. Address for letters-P.O. Box 683, Cape Town. Office-New South African Mutual Buildings. 21 Parliament Street, Cape Town. Cable address-Cantracom.
H. L. Brown. Address for letters-P.O. Box 715, Johannesburg. Office-Mutual Buildings, Harrison Street, Johannesburg. Cable addressCantracom.
Frederic Hudd, Chief Trade Commissioner in the United Kingdom, Canada House, Trafalgar Square, S.W. I. Cable address-Sleighing, London.
J. A. Langley, Canada House, Trafalgar Square, S.W. 1. Cable address-Sleighing, London.
W. B. Gornall, Fruit Trade Commissioner, Canada House, Trafalgar Square, S.W. 1. Cable address -Canfrucom.
Acting Animal Products Trade Commissioner, Canada House, Trafalgar Square, S.W. 1. Cable address-Agrilson.
A. E. Bryan, Martins Bank Building, Water Street, Liverpool.

## CANADIAN GOVERNMENT TRADE COMMISSIONERS-concluded

| United Kingdom-concluded Glasgow (territory covers Scotland). |
| :---: |
| United StatesWashington. |
| Chicago (territory covers the Middle States of the United States). |
| Los Angeles (territory covers the Mid-Western and Western States of the United States). |
| New York City (territory includes Bermuda)... |

G. B. Johnson, 200 St . Vincent Street, Glasgow, Cable address-Cantracom.
H. A. Scott, Commercial Counsellor. Office-Canadian Embassy Annex, 1771 N. Street N.W., Washington.
J. M. Boyer, Tribune Tower Building, 435 North Michigan Avenue, Chicago.
T. J. Monty, Associated Realty Building, 510 West Sixth Street, Los Angeles.
B. C. Butler, British Empire Building, Rockefeller Centre, New York City. Cable addressCantracom.
Under an arrangement made by the Minister of Trade and Commerce with the-British Foreign Office, Canadian manufacturers, exporters and others interested in trade matters may secure information and advice from British commercial diplomatic officers and British consuls in all countries in which Canada is not represented by her own Commercial Intelligence Service.

Commercial Intelligence Journal.-The "Commercial Intelligence Journal" contains reports of the Trade Commissioners and other pertinent material relating to export trade and is issued weekly by the Department of Trade and Commerce in both English and French editions. The subscription price for either edition is $\$ 1$ per annum in Canada and $\$ 3 \cdot 50$ outside of the Dominion, and subscription orders should be addressed to the King's Printer, Government Printing Bureau, Ottawa.

The Export Planning Division.-This is a wartime development. It was established in August, 1943, with two principal objects in view:-
(1) To ensure that the limited supplies of goods available for export were directed to those countries which were dependent upon Canada and were most in need of goods.
(2) To ensure as far as was consistent with the war effort that Canada's export markets were kept open by a continuation of token shipments.

It is essential that the Uniṭed Nations, particularly those which are dependent upon imported supplies for the maintenance of their war effort, shall be assured of their minimum needs of essential goods. This object is being achieved by the planning of exports and the operation of export control.

The importance of the second purpose of the new Division, mainly that of ensuring a continued, if small, flow of merchandise to normal export markets, becomes evident when one realizes the dependence of Canada on export trade in normal times and the difficulties involved in the development of export markets. Most successful exporters have records of long perseverance, considerable expense, and much patience in the development of their export trade. The difficulties involved and the care taken in development of suitable overseas agency contacts, are valuable assets to those whose successful operation in the Canadian domestic market are largely dependent upon a large volume of export trade. It is apparent, therefore, that the retention of the goodwill of the overseas customers is worth some sacrifice to Canadian consumers. For this reason, arrangements were made and carried out to permit at least a limited export to old customers of all except goods in strategic short supply.

The execution of these two principles has involved detailed study and analysis of the requirements of overseas markets, the development of export programs for certain commodities in short supply and the development and programming of proposed exports to overseas markets.

In most overseas countries, the War brought with it varying degrees of import control. In many cases, overseas countries were not prepared to permit imports from other countries until officially notified by the supplying country that supplies would be made available. The programming of available exports by commodities and countries thus became an important factor in ensuring the continued flow of Canadian merchandise to world markets.

The Import Division.-In order to stimulate the expansion of imports and thus facilitate increased exports and a greater expansion of total external trade, an Import Division was set up under the Director in May, 1944. The chief functions of this Division are to help secure materials and supplies required by Canadian industry; to secure commodities not used by industry, but essential to Canada's economy; and to help build up goodwill and buying power in other countries. Canada, as a large exporting country, must do everything possible to assist her customers to secure Canadian dollars. The officials of the new Import Division will devote all their energies to the realization of this objective.

The Import Division will work closely with the Commodity Chiefs of the Commercial Intelligence Service and Trade Commissioners will be required to submit reports on the supply situation in their territories, particularly those items required by the Canadian economy. They will also help importers in Canada to secure good supply contacts abroad and will assist exporters in their territories to find outlets in Canada for the sale of their products. Close contact will be kept with Canadian import organizations, shipping organizations and Government agencies concerned with customs, tariffs, and exchange control.

## Section 3.-The War in Its Relation to Government Control of External Trade

In order that this Chapter of the Year Book should explain more fully the influences that are bringing about the re-orientation of trade now taking place and reflected by the statistical tables in their resultant effect only, paragraphs describing the various controls that have been organized under such legislation as the War Exchange Conservation Act, the Enemy Trading Regulations, the Shipping Priorities Committee, etc., are introduced here. Studied in conjunction with Section 1 on the tariff relationships existing between Canada and other countries, they will give to the student a more complete picture of the organization that has been established by the Government to cope with the special circumstances induced by the War.

## Subsection 1.-Canadian Wartime Restrictions

Enemy Trading Regulations.-Regulations respecting trading with the enemy, originally brought into force by Order in Council P.C. 2512 of Sept. 5, 1939, under, and by virtue of, the War Measures Act (R.S.C. 1927, c. 206), are now provided for under "Revised Regulations Respecting Trading with the Enemy (1943)" Order in Council P.C. 8526 dated Nov. 13, 1943.

#### Abstract

Because of occupation by an enemy State, or by reason of real or apprehended hostilities, the following were brought within the scope of provisions of the Enemy Trading Regulations:-

Enemy or Proscribed Territory
German Reich
Austria.
Moravia, Bohemia and Slovakia.
Poland.
Czechoslovakia.
Danzig.
Denmark.

Norway.
Netherlands.
Belgium
Luxembourg
Italy and its Possessions.
Italian Colonial Possessions.
Zara
Albania.
France-All French territory in Europe, the contiguous territories of Andorra and Monaco and the French Zone of Morocco, Algeria, Corsica and Tunisia.
Channel Islands.
Roumania.
Bulgaria.
Hungary.
Yugoslavia.
Greece.
Syria, Lebanon and French Somaliland.
Syria and Lebanon revoked
French Somaliland revoked.
Finland.
Estonia.
Latvia.
Memel.
Lithuania.
Japan (including Karafuto), Korea, Manchuria, Kwangtung Leased Territory, Formosa, Japanese Mandated Islands, Japanese Occupied China (including the whole of the Chinese Coast Line), Indo-China, International and French Concessions at Shanghai, and any other territory occupied by Japan at the time.
Thailand
Hong Kong.
Philippine Islands.
Singapore.
Malay Peninsula.
Netherlands East Indies
Burma.
State of North Borneo
State of Sarawak.

The Regulations define "enemies" and "enemy territories". Attempts to trade with the enemy, and proposals or agreements to so trade are included under the general prohibition of such trading. Other offences included in the scope of the Regulations are: dealing in the property of enemies for the purpose of enabling them to obtain money or credit thereon; aiding or abetting any person, whether resident in Canada or not, to so deal in enemy property; knowingly discharging any enemy debt, promissory note or bill of exchange, or purchasing enemy currency. Penalties for trading, or attempting to trade, with the enemy are quite severe.

In addition to the cessation of actual trading with the enemy, external trade is directly affected by the sequestration of enemy property, much of which is probably held for trading purposes. The Secretary of State is the Custodian of Enemy Property. The term "enemy property" includes such items as dividends and interest, insurance and bequests payable to such enemies. The regulations provided under the Designs, Copyright and Trade Marks Efficiency Order, 1939, relate to industrial property and prescribe the methods which are to be followed in relation to applications of enemy aliens and the disposition of rights of enemy aliens.

Notice was given by the Secretary of State on Nov. 24, 1943, that trade could be resumed with persons residing in the territories which comprise the French zone of Morocco, Algeria, Corsica and Tunisia. During 1944 permission was given persons residing in Canada to communicate with and receive communications from persons residing in the following liberated areas in Europe, subject to certain conditions: Italy, Oct. 28; France, Nov. 4; Greece, Nov. 25; and Belgium, Nov. 25. Also, permission was given residents of Canada, under certain conditions, to make remittances to residents of the following liberated areas in Europe: Sicily, Mar. 25; Sardinia and mainland provinces of Italy occupied by United Nations Forces, Apr. 8; France, Andorra and Morocco, Dec. 8 and Dec. 18.

Control of Exports.-The main purposes of export control during wartime are: (1) to prevent Canadian exports falling into enemy hands; (2) to conserve critical or strategic materials and supplies needed by Canada and the Allied Nations; (3) to aid in distributing available materials in the manner most advantageous to the carrying on of the War; and (4) to ensure equitable distribution of available supplies to markets normally dependent upon Canada for essential goods.

Export control is centred in the Department of Trade and Commerce under the Export Permit Branch, (see p. 478).

Control of Imports.-Restrictions.-Canada's inability to convert surplus sterling assets into United States dollars led to a severe shortage of 'hard currency' early in the War. This necessitated curtailing non-essential imports from the United States and other non-Empire countries, while encouraging imports from sterling areas. The War Exchange Tax (June 25, 1940) provided for a 10 p.c. tax on the value for duty of all imports from non-Empire countries and the War Exchange Conservation Act (Dec. 2, 1940) prohibited the import of a long list of consumption goods that were regarded as non-essential or that could be obtained from within the sterling area in sufficient volume to meet essential requirements. In addition, the Act made certain other products subject to import licence. These measures were supplemented by high excise taxes on many durable consumer goods, the main purpose being to discourage expansion of their manufacture in Canada as imports were eliminated or curtailed. The restrictions on imports under the War Exchange Conservation Act were repealed, effective Aug. 1, 1944, but some goods-mainly textiles, automobiles and petroleum products-were placed under import control.

The principle underlying all restrictions is that war production must be facilitated, rather than hindered, by the controls adopted. Officials of the Department of National Revenue, who administer most of the import controls, maintain close contact with controllers and administrators of the Department of Munitions and Supply and the Wartime Prices and Trade Board regarding requirements. These controls are being relaxed gradually, as conditions permit.

The War Exchange Conservation Act facilitated imports from the United Kingdom. Duties on United Kingdom cottons, artificial silks and certain other goods were removed and (on Apr. 30, 1941) imports from the United Kingdom were allowed discounts from the British Preferential Tariff of 25 p.c. on woollens, boots and shoes and 50 p.c. in the case of almost all other goods, except liquor. These tariff adjustments tended to counterbalance restrictions against certain imports from the United States and to help British importers overcome the disadvantage of rising production and transportation costs; at the same time they enabled Canada to utilize some excess sterling balances. The imposition of the retail price-ceiling on Dec. 1, 1941, necessitated further measures of this type to ensure a continued flow of essential imported goods for sale in Canada. The Wartime Prices and Trade Board assured importers that, where necessary, in view of the rising prices abroad, assistance would be provided to them either directly by subsidies provided through the Commodity Prices Stabilization Corporation, or indirectly by reduction in duties and taxes on imported goods, to enable the price-ceiling to be maintained. As preliminary measures, on Dec. 22, 1941, all special or dumping duties on imported goods (except fresh fruits and vegetables) were removed and the Minister of National Revenue was authorized by Order in Council to accept the export selling price as the basis of valuation for duty purposes in the case of commodities that are recommended to receive such treatment by the Wartime Prices and Trade Board with the approval of the Minister of Finance. In addition, on Jan. 20, 1942, an Order in Council provided that import and excise duties imposed in any country from which Canada imports goods would be disregarded in estimating the value for duty purposes.

The general principle underlying all import subsidy arrangements is that consumer goods imported will cost the importer no more than is 'appropriate' in relation to ceiling prices. The importation of war supplies has, of course, been exempted from the operation of the ceiling and of import price control.

Empire and Foreign Import Restrictions Affecting Canadian Exports.The War automatically terminated Canadian trade with enemy or enemy-occupied countries. With the rest of the world, the outgoing commerce of Canada is to a large extent affected by controls in force in many countries which subject imports to the requirement of licence from governmental authorities, quota limitations, restrictions on issue of exchange for payment of merchandise and related official supervision of purchases from abroad. Restrictive measures of this kind vary in different territories and, taken on the whole, undergo frequent modifications. The general situation remains substantially as outlined at pp. 445-449 of the 1943-44 Year Book, with the following exceptions:-

Brazil.-A Brazilian decree of Jan. 22, 1945, stipulated that a wide list of imports would be subject to the granting of import licences issued by the ImportExport Control Branch of the Bank of Brazil. The list included practically all semi-manufactured and manufactured metals including machinery, asbestos,
graphite, mica, porcelain insulators, refractories and abrasives. These measures, it was stated, were taken to ensure the maintenance and development of national industries.

Peru.-In order to preserve the exchange situation, the Peruvian Minister of Finance announced on Jan. 26, 1945, that import ticences would be required for all goods entering Peru on or after Mar. 1, 1945.

Venezuela.-Towards the end of 1943 import licensing for nearly all goods was re-introduced in Venezuela but the restrictions were relaxed by a resolution of July 1, 1944, which listed many goods as being exempt from import licence and at the same time eliminated import recommendations, hitherto required on most goods from Canada and the United States, on all but a few goods in short supply. The regulations were further amended on Nov. 18, 1944, by substituting the list of goods exempt from import licence by a list of goods for which licences are still required. The list includes about 135 of the 475 items of the Venezuelan Tariff, about 60 of which also continue to require import recommendations.

## Subsection 2.-Government Bodies Set Up to Direct and Promote Trade under Wartime Conditions

The wartime organization that has evolved under the Minister of Trade and Commerce for the control of external trade during the War years and the re-opening of normal channels with world countries when hostilities are brought to a successful end are illustrated and their interrelations shown in the chart at p. 479. Under the headings of this Subsection the functions of the various units are described.

The liberation of Allied territories, that resulted from Allied military successes, brought to the fore during the past year the need of making provision in Canada to meet the requirements of these territories for supplies both for relief and for their programs of reconstruction. The need became apparent also for making provision not only to furnish supplies but for dealing with other problems of external trade under wartime conditions and during the period of transition from war to peace.

Developments in this field include the passing by Parliament, at its 1944 session, of an Act to incorporate the Export Credits Insurance Corporation, which is designed to promote export trade by making provision for Dominion Government loans and guarantees to foreign governments or government agencies and for insurance of goods exported through commercial channels; the establishment of the External Trade Advisory Committee, a body designed for the inter-departmental consideration of problems of wartime and transitional trade; the establishment of the new division of Export Planning and an Import Division in the Commercial Intelligence Service of the Department of Trade and Commerce; the creation of the Canadian Export Board under the Department of Trade and Commerce, designed to furnish a procurement service for foreign governments; the approval by Parliament of Canada's participation in UNRRA and arrangements for the provision by Canada of supplies to meet UNRRA requirements; and, finally, controls over the export and import of many commodities were relaxed or withdrawn as the occasion warranted.

External Trade Advisory Committee.-The Committee, established under P.C. 3059 of Apr. 27, 1944, is primarily a co-ordinating body: it has the primary function of providing a medium for consultation between Departments and agencies of the Government on import and export trade matters, including relief during the period of the War and during the period of transition from war to peace, and of making recommendations and reports to Departments and to the Government.

It consists of representatives of the Departments of External Affairs, Trade and Commerce, Munitions and Supply, Finance, National Revenue, Agriculture, Labour, Reconstruction, and of the Mutual Aid Board, the Wartime Prices and Trade Board, the Foreign Exchange Control Board, the Tariff Board, and the Agricultural Prices Support Board.

A standing committee of the main Committee considers all export programs, other than munitions and food, and reports to the main Committee on these and any other questions which may be referred to it.

Food Requirements Committee.-The Food Requirements Committee was set up under P.C. 9692 of Oct. 22, 1942, the terms of which were revised by P.C. 4892 of July 4, 1944. The Committee is composed of representatives of the Departments of Agriculture, External Affairs, Finance, Fisheries, National Health, Trade and Commerce and the Wartime Prices and Trade Board. It has the duty and authority to consider and report upon all matters of policy connected with the utilization of supplies of Canadian food and certain related commodities and with their supply to other nations. In particular, the Committee and its Commodity Sub-Committee deals with the co-ordination of Canada's undertakings to export foods to various destinations, including various relief and rehabilitation agencies. Further, the Committee may submit recommendations to the Cabinet with respect to matters of policy concerning embargoes or other restrictions on exports or imports of foodstuffs. Canadian representatives on the various commodity committees of the Combined Food Board are appointed by, and are responsible to, the Food Requirements Committee.

Advisory Committee on Export Control.-An Advisory Committee on Export Control was set up in November, 1941, by Order in Council P.C. 9269, which also provided for the establishment of an Executive Sub-Committee to deal with problems arising in connection with applications for export permits and to interpret policy in doubtful cases. With a few exceptions, the Executive SubCommittee has dealt with the policy problems affecting export permit procedure, including the operation of economic warfare considerations and collaboration with the former Bureau of Economic Warfare in Washington, now known as the Foreign Economic Administration, in the operation of the Decentralization Plan, under which Latin American countries have been more or less allowed to control their import requirements from North America according to available shipping. Following its inception the Sub-Committee met once a week or oftener to deal with export permit problems. Since 1943 it has not needed to meet so frequently and has been mainly concerned with questions of relaxation of controls with the co-operation of the Department of Munitons and Supply and the Wartime Prices and Trade Board.

Export Permit Branch.-As part of the system of wartime controls, before commodities can be exported from Canada, an export permit must be obtained by the exporter from the Branch. Before issuing permits, the Branch consults other

## GOVERNMENTAL MACHINERY FOR THE CONTROL OF EXTERNAL TRADE IN WARTIME AND ITS POST-WAR REHABILITATION

Departments or agencies responsible for supply. As the War has progressed, shortages, loss of established foreign sources of supply, shipping difficulties and other abnormal conditions of widely varied nature have made necessary the control of an ever-widening range of exports until at present all commodities are under some degree of export control. However, during the past year the question of relaxing export control wherever possible has received the close attention of the different agencies and Departments of Government concerned. As a result it was found possible, because of an improved supply situation, to remove a large number of items from export control when consigned to British Empire and United States destinations.

A detailed account of the activities of the Export Permit Branch during the war years is given at pp. 442-444 of the 1943-44 Year Book.

Shipping Priorities.-The Shipping Priorities Committee was set up under the Minister of Trade and Commerce on Oct. 31, 1944, on the recommendation of the Joint Economic Committees of the United States and Canada. The two

Governments accepted the basic policy that equal consideration should be given to United States and Canadian defence shipping, and civilian shipping requirements. It was recommended that appropriate agencies in each country should enter into immediate consultation with a view to establishing an effective, convenient and continuing method of placing Canadian requirements before the United States agency or agencies responsible for deciding on overseas import and export shipping. priorities.

Imports Section.- In the case of imports, effective co-operation has been maintained between the Shipping Priorities Committee and the Division of Stockpiling and Transportation at Washington. The Commercial Counsellor in the Canadian Embassy has represented the Shipping Priorities Committee on the Interdepartmental Shipping Priorities Advisory Committee at Washington.

The Committee ascertains Canadian cargo space requirements and determines their priority and the extent to which such requirements can be moved by ships of Canadian registry. In consultation with the Canadian Shipping Board, the decision is made as to which items are to be carried by Canadian ships and which by the Wartime Shipping Administration.

The first major problem of the Import Section arose over the question of import controls in February, 1943. It was decided:-
(1) To restrict the use of import shipping space available from most overseas countries to commodities essential to the wartime economy of Canada.
(2) To control by permit, the importation into Canada of specified goods, in order to prevent unnecessary importations into Canada from prejudicing the movement of essential imports.

The Import Section has also tàken a broad interest in import trade and has been responsible for the preliminary developments of the new Import Division in the Department of Trade and Commerce (see p. 473).

Export Section.-For all practical purposes, 100 p.c. of Canada's exports to Latin America move via United States ports and on vessels controlled directly or indirectly by Wartime Shipping Administration. Early in 1942 it became evident that the available United States-controlled shipping services would not be able to carry the growing backlog of cargoes piled up at United States ports of exit destined to Latin America.

In May, 1942, the Board of Economic Warfare of the United States (now Foreign Economic Administration) introduced a system of export priorities, and Canada's Export Permit Branch (see p. 478) assumed responsibility for affixing the proper United States shipping priority code to Canadian permits in order that the Wartime Shipping Administration would have a guide to the relative importance of each shipment.

On July 6, 1942, the Foreign Economic Administration announced the introduction of control measures on all shipments of $2,240 \mathrm{lb}$. or over to Latin America (except all-rail shipments to Mexico), to become effective on Aug. 15, 1942.

The Shipping Priorities Committee, under the terms of its Order in Council, was the logical authority to administer complementary controls in Canada, and immediately set up the "Export Section". Arrangements were made whereby the United States authorities would handle only those shipping-space applications from Canada which had been approved by the Committee.

The proeedure, modified from time to time to meet changing conditions, remained in effect until Oct. 15, 1944, when all shipping controls over shipments (except newsprint) to Latin American countries other than Argentina were removed. Newsprint is not under export permit, and the controls necessary to ensure equitable distribution to Latin American countries are administered by the Shipping Priorities Committee, as is the processing of space applications for shipments of $2,240 \mathrm{lb}$. or more going to Argentina.

On Oct. 1, 1944, the Export Section, in co-operation with the Foreign Economic Administration, commenced the processing of space applications on shipments of $2,240 \mathrm{lb}$. or more to certain African countries consisting of the French, Portuguese and Belgian Colonies and the British West African Colonies of Nigeria, Cameroons, Gambia, Sierra Leone, Gold Coast including Ashanti and Northern Territory, British Togoland and British possessions in the South Pacific consisting of Fiji, Solomon Islands, Gilbert and Ellice, Pitcairn, Tonga and Santa Cruz.

On Nov. 21, 1944, in co-operation with the Foreign Economic Administration, control was exteaded to cover Middle East countries, which formerly came under the jurisdiction of the Middle East Supply Centre.

British West Indies Shipping Division.-During the winter and spring of 1942 the German submarine campaign resulted in heavy shipping losses among vessels supplying the British Colonies in the Caribbean. In consequence, the British colonial authorities deemed it advisable to set up a system of cargo priorities and opened an office in the United States. In order to take care of cargo originating in Canada, the Commercial Intelligence Service undertook to act on behalf of the colonial authorities. Accordingly, under authority derived from the Canadian Shipping Board, the B.W.I. Shipping Division allocates space to Canadian shippers on vessels proceeding to the Leewards, Windwards, Barbados, Trinidad and British Guiana. Space allocations to the remaining colonies in the group, while under the general supervision of the Division are handled by other organizations. In this connection the Division has co-operated with the Canadian Shipping Board and the British Colonies Supply Mission in the planning of shipping schedules. In addition the Division has co-operated with the British Colonies Supply Mission in the United States in maintaining essential supplies in the colonies and also has arranged for the purchase and shipment of flour under Mutual Aid to the British West Indies.

Canadian Shipping Board.-The Shipping Board is a wartime body reporting to the Government through the Minister of Trade and Commerce. It controls shipping from the transport side and for that reason its functions and activities are dealt with in the Transportation Chapter at pp. 639-640. It is part of the wartime machinery for the Control of External Trade, however, and as such is shown in the chart at p. 479.

Canadian Export Board.-The Board was established by Order in Council P.C. 70 dated Jan. 31, 1944, to overcome certain difficulties that had arisen in export trade channels.

The Canadian Export Board is designed to meet a need, which has developed as a result of wartime trade conditions, for a Canadian Government agency possessing the requisite powers to co-operate with the governmental procurement agencies and trade missions of British colonies, other parts of the British Commonwealth and
certain other countries, in purchasing in Canada and exporting to these countries goods required for civilian use, and to facilitate export transactions with such agencies.

The Board operates only when ordinary commercial channels between exporter and importer cannot be utilized or when there are no existing procurement facilities: it will not interfere with normal commercial enterprise.

The Board is under the control of the Minister of the Department of Trade and Commerce: it has five members, three including the Chairman who is the Director of the Commercial Intelligence Service, from the Department of Trade and Commerce and one each from the Department of Agriculture and the Department of Fisheries.

For the purpose of carrying out business transactions in as normal a way as possible, the office staff has been divided into three sections-Purchasing, Traffic and Accounting.

Powers of the Board.-The Board is empowered to buy and sell and to negotiate, as principal or agent, the purchase of all types of civilian commodities required by the British Commonwealth of Nations and also Allied Nations. It can conduct negotiations concerning the prices at which the products should be purchased and may determine the price at which such products shall be sold by the Board. In practice, goods are bought and sold at the same price and, at the present time, no charge is being made for the Board's services, although it has power to make such a charge if deemed advisable.

It may establish offices at whatever points throughout Canada it may be considered advisable to do so, and it may also establish warehouses in which to store goods required by the various authorities who make use of its services.

As at Apr. 1, 1945, the Board's offrees were restricted to Ottawa but four warehouses were in operation taking care of purchases made at the request of the Canadian Mutual Aid Board for ultimate delivery to United Nations Relief and Rehabilitation Administration. The Board conducts a very large amount of business on behalf of the Canadian Mutual Aid Board when their requirements are of a civilian nature and it also buys for the following: British Colonies Supply Mission; India Supply Mission; French Military Mission; French Naval Mission; French Supply Mission; Belgium Mission; Australian War Supplies Procurement Division; Union of Soviet Socialist Republics; Union of South Africa; Iceland; United Nations Relief and Rehabilitation Administration; Commercial Corporation of United Kingdom; Ministry of Supply of Great Britain; New Zealand; Military Relief; and others.

As at the first of June, 1944, firm orders placed by the Board amounted to just over $\$ 2,500,000$. By Jan. 1, 1945, these had increased to a total of $\$ 37,500,000$ and by Apr. 1, to $\$ 90,000,000$.

Import Division and the Export Planning Division.-Although wartime organizations in origin these Divisions are tied in closely with the permanent organization of the Commercial Intelligence Service (see chart at p. 479) and for convenience has been dealt with in the review of that Service at pp. 472-473.

Export Credits Insurance and Loans and Guarantees to Other Countries: The plan, forecast in the Speech from the Throne in January, 1944, to create a Government body to protect Canada's position as a world trader over the transitional period from war to peace and thus meet some of the financial problems that
the post-war period is bound to bring, was implemented by passage of the Export Credits Insurance Act in August, 1944. This Act is divided into two parts:-

Part I provides for the establishment of the Export Credits Insurance Corporation, the function of which is to insure exporters of Canadian goods against the risk of loss accruing upon non-payment, when due, of the purchase price by reason of insolvency or delay on the part of the importer or his inability to secure the proper kind of currency-because of moratoria, foreign exchange restrictions or other occurrences in his own country. It is intended that the Corporation shall form a permanent feature of assistance to exporters of Canadian goods.

Part II of the Act is limited in operation to a transitional period of three years from August, 1944, and empowers the Governor in Council, on the recommendation of the Minister of Finance and Minister of Trade and Commerce, to enable the former to guarantee the obligations of, make loans to, or purchase or guarantee any security issued by the Government or an agency of the Government of any other country.

Export Credits Insurance Corporation.-This Corporation was established under the above Act with an authorized capital of $\$ 5,000,000$ ( 50,000 non-transferable Government-owned shares of $\$ 100$ each) together with a $\$ 5,000,000$ surplus account, under the management of a board of not more than seven directors, including the Deputy Minister of Trade and Commerce, Deputy Minister of Finance, and the Governor of the Bank of Canada. An advisory council consisting of not more than fifteen members may be appointed to advise the Corporation on matters of administration.

The Corporation is empowered to issue insurance contracts to exporters of Canadian-produced goods to insure against risk of loss caused by insolvency, delays in collection and transfer difficulties. Similar facilities have existed in many other countries over a period of years. With Canada's productive capacity vastly greater than her ability to consume, it is essential that her position be maintained in the historic markets and trade extended into the new markets of the world. The scheme of export credits insurance is designed to assist exporters of Canadian goods in their objectives. If an exporter does not wish to insure with the Corporation he is under no compulsion to do so. Exporters wishing to take out policies of insurance are required to pay premiums established by the Corporation. It is the duty of the Corporation to establish premium rates which are adequate to cover probable losses. It is expected that officers of the Canadian Government and trade commissioner services will collaborate with the Corporation and with exporters in providing credit data respecting the reliability and financial standing of foreign firms. In essence, the Canadian scheme is to be on an insurance basis, where those paying the premiums participate in the benefits.

The limit of liability of the Corporation on contracts of insurance outstanding at any one time is ten times the paid-up capital and surplus as shown by the Corporation's latest quarterly statement.

Export Credits to Other Governments.-During the period of transition from war to peace it is possible under Export Credits Insurance Act, Part II, for the Canadian Government to provide loans or guarantees to governments of other countries or their agencies for three years from the coming into force of the Act.

The aggregate amount of guarantees outstanding at any one time must not exceed $\$ 200,000,000$ and the aggregate of loans outstanding and securities held must not exceed $\$ 100,000,000$ at any one time. All guarantees or loans made are to be conditional on the Government of the country to which the goods are exported requesting the Canadian Government to give such guarantees, etc., and undertaking to indemnify the Canadian Government against loss.

The loans and guarantees authorized under Part II of the Act are intended to help restore and develop Canadian trade in the difficult period of transition between war and peace, particularly trade with those countries which need imports for the purpose of reconstruction and rehabilitation of their economies devastated or disorganized by war, which countries may be expected to have some difficulty in acquiring sufficient Canadian dollars to pay for the imports they would like to obtain from Canada.

## PART II.-STATISTICS OF EXTERNAL COMMODITY TRADE*

Actually about 75 to 80 p.c. of the enormous export business which Canada now is doing belongs in the category of temporary, abnormal, wartime trade, with only about 20 to 25 p.c. in the category of normal and permanent trade. Nevertheless, this remaining trade, amounting to about $\$ 600,000,000$ a year, despite the stress of wartime restrictions is very important and still plays a vital role in sustaining the agricultural and industrial life of the country. Canada's normal pre-war export business has become, to a large extent, a war casualty since, in addition to the fact that her energies and resources have been concentrated primarily on production and distribution for war purposes and that exports have had to be limited, some of the customary export markets have been cut off and, in most of those remaining open, imports of many classes of goods from Canada have had to be reduced because of shipping shortage, the conservation of exchange for more urgent requirements, or for other reasons.

The statistics in this Chapter of the Year Book, which bring the analyses down to the end of 1943, reflect the changing conditions in the trade economy of Canada, as exemplified by the increase in exports of foodstuffs to the United Kingdom and the importation of machine tools, followed later by the export of munitions and transport vehicles to the United Nations. See the article on "Changes in Canadian Manufacturing Production from Peace to War, 1939-44", at pp. 364-381.

General Explanations Regarding Canadian Trade Statistics.-External trade statistics are derived by recording the physical movement of goods outwards or inwards across the frontiers or through ocean ports and the valuations placed upon them at the time of movement. Such statistics cannot take cognizance of the complex financial transactions involved in this physical movement of goods, which transactions may take place prior to or subsequent to the actual shipment (although in investigating the balance of international payments, as in Part III of this Chapter, such financial transactions are the sole consideration). Certain problems of procedure arise in recording trade statistics and it is necessary to explain these.

[^160]For the correct interpretation of the statistics of external trade, it is necessary that the following definitions and explanations of terms used, as well as certain features of the statistics that necessitate adjustments to the external trade figures, be carefully kept in mind, if the true position of trade in relation to the total of Canada's international transactions is to be understood.

Quantities and Values.-In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: ,Valuation.- "Imports" means imports entered for consumption. "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which, and at the time when, said merchandise was exported directly to Canada; but the value shall not be less than the actual cost of production at the time of shipment plus a reasonable advance for cost of selling and profit. (See Sects. 35 to 45 of the Customs Act.) Under these provisions and amendments thereto, some imports are given arbitrary valuations differing from those upon which actual payments for the imports are made.

For Customs entry purposes, the value of the currency of the country of export is converted to Canadian currency at exchange ratios as authorized by law and Orders in Council. (See Sect. 55 of the Customs Act and Orders in Council respecting currency valuations.) Differences arising from fluctuations in the exchange rates of foreign currencies are treated more fully below under the heading "Discrepancies in Trade Statistics between Canada and Other Countries".

Canadian Exports: Valuation.-"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminum extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual cost or the value at the time of exportation at the points in Canada whence consigned for export.

Foreign Exports: Valuation.-"Foreign produce" exported consists of foreign merchandise that had previously been imported (entered for home consumption). The value of such commodities is the actual cost.

Countries to which Trade is Credited.-Imports are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence dispatched, after longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market at London, England; Canadian statistics record such imports as coming from the United Kingdom.

Exports are credited to the country of final destination, i.e., the country to which they are consigned, whether that country possesses a seaboard or not. The country of final destination is the country to which goods exported from Canada are intended to pass, without interruption of transit save in the course of transhipment or transfer from one means of conveyance to another.

Discrepancies in Trade Statistics between Canada and Other Countries.-Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies, among which are the following:-

1. Differences in the basis of the Canadian valuations and those of the valuations of other countries.

Disturbed currency relations between countries introduces an additional element of difference in valuations. Thus imports from the United Kingdom have been valued all along at $\$ 4.86 \mathrm{l}$ to the $£$, although for two years after Sept. 21, 1931, the actual value of the $£$ was below that figure, dropping as low as $\$ 3 \cdot 70$, and the actual value of imports from the United Kingdom was thereby greatly exaggerated. More recently, when the exchange value of the $£$ was above par, imports from the United Kingdom were under-valued. Similar difficulties have resulted from disturbances in exchange levels with other countries, and the placing of arbitrary valuations upon their currencies.

A further discrepancy in valuation of imports from the United Kingdom existed from 1920 to Mar. 31, 1935, in connection with distilled spirits, an important item in imports from that country. The valuation of Canadian imports of spirits from the United Kingdom included, during this period, the excise duty in addition to the British export valuation, an excess valuation aggregating over $\$ 200,000,000$ for the period $1920-34$. The excise duty has been excluded from the valuation of such imports since Apr. 1, 1935.
2. Even where the statistics cover the same period of time, there are quantities of goods on their way from the exporting to the importing country at the beginning and the end of the period.
3. By far the greatest discrepancies occur from the impossibility of determining the country of final destination for exports or the actual country of origin for imports. A considerable proportion of Canada's exports to overseas countries ( 43 p.c. in 1943) is shipped via the United States. Some of this is credited by importing countries to the United States. Canadian grain exports, for example, are frequently routed through the United States in bond. Most of this grain leaves Canada with the United Kingdom as the stated destination, but large quantities are later diverted to other European or overseas countries and some is taken out of bond for consumption in the United States. Thus the Canadian record of exports to the United Kingdom may be $\$ 100,000,000$ or more in excess of Canadian products actually received by the United Kingdom, while stated exports to other overseas countries are short this amount. Again, United States grain is routed through Canada and shipped from Montreal and is, therefore, frequently shown by other countries as imported from Canada, while it is included in United States statistics as an export to Canada.

Treatment of Gold in Trade Statistics.-The fact that gold is a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, the movement of gold in international trade is determined, almost exclusively, by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. In addition, gold is generally acceptable. It does not have to surmount tariff barriers and is normally assured a market at a relatively fixed price. It should also be noted that gold does not move in international trade in any direct or normal relation to sales and purchases. Changes in the Bank of Canada's stock of gold under earmark do not enter, therefore, into the trade statistics.

The publication of statistics showing the gross imports and exports of gold has been temporarily suspended as from September, 1939. Trade statistics for periods prior to that time have been revised accordingly, to exclude all gold formerly included in the total of merchandise exports.

Statistics showing the net exports of non-monetary gold, including changes in stocks held under earmark, which supplement the trade figures, are given below.

In previous years a historical table was published showing the movement of coin and bullion in each year since 1868. In the 1940 Year Book this table appears at p. 528. Since the outbreak of war in September, 1939, information as to the movement of gold has not been available.
I.-NET EXPORTS OF NON-MONETARY GOLD, 1939-44

| Month | $1939{ }^{\circ}$ | 1940 | 1941 | 1942 | 1943 | 1944 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Totals. | 184.4 | $203 \cdot 0$ | $203 \cdot 7$ | 184.4 | $142 \cdot 0$ | $109 \cdot 7$ |

## Section 1.-Historical Statistics of Canadian Trade

For the period covered in Table 1, it will be seen that, on the whole, imports have fluctuated much more than exports. In only 4 of the 26 years imports exceeded exports and in 2 of these years, viz., 1920 and 1931, the amounts of the excess were quite moderate. On the other hand, what is generally referred to as the "favourable balance of trade" has been, on the average, quite substantial, indeed embarrassingly so for the latest three years, due to the export of the vast quantities of munitions of war that the Canadian economy has been geared to produce.

## 1.-Trade of Canada (Excluding Gold) with All Countries, 1919-44

Nore.-These figures are available on a calendar-year basis only since 1919; for figures for the fiscal years 1868-1919, see the Canada Year Book, 1940. p. 526.

| Year | Imports |  |  | Exports |  |  | Balance of Trade: Excess of Exports ( + ), Imports (-) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Section 2.-Geographical Distribution of Canadian Trade

Since Confederation the records of Canadian trade have emphasized the importance of trade relationships with the United Kingdom and the United States. In the early years of the Dominion, when the United Kingdom was lending Canada capital on a considerable scale, that country supplied more than half of the Canadian

imports, even though, as a purchaser of Canadian goods, she took second place to the United States. To-day, though there have been vast changes and shifting trends, Canadian trade is still carried on predominantly with these two countries.

## Subsection 1.-Canada's Place in the World Economy

An outline of Canada's place in the world economy before the outbreak of war is given at pp. 404-408 of the 1941 Year Book.

## Subsection 2.-Changes in Distribution Brought About by the War*

The War has altered the structure of world trade and Canada, being a leading trading nation, has been immediately affected. The Government controls of trade and the exchange restrictions that it has been found necessary to impose (see pp. 477-484) indicate some of the difficulties that exist in the international trade field under war conditions.

The main transformation has, of course, taken place in trade with belligerent countries. With the Allied Nations, especially with the United Kingdom (exports) and the United States (imports and exports) trade has bounded forward, and with neutral countries within the present trading area a satisfactory level has been maintained considering all existing conditions. With enemy countries, however, including all the extensive occupied areas, trade has been entirely cut off and the resulting situation is one of great abnormality.

The relaxation, early in 1944, of censorship restrictions (in force since the beginning of the War) conoerning the publication of information regarding the destination of exports from Canada and the sources of imports into Canada makes it possible to secure a more detailed picture of the phenomenal expansion of Canadian trade, particularly of exports, during the war period. While the great bulk of exports goes to the countries most definitely engaged in the United Nations war effort, there are approximately 50 countries to which the Dominion is exporting goods in varying but steady quantities, in spite of war handicaps.

In 1944 Canada's export trade amounted to $\$ 3,483,098,612$ : this was twice as large as during any year of the War of 1914-18 and three and one-half times greater than in 1939. Exports alone during 1944 were considerably higher than total external trade in 1939. Trade figures by months from January, 1944, to the latest month available in 1945, together with summaries of exports by principal commodities and by countries for 1944 are given in Appendix I to this volume.

Marked changes have characterized the trade of the Dominion since 1939.

These changes are reflected in the trade returns, and Statement II, which summarizes the expansion of exports and war industries from 1939 to 1944 lists those foods, munitions and war materials that have mainly influenced the result. The twenty-two items listed comprise 80 p.c. of the total value of all Canada's exports during 1944.

[^161]II.-EXPORTS OF FOODS, MUNITIONS AND WAR MATERIALS, 1939-44
(In millions of dollars)

| Item | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 |

| Motor-vehicles and parts (including trucks, bren-gun carriers, universal carriers, tanks, etc.). | 25.9 | $65 \cdot 6$ | $153 \cdot 7$ | 328.3 | 507.4 | $433 \cdot 2$ |
| Guns........ | $0 \cdot 0$ | $2 \cdot 7$ | 13.0 | 73.7 | $143 \cdot 9$ | $239 \cdot 6$ |
| Non-ferrous metals. | 182.9 | $194 \cdot 7$ | $244 \cdot 0$ | $308 \cdot 9$ | $332 \cdot 7$ | $339 \cdot 9$ |
| Non-metallic minerals. | $29 \cdot 3$ | 33.8 | $45 \cdot 2$ | $56 \cdot 6$ | $62 \cdot 2$ | 58.4 |
| Explosives. | $0 \cdot 6$ | 2.8 | $20 \cdot 2$ | $24 \cdot 3$ | $17 \cdot 3$ | 19.1 |
| Other chemicals and products | $23 \cdot 7$ | 28.4 | 38.5 | $53 \cdot 0$ | $69 \cdot 1$ | 81.6 |
| Ships. | 0.5 | $0 \cdot 1$ | $2 \cdot 0$ | $106 \cdot 8$ | 88.9 | 23.3 |
| Aircralt and parts. | $0 \cdot 4$ | 6.0 | $20 \cdot 2$ | 27.0 | $44 \cdot 8$ | 107-1 |
| Canadian Army and Navy stores | $0 \cdot 0$ | 1.4 | $40 \cdot 3$ | $55 \cdot 1$ | 48.6 | 45.6 |
| Cartridges and shells.................. | 0.8 | 12.5 | $41 \cdot 9$ | $300 \cdot 4$ | $353 \cdot 9$ | 313.9 |

A further interesting insight into Canada's present-day economic and industrial development is that prior to the War of 1914-18 a large proportion of Canadian exports were raw or only semi-manufactured goods, whereas to-day the larger bulk of exports are fully manufactured. In 1944, 36 p.c. of all exports went to the United Kingdom and 11 p.c. to other countries of the British Commonwealth; 38 p.c. to the United States and 15 p.c. to other countries.

The percentage analysis of imports for the same year shows that only 6 p.c. came from the United Kingdom and 7 p.c. from other Empire countries. The vast proportion of Canada's imports in that year came from the United States, amounting to 82 p.c., and only 5 p.c. came from other foreign countries. As the War has progressed, the trend of imports from the United Kingdom has been definitely downwards, and upwards from the United States.

An analysis of the exports to countries outside of the actual war zone indicates that, as compared with 1939, there has actually been little slackening-and in some cases an increase-in the exports. This is particularly true in connection with most of the Latin American countries, as Statement III shows.
III.-CANADIAN EXPORTS TO LATIN AMERICAN COUNTRIES, 1939-44

| Country | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$'000 | $8^{\prime} 000$ | \$'000 | \$'000 | \$'000 | \$'000 |
| Argentina. | 4,117 | 6,107 | 7,172 | 4,165 | 3,677 | 3,645 |

| Chile. | 957 | 1,436 | 1,788 | 1,059 | 1,028 | 1,648 |
| Colombia | 1,781 | 1,438 | 1,792 | 1,215 | 1,338 | 2,215 |
| Mexico.. | 3,004 | 4,328 | 4,255 | 5,584 | 8,330 | 6,273 3,725 |
| Cuba.. | 1,497 | 1,859 | 2,529 | 2,117 | 2,416 | - ${ }^{\mathbf{7} 72}$ |
| Panama. | . 263 | . 532 | + 740 | 765 1.026 | 735 | 1, 339 |
| Peru.... | 1,245 138 | 1,527 610 | 1,942 | 1,026 884 | 766 843 | 1,339 1,331 |
| Venezucla | 1,702 | 1,720 | 1,734 | 797 | 735 | 1,810 |

It would appear that Canada, in addition to making a tremendous contribution to the needs of the United Nations, is, in the meantime, endeavouring to fill many of the most urgent needs of the neutral countries.

Trade figures are not, of course, available for many countries for the war years. Table 2, however, gives figures, so far as possible, for eight principal trading countries for the first three years of War and shows Canada's high position among these countries in per capita trade.

## Subsection 3.-Trade by Continents and Leading Countries

Trade by Continents.-The continued increase in Canada's imports in 1943 was not contributed to in equal measure by all continents, the effect of the War on the re-orientation of the channels of trade being shown in Table 3. Imports from the United Kingdom, for instance, were still further reduced: those from the United States again increased. A large part of the increase in imports was occasioned by the necessity of importing raw materials and finished parts for the vast flow of munitions of war to the United Kingdom. As would be expected, imports from Continental Europe remained at a low level. On the other hand, North America supplied $85 \cdot 2$ p.c. of Canada's imports in 1943 as compared with 68.4 p.c. in 1939; the United Kingdom percentage was reduced to $7 \cdot 8$ p.c.

As regards exports, United States, which led in 1939, gave place to the United Kingdom in 1940 and 1941, owing largely to the export of munitions of war, but resumed first place in 1942 and 1943. The same traffic accounted for the increases in the percentages of Canada's exports to Africa. Other North America (chiefly Newfoundland), after reaching a high point of 4.8 p.c. in 1941, declined to 4.0 p.c. in 1942 and $3 \cdot 1$ p.c. in 1943. Exports to South America declined from $1 \cdot 9$ p.e. of the total in 1941 to 0.8 p.c. in 1942 and 0.7 p.c. in 1943 although the dollar value in 1943 was the same as in 1942.

3.-Trade of Canada (Excluding Gold), by Continents, 1939-43

${ }^{1}$ Percentages over 1,000 not calculated, being too high for comparison. ${ }^{2}$ Less than $\$ 1,000$.

Imports from Principal Countries.-The percentage of imports from countries from which Canada obtains important industrial materials is tending to rise owing to increased industrial activity in the Dominion. Particularly notable are the incredses in the amounts purchased from the United States, Mexico, Netherlands Guiana and Argentina. In Table 5 will be found the values of imports from all important countries in recent years.

## 5.-Total Imports, by Countries, 1939-43

[^163]Exports to Principal Countries.-The United States and the United Kingdom together took $73 \cdot 4$ p.c. of Canada's exports in 1943. While exports to countries in the belligerent zones were curtailed after the outbreak of war, the subsequent dispatching of munitions and other supplies of war to Newfoundland, Australia, New Zealand, British India, Egypt, Iraq and Russia resulted in vast increases being shown in Canadian exports to those countries. Exports to all these countries except Iraq and Russia decreased in 1943 as compared with 1942. In Table 6 will be found the values of exports to all important countries in recent years.

It should be carefully noted that in the figures of Canadian exports, by countries, all the goods shown as exported to certain countries may not finally be consumed in those countries, while, on the other hand, some countries may ultimately buy and consume more Canadian goods than the Canadian export statistics indicate.

In many cases the country of final destination is not known at the time when goods leave Canada and, therefore, exports to countries such as the United Kingdom, which carries on a large entrepôt trade (this is especially the case in respect to munitions and certain commodities), are higher than would be the case if the exports in question were credited to the countries of final consumption. Exports to other countries, such as Switzerland (which obtains Canadian goods indirectly), would be correspondingly higher than the Canadian export statistics indicate.

## Subsection 4.-Trade with the United Kingdom and the British Empire

Trade with the United Kingdom.-As already mentioned in the introduction to this Section and in Subsection 1, the trade of Canada for many years has been carried on predominantly with the United Kingdom and the United States, both great trading countries, whose people speak the English language, and with whose
standards of living and tastes Canadians have much in common. The fluctuating positions of the two countries in this regard, from Confederation to the outbreak of the Second World War, are discussed at pp. 414-415 of the 1941 Year Book.

From 1929 to 1938, Canada sold the British people about \$2,800,000,000 worth of goods, and purchased less than half that amount from the United Kingdom. In each of the seven years prior to 1939 the United Kingdom was the greatest single buyer of Canadian exports. Previous to the present war, Canada had a customer in the United Kingdom who was able to buy from her without regard to the amount of trade in the opposite direction and who was able to pay in cash of a kind that could be readily converted and used anywhere. The British people after the War will face many problems: British exports will have fallen to a low level; there will probably be a reduction in the earnings of British shipping; and there will certainly be a very heavy decline in the return from British investments abroad, due to the extent to which it has been necessary to liquidate those investments during the War. The United Kingdom's post-war trade policy, therefore, particularly as it affects imports, may radically concern the degree to which we are going to be able to sell our goods in post-war years in the country that has been literally the sheet-anchor market for many of the products by which the economy of both Western and Eastern Canada has been sustained.

In 1940 the United Kingdom regained the position as the chief market for Canadian exports which she had held since 1932, with the single exception of the year 1939; this position was retained in 1941, but in 1942 and 1943 the United States became Canada's best customer. Wartime demand for foodstuffs, wood products, military vehicles and munitions was the chief cause for this increase.

The values and proportions of import and export trade with the United Kingdom for certain fiscal years ended 1886 to 1921 and for the calendar years from 1926 are shown in Table 7. Details of the commodities that made up that trade in the calendar years 1940-43 appear in Tables 15 and 16 of this Chapter.

Trade with the British Empire.-Generally, this trade has been marked by a larger proportion of exports than of imports. The percentage of both import and export trade with the Empire, other than the United Kingdom, has increased considerably in the period covered since 1886 although during war years this trend has been interrupted. The industrial organization of Canada draws increasing imports of raw materials from other Empire countries, which in turn provide an expanding market for Canada's manufactured and specialized products. A record of the value and proportion of trade with the British Empire for representative years since 1886 is given in Table 7.

## 7.-Trade (Excluding Gold) with the British Empire and Foreign Countriesconcluded

The Preferential Tariff and Empire Trade.-Canada was the first of the British Dominions to grant a preference on goods the produce and manufacture of the United Kingdom and reciprocating British Dominions and possessions. This preference was extended from time to time to other portions of the British Empire until now it is applicable to practically every British Dominion and possession. In the case of Newfoundland, in addition to the preference, Canada grants free admission to fish and fish products. The British West Indies receives special concessions under the Agreement of 1925 referred to at p. 385 of the 1941 Year Book.

The British Preferential Tariff enacted in 1897 has had the effect of stimulating Canada's Empire trade. When this preference became effective in 1897, Canada's total imports from the United Kingdom amounted to only $\$ 29,401,000$, compared with imports in 1887 valued at $\$ 44,741,000$ and in 1873 at $\$ 67,997,000$, so that from 1873 to 1897 imports from the United Kingdom declined by $\$ 38,596,000$ or 56.8 p.c. After the introduction of the British Preferential Tariff, the downward trend in the value of imports from the United Kingdom was reversed, although the proportion of total imports coming from the United Kingdom continued to decline. Imports from other Empire countries, which were insignificant before the beginning of the century, have increased both in actual value and proportion of total imports.

Table 10, at p. 503, shows the average ad valorem rates of duty on imports from the United Kingdom, the United States and all countries in each year since 1919.

## 8.-Dutiable and Free Imports from Principal British Empire and Foreign Countries, 1942 and 1943

Note.-This tahle and that at pp. 418-419 of the 1941 Year Book, pp. 457-458 of the 1942 Year Book and p. 467 of the 1943-44 Year Book continue the series appearing as Table 17 or 18 of the External Trade chapter of former Year Books, but the division between General, Preferential and Treaty Tariffs is not available after Mar. 31, 1939.

## Subsection 5.-Trade with United States and Other Foreign Countries

The relative importance of the United Kingdom and the United States in the trade of Canada from Confederation to the outbreak of the present war is discussed at pp. 414-415 of the 1941 Year Book.

Since the outbreak of the War there has been a sharp expansion in imports from the United States. Although most of this has been in iron and its products, increases have been general in other groups. To a large extent this rise is a reflection of the war expenditures of the Dominion Government. The large volume of British purchases in Canada has also contributed to the rise since the United States is the source of many of the parts and materials required as well as of machine tools and other capital equipment employed in new kinds of production. Furthermore, the increased volume of industrial activity accompanying the War has enhanced the national income with the result that the greater demands for consumer goods have also led to increased imports from the United States.

While Canada's imports from the United States have increased since the start of the War, this increase has not been as great as in the case of exports, the percentage increases for 1943 as compared with 1939 being $202 \cdot 1$ for exports and 186.5 for imports. The exchange situation as it has developed since the War is described in the section on the balance of international payments (see pp. 552-562).

A record of the value and proportion of trade with the United States since 1886 is given in Table 7, pp. 499-501. The commodities of Canadian import and export trade with the United States are shown for the calendar years 1940-43 in Tables 15 and 16, pp. 512-543.

Canadian Trade via the United States.-Imports from overseas countries via the United States declined steadily in immediate pre-war years, especially those from the British Empire. This decrease has followed: (1) encouragement of the use of Canadian sea and river ports; (2) additional concessions to goods imported under the Preferential Tariff if they come direct. Provision has been made, in trade treaties and agreements negotiated with foreign countries, that goods must be imported via a Canadian sea or river port in order to obtain the full benefits of special rates of duty. This provision was cancelled so far as wheat is concerned, under the United Kingdom-United States Trade Agreement that came into effect Jan. 1, 1939. Between 1920 and 1939 imports via the United States decreased from $9 \cdot 5$ p.c. to $2 \cdot 7$ p.c. of the total imports from overseas countries. During war years, the situation has temporarily changed and in 1940 they rose to $4 \cdot 6$ p.c., to $8 \cdot 8$ p.c. in 1941 , to $15 \cdot 7$ p.c. in 1942 but decreased to $14 \cdot 2$ p.c. in 1943.

The proportion of exports from Canada to overseas countries going via the United States also showed a considerable decline between 1927 and 1939, the percentages by fiscal years being: $1927,39 \cdot 4 ; 1930,33 \cdot 7 ; 1932,18 \cdot 7 ; 1935,16 \cdot 7 ; 1936,18 \cdot \dot{4}$; 1937, $16 \cdot 6 ; 1938,11 \cdot 4$; and calendar year 1939, $10 \cdot 8$. In 1940, owing to war conditions, they rose to 14.4 p.c. and to $22 \cdot 1$ p.c., $38 \cdot 6$ p.c. and 43 p.c. in 1941 , 1942 and 1943, respectively.

## 11.--Values and Percentages of Trade with Overseas Countries via the United States, 1943

Note.-Comparable figures for 1941 and 1942 are given at pp. 469-471 of the 1943-44 Year Book.

${ }^{1}$ Includes other countries not specified.
United States imports or exports.
${ }^{2}$ Percentage worked out on totals of Tables 5 or 6 less
Trade with Other Foreign Countries.-During the War of 1914-18 and the years immediately following when production and exports by many European countries were curtailed, imports from the United States rose to a high proportion, while those from other foreign countries declined. The proportion of imports from other foreign countries has remained surprisingly constant, at about one-tenth to one-
eighth of total imports, over the period of nearly half a century, until a declining trend became evident again in the disturbed European conditions preceding the outbreak of the present war. Canadian exports to 'other foreign countries' increased from 4.5 p.c. in 1886 to 23.0 p.c. in 1929 but they have since declined, and in 1940 amounted to 6.8 p.c. of the total value of exports; wartime exports to Egypt, Iraq, Russia, etc., caused the percentage to rise to $13 \cdot 7$ in 1942 and to $14 \cdot 2$ in 1943. One of the brighter spots in this trade is that exports to Latin American countries climbed from $\$ 19,000,000$ in 1939 to $\$ 25,000,000$ in 1943. A record of the value and proportion of trade with other foreign countries since 1886 is given in Table 7, pp. 499-501.

## Section 3.-Commodity Analyses of Canadian Trade

## Subsection 1.-Trade of Canada by Main Groups

The expansion in Canada's trade that followed the depression of the early 1930's experienced some interruption in 1938 but was continued in 1939 and 1940. The impact of the War on the Canadian economy resulted in an increase in both imports and exports. In 1941 imports in all groups showed increases over the preceding year, except animals and products and wood and paper; in 1942, decreases were shown in the value of agricultural and vegetable products, iron and its products and non-ferrous metals, and in the volume of animals and products, wood and paper and chemicals and allied products, in addition to the three groups whose value had decreased. In 1943 increases were posted on all groups except miscellaneous commodities for which a very high increase had been recorded in 1942 and was well maintained in the later year.

Exports showed increases in 1941 compared with 1940, for all classes; in 1942, decreases were shown in the value of agricultural and vegetable products and in fibres and textiles, also in volume for these two groups and in wood and paper and chemicals and allied products (see Table 17, p. 545). The group "miscellaneous commodities", which includes such items as aircraft, ships and shells, increased by 307 p.c. over 1941 and accounted for $22 \cdot 2$ p.c. of the total value of exports in 1942.

Canadian export trade (including foreign produce) for 1943 totalled more than $\$ 3,000,000,000$, an unprecedented figure, and the highest record in Canadian history. In other words, Canada exported in 1943 commodities at the average rate of $\$ 250,000,000$ a month, or approximately $\$ 10,000,000$ per working day. The value of 1943 exports was more than three times greater than the value of the 1939 exports, which was set at more than $\$ 935,900,000$. Well over 80 p.c. of the 1943 exports were materials used directly in the carrying on of total war, and were sent where they would best serve the cause of the United Nations. They represented the wonderful contribution which Canadian industry made towards the War.

In the export trade the relative positions of the groups altered considerably; the fluctuations are apparent from the figures of Table 12.
12.-Trade (Excluding Gold), by Main Groups, 1914, 1926, 1932, 1941, 1942 and 1943

| Group | Values of Imports (Millions of Dollars) |  |  |  |  |  | Values of Domestic Exports (Millions of Dollars) |  |  |  |  |  |
