# THE CANADA YEAR BOOK 1946 

## THE OFFICIAL STATISTICAL ANNUAL OF THE RESOURCES, HISTORY, INSTITUTIONS, AND SOCIAL AND ECONOMIC CONDITIONS OF THE DOMINION

## Published by Authority of

The Honourable James A. MacKinnon, M.P. MINISTER OF TRADE AND COMMERCE

OTTAWA
EDMOND CLOUTIER, C.M.G., B.A., L.Ph.,
KING'S PRINTER AND CONTROLLER OF STATIONERY

## PREFACE

The Canada Year Book under this name, or under those of predecessors in which its roots strike deep, has been the standard official compendium of information and resources, institutions, social and economic conditions for almost eighty years.

The position that the Year Book has now won in the field of official reference books is a very important one and widely recognized. It is an encouraging sign, from the standpoint of public education and increased interest in affairs of government in a democracy, that the demand for this publication has grown far more rapidly than the means of meeting it. In recent years supplies have been exhausted within a few months of the appearance of the respective editions. It is of course recognized that a public report such as this should be accessible to every Canadian taxpayer and to that end a free distribution is made to each and every public library in Canada so that the citizen who is not fortunate enough to own a copy may have ready access to one.

But it is not only in Canada that the demand is growing. The Year Book in its English and French editions represents Official Canada all over the world: it serves a very valuable purpose in making known the economic and social development of the Dominion in this 'Atomic Age' when interchange of information, upon which comity and understanding between nations is based, is so essential.

An increasing interest is also evidenced from year to year in the Special Articles printed in the Year Book at intervals because they are not subject to wide change. As indicated in the Preface to the 1945 Year Book, authority to reprint important material of this nature has been granted by the Minister of Trade and Commerce and those reprints now available are given at the end of the List of Special Articles, p. xiii.

This is the first peacetime edition of the Year Book that has been published for a period of six years, and a considerable recasting of material has been considered desirable. During the War much space had to be devoted to tracing and permanently recording changes then taking place in the economy. Reconversion, the term most frequently applied to the processes now operating, must not be taken to mean reconversion to pre-war conditions. It is widely realized that the cataclasm of war will leave its mark permanently on Canada and the world and that there can be no going back. The new post-war economy, now being gradually precipitated from the forces in solution will eventually become crystallized but cannot yet be defined. The developments that will mark the next few years will in any case be far-reaching and it will be the function of future editions of the Year Book to trace them carefully.

Among the special articles appearing in the present edition are two that have reference to wartime accomplishments that could not be given earlier publicity. These are: "The Relation of Hydrography to Navigation and the War Record of the Hydrographic and Map Service" at pp. 14-18; and "The British Commonwealth Air Training Plan-A Summary of the R.C.A.F's Major Role in the War of 1939-45"' at pp. 1090-1099. "A Review of the Activities of the Wartime Prices and Trade Board" appears at pp. 851-858 and continues the description of this administration as given in carlier Year Books.

Other articles mainly connected with the transition to peace are: "Canadian Agriculture during the Transition Period" at pp. 200-211; "The Outlook for the Mineral Industry in Relation to the Economic Development of Canada" at pp. 302-314; and "The Report of the Royal Commission on Co-operatives" which, because of its economic importance and the deep public interest in the Commission's findings, is reviewed at pp. 618-624. Since the review was written the report has been implemented in some measure by the Budget of June 27, 1946 (see pp. 22-26).

The economic importance of Canadian coal deposits is widely recognized but, due to the absence of precise information, estimates of these resources have not been published in the Year Book since the summary of the then known coal resources given at pp. 391-394 of the 1922-23 Year Book. The formula by which those resources were estimated was later questioned but the statistics were continued in the Year Book down to 1935 since they were the best available. At that time, however, they were considered to be hopelessly out of date and were dropped. The Royal Commission on Coal appointed in 1944 has again revived the subject and, as a result, this edition of the Year Book carries an up-to-date article on "The Coal Deposits and Coal Resources of Canada" at pp. 337-347.

The regular chapter material has been revised and rearranged to reflect the changes that have so far taken place in the post-war period. Reconstruction and Rehabilitation, first introduced as a chapter in the 1943-44 Year Book when victory was in sight, now appear as two chapters, viz., "Post-War Reconstruction" and "The Rehabilitation of Ex-Service Personnel" Reconstruction is no longer at the stage of theoretical planning: the policies drafted during the later years of the War are now finding practical expression through Dominion and Provincial departmental administrations established for the purpose. The relationship between Reconstruction and Veterans Affairs, though still close in certain respects, will develop along lines that have less in common as re-establishment proceeds. For the first time, National Defence is made the subject of a separate chapter: this is felt to be warranted in view of Canada's world position and the importance defence has now assumed in that picture.

Among revisions and extensions in the material of the regular chapters are: the inclusion of material on Canada and the United Nations in Chapter III and a treatment of the important subject of Dominion-Provincial Relations in the fields of Constitution and Government (Chapter III) and Reconstruction (Chapter XXII); the latest material on Dwellings, Households and Families, now available in final form from the 1941 Census, is given in the Population Chapter (IV).

Canada's important part in the Food and Agriculture Organization of the United Nations (FAO) is dealt with in its relationship to Agriculture (Chapter VIII) Forestry (Chapter IX) and Fisheries (Chapter XI).

External Trade (Chapter XVI) is vital to the Canadian economy and the wartime editions of the Year Book have described the great changes that took place in the direction and volume of that trade. The return of peace has been the signal for the lifting of restrictions and controls and for revitalizing of trade on a permanent basis. The changes and reorganization brought about in the Department of Trade and Commerce to assist Canadian manufacturers and traders in opening up new channels during the years ahead are reviewed.

In the field of Public Finance the former Section dealing with "National Income" is now superseded by a new series-"National Accounts"-the treatment being on a broader basis. These income and expenditure calculations of individuals, cor-
porations and governments for the entire country, as well as providing an estimate of national income, comprise a statistic of great value in formulating economic policy generally.

The Education Chapter (XXVII) has been broadened to include the relationship of the National Art Gallery, the CBC, and the National Film Board, along with public libraries and scientific institutions, with this all important field.

The policy of holding the price level against tremendous inflationary influences has been continued-so far with success, though at times with difficulty. Chapters XXIII and XXIV deal with Prices and Finance, respectively, and continue the record of Canada's singular achievement in this direction.

In addition to the more outstanding changes and adjustments mentioned, each Chapter has received careful revision and is brought up to date at the time of going to press.

In view of the rapid developments now taking place, the function of the Year Book, viz., to give in a volume of moderate size a co-ordinated picture of economic progress against a statistical and interpretative background, increases in difficulty: nevertheless the present edition has been kept down to a total of 1,224 pages (not including introductory material)-approximately the same as the 1945 Year Book.

The present volume has been edited by A. E. Millward, Editor, Canada Year Book, assisted by the Staff of the Year Book Branch of this Bureau. Charts, graphs and layouts have been made by or under the direction of J. W. Delisle, Senior Draughtsman of the Bureau.

Acknowledgments are hereby tendered to the numerous officials of the Dominion and Provincial Governments, and to others who have contributed material. Whenever possible, credit is given to the various persons and services concerned by means of footnotes to the respective sections.

With a view to the improvement of future editions, the Bureau will be glad to hear of any errors that may have escaped notice and to receive suggestions with regard to omissions or to methods of treatment.

## DISTANCES BETWEEN PRINCIPAL POINTS IN CANADA．＊

## Notr．－Generally，the distances given are the shortest by railway．

A knowledge of distances in miles between principal points constitutes very useful information in these days of wide travel，but when an attempt is made to compile such data difficulties are at once encountered．Railway distances are the logical choice，even though road distances are of increasing interest to a vast body of travellers by automobile and are a useful alternative．Railway distances represent usually the shortest practicable land distances between two points and even to－day
the bulk of freight and passenger traffic is by rail．Again，distances by air（sometimes called bee－line＇distances）are only useful in practice to those who travel by air． This is a growing phase of transportation，of course，but has not yet assumed such proportions that its tabulation should displace the more usual one．Again，it is not a difficult matter to estimate air－line distances from a map made to convenient scale，whereas the ordinary reader is not able to obtain railway distances easily． Even though it be decided to adopt railway distances as most useful，it is necessary to decide whether the most travelled route bet ween two places or the shortest
railway route should govern．In the tables given below，the distances between points are the shortest distances by railway and not necessarily the most travelled routes or the routes by which main trains travel．They are compiled principally from the railway time tables．The main table includes the capitai of each province and some of the main shipping points chosen principally，but not altogether，by population；the subsidiary tables include distances of local importance．Included in the distances from Charlottetown is the distance from Borden to Cape Tormentine，over which the trains are transported by ferry；similarly，the train ferry distance between Mulgrave
and Point Tupper is included in the distance from Halifax to Sydney．In the main table all the distances from Victoria include the distance travelled by boat from and Point Tupper is included in the distance from Halifax to Sydney．In the main table all the distances from Victoria include the distance travelled by boat from use of ferries，to travel by shorter routes than those given in the tables，the rail route only being taken in these cases．

Where boat routes are given，the best approximation of the distance travelled is used． in good weather．

## articles and miscellaneous text material (PUBLISHED IN FORMER EDITIONS) CLASSIFIED BY SUBJECT

Note.-It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions, and the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1946 Iear Book with its predecessors in respect to matters that have not been subject to wide change. Those sections of chapters, such as Population, which are automatically revived when new material is made available from a later census, and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article takes in ground not covered in the later one. When articles cover more than one subject they are listed under each appropriate heading.

## WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada, as a rule, the imperial system of weights and measures is followed. An exception, however, is the ton where, unless otherwise stated, the short ton of $2,000 \mathrm{lb}$. is meant.

The following table shows the weights and measures used in Canada in connection with the principal field crops and for wheat flour and fruits:-

## Relative Weights and Measures, Imperial and United States

The following tables of coefficients may be used to translate amounts expressed in one unit to the other or vice versa.

1 Imperial pint=20 fluid ounces.
1 United States pint $=16$ fluid ounces.
1 Imperial quart $=40$ fluid ounces.
1 United States quart $=32$ fluid ounces.
1 Imperial gallon=160 fluid ounces.
1 United States gallon=128 fluid ounces.

1 Imperial proof gallon=1.36 United States proof gallon.
1 short ton $=2,000$ pounds.
1 long ton $=2,240$ pounds.
1 barrel crude petroleum $=35$ Imperial gallons.

## FISCAL YEARS OF DOMINION AND PROVINCES

## The Dominion Government fiscal year ends on Mar. 31.

The dates on which the fiscal years of the provinces end are as follows:-

Prince Edward Island. . . . . . . . . . . Mar. 31 Manitoba............................. Apr. 30
Nova Scotia........................... . . Nov. 30
New Brunswick. . . . . . . . . . . . . . . . . . Oct. 31
Quebec...................................... Mar. 31
Ontario
Mar. 31

Throughout the Year Book, fiscal-year figures are so indicated in the text and headings of tables; in all other cases figures are for calendar years.

## STATISTICAL SUMMARY OF THE PROGRESS OF CANADA 1871-1945

#### Abstract

Nore.-In the following summary, the statistics of fisheries (1871-1911), trade, shipping, the Post Office, the public debt, revenue and expenditure, and the Post Office and Government savings banks relate to the fiscal years ended June 30 up to 1906; subsequently to years ended Mar. 31, except in the case of trade, where, as indicated by footnotes, calendar-year figures are given for certain later years. Agricultural, dairying, fisheries (from 1922), mineral, manufacturing, banking, insurance, loan and trust companies, construction, road transportation, vital, hospital, and immigration statistics relate to the calendar years, and railway statistics to the years ended June 30, 1871-1916, and to the calendar years 1921 and 1926-44. Canal statistics are those of the navigation seasons. The telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

## Comparative Expenditures for the First and Second World Wars

The following figures are presented of the comparative financial cost to Canada of the First and Second World Wars.

First World War.-For the fiscal years 1915 to 1920, direct expenditures on war and demobilization totalled $\$ 1,670,406,000$.

Second World War.-For the fiscal years ended 1940 to 1946, direct expenditures on war totalled $\$ 18,942,678,000$. The expenditures in the fiscal year ended March, 1946, alone were nearly two and one-half times the total war expenditures in the fiscal years ended March, 1915 to March, 1921. In addition, large disbursements of cash were necessary in the War of 1939-45 to provide assistance by way of loan to the United Kingdom and the repatriation of securities held in the United Kingdom. These are given in Chapter IVI (External Trade) at pp. 562-569.

## STATISTICAL SUMMARY OF THE PROGRESS OF CANADA

Area of the Dominion of Canada in square miles: Land, 3,462,103; Fresh Water, 228,307; Total 3,690.410. Note.-Dashes in this table indicate that comparable data are not available for the years so indicated.

[^0] ${ }^{3}$ Exclusive of the Territories.

## STATISTICAL SUMMARY OF THE PROGRESS OF CANADA-continued

The length of the Canada-United States boundary is $3,986.8$ miles, and that of the Canada-Alaska boundary is $1,539.8$ miles. The Canada-Labrador boundary (not surveyed) is estimated at 1,260 miles; the total mainland coast line of Canada (not accurately computed) is estimated at 14,820 miles.

Nore.-Dashes in this table indicate that comparable data are not available for the years so indicated.

${ }^{6}$ Fiscal year.
${ }^{7}$ Figures for the decennial census years 1871-1921 are for the aext preceding years;
those for 1871 are for the four original provinces only. ${ }^{1}$ Cwt.
50871-B

STATISTICAL SUMMARY OF THE PROGRESS OF CANADA-continued

${ }^{1}$ Figures are subject to revision.
${ }^{2}$ On farms only.
${ }^{3}$ Figures for the decennial census years 1881-1921 are for the next preceding years. In the Censuses of 1881 and 1891 values only were given of factory butter and cheese; quantities have been calculated by reckoning cheese at 10 cents per lb . and butter at 25 cents.

4 Data shown for 1942-45 represent cheddar and factory cheese other than cheddar
1942 the figures include other cheese for Quebec only. in all provinces; prior to 1942 the figures include other cheese for Quebec only. item does not include skim milk and buttermilk.

STATISTICAL SUMMARY OF THE PROGRESS OF CANADA-continued

#### Abstract

${ }^{1}$ Figures are subject to revision. ${ }^{2} 1928$ figures; first year available. ${ }^{3} 1922$ figures; first year provincial figures made available by the Department of Insurance. 4 Prior to 1920 when the Dominion Department of Insurance took over the administration of the legislation concerning loan companies, the figures are not comparable. They are shown, however, at pp, xl and xli of the 1938 Year Book. ${ }_{5}$ Compiled from data supplied voluntarily to the Superintendent of Insurance by provincial companies, but estimated to cover about 90 p.c. of all provincial business. The figures include all the large and most

## PART I.-GEOGRAPHY*

Main Geographical Features.-The Dominion of Canada comprises the whole northern part of the North American Continent with its islands, except the United States territory of Alaska and the territory of Newfoundland (with Labrador). It takes in the whole Arctic Archipelago between Davis Strait and the connecting waters northward to the 60th meridian on the east and the 141st meridian on the west.

The Dominion is bounded on the west by the Pacific Ocean and Alaska; on the south by the United States; on the east by the Atlantic Ocean, the waters between Newfoundland and the Gulf of St. Lawrence, Labrador, Davis Strait and the dividing waters between the Danish territory of Greenland and Ellesmere Island; northward it extends to the North Pole.

The southernmost point is Middle Island in Lake Erie, in north latitude $41^{\circ} 41^{\prime}$. From east to west Canada extends from about west longitude $57^{\circ}$ at Belle Isle Strait to west longitude $141^{\circ}$, the boundary of Alaska. Canadian territory thus extends over $48^{\circ}$ of latitude and $84^{\circ}$ of longitude.

The area of the Dominion is $3,690,410$ square miles, a figure that may be compared with that of $3,608,787$ square miles for Continental United States and Alaska; $3,776,700$ the total area of Europe; 2,974,514 the area of Australia; 3,275,510 the area of Brazil; 1,581,079 the area of India (excluding Burma); 120,849 the area of the British Isles. Canada's area is 28 p.c. of the total area of the British Empire, as it is shown at p. 141 of the 1943-44 Year Book.

The sea coast of Canada, one of the longest of any country in the world, comprises the following mileages:-

Mainland-Atlantic 3,068, Pacific 1,579, Hudson Strait 1,245, Hudson Bay 3,157, Arctic 5,771; total 14,820 miles.
Islands- Atlantic 1,518, Pacific 3,979, Hudson Strait 60, Hudson Bay 2,307, Arctic 26,786; total 34,650 miles.

[^3]The Canada-United States boundary is $3,986 \cdot 8$ miles long and that between Canada and Alaska is $1,539 \cdot 8$ miles; the Canada-Labrador boundary has not been surveyed but is estimated at 1,260 miles.

The St. Lawrence-Great Lakes system of navigable waterways provides ship transportation from the sea into the very heart of the continent. From the Strait of Belle Isle at the northern entrance to the Gulf of St. Lawrence, the sailing distance to the head of Lake Superior is 2,338 miles; from Montreal to Fort William, the great Canadian grain-shipping port, the distance is 1,215 miles. Throughout its length the waterway gives access to a region rich in natural and industrial resources.

The potentialities of these inland waterways of Canada are enormous since modern canal systems by-pass the unnavigable portions of the St. Lawrence River, link up the various bodies of water of the Great Lakes and are bound to have a much greater economic influence on the future wealth and progress of the nation. There are no tides in these Lakes although considerable variation in water levels is sometimes occasioned by strong winds or heavy precipitation. At the Great Lakes ports and harbours, ships load and unload their cargoes to and from all points in the Dominion.

cation of the 1945 Year Book.

## Section 1.-Physical Geography

The physical features of Canada are considered under this heading in six natural divisions into which the country is divided, each of which is defined and shown in the map on p. 5.
(1) The Appalachian-Acadian Region, comprising the Maritime Provinces and most of that part of Quebec lying south of the St. Lawrence River. It is a hilly or mountainous Region and is made up largely of disturbed beds.
(2) The St. Lawrence Region, a lowland belt bordering the St. Lawrence River and extending westward through southern Ontario to Lake Huron. It is underlain chiefly by flat or gently dipping strata of Palæozoic age.
(3) The Canadian Shield, a vast V-shaped area of ancient, rocks surrounding Hudson Bay.
(4) The Interior Plains Region of Manitoba, Saskatchewan, and Alberta, which stretches down Mackenzie Valley to the Arctic Ocean. It is underlain by only slightly disturbed Palæozóic and Mesozoic strata.
(5) The Cordilleran Region, including the mountainous country of the Pacific Coast which is developed on highly disturbed rocks.
(6) The Arctic Archipelago, with which is linked the Hudson Bay Lowland. The former includes the islands lying north of the Canadian Shield, while the latter *is a broad, flat region, underlain by flat-lying Palæozoic beds.

The physiographic details of each division are described as follows:-
Appalachian-Acadian Region.-This Region embracing an extension northward of the Appalachian Mountains includes the Maritime Provinces (New Brunswick, Nova Scotia, and Prince Edward Island) together with the southeastern portion of Quebec. Excepting the Notre Dame Mountains of Gaspe Peninsula, the terrain is not high and the comparatively low elevations are better described as hills. With the exception of the St. John, the rivers are of no great length in their courses down to the sea. It is a beautiful country of diversified character with areas of good farm lands. The broken coast provides many good harbours and the only ocean ports open throughout the whole year that Canada possesses on the Atlantic seaboard.

The rocks of the Appalachian-Acadian Region include sediments, volcanics and intrusives, chiefly of Palæozoic age. In a few places rocks of Precambrian age are known and along the Bay of Fundy Coast are a few areas underlain by Mesozoic rocks. The lowland area of eastern New Brunswick is underlain by little-disturbed Carboniferous beds. Elsewhere, however, throughout the Region, the rocks are nearly everywhere thrown into folds with axes trending in a northeast direction and are, in addition, broken by faults giving rise to a complex structure. During the Glacial Period the whole Region, with the exception of the central part of Gaspe, was overridden by ice sheets.

The area has mineral deposits in great variety but the only substances mined in large quantity at present are coal, asbestos and gypsum. The coal industry is of exceptional importance and the area produces over 40 p.c. of the coal mined in Canada. All of the asbestos and about 88 p.c. of the gypsum mined in Canada are also produced here.

St. Lawrence Lowlands.-South and east of Hudson Bay the predominating physical geographic feature is the very extensive depression containing the Great Lakes and the St. Lawrence River which connects them with the Atlantic Ocean. The bulk of the drainage basin of the Great Lakes and the St. Lawrence lies within the limits of the Canadian Shield with the same characteristics as already described. The very important exception is the valley of the St. Lawrence River from Kingston to Quebec and the peninsula of Ontario formed by the Great Lakes which together are generally known as the St. Lawrence Lowlands, about 35,000 square miles in area. At present containing the greater part of the population of Canada, this industrial area is of great economic importance; the climatic conditions and fertile soil combine to make it most suitable for mixed farming.
50871-1 $\frac{1}{2}$

The underlying rocks are sediments, mostly little disturbed, ranging in age from Cambrian to Devonian. The Cambrian rocks consist of sandstones derived by the weathering of the old Precambrian surface. The Ordovician, Silurian and Devonian rocks consist largely of limestones and shales deposited during inundations by the sea. Since the Devonian, the history of the Region has been one of erosion. The Region was overridden by the ice sheets of the Pleistocene. In general the rocks dip gently away from the Canadian Shield; in some places they are broken by faults and in others they are gently folded.

The Lowlands contain no coal nor metallic mineral deposits of importance. The chief mineral resources are natural gas, petroleum, salt and gypsum; limestone, . dolomite, shale and other rocks are quarried for various uses.

The Canadian Shield.-The Canadian Shield includes a vast area comprising all the mainland of Canada to the east of the Interior Plains excepting the relatively small St. Lawrence, and Appalachian-Acadian Regions. The northern shore line of Canada's mainland is markedly affected by the great and deep indentation of Hudson Bay which, receiving rivers running in from west, south and east, has an enormous drainage basin mainly in Manitoba, Ontario and Quebec. Practically all of this great basin, excepting the Nelson River drainage, is included in the Canadian Shield, the surface characteristic of which is hard rock either exposed or overlain with shallow soil generally confining agriculture to the valleys or small basins. With only small areas in northeastern Quebec rising above 2,000 feet in elevation, there are no great eminences, but the surface is generally accidented by many hills and hollows with countless numbers of lakes and streams. On its south and west sides, Hudson Bay is bordered by a strip of low land under 500 feet in elevation and varying in width from one to two hundred miles; in the southerly part of these flat, low lands the rock is overlain with a considerable depth of soil sometimes referred to as the clay belt of northern Ontario.

The rocks of the Shield are mainly of Precambrian age. They form a continental mass which in Precambrian time extended out in all directions beyond the present limits of the Shield. Many times during the succeeding Palæozoic and Mesozoic Eras the Shield was at least partly flooded by seas which advanced over it and later retreated. The sediments that accumulated in these seas were largely swept away by later erosion. During the Pleistocene or Glacial Period, the Shield was heavily glaciated by huge glaciers of continental extent. One of these sheets had its gathering ground west of Hudson Bay and another in the heart of Labrador. From these centres the ice moved out in all directions. In its advance it scoured off the residual soil, smoothed down the topography, polished and striated the rock surface and, by scattering debris irregularly over the surface, completely disorganized the drainage. The result was the formation of the numerous lakes which are everywhere so characteristic a feature of the region. On the retreat of the glaciers, large temporary. lakes were left in front of ice and, in these, clay and other fine stratified deposits accumulated forming what are known as clay belts. The mineral resources of the Canadian Shield are of great variety and immense value. In 1944 it produced about 92 p.c. of the gold of Canada, 56 p.c. of the silver, 95 p.c. of the copper and all of the nickel, radium, platinum and cobalt. There are no deposits of coal or oil in the Precambrian rocks.

Interior Plains.-This Region of Canada is part of a great plains region in the interior of the North American continent stretching from the Gulf of Mexico to the Arctic Ocean. It comprises the area bordering on the mountain system to

the west and extending eastward to the edge of the great Canadian Shield which commences on the Arctic Coast about three hundred miles east of the mouth of Mackenzie River and runs south and east through Great Bear, Great Slave, Athabaska and Winnipeg Lakes. Throughout most of the Region the underlying Palæozoic, Mesozoic and Tertiary rocks are nearly flat-lying. In the northwestern part of the area, however, the Franklin Range, which lies between Great Bear Lake and Mackenzie River, is composed of folded strata. In western Alberta, also, the rocks are folded and faulted.

The southern portion of the Plains Region slopes gently to the east down to Lake Winnipeg and includes the Nelson River drainage emptying into Hudson Bay; representing the bulk of the presently settled part of Western Canada, it includes the treeless prairies and comprises the lands which, in the main, produce Canada's great wheat crops. This area is characteristically different from other parts of Canada in that any exposure of surface rock is rare. Generally, it is overlain by great depths of clay soil, through which the streams have cut themselves down into deep coulées and the rivers into deep wide valleys. Lakes of any considerable extent are infrequent and usually quite shallow. The terrain is generally smooth or gently undulating and, from an elevation of 3,400 feet at Calgary, falls away gradually to 800 feet around Lake Winnipeg, 700 miles to the east.

Just north of Edmonton where the plains have narrowed to a width of about 400 miles, a height of land turns the water. The northern portion of the Plains Region is drained by a river system flowing eastward from the high mountains and then turning north to discharge into the Arctic Ocean through the great Mackenzie River. The Mackenzie is over 2,500 miles long and its valley with its low elevation is the outstanding feature of the Northwest Territories. In this watershed the terrain becomes less smooth with prominent elevations in the Caribou, Horn, and Franklin Mountains and the clay soils of the prairies give way to more of sand and gravel. Great Slave and Great Bear Lakes, each half as large again as Lake Ontario and less elevated above the sea than Lake Erie, are notable features.

The Cordilleran Region.-The outstanding and predominant orographical feature in Canada is the great Cordilleran Mountain System which, extending up from the south, parallels the coast of the Pacific Ocean and, continuing on, comprises the bulk of the United States territory of Alaska. Throughout Canada this mountain system has a width of about 400 miles and, covering about 530,000 square miles in area, includes nearly all of British Columbia and Yukon. This area is definitely the most rugged and elevated in the Dominion, many of the summits reaching heights of 10,000 feet with occasional peaks over 13,000 feet above sea-level. The principal named peaks exceeding 11,000 feet in elevation are given in Table 6. The main mountain ranges forming the system are the Coast Mountains and the St. Elias Mountains on the Pacific side, the Selkirks and the Rockies on the east side of the system to the south, and farther north on the east side the Stikine and the Mackenzie Mountains. This great mountainous tract is a formidable barrier between the ocean and the interior of Western Canada; by precipitating a great part of the moisture out of the winds coming from the Pacific, it has a marked effect on the climate of the western country. On the west side, the Cordilleras are drained by mountain streams pitching swiftly down to the Pacific. The Yukon Territory is drained to the north by that remarkable river of the same name which runs through
a wide valley over 1,700 miles long before reaching the Bering Sea. On the east side of the mountains and their foothills, the land slopes gently away to the east and to the north.

The fundamental geology of this Region is of highly disturbed rocks ranging in age from Precambrian to Recent. The Rocky Mountain Belt is composed of great thicknesses of Precambrian, Palæozoic and Mesozoic sediments, in most places unaccompanied by plutonic or volcanic rocks. The Coast Range consists essentially of complex batholiths of granite of late Jurassic or early Cretaceous age, cutting and enclosing sediments and volcanic rocks of earlier Mesozoic age, and fringed on both sides by pre-granite rocks and by isolated basins of younger rocks. The Interior Belt, of plateaus and mountain ranges, is underlain by Palæozoic, Mesozoic and Tertiary sediments and volcanic rocks. The pre-Tertiary beds are cut by numerous bodies of plutonic rocks and in several districts strata of Precambrian age are exposed. The Precambrian rocks of the Region are almost entirely quartzites, argillites, limestones, conglomerates and gneisses and schists derived from sedimentary rocks.

The Arctic Archipelago.-This remarkable archipelago lying in the Arctic Ocean sits like a cap on the northern shore line of the mainland and extends northward as a great triangle with its apex at Ellesmere Island in latitude $83^{\circ} 05^{\prime}$ and in longitude almost due north of Ottawa, the capital city of the Dominion. These treeless Arctic islands are of vast extent. Baffin, Victoria and Ellesmere, are approximately $197,754,80,340$, and 77,392 square miles, respectively, in area. Other large islands are: Banks, 25,675; Devon, 21,606; Melville, 16,503; Prince of Wales, 13,736; Axel-Heilberg, 13,583; and Somerset 9,594 square miles. There are some high mountains in the northeastern islands and in Ellesmere Island an elevation of 10,000 feet has been recorded.

Little is known of the geology of the islands and the economic potentialities, beyond deposits of coal and other minerals, have not been fully established. Precambrian schists and granitoid gneisses occur on Baffin and Ellesmere Islands and probably elsewhere. Palæozoic strata occur on most of the islands and Triassic and Tertiary rocks on a few. Linked with the Archipelago is the Hudson Bay Lowland underlain by flat-lying Ordovician, Silurian and Devonian strata. An area of Mesozoic rocks also occurs along the Moose River.

Gold has been reported from the head of Wager Inlet; native copper has been brought back from Baffin Island; mica and graphite have been found on the north side of Hudson Strait; bituminous coal is known to occur in Carboniferous strata on the islands north of Lancaster Sound and lignite occurs in Tertiary beds on the northern and eastern shores of Baffin Island as well as on Bylot Island. Lignite has been found in the Mesozoic rocks of Moose River. The possibility of finding oil in the Palæozoic strata of the Hudson Bay Lowland has been considered, but the probability is that the formations are too thin and lack the structure necessary for the accumulation of oil.

## Subsection 1.-Hydrographical Features*

The oceanic areas immediately surrounding the northern half of North America play a.vital role in the national life of Canada. The immense navigable waterways which extend into the heart of the continent have been of greatest importance to the discovery, exploration and mercantile development of the Dominion. The energizing

[^4]influence of the ocean, brought far inland by remarkable coastal physiography, has had marked effect on the lives and character of the inhabitants. The serried Atlantic and Pacific Coasts provide excellent harbours for great fishing fleets and are natural sites for the ports required for transhipment of primary and manufactured products.

To present a comprehensive description of these adjacent seas the good offices of oceanography, geology, marine biology, meteorology, and many other sciences would have to be invoked, but in the space allotted it would be impossible to deal with so many aspects. The basic factor in any utilitarian study of the oceaniccontinental margin is the physical relief of the sea-floor, a subject which has greatly developed in recent years. As an arbitrary limit must be set, the scope of this subsection will be restricted to a consideration of some of the more salient features of the hydrography of the marginal seas surrounding Canada.

The Dominion authority for conducting hydrographic surveys is the Hydrographic Service of Canada, under the administration of the Surveys and Engineering Branch of the Department of Mines and Resources.* The work with which it is charged includes the charting of coastal and inland waters, the investigation of tides and tidal streams, and the recording of fluctuations of the waters comprising the Great Lakes-St. Lawrence waterway. This Service produces and circulates the official Canadian hydrographic aids to navigation: charts, volumes of pilots' and sailing directions, tide tables and related nautical publications.

The hydrographical descriptions of the marginal seas are dealt with under the headings, Atlantic, Arctic and Sub-Arctic, and Pacific, in the following paragraphs.

Atlantic.-Incursions of the sea in the Atlantic Coast are formed in depressions between crests of the Appalachian Mountain Range as it dips into the ocean. Seaward from the shore protrudes the submerged Continental Shelf, the zone which effects the transition from continental to oceanic regions. In contrast to the narrowness and comparative smoothness of submarine plateaus in many parts of the world, the shelf extending off the Atlantic Coast of Canada is distinguished by great width and diversity of relief. From the coast of Nova Scotia ir extends 60 to 140 miles; from Newfoundland 120 to 270 miles. In the latter region, the oceanward edge of the submerged plateau is over 600 miles from the Canadian coast, the shelf there being taken to embrace within its confines the Island of Newfoundland. Owing to the great paucity of soundings the width off Labrador is uncertain, but indications are that it varies from about 150 miles at Belle Isle to 50 miles at the entrance to Hudson Strait. Northward it merges into that of the Polar Sea.

The outer edge of the shelf is known as the Continental Shoulder. There, the sea-floor drops suddenty to the main oceanic basin, several miles deep, the steep declivity being referred to as the Continental Slope. Depths of the sea over the top of the Shoulder vary considerably in different regions and, in consequence, this boundary line between continental and the deep oceanic features cannot be universally defined in terms of a constant bathymetric contour. Off the Canadian and Newfoundland coasts, soundings of from 100 to 200 fathoms are reached before the shelf suddenty gives way to the steep declivity leading to abysmal depths.

From the relations between widths and depths as given above, it is evident that the over-all gradient of the Atlantic Continental Shelf is slight. It is far from smooth, however, the whole area being studded with such impressive forms as shoals, plateaus, banks, ridges and islands. The deeply indented Atlantic coasts of Nova Scotia and Newfoundland are fringed by scraggy islets and rock shoals. Off Nova Scotia

[^5]the 40 -fathom line lies at an average distance of 12 miles from shore. This submarine contour constitutes the danger line for coastwise shipping but close within it lie some formidable menaces to navigation. Seaward, rise the extensive fishing banks known as Georges, Browns, La Have, Sambro, Middle, Misaine, Banquereau, Sable Island, St. Pierre and the Great Banks of Newfoundland. Sable Island, the dry top of a long undersea ridge, lies 90 miles off the nearest point of the continental coast and less than 25 miles from the rim of the deep oceanic basin. This Island is reported to be moving oceanward owing to the action of sea and wind, the sea encroaching on the western end and the land extending eastward.

A Cross-Section showing a Portion of the Continent and the Continental Shelf, Vicinity of Saint John, Halifax and Sable Island.

The whole floor of the marginal sea appears to be traversed with channels and gulleys, as yet imperfectly charted but sufficiently so to indicate the general outlines. The outer edge of this submerged flank of the continent is trenched with deep submarine ravines cutting well into the shelf. Outstanding of these is a bold, canyonlike depression which commences in the deep Atlantic Basin south of the Great Banks of Newfoundland and separating St. Pierre Bank on the north and Banquereau on the south. It continues northwestward through Cabot Strait, crosses the open Gulf of St. Lawrence to the north of the Magdalen Islands, thence runs past the Gaspe Coast into the broad estuary of the St. Lawrence. Branches extend for some distance into the northeast arm of the Gulf towards Belle Isle, and also along the northeastern coast of Anticosti Island. Depths in this trough vary from nearly 50871-2

300 fathoms in Cabot Strait, to 100 fathoms in the St. Lawrence Estuary a short distance below the Saguenay. In referring to the Estuary of the St. Lawrence it is of interest to record that, off the mouth of the Saguenay, the water of the St. Lawrence is salt; at the lower end of Orleans Island it is brackish and the range of tide here reaches its maximum; at Quebec the water is fresh. The true head of the Estuary, therefore, is at the lower end of Orleans Island.

The main features of the topography of the Atlantic marginal sea-floor are attributed to glacial origin, but other agencies are at work constantly modifying the submarine relief. Land erosion is an important factor, eroded materials from the continent being carried by rivers, ice, or winds to the foreshores from whence the solid detritus is spread over wide areas by sea and ice. Stones, gravels, sand and muds are thus transported. Wave action against cliffs and shore banks accounts for enormous masses of continental substances being washed away and deposited over the surrounding sea-floor. The processes of erosion on a great scale are apparent in the Magdalen Islands area in the centre of the Gulf of St. Lawrence. There, the comparatively soft sandstone cliffs are continually being nibbled into fantastic shapes, or worn away by the violent seas to which the coast is exposed. As a result, shallow submarine flats and sand-bars are formed, and bottom contours fluctuate to a considerable degree.

Sea ice, also, is an active agent in the processes of littoral erosion, transport and deposition of eroded materials. A very good illustration can be seen each spring in Cabot Strait where, for many weeks prior to the opening of navigation, an extensive procession of winter ice from the Gulf and River St. Lawrence and Chaleur Bay streams out along the Atlantic coast of Cape Breton on its journey to the sea. The ice which was formed in shallow water and along the shores is laden with erosion products, the mud, sand or clay scoured from the bottom, or swept from the land by gales. The origin of such ice can be recognized: that formed in the St. Lawrence River and Chaleur Bay is dark with the characteristic muds and clays conveyed from those regions, while the ice from the Northumberland Strait area is red with the coloured sand peculiar to the southern part of the Gulf. Ice navigators and coastal dwellers refer to the latter as "red" ice-a welcome sight in the spring as it moves down the coast of Cape Breton for, being the last of the winter ice to flow out of the Gulf, it heralds the opening of navigation. Much of this ice-borne material is carried well out on the Continental Shelf, some of it reaching even beyond Sable Island before the ice deteriorates.

Icebergs, also, are partly responsible for continental shelf-building. Each year a great number of these 'bergs, calved on the shores of Greenland and carrying detritus gouged from the land, are brought south by the Labrador Current. Some become stranded off the Labrador Coast, some on the Great Banks of Newfoundland, others drift until melted by the warmer water of the Gulf Stream. In any case, they succeed in transporting and depositing quantities of stones, mud and other solid material. Wave motion and tidal currents complete the work of distribution. The configuration of the continental sea-floor is continually changing, and vigilance is necessary to keep navigation charts of Canada's eastern seaboard up to date.

Arctic and Sub-Arctic.-The submerged plateau protruding from the northern coast of North America is a major part of the Great Continental Shelf surrounding the North Polar Sea and on which lie all the Arctic Islands of Canada, Greenland, Iceland and most of the islands north of Europe and Asia. In the Canadian segment
of the Arctic the Polar Shelf develops its maximum width and attains its "Farthest North". Hudson Bay, connected to the Arctic by Foxe Channel, and to the Atlantic by Hudson Strait, is a shallow flooding of this same Continental Plateau.

On the 80 th meridian of west longitude the Polar Shelf reaches the greatest width of any submerged continental plateau. A cross-section of the Shelf on this meridian intersects the southern extremity of James Bay, Hudson Bay and the north coast of Ellesmere Island-a total distance of over 2,000 miles, the Continental Shoulder being only 300 miles from the Pole. Owing to the very limited amount of charting that has been done in the Arctic, the bottom topography on this profile would be somewhat hypothetical. Sufficient is known, however, to indicate an abrupt break of the continental margin at its northern oceanward edge. There, the sea-floor drops from a depth of about 100 fathoms to depths of over two miles in the North Polar Basin. This steep continental terrace borders the whole western side of the Canadian Archipelago and it constitutes one of the most striking and significant features of the Polar Regions. From this great declivity a number of deep, well-developed troughs, apparently cut by glaciers, enter between the western groups of islands. Off Baffin Island, on the submerged shelf which joins the eastern side of the Archipelago with Greenland, is an isolated depression reported to be considerably over a mile in depth. A ridge across Davis Strait, on which the depth is about 200 fathoms, separates this basin from the open Atlantic.

The incursions of the sea, Hudson Bay and Hudson Strait, bite deeply into the continent. Hudson Bay is an inland sea, some 250,000 square miles in area. Into it is poured the water drained from one and a half million square miles of the continent-nearly three times that of the Atlantic drainage system. In this respect, the Bay resembles an enormous estuarial basin, the great flood of fresh water into it accounting for the low salinity of the upper layers and partly for its great temperature ranges. Still more pronounced in estuarial character is James Bay to the south. This projection, with general depths of 20 to 30 fathoms in its central part and with extensive, drying mud-flats off its shores, is studded with islands. A great number of rivers discharge into James Bay and, as a result, the water is brackish.

In Hudson Bay soundings are too few to give a complete picture of submarine relief, but the average depth is about 70 fathoms. It has been ascertained that a deepwater channel is carried from Hudson Strait into an irregular-shaped depression in the centre of the Bay where a greatest charted depth of 141 fathoms has been found. Of the hydrography of the east side of the Bay, little is known beyond the fact that it is bordered by groups of islands and rocks lying as far off as 100 miles. Ship navigation inside these islands would be subject to great risk owing to the scarcity of chart soundings. Strikingly different is the western side of Hudson Bay which is low and flat, almost devoid of islands except well to the north where a few small islets are found. Off the shore between James Bay and Cape Churchill the water deepens gradually, the 50 fathom contour lying about 50 to 90 miles off. Northward of Churchill this contour approaches within 15 to 30 miles of the coast.

Hudson Strait, 430 miles in length, is a deep arm of the sea separating Baffin Island from the continental coast and connecting Hudson Bay with the Atlantic Ocean. Widths of the Strait vary from 37 miles at the entrance to 120 miles near its western extremity. The coasts are generally high and bold, broken by many bays and fiords which afford excellent harbourage. Its greatest charted depth of 481 fathoms is found close inside the Atlantic entrance. There the sea-floor is extremely irregular 50871-2 ${ }^{\frac{1}{2}}$
and deep, swift tidal currents striking the nearly vertical rock walls of submarine valleys are deflected sharply upward to cause the disturbance referred to by Davis as "the furious overfall". Throughout the whole Strait, great irregularities of the bottom are indicated but, except in inshore waters, few hazards to navigation have been located.

Pacific.-The marine zones of Canada-Atlantic, Pacific and Arctic-exhibit individual characteristics, the marginal sea of the Pacific differing strikingly from the others. In contrast to the more symmetrical and subdued hydrography of the eastern seaboard, the corresponding coastal belt of British Columbia is characterized by bold, abrupt relief-repetition of the mountainous landscape. Dominant features of the Pacific Marginal Sea are the great detached island land-masses, their western slopes lying close to the edge of the deep oceanic basin. Whereas the Atlantic Coast is broken by bays and inlets of moderate length and depth, the western seaboard of Canada is characterized by a well-developed fiordal system which penetrates the mountainous coast for distances of 50 to 75 miles.

The inlets of British Columbia are occasionally straight, but most are winding and branch off at intervals to form webs of off-shoots and ramifications. They are

Plan showing the Extent of the Continental Shelf Off the Pacific Coast of Canada. This Coast lends itself better to delineation in plan rather than in elevation. (See crosssection of Atlantic Coast, p. 9.) This is due to the great heights of the land in comparison to the relatively shallow depths on the narrow continental shelf.
usually a mile or two in width, have steep, almost canyon-like sides, and are attributed to glacial origin. Many have been only sketchily surveyed, but in some which have been sounded, depths of well over 100 fathoms are indicated. True to their fiordal character, depths inside the inlets are considerably greater than those in the entrances and the immediate approaches are often strewn with islets and sunken rocks.

Along the whole stretch of coast continuous navigation is afforded in an "Inside Passage", sheltered from the sea by a protective barrier of islands. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating great caution in navigation. Fortunately, kelp grows on nearly every danger having a rocky bottom and can be seen on the surface during the summer months especially in those channels where the water is in constant motion. During the winter and spring, however, this useful plant is not always visible and in harbours where there is little water movement it is often absent.
"Ripple Rock", the worst danger on the coast, lies in the main ship passage between Vancouver Island and the mainland. This formidable menace rises suddenly from'depths of 200 and 300 feet in the fairways on either side. During low water of spring tides the two heads on the rock are only 9 and 21 feet below the surface. The tide race, here, attains velocities up to 14 knots, creates great turbulence and whirlpools, and renders the passage unnavigable to all but the highestpowered vessels, except during the brief period of slack water.

From the islet-strewn coast of British Columbia the Continental Shelf extends from 50 to 100 sea-miles to its oceanward limit where depths of about 200 fathoms are found. There the sea-floor drops rapidly to the Pacific Deeps, parts of the western slopes of Vancouver and Queen Charlotte Islands lying only 4 miles and one mile, respectively, from the edge of this steep declivity. These high islands are partially submerged mountain ridges, their slopes broken by numerous seainundated valleys. An outstanding feature of the marginal sea-belt off the British Columbia coast is the submerged ridge which joins the Queen Charlottes to the chain of smaller islands fringing the mainland. This body of water, Hecate Strait, connects the two much deeper arms of the sea-Queen Charlotte Sound on the south and Dixon Entrance on the north. Widths of Hecate Strait vary from 80 to 30 miles, and depths on it decrease from over 100 fathoms in the southern part to from 4 to 20 fathoms in the northern portion. Characteristic of the sea-floor of the whole Pacific Coast, the submerged shelf here is furrowed and deeply ravined.

Extensive areas lying off British Columbia have, as yet, been only partially charted and, in consequence, much of the intricate submarine relief has not been developed. Owing to the great depths encountered, sounding by lead and line was a slow process, but with the advent of automatic echo-sounding, progress of hydrographic work has received great impetus. As charting progresses along the coast, unexpected submarine features come to light, new rocks are located and safe passages which clear them are found, prospective fishing banks are delineated and new navigation charts are produced. For detailed hydrographic information on specific localities, the reader is referred to these and related nautical publications.*

[^6]
## THE RELATION OF HYDROGRAPHY TO NAVIGATION AND THE WAR RECORD OF THE HYDROGRAPHIC AND MAP SERVICE

Two closely related Dominion Government Units operating as one Service are involved in this record. The normal peacetime function of the Hydrographic Service is the production and distribution of hydrographic aids to navigation. Its nautical publications consist of the official navigation charts of Canada, the volumes of Pilots and Sailing Directions describing Canada's coastal and inland navigable waters, the Standard Tide Tables for the Atlantic and Pacific Coasts, and also the Water Level Bulletins covering the St. Lawrence-Great Lakes Waterway. The navigational aids supplied by the Hydrographic Service contribute to the protection of life and property at sea, to the lowering of marine insurance rates and, in consequence, to the development of Canadian mercantile trade.

The Legal and Map Service conducts all legal surveys required by Government Departments, including those on Indian reserves, airports, national parks, ordnance lands, and all surface and mineral rights in Yukon and the Northwest Territories. It compiles and distributes a wide variety of air-charts, electoral maps, general maps for use of the various Government Departments, natural resources and railway maps and general maps of Canada and maintains a lithographic office for the reproduction of hydrographic charts and other maps prepared by the Department, within the capacity of the presses installed. It maintains a central office for indexing, filing, and recording survey returns and plans, and distributes all topographical and general maps of Canada.

The combined activities of the Hydrographic and Map Service during the war years were of vital importance and contributed appreciably toward the achievement of victory, although, from the very nature of the work, the story could not be told earlier. With the outbreak of war, the enormous expansion of the Navy, Merchant Marine and Air Force, and the constantly gathering momentum of sea and air warfare, were reflected in corresponding increases in demands for the marine, airnavigation and special charts and maps. The close contact maintained between the Service and the Defence Forces permitted these needs to be anticipated to a remarkable degree, and all available facilities for nautical charting, air-mapping and other technical operations were operated under pressure throughout the war years.

A broad summary of actual operations conducted during the War is given in the following paragraphs.

Hydrographic Service.-The work of the Hydrographic Service became progressively more extensive in scope as the War advanced. While the standard nautical charts, "Pilots" and related hydrographic publications, provided the primary aids-to-navigation to the Navy and Merchant Marine, the strategic charts produced for use at Naval and Air Force Headquarters facilitated the carrying-out of important fleet and convoy movements. Throughout the whole period of hostilities, hydrographic surveys and special field examinations were required in widely separated parts of Canada's seaboards. In order to avoid the hazards of war, vessels were obliged to navigate off the usual sea-lanes and, in consequence, navigation was more than ever dependent upon the nautical chart. Many small harbours, previously used only for local trade, became of significant war-importance and detailed charts of these were produced for Canadian and Allied war-shipping authorities.

Prior to the construction of large seaplane bases on the Atlantic and Pacific Coasts, Newfoundland, Labrador and in Hudson Bay, detailed hydrographic surveys were conducted; suitable buoys, ranges and anchorage sites were laid out, and largescale charts of the areas were supplied. Special hydrographic operations were performed in connection with the establishment of harbour defences such as anti-submarine, anti-torpedo, anti-mine installations, and submarine detecting devices. The laying of submarine cables for gunfire-control of connected coastal batteries required precise sea-floor investigations.

At all major harbours and coastal defence establishments in Canada and Newfoundland, undersea examinations were made for the purpose of locating suitable sites for the installation of degaussing apparatus for ships. For compass adjustment, true bearings of visual lines were calculated. To enable vessels to try out their speeds, a number of measured-mile distances were laid off at various places on the sea-coasts, the St. Lawrence River and the Great Lakes. Special hydrographic operations were conducted in the Ottawa River in connection with the development of the plant for the production of atomic bomb materials.

Due to very limited hydrographic floating equipment, much of the war work conducted at sea was performed under adverse conditions. At the outbreak of hostilities, two of the three marine survey steamers were turned over to the Navy for use as patrol and naval-training vessels and, as a consequence, hydrographic operations in strategic Atlantic coastal areas were carried out with a fleet of small sea-going motorboats, all equipped with modern automatic recording echo-sounding instruments. To expedite the work in the St. Lawrence River, the Gulf of St. Lawrence and on the Atlantic, these small charting units were based at convenient points along the coast. Important hydrographic work in Newfoundland, Labrador and in sub-arctic waters was performed by hydrographers operating from a Department of Transport vessel. The single marine survey steamer operated by the Service during the war years was used off the Pacific Coast.

Through intimate knowledge of navigation conditions in little-frequented parts of Canada's waters, the Hydrographic Service was in a position to furnish considerable specialized nautical data to the Defence Forces pertaining to the location of beaches and landing places on the coasts; selection of sites for wireless stations and listening posts; establishment of emergency fuel caches; construction of wharves, breakwaters and harbour defences; and first-hand information on navigating conditions on various coasts, including Hudson Strait and Bay.

Mention should also be made of the work of the Tidal and Current Division. Installation and maintenance of coastal defences, launching of warships, fleet and convoy movements all required accurate tidal data. For the most part, this and other tidal data were provided through the medium of the Standard Tide Tables and other tidal publications, but many special studies and reports were supplied on request to Canadian War Departments, the British Admiralty, the United States Government, and commercial interests engaged in coastal war-construction.

Precise data pertaining to the fluctuations of the lake and river levels of the Great Lakes-St. Lawrence Waterway were also a necessity. Such levels greatly affected the loading capacity of ships; a few extra inches beneath a keel meant the possibility of hundreds of extra tons of war-cargo above it. The projected location of new major war plants often depended upon the water levels that could be relied
on. The extent of inland completion of naval craft under construction frequently depended on the existing depths that could be assured in canals, dry docks and channels leading to the sea.

Internationally, the Hydrographic Service of Canada constituted a link in the chain of hydrographic services of the Allied Nations and, in consequence, there was a constant flow of standard and confidential data circulating between the Canadian Service and the Hydrographic Offices at London and Washington. Through this co-operation, the chart folios of the Fleets of the United Kingdom and the United States, like those of the Royal Canadian Navy, contained the latest Canadian hydrographic charts.

Chart Production.-At Hydrographic Headquarters, chart compilation and production surpassed all records. Charts furnished for war purposes may be divided into three categories: (1) standard navigation charts; (2) special strategic and plotting charts; and (3) wall charts. The standard charts were supplied principally to the Defence Forces for use on war vessels, and were furnished in very large numbers to merchantmen, including neutral vessels whose navigators were often strangers to Canadian waters. There was a heavy demand for charts from the fishing industry, especially from purchasers of previously Japanese-owned fishing craft on the British Columbia coast, who were, in many cases, unfamiliar with the intricate coastal waters. These marine charts were printed in colour to emphasize the gradations of water-depths; the shoals, banks and other dangers; and also the safe, navigable channels. Certain tints were used to provide maximum visibility under the peculiar red-lighting conditions used in ships' chartrooms.

The special charts compiled for strategic war purposes included secret routecharts; technical charts of world-wide scope to facilitate the plotting of ratio direc-tion-finding bearings; and many other sheets used for shipping control, convoy routing and sea- and air-operational purposes. In addition, a number of instructional charts were supplied and meteorological base charts were constructed, also sets of chartlets showing the monthly sea and air temperatures on various Atlantic lanes required in connection with the shipping of perishable products to Britain.

Complete sets of very large wall charts covering Canada and other parts of the world were prepared for the Navy and the Air Force. They were of uniform design and were used extensively throughout the various directorates of the Defence Forces for plotting the progress of ships at sea, for indicating reported positions and courses of enemy sea and undersea craft, and for the planning of important fleet and convoy operations.

A constant stream of standard navigation charts, special charts and wall charts were always in course of construction, revision and processing. The wartime demand is indicated by the fact that the output increased steadily each year from 19,850 charts in 1939 to a peak of 106,042 in 1944; a reduction to 101,633 was recorded for 1945.

Legal and Map Service.-Throughout the War, the activities of this Service were increasingly concentrated towards assisting in Canada's war effort. This work consisted in the compilation and printing of aeronautical maps and the supplying of maps and survey data. Upon the outbreak of hostilities, the Map Service was faced with the responsibility of furnishing air-navigation charts, not only for general operational use, but to meet the huge requirements of the training schools under the British Commonwealth Air Training Plan. Air-navigation charts became
implements of war. Fortunately, before the War, work had already started on the production of air-navigation charts for the Trans-Canada air-route between Moncton and Vancouver and, while this set comprised only six charts, many technical and printing problems had been solved in their production. As a result, the Map Service was not unprepared to meet the war demand and emergency issues of strategic areas were issued without delay.

As new air-training schools were opened, the distribution of air-navigation charts and accessory plotting sheets rapidly increased. These charts were designed to meet all the varied demands for air-navigation purposes, including defence patrols of the coasts, convoy work and other operational flights of the Royal Canadian Air Force. Three main types of charts were required: (1) planning charts used for laying off the main courses for proposed extended flights; (2) pilotage charts required for visual contact flying; and (3) plotting charts-skeleton charts used for plotting 'plane positions as obtained by astronomical sights or radio bearings and for laying down courses flown by dead-reckoning when no dependence is placed on recognizing features of the earth's surface.

The standard pilotage chart consists of an 8-miles-to-1-inch topographic base map with an overprint in red showing the special information required by the air-pilot. These maps, numbering 221 by the end of the War, cover the whole of Canada, including the Arctic Islands, Labrador, Newfoundland and overlap into United States and Alaska territory, an area, all-told, of about $5,330,000$ square miles. From 10,000 to 20,000 each were required annually. Keeping the air maps in line with advances in aeronautical defence and with expansions in the Air Training Plan, necessitated their revision as often as three times a year.

Of almost equal importance to the British Commonwealth Air Training Plan were the charts of the Plotting Series required for air-navigation without visual ground contact. Whereas Pilotage Charts, above referred to, were used for navigating over land and the immediate marginal sea, plotting charts were required for both oceanic and continental flights. The North American Plotting Series, produced by the Map Service, was an integral part of the standardized British system of mapping designed for world coverage within the limitations of Mercator's projection to a scale of 1 to $1,000,000$ (about 16 miles to 1 inch ) at latitude $56^{\circ}$. Of the 93 published sheets which constitute the North American Series, 90 were compiled, drawn and printed by the Map Service, the others being produced directly from copies supplied. One of the plotting charts which was used extensively in training was supplied in quantities of 190,000 a year.

While the air-charts were standardized to the greatest possible extent, many special strategic charts were required to be produced for the Royal Canadian Air Force and other organizations. For air-training, certain of Britain's air-navigation charts, secret target maps to assist in the training of bombing crews, and other special sheets were reproduced and printed. Many large wall charts and special strategic charts on various projections and covering vast air-patrol and combat areas were produced. For the Aircraft Detection Corps, special maps were constructed for plotting and reporting the positions and courses of unidentified 'planes which proved to be alien.

Important air-navigation publications during the War were the Pilot Handbooks for Eastern and Western Canada. These informative volumes, corresponding somewhat to the well-known "Pilots and Sailing Directions" in the marine naviga-
tional series, are illustrated by chartlets and views of the various Canadian airports and harbours. The publications were instituted by the Royal Canadian Air Force and were printed by that organization. The Map Service assisted in their compilation by constructing the 'fair' drawings and other original copy, and also undertook the numerous revisions necessary to keep the drawings up to date.

War requirements as reflected in the various training organizations and engineering developments, created an increased demand for standard topographical maps. These civilian editions were on larger scales than the air-navigation charts and were reprinted as stocks became exhausted. For security reasons, however, no such topographical maps, up to and including a scale of 8 miles to 1 inch, within certain coastal areas were made available for distribution without consent of the Committee of the Chiefs of Staffs of the three Armed Forces.

Under the Western Hemisphere Defence Plan, close co-operation was maintained with the United States in mutual mapping projects for air-navigation purposes and overlapping of effort was thus avoided. The great expansion of military aviation required a corresponding increase in areas to be mapped and resulted in the extension of the 8-miles-to-1-inch air-navigation charts to include the more northern parts of Canada. Photographing of extensive Arctic and Sub-Arctic areas was carried out by the United States Army Air Corps and the Royal Canadian Air Force working in conjunction with the Map Service which, in many cases, provided ground control by means of astronomical observations, especially along the Edmonton-Whitehorse Airway.

The output of marine and air-navigation charts increased each year from 263,000 in 1939 to $1,827,000$ in 1943. Production in 1945, the closing year of the War, was $1,321,615$.

## Subsection 2.-Lakes and Rivers

The fresh-water area of Canada is unusually large constituting over 6 p.c. of the total area of the country. The outstanding feature is the Great Lakes, details concerning which are given in Table 2.

Particularly notable are the depth of Lake Superior and the shallowness of Lake St. Clair and Lake Erie.
2.-Areas, Elevations, and Depths of the Great Lakes

| Lake | Elevation Above Sea-level | Length | Breadth | $\underset{\text { Depth }}{\text { Maximum }}$ | Total Area | Area on Canadian Side of Boundary |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | ft. | miles | miles | ft . | sq. miles | sq. miles |
| Superior. | $602 \cdot 23$ | 383 | 160 | 1,302 | 31,820 | 11,200 |
| Michigan. | $580 \cdot 77$ | 321 | 118 | 923 | 22,400 | Nil |
| Huron. | 580.77 | 247 | 101 | 750 | 23,010 | 13,675 |
| St. Clair. | $575 \cdot 30$ | 26 | 24 | 23 | - 460 | 5.270 |
| Erie.. | $572 \cdot 40$ | 241 | 57 | 210 | 9,940 | 5,094 3,727 |
| Ontario. | $245 \cdot 88$ | 193 | 53 | 774 | 7,540 | 3,727 |

Lake Superior, with an area of 31,820 square miles, is the largest body of fresh water in the world. As the International Boundary between Canada and the United States passes through the waters of Lakes Superior, Huron, St. Clair, Erie,
and Ontario, only the areas of these lakes given in the final column of Table 2 are Canadian, while the whole of Lake Michigan is within United States territory. The great obstacle to navigation on this waterway, the rise of 327 feet between Lakes Ontario and Erie, is surmounted by the Welland Ship Canal.
3.-Areas and Elevations of Canadian Lakes with Areas of $\mathbf{3 0 0}$ or More Square Miles, Exclusive of the Great Lakes, by Provinces

| Province and Lake | Elevation | Area | Province and Lake | Elevation | Area |

[^7]In addition to the Great Lakes there are many other remarkably large lakes as is shown by Table 3: it will be noted that there are eleven lakes over 1,000 square miles in area. Apart from these lakes, named as notable for their size, there are innumerable other lakes scattered all over that major portion of the area of Canada lying within the Canadian Shield. In an area of 6,094 square miles, accurately mapped, just south and east of Lake Winnipeg, there are 3,000 lakes; in an area of 5,294 square miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes. A table at pp. 12-13 of the 1938 Year Book gives a more extended list of the principal lakes of Canada, by provinces, with their elevations and areas.

The river systems of Canada, excluding the Arctic islands, are best studied by segregating the main drainage basins as shown in Table 4.*

[^8]4.-Drainage Basins in Canada

| Drainage Basin | Area <br> Drained ${ }^{I}$ | Drainage Basin | Area Drained ${ }^{1}$ |
| :---: | :---: | :---: | :---: |
| Atlantic Basin | sq. miles | Arctic Basin | sq. miles |
| Atlantic or Maritime Provinces........ | 61,151 | Great Slave Lake. | 370,681 |
| Great Lakes and St. Lawrence River.. | 359,312 | Arctic. | 576,507 |
| Total | 420,463 | Total | 947,188 |
| Hudson Bay Basin |  | Pacific. | 273,540 |
| Northern Quebec. . | 343,259 |  |  |
| Southwestern Hudson Bay............. | 283,997 | Total. | 400,730 |
| Western Hudson Bay .................... | 383,722 | Gulf of Mexico Basin | 10,121 |
| Total...................... | 1,379,160 | Canada, Less Aretic Archipelago . . . | 3,157,662 |

${ }^{1}$ Areas are approximate and are exclusive, for all rivers, of those portions of their basins that lie in United States territory.

It is noteworthy that the greater part of the Dominion drains into Hudson Bay and the Arctic Ocean; the Nelson River drainage is exceptional in running through the most arable and the most settled part of the West but, otherwise, the rivers of Western Canada east of the Rockies run away from the settled areas towards the cold northern salt waters and this adversely affects their industrial utility. The Mackenzie, which drains Great Slave Lake, is, with its headwaters, the longest river in Canada ( 2,514 miles) and its valley constitutes the natural transportation route through the Northwest Territories down to the Arctic Ocean. From Fort Smith, on the Slave River, large river boats run without any obstruction down to Aklavik in the delta of the Mackenzie, a distance of 1,292 miles. In Eastern Canada it is the Great Lakes and St. Lawrence drainage basin that dominates, and has undergone the greatest degree of development. Apart from the plains region of the West, the rivers of Canada have a vast power potentiality well distributed over the country. Table 5 shows Canadian rivers and tributaries 300 miles or more in length, by drainage basins. A table at p. 15 of the 1938 Year Book gives a more extended list of the principal rivers with their tributaries classified according to the four major drainage basins.

## 5.-Canadian Rivers and Tributaries $\mathbf{3 0 0}$ Miles or More in Length

Nore.-In this table the tributaries and sub-tributaries are shown by indentation of the names. Thus the Winnipeg River is shown as tributary to the Nelson, and the English River as tributary to the Winnipeg.

| River | Length | River | Length |
| :---: | :---: | :---: | :---: |

## Subsection 3.-Mountains

As pointed out at p. 6 the outstanding and predominant orographical feature in Canada is the great Cordilleran Mountain System. The principal named peaks exceeding 11,000 feet in elevation are given in Table 6.

## 6.-Mountain Peaks 11,000 Feet or Over in Elevation, by Provinces and Mountain Ranges

Nors.-The highest point on the mainland of Eastern Canada (peaks of the Torngats in Labrador rise to about 5,500 feet) is Mount Jacques Cartier, a peak of Tabletop Mountain in N. lat. $48^{\circ} 59^{\prime}$, W. leng $65^{\circ} 56^{\prime}$, Gaspe district, Quebec, the summit of which is 4,160 feet above sea-level.

[^10]There are no elevations in the rest of Canada that come anywhere near rivalling those of the Cordilleran Region. Only small areas in northeastern Quebec rise above 2,000 feet in elevation; there are no great eminences, but the surface is generally accidented by many hills and hollows with countless numbers of lakes and streams.

South and east of the River St. Lawrence, the St. Lawrence Lowlands are bordered by extensions and outliers of the Appalachian Mountains. The Appalachian System, in fact, extends through the Maritime Provinces and the Gaspe Peninsula of Quebec. The whole area may be regarded as a peninsula jutting out with bold and broken coast line to separate the Gulf of St. Lawrence from the Atlantic. Peaks in this area, notably the Notre Dame and the Shickshock Mountains, reach elevations up to $4,000 \mathrm{ft}$.

## Subsection 4.-Islands

The islands of Canada are among its most remarkable geographic features. They include the very large group lying in the Arctic Ocean, the fringe of both large and small islands off the Pacific Coast, those of the Maritime Provinces and Quebec in the Atlantic Ocean and the Gulf of St. Lawrence, together with the islands of the Great Lakes and other inland waters. The Pacific Coast islands, with the exception of Vancouver Island and the Queen Charlotte group, are small and dot the coast of British Columbia from Dixon Entrance to the southern boundary of the Province. Vancouver Island is 285 miles long and from 40 to 80 miles broad, covering an area of about 12,408 square miles; the mountain range which forms its backbone rises again to form the Queen Charlotte Islands farther north. These islands figure

PROFILE
Following C P.R. Main Line, Montreal-Vancouver

largely in the mining, lumbering and fishing industries of the West and, together with the bold and deeply indented coast line, provide a region for scenic cruises rivalling those of Norway.

On the eastern coast of the Dominion are the island province of Prince Edward Island, the Islands of Cape Breton (an integral part of Nova Scotia), Anticosti, and the Magdalen group (included in the Province of Quebec), and the Islands of Grand Manan and Campobello (part of the Province of New Brunswick) in the Bay of Fundy. Prince Edward Island is 2,184 square miles in area, Cape Breton 3,970 and Anticosti about the same. Fishing activities in these eastern islands are important, while agriculture on Prince Edward Island and mining on Cape Breton are the chief occupations of the inhabitants.

Manitoulin Island and the Georgian Bay islands in Lake Huron and the Thousand Islands group in the St. Lawrence River, at its outlet from Lake Ontario, are the more important islands of the inland waters.

## Section 2.-Political Geography

Politically, Canada is divided into nine provinces and two 'territories'. Each of the provinces is sovereign in its own sphere, as set out in the British North America Act (see pp. 40-60 of the 1942 Year Book) and, as new provinces have been organized from the Dominion lands of the northwest, they have been granted political status equivalent to that of the original provinces. Yukon and the Northwest Territories with their boundaries of to-day are administered by the Dominion Government. The characteristics of each of the provinces and of the 'territories' are reviewed below.

Prince Edward Island.-This, the smallest province of the Dominion, is about 120 miles in length, with an average width of 20 miles and has an area of 2,184 square miles. It lies just off the coast east of New Brunswick and north of Nova Scotia and is separated from both provinces by Northumberland Strait, from 10 to 25 miles wide.

The Island is almost trisected by the deep indentations of Malpeque Bay, north of the town of Summerside, and by the mouth of the Hillsborough River at Charlottetown, which nearly meets Tracadie Bay on the north side. Its rich, red soil and red sandstone formations are distinctive features, and no point on the Island attains a greater altitude than about 450 feet above sea-level. Its climate, tempered by the surrounding waters of the Gulf of St. Lawrence and yet free from the rigours of Atlantic storms, combined with a fertile soil and sheltered harbours, offers great inducements to the pursuits of agriculture and fishing. The Province is noted for its relative predominance in the fox-farming industry, its lobster canneries, its oyster beds, and its production of seed potatoes.

Nova Scotia.-The Province of Nova Scotia is 381 miles in length by 50 to 105 miles in width and has an area of about 21,068 square miles (see p. 2), somewhat smaller than that of Eire. The mainland is connected with the Province of New Brunswick by the Isthmus of Chignecto; the Island of Cape Breton forms the northeast portion. The latter is separated from the mainland by the narrow Strait of Canso and includes the famous salt-water lakes of Bras d'Or.

Nova Scotia leads the provinces in the production of coal. The coal-fields are bituminous, of good quality, well adapted to the production of coke and excellent for domestic use and for steam-raising purposes. The chief coal-fields are at Sydney and Inverness on Cape Breton Island, and at Pictou and Cumberland on the mainland.

On the Atlantic side, the mainland is generally rocky and open to the sweep of Atlantic storms; it is deeply indented and has numerous harbours providing safety for the large fishing fleets that support the extensive fishing industry of the Province (see Chapter XI). The slopes facing the Bay of Fundy and the Gulf of St. Lawrence are sheltered from the Atlantic by low mountainous ridges not exceeding an altitude of 1,500 feet and running through the centre of the Province. In striking contrast to the Atlantic side, they present fertile plains and river valleys especially adapted by climate and situation to the growth of apples, pears and other fruits.

New Brunswick.-New Brunswick is nearly rectangular in shape with an area of 27,985 square miles and may be compared in size to Scotland ( 30,405 square miles). The Bay of Chaleur at the north, the Gulf of St. Lawrence and Northumberland Strait at the east, the Bay of Fundy at the south, and Passamaquoddy Bay at the southwest, provide the Province with a very extensive seacoast. It adjoins the State of Maine on the west and the Province of Quebec on the north and northwest.

The conformation of New Brunswick is, in general, undulating, but to the east it attains its highest elevation of 2,690 feet in the vicinity of Grand Falls on the St. John River. In the northeastern half of the Province there are extensive areas of Crown lands carrying valuable stands of merchantable timber. Numerous rivers provide access to the extensive lumbering areas and to attractive hunting and fishing resources. The Province is watered to the west and south by the St. John River, which, in its course of 400 miles, runs through country famed for its distinctive beauty.

White the forest resources are of first importance economically, large areas of rich agricultural land are found in the numerous river valleys, especially that of the lower St. John, and in the broad plains near the coast. Natural gas and petroleum are obtained in limited quantities and coal mining on a moderate scale is carried on in the Minto Basin at the head of Grand Lake.

Quebec.-Quebec is the largest province of the Dominion and occupies the area of British North America east of Hudson Bay, with the exception of the Maritime Provinces and Newfoundland (including the Coast of Labrador). It has an area (see p. 2) of 594,860 square miles, equal to be combined areas of France, Germany and Spain, but a large part of the surface is made up of Precambrian rocks of the Canadian Shield, which renders it unsuitable for agriculture. The Gulf of St. Lawrence and the River St. Lawrence penetrate across the entire width of Quebec and divide the Eastern Townships and the Gaspe Peninsula to the south from the larger area of the Province to the north. North of the St. Lawrence the land takes the form of a ridge parallel to the river and rises from sea-level to the Height of Land at an elevation of from 1,000 to 3,000 feet from which it descends gently to sea-level at Hudson Bay and Hudson Strait.

With the exception of the treeless zone, extending north of latitude $58^{\circ}$, most of the Province supports a valuable tree growth varying from the mixed forests in the southwest to the coniferous forests in the east and north. In addition to extensive
timber limits, which form the basis of a great pulp and paper industry (see Chapter IX), Quebec is the foremost of the provinces in the development of hydro-electric power (see Chapter XIII) and has available water-power resources, at ordinary minimum flow, almost equal to those of Ontario and Manitoba combined. Its asbestos deposits have long been known for their quality and extent and promise to become still more important as a possible source of magnesium as a by-product. Relatively recently, extensive developments of gold and copper in the western part of the Province have taken place and the mineralized area is being extended year by year. Quebec is in second place in mineral production among the provinces of the Dominion (see Chapter XII). Its fisheries in the St. Lawrence River and Gulf are an important resource. The climate and soil of the upper St . Lawrence Valley and of the Eastern Townships are well suited to general farming operations, including dairying and the production of vegetables on a commercial basis.

Ontario.-Lying between Quebec on the east and Manitoba on the west, Ontario is usually regarded as an inland province but its southern boundary has a fresh-water shore line on the Great Lakes of 2,362 miles while its northern limits have a salt-water shore line of 680 miles on Hudson and James Bays. There is a tidal port at Moosonee at the southern end of James Bay. The most southerly point in the Province is Middle Island at $41^{\circ} 41^{\prime} \mathrm{N}$. latitude (this is also the most southerly point in the Dominion) and the most northerly latitude of the Province is $56^{\circ} 50^{\prime}$. It has an area of 412,582 square miles.

As in Quebec, the surface of Ontario follows the conformation characteristic of the Precambrian Shield except in the Ontario Peninsula where the surface is low and level. The highest point in Ontario is 2,120 feet, on the promontory at the northeastern corner of Lake Superior. Northwest from the Height of Land, the slope descends very gently to Hudson Bay where a large marginal strip (the Hudson Bay Lowlands) is less than 500 feet above sea-level.

Mining is a very important industry in the wide-spread Precambrian area; as in the adjoining Province of Quebec, Ontario is lacking in native coal but is rich in other minerals and contributes almost half of the total mineral production of the Dominion. Gold, silver, nickel, copper, zinc, magnesium, dolomite, gypsum, salt and other minerals are mined commercially. Petroleum and natural gas are also produced on an important scale in the Ontario Peninsula (see Chapter XII).

The geographic position of Ontario on the Great Lakes waterways system permits coal to be economically transported from Pennsylvania and iron ore from Minnesota to provide the basis of a large iron and steel industry. A rich iron-ore development in the Steep Rock district west of Port Arthur has recently come into production. An abundance of natural resources has made Ontario the foremost industrial province of Canada (see Chapter XIV).

Possessed of excellent soil and a wide variety of climate, gencral farming is carried on extensively. In the Niagara Belt, fruit farming has been scientifically developed and is a highly specialized industry throughout the Ontario Peninsula.

Vast forest resources in proximity to hydro power (see Chapter IX) are the basis of large wood-using industries and the forests of the north are a rich fur preserve.

Manitoba.-Manitoba, covering 246,512 square miles, is roughly the size of France and is the most central of the provinces. Together with the Provinces of Saskatchewan and Alberta it constitutes the famous Prairie Belt or Interior Plain section of the Dominion-world renowned for the quality of its wheat.

The Province has a considerable area of prairie land but is also a land of wide diversity combining 400 miles of sea-coast (on a rocky belt along its northeastern boundary, bordering Hudson Bay); great areas of northern mixed forests; large. lakes and rivers covering an area of 26,789 square miles; a belt of treeless prairie extending to the southeastern corner of the Province; and patches of open prairie overlain by very fertile soil of great depth. The surface of the Province as a whole is comparatively level, the average elevation being between 500 and 1,000 feet; the greatest height of 2,727 feet is Duck Mountain northwest of Lake Dauphin.

About three-fifths of the Province, east and north of Lake Winnipeg, is underlain with Precambrian rock in which the presence of rich deposits of base metals has been confirmed, as in Ontario and Quebec (see Chapter XII).

The Province, although regarded as basically agricultural, possesses a wealth of water-power resources (Manitoba ranks after Quebec, Ontario and British Columbia in this respect) that, together with mineral and forest riches, have brought about an expanding industrial development.

Saskatchewan.-Saskatchewan lies between Manitoba and Alberta extending, like each of the Prairie Provinces, from the International Boundary on the south to the 60th parallel of Iatitude which divides it from the Northwest Territories. It has an area of 251,700 square miles.

The northern half of the Province is abundantly watered by lakes and rivers and the topography is one of low relief. The Precambian Shield, which covers most of Quebec, Ontario and Manitoba, penetrates over the northern third of Saskatchewan and has given evidence of potential richness of mineral wealth. This area is also rich in timber resources while the southerly two-thirds of the Province is generally fertile prairie with soil of great depth. In normal years there is sufficient moisture for rapid growth and the abundant sunshine during the long summer season in this northern latitude quickly ripens the crops.

Alberta.-This Province, covering 255,285 square miles, lies between Saskatchewan and the Rocky Mountains. Like Saskatchewan, the southern part of the Province is comprised in the dry, treeless prairie belt, changing to the north into a zone of poplar interspersed with open prairie. This gives way to mixed forests covering the more northerly parts. The Precambrian rocks enter Alberta at its northeast corner, so that, excepting the fringe of mountainous country on its western border, practically the whole of the Province is overlain by arable soil of great depth. Alberta has two marked features: (1) the great valley of the Peace River, which has already resulted in the extension of settlement farther north than in any other part of Canada; and (2) the wonderful grazing lands in the foothills district which, rising sharply on the west, commence the ascent that continues to the very peaks of the Rocky Mountains. The southern half of the Province, rising towards the west, lies at a general elevation of from 2,000 to 4,000 feet; but in the northern half, the slope descends until elevations of well under 1,000 feet are reached at Lake Athabaska in the northeast corner.

Alberta has the most extensive coal resources of any province of the Dominion and has become the leading producer of petroleum and natural gas. Lumbering is important in the more mountainous western parts and in the north, but ranching is still pursued in the less populous sections. In the southern prairies there are considerable areas where the quantity and distribution of the natural precipitation makes permanent agriculture precarious and, in these areas, a number of large irriga-
tion projects have been developed, taking their water supply from rivers rising in the mountains which form the western boundary of the Province. The climate of Alberta is a particularly pleasant one, cooler in summer than more eastern parts of the country and tempered in winter by the Chinook winds.

The coal and oil resources have provided the basis of an industrial development and Edmonton has become the railhead for the north country.

British Columbia.-British Columbia, the third largest and the most westerly province of the Dominion, includes many islands of the Pacific, notably the Queen Charlotte Group and Vancouver Island, the area of the latter being about 12,408 square miles. The total area of the Province is 366,255 square miles.

The predominant feature of the Province is the parallel ranges of mountains which cover all of it except the northeast corner and produce a conformation characterized by high mountain ranges interspaced with valleys many of which are extremely fertile, with climatic conditions well adapted to mixed agriculture or fruit growing. As a rule the agricultural areas of these valleys are relatively small and broken but there are two large areas in the Peace River Block and the Stuart Lake District that are rich and have great agricultural possibilities. The shore line of the Pacific is deeply indented with many inlets ideal for harbourage and has wonderful scenic aspects.

The wealth of forest resources supports the lumbering and pulp and paper industries and places British Columbia first among the provinces in the production of lumber and timber (see Chapter IX). The Province also excels in fishery products, chiefly on account of its catches of the famous Pacific salmon. The mineral resources are remarkable for their variety and wealth. Production of the metals, gold, copper, silver, lead and zinc has played an important role in the economic life of the Province since its early days, while valuable coal deposits on Vancouver Island, and at Crowsnest and Fernie in the interior, have been worked for many years. In regard to water-power resources, British Columbia ranks after Quekec and Ontario (see Chapter XIII).

Yukon and the Northwest Territories.-North of the western provinces the Dominion of Canada extends over an area of $1,511,979$ square miles. This is iargely an undeveloped domain, and for administrative purposes is divided into Yukon Territory and the Northwest Territories: the latter is subdivided into three Provisional Districts. This vast area is over twelve times the area of the British Isles and about half the area of the United States. Great rivers, like the Mackenzie and the Yukon, are found there, as well as great inland bodies of water, such as Great Slave and Great Bear Lakes. There are many indications of mineral wealth; a number of rich gold-bearing deposits are under development and many prospects are being investigated in the Yellowknife area. The radium mines of Great Bear Lake yield the only radium produced on the Continent.

The Yukon-Alaska Highway, completed in 1942, links the entire northwest, through Edmonton, with the cities of the Prairie Provinces and the United States. Airports and other facilities have been provided over wide sections of the Mackenzie Valley and in future it is likely that travel and transport by air will have a great influence on the development of the Territories. In Chapter XXXI, Section 1, details regarding the resources and administration of these areas are given.

## PART II.-GEOLOGY

See list at the front of this edition for special material published, under this heading, in previous editions of the Year Book.

## PART III.-SEISMOLOGY

Basic material on this subject appears at pp. 27-30 of the 1938 Year Book. For special material published, under this heading, see pp. 24-26 of the 1945 Year Book.

## PART IV.-FAUNA AND FLORA

See list at the front of this edition for special material, under this heading, published in previous editions of the Year Book.

## PART V.-LANDS, PARKS, SCENIC AND GAME RESOURCES

Canada is distinctly a new country and her resources are, for the most part, in the early stages of development. The fur, fishery and forest resources have, it is true, been the basis of trade for two or three hundred years, but exploitation on the present commercial scale is of relatively recent growth. Nevertheless, much effort has been directed to conservation in the cases of those resources that admit of such methods. Details of such policy are given in the chapters dealing with the individual resources.

Numerous surveys and investigations of the extent and value of the resources have been made from time to time and the results have been reviewed in special publications. Detailed information regarding individual natural resources will be found in the later chapters.

The treatment of resources considered below is concerned only with those summary phases of the subject that can be regarded as falling under the definition of physiography used in its wider interpretation. A classification of lands resources, information on the National Parks and resources in game and scenery properly fall under this head.

## Section 1.-LLands Resources

The figures of Table 1 are based on estimates from the Decennial Census of 1941 in regard to agricultural lands, the Dominion Forest Service as regards forested lands, and from the Surveyor General and Chief of the Surveys and Engineering Branch as regards total areas of Canada and of the provinces; they show how the total land area of Canada is made up as between present and potential agricultural lands, present and potential forested lands, and lands that are unproductive as regards surface resources. Between the totals of present and potential agricultural lands and the totals of forested lands there is, of course, duplication to the extent of the agricultural lands under forest.

## 1.-Land Area of Canada, Classified as Agricultural, Forested or Unproductive

Note.-The land area of Canada is shown classified by tenure in Chapter XXXI.

| Description | Prince Edward Island | Nova Scotia | New Brunswick | Quebec | Ontario | Manitoba |

## Section 2.-National and Provincial Parks

National Parks of Canada.*-The Dominion Government maintains the National Parks of Canada as a means of preserving regions of outstanding beauty or marked interest. The parks are dedicated to the people of Canada for their benefit, education and enjoyment, for which they provide remarkable opportunities. Differing widely in character and varying in purpose, the park areas include: the scenic and recreational parks situated from the Atlantic Coast to the Rocky and Selkirk Mountains; the national wild-animal parks or reserves-large fenced areas established for the protection and propagation of species once in danger of extinction; and the national historic parks. They are administered by the National Parks Bureau of the Lands, Parks and Forests Branch, Department of Mines and Resources. Under the supervision of this same Bureau are the historic sites of national interest that have been acquired throughout the country. (See pp. 78-90 of the 1938 Year Book.)

In the national parks all wild life is rigidly protected, and primal natural conditions are maintained in so far as possible. The local administration of the larger parks is carried out by resident superintendents, assisted by a warden service that is responsible for the necessary game and forest patrols. Opportunities for outdoor life and recreation have been increased by the provision of equipped camp-grounds, bath-houses and playgrounds, as well as by the construction of golf courses, tennis courts and outdoor swimming pools. Accommodation is provided in many of the parks by modern hotels, bungalow camps and chalets operated by private enterprise. Railways and motor roads serve the parks, and nearly 700 miles of motor highways and 2,500 miles of trails have been built to provide access to the outstanding scenic regions.

[^12]Scenic and Recreational Parks.-The scenic and recreational parks include regions of unsurpassed grandeur in the Rocky and Selkirk Mountains of Western Canada. Among these are: Banff, Jasper and Waterton Lakes National Parks in Alberta, on the eastern slope of the Rockies; Kootenay and Yoho Parks in British Columbia, on the western slope of the Rockies; and Glacier and Mount Revelstoke Parks (also in British Columbia), in the Selkirks. While these parks bear a general resemblance to one another, each possesses individual characteristics and phenomena, varying fauna and flora and different types of scenery. Banff Park contains the famous resorts, Banff and Lake Louise, and in Jasper Park is the well-known tourist centre, Jasper. Direct connection between these points is provided by the BanffJasper Highway, which was completed and opened for travel in 1940.

Eastward from the mountains are found Prince Albert National Park in Saskatchewan, a typical example of the forest-and-lake country bordering the northwestern plains region, and Riding Mountain National Park in Manitoba, a well-timbered area dotted with numerous lakes, and at a general altitude of 2,000 feet above seaIevel. In Ontario are three small park units established primarily as recreational areas. They are Point Pelee, Georgian Bay Islands and St. Lawrence Islands National Parks.

In the Maritime Provinces, two remarkable areas have been established as National Parks. Cape Breton Highlands National Park, situated in the northern part of Cape Breton Island, Nova Scotia, has an area of 390 square miles. Its rugged and picturesque shore line, indented by numerous bays and coves, and its rolling mountainous interior provide a delightful setting reminiscent of Scotland. Girdled on its eastern, northern and western sides by a spectacular highway called the Cabot Trail, and possessing such features as trails, beaches, tennis courts, and a golf links, the park offers many diversions to the visitor. Prince Edward Island National Park, containing an area of 7 square miles, extends for a distance of about 25 miles along the northern shore of the island province. Its chief attractions are magnificent sand beaches which permit salt-water bathing under ideal conditions. The Park also contains "Green Gables", the farmhouse made famous by the novels of L. M. Montgomery. A fine golf links, tennis courts, camp-grounds and marine drives enhance its attractions.

Gatineau Park.-Gatineau Park differs from the other National Parks by being under the administration and control of the Federal District Commission, a body established in 1899 by Parliament for the beautification and improvement of Ottawa and environs. It is situated in the Province of Quebec about 8 air miles from the Federal Capital. It comprises at present about 16,000 acres of wooded hills, valleys, lakes and streams located in the southerly fringe of the Laurentians, the oldest mountains in Canada, and is being preserved in its natural state for the enjoyment of the public.

The park is a game sanctuary. Deer, bear, fox, beaver, mink, raccoon and other fur-bearing animals are quite numerous. Well-located trails, picnic spots and camping sites afford the maximum of pleasure and healthful recreation for the many thousands who patronize this beautiful natural park located at the very doorstep of Canada's capital city. Gatineau Park furnishes excellent opportunities for the enjoyment of skiing and is the principal centre in the Ottawa district for this popular winter sport.

In the further development of this park, it is expected that its area will be increased to 30,000 acres, that overnight cabins will be provided and that shelters, refectories, bath-houses and other essential structures will be added.

Animal Reserves.-The special animal parks were established for the protection of such species of mammalian wild life as buffalo, elk and pronghorned antelope, which, once in danger of extinction, now thrive under natural conditions in large fenced enclosures especially suited to their requirements. These reserves include Elk Island National Park in Alberta, 30 miles from Edmonton, which contains a large herd of buffalo and numerous deer, elk and moose. This park also includes a recreational development at Astotin Lake, where bathing, camping, tennis and golf may be enjoyed.

The National Historic Parks and Sites.-A further extension to the National Parks system was made in 1941 when seven areas, previously acquired and administered as historic sites, were designated as National Historic Parks. They are associated with events of outstanding interest in the early history of the Dominion and as such merit the distinction now conferred on them.

Of the National Historic Parks, one of the most interesting is Port Royal in Nova Scotia. This park area, situated on the shores of Annapolis Basin at Lower Granville, contains a replica of the Port Royal Habitation, a group of buildings constructed to shelter the first permanent European settlement in Canada. The present buildings stand on the exact site of the original Habitation erected in 1605 by DeMonts, Champlain, and Poutrincourt and destroyed by an English force in 1613.

The other new National Historic Parks are: Fortress of Louisbourg, Cape Breton Island, N.S.; Fort Chambly, Chambly Canton, Que.; Fort Lennox, Ile-auxNoix, Que.; Fort Wellington, Prescott, Ont.; Fort Malden, Amherstburg, Ont.; and Fort Prince of Wales, Churchill, Man. Fort Anne Park, at Annapolis Royal, N.S., and Fort Beauséjour Park near Sackville, N.B., previously established as National Parks, have also been designated National Historic Parks.

The National Parks Bureau is also charged with the preservation, restoration and marking of historic sites throughout Canada. In the work of acquiring and selecting sites worthy of commemoration, the Bureau has the assistance of the Historic Sites and Monuments Board of Canada, a group of recognized authorities on the history of the section of the country they represent. Of the total number of sites that have been considered by the Board, more than 300 have been suitably marked by the Department of Mines and Resources and many others recommended for future attention.
2.-Locations, Years Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1944

| Park | Location | Year Established | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
| Scenic and Recreational Parks |  |  | sq. miles |  |
| Banff. | Western Alberta, on east slope of Rockies. | 1885 | 2,585.00 | Mountain playground containing famous resorts, Banff and Lake Louise. Typical example of central Rockies, with massive ranges, ice-fields, alpine valleys, glacierfed lakes and hot mineral springs. Biggame sanctuary. Recreations: climbing, motoring, riding, bathing, golf, tennis, fishing, skiing. |

2.-Locations, Years Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1944 - continued

| Park | Location | Year <br> Estab- <br> lished | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
| Scenic and Recreational Parks-con. Yoho................... | Eastern British Columbia, on west slope of Rockies. | 1886 | sq. miles 507.00 | Rugged scenery on western slope of Rockies. Contains famous Yoho Valley, with its numerous waterfalls; Kicking Horse Valley; Emerald, O'Hara, and Wapta Lakes; natural bridge. Alpine climbing centre. |
| Glacier.............. | Southeastern British Columbia, on the summit of the Selkirk Range. | 1886 | $521 \cdot 00$ | Superb example of Selkirk* Mountain region, with snow-capped peaks, glaciers, luxuriant forests, alpine flower-gardens, numerous big game. Illecillewaet and Asuikan Glaciers; Rogers Pass; and famed Macdonald tunnel. |
| Waterton Lakes..... | Southern Alberta, adjoining Glacier Park in Montana, U.S.A. | 1895 | $220 \cdot 00$ | Canadian section, Waterton-Glacier International Peace Park. Mountains noted for beauty of colouring; lovely lakes, picturesque trails, waterfalls. Recreations: motoring, riding, fishing, tennis, golf, camping. |
| Jasper............... | Western Alberta, on east slope of Rockies. | 1907 | 4,200.00 | Rich in historical associations. Immense region of majestic peaks, deep canyons, beautiful lakes, containing famous resort, Jasper. Also Miette Hot Springs, Maligne Lake, Mount Edith Cavell and Columbia Ice-field. Big-game sanctuary. Recreations: motoring, climbing, riding, bathing, fishing, golf, tenris, skiing. |
| Mount Revelstoke... | Southeastern British Columbia, on the west slope of Selkirks. | 1914 | $100 \cdot 00$ | Alpine plateau on summit of Mount Revelstoke, accessible by spectacular 18 -mile drive from Revelstoke. Contains mountain lakes, alpine flora, camp-sites. Game sanctuary; winter sports centre. |
| St. Lawrence Islands. | InSt. <br> River <br> Lawrence <br> betweenMorrisburg andKingston, Ont. | $\begin{gathered} 1914 \\ \text { (Re- } \\ \text { served } \\ \text { 1904) } \end{gathered}$ | $\begin{gathered} 185 \cdot 60 \\ \text { (acres) } \end{gathered}$ | Mainland reservation and thirteen islands among "Thousand Islands". Recreational area; camping, fishing, bathing. |
| Point Pelee.......... | Southern Ontario, on Lake Erie. | 1918 | 6.04 | Most southerly mainland point in Canada ( $41^{\circ} 54^{\prime} \mathrm{N}$. ). Recreational area with unique fiora and fine beaches. Resting place for many migratory birds. Bathing, camping. |
| Kootenay........... | Southeastern British Columbia, on the west slope of Rockies. | 1920 | 587.00 | Mountain park bordering VermilionSinclair section of Banff-Windermere Highway. Contains Sinclair Canyon, Radium Hot Springs, Marble Canyon. Big-game sanctuary. Recreations: motoring, bathing, camping. |
| Prince Albert........ | Central Saskatchewan, north of Prince Albert. | 1927 | $\begin{aligned} & 1,869 \cdot 00 \\ & \text { (approx.) } \end{aligned}$ | Forested lakeland of northwestern Canada with extensive waterways and fine beaches. Interesting fauna; summer resort. Recreations: boating, bathing, fishing, camping, tennis, golf. |
| Riding Mountain..... | Southwestern Manitoba, west of Lake Winnipeg. | 1929 | 1,148.08 | Rolling woodland, with crystal lakes, on summit of Manitoba escarpment. Natural home for big game, including elk, deer, moose. Summer resort. Recreations: bathing, boating, fishing, tennis, golf, camping. |
| Georgian Bay Islands (including Flowerpot Island Reserve) | In Georgian Bay, near Midland, Ont. | 1929 | $5 \cdot 37$ | Thirty islands in Georgian Bay. Recreational and camping area, boating, bathing, fishing. Unique limestone formations and caves on Flowerpot Island. |

## 2.-Locations, Years Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1944-continued

| Park | Location | Year Established | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
| Scenic and Recreational Parks-conc. |  |  | sq. miles |  |
| Cape Breton Highlands. | $\begin{aligned} & \text { Northern part of } \\ & \text { Cape Breton Is- } \\ & \text { land, N.S. } \end{aligned}$ | 1936 | $\begin{array}{r} 390.00 \\ \text { (approx.) } \end{array}$ | Outstanding example of rugged coast line with mountain background. Remarkable views of Atlantic Ocean and Gulf of St. Lawrence visible from highway, Cabot Trail. Recreations: bathing, boating, golf, tennis, deep-sea fishing, camping. |
| Prince Edward Island. | $\left\lvert\, \begin{array}{lll} \text { North } & \text { shore of } \\ \text { Prince } & \text { Edward } \\ \text { Island. } & \end{array}\right.$ | 1937 | $7 \cdot 00$ | Strip 25 miles long on north shore. Recreational area with magnificent beaches. Contains famed Green Gables farmstead. Recreations: bathing, boating, fishing, golf, bowling, camping. |
| Animal Parks and Reserves |  |  |  |  |
| Buffalo.............. | Eastern Alberta, near Wainwright. | 1908 | 197.50 | Fenced area originally set aside for the preservation of buffalo and other big game. Animal population since withdrawn; area now being utilized by Department of National Defence. |
| Elk Island........... | Central Alberta, near Lamont. | $\begin{gathered} 1913 \\ (\mathrm{Re}- \\ \text { served } \\ 1906) \end{gathered}$ | $51 \cdot 20$ | Fenced reserve containing a large herd of plains buffalo; also numerous deer, elk and moose. Recreational area at Astotin Lake; camping, boating, bathing, tennis and golf. |
| Nemiskam.......... | Southern Alberta, near Foremost. | 1922 | 8.50 | Fenced reserve established to protect pronghorned antelope, a species native to the region. |
| Wood Buffalo ${ }^{1}$...... | Partly in Alberta ( 13,675 sq. miles) and partly in Northwest Territories ( $3,625 \mathrm{sq}$. miles), west of Athabaska and Slave Rivers. | 1922 | $\begin{aligned} & 17,300 \cdot 00 \\ & \text { (approx.) } \end{aligned}$ | Immense unfenced area of forests and open plains, dotted with lakes and coursed by numerous streams and rivers. Contains a large herd of buffalo, developed from the native "woodland" type and surplus plains buffalo from Buffalo National Park; also bear, beaver, caribou, deer, moose and waterfowl. Area as yet undeveloped. |
| Historic Parks |  |  | acres |  |
| Fort Anne.......... | Nova Scotia (Annapolis Royal). | 1917 | 31 | Site of early Acadian settlement of Port Royal. Contains well-preserved fortifications of earthworks type; also museum housing a fine historical library and numerous exhibits relating to early periods. |
| Fort Beauséjour...... | New Brunswick, near Sackville. | 1926 | 59 | Site of French fort erected in middle of 18th century. Renamed Fort Cumberland by British on capture in 1755; original name since restored. Contains museum with many exhibits relating to history of region. |
| Fortress of Louishourg. | Cape Breton Island, N.S., 25 miles from Sydney. | 1941 | 340 | Old walled city and strategic military and naval station built by the French, 1720-40. Captured by the British in 1758, it was destroyed in 1760. A museum on the site contains interesting mementoes of historic past. |

[^13]
# 2.-Locations, Years Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1944-concluded 

| Park | Location | Year Established | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
| Historic Parks-conc. |  |  | sq. miles |  |
| Port Royal. | Lower Granville, N.S., 8 miles from Annapolis Royal. | 1941 | 17 | Reconstruction on the exact site of the Port Royal "Habitation" erected by DeMonts and Champlain in 1605. The original group of buildings, which sheltered the first permanent European settlement in Canada, was destroyed in 1613. |
| Fort Chambly....... | Chambly Canton, Que. | 1941 | $2 \cdot 5$ | French fort first constructed in 1665 on Richelieu River. Rebuilt of stone in 1711, it figured in several wars. Contains a museum housing many interesting exhibits. A military cemetery outside walls of fort is included in park area. |
| Fort Lennox. . . . . . . | Ile-aux-Noix, Que., near St. Johns. | 1941 | 210 | Military post constructed by British on site of early French fort, to command Richelieu River water route from south. Several well-preserved stone buildings together with the earthworks and moat remain. |
| Fort Wellington...... | Prescott, Ont....... | 1941 | 8.5 | Contains well-preserved earthworks, blockhouse and other buildings constructed by British as base for defence of communications between Kingston and Montreal. The block-house contains a small museum. |
| Fort Malden......... | Amherstburg, Ont.. | 1941 | 3 | Situated on the banks of the Detroit River, the site of one of the principal frontier military posts in Upper Canada. A new museum building contains interesting exhibits of the region. |
| Fort Prince of Wales. | Northern Manitoba, near Churchill. | 1941 | 50 | Massive stone fort built 1733-71, to secure control of Hudson Bay for Hudson's Bay Company and England. The fort was captured and partially destroyed by a French force in 1782. |

SUMMARY OF THE AREAS OF NATIONAL PARKS, BY PROVINCES

| Province | Area | Province | Area |
| :---: | :---: | :---: | :---: |
|  | sq. miles |  | sq. miles |
| Prince Edward Island. | 7.00 | Saskatchewan. | 1,869.00 |
| Nova Scotia.. | $390 \cdot 60$ | Alberta. | 20,937.201 |
| New Brunswick | 0.09 | British Columbia. | 1,715.00 |
| Quebec. | 0.33 | Northwest Territories | 3,625.001 |
| Manitoba | 1,148.16 | Total | 29,704-10 ${ }^{2}$ |

${ }^{1}$ Including portion of Wood Buffalo Park. in extent (see p. 31).

Provincial Parks.-In addition to the national parks already described, most of the provinces have established provincial parks. The purpose is the same-to maintain areas of great scenic or other interest for the benefit of present and future generations. The provincial parks are administered by the Provincial Governments
concerned, and in most cases they have not yet reached the degree of development which marks the national parks. Following are brief descriptions of the principal provincial parks, by provinces.

British Columbia.-With its great scenic areas, no province lends itself more to the creation of parks than does British Columbia, and this condition is reflected in the large number of provincial parks that have been established. There are three classifications of parks: Class A, with 16 ; Class B, with 3 ; and Class C, with 28 , representing a total of 47 units with a combined area of 11,480 square miles. In addition there are three parks, known as Special Act Parks, with a total area of 2,604 square miles.

Only a few of the Class A parks can be mentioned in this article. Tweedsmuir Park, 5,400 square miles in area, possesses outstanding mountain, lake and river scenery, and is of great interest to sportsmen, naturalists, mountaineers and photographers; it contains a fine chain of connected lakes. Hamber Park 3,800 square miles, also has fine mountain and river scenery, and is traversed from the Big Bend of the Columbia River to Golden by the Trans-Canada Highway. Wells Gray Park, 1,820 square miles, due north from Kamloops, is a primitive wonderland in the heart of one of the finest scenic and big-game areas in the Province. Garibaldi Park, 973 square miles, immediately north of the city of Vancouver, is a rugged alpine area of peaks, glaciers and snowfields. Strathcona Park, 828 square miles, in the centre of Vancouver Island, another alpine area of outstanding beauty, is a game sanctuary but offers excellent fishing. Other parks serve almost every part of the Province.

Alberta.-Although Alberta has a larger area of National Parks than any other province, many small park areas have also been set apart by the Provincial Government. These include:-

Aspen Beach Park, 17 acres on the shore of Gull Lake, west of Lacombe, primarily for bathing, outing and picnic purposes; Saskatoon Island Park, 250 acres reserved mainly for picnic purposes, west of Grande Prairie; Gooseberry Lake Park, 320 acres on the shore of Gooseberry Lake north of Consort, has a sports ground and a number of cottages, and accommodation for transients is available in the town of Consort; Lundbreck Falls Park, 13 $\frac{1}{2}$ acres, a pleasant little beauty spot on the Crowsnest Pass highway west of Macleod, popular with fishermen and motorists; Sylvan Lake Park, $8 \cdot 6$ acres on the shores of Sylvan Lake, 11 miles west of Red Deer, a popular bathing place; Hommy Park, $5 \frac{3}{4}$ acres in the vicinity of Albright, established to serve residents of the district with pienic and outing facilities; Ghost River Park, 535 $\frac{1}{2}$ acres on a beautiful artificial lake on the Ghost and Bow Rivers west of Calgary; Park Lake Park, $37 \cdot 2$ acres set aside to provide pienic facilities for the districts north and west of Lethbridge; Assineau Reserve, on the Assineau River south of Lesser Slave Lake, set aside to preserve a fine stand of large spruce; Dillberry Lake Reserve, 78.4 acres on the Alberta-Saskatchewan boundary near Chauvin, to preserve the natural beauty of a picturesque lake; Writing on Stone Reserve, 796 acres on the Milk River east and north of Coutts, to preserve natural obelisks on which appear hieroglyphics which have never been deciphered; Saskatoon Mountain Reserve, 3,000 acres preserving a fine lookout point
in the Grande Prairie district; Little Smoky Reserve, $34 \cdot 7$ acres, a picnic ground and big-game hunting base on Little Smoky River, 12 miles south of Falher;Bad Lands Reserve, 1,800 acres north of Drumheller, established to stop unauthorized removal of fossilized remains of pre-historic animals; Wapiti Reserve, 21.8 acres on a canyon in the Wapiti River ten miles south of Grande Prairie, established as an outing centre for the rural district and also for the use of big-game hunters.

Saskatchewan.-Saskatchewan's seven permanent park reserves are distributed over the southern part of the Province. They are well treed and contain many beautiful lakes providing facilities for quiet recreation, camping, hiking, fishing and boating. They are: Cypress Hills Park, south of Maple Creek and a few miles from the United States boundary, beautifully located in the heart of a provincial forest area; this park has modest bungalow, lodge and cabin accommodation, and an auto-camp equipped with camp kitchens, spring water, and wood for fuel. Moose Mountain Park, an area of 192 square miles honeycombed with lakes and thickly covered with poplar and white birch, is located about 15 miles north of Carlyle, and is popular with visitors from the United States because of its fine scenery and good fishing. Katepwe Park, about 60 miles northeast of Regina, on the famous Qu'Appelle Lakes, has camp kitchens and bathhouses and offers boating, fishing and safe bathing. Good Spirit Lake Park, 20 miles west of Canora, also offers good fishing and bathing, and has excellent camp and pienic grounds with kitchen and bath-house. Greenwater Lake Park is an area of 35 square miles in the forest belt north of Kelvington; it consists mainly of virgin forests and lakes affording good bathing and fishing. Little Manitou Park is an area of about 4 square miles on Manitou Lake, renowned for its medicinal qualities: chateau, cabin, and touristcamp accommodation are available. Duck Mountain Park, 15 miles northeast of Kamsack, presents a well-forested area and beautiful Madge Lake, which has a shore line of 47 miles, densely wooded and with sandy beaches. Wild life is plentiful and the lake is well stocked with fish.

Manitoba.-Although Manitoba has many areas attractive to the sightseer and vacationist, the Province has as yet established officially, only one which may be described as a provincial park. This is the area set aside in 1930 as the Whiteshell Forest Reserve, a rugged section of the Precambrian part of eastern Manitoba, covering 1,088 square miles. The physical characteristics of this area account for its distinctiveness as a recreational, fishing and hunting reserve. More than 200 lakes and rivers are interlaced among islands and mainland, providing a fine network of canoe routes throughout the park. Volcanic rock cliffs, overhung with moss and small brush, rise steeply from the water. Much of the land is rough, hilly and thickly forested with the contrasting green of poplar, birch and tamarack. Although much of the northern Whiteshell remains in its primitive state, several southern lakes have been developed as resorts. West Hawk, Falcon, Caddy, Brereton, and White Lakes have become most popular. Fishing is an outstanding attraction of the Whiteshell, with northern pike, pickerel, lake trout, bass and perch the most prevalent species. A large sport-fish hatchery with a capacity of 500,000 eggs was constructed in 1942. Game-bird and big-game hunting have long been popular in the northern Whiteshell, though much of the southern portion has been set aside
as a game preserve. Early maps show that La Vérendrye was the first white man to explore what is now the Whiteshell Provincial Park. In 1734 he followed the turbulent Winnipeg River, which roughly outlines its northern boundary. Manitoba's "Land of the Granite Cliffs" has had a colourful past. Proposed post-war development promises it an interesting future.

Ontario.-There are six provincial parks in Ontario. With the exception of Ipperwash Beach Park, which is maintained exclusively for camping, picnicking and swimming, they were all dedicated primarily to the preservation of the forests, fish, birds, and all forms of wild life. The recreational possibilities which they provide are varied and extensive.

Algonquin Provincial Park, 2,741 square miles, is a wilderness area available by highway from the southern boundary. There are good camping facilities, with excellent fishing and attractive canoe trips. Quetico Provincial Park, 1,720 square miles, also a wilderness area, provides good camping facilities, fishing and canoe trips. Lake Superior Provincial Park, 540 square miles, is another wilderness area. Camping facilities have not yet been provided but there is good fishing. Canoe trips have not yet been defined or routes improved. Sibley Provincial Park, 61 square miles, is a wilderness area as yet without camping facilities. Rondeau Provincial Park, 8 square miles, is partly cultivated, with fine timber stands and highly improved camping facilities. There are some enclosed animals and others running wild: fishing is fair and special duck shooting licences are obtainable. There are no canoe trips in this park. Ipperwash Beach Provincial Park consists of 109 acres of sandy beach and woodland area with highly developed camping facilities. There are no wild animals, but the fishing is fair. Special fishing licences are available in Algonquin and Quetico Parks.

Quebec.-There are four provincial parks in this Province, located in distinctive areas which enables each to offer some special interest. Like those in the other provinces they have been established in order to preserve natural beauty and to protect the fauna and flora.

Laurentide Park is an area of about 4,000 square miles, beginning a short distance north of the city of Quebec, and has an altitude of about 3,000 feet. It is remarkable for its numerous lakes and tumultuous rivers and its fine speckled trout. Moose, deer, black bears, wolves, and all the fur-bearing animals of the Province abound, but no hunting is permitted. There are two well-organized hotels and about twenty fishing camps. Mount Orford Park has an area of 9,425 acres, located on Orford Mountain, with an altitude of 2,860 feet. The slope of the mountain makes it one of the best skiing tests in Canada, and it also has a picturesque nine-hole golf course. Gaspe Park, 350 square miles, has a flora dating back to an era prior to the Great Continental Glacier. The main object of this park is to preserve the last herds of caribou on the south shore of the St. Lawrence. Speckled trout affords fishing in the lakes and rivers of the park. The Mount Laurier-Senneterre Highway Reserve, 2,600 square miles, in the western part of the Province, is crossed on its full length by the road leading from Montreal to the Abitibi region. It is remarkable for its numerous lakes and rivers which provide favourable conditions for long
canoe excursions. Fish include grey trout, northern pike, pickerel, black bass, and, in a limited number of lakes, speckled trout. There are two establishments for the accommodation of travellers, also a stopping place maintained by the Department of Game and Fisheries where cabins and boats may be rented.

Maritime Provinces.-There are national parks in Prince Edward Island and Nova Scotia, and many civic parks, but none in any of the Maritime Provinces which comes within the classification of provincial parks.

## Section 3.-Game and Scenery

The resources of Canada from the standpoints of the sportsman and tourist are both unique and varied. In the wooded and unsettled areas of each province there are many moose, deer, bear and smaller game, while in the western part of the Dominion there are also wapiti, caribou, mountain sheep, mountain goat, grizzly bear and lynx. Mountain lion, or cougar, are found in British Columbia and in the mountains of Alberta, while in the Northwest and the Far North there still exist herds of buffalo and musk-ox, which are given absolute protection by the Dominion Government.

Ruffed and spruce grouse are found in the wooded areas of Canada from coast to coast. Prairie chicken and Hungarian partridge inhabit the open prairies and the partly timbered areas of the three mid-western provinces. The Franklin grouse is native to the mountains of the West and the ptarmigan, an Arctic grouse, lives in the treeless northern plains and is also found in the high mountains of Alberta and British Columbia.

The valleys of Nova Scotia and New Brunswick, the broken lake-country of northern Quebec, Ontario, Manitoba and Saskatchewan, as well as the mountain districts of British Columbia and Alberta, offer a variety of attractions including innumerable game preserves that have won for the Dominion a reputation as a paradise for sportsmen and campers. And not only are these available to those who travel by land; the lakes and rivers that form a network over the eastern part of the country particularly, have made water travel in smaller craft both feasible and attractive. Further, winter sports, the unusual attractions of winter scenery and the bracing though rigorous winter climate may be enjoyed at many winter and year-round resorts. In both Dominion and provincial parks, while angling is permitted, the hunting of game is forbidden, and the wild-life resources preserved. Elsewhere, however, there is available for the hunter, at proper seasons, a wealth of game species.

Migratory Birds Treaty.-This Treaty and the legislation making it effective throughout Canada are administered by the National Parks Bureau of the Department of Mines and Resources and the Royal Canadian Mounted Police. The Treaty, which has been effective since 1916, has as its object the protection of the valuable migratory bird life of Canada and the United States. Information concerning the Treaty, and regulations enacted for its enforcement, may be obtained from the Controller, National Parks Bureau, Department of Mines and Resources, Ottawa.

Oct. 25, Diplomatic relations with Italy resumed by Great Britain, the United States and American Republics. Nov. 8, Prime Minister Mackenzie King set forth the Cabinet's policy in regard to meeting the need for overseas reinforcements. Nov. 22, Nineteenth Parliament reconvened in emergency session to consider conscription issue. Nov. 23, Prime Minister King tabled in the House an Order in Council making 16,000 draftees available for service overseas. Nov. 24-Dec. 7, Debate on Government's war effort. Members voted to support the Government's revised motion of confidence; special session adjourned.
1945. Jan. 5, Field Marshal Sir Bernard Montgomery appointed to command all Allied Forces on northern flank of the Ardennes salient in Belgium; Lt.-Gen. Omar Bradley to command Allied Forces on southern flank. Feb. 6-14, Prime Minister Churchill, President Roosevelt and Marshall Stalin met at Yalta; complete agreement was reached on joint military action against Germany and restoration of democratic, permanent peace throughout the world. Mar. 28, House of Commons approved Canada joining the World Security Conference at San Francisco. Mar. 31, British Commonwealth Air Training Plan brought to a close. Apr. 12, Franklin Delano Roosevelt died suddenly at Warm Springs, Georgia: world paid high tribute to his memory. Apr. 25-June 26, Representatives from 50 Nations met at United Nations World Security Conference, San Francisco, to prepare a charter for a general international organization. May 2, The war in Italy and part of Austria ended under terms of unconditional surrender of the German forces signed by the Germans Apr. 29 in Caserta. Moscow announced the fall of Berlin to the Russian invaders. May 7, Unconditional surrender to Gen. Eisenhower of the German Armed Forces signed at Reims, France, by Col.-Gen. Gustav Jodl, Chief of Staff for Germany. May 8, Proclaimed a holiday for the Victories by the United Nations over the German Reich. June 11,

Dominion general election; Liberal Government of Rt. Hon. W. L. Mackenzie King returned to power. July 4, Canadian military troops entered Berlin as part of the British garrison force to take over their assigned occupation zones of the German capital. July 17-Aug. 2, Prime Minister Churchill, President Truman and Premier Stalin met in a Conference at Potsdam, Germany. On July 28, after the British general election, Clement Attlee replaced Mr. Churchill at the Conference. July 18, Halifax rocked by a series of terrific explosions at the Bedford Naval Basin, Burnside, N.S., caused by fire in an ammunition dump. July 26, The Potsdam Declaration which demanded unconditional surrender of Japan or utter destruction of the enemy was issued by the Allied Powers-Great Britain, United States and China. Aug. 6, First atomic bomb hurled against Japan, wrought devastation on army base of Hiroshima. Canada's part in development of atomic bomb, revealed. Aug. 6-10, DominionProvincial Conference held at Ottawa; Dominion Government presented its brief as a basis for later discussion. Aug. 8, Russia declared war against Japan. Aug. 9, President Truman in a radio broadcast to the world warned Japan that only surrender would stop further use of the terrifying atomic bomb and save the Japanese from destruction. Second atomic bomb dropped on the naval base of Nagasaki. Aug. 10, Government of Japan notified Allied Powers of willingness to surrender provided the Emperor be allowed to retain certain of his prerogatives. Aug. 11, Allied Powers accept Japanese proposal but insist that the Emperor take orders from Gen. Douglas MacArthur the Supreme Commander of the Allied Forces. Aug. 14, Japan announced acceptance of the terms of Potsdam Declaration. Aug. 21, President Truman ended all further lend-lease operations and notified the Governments concerned. Canadian Mutual Aid continued until Sept. 2. Aug. 28, British Pacific fleet steamed into Tokyo Bay, bearing its part in the operations for Allied occupation of the Japanese Islands. Sept. 1, The Japanese officially laid down their arms to Gen. Douglas MacArthur and representatives of the State and Armed Forces signed the terms of unconditional surrender. (Sept. 2, 9.18 a.m., Tokyo time.) Sept. 3-6, Lord Keynes, Adviser
to the British Treasury, arrived at Ottawa to hold preliminary discussions with the Canadian Government before visiting New York. Sept. 12, Admiral Louis Mountbatten, Commander of the Allied Forces in Southeast Asia, received the surrender of the Supreme Commander of the Japanese forces at Singapore. Sept. 12Dec. 19, The union security strike at the plant of Ford Motor Company of Canada at Windsor, Ont., the longest and most serious in the history of the Canadian automobile industry. Mr. Justice J. C. Rand of the Supreme Court of Canada appointed to arbitrate between the Company and the Union (see "Principal Events of the Year" Chapter XXXIII). Sept. 17Nov. 17, The Belsen War Crimes Trials, Lunneberg, Germany; Joseph Kramer, director of the Belsen Camp, and his co-defendants were sentenced. Oct. 7-Nov. 4, Prime Minister King visited the United Kingdom to discuss Empire affairs with Prime Minister Attlee. Oct. 16-Nov. 1, The United Nations Food and Agriculture Organization Conference held at Quebec city at which 37 nations were represented. Nov. 9, Prime Minister Attlee and Prime Minister King arrived in New York from the United Kingdom. Nov. 15, President Truman, Prime Minister Attlee and Prime Minister King issued to the world a joint statement recommending world exchange of all knowledge on atomic energy with necessary safeguards. Nov. 20, International war crimes trial of 20 Nazi war lords held at Nuremberg, Germany. (see "Principal Events, of the Year" Chapter XXXIII). Nov. 26, Report of the McDougall Royal Commission recommending revision of tax laws applicable to cooperatives presented to the House of Commons. Nov. 26-29, Dominion Provincial Conference (adjourned Aug. 10, 1945) renewed discussions on Dominion Government brief. Dec. 10-28, War crimes trial of Maj.-Gen. Kurt Meyer, Commander of the 12th S.S. Division, for responsibility in the murder of 48 Canadian prisoners of war, held at Aurich, Germany (see "Principal Events of the Year" Chapter XXXIII). Dec. 17-28, United Kingdom, United States and Russia announced agreements on the United Nations' control of atomic power. Dec: 27, The Bretton-Woods Monetary Agreements signed by Canada and 27 other United Nations.

The Government of Canada was established under the provisions of the British North America Act of 1867.* This Statute of the Imperial Parliament, as from time to time amended, forms the written basis of the Constitution of Canada. Subsequent sections of this Chapter describe in some detail the processes by which the Constitution has developed and the institutions, as at present constituted, by which Canada is governed.

The several stages in the development of the status of the Dominion have been authoritatively described in the reports of successive Imperial Conferences including that held at London in 1926, which defined the group of self-governing communities consisting of the United Kingdom and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that, as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Simultaneously, with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations, there developed, as a complementary aspect of nationhood, the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations, the exercise of treaty-making

[^14]powers and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931, which provided for the removal of the remaining limitations on the legislative autonomy of the Dominions.

## PART I.-THE CONSTITUTION AND GENERAL GOVERNMENT OF CANADA

Canada is the largest in area and the most populous of the great self-governing Dominions of the British Empire, which also include the Commonwealth of Australia, the Union of South Africa, the Dominion of New Zealand, Southern Rhodesia and the island colony of Newfoundland (with Labrador). The Dominions enjoy responsible government of the British type, administered by Executive Councils (or Cabinets) acting as advisers to the representative of the Sovereign, themselves responsible to and possessing the confidence of the representatives elected to Parliament by the people, and giving place to other persons more acceptable to Parliament whenever that confidence is shown to have ceased to exist.*

Of these Dominions, Canada, Australia and South Africa extend over enormous areas of territory, each of the first two approximating Europe in area. Each section of these countries has its own problems and point of view; a local Parliament for each section, as well as the central Parliament for each country, is required. The local Parliaments, established when transportation and communications were more difficult and expensive than at present, were chronologically prior to the central body, to which on its formation they either resigned certain powers, as in the case of Australia, or surrendered their powers with certain specified exceptions, as in Canada and South Africa. Of such local Parliaments, Canada at the present time has nine, Australia six and South Africa four.

Besides the Dominions above enumerated, the great Empire of India in its internal administration has been placed on the road, formerly traversed by the Dominions that are now fully self-governing, towards responsible government. Indeed, the whole evolution of the Empire, throughout all parts that are more than mere fortresses or trading stations, is in the direction of responsible government, to be attained in the dependencies as it has been in what used to be called the Colonies, by the gradual extension of self-government in proportion to the growing capacities of their respective populations. It has been and is the recognized aim of British administrators, by the extension of educational facilities and by just administration, to develop these capacities to the utmost.

## Section 1.-The Evolution of the Constitution of Canada Down to Confederation

The process of the development of free government in the Dominion of Canada down to Confederation is given in an article appearing at pp. 34-40 of the 1942 Year Book. Also in an Appendix to that article, pp. 40-60, the text of the British North America Act is presented.

[^15]
## Section 2.-The Development of the Constitution Since Confederation

A specially prepared article bringing the developments since Confederation up to date is published at pp. 41-47 of the 1943-44 Year Book. See also list of Special Articles under "Constitution and Government" at the front of this volume.

## PART II.-LEGISLATIVE AND EXEGUTIVE AUTHORITIES Section 1.-Dominion Parliament and Ministry

The Dominion Parliament is composed of the King (represented by the Governor General), the Senate and the House of Commons. As a result of the working out of the democratic principle, the part played by the King's Representative and the Upper Chamber of Parliament in the country's legislation has been, in Canada as in the United Kingdom, a steadily decreasing one, the chief responsibilities involved in legislation being assumed by the House of Commons.

## Subsection 1.-The Governor General of Canada

The Governor General is appointed by the King as his representative in Canada, usually for a term of five years, with a salary fixed at $£ 10,000$ sterling per annum, which is a charge against the consolidated revenue of the country. The Governor General is bound by the terms of his commission and instructions and can exercise only such authority as is expressly entrusted to him. He acts under the advice of his Ministry, which is responsible to Parliament, and, as the acting head of the Executive, summons, prorogues and dissolves Parliament, and assents to or reserves bills. In the discharge of these and other executive duties, he acts entirely by and with the advice of his Ministry (the Governor General in Council). The royal prerogative of mercy in capital cases, formerly exercised on the Governor General's own judgment and responsibility, is now exercised pursuant to the advice of the Ministry. The practice whereby the Governor General served as the medium of communication between the Canadian and the British Governments has been given up; since July 1, 1927, direct communication has been conducted between His Majesty's Government in Canada and His Majesty's Government in the United Kingdom.
1.--Governors General of Canada, 1867-1946

## Subsection 2.-The Ministry

A system of government based upon the British, by which a Cabinet or Ministry (composed of members of the House of Commons or the Senate), responsible to Parliament, holds office while it enjoys the confidence of the people's representatives, is found in Canada. The Cabinet is actually a committee of the King's Privy Council for Canada. Without enlarging upon the features of the system, it may be sufficient to note that the Cabinet is responsible to the House of Commons, and, following established precedent, resigns office when it becomes evident that it no longer holds the confidence of the people's representatives. Members of the Cabinet are chosen by the Prime Minister; each generally assumes charge of one of the various Departments of Government, although a Minister may hold more than one portfolio at the same time, or may be without portfolio.

## 2.-Prime Ministers Since Confederation

Nore.-A complete list of the members of Dominion Ministries from Confederation to 1913 appears in the 1912 Year Book, pp. 422-429. Later Ministries will be found in the corresponding tables of subsequent editions of the Year Book.

| Ministry | Prime Minister | Length of Administration |
| :---: | :---: | :---: |
| 1 | Right Hon. Sir John A. Macdonald | July 1, 1867-Nov. 6, 1873 |
| 2 | Hon. Alexander Mackenzie......... | Nov. 7, 1873 - Oct. 16, 1878 |
| 3 | Right Hon. Sir John A. Macdonald | Oct. 17, 1878 - June 6, 1891 |
| 4 | Hon. Sir John J. C. Abrott.. | June 16, 1891 - Dec. 5, 1892 |
| 5 | Hon. Sir John S. D. Thompso | Dec. 5, 1892- Dec. 12, 1894 |
| 7 | Hon. Sir Mackenzie Bowell.. | Dec. $21,1894-A p r . ~ 27, ~$ May 1, - July 8, 18969 |
| 8 | Right Hon. Sir Wilfred Laurier. | July 11, 1896-0ct. 6, 1911 |
| 9 | Right Hon. Sir Robert L. Borden | Oct. 10, 1911 - Oct. 12, 1917 |
| 10 | Right Hon. Sir Robert L. Borden | Oct. 12, 1917-July 10, 1920 |
| 11 | Right Hon. Arthur Meighen | July 10, 1920 - Dec. 29, 1921 (Unionist-" National Liberal and Conservative Party") |
| 12 | Right Hon. William Lyon Mackenzie King. | Dec. 29, 1921 - June 28, 1926 |
| 13 | Right Hon. Arthur Meighen. | June 29, 1926 - Sept. 24, 1926 |
| 14 | Right Hon. Whliam Lyon Mackenzie King | Sept. 25, 1926 - Aug. 6, 1930 |
| 15 | Right Hon. Richard Bedford Bennett. | Aug. 7, 1930-Oct. 23, 1935 |
| 16 | Right Hon. Wriliam Lyon Mackenzie King. | Oct. 23, 1935 - - |

## 3.-Members of the Sixteenth Dominion Ministry as at Jan. 1, 1946

(According to precedence of the Ministers)

| Office | Occupant | Date of Appointment |
| :---: | :---: | :---: |
| Prime Minister, President of the Privy Council Secretary of State for External Affairs. | Right Hon. William Lyon Mackenzie King, C.M.G. | Oct. 23, 1935 |

## Subsection 3.-The Senate*

From an original membership of 72 at Confederation the Senate, through the addition of new provinces and the general growth of the Dominion, now has 96 members, the latest change in representation having been made in 1915. The growth of representation in the Senate is traced at pp. 47-49 of the 1940 edition of the Year Book and is summarized, by provinces, in Table 6.
*In addition to a sessional indemnity of $\$ 4,000$, a Bill introduced in the House of Commons during 1945 makes provision for an allowance of $\$ 2,000$ per annum to be paid at the end of each calendar year: this allowance is deemed to be taxable income.

## Subsection 4.-The House of Commons*

In Section 37 of the original British North America Act of 1867 (30 Vict., c. 3), it was provided that "The House of Commons shall . . . consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, sixty-five for Quebec, nineteen for Nova Scotia, and fifteen for New Brunswick". Further, under Section 51, it was enacted that after the completion of the Census of 1871 and of each subsequent decennial census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time, as the Parliament of Canada provided, subject to and according to the following rules:-
"(1) Quebec shall have the fixed number of Sixty-five Members;
"(2) There shall be assigned to each of the other Provinces such a Number of Members as will bear the same Proportion to the Number of its Population (ascertained at such Census) as the Number Sixty-five bears to the Number of the Population of Quebec (so ascertained);
"(3) In the Computation of the Number of Members for a Province a fractional Part not exceeding One Half of the whole Number requisite for entitling the Province to a Member shall be disregarded; but a fractional Part exceeding One Half of that Number shall be equivalent to the whole Number;

[^16]"(4) On any such Re-adjustment the Number of Members for a Province shall not be reduced unless the Proportion which the Number of the Population of the Province bore to the Number of the aggregate Population of Canada at the then last preceding Re-adjustment of the Number of Members for the Province is ascertained at the then latest Census to be diminished by One Twentieth Part or upwards;
"(5) Such Re-adjustment shall not take effect until the Termination of the then existing Parliament."
Again, in Section 52, it was enacted that "the number of members of the House of Commons may be from time to time increased by the Parliament of Canada, provided the proportionate representation of the Provinces prescribed by this Act is not thereby disturbed".

Later on, by the British North America Act of 1886 (49-50 Vict., c. 35), provision was made in Section $\dot{1}$ that "the Parliament of Canada may from time to time make provision for the representation in the Senate and House of Commons of Canada, or in either of them, of any territories which for the time being form part of the Dominion of Canada, but are not included in any province thereof".

Again in 1915, an amendment to the British North America Act (5-6 Geo. V, c. 45) was passed by the Imperial Parliament, providing that "notwithstanding anything in the said Act, a province shall always be entitled to a number of members in the House of Commons not less than the number of senators representing such province".

Readjustments in Representation.-As set out in the above-mentioned provisions of the British North America Act, the first Dominion Parliament of 1867 consisted at its commencement of 181 members, 82 for Ontario, 65 for Quebec 19 for Nova Scotia and 15 for New Brunswick. To this number were added, under the Manitoba Act of 1870 (33 Vict., c. 3), 4 members to represent the newly created Province of Manitoba; also, according to the agreement under which British Columbia entered Confederation (ratified by Imperial Order in Council of May 16, 1871), 6 members were added to represent the new Province, making a total of 191 members at the end of the First Parliament of Canada.

Arising out of the first census of the Dominion in 1871, a readjustment of representation took place in 1872 (c. 15 of 1872) increasing the representation of Ontario from 82 to 88, of Nova Scotia from 19 to 21, and of New Brunswick from 15 to 16 members, the 9 additional members bringing the total number of representatives up to 200. To these were added in 1874, as a result of the agreement under which Prince Edward Island entered Confederation (ratified by Imperial Order in Council of June 26, 1873), 6 members representing that Province-bringing the membership of the House of Commons to 206.

Results of the second census, that of 1881, necessitated the passage of a new Representation Act ( 45 Vict., c. 3), increasing the representation of Ontario from 88 to 92 and that of Manitoba from 4 to 5 , thus bringing the membership of the House of Commons to 211 members. To these were added, under the provisions of 49 Vict., c. 24 , passed in 1886, 4 members for the Northwest Territories ( 2 for the then Provisional District of Assiniboia and 1 each for the then Provisional Districts of Alberta and Saskatchewan), bringing the total membership to 215.

The third census, of 1891, was followed by another readjustment of representation, reducing the representation of Nova Scotia from 21 to 20, of New Brunswick from 16 to 14, of Prince Edward Island from 6 to 5, and increasing the representa-
tion of Manitoba from 5 to 7, the representation of the other provinces remaining as before. The net result was a reduction in the number of members of the House from 215 to 213.

The fourth census, of 1901, resulted in a readjustment in 1903, reducing the representation of Ontario from 92 to 86, of Nova Scotia from 20 to 18, of New Brunswick from 14 to 13, of Prince Edward Island from 5 to 4 . On' the other hand, the representation of Manitoba was increased from 7 to 10 , of British Columbia from 6 to 7, of the Northwest Territories from 4 to 10. By c. 37 of the Statutes of 1902, a member was added for the Yukon Territory, so that the net effect of the changes was to keep the membership at 214 in the early years of the present century. The extremely rapid growth"of the Northwest Territories, however, led to their division and the admission to Confederation in 1905 of the Provinces of Alberta and Saskatchewan. In the Acts admitting them - the Alberta Act (4-5 Edw. VII, c. 3) and the Saskatchewan Act (4-5 Edw. VII, c. 42)-it was provided that their representation should be readjusted on the basis of the results of the Quinquennial Census of 1906. The Representation Act of 1907, implementing this pledge, increased the representation of Saskatchewan from 6 to 10 and of Alberta from 4 to 7 members, thus raising the total membership of the House of Commons to 221.

The Census of 1911, with its very large but very unevenly distributed increase of population, led to considerable changes in representation, enacted by the Representation Act of 1914. The representation of Ontario was reduced from 86 to 82 , of Nova Scotia from 18 to 16, of New Brunswick from 13 to 11, of Prince Edward Island from 4 to 3 . On the other hand, the representation of Manitoba was raised from 10 to 15, of Saskatchewan from 10 to 16, of Alberta from 7 to 12 and of British Columbia from 7 to 13 . The net result was an increase of 13 members in the total membership of the House of Commons, bringing the figure to 234. However, in the following session the amendment to the British North America Act, already referred to, resulted in the retention by Prince Edward Island of her fourth member (since she had 4 senators). (See also 5 Geo. V, c. 19.) The total membership, therefore, of the House of Commons in the Thirteenth and Fourteenth Parliaments (elected in 1917 and 1921, respectively) was 235.

As a result of the smaller increase of population shown by the Census of 1921, the changes in representation were less far-reaching. Nova Scotia lost 2 members and the West gained 12, 2 of these being added to Manitoba, 5 to Saskatchewan, 4 to Alberta and 1 to British Columbia. The representation of the remaining four provinces was unchanged. Prince Edward Island retained its 4 members because of the provisions of the amendment of 1915 to the B.N.A. Act of 1915, to the effect that the members of the House of Commons returned by a province shall never be fewer than its senators. Ontario, again, retained its 82 members because (under Subsection 4 of Section 51 of the British North America Act) the proportion which its population bore to the aggregate population of the Dominion had not declined by one-twentieth. Further, by the Quebec Boundaries Extension Act of 1912, it had been stipulated that the population of the added area (Ungava) should not be included for the purpose of determining the unit of representation, so that the 1921
population of Quebec, within its 1911 boundaries, viz., $2,358,412$, divided by the fixed number of 65 seats for that province, became the new unit of representation, 36,283 .

The population of Quebec in 1931, exclusive of the population $(2,584)$ of the territory added to Quebec by the Boundaries Extension Act of 1912, was 2,872,078, which, divided by 65 , gave a unit of representation of 44,186 . The populations of the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Ontario and Manitoba each showed a decrease in the rate of growth as compared with the rate for Canada as a whole, but because that decrease in Ontario and Manitoba was less than one-twentieth the representation of these two provinces remained the same as in 1921. The proportion for each of the other provinces diminished by more than one-twentieth and as a consequence Nova Scotia lost 2 members. The representation of Prince Edward Island and of New Brunswick on a strict basis of population would have been reduced by 2 members each but, because of the provision that members of the House of Commons returned by a province shall never be fewer than its senators, the representation of the former province remained unchanged at 4 and that of the latter was reduced from 11 to 10 . The representation of Saskatchewan remained at 21, while Alberta gained 1 member and British Columbia 2.

A table showing the representation of the provinces and territories of Canada in the House of Commons, as determined by the Censuses of 1911, 1921 and 1931 is given at p. 76 of the 1934-35 Year Book.

The number of representatives of each province elected at each of the twenty general elections since Confederation is given in Table 8.

Redistribution for 1941 Postponed.-For the first time since Confederation, the redistribution of parliamentary constituencies required by the B.N.A. Act after each decennial census, has been postponed. A resolution to that effect was presented to Parliament and forwardrd to London in the form of an address to His Majesty the King. His Majestr caused a Bill to be laid before the Parliament of the United Kingdom for the eractment of the provisions of the resolution; this was duly passed through all sto $\bar{z}$ s by July 22, 1943. The Bill provides that "notwithstanding anything in the British North America Acts, 1867 to 1940, it shall not be necessary that the representation of the provinces in the House of Commons be readjusted, in consequence of the completion of the decennial census taken in
the year One Thousand Nine Hundred and Forty-One, until the first session of the Parliament of Canada commencing after the cessation of hostilities between Canada and the German Reich, the Kingdom of Italy and the Empire of Japan". Up to the end of December, 1945, no Bill had been introduced nor any authoritative action taken to effect the redistribution.

## 9.-Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Twentieth General Election, June 11, 1945.

Note.-This information, except the populations of constituencies, has been supplied by the Chief Electoral Officer, Ottawa, who publishes an official report giving the total vote cast for each candidate. Party affiliations are unofficial. The vote is summarized by provinces for this general election in Table 10, pp. 68-69.

${ }^{1}$ Successful candidate.

## Subsection 5.-The Franchise at Dominion Elections*

It was provided by the British North America Act, 1867, that, until otherwise directed by Parliament, elections to the House of Commons should be governed by the electoral laws of the several provinces. The qualifications of electors throughout the Dominion consequently varied but remained the same for both Dominion and provincial elections in any one province until, in 1885, Parliament legislated on the subject by passing the Electoral Franchise Act (47-48 Vict., c. 40). That Act defined a uniform qualification for voters throughout Canada for Dominion purposes, the basis of this new franchise being the ownership or occupation of land of a specified value, although the sons of owners, and particularly farmers' sons, were given the right to vote on special conditions. This Dominion franchise remained in force for thirteen years, but between 1898 and 1920, under the Franchise Act of the former year (59-60 Vict., c. 14), the provincial franchises were again made applicable at Dominion elections. The adoption of the provincial franchise laws for Dominion purposes was temporarily modified by the War-time Elections Act (7-8 Geo. V, c. 39), which admitted certain near female relatives of members of the military forces, or of the naval forces, to vote at Dominion elections. Three years later, on the adoption of a New Dominion Elections Act (10-11 Geo. V, c. 46), the provincial franchises were again wholly abandoned and a new electoral qualification was established for Dominion elections throughout Canada. The right to vote was conferred by the new Act upon all British subjects, men and women, of 21 years and upwards, who had resided in Canada for a year, and for two months in the electoral district in which they desired to vote. Women were granted general franchise in Canada in 1918 (8-9 Geo. V, c. 20), and have voted at all Dominion elections held since that date.

Franchise Legislation now in Force.-The right to vote is at present provided for in the Dominion Elections Act, 1938 (2 Geo. VI, c. 46) as amended by 6 Geo. VI, c. 26. The franchise is conferred upon all British subjects, men and women,

[^23]who have attained the age of 21 years and who have been ordinarily resident in Canada for 12 months prior to polling day at a Dominion election, and ordinarily resident in the electoral district on the date of the issue of the writ for such election. Lists of electors are prepared afresh for use at each Dominion election. Those denied the right to vote are:-

1. Judges appointed by the Governor in Council;
2. The returning officer for each electoral district;
3. Persons undergoing punishment as inmates of any penal institution for the commission of any offence;
4. Indians ordinarily resident on an Indian reservation who did not serve in the War of 1914-18, or in the War of 1939-45;
5. Persons restrained of their liberty or management of their property by reason of mental disease;
6. Eskimos, whether born in Canada or elsewhere;
7. Persons who are disqualified by reason of race from voting at an election of a member of the Legislative Assembly of a province in which they are residing, and who did not serve in the War of 1914-18, or in the War of 1939-45;
8. Doukhobors, residing in the Province of British Columbia, whether born in Canada or elsewhere;
9. Persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices;
10. Inmates of an institution which is maintained by any government or municipality for the housing of the poor, if such persons are disqualified from voting at an election of a member of the Legislative Assembly of the province, and did not serve in the War of 1914-18, or in the War of 1939-45;
11. Every Japanese who resided in the Province of British Columbia on July 1, 1938. and on Dec. 7, 1941, who did not serve in the War of 1914-18, or in the War of 1939-45.
10.-Voters on the Lists and Votes Polled at the General Elections of 1930, 1935, 1940 and 1945

Note.-Corresponding statistics for the general elections of 1911, 1917, 1921 and 1925 will be found at p. 82 of the 1926 Year Book and those for the general election of 1926 at p. 66 of the 1945 edition.

[^24]According to the Canadian Prisoners of War Voting Regulations, 1944, any person eligible to vote under the Canadian War Service Voting Regulations, 1944, who became a prisoner of war, or interned in a neutral country, was entitled to vote by proxy at a general election held in Canada during the War of 1939-45, such proxy being his or her next of kin, as officially recorded at Headquarters, and such vote was cast in the polling division in which such next of kin was entitled to vote as a civilian elector.

## Section 2.-Provincial Governments

In each of the provinces the King is represented by a Lieutenant-Governor appointed by the Governor General in Council and governs with the advice and assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body. The legislatures of all the provinces with the exception of Quebec are now unicameral, consisting of a Legislative Assembly elected by the people. In Quebec there is a Legislative Council as well as a Legislative Assembly. A detailed description of the Provincial Governments is given at pp. 101-115 of the 1922-23 edition of the Year Book.

## 12.-Lieutenant-Governors of Provinces and Territories, 1867-1945, Legislatures and Prime Ministers, 1934-45, and Present Ministries as at Dec. 31, 1945

Note.-The Lieutenant-Governor of a province is styled "His Honour" and is also styled "Honourable" throughout his life. Where a knighthood or other honour was conferred during the term of office, it is shown. Many Lieutenant-Governors were knighted after their term had expired. Legislatures and Ministries from Confederation to 1923 will be found at pp. 75-84 of the 1924 Year Book, and for 1924-34 at pp. 110-118 of the 1938 Year Book. When two or more dates are shown for the appointment of a Minister, the first denotes the original appointment to the Ministry and the second or last to the portfolio held at present.

## THE NORTHWEST TERRITORIES

Note.-In 1888, the Districts of Alberta, Assiniboia, Athabaska, and Saskatchewan, then called the Northwest Territories, with their capital at Regina, were given responsible government, and the former Northwest Council was replaced by the Northwest Legislature, which existed until Aug. 31, 1905. When the area included in these Districts was formed into the Provinces of Alberta and Saskatchewan on Sept. 1, 1905, these provinces were given systems of government similar to the other provinces of the Dominion. The prevailing form of government for the remaining part of the Territories was discontinued in 1905 and the office of Lieutenant-Governor abolished. In its place, government was vested in a Commissioner and a Council, now composed of six members, one of whom may be appointed Deputy Commissioner. The administration of the various Acts, Ordinances, and Regulations pertaining to the Northwest Territories is supervised by the Director of the Lands, Parks and Forests Branch, Department of Mines and Resources, who is also Deputy Commissioner. The seat of government is at Ottawa. The Lieutenant-Governors from Confederation to 1905 are listed at p. 73 of the 1945 Year Book.

## Territorial Council

(Appointed by the Governor General in Council)
Commissioner-Charles Camsell.
Deputy Commissioner--Roy Alexander Gibson.
Members of the Council-Austin Louis Cumming; Kenneth Robinson Daly; Robert alexander Hoey; Stuart Taylor Wood.
Secretary-David Livingstone McKeand.

## YUKON TERRITORY

Note.-The Yukon, formerly a District of the Northwest Territories, was made a separate Territory in 1898. The Yukon Act provides for a local government composed of a Chief Executive, styled Commissioner but since classified as Controller; also an elective Legislative Council of three members having a three-year tenure of office. The Yukon Territorial Council performs much the same functions as do the Provincial Governments. The Controller functions in lieu of the Provincial Cabinet and the three members of the Territorial Council function in lieu of the Provincial Parliament. The seat of local government is at Dawson, but the Controller acts under instructions from the Governor General in Council or the Minister of Mines and Resources at Ottawa.

## Section 3.-Dominion-Provincial Relations*

The genesis of the current phase of Dominion-Provincial relations was the Dominion-Provincial Conference of December, 1936. At that time drought and depressed prices had led the Government of Alberta into partial default on its outstanding debt, and the Governments of Saskatchewan and Manitoba made clear at the Conference that in default of assistance they would be forced to take similar action. On the invitation of the Dominion Minister of Finance and the Premiers of the three Prairie Provinces, the Bank of Canada undertook an examination of their financial positions. The Bank's report on Manitoba was made public on Feb. 15, on Saskatchewan on Mar. 15, and on Alberta on Apr. 7, 1937. The Bank Report recommended certain interim financial assistance from the Dominion Government but concluded that no solution seemed possible other than that which might be provided by a complete inquiry into the financial powers and responsibilities of Canadian governing bodies at all levels. In addition to the special difficulties of the Prairie Provinces, the burden of relief had weakened the financial position of all provincial and municipal governments, and had finally proved completely beyond their capacity to bear in its entirety.

Royal Commission on Dominion-Provincial Relations.-By P.C. 1908 on Aug. 14, 1937, the Royal Commission on Dominion-Provincial Relations was established. The Chairman was the Hon. N. W. Rowell, Chief Justice of Ontario, and the members were the Hon. Thibaudeau Rinfret, Justice of the Supreme Court of Canada, Dr. J. W. Dafoe of Winnipeg, Dr. R. A. MacKay of Dalhousie University, and Professor H. F. Angus of the University of British Columbia. Subsequently the Hon. Justice Rinfret was compelled to retire owing to ill health and was replaced by Dr. Joseph Sirois of Quebec. Illness also forced the resignation of Chief Justice Rowell in 1938 and Dr. Sirois was appointed Chairman to succeed him. The Commission has consequently been generally known as the Rowell-Sirois or Sirois Commission. Hearings were held throughout Canada and an exhaustive report, accompanied by a large number of special studies prepared by the research staff of the Commission, was submitted on May 3, 1940. The report recommended important financial and jurisdictional changes, $\dagger$ of which the chief were: (1) exclusive Dominion jurisdiction in income, corporation tax and succession duty fields; (2) acceptance by the Dominion of responsibility for relief to able-bodied unemployed; (3) assumption by the Dominion of net provincial debt charges; and (4) payment by the Dominion of national adjustment grants designed to put each provincial government in a position to provide average standards of services without imposing higher than average rates of taxation.

Dominion-Provincial Conference, January 1941.-A Dominion-Provincial Conference was called in January, 1941, to consider the Royal Commission Report. The Conference broke down on the second day in the face of opposition from the Premiers of Ontario, British Columbia and Alberta.

Wartime Tax Agreements.-Later in the year the Dominion Government proposed that, in order to meet the exigencies of the War, the Provincial Governments (and their municipalities) should suspend imposition of income taxes and corporation taxes for the duration of the War and one year after, and be reimbursed by the Dominion on the basis of either the 1940 revenues of the particular Province

[^30]from these sources, or the amount of that Province's net debt service less succession duty collections in 1940. There were also some relatively small fiscal-need subsidies proposed and an offer to guarantee provincial gasoline tax revenues at the 1940 level. Agreements were negotiated with all the Provincial Governments in 1941 and the necessary legislation was passed in the spring of 1942. Under these agreements, which brought into effect an important part of the Sirois Report recommendations for the duration of the War, the Dominion was given a free hand in the income and corporation tax fields and developed these sources of revenue very substantially as an aid both in financing the War and in combating inflation. The other chief problems with which the Sirois Report dealt, such as provincial debts and unemployment and agricultural relief, were for the time being thrust into the background.

Dominion-Provincial Conference (1945).-Since the Wartime Tax Agreements were of temporary duration only, and since a number of the pre-war financial and constitutional problems promised to arise in even more aggravated form upon the termination of these agreements, the Dominion formulated proposals for a new agreement. These proposals were submitted at a Dominion-Provincial Conference called in August, 1945. They were broader in scope than the Sirois Report recommendations, primary stress being placed on the maintenance of a high and stable level of employment and income. To this end, not only important fiscal changes but also greatly developed public investment and social security policies were suggested. The agreement was proposed initially for a three-year period and would involve no constitutional changes, although there was one recommendation for a constitutional amendment to provide for delegation of powers from the Dominion Government to a Provincial Government or vice versa whenever desired by both Governments.

The fiscal proposals were that the Provinces should withdraw from the personal income tax, corporation tax and succession duty fields in return for annual subsidies which would not fall below a guaranteed minimum and which would rise proportionally with population and increases in per capita gross national product. The amount of the subsidies proposed was approximately 50 p.c. above provincial receipts under the Wartime Tax Agreements.

The public investment proposals outlined a substantial expansion in the Dominion program for natural resource development, conservation, and public works, and also a large increase in Dominion assistance to provincial services and construction projects either through joint participation or by grants in aid. Particular emphasis was put upon, and tangible encouragement offered to, the advance planning of works and, in so far as practicable, the timing of public investment expenditures with a view to helping to stabilize employment and offset fluctuations in the business cycle.

The social security proposals were among the most extensive that have been made in any country. Family allowances had already been put into effect in 1945. The Dominion now proposed in addition, to pay a $\$ 30$ a month old-age pension without a means test to everyone 70 years of age and over; to contribute 50 p.c. to provincially administered old-age assistance under a means test for people from 65 to 69; to make grants to the Provincial Governments for general preventive public-health work and for the prevention and cure of tuberculosis, mental diseases, venereal disease, and other specific ills; to contribute approximately 60 p.c. of the cost of provincially administered health insurance schemes; to make low-interest loans for hospital construction; to provide assistance for all unemployed able and willing to work, not covered by unemployment insurance, at the scale of approxim-
ately 85 p.c. of the unemployment insurance benefits;'to provide and assist in the provision of greatly expanded vocational training and other rehabilitation services to improve employability.

The Dominion-Provincial Conference in August adjourned, after five days' discussion, to consider the proposals and any alternatives or amendments to them. A Co-ordinating Committee under the chairmanship of the Prime Minister of Canada, consisting of three Dominion Ministers and the nine Provincial Premiers, was established and subsequently held three meetings in camera from Nov. 26 to Nov. 30, 1945, from Jan. 28 to Feb. 1, 1946, and on Apr. 25 and 26, 1946. An Economic Committee, consisting largely of technical representatives of the different governments, was also established and met for three weeks in December, 1945, and January, 1946, for the exchange of information and the development and clarification of the proposals in detail. The Economic Committee under its terms of reference made no collective report, but its members reported to their respective governments. The Co-ordinating Committee reported back to a full plenary session of the Dominion-Provincial Conference when it reassembled on Apr. 29, 1946.

The Dominion put forward a number of modifications that had been made in its original proposals in the light of discussions in the Co-ordinating Committee.* The most important of these were an increase in the guaranteed minimum annual subsidy from $\$ 12$ per capita to $\$ 15$; an optional provision in connection with succession duties which would enable any Province that wished to continue levying succession duties subject to an adjustment in its annual subsidy and with provision for offsetting credits to the taxpayer; and an expression of willingness by the Dominion to withdraw from certain tax fields as requested by some of the Provincial Governments in return for an adequate financial equivalent.

By this time submissions in relation to the Dominion proposals had been made by all the Provincial Governments. Most of these submissions accepted the Dominion proposals in principle but contained a number of suggested modifications. The submission of the Government of Ontario suggested an alternative approach and differed in principle on some important issues. After five full days of discussion it was found that too wide a gap existed to enable an agreement to be reached at that time and the Conference adjourned sine die. The Dominion advised that it would have to proceed with the formulation of its Budget policies in the light of these circumstances.

The Budget of June 27, 1946, included proposals for a tax agreement which could be entered into by any individual province. In compliance with the Wartime Tax Agreements, the Dominion undertook to reduce the standard corporation income tax from 40 p.c. to 30 p.c. and also to reduce personal income taxes for 1947. The Dominion would also give a tax credit of the amount of personal income tax paid any province up to 5 p.c. of the tax payable to the Dominion. The Dominion proposed to double its succession duty tax, but to provide a credit against this tax of the amount of succession duties paid to a provincial government up to 50 p.c. of the Dominion tax. If a province was prepared to agree to withdraw from income tax, corporation tax and succession duty fields for five years, the Dominion would undertake to pay the annual per capita subsidy under the terms proposed at the Conference. Agreeing provinces would be required to levy a 5 p.c. tax on net corporate income within the province to be collected by the Dominion, and the proceeds of this tax would be deducted from the annual subsidy.

[^31]
## PART III.-CANADA'S EXTERNAL RELATIONS <br> Section 1.-Canada's Growth in External Status

The evolution of Canada in its external relations is reflected in the growth of its Department of External Affairs. A review of the organization and development of that Department is given at pp. 74-79 of the 1945 edition of the Year Book.

## Section 2.-Canada and the United Nations*

The first step towards the establishment of an organization for the maintenance of international peace and security was taken at Dumbarton Oaks, Washington, D.C., where the representatives of the four Governments which had signed the Moscow Declaration of Nov. 1, 1943-China, Union of Soviet Socialist Republics, United Kingdom and United States-met from August to October, 1944, and developed a set of draft proposals for the new organization. These proposals were based upon the general principles contained in the Declaration of the United Nations. The Declaration was signed on Jan. 1, 1942, by the States allied together to resist Nazi, Fascist and Japanese aggression. Thereafter, any State signing the Declaration became a Member of the United Nations.

At the Yalta Conference in February, 1945, between the U.D.S.R., the United Kingdom and the United States, invitations were issued to the signatories of the United Nations Declaration to meet at San Francisco to consider the proposals arising out of the Dumbarton Oaks meeting. The Parliament of Canada approved by an overwhelming majority a resolution endorsing the Government's acceptance of the invitation. Fifty nations were represented at San Francisco. During the Conference which lasted from Apr. 25 to June 26, 1945, the Dumbarton Oaks proposals were the basis of discussion. The Charter of the United Nations, which was drawn up at San Francisco, was drafted after lengthy and detailed debate in the full Conference. $\dagger$ The Charter is the constitution of the Organization named, at the suggestion of the late President Roosevelt, "The United Nations". On Oct. 24, 1945, following the deposit of the required number of ratifications, the Charter came into force. The Parliament of Canada ratified the Charter on Oct. 19, 1945.

Canada was represented at the San Francisco Conference by a delegation representing both Houses of Parliament and both sides of the House. The following delegates were appointed:-

The Rt. Hon. W. L. Mackenzie King, Prime Minister of Canada;
The Rt. Hon. L. S. St. Laurent, K.C., M.P., Minister of Justice;
Senator the Hon. J. H. King, M.D., Leader of the Government in the Senate;
Senator the Hon. Lucien Moraud, K.C., Member of the Senate;
Mr. Gordon Graydon, M.P., Leader of the Opposition in the House of Commons;
Mr. M. J. Coldwell, M.P., President and Parliamentary Leader, Co-operative Commonwealth Federation; and
Mrs. Cora T. Casselman, M.P.

[^32]The delegates were assisted by senior Government officials, including Mr. N. A. Robertson, Under-Secretary of State for External Affairs; Mr. H. H. Wrong, Associate Under-Secretary of State for External Affairs; Mr. L. B. Pearson, Canadian Ambassador at Washington; Mr. L. D. Wilgress, Canadian Ambassador at Moscow; Mr. W. F. Chipman, Canadian Ambassador to Chile; Mr. Jean Désy, Canadian Ambassador to Brazil; Major-General M. A. Pope, Military Staff Officer to the Prime Minister; and a staff of experts and advisers.

## The Charter of the United Nations

The primary purpose of the United Nations is "to maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression, or other breaches of the peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace." The United Nations is also intended to achieve international cooperation in solving international problems of an economic, social, cultural or humanitarian character and in promoting respect for human rights and for fundamental freedoms for all, without distinctions as to race, sex, language or religion.

The fundamental principles of the United Nations are the sovereign equality of all its Members, the pledge by each Member to refrain in its international relations from the threat or use of force against the territorial integrity or political independence of any State, and the undertaking by all Members to settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered.

## Organs of the United Nations

The Charter provides for the setting up of six principal organs of the United Nations: the General Assembly, where all Members are represented and have an equal vote; the Security Council of eleven members, five of which are permanent members-China, France, the U.S.S.R., the United Kingdom and the United States-and six are non-permanent members elected by the General Assembly for a term of two years; the Economic and Social Council composed of eighteen members chosen for three-year terms by the General Assembly, all members being nonpermanent; the Trusteeship Council, composed of the five permanent members of the Security Council, of all Members of the United Nations administering trust territories, and of a sufficient number of non-permanent members which do not administrate trust territoriss, lected by the General Assembly, to ensure that onehalf of the Council is always composed of members which do not administer trust territories; the International Court of Justice with headquarters at The Hague, composed of fifteen judges elected by the Security Council and the General Assembly in concurrent ballots; and a Secretariat in charge of a Secretary-General appointed by the General Assembly upon the nomination of the Security Council.

## Preparations for the General Assembly

In August, 1945, the fourteen nations, including Canada, which constituted the Executive Committee of the San Francisco Conference met at London, England, to make detailed preparations for the first meeting of the organs of the United

Nations. In November, 1945, the work of the Executive Committee was taken over by the Preparatory Commission on which all the Members of the United Nations were represented.

The Preparatory Commission drew up the agenda for the first meetings of the organs of the United Nations, drafted the provisional rules of procedure, prepared the recommendations for setting up the Secretariat and made other arrangements of an organizational character. The main decision taken by the Preparatory Commission was that the headquarters of the United Nations should be located in the United States.

## The Meeting of the General Assembly

On Jan. 10, 1946, the First Session of the General Assembly was convened in Central Hall, Westminster, London, England.* The Assembly elected Mr. P. H. Spaak, Foreign Minister of Belgium, as its first President, and appointed Mr. Trygve Lie, Foreign Minister of Norway, as Secretary-General. It elected Australia, Brazil, Poland, Egypt, Mexico and the Netherlands to the non-permanent seats on the Security Council. The Economic and Social Council was constituted by the election of its eighteen members. Canada was elected to a three-year term on this Council. The members of the International Court of Justice were chosen. Among them was Mr. John E. Read, K.C., Legal Adviser of the Department of External Affairs.

The Canadian Delegation to the General Assembly was headed by the Rt. Hon. L. S. St. Laurent, Minister of Justice; and consisted of the Hon. J. G. Gardiner, Minister of Agriculture; the Hon. Paul Martin, Secretary of State; the Rt. Hon. Vincent Massey, Canadian High Commissioner in the United Kingdom; and Mr. H. H. Wrong, Associate Under-Secretary of State for External Affairs. The alternate delegates were Mr. J. E. Read, K.C., Mr. L. D. Wilgress, Mr. Pierre Dupuy, Mr. Gordon Graydon, M.P., and Mr. S. H. Knowles, M.P.

The first part of the First Session of the General Assembly, which lasted from Jan. 10 to Feb. 14, 1946, dealt with a number of urgent matters of policy. The application of atomic energy to modern warfare made necessary the creation of international machinery to deal with the problems raised by this discovery. The General Assembly established an Atomic Energy Commission identical in composition with the Security Council, except that Canada, as one of the countries which played a leading role in developing atomic energy, has the status of a permanent member of the Commission. Other matters discussed by the Assembly included the world food shortage, the future of refugees and displaced persons, the reconstruction of countries devastated by the War, the problem of Spain, war criminals, and the transfer to the United Nations of certain assets, functions and activities of the League of Nations.

The First Session of the General Assembly will be continued in New York on Sept. 10, 1946. This meeting will be known as the second part of the First Session.

[^33]
## The Economic and Social Council

The Economic and Social Council met on Jan. 23, 1946, under the Presidency of Sir Ramaswami Mudaliar, the delegate for India. Canada was represented by the Hon. Paul Martin. The Council established six commissions dealing with human rights, full employment, social welfare, co-ordination of statistical information, the traffic in narcotic drugs, and transport and communications. The main functions of these commissions are to survey their fields of competence and to make recommendations to the Council on the organization of international cooperation in these fields.

A number of committees were constituted by the Council to make studies and recommendations on the problems of refugees and displaced persons; co-operation with international organizations having specialized responsibilities, such as the Food and Agriculture Organization, the International Labour Organization, etc.; and to prepare for international conferences on trade and employment, and health. Canada is a member of these committees.

The next session of the Economic and Social Council began at New York City on May 25, 1946.

## The Second Part of the First Session of the General Assembly

At the September meeting of the General Assembly, the Members of the United Nations will consider the permanent budget of the Organization and will hear reports from the Economic and Social Council'on the problems lying within its field of competence. The Assembly will be called upon to approve such trusteeship agreements as may have been concluded by the States administering non-selfgoverning territories. Also at the September meeting, the second elections to Councils will take place. At the meeting at London, England, one-half of the non-permanent members of the Security Council and one-third of the members of the Economic and Social Council were elected for one-year terms in order to ensure adequate rotation of membership. It was agreed that their successors would be chosen at the second part of the First Session. They will not, however, take their seats until January, 1947, in order to allow States elected in January, 1946, to complete their full calendar terms of office.

## Canada and Other United Nations Organizations

From 1939 to 1945 a great number of international and regional bodies, with varying memberships, were established to deal with a wide variety of problems arising out of the War. Many of them terminated their activities with the cessation of hostilities. Canada is a member of the following organizations which are still active: the Combined Food Board; certain committees of the Combined Production and Resources Board; the Far Eastern Advisory Commission; the Food and Agriculture Organizations of the United Nations (F.A.O.); the Intergovernmental Committee on Refugees; the International Bank for Reconstruction and Development; the International Monetary Fund; the International Wheat Council; the Permanent Joint Board on Defence, United States and Canada; the Provisional

International Civil Aviation Organization (P.I.C.A.O.); the United Nations Educational, Scientific and Cultural Organization (U.N.E.S.C.O.); the United Nations Information Organization (U.N.I.O.); the United Nations Relief and Rehabilitation Administration (U.N.R.R.A.); the United Nations Standards Co-ordinating Committee; the United Nations War Crimes Commission.

Canada is also a member of the International Labour Organization (I.L.O.).

## PART IV.-DIPLOMATIC REPRESENTATION*

Section 1.-Representatives of Canada in Other Countries

## Subsection 1.-High Commissioners Within the British Commonwealth of Nations

United Kingdom.-The present High Commissioner for Canada in the United Kingdom is the Rt. Hon. Charles Vincent Massey, who was appointed on Nov. 8, 1935. His office is in Canada House, Trafalgar Square, London, S.W.1.

Following is the list of previous High Commissioners:-
Sir Alexander Galt, 1880-83
Sir Charles Tupper, 1884-87, 1888-96
Lord Strathcona and Mount Royal, 1896-1914
Sir George Perley, 1917-22 (Acting High Commissioner 1914-17)
The Hon. P. C. Larkin, 1922-30
The Hon. G. Howard Ferguson, 1930-35
Australia.-The present High Commissioner for Canada in Australia is the Hon. Thomas C. Davis, K.C., who was appointed on Nov. 4, 1942. His office is at Canberra.

Following is the list of previous High Commissioners:-
Mr. Charles J. Burchell, 1939-41
Major-General Victor Odlum, 1941-42
New Zealand.-The present and first High Commissioner for Canada in New Zealand is Dr. W. A. Riddell, who was appointed on Feb. 1, 1940. His office is at Wellington.

South Africa.--The first High Commissioner for Canada in the Union of South Africa was Dr. Henry Laureys, who was appointed on Feb. 1, 1940. The High Burchell, K.C., who returned to Canada in 1945. Mr. J. C. Macgillivray is Acting High Commissioner.

Ireland.-Mr. Merchant M. Mahoney, C.B.E., was appointed High Commissioner for Canada in Ireland on Oct. 12, 1945. His office is in Dublin. The previous High Commissioner was Mr. J. D. Kearney who has been appointed Canadian Minister to Norway.

[^34]Newfoundland.-The first High Commissioner for Canada in Newfoundland was Mr. Charles J. Burchell, K.C., who was appointed on July 31, 1941. He has been succeeded by Mr. J. Scott Macdonald. His office is at St. John's.

## Subsection 2.-Representatives in Foreign Countries

United States of America.-The first Canadian Ambassador to the United States was the Hon. Leighton Goldie McCarthy, K.C., who was appointed Minister Plenipotentiary on Feb. 24, 1941, and presented his Letter of Credence as Ambassador on Jan. 12, 1944. He resigned on Dec. 31, 1944, and was succeeded by Mr. L. B. Pearson, O.B.E., who presented his Letter of Credence as Ambassador on Jan. 22, 1945. The address of the Canadian Embassy is 1746 Massachusetts Avenue, Washington, D.C.

Following is the list of previous Ministers:-
The Hon. Charles Vincent Massey, 1927-30
The Hon. W. D. Herridge, 1931-35
The Hon. Sir Herbert Marler, 1936-39
Mr. Loring C. Christie, 1939-41.
Canadıan Consulate General in New York City, N.Y.-The Canadian Consulate General in New York City is in charge of Mr. Hugh Day Scully, Consul General, who was appointed to that post Apr. 8, 1943. The Consulate General is situated at 620 Fifth Avenue, New York, N.Y.

Belgium.-Mr. Jean Desy was appointed as the first Canadian Minister to Belgium in 1939. The Legation has been raised to the rank of Embassy and the Hon. W. F. A. Turgeon presented his Letter of Credence as Ambassador on Jan. 16, 1945.

Luxembourg.-Hon. W. F. A. Turgeon, Canadian Ambassador to Belgium also represents Canada in Luxembourg as Minister. He presented his Letter of Credence on Jan. 3, 1945.

Czechoslovakia and Yugoslavia. - Major-General George P. Vanier was appointed on Nov. 30, 1942, as Minister to the Allied European Governments in London. General Vanier has since been appointed Canadian Ambassador to France.

Brazil.-The first Canadian Ambassador to Brazil is Mp. Jean Dfsy, K.C., who was appointed Minister Plenipotentiary June 24, 1941, and presented his Letter of Credence as Ambassador on Jan. 18, 1944. The Canadian Embassy is at Rio de Janeiro.

Argentina.-The first Canadian Minister to Argentina was the Hon. W. F. A. Turgeon, who was appointed July 31, 1941. He has been transferred to Brussels. Mr. Warwick F. Chipman, K.C., presented his Letter of Credence as Canadian Ambassador on Oct. 1, 1945. The Canadian Embassy is at Buenos Aires.

Union of Soviet Socialist Republics.-The first Canadian Ambassador to the Union of Soviet Socialist Republics is Mr. L. D. Wilgress, who was appointed Minister Plenipotentiary Nov. 4, 1942, and presented his Letter of Credence as Ambassador on Feb. 29, 1944. The Canadian Embassy is at Moscow.

China.-The first Canadian Ambassador to China is Major-General Victor W. Odlum, C.B., C.M.G., D.S.O., who was appointed Minister Plenipotentiary Nov. 4, 1942, and presented his Letter of Credence as Ambassador on Mar. 15, 1944. The Canadian Embassy is at Chungking.

Cuba.-Mr. Emile Vaillancourt was appointed first Canadian Minister to Cuba on Mar. 16, 1945, and presented his credentials on May 8, 1945.

Greece.-The first Canadian Ambassador to Greece is Major-General the Hon. L. R. LaFlechr, D.S.O., who presented his Letter of Credence on Sept. 28, 1945.

Netherlands.-Mr. Pierre Dufuy, C.M.G., was appointed Canadian Minister to the Netherlands and presented his Letter of Credence on Apr. 7, 1945.

Norway.-Mr. J. D. Kearney, K.C., was appointed Canadian Minister to Norway on Oct. 12, 1945.

Chile.-The first Canadian Minister to Chile was the Hon. W. F. A. Turgeon, who presented his Letter of Credence on Jan. 2, 1942. He was succeeded on Nov. 4, 1942, as Minister by Mr. Warwick Chipman, K.C., who presented his Letter of Credence as Ambassador on July 8, 1944. Mr. Chipman has been transferred to Buenos Aires, and Mr. Jules Leger is at present Chargé d'Affaires ad interim. The Canadian Embassy is at Santiago.

Mexico.-The first Canadian Ambassador to Mexico was the Hon. W. F. A. Turgeon, who presented his Letter of Credence on Apr. 27, 1944. He has been succeeded by Dr. H. L. Keenleyside, who presented his Letter of Credence on Feb. 15, 1945.

Peru.-Dr. Henry Laureys presented his Letter of Credence as the first Canadian Ambassador to Peru on Oct. 21, 1944. The Embassy is at Lima.

France.-After the formation of the French Committee of National Liberation in Algiers, Major-General Georgf P. Vanier, D.S.O., M.C., who had been Canadian Representative to the Committee in London, was appointed at Algiers in a similar capacity, with the personal rank of Ambassador. General Vanier is now accredited to the President of the Provisional Government of the French Republic as C'anadian Ambassador in France, and presented his Letter of Credence on Dec. 20, 1944. The Embassy is at Paris.

Greenland.-The Canadian Consulate at Greenland is in charge of Mr. J. Dunbar as Vice Consul.

Portugal.-The Canadian Consulate General at Lisbon is in charge of Mr. L. S. Glass, Acting Consul General.

## Section 2.-Representatives of Other Countries in Canada

## Subsection 1.-Representatives of the Governments of the British Commonwealth of Nations

High Commissioner for the United Kingdom: (Office established 1928.) The present High Commissioner is the Rt. Hon. Malcolm MacDonald, who assumed office in 1941. The previous High Commissioners were:-

Sir William H. Clark, 1928-34
Sir Francis Floud, 1935-38
Sir Gerald Campbell, 1938-41
Address: Earnscliffe, Ottawa.

High Commissioner for the Commonwealth of Australia: (Office established 1939.)

The first High Commissioner was Major-Genekal the Hon. Sir William Glasgow, K.C.B., who assumed office in 1940. He has been succeeded by the Hon. Alfred Stirling, O.B.E., who arrived on July 13, 1945.

Address: 114 Wellington St., Ottawa.
High Commissioner for New Zealand: (Office established 1942.)
The present and first High Commissioner is the Hon. David Wilson, who assumed office in 1944.

Address: 107 Wurtemburg Street, Ottawa.
High Commissioner for the Union of South Africa: (Office established 1938.)

Mr. David de Waal Meyer was appointed Accredited Representative in 1938. The Hon. R. P. Vilioen, M.C., was appointed High Commissioner and arrived in Ottawa on Sept. 10, 1945.

Address: 15 Sussex Street, Ottawa.
High Commissioner for Ireland: (Office established 1939.)
The present and first High Commissioner is the Hon. John J. Hearne, who assumed office in 1939.

Address: 140 Wellington Street, Ottawa.

## Subsection 2.-Diplomatic Representatives of Foreign Countries

United States of America: (Established 1927.)
Ambassador Extraordinary and Plenipotentiary: His Excellency the Hon. Ray Atherton (Nov. 19, 1943).

Address: 100 Wellington Street, Ottawa.
China: (Established 1942.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Dr. Lid Shif Shun (Feb. 26, 1944).

Address: 201 Wurtemburg Street, Ottawa.
Brazil: (Established 1941.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Dr. Acyr do Nascimento Paes (nominated).

Chargé d'Affaires ad interim: Mr. Joao Emilio Ribeiro.
Address: 140 Wellington Street, Ottawa.
Mexico: (Established 1944.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Dr. Luis I. Rodriguez (nominated).

Chargé d'Affaires ad interim: Dr. A. Mendez.
Address: 87 Sparks Street, Ottawa.

Union of Soviet Socialist Republics: (Established 1942.)
Ambassador Extraordinary and Plenipotentiary: His Excellency George N. Zaroubin (June 8, 1944).

Address: 285 Charlotte Street, Ottawa.
France: (Established 1928.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Count Jean de Hauteclocque (Feb. 21, 1945).

Address: 42 Sussex Street, Ottawa.
Peru: (Established 1944.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Alfredo Benavides (Mar. 29, 1945).

Address: 36 Elgin Street, Ottawa.
Belgium: (Established 1937.)
Ambassador Extraordinary and Plenipotentiary: His Excellency A. Paternotte de la Vaillee (July 20, 1945).

Address: 395 Laurier Avenue East, Ottawa.
Chile: (Established 1942.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Pedro Castelblanco (Aug. 13, 1945).

Address: 56 Sparks Street, Ottawa.
Argentina: (Established 1941.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Dr. Honorio Leguizamon-Pondal (Nov. 1, 1945).

Address: 18 Rideau Street, Ottawa.
Greece: (Established 1942.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Constantine Sakellaropoulos (Nov. 12, 1945).

Address: Chateau Laurier, Ottawa.
Norway: (Established 1942.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Daniel Steen (Apr. 2, 1942).

Address: 45 Rideau Street, Ottawa.
Czechoslovakia: (Established 1942.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Dr. Frantisek Pavlasek (Aug. 14, 1942).

Address: 171 Clemow Avenue, Ottawa.
Sweden: (Established 1943.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Per Wijkman (Aug. 4, 1943).

Address: 720 Manor Road, Rockcliffe Park.

Turkey: (Established 1944.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Sevki Alfan (Mar. 6, 1944).

Address: Chateau Laurier, Ottawa.
Netherlands: (Established 1939.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Jonkheer J. W. M. Snouk Hurgronje (Apr. 13, 1944).

Address: Suite 515, 56 Sparks Street, Ottawa.
Cuba: (Established 1945.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Dr. Mariano Brull y Caballero (Nov. 2, 1945).

Address: 499 Wilbrod Street, Ottawa.
Switzerland: (Established 1945.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Victor Nef (nominated).

Address: Chateau Laurier, Ottawa.
Yugoslavia: (Established 1942.)
Chargé d'Affaires ad interim: Mr. Pero Cabric (Oct. 21, 1944).
Address: 259 Daly Avenue, Ottawa.

The records accumulated at the decennial censuses of Canada, since the creation of the Dominion in 1867 to the latest census to date, 1941, make a valuable contribution to the demographic history of the nation. Each successive decade has added to the vast scope of the material; the detailed statistical analyses and the numerous monographs and studies available under the several aspects of demography and agriculture have made the census a most important statistical measure of accomplishment and progress.

The salient aspects of population growth under each main heading shown in the conspectus are covered but not necessarily in any one edition. The Canada Year Book can do no more than summarize the broad results of the Census. More detailed information may be obtained from the census publications.*

The main legal reason for a periodic census under the Constitution of Canada is to determine representation in the House of Commons: this, according to the British North America Act, is based on population (see p. 57). The payment of provincial subsidies on a per capita basis is adjusted annually on population estimated from the census data. In view of this, the de jure principle of census enumeration is used, i.e., each person is counted as belonging to the locality of his regular domicile, rather than to the place he may be at the date of enumeration, a method followed in some other countries.

The modern Dominion-wide census, however important this redistribution purpose, has a much wider sphere of usefulness. It constitutes, through the data collected directly from the people, a true measure of the social and economic progress of the country and can therefore be used in the regulation of general administration and public affairs, social security and post-war rehabilitation programs, etc.

Growth of Population in Canada.-A brief résumé of the population history of Canada from the first census in 1666, when it numbered 3,215 persons, to the eighth Dominion census of 1941, when the figure was $11,506,655$, places Canada among the leading countries of the British Empire in the rate of population growth.

CHANGES IN PERCENTAGE DISTRIBUTION OF POPULATION
PC CHANGEMENTS DANS LA DISTRIBUTION PROPORTIONNELLE DE LA POPULATION

The inflow of capital and the opening up of new and vast areas with the consequent stimulation of immigration began with the opening of the twentieth century and was the latest episode in the transformation of the central prairie region, which, in the course of forty years, has been organized into provinces and developed with such promise. While at the end of the nineteenth century the population of the Dominion of Canada was approximately $5,400,000$, it had about doubled this figure by 1931. The general increase in the population of European countries during the entire nineteenth century was approximately three-fold; Canada equalled this rate of progress during the sixty years from 1871 to 1931.

In the decade 1901-11 immigration, alone, totalled 1,800,000. This figure was the main factor in the gain of $34 \cdot 17$ p.c. which the total population of Canada registered in that decade and which was relatively larger than the growth of any modern country during the same period.

The next decade started out with an intensification of this immigration movement, but with the outbreak of the War of 1914-18 a recession set in. The effects of that War upon the Canadian population were both direct and indirect. Nearly 60,000 Canadians died overseas and approximately 20,000 took their discharge in the United Kingdom. To these may be added 50,000 deaths from the war plague, influenza. In addition large numbers of British Isles residents in Canada, most of them recent immigrants, left Canada to join the Armed Forces of the United Kingdom and did not return; the same is true of enemy nationals who passed in considerable numbers into the United States immediately before and after the declaration of hostilities. The fluidity of the Canadian population accordingly rendered the War costly in personnel far beyond actual casualties. However, the net result over the ten years was a population increase of 21.94 p.c. or the largest increase for any modern country with the exception of Australia where an increase of 22.01 p.c. was recorded.

The Census of 1931 showed a further increase of $18 \cdot 08$ p.c. over 1921. Natural increase and immigration contributed $1,325,256$ and $1,509,136$, respectively, although the net gain was only $1,588,837$ since estimated emigration was $1,245,555$, for the ten years. Census returns of Great Britain for 1921-31 showed an increase of 4.7 p.c., equalling that of the previous decade. New Zealand in the ten-year interval between 1911-21 showed an increase of 19.8 p.c. and between 1921-31, $19 \cdot 3$ p.c. A census of Australia was not taken in 1931, but the official estimate of population based on the Census of 1933 gives an increase of 19.8 p.c. as against 22.0 p.c. for the period 1911-21 (Official Year Book of Australia, 1940, p. 519). Census figures for the United States showed an increase of population of 14.9 p.c. between $1910-20$ and $16 \cdot 1$ p.c. from 1920-30.

The eighth census of Canada taken June 2, 1941, gives the population as $11,506,655$ as compared with $10,376,786$ as of June 1, 1931, an increase of $1,129,869$ or 10.89 p.c. in the decade. During the greater part of this decade Canada, along with all other countries, was face to face with a prolonged and severe economic depression; immigration was still further restricted by government regulations as well as by economic necessity. The figures for immigrant arrivals were actually reduced from $1,166,004$ in the ten-year period 1921-31 to 140,361 in 1931-41. The
natural increase for this period showed a reduction of about 7 p.c. and, since immigration was reduced more than 88 p.c. over the decade, the net increase in population was due almost entirely to the favourable birth and death rates of the established population.

## Section 1.-Census Statistics of General Population

Since the creation of the Dominion of Canada in 1867, decennial censuses have been taken as of Apr. 2, 1871, Apr. 4, 1881, Apr. 5, 1891, Apr. 1, 1901, June 1, 1911, 1921, 1931 and June 2, 1941. Summary figures are given in Tables 1 to 4.

## 1.-Population of Canada, by Provinces and Territories, Census Years 1871-1941

Note.-The populations of the Prairie Provinces in 1906, 1916, 1926 and 1936, are shown at p. 147 of the 1937 Year Book. For intercensal estimated populations, see table at p. 127.

${ }^{1}$ The populations of Ontario, Quebec, Manitoba and Northwest Territories were adjusted for 1911 according to the provisions of the Boundaries Extension Acts, 1912.
${ }^{2}$ Revised in accordance with the Labrador Award of the Privy Council, Mar. 1, 1927. The total for Canada includes 485 members of the Royal Canadian Navy who were recorded separately in 1921.
${ }^{3}$ Revised since the publication of the 1945 Year Book.
4.-Area and Density of Population, by Counties or Census Divisions, 1941

## 5.-Densities of Population in Various Countries in Recent Years

Note.-In the past, this table has been based on census data. Owing to the incidence of the War and the postponement of regular census-taking in most countries, it was decided to substitute density figures based on estimated population in those cases marked with an asterisk (*), rather than give census data that is not representative of existing conditions. Total area is used, except in the cases of Canada, the Netherlands, Norway, Sweden and the United States, where figures of land area are available.

| Country | Year | $\begin{gathered} \text { Persons } \\ \text { per } \\ \text { Sq. Mile } \end{gathered}$ | Country | Year | Persons per <br> Sq. Mile |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Netherlands** | 1942 | $721 \cdot 16$ | China proper*. | 1939 | $104 \cdot 97$ |
| Belgium** | 1942 | $711 \cdot 21$ | United States of America* (not |  |  |
| United Kingdom (England and |  |  | including Alaska).............. | 1943 | $45 \cdot 10$ |
| Wales, Scotland and Northern |  |  | Sweden**...... | 1943 | 37.63 |
| Japan**............................ | 1940 1940 | 507.24 495.72 |  | 1940 | 24.75 23.04 |
| German Reich | 1939 | 381.98 | U.S.S.R....................... | 1939 | 20.85 |
| Italy** | 1941 | 372.07 | New Zealand* | 1943 | 15.87 |

## Section 2.-Sex Distribution

The sex distribution of the Canadian people is characterized, as is that of any 'young' population, by a preponderance of males, although this condition has been greatly modified in recent times, especially since the rigid control of immigration following the War of 1914-18. In 1666, during the early years of settlement by the French-speaking immigrants, $63 \cdot 27$ p.c. of the population were males. In 1784, when the English-speaking immigration to Canada was commencing, there were 54,064 males and 50,759 females and by the middle of the nineteenth century there were 449,967 males to 440,294 females in Lower Canada, and 499,067 males 50871-7年
to 452,937 females in the more newly settled Upper Canada. Since Confederation the newer sections of Canada-the west and the northwest-have shown the greatest excess of males.

From 1871 to 1941, for Canada as a whole, the percentage of males never dropped below 51 p.c. of the total population, whereas for Western Canada it varied between 53 p.c. and 59 p.c.

${ }^{1}$ Includes 485 members of the Royal Canadian Navy, who were recorded separately in 1921.

Immigration has influenced the sex distribution of the population, as between provinces, in widely different degree. In the older settlements of Quebec and parts of New Brunswick and Ontario, where the populations are of French basic stock, immigration has not played as great a part in upsetting the normal distribution of the sexes as it has in the other provinces. Even in Ontario immigrants from Continental European countries do not settle as readily and are not assimilated as completely as in the newer western provinces.

A characteristic of population distribution since 1911 has been the rapid growth of urban centres due to the far-reaching developments in manufacturing that have entirely changed the economic picture. Summary figures showing the disparity between the sexes in the matter of urban concentration in 1911, 1921, 1931 and 1901 in the total population are given in the following tabulation. Where the percentaso

of urban males is large the percentage of females is also large. Each decade emphasizes the greater opportunities for female employment in urban centres as compared with rural.

| Item | 1911 | 1981 | 1981 | 1941 |

## Section 3.-Age Distribution

The age distribution of a population is fundamental to most, if not all, other analyses, for the age factor influences employment, marriage, birth rates and death rates, education, immigration, criminology and a multitude of events and activities that are of great importance in the national life.

Immigration has a strong influence on age distribution: it does not directly affect the very young sections of the population except to a very small degree, but it immediately affects the age groups between the 'teens' and the 'twenties' and its effects are carried to the older groups as time goes by. Thus, the influence of the very heavy immigration of the early years of the century (1900-11) is indicated by the fact that, in 1901, $175 \cdot 1$ persons per thousand of the total population were in the age group 20-29 years and 130.5 persons per thousand in the group 30-39 years: a decade later, $190 \cdot 3$ per thousand were in the former group and $142 \cdot 6$ in the latter. Since immigration was cut down very severely after the outbreak of war in 1914, the influence of these earlier accretions to the population has crept through the upper age groups year by year; it has now reached those of the population in the 'fifties'.
9.-Male and Female Populations of Canada, by Age Periods, Census Years 1921-41

Notz.-For comparable data for 1891-1911, see the 1943-44 Year Book, p. 95.

Between 1931 and 1941 a more pronounced general ageing of the population is shown owing to practically non-existent migration and a lower birth rate-factors that were emphasized during the depression years. In 1921 the number per thousand of total population between 40 and 59 years of age was $183 \cdot 0$; it was $201 \cdot 1$ in 1931 and $209 \cdot 5$ in 1941. Greater proportional increases, however, are shown by the group 60 years of age or over; this group represented $75 \cdot 1$ per thousand of the total population in 1921, $83 \cdot 9$ in 1931 and no less than $102 \cdot 1$ per thousand in 1941.

More detailed tables on this subject are given at pp. 94-96 of the 1943-44 edition of the Year Book.

## Section 4.-Conjugal Condition

Next to the sex and age distribution of a population, that of conjugal condition is probably the most fundamental. Its incidence is twofold: 'vital' and 'economic and social'.

The vital basis lies in the influence of the marriage state on the fertility of a population and, from this angle, close analyses of conjugal condition, by age, are important. The ages of females (see Table 9), between 15 and 45 years have more significance than those of males; if the proportion of females in this group is small, the expected proportion of births will also be small. It has been shown that for the Canadian population the combined influences of age of the population, age of the
married females, and proportion of females married has become steadily more favourable to the birth rate from 1871 to 1921 but that, since the latter date, the trend has been less favourable.

## 10.-Conjugal Condition of the Population, 15 Years of Age or Over, by Sex, Census Years 1911-41

Note.-Figures for censuses previous to 1911 are not comparable.

${ }^{1}$ Includes conjugal condition not stated; percentages are based on stated condition.
In Canada as a whole there are more married males than married females because of the excess of married male immigrants. Other striking statistics of conjugal condition are the great preponderance of widows compared to widowers and the large and increasing numbers of divorced or legally separated persons, but the reasons for these figures are more apparent.

Conjugal condition of the 1941 population 15 years of age or over, by provinces and sex, is shown at p. 102 of the 1945 Year Book.

## Section 5.-Racial Origins

A population composed of divers racial stocks gives rise to political, economic and social problems quite different in nature from those of one with a small admixture of foreign elements, although, to the extent that certain racial stocks are more readily assimilated than others, the problems are mitigated. It is equally true that the different educational, moral, economic, religious and political backgrounds of a people of mixed origins lend variety and diversity to the national life.

The two basic stocks of the Canadian people are the French and the English: historically the French is much the older and, excepting for the Census of 1921, has exceeded in numbers any one of the basic British Isles stocks.

It will be seen from Table 11 that, at the time of Confederation, the largest of the groups comprising the British Isles races was the Irish and that the Irish and the Scottish together outnumbered the English by almost two to one. The English, however, exceeded the Irish after 1881, while the Scottish took second place after 1911. From 1881 to 1901, those of Irish origin increased only $3 \cdot 3$ p.c.: the smaller proportion of Irish to English and Scottish was due not alone to a decline in immigration but to their emigration from Canada. The relative gains from 1911 to 1921 of the British Isles races as a group brought them to over one-half ( $55 \cdot 4$ p.c.) of the total population. The English (with 28.96 p.c.) ranked first in 1921 of all races in Canada, the French were second ( 27.91 p.c.), the Scottish were third ( 13.35 p.c.), and the Irish fourth ( $12 \cdot 61$ p.c.). In 1931 the French again assumed the premier position and the English ranked second, outnumbered by 187,000, yet there were only 54 French to every 100 persons of English, Scottish, Irish and Welsh descent combined. There was a relative reduction in the British Isles races
from 57.03 p.c. of the total population in 1901 to 49.7 p.c. in 1941 . The causes for this relative decrease were mainly: declining immigration from the British Isles, emigration to the United States of the Anglo-Saxons, repatriation of large numbers of French Canadians from the United States, and the generally higher rate of increase on the part of the French as compared with the various Anglo-Saxon peoples. The factors of immigration and emigration are transitory and change rapidly but the rate of natural increase has been persistently favourable to the French.

For the British Isles races the inter-decennial increases have fallen consistently from 1911 to 1941. Between 1911 and 1921 the increase was 869,657 ; for the following decade it was 512,333 ; and from 1931 to 1941, 334,833.

The British Isles and French groups taken together constituted 80 p.c. of the population in 1941, as was the case in 1931; this compared with 83 p.c. in 1921 , 84 p.c. in 1911, 88 p.c. in 1901, 89 p.c. in 1881 and no less than 92 p.c. in 1871. This pronounced decline has been due, in the main, to immigration of Continental Europeans to Canada during the past 40 years.

From the beginning of the present century the proportion of the European races (other than British and French) increased from 8.53 p.c. in 1901 to 17.76 p.c. in 1941. The rate was such as to more than double the numbers of these European stocks in one decade (1901-11) and was much higher for specific origins: for instance the Belgians and Scandinavians trebled; the Jews and Italians increased more than fourfold; the Poles and Finns, respectively, were numerically five and six times stronger in 1911 than in 1901.

The second decade of the century showed declining rates of growth; this period included three years of the heaviest immigration in the history of the Dominion and four years of war. The net result was that the European stocks increased from 944,783 to $1,247,103$ or 32 p.c.

Several significant changes occurred in the third and fourth decades; the increase for the European stocks (other than British and French) rose from 1,247,103 in 1921 to $2,043,926$ in 1941 or by $63 \cdot 9$ p.c. With the resumption of moderate immigration from Continental Europe in 1921 and the relatively higher birth rate among earlier Continental European immigrants, foreign European stocks increased nearly four and one-half times more rapidly than the British in 1921-31.

[^41] into Danish, Icelandic, Norwegian and Swedish.

Racial origins of the population by provinces and territories in 1941 are given at p. 106 of the 1945 edition of the Year Book.

It is interesting to note how the main racial origins are represented in the populations of leading Canadian cities and in Table 12 the populations of nine cities of Canada are analysed from this standpoint. The predominantly French complexion of Montreal and Quebec contrasts with the British Isles racial majorities of the other cities.

## Section 6.-Religions

At each census the actual numbers attached to any religious denomination, as reported by the persons enumerated, have been recorded. The growth of the different denominations from an early date is traced statistically in Table 13.

Over the period from 1871 to 1941 something like 40 p.c. of the population of Canada has been of the Roman Catholic faith. This proportion has been remarkably constant over the 70 years. The 1941 percentage (inclusive of Greek Catholics) was 43.34 p.c. Methodists were $15 \cdot 67$ p.c. of the population in 1871 but fell to 13.19 p.c. in 1921 . Presbyterians increased from 15.57 p.c. in 1871 to 16.04 p.c. in 1921; they were reinforced by the considerable immigration from Scotland after the beginning of the century. The organization of the United Church of Canada in 1925 left the Presbyterians and the Congregationalists much weaker in membership. Almost all Methodists, the main body of Congregationalists and a large number of Presbyterians united to form that Church.

Among some of the numerically larger European races in Canada the leading religious denominations at the 1941 Census were: German- $32 \cdot 0$ p.c. Lutheran, $25 \cdot 0$ p.c. Roman Catholic and $14 \cdot 2$ p.c. United Church; Ukrainian- 62.3 p.c. Roman Catholic and 29.1 p.c. Greek Orthodox; Scandinavian- 59.8 p.c. Lutheran, $17 \cdot 0$ p.c. United Church and 6.8 p.c. Anglican; Netherlanders- 30.5 p.c. Mennonite, 28.1 p.c. United Church, 11.4 p.c. Anglican and $7 \cdot 6$ p.c. Baptist. About 81 p.c. of the people of Polish origin were Roman Catholic and 91 p.c. of the Italians reported this religious denomination. It is interesting to note that $13 \cdot 6$ p.c. of the Chinese stated that they belonged to the United Church and 7 p.c. to the Presbyterian Church, while 21.4 p.c. of the Japanese reported United Church as their religious denomination.

[^43]
## Section 7.-Birthplaces

The population of Canada by broad nativity groups, Canadian born, other British born, United States born and other foreign born, is shown in Table 15.

The effects of the large immigration at the beginning of the century are seen in all columns of the percentage figures after 1901. Whereas in $1871,83 \cdot 30$ p.c. of the total population were Canadian born, 14.06 p.c. other British born, and 2.64 p.c. foreign born, the corresponding proportions in 1941 were $82 \cdot 46$ p.c., $8 \cdot 72$ p.c. and 8.82 p.c., respectively.

The smallest element in the population, viz., the foreign born other than United States born, actually shows the greatest percentage increase. These "other foreign born" increased rapidly from 0.85 p.c. in 1871 to 7.50 p.c. in 1931, more than doubling in absolute numbers from 1901. The decline of the group indicated for 1941 is attributable to a restricted immigration policy. (See Chapter VI.)
15.-Nativity of the Population, Census Years 1871-1941

| Year | British Born |  | Foreign Born |  | Total Population | Percentages of Total Population |  |  |  |

${ }^{1}$ Includes some hundreds of persons born at sea.
${ }^{2}$ Includes six provinces only.
${ }^{3}$ Includes "birthplace not stated".

Table 27, p. 113 of the 1943-44 Year Book gives, for 1941, the nativity of the population analysed by sex and province.

Table 16 gives the total population by country of birth for census years 18711941. The census, under birthplace, collects information on both the country of birth of the immigrant arrivals in Canada and the province of birth of the nativeborn population. These data provide information respecting the interprovincial movement of the Canadian-born population (see p. 118).

Comparative figures for country of birth for census periods to 1921 and those taken more recently are difficult to obtain because of the many geographical changes in Europe after the War of 1914-18; for instance, a person who early in the century migrated to Canada from a certain part of Austria or Hungary might not realize that in 1931 he should have recorded his birthplace as Poland or Roumania in line with the new national boundaries. In comparing the census figures of several decades these facts have to be considered and a regrouping of certain European countries whose boundaries were changed in later censuses is carried back to earlier censuses to maintain comparability. Table 16 is probably as far as the census can go in supplying strictly comparable figures along these lines. In this table no change has been made affecting the census figures themselves: they have been merely regrouped geographically.

## 16.-Population, by Birthplace, Census Years 1871-1941

More detailed information on this subject will be found at pp. 111-117 of the 1943-44 Year Book.

Table 17 gives, for all urban centres of over 30,000 , the numbers and proportions of the population who are Canadian born and who are born outside Canada. As is to be expected, the percentages of those born outside Canada are, in general, much greater in western than in eastern cities.

## Section 8.-Rural and Urban Population

For the purposes of the Census, the-population residing in cities, towns and incorporated villages has been defined as 'urban' and that outside of such localities as 'rural'. The distinction between rural and urban populations in Canada, therefore, is a distinction of provincial legal status rather than of size of aggregation of population within a limited area. Since the laws of the various provinces differ in regard to the population necessary before a municipality may be incorporated as urban, * the line of demarcation between rural and urban population is not at all uniformly drawn throughout the Dominion.

This basis of comparing rural and urban populations adhered to throughout the census analyses is, then, adopted for Canada, not because it is best, but because the necessary comparable data over a long period of years required for comparison by degree of urbanization does not exist. Obviously, the populations of villages of less than 1,000 cannot be regarded as truly urban, although there is reason, for certain purposes, to distinguish them from the surrounding rural populations, in that they enjoy definite cultural advantages not possessed by the strictly rural municipalities.

Table 18 has been prepared to overcome some of the difficulties involved, and to provide a basis for comparison of urban centres by size with those of other countries. These data enable places outside any required size limits to be readily excluded. Similar data, by provinces, will be found in Volume II of the Census of 1941.

During the latest four decades there has been a radical shifting in the distribution of the Canadian population as between rural and urban districts. The change has been continuous throughout the period. In the decade ended 1941 the proportion increased from $53 \cdot 70$ p.c. to $54 \cdot 34$ p.c. Urban communities absorbed nearly 60.22 p.c. of the total increase with the result that the urban population of Canada in 1941 exceeded the rural by 998,177 . Out of every 1,000 persons in the country, 457 were resident in rural and 543 in urban communities on June 2, 1941, as compared with 463 in rural and 537 in urban communities on June 1, 1931; 505 in rural and 495 in urban on June 1, 1921; and 546 in rural and 454 in urban on June 1, 1911. In this trend to urbanization of population Canada is by no means unique. The same change has characterized virtually all western nations to a greater or lesser degree during the past century.

The information regarding rural and urban residence was enlarged upon in the Census of 1941. Every person stated not only his province of birth, but also whether he was born in a rural or urban municipality, the length of residence in the rural or urban municipality in which he was enumerated, the province or country of previous residence, and whether this was in a rural or urban municipality. This information will enable a closer study to be made of urbanization and its causes.

Table 18 gives the distribution of urban population in Canada by size of urban centres, the rural-urban trend is very strongly indicated by the increased size of the larger cities and towns at a time when immigration, which in former decades (especially that of British origin) tended to concentrate in urban centres, was negligible.

${ }^{1}$ Royal Canadian Navy (485) included in rural total.

Montreal, the largest city in Canada, increased by 84,430 in the decade 1931-41, from 818,577 to 903,007 ; Toronto, the only other city of over half a million population, increased by 36,250 from 631,207 to 667,457 . Vancouver and Winnipeg went up to 275,000 and 222,000 , respectively; Hamilton, Ottawa and Quebec were all over 150,000; Windsor over 100,000 ; and the western cities of Edmonton and Calgary over 93,800 and 88,900 , respectively. These latter cities exceeded London, which also came in the 75,000 to 100,000 class in 1941.

All the larger cities have in their neighbourhoods growing 'satellite' towns or other densely settled areas in close economic relationship with the central municipality. It has, therefore, been advisable to calculate the total populations for the metropolitan areas of these greater cities. Table 20 shows comparative figures for 1931 and 1941.
20.-Populations of Greater Cities in 1911 Compared with 1931

## Section 9.-Movement of Population

A short review of the rural and urban movement of population in 1941-44; the migration between the nine provinces of Canada during the decade 1931-41; and the estimated net civilian immigration by provinces, 1941-44, appears at pp. 120-122 of the 1945 Year Book.

## Section 10.-Citizenship

The basic legal definition of Canadian nationality is to be found in the Immigration Act, which defines a Canadian citizen as a person included in one of three categories: (1) a person born in Canada, who has not subsequently become a citizen of a foreign State; (2) any British subject who has been domiciled for five years in Canada; (3) any subject of a foreign power who has become naturalized and has not subsequently become an alien or lost Canadian domicile (R.S.C. 1927, c. 93; 21-22 Geo. V, c. 39).

The part that Canada played in the negotiating of the Peace Treaty and the subsequent enrolment of Canada as a member of the League of Nations necessitated an enlargement of the terms of the Immigration Act. In other words, there arose the need of an official definition of the term "Canadian citizen" as distinct from "British subject"-a definition that would be internationally recognized. An Act was accordingly passed entitled "An Act to Define Canadian Nationals and to Provide for the Renunciation of Canadian Nationality" (R.S.C. 1927, c. 21).

This Act defines a Canadian national as (1) any British subject who is a Canadian citizen within the meaning of the Immigration Act; (2) the wife of any such person; and (3) any person born out of Canada whose father was a Canadian national at the time of such person's birth, or, with regard to persons born before the passing of the Act, any person whose father at the time of such birth possessed all the qualifications of a Canadian national as defined in the Immigration Act.

It will be seen from this that Canadian nationality has, several bases. Any naturalized person in Canada is now recognized as a British subject in any part of the world, although there was a time when persons were admitted to naturalization in Canada who could not qualify as British subjects outside of Canada. (See also statistics of naturalization, Chapter XXXI on Miscellaneous Administration.)

Table 23 shows that, at the Census of 1941 , less than 1 p.c. of the total Canadianborn and other British-born population had lost their Canadian citizenship through renunciation or marriage. Over 80 p.c. of the United States born persons in Canada, who form 2.7 p.c. of the total population, had become Canadian citizens together with 74.7 p.c. of the Continental European born, while 72.7 p.c. of those born in Asiatic countries were still aliens. Of the total population only 2.4 p.c. were aliens. Table 24 shows the citizenship of non-British and non-French racial origins as at the Censuses of 1931 and 1941.
23.-Citizenship of the Total Population, by Nativity, 1941

${ }^{1}$ Includes citizenship "not stated".

## Section 11.-Languages and Mother Tongues

At pp. 124-125 of the 1945 edition of the Year Book census data of languages and mother tongues are summarized giving compilations of the number of persons speaking one, both or neither of the official languages of Canada and the mother tongue of the total population in 1941.

## Section 12.-School Attendance

Statistics under this heading for the Census date of 1941 will be found at p. 138 of the 1943-44 Year Book.

## Section 13.-Blind and Deaf-Mutes

The 1945 Year Book shows, at p. 126, the number of blind and deaf-mutes, by provinces in 1941, together with the proportion of such persons per 10,000 population.

## Section 14.-Occupations of the Canadian People

For a summary of the occupations of the Canadian people for the 1941 Census, see Appendix III, pp. 1062-73, of the 1943-44 Year Book.

## Section 15.-Dwellings, Households and Families*

Buildings and Dwellings.-According to Table 25, the number of occupied dwellings in Canada $\dagger$ at the 1941 Census was 2,597,969 as compared with 2,227,000* at the 1931 Census. The number of persons per dwelling was highest in Quebec

[^47]at $5 \cdot 12$ and lowest in British Columbia at $3 \cdot 66$. In addition, there were 62,008 vacant dwellings in the Dominion on June 2, 1941. It should be explained that the total number of buildings used for habitation- $2,181,564$-was somewhat less than the number of dwellings since in the case of apartment buildings, rows and semidetached structures each building would contain one or more dwellings.

Definitions of Dwellings and Dwelling Types.-The Census defines a dwelling as "a structurally separate set of self-contained living premises having its own entrance from outside of the building containing it or from a common passage or stairway inside". According to this definition a single dwelling house is a permanent structure in which there is only one self-contained dwelling unit. A semi-detached dwelling house, sometimes known as a "double house", is a two-dwelling structure with separate entrances to each dwelling, and divided by a solid partition extending from attic to cellar. This distinguishes the semi-detached from the "duplex" or two-dwelling apartment house where the division, with upper and lower apartments, is on a horizontal basis. Apartment dwellings or suites are found in apartment blocks, each dwelling having a separate exit to a common hall or landing. A flat is structurally similar to an apartment house except that each dwelling unit has an independent entrance from the outside. In Table 27 of this Section, flats and duplexes are included with the figures shown for apartments. A row or terrace dwelling structure is similar to a semi-detached in construction except that it consists of three or more such adjacent dwellings.

Households and Families.-The number of households in the nine provinces at the 1941 Census was 2,706,089 and the average size of all households was 4.25 persons per household. Private families in Canada totalled 2,525,299, the average number of persons per family being $\mathbf{3 \cdot 9 4}$. The size of households and of families was largest in Quebec and smallest in British Columbia.

Definitions of Household and Family.-In the Census a household is defined as "a person or a group of persons living in one housekeeping community. The persons may or may not be related by ties of kinship, but if they live together with common housekeeping arrangements, they constitute a household. It should be noted that two or more households may occupy the same dwelling. If they occupy separate portions of the dwelling and their housekeeping is entirely separate they shall be treated as separate households." Persons on Active Service were included as members of their family households whether actually living at home or not at the date of the Census.

In the Census the family is understood to consist of husband and wife (with or without children) or a parent and unmarried child or children living together in the same housekeeping community. Hence the family membership is restricted to persons having the husband-wife or parent-child relationship and thus is not consistent with the group of persons composing the household. The latter often consists of two or more families and very frequently includes persons related to the head, such as uncle, niece, grandmother, etc., but who are not members of his immediate family.
25.-Numbers of Buildings, Dwellings, Households and Families, and Average Numbers of Persons per Dwelling, per Household and per Family, by Provinces, 1941

${ }^{1}$ Buildings used for habitation only. $\quad{ }^{2}$ Does not include dwellings with tenure not stated.
Tenure and Kind of Dwelling.-As indicated in Table 27 the 1,457,526 owner-occupied dwellings constituted 55 p.c. of all occupied dwellings in Canada at the 1941 Census. In rural areas, dwellings occupied by owners represented about 75 p.c. of total occupied dwellings while in urban areas, owner-occupied dwellings were only about 40 p.c. of all occupied dwellings.

Of the total $1,115,629$ tenant-occupied dwellings in Canada, 832,703 were found in urban centres. A considerable proportion of the latter would be apartment dwellings since almost all the 500,328 apartment dwellings shown in Table 27 were occupied by tenants. It is worth noting that, while the number of single dwellings in urban Canada increased from 707,150 to 735,795 between 1931 and 1941, or by 4 p.c., apartment dwellings increased from 333,374 to 500,328 over the same period, or by about 50 p.c. Some part of the increase in apartment dwellings would be accounted for by the conversion of single dwellings into apartments.

## 27.-Occupied Dwellings, Classified According to Tenure and Kind of Dwelling, Rural and Urban, by Provinces, 1941

Nore.-In the Census "urban" includes all incorporated cities, towns and villages, the "rural" areas including organized rural municipalities, townihips and parishes and all unorganized areas.

[^50]Households by Number of Rooms.-Table 28 shows households classified by number of rooms per household by provinces at the 1941 Census. Differences in average size of household by provinces, as measured by rooms occupied, are due in part to differences in the relative proportions of households living in apartment dwellings in the various provinces.

Definition of Rooms.-Rooms as defined in the Census, include only those occupied by each household as living quarters. Rooms used for business purposes, clothes closets, bathrooms, pantries and halls are not included; neither are attics, basements, porches, summer kitchens, or sunrooms unless they are finished off and used for living quarters throughout the year.

${ }^{1}$ Includes households with number of rooms not stated.
Urban Households.-Two- and three-person households were more numerous in urban than in rural areas in 1941. It will be noted from Table 29 that households of from one to five persons per household were more numerous in Ontario than in Quebec, while households of six persons and upward were more numerous in Quebec than in Ontario.

Table 30 shows the number of households in urban centres falling below the level of one person per room and thus gives some idea of the extent of over-crowding in these centres at the time of the Census.

Table 31 shows the number of urban households in Canada living in owned homes according to the estimated current value of the home at the 1941 Census. Over one-third of these homes were valued at between $\$ 2,000$ and $\$ 1,000$, while only about 15 p.c. were valued at $\$ 5,000$ or more.

In Table 32 urban households living in rented homes are classified according to rent paid during the month of May, 1941. Over one-third of the urban tenant households paid from $\$ 10$ to $\$ 19$ rent, while over one-quarter paid from $\$ 20$ and $\$ 29$ rent in that month. It is interesting to note that in urban Quebee where apartment dwellings are more common than in other provinces, households living in rented homes were approximately three times as numerous as those living in owned homes.

Data similar to that appearing in Tables 30 and 32 for cities of 30,000 or over will be found in Bulletin HF-3 of the 1941 Census.

${ }^{1}$ Includes households with monthly rent not stated.
households with tenure not stated.
Composition and Size of Families.-Table 33 gives the total number of families, the number of normal families, i.e., those with husband and wife at home, the number of lodging families, the total family population, and the number of
children under 24 years of age, by age groups, showing, for the 15-24 age group, the number at school and the number gainfully occupied. It should be explained that lodging families consist of families whose heads are not heads of the households in which they reside. The family population at the 1941 Census constituted 86 p.c. of the total population in Canada. It will be noted that, of the total children in families about 30 p.c. were under 7 years of age, 36 p.c. were $7-14$ years of age, and 33 p.c. $15-24$ years of age. About one-half of those in the latter age-group at the census date were gainfully occupied, about one-third were at school, and the balance neither at school nor gainfully occupied.

${ }^{2}$ Normal families are defined in the Census as families with husband and wife at home. ${ }^{2}$ A few lodging families in households with tenure not stated are not included.

In Table 34 families are classified according to number of children at home. It is interesting to note that the largest single group, almost one-third of all families, consists of those with no children or whose children were married or, if unmarried, were living away from home at the time of the Census. In this connection reference might be made to the 1941 Census Bulletin No. HF-3, in Table 12 of which families in Canada are classified according to age of head and number of children per family at home. This table shows that about two-thirds of the families with no children at home were families in which the head was 45 years of age or over, 30 p.c. being families in which the head was 65 years of age or over. It should be added that in one-quarter of the families with no children at home the head of the family was under 35 years of age. Table 34 shows also that $1,031,864$ families, or about 40 p.c., had one or two children living at home at the census date, another 425,664 families, or about one-sixth of all families, had three or four children at home, and 268,369 families, or just over 10 p.c., had five or more children living at home on that date.

${ }^{1}$ Does not include 15,635 families with tenure of household not stated.

## Section 16.-Quinquennial Census of the Prairie Provinces

The statutory Quinquennial Census of Manitoba, Saskatchewan and Alberta will be taken as of June 1, 1946. As in the past it will cover both population and agriculture. The population census will ascertain the age, sex, marital condition, birthplace, nationality, ethnic origin, mother tongue and degree of education of every person. In addition, every person of 14 years of age or over will be asked to report his occupation, the industry in which he is employed and his occupational status, as employer, wage-earner, own account, etc. Wage-earners will be asked to report their earnings for the twelve months immediately preceding the Census. Questions will be asked to determine the amount of unemployment at the date of the Census and to ascertain housing conditions.

The census of agriculture will ascertain the farm population and the number of farm workers; the area, condition and value of farm lands; the area and production of crops; the numbers of live stock and the production of animal products. In addition, questions will be asked regarding farm facilities, mortgage indebtedness, farm expenditures and gross revenues of farms.

The 1947 Year Book will carry summary figures of the 1946 Census.
At pp. 146-152 of the 1937 edition of the Year Book and pp. 110-112 of the 1939 Year Book the latest results now available are given; also in Volumes I and II of the 1936 Census.

## Section 17.-Estimates of Population

Annual Estimates.-The exact statement of the population of Canada given at ten-year intervals by the Census must be supplemented by estimates for intervening years. These are essential for the calculation of per capita figures in production and trade, and particularly for use as a base in birth and death comparisons.

The calculation for Canada is easier than that for its component parts. The number of births and immigrants each year is known as well as the number of deaths, and reasonably accurate estimates may be made of the amount of emigration from the immigration reports of the countries to which Canadians most frequently move, principally the United States and the United Kingdom.

The analysis according to provinces normally involves a large error, particularly in the time of rapid movement of population within the country. The period since 1941 has been characterized by particularly heavy movements of population, but fortunately ration-book figures available provide a very satisfactory means of ascertaining these estimates. Members of the Armed Forces whose homes were in
one of the provinces were added to the rationed population, in order to secure the total number of persons legally resident in each province-the annual estimated figure comparable with the Census.
35.-Estimates of the Population of Canada, by Provinces, Intercensal Years, 1905-45

Nore.-At every census the previous post-censal data are adjusted to the newly recorded population figures. Figures for 1867-99 will be found at p. 141 of the 1936 Year Book.

Present Trends of Population Growth as Applied to the Future.*Population projections on the basis of past trends are made to facilitate scientific examination of the resultant consequences that will ensure from the continued operation of such trends, their purpose is not to forecast future population. Their value lies in pointing the way to possible remedial action, end thus adjust trends that are not wholly in the national interest. The methods adopted by the Dominion Bureau of Statistics in carrying on this work and the interpretations of, and limita-

[^52]tions to be placed on, the estimates are fully described in the publication referred to in the footnote, p. 127. Certain results or conclusions arrived at in that Report are noted here.

The projections of that study carry the population of Canada from 1941 (the latest census) to 1971 and show the growth as it will be, only if certain assumptions prevail-one of the most important being that no migration will take place between Canada and other countries, or within Canada between the provinces, in the future. Obviously, migration is an unknown factor that will depend upon future government policy which cannot be predicted, nor can past experience give any basis for assuming a consistent trend. The best that can be said is that at present it does not seem likely that external migration will greatly affect the future size of the population. The projection must be interpreted as showing the results of current trends in fertility and mortality only.

Four projections have been computed for Canada. The first was computed on parallel lines to well-known estimates for Europe and the Soviet Union, and disregarded any demographic effects of the War of 1939-45. This estimate indicates that, in contrast to most European countries which expect a declining population by 1970, the population of Canada will probably continue to increase up to and beyond that year, though at an ever-decreasing rate of increase.

The fourth estimate is perhaps of the most practical significance. The high marriage rates of the war years are credited with some effect in slowing down the rate of decline in fertility which has been observed in recent years. According to this estimate, the population in 1951 will, under the premises laid down, approximate $13,000,000$; in 1961 it will be almost $14,000,000$; and in 1971 it will be somewhat over $14,500,000$.

In the opinion of the research group responsible for the investigation, "the probable future population of Canada (in the absence of gain or loss through migration) will be between the upper (first) and lower (fourth) limits of estimates and most probably nearer the upper limit". If, however, fertility continues to decline in the future as it has done in the past, the population will eventually reach a maximum and thereafter will begin to decline. According to this fourth estimate, the maximum will be reached at the end of the century and the population will then be about $15,000,000$.

As a result of past changes in fertility and mortality, the population of Canada is getting older. If these trends continue, there will be more old people and fewer children, and the labour force will contain a higher proportion of older workers. The potential labour force will, however, continue to increase up to 1971, both in absolute numbers and relatively to the rest of the population, so that the burden of social dependency will be somewhat lighter.

## Section 18.-Area and Population of the British Empire

Statistics showing the latest official estimates of the area and population of the British Empire by continents and countries are given in Table 52, pp. 141-142 of the 1943-44 Year Book.

## Section 19.-Area and Population of the. World

Statistics showing the areas and the populations of the various continents and details of each country, as in 1931, are given in a table at pp. 168-169 of the 1934-35 Year Book. The lack of statistical data, and the dislocations caused by the War, preclude the compilation of later information.

## GHAPTER V.-VITAL STATISTICS*

## CONSPECTUS

A short historical outline of the early collection of vital statistics in Canada is given at pp. 104-105 of the 1940 edition of the Year Book. Co-operation of the provinces in the collection of comparable statistics was finally brought about as a result of the establishment of the Dominion Bureau of Statistics, under the Statistics Act of 1918. From 1921 to 1925 vital statistics were compiled by the Bureau on a comparable basis for all provinces, except Quebec. Quebec has been included in the registration area from Jan. 1, 1926. From that date, vital statistics have been on a comparable basis for all provinces.

The main tables of the Summary and of Sections 2-5 which follow cover statistics for the nine provinces. Section 6 deals with those of Yukon and the Northwest Territories; the reasons for this separation are given at that place.

A Section dealing with communicable diseases has been included for the first time at the end of the Chapter.

Classification of Vital Statistics.-Until recently, vital statistics data were all classified by place of occurrence. In 1944, however, the classification of births and deaths by place of residence was begun, births being classified by the place of residence of the mother. A number of special tabulations by place of residence have been made for a few years prior to 1944; in Tables 2 to 5 the figures for 1941-44 are given by place of residence. In all the other tables of this Chapter, only the figures for 1944 are by place of residence, except in Tables 11, 23 and 28, which deal with urban centres. The sub-headings and footnotes of the tables throughout will clearly indicate the classification employed.

With respect to many provincial figures and rates, the change in classification may result in comparatively small differences. But in the case of individual localities, the resulting differences may be of much greater importance. In such cases, the figures for the single years 1941 and after are not comparable to the five-year averages for the earlier years.

## Section 1.-Population and Summary of Vital Statistics

Population by Sex and Age.-For the calculation of many vital-statistics rates, it is important to know each year not only the total population but also the distribution by sex and age. Hitherto, calculations requiring this information have been, for the most part, restricted to the years about each census, since it was felt that the use of sex and age distributions for periods more than two or three years

[^53]50871-9
1.- Population of Canada ${ }^{1}$ by Age Groups and Sex, Censuses 1931 and 1941 with Estimates (as at June 1) for Intercensal Years

before or after each census involved too much inaccuracy. On the other hand, by the use of such estimates important gaps in the knowledge of vital statistics phenomena can be filled.

Table 1 shows the population of Canada distributed by sex and age for the years 1931 to 1944. The figures for 1931 and 1941 are those obtained at those Censuses, while for the intercensal years they are estimates. These estimates are calculated from the Censuses of 1931 and 1941, the births and deaths of each year, and known immigration to, and emigration from, the country.

The population of the 1931 Census was the starting point in the calculation. The census figures by sex and single years of age were used up to age 25 , and graduated figures (preserving five-year totals) from age 25 on. The decision to use graduated figures was made after a study of the concentrations on even ages; it was found that these concentrations are greatest at middle and older ages. The sharp fluctuations at younger ages are to be attributed, mainly, to the great variations in the number of births during and after the War of 1914-18, and should not be smoothed out.

The census is taken at the beginning of June. A "census year" may therefore be said to run from June 1 to May 31. In order to obtain the number living at age 0 on June 1 of each year, i.e., the number of children less than 1 year of age, from the number of children born during each census year, the number of those who had died during the same period was subtracted. At each other single year of age, the deaths occurring at that age were subtracted from the census figures to give a first approximation to the number at the next higher age in the following year. This process was carried through successive years to 1941 and, together with known immigrants and emigrants, gave what might be called the 'expected' figures of population for that year. These expected figures were then compared with the actual figures obtained from the 1941 Census, and the differences at each year of age noted. The sum of these differences amounted to about 90,000 persons in all, and is believed to be largely due to unrecorded migration out of the country.

The intercensal estimates arrived at by the method described above were revised in the light of the differences found in 1941. The official revised estimates of the total population were compared with the totals of both sexes and all ages of the original estimates. The differences of each year were distributed between the two sexes and the different ages in the same ratio as the differences between the actual and expected figures were found to be distributed in 1941.

The estimates for the years following 1941 are being made by the same method as that used in the original estimates for the intercensal years prior to 1941. The figures for 1942-44 will be revised following the 1951 Census; those for the years 1932-40 are now final.

Tables similar to Table 1 have been completed for each of the nine provinces. The population of Canada in 1931 and 1941 by sex and age is shown graphically in the chart facing p. 160. Tables 2 to 6 provide a summary of the vital statistics of Canada and the provinces for the years 1926 to 1944.

In comparing the birth, death and marriage rates of the provinces, it is useful to bear in mind that part of the differences observed may be due to differences in the sex and age distribution of their populations. Similarly, changes in these rates over a period of years may be partly due to changes in the sex and age distribution of the population. For example, in recent years the birth rate of Quebec has been approximately the same as that of New Brunswick and considerably higher than that of Prince Edward Island. However, the fertility of the female population has 50871-9 ${ }^{\frac{1}{2}}$
been highest in New Brunswick and, except in 1944, approximately equal in the other two provinces. Again, over the past 15 years, the death rate in British Columbia has been rising, while in Ontario it has been more or less stable, with the result that, whereas 15 years ago the death rate in Ontario was considerably higher than in British Columbia, at present they are about equal. This does not mean, however, that the rates of mortality at each age have risen in British Columbia. On the contrary, the life tables of 1941 show that the average expectation of life in 1940-42 was nearly 3 years longer for males and nearly 4 years longer for females than in 1932. This increase is only slightly less than that which occurred in Ontario, and the expectation of life for both sexes is approximately equal in the two provinces. The death rate in British Columbia has been rising because the increase in the proportion of the population in the higher age groups has more than outweighed the fall in the mortality rates at each age. In other words, the age distribution of the population has become less favourable to a low death rate.

The above remarks are also applicable to international comparisons of birth, death and marriage rates.

## ${ }^{1}$ By place of occurrence.

${ }^{2}$ Exclusive of the Territories.
Canadian Life Tables. - Life tables have now been calculated on the basis of the population of 1941 and the deaths of 1940-42. These are the second official life tables for Canada to be published, the first having been calculated on the basis of the deaths of 1930-32 and the population of 1931. The two life tables are presented in abbreviated form in Tables 7 and 8.

Life tables give a summary of the health and general conditions of survival of the population in a conventional, standarized form. A hypothetical number of births of each sex $(100,000)$ is assumed. The life tables then show how, on the basis of the mortality rates at each age which have been found to exist in the years for which the life tables are being calculated, the 100,000 births of each sex are reduced in number as a result of death. Thus, for example, in 1940-42, out of 100,000
male births, 6,250 die in the first year of life, with the result that only 93,750 survive to 1 year of age; a further 676 die in the second year of life, so that only 93,074 survive to 2 years of age; and so on. At 100 years of age, only 50 of the original 100,000 have survived. The probability of death at each age is found by relating the number of deaths that actually occurred at each age in the given years(1940-42 or 1930-32) to the population at that age, as obtained from the census. Finally, the expectation of life at each age shows the average number of years of life to which a person might look forward if the mortality rates found for the life table were to remain constant.
7.-Canadian Life Tables, 1941, Based on Population, 1941, and Deaths, 1940-42

50871-10

## 8.-Canadian Life Tables, 1931, Based on Population, 1931, and Deaths, 193e-32

A comparison of the two life tables reflects the great improvement in mortality which has taken place during the 10 -year period. This is conspicuous in respect of both males and females.

Male mortality is heavier at all ages, but particularly so among infants of 0-1 year; 62 out of every 1,000 boys born die before 1 year of age, but only 49 out of every 1,000 girls. The life expectation in this period is less than at age 1. Males who have passed through the hazardous first year may look forward to 66 years of life and females to 69 years. Expectation of life of a boy who reaches working age, say 15 , is 54 years, and of a girl 56 years. At age 25, a common age of marriage, it is 45 years for males and 47 for females. At age 70, when people become eligible for
old age pensions, the expectation of life is 10 years for males and 11 years for females. In 1930-32 male mortality was lower than female mortality through the childbearing ages of life (15-50 years), but in 1940-42 this was not the case.

## Section 2.-Births

The history of birth rates in most countries of Europe and in North America was one of decline during the years between 1919-39. In the countries of northwestern Europe, in fact, this decline had already set in fifteen to thirty years before the War of 1914-18. It has been partly offset, in its immediate effects on the natural increase of the population, by a simultaneous decline in death rates. Since 1939, available statistics show that in those countries that were not occupied by the enemy, the rapid and consistent decline in birth rates has, for the time being, ceased. In Canada and the United States there has been a real 'boom' in births since the outbreak of the War of 1939-45.

The birth rate for England and Wales was $29 \cdot 9$ per 1,000 population during the years 1891-1900 and $27 \cdot 3$ per 1,000 during the years 1901-10. It continued to fall to $16 \cdot 5$ per 1,000 in 1926-30, and to $14 \cdot 4$ in 1933. The lowest figure recorded was $14 \cdot 2$ in 1941. Since then it has risen to $15 \cdot 8$ per 1,000 in $1942,16 \cdot 5$ in 1943 and $18 \cdot 0$ in 1944.

In France, the birth rate began to decline almost a hundred years ago. It fell from 24.4 per 1,000 population during the years 1891-1900 to $20 \cdot 9$ per 1,000 during 1901-10, and after the War to $18 \cdot 2$ in 1926-30. It was $15 \cdot 3$ per 1,000 in 1935 and $14 \cdot 6$ in 1939. No accurate figures can yet be obtained for later years.

In Germany, the decline of the birth rate began much later than in France or England and was steeper. From $36 \cdot 1$ per 1,000 population during the years 18911900, it fell to $33 \cdot 0$ per 1,000 in 1901-10 and to $18 \cdot 4$ in 1926-30. The lowest figure, $14 \cdot 7$ per 1,000 was recorded in 1933. After the Nazi dictatorship came to power, the birth rate rose quite sharply to 18.9 per 1,000 in 1935 and 20.0 in 1940 . In 1941, no doubt as a result of the War, it dropped to 18.6 and in 1942, the last year for which figures are available, it had slumped to $14 \cdot 9$.

In the United States, the birth registration area has included all States since 1933. In 1920, in the registration area of that year ( 24 states, comprising the great majority of the population) the birth rate was $23 \cdot 7$ per 1,000. In 1926-30 it was $19 \cdot 7$ per 1,000 and fell to $16 \cdot 6$, the lowest figure, in 1933 . From $16 \cdot 9$ per 1,000 in 1935, it rose to $17 \cdot 9$ in 1940, $21 \cdot 9$ in 1943 and was $20 \cdot 2$ in 1944.

In Canada, when the registration area (of the eight provinces) was established in 1921, the birth rate stood at the comparatively high figure of 29.4 per 1,000 population. Since a rate of 35 per 1,000 is very high for modern countries of western civilization, the Canadian birth rate probably had not fallen very far, or for very long, before then. However, as can be seen from Table 2, it declined continually and steeply until 1937 , when it was $20 \cdot 0$ per 1,000 . Since then, following the economic recovery and during the War of 1939-45, a sharp rise has taken place. In 1940 the birth rate was $21 \cdot 5$ per 1,000 , in 1943 it was $24 \cdot 0$ and in 1944, 23•8. The same general trend of a continuous fall during the 1920's and early 1930's followed by a more or less pronounced rise can be observed in all the provinces except the Maritimes; there the decline had already been arrested before 1930. The decline during the depression and the subsequent rise have been greatest in the highly industrialized provinces of Ontario, Quebec and British Columbia.
50871-10 $\frac{1}{2}$

Sex of Live Births.-In all countries and communities in which birth statistics have been collected, there has always been an excess of male births over female births. No conclusive explanation has yet been given for this excess, but it seems to be one of the laws of nature. There has been an excess of male over female births in every Canadian province throughout the years shown in Table 9. The number of males to every 1,000 females born in Canada during the period 1926-44 has varied between 1,047 in 1935 and 1,067 in 1942.
9.-Live Births by Sex, Birth Rates, and Ratio of Males to Females, by Provinces, 1941-44, with Five-Year Averages, 1926-40
Note.-Figures for 1944 are by place of residence.

International Comparisons.-The relative position of Canada and the provinces among the various countries of the world with respect to the birth rate per 1,000 population is given in Table 10. For the countries of Europe that were invaded and temporarily subjugated by Nazi Germany, the latest pre-war figures are given. Later figures cannot be considered representative, nor completely reliable. A similar rule was followed in subsequent tables showing international comparisons.

## 10,-Birth Rates per $\mathbf{1 , 0 0 0}$ Population of Various Countries of the World Compared with Canada and the Provinces for Recent Years

(Sources: League of Nations Year Book and other official sources. In certain cases final figures are not available and provisional data are shown.)

1 Within the boundaries of the Treaty of Trianon.
Births in Canadian Cities and Incorporated Centres.-Table 11 gives the number of births in the urban centres of Canada with 10,000 population or over in 1941.

The five-year averages for $1926-40$ of births by place of occurrence show the number of births that actually took place in each centre during those years. Many of these births were to women who lived elsewhere, but who came to the city or town on account of its hospital facilities or for other reasons. The figures for 1941-44 are by place of residence of the mother, and show the actual number of births to residents of each centre. The two sets of figures are thus not comparable.

There has been a growing tendency in Canada towards hospitalization and medical attendance at birth. In the years 1926-30, only 22 p.c. of live births took place in hospitals, while in 1940-42 the proportion was 50 p.c. and in 1943-44 58 p.e. There are still important differences between the provinces in this respect. In Quebec, less than one-third of births take place in hospitals, and in Prince Edward Island and New Brunswick less than one-half. In British Columbia, on the other hand, over 90 p.c. of births are now hospitalized, and in Alberta and Manitoba the proportion is over four-fifths.

Illegitimacy.-Less than 5 p.c. of live births in Canada are illegitimate. This percentage is comparatively low. The steady increase of illegitimacy since the collection of vital statistics was begun is due, in part, to the more complete registration of children born out of lawful wedlock. This has been brought about by the co-operation of social welfare agencies and provincial registration officials, and by an intelligent human approach on their part to the problem of illegitimacy.

Table 12 shows the number of illegitimate live births in Canada, by provinces, and the percentages that these constitute to the total.
12.-Illegitimate Live Births, and Percentages of Total Live Births, by Provinces, 1941-44, with Five-Year Averages, 1926-40

Stillbirths.-Table 12 shows the number of children born dead in Canada and the provinces, together with the rates per 1,000 live births. It is evident that the rate of stillbirths has declined steadily over the years, and that a similar, though unequal, decline has been recorded in all the provinces.

Stillbirths to unmarried mothers form a higher percentage of the total than is the case with live births. Consequently, the rate of stillbirths per 1,000 illegitimate live births is considerably higher than the over-all rate. The difference, however, has been getting smaller.
13.-Stillbirths, and Rates per 1,000 Live Births, by Provinces, 1941-44, with Five-Year Averages, 1926-40

${ }^{1}$ Exclusive of the Territories.
Multiple Births.-Approximately one confinement in 85 in Canada results in the birth of more than one child. In the nineteen years 1926-44, there have been 54,425 multiple confinements, of which 53,931 gave birth to twins and 489 triplets. There have been four quadruplet confinements, one in British Columbia in 1931, from which all the children died within a few hours of birth, two in Quebec in 1937 and one in Alberta in 1944 of which all the children died within a few hours of birth. A multiple confinement in 1934 resulted in the birth of the Dionne quintuplets.

It can be seen from Table 14 that the proportion of stillbirths is higher in multiple than in single confinements. It is about twice as high in the case of twins, and in some years as much as six times as high in the case of triplets.
14.-Single and Muitiple Births, Live and Stillborn, 1941-44, with Five-Year Averages, 1926-40

[^58]Fertility Rates.-The sex and age distribution of the population of a country is one of the most important factors influencing its birth, death and marriage rates. In particular, more than 95 p.c. of children are born to women between the ages of 15 and 50. Consequently, differences in the proportion of men to women in these age groups, and in their relative importance in the population as a whole, will cause the birth rate to be different as between countries or regions, even though the fertility of the women of each age may be the same. Measures of fertility which are independent of the sex and age composition of the population have therefore been devised. The most common of these are age-specific fertility rates and reproduction rates.

Table 15 shows the fertility of women in the age groups between 15 and 50 years in Canada and the provinces. The three-year averages 1930-32 and 1940-42 have been calculated on the basis of census figures, while for the single years estimated population figures have been used.

The fertility rates and gross reproduction rates given in Table 15 make it possible to compare fertility in the several provinces after the influence of differences in the sex and age distribution of the population has been eliminated. The figures of 'total fertility' show the number of children that would be born, on an average, to 1,000 women living through the child-bearing ages, that is, from 15 to 50 years, assuming that the fertility at each age were to remain constant and that none of the women died during the 35 years. They are obtained by adding together the fertility rates of the seven age groups and multiplying the sum by 5 (since each age group represents 5 years of child-bearing life).

The gross reproduction rates are obtained by reducing the figures of total fertility in the same proportion as the ratio of female births to total births, and then dividing by 1,000 , e.g., the ratio of female to total births in Canada in 1940-42 was 1,000 to 2,059 . The gross reproduction rate for $1940-42$ is obtained by multiplying total fertility 2,857 by the fraction $1 / 2,059$. The gross reproduction rate shows the extent to which, on the basis of current fertility and without allowing for any loss as a result of death, the present child-bearing generation of women is reproducing itself for the future. A reproduction rate greater than 1 indicates that the childbearing generation of women is increasing, a reproduction rate of 1 shows that it is being exactly maintained, while a reproduction rate of less than 1 shows that it is in process of decline.

For purposes of comparison with the Canadian figures, the gross reproduction rate of England and Wales was 0.937 in 1931, and that of the United States 0.992 in 1934-36. In 1936 the gross reproduction rate of France was 1.004, that of Germany was $1 \cdot 072$. These are countries of relatively low fertility. In Italy the gross reproduction rate was 1.585 in 1930-32, in Poland it was 1.705 in 1931-32, and in Bulgaria 1-696 in 1934-35. Among the white population of South Africa, fertility is also relatively high; the gross reproduction rate was 1.423 in 1933-34 and 1.495 in 1940. In Australia and New Zealand where, in comparison, fertility is relatively low, the gross reproduction rate was 1.063 and 1.041 , respectively, in 1936 and $1 \cdot 100$ and $1 \cdot 284$, respectively, in 1940.*

It is evident that while, apart from the wartime 'boom' in births, fertility in Canada has undoubtedly been declining, the Canadian population is still a considerable distance away from the immediate prospect of numerical diminution. Fertility in British Columbia and Ontario is, however, approaching the danger point.

[^60]Age of Parents.-The numerical and percentage distribution of legitimate live births, according to the ages of the parents, is given in Table 16, those of illegitimate children, according to the age of the mother, in Table 17, and of stillbirths in Table 18. The average ages of the parents are also given.

It will be seen that the average age of parents is now slightly lower than it was in 1930-32. In addition to the probability of having chilaren in each age, two other factors play a part in determining the average age of parents. First, the average age of potential parents, that is, of the population between the ages of 15 and 50 . On the basis of the census figures, the average age of men between 15 and 50 was $30 \cdot 9$ in 1931 and $30 \cdot 7$ in 1941; the average age of women between 15 and 50 was $30 \cdot 4$ in 1931 and again 30.4 in 1941. The changes are thus very small. Secondly, the proportions of first and second child in the total number of children born. Other things being equal, parents of first and second children will, naturally, be younger than the parents of later children. A high proportion of first and second children will, therefore, tend to lower the average age of all parents. In 1930-32, first children accounted for slightly less than one-quarter of all children born, and second children for less than one-fifth. First and second children together thus constituted approximately $42-43$ p.c. of the total. In 1940-42, however, first children accounted for over one-third of all children born, and second children for nearly one-quarter. First and second children in these later years thus constituted 56 p.c. of the total. Very great changes have thus taken place in the proportion of first and second children.

A number of further interesting facts are revealed by Tables 16,17 and 18. In the first place, the difference between the average ages of the parents of legitimate children is about 4 years, the age of the father being higher. Secondly, the average age of mothers of illegitimate children is about 5 years less than the average age of mothers of legitimate children; in 1930-32 the difference was 6 years. The fact that over two-thirds of illegitimate children are born to mothers less than 25 years of age accounts for this difference. Thirdly, the average age of mothers of stillborn children is higher than that of live born. As is shown in Table 18, the rate of stillbirths per 1,000 live births rises sharply with age. It is twice as high among mothers between the ages of 40 and 44 than it is among mothers between 20 and 24 , and over three times as high among mothers between the ages of 45 and 49 .
16.-Legitimate Live Births, by Age of Parents, 1943 and 1944, with Three-Year Averages, 1930-32 and 1940-42

18.-Stillbirths by Age of the Mother, Together with Rates per 1,000 Live Births, 1943 and 1944, with Three-Year Averages, 1930-32 and 1910-42

Note.-Figures for 1944 are by place of residence.

[^61]Birthplace of Parents.-Table 19 gives the numbers and percentages of children whose parents were born in Canada or in different countries abroad. It gives some idea of the extent to which the coming generation of Canadian-born children will be the offspring of Canadian-born, other British-born or foreign-born parents. The figures reveal clearly that the proportion of children born to Britishborn immigrants and to foreign-born parents is decreasing, while the proportion to Canadian-born parents is rising. This is the result of the limited immigration which has taken place in recent years.
19.-Numbers and Percentages of Live Births by Nativity of Parents, 1941-44, with Five-Year Averages, 1926-40

${ }^{1}$ Less than one-tenth of one per cent. $\quad{ }^{2}$ This figure gives the number of children whose fathers and mothers were born in the same country. The difference between this figure and the total number of births represents the number of children whose parents were born in different countries.
${ }^{3}$ This is the percentage of children whose fathers and mothers were born in the same country.

Origin of Parents.-While Table 19 deals with the country of birth of parents, Table 20 is concerned with the racial or ethnic origin of parents. It shows the numbers and percentages of children born to parents of the principal racial or ethnic groups in Canada.

A person's origin is generally traced through his or her father. For example if a person's father is English and his mother French, his origin is said to be English, and vice versa. Table 20 shows that about one-third of Canadian children are born to parents of different origin, who will in future be classified accoraing to the origin of their father. A certain amount of this inter-mixture has no doubt been going on for a number of years. More important than the biological aspect, therefore, are the factors of geography, language, religion and economy, all of which contribute primarily to the formation of different cultural communities.

The difference between this figure and the total number of births represents the number of children whose parents are of different origins. $\quad{ }^{2}$ This is the percentage of children whose fathers and mothers are of the same origin.

## Section 3.-Deaths

A low death rate has come to be regarded as one of the hallmarks of a civilized, healthy society, except for wars and their aftermath-it may be noted that the loss of military and civilian lives in the Wars of 1914-18 and 1939-45 must be counted in tens of millions-impressive declines in the death rate have been recorded during the past century in many countries of the world.

In England and Wales, for example, the death rate, which was 22.4 per 1,000 population during the years 1861-70, declined to 15.4 per 1,000 in the first decade of the present century and to $12 \cdot 1$ in the third; it was $12 \cdot 9$ per 1,000 in $1941,12 \cdot 1$ in 1943 and 11.9 in 1944. In Germany, the death rate was 26.8 per 1,000 in 1861-70, it declined to $18 \cdot 7$ per 1,000 in 1901-10 and to $12 \cdot 6$ in 1921-30. It was $11 \cdot 6$ per 1,000 in 1938 and $12 \cdot 6$ in 1939. Other European countries in which the death rate has fallen to a very low level are the Netherlands, Denmark, Norway, Sweden and Switzerland. The death rate is also extremely low in Canada, the United States, Australia and New Zealand.

Another method of measuring conditions of mortality is by means of life tables (see p. 136) and the expectation of life which may be derived from such tables. In England and Wales, the expectation of life at birth in 1933-35 was 59.7 years for males and 63.6 years for females. In Germany, in 1932-34, the figures were 59.9 years for males and 62.8 years for females, while in the Netherlands, in 1931-35, the figures were $65 \cdot 1$ years for males and 66.4 years for females. The Netherlands had, before the War, the longest expectation of life of any European country.

The expectation of life in Canads in 1940-42 was 63.0 years for males and 66.3 years for females. In the United States, for the white population, the expectation of life in 1940 was 62.9 years for males and $67 \cdot 3$ years for females. New Zealand has the longest expectation of life on record; in 1934-38 it was $65 \cdot 5$ years for males and 68.5 years for females.

## Subsection 1.-General Mortality

Table 21 gives a review of deaths and death rates in Canada since 1926. From a high point of 113,515 deaths in 1929 , the number of deaths declined steadily to 101,582 in 1934. There were substantial increases in 1935, 1936 and 1937. The high number of deaths in 1941 and 1943 was partly due to higher mortality from certain communicable diseases.

Since 1931, the Canadian death rate has fluctuated between $10 \cdot 1$ per 1,000 population in 1931 and 9.5 per 1,000 in 1934. It has been more or less stable in Prince Edward Island and Ontario, has been falling considerably in Nova Scrtia, New Brunswick and Quebec, while in the Prairie Provinces and British Columbia it has been rising slightly. The exceptionally low death rates that still prevail in the Prairie Provinces are, to a large extent, due to the favourable age distribution of the population. The slow rise that has taken place in recent years (with the exception of 1944) in the death rates of these provinces and of British Columbia, is the result of the age distribution becoming somewhat less favourable. In all parts of Canada, however, the longer expectation of life shown by the 1941 life tables indicates that the health and general conditions of survival of the population have improved.

Mortality is heavier at all ages for males than for females. Thus, the death rate is higher for the male than for the female population in every province for all the years shown.

${ }^{1}$ Excluding war losses.
${ }^{2}$ Within boundaries of Treaty of Trianon.
Deaths in Canadian Cities and Incorporated Centres.-Deaths in urban centres of 10,000 population or over are given in Table 23, together with the population of these centres. Taking the single years in which deaths are classed by place of residence, the death rate in urban centres does not appear to vary greatly from the death rate of the respective provinces in which the centres are located. However, the sex and age distribution of the population in urban centres is usually more favourable to a low death rate than that of the population as a whole.

Sex and Age Distribution of Decedents.-Despite the reductions in infant mortality that have been made in recent years, the greatest number of deaths still occur in the first year of life. The number of children who die at less than five years of age has been reduced from an average of 25,174 in 1930-32 to 17,949 in 1940-42 and to 18,868 in 1944. The reduction in the proportion that deaths of young children constitute of the total has been from 23.8 p.c. in $1930-32$ to 15.9 p.c. in 1940-42 and to $16 \cdot 3$ p.c. in 1944 . Only part of this reduction can be attributed to the smaller proportion of the population formed by children under five years which fell from $10 \cdot 4$ p.c. in the 1931 Census to $9 \cdot 1$ p.c. in the Census of 1941.

As can be seen from Table 24, the percentage distribution of deaths has greatly changed over the whole range since 1930-32. The proportion of deaths at all ages up to 50 years has declined, while the proportion of deaths in the later years of life has increased. At the same time, the average age at which death takes place has been pushed gradually higher. Under present conditions, people live longer and die at more advanced ages. A further result of the reduction in mortality rates in the early and middle years of life is to increase the number of people in the older age groups and to raise the average age of the population as a whole. In 1931, on the basis of the census figures, $16 \cdot 6$ p.c. of the population was 50 years of age or over. The average age of all males was $29 \cdot 0$ years and of all females $28 \cdot 1$ years. By 1941, 19.7 p.c. of the population was 50 years of age or over, while the average age of all males had increased to $30 \cdot 7$ years and of all females to $30 \cdot 2$ years. Compared to a number of European countries, however, the ageing of the Canadian population has not advanced very far.

Nore.-Figures for 1944 are by place of residence.

24.-Deaths, by Sex and Age Groups, 1943 and 1944, with Three-Year Averages, 1930-32 and 1940-42-concluded

Causes of Death.-Of the deaths recorded in Canada in the years 1941-44, 89 p.c. were due to the 28 causes specified in Table 25. Seventy-five per cent were due to the 10 leading causes: diseases of the heart, cancer, intracranial lesions, violent deaths, nephritis, diseases of early infancy, pneumonia, tuberculosis, influenza and diseases of the arteries.

The groupings of the causes of death are at present in accordance with the revision of the International List in 1938. This revision was first applied to Canadian vital statistics for the year 1941. Each revision of the International List creates special difficulties in preserving continuity of classification. A number of causes are not strictly comparable in the different years owing to the changes that have been made following the revision in 1938. This is particularly true in the case of diseases of the heart, intracranial lesions (cerebral hæmorrhage) and diseases of the arteries.

Another factor to be considered in analysing the relative importance of the causes of death is the rise in the average age at death noted above. The causes of death commonly associated with the early years of life have, to a considerable extent, been brought under control and have declined. Diphtheria, for example, has very nearly been wiped out; the incidence of tuberculosis has also been very greatly reduced. On the other hand, the ageing of the population tends to thrust those causes commonly associated with advanced years to the fore. Cancer, nephritis and diseases of the heart are three of the important causes of death which mainly affect older people and which now account for a substantially greater proportion of all deaths, quite apart from the changes in classification referred to above.

${ }^{1}$ The numbers given in this column refer to the International List of Causes of Death, as revised in 1938 by the International Commission on the Classification of Diseases and Causes of Death. This classification, in its detailed, intermediate or abridged form, is accepted by almost all civilized countries. ${ }^{2}$ The figures for these causes of death for the single years 1941 and after are not strictly comparable with those of the five-year averages, 1931-40, due to changes in classification following the revision of 1938.

## Subsection 2.-Infant Mortality

In recent years a great part of the energy devoted to bringing about a decline in the general death rate has been directed towards reducing infant mortality. Large reductions in infant mortality in many countries have taken place as a result of this effort. That the Dominion, provincial and municipal health authorities, together with private welfare agencies, have all taken part in the struggle to reduce infant mortality in Canada is reflected in the figures from 1926 to 1944, which show a fairly constant and, over the period as a whole, a striking and most gratifying improvement. To illustrate this improvement, it may be said that of the children born in the three years 1942-44, approximately 33,000 survived who would have died before their first birthday under the conditions and rates of infant mortality prevailing in 1926-30.

Infant mortality of males is between 25 and 30 p.c. higher than that of females. In an earlier section, it was pointed out that the ratio of male to female births varied between 1,047 and 1,067 in the period 1926-44. As a result of heavier male infant mortality, the excess of males is already considerably reduced by the end of the first year of life. For example, in the years 1940-42, 397,038 male children were born, compared with 374,908 female children, an excess of 22,130 , or $5 \cdot 9$ p.c. According to the life table of 1941, by the end of the first year of life, 24,815 of the male children had died, while only 18,487 of the female children had died, that is to say, 6,328 fewer. The excess of males over females had thus been reduced to 15,802 , or only $4 \cdot 2$ p.c. By the age of 52 , according to the life table, the number of males and females will have become equal.

Infant mortality figures and rates per 1,000 live births by sex are given for Canada and the provinces in Table 26. Considerable variations in infant mortality rates between the provinces are to be observed. One of the principal causes of these variations appears to be the difference in the proportion of births which take place in hospitals under proper medical care. Examples of these differences have been given earlier on p. 142. There seems to be a direct connection between the reduction in infant mortality and the extension of hospitalization and medical care.

The proportion of hospitalized births in Canada has risen from 22 p.c. in 1926-30 to 58 p.c. in the most recent years. Other factors, particularly the supervision of water supply, improved sanitation and the pasteurization of milk, must of course also be taken into account. Moreover, along with increased hospitalization has come more widespread and improved pre-natal and post-natal care. Further extensions of hospitalization and of health services generally to provide for all the population will no doubt bring about further reductions in infant mortality, particularly in those centres and areas in which it still remains high.
26.-Infant Mortality, and Rates per $\mathbf{1 , 0 0 0}$ Live Births, by Sex and by Provinces, 1941-44, with Five-Year Averages, 1926-40

26.-Infant Mortality, and Rates per $\mathbf{1 , 0 0 0}$ Live Births, by Sex and by Provinces, 1941-44, with Five-Year Averages, 1926-40-concluded

Infant Mortality in Various Countries. - New Zealand for many years had the lowest rate of infant mortality. In 1942 the rate was only 29 per 1,000 live births, compared with 68 per 1,000 in 1905, 51 per 1,000 in 1920 and 34 per 1,000 in 1930. Sweden, Iceland and Australia also have extemely low rates. In England and Wales the rate has been reduced from 128 per 1,000 live births in 1905 to 80 per 1,000 in 1920,60 per 1,000 in 1930 and 46 per 1,000 in 1944. In the United

States the rate has also greatly declined. It fell from 162 per 1,000 live births in 1900 to 92 per 1,000 in 1920 and 47 per 1,000 in 1940. In 1943, it was 40 per 1,000 live births.
27.-Infant Mortality per $\mathbf{1 , 0 0 0}$ Live Births in Various Countries of the World Compared with Canada and the Provinces for Recent Years
(Sources: League of Nations Year Book and other official sources. In certain cases final figures are not available and provisional data are shown.)

${ }^{1}$ Within the boundaries of the Treaty of Trianon.
Infant Mortality in Canadian Cities and Incorporated Centres.-The rates of infant mortality in individual cities and towns are usually subject to wide annual fluctuations. A number of urban centres have, however, maintained very low rates over many years. Among the larger cities Vancouver has a splendid record, Calgary, Toronto and Winnipeg have exceptionally low rates, and Montreal has shown steady improvement. The greatest drop has taken place in Three Rivers, where infant mortality has been more than cut in half in 1941-44 compared with earlier years.

The change to classification of births and deaths by place of residence reveals a considerably different picture of infant mortality in many cities and towns when the single years 1941-44 are compared with the five-year averages 1931-40.
28.-Deaths and Death Rates of Children under One Year of Age (Exclusive of Stillbirths), in Urban Centres of 10,000 or Over, by Place of Residence, 1941-44, with Five- Year Averages, 1931-40, by Place of Occurrence.

Infant Mortality by Causes of Death.-Of the infant deaths that occur in Canada, about 90 p.c. are due to the nine causes and groups of causes specified in Table 29. One cause alone, premature birth, accounts for over 20 p.c. of infant deaths. Male children are more heavily subject to nearly every one of the causes listed than are female children.
29.-Infant Mortality and Rates per 100,090 Live Births, by Principal Causes, 1941-44, with Five-Year Averages, 1931-40
Nore.-Figures for 1944 are by place of residence.

## Subsection 3.-Maternal Mortality

Closely allied to infant mortality are those accidental deaths that occur among mothers during the period of childbirth. Maternal mortality in Canada and the provinces is shown in Table 30. Great reductions have been made here as in infant mortality. In recent years, although the number of births has greatly increased, the number of mothers who have died in childbirth has been well below 1,000 per year. The last two columns of the table show that maternal mortality among unmarried mothers has been in the past over 50 p.c. higher than among married mothers.
30.-Maternal Deaths, and Rates per 1,000 Live Births, by Provinces, 1941-44, with FiveYear Averages, 1926-40
Note.-Figures for 1944 are by place of residence.

${ }^{1}$ Exclusive of the Territories.
Age of Mothers Who Died in Childbirth.-Table 31 gives the distribution of maternal deaths according to age, together with the average age at death. This average age is slightly more than two years greater than the average age of all mothers at the time of childbirth. The rates per 1,000 live births by age groups show clearly that age is a decisive factor in the incidence of maternal mortality. While the rates for all age groups have been greatly reduced, the inequalities between the age groups remain. The rate at $30-34$ years of age is at present nearly twice as high as the rate at 20-24 years, while above the age of 40 it is over four times as high. The slightly higher rate found in the first age group shown in Table 31 compared with the second is explained by the very much greater proportion of illegitimate children born to young mothers.
31.-Maternal Mortality and Rates per 1,000 Live Births, by Age Groups, 1943 and 1944, with Three-Year Averages, 1930-32 and 1940-42

Maternal Deaths by Causes of Death.-Table 32 shows the numbers and rates per 100,000 live births of maternal deaths by causes. Until recently, puerperal sepsis and toxæmias of pregnancy were by far the most important causes. Since the introduction of sulpha drugs in 1936 the rates from these two causes have been halved.

## Section 4.-Natural Increase

The natural increase of the population is the number of births less the number of deaths. Prior to 1930, the rate of natural increase in Canada was about 13 per 1,000 population. This is a very high rate for a country of western civilization. During the 30 's the rate declined steadily to a low point of $9 \cdot 7$ per 1,000 in 1937;
owing partly to the effects of the depression, the birth rate fell more than did the death rate. Since then the rate of natural increase has risen sharply to 13.7 per 1,000 in 1942, $13 \cdot 9$ in 1943 and $14 \cdot 1$ in 1944. These rates are higher than in any years since 1926.

The rates of natural increase of the provinces followed generally the trend of Canada as a whole, with minor variations. In the earlier years, Saskatchewan and Quebec had the highest rates. The high rates in the Prairie Provinces were due in part to their relatively younger populations and consequent very low death rates. In Quebec, on the contrary, the death rate in 1926-30 was high and has declined steadily since then. Quebec now has the highest rate of natural increase in Canada and, in fact, one of the highest in any civilized area.

Table 33 gives the numbers and rates of natural increase in Canada and the provinces for the years 1926-44. Numbers and rates by sex are also given. It can be seen that, except in the case of Quebec, the rates of natural increase are throughout considerably higher for the female than for the male population. There are two reasons for this. On the one hand, the excess of male over female births is relatively smaller than the excess of males over females in the population as a whole. This is particularly true of the western provinces. Hence the birth rate for males is less than the birth rate for females. On the other hand, we have already noted the fact that male mortality is heavier than female and that the death rate of males is higher than that of females.

In a country with a fairly young population such as Canada, which has been populated to a large extent by immigration in the past fifty years, an excess of males in the population is to be expected. The higher rate of natural increase of the female population is the means by which this excess is gradually reduced. Eventually, quite apart from the casualties of war, there will no doubt be an excess of females, as is already the case in most European countries.
33.-Natural Increase and Rates of Natural Increase, by Sex and by Provinces. 1941-44, with Five-Year Averages, 1926-10
Nore.-Figures for 1944 are by place of residence.

Natural Increase in Canadian Cities and Incorporated Centres.-The classification of births and deaths by residence makes it possible to calculate rates of natural increase for urban centres; the figures are given in Table 34. 50871-12 $\frac{1}{2}$

It will be found in the case of the majority of the larger cities that the rate of natural increase is lower than that of their respective provinces. The increase of the population of urban centres is to a greater extent the result of the influx of people from rural areas.
34.-Natural Increase in Urban Centres of $\mathbf{1 0 , 0 0 0}$ Population or Over, by Place of Residence, 1941-44, with Five-Year Averages, by Place of Occurrence, 1926-40

## Section 5.-Marriages and Divorces

## Subsection 1.-Marriages

In modern industrial countries, the marriage rate is greatly influenced by the general level of economic prosperity. Marriage rates fell during the depression and recovered in the later 30's. In Canada, England and the United States marriages were abnormally numerous in the early years of the recent war: a noticeable regression has already taken place. In the peak year of 1942, the number of marriages was 86 p.c. greater than the average for the years 1931-35, and 104 p.c. greater than in 1932, the lowest year. In 1944, the number of marriages was 20 p.c. less than in 1942.

Numbers and Birthplaces of Brides and Bridegrooms.-Table $\mathbf{3 5}$ shows the number of marriages and the marriage rates per 1,000 population in Canada and the provinces for the years 1926-44. Percentages of brides and bridegrooms according to their place of birth are also given.

The proportion of brides and bridegrooms born in Canada has been rising steadily since 1926. In the western provinces, the majority of marriages solemnized before 1930 were between persons born outside Canada. This position has now been reversed. At the present time, taking Canada as a whole, approximately 87 p.c. of all bridegrooms and 91 p.c. of all brides are born in Canada, while in the western provinces the proportions are 75 p.c. and 85 p.c., respectively. Again, this trend is the result of the limited immigration of recent years.
35.-Marriages and Marriage Rates, by Provinces, together with Percentage Distribution of Grooms and Brides by Nativity, 1941-44, with Five-Year Averages, 1926-4.

Age and Marital Status of Contracting Parties.-The distribution of marriages by sex, age and marital status of the contracting parties is given in Table 37. About 93 p.c. of marriages are entered into by persons who have not previously been married. The average age at marriage of bachelors is about 28 years, that of spinsters slightly under 25 years. The average age of widowers at the time of remarriage is more than 20 years higher than that of bachelors, being 50.3 years in 1940-42 and $52 \cdot 0$ in 1944. The average age of widows at the time of remarriage is also more than 20 years higher than that of spinsters; it was 46.4 years in 1940-42 and $46 \cdot 9$ in 1944. The percentage distribution by age of widowers and widows who remarry is naturally altogether different from that of bachelors or spinsters.

Widows and widowers constitute about 4 p.c. and 6 p.c., respectively, of all brides and bridegrooms. Divorced persons constitute only $2 \cdot 0$ p.c. of the total.

3i.-Marriages in Canada, by Age and Marital Status of Contracting Parties, 1913 and 1944, with Three-Year Average, 1940-42 - concluded

Religious Denominations of Contracting Persons.-The distribution of marriages according to the religious denominations of the contracting parties is roughly the same as that for the population as a whole. The figures in Table 38 indicate the very strong influence that religious belief has on brides and grooms. Approximately 70 p.c. of all marriages are between persons of the same religious denomination. The ratio of grooms marrying brides of the same denomination is above 60 p.c. for all denominations with the exception of Anglicans, Lutherans, Baptists and Presbyterians, which showed percentages in 1940-42 of 54, 50, 46 and 44 , respectively. The highest percentage of grooms marrying brides of the same
denomination is among those of the Jewish faith, with 97 p.c. in 1940-42. The percentage among Roman Catholics was 88 in the three years, while among those of Greek Catholic, United Church and Eastern Orthodox faith it was between 60 p.c. and 70 p.c.

## Subsection 2.-Dissolutions of Marriage (Divorces)

For many years after Confederation, the number of divorces granted in Canada was very small. It did not reach 20 in any year prior to 1900. In 1903, 23 divorces were granted. Thereafter, the numbers grew more rapidly. In 1909, there were 51 divorces and in 1913, 60. These numbers were, however, less than 1 per 1,000 of the marriages contracted in Canada in each of those years.

One effect of the War of 1914-18 was to increase the number of divorces. The generally unsettling psychological conditions of the war period, and the long separation between men on active service and their wives contributed to this increase. Changes in law and procedure which made it easier to obtain divorce was a further factor. A decision of the British Privy Council in 1918 gave jurisdiction to the Prairie Provinces for granting dissolutions of marriage. At present, Prince Edward Island and Quebec are the only provinces in which applicants for divorce must secure a private Act of Parliament.

In 1918 there were 114 divorces in Canada. In 1926 the number was 608. It was 700 in 1931, 1,570 in 1936 and 2,369 in 1940. In every year since then the number of divorces has been greater than that of the previous year. Compared with the average of 1926-30 the number of divorces in 1942 showed an increase of 402 p.c., in 1943, 425 p.c. and in 1944, 493 p.c. These figures, in most cases, cover final decrees of dissolution of marriage which alone constitute divorces. Annulments and legal separations have been eliminated.

Statistics of dissolutions of marriage were revised in 1941 through the cooperation of the provincial authorities and the Clerk of the Divorce Committee of the Senate of Canada.
39.-Dissolutions of Marriage (Divorces), by Provinces, 1941-44, with Five-Year Averages, 1926-40

## Section 6.-Vital Statistics of Yukon and the Northwest Territories

The vital statistics of Yukon and the Northwest Territories have been collected and compiled since 1924. They are not, however, presented with those of the nine provinces in the tables of this Chapter, because figures are not considered to be
complete. The details are in many cases not available, and the small and varying population of each year is not known with sufficient accuracy to allow vital statistics rates to be calculated. As these Territories contain less than 0.15 p.c. of the population of Canada, the error resulting from the omission of their vital statistics from the total may be considered negligible.

## Section 7.-Communicable Diseases

The reporting on a national basis of communicable diseases in Canada was instituted in 1933 by the Dominion Bureau of Statistics, at the request of the Department of Pensions and National Health in consultation with the Provincial Departments of Health. Since that date, the Vital Statistics Branch of the Bureau has been responsible for the compilation and analysis of weekly communicable disease reports, except for a short period in 1939-40, during which the work was transferred to the Department of Pensions and National Health. Under arrangements with the Department of National Health and Welfare, the Vital Statistics Branch is now analysing the accumulated records of communicable diseases in its files, dating back in many instances to 1924. The reports of cases of venereal disease are included in the current analyses and a standard report form is used by all the provinces.

Table 40 shows the number of cases of certain communicable diseases reported to the Dominion Bureau of Statistics by the Provincial Departments of Health in 1944. In the case of two diseases, dysentery and rubella, the reporting is not compulsory in all provinces; consequently, the totals for Canada should be considered with caution.

## 40.-Numbers of Cases of Certain Communicable Diseases Reported by Provincial Health Departments, 1944

## Section 1.-Statistics of Immigration

In 1851 the population of Upper and Lower Canada, Nova Scotia and New Brunswick totalled 2,312,919 and in 1941 the population of the Dominion was $11,506,655$. During that period no fewer than $6,703,891$ persons were admitted as immigrants, not all of whom stayed in the Dominion, for numbers eventually found their way to the United States while others returned to the land of their birth.

The War of 1939-45 did not affect immigration to the same relative extent as did the War of 1914-18. The year 1913 witnessed the greatest immigration in Canada's history, 400,870 persons having been admitted; the greatest number admitted during a war year was 72,910 in 1917. At the outbreak of war in 1939, Canada had been going through a period of restricted immigration and the figures showed a decrease each year from 1939 to 1942. However, the trend changed during 1943 and the number of immigrants admitted in 1945 showed an increase of 32 p.c. over 1938, the last complete pre-war year. The reason for this increase lies in the movement to Canada of dependents of the Armed Forces and not to any fundamental change in immigration policy, see p. 182.

Full information regarding the immigration regulations may be obtained from the Immigration Branch, Department of Mines and Resources, Ottawa. (See also p. 110 of the 1941 Year Book.)

About 65 p.c. of Canada's expenditure on the encouragement and control of immigration was spent in the three decades 1901-1930. Expenditures for the five latest years will be found in the Public Finance Chapter of this volume, while yearly details may be obtained from the "Public Accounts", published annually by the Department of Finance.

## Subsection 1.-Growth of Immigration

The wide fluctuations in the immigration movement since 1891 are shown in Table 1. The heavy movement between 1902 and 1914 was cut down severely between 1915 and 1918. Beginning with 1931 the figures have been the lowest since 1893.

Immigration of Dependents of Members of the Armed Forces.-In January, 1942, provision was made to furnish the dependents of members of the Armed Forces serving overseas with free transportation from their home in the country of residence to destination in Canada. The term "dependent" means the wife or widow of a member of the Forces who was married to such member while the latter was serving outside of Canada during the War of 1939-45, and also the children of such member of the Forces. By Order in Council dated Sept. 21, 1944, dependents, immediately on their admission to Canada, acquire the same immigration status as the head of the family.

From 1942 to 1944, 5,321 dependents comprising 3,319 adults and 2,002 children were admitted to Canada. During 1945, 10,677 dependents were admitted; of this number 6,972 were adults and 3,705 children. The movement is continuing.

## Subsection 2.-Sex and Conjugal Condition of Immigrants

Females constituted $66 \cdot 1$ p.c. of the total immigrants to Canada in 1945, as compared with $64 \cdot 9$ p.c. in 1914 . Prior to 1931 males normally exceeded females.
3.-Sex and Conjugal Condition of Immigrant Arrivals, by Age Groups, 1943-45

## Subsection 3.-Languages and Racial Origins of Immigrants

Languages of Immigrants.-At the Census of 1941, only 115,414 persons or 1 p.c. of the total population were unable to speak either English or French, but the percentages, by racial origins, of those speaking neither official language varied greatly.

The Immigration Branch does not record the ability of immigrants to speak the official tongues of the Dominion; the statistics appearing in Table 5 relate only to the mother tongue of the immigrant. The great majority of those coming from the United States naturally give English as their mother tongue, regardless of their racial origin. In the calendar year 1945, 405 persons (10 years of age or over) coming from the United States, many of whom were undoubtedly of FrenchCanadian origin, gave French as their mother tongue. In that year, persons from all countries giving English as their mother tongue constituted 92.9 p.c. of the total and those giving French $2 \cdot 7$ p.c.

## 5.-Mother Tongues of Immigrants, 10 Years of Age or Over, 1936-45

Note.-Dashes in this table indicate that no immigrants were reported for the corresponding stub item.

Racial Origins of Immigrants.-The great bulk of Canadian immigration of the past generation has been drawn from the English-speaking countries and from those Continental European countries where the population is ethnically closely related to the British, though for some years there was an increasing immigration of Slavs. Since the outbreak of war in 1939, the predominant racial origins of immigrants have been British, French and'Jewish.

## 6.-Racial Origins of Immigrants into Canada, 1941-45

Note.-Dashes in this table indicate that no immigrants were reported for the corresponding stub items. Figures for $1926-40$ will be found in the corresponding table of previous Year Books beginning with the 1939 edition.

${ }^{1}$ Reported as "Swiss" origin but are evidently one of the constituent races such as German, French, Italian, etc.

## Subsection 4.-Nationalities of Immigrants

In the calendar year $1945,74 \cdot 3$ p.c. of total immigrants into Canada were British subjects and $22 \cdot 6$ p.c. were citizens of the United States.

## 7.-Natlonalities of Immigrants into Canada, 1941-45

Note.-Dashes in this table indicate that no immigrants were reported for the corresponding stub items. Figures for 1930-40 will be found in the corresponding table of previous Year Books beginning with the 1936 edition.

## Subsection 5.-Destinations and Occupations of Immigrants

Destinations.-Immigrants entering the Dominion are required to give the province of intended destination, but it does not necessarily follow that this is the province of eventual residence. It is believed, however, that the figures for later years give a truer picture of actual residence than did those for the earlier years, when 'boom' conditions tended to create a class of 'floaters' who flocked to new jobs, quite possibly in other provinces, as soon as the ones on which they were originally employed ended. Of the provinces, Ontario has received the largest number of immigrants in each year since 1905. In 1929 and 1930, Manitoba was in second place, while in the latest years Quebec has stood second as the immediate destination of new arrivals.

## 8.-Destinations of Immigrants into Canada, by Provinces, 1930-45

Note.-The 1934-35 edition of the Year Book gives similar information for the fiscal years ended Mar. 31, 1901-34.

| Year | Maritime Provinces | Quebec | Ontario | Manitoba | Saskat chewan | Alberta |  | N.W.T. | Total |

| 1939. | 1,167 | 3,433 | 5,957 | 1,316 | 1,227 | 1,695 | 2,190 | 9 | 16,994 |
| 1940 | 1;642 | 2,556 | 4,447 | 314 | 250 | 458 | 1,653 | 4 | 11,324 |
| 1941 | 1,717 | 1,931 | 3,365 | 193 | 186 | 288 | 1,647 | 2 | 9,329 |
| 1942. | 1,299 | 1,399 | 3,315 | 209 | 118 | 287 | 949 | Nil | 7,576 |
| 1943. | 1,852 | 1,369 | 3,852 | 190 | 171 | 310 | 760 |  | 8,504 |
| 1944 | 2,674 | 2,066 | 5,361 | 493 | 423 | 596 | 1,186 | 3 | 12,801 |
| 1945. | 4,049 | 3,428 | 9,342 | 1,168 | 1,067 | 1,401 | 2,264 | 3 | 22,722 |

${ }^{1}$ Includes 2 persons whose destinations were not given in 1930 and 1 such person in 1933.
Occupations.-Immigrants are classified as follows: farming, labouring, mechanics, trading and clerical, mining, female domestics, and other. Of late years, the last-named class has accounted for about 60 p.c. of the total, owing to the curtailment of immigration and to the numbers of wives and children of earlier immigrants coming to Canada. Under these circumstances the statistics of occupations are meaningless and will be discontinued until circumstances warrant the reappearance of the data.

## Subsection 6.-Rejections of Immigrants

Prohibited Immigrants.-The immigration of certain classes of persons into Canada is prohibited. These classes include persons who are physically or mentally unable to earn a living, criminals, beggars, persons who believe in the overthrow of government by revolutionary influence, etc. The particular subsection of the Immigration Act defining this class is worded as follows:-
(n) Persons who believe in or advocate the overthrow by force or violence of the Government of Canada or of constituted law and authority, or who disbelieve in or are opposed to organized government. or who advocate the assassination of public officials, or who advocate or teach the unlawful destruction of property.
Section 3 of the Immigration Act (R.S.C. 1927, c. 93), dealing with prohibited immigrants, was quoted in extenso in the editions of the Year Book published between 1934 and 1940.

The Act provides for the rejection and deportation of immigrants belonging to the prohibited classes, and also for the deportation of those who become undesirables within five years after legal entry.

## 9.-Rejections of Prospective Immigrants upon Arrival at Ocean Ports, by Principal Causes and by Nationalities, 1934-45

Norg.-Figures for the calendar years 1931-33 are given at p. 159 of the 1940 Year Book; those for the fiscal years ended Mar. 31, 1903-34 will be found at p. 222 of the 1934-35 edition.

${ }^{1}$ Revised since the publication of the 1945 Year Book.
While the majority of persons included in the figures of Table 10 have been previously shown in the statistics of immigration, a certain number of deserting seamen are included who have, of course, never been included in the immigration statistics. This situation became intensified during the war years.
10.-Deportations of Immigrants, Including Accompanying Persons, after Admission, by Principal Causes and by Nationalities, 1934-45

Note.-Figures for the calendar years 1930-33 are given at p. 120 of the 1941 Year Book; those for the fiscal years ended Mar. 31, 1903-39 will be found at p. 160 of the 1940 edition.

## Subsection 7.-Juvenile Immigration

Juvenile immigration, apart from children accompanying their parents, has not been a large factor since 1931, when the Dominion Government ceased to grant financial assistance for this particular form of immigration. In 1941 there were 33 juvenile immigrants but since that year none have been admitted. An outline of juvenile immigration, including those children brought to Canada under the British Empire Settlement Agreement, is given at p. 121 of the 1941 Year Book.

## Subsection 8.-Oriental Immigration

Under wartime conditions, Oriental immigration ceased to be a problem and the economic effect of the presence of persons of Oriental origin can best be studied from census figures. An outline of the background and legislation connected with the immigration of Orientals into Canada is given at pp. 122-124 of the 1941 edition of the Year Book, and the table below presents statistics of Oriental immigration since 1906, the earliest year for which figures are available. These figures are given by sex at pp. 175-176 of the 1945 Year Book.

## 11.--Oriental Immigration to Canada, 1906-45

## Section 2.-Emigration and Returning Canadians

Emigration from Canada is an important factor tending to offset the immigration activities of the past and the movement from Canada to the United States has attained considerable proportions at certain periods. The two main factors have been the immigration to the United States of Europeans originally immigrating to Canada and the emigration of native-born Canadians.

Since 1924 immigration officers have recorded the number of Canadians returning to Canada from the United States after having left Canada to reside in that country. Statistics of that movement are given in Table 12.
12.-Canadians ${ }^{1}$ Returned from the United States, 1926-45

| Year | Canadian Born Citizens | British Born Who Had Acquired Canadian Domicile | Naturalized Canadian Citizens | Total | Year | Canadian Born Citizens | British Born Who Had Acquired Canadian Domicile | Naturalized Canadian Citizens | Total |

${ }^{1}$ Not including aliens with Canadian domicile.
A question of considerable interest to Canadians is that of the permanent movement of population between Canada and the United States. In view of the lack of Canadian statistics on emigration, the following table has been compiled from figures supplied by the Immigration and Naturalization Service of the United States Department of Justice. Not all of the statistics are available by months, so that it has not been possible to present the figures on a calendar-year basis; they are, therefore, shown on that of the United States fiscal year, July 1-June 30. The column headed "Deportable Aliens Destined to Canada" covers persons permitted to return to Canada in lieu of deportation proceedings.

${ }^{1}$ Estimated.

Statistics of the permanent migration between Canada and the United Kingdom published by the British Board of Trade, are available from Jan. 1, 1924, to June 30, 1939. These are given at p. 169 of the 1942 Year Book.

Commencing Apr. 1, 1938, an enumeration was made of returning Canadians and other non-immigrants entering the Dominion from Newfoundland. The table below gives details of this movement for the calendar years 1943-45.
14.-Returning Canadians and Other Non-Immigrants Entering the Dominion from Newfoundland, 1943-45

## Section 3.-Colonization Activities

Information on this subject is given at pp. 201-202 of the 1936 edition of the Year Book.

# CHAPTER VII.-SURVEY OF PRODUCTION* 

## CONSPEGTUS

#### Abstract

Section 1. Leading Brancees of Production, 1942 and 1943.

Page

Section 3. Leading Branches of Production in each Province, 1943 Compared with 1942.

A revision has recently been made in the method of compiling gross and net values of agricultural production (see p. 192). These changes, together with revisions in the value of production of custom and repair activities, have necessitated the computation of a new series of gross and net production figures. The series has been worked back to 1938 and the figures, shown in Table 1, supplant those given in previous editions of the Year Book.

[^65]
## 1.-Gross and Net Values of Production in Canada, by Industries, 1938-43

[^66]Net production, in general, represents an estimate of the amount contributed to the national economy by the leading industrial groups occupied with commodity production, and is made up of the total value less the cost of materials, fuel, purchased electricity and process supplies consumed in the production process. For purposes of ordinary economic discussion, the net figure should be used in preference to the gross, in view of the large amount of duplication that the latter includes. A description of the general method used in computing the statistics shown in this Chapter is given in the Bureau of Statistics report "Survey of Production"

As regards the revised agricultural figures, the gross is now obtained by adding cash sales and the value of goods produced and consumed on the farm by the farm family with adjustment for the changes in grain and live-stock inventories. The cost of materials such as purchased seed and feed, gasoline and oil, repair parts, twine, fertilizers and insecticides are deducted from the gross to give the net value. See the Quarterly Bulletin of Agricultural Statistics, April-June 1944, pp. 8-27. The items included in the former gross value are listed on p .28 of the same bulletin.

Current Trends.-Canadian production showed important expansion in 1943 as compared with the preceding year. The total net output of the nine main productive industries, after deduction of the cost of materials, rose from $\$ 5,920,000,000$ to $\$ 6,325,000,000$. The consequent gain was $\$ 406,000,000$ or $6 \cdot 85$ p.c. Production in 1943 was greater than in any previous year, the standing in 1929, the culmination of the preceding major prosperity period, having been about $\$ 3,580,000,000$.

The evidence points to further advance in commodity production during 1944 with moderate reaction in 1945, due to the termination of the War. Statistics indicate that the upward trend of Canadian production was extended in 1944 and progress made toward new records under the continuance of war demands. The expansion is indicated by the advance shown in the indexes of the physical volume of business and in wholesale prices during 1944 over 1943. A considerable increment in farm cash income was shown in 1943 over the preceding year and this position was decidedly more favourable in 1944.

## Section 1.-Leading Branches of Production, 1942 and 1943

Primary Production.-Declines in the output of the basic industries of agriculture and mining, and also in the trapping industry, brought the net value of primary production in 1943 to a figure 4 p.c. lower than that for 1942. A substantial gain was shown in fisheries and in forestry output, while electric power showed only a slight gain over the preceding year.

Secondary Production.-The output of manufactured products, stimulated by the demands of war, reached its peak in 1943 , showing an increase of $15 \cdot 3$ p.c. over 1942. After eliminating the production of the processing industries, the output of manufacturing industries accounted for 53.8 p.c. of the total net production of the Dominion in 1943 as compared with 48.7 p.c. in 1942. Custom and repair showed an increase of 2.5 p.c. in net value of production over 1942, while construction, which had passed its industrial wartime peak by 1942, recorded a drop of $5 \cdot 6$ p.c.

## 2.-Gross and Net Values of Production in Canada, by Industries, 1942 and 1943

Nors.-Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and process supplies consumed in the production process.

| Industry | 1942 |  | 1943 |  | $\begin{aligned} & \text { Percentage } \\ & \text { Change } \\ & \text { in Net } \\ & \text { Value, } \\ & 1943 \text { from } \\ & 1942 \end{aligned}$ | Percentage of Net Value to Total Net Production 1943 |

${ }^{1}$ Revised since the publication of the 1945 Year Book. The revision in the method of computing agricultural gross and net production is described in the text on p. 192.
${ }_{2}$ Gross value comprises industrial mineral production shown in Chapter XII, Table 1, plus the value of ores, etc., of the smelting industry. ${ }^{3}$ The item "Manufactures" includes sawmills, pulp and paper mills, etc., which are also included in other headings above. This duplication, given in Table 3 , is eliminated from the grand total. -Secondary production includes the above-mentioned duplication. The percentage of net manufactures, less duplication, to the total net production in 1943 was 53.8 .

Table 2 classifies industry into primary and secondary production, but naturally many stages of the manufacturing industries are closely connected with the primary resources. Fish-curing and -packing plants, for instance, are operating in close relationship to the fishing fleets; sawmills with forestry, and smelters and refineries with metal mines. The gross and net values of production of such processing industries are given separately in Table 3. This table is designed to indicate the method of computing the duplication between primary industries and manufactures and consequently to establish the levels of "manufactures, not elsewhere stated".

## 3.-Gross and Net Values of Production of the Processing Industries, 1942 and 1943

## Section 2.-Provincial Distribution of Production, 1942 and 1943

A majority of the provinces of the Dominion showed an advance in net production during 1943 over 1942; the total of this increase amounted to $6 \cdot 85$ p.c. Prince Edward Island showed the greatest relative improvement, commodity production having increased nearly 30 p.c. British Columbia, Nova Scotia and Quebec followed with increases of $16 \cdot 2$ p.c., $16 \cdot 1$ p.c., and 14.8 p.c., respectively.

With regard to the relative importance of the nine provinces as commodity producers, Ontario held first place in the creation of new wealth, producing 41.5 p.c. of the Dominion total. Quebec followed with an output of 29.2 p.c. against 27.2 p.c. in the preceding year. British Columbia and Saskatchewan were in third and fourth places, with contributions of 8.9 p.e. and $5 \cdot 3$ p.c., respectively. Alberta, Manitoba, Nova Scotia, New Brunswick and Prince Edward Island followed in the order named.
4.-Gross and Net Valnes of Production in Canada, by Provinces, 1942 and 1943

| Totals | 10,982,803,173 | 5,919,8¢7,344 | 100.00 | 507.97 | 12,023,952,501 | 6,325,458,373 | 100.00 | 535-51 |

${ }^{1}$ Based on estimated population figures as given at p. 127.
Per Capita Production.-The Dominion total of net commodity production at $\$ 536$ per capita was $\$ 28$ above the figure for 1942 , the estimated increase in the population having been only 1 p.c.

Each of the provinces showed per capita betterment in 1943 over the preceding year except Saskatchewan and Alberta. Ontario, with its pre-eminent industrial position and diversification, was in first place in this respect, with a net commodity output of $\$ 669$ per capita, a gain of approximately $\$ 41$ over the level of 1942. British Columbia ranked second and Quebec third.

## Section 3.-Leading Branches of Production in Each Province, 1943 Compared with 1942

Maritime Provinces.-Net production in the Maritime Provinces in 1943 increased 16 p.c. over the preceding year. The greatest absolute gain was recorded in manufactures, the net production rising from $\$ 120,000,000$ to $\$ 147,000,000$. Decreases were shown in construction, mining and trapping.

Quebec.-Manufacturing was again the principal industry in Quebec, contributing, without duplication, about 60 p.c. of the net value of provincial production. In comparison, agriculture accounted for only 11 p.c. and forestry $9 \cdot 7$ p.c. of the total net value. Construction registered a decline from 6.9 to 4.3 p.c., while mining decreased from $8 \cdot 6$ to $7 \cdot 3$ p.c. of the provincial total.

Ontario.-This Province held the leading position in the net value of manufacturing production in 1943, which, without duplication, contributed 66 p.c. of the provincial total. Mining and electric power were relatively less important than in 1942.

Prairie Provinces.-Agriculture naturally predominated in the Prairie Provinces, contributing about 60 p.c. of the net production of those provinces in 1943. The decrease from 1942 was 23 p.c., the declines in Saskatchewan and Alberta having more than counterbalanced the gain in Manitoba. Manufacturing accounted for more than one-fifth of the regional output-a remarkable development of the past quarter century in an area generally regarded as predominantly agricultural.

British Columbia.-The net output of the forestry industry in British Columbia during 1943 was over $\$ 98,000,000$, or more than 17 p.c. of the provincial production. Manufactures, eliminating duplication, contributed the highest proportion, viz., 46 p.c., while mining accounted for 9.6 p.c. of the net value.

## 5.-Gross and Net Values of Production, Classified for Each Province, by Industries, 1942 and 1943

Note.-For Dominion totals, see Table 2.

Agriculture, including stock raising and horticulture, is the most important single industry of the Canadian people, employing, according to the Census of 1941, $25 \cdot 2^{*}$ p.c. of the total gainfully occupied population and $30 \cdot 5^{*}$ p.c. of the gainfully occupied males. In addition, it provides the raw materials for many Canadian manufactures, and its products in raw or manufactured form constitute a very large percentage of Canadian exports. For a statement of the occupied and the available agricultural lands in Canada, see pp. 29-30 of this volume.

An introductory outline of the historical background of Canadian agriculture is given at pp. 187-190 of the 1939 Year Book. As now presented, this Chapter treats of current governmental activities-Dominion, by special authoritative articles prepared in the Department of Agriculture but not repeated from year to year unless changes warrant; and Provincial, by an outline of the work of each provincial department. Comprehensive statistics of agriculture, collected and compiled by the Agricultural Branch of the Dominion Bureau of Statistics and covering Canada as a whole, close the Chapter. These include data on farm income, values of agricultural production and farm capital, field crops, farm live stock and poultry, dairying, fruit, special crops, prices and miscellaneous statistics. World statistics of agriculture, formerly compiled from the publications of the International Institute of Agriculture, have not been available for recent editions of the Year Book because of war conditions.

## CANADIAN AGRICULTURE DURING THE WAR AND POST-WAR PERIOD $\dagger$

Editions of the Canada Year Book issued during the past few years have carried as introduction to this Chapter special articles showing the effects of the War of 1939-45 on Canadian agriculture. Broad world-wide readjustments will accompany reconversion to peace: these, especially in the case of Canadian agriculture, may not result in any abrupt change but, in any case, there can be little doubt that in certain directions European agriculture will establish its position

[^68]fairly quickly. If and when this happens a reorientation of external trade in agricultural products will be inevitable and the results to Canada will be far-reaching.

In many ways, therefore, the present may be regarded as a turning point and for this reason the various special articles that have appeared over the past few years have been summarized below with the purpose of presenting the salient features in the developments of Canadian agriculture during the war years, so that the student will be in a position to make comparisons and draw his conclusions with greater facility.

When war broke out in 1939, the position of Canadian agriculture was much more favourable with respect to the supplying of wartime food needs than had been the case at the beginning of the War in 1914. In the interval between the two wars the acreage devoted to cereals and other field crops had increased greatly while live-stock production had also made important gains. On the other hand, the outbreak of hostilities disrupted the normal marketing of many products and created a number of problems in the adjustment of agriculture from a peacetime to a wartime basis.

One of the first acts of the Dominion Government was the setting up of the Agricultural Supplies Board. The purpose of the Board was to keep agriculture functioning in a manner which would supply the food and fibre needs of the people of Canada and her Allies during the period of the War and leave the Canadian farmer. so far as possible, in a position to follow his normal program when peace returned.

Composed of senior officers of the Dominion Department of Agriculture, the Board had a two-fold responsibility, viz., to see that the needed foodstuffs were produced in sufficient quantities, and to secure and conserve the supplies needed by producers and processors in carrying out their share of the program. The Board was to serve as the central directive agency to deal with problems in connection with the production and marketing of farm products. It was given power to buy and sell, store, regulate the distribution of supplies used in production, to recommend the licences for the export of such supplies, and to appoint advisory committees representative of producers and the trade.

At the outset the Board enlisted the co-operation of the provinces and instituted a series of conferences with provincial representatives, first at frequent intervals and later annually, where production programs were planned in the light of known requirements. Representatives of the organized farmers and of the farm press were also invited to attend and take part in the conferences.

During the early months of the War there was no important increase in demand for any Canadian farm product. Indeed the chief problems were those of disposing of surpluses rather than of stimulating production. True, Britain had negotiated agreements for increased quantities of Canadian bacon and cheese and, in order to implement these agreements, Canada set up two additional boards, a Bacon Board, which later extended its activities to other meats as well and became known as a Meat Board, and a Dairy Products Board. Still later when the United Kingdom became interested in large shipments of Canadian eggs, flax fibre and other products, a Special Products Board was set up to handle these commodities.

In March, 1943, the Department of Agriculture undertook additional responsibilities in connection with the supply and distribution of food products and these were followed by the setting up of the Agricultural Food Board. The purpose of this

Board was to co-ordinate the activities of all commodity boards established under the Department of Agriculture; to direct the diversion of food products produced in Canada to fill export contracts, to meet the needs of the Armed Forces and to supply deficient areas in Canada; and to provide a medium for co-operation between the Department of Agriculture and the Wartime Prices and Trade Board in all matters pertaining to agricultural production, price adjustments and subsidies.

Meat Production.-In the story of Canada's wartime food production effort there is no more impressive chapter than that relating to the development of meat production. Immediately prior to the War, hog production was the only very encouraging feature of the live-stock industry in the Dominion. Hog production had been steadily increasing under the stimulus of good markets and an abundant supply of feed grains. Processing capacity and other handling facilities were considerably in excess of normal requirements and when the first bacon contract was negotiated with the British Ministry of Food involving weekly shipments of $5,600,000 \mathrm{lb}$. up to Oct. 31, 1940, it was a comparatively easy matter to exceed this quantity. The second agreement called for deliveries of $425,000,000 \mathrm{lb}$. between November 1940, and Oct. 31, 1941, and again the hog industry was able to complete this contract in advance of the contract period and thus relieve the situation in the United Kingdom which had been complicated by the loss of Continental European sources of supply. A third agreement involved a quantity of $600,000,000$ lb ., an increase of $269,000,000 \mathrm{lb}$. over the amount shipped during the first year of the War; the following year the amount was again raised to $675,000,000 \mathrm{lb}$. This year marked the climax in Canada's hog production effort when an unprecedented volume of hog marketings enabled the shipment to the United Kingdom of nearly $700,000,000 \mathrm{lb}$. of wiltshire sides and cuts. The chief factors that contributed to this phenomenal production were the assurance of a market at good prices for at least a year in advance, an abundance of feed grains, and a favourable price relationship between the prices of hogs and the prices for grain and other farm products.

An agreement covering the years 1944-45 involved total shipments of $900,000,000$ lb . The peak of production had been passed and during 1945 hog marketings fell off sharply. Contributing factors to this decline were the gradual reduction of the feed-grain surplus, the shortage of farm help and the gradual loss by the bacon industry of the advantageous economic position which it had enjoyed during the earlier years of the War. In spite of the falling off in production, shipments for the two-year contract period amounted to more than $1,103,000,000 \mathrm{lb}$.

WARTIME BACON AGREEMENTS WITH THE UNITED KINGDOM
(Million Pounds)

|  | 1989-40 | 1940-41 | 1941-42 | 1948-49 | 1944-45 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Minimum contract. | 291.0 | $425 \cdot 6$ | $600 \cdot 0$ | $675 \cdot 0$ | $900 \cdot 0$ |
| Actual shipment.. | $331 \cdot 0$ | $425 \cdot 6$ | $600 \cdot 0$ | $675 \cdot 0$ | 1,103.8 |

Throughout the war period, the quality of Canadian bacon was maintained at a high level. However, the percentage of carcasses making the top grades did fall off somewhat in the face of pressing demands from the United Kingdom for increased quantities.

The negotiation of successive agreements, at firm prices throughout the year, had the effect of eliminating most of the seasonal variation in Canadian hog prices. While this factor contributed substantially to the increased production, it also had the effect of disturbing the seasonal pattern of production and necessitated the
storing of large quantities of pork during the season of heavy runs for later processing and shipment in the off-peak periods, but it taxed severely the capacities of the meatpacking establishments.

In addition to bacon, the Meat Board handled the export of other meats and in the latter part of 1943 a beef agreement was negotiated with the British authorities which resulted in the shipment of about $70,000,000 \mathrm{lb}$. up to September, 1944. During this period small quantities of lamb were also exported to the United Kingdom. Later, an agreement for 1944-45 was signed involving the shipment of all surplus beef and, despite strong pressure for the opening of the United States market to Canadian cattle, it was decided to confine these shipments to the British market.

While meat production in Canada during the War surpassed all previous records, the tremendous demands of the British market, the requirements of the Armed Forces and the increased home consumption necessitated the imposition of meat rationing, first in 1943 and again in 1945.

During 1945 the marketings of hogs totalled $5,900,000$ head, cattle $1,720,000$ head, and sheep and lambs $1,200,000$ head. In 1946 some increase is looked for in hog production while cattle marketings are expected to remain at about the same figure with a slight reduction in the production of sheep and lambs.

Dairy Prọducts.-Canadian dairy products have made an impressive contribution to the war effort. During the year 1939, total milk production in Canada was estimated at slightly less than $16,000,000 \mathrm{lb}$. This figure was increased progressively throughout the war period until a production of $17,600,000 \mathrm{lb}$. was attained during 1945. In the early days of the War, cheddar cheese and evaporated milk were among the items which the United Kingdom requested in greater than peacetime quantities. The first agreement (May, 1940) covering cheese called for deliveries of $78,400,000 \mathrm{lb}$. in the period ended Nov. 30,1940 , but the British market agreed to take such additional quantities as might be available so that shipments reached a total of almost $89,600,000 \mathrm{lb}$. During the summer of 1941, drought in Eastern Canada curtailed cheese production in the early part of the season but by restricting the amount of cheese going on the domestic market, shipments of $112,000,000 \mathrm{lb}$. of the season's production were made possible. The 1943 cheese agreement involved a quantity of $125,000,000 \mathrm{lb}$. and in 1944 the contract called for $150,000,000 \mathrm{lb}$.; while shipments fell slightly short of this 1944 figure, exports of butter to the extent of $7,000,000 \mathrm{lb}$. helped to make up the shortage in the cheese contract. For two years ending Mar. 31, 1947, Canada has undertaken to ship $125,000,000 \mathrm{lb}$. annually.

Shipments of concentrated milk products were made to the United Kingdom during each of the war years. Evaporated milk was one of the few items asked for by the United Kingdom in the early part of the War. An agreement for 1940 called for shipments of 300,000 cases and this was later increased by another 150,000 cases. Contract quantities were increased in each of the years ended Mar. 31, 1942 and 1943 but in 1944 they were reduced to about 300,000 cases; a similar amount was provided for the following year. While meeting the United Kingdom's requirements of concentrated milk products, Canada was able to look after other established markets within the Empire and elsewhere.

WARTIME SHIPMENTS OF DAIRY PRODUCTS
(Million Pounds)

| Year | Contract | Cheese | Evaporated Milk |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Actual Shipments | Contract | Actual <br> Shipments |
| 1940-41. | 78.4 | $93 \cdot 1$ | $50 \cdot 4$ | $36 \cdot 1$ |
| 1941-42. | $112 \cdot 0$ | $115 \cdot 4$ | 28.8 | $30 \cdot 9$ |
| 1942-43. | $125 \cdot 0$ | $142 \cdot 1$ | $32 \cdot 1$ | $32 \cdot 1$ |
| 1943-44. | $150 \cdot 0$ | $116 \cdot 2$ | 14.4 | 14.4 |
| 1944-45. | $125 \cdot 0$ | $122 \cdot 2$ | $14 \cdot 4$ | 14.4 |
| 1945-46. | $125 \cdot 0$ | 126.5 | $33 \cdot 6$ | $33 \cdot 6$ |

[^69]In addition to the United Kingdom's demands for dairy products, Canadian farmers throughout the war period were faced with a sharp rise in domestic consumption of fluid milk and a steady increase in the demand for creamery butter. Total milk production increased generally throughout the country; the most striking increase occurred in the Prairie Provinces where a favourable price relationship between grain prices and the prices of dairy products provided a strong incentive. This increase, however, was not maintained throughout 1945 mainly because of drought conditions in parts of the prairies.

The average farm value of all milk produced more than doubled during the war period. To maintain production generally and to prevent diversion from one use to another, various subsidies were paid under the authority of the Agricultural Food Board and the Wartime Prices and Trade Board while rationing of butter was imposed in order to regulate consumption.

Eggs and Poultry.-Immediately following the outbreak of war, the tendency was for the United Kingdom to increase purchases of eggs from those European countries immediately adjacent to enemy countries, and it was not until these sources of supply had been cut off that purchases in Canada were sharply increased.

Egg shipments were in the hands of private firms until May 1, 1940, but from that date forward the British Ministry of Food became the sole importer and on Apr. 15, 1941, the Special Products Board of Canada assumed control of all exports of eggs from Canada. Shipments in 1940 were almost $11,000,000$ doz. while for 1941 they were $16,300,000$ doz. Beginning in 1942, the United Kingdom found it necessary to accept only dried eggs and arrangements were made to set up in Canada processing plants for the drying and handling of eggs. By 1943 a new contract with the United Kingdom was arranged; this called for Canada's largest total export of eggs up to that time and involved the purchase of 9,000 tons of dried egg powder, the equivalent of $63,000,000$ doz. eggs. Under a contract covering 1944-45, the British Ministry of Food undertook to purchase a minimum of 7,500 tons of dried eggs with the option of accepting additional quantities of shell eggs. Total egg production during 1945 reached the figure of $374,000,000 \mathrm{doz}$. and it is probable that during 1946 production will be maintained close to that level.

EGGS SHIPPED TO THE UNITED KINGDOM, 1941-46
(Expressed as Shell Eggs)

| Year | Doz. | Year | Doz. |
| :---: | :---: | :---: | :---: |
| 1941. | 15,336,600 | 1944. | 79,929,750 |
| 1942 | 37,535,940 | 1945. | 89,945,100 |
| 1943 | 33,642,810 | $1946{ }^{*}$ | 86,000,000 |

[^70]The spectacular increase in egg production was accompanied by a sharp rise in the volume of poultry meats available. Since poultry meats had been placed on the luxury list in the United Kingdom during the early months of the War, there was no export outlet to that market until later in the war period. While the United States on occasion provided an outlet for some of the surplus, the bulk of the poultry meat was consumed in Canada where the rationing of other meats and the higher purchasing power of the people contributed to the increased rate of domestic consumption.

Wheat and Feed Grains.-Large crops of wheat in 1939 and 1940, together with the cutting off of practically all of the Western European markets resulted in the accumulation of a large surplus in Canada. In order to encourage farmers to reduce their wheat acreage and grow more of the needed feed grains and forage erops, the Wheat Acreage Reduction Act provided for acreage payments on land taken out of wheat production. This had the desired effect of reducing wheat production and increasing the output of feed grains demanded by the rapidly expanding live-stock industry. As the War progressed, new outlets for Canadian wheat were opened up in the liberated countries; by 1944 the wheat acreage had increased sharply and a further increase occurred in 1945.

The conclusion of the War resulted in a tremendous increase in the demand for Canadian wheat. The country has been exporting wheat and flour at the maximum capacity of the elevator and milling facilities and there has been pressure to further increase the acreage sown to wheat in 1946. It has been recognized, however, that any increase in wheat production resulting from increased acreage could be secured only at the expense of coarse grains which are required by the live-stock industry. Consequently, the Dominion-Provincial agricultural conference which set the objectives for 1946 recommended no further increase in wheat acreage for this year.

Throughout the war period, over-all supplies of feed grains were ample but, because of deficiencies in Eastern Canada, it became necessary to move substantial quantities from the Prairies to the east. A policy of freight assistance adopted by the Government and administered under the -Agricultural Supplies Board contributed to a record movement of feed grains during 1943-44, while improved crop yields in Eastern Canada in 1944 resulted in a reduced demand for western grain.

Fruit and Vegetables.-One of the outstanding casualties of the War, so far as Canadian agriculture was concerned, was the apply industry. A high proportion of the total crop was normally exported to the United Kingdom and the industry faced a serious situation when that market weakened in 1939 and disappeared entirely the following year. Because of the necessity of maintaining the industry until normal outlets could be regained, the Government undertook to guarantee reasonable returns to the growers from year to year throughout the War. This involved subsidies on the processing of large quantities of apples. Efforts were also made to stimulate domestic consumption during years of large crops. Substantial shipments of dehydrated apples, concentrated apple juice and other products were made to the British market by the Special Products Board which also handled the shipment of fresh apples when exports were resumed.

Food requirements in the United Kingdom and the shortage of shipping space resulted in the initiation of a program of vegetable dehydration in Canada in 1942. Financial and technical assistance was provided by the Dominion Government and a number of processing plants were established to handle the dehydration of such vegetables as cabbage, carrots, onions and potatoes.

Farm Labour.-The spectacular accomplishments of Canadian farmers during the war period are all the more remarkable in the light of the handicaps under which they worked. Almost from the start of the War, young men and women left the farms for the Armed Services and industry so that the strain on those remaining was greatly increased. While some relief was afforded by temporary assistance from students, home defence troops and other part-time workers, as well as by seasonal transfer of agricultural workers from one region to another to assist with harvesting, these measures were only a partial offset to the losses of regular farm help. In 1942 indefinite postponement of compulsory military service was decided upon for farmer's sons and farm labourers in order to cope with the farm labour situation. In addition to the labour shortage, farm machinery was in short supply and had to be placed on a ration basis to assure distribution where the need was greatest.

Prices and Income.-During the War, prices of farm products rose appreciably, particularly in the case of live-stock products. In 1941 price ceilings were imposed but certain farm products were exempt from the regulations. Coupled with price control was a policy of bonuses and subsidies employed to encourage production along certain lines, while freight assistance on the movement of feed grains and subventions on fertilizers helped to keep down production costs. Farm cash reached a peak in 1944 with a figure of $\$ 1,826,493,000$ and while there was a slight reduction during 1945, cash income was maintained at a high level to the end of that year.

When the War ended there were no serious marketing problems in sight for Canadian farmers. Contracts with the United Kingdom continue to the end of 1946 in a number of instances and while these are for specified minimum amounts, as much more as can be made available will be accepted. In addition, UNRRA is in the market for large quantities of foodstuffs of all kinds so that the problem of disposing of embarrassing surpluses is unlikely to arise for some time to come. At the same time, steps have been taken to prevent any serious collapse of farm prices. The Agricultural Prices Support Act, passed during 1944, is designed to assist in maintaining adequate and stable returns for agriculture during the transition period from war to peace. Under the Act, a Board is set up which will have power to buy and sell any farm product, except wheat, and thus establish a level below which no one need sell; the Board will also pay subsidies in order to maintain domestic and export prices at similar levels.

## The Food and Agriculture Organization of the United Nations*

The first Session of the Conference of the Food and Agriculture Organization of the United Nations (FAO) which was held at Quebec City from Oct. 16 to Nov. 1, 1945, was attended by representatives of thirty-seven countries, which became Members of the Organization, and representatives of four observer countries (four other Member Nations were not represented at the Conference).

The permanent organization was created by the signing of the constitution by the representatives of the countries attending; the Chairman and the Heads of Committees of the Interim Commission which had been established at the Conference at Hot Springs, Virginia, in May-June 1943, presented reports of their work; a Director General and an Executive Committee of fifteen members were elected, and reports were prepared on the organization and administration of FAO and on the policies and programs of work to be undertaken.

[^71]FAO is designed essentially to provide a focal point for the collection, analysis, interpretation and dissemination of information concerning all aspects of the production, distribution and consumption of food. It may also promote and recommend national or international action and, on request, it may furnish technical assistance to nations that are themselves unable to carry out the recommendations of the Organization.

FAO has not within itself power to enforce the putting into effect all the policies it may consider to be desirable as a means of eliminating freedom from want throughout the world. It is limited to advice and recommendation, but this restriction should not unduly limit its ability to give service. It simply means that the Member Nations must maintain the same spirit of co-operation and sincerity that prevailed at the first meeting of the Organization. No organization of this kind can achieve its goal without the wholehearted working together of the Member Nations. Once a staff of experts and specialists has been assembled, the first activity of FAO will undoubtedly be an appraisal of the world situation from both the production and the consumption side on the basis of data already available and secured by special surveys where necessary. The information so assembled will be made available to all Member Nations. This information will include not only basic statistics, but all scientific knowledge including that of biologists, technologists, nutritionists and scientists in other related fields.

It should be clearly understood that while FAO is vitally concerned with the current food situation arising out of the War, it is not a relief organization. Nevertheless, it must concern itself with the operations of UNRRA and lend every assistance to that Organization.

The principal work of the Conference was carried on under Commission "A" which was responsible for the development of policies and programs of FAO, and Commission "B" entrusted with the consideration of problems of organization and administration.

Report of Commission "A".-Under Commission "A" six committees were created. In an introductory statement to the report of this Commission the Chairman said: "Whereas the various services had been outlined in general terms in the Final Act of the Hot Springs Conference and in the reports of the Interim Commission this time they have been particularized into a series of concrete and realistic proposals. It had been agreed that FAO should collect and disseminate information, should give advice and organize missions of technical experts, should make studies and recommend action to other international agencies and to governments. This time the questions answered are what information? What advice? What studies? What recommendations?"

Nutrition and Food Management.-The primary objective of the nations united in the Food and Agriculture Organization is to raise levels of nutrition throughout the world, to ensure not only that all peoples are freed from the danger of starvation and famine but that they obtain the kind of diet essential for health. It is the responsibility of Member Nations to take the steps necessary for attaining this objective, and the responsibility of FAO to assist them by all possible means. In the international sphere, the work of FAO in the field of nutrition must be closely integrated with that of other international organizations concerned with health, social and economic problems, and the welfare of industrial and other workers.

While much remains to be done, scientific research has made it possible to define with sufficient precision to guide practical food management, the amounts of nutrients necessary for human well-being. The remarkable benefits to health which have been obtained in certain countries in wartime by the application of relatively simple and inexpensive nutritional measures are full of promise for the future. It must be recognized, however, that to bring about a general rise in nutritional levels the productivity of those engaged in both agricultural and non-agricultural pursuits must be increased so that workers may have the purchasing power to buy food at prices fair to food producers, while the latter have the means to pay for industrial products and services contributing to their welfare.

The recommendations refer to practical measures for improving nutrition as well as detailed studies in collaboration with experts.

Among the recommendations for urgent attention are the need for a survey of available food resources, supplies and requirements of needy countries, the development of programs to improve nutrition in demonstration areas, encouragement to the organization of national nutrition organizations and a world-wide study of school lunches and other programs to supply food to vulnerable groups. This report also recommmended that early action be taken to study the conservation of natural nutritional values of food, the methods and value of food enrichment programs and the best means of making nutritious food palatable. The report further recommended that a clearing house for information on nutrition and food management should be set up at an early date and that a Conference should be called as soon as possible to define tentative dietary standards which could be used by all countries. Collaboration with the international health organization, standardization of methods of investigating food consumption and of analyzing foods were also included as important matters for early consideration. Nutrition is a very new science and a vast amount of immediate and continuous fundamental research is still needed. The recommendations for long-term projects include research on the effect of social and economic policies and measures on food consumption, the social background of dietary habits and the development of high nutritional value in food plants.

Agriculture.-In the field of agricultural production, a most comprehensive program of action for FAO was prepared at Quebec City. The goal will be to integrate the food-producing resources of the earth and the growing body of technical knowledge in such ways as to meet the food requirements of all people.

By the application of existing technical knowledge to millions of acres of land they can be made more productive. By research and experimentation much can yet be done to improve production practices in all countries. The economic difficulties are enormous and it will take many years to overcome them but it is recommended that the tools which do not now exist for the task should be invented.

The attainment of the objectives of FAO to give to every human being the food, clothing and shelter to which he is entitled will require the discovery of the particular methods to use to make each soil produce most efficiently and at the same time to conserve its natural fertility. This will involve the use of the most appropriate kinds of crops and live-stock enterprises and the best seed, fertilizers and farm animals, the wise utilization of available water resources, the control of erosion and plant and animal diseases and insects, the employment of the most up-to-date methods of feeding and breeding, of cultivation and harvesting, and the distribution to all Member Nations of the results of the latest scientific research. Some Member

Countries may require advice and assistance in the reconstruction and modernization of their agricultural production. The exchange of research materials between all Member Countries will be essential.

The findings of science must be translated in terms appropriate to people. Educational and extension programs must be broad in scope and all modern techniques of press, radio and film will have to be utilized in addition to demonstrations on operating farms. The exchange of experience and techniques and of improved seeds, shrubs, trees and farm animals among countries was also recommended.

The report of agricultural production recognized further the need to stimulate, where and when economically possible, increased production of protective foods, the need to provide adequate credit for farmers, the need to find ways of supplying the farmers of the world with suitable and sufficient labour, machinery and equipment for the production of crops and animal products. FAO will also concern itself in this field with the welfare of all rural people and work towards programs which will be necessary to assure the rural people of the world an equitable share of national incomes and social services.

The program of agricultural production was divided into a number of headings with a series of recommendations under each for the guidance of the Director General and his staff. Some idea of the tremendous scope of these recommendations will be obtained by a brief reference to a few of them. It is recommended that FAO should:-
(a) Co-operate with such special international agencies as those dealing with health, housing, social legislation, credit and trade to assure quality and services to rural people.
(b) Take necessary steps in co-operation with other international organizations and governments to develop a proper plan for agriculture and other industries.
(c) Undertake studies of income and levels of living of rural people.
(d) Encourage surveys in land classification with a view to the more rational use of land.
(e) Promote flood-prevention and water-conservation measures.
(f) Undertake economic studies of areas to learn the potentialities of soils and requirements for soil improvement and conservation.
(g) Encourage the development of extension services throughout the world.
(h) Provide for the assembling, compiling, abstracting and disseminating of scientific and technical information in the field of agricultural production.
(i) Provide assistance to Member Nations in the organization of research agencies.
(j) Collaborate with all agencies in encouragement of research personnel.
(k) Make periodic appraisals of commodity situations and production programs.
(l) Collect and distribute to Member Nations information on various types of agricultural co-operatives.
(m) Survey post-war needs for fertilizers and fertilizer-processing facilities.
(n) Investigate ways and means of lowering the cost of agricultural machinery for farmers.
(o) Arrange for assistance and guidance for the organization of research institutions in the tropics and sub-tropics.

Marketing.-Marketing, as conceived in this report, covers a wide range of activities in relation to food, non-edible agricultural products, and forest products.

The main problem with which FAO is concerned is that of food supply and management, if this be conceived in broad enough terms. In its narrower sense, food management is a question of economy of the home. In its broader sense, which is that used in this report, it embraces national and international food and agricultural considerations. Food management should then be conceived as the direction and development of resources to ensure their maximum use in terms of food value, and to ensure further that all groups of both producers and consumers of agricultural products have sufficient quantities of food of the right kinds.

Marketing is the crux of the whole food and agriculture problem. It would be useless to increase the output of food and it would be equally futile to set up optimum standards of nutrition, unless means could be found to move the food from the producer to the consumer at a price that represents a fair remuneration to the producer and is within the consumer's ability to pay. Similar considerations apply to other agricultural products and to fish and forest products.

It should be the responsibility of FAO to collect all relevant facts regarding both the supply and demand situation. The collection of the facts alone will not be sufficient. FAO must advise the governments that comprise it, and the other international bodies whose activities affect supply and demand, as to the action that should be taken to maintain and increase consumption.

This report recognized that undeveloped countries need immediate advice on how to develop the physical means of marketing-roads, railroads, storage and processing plants. It was recommended that FAO should facilitate the exchange of information between countries on improvements in marketing facilities and in the methods adopted particularly in the more developed countries to reduce marketing costs. It was further recommended that FAO should investigate measures to maintain and improve the purchasing power (in consultation with other United Nations agencies) to meet the nutritional needs of vulnerable groups and those whose consumption of food for any reason is too low, and to stimulate new uses for agricultural products where real surpluses develop. It was pointed out that probably the most important problems of all the activities of FAO is the economic adjustment of international markets. In the field of commodity agreements FAO could participate in the preparation, negotiation and administration of such agreements and provide statistical material on commodity situations.

The publication by FAO of periodic reports on supplies and prices of the principal agricultural products and, where practicable, make estimates of the future position was also recommended.

Statistics.-If FAO is to carry out its work successfully it will need to know where and why hunger and malnutrition exist, what forms they take, and how widespread they are. Such data will serve as a basis for making plans, determining the efficacy of measures used, and measuring progress from time to time. Surveys to date amply demonstrate the feasibility of measuring nutritional status and getting data on food consumption of families and other small consuming units and per capita measures of food consumption of countries.

In the field of agricultural production, important changes have taken place during the War of 1939-45 in the use of land for crop production, for pasture, for woodlots and forests, and for other uses. In the post-war period fluctuations in supplies of food and feed crops and the reaction of these upon prices will require
continuous watchfulness on the part of producers; otherwise they cannot make those timely adjustments in plans that tend toward keeping production in equilibrium with food requirements.

Statistical services are essential for most of the projects that will be undertaken by FAO. Resumption of the collection of international agricultural statistics will be necessary and in this certain improvements should be made. It was recommended that consideration be given to the establishment of regional libraries accessible to research workers and that the library of the International Institute of Agriculture be taken over by FAO.

A strong central statistical unit should be established servicing all FAO activities, and so constituted as to meet the technical requirements of the Organization, which relate to nutrition and food consumption, rural welfare, agricultural production, marketing, prices, fisheries and forestry and forest products.

Report of Commission "B".-The four Committees dealing with (1) Rules of Procedure; (2) Finance; (3) Administrative Arrangements; and (4) Constitution and Diplomatic Questions, under Commission " $B$ " prepared reports. The Committees worked in close harmony with one another and many of their recommendations were the result of parallel deliberations of two or more Committees.

Only minor changes were made in the Rules and Regulations that had been prepared by the Interim Commission. Aspects of staff policy were suggested with a view to assisting the Director General to organize an efficient and strong administration.

The particular problems considered by the Committee on Finance related to the financial year, the budget and the apportionment of contributions by Member Nations for the first and second years. Canada's contribution for the first year was fixed at $5 \cdot 06$ p.c. of the total, or $\$ 126,500$, which is to be reduced by advances to the Organization in the form of payment of expenses of the First Session of the Conference. The proposed contribution by Canada in the second year is 3.80 p.c., or $\$ 190,000$.

Washington was designated as the temporary seat of FAO but it was agreed that the permanent seat should be at the seat of the United Nations Organization on the understanding that that would also be the seat of the United Nations Economic and Social Council.

The establishment of regional offices was considered to be the task of the Director General and the Executive Committee who would recommend to the Conference the number, location and functions of such offices.

The principle was adopted that any disputes would be determined by the International Court of Justice.

It was recommended that FAO should achieve the closest possible relationship with the United Nations and other specialized agencies that may be established, and that FAO should, after the winding up of their affairs, take over the appropriate activities of the International Institute of Agriculture and the Comité International du Bois.

## Section 1.-Government in Relation to Agriculture

It is provided in Sect. 95 of the British North America Act that "in each province the legislature may make laws in relation to agriculture in the province"; it is also declared "that the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture . . . shall have effect in and for the province as long and as far only as it is not repugnant to any Act of the Parliament of Canada".

As a result of this provision, there exist at the present time Departments of Agriculture, with Ministers of Agriculture at their heads, in the Dominion and in each of the nine provinces.

## Subsection 1.-The Dominion Government

Subjects dealt with under this heading in previous editions of the Year Book are: the Functions of the Dominion Department of Agriculture; Agricultural Progress in Canada and the Dominion Experimental Farms System; the Prairie Farm Rehabilitation Program; the Historical Background of Canadian Agriculture; and Agricultural Marketing Legislation, 1939. See list of special articles at the front of this edition.

The Canadian Farm Loan Board.*-This Board was appointed by the Governor in Council under the provisions of the Canadian Farm Loan Act (c. 66, R.S.C. 1927, as amended by c. 46, Statutes of 1934 and c. 16, Statutes of 1935) and, as an agency of the Crown in the right of the Dominion, administers a system of long-term mortgage credit for farmers throughout Canada.

The Board is empowered to loan money to farmers for the payment of debts, for the purchase of farm equipment and live stock, to assist in the purchase of farm lands, for farm improvements or for any other purpose considered as improving the value of the land for agricultural purposes.

Loans may be granted on the security of first mortgages on farm lands actually operated by the borrower up to an amount not exceeding 50 p.c. of the appraised value of such farm lands but, in any event, not in excess of $\$ 5,000$; such loans are repayable on an amortized plan of repayment over a period not exceeding 25 years.

In virtue of amendments to the Act enacted in 1935, the Board is also empowered to make additional advances to farmers who, having obtained a firstmortgage loan from the Board, require additional funds. The amount of such additional advance is not to exceed 50 p.c. of the amount of the first-mortgage loan, nor the aggregate of first- and second-mortgage loans to exceed two-thirds of the appraised value of the farm lands mortgaged as security for the loan, nor in any event an aggregate amount of $\$ 6,000$. The interest rate on loans made on or after Apr. 2, 1945, is $4 \frac{1}{2}$ p.c. on first-mortgage loans and 5 p.c. on second-mortgage loans. The interest rate on loans made prior to Apr. 2, 1945, is 5 p.c. on firstmortgage and 6 p.c. on second-mortgage. Operations are now carried on in all provinces of Canada.

Particulars regarding the capital requirements of the Board, rates of interest charged and other details appear at p. 185 of the 1940 lear Book.

[^72]1.-Applications for Farm Loans Received, Loans Approved and Loans Disbursed, Years Ended Mar. 31, 1939-45
Nors.--Figures for 1930-32 are given at p. 192 of the 1939 Year Book and for 1933-38 at p. 193 of the 1945 edition.

| Year | Applications Received |  | Loans Approved |  |  |  |  | Loans Paid Out |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | Amount | First <br> Mortgage |  | Second Mortgage |  | Total Amount | First Mortgage | Second Mortgage | Total |

## 2.-Farm Loans Approved, with Details of Appraised Values of Security, by Provinces, Years Ended Mar. 31, 1944 and 1945

## Subsection 2.-Provincial Departments of Agriculture*

Prince Edward Island.-The Department of Agriculture is presided over by a Minister, assisted by a Deputy Minister, a Dairy Inspector, a Pathologist and Veterinarian, a Soil Assistant, two County Representatives, a Superintendent of Women's Institutes and an Assistant.

[^73]Nova Scotia.-Provincial agricultural policies in Nova Scotia are administered by the Department of Agriculture and Marketing, with the Minister's Office and those of the Director of Marketing, Statistician and Superintendent of Immigration, and Co-ordinator of Agricultural Services situated at Halifax. Many of the technical officials and the Land Settlement Board are located at the Agricultural College and Farm, Truro. Divisions of the Department include: extension service; agricultural societies; associations and exhibitions; dairying; poultry; live stock; entomology; botany; agronomy; animal husbandry; soils and fertilizer; horticulture; apiculture; animal pathology; agricultural engineering; and women's institutes.

New Brunswick.-The divisions of the Department of Agriculture of New Brunswick are as follows: live-stock and agricultural societies; dairying; herd improvements; soils and crops; poultry; horticulture; women's institutes; extension; industry; immigration and farm settlement; field husbandry; beekeeping; agricultural engineering; fur; and credit unions and co-operatives.

Quebec.-The Department of Agriculture of Quebec is divided into the following branches: agricultural education; rural economics; extension; animal husbandry; horticulture; field husbandry; information and research; handicrafts and home economics. Each branch is divided into sections dealing with particular problems. There are also many other special organizations such as the Farm Credit Bureau, the Drainage Bureau, the Rural Electrification Bureau, and the Dairy Industry Commission. A provincial entomologist and a provincial botanist are included on the staff of the Department.

To encourage better farming, an Agricultural Merit Competition for junior and senior farmers is held each year in one of the five districts into which the Province is divided for that purpose; also 65 County Farm Improvement Competitions were held in 1944 enlisting 1,516 farmers. Co-operation is widespread in rural Quebec where there are 544 agricultural co-operatives with 44,069 members and 92 agricultural societies with 29,367 members, together with 134 clubs for young farmers with 3,297 members and 866 clubs for farm women (Cercles de Fermières) with a total membership of 49,000 .

Agricultural instruction is given in 3 Colleges of Agriculture leading to the B.S.A. degree, in 17 secondary Schools of Agriculture and in 6 Agricultural Orphanages.

Ontario.-The Ontario Department of Agriculture maintains administrative, educational, extension and financial assistance services to agriculture in Ontario. These services are carried on through 11 branches and 6 institutions: (1) the Live Stock Branch promotes live-stock improvement policies, licenses and examines stallions and gives support to pure-bred live-stock associations; (2) the Crops, Seeds and Weeds Branch assists in the development of good cultural practices, the use of improved strains of seed, the promotion of improved pastures and the eradication of weeds; (3) the Dairy Branch provides an inspection, instruction and supervision service for all creameries and cheese factories; (4) the Fruit Branch enforces fruit and vegetable regulations and provides an information service to growers; (5) the Co-operation and Markets Branch administers the Farm Products Control Act and the Credit Unions Act, and supervises co-operatives under the Co-operative Marketing Loans Act; (6) the Milk Control Board, under the Milk Control Act, regulates and supervises the marketing of fluid milk; the Agricultural and Horticultural Societies Branch gives assistance to agricultural and horticultural fairs and
exhibitions, ploughing matches and other competitions; (8) the Agricultural Representative Branch carries on an educational and extension service through agricultural representatives located in all counties and districts and has direction over junior farmer activities; (9) the Women's Institute Branch gives leadership and direction to farm women's organized activities; (10) the Statistics and Publications Branch, in co-operation with the Dominion Bureau of Statistics, provides a crop-reporting service and gathers and disseminates data on crops, live stock and dairy products; (11) the Ontario Farm Service Force is organized to secure and provide help for farmers during their busy seasons. The Department is responsible for the financing and administration of the Ontario Agricultural College, the Ontario Veterinary College, the Kemptville Agricultural School, the Horticultural Experiment Station at Vineland, the Western Ontario Experimental Farm at Ridgetown and the Demonstration Farms at New Liskeard and Hearst.

Manitoba.-The Department of Agriculture of Manitoba serves through the following Branches: agricultural extension; live stock; dairy; agricultural publications and statistics; weeds administration; farm labour; debt adjustment; and provincial veterinary laboratory.

The Extension Service deals with agronomy, horticulture, poultry, agricultural engineering, beekeeping, junior live stock, boys' and girls' clubs and women's work, with specialists devoting their attention to these subjects. Meetings, field days, and short courses are held throughout the Province. There are 19 agricultural representative offices in Manitoba, each representative serving from 1 to 5 municipalities.

The Dairy Branch administers the Dairy Act, supervises the grading of cream, inspects creameries and cheese factories, gives instruction in cheese- and buttermaking, issues licences to makers of dairy products and to cream graders, furnishes plans and specifications in connection with the establishment of new creameries and cheese factories, etc.

The Agricultural Publications and Statistics Branch publishes and distributes, annually, approximately 100,000 bulletins, circulars, posters, leaflets, etc.

The Weeds Administration Branch directs the activities of 15 municipal weedcontrol units comprising 70 rural municipalities engaged in eradicating deep-rooted, persistent perennial weeds, supervises weed demonstrations, investigates weed problems, conducts weed surveys and prepares weed literature, radio addresses, articles, pictures, mounted weed specimens, etc.

The Veterinary Laboratory operates a diagnostic laboratory for animal diseases, the services of this laboratory being available to veterinaries and live-stock owners.

Saskatchewan.-The duties of the Department of Agriculture of Saskatchewan are as follows: (1) the Field Crops Division promotes good cropping and tillage practices, encourages the use and distribution of good-quality seed, operates a seed-cleaning plant and provides measures for suppressing insect and weed pests; (2) the Live Stock Division encourages the use of suitable animals for breeding purposes through establishment of pure-bred sire areas, examines and licenses stallions, arranges for exhibits of live stock, registers brands, bonds and licenses live-stock dealers and agents, and promotes warble control; (3) the Veterinary Division investigates conditions with a view to safeguarding the health of live stock, and co-operates with Dominion officials and practising veterinarians in disease control; (4) the Poultry Division maintains flock-culling and turkey-grading
and banding services, administers an approved hatchery policy, licenses wholesalers and first receivers of poultry products and also licenses hatcheries and hatchery agents, bonds produce dealers and poultry buyers, and promotes flock improvement;
(5) the Dairy Division licenses and bonds dairy manufacturing plants, licenses cream graders and milk and cream testers, and promotes herd improvement through cow-testing centres and organized Herd Improvement Associations; (6) the Statistics Division, in co-operation with the Dominion Bureau of Statistics, maintains a crop-reporting service and gathers data regarding crops and live stock, including production, marketing and income; (7) the Apiary Division registers beekeepers, inspects apiaries and promotes better management practices; (8) under the Agricultural Representative Service, the Province is divided into districts where qualified men carry on promotional and educational work; (9) grants to agricultural societies are paid through the Department, but activities are directed by the College of Agriculture; (10) general administrative activities commensurate with requirements of agriculture.

Alberta.-The Alberta Department of Agriculture serves the rural people of the Province through a number of branches, each concerned with a particular phase of the industry.

The Field Crops Branch includes the following divisions: crop improvement; soil conservation and weed control; pest control; horticulture; and a farmstead planning service.

The Live Stock Branch assists in maintaining the quality of Alberta herds and flocks through sire exchange and assistance policies and an Artificial Insemination Laboratory has been established at Olds. The Branch has also increased the feeding of beef cattle through its Live Stock Feeder Associations Policy. The establishment of cattle tuberculosis restricted areas continues with 12 districts accredited as at the end of 1943 . The work of the Branch also includes the administration of Acts relating to stock inspection, brands, domestic animals and the sale of horned cattle.

The Dairy Branch administers several provincial dairy promotion policiesEducational work is carried on through the cow-testing service, short courses and other means of instruction. Prescribed standards in construction and sanitation practices, enforced through licensing and inspection, are required of all dairy manufacturing, milk distributing and frozen-food locker plants. The Branch operates a laboratory in which chemical and bacteriological analyses are made of samples of dairy products and creamery water supplies.

Higher egg and poultry-meat production in the Province has increased the work of the Poultry Branch. In addition to the production program and the operation of an up-to-date demonstration and breeding plant (located at Oliver), regulations dealing with egg and poultry grading, the conduct of hatcheries, and blood testing for pullorum disease are enforced.

The Veterinary Branch and Veterinary Laboratory conducts pathological and post-mortem examinations on specimens submitted and findings are reported to the shipper. This service has done much to help producers to understand disease problems and their control. Special campaigns to control Bang's Disease by calfhood vaccination, and infectious rhinitis in swine, are being conducted.

The Apiculture Branch administers the Bee Diseases Act, involving the registration of all beekeepers and the maintenance of an inspection service.

Alberta junior farm and home clubs provide programs of activities designed to arouse in farm young people an appreciation of farming as a vocation and to train them in the essentials of good citizenship. In 1945, 236 clubs included projects in beef and dairy cattle, swine, poultry, grains, forage crops, gardening and home economics. Seasonal short courses in agriculture and farm mechanics are conducted at selected country points for the training of farm youth. A two-year course is offered at the Olds and Vermilion Schools of Agriculture providing training in the principles and practices underlying successful farming and homemaking. During the summer months short courses are conducted for students connected with the junior clubs and for groups of farm men and women.

Under the Agricultural Extension Service, 33 district agriculturists work among the rural people, assisting them with their many problems and carrying to them the various Departmental policies designed to improve the general standard of agricultural practices throughout the Province.

The Women's Division of the Extension Service, through the appointment of 5 district home economists in 1944, has begun the task of providing a comprehensive service in home economy to meet the needs of homemakers, particularly those in rural areas. Particular attention is paid to the supervision of girls' club work, and a specialist in nutrition has been added to the staff.

An extension specialist in agricultural engineering directs the activities conducted by the Department in this field. Study and investigations of current farm engineering problems are made. Agricultural statistics are collected by the Extension Service, and publications, etc., prepared by the various Branches or in cooperation with the University of Alberta, are made available through its facilities. In 1943 an Office of Agricultural Information was established to make available to the technical and administrative personnel of the Department data pertaining to the science, practice and possibilities of agriculture.

British Columbia.-The Department of Agriculture consists of four main Divisions: (1) The Administrative Division is responsible for the general direction of agricultural policies; administration of legislation affecting agriculture; supervision of extension programs; collection of agricultural statistics; compilation of reports and publications; preparation of material for agricultural exhibitions; supervision of farmers' and women's institutes; direction of junior-club projects; and markets extension. (2) The Animal Industry Division supervises live-stock work including: promotion and improvement of animal production; brand inspection; inspection of beef grading; control of contagious diseases of animals; eradication of insect pests detrimental to live stock; and field extension connected with animal nutritional work. This Division consists of general live-stock, veterinary, dairy, and poultry Branches. (3) The Plant Industry Division includes: horticulture, field crop, plant pathology, entomology and apiculture Branches; fruit, vegetable and seed production and surveys dealing with orchards, small fruits, flowering bulbs and greenhouse areas are supervised; suppression of insect pests and plant disease nspection with control of noxious weeds and general promotion of crop production.
(4) The Land Clearing and Agricultural Development Branch is in charge of clearing of agricultural lands and developing them for agricultural production. This Branch was created during the fiscal year 1945-46.

Extension officials of the Department are located in 16 agricultural centres of the Province.

## Subsection 3.-Provincial Agricultural Colleges and Schools

A treatment of this subject appears at pp. 203-213 of the 1943-44 Year Book.

## Section 2.-Statistics of Agriculture*

Crop-Reporting Service.-Through the voluntary crop-reporting service of the Dominion Government, accurate, timely and independent reports on crop conditions throughout the Dominion are published.

Census Statistics.-In addition to the statistics collected annually, which are the subject of this Section, valuable information is published following each decennial census of the Dominion and each quinquennial census of the Prairie Provinces. The more important data, at present available from the 1941 Census, are given at pp. 250-254 of this edition while details published following the Censuses of 1931 and 1936 are given at p. 152 of the 1941 Year Book.

## Subsection 1.-Farm Cash Income

In 1945, Canadian farmers received, in cash, from the sale of their farm products a total of $\$ 1,686,000,000$. This compares with $\$ 1,826,000,000$ in 1944 and $\$ 722,000,000$ in 1939.

A decline in the volume of production was responsible for the decreased cash income. In addition to the above amounts, farmers, mainly in the Prairie Provinces, received $\$ 6,439,000$ in 1945 from supplementary payments under the Wheat Acreage Reduction Act, the Prairie Farm Assistance Act, and the Prairie Farm Income Order in Council. The comparable figure for these payments in 1944 was $\$ 17,681,000$.

Cash income estimates do not include income accruing to farmers from outside sources nor the value of products consumed in the farm home. Farm cash income, together with these latter amounts, represents what farmers have available to meet living and farm operating costs, new capital expenditures, payments against indebtedness and so forth.

[^74]
3.-Cash Income from the Sale of Farm Products, by Sources, 1944 and 1945

| Item | 1944 | 19451 | Item | 1944 | 1945 |

## Subsection 2.-Value of Agricultural Production and of Farm Capital

Publication of the series formerly known as "Gross and Net Values of Agricultural Production" has been discontinued. These series contained duplications and, as a result, were not comparable with value of production estimates for other industries. Work is now under way on new series which will replace those previously published but these will not be available for publication until late in 1946.

Value of Farm Capital.-The items included in the term "farm capital" as used in Table 5 are: lands and buildings; implements and machinery, including motor-trucks and automobiles; and live stock, including poultry and animals on fur farms. The value of lands and buildings for intercensal years are based on the value of occupied farm lands reported annually by crop correspondents; annual values of farm implements and machinery are estimated on the basis of sales reported each year.
5.-Current Values of Farm Capital in Canada, by Provinces, 1943 and 1944

| Province | 1943 |  |  |  | 1944 |  |  |  |

${ }^{1}$ Includes poultry and fur farms.
Average Values of Farm Lands.-Land values as reported by crop correspondents represent the average value per acre of all occupied land and include a considerable percentage of unimproved land. Consequently, these values are considerably below current market prices for improved farm land.

Although the value of farm lands shows a considerable rise since 1940, the present values are substantially below those recorded prior to the collapse in land values in 1929 and no serious inflation of land values similar to that which followed the War of 1914-18 is yet in evidence. A decline from the high values of that time occurred prior to 1926 and a second sharp decline followed 1929, values per acre reaching their lowest point in 1934 at $\$ 23$ per acre. For 1944 the average value indicated was $\$ 30$ per acre.

## Subsection 3.-Acreages, Yields and Values of Field Crops

The Canadian agricultural program for 1945 contained recommendations for a reduction of 8 p.c. in wheat acreage and for increases of 12 and 10 p.c., respectively, $i_{n}$ the acreages devoted to oats and barley. In the case of summerfallow, a 3 p.c. increase in acreage was recommended. However, Canadian farmers did not follow this program and the acreage devoted to wheat was nearly $2,000,000$ acres higher than the recommendation and was slightly above that of 1944. The acreages devoted to oats and barley were only slightly higher than in 1944 but were below the recommendations.

Unsatisfactory weather conditions of the 1945 season, however, resulted in an appreciable reduction in the yields of grain crops. This reduction took place in the Prairie Provinces, most of it occurring in southwestern Saskatchewan and southern Alberta. Wheat production fell to $305,900,000$ bu. from the 1944 yield of $416,600,000 \mathrm{bu}$. Likewise the 1945 crops of oats and barley showed substantial reductions from those of the previous year, with the oat crop being over $118,000,000$ bu. smaller and the barley crop down $37,000,000 \mathrm{bu}$. The rye and flaxseed crops were also smaller.

On the other hand, production of crops in Eastern Canada was well maintained with an especially good yield of high-quality hay. To a very considerable extent the maintenance of production in Eastern Canada and British Columbia helped to prevent a feed shortage which would have been serious in view of the relatively high live-stock population. The gross farm value of all the major field crops produced on $62,770,860$ acres in 1945 amounted to $\$ 1,089,765,000$ as compared with a gross farm value of production of $\$ 1,296,992,000$ from $62,673,050$ acres devoted to the same crops in 1944.

## 7.-Acreages and Values of Field Crops in Canada, by Provinces, 1940-45

Note.-For earlier figures, see Statistical Summary at the beginning of this volume.

## 8.-Acreages, Yields and Values of Principal Field Crops Grown in Canada

Nors.-Comparative figures for the Dominion as a whole for the years 1908-28 are given in the 1929 Canada Year Book, pp. 230-232; for 1929-38 in the 1939 Canada Year Book, pp. 203-205; for 1939-41 in the 1943-44 Canada Year Book, p. 217. For certain figures for earlier years on acreage, production and value, see Statistical Summary of the Progress of Canada at the beginning of this volume. For the majority of crops, the long-time average covers the years 1908-40. Figures for 1945 are preliminary and therefore subject to revision.

[^75]Stocks of Grain in Canada.-Table 10 shows the stocks of Canadian grain on hand on July 31, for the years 1936-45, in both Canada and the United States as well as the amounts held on farms at that date. Farm stocks are given for Canada and the Prairie Provinces separately, while an additional column indicates the amounts held in country elevators in the Prairie Provinces.

## 10.-Carryover of Canadian Grain as at July 31, 1936-45

${ }^{1}$ Cows in milk or in calf. $\quad 2$ Cows and heifers, two years old or over, kept mainly for milk purposes.

Live stock on farms as obtained from the census data, cannot be separated from the total numbers except for the past three census years. Table 12 gives the numbers of live stock on farms for those years.
12.-Live Stock on Farms in Canada, Censuses of 1921, 1931 and 1941

| Item | 1921 | 1931 | 1941 |

[^76]Annual estimates based on census data are made of numbers of animals on farms. The indexes in Table 13 are the numbers of live stock for the respective years expressed as percentages of the numbers on farms during the period 1935 to 1939. Table 14 gives the absolute figures by provinces for 1941-45 and Table 15 the average values per head of farm live stock in the same years.

## 13.-Index Numbers of Animals on Farms in Canada, 1936-45

(Average 1935-39=100)
Nors.-Comparable figures for 1906-35 are given at pp. 211-212 of the 1945 Year Book.

| Year | Horses | Milk Cows | Other Cattle | $\stackrel{\text { All }}{\text { Cattle }}$ | $\begin{gathered} \text { Sheep } \\ \text { and Lambs } \end{gathered}$ | Swine |

Wool.-Shorn wool production in Canada in 1945 totalled 14,513,000 lb., which was below the 1944 output by over $600,000 \mathrm{lb}$. However, an increase of nearly $1,000,000 \mathrm{lb}$. in pulled wool production, due to greatly increased marketings of sheep and lambs, resulted in a total wool production of $19,626,000 \mathrm{lb}$., over $340,000 \mathrm{lb}$. above the total for 1944.

In spite of a slightly higher price per pound in 1945, the total value of the shorn wool production was $\$ 86,000$ less than in 1944. No value is assigned to pulled wool production as returns from this product are included in the estimates of the value of sheep and lambs marketed.

## 16.-Estimated Production, Exports, Imports and Apparent Consumption of Wool in Canada, 1936-45

Note.-All estimates are on a 'greasy' basis. Comparable statistics of production for the years 1920-29 are given at p. 219 of the 1939 Year Book and for 1930-35 at p. 214 of the 1945 edition.

## Subsection 5.-Poultry and Eggs

The data on the value of live poultry are now revised from 1941 to 1945 to accord with other farm live stock, which are valued as of June 1 each year, the date of the annual surveys. The 1941 numbers and values are from the 1941 Census.

The flock improvement work of the Dominion and Provincial Departments of Agriculture, carried on for many years, again showed its efficacy in the larger production of eggs in 1945 , when $373,952,000 \mathrm{doz}$. were produced on the farms of the nine provinces. Of this production it was estimated that $264,674,000 \mathrm{doz}$. were sold by farmers.

Production of farm poultry meat, however, declined in 1945, the total being $307,435,600 \mathrm{lb}$. , as compared with $315,176,000 \mathrm{lb}$. in 1944 . There were declines in each kind of poultry except ducks. The domestic disappearance, however, increased to $322,654,700 \mathrm{lb}$. in 1945 from $315,156,514 \mathrm{lb}$. in 1944 due to the large stocks on hand at the beginning of the year. Consumption increases were shown in all kinds of poultry meat except geese.
17.-Numbers and Values of Farm Poultry in Canada, by Provinces, June 1, 1941-45

## Subsection 6.-Dairying

The development of dairying enterprises which commenced at the beginning of the War reached a peak in 1944. The stimulation of dairy production by producer subsidies during the entire war period, and the payment of consumer subsidies during the past three years has tended to increase the sales of fluid milk for direct consumption. After the collapse of Germany in May, 1945, production suffered from a reactionary development which became more pronounced after the final cessation of hostilities in August. The retreat from dairying in the Prairie Provinces following the bountiful harvest of 1944 with higher prices paid for grain and livestock, and the cumulative effects of the labour shortage, all played a part in halting the upward swing in dairying production during 1945.

Milk Production and Utilization.-Production of milk reached a high point in 1944. In 1945 a decline of $4,000,000 \mathrm{lb}$. was recorded, reducing the total to $17,620,000,000 \mathrm{lb}$. A notable feature of the situation was a slight decline in the quantity used in manufacture, which resulted from the smaller quantities used for making creamery butter. On the other hand, fluid sales increased about 2.5 p.c. over 1944, while the amount used on farms for manufacture, home consumption and live-stock feeding remained practically the same. In 1945, factory dairy
products absorbed approximately 56 p.c. of the milk supply as against a five-year average (1939-43) of 54 p.c. The proportion used for fluid sales also advanced, being 23 p.c. in 1945 as compared with an (1939-43) average of 20 p.c. On the other hand the percentage used on farms declined to 21 p.c. from 26 p.c. in the same comparison. Milk production in the Prairie Provinces showed a 7 p.c. reduction over 1944 which was partially offset by a combined increase of 3 p.c. in British. Columbia and the five eastern provinces.

Butter Production.-Creamery butter production in 1945 suffered a reduction of over $5,000,000 \mathrm{lb}$. This decline occurred in the Prairie Provinces only, where the reduction was 13 p.c. as compared with 1944.

The dairy butter make of $53,283,000 \mathrm{lb}$. was approximately $1,300,000 \mathrm{lb}$. below the output of 1944, each province, except British Columbia, having shown a reduced make. A point that should be observed, however, is that the Prairie Provinces continue to produce considerable quantities of dairy butter, most of which is made in Saskatchewan where the 1945 output represented 26 p.c. of the total production of Canada.

Cheese Production.-Cheddar cheese production in 1945 was the highest since 1942 , being approximately $184,000,000 \mathrm{lb}$. as compared with $206,000,000$ lb . in that year. The total factory production of $186,251,000 \mathrm{lb}$. (including $1,799,000$ lb . of cheese other than cheddar) represented an increase of $2 \cdot 5$ p.c. over that of 1944. Farm-made cheese amounted to $744,000 \mathrm{lb}$., being slightly less than that produced in 1944.

Miscellaneous Milk Products.-Concentrated milk products advanced to $298,684,000 \mathrm{lb}$. in 1945 , an 8 p.c. increase over 1944. Whole-milk products represented 82.1 p.c. of this total and milk by-products 17.9 p.c. Evaporated milk, the principal whole-milk product, moved up from $184,000,00 \mathrm{ll}$. to $202,000,000$ lb .; and skim milk powder, the principal by-product, advanced from $30,000,000$ lb. to $36,000,000 \mathrm{lb}$.

The restrictions placed on the production and sale of ice cream for civilian use tended to reduce the quantity manufactured. The closing of military establishments in the latter part of 1945 was reflected in the output for the year which fell to $16,431,000$ gal. as compared with $17,667,000 \mathrm{gal}$. in 1944.

Domestic Disappearance.-Creamery butter directed into consumption channels in 1945 , has been estimated at $292,508,000 \mathrm{lb}$.; combined with dairy butter and whey butter, the domestic disappearance of the total was $348,514,000 \mathrm{lb}$. On a per capita basis the former was 24.14 lb ., while dairy and whey butter were 4.40 and 0.22 lb ., respectively. It will be seen from Table 24 that the total per capita disappearance of 28.76 lb . was approximately 1 lb . less than that shown in the previous year, and just slightly more than that of 1943. The domestic disappearance of cheese (including cheddar, farm-made cheese and factory cheese other than cheddar) reached a total of $58,851,000 \mathrm{lb}$., averaging 4.86 lb . per capita. Concentrated whole-milk products showed a per capita disappearance of 14.15 lb . and concentrated milk by-products 4.04 lb . Comparative figures for 1944 were 13.17 lb . and 3.71 lb . Despite the increase in fluid milk sales already indicated, the increase in population in 1945 left the daily average unchanged at 0.98 pints per capita.
20.-Production and Utilization of Milk in Canada, 1939-45, and by Provinces, 1944 and 1945

## 27.-Values of Production, Cost of Milk at Plants, and Income from Dairying, 1939-45, and by Provinces, 1944 and 1945

Nors.-The first two columns of this table represent values based on total production, the entire milk supply being accounted for in each case. The third column is the cost of milk delivered for fluid and for manufactured purposes; while the fourth column represents the income received from the sale of milk, butteriat and dairy butter.

| Province and Year | Total Value of Dairy Products | Farm <br> Value of Milk Production | Cost of Milk Delivered at Plants | Sales <br> Income from Dairying | Per Hundredweight of Milk |  |  |  |

## Subsection 7.-Horticulture

Annual statistics of commercial horticulture are now confined to production and value of fruits. Until 1943 a survey of the floriculture and nursery stock industry was conducted annually, but as a wartime measure the collection and publication of this information was suspended. No estimates of the area and annual production of vegetables is as yet available but an attempt is now being made to collect this information for the major crops. Details of area, production and value of all the common vegetables grown in 1940 and 1941 will be found in a series of bulletins issued by the Census Branch. The processing of fruits and vegetables is closely allied with production and the total value of Canadian produce used by the fruit and vegetable preparations and wine industries amounted to $\$ 14,513,000$ in 1942 and $\$ 14,611,000$ in 1943.

Fruit Production.-The production of fruit in Canada on a commerciascale is confined to the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Fruit production in each of these Provinces is concentrated for the most part in fairly well defined sections. In Nova Scotia, for example, the Counties of Annapolis and Kings-the Annapolis Valley-and to a lesser extent Hants County are the main fruit-producing areas. In New Brunswick there are two chief centres for fruit growing, the most important being St. John River Valley, which includes the Counties of Queens, Kings, Sunbury and York. The other district is located in Westmorland County adjacent to Nova Scotia. The fruit areas in Quebec can be roughly divided as follows: the Montreal area
including Montreal and Jesus Islands; the North Shore area including the Counties of L'Assomption, Terrebonne and Two Mountains; the Eastern Townships including Châteauguay, Huntingdon, St. Jean, Missisquoi and Rouville Counties, and the Quebec City district including the Counties of Portneuf, Montmorency, Lévis, Bellechasse, L'Islet and Quebec. In Ontario the fruit-producing area is much more widespread and is located in the counties adjacent to the St. Lawrence River and the Great Lakes as far as Georgian Bay. The most famous fruit section is, of course, the Niagara district which includes Welland and Lincoln Counties. There are two other well-known sections: the north shore of Lake Ontario and the St. Lawrence including the Counties of Dundas, Grenville, Leeds, Hastings, Prince Edward, Lennox and Addington, Northumberland, Durham and Ontario; and the equally well-known section in the Georgian Bay district, including the Counties of Grey, Bruce and Simcoe. In British Columbia there are four well-defined areas of fruit production, the most extensive and best known is, of course, the Okanagan Valley. In addition, there are the Fraser Valley, the Kootenay and Arrow Lakes section and Vancouver Island.

## 28.-Estimated Commercial Production and Shipping-Point Values of Fruit in Canada, 1940-44, with Five-Year Averages, 1935-39

## Subsection 8.-Special Agricultural Crops

Maple Syrup and Sugar.-The production of maple products in 1945 was considerably smaller than in the previous season and much below normal. The crop, expressed in terms of syrup, was estimated at $1,530,000$ gal. or 50 p.c. below the 1944 level of $3,090,000$ gal. and 43 p.c. below the ten-year average. The amount of syrup made shows a reduction of 53 p.c. from the previous crop, but sugar production was fairly well maintained.

Producers were not prepared for the early flows of sap which, in some cases, began in March. Unusually warm days and lack of night frosts materially shortened the tapping season which lasted approximately three weeks. The number of trees tapped in 1945 was below the 1944 level, the result of the unusual season and acute labour shortage. More sales than usual were made direct to consumers, and prices were at the maximum permitted for the grades produced. Average prices were slightly higher than those of the 1944 season.

## 31.-Estimated Quantities and Values of Maple Sugar and Maple Syrup Produced in Canada, by Provinces, 1942-45

Note.-Many of the figures for 1942-44 in this table have been revised since the publication of the 1945 Year Book.

Sugar Beets and Beetroot Sugar.-At the present time there are four beet sugar companies operating in Canada: the Canada and Dominion Sugar Co., Ltd., with factories at Chatham and Wallaceburg, Ont., the Canadian Sugar Factories, Ltd., with plants at Raymond and Picture Butte, Alta., the Manitoba Sugar Company, Ltd., at Fort Garry (Winnipeg), Man., and at St. Hilaire, Que.

During the period 1940-44, beet prices per ton based upon the quality (sugar and purity) of beets grown in the various territories through the companies' contracts, increased by $\$ 1 \cdot 00$ to $\$ 1 \cdot 25$. The growers received since 1943 , over and above the aforementioned increase, a further benefit payment resulting from the excise tax reduction of 50 cents per bag of sugar, amounting to $\$ 1 \cdot 25$ to $\$ 1.50$ per ton of beets depending again upon their quality, making the total general increase $\$ 2.25$ to $\$ 2.75$ per ton.

During 1945, the Ontario Government, recognizing the plight of Ontario beet producers and the importance of beet growing for the Province both during and after the War, granted the beet growers there an additional subsidy of $\$ 1 \cdot 25$ to $\$ 1 \cdot 55$ per ton.
32.-Acreages, Yields and Values of Sugar Beets Grown in Canada and Quantities of Refined Beetroot Sugar Produced, 1937-44

Fibre Flax.-Table 33 shows that under the stimulus of the wartime demand for fibre-producing crops, the area devoted to this crop increased from 10,536 acres in 1939 to 47,070 acres in 1942. Through action of the Agricultural Supplies Board, the entire industry is on a mechanized basis and mill-processing machinery as well as mechanical pullers and lifters for field work are now manufactured in Canada. Canadian flax fibre and tow find a ready market in the United Kingdom and the United States.

The prospect of high returns encouraged many inexperienced growers to seed flax on poor land in 1942. With the low yields in 1942 and 1943 enthusiasm waned, growers preferring to plant crops with more certain yields and higher cash returns. In 1944 the season was late and it was not until the end of June that much of the crop was planted. While the area in 1944 was greater than in 1943, yields on the
late-sown acreage were disappointing. Spring weather in 1945 was also backward but after the experience of 1944 there was little late seeding, the acreage, as a result, was down sharply from 39,102 acres in 1944 to 21,557 acres in 1945.
33.-Acreages, Yields and Values of Flaxseed, Fibre and Tow in Canada, 1937-45

Norp.-Figures for the years 1915-30 will be found at p. 284 of the 1934-35 Year Book, and for 1931-36 at p. 224 of the 1942 edition.

${ }^{3}$ Subject to revision.
Tobacco.-The difficulties experienced in the first year of the War of 1939-45 in exporting Canadian tobacco leaf were overcome as sterling exchange became available for this commodity and as tobacco requirements for the British and Canadian Armed Forces increased. The rising price to growers increased acreages, except in 1943 when unfavourable weather, fertilizer and labour conditions militated against the growers. The crop of 1944, however, was the largest in acreage and in production since 1939 and gave the highest yield per acre since the crop of 1938. Prices have steadily advanced since 1940; flue-cured tobacco leaf averaged a farm price of 20.6 cents per lb . in 1940 , while the 1944 crop averaged $30 \cdot 7$ cents per lb ., burley leaf increased from $12 \cdot 2$ cents in 1940 to $23 \cdot 2$ cents in 1944 and cigar leaf advanced from 10.4 cents to 21.0 cents. These price advances reflected the increase in demand for tobacco for domestic consumption due to fuller employment, for supplies to the Armed Forces overseas and for export.

While the acreage in 1945 was the largest ever planted in Canada, the yield was lower than that of 1944, but showed an increase over 1942 and 1943.

Apiculture.-The keeping of bees in Canada is as much an industry as any other form of Canadian enterprise and has, in some cases, developed into a 'big business' involving more than a thousand colonies which produce many thousands of pounds of honey. Annual statistics of honey production have been published since 1924, when 22,200 beekeepers were engaged in producing honey. Since then, the number has almost doubled and in 1944 there were 40,700 beekeepers. Ontario continues to be the chief producing province and contributes about half of Canada's total production. In 1944, Ontario produced 43 p.c. of the total, followed by Manitoba and Alberta with 15 p.c. each, Saskatchewan with 12 p.c., Quebec with 10 p.e., British Columbia with 4 p.e. and the Maritime Provinces with 1 p.c.

The farm value of the Canadian honey crop in 1944 was estimated at $\$ 5,253,000$. While this was 14 p.c. below the value of production in 1943, it was 55 p.c. higher that the five-year $1938-42$ average of $\$ 3,392,000$. The average price received by producers, which showed a steady increase from 8 cents per lb. in 1938 to 15 cents per lb. in 1943, continued at this level during 1944.

## 37.-Beekeepers and Colonies, Production and Values of Honey and Beeswax in Canada, 1938-44

Note.-Statistics by provinces are shown in the "Quarterly Bulletin of Agricultural Statistics" Dominion totals for 1924-37 are given at p. 227 of the 1940 Year Book.

Index Numbers of Agricultural Prices.-Index numbers of prices of field crops, based on the five-year pre-war average (1935-39) prices, are shown for the crop years ended July 31, 1936 to 1945 in Table 41. The series relates to average prices received by farmers during the crop-marketing season Aug. 1 to July 31 of the following year.

## 41.-Index Numbers of Farm Prices ${ }^{1}$ of Field Crops, for Canada, Crop Years Ended July 31, 1937-45

#### Abstract

Nots.-For the formulæ used in the calculation and for index numbers by provinces, see "Quarterly Bulletin of Agricultural Statistics', January-March, 1942 . Indexes for the years 1931-32 to 1939-40 based on average prices, 1926-27, are given at p. 230 of the 1940 Year Book. Indexes on the present base, for the years 1909-10 to 1935-36, are given at pp. 180-181 of the 1941 Year Book.

| Field Crop |  | Index Numbers (1935-36 to 1939-40 = 100) |  |  |  |  |  |  |  |  |

## Subsection 10.-Agricultural Statistics of the Census

The more important miscellaneous agricultural statistics at present available from 1941 Census data are included in this Subsection. Information regarding types of farm, farm machinery and farm revenues and expenditures is given at pp. 238-240 and 243-245 of the 1945 Year Book.

Farm Population.-According to the 1941 Census, the number of persons living on farms, as of June 2, 1941, was $3,152,449$, or $27 \cdot 4$ p.c. of the total population of the nine provinces.

42.-Farm Population, by Sex and Provinces, Census of 1941-concluded

Rural and Urban Farm Population.-In distribution of rural farms, Ontario with 24.2 p.c., had the largest proportion; Quebec was second with 20.9 p.c. Of all persons living on rural farms in Canada in 1941, Quebec had 26.4 p.c., Ontario came second with $22 \cdot 3$ p.c., and Saskatchewan third with $16 \cdot 5$ p.c.

Of the 732,832 farms in the nine provinces, 7,812 , or $1 \cdot 1$ p.c., were located within the limits of incorporated cities, towns or villages. The population of 35,527 living on these urban farms represented $1 \cdot 1$ p.c. of the farm population and 0.3 p.c. of the total population of the nine provinces.

Quebec, with $36 \cdot 1$ p.c. of the urban farms and 42.4 p.c. of the urban farm population, had the largest proportion of any province. Ontario had 31.4 p.c. of the urban farms and 27.4 p.c. of the urban farm population. Alberta had $9 \cdot 2$ p.c. of the people living on urban farms and Nova Scotia had $7 \cdot 1$ p.c.

| Totals. | 725,020 | 7,812 | 732,832 | 3,116,922 | 35,527 | 3,152,449 | $4 \cdot 30$ | $4 \cdot 55$ | $4 \cdot 30$ |

Farm Workers.-In Canada as a whole farm workers, male and female, who were members of the family constituted 31.8 p.c. of the total farm population.

Of the 732,832 farms in Canada, only 267,337 or $36 \cdot 5$ p.c. employed hired help. The percentage of farms employing hired help was highest in Ontario with $46 \cdot 9$ p.c. and lowest in Quebec with 26.4 p.c. On those farms reporting hired help there
was an average of 26.7 weeks of such labour, and $3 \cdot 7$ p.c. of all farm workers in Canada were hired on a yearly basis. The average cost of hired labour was highest in British Columbia at $\$ 14 \cdot 62$ per week and lowest in Prince Edward Island at $\$ 8.58$ per week.

The above percentages for 1941 showed very little change over those for the 1931 Census. The 1931 census figures indicated that 33.2 p.c. of the total farm workers consisted of members of the family and that $38 \cdot 6$ p.c. of the farms of Canada employed hired help. According to that census, the percentage of farms in Ontario reporting hired help was $44 \cdot 7$, Prince Edward Island $43 \cdot 3$, Nova Scotia $27 \cdot 9$ and Quebec $28 \cdot 2$, and an average of $26 \cdot 2$ weeks of hired labour was reported for the whole of Canada.

Farm Tenure, Values and Indebtedness.-The tendency toward a decrease in the number of owned farms and an increase in farms "partly owned and partly rented" and "occupied by tenants", brought out by the figures of the 1921 and 1931 Censuses, is still prevalent according to the Census of 1941. The percentage of all farms fully owned, for the whole of Canada, has decreased from 86.52 in 1921 to $80 \cdot 47$ in 1931 and $75 \cdot 55$ in 1941. Percentage decreases in the number of owned
farms since 1931 were greatest in Saskatchewan at 19 p.c., Nova Scotia at 18 p.c. and Alberta at 12 p.c., while increases were shown in Quebec and Manitoba. The large acreage in the "partly owned and partly rented" type in the western provinces is due to the fact that most ranches are composed of small acreages actually owned and additional large acreages of pasture leased from the governments. In Saskatchewan the acreage of farms of this type showed an increase from 1931 to 1941 of $27 \cdot 0$ p.c., while the acreage of owned farms decreased by 20.7 p.c.

Farm values for the whole of Canada have shown a considerable decrease, amounting to $19 \cdot 2$ p.c. as compared with 1931 and $35 \cdot 2$ p.c. as compared with 1921. The value of land, buildings and implements and machinery contributed to the decrease between 1931 and 1941, while live stock showed an increase of $13 \cdot 2$ p.c. The major portion of the increase in live stock was recorded on Quebec, Ontario and Alberta farms.

The total mortgage debt reported on farms operated by the owner in Canada amounted to $\$ 607,187,100$ on June 2, 1941, a decrease of $9 \cdot 6$ p.c. from that of 1931. Each province with the exception of Prince Edward Island and Quebec showed a decrease. For the Dominion as a whole in 1941, $38 \cdot 9$ p.c. of the fully owned farms reported mortgage debts as compared with $35 \cdot 7$ p.c. in 1931 . The ratio of the mortgage debt to the value of the mortgage debt on farms that are fully owned decreased from 40.9 p.c. in 1931 to 23.1 p.c. in 1941.

${ }^{1}$ On buildings and land operated by the owner. $\quad 2$ "Fully owned" means that the operator holds the title to all land which he operates. It does not necessarily mean that the farm is free of debt.

## Subsection 11.-Agricultural Irrigation

Alberta.-The surface waters in Alberta are vested in the Crown and are administered by the Water Resources Office under the Water Resources Act (c. 65 R.S.A. 1942). All matters affecting the control of water supply generally, as well as the inspection and authorization of works for the use of water for domestic, industrial, irrigation, water power and other purposes and the granting of licences for such purposes are dealt with by that office. The Director of Water Resources at Edmonton is responsible for all field administration. The Irrigation Districts Act of Alberta (c. 98 R.S.A. 1942) provides for the formation of irrigation districts and authorizes the raising of loans or the carrying out of work under by-laws approved by the voters of the districts.

The operation of two large irrigation systems constructed by the Canadian Pacific Railway has been turned over to the water-users; these are now known as the Eastern and Western Irrigation Districts. The C.P.R. still retains the Lethbridge section, known as the Alberta Railway and Irrigation System, but negotiations $r e$ the transference of this System are under way.

During the past few years the Prairie Farm Rehabilitation Administration of the Dominion Department of Agriculture has been active in promoting and assisting the construction of irrigation projects. It is expected that certain long-awaited irrigation construction will commence in 1946; the Dominion Government has appropriated a sum of money for the first stage in the construction of the $\$ 3,500,000$ dam on the St. Mary River near Magrath. This dam, which will control all but extreme flood flows of the river, will be the key structure in a development that will eventually provide irrigation water for about 345,000 acres of land in the area between Lethbridge and Medicine Hat on the north and the International Boundary on the south; in addition it will improve the supply for the existing Alberta Railway and Irrigation, Magrath, Raymond and Taber Districts of about 120,000 acres.

The cost of the whole project is estimated at about $\$ 15,000,000$ to be divided between the Dominion and Alberta Governments and the local water-users. The Alberta Government is at present financing the construction of the East Pothole Coulee Reservoir, also a length of canal which will be fitted into the larger project. The Alberta Railway and Irrigation System, at present operated by the Canadian Pacific Railway, will be incorporated into the large development and negotiations between the Alberta Government and the Canadian Pacific Railway are in an advanced stage.

Largely on account of assistance given and promised by Prairie Farm Rehabilitation Administration, the Leavitt and Etna Irrigation Districts have been organized. Construction of the Leavitt District is nearing completion while that of the Wtna District has been commenced.

${ }^{1}$ Not completed.
In addition to the above, there are 630 private irrigation schemes in Alberta, with a total irrigable area of 70,813 acres.

British Columbia.-Early in the history of British Columbia, the common law of England relative to riparian rights was made non-applicable in British Columbia, and the water in all streams and lakes was vested in the Crown. Provision was made for the issue of licences authorizing the diversion and use of water for various purposes. The current legislation on the subject is the Water Act, 1939, which is administered by the Water Rights Branch of the Department of Lands and Forests.

There are outstanding 5,650 licences authorizing the diversion and use of water for irrigation, and 609 authorizing the storage of water for the same purpose. The majority of these were issued for individual projects, but there are 53 organized community projects varying in size from 64 acres to 7,500 acres of irrigable land. There are 150,000 acres irrigated in the Province, and approximately one-third of this area is under community projects. It is estimated that an additional 285,000 acres could be brought under irrigation.

The table at p. 236 of the 1940 Year Book gives particulars of many of the larger irrigation projects in the Province, and further information may be had from the Comptroller of Water Rights, Victoria, B.C.

## Subsection 12.-International Agricultural Statistics

Owing to the unavailability of the compilations of the International Institute of Agriculture at Rome, the statistics of world production of cereals and potatoes, trade in wheat and flour and numbers of live stock in principal countries, which formerly appeared under this heading, cannot be brought up to date.

| Subsection 1. Administration of Do- | 260 |
| Subsection 2. Forest Protection........ | 261 |
| Subsection 3. Scientific Forestry. | 263 |

The forests of Canada cover a vast region in the north temperate climatic zone, reaching from the Atlantic Ocean to the Pacific; they extend northward from the International Boundary to beyond the Arctic Circle. Wide variations in climatic, physiographic and soil conditions cause marked differences in the character of the forests in different parts of the country, hence more or less well-defined forest regions may be recognized. The principal regions are: Acadian, Great Lakes-St. Lawrence, Deciduous, Boreal, Sub-Alpine, Columbia, Montane and Coast.

## Section 1.-Forest Regions

At pp. 184-188 of the 1941 edition of the Year Book the forest regions of Canada are separately described, together with the dominant and associated tree species common to each.

## Section 2.-Important Tree Species

In Canada there are over 130 distinct species of trees. Only 33 of these are conifers or softwoods, but they comprise over three-quarters of the standing timber and supply nearly 80 p.c. of the wood used for all purposes. Of the deciduous-leaved or hardwood species, only about a dozen are of commercial importance as compared with twice that number of conifers.

A short description of the individual tree species is given at pp. 247-249 of the 1940 Canada Year Book. More detailed information on this subject is given at pp. 283-286 of the 1936 edition of the Year Book and in the Dominion Forest Service Bulletin No. 61, "Native Trees of Canada", published by the Department of Mines and Resources, Ottawa.

## Section 3.-Forest Resources

The forested area of Canada is estimated at $1,290,960$ sq. miles, or 37 p.c. of the total land area. In comparison, only 16 p.c. of the land area is considered to be of present or potential value for agriculture, and only 7 p.c. is now classed as "improved and pasture" The forested area within the boundaries of the nine provinces totals $1,167,960$ sq. miles, or 58 p.c. of the provincial land area. About 478,000 sq. miles of the existing forests are classed as "unproductive". They are made up of small trees which cannot be expected to reach merchantable size because they are growing on poorly-drained lands, or at high altitudes, or are subject to other adverse site conditions. These unproductive forests, however, perform valuable functions.

[^85]They help to protect watersheds and conserve water supplies; they provide fuel and building materials to natives and travellers in remote areas; and they are the habitat of valuable fur-bearing and game animals.

The productive forests covering more than 813,000 sq. miles are considered to be capable of producing continuous crops of timber suitable for domestic and industrial purposes. A considerable proportion of these forests is not yet accessible to commercial operations, but constitutes a valuable reserve for the future. About 435,000 sq. miles of productive forests are considered to be economically accessible at the present time. One-half of the productive forest area bears trees large enough for use as sawlogs, pulpwood or fuel wood, and the other half is occupied by young growth of various ages, kinds and degrees of stocking.

The total stand of timber of merchantable size is estimated to be $311,201,000,000$ cu. ft., of which $191,347,000,000 \mathrm{cu} . \mathrm{ft}$. is accessible. (These cubic volumes are volumes of wood that can actually be used; in earlier editions of the Year Book statements of cubic volume were in terms of total volume of standing timber, including stumps and tops. See pp. 265-66 for reasons for change in estimates.) Expressed in commercial terms, the accessible timber is made up of $250,250,000,000$ $\mathrm{bd} . \mathrm{ft}$. of logs in trees large enough to produce saw-logs and $1,684,710,000$ cords of smaller material suitable for pulpwood, fuel, posts, mining timbers, etc.

Forest inventory surveys are conducted by the Dominion and provincial authorities. Inventories for Manitoba and New Brunswick have been completed by the Dominion Forest Service and those of Nova Scotia and Prince Edward Island are now in progress. Publications describing the forest resources of Ontario and British Columbia have been issued by the forest authorities of those Provinces.

## 1.-Estimate of Total Stand of Timber in Canada, by Type and Size, and by Provinces and Regions

Note.-The figures in this table have been revised since the publication of the 1945 Year Book; they are based on a new converting factor (see text on pp. 265-266).

| Province and Region | Conifers |  |  | Broad-Leaved |  |  | Totals |  |  |

[^86]
## Section 4.-Forest Depletion and Increment

Depletion.-The average annual rate of depletion of reserves of merchantable timber during the ten years $1934-43$ was $3,150,000,000 \mathrm{cu} . \mathrm{ft}$. Of this total, 73 p.c. was felled for domestic and commercial use and 27 p.c. was destroyed by fire and pests. Of $2,312,000,000 \mathrm{cu} . \mathrm{ft}$. utilized, 37 p.c. was used in sawlogs, 31 p.c. for fuel, 28 p.c. for pulpwood, and 4 p.c. in miscellaneous products. Between 75 and 80 p.c. of the total cut was of softwood species. Losses by fire averaged 338,000,000 $\mathrm{cu} . \mathrm{ft}$. annually, and insects and tree diseases destroyed about $500,000,000 \mathrm{cu} . \mathrm{ft}$.

Forest Fires.-Fire losses in 1944 were somewhat higher than the average for recent years. The fire season was particularly severe in New Brunswick and Nova Scotia, whereas in Ontario and Saskatchewan losses were considerably below normal.

Summary statistics of fire losses are given in Tables 2 and 3, while fuller details by regions are given in the Annual Report of the Department of Mines and Resources for the fiscal year ended Mar. 31, 1945.

Increment.-Practically all of the annual depletion or drain on the forest is concentrated on the 435,000 sq. miles of productive forest which is classed as accessible, and replacement of normal depletion by this area alone requires an

50871-17 $\frac{1}{2}$
average growth rate of more than $11 \mathrm{cu} . \mathrm{ft}$. Complete estimates of the rates at which the forests of Canada grow are not yet available. The vast size of the country, the diversity of growing conditions, and the complex character of the forests themselves, place great difficulties in the way of estimating growth. Numerous studies have been made by the Dominion Forest Service which indicate, beyond reasonable doubt, that over considerable tracts annual growth exceeds 25,30 or even 40 cu . ft. per acre per annum; but there are other areas classed as productive on which the growth is much less.

Natural reproduction of forest tree species in Canada is fortunately prolific except in a few localities. After an area has been cut over or burned, young growth usually appears within a short time. Thus, the re-establishment of some sort of forest growth is a less difficult problem than it is in many other countries. There is, however, no guarantee that the species reproduced will be of the kinds desired by industry. Most of the wood used in Canada is softwood and, in general, softwood reproduction is fairly good; but there are considerable areas in which a combination of overcutting and repeated fires have resulted, not in the permanent destruction of the forest, but in the replacement of valuable stands by new ones of inferior type.

There is no room for doubt that the introduction of better methods of forest management, including the provision of more adequate forest protection, can make the forests of Canada more productive than they have ever been. It is true that stocks of very large trees, whose growth required upwards of 300 years, are disappearing and will not be replaced; but, though the forest industries of the future must use smaller logs than did those of the past, good forest management can make possible a considerable expansion of those industries as and when market conditions warrant.

The potential capacity of many forest soils to produce more usuable wood in a given period than they have ever done in the past is already being demonstrated on such areas as the Dominion Forest Experiment Station at Petawawa, Ont., and on some of the better-managed farm woodlots.

## Section 5.-Forest Administration

## Subsection 1.-Administration of Dominion and Provincial Timber-Lands

Although the forest resources are, generally speaking, under the control of the provinces, forests of the National Parks, Forest Experiment Stations and the Northwest Territories and Yukon are administered by the Dominion Government.

In Canada the general policy of both the Dominion Government and the Provincial Governments has been to dispose of the timber by means of licences to cut, rather than to sell timber-land outright. Under this system the State retains ownership of the land and control of the cutting operations. Revenue is received in the form of Crown dues or stumpage (either in lump sums or in payments made as the timber is cut); ground-rents and fire protection taxes are collected annually. Both ground-rent and Crown dues may be adjusted at the discretion of the governments.

The Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island practically all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia

71 p.c. of the forest land is privately owned; nearly half of this is in holdings exceeding 1,000 acres. In New Brunswick nearly 50 p.c. is under private ownership. The percentages of privately owned forest land in the other provinces are as follows: Quebec, 7.2 p.c.; Ontario, 6.0 p.c.; Manitoba, 12.7 p.c.; Saskatchewan, 11.9 p.c.; Alberta, $7 \cdot 7$ p.c.; and British Columbia, 3.4 p.c.
4.-Forest Reserves in Canada, 1945

| Province | $\begin{aligned} & \text { Dominion } \\ & \text { Forest } \\ & \text { Experiment } \\ & \text { Stations } \end{aligned}$ | Provincial Forest Reserves | Total |

| Totals. | 202.11 | 88,055-49 | 88,257-60 |

${ }^{1}$ Under National Park reservation and therefore not included in total.
Forest Lands under Dominion Control.-The forests under Dominion control are administered by the Department of Mines and Resources. The National Parks Bureau has charge of the National Parks, and the Bureau of Northwest Territories and Yukon Affairs administers the timber in those areas. The Indian Affairs Branch administers, in trust for the Indians, the timber within their reservations. The Dominion Forest Service has charge of the Forest Experiment Stations.

Forest Lands under Provincial Control.-With the exception of relatively small areas owned by the Dominion Government, the Crown lands and the timber on them are administered by the provinces in which they lie. As new regions are explored, their lands are examined and the agricultural land disposed of. Land suitable only for forest is set aside for timber production, and the policy of disposing of the title to lands fit only for the production of timber has been virtually abandoned in every province of Canada. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on a community basis. Information regarding forest administration in the individual provinces is given at pp. 234-236 of the 1942 Year Book.

## Subsection 2.-Forest Protection

Fire Protection.-The Dominion Government administers the forests of the National Parks, Forest Experiment Stations and the Northwest Territories and Yukon, and is, therefore, responsible for fire-protection measures therein. Each of the Provincial Governments, except that of Prince Edward Island, maintains a fireprotection organization co-operating with owners and licensees for the protection of all timbered areas, the cost being distributed or covered by special taxes on timberlands. In each province, with the exception just mentioned, provincial legislation regulates the use of fire for clearing and other legitimate purposes, and provides for close seasons during dangerous periods. An interesting development in this con-
nection in the Province of Quebec is the organization of a number of co-operative protective associations among lessees of timber-limits. These associations have their own staffs, which co-operate with those of the Board of Transport Commissioners and the Provincial Government. The latter contributes money grants, and also pays for the protection of vacant Crown lands lying within the area of the associations' activities.

In the matter of forest-fire protection along railway lines, the provincial services are assisted by the Dominion Railway Act administered by the Board of Transport Commissioners. This Act gives to that body wide powers relating to fire protection along railway lines under its jurisdiction. Certain officers of the various forest authorities are appointed ex-officio officers of the Board of Transport Commissioners and co-operate with the fire-ranging staffs which the railway companies are required to employ under the Dominion Railway Act.

In certain districts in Canada aircraft are used to good effect for the detection and suppression of forest fires. Where lakes are numerous, seaplanes or flying boats can be used for detection, and for the transportation of fire fighters and their equipment to fires in remote areas. Radio-equipped aircraft are employed on forest fire-protection operations; these enable the observer to report the location of a fire as soon as it has been detected.

In the more settled areas with better transportation facilities, fire detection is carried out by means of lookout towers fitted with telephone or radio for reporting fires. Field staff and equipment are maintained at strategic points ready to deal with fires when they are reported. These staffs, when not engaged on actual fires, are employed on the construction and maintenance of roads, trails, telephone lines, fire guards and other necessary improvements in the interest of fire protection.

Portable gasoline pumps, which weigh from 45 to a little over 100 lb . each, and linen hose are important equipment. These pumps can be carried to a fire by canoe, motor-boat, automobile, aircraft, pack-saddle or back-pack and can provide hose pressures up to 200 lb . per square inch, depending upon the elevation above and distance from the water supply. Hose lines over a mile in length are frequently used. Small hand-pumps supplied by 5 -gallon portable containers are also used effectively in many cases.

In addition to these improved measures, the enactment of legislation has tended to reduce the fire menace. The establishment of close seasons for brush-burning, and seasons during which permits are required for setting out fires and for travel in the forests during dangerous dry periods, have been of enormous value as preventive measures.

Another important advance in forest protection is the development by the Dominion Forest Service of methods for the daily measurement of the actual degree of forest-fire danger. In the forest types and regions in which the necessary research has been completed the forest authorities are able, not only to gauge the trend of increasing fire danger at any given time but, by the aid of weather forecasts, to anticipate the trend one or two days in advance and so regulate their activities to meet hazardous conditions as they develop.

The various governmental forest authorities conduct forest conservation publicity work independently and in co-operation with the Canadian Forestry Association.

Since its beginning in 1900, the Canadian Forestry Association has played an important part in securing popular co-operation in reducing the fire hazard. By means of its magazine, which has a large circulation, by railway lecture cars and motor-trucks provided with motion-picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of the Dominion. Special efforts are made through the schools by specially appointed junior forest wardens and other means, to educate the younger generation as to the value of forests, the devastation caused by fire and the means of preventing such destruction.

Forest Insects Control Board.-The mounting loss and damage through forest insects in Canada is now a matter of great concern to Governments and the forest industry in this country. In particular, the present uncontrolled epidemic of spruce budworm threatens the loss of raw materials on a scale approaching a national disaster.

To meet this situation an Order in Council was passed by the Dominion Government on Sept. 14, 1945, setting up a Forest Insects Control Board. (See Chapter XXII, Sect. 2, Subsection 2.) This Board operates under the supervision of the Minister of Reconstruction and Supply, which Department defrays its administration costs. Composition of the Board consists of eight members, one of whom is chairman, and includes representatives from the Departments of Reconstruction and Supply, Mines and Resources, and Agriculture, also one member from the pulp and paper industry, one member from each of the Provinces of British Columbia, Ontario and Quebec, and one member to represent the three Maritime Provinces, New Brunswick, Nova Scotia and Prince Edward Island.

The functions of the Forest Insects Control Board do not involve the taking over or replacement of any existing service, entomological or otherwise. Each service, Dominion or Provincial, must budget for and carry on its duties in its normal way. The purpose of the Board is to secure additional funds, where necessary, to supplement the functions of existing services and co-ordinate their several efforts into one cohesive program with a view to expediting the solution of the forest insect problem in Canada.

## Subsection 3.-Scientific Forestry

The great forestry problem is the management of Crown forests, first under provisional and later under more intensive working plans, so as to ensure a sustained yield. Forest research activities in this direction are now assuming great importance. The Dominion Forest Service operates four forest experiment stations and a National Park Reserve* with a total area of 227 sq. miles. Here investigations of the underlying principles governing the growth of forests are made and practical methods of management are tested.

About 600 technically trained foresters are employed by the Dominion, by provincial forest services or by paper and lumber companies. A number of foresters are actively engaged in commercial logging operations and, in addition to administrative work, these men carry on forest surveys either for the estimation of timberstands and making of maps, or to determine natural growth and reproduction conditions and factors.

Through the use of air photographs taken by the Royal Canadian Air Force and base maps prepared by the mapping organizations of the Departments of Mines and Resources and National Defence, the Dominion Forest Service has taken a leading part in the development of methods for the interpretation of air photographs

[^87]for forestry purposes. Most of the provincial forest services and many timberowning companies are also making extensive use of aerial photographs. It is now possible not only to map the areas occupied by the different forest types but to estimate the volume of standing timber with an accuracy that compares favourably with ground surveys. Aerial photographs drawn to scales suitable for mapping purposes and covering about $1,000,000$ sq. miles are now available in the National AirPhotographic Library of the Department of National Defence, and about 123,000 sq. miles of forest have been mapped and classified from the photographs. Still greater use of air photographs for forestry purposes is expected in future.

Research Work in Forestry.-In a special article on Scientific and Industrial Research in Canada, which appears at pp. 979-1012 of the 1940 Year Book, a comprehensive review of all phases of scientific research work being undertaken by the various Government Departments is given. Specifically at pp. 993-995, research in forest economics, silviculture, forest-fire protection and forest products is covered.

Forestry and FAO.-In October, 1944, the Food and Agriculture Organization of the United Nations was formally established and held its first conference at Quebec. The functions of the Organization generally, and as they concern agriculture particularly, are given at pp. 206-211. The relation of FAO to fisheries is outlined at pp. 291-294. The Canadian delegation included five representatives of forestry, headed by the Dominion Forester. The Conference decided that the Organization should include a Division on Forestry and Forest Products, because the promotion of human welfare requires provision of shelter and warmth as well as sufficient and suitable food. Furthermore, it was recognized that forestry and agriculture are alternative forms of land use and, in many cases, the two activities are complementary.

In many regions, the permanent success of agriculture itself depends on the maintenance of a satisfactory proportion of forest cover, in the form of farm woodlots or small community forests. The disastrous effects of complete removal of forest cover on ground water levels and on the stability of the soil are amply demonstrated in certain sections of Canada.

It is recognized that the very low standards of living now prevalent in many parts of the world cannot be substantially improved unless larger supplies of forest products can be made available. Wood is needed for the construction of better housing, granaries, and improved accommodation for live stock. Improved standards of living require improvements in education and in the dissemination of news, for which purposes paper manufactured from wood-pulp is essential. Wood cellulose has become one of the chief sources of textiles; consequently, the forests are assuming new importance in connection with the clothing of the peoples of the world.

At present there are great differences in per capita consumption of wood as between different regions. To some degree these differences arise from climatic factors because the needs for shelter and heating are much greater in cold countries than in the tropics. It remains true, however, that very large populations are unable to obtain sufficient wood because supplies are not available. With certain limitations, it is believed possible to establish minimum standards of wood consumption which are essential to a reasonable minimum standard of living in the different regions of the world, and it is expected that FAO will take the lead in the establishment of such basic requirements.

The FAO international forestry office will assemble information respecting forest resources, forestry conditions and practices, and forest industries on a worldwide basis. It will assist in the compilation of up-to-date statistics, and will be required to advise the appropriate international authorities respecting measures that might be adopted to correct shortages of forest products in different parts of the world. At the request of governments concerned it will organize technical missions to give advice on forest management problems.

Canada has undertaken to co-operate in the forestry work of FAO, and should benefit by the new services to be provided. In particular, improvements in the completeness and accuracy of information respecting world supplies and demands for forest products should help to stabilize the export markets that are so vital to Canada's forest industries.

## Section 6.-Forest Utilization

## Subsection 1.-Woods Operations

A short review of the differences in logging methods throughout Canada is given at pp. 195-196 of the 1941 Year Book.

In connection with operations in the woods it should be borne in mind that the forests not only provide the raw material for the sawmills, pulp-mills, wood distillation, charcoal, excelsior and other plants, but that they also provide logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products, which are finished in the woods ready for use or exportation. There are also a number of minor forest products, such as Christmas trees, maple sugar and syrup, balsam gum, resin, cascara, moss and tanbark, that go to swell the total.

It has been estimated that operations in the woods in Canada in 1943 involved the investment of over $\$ 281,000,000$, gave employment during the logging season amounting to $32,337,000$ man days, and distributed over $\$ 180,000,000$ in wages and salaries.

> 5.-Values of Woods Operations, by Products, 1938-43

| Product | 1938 | 1939 | 1940 | 1941 | 1942 | 1943 |

| Totals | 148,265,857 | 157,747,398 | 194,567,875 | 213,163,089 | 234,371,891 | 268,615,283 |

For more than 25 years, commercial units were converted to terms of cubic volume of standing timber by means of a series of factors which purported to represent equivalent volumes of wood consumed, including stumps and tops. Because of technological changes in logging practice, some of these factors have become obsolete. A change was necessary, and the Dominion Forest Service, Department of Mines and Resources, suggested that the practice of estimating total volume of 50871-18
standing timber should be discontinued and that estimates of cubic volume should be prepared in terms of merchantable wood used. The principal reasons for the proposed change were: (1) Results of forest surveys in most parts of Canada were nearly always expressed in terms of commercial units of merchantable wood; it seemed more logical to convert directly to cubic volume of merchantable wood than to make arbitrary allowances for stumps and tops that were not used. (2) Most, if not all, of the principal forest countries of the world reported merchantable rather than total cubic volumes, and the practice was likely to be standardized by the forestry office to be set up as a unit of FAO.

The Dominion Forest Service discussed the proposed change with the forest authorities of the provinces and obtained their views respecting new converting factors to be used. It was generally agreed that a change would be advantageous and the factors given below were adopted. It will be observed that, with respect to "Logs and bolts", a different factor is used for the coastal region of British Columbia than for the rest of Canada. This is necessary because of a much larger average diameter of the logs used in the first-mentioned region and the fact that the percentage of the cubic volume of a log that can be converted into sawn lumber increases with diameter. The volume figures in Tables 6 and 7 were calculated on the new basis.

## 6.-Wood Cut in Operations in the Woods, Equivalents in Merchantable Wood and Total Values, by Chief Products, 1943, with Comparative Totals, 1926-42

Note.-The figures in this table have been revised since the publication of the 1945 Year Book; they are based on a new converting factor (see text above). Details by chief products and by provinces for the years 1926-42 will be found in the "Annual Estimate of Operations in the Woods, 1944 ", published by the Forestry Branch, Dominion Bureau of Statistics.

## Subsection 2.-The Pulp and Paper Industry

The rapid development of this industry in Canada is traced briefly at p. 265 of the 1940 Year Book. Summary statistics for the combined pulp and paper industries are given at pp. 273-74 of this volume.

There are three classes of mills in the industry. These, in 1944, numbered 27 mills making pulp only, 50 combined pulp and paper mills and 27 mills making paper only.

The industry in Canada includes three forms of industrial activity, the operations in the woods with pulpwood as a product, the manufacture of pulp and the manufacture of paper. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. In all provinces except Nova Scotia, pulpwood cut from Crown lands must be manufactured into pulp in Canadian mills unless a special permit to export is obtained. A large proportion of the pulpwood cut in Canada for export to the United States is taken from private lands. In 1908 almost two-thirds of the pulpwood cut in Canada was exported in the raw or unmanufactured form, but the proportion has now declined to less than one-fifth.

## 8.-Production, Consumption, Exports and Imports of Pulpwood, 1931-44

Nore.-Figures for earlier years will be found in the corresponding table of previous Year Books. Figures of imports and exports are shown on a rough or unpeeled basis, and are not comparable with those shown in Tables 14 and 15 of the External Trade Chapter.

| Year | Apparent Total Production of Pulpwood in Canada |  |  | Canadian Pulpwood Used in Canadian Pulp-Mills |  | Canadian Pulpwood Exported Unmanufactured |  | Imported Pulpwood Used in Canada |  |

${ }^{1}$ All quantities are given in terms of rough or unpeeled wood.
${ }^{2}$ Less than one-tenth of one per cent. ${ }^{3}$ Revised since the publication of the 1945 Year Book.

The manufacture of pulp is the second stage in this industry. This is carried on by mills producing pulp alone and also by paper manufacturers operating pulpmills in conjunction with paper-mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species of wood for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulpmill, but in Canada there are a number of 'cutting-up' and 'rossing' mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for exportation. Pulpwood is measured by the cord ( $4^{\prime}$ by $4^{\prime}$ by $8^{\prime}$ of piled material). One cord of rough pulpwood contains approximately $85 \mathrm{cu} . \mathrm{ft}$. of solid wood, and one cord of peeled pulpwood $95 \mathrm{cu} . \mathrm{ft}$.

In Canada, four methods of preparing wood-pulp are used, one of which is mechanical and three chemical. Detailed descriptions of these processes are given in the 1931 Year Book, pp. 290-291.

Pulp Production.-Growth of pulp production was steady up to 1920, when $1,960,102$ tons of pulp were produced. With the exception of 1921 and 1924, each year up to 1929 showed consistent growth in the annual production, 1929 reaching a total of 4,021,229 tons. Figures from 1931 are given in Table 9.

## 9.-Pulp Production, Mechanical and Chemical, 1931-44

Nore.-Figures for earlier years will be found in the corresponding table of previous Year Books.

| 1940. | 3,368,209 | 56,017,547 | 1,922,553 | 92,987,720 | 5,290, 762 | 149,005, 267 |
| 1941. | 3,550,285 | 61,749,788 | 2,170,562 | 113,689,763 | 5,720,847 | 175, 439,551 |
| 1942. | 3,308,118 | $65,208,919$ | 2,298, 343 | 126, 936, 143 | 5, 606,461 | 192, 145, 062 |
| 1943. | 3,033,751 | $63,721,703{ }^{3}$ | 2,239,079 | 130,797,4493 | 5,272, 830 | 194,519,152 ${ }^{3}$ |
| 1944 | 3,113,142 | 72,097,231 | 2,157,995 | 138,944, 181 | 5,271,137 | 211,041,412 |

During 1944, 77 establishments turned out $5,271,137$ tons of pulp valued at $\$ 211,041,412$, as compared with $5,272,830$ tons of pulp, valued at $\$ 194,519,152$ in 1943. Of the 1944 total for pulp, $3,652,636$ tons, valued at $\$ 98,114,072$ were made in combined pulp and paper mills for their own use in manufacturing paper. The remainder was made for sale in Canada or for export. As in the case of pulpwood, a part of the product at this stage of the industry provides raw material for the later stages, while the remainder has a definite market value as pulp.

Over 58 p.c. of the production in 1944 was groundwood pulp and over 19 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite, bleached and unbleached sulphate, soda fibre and groundwood and chemical screenings made up the remainder. A considerable market has developed for screenings in connection with the manufacture of rigid insulating boards.

The manufacture of the $5,271,137$ tons of pulp produced in 1944 entailed the use of $7,177,639$ cords of rough pulpwood valued at $\$ 104,477,689$, and the total value of materials used in the manufacture of pulp was $\$ 122,160,859$.

## 10.-Production of Wood-Pulp in Canada, by Chief Producing Provinces, 1932-44

Nots.-Figures for earlier years will be found in the corresponding table of previous Year Books.

Pulp Exportation.-A table at p. 201 of the 1941 Year Book gives the exports of wood-pulp from the principal producing countries for 1913, 1938 and 1939. The latter figures are incomplete, owing to exigencies of war, and consequently the table has not been continued. Total exports of wood-pulp from Canada in the years 1942-45 will be found in Table 15 of the Chapter on External Trade.

Paper Production.-During 1944, 77 establishments produced 4,044,376 tons of paper and paper board with a total value of $\$ 255,545,841$, as compared with $3,966,344$ tons, valued at $\$ 234,036,152$ produced in 78 establishments in 1943. In addition to newsprint, Canadian mills have a highly developed production of fine paper, wrapping paper, tissues, paper board and other cellulose products: in fine paper Canada produces close to 600 types. In 1944 newsprint paper formed $75 \cdot 2$ p.c. of the annual paper production in Canada; the production decreased by 0.2 p.c. but the value increased by $8 \cdot 3$ p.c. as compared with 1943 . The remainder of the paper production was divided as follows: 14.5 p.c. paper boards, 3.9 p.c. wrapping paper, 3.8 p.c. book and writing paper, and about $2 \cdot 6$ p.c. tissue and miscellaneous papers.

## 11.-Paper Production in Canada, 1931-44

${ }^{1}$ Revised since the publication of the 1945 Year Book.
The Newsprint Situation at the end of 1945.-During the latter part of 1944 and the early part of 1945 , electric power, which had been taken from certain newsprint mills for direct war needs, was returned to the mills and newsprint production was then increased in some cases. During the same period, the supply of pulpwood also increased and labour commenced to become more plentiful. As a result, the production of newsprint in Canadian mills amounted to $3,259,208$ tons in 1945; production figures for previous years back to 1931 are given in Table 11.

During the war years, newsprint production was allocated under the jurisdiction of the Newsprint Administrator appointed by the Wartime Prices and Trade Board, and deliveries to various world markets were allocated on a monthly basis. In 1945, the United States market was allocated 200,000 tons a month during the first six months, 220,000 tons a month during the third quarter, and 230,000 tons a month during the fourth quarter. Canadian consumers were allocated 15,700 tons a month during the first six months, 16,800 tons a month in the third quarter and 17,500 tons a month in the fourth quarter of the year. Overseas markets received 37,500 tons a month during the first half of the year and 42,000 tons a month during the last half of 1945 .

Under these allocations, Canadian consumers received more newsprint during the six war years than they did in the six pre-war years. For United States consumers, Canadian mills have more than filled the gap caused by loss of United States and Scandinavian tonnage. During the war emergency, Canadian mills also supplied over 80 p.c. of the quotas for South American countries and, with help from Newfoundland, provided all the imports for the United Kingdom, Australia, New Zealand, Africa and India. Over 40 countries relied chiefly on Canada for their wartime newsprint supply.

Allocation of Canadian newsprint production to all markets, other than to Canada, terminated on Dec. 31, 1945. The industry compensation plan, which had been functioning since Sept. 1, 1942, and under which wartime burdens were distributed among all Canadian newsprint companies, also terminated on the same date.

World Production of Newsprint.-The world production of newsprint in 1939 has been estimated at $7,679,000$ short tons, of which North America supplied 54 p.c. and Canada alone 38 p.c. Owing to the War, statistics for later years are not available; a table at p. 203 of the 1941 Year Book gives figures of production in leading countries in 1938 and 1939, together with the average production in each country over the period 1928-39.

Exportation of Newsprint Paper.-In the fiscal year 1908, exports of printing paper were recorded separately for the first time, and were valued at $\$ 2,833,535$. This was largely newsprint paper. In the fiscal year 1913, when quantities were first shown, Canada exported 256,661 tons of newsprint valued at $\$ 9,980,378$; for the calendar year 1944, exports amounted to $2,805,776$ tons valued at $\$ 157,190,834$ and ranked fifth among the exports of the Dominion.

Since 1913 Canada has led the world in the exportation of newsprint. In 1938 the quantity of newsprint exported by the 11 principal newsprint-producing countries was $3,806,737$ short tons, of which Canada contributed $63 \cdot 7$ p.c. World comparisons for later years are not available.

Statistics of the Combined Pulp and Paper Industries.*-The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries, for they are frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into towels, stationery and other highly processed paper products are often combined in one plant. This further converting of paper within the pulp and paper industry itself represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper mills in this industry are now attributed to the particular industrial group of converting plants to which they properly belong. The figures for 1937 and subsequent years, therefore, exclude all information pertaining to paper converting, which tends to lower perceptibly all the principal statistics of the pulp and paper industry and to render these figures not strictly comparable with those of previous years. Including manufacturing operations as far as the basic paper-making stage, there were altogether 104 mills in operation in 1944. The employees numbered 37,896 and their salaries and wages amounted to $\$ 75,833,408$. If the pulp made for their own use in combined pulp and paper mills is disregarded, the total of materials and supplies used in the industry as a whole can be considered as amounting to $\$ 157,995,141$ in $1944, \$ 143,956,462$ in 1943 , and $\$ 135,970,437$ in 1942; the gross value of production as $\$ 369,846,086$ in $1944, \$ 344,411,614$ in 1943 , and $\$ 336,697,277$ in 1942 ; and net value of production, $\$ 174,492,103$ in $1944, \$ 164,244,088$ in 1943 , and $\$ 164,500,420$ in 1942.

The pulp and paper industry is one of the leading single manufacturing industries in C'anada. It was first in gross value of production from 1925 to 1934, but was replaced in 1935 by non-ferrous smelting and refining; it was first for many years in capital invested, in net value of production and in wages and salaries paid. During the war years, because of the extraordinary demands for munitions, vehicles and certain food products, such industries as non-ferrous metal smelting and refining, miscellaneous chemical products, slaughtering and meat packing, shipbuilding and repairs, iron and steel products and automobiles advanced temporarily to higher positions. This situation was quite abnormal, however, and the pulp and paper industry is resuming its former place as the leading peacetime industry in Canada. Only the manufacturing

[^89]stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. In world trade, pulp and paper are Canada's main commodities except gold; greater than wheat and far greater than nickel. Newsprint alone, over a considerable period, has brought Canada more export dollars than wheat, nickel or any other single commodity except gold. If the $\$ 20,000,000$ worth of exported pulpwood be taken into consideration, the gross total contribution of the pulp and paper industry towards Canada's excess of exports over imports in 1944 amounted to $\$ 285,000,000$, representing the difference between exports and imports of pulpwood, pulp, paper and paper products. The United States market absorbs, annually, practically all pulpwood exports, over 80 p.c. of the pulp and more than three-quarters of the paper shipments of Canada. About half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

## Subsection 3.-The Lumber Industry

The manufacture of sawn lumber is the second most important industry in Canada depending on the forest for its raw materials.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills and mills for cutting-up and barking or rossing of pulpwood that reported in 1944 was 5,508 , as compared with 5,140 in 1943 . Employees numbered 43,516 and wages and salaries amounted to $\$ 51,516,085$. The logs, bolts and other materials and supplies of the industry were valued at $\$ 118,167,020$ and the gross value of production was $\$ 216,556,623$. The net production in 1944 was $\$ 96,525,135$.

Lumber production in Canada reached its maximum quantity in 1911 with almost 5,000 million ft . b.m. The maximum value was reached in 1920. Average values were fairly uniform up to 1916, but increased rapidly from 1917 to 1920 , only to decline gradually during the following years to the lowest level for the entire period, which was reached in 1932. With the exception of 1938 , increases took place each year from 1933 to 1944.
13.-Quantities and Values of Lumber and All Sawmill Products Made in Canada, by Provinces, 1943 and 1944

| 1936.. |  | 3,412,151 | 61,965,540 | 3,019,030 | 6,754,788 | 286,323 | 874,231 |
| 1937. |  | 4,005,601 | 82,776,822 | 3,048,395 | 7,631,691 | 392,922 | 1,231,965 |
| 1938. |  | 3,768,351 | 72,633,418 | 2,761,978 | 6,894,654 | 239,467 | 656,320 |
| 1939. |  | 3,976,882 | 78,331,839 | 3,469,411 | 9,048,876 | 163,686 | 476,252 |
| 1940. |  | 4,628,952 | 105, 988, 216 | 4,420,240 | 9,600,497 | 216,465 | 688,167 |
| 1941. |  | 4,941,084 | 129, 287, 703 | 4,160,772 | 12,309,632 | 204,991 | 731,227 |
| 1942. |  | 4,935, 145 | 149, 854,527 | 3,720,482 | 13,191,084 | 181,994 | 737,874 |
| 1943. |  | 4,363,575 | 151,899,684 | 2,565,752 | 10,020, 804 | 114,029 | 554, 278 |
| 1944. |  | 4,512,232 | 170,351,406 | 2,697,724 | 11,411,359 | 110,639 | 645,010 |

British Columbia came first in total production in 1944, contributing $43 \cdot 9$ p.c. of the total cut in lumber and $85 \cdot 3$ p.c. of the shingles. Quebec followed in second place, Ontario was third and New Brunswick fourth. In 1944 spruce was the most important kind of lumber sawn; it is produced in every province. Douglas fir, which is sawn almost entirely in British Columbia, came second, with hemlock, white pine, jack pine and cedar next in order of importance. Cedar was the most important shinglewood sawn. The conifers usually form between 90 and 95 p.c. of the total cut of all kinds of wood.

Lumber Exportation.-The hewn square-timber trade reached its maximum development in the '60's; thereafter it declined gradually and has now almost entirely disappeared. Simultaneously with its decline came the increased exportation of deals and other sawn lumber, first to the United Kingdom and later to the United States. From the first, trade with the latter country has been confined largely to planks, boards and dimension stock. During the American Civil War exports of forest products of all kinds to the United States for the first time exceeded those to the United Kingdom, but in late years this has become the rule. The total quantity of sawn lumber and square timber exported changed little from 1900 to 1929 , averaging about 2,000 million ft . b.m. per annum, but decreased considerably in the next three years, reaching its lowest level of $790,000 \mathrm{M} \mathrm{ft}$. b.m. in 1932 . Since that time lumber exports have recovered.

## Subsection 4.-Manufactures of Wood and Paper

Sawmills and pulp and paper mills draw their raw material directly from the forest in the form of logs and pulpwood, and produce sawn lumber, other sawmill products and pulp and paper. There are also a number of important industries that use these products as raw material for further manufacture. Some of them produce commodities made almost entirely of wood, wood-pulp or paper, some manufacture articles in which wood is the most important component, and others produce articles in which wood is necessary but forms only a small proportion of the value. There are, in addition, a number of industries that use wood indirectly in the manufacture of articles that do not contain wood as a component part. The first class includes the manufacture of paper, sash, doors, other mill-work and planing-mill products; boxes, baskets, cooperage and other containers; canoes, boats and small vessels; kitchen, bakers' and dairy woodenware; wooden pumps, piping, tanks and silos; spools, handles, dowels and turnery. The second class includes the manufacture of furniture, vehicles and vehicle supplies, coffins and caskets, etc., and the use of paper in printing and the manufacture of paper boxes, bags, stationery and paper goods. The third class, where wood has a secondary importance, includes the manufacture of agricultural implements, railway rolling-stock, musical instruments, brooms and brushes, etc. The fourth class can be said to include practically every form of industrial activity, as few, if any, of these are entirely independent of the use of wood, directly or indirectly.

A classification based on the chief component material in the products of each manufacturing establishment is now largely used in compiling manufacturing statistics and for external trade purposes. Under this system most of the forest industries fall in the wood and paper group. In 1943, this group, comprising 9,974 establishments, gave employment to 183,865 persons and paid out $\$ 264,844,792$
in salaries and wages. Capital invested in the industries of the group amounted to $\$ 1,103,984,216$; the gross value of its products was $\$ 1,001,563,243$ and the net value, $\$ 508,835,982$.

Exports of Wood and Paper Products.-The forests of Canada contribute substantially to the export-trade values. During the calendar year 1944 exports of wood and paper products amounted to $\$ 440,901,011$ and made up $12 \cdot 8$ p.c. of the total value of Canadian exports for the period, amounting to $\$ 3,439,953,165$. Domestic exports of wood and paper products were exceeded by those of agricultural (vegetable and animal) products, which made up 32.4 p.c. of the total, and by mineral products with 34.0 p.c. Wood and paper products are prominent among the individual items of export. Even more impressive is the contribution made by products of the forest and forest industries toward Canada's excess of exports over imports. In 1944 this excess from trade in all commodities (excluding gold) was $\$ 1,724,200,000$. In comparison, the gross total contribution from trade in "wood, wood products and paper" only, amounted to $\$ 397,700,000$.

## Section 7.-Timber Control*

Canada's $500,000,000$ acres of productive forested land have taken on a new significance, not only because of the part they played in the War of 1939-45, but also because of their great and growing importance to the Canadian economy in the post-war world.

At the outbreak of hostilities in 1939, the Canadian lumber industry was experiencing a period of reasonable activity. During the following winter the cut of logs was increased but, on the whole, the industry experienced no great dislocation until early in the summer of 1940 . Then the conquest of Western Europe by Germany produced an entirely new situation.

To meet this emergency, the Department of Munitions and Supply established a Timber Control on June 24, 1940. Apart from applying the brakes to runaway prices, the heaviest task facing the Control during its first six months was the purchasing of lumber for departmental account and facilitating deliveries to war projects undertaken by the construction industry. At that time, Royal Canadian Air Force projects were built under contract but Army training camps were built by the Royal Canadian Engineers and lumber for the latter was purchased outright by the Department.

By December, 1940, Government purchases had exceeded $110,000,000 \mathrm{bd} . \mathrm{ft}$. and war contractors had taken an additional $260,000,000 \mathrm{bd} . \mathrm{ft}$. In this period, several flying schools, each requiring 6 hangars and 33 other buildings, were erected in the amazingly short time of 100 days or less. More than 5,000 wooden buildings were built in 1940, and about 4,000 more in the following year.

With the sudden expansion of the war effort, the railways were soon overburdened and the Control found it necessary to eliminate cross-hauling where possible. Much large timber had to be secured from British Columbia, but otherwise the policy was to buy from the nearest source.

At the same time the Control undertook to scrutinize the specifications for buildings and for all articles made of wood so that the proper grades might be used wherever possible. This procedure saved the Government hundreds of thousands of dollars and much valuable material. Enormous quantities of lumber were used

[^91]in making boxes and crates for shipping munitions, food, automotive equipment, aircraft, and other war supplies and, at the instance of the Control, many types of containers were redesigned by the Forest Products Laboratories of the Department of Mines and Resources, effecting important savings in lumber and shipping space.

To offset the shortage of structural steel during the period of greatest construction activity, new techniques in the use of wood were adopted. Huge structures were built without steel girders. This was made possible by the use of the then recently perfected ring connector, which permits the fabrication of timber joints of far greater strength than could be secured by previous practice. More than 700 hangars, drill halls, storage buildings, and other structures requiring a maximum area of unimpeded floor space were built in Canada with frames of structural grades of Douglas fir held together by the new connectors.

Lumber prices were among the first in Canada to be brought under control. At first this was accomplished through informal agreements between the Timber Controller and the trade but, when the general policy of Price Control was established on Dec. 1, 1941, under the Wartime Prices and Trade Board, the Timber Controller was appointed Administrator of lumber prices. During 1942, only minor adjustments in prices were authorized but in 1943, the rise in cost of production made necessary a general review of lumber prices throughout Canada and upward adjustments in most cases. From that date until the end of hostilities, lumber price ceilings were not altered, except in a few instances where circumstances demanded special treatment.

Control of civilian requirements was at first effected by informal direction of the Control but in January, 1943, an order provided that no person could buy more than $\$ 1,000$ worth of lumber or mill-work for construction or repairs at any plant, or more than $\$ 200$ worth for construction or repairs of a building, other than a plant, unless a permit was obtained from the Timber Control or a licence was granted by the Construction Control. This particular order was rescinded on Feb. 22, 1944, but some restrictions remained in force until after the end of the War. Other orders, passed at various times, prohibited the use of Sitka spruce, of aircraft quality, for any purpose other than for the manufacture of aeroplanes, and high-grade yellow birch logs suitable for veneering had to be placed at the disposal of the authorities. By the end of 1945, practically all orders of this type had been rescinded but it still proved necessary to restrict exports of lumber.

Since the end of the War, the domestic demand for lumber for all purposes including construction, railway maintenance and general industrial use, stepped up sharply with the conversion of industry to peacetime operation. Export demand also increased to unprecedented heights because of the needs for reconstruction throughout the world. At the end of 1945, visible demand for Canadian lumber was far greater than the supply, although preliminary estimates of production indicated that the year's output had reached the high total of $4,900,000,000 \mathrm{bd} . \mathrm{ft}$.

The continuance of prices in other countries at levels much higher than those in Canada made it necessary to continue strict export controls, even though the War was over, to provide for Canada's basic requirements and prevent the draining away of all domestic supplies. However, following the termination of hostilities, Timber Control, after protecting United Kingdom contracts, discontinued its allocation to specific countries, leaving the trade free to pick its own export markets, export quotas being fixed on an over-all basis.

Aircraft Woods.-During the War of 1914-18, Sitka spruce, which grows only on the west coast of North America, was found to be the most satisfactory wood for structural components of aircraft and, during the War of 1939-45, selected yellow birch logs from Eastern Canada were found most suitable for producing veneers to the exacting specifications required for aircraft plywoods. The Timber Control materially helped to ensure that manufacturers in Canada and the United Kingdom would receive adequate supplies of both these high-quality woods.

In the earlier years nearly all of the output of Sitka spruce of aircraft quality, went to the United Kingdom but by the spring of 1942 supplies threatened to become inadequate. The situation was further complicated by the inauguration of the Canadian program for building the Mosquito bomber. In June, 1942, a Crown company known as Aero Timber Products Limited, was established for the purpose of increasing production of Sitka spruce. The Company set up eight camps and supervised private operations. Output increased to $17,000,000 \mathrm{ft}$. in 1942 and to $26,000,000 \mathrm{ft}$. in 1943, about two-thirds of which was exported to the United Kingdom. The remainder was allocated between Canada, Australia, New Zealand and South Africa.

The United Kingdom is the largest user of aircraft veneers. Pre-war imports from Canada totalled about 10,000 tons annually but by 1941 they had increased to 60,000 tons. In that year the British Controller asked for assistance in obtaining birch veneer logs and aircraft veneers and plywoods and the Canadian Timber Control took over all negotiations. In August, 1942, a Crown company known as Veneer Log Supply Limited, was established and producers of logs of the requisite quality were required to offer them to the new Company.

In the spring of 1945, and before the end of hostilities, it was recognized that the peak of demand for special aircraft woods had passed. Substantial inventories had been built up and it was, therefore, possible for controls over the use of Sitka spruce and yellow birch veneer logs to be removed. The two Crown companies were wound up and surrendered their charters.

Wood Fuel.-Almost one-half of all Canadian householders depend on firewood to heat their homes. The larger part of this firewood is normally produced in farm woodlots and the diversion of farm labour to the Armed Forces and war industry resulted in a serious wood-fuel shortage in 1942. On the coast of British Columbia, where many homes are heated by sawdust or other sawmill refuse, a shortage developed because of the increased industrial demand for these products.

To deal with this emergency, a Wood Fuel Administrator was appointed under the Wartime Prices and Trade Board and these responsibilities were later assumed by a new division of Timber Control. In order to stimulate production, subsidies were paid to dealers and the interests of the consumers were protected by the establishment of ceiling prices. Transportation subsidies were paid where necessary, and the Government established stock piles of wood fuel in critical areas.

At the end of 1944, general subsidies were discontinued and price increases of $\$ 1$ per cord were allowed to producers, but throughout 1945 some subsidies were paid, on a discretionary basis, to dealers in areas where such action was deemed necessary to ensure supplies and to maintain the consumer price ceiling. Government stock piles were disposed of during the year.

Pulpwood.-At the end of 1941, pulpwood operations in Canada were brought under direction of the Timber Control, because it appeared that scarcity of woods labour and the increased demand for Canadian pulpwood in the United States might
combine to cause serious shortages. Advisory committees were established in each of the main pulpwood regions east of the Rocky Mountains. Domestic prices for pulpwood were established, by regions, after consultation with Canadian producers and consumers. Exports to non-Empire countries were made subject to permit and were allocated on a quota basis, with the understanding that mills in the United States, which normally relied on Canada as their chief source of pulpwood, would receive supplies based on available quantities and their average imports during the previous seven years.

Because of shortages in 1943, domestic prices were adjusted upward and placed on a consumer basis. This action was taken to bring pulpwood up to price levels comparable to those of other primary forest products. In 1944, a further increase in price was granted to brokers and dealers because they were considered to be an integral part of the trade and, as such, entitled to a certain margin over and above the price which might be paid to a producer.

Consumption of pulpwood by domestic mills was substantially higher during the war years than in the pre-war period. Shortages of labour made it necessary to draw heavily on accumulated inventories and the continued operation of many Canadian mills now depends on suitable weather conditions and the availability of adequate bush labour. Until inventories can be built up, some measure of control of exports of pulpwood appears to be inevitable.

Operating Difficulties.-From the early part of 1942, until the end of the War in 1945, the demand for labour by war industries was very great and, in addition, very large numbers of woods workers enlisted in the Armed Forces. As a consequence, woods labour in Canada has been in short supply and the loss of experienced key men has been particularly serious. Rationing of foods and difficulties in obtaining needed supplies have further added to the burdens of logging operators. In spite of these difficulties, the output of sawlogs, pulpwood, and other forest products has been maintained at a remarkably high level and, with the return of men from the Armed Forces, it is expected that still higher production will be possible during the immediate post-war years.

Effects on the Forests during the War Years, 1939-45.-Because the forested area of Canada is large in relation to the population, it is unlikely that heavy cutting during the War has seriously injured the future productivity of the forest estate. On the other hand, the need for obtaining the highest possible yield per man-day from the available labour force has tended to concentrate fellings in the best and most accessible forest areas and local overcutting has certainly taken place. In addition, stocks of specially valuable woods, such as Sitka spruce and yellow birch veneer logs, have been seriously depleted, and the reduction of trained forest protection staffs has resulted in considerable losses from fire and pests which might otherwise have been reduced. The existing situation can be corrected by building up forest protection organizations and improving the general standards of forest management and plans are being developed by the Dominion and Provincial Governments to accomplish these improvements.

# CHAPTER X.-FUR RESOURGES AND FUR PRODUCTION 

## CONSPECTUS

## Section 1.-The Fur Trade*

Historical Sketch.-The value of the fur trade to Canada cannot be measured on a dollars and cents basis. Like gold, spices and other highly desired products, furs were an important incentive to the voyages of exploration from the British Isles and Continental Europe in the early days of settlement in the Western Hemisphere.

From the earliest times the Basque and Breton fishermen operating upon the "banks" had traded for furs. As the French Court demanded more and more furs, adventurers came for the latter trade exclusively. Pont-Grave and Chauvin built Tadoussac in 1599 as a centre for this trade with the Indians of the Saguenay, and when trade routes were discovered farther inland, the founding of Quebec and Montreal followed. The French Government from the first granted monopolies to the fur trade, always on the condition that the company would bring to Canada a stated number of settlers. But settlement and the fur trade could never go together-settlement by driving fur-bearing animals farther afield made trading increasingly expensive, and the great profits of the fur trade, together with its freedom and romance, took the more adventurous-minded from commonplace pursuits of the settler. Trade spread west and south by the river routes, convoys bringing the furs yearly to Montreal and Quebec. The de Caen Company in the seventeenth century sent yearly to France enormous quantities of pelts. The beaver pelt became the unit of Canadian currency and was so used for many decades.

In the meantime, English navigators had been seeking a Northwest Passage to the Orient. By 1632 their efforts came to an end with little practical result. Hudson Bay, however, had been navigated, so that when the first English furtrading ships came some years later, they sailed by known routes to a safe harbour. The first expedition (1668) came at the instigation of Radisson and Groseilliers, two French coureurs de bois who had travelled in the rich fur country north of Lake Superior. They had sought aid in France but, being refused, türned to England. In 1670 the charter of the "Adventurers of England trading into Hudson Bay" was obtained by Prince Rupert, who became the first Governor of the Company now known as the Hudson's Bay Company (whence the name Rupert's Land). On the granting of the charter a second expedition set forth, the ships well laden with merchandise to be used in barter with the Indians and with supplies for new trading posts.

[^92]Forts were built on Hudson Bay and James Bay, at the mouths of rivers, and here the Company bartered with the natives. From the first, the relations with the Indians were friendly, and the Company soon won their confidence by fairness in barter and by help in time of need. As a result, the Indians carried their harvests of pelts to the Company's posts and the ships returned to England each year well laden with furs, the proceeds from which gave to the "Gentleman Adventurers" generous rewards for their vision and for the investment that had made possible the utilization of this rich domain. During the struggle between the English and the French, which commenced about 1685, the Company sustained heavy losses and no dividends were paid but, with the English victory, came a new era of prosperity. Additional posts were built, more and more Indians came to trade, great cargoes of furs were sent to England, and the shareholders again received substantial dividends on their stock.

After the Seven Years' War the fur trade from the south passed out of the hands of the French, and until 1771 the English were busy rediscovering the old French routes to the west. The discoverer of a new fur district was followed by competitors and, in the competition that followed, many were ruined and left for new fields.

There have been great changes in the fur trade. The railway first revolutionized conditions throughout the country, then more recently the advent of the motorvehicle has influenced the extension of highways to the borders of settlement, and beyond. Boats ply the lakes and rivers, and the aeroplane is requisitioned for the transportation of furs from the more inaccessible districts. The advance of lumbering, mining and agricultural settlement, together with improved methods of capture, have driven fur-bearing animals farther and farther afield, and caused serious reduction in their numbers. To guard against further depletion and to ensure the prosperity of Canada's great wild-life heritage, the Dominion and Provincial Governments have adopted, in co-operation, a strong policy of conservation.

## Section 2.-Fur Farming*

Since the early days of the fur trade, it has been the practice in Canada for trappers to keep foxes alive until the fur was prime, and from this custom has arisen the modern industry of fur farming. The earliest authentic record of the raising of foxes in captivity comes from Prince Edward Island, where about 65 years ago a number of foxes were raised on a farm near Tignish. After 1890 there came a period of rising prices for furs, and the fox farming industry grew rapidly. The beauty of the fur of the silver fox and the consequent high prices realized from the sale of the pelts, caused attention to be directed chiefly to this breed, a colour phase of the common red fox, which had been established through selective breeding carried on by the pioneer fox farmers. While experiments were being carried on in Prince Edward Island, attempts at raising foxes in captivity were also being made in other provinces, the records showing that foxes were successfully bred in Quebec in 1898, in Ontario in 1905 and in Nova Scotia in 1906. Fur farming is now carried on in all provinces of the Dominion and the number of farms, until the outbreak of war in 1939, showed a steady increase. An experimental fox ranch is operated by the Dominion Government at Summerside in Prince Edward Island, where problems of breeding, feeding, housing and general care are studied.

[^93]Although the fox was the first to be raised in captivity many other kinds of fur-bearing animals are now being raised-mink, raccoon, skunk, marten, fisher and rabbit. Mink farms are the most numerous of the miscellaneous class, raccoon farms coming next. From 1920 to 1939 there was a rapid expansion of fur farming in Canada and during that period there was a marked change in type of furs which were most acceptable to the market. Black fox was popular 25 years ago. A few years later the highest prices were being paid for quarter and half silvers and during recent years the full silver and new types have been setting the upper price limit. The development of new colour phases in foxes and mink has proven to be a new incentive to the fur-farming industry. New-type fox such as platinum, platinumsilver, pearl-platinum and white-marked are meeting a ready market as are the newtype mink including silver-sable, platinum, silver-blue, snow-white and a number of other colour phases.

In 1939 the Dominion Government introduced the grading of furs under the Department of Agriculture. One of the Department's main objectives in grading is to secure uniformity so that furs may be bought by grade without the necessity of buyers from foreign countries personally examining the pelts. Grading offers many benefits to the producer as well as to the trade in general: (1) it educates the rancher as to the proper value of his pelts, and creates an incentive to improve the quality of his product; (2) it furnishes much needed guidance in the planning of future matings; (3) it raises the standard of quality of the entire crop of pelts; and (4) it raises the level of prices for the higher quality pelts.

Statistics of Fur Farming.-The following tables give the numbers and values of the fur farms and animals, for recent years.
1.-Fur Farms, Land and Buildings, and Fur-Bearing Animals, by Provinces, 1941-43

| Province or Territory | Fur Farms |  |  | Values of Land and Buildings |  |  | Values of Fur-Bearing Animals |  |  |

| Totals | 234,269 | 7,094,357 | 256,928 | 7,928,971 | 204,480 | 6,753,855 | 219,257 | 10,044,903 |

The annual revenue of the fur farmer arises from two sources, the sale of animals and the sale of pelts. In the early years of the industry the value of animals sold from fur farms exceeded the value of pelts sold; in 1943 the latter figure was over ten times the former.

## Section 3.-Total Fur Production*

Early records of raw-fur production are confined to the decennial censuses, when account was taken of the numbers and values of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of rawfur production, basing its statistics on information supplied by the licensed fur traders. This survey was continued for some years. More recently, annual

[^94]statements, based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are now used in the preparation of the statistics issued annually by the Bureau. In the case of Prince Edward Island, the statistics are based on returns supplied directly to the Bureau by the fur traders who deal in furs produced in the Province.
4.-Pelts of Fur-Bearing Animals Produced in Canada with Percentages Sold from Fur Farms, Years Ended June 30, 1922-44

| Year | Pelts |  | Approximate P.C. of Value Sold from Fur Farms | Year | Pelts |  | Approximate P.C. of Value Sold from Fur Farms |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Number | Value |  |  | Number | Value |  |
|  |  | \$ |  |  |  | \$ |  |
| 1922. | 4,366,790 | 17,438,867 | 4 | 1934. | 6,076,197 | 12,349,328 | 30 |

| Saskatchewa | $1,174,164$ $2,446,665$ | 1, 106,354 | $2,440,942$ $4,542,818$ | 3,437,777 |
| Alberta........ ${ }^{\text {Brish }}$ | $1,446,665$ 677,168 | $1,513,951$ 682,371 | $4,542,818$ $1,860,990$ | 4,686,311 |
| Yukon........... | -52,897 | 68,371 78,005 | $1,860,990$ 338,035 | 2,736,991 |
| Northwest Territories | 385,440 | 297, 633 | 3,165, 107 | 2,199,132 |
| Canada | 7,418,971 | 6,324,240 | 28,505,033 | 33,147,392 |

The total number of pelts taken from all fur-bearing animals in 1944 amounted to $6,324,240$ as compared with $7,418,971$ in 1943. Examination of the figures by kinds, however, reveals that almost all the reduction occurred in the numbers of rabbit and squirrel pelts taken. The total value of pelts rose from $\$ 28,500,000$ in

1943 to $\$ 33,100,000$ in 1944 as a result of a further advance in prices per pelt for most kinds. Pelts of silver fox increased from $\$ 24.84$ to $\$ 33.99$ while those of mink increased from $\$ 11.08$ to $\$ 19 \cdot 55$.

## 6.-Pelts of Fur-Bearing Animals Taken in Canada, by Kinds, Years Ended June 30, 1943 and 1944

| Kind of Pelt | Pelts |  | Total Values |  | Average Values |  |

Fur Trade.-Since the War of 1914-18, Montreal has been recognized as an international fur market, holding the first Canadian fur auction sale in 1920. Through the medium of the Canadian fur auctions, grading and marketing of furs have been placed on a scientific footing, resulting in more stabilized prices to the benefit equally of trapper, breeder, manufacturer, distributor and consumer. Furauction sales are held also at Winnipeg, Edmonton, Vancouver, Toronto and Regina.

During the past twenty years or so, immense improvements have been made in the dressing, dyeing and finishing of furs. In 1944, the 18 fur-dressing and -dyèing plants in Canada treated $8,606,642$ fur skins, the chief kinds being rabbit $(3,593,393)$, muskrat $(1,641,374)$ and squirrel $(994,306)$. In 1943 the number of plants engaged in the manufacture of fur goods-coats, capes, scarves, muffs, etc.-numbered 495 with a total output valued at $\$ 39,131,614$.

The fur-farming industry was adversely affected by the impact of war. The London market, which in normal times took about 80 p.c. of the total production of Canadian fox furs, was lost and other outlets had to be explored. The United States, ${ }^{\text {i f fearing their market would become flooded with pelts from Canada and }}$
other countries, imposed a quota in 1939, limiting imports from all countries to only 100,000 units annually. Of this quota, Canada's portion was 58,300 units for the year, and not more than 25 p.c. of this quota was allowed entry in any one month. Under the original quota arrangement each piece, head, paw, tail, or finished article, was considered a unit for quota purposes.

During the first month of 1939 sufficient pelts, chiefly of inferior quality, pieces and tails, were presented for entry to fill the quota for the whole year. Although, as pointed out above, only 14,575 units were allowed entry in that month, the greater portion was held over and presented for entry at each opening day of the quota in subsequent months. In order to avoid recurrence of this situation in the 1940-41 season, government grading was established and qualitative restrictions were placed on the export of standard silver and black fox pelts to the United States and only pelts of the better grades were allowed to be exported to that country. This was most important because practically the only market left open was the United States market. The sale of pelts to that market brought back considerable foreign exchange needed under war conditions and at the same time proved an incentive to the producer who wished to ship pelts to that market to do considerable culling of his breeding animals as, prior to that time, the quality of the industry had been becoming somewhat inferior. In time it was noticeable in some of the provinces that the quality restrictions had had a good effect, and that an effort was being put forward to improve the standard of production. In the autumn of 1940 quota arrangements were amended, whereby Canada's portion of the 100,000 pelts allowed into the United States annually was increased to 70,000 pelts and not on a unit basis, for a separate quota was established for pieces and tails.

Recent breeding developments on fur farms and the active interest being shown in this phase of the industry indicate an expansion of production on fur farms.

## CHAPTER XI.--THE FISHERIES

## CONSPECTUS

## Section 1.-The Early Fisheries

Since the time of John Cabot's discovery of the mainland of North America in 1497, or very shortly thereafter, the exploitation of the fisheries of the country now known as Canada has gone on continuously. There is some evidence, indeed, that even before the days of Cabot fishermen from Europe had voyaged to the fishing grounds of this continent. According to the Census of 1941, of $3,676,563$ males gainfully occupied in that year (including persons on Active Service), 36,297 reported fishing as their principal occupation.*

More detailed reference to the history of the Atlantic fisheries will be found at p. 348 of the 1934-35 Year Book.

## Section 2.-The Canadian Fishing Grounds

The fishing grounds of the Dominion are among the most extensive and prolific in the world and fall naturally into three main divisions-Atlantic, inland and Pacific. A detailed description of each, the fish obtained from it, and the methods of fishing, is given on pp. 222-225 of the 1932 Year Book.

## Section 3.-Governments and the Fisheries

## Subsection 1.-The Dominion Government $\dagger$

Although the right of fisheries regulations for all parts of Canada rests with the Dominion Government (see Fisheries Act, 22-23 Geo. V, c. 42), the administration of the fisheries is carried on by different authorities in different areas. Except in the case of Quebec (where, by agreement between the Province and the Dominion, all fisheries are under provincial administration), the tidal or sea fisheries of Canada are administered by the Dominion Department of Fisheries. The non-tidal fisheries of Nova Scotia and the fisheries of Yukon and the Northwest Territories are also administered by the Dominion Department. On the other hand, the non-tidal fisheries of New Brunswick and Prince Edward Island, and those of Quebec, Ontario, the three Prairie Provinces and British Columbia are administered by the respective provinces, although the Dominion Department carries on some protective work in non-tidal waters of British Columbia, Prince Edward Island and New Brunswick.

[^95]Revenue accruing to the Dominion Government from fisheries in the fiscal year 1944-45 was $\$ 479,665$ as compared with $\$ 305,420$ in the preceding year. Dominion expenditure in connection with the fisheries in 1944-45 was $\$ 2,213 ; 203$ as against $\$ 1,744,151$ in 1943-44. This expenditure included spendings in connection with the International Fisheries Commission (Halibut Commission), the International Pacific Salmon Fisheries Commission, departmental administration, etc. The special war expenditures in 1944-45, which represented mainly fish supplied to the United Nations (principally the United Kingdom) under various governmental agreements, amounted to $\$ 21,727,350$.

Conservation.-From the inception of the Dominion in 1867, adequate conservation of the country's fish stocks has been a major objective of the Dominion fisheries authorities. The purpose of this work is, of course, to maintain and increase fish abundance. In general, conservation is achieved by such action as the control of fishing seasons, the regulation of fishing operation including control of types of gear, the imposition, where found desirable, of limitations of catch and prohibition of capture of undersized fish, and the prevention of the obstruction or pollution of fishing waters.

As an additional step towards the maintenance and increase of fish stocks, a Dominion system of fish culture has been carried on for many years in various areas where the fisheries have been under Dominion administration. In 1944, the Fish Culture Branch of the Department operated 13 hatcheries, 5 rearing stations, 6 salmon retaining ponds, and several egg collecting stations at a cost of approximately $\$ 181,000$. During the year, more than $18,500,000$ trout and salmon fry, etc., were distributed in suitable selected waters from the fish cultural establishments.

For some time, the Department has been carrying on a successful program for developing 'oyster farming', or commercial rearing of oysters, in those Atlantic regions where the oyster areas come under Dominion jurisdiction-in Prince Edward Island, Nova Scotia and parts of New Brunswick. The oyster farming carried on in the Maritime Provinces takes place on grounds made available to lessees by the Department on prescribed conditions, and the methods of cultivation employed by the lessees are those advised by the Dominion Fisheries Research Board. There are no oyster fisheries in Quebec; in British Columbia, the fourth oyster-producing province, the oyster areas come under provincial jurisdiction.

Direct Assistance to Fishermen.-Advice and instruction as to the most efficient methods of fish handling and processing are made available by the Department to fishermen and fish producers, with the co-operation of the Fisheries Research Board of Canada, and information brought out by the Board through its studies and experiments is put freely at the disposal of the fishing industry. .Special instruction in fish handling and processing is given in appropriate districts by Departmental employees trained for this work. Instruction is given both orally and by operational demonstrations. Under arrangements made by the Department, adult-education specialists from the University of St. Francis Xavier, Antigonish, N.S., the High School of Fisheries, Ste. Anne-de-la-Pocatiere, Que., and the University of British Columbia, Vancouver, B.C., assist fishermen by studying their problems and by joint action. The cost of this special work is met by the Department.

For several years during the War, subsidy to aid in the construction of needed additions to the fishing fleet was paid by the Department of Fisheries. Under this plan some 20 vessels of the packer-seiner type were constructed on the Pacific Coast, and a smaller number of draggers in the Atlantic provinces. The Atlantic subsidy plan is still operative. To assist Atlantic Coast fishermen in applying improved methods of fishing, an experimental long-line vessel was constructed by the Department and put into operation about a year ago. This work is being continued, with exploratory fishing for halibut on Atlantic grounds (not hitherto fished for this species) receiving special attention.

Defence considerations compelled the wartime discontinuance of special weatherreport broadcasts for fishermen, but this service has now been resumed, and extended, in appropriate areas. Weather reports and forecasts, prepared by the Dominion Meteorological Service, are broadcast several times daily at hours most likely to serve the fishermen effectively. The broadcasts are made from Canadian Broadcasting Corporation stations which cover the fishing areas concerned, and the information contained in them is also available to other stations for broadcasting.

By giving lectures on the nutritive values of Canadian fish foods in different centres of population, and demonstrating methods of fish cookery, the Departmental lecture-demonstration program gives useful though indirect assistance to the fishermen by helping to increase demand for their products. The program has been carried on for some years.

Fishing Bounty.-Annual bounty is paid to fishermen and owners of fishing boats and vessels on the Atlantic Coast under prescribed conditions. The bounty represents interest on the Halifax Award, and was established under authority of legislation to assist in sea fisheries development and construction of fishing vessels and boats ( 45 Vict., c. 18 passed in 1882, and 54-55 Vict., c. 42, passed in 1891).

$$

| Totals. | 18,458 | 19,709 | 159,399 | 158,230 |

${ }^{1}$ Amounts include payments to owners of vessels and boats.
Scientific Research.-Formerly known as the Biological Board of Canada, the Research Board operates under the control of the Minister of Fisheries and is, in effect, the scientific division of the Department. It conducts 6 permanent fisheries research stations, or centres, in different parts of the country and one or two sub-stations. Staffs of fisheries scientists and technicians carry on full-time work in connection with Canadian fisheries problems. Some reference to fisheries research will be found in a special article on Scientific and Industrial Research, which appears at pp. 998-1001 of the 1940 Year Book.

International Problems.-An outline of the problem regarding United States privileges in connection with Canada's Atlantic fisheries is given at pp. 351-352 of the 1934-35 Year Book. Since 1933, under the modus vivendi plan, which grew out of the unratified treaty of 1888, United States fishing vessels have again been permitted to enter Canadian Atlantic ports to purchase bait and other supplies. Canada has likewise extended port privileges on the Pacific Coast to United States halibut fishing vessels for some time past and, in more recent years, to United States vessels fishing for black cod and several other species. The United States Government has given similar privileges in United States Pacific ports to Canadian fishing vessels. These privileges include permission to buy bait, ship crews, tranship catches, etc.

Two fisheries problems of importance which have been the objects of joint action by Canada and the United States in comparatively recent years are the preservation of the halibut fishery of the North Pacific and Bering Sea, and the restoration of the sockeye salmon fishery of the Fraser River system to its former proportions. A Commission, equally representative of either country, was set up in each case: the International Fisheries Commission deals with the halibut question, and the International Pacific Salmon Fisheries Commission with the salmon problem. Under Commission regulation the stocks in the halibut fishery have been greatly increased. So far, the main project of the Salmon Commission has been the work of overcoming conditions at Hell's Gate Canyon on the Fraser River, which had been the principal obstacle to the restoration of the Sockeye run. Construction of large-seale fishways at the Canyon was undertaken by the Commission in 1944 following intensive scientific and engineering studies, and has now been completed, with apparent successful results.

International fisheries questions in the Great Lakes region are more complicated by the fact that Provincial and State Governments, as well as national authorities, may be concerned. Following a study of Great Lakes fisheries questions by a Board of Inquiry, representative of Canada and the United States, a convention between the two countries was signed at Washington, D.C., on Apr. 2, 1946, to provide for the development, protection and conservation of those fisheries through joint action. Under the convention, the two Governments agree to establish and maintain a joint commission which "shall undertake to develop a comprehensive plan for the effective management of the fishery resources of the Great Lakes for the purpose of securing the maximum use of these resources consistent with their perpetuation". The term "Great Lakes", as defined for convention purposes, includes Lake Ontario, Lake Erie, Lake St. Clair, Lake Huron, Lake Michigan. Lake Superior, the connecting waters, bays, and component parts of each of these lakes, and the St. Lawrence River from Lake Ontario to the 45th parallel of latitude.

FAO and Its Relation to Fisheries.-The word "agriculture" in FAOUnited Nations Food and Agriculture Organization-is used in a sufficiently broad sense to include the fisheries and forestry. The functions of the Organization generally and as they concern agriculture in particular are given at pp. 206-211. The relation of FAO to forestry is outlined at pp. 264-265.

It is obvious that any organization that proposes to concern itself with the food problems of the world must give consideration to the important food contribution of the fishery.

In this connection, the immediate task of FAO is the establishment of services that will bring together information and statistics covering the world production and distribution of fish. Another urgent task is to explore the resources of hitherto unexplored fishing grounds. During the war years, fishing on a commercial basis has been developed in many new areas, particularly off the coast of South America. The pressure of war was necessary to force an appreciation of these resources. A determined international aim to eliminate inadequate diets should lead to the development of additional new resources as well as to a more efficient and economical utilization of those resources that have been exploited over the past several centuries. Experience has proven that supplies of many types of fish are not inexhaustible and FAO can assist individual nations or groups of nations to proceed with conservation methods where the need is indicated. The fact that many of the important fishing areas of the world are located in international waters makes it particularly important that there be international co-operation in respect to the exploitation and conservation of world fishery resources. The report of the Fisheries Committee sets forth in detail, the lines along which FAO may proceed in so far as fisheries are concerned. Some of the more important considerations of that Committee are summarized in the following paragraphs.

Fisheries statistics have proven to be a difficult problem for individual nations and will undoubtedly be even more troublesome when an attempt is made to bring together the statistics of many countries on a comparable basis. The fishery does not lend itself to the statistical methods employed in agriculture where sample surveys give a reasonably accurate picture of the whole. Local conditions vary greatly in the fishery and it is necessary to make almost complete enumerations to secure satisfactory estimates of total landings. The seasonal nature of the fishery and the unpredictable movements of many types of fish make it extremely difficult to forecast what may occur in the future. Some countries have undertaken research into the life history and habits of fish but current knowledge of this nature is scanty for most countries and for most types of fish. FAO will be making a substantial contribution to the fishery if it can organize over a period of years such statistical information as is now available and encourage the extension of statistical work so that a more comprehensive picture of the world situation will be available.

In the field of biological and hydrographical research, FAO can play a part in the encouragement of the resumption of work suspended or curtailed during the War. Also it can encourage the initiation of such work by countries that have not heretofore carried on such research. The organization will provide a clearing house for the exchange of knowledge on current activities and provide a means for co-operative research by nations that share the same resources. Further, it can encourage the exchange of students and research workers among nations, in order to promote better opportunities for scientific training, as well as to ensure the co-ordination of activities and the improvement of research techniques.

From a nutritional standpoint, research done heretofore appears to be fairly adequate with respect to protein, fat, mineral content, certain of the essential vitamins and digestibility. A large volume of this information is available and FAO will provide a service by bringing together this information and encouraging investigations along lines where current knowledge is inadequate. FAO should also encourage studies designed to bring about increased consumption of fish, particularly in nations where the present diet is lacking in protein. Further research is desirable on the development of pharmacological products in order to diversify the uses for fishery products.

In the field of technological research, a great mass of information has been assembled on fish production and processing covering the handling of fish aboard the boat or vessel; the preparation of fish for market by icing, freezing, salting, drying, canning, etc.; and the warehousing, storage and transport of fishery products. Much work has also been undertaken in fishery by-products, such as fish meal and oil and in the development of mechanical devices for their preparation. While much still remains to be accomplished in this field, it is believed that existing knowledge is far in advance of practical application. FAO should, therefore, direct its efforts towards the adoption of these improved methods and the making available of up-to-date information to Member Nations. Further, FAO might sponsor periodic international conferences of fishery technologists to discuss problems arising in the various countries. Since existing research facilities are inadequate, FAO might encourage through co-operation with the interested international, national or private bodies, further development of existing research centres and the establishment of new centres in the major producing regions and in areas where fisheries might be more fully developed.

Very little work has been done in the fields of sociological and economic research in so far as the fishery is concerned. Since, in many instances, fishermen and shore workers are in the low income group of labour, more attention should be given to helping them improve their general well-being. FAO can assist in this connection through co-operation with such international bodies as those concerned with labour, health and education, to encourage the initiation of studies on such subjects as the relation of fishery methods to production and employment, to the general well-being and public health, to occupational hazards, to diseases, and to opportunity for education and community life. FAO might also encourage studies in the field of fishery economics which should extend not only to the economics of production, processing and distribution, but also to consumption.

Facilities for the training of fishery personnel in all phases of production, processing and distribution are at present very limited. Improvement of education relating to fisheries and fishery industries is important to the full development of resources. FAO should, therefore, encourage the establishment of fishery schools and suitable fishery courses at appropriate institutions.

The problem of conservation is becoming of more and more importance, and although it is considered preferable for any international action for conservation and management to be established on a regional basis, the free interchange of ideas and information between such regional authorities will assist in bringing about a wider degree of co-ordination and interest. FAO should stimulate interest in research in the field of conservation and render all possible support to the development of international programs designed to bring about the proper management of fishery resources. Since the full use of fishery resources depends to a large degree on the development of fishery techniques best adapted to the different conditions, FAO might accelerate progress by encouraging the full exchange of information and the practical demonstration of modern fishing vessels and gear. Also, in the field of conservation and full use of resources, FAO should encourage the adoption of suitable techniques of fish culture wherever facilities and conditions for the propagation of fish render such programs practical.

Turning to the field of processing, marketing and distribution of fishery products, FAO can lend assistance to Member Nations by assembling information on developments in this field and making it available to all other nations. In the case of those
nations where a lack of capital has restricted the development of the fisheries, FAO might encourage governments to provide the necessary credits and be prepared to give expert advice on this subject when it is required. It should also be possible for FAO to concern itself with the problems of international trade in fishery products and to study those factors that have, in the past, tended to restrict the volume of trade and to furnish such information to governments of producing and consuming countries or other interested authorities.

The committee dealing with fisheries at the Quebec Conference further felt that in view of the many problems that were likely to arise, the Director General and his deputies would benefit from consultations with an expert committee on fisheries, and therefore recommended that an advisory committee be appointed.

The foregoing indicates that the contribution which FAO can make to the advancement of the fisheries of the world is substantial. It will provide for the first real appraisal of the industry and for the co-ordination on a world basis of the scientific approach to the problems of exploitation and conservation with a view to deriving the maximum possible food contribution from the fishery. It will also provide an opportunity for better co-operation between the producing nations in the field of marketing so that the primary producers may be protected against the recurrence of the depressed economic conditions that persisted throughout the interwar period. The fisheries look to FAO with hope and confidence.

## Subsection 2.-The Provincial Governments

The work that is being done by the different Provincial Governments in connection with the administration of commercial and game fisheries, assistance to the industry, educational and research work and conservation is outlined at pp. 279-286 of the 1945 Year Book.

## Section 4.-The Modern Fishing Industry*

## Subsection 1.-Primary Production

The latter half of the nineteenth century saw the commencement of expansion in the commercial fishing industry of Canada. In 1844 the estimated value of the catch was only $\$ 125,000$. It doubled in the following decade and by 1860 had passed the million-dollar mark. Ten years later it reached $\$ 6,500,000$ and this was again more than doubled by 1878 . By 1900 it had reached almost $\$ 22,000,000$ and the growth continued with little interruption until 1918, when it reached $\$ 60,000,000$. This figure was not again reached until 1941, owing largely to lower prices rather than to smaller catches, but in that year a new peak of $\$ 62,258,997$ was reached. In the three latest years further increases were recorded, the 1944 figure of $\$ 89,427,913$ showing a gain of $43 \cdot 6$ p.c. over 1941. The figures given represent the total value of fish as marketed, whether in a fresh, dried, canned or otherwise prepared state.

[^96]
## 2.-Values of the Products of the Fisheries of Canada, 1870-1944

| Year | Value | Year | Value | Year | Value | Year | Value |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ |  | \$ |  | \$ |  | \$ |
| 1870 | 6,577,391 | 1907 | 25,499,349 | 1920 | 49,241,339 | 1933. | 27,496,946 |

| 1895 | 20,199, 338 | 1912 | 33,389, 464 | 1925 | 47, 942, 131 | 1938 | 40,492,976 |
| 1900. | 21, 557, 639 | 1913 | 33,207,748 | 1926 | 56,360, 633 | 1939 | 40,075,922 |
| 1901 | 25,737, 153 | 1914 | 31,264,631 | 1927 | 49, 123,609 | 1940 | 45, 118,887 |
| 1902 | 21,959, 433 | 1915 | 35,860,708 | 1928 | 55,050,973 | 1941 | 62,258,997 |
| 1903. | 23,100, 878 |  | 39,208, 378 |  | 53,518,521 |  | 75, 116, 933 |
| 1904. | 23,516,439 | 1917. | 52,312, 044 | 1930 | 47, 804, 216 | 1943 | 85, 594,544 |
| 1905. | 29,479,562 | 1918 | $60,259,744$ $56,508,479$ | 1931 | 30,517,306 | 194 | 89, 427, 913 |
| 1906. | 26,279,485 | 1919 | 56, 508,479 | 1932 | 25,957,109 |  |  |

In the early days of the industry Nova Scotia held the leadership among the provinces, but British Columbia now occupies first place with 39.0 p.c. of the total value of products, Nova Scotia second with 26.5 p.c., and New Brunswick third with $13 \cdot 4$ p.c.
3.-Values of the Products of the Fisheries of Canada, by Provinces, 1939-44

| Province or Territory | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | \$ | \$ | \$ | \$ | \$ |

| Saskatchewan. | 478,511 | 403,510 | 414,492 | 585,782 | 1,154,544 | 1,482,223 |
| Alberta. | 430,724 | 450,574 | 440,444 | 492,182 | 795,000 | 929,887 |
| British Columbia. | 17,698,989 | 21,710,167 | 31,732,037 | 38,059, 559 | 32,478, 632 | 34, 900,990 |
| Yukon. | 4,867 | 4,994 | 6,652 | 3,056 | 2,495 | 3,131 |
| Totals. | 40,075,922 | 45,118,887 | 62,258,997 | 75,116,933 | 85,594,544 | 89,427,913 |

The cod of the Atlantic and the salmon of the Pacific were rivals for first place in the earlier years of the fishing industry; since 1895 salmon has definitely taken the lead, with lobster in second place in recent years until the War reduced the foreign market. In 1944 cod, with an increase over 1943 of 10.9 p.c. in the quantity caught, took second place in order of marketed value; herring was third.

In Table $\mathbf{4}$ the quantities given are those of primary products caught, but the values are those of all products marketed, both primary and secondary. The grand totals are subdivided to show the values of the sea fisheries and inland fisheries, respectively, as compared with the whole. More detailed tables of quantities and values of both sea and inland fish marketed may be found at pp. 9-16 of the "Report on Fisheries Statistics", published by the Dominion Bureau of Statistics.

## 4.-Quantities Caught and Values of All Products Marketed of the Chief Commercial Fishes of Canada, 1940-44

Note.-The catch as shown in this table is in each case exclusive of the quantity of livers landed, but the value includes the value of the livers as marketed.

${ }^{1}$ Landings at British Columbia ports by United States vessels excluded for 1934 and later years. :Hake only for 1941 and later years. $\quad$ Clams only for 1941 and later years.
${ }^{6}$ Totals include minor items not specified.
${ }^{6}$ Since ling cod was included with and ior
1926, the average of the years $1927-30$ was taken as the quantity of ling cod for 1926 and this was deducted
from the quantity of cod reoorted for 1926, the resulting amount being used as the base for the volume index.
${ }^{7}$ Indexes are not given in this case since no production was recorded for the base year.
50871-20

## Subsection 2.-The Fish-Processing Industry

A special article on Developments in Fish Processing, prepared by the Deputy Minister of Fisheries, Ottawa, appears in the 1941 Year Book, pp. 225-226.

Establishments, Capital, Employees, Materials Used and Products.Among the fish-processing establishments in operation in Canada in 1944, the salmon canneries comprised the principal group with an investment valued at $\$ 10,752,238$, or 33 p.c. of the total for all establishments. About 63 p.c. of the value of production of the establishments was in the form of fish canned, cured or otherwise prepared, and 37 p.c. fish marketed for consumption in a fresh state.

## 8.-Fish-Processing Establishments, 1943 and 1944

Historical Sketch.-A short historical outline of the development of the mineral industry in Canada is given at pp. 309-310 of the 1939 Year Book.

## THE OUTLOOK FOR THE MINERAL INDUSTRY IN RELATION TO THE ECONOMIC DEVELOPMENT OF CANADA $\dagger$

Note.-In the 1940 edition of the Canada Year Book (p. 298) is an article entitled "The Development of Canadian Mineral Resources in Relation to the Present War Effort". This article gave a comprehensive idea of the role that the mineral industry, as developed in peacetime, could be expected to play in the Canadian war effort. By inference and by direct statement it was clear from the article that, in so far as a supply of mineral raw materials was concerned, Canada was in a position to undertake the production of munitions of war on a huge scale and, in addition, would be able to supply a large share of the Allied needs for these materials, in particular, the non-ferrous base metals.

The introductory paragraphs of the present article are in a sense a sequel to the above article, for they comprise, in the main, a brief account of the war record of the mineral industry. This is followed by a more lengthy consideration of the outlook for the industry in relation to the economic development of the country as a whole.

## Contribution of the Mineral Industry to the War Effort

The Minister of Mines and Resources has stated publicly on several occasions (notably in an address before the Montreal Branch of the Canadian Institute of Mining and Metallurgy on Jan. 11, 1946) that the Dominion's splendid war record can be traced in no small degree to the country's strong position as a producer

[^100]of minerals. The huge scale production by Canadian industry of the munitions of war-a production that was exceeded only by three other Allied countries-could not have been undertaken otherwise. Because of this strong position as a mineral producer, the Dominion was able to supply the Allied countries with a large share of their needs for such metals and minerals as nickel, copper, lead, zinc, mercury, asbestos and mica. Throughout the War, for instance, Canada supplied 80 to 85 p.c. of the Allied nickel requirements. From the mines in the Eastern Townships of Quebec came most of the asbestos used by the Allied countries. From imported ore was produced sufficient aluminum to supply, during a considerable portion of the War, close to 40 p.c. of the Allied needs for that metal. That the mineral industry gave of its best is amply borne out by its production record, and this in spite of the restrictions that were necessary in an all-out effort-restrictions such as the dislocation of labour, the loss of men due to enlistments, the difficulties of obtaining supplies, etc. The gold industry suffered the most, but it gladly co-operated by helping to man the base-metal and other_industries.

In reference to the production record, the Minister has stated that during six years of war Canada produced nickel, copper, lead and zinc to a total value of more than a thousand million dollars. Canadian mines produced approximately 810,000 tons of nickel, $1,800,000$ tons of copper, $1,600,000$ tons of zinc, and $1,300,000$ tons of lead. The Dominion exported over 76 p.c. of this total output. At the request of the United Kingdom, Canadian producers of copper, lead and zinc agreed in the early weeks of the War to supply that country with their surplus output of the three metals at the then prevailing prices. Certain minor upward adjustments were permitted under the terms of the agreement, but the adjusted prices were well below those that could have been obtained in the open market.

To meet the needs for the non-ferrous base metals, plant facilities had to be greatly extended. Production rates soon increased well beyond those of the peak pre-war years and, as a further measure of assuring that needed supplies were made available, the production of civilian goods requiring the use of metals in their manufacture was greatly curtailed and in some cases eliminated.

One of the greatest accomplishments on the Canadian industrial front during the War was in the production of aluminum. From a pre-war annual production of less than 29,750 tons of primary metal, the output increased to 340,500 tons in 1942, and reached a peak of 495,600 tons in 1943. This compares with a peak output of only 12,100 tons during the War of 1914-18.

Every effort was made in the early years of the War to encourage the production of gold. This continued until about the end of 1941, in which year production reached a peak, and by which time a much greater need had developed for the production of other metals and minerals. From then onward there was a steady decline in the output of the metal though, despite this decline, Canada produced gold to a total value of close to $\$ 952,000,000$ during the war years.

Within a few months of the commencement of the War, critical situations began to develop in the supply of the ores of the alloying metals, tungsten, molybdenum and chromium, and it became a matter of endeavouring to supply the needs from
domestic sources. In due course, with Government financial assistance and other aid, the problem was largely overcome, and a supply shortage that threatened to endanger a major part of the Dominion's war production program was surmounted.

As in the case of the metals, Canada drew heavily upon her wealth of nonmetallic minerals. In furtherance of her war effort the Dominion produced a total of $106,000,000$ tons of coal valued at $\$ 378,000,000$; close to $2,600,000$ tons of asbestos valued at $\$ 124,900,000 ; 57,800,000 \mathrm{bbl}$. of crude petroleum, $5,500,000$ tons of gypsum, and $3,700,000$ tons of salt. The production of clay products and other structural materials reached a total value of $\$ 269,000,000$. The wide range of production also included sodium sulphate used in copper-nickel refining processes; fluorspar, used in the manufacture of steel; brucite, from which basic refractories used for the lining of metallurgical furnaces are made; and high-quality mica, indispensable for electrical and other uses. In addition, such minerals as graphite, nepheline syenite, barite, rock wool, quartz, talc, limestone, and sulphur were produced.

For several of the minerals, however, production was far from sufficient to meet requirements, the major shortages being in crude petroleum and coal and, though it was used in much smaller quantities, cryolite should also be included because of its vital use in the production of aluminum. On the opposite side of the ledger can be credited Canada's large exports of asbestos, gypsum, barite and mica, and lesser though important amounts of sodium sulphate, nepheline syenite and other minerals.

From the commencement of the War until 1943, when a peak was reached in the output of munitions, practically every unit of production in the mineral industry was operated at or near capacity. At several of the larger mines, because of the urgent need for production and the shortage of labour, underground development work had to be steadily curtailed, and in some cases it was discontinued. Within a year and a half of the commencement of the War almost every ton of metal and mineral produced was diverted to war use or to essential civilian use, and there was little relaxation of these restrictions until near the end of hostilities. The industry's widespread and diversified operations were so planned and directed that the Dominion's war industries were assured of a maximum supply of mineral raw materials with a minimum of delay in making them available. In net result Canada was enabled to expand her war industries virtually without limit other than that governed by the needs of the situation.

## The Present Outlook

Long before the War had ended, the matter of the industry's outlook in the post-war years was engaging the attention of those concerned with its welfare. Already mining had shown a remarkable growth, but this growth was more evident in annual production figures than in an increase in physical assets as represented by the disclosure of new sources of mineral supply. The high rate of depletion of known reserves during the War only served to accentuate this feature. The fact that the known reserves of most of the principal metals are large was comforting knowledge only to the extent that there was no particular cause for concern for the next several years. The wasting asset angle can never be overlooked, however, in an industry like mining, and it was recognized that every effort would need to be made to stimulate prospecting and exploratory activities. Such efforts, it is generally agreed, should be continuous in nature and should form part of a long-range mineral policy.

It should be emphasized in this connection that Canada has reached a stage in its mineral development where careful planning and the use of scientific methods are required in the search for new sources of mineral supply. The present-day prospector and exploration company realizes that most of the so-called "easy finds" have probably been made, and that every advantage must be taken of the benefits of science to avoid wasted efforts and expenditure and to provide reasonable assurance of success. Geophysical methods of prospecting in conjunction with geological surveys are being used to an increasing extent, more particularly in areas where the overburden is thick. These methods have undergone considerable improvement in recent years, but they cannot be employed to full advantage until further improvements are made.

As had been expected, there was a substantial decline in the demand for most products of the mines following the cessation of hostilities. This caused no great concern, as there were indications that the decline was temporary in nature and that it would be followed in due course by a rising demand for these products. Throughout the War the production of civilian goods of all classes was reduced to a minimum in Canada and elsewhere. These goods, for the most part, require the use, directly or indirectly, of metals and minerals in their manufacture, and it seems evident from the extent of the demand for such goods, that tremendous quantities of these raw materials will be required. Moreover, as a result of scientific achievements during the War, many new products will be marketed in due course, and a marked increase in the use of transportation and other services can be expected. These latter factors will tend to increase the demand for metals and minerals. It seems likely also that the rehabilitation of the economy of war-torn portions of Europe and Asia will provide an important outlet for these products. It is well to keep in mind, however, that forecasts made at an early stage in the reconversion period are almost unavoidably influenced by what might be described as mass reaction resulting from a long period during which goods and services were in short supply. Thus the demand may level off when it is realized that production is again fully underway and that requirements can be obtained without difficulty.

In any event, as a producer of most of the principal metals and minerals, Canada is vitally concerned in all matters likely to affect the outlook for the mineral industry. What bearing the outlook will have on the economic development of the country as a whole can be best appraised, perhaps, by considering the divisions or branches of the industry in order of their importance from the viewpoint of their annual value of production. On this basis the gold industry is first in importance by a fairly wide margin, and is followed in order by the non-ferrous base metals; other metals or metallic ores; the fuels; and the non-metallic minerals, including the clay products and other structural materials. These groups are considered in the order given.

The Gold Industry.-Since 1930 gold has been the greatest single contributor to the Canadian mineral output. Production reached a peak of $5,345,179$ fine oz. valued at $\$ 205,789,392$ in 1941 . Owing to wartime restrictions it declined steadily until the late summer of 1945, the output for that year amounting to $2,661,567$ fine oz., valued at $\$ 102,470,330$. Canada, however, has continued to hold second position as a gold producer, being exceeded only by South Africa.

Little comment is needed as to the importance of gold mining to the national welfare, for few industries have contributed more toward the strengthening of the Canadian economy. Prior to 1931 when the price of gold began to rise the major
operations were confined mainly to the Porcupine and Kirkland Lake camps in Ontario. The price continued to rise until January, 1934, when it was fixed by the United States Government at $\$ 35 \cdot 00$ an oz. Since late in 1939 the price in Canadian funds has been $\$ 38 \cdot 50$ an oz. The effect of the price rise was revolutionary. Properties that had long been abandoned were reopened; existing producers made plans for the extension of their activities; prospectors by the thousands set out in search for the metal, and within a few years gold-mining communities were springing up in areas here and there throughout the country that had hitherto been little more than a wilderness. Porcupine and Kirkland Lake still remain at the top of the list from the viewpoint of production, but they are sharing honours with such contributors to the output as the Bourlamaque and Cadillac areas in Quebec; the Little Long Lac, Pickle Crow, and Red Lake areas in Ontario; the God's Lake and Rice Lake areas in Manitoba; the Bridge River area in British Columbia; and the Yellowknife area in the Northwest Territories.

It is difficult by the use of figures alone to reveal the extent of the expansion in the industry, but the statement below gives an idea of the growth and suggests also something of the importance of this expansion to the national welfare.

| Year | $\begin{gathered} \text { Mills } \\ \text { in } \\ \text { Operation } \end{gathered}$ | Total <br> Daily <br> Capacity | Annual Value of Gold Production | Employees | $\begin{gathered} \text { Salaries } \\ \text { and } \\ \text { Wages Paid } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | tons | \$ | No. | \$ |
| 1928. | 30 | 18,000 | 39,082,005 | 9,400 | 15, 154,300 |
| 1931. | 32 | 16,075 | 58,093,396 | 10,000 | 17, 150, 100 |
| 1934. | 115 | 33,392 | 102, 536,553 | 18,400 | 28,184,500 |
| 1939. | 161 | 57,815 | 184, 115, 951 | 26,500 | 55,672,146 |
| 1941. | 148 | 64,870 | 205, 789,392 | 33,350 | $64,105,100$ |

Despite the marked decline in production since 1942, the outlook for the gold industry appears to be bright. As rapidly as conditions permit, the companies concerned are getting their properties into full-scale production and much of the ground that was lost during the War will have been regained by the end of 1946. Quite apart from this is the unprecedented amount of exploratory and related work that has been under way during the past two years and is continuing on an increasing scale. This work has been especially active in western Quebec, in various parts of Ontario, in the Snow Lake and adjoining areas in Manitoba, and in the Yellowknife area in the Northwest Territories. Reports from several of these areas indicate that 1946 will be a particularly active year, especially in relation to the diamonddrilling of deposits. In this exploratory work the results to date in the main have been encouraging. Several deposits of merit have already been disclosed and on some of these shaft sinking and other preliminary development work is under way. Few of the properties concerned, however, are likely to reach production before the end of 1947.

The outlook for the gold industry from the long-range viewpoint is more difficult to appraise, particularly as the price of the metal in relation to taxes, salaries and wages, and the prices of commodities, has a bearing on the future of the industry. The extent of the known reserves is an important factor, and in this connection it should be noted that most of the long-established producing mines, in particular those in the Kirkland Lake and Porcupine areas, are in a position to continue operations at the pre-war scale for several years. For the most part also, the properties that entered production since 1931 have reserves sufficient to assure continuous
operations well into the future; some of these properties are now among the leading contributors to the output. In the search for new sources of gold much attention continues to be given to the older areas, large portions of which are overlain by glacial drift of considerable thickness. Geophysical methods of prospecting will be used to an increasing extent in determining the possibilities of such areas. In the outlying areas, interest has been greatly stimulated as a result of recent discoveries, and the indications are that, despite such handicaps as high transportation costs, these areas will receive increasing attention.

The Non-Ferrous Base-Metal Industry.-Canada has long been the leading producer of nickel and during the past twenty years it has been a leading producer of copper, lead and zinc. Almost all of its nickel production is obtained from the properties of International Nickel Company of Canada, Limited, in the Sudbury area and from the Falconbridge Mine in that area. Close to 50 p.c. of its copper production comes from the mines of International Nickel Company, the other chief sources of supply being the Noranda deposits in Quebec, the Flin Flon deposits in Manitoba and Saskatchewan, the Sherritt-Gordon Mine in Manitoba, and deposits of Britannia Mining and Smelting Company and of Granby Consolidated in British Columbia. About 96 p.c. of the lead output is obtained from the Sullivan Mine of Consolidated Mining and Smelting Company at Kimberley, B.C., and this Mine is also the source of about 55 p.c. of the zinc output, the remainder of which is obtained chiefly from the Flin Flon and Sherritt-Gordon deposits, and from mines in western Quebec.

Aside from the mines, concentrating plants and smelters, the productive facilities of the industry include a lead refinery and a zinc refinery at Trail, B.C., a zinc refinery at Flin Flon, Man., a copper refinery at Copper Cliff, Ont., a nickel refinery at Port Colborne, Ont., and a copper refinery at Montreal East in Quebec. From a capacity viewpoint these refineries are among the largest in the world, the copper refinery at Copper Cliff being the largest in the British Empire. In addition to these facilities the industry maintains extensive research and sales organizations, and thus it has a well-integrated physical set-up that makes for efficiency of operation.

On its return to peacetime operation the industry faced an uncertain outlook. In large areas of the world economic conditions were in a chaotic state and in others they were sufficiently unsettled to preclude any worthwhile appraisal of the prospects. However, within a few months, limited but definite headway had been made in the reconversion of industry and in due course the outlook for the base metals became somewhat less uncertain.

To appraise the outlook properly it would be necessary to take many factors into consideration, such as world consumption and production trends in relation to the four metals concerned, competitive production costs, stocks of the metals on hand in the chief consuming countries, changes that may arise as a result of the War in regard to matters affecting world export and import trade, and the probable trend of economic conditions in the chief metal-consuming countries. It is considered sufficient for the purpose of this article, however, to bring to attention certain features in respect to each of the four metals by way of suggesting the probable trend.

Copper.-Canada's production of this metal during the past decade has ranged from a low of approximately 211,000 tons in 1936 to a record output of 328,000 tons in 1940. It declined to 238,000 tons in 1945. During the years 1936 to

1939, inclusive, Canada exported an average of 90 p.c. of its copper output, and during the years 1940 to 1944, inclusive, it exported an average of 64 p.c., the exports in both cases being mostly in the refined form. In the former period an average of 50 p.c. of the output was shipped to the United Kingdom, 13 p.c. to the United States, and the remainder of the surplus output was shipped mostly to Europe. In the latter period the corresponding figures are 42 p.c. to the United Kingdom and 17 p.c. to the United States.

Making allowance for a substantial increase in the domestic consumption as compared with the pre-war years, Canada is likely to have available for export at least 70 p.c. and probably as much as 80 p.c. of its output. World production and consumption had been fluctuating in an upward direction for several years prior to the War and this trend was continuing upward early in 1946. In the United Kingdom stocks are low mainly as a result of domestic consumption and partly as a result of shipments to European areas, and that country has already placed fairly large orders for Canadian copper.

In Continental Europe there appears to be a large potential demand for copper and for most of the other mine products, but this demand may be slow in developing as there are many difficulties in the way. Much time will be required to restore trade channels. Food is the main consideration of most of these countries at present and will probably continue to be for an indefinite period. The Dominion, prior to the War, shipped only a small percentage of its surplus output to Asiatic countries. In the United States, the demand for the metal has been well ahead of production and that country appears likely to become an important importer. If so, Canada will share in the trade, although Chile is in a more favourable position because of the large American investments in mines in that country.

Nickel.-As Canada is the source of from 80 to 85 p.c. of the world nickel supply, the outlook is governed mainly by the trend of business conditions in general. Present Canadian production capacity amounts to about 160,000 tons of the metal a year but, owing to a decline in nickel sales and the large volume of nickel on hand, International Nickel greatly curtailed its output shortly after the end of the War. This curtailment is expected to be temporary in nature.

Canada uses less than 10 p.c. of its nickel output and will thus have large surpluses available for export. In 1945 the United States steel industry was the chief consumer and used about 60 p.c. of the refined metal exported from Canada in that year. Early in 1946 the American steel industry was operating at about 90 p.c. of rated capacity, and sufficient orders for steel were on hand or in the offing to enable near-capacity operation well into the future. Many war uses of. nickel were in industrial equipment converted to war services, and these will now resume their place in peacetime applications. New uses for the metal were developed during the War and these promise to compensate for losses to competitive materials. A marked increase in the use of nickel in the automotive industry is expected. The long-range outlook for the metal is considered to be favourable barring unforeseen developments.

Zinc.-Canada's production of zinc, including the metal content of concentrates, has ranged during the past decade from a low of 167,000 tons in 1936 to a record output of 305,000 tons in 1943. Production in 1945 amounted to 255,000 tons. About 75 p.c. of the total output is refined within the country and the remainder in the form of zinc concentrates is shipped to plants in the United States for treatment. These concentrates come mainly from a mine in British Columbia, another in Manitoba, and from a few properties in Quebec. Prior to the War, Canada
exported about 85 p.c. of its total output of zinc and during the War from 70 to 80 p.c. While in normal times the greater part of the exports go to the United Kingdom, in the later years of the War the United States has taken a larger share of the production.

Supplies of zinc in the United Kingdom are low and buying by that country in 1946 will possibly reach a total of 80,000 long tons of the metal, of which Canada will probably supply 30,000 long tons. The Dominion will have an estimated additional 90,000 to 95,000 tons available for export and this will probably be marketed chiefly in the United States, and most of the remainder in Continental Europe. Prior to the War, the United States supplied its own requirements of zinc, but in recent years it has been importing large tonnages of the metal, partly in the form of concentrates. Canadian high-grade zinc is in demand in that country, with prospects of an upward trend.

Lead.-In the past decade Canada has produced an average of approximately 207,000 tons of lead annually, with a peak output of 256,000 tons in 1942, and with an output of 173,000 tons in 1945. Practically all of the output is in the refined form. Domestic consumption during the past decade has averaged in the neighbourhood of 20 p.c. of the output. The United Kingdom has long been the chief importer of Canadian lead, and shipments to that country during the War ranged from 71,000 tons to 144,000 tons a year. Shipments of Canadian lead to the United States during the same period ranged from 9,000 tons to 97,000 tons a year, the latter figure being much higher than the pre-war average. In 1946, sales to the United Kingdom will likely account for more than 45 p.c. of the exportable surplus, and to the United States to about 15 p.c. Sales to UNRRA and to South American countries will account for most of the remainder.

Although the world output of lead showed a marked increase during the War, it is significant that no important mines have entered production for many years past. In Mexico and Australia, two of the leading producers, output has been declining, and in the United States, the leading producer, it will probably be necessary to import lead in large quantities to meet the requirements. Lead has always been used in large quantities in Europe for roofings and plumbing, and the need in that region has greatly expanded.

Other Metals and Ores.-This group in recent years has comprised antimony, arsenic, bismuth, cadmium, calcium, chromite, cobalt, magnesium, mercury, molybdenite concentrates, the platinum metals, selenium, silver, radium, tellurium, tin, and titanium ore. The production (exclusive of radium, figures for which are not available for publication) reached a total value of $\$ 23,458,400$ in 1945 , the value of output of the principal metals of the group being: platinum metals, $\$ 12,719,700$; silver, $\$ 6,001,000$; magnesium $\$ 1,463,900$; selenium, $\$ 720,750$; and cadmium, $\$ 630,600$. Most of the metals are recovered as by-products in the production of the principal non-ferrous base metals, the chief exceptions being magnesium, radium, chromite and mercury.

Practically all of the output of the platinum metals comes from the mines of International Nickel Company, and for the past several years Canada has been the leading producer of these metals. About 43 p.c. of the silver comes from properties in British Columbia, chiefly the Sullivan Mine at Kimberley, and the remainder is largely obtained from the various gold mines throughout Canada.

The production of magnesium in Canada is a development of the War. Production was commenced in September, 1942, and was continued until the summer of 1945 , during which period a total of $24,018,162 \mathrm{lb}$. of magnesium was produced.

All of the output came from the Dominion Magnesium plant at Haleys, Ont., near Renfrew, and most of it was exported to the United Kingdom. It was recovered from dolomite, large deposits of which occur in the area, by use of a thermal reduction process.

Canada is abundantly supplied with dolomite and it also has large resources of magnesite, brucite and serpentines, which, if the need arises, can be used as source minerals in the production of magnesium.

Iron Ore.-Canada's potentialities as a producer of iron ore have been greatly enhanced as a result of the discovery a few years prior to the War of large deposits of hæmatite in the Steep Rock Lake area, 140 miles west of Port Arthur in Ontario, and of the more recent discoveries of large deposits of that ore in the QuebecLabrador boundary region. Regular shipments from the Steep Rock deposits were commenced early in 1945 and from then until the close of navigation production was at a rate of about 4,000 tons of ore a day. The ore is shipped via Superior, Wisconsin and Port Arthur, mostly to Lower Lake American ports for use in the United States. Part of the output is high-grade lump ore suitable for open hearth use, but much the greater portion is blast furnace ore. Shipments from the deposits in 1945 amounted to approximately 504,000 tons.

In the Labrador-Quebec area the deposits of hæmatite so far discovered lie astride the boundary about 350 miles north of the Gulf of St. Lawrence. The iron-bearing rocks are several hundred miles in length and the known length of the deposits in the midst of this area is more than 100 miles. Although exploration even of a preliminary kind is far from complete, it is evident from this work that the area is a major potential source of high-grade iron ore. It seems possible that, with further exploration, the iron range will prove to be comparable in importance to the Mesabi Range of Minnesota, the output from which is $60,000,000$ tons a year. As disclosed by exploratory work to date, the grade of the ore ranges from $59 \cdot 3$ to $69 \cdot 4$ p.c. iron. Less work has been done on the known deposits northward across the boundary in Quebec, but their grade and dimensions are similar to those in Labrador. Much of the ore is of Bessemer grade.

From 1924 to 1939 no iron ore was produced in Canada, and from then until 1945 practically all of the production came from the New Helen Mine in the Michipicoten area of Ontario. It is a siderite ore which is sintered to bring it up to commercial grade. Production in 1945 amounted to about 450,000 tons. The Company has opened up a pit at the east end of its property and most of the production for a time will come from this pit. In the same area the Josephine Mine is producing a lump ore which is shipped by rail to Sault Ste. Marie and a hæmatite ore high in silica which, after removal of the silica, will be mixed with ore from the New Helen Mine for sintering.

It seems likely that Canada's production of iron ore will long continue to show a general upward trend, the main reason for this view being that ore high in iron and low in silica and other impurities is becoming increasingly scarce in the United States and in Europe. It will probably be a matter of several years before production from the Labrador-Quebec deposits commences, but a ready market for this ore can be anticipated. . Much of it will be lump ore which is the highest priced of all iron ores. The indications are that the deposits can be mined at low cost and that the ore can be transported to the St. Lawrence at moderate cost. There is a large potential market for the ore along the Atlantic seaboard of Canada and the United States where the short voyage will be advantageous. The largest potential market,
however, is in the areas now served by the mines of the Lake Superior region in the United States. There are already inquiries from the United Kingdom and western Europe which suggest the likelihood of substantial markets for the high-grade ore in these regions.

The Fuels.-The annual value of Canada's production of fuels during the past decade has ranged from a low of $\$ 59,983,320$ in 1936 to a record of $\$ 97,291,007$, in 1944, the total value of output in 1945 being $\$ 95,493,358$. Coal is far in the lead, the value of its output ranging from a low of $\$ 43,982,171$ in 1938 to a peak of $\$ 70,433,169$ in 1944, and is followed in order by crude petroleum with a value ranging from a low of $\$ 3,421,767$ in 1936 to a record of $\$ 16,470,417$ in 1943 , and by natural gas with a value ranging from a low of $\$ 10,762,243$ in 1936 to a record of $\$ 13,301,655$ in 1942.

Coal.-Production of coal in Canada is confined mainly to Alberta, Nova Scotia, British Columbia and Saskatchewan, with a much smaller production from New Brunswick and Manitoba. Alberta produces almost all ranks of coal, including a small tonnage of semi-anthracite; Nova Scotia produces medium and high volatile coking and non-coking bituminous coals; British Columbia produces bituminous coal of varying ranks, from low to high volatile; and Saskatchewan produces lignite. The coal production from Nova Scotia, augmented by a relatively small tonnage from New Brunswick, ordinarily provides in peacetime, not only for the requirements of the railways of the area, the steel industry, and the domestic market but also for much of the fuel requirements of Quebec and, to a lesser extent, Ontario. The increasing wartime expansion of industry and shortage of cargo space, however, caused an almost complete stoppage of the movement of coal into Quebec and Ontario from Nova Scotia. This situation has been improving since the end of the War and it is expected that substantial tonnages of coal will be shipped to Quebec and Ontario during 1946. During most of the War, coal operators in Nova Scotia were faced with a shortage of experienced workmen and this has tended to depress production. Conditions have been improving slowly, but considerable time is likely to elapse before full advantage can be taken of the demand for the coal within the Province and in the Provinces of Ontario and Quebec. In Western Canada practically all of the coal mines have been operating to the capacity of their available manpower.

From the viewpoint of the immediate and near future demand, the outlook for the Canadian coal industry is bright and, in fact, great difficulty is being experienced in meeting the requirements. Looking further ahead, however, the industry faces many problems, several of which are of an involved and complicated nature. In the main it appears largely to be a matter of the industry's ability to meet changing marketing conditions. There is a constant tendency among all types of consumers, for instance, to use fuels that will give the most efficient services at lowest costs and markets for coal are likely to become increasingly competitive. It will thus be necessary for the industry to keep fully abreast of changing trends in consumer requirements.

Crude Petroleum.-Canada obtains much the greater part of its output of crude petroleum from the Turner Valley Field in the foothills section of Alberta and the remainder comes from wells in the foothills and plains of Alberta; from the Norman Field in the Northwest Territories; from southwestern Ontario; and from the Moncton area in New Brunswick; Canadian production of crude petroleum is
sufficient to meet only a relatively small part of the requirements. It reached a peak of $10,364,796$ barrels in 1942, in which year production from the Turner Valley Field reached a peak of $10,080,300$ barrels. Output from that Field has shown a steady decline since then and the decline appears likely to continue. During the past three years several large United States and Canadian companies have been engaged in the geological exploration and drilling of various structures in the different sections of Alberta, but from a production viewpoint the results so far have not been particularly encouraging. Several areas in the Province, however, continue to receive active attention.

Non-Metallic Minerals.-Canada's production of this group of minerals reached a peak value of $\$ 85,094,549$ in 1945 , of which $\$ 46,806,342$ was the value of clay products and other structural materials. Asbestos, with a value of $\$ 21,405,391$ was the largest single contributor to the output and was followed in order by cement valued at $\$ 13,908,014$, sand and gravel valued at $\$ 10,513,992$, stone valued at $\$ 7,577,804$, and salt valued at $\$ 4,025,083$.

With the chief exception of asbestos, gypsum, barite, and nepheline syenite, Canada's production of the non-metallic minerals is marketed mainly within the country. Their production is accordingly governed largely by domestic demand, and frequently by localized demand. Transportation costs are an important factor in the marketing of many of them and that factor, together with Canada's relatively small population, has hampered the development of deposits too far from populated areas and industrial centres. The supplies of most of them are abundant, however, and taking into account the important part that non-metallic minerals play in the industrial life of a nation, it is evident that, as the Canadian economy continues to expand, new outlets will be found for these minerals.

Though only a comparatively few of the long list of non-metallic minerals are exported in large quantities, this export trade is likely to be of increasing importance. The chief item on the list is asbestos, of which Canada has been the leading exporter for many years. A large part of the production is exported in the unmanufactured state and most of the exports go to the United States, though substantial quantities are shipped to the United Kingdom and Australia. The outlook for the industry appears to be good. Throughout the War, Canadian producers were able to sell their entire output in spite of the loss of overseas markets, and these markets are again open to Canadian fibre. Development of raw asbestos products has been rapid in recent years, with particular reference to asbestos-cement products which require the short grades of fibre, the marketing of which formerly constituted a problem.

Most of Canada's output of gypsum is also exported. Contracts for export are generally made early in the year with the producer for the year's requirements of the purchaser. Consumption of gypsum in Canada is approximately 180,000 tons a year, mostly as calcined product. Nova Scotia is the chief producer followed in order by Ontario, New Brunswick, Manitoba and British Columbia.

Canada, in recent years, has become an important producer and exporter of barite; the output in 1945 amounted to 140,200 tons, being more than five times greater than in 1943. All but a small percentage of the output comes from deposits in Hants County, N.S., and the remainder from a property south of Golden, B.C. During the last two years of the War, large tonnages of crude lump barite were
shipped from Canada to the United States mainly for military use. Most of the ground barite is exported for use in oil-well arilling in Trinidad, Venezuela and other South American countries.

The demand for clay products and other structural materials has been exceptionally strong and is likely to continue so in view of the many housing and other structural projects now under way. Practically all branches of the industry have been operating to the capacities of their available manpower. Several of the operating companies report serious shortages of labour and to a lesser extent of equipment, but this situation has been improving gradually. In the ceramic industry there is a large backlog of orders for appliances, the demand for which will probably not lessen for the next several years. Rural electrification, remodeling, the farm market, and exports can also be counted on to keep production in the ceramic industry at a high level. The artware section of the industry has been expanding rapidly in Canada. This phase of ceramics can play a large part in the rehabilitation of returned personnel, many of whom are already taking an active interest in the possibilities of a career in clay modeling, pottery and artcraft.

## Summary Remarks

As mining is Canada's second largest primary industry, the progress it makes has an important bearing on the expansion of the Canadian economy as a whole.: This progress during the past two decades has been particularly colourful. Nonferrous base-metal production in 1942, for instance, was almost ten times greater than in 1921, and gold production during the same period showed more than a fivefold increase in quantity and close to a tenfold increase in value. There have been marked increases also in the production of the fuels and of the non-metallic minerals. Every industry, in fact every phase of Canadian endeavour, has benefited from this growth. It has opened up new avenues of employment for Canadian workmen; it has provided new outlets for the products of Canadian farms and forests and of Canadian manufacturing plants; it has provided the railways with new sources of revenue; and it has paved the way for the settlement of areas that would otherwise have probably remained largely unsettled.

In the changeover from wartime to peacetime activities the industry has made greater progress than had been anticipated. In Canada and abroad there has been a widening demand for its products and, unless all present indications are misleading, this demand will continue to be strong well into the future. There is likely to be great opportunities for expansion in the industry, but increasing attention will need to be given to the problem of mineral discovery, more especially in reference to the disclosure of metal deposits. The rate of production has been excessively high in relation to what might be termed the rate of replenishment through discoveries, and continued growth can be assured only if a proper balance is maintained between the two. Any other course would, in time, prove to be unsound. There is also a need for a stock-taking of the country's mineral resources, for without such an inventory no suitable planned policy for the development of these resources can be formulated. Such an appraisal will not be simple. It will involve many qualifications, all of which will need to be taken into consideration. Mineral resources, for instance, can be enlarged by improved methods of mining and extraction of the metal from the ore; and an increase in price can raise marginal or submarginal ore into mineable grades. It is a task that will require the closest co-operation of all branches of the mineral industry, and of the manufacturing, chemical, and other
industries that use mineral raw materials, and the co-operation also of all branches of government both Dominion and provincial. The Bureau of Mines at Ottawa has made a start on this work, which will require several years to complete.

## Section 1.-Mining Laws and Government Administration

## Subsection 1.-Mining Laws and Regulations

The mineral lands of Canada, like other Crown lands, are administered by either the Dominion or the Provincial Governments. The Dominion Government administers the mineral lands of Yukon and the Northwest Territories as well as those in all Indian Reserves and in National Parks; all other mineral lands lying within the boundaries of the several provinces are administered by the respective Provincial Governments.

Mining Laws and Regulations on Dominion Lands.*-Dominion lands to which these regulations apply are those administered by the Lands, Parks and Forests Branch, Department of Mines and Resources, and lie within Yukon and the Northwest Territories. Titles issued for Dominion lands, the property of the Dominion Government, in the Territories of Canada reserve to the Crown the mines and minerals that may be found on or under such lands, together with the right of operation.

The Acts and regulations governing mining and quarrying on Dominion lands are: Yukon and the Northwest Territories-Alkali Mining Regulations; Carbon-Black Regulations; Coal Mining Regulations; Potash Regulations; Petroleum and Natural Gas Regulations (which provide that no person shall explore for petroleum or natural gas in Yukon or the Northwest Territories without first obtaining a permit to do so from the Minister of Mines and Resources); and Domestic Coal Permits. Yukon-Yukon Placer Mining Act (R.S.C., 1927, c. 216); Yukon Quartz Mining Act (R.S.C., 1927, c. 217); Dredging Regulations. Northwest Territories-Quartz Mining Regulations; Placer Mining Regulations; Dredging Regulations; Quarrying Regulations; and Permits to remove sand, stone and gravel from beds of rivers.

Copies of these regulations are available from the Lands, Parks and Forests Branch of the Department of Mines and Resources, Ottawa.

Provincial Mining Laws and Regulations. $\dagger$-The granting of land in any province, except Ontario, no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. Some early grants in New Brunswick and Quebec also included certain mineral rights. Otherwise mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (usually metallic ores), fuel (coal, petroleum, gas) and quarrying. Under these divisions of the provincial mining industry, regulations may be summarized as follows:-

Placer.-In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held and the royalties to be paid.

[^101]General Minerals.-These are sometimes described as quartz, lode minerals or minerals in place. The most elaborate regulations apply in this division. In all provinces, except Alberta, a prospector's or miner's licence to search for mineral deposits, valid for a year, must be obtained. A claim of promising ground of a sperified size may then be staked. This claim must be recorded within a time limit, with the payment of recording fees. Work to a specified value per annum must be performed upon the claim for a period up to five years, when a grant or lease of the mining rights may be obtained, subject to fees or annual rental. The taxation most frequently applied is a percentage of net profits of producing mines.

Fuels.-In those provinces in which coal occurs, the size of holdings is laid down and the conditions regarding work and rental under which they may be held. In some cases royalties are provided for. In the cases of petroleum and natural gas, a permit to drill on promising ground is usually first obtained. If oil or gas is discovered, the operator may obtain the lease or grant of a limited area subject to rental or fees. A royalty on production is sometimes payable.

Quarrying.-Regulations under this heading define the size of holding and the terms of lease or grant.

The legislation controlling mining and minerals in each province is given at pp. 278-279 of the 1942 Year Book. Copies of the legislation and regulations and details concerning them may be obtained from the following authorities:-

Nova Scotra.-Minister of Mines, Parliament Buildings, Halifax.
New Brunswick.-Department of Lands and Mines, Fredericton.
Quebec.-Minister of Mines, Quebec.
Ontario.-Department of Mines, Parliament Buildings, Toronto.
Manitoba.-Director, Mines Branch, Department of Mines and Natural Resources, Winnipeg.
Saskatchewan.-Department of Natural Resources, Regina.
Alberta.-Department of Lands and Mines, Edmonton.
British Columbia.-Department of Mines, Victoria.

## Subsection 2.-Government Administration and Controls

Dominion Fuel Board.*-The Board was created in 1922 to meet the need for a permanent organization responsible to the Government for a thorough and systematic study of the fuel situation and recurrent shortages experienced throughout Canada. It is composed of permanent members of the Dominion Civil Service and the staff of the Board constitutes a Division in the Bureau of Mines and Geology, Department of Mines and Resources.

On Oct. 18, 1939, a Coal Administrator was appointed by Order in Council under the Wartime Prices and Trade Board to administer coal problems as they arose as a result of the War. In the early months of 1941 it became apparent that the duplication of endeavour between the Coal Administration and the Dominion Fuel Board was creating difficulties of administration. The Government, therefore, by Order in Council P.C. 27-4600, on June 25, 1941, transferred the duties, functions and establishment of the Dominion Fuel Board to the Coal Administration for the duration of the War.

[^102]In the latter part of 1942 it became increasingly evident that there was grave danger of a coal shortage due to the increasing cost of production incident to the War and that many mines would go into bankruptcy and shut down if financial aid were not provided. On Nov. 23, 1942, by Order in Council P.C. 10674, the Emergency Coal Production Board was formed, the Coal Administrator being appointed as Chairman of the Board.

By the early months of 1943 the supply position was becoming grave and as supply was more within the function of the Department of Munitions and Supply a transfer was made of the duties and responsibilities of Coal Administration to that Department. This was accomplished on Mar. 5, 1943, by Order in Council P.C. 1752. The Coal Administrator under this Order became Coal Controller. On transference of Coal Administration to Coal Control, the Coal Controller became Chairman of the Emergency Coal Production Board. A breakdown of the responsibilities and duties of the Coal Controller and the Chairman of the Emergency Coal Production Board follows.

## Dominion Fuel Board-

(1) The payment of subventions on the movement of coal and administration of Orders in Council governing such movements.
(2) The administration of the Domestic Fuel Act and Act 20-21 Geo. V and payments thereunder.
(3) Maintaining ordinary peacetime work and contacts, some of which had direct bearing on the war effort (e.g., production costs).

Coal Administration-
(1) The maintenance of the price ceiling on coal for domestic consumers, industrial, railway and others.
(2) The payment of subsidies through Commodity Prices Stabilization Corporation Limited, to maintain ceiling prices on coal (import subsidies).
(3) The licensing of coal dealers as per Order of the Wartime Prices and Trade Board No. 1.
(4) Statistical records and tabulations of prices, sales and stocks of coal.
(5) Same data in respect to coke.
(6) The maintenance of adequate supply to the domestic population.
(7) The administration and payment (through the Commodity Price Stabilization Corporation Limited) of assistance in respect to cost-of-living bonus.

Coal Control-
(1) The control, maintenance and increase of coal production in conjunction with the Emergency Coal Production Board. At present Coal Control functions in an advisory and assisting capacity.
(2) Control and maintenance of coal imports.
(3) The distribution or allocation of available coal in Canada to war industry, railways and other industry.
(4) The allocation of Canadian coal to export markets and bunker supplies.
(5) The overseeing and allocation of coal supplies to the Armed Services in conjunction with the Purchasing Division of the Department of Munitions and Supply.

The Emergency Coal Production Board -
(1) Maintaining and stimulating production of Canadian coal, lignite, coke and peat.
(2) The opening and operation of new coal, lignite, coke and peat operations.
(3) Prohibiting or limiting operation of inefficient mines or plants.
(4) Directing the production policies and methods of coal mines, etc.
(5) Making recommendations to the Minister for the procurement or transfer of labour.
(6) Providing financial assistance to maintain or increase production and payment thereof.
(7) Suspending rules, regulations or laws impeding maximum production.
(8) Requiring adoption of production bonus or incentive plans.

Bounties.-Government bounties or subsidies for protective duties on various minerals have been paid in the past years; for further details see p. 585 of this volume.

Government Control.-The operation of various Government agencies during the War to stimulate production of major non-ferrous metals, petroleum and coal were reviewed in the Canada Year Book 1945, pp. 295-296.

The Metals Control of the Department of Munitions and Supply was dissolved at the end of November, 1945. The Oil Control, and the Crown Company, Wartime Oils Limited which operated under its direction, were likewise dissolved at the same time.

The Emergency Coal Production Board, operating in co-operation with the Coal Control of the Department of Munitions and Supply, continued throughout 1945 to extend financial assistance to coal operators with a view to increasing production. In addition to this assistance to normal commercial producers, the Board has developed surface-stripping operations in Alberta. The Dominion Fuel Board (see p. 315) for nearly two decades has maintained a close study of the coalmining industry and has administered various measures of governmental assistance; this Board and its staff are operating under the Coal Control.

In 1943, anticipating a severe shortage of domestic coal supplies in Western Canada, six strip mines were opened by companies set up for the purpose under the supervision of the Board's consulting engineer, financed by Government funds and under the management of experienced operators. It was felt that these operations would serve as: (a) sources of supply to fill shortages that the established underground mines could not fill; and (b) insurance against emergencies and to fill distress calls.

Modern buildings and equipment including tipples, machinery, roads, spur tracks, etc., were installed at all projects in order to facilitate the handling, loading, screening, etc., of the coal.

The Power Control of the Department of Munitions and Supply retained in force, through the 1945-46 burning season, a series of orders that had been issued in 1942, restricting the use of gas in southwestern Ontario.

## Section 2.-Summary of Mineral Production

A special article on the Development of Canada's Mineral Resources in Relation to the Present War Effort, so far as this development had taken place by the middle of 1940, appears at pp. 298-309 of the 1940 Year Book.

The importance of mineral production as compared with other primary industries in Canada is indicated in Chapter VII while its part in the external trade of Canada is dealt with in Chapter XVI, Part II, especially Section 3, Subsections 2 and 5.

## Subsection 1.-Value and Volume of Mineral Production

Historical Statistics.-Definite records of the annual value of mineral production go back only to 1886 , although actual production began with the earliest settlements. The figures given in Table 1 are not strictly comparable throughout the whole period, minor changes having been adopted in methods of computing both the metallic content of ores sold and the valuations of the products. Earlier methods resulted in a somewhat higher value than those now in use would have shown. However, the changes do not interfere with the general usefulness of the figures in showing the broad trends in the mineral industry.

## 1.-Value of Mineral Production of Canada, 1886-1945

| Year | Total Value | Value per Capita | Year | Total Value | Value per Capita | Year | Total Value | Value per Capita |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | 8 |  | \$ | \$ |  | \$ | \$ |

[^103]Current Production.-The depression beginning in 1930 had a profound effect upon the production of minerals in Canada. The decline in general commodity prices and the increased price of gold provided a two-fold stimulus to production and, as in the 1920's, output of gold was increased. This rise in the price of gold since 1931 ( $\$ 20 \cdot 67$ per fine ounce in 1931 to $\$ 38 \cdot 50$, Canadian funds, in 1945) resulted in the mines being able to produce from ore that was hitherto unprofitable, and stimulated prospecting to such a degree that many new mines were discovered. In addition, parts of Canada not hitherto of commercial importance were opened up and new communities were established with resultant markets for consumer goods and mine supplies. Base-metal prices declined to low levels, but the improvements that low prices and competition had brought about in productive facilities during the 1920 's, together with the presence in the ores of small but appreciable quantities of precious metals, enabled the producing companies to carry on. After a period of readjustment, production expanded again. However, the serious reduction in industrial and construction operations materially restricted the production of coal, non-metallics other than fuels, and the various structural minerals.

The situation, therefore, prior to the outbreak of war in 1939 was that Canada's mineral industries were in a particularly strong position so far as their ability to make a substantial contribution to the country's war effort was concerned. Such a possible contribution had two aspects, namely:-
(1) The production at reasonable cost of those minerals that were essential for the manufacture of armaments, munitions and other war supplies as well as for non-war requirements.
(2) The creation of essential foreign credits by the production of gold and silver and of other minerals, surplus to national needs, for export sale to other countries.

The production of gold was reaching new high records each year so that in 1940 Canada stood second among the countries of the world with $13 \cdot 1$ p.c. of the total world production. Reliable world figures of gold production are difficult to obtain at present as accurate data are not available. As already indicated, developments in connection with base metals enabled Canadian companies to produce large supplies of copper, nickel, lead and zinc on a low-cost basis. The policy of the Department of Mines and Resources was to encourage and assist in the location of deposits of other metals and minerals that were formerly imported, important among which were tungsten, molybdenite and magnesium. Metallurgical processes had been
extended to include final refining operations of sufficient capacity to handle the major part of Canadian production. In this field, while no aluminum ores are mined in Canada, with the availability of low-cost hydro-electric power, metallurgical plants for the production, from imported ores, of refined aluminum on a large scale had been established. At the beginning of the War, producers of all these base metals entered into voluntary agreements with the Government of the United Kingdom to sell the surplus above Canadian requirements at practically no advance on the low prices prevailing before the War, thus assuring to Great Britain a supply of these essential materials without the risk of advancing prices.

In the case of fuels, non-metallics other than fuels, and structural materials, productive capacity in Canada before the War for many essential minerals was more than sufficient to provide for the then-existing industrial and civil requirements. Thus the expanding demands of war industries and the construction operations necessitated by various features of the war program were readily met.

Canada's mineral production in 1945 was valued at $\$ 479,587,911$; this figure was 1 p.c. lower than the 1944 total of $\$ 485,819,114$. The reduction was principally in the metals group. The total value of all metals produced was $\$ 299,000,004$, a decrease of 3 p.c. from the production in the previous year; fuels, including coal, natural gas, crude petroleum and peat, amounted to $\$ 95,493,358$, a decrease of 2 p.c.; other non-metallics showed a slight increase, the figure being \$38,288,207 in 1945 as against $\$ 37,251,009$ in 1944 , and the production of other structural materials, including clay products, cement, lime, stone, sand and gravel, at $\$ 46,806,342$ was 9 p.c. higher than the preceding year when it amounted to \$42,984,937.

[^104]Analysis of Current Value and Volume.-In order to interpret more clearly and simply the trends in mineral production in Canada over the period since 1935, Table 3 gives the percentage of the total value contributed by each principal mineral in each year. Values upon which percentages in this table are based are the annual values of mineral production expressed in Canadian currency as published in Tables 1 and 2.

## 3.-Percentages of the Total Value of Mineral Production, by Principal Minerals, 1935-44

Although the year 1926 was not a normal year in mineral production to the same extent as in some other productive fields, the rapid changes that have resulted from circumstances arising since 1926 can be seen more clearly by using it as a base year. Table 4 shows the indexes of volume of mineral production, using 1926 as the base year, by principal minerals, for the period 1933-44. The very large increases in the production of petroleum and platinum metals are especially noteworthy.

## 4.-Indexes of Volume of Mineral Production, by Principal Minerals, 1933-44

## ( $1926=100$ )

Note.-Indexes for 1927-32 will be found at p. 319 of the 1940 Year Book.

## Subsection 2.-Provincial Distribution of Mineral Production

Since 1907 Ontario has been the principal mineral-producing province of Canada. In 1940, Ontario's production was 49.4 p.c. of the total but it has declined steadily to $41 \cdot 7$ p.c. in 1945 . The rise in the price of gold has been especially favourable to Ontario's mineral production, while the Sudbury nickel-copper deposits are another outstanding feature in the mineral resources of the Province. For many years British Columbia, where most of the important metals are found and substantial quantities of coal exist, was in second place, but for the past eight years Quebec has held that position. A great part of Quebec's mineral production is made up of gold, copper and asbestos. Nova Scotia and Alberta are the most important coal-producing provinces. The discovery and development of the Flin Flon and Sherritt-Gordon orebodies resulted in the Provinces of Manitoba and Saskatchewan becoming important producers of base metals, gold and silver. Alberta, besides being a big producer of coal, is the most important province for the production of petroleum and natural gas.

## 5.-Mineral Production of Canada, by Provinces, 1926-45

Notz.-Figures for the years 1899-1910, inclusive, will be found at p. 345 of the 1933 Year Book, and for 1911-28 at p. 323 of the 1939 edition.

${ }^{1}$ Yukon production only. ${ }^{2}$ Subject to revision.
Table 6 shows the different minerals that made up the mineral production of each province and also the particular province or provinces that contributed to the production of each mineral in Canada in 1944.

## 6.-Detailed Mineral Production of Canada, by Provinces, 1944

Nore.-Quantities and values of minerals produced during 1944 in Yukon were-gold, 23,818 fine oz., $\$ 916,993$; silver, 32,066 fine oz., $\$ 13,788$; lead, $105,727 \mathrm{lb}$., $\$ 4,758$; tungsten concentrates, $5,593 \mathrm{lb} ., \$ 3,780$; total, $\$ 939,319$ : and in the Northwest Territories-gold, 20,775 fine oz., $\$ 799,838$; silver, 13,677 fine oz., $\$ 5,881$; copper, $11,902 \mathrm{lb}$., $\$ 1,428$; natural gas, $1,500 \mathrm{M}$ cu. ft., $\$ 335$; petroleum, $1,223,675 \mathrm{bbl}$., $\$ 632,587$; total, $\$ 1,440,069$. Wartime restrictions preclude the publication of data for pitchblende products found in these areas. For the Dominion totals of individual minerals, see Table 2. Dashes in this table indicate that no production was recorded. The ton referred to is the short ton of $2,000 \mathrm{lb}$.

## Section 3.-Industrial Statistics of Mines and MineralsCapital, Labour, Wages, etc.

Annual statistical reports on the mineral production of Canada have been published for many years, first by the Geological Survey, later by the Mines Branch of the Department of Mines and, since 1921, by the Dominion Bureau of Statistics. Prior to that year the annual statistics of mines were confined chiefly to a presentation of the quantity production of each of the minerals and their value at average market prices for the year. The scope of the statistics now includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc, and nickelcopper industries, as well as a section on metallurgical works. Additional data published at irregular intervals, include such features as capital employed, numbers of employees, wages and salaries paid and net value of sales.

The figures for "net income from sales" of industries given in Tables 7 and 8 are those reported by the operators, and are in each case the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table 2 of this Chapter where, in the cases of copper, lead, zinc and silver, the values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum where imported ore only is used. The net sales of these plants include, therefore, the net value of the metals recovered from these imported ores and, to this extent, the net sales shown in Tables 7 and 8 include products of other than Canadian origin.

An explanation of what is included in the figures under the headings "Capital Employed" and "Employees" in Tables 7 and 8 is given at p. 244 of the 1941 Year Book.

${ }^{1}$ Includes freight and smelter charges and cost of ores treated. $\quad{ }^{2}$ Not available.
A summary of the industrial statistics of the principal mineral industries operating in Canada in 1942, 1943 and 1944 is presented in Table 8. The difficulties imposed by the War in the way of labour shortages, lack of new equipment and essential supplies necessary for the mines, have resulted in a steady drop in the gross value of production for the entire auriferous quartz mining industry. The value of recoverable metals, gold, silver, etc., which was $\$ 179,000,000$ in 1941 fell to $\$ 161,000,000$ in $1942, \$ 117,000,000$ in 1943 and $\$ 94,000,000$ in 1944.

## Section 4.-Production of Metallic Minerals

## Subsection 1.-Canadian Production of Metallic Minerals

The metals of chief importance in Canada are copper, gold, iron, lead, nickel, those of the platinum group, silver and zinc. Production of these metals is given in the following tables. In addition, there are a number of metals produced in minor quantities, principally as by-products in the treatment of metalliferous ores (see Tables 2 and 6).

## 9.-Copper Produced in Canada, by Provinces, with Total Values, 1926-45

Note.-Figures for the years 1886-1910, inclusive. will be found at p. 272 of the 1916-17 Year Book; for the years 1911-25 and 1927-28 at p. 335 of the 1939 edition.

## 20.-Quantities and Values of the World Production of Gold and Silver, by Principal Countries, 1942 and 1943

Note.-Abridged from the Annual Report of the Director of the United States Mint; many of the figures are estimates, the sources of which are given as footnotes to the U.S. Mint table. It is not possible to obtain official figures or even reliable estimates for many countries, mainly European, during the war years, and world totals have therefore been omitted.

## 21.-Quantities and Values of World Production of Silver, with Annual Average Prices, 1900-41 ${ }^{1}$

(From the Annual Report of the Director of the United States Mint)
Note.-Figures for the years 1860-99, inclusive, will be found at p. 346 of the 1939 Year Book.

# Section 5.-Production of Fuels 

THE COAL DEPOSITS AND COAL RESOURCES OF CANADA*

## The Origin of Coal

The coals of Canada range in physical appearance from soft, friable, brown, peaty material in which the leaf, plant and tree fragments are distinctly discernible, and in some cases separable, to hard compact steel grey to jet black mineral fuel having a conchoidal fracture in which none of the original vegetable structure can be recognized. For many years the hard dense coals were regarded as of non-vegetable origin, and it is only within recent years, with the perfecting of the process of making thin sections of these hard coals, that their vegetal constitution has been satisfactorily proved. It is now generally accepted that all coals have been formed from ancient swamp vegetation which, like that of our present-day peat bogs, either grew on the spot now occupied by the coal deposits or were floated into it from an outside source and deposited in water close to land. For this reason coal deposits are always associated with sediments of fresh or brackish water origin and in some areas the individual beds or "seams" are traceable for great distances.

The presence of a clay bed at the base of a coal seam containing rootlets indicates that the coal has been formed from vegetation that grew in situ, whereas the absence of such a clay floor, a marked irregularity in the thickness of the coal deposit within short distances, and the presence in the coal seam of large boulders and pebbles or other foreign material, point to the coal deposit having been formed of vegetation that was rafted into the basin, the boulders and gravel having been carried along by the roots of trees. With few exceptions, a coal seam may be

[^117]regarded as an ancient peat deposit that, through bacterial and other chemical agencies and the heat and pressure developed through burial beneath younger sediments or through crustal movements of the earth, has been converted into a compact mineral fuel. A few coals, such as splint coals, cannel coals, and boghead coals, which are composed largely of wind- and water-borne plant cuticles, spores and pollen-coatings, and waxy and fatty algæ, have been formed principally of aquatic organisms, both plant and animal, but the majority of ordinary coals, designated as humic or xyloid coals, are believed to have been formed mainly from terrestrial vegetation, consisting largely of forest growth. In this respect, the bogs that gave rise to the coal deposits differ somewhat from the common present-day peat bogs, the vegetation of which consists principally of grasses, mosses and turf. One of the most accessible modern fuel-peat bogs in Canada occurs at Alfred, Ont., 45 miles east of Ottawa. Over much of the plains region of Alberta and Saskatchewan, the coal deposits are still in about the same attitude in which the material accumulated, but elsewhere the seams are generally gently to steeply inclined. In places the coal seams are greatly disturbed, being vertical or even overturned, and associated with folded, faulted and plunging structures that reveal great variations of attitude when traced along their trend. Such changes in the attitude and nature of the deposit have, in a number of fields, proved to be the controlling factor in the economic development of the deposit.

Chemical Composition of Coals.-Regarded chemically, coals consist of an organic complex derived from the destructive distillation of two principal plant constituents, lignin and cellulose, and composed of the elements carbon, hydrogen and oxygen in various combinations associated with minor amounts of nitrogen and sulphur. For all practical purposes, coals may be considered as composed of four principal components, moisture, volatile matter, fixed carbon and ash, the latter consisting largely of transported mineral matter. The proportion of these four ingredients vary in different coals but, with the exception of the ash content which is largely accidental, are relatively the same in coals that have a common origin and that have been subjected to about the same degree of metamorphism. Thus in the evolution of coal from peat to anthracite there is a progressive increase in fixed carbon and a corresponding decrease in moisture and volatile matter. Accompanying the change in physical and chemical character there is a corresponding change in the heat value of the coal as determined in calories or British thermal units, the maximum heat value being contained in coals in which the fixed carbon and volatile matter components are most effectively balanced rather than in those coals having the highest percentage of fixed carbon.

## Geological and Geographical Distribution of Coal Deposits in Canada

The coal deposits of Canada occur in formations of at least five geological ages. The oldest coal deposits of mineable thickness are those of Carboniferous age estimated at roughly $250,000,000$ years old. These occur in several Pennsylvanian formations in Nova Scotia, New Brunswick, and some of the Islands of the Arctic Archipelago. Next in age are coal deposits occurring in northwestern British Columbia and Yukon of possible Jurassic age estimated at roughly $175,000,000$ years old. Closely following these are the coal deposits of Lower Cretaceous age estimated at approximately $150,000,000$ years old. These embrace the lignite deposits of the Onakawana Field of northern Ontario and the coal deposits of the Kootenay and Luscar formations that outcrop along the inner foothills belt of the Rocky Mountains in Alberta and eastern British Columbia. These are succeeded
by the coal deposits of Upper Cretaceous age that occur in three formations that underlie much of the plains region of Alberta and outcrop along the outer Foothills belt, and the coal deposits of Vancouver Island, British Columbia; they are estimated at about $100,000,000$ years old. The three formations in Alberta in which they occur are the Foremost and Oldman formations of the Belly River Series, and the uppermost or Edmonton formation. The youngest coals in Canada are those of Paleocene and later Tertiary ages, estimated at $50,000,000$ to $30,000,000$ years old. They comprise the lignite deposits of southern Saskatchewan and their extension into southern Manitoba and southeastern Alberta, the Tertiary deposits of the outer Foothills belt of central Alberta, and numerous small isolated basin coal deposits occurring in central British Columbia, Yukon and the Northwest Territories.

The coal deposits of the different geological ages reveal a wide range with respect to continuity, uniformity of thickness of seams and quality of the coal. The Lower Cretaceous coal deposits of western Alberta and eastern British Columbia appear to be much more uniform in quality and thickness of seams and more extensive than are either the carboniferous coal deposits of Nova Scotia and New Brunswick or the Upper Cretaceous coal deposits of Alberta or Vancouver Island. The coal deposits of Tertiary age are generally characterized by wide variations in thickness and quality of coal within short distances. This is, in a large measure, an expression of the environmental conditions that existed when the deposits were being formed, and the relative sizes of the coal-forming bogs.

## Classification of Coals of North America

On physical character, chemical composition and heat value, coals of various types or modes of occurrence have been subdivided into different classes or ranks. In that the coals differ as to the original material of which they are composed and as to their manner of deposition, it is to be expected that no hard and fast division lines can be drawn between coals of the adjacent ranks. In fact, up until recent years no uniform classification of coals existed, and coals having the same physical and chemical composition and heat value were designated in Canada and the United States by different names. The need for a uniform and scientific classitication of coals of the United States and Canada based on the physical and chemical properties of the coal has long been felt, the divergence in classification being especially noticeable in applying regulations governing the importation and exportation of coals under reciprocity agreement between these two countries. To establish such a uniform classification, an Associate Committee on Coal Classification of the National Research Council was set up in 1928 to work according to the procedure of the American Standards Association, in close association with an earlier formed Sectional Committee on Classification of Coals functioning under the sponsorship of the American Society for Testing Materials. This Committee was concerned with a classification of coals of the whole of North America. After nearly ten years of united effort, a uniform classification of the coals of North America was evolved which has been concurred in by both the American and Canadian Committees. This classification is essentially a chemical classitication based on the fixed carbon percentage and the calorific value of the coal calculated on a mineral-matter-free basis, "the higher rank of coals being classified on the dry basis, and the lower rank coals according to B.T.U. per pound on the moist (as mined) basis. Agglomerating properties, that is, weakly caking properties, and slacking indices, the tendency for certain low-rank, high-moisture coals to slack and crumble due to weathering, are used to differentiate between certain adjacent groups". This A.S.T.M. classification by rank arranges the coals into the following four classes and thirteen groups:-

| Class | Group | Limits of Fixed Carbon (F.C.) and Calorific Value (B.T.U.) on Mineral Matter-Free Basis and Requisite Physical Properties. |
| :---: | :---: | :---: |
| Class I- | Anthracitic Class- |  |
| Group 1 | Meta-Anthracite group. | Dry F.C. 98 p.c. or more. |
| Group 2 | Anthracite group... | Dry F.C. 98 p.c. to 92 p.c. |
| Group 3 | Semi-Anthracite group. | Dry F.C. 92 p.c. to 86 p.c., non-agglomerating. |
| Class II- | Bituminous Class- |  |
| Group 1. | Low Volatile Bituminous group. | Dry F.C. 86 p.c. to 78 p.c. |
| Group 2.. | Medium Volatile Bituminous |  |
| Group | group High Volatile A Bituminous | Dry F.C. 78 p.c. to 69 p.c. |
| Group | group | Dry F.C. less than 69 p.e. and moisture B.T.U. 14,000 or more. |
| Group 4. | High Volatile B Bituminous group. | Moist B.T.U. 14,000 to 13,000. |
| Group 5. | High Volatile C Bituminous group. | Moist B.T.U. 13,000 to 11,000 either agglomerating or non-weathering. |
| $\begin{gathered} \text { Class III- } \\ \text { Group } 1 . . \end{gathered}$ | Sub-bituminous Class-Sub-bituminous A group...... | Moist B.T.U. 13,000 to 11,000 both weathering |
| Group 2 | Sub-bituminous B group | and non-agglomerating. <br> Moist B.T.U. 11,000 to 9,500 . |
| Group 3. | Sub-bituminous C group ...... | Moist B.T.U. 9,500 to 8,300. |
| Class IV- | Lignitic Class- |  |
| Group 1 | Lignite group. | Moist B.T.U. less than 8,300 (consolidated). Moist B.T.U. less than 8,300 (unconsolidated). |

This distribution of the various classes of coal of Canada and the United States is shown on the map facing this page.

The chief factors that have been operative in determining the rank or stage of metamorphism of a coal are geological age, and heat and pressure produced by mountain-building forces or by igneous intrusions. Age has doubtless played an important part in maturing the coal, but it does not appear to have been very effective in raising the rank of the coal as is evident from the fact that the oldest coals in Canada, those of Carboniferous age in Nova Scotia, estimated at 250,000,000 years old, have attained only to the rank of High Volatile A, B and C Bituminous coals which are the same as those reached by much younger coals in the outer Rocky Mountains Foothills belt of Tertiary Paleocene age that are estimated at about $30,000,000$ years old. So, also the Lower Cretaceous deposits of the Onakawana field of northern Ontario, estimated at $150,000,000$ years old, are still in the lignite or brown coal stage, whereas coals of this age in the Rocky Mountain Foothills have been raised to the ranks of Medium and Low Volatile Bituminous and even Anthracite. This increase in the rank of the western coals is due to pressure exerted by the overthrust of the Rocky Mountains as is clearly shown by the examination of the analysis of the coal samples obtained from mines located at varying distances from the Rocky Mountain front westward from the Saskatchewan border. These reveal a progressive increase in the rank of the coal from lignite at the Saskatchewan border through Sub-bituminous and Bituminous stages to reach the Anthracite rank in the vicinity of Banff. For the same reason the coals occurring in the same geological formation being mined at Redcliff and at Lethbridge are of different geological ranks, those at Redeliff being of Sub-bituminous C rank, and those at Lethbridge being of Bituminous High Volatile B rank.

Heat derived from igneous intrusions and lava flows have also been effective in raising the rank of the coal in the immediate vicinity of the igneous rocks, the coal at the contact being commonly raised to the rank of Anthracite. Examples of this are to be found in association with igneous dykes as at Telkwa, Kathlyn Lake, and Groundhog coal areas in northern British Columbia.

## Estimated Coal Reserves

So many unknown factors exist pertaining to the nature and formation of the coal, the character of the associated sediments, and the folding, faulting and erosion to which the coal seams have been subsequently subjected, that it is impossible to make any accurate estimate of the amount of coal within any particular field without having made a thorough geological examination, supplemented by surface prospecting, systematic drilling, sampling of the coal seams or actual mining operations.

The estimate of Canada's.coal resources as given in Geological Survey Memoir 59, Coalfields and Coal Resources of Canada-by D. B. Dowling, 1915, was compiled for the 12th International Geological Congress held in Canada in 1913. These estimates include all known coal seams 1 foot or over in thickness to a vertical depth of 4,000 feet and seams 2 feet or more in thickness lying between 4,000 and 6,000 foot cover. At the time the estimate was made, data pertaining to many of the coalfields of Canada were meagre and the estimates were based on certain assumptions that have since been found to be inaccurate. Since that date, geological investigations, drilling and actual mining operations have been carried on in many of the areas and have shown that the coal seams are not commercial or are not as extensive as Dowling assumed. The figures placed on the thickness of coal seams and the depth to which the calculations were carried made it obvious that these estimates could not be regarded as more than rough estimates of probable coal in the ground and not those representing available reserves. Under existing mining conditions no coal seam, 1 foot in thickness, can be profitably mined by itself at a depth of 4,000 feet, and therefore should not be considered as an economic asset. The minimum thickness at which a seam at this depth can be mined is placed at 3 feet. At present coal mining is being carried on at Springhill, N.S., in Carboniferous rocks at a depth of 3,820 feet but, due to the presence of "bumps" accompanied by fatal results, it is unlikely that coal mining in this Province can be profitably carried on much below this depth. Accordingly, 4,000 feet is here taken as the limit of mining in the Carboniferous measures of Nova Scotia.

There is no possibility, however, that such a depth can be reached in the mining of Lower Cretaceous coals of Western Canada. The deepest cover experienced in mining these deposits is at Coal Creek, Fernie, B.C., where mining operations in several seams had to be discontinued when the cover reached a thickness of approximately 2,500 feet, necessitating the abandonment of the workings and the opening up of a new colliery. Here, also, the minimum thickness of coal seams mineable at this depth should be placed at 3 feet, and estimates of available coal reserves are being made on this basis. Comparable figures may be taken for the Bituminous coals of Upper Cretaceous and Tertiary ages in the Foothills of the Rocky Mountains and Vancouver Island, but it is unlikely that the lignite deposits of Tertiary age could be profitably mined at a depth of more than 1,000 feet.

Estimates of available coal reserves now being compiled for the Royal Commission on Coal by various mining companies, Departments of Mines of the several coal-producing provinces and by the Geological Survey, indicate that the reserves of available coal form not more than about 25 p.c. of what was previously listed under resources as actual, probable and possible reserves. These show, however, that, with the exception of one important district, the reserves of available coal are amply sufficient to take care of market requirements for many generations to come. The map facing p. 347 shows by different colours the areas of developed and potential coal deposits of the various ranks and, by size of circle, the relative production in 1945 of coal in the various provinces and the principal mining districts of each province where the production exceeds 10,000 tons. Brief descriptions of the coal deposits of each of these provinces follow.

Nova Scotia.-The coal deposits of Nova Scotia occur in several formations of Carboniferous Pennsylvanian age. The coalfields fall into two main groups: (1) that of Cape Breton Island, comprising the Sydney County coalfield on the east coast, the Inverness County coalfield on the west coast, and the small unproductive Richmond County coalfield at the southwestern part of the Island; and (2) that of Nova Scotia mainland, comprising the Pictou County coalheld in the eastern part of the Province, and the Cumberland County coalfield in the northwestern part of the Province.

Sydney County Coalfield.-The Sydney County coalfield is spread along the east coast of Cape Breton for a distance of 30 miles from Port Morien on the southeast, to Cape Daulphin on the northwest. Its productive measures reach inward for a maximum distance of 5 miles and seaward for an undertermined distance. The coal seams occur at several areas in the uppermost 6,800 feet of strata of Pennsylvanian Carboniferous age. There are 15 or more seams in the formation, 11 of which, ranging in thickness from 3 to 9 feet, either have been or are being mined in one or more of the five mining districts of this coalfield. The coal measures and contained seams are flexed into gentle indulations, and with few exceptions, dip seaward at low angles. The coal in most of the land areas has been worked-out and present mining operations, as well as available reserves, lie in the submarine areas. There are no serious structural faults to interfere with extensive mining operations seaward, but over much of the areas the coal cannot be mined profitably due to its inferior grade, or to the coal seams splitting and becoming too thin to mine. This coalfield is the oldest and most important in Canada from the standpoint of past history, present production, and reserves available for future development. It has been under development for nearly 200 years, its production of marketed coal up-to-date, amounting to over $200,000,000$ tons, and its total worked-out coal, consisting of that mined and that left in the old wokrings, being estimated to amount to over $406,000,000$ tons. Its production in 1945 amounted to $3,688,657$ tons, and its available coal reserves are estimated at over $1,000,000,000$ tons, an amount which should meet the requirements of the maximum annual output for a period of about 200 years. The coal mined in the Sydney coalfield is an excellent coking bituminous coal, with some deposits of "cannel" coal. The coal is classed as High Volatile "A" Bituminous and High Volatile "B" Bituminous coal.

Inverness County Coalfield.-The Inverness County coalfield embraces a group of four small detached coal areas that occur along the west coast of Cape Breton Island in Inverness County from Port Hood at the southwest to Margaree Harbour at the north, a distance of 40 miles. They embrace Port Hood, Mabou, Inverness, St. Rose and Chimney Corner coal areas. Coal seams in all these areas have been worked,
but in recent years mining operations have been confined largely to the Inverness area. The 4 coal seams mined in the Inverness and the 2 seams mined in the Mabou areas are of the same geological horizon as those mined at Sydney, whereas the 6-7 foot thick seam mined at Port Hood, the 4 feet and 7 feet thick seams mined at St. Rose, and the 8 foot- 3 inch and the 5 foot- 8 inch thick seams being mined at Chimney Corners, belong to a lower geological horizon. The coal deposits in the land areas of these several basins have been nearly worked-out, and the aggregate reserves estimated at about $18,000,000$ tons are located largely in the submarine areas opposite the old workings of the different areas. The 91,020 tons of coal mined in the Inverness field in 1945, classed as High Volatile "C" Bituminous coal came largely from Inverness coal mine and other small operations in this area.

Richmond County Coalfield.-Coal seams are known to occur at Whiteside on Little River and at Seacool Bay near the southern entrance of the Strait of Canso, where seams $3,4,5$ and 11 feet thick occur. A few thousand tons have been mined at the old Richmond coal mine. The coal measures are highly inclined and faulted, and the commercial possibilities of the area are considered to be small.

Pictou County Coalfield.-The Pictou County coalfield occupies a down-faulted block that has its centre about 3 miles due south of New Glasgow. It extends about 11 miles in an east-west direction and has a maximum width of about 3 miles. It comprises 3 detached coal areas, each of which possesses a different series of coal-bearing strata; in the southwestern part of the Pictou field is the Westville area, in which the 4 coal seams mined belong to the Westville member, the oldest of the series; in the central part of the Pictou coalfield is the Stellarton or Albion area, in which the 5 seams that have been mined or are being mined are in the Albion member; and in the eastern part is the Thorburn or Vale coal basin, in which the 5 seams mined belong to the Vale or Thorburn member, which is the youngest of the series. Coal production in the Pictou Field in 1945 amounted to 555,689 tons. The coal mined at Stellarton is High Volatile "A" Bituminous, and that at Westville is Medium Volatile Bituminous coal. The Pictou Field is one of the earliest developed fields in Nova Scotia, its total production to date amounts to $40,000,000$ tons, its total worked-out coal is estimated at over $132,000,000$ tons, and its available reserves are estimated at about $35,000,000$ tons.

Cumberland County Coalfield.-Cumberland County coalfield contains 2 detached coal-bearing areas, Joggins coal area in which the coal measures extend from Chignecto Bay eastward for a maximum distance of 19 miles, and dip to the south, and the Springhill coal area in which the measures are on the south limb of a westerly plunging syncline, all the mine slopes being located at Springhill about 15 miles east of Joggins. The two areas are separated by the deep trough of a broad structural basin. The coal seams at Cumberland are considerably younger than those of the Joggins area. At Joggins a maximum of 5 seams have been mined ranging from 2 feet- 6 inches to 5 feet in thickness. Traced eastward from the coastline at Chignecto Bay or where worked down the dip, the coal seams have been found to thin and peter out or to become too dirty to mine. Mining at present is restricted to the Joggins River, River Hebert and MacCan areas. The coal measures of the Springhill area contain at least 25 coal seams, five of which, from the bottom up, seams Nos. 6, 7, 2, 1 and 3 having thicknesses of $6,5,10,10$ and 11 feet, respectively, have either been or are being mined. This area possesses the main reserves of the Cumberland Coalfield. The output for 1945 from this ares was 777,123 tons. The coal mined at Springhill is classified as High Volatile "A" Bituminous and that at Joggins as High Volatile " B " Bituminous.

New Brunswick.-Carboniferous coal-bearing rocks underlie more than 10,000 square miles of central New Brunswick, but only in the Grand Lake region and at Beersville are the coal seams of sufficient thickness to be mineable. The main deposit occurs in what is known as the Minto Coal Basin. Here there are 2 seams but only one of them, the uppermost, is of sufficient thickness to be mined. This seam ranges in thickness from 16 to 30 inches, and averages about 20 inches thick. The seams occur near the base of the middle member of the Grand Lake Formation, and are estimated to underlie an area of 37,675 acres. The probable and possible coal reserves of this area have been calculated at approximately $78,000,000$ tons. The estimate is regarded as conservative as indicating available coal. Coal is being mined by both underground workings and by means of opencut stripping operations, the latter being conducted wherever the coal is sufficiently thick, and the overburden does not exceed 35 feet. There are over a dozen separate mining operations in this basin, centred about the village of Minto and the town of Chipman, the relative production of coal mined at these two centres being indicated on Map II, facing p. 347. The coal production for the district for 1945 amounted to 358,745 tons. The coal mined is classed as High Volatile "A" Bituminous rank.

Ontario.-The lignite deposits of the Onakawana field in northern Ontario have attracted considerable attention since 1929, when systematic drilling was begun to prove up the extent and nature of the deposit which outcrops at Blacksmith Rapids on Abitibi River. During the following three years there were drilled 116 boreholes, spaced 1,000 feet apart, to the base of the deposit. These showed that the lignite underlay an area of approximately 6 square miles; in the eastern part of the field it consists of a single seam 10 to 30 feet thick, and in the central and southwestern part of the field, of two seams aggregating about 35 feet thick. During the past 15 years, the Ontario Department of Mines and the Ontario Research Foundation have been endeavouring to evolve some method by which these deposits could be economically mined and marketed, but recently the Department has announced that this has proved unsuccessful and that tests are being discontinued.

Manitoba.-The coal resources of Manitoba are dependent on the continuity of the $4 \frac{1}{2}$ foot seam of lignite that is being mined by the Woodlands Coal Company in LSD 2, S. 13, Tp. 1, Rg. 24, W. of the Principal Meridian. This mine is situated about one-quarter mile from the old Baden Mine that is located in LSD 15, S. 12, of the same Township and which is believed to be on the same seam. The old D. McArthur Mine located in LSD 10, S. 11, Tp. 2, Rg. 23, $7 \frac{1}{2}$ miles to the northeast and about 10 miles along the contour of the hill, is believed to be also on the same seam. If this assumption is correct, mineable coal will likely be found to underlie an area of about 10 square miles.

Saskatchewan.-The coal deposits of Saskatchewan are all of lignitic rank. They occur in formations of two geological ages. The Ravenscrag formation of Tertiary age and the Belly River formation of Upper Cretaceous age. The Tertiary deposits are by far the most important with respect to present and future mining development. These deposits occur in the southern part of the Province which is divisible into three districts; the Souris River district on the east, the Wood MountainWillowbunch district in the centre, and the Cypress Hills district on the west. The most important of the coal deposits are the upper 4 seams which occur in the Estevan area of the Souris River district, and which are mined by both open-pit and underground operations. Elsewhere throughout the Tertiary area, coal mining is being largely carried on by numerous small operations. Due to meagre data pertaining
to the existence, thickness, quality and continuity of the coal seams over much of this extensive district, any estimates as to the available coal must be regarded as only rough approximations. The coal mined in 1945, most of which came from the Estevan area, amounted to $1,533,142$ tons.

The Belly River formation of Upper Cretaceous age contains seams of lignite which outcrop at widely separated areas in western Saskatchewan, and especially along the valley of the South Saskatchewan River. The seams range in thickness from a few inches up to a maximum recorded thickness of 11 feet of dirty coal, but as yet, no seams have been discovered that are sufficiently thick or of sufficient purity to be mined profitably, and until such deposits are discovered, the coal seams should not be regarded as available reserves.

Alberta.-Alberta contains by far the largest reserves of coal of any of the provinces of Canada. The deposits occur in the following six geological formations: the Kootenay and Luscar formations of Lower Cretaceous age; the Foremost and Oldman formations of the Belly River series, and the Edmonton formation all of Upper Cretaceous age; and the Coalspur beds of Tertiary Paleocene age. The coal deposits of the Province have been arranged by the Provincial Government into 50 coal areas, which may be conveniently grouped into 4 main classes. These are: (1) Coal deposits of Lower Cretaceous age of the Inner Foothills Belt; (2) Coal deposits of Upper Cretaceous and Tertiary Paleocene ages of the Outer Foothills Belt; (3) Coal deposits of Foremost and Oldman formations of the Belly River Series of Upper Cretaceous age of the Plains Region; and (4) Coal deposits of the Edmonton formation of Upper Cretaceous age of the Plains Region.

The Lower Cretaceous coal deposits extend along the Rocky Mountain Foothills from the International Boundary to beyond Smoky River, a distance of 460 miles. This belt has been transversely divided into 10 coal areas. Mining of the deposits to date has been largely restricted to where the belt is crossed by the Canadian Pacific Railway in the Crowsnest Pass, and along Bow River, and to the Mountain Park and Nordegg areas that are reached by branch lines of the Canadian National Railway. Between these areas there are large reserves of coal that have not as yet been mined. The coals mined at Blairmore, Bellevue, Coleman and Carbondale in the Crowsnest Pass, and at Mountain Park, Cadomin and Luscar in the Mountain Park district, are largely of Medium Volatile and High Volatile "A" Bituminous ranks. On the other hand, those being mined at Canmore and at Nordegg are of Low Volatile Bituminous rank. The total production in 1945 amounted to $3,460,736$ tons.

The coal deposits of the Outer Foothills Belt occur in narrow bands of Belly River and Edmonton formations of Upper Cretaceous age, and in the Coalspur beds of Tertiary Paleocene age. This coal-bearing Belt extends from near the International boundary north to beyond the Canadian National Railway at Entrance, a distance of 370 miles. The Belt has been divided transversely into 7 coal areas, which from north to south are Prairie Creek, Coalspur, Saunders, Red Deer, Morley, Pekisko and Pincher Creek. The production from these deposits in 1945 amounted to 678,803 tons, 616,000 tons of which was mined in the Coalspur district. These coals were formerly designated as sub-bituminous coals, but are now classified as High Volatile "C" Bituminous.

The coal deposits of the Outer Plains Region belong largely to the Foremost and Oldman formations of the Belly River series of Upper Cretaceous age. They occur in 18 of the coal areas of Alberta. The production from these areas in 1945 amounted to 937,311 tons, the 3 main producing areas being Lethbridge, Taber
and Brooks. The coals from most of these areas are classified as Sub-bituminous " A ", " B " and " C " ranks, except those in the Lethbridge and Magrath areas which being closer to the mountain front have been raised to the rank of High Volatile "B" Bituminous coals.

The coal deposits of the Inner Plains Region belong largely to the Edmonton formation of Upper Cretaceous age. They occur in 15 of the coal areas of Alberta and, in 1945, produced a total of $2,657,921$ tons, of which the Edmonton district produced 408,306 tons and the Drumheller district $1,722,667$ tons. The coal of the Edmonton region is classed as Sub-bituminous "C" and that of the Drumheller as Sub-bituminous "B" coal.

British Columbia.-The coal deposits of British Columbia occur in formations of three geological ages, Lower Cretaceous, Upper Cretaceous and Tertiary. The Lower Cretaceous deposits are the most important with respect to both present and future development. They include: the coalfields of the Crowsnest district in southeastern British Columbia; the coalfields of the Peace River district in northeastern British Columbia; and those of the Telkwa, Groundhog and numerous other small bituminous coal basins in northern and northwestern British Columbia. In 1945 the production from the Crowsnest district coming wholly from Michel, Coal Creek and Elk River Collieries, amounted to 974,000 tons, the production from the Telkwa Coal Basin amounted to 78,561 tons, and from Hasler Creek Mine amounted to 3,547 tons. The coal mined in the Crowsnest district is classed as Medium Volatile Bituminous coal, that of the Telkwa Basin as High Volatile "A" Bituminous coal, and that of the Peace River district as Low Volatile Bituminous coal. Where igneous intrusions occur, as in the Lake Kathlyn and Groundhog areas, the coals have been raised to Anthracitic rank.

The coal deposits of Upper Cretaceous age are restricted to the Coastal Region, and embrace the Nanaimo, Comox, Tsable River and Suquash coalfields of Vancouver Island, and the Yakoun River coal area of Graham Island. The mining of these deposits is confined to the Nanaimo and Cumberland areas which in 1945 produced 623,950 tons. The coal mined in these areas is classed as High Volatile "A" Bituminous. The reserves of the Nanaimo field are small, and the main production in the future will have to come largely from the Comox and Tsable River deposits. Geological data pertaining to the extent of these deposits are too meagre to estimate their available reserves.

Coal deposits of Tertiary age occur in numerous small basins in southern, central and northwestern British Columbia, and underlie a large area in the northern part of Graham Island. The deposits include those at Princeton, Tulameen, Merritt, White Lake, Hat Creek, North Kamloops, Coal Creek, Bowron, Stikine River and Liard River coal areas. The coals are largely Lignite and Sub-bitumınous, but in a few localities as at White Lake where the coal seams have been invaded by igneous dykes and covered by lava flows, the coal in the immediate vicinity of the intrusion has been raised to Bituminous or even Anthracitic rank. Mining of these deposits in 1945 was largely restricted to the Tulameen and Merritt deposits, which produced 63,000 tons.

The total production for British Columbia in 1945 amounted to $1,699,780$ tons.

Yukon.-Coal deposits of Jurassic-Cretaceous and of Tertiary ages occur widely distributed throughout the Yukon. Those of Jurassic-Cretaceous age occur at the following areas: Fish Lake and Wheaton areas in Whitehorse district; Big Salmon, Claire Creek, Cassiar Bar, Hootelanqua, Mason Landing and Kynocks area in Laberge district; at Five Fingers, Minto, Tantalus and Ptarmigan Creek areas in Carmacks district; at Nordenskieold and Kynocks areas in Aishihik district; in Old Crow district; in Peel River district; and at Moose River in the Arctic Coast district. These deposits are largely of Bituminous rank.

Deposits of Lignite of Tertiary-Paleocene age occur in the following areas: Rock Creek coalfield in Dawson district; Indian River coal area, Ogilvie district; Wade Creek, Duke River and Sheep Creek areas in Klaune district; Jarvis River area in Kaskawulsh district; Squaw Creek in Dezadeash district; Liard River and Hyland River areas in Watson Lake district, and in the Bonnet Plume district.

Coal mining to date has been confined to small mines located at Tantalus, Butte, Five Fingers, Rock Creek and Moose River, to meet local demands.

Northwest Territories.-Lignite deposits of Tertiary age occur at 6 localities on the mainland, and have been reported from 10 widely separated localities on the Arctic Islands. Bituminous coal either as seam outcrops in Pennsylvanian rocks of Carboniferous age or as float coal have been reported from 32 localities, extending from Banks Island to Ellesmere Island a distance of over 1,000 miles, as indicated on the map facing this page.

## Subsection 1.-Canadian Production of Fuels

## Coal

The fuel situation in Canada is somewhat anomalous as, in spite of the enormous resources of coal and oil, output is relatively small in comparison with domestic requirements.
22.-Production of Coal in Canada, by Provinces, 1926-45

${ }^{1}$ First reported production.
${ }^{2}$ Subject to revision.

The Canadian coal areas are situated in the eastern and western provinces, while the areas of densest population and greatest industrial development, in Ontario and Quebec, are more easily and economically supplied with coal from the nearer United States coalfields of Pennsylvania and Ohio. The coal produced in Nova Scotia, New Brunswick and British Columbia is all classed as bituminous, while Alberta produces bituminous, sub-bituminous and lignite and Saskatchewan and Manitoba lignite only.

## 23.-Imports of Anthracite, Bituminous and Lignite Coal into Canada, 1926-45

Nors.-Anthracite dust is included under anthracite coal. Figures for the years 1868-1910, inclusive, will be found at p. 420 of the 1911 Year Book; for the years 1911-25 and 1927-28 at p. 349 of the 1939 edition.

## ${ }^{1}$ Subject to revision.

Coal Consumption.-The sources of coal consumed in Canada in the calendar years 1926-44 are shown in Table 25 and detailed figures of coal made available for consumption in 1944 are given in Table 26; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may
be held in bond at Canadian ports and not "cleared for consumption" until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally, the coal made available for consumption is greater than the apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond, but while remaining in bond at the port it is available for domestic consumption if required.

## 25.-Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, 1926-44

Note.-Figures for the years 1886-1910, inclusive, will be found at p. 354 of the 1921 Year Book; for the years 1911-25 and 1927-28 at p. 350 of the 1939 edition.

## Natural Gas

The producing natural gas wells in Eastern Canada are in southwestern Ontario, and near Moncton, N.B. The principal producing fields in Alberta are the Turner Valley (about 35 miles southwest of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost, Bow Island and Wetaskiwin. Wainwright is supplied with gas from the Maple Leaf Well in the Fabyan Field. Near Lloydminster, in Saskatchewan, a well was brought into production during 1934 and is now supplying that town with gas. In 1945, Alberta was credited with over 54 p.c. of the total value and 82 p.c. of the total quantity, while Ontario consumed over 43 p.c. of the value and over 16 p.c. of the total quantity.

## 27.-Quantities and Values of Natural Gas Consumed in Canada, by Provinces, 1926-45

Note.-For the years 1892-1919, see the Annual Report on the Mineral Production of Canada, 1928 p. 188; for the years 1920-25 and 1927-28 see p. 347 of the 1940 Canada Year Book.

## Petroleum

A brief account of the development of the petroleum industry in Canada is given at pp. 266-267 of the 1941 Year Book. At pp. 316-317 of the 1943-44 edition, the developments of oil production in the Northwest Territories are covered.

The quantity of crude petroleum produced in 1945 was less by 15 p.c. than that produced in 1944. The greatest decline was shown by the Northwest Territories due to the closing of the Whitehorse refinery in March, 1945, which was followed by the shutting down of the majority of the producing wells in the Fort Norman field. Only those required for production of aviation fuel and for use in the mining areas of the Northwest Territories have since been producing.

[^119]The Alberta Oil Fields.*-Over 90 p.c. of Canada's oil is produced from the wells of Alberta. The year 1942 was the peak year for oil production in that Province when, for the first time in its history, the oil fields produced over $10,000,000$ barrels. Since then there has been a steady decline in production. During the first half of 1945 the rate of decline was noticeably reduced, due to the encouraging performance of newly completed wells in the Turner Valley, but the trend changed in the latter part of the year with the result that the output of Turner Valley in 1945 was $7,422,061 \mathrm{bbl}$., a decrease of $904,253 \mathrm{bbl}$. from the 1944 figure. Over 90 p.c. of Alberta's production comes from the Turney Valley.

The situation was brighter in other producing fields of the Province in which the total increased from $462,412 \mathrm{bbl}$. in 1944 to $633,379 \mathrm{bbl}$. in 1945 , offsetting to some extent the decrease in the Turner Valley. Conrad, Princess, Lloydminster and Vermilion were the principal contributors to this increase. During December, 1945, the Conrad Field presented an average of 517 bbl . daily from 17 wells; Princess, 207 bbl . from 8 wells; Lloydminster, 115 bbl . from 9 wells; and Vermilion 569 bbl. from 47 wells. The figures covering Lloydminster deal only with the wells on the Alberta side of the boundary; the field extends into the Province of Saskatchewan where production is also being obtained. Ram River in the foothills area is reported to be reaming its No. 3 Well and has also started its No. 4 on the Clearwater River. Development is being continued in the Jumping Pound area and the Home Brazeau Well, about 25 miles to the northwest of the railway terminus of Brazeau, is being watched with considerable interest. This general district has for some time been regarded as possessing potential possibilities.

Exploratory work was intensified throughout the Province in 1945 and will be continued during 1946.

The Bituminous Sands Development.-Alberta, in its bituminous sands deposit at McMurray, has the greatest known oil reserve on the face of the earth. Estimates vary between that of Canadian geologists at $100,000,000,000$ tons and that of the United States Bureau of Mines at $250,000,000,000$ tons. The yield at present is about one barrel of oil per ton of sands.

At Bitumount, 50 miles north of McMurray on the Athabaska River, an Oil Sands Limited plant is being erected and experimentation regarding processing of the sand in that area has been carried out. Overburden covering the outcrop is very light at Bitumount and the product, being soft, lends itself more readily to separation than the harder outcrop in other parts of the reserve.

Another feature of the Bitumount area is the question of usage of the separated sand for glass manufacture. The sand analysed for such purpose has been favourably reported on, and quantities have been transported to points of manufacture.

## Subsection 2.-Empire and World Production of Fuels

Coal.-The total estimated coal production of the world in 1938, the latest year for which complete figures are available, amounted to about $1,420,000,000$ long tons, a decrease of 6 p.c. from the previous year.

Petroleum.*-Oil production for the world, in 1945, reached a total of $2,493,680,000 \mathrm{bbl}$.; this figure is exclusive of production in Russia and countries previously controlled by the Axis. The countries contributing the major part of this total were: United States, 1,754,190,000 bbl.; Venezuela, 295,550,000 bbl.; Near and Middle East, $184,690,000 \mathrm{bbl}$; and Mexico, $42,340,000 \mathrm{bbl}$. The production of each of these countries showed an increase over 1944.

The British Empire produces only about 2 p.c. of world production of petroleum. Table 30 shows Empire production for the years 1942 to 1945.

## Section 6.-Production of Non-Metallic Minerals (Excluding Fuels)

'Asbestos is by far the most important mineral included in this group followed by salt, gypsum and sulphur. Figures of production of these minerals since 1926 are given in the following tables. A reference to Table 2 at p. 320 and Table 6 at p. 325 shows numerous other minerals, used chiefly for chemical and industrial purposes, which are classified under this group. Among these may be mentioned quartz, peat moss, feldspar, graphite, iron oxides (ochre), magnesitic dolomite, mica, nepheline-syenite, silica brick, sodium sulphate, talc and soapstone. Statistics of production for recent years of these and other minerals of lesser importance appear in the tables mentioned above.

## 31.-Quantities and Values of Asbestos Produced in Canada, 1926-45

Notr.-Figures for the years 1896-1910, inclusive, will be found at p. 424 of the 1911 Year Book; for the years 1911-25 and 1927-28 at p. 354 of the 1939 edition.

## Section 7.-Production of Clay Products and Other Structural Materials

Statistics in this Section include the output of those firms engaged in the production of clay products, Portland cement, lime, sand, gravel and stone, and the production of these materials is naturally dependent upon the activity of the construction industry as a whole. The following tables give figures for the main structural materials.

## Section 1.-Water Power

Canada's basic geological formations and their superimposed topographical features have resulted in a fresh-water area officially estimated at 228,307 square miles. This is larger than the fresh-water area of any other country and more than double that of the whole land area of Great Britain and Ireland. As all of this fresh-water area is above sea-level, and much of it at considerable altitudes, its outflow in its descent to the sea creates sources of potential energy at every rapid and fall along its course. By what may be regarded as a special dispensation of nature, more than half of this potential power occurs in that section of Canada comprising the Provinces of Ontario and Quebec, which is without commercial fuel deposits and in which is concentrated over 80 p.c. of the industrial development of the Dominion.

Since the turn of the present century, water power has been a dominant factor in the evolution of the Canadian economy. In 1900, Canada was predominantly an agricultural country and water power, with the advent of long-distance transmission of electricity, was just beginning to exert its influence in the development of large-scale industry. In the succeeding decades this influence grew rapidly fostering the economic utilization of the resources of land, mine and forest throughout the Dominion and bringing Canada to a position of first-rate importance among the manufacturing countries of the world. Water-power installation, which totalled only $173,000 \mathrm{~h}$. p. in 1900 , grew to $890,000 \mathrm{~h}$. p. in 1910 , to $2,470,000 \mathrm{~h}$. p. in 1920 , to $5,727,000 \mathrm{~h} . \mathrm{p}$. in 1930 , to $8,289,000 \mathrm{~h} . \mathrm{p}$. in 1940 , and at the beginning of 1946 had reached a total of $10,283,610 \mathrm{~h} . \mathrm{p}$. This total places Canada in a position second only to the United States in the development of water power and, on the commonly accepted basis of one horse-power being the equivalent of the work of ten men, furnishes energy equal to that of more than $100,000,000$ workers.

[^128]From hydro-electric developments ranging in size from a few hundred to more than one million horse-power, networks of transmission lines carry power not only to most urban centres in Canada and to industries in isolated locations but also in increasing degree to rural areas in many parts of the Dominion. Low-cost hydroelectric energy is fundamental to the economic mining, milling and refining of base and precious metals, and enables these metals to be fabricated into a multitude of manufactured products. It supplies the enormous power needs of pulp, paper and other wood products industries, and of the lesser but important needs of food processing, textile, and many other industries throughout Canada.

These great hydro-electric undertakings, built to meet the domestic and industrial requirements of the country in peacetime, have been of incalculable value to Canada's participation in two world wars. This is particularly true of the War of 1939-45 in which mechanization played such an enormous part. During the six years of this War more than $2,000,000 \mathrm{~h} . \mathrm{p}$. was added to Canada's waterpower installation, virtually all of which was utilized for war production and great quantities of power also were diverted from peacetime to wartime use. This huge supply of power enabled Canada to produce materials and munitions of war on a scale entirely disproportionate to her population. Aluminum, so essential for the manufacture of aircraft, took at least one-quarter of all electric energy generated in Canada at the time of its peak production and, together with the output of base metals, alloys, explosives, tanks, guns, 'planes, ships, motor-vehicles, and other munitions, resulted in about one-third of the developed water-power capacity of the Dominion being devoted to war purposes.

With the War at an end, the power industry has entered a period of readjustment. Some of the new generating capacity, added during the war years, will be required to supply the normal growth in demand for power which was curtailed by wartime restrictions and some will be needed to provide normal reserves for emergencies which were not available under war conditions. In certain regions there is a prospect of surplus power capacity due to the cessation of war demands, while in others new hydro-electric developments are being undertaken or are being planned to provide for the growing needs of communities and industries.

## Subsection 1.-Water-Power Resources of Canada and Their Utilization

An extensive discussion of Canada's water-power resources with those of other countries and of problems in the development, distribution and merchandising of power is included in the 1940 Canada Year Book, pp. 353-364.

The figures listed in the first and second columns of Table 1 represent 24 -hour power and are based upon rapids, falls and power sites of which the actual drop or the head possible of concentration has been measured or at least carefully estimated. Many unrecorded rapids and falls of undetermined power capacity exist on rivers and streams from coast to coast. These will become available for tabulation only as more detailed survey work is completed; this is particularly true in the lessexplored northern districts. Also, no consideration has been given to the power
concentrations that are feasible on rivers and streams of gradual gradient, where economic heads may be created by the construction of power dams, unless definite studies have been carried out and the results made matters of record.
1.-Available and Developed Water Power in Canada, by Provinces, as at Dec. 31, 1944 and 1945

| Province or Territory | Available 24-Hour Power at 80 p.c. Efficiency December 1945 |  | Turbine Installation |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { At Ordinary } \\ & \text { Minimum } \\ & \text { Flow } \end{aligned}$ | At Ordinary Six-Month Flow | Dec. 31, 1944 | Dec. 31, 1945 |
|  | h.p. | h.p. | h.p. | h.p. |
| Prince Edward Ieland. | 3,000 20 | 5,300 128,300 | 2,617 133,384 | 2,617 133,384 |
| New Brunswick. | 68,600 | 169,100 | 133,347 | 133,347 |
| Quebec. | 8,459,000 | 13,064,000 | 5,848,572 | 5,848,572 |
| Ontario. | 5,407,000 | 7,261,000 | 2,673,443 | 2,673,290 |
| Manitoba. | 3, 309,000 | 5,344,500 | 422,825 | 422,825 |
| Saskatchewan | 542,000 | 1,082,000 | 90,835 | 90,835 |
| Alberta. | 390,000 | 1,049,500 | 94,997 | 94,997 |
| British Columbia | 7,023,000 | 10,998,000 | 864,024 | 864,024 19 |
| Yukon and Northwest Territories | 294,000 | 731,000 | 19,719 | 19,719 |
| Canada | 25,516,400 | 39,832,700 | 10,283,763 | 10,283,610 |

The third and fourth columns give the total capacity of the water wheels actually installed throughout the Dominion; these figures should not be placed in direct comparison with those in the first and second columns to deduce the percentage of the available water-power resources developed. The water-wheel installation throughout the Dominion averages 30 p.c. greater than the corresponding maximum available power figures for developed sites calculated as in the second column. The above figures, therefore, indicate that the at present recorded water-power resources of the Dominion will permit of a turbine installation of more than $51,700,000 \mathrm{~h} . \mathrm{p}$. In other words, the turbine installation at Dec. 31, 1945, represents only 20 p.c. of the present recorded water-power resources and the figures in the first and second columns may be said to represent the minimum water-power possibilities of the Dominion.

## Subsection 2.-Statistics of Water-Power Development

Growth of Water-Power Development.-The inception of long-distance transmission of electricity about the beginning of the present century rendered practicable the development of water-power sites remote from the point at which the power was to be utilized. This resulted in the hydro-electric central station installation increasing from $33 \cdot 5^{\circ}$ p.c. of the total hydraulic installation at Jan. 1, 1900, to 90 p.c. at Jan. 1, 1946. The growth of installation during the period 1931-45 is shown in Table 2. Attention is drawn to the heavy increase in installation during the war years 1939-43 inclusive, also to the relatively small increase in 1944 and the decrease in 1945 due to the cessation of war demands.

The only new installation of magnitude made during 1945 was that of a $19,000-$ h.p. unit at the Alexander Development of the Hydro-Electric Power Commission of Ontario on the Nipigon River. This brought the capacity of the Alexander Station to a total of $73,000 \mathrm{~h} . \mathrm{p}$.

## 2.-Hydraulic Turbine Horse-Power Installed in Canada, by Provinces, as at Dec. 31, 1931-45

Note.-Comparable statistics for the years 1900-19, inclusive, are given at p. 361 of the 1939 Year Book and those for $1920-30$ at p. 364 of the 1940 edition.

| 1944 | 2,617 | 133,384 | 133,347 | 5,848,572 | 2,673, 443 | 422, 825 | 90, 835 | 94,997 | 864,024 | 10,283,763 |
| 1945 | 2,617 | 133,384 | 133,347 | 5,848,572 | 2,673,290 | 422,825 | 90,835 | 94,997 | 864,024 | 10,283,610 |

[^129]Analysis of Total Hydraulic Power Installations.-For the purpose of this review the present total installation of $10,283,610 \mathrm{~h} . \mathrm{p}$. in Table 3 is divided under three main headings: central electric stations, pulp and paper mills, and installations in other industries.

The largest and most rapidly growing of these classes, viz., central electric stations (a detailed survey of which is included in Section 2) totalling $9,315,359$ h.p., represents slightly more than 90 p.c. of Canada's present development and produces 98 p.c. of all electricity sold in or exported from Canada.

The pulp and paper industry has a hydraulic installation of $637,765 \mathrm{~h} . \mathrm{p}$. and is the largest individual purchaser of central station power, buying as much as 50 p.c. of all power sold for industrial purposes.

The "other industries" group has a hydraulic installation of 330,486 h.p. and provides a broad market for central station "power.

The figures of turbine installation, given in Table 3, must not be placed in direct comparison with those of the annual central electric station census nor those of the census of the pulp and paper industry, because of the different bases of com. pilation. The figures of hydraulic installation represent the cumulative totals of installation for the purposes named, adjusted by deducting the capacity of installations removed because of obsolescence or for other reasons. The Census of Industry data are computed on a different basis, representing only the sum of the installation in the plants actually in operation during the year dealt with at the census and not total installation. Also data on installations are available as soon as equipment is installed, whereas census data are not available until some time after the end of the period.

## 3.-Developed Water Power in Canada, by Provinces and Industries, as at Dec. 31, 1945

${ }^{1}$ Includes only hydro-electric stations that develop power for sale. ${ }^{2}$ Includes only water power actually developed by pulp and paper companies. In addition to this turbine installation pulp and paper companies have motor equipment for operation by hydro-electricity purchased from the central electric stations totalled in the first column, aggregating approximately $1,370,000 \mathrm{~h} . \mathrm{p}$., making a total of almost $2,008,000 \mathrm{~h} . \mathrm{p}$. actually developed for the manufacture of pulp and paper. Large amounts of electricity are also purchased for use in electric boilers rated at more than $1,750,000 \mathrm{~h} . \mathrm{p} . \quad{ }^{3}$ Includes only water power actually developed in connection with industries other than the central electric station and pulp and paper industries. These industries also purchase power from the central electric stations totalled in the first column. $\quad$ All water wheels and hydraulic turbines installed in Canada.

## Section 2.-The Central Electric Station Industry in Canada

An article dealing with Government control of power in wartime is given at pp. 336-337 of the 1945 Canada Year Book.

The close relation between the utilization of electric energy and industrial development is indicated by the chart on p. 364 where the three indices of net value of manufacturing production, employment in manufacturing industries and utilization of electricity are brought together. Indices are based on $1926=100$. Canada with annual supplies of electric power produced at low cost and with bountiful reserves of raw materials, well-trained and efficient labour and excellent transportation facilities is in a position that holds great promise during the reconversion of the post-war era.

Summary of Energy Generated by Type of Station, 1943 and 1944.Central electric stations are companies, municipalities or individuals selling or distributing electric energy, whether generated by themselves or purchased for resale. Stations are divided into two classes according to ownership, viz., (1) commercial-those privately owned and operated by companies or individuals, and (2) municipal-those owned and operated by municipalities or Provincial Governments. These are subdivided according to the kind of power used into (a) hydraulic, (b) fuel, and (c) non-generating. This last sub-class purchases practically all the power it resells; a few of these stations have generating equipment that is held for emergencies. The hydraulic stations contain water turbines and wheels with around 88 p.c. of the total capacity of hydraulic installations in all industries in Canada and the generators driven by this hydraulic equipment generate 98 p.c. of the total output of all central electric stations.

## Subsection 1.-Historical and General Statistics

The growth of the central electric stations industry, has been almost continuous since 1919, when statistics of kilowatt hours generated were first made available. The depression that occurred in the early 1930's resulted in decreased output of power for several years but output soon recovered, the increase from 1939-44 being particularly large, owing to the effects of the War on production.

The central electric stations industry is one that is particularly suited to largescale operation, because of the huge outlays of capital necessary. Capital invested and total horse-power installed increased almost continuously even during the depression years, mainly because large power projects, planned before the depression, were in process of construction during the early years of the past decade. Off-peak and surplus power, used mainly in electric boilers of pulp and paper plants, grew steadily to a peak of $7,803,000,000 \mathrm{kwh}$. in 1937 but, owing to war requirements for firm power, it was reduced in 1940-44, and amounted to only $2,743,121,000 \mathrm{kwh}$. in the latter year.

## 5.-Summary Statistics of Central Electric Stations, 1931-44

Note.-Figures for the years 1917-30 will be found at p. 369 of the 1940 Year Book.

| Year | Stations | Capital Invested | Revenue from Sale of Power ${ }^{1}$ | Power Equipment Capacity ${ }^{2}$ | Kilowatt Hours Generated | Customers | Persons Employed | Salaries and Wages |

Although the amount of power used by domestic customers or for residential purposes has been between only 4 and 7 p.c. of the total production of central electric stations, this service is exceedingly important. Details of the number of domestic customers served, the kilowatt hours delivered and the costs to the customers, exclusive of direct Dominion, provincial and municipal taxes on such service, are shown in Table 6. The average consumption per customer and average cost per kilowatt hour vary considerably as between municipalities and also as between provinces; there are smaller differences between the average bills.
6.-Summary Statistics of Domestic Service Consumption of Electricity, 1931-44

| Year | Customers | Consumption | Average Consumption per Customer | Average Charge per Annum | Average per kwh. |

Equipment of Central Electric Stations.-Auxiliary equipment includes only thermal engines and generators operated by them in hydraulic stations and in non-generating plants and does not include spare equipment in thermal stations or spare hydraulic equipment in hydraulic stations. Such equipment is classed as main-plant equipment. The capacities of the equipment are the manufacturers' ratings and, for water wheels and turbines, vary with the supply of water. The majority of the hydraulic stations are large, serving wide areas over transmission lines, whereas most of the plants with thermal engines are small, serving the needs of the local municipality in each case.

## 7.-Main-Plant Equipment of Central Electric Stations, by Provinces, and Total Auxiliary Equipment, 1944

Note.-Kva. means kilo-volt-amperes.

Farm Service Furnished by Central Electric Stations.-A complete segregation of farm customers from other domestic customers is not made by all central electric stations. For 1930 only Ontario and Quebec stations reported farm customers almost equal in number to the farms supplied with electricity as recorded in the census.

Table 9 shows the number of farm customers, the average annual consumption, average annual revenue exclusive of the 8 p.c. Federal tax, and the average revenue per kilowatt hour sold to these customers in each province for 1944.

Effective Jan. 1, 1944, the Ontario Hydro-Electric Power Commission reclassified its rural customers, including under "farm customers" only farm contracts whereby one or more dwellings occupied by persons engaged in the operation of the farm would be counted as one customer. This classification excluded other dwellings, stores, garages, repair shops, etc., also small properties of five acres or less except under special conditions. This change in classification explains the apparent decrease in farms served as shown in previous years. The Ontario Government pays for part of the cost of installing services to farm customers, which accounts in part for the lower average revenue per kilowatt hour in Ontario as compared with the other provinces.

## Subsection 2.-Public Ownership of Central Electric Stations*

Water power is developed in Canada by provincial commissions, by municipalities and by private companies-hydro-electric plant. The first such provincial commission was formed in Ontario in 1906 to act as trustee for a group of municipalities to develop and distribute electricity. It now generates and purchases power, transmits it to urban municipalities, serves large power customers and distributes power in rural municipalities. Somewhat similar commissions have since been formed in each of the other provinces.

A large portion of the power development in Quebec has been connected with pulp and paper plants and with the aluminum industry. These power plants are operated as separate organizations and deliver power to the parent companies at relatively low rates. Also substantial blocks of power are produced in Quebec for export to Ontario. The large switch from private to public plants in Quebec was due to the acquisition of the Montreal Light and Power Company and the Beauharnois Power Company by the newly formed Quebec Hydro-Electric Commission.

Table 11 shows statistics of municipally or publicly owned central electric stations, by provinces, for 1944 . Table 21 at p. 379 shows comparable statistics for commercial stations.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. The governing bodies, their general regulations and their activities are summarized by provinces.

Nova Scotia.-In 1909 legislation was first enacted in Nova Scotia relating to the use of water power in "An Act for the Further Assisting of the Gold Mining Industry". This was the most advanced legislation until the development of water power within the Province of Nova Scotia was initiated under the Acts of 1914 and carried on in an investigatory manner in co-operation with the Dominion Government until 1919, when the Nova Scotia Power Commission was created under the Power Commission Act. Certain investigatory work is still carried on in Nova Scotia by the Dominion Government through the Dominion Water and Power Bureau with which the Nova Scotia Power Commission is closely associated. The control of the water resources of the Province is vested in the Crown and administered under the provisions of the Nova Scotia Water Act of 1919. The Commission pays the regular fees for water rights.

The function and policy of the Commission is the supply of electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service. It provides for financial assistance to equalize cost and revenue of extensions, the construction of which have been approved by the Governor in Council as qualifying under the Act. In 1941, an amendment to the Power Commission Act authorized the Commission subject to the approval of the Governor in Council, to regulate and control the generation, transformation, transmission, distribution, supply and use of power in the Province.

Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1945, showed fixed assets of $\$ 18,379,723$, including work in progress of $\$ 142,339$, current assets $\$ 196,608$, contingency and renewal reserves $\$ 1,996,452$, sinking fund reserves $\$ 2,406,682$ and special and general reserves of $\$ 1,452,767$.

The initial development of the Commission was an $800 \mathrm{~h} . \mathrm{p}$. installation on the Mushamush River, which went into operation in 1921 and delivered $192,000 \mathrm{kwh}$. in the first complete year of operation. This and later developments are shown in Table 12.
12.-Present Developments with Initial Capacities of Undertakings of the Nova Scotia Power Commission

| Grand Total. |  |  |  |  | 237,663,256 |

${ }^{1}$ Mininum head. $\quad{ }^{2}$ Distribution system only. $\quad{ }^{\mathbf{2}}$ Rated in kilowatts.
The nine systems comprise $1,617 \cdot 92$ miles of combined transmission and distribution lines and served 34 wholesale and 9,200 retail customers at Nov. 30, 1945. Nineteen generating stations and 38 generating units are in service with a total installed capacity of $77,924 \mathrm{~h} . \mathrm{p}$., and a steam installation of $1,125 \mathrm{kw}$. in two units. The total delivery to customers, which is somewhat variable, has reached $249,449,505 \mathrm{kwh}$. per year.

New Brunswick.-The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. Generating stations owned and operated by the Commission are as follows:-

| Plant | Tupe | Capacity |
| :---: | :---: | :---: |
|  |  | h.p. |
| Musquash.... | Water power. . | 10,000 |
| Grand Lake... | Steam....... | 26,800 |
| Grand Manan. | Water powe Diesel..... | 200 310 |
| St. Quentin. | Diesel. | 380 210 |
| Total. |  | 37,590 |

The Musquash, Grand Lake and Kouchibouguac plants are inter-connected and operate in parallel at all times.

Transmission Lines.-The transmission system consists of a 66,000 -volt line from Musquash to Moncton; and five lines from Grand Lake, viz., two 33,000 -volt lines to Fredericton, one 66,000 -volt line to Newcastle, one 66,000 -volt line to Moncton, and one 66,000 -volt line from Coal Creek to Hampton.

Power is sold en bloc to the cities of Saint John, Moncton, Fredericton and the town of Sussex.

The statistical information given below shows the growth of the Commission's undertaking since 1924.

Quebec.-The National Electricity Syndicate, 1937 (Geo. VI, c. 24), was established to develop electricity generating plants and distributing systems in the Province. It was abolished in 1940 (4 Geo. VI, c. 22) and its powers, duties, and contractual obligations were then transferred to the Quebec Streams Commission.

The Quebec Streams Commission.-Created in 1910 by 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (see R.S.Q., c. 46), by 20 Geo. V, c. 34 and by $4 \mathrm{Geo} . \mathrm{VI}, \mathrm{c} .22$, the Commission is authorized to ascertain the water resources of the Province, to make recommendations regarding their control, to construct certain storage dams and operate them so as to regulate the flow of streams, and to undertake the direct production of electric power. The Commission has assisted companies engaged in such work by the systematic collection of data on the flow of the principal rivers and on the meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mainly by the regulation of the flow of the principal power streams through the construction of storage dams. In 1941, and at the beginning of 1942, the Quebec Streams Commission completed the construction of a $48,000 \mathrm{~h} . \mathrm{p}$. ( 3 units) generating plant at Rapid 7 on the Upper Ottawa River, at a cost of $\$ 9,600,000$ including interest during construction. About $16,000 \mathrm{~h} . \mathrm{p}$. has been supplied to the Noranda Mines since Oct. 18, 1941. A fourth unit is to be installed when warranted and when the flow of the drainage area above Rapid 7 has been regulated. Act 4 Geo. VI, c. 22, conferring on the Quebec Streams Commission powers to undertake the direct production of electric power, was abolished in 1944 and the same powers were granted to the Quebec Hydro-Electric Commission by 8 Geo. VI, c. 22. By the said Act, the administration of the Hydro-Electric Plant at Rapid 7 was entrusted to the Quebec Hydro-Electric Commission.

From 1912 to 1925, storage reservoirs were built or acquired and operated by the Commission, charges being made to benefiting companies to cover interest and amortization on the capital invested as well as the cost of operation. Since 1925, companies or persons have availed themselves of the latitude given them by R.S.Q., 1925, c. 46, s. 6, to build the necessary dams. Such storages have been transferred to and are operated by the Commission, the cost of operation only being charged annually to the interested companies or persons.

There were 28 storage reservoirs in 1944, which have been built and are controlled by the Commission in Quebec. Among the rivers controlled by the Commission either by means of dams on the rivers themselves or by controlling the outflow of lakes at their headwaters, together with the horse-power now developed, are: the St. Maurice, 1,026,050 h.p.; the Gatineau, $504,000 \mathrm{~h} . \mathrm{p} . ;$ the Lièvre, 274,000 h.p.; the St. Francis, 100,000 h.p.; the Chicoutimi, 41,400 h.p.; and the Au Sable, $33,200 \mathrm{~h} . \mathrm{p}$. Most of these developments are capable of being extended to produce more power than is now installed.

Other storage reservoirs operated by the Commission are: the Lake Metis Reservoir, the Savane River and Lake Brûlé Reservoirs on Ste. Anne de Beaupré River, nine reservoirs on North River and one reservoir on Rivière-du-Loup (en bas).

Among storage reservoirs not controlled or operated by the Commission are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River, and the Onatchiway on the Shipshaw River. Power developments on the Saguenay River, benefiting from the Peribonca and Lake St. John Reservoirs, amount to over $1,500,000 \mathrm{~h} . \mathrm{p}$. , since the Chute-à-Caron (Shipshaw) project has been completed.

The Quebec Hydro-Electric Commission.-The Quebec Hydro-Electric Commission was established by 8 Geo. VI, c. 22, with the object of supplying power to the municipalities, industrial or commercial undertakings and citizens of the Province of Quebec at the lowest rates consistent with sound financial administration.

On Apr. 15, 1944, in accordance with the provisions of this enactment, the Commission took over: (a) the undertaking of Montreal Light, Heat and Power Consolidated for the generating and distributing of electricity; (b) the undertaking of Montreal Island Power Company for the generating and distributing of electricity; and (c) all the shares of the capital stock of Beauharnois Light, Heat and Power Company. Thus, Quebec Hydro-Electric Commission acquired the control, among other assets, of the following hydro-electric plants:-

| Hydro-Electric Plant | River | Installed <br> Capacity |
| :---: | :---: | :---: |
| Cedars | St. Lawren | 200,000 h.p. |
| Chambly | Richelieu. | 9,000 h.p. |
| Sault-au-Récoll | Rivière-de | 45,000 h.p. |
| Beauharnois. | .St. Lawren | 680,000 h.p. |

The Commission operates a public utility system which supplies electric light and power requirements to Greater Montreal and surrounding districts embracing a population of nearly $1,500,000$.

From the Cedars Plant, electric energy is supplied to the Aluminum Company of America at Massena, N.Y., and through Beauharnois Light, Heat and Power Company power is sold to the Hydro-Electric Power Commission of Ontario. The quantities involved are in the neighbourhood of $100,000 \mathrm{~h} . \mathrm{p}$. to Massena, N.Y., and $250,000 \mathrm{~h} . \mathrm{p}$. to Ontario.

In addition to the ownership and operation of these generating and distribution systems, the Quebec Hydro-Electric Commission administers the $48,000 \mathrm{~h} . \mathrm{p}$. Upper River plant at Rapid 7. Primary power statistics for this Northern Quebec System (Cadillac-Noranda district) are as follows: 1941, 14,010 h.p.; 1942, 14,660 h.p.; $1943,15,030$ h.p.; $1944,16,820$ h.p.; and $1945,14,720 \mathrm{~h} . \mathrm{p}$.

Ontario.-The Hydro-Electric Power Commission.-An account of the inception and operations of the Commission is given at pp. 377-378 of the 1940 Year Book.

To meet the constantly expanding power demands of the undertaking, the Commission has constructed its own generating plants, and has acquired several privately owned generating plants. Of the 47 hydro-electric power plants operated by the Commission in 1944, the largest was the Queenston-Chippawa development on the Niagara River, which was constructed by the Commission and has a normal operating capacity of $500,000 \mathrm{~h} . \mathrm{p}$. By the end of the War of $1939-45$ provision for existing needs was made-including plants and power under contract for delivery-up to an aggregate of about $2,545,000 \mathrm{~h} . \mathrm{p}$.

Hydro-Electric Power Commission Statistics.-The Annual Reports of the Commission present in great detail descriptions and statistics of operation, construction, municipal work and transmission and distribution. The Commission exercises supervisory functions over the electrical utilities owned and operated by the partnermunicipalities.

The initial capital expenditure required to serve about twelve municipalities amounted to approxmately $\$ 3,600,000$. At Oct. 31, 1944, the total capital investment amounted to $\$ 492,830,876$, of which $\$ 356,142,096$ were investments by the Commission in generating plants, transmission systems, etc., including electric railway and other properties operated by the Commission for the major systems under their control, and $\$ 136,688,780$ were investments by municipalities in local distributing systems of their own, including other assets. Similarly, total reserves of the Commission and of the municipal electrical utilities for sinking fund, renewals, contingencies and insurance purposes amounted to $\$ 344,684,635$ of which $\$ 224,069,106$ represented reserves of the Commission and $\$ 120,615,529$ of the municipalities.

## 16.-Growth of the Ontario Hydro-Electric Power Commission, Years Ended Oct. 31, 1931-44

Nore.-Statistics for 1910-30 are given at p. 288 of the 1941 Year Book.

| Year | $\underset{\text { Served }}{\text { Municipalities }}$ | Customers Served | Total Power Distributed | Capital of Commission and Assets of Municipal Utilities |

[^131]Statistics of Urban Municipal Electrical Utilities of Ontario Supplied by the Commission.-Statistics of the assets and liabilities of the electrical departments of urban municipalities served by the Hydro-Electric Power Commission show, for 1944, total assets of $\$ 206,192,679$, as compared with liabilities of $\$ 16,073,251$. Of the difference, $\$ 109,802,098$ was allotted as reserves, leaving a surplus of $\$ 80,317,330$. In computing the percentage of net debt to total assets, the equity in Hydro systems is not taken into account. Between 1933 and 1944 total assets increased by $\$ 70,414,010$ while total liabilities decreased by $\$ 33,847,503$.

Rural Electrical Service in Ontario.*-During past years substantial progress has been made in Ontario in the field of rural electrification, and the Commission's rural operations are now an important feature of its work. Towards this rural work the Ontario Government, pursuant to its policy of promoting agriculturethe basic industry-contributes, in the form of 'grants-in-aid', 50 p.c. of the initial capital cost of distribution lines and equipment. In 1930 the Ontario Government passed legislation providing for advances up to $\$ 1,000$ to actual farm owners of lands and premises in rural power districts for the installation of electrical wiring and the purchase of equipment and providing for the fixing of low maximum service charges for all classes of rural service. During the war years non-essential rural service was suspended except where such service increased the production of foodstuffs.

${ }^{1}$ Included in "capital invested".
Manitoba.-The Manitoba Power Commission commenced its operations in 1919 under the authority of the Electrical Power Transmission Act. This Act empowered the Commission to make provision for generating electric energy, to enter into contracts for the purchase of power in bulk from generating agencies and for its transmission and sale to municipalities, corporations and individuals. The first stretch of transmission line was completed in 1920 from Winnipeg to Portage la Prairie.

For the first ten years power was purchased in bulk from the Winnipeg Hydro System. At the expiration of this period, the Seven Sisters Agreement between the Manitoba Government and the Winnipeg Electric Company, provided for the reservation of a block of power for the Power Commission for thirty years.

[^132]The Manitoba Power Commission Act of 1931 provided for the establishment of a Commission. The new Commission, comprised of 3 members, reorganized the administration of the utility by cancelling bulk contracts and beginning service direct to the consumer; municipalities and towns having contracts for street lighting only. This proved to be the turning point in the utility's development, making possible the adoption of a policy by which the Commission might eventually establish a standard rate for all towns and villages regardless of their distance from the source of supply or the sparsity of population. The tremendous expansion of the utility since 1933 shows the importance of this reorganization. In 1933 there were 65 cities, towns and villages on the System; in 1944, 2,154 circuit miles of transmission line served 157 cities, towns and villages. The revenue of the utility increased from $\$ 820,107$ in 1933 to over $\$ 2,000,000$ in 1944 ; kilowatt hours distributed from $16,928,294$ in 1933 to $81,012,452$ in 1944; and investment in reserves from $\$ 216,558$ in 1933 to $\$ 4,976,432$ in 1944.

In 1942 the Chairman of the Commission acted on the Manitoba Electrification Enquiry Commission to study the feasibility of farm electrification in the Province. It was found that, despite the fact farms are, on the average, more than a mile apart in Manitoba, it would be practicable to bring electrical service to 53,000 farms. As soon as materials were available construction began in the summer of 1945 to bring electricity to farms in seven districts chosen as farm electrification test areas. After analysing the information and experience gained by the test project, the Power Commission will be prepared to launch the province-wide program. In conjunction with the farm project the Commission will build lines to serve 200 villages.

The Commission operates a central steam-heating system and gas plant at Brandon as well as steam stand-by plants throughout the Province.

The utility enters actively into the appliance merchandising field as a service to customers and as part of a load-building program designed to raise revenue by increasing consumption which, in turn, will enable the utility to lower rates.

Saskatchewan.-The Saskatchewan Power Commission was established in 1929 under the Power Commission Act (R.S.S. 1940, c. 33) which authorized the Commission to manufacture, sell and supply electric energy, to acquire and develop water-power sites, to acquire or construct steam and oil plants, to construct transmission lines, to purchase power and to enter into contracts with municipalities for the supply of energy.

The Commission's main system is centred on its generating plant at Saskatoon. North Battleford and Swift Current also have generating plants owned and operated by the Commission. Electric energy is furnished in bulk to the city corporations, which own and operate their own distribution systems. In the town of Battleford, electric energy is supplied by the Commission, in bulk, by transmission line from the Commission's plant at North Battleford. In all the municipal corporations on its system (203 in number, including those on the former system of Prairie Power Company Limited), the Commission supplies approximately 18,034 individual consumers directly and 16,341 indirectly. In $1945,2,262$ miles of transmission lines were owned and operated, including those taken over from Prairie Power Company Limited.

During the years 1929 to 1944 the Commission purchased certain generating plants, and constructed and purchased transmission lines and also distributing systems in towns and villages. These were improved, enlarged or supplemented. Particulars of these acquisitions and constructions are given in the 1941 Year Book and subsequent editions.

In 1945 a transmission line and distribution systems were completed to provide service to Lestock, Leross and Kelliher; a transmission line was constructed to connect the town of Wadena, on the Commission's system, with the villages of Rose Valley and Kelvington, in which the Commission has been operating local plants; a short transmission line was built to the summer resort of Buena Vista, and another from Aylsham to Carrot River; and a transmission line was constructed from the city of Swift Current, on the Commission's system, to the village of Cadillac, on the system of Dominion Electric Power Limited. At the close of the year certain other transmission-line projects were under construction.

Of the 17 generating plants owned and operated by the Commission in 1944, those at Saskatoon and North Battleford were steam plants, and the remainder were equipped with compression-ignition engines. The total installed capacity of the generating plants was $34,200 \mathrm{~h} . \mathrm{p}$. There are no hydro-electric plants in the Commission's system, the primary power being: steam-reciprocating engines 800 h.p.; steam turbines $38,700 \mathrm{~h} . \mathrm{p}$. ; and internal combustion engines $9,680 \mathrm{~h} . \mathrm{p}$. The Commission purchases several blocks of power from, and contracts for the interchange of power with private interests.

The total revenue for the calendar year 1945 was $\$ 1,963,613$. Provision has been made for depreciation and replacement reserve to the amount of $\$ 4,073,410$. The total plant investment as at Dec. 31, 1945, was approximately $\$ 10,661,321$.

During the year 1945, the Commission acquired control of Dominion Electric Power Limited by purchasing the common stock of that Company, which owns and operates electrical generating plants, transmission lines and distribution systems in the Province. The Company's generating plants are situated at Estevan, Taylorton, Melville, Assiniboia, Gravelbourg, Shaunavon, Gull Lake, Davidson, Biggar, Radville, Eastend, Herbert, Perdue and Hudson Bay Junction. It owns and operates 220 miles of transmission line and supplies 33 towns and villages. In the meantime these properties continue to be operated in the name of Dominion Electric Power Limited, but the Commission's intention is to absorb them into the Commission's own system as soon as is practicable.

On Dec. 1, 1945, the Commission acquired control of Prairie Power Company Limited by purchasing the common stock of that Company, which owned and operated electrical transmission lines and distribution systems in southeastern Saskatchewan. Power for the Company's system was purchased from the cities of Regina and Weyburn, the National Light and Power Company Limited, Moose Jaw, and Dominion Electric Power Limited, Estevan. The assets of the Company were immediately transferred to the Commission and incorporated in the Commission's system. The transmission lines so acquired were 540 miles in length and the town and village distribution systems so acquired numbered 53 .

Regina and Weyburn, as well as several towns and villages, own and operate municipal plants and distributing systems. There are two private corporations owning and operating electrical generating plants, transmission lines and distributing systems in the Province. Control and regulatory powers regarding franchises for the supply of electric energy and the rates to be charged therefor are conferred
upon the Local Government Board by Part III of the Public Utilities Companies Act (R.S.S. 1940, c. 118). The Power Commission is charged with the administration of the Electrical Inspection and Licensing Act (R.S.S. 1940, c. 261), and is given certain control and regulatory powers regarding electrical public utilities under Part III of the Power Commission Act.

[^133]Alberta.-Public ownership of power-generating and distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately owned systems is the Board of Public Utility Commissioners, which has jurisdiction over the distribution and sale of electricity. The Board has general power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates.

Two privately owned utilities are the chief sources of power for the municipalities. One has in operation 4 hydro-electric power plants totalling $91,000 \mathrm{~h} . \mathrm{p}$. on the Bow River and tributaries west of Calgary, with supplementary storage at Lake Minnewanka and Upper Kananaskis Lake totalling 240,000 acre feet. It operates, under lease, the city of Calgary's $14,000 \mathrm{~h} . \mathrm{p}$. steam plant, and has interchange arrangements and transmission-line ties with the city of Edmonton and the city of Lethbridge. The other is located at the city of Drumheller; its power is generated by steam and it services a large number of towns to the north and northeast of Drumheller. In some communities not accessible to its lines, it operates individual diesel-engine plants.

Edmonton generates power from coal and operates its own distribution system; in addition, there is a reciprocal arrangement with one of the privately owned utilities for exchange of power at peak periods. Calgary and Red Deer own their distributing systems but purchase power from the same private source as Edmonton. Certain
other large cities and towns such as Medicine Hat and Cardston own their power plants and those beyond reach of the two private utilities referred to above are served by small privately owned power plants.

British Columbia.-Authority was given to the British Columbia Power Commission under the provisions of the Electric Power Act, assented to Mar. 28, 1945, to enter the public ownership field. The Commission has done so by acquiring the electric system of the West Canadian Hydro Electric Corporation, operating a water-power plant at Shuswap Falls in the northern portion of the Okanagan Valley; the Nanaimo Duncan Utilities Limited system, operating water-power plants and steam plant near Nanaimo, Vancouver Island; and has also purchased several smaller privately owned utilities. It has undertaken surveys and is, about to commence the construetion of a hydro-electric plant of $25,000 \mathrm{~h} . \mathrm{p}$. on the Campbell River, Vancouver Island.

Grand Forks, Kaslo, Nelson, Prince George, Revelstoke and the municipality of Peachland, each distribute electric energy generated by either fuel or water power, while Courtenay, Cranbrook, Fernie, Kelowna, Ladysmith, Merritt, New Westminster, the municipalities of Penticton and Summerland, the village of McBride and the improvement districts of Cranberry, Westview and Wildwood each purchase energy at wholesale rates and undertake distribution.

## Subsection 3.-Private Ownership of Central Electric Stations

Summary statistics of privately owned central electric stations are given for the years 1930 to 1944 in Table 20.
20.-Privately Owned Central Electric Stations in Canada, 1930-44

| Year |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |

[^134]The predominant position of Quebec in the electric-power field can be seen from the column in Table 21 showing electric energy generated. Of the total power generated in Canada by all central electric stations in 1944, 44 p.c. was generated by privately owned or commercial stations in the Province of Quebec; this percentage decreased from 57 in 1943 as a result of the taking over of the Montreal Light, Heat and Power Company and the Beauharnois Power Company by the publicly owned Quebec Hydro-Electric Commission.

All stations in Ontario produce less than one-half as much power as the Quebec stations and only 23 p.c. of the total for Ontario stations is produced by privately owned stations.
21.-Privately Owned Central Electric Stations in Canada, 1944

| Province | Power Plants | Customers | Electric Energy Generated | Power Equipment |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Totals | 424 | 753,239 | 25,688,581 | 6,175,674 | 6,373,523 |

${ }^{1}$ Power generation in Saskatchewan is entirely by fuel plants. There is one hydro-electric station but the power is used in Manitoba and the statistics are included with those of Manitobs.

## Subsection 4.-Export of Electric Power

Electric energy is exported from Canada only under licence and an export tax of 0.03 cents per kwh. is levied. The export duties for the fiscal years ended Mar. 31, 1942 to 1945 were $\$ 598,038, \$ 618,953, \$ 641,253$ and $\$ 639,320$, respectively.

Exports for the calendar years 1942-45 are shown in Table 22. There are also large interprovincial movements of electric energy from Quebec to Ontario, and smaller movements from Quebec to New Brunswick and from British Columbia to Alberta.

The water allowed to be diverted at Niagara Falls for power purposes was increased by $5,000 \mathrm{cu} . \mathrm{ft}$. per second to the Canadian side in November, 1940, owing to a diversion of water from Long Lake and the Ogoki River from the James Bay watershed to the Great Lakes watershed. In 1941 a further increase of 9,000 c.f.s. to the Canadian plants and 12,500 c.f.s. to the United States plants was permitted. This increased water with greater development of plants on the St. Lawrence River made possible the increased export of both firm and secondary power to the United States, mainly to plants producing war materials ( 5,000 c.f.s. will produce around $150,000 \mathrm{~h} . \mathrm{p}$. at the Queenston, Ont., plant).

${ }^{1}$ In November, 1942, Cedars Rapids was transferred to the Montreal Light, Heat and Power Co., and in April, 1944, the latter was taken over by the Quebec Hydro-Electric Commission.

## Section 3.-Evolution of Power Equipment and Utilization of Power in Industry

The Dominion Bureau of Statistics has compiled tables showing the power equipment installed in the manufacturing and mining industries of Canada from 1923 to 1943. Table 24 gives the combined statistics for both industries from 1930. The figures for the 14 years show that primary power increased from $1,738,924 \mathrm{~h} . \mathrm{p}$. to $2,289,094 \mathrm{~h} . \mathrm{p}$. or by 31.6 p.c. while the installation of electric motors operated by purchased power shows an increase of no less than $82 \cdot 1$ p.c. In considering the increase in the latter figures, it must be borne in mind that the shift from belts and shafting to individual motors at each machine does not necessarily mean that an amount of power is used equivalent to the increased capacity.

Of the total primary power installed, manufacturing establishments accounted for $87 \cdot 2$ p.c. and mines for $12 \cdot 8$ p.c., while of the total electric motors operated by purchased power, manufacturing accounted for 86.4 p.c. and mining for $13 \cdot 6$ p.c.

The mining industry showed an uninterrupted increase in the amount of equipment operated by purchased power from 1933 to 1941 ; the total amount of power equipment installed showed a drop in 1932, but resumed the upward trend in 1933; the same is true of the capacity of electric motors installed but that of motors operated by power generated within the establishment dropped sharply from 1930 to 1933 and did not attain a figure equal to the 1930 total until 1937, when a very sharp rise over the 1936 figtures occurred. This would indicate a tendency of mining companies to rely more and more upon purchased power rather than to attempt to generate their own, a very natural tendency in northern Canada where water power is abundant and fuel scarce.

In manufacturing, a steady growth is indicated in total power equipment installed, total electric motors and in motors operated by purchased power. In the capacity of motors operated by power generated within the establishment, the figures fluctuated between 1929 and 1935 and from there rose steeply to 1942.

## 23.-Percentage of Electric Rating to Total Power Equipment in the Manufacturing and Mining Industries, 1930-43

#### Abstract

Note.-Figures exclude central electric stations and include idle and reserve equipment. Figures for 1923-29 are given at p. 295 of the 1941 Year Book.

| Year |  | Total Power Equipment Installed | Electric Power |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Total Motor Capacity | Per Cent of Total |
|  |  |  | h.p. | h.p. | p.c. |
| 1930. |  | 4,548,014 | 3,376,103 | 74.2 |
| 1931. |  | 4,620,570 | 3,510,779 | 76.0 |
| 1932. |  | 4,625,002 | 3,559,516 | $77 \cdot 0$ |
| 1933. |  | 4,722,942 | 3,576,793 | $75 \cdot 7$ |
| 1934. |  | 4,850,743 | 3,781,779 | $78 \cdot 0$ |
| 1935. |  | 5,019,958 | 3,889,366 | 77.5 |
| 1936. |  | 5,186,506 | 4,059,355 | $78 \cdot 3$ |
| 1937. |  | 5,562,772 | 4,411,974 | $79 \cdot 3$ |
| 1938. |  | 5,844, 666 | 4,635,423 | $79 \cdot 3$ |
| 1939 |  | 6,071,557 | 4,883,670 | $80 \cdot 4$ |
| 1940.. |  | 6,352,775 | 5, 136, 200 | $80 \cdot 8$ |
| 1941. |  | 6,963,218 | 5,624,681 | 80.8 |
| 1942. |  | 6,978, 672 | $5,668,039$ | 81.2 |
| 1943. |  | 7,404,308 | 5,981,280 | $80 \cdot 8$ |

## 24.-Power Equipment Installed in Manufacturing and Mining Industries, 1930-43, with Details by Provinces and Industrial Groups, 1943

Note.-Totals for the years 1923-29 are given at p. 297 of the 1941 Year Book. Figures by provinces and industrial groups for each year since 1936 are given in the corresponding table in previous Year Books beginning with the 1939 edition.

## Section 4.-Power Generated from Fuel

Industrial Use of Fuel.-Fuel is used quite generally throughout the industrial field for the generation of power by means of steam- and internal-combustion engines. It is also used for the heating of plants, and for providing the heat necessary to some manufacturing processes. The most important industries where heat is applied to materials to facilitate or accomplish a desired transformation are: foundries and machine shops; brick, tile, lime and cement works; petroleum refineries; the glass industry; distilleries; food preparation plants; rubber goods industry; etc. The figures of Table 25 cover fuel used for such heating purposes and for power. Fuels that constitute the raw materials to be transformed, such as coal in the coke and gas industries and crude petroleum in the refining industry and electricity used in metallurgical processes, such as in the electrolytic refining of non-ferrous metals, are excluded.

The value of fuel consumed in the manufacturing and mining industries in 1943 showed an increase of 67.4 p.c. over 1940. Of the 1943 fuel account, the requirements of Ontario cost $47 \cdot 7$ p.c. of the total, of Quebec $30 \cdot 7$ p.c., of British Columbia $7 \cdot 6$ p.c. and of Nova Scotia $4 \cdot 7$ p.c.

The iron and its products group used 21.8 p.c. of the fuel consumed by manufacturing industries, wood and paper products $20 \cdot 2$ p.c., non-ferrous metal products $16 \cdot 3$ p.c., non-metallic mineral products $15 \cdot 6$ p.c. and vegetable products $9 \cdot 2$ p.c.

Gas.-In southwestern Ontario gas comes from natural gas wells, from light end gases sold by a Sarnia company which draws from a refinery in that city, and from the coke plants of the steel city, Hamilton. With the advent of greatly increased industrial activity in the Niagara Peninsula and the southern half of southwestern Ontario, the normal Ontario consumption of about $10,000,000,000 \mathrm{cu} . \mathrm{ft}$. of natural gas per year rose to nearly $13,000,000,000$ in 1940 . At that time some natural gas fields completely played out, and others showed signs of exhaustion. At this peak capacity, insufficient gas was available to continue supplying industrial requirements and at the same time provide enough for household use.

When a crisis appeared imminent in 1942, the Power Control of the Department of Munitions and Supply arranged for the installation of new manufacturing facilities. These new facilities included some propane plants and a new coke oven and gas plant at Hamilton. Thirty-six ovens were completed by the spring of 1943, but even this added capacity was not enough and 18 more ovens were installed. With the completion of the 18 additional ovens in December, 1943, the situation eased somewhat.

As a result of these various measures to expand production, the annual output of gas in southwestern Ontario rose by about $4,000,000,000$ cubic feet.

## 25.-Cost of Fuel Used in Manufacturing and Mining Industries, 1930-43, with Details by Provinces and Industrial Groups, 1943

Note.-Includes fuel used for heating purposes, but not that used as raw material. Totals for 1922-29 are given at p. 300 of the 1941 Year Book. Figures by provinces and industrial groups for each year since 1936 are given in the corresponding table in previous Year Books beginning with the 1939 edition.

## GHAPTER XIV.-MANUFACTURES

## CONSPECTUS

This Chapter deals with manufacturing industries in Canada in two main Parts. Part I gives general analyses of manufactures in the Dominion including: the historical development of manufacturing in Canada in so far as statistical data are available; production by industrial groups and individual industries, i.e., a detailed treatment of current production under various groupings and individual industries; general analyses of the principal factors in manufacturing production under such sub-headings as capital, employment, salaries and wages and size of establishment. Part II deals with provincial and local distribution of manufacturing production.

With regard to the first section of Part I, dealing with historical development, it is impossible to give absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, in so far as possible, back to 1917.

The far-reaching influence of the War of 1914-18 was, of course, the outstanding factor in the growth recorded prior to 1940 . It was during these years that Canadian manufactures began to develop on a really large scale. Munitions contracts, placed by the Imperial Munitions Board of Canada, in those years totalled well over $\$ 1,000,000,000$ and these did not include such fields of production as shipbuilding and aviation. Shipbuilding construction alone amounted to $\$ 35,000,000$ in 1917, \$75,000,000 in 1918 and $\$ 86,000,000$ in 1919.

Canada's effort in the War of 1939-45 brought manufacturing production to a much higher level than ever before. The output of manufactured products in 1944 amounted to $\$ 9,073,692,519$ which represented an increase of $161 \cdot 1$ p.c. over the pre-war year of 1939.:

## PART I.-GENERAL ANALYSES OF MANUFACTURING IN THE DOMINION

## Section 1.-Growth of Manufacturing in Canada

This Section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials, and values of products. Other useful comparisons are made in Table 4 and figures of consumption are given in Table 5. Tables 6 and 7 show volume comparisons.

## 1.-Historical Summary of Statistics of Manufactures for the Dominion, 1917-44

Nors.-Statistics of manufacturing from 1870 have been published, but between that vear and 1917 they are not on a comparable basis to the series given below. They will be found in Table 1 in former editions of the Year Book. Statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

| Year | Estab-lishments | Capital |  | Salaries and <br> Wages | $\begin{gathered} \text { Cost } \\ \text { of } \\ \text { Materials } \end{gathered}$ | Net Value of Products 1 | Gross Value of Products |

Summary Statistics of Manufactures.-The figures in Table 4 trace the tendencies in Canadian manufacturing industries as clearly as possible through the latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values from 1914 through the immediate post-war period and the drop in prices of commodities during the depressions following 1921 and 1930, the figures for these periods are not completely comparable. One very important figure, however, which shows the trend of development clearly, is concerned with the use of power. The total horsepower employed increased from $1,658,475$ in 1917 to $6,415,851$ in 1943, an increase of about 286.9 p.c. in 27 years. In the same period, horse-power per wage-earner showed an interrupted trend from 3.06 to 10.82 in 1933 and 9.46 in 1939. With the large increase in the number of wage-earners on war production, and the more efficient utilization of the equipment available, the horse-power per wage-earner dropped to $6 \cdot 12$ in 1943. The significant |feature is the increase in both the absolute figures of power employed and the averages per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 reduced the averages for the years 1934 to 1937 and again for 1940 to 1943. Other interesting comparisons are the trend of value added by manufacture, per employee, and of average salaries and wages paid since 1929.

Consumption of Manufactured Products.-One of the beneficial results of adopting the same classification for external trade and for production is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from these statistics. For example, the value of all manufactured commodities made available in 1944 was $\$ 7,708,000,000$, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports.

In past years there have always been large amounts of manufactured animal, wood and non-ferrous metal products available for consumption in Canada with considerable surplus left for export. With the commencement of the War, however, it was necessary to export more and more of such goods to the United Kingdom, and while this was done mainly by increasing production, Government control of consumption at home grew stronger as the War advanced. In the case of manufactured vegetable products, the figures for 1944 showed large excesses of exports over imports for such products as cereal foods (including flour), canned and dehydrated vegetables, etc. Excesses of imports were chiefly confined to cocoa, tea, coffee and preserved fruits and fruit juices, in which cases domestic production cannot be substituted.

On balance, Canada, in the past, imported large quantities of iron and steel, textile and non-metallic mineral products in spite of large home production. The urgent requirements for munitions of war brought about an expansion of the iron and steel, chemical and non-ferrous metals industries that will enable Canada to meet most requirements for home consumption in the future as these industries are adjusted for peacetime needs.

${ }^{1}$ Imports and exports of manufactured and partly manufactured goods for the years 1928 to 1938 are for the fiscal years ended Mar. 31 of the following years, while for 1939 to 1944 they are for calendar years. ${ }^{2}$ Total imports less foreign products re-exported.

## Section 2.-Value and Volume of Manufactured Products

Value of Manufactured Products.-In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at $114 \cdot 3$ in 1917, $155 \cdot 9$ in 1920, $97 \cdot 3$ in 1922, $95 \cdot 6$ in 1929 $67 \cdot 1$ in 1933, $84 \cdot 6$ in 1937, $75 \cdot 3$ in 1939 and $100 \cdot 0$ p.c. in 1943 . Index numbers of the prices of fully or chiefly manufactured goods were: 113.5 in 1917, 156.5 in 1920, $100 \cdot 4$ in 1922, $93 \cdot 0$ in $1929,70 \cdot 2$ in $1933,80 \cdot 5$ in $1937,75 \cdot 3$ in 1939 and $93 \cdot 1$ p.c. in 1943.

Volume of Manufacturing Production.-Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The index of volume (Table 6) is based on the quantities of manufactured products reported. The industry indexes are weighted according to the values added by manufacture. The indexes for the years 1923-31 are based on the values added in
1926. The weights and products were changed in 1931, 1936 and then again in 1941. By changing the weights and products used in the construction of the index every five years, current changes in production are thereby reflected more accurately.

The physical volume of manufacturing production increased $50 \cdot 2$ p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.1 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would, therefore, be about $11 \cdot 1$ p.c. Exports of partly and fully manufactured goods increased from $\$ 591,830,000$ in the fiscal year ended Mar. 31, 1924, to $\$ 686,876,000$ in the fiscal year 1930, the increase in exports representing about $3 \cdot 6$ p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923 , was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

A similar analysis of the volume of manufactures since 1929 in relation to population and exports would show that the decline in the depression preceding the War of 1939-45 was due chiefly to reduced exports and a cessation in production of capital equipment. As a result of the expansion in production resulting from the demands created by the War, the physical volume of production in 1943 increased by $76 \cdot 6$ p.c. since 1939 and by $85 \cdot 1$ p.c. since 1929 . The chemical and allied products group, with an increase of 262.5 p.c., reported the greatest expansion in output since 1939. This was followed by the iron and its products group with an increase of $222 \cdot 2$ p.c., non-ferrous metal products $129 \cdot 9$ p.c., miscellaneous industries 68.0 p.c., non-metallic mineral products 55.6 p.c., animal products 40.4 p.c., textiles and textile products $33 \cdot 7$ p.c., vegetable products $24 \cdot 6$ p.c., and wood and paper products 21.4 p.c. There was also an increase in the volume of consumer goods. As was to be expected, the increase was not so great as that for the output of equipment and supplies needed by the Armed Forces. Drink and tobacco increased by 50.5 p.c., food 26.8 p.c., and clothing 24.7 p.c.
6.-Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, Significant Years, 1923-43
( $1935-39 \Rightarrow 100$ )

| Group and Classification | 1923 | 1929 | 1933 | 1939 | 1941 | 1942 | 1943 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Section 3.-Production by Industrial Groups and Individual Industries

For the purposes of the Census of Manufactures, the main detailed analysis is made under a classification in which industries are grouped according to the chief component materials of the goods manufactured. This is, therefore, the grouping used in Table 9, where the statistics of individual industries are presented in detail, and in the historical series shown in Table 3. However, there are also less detailed analyses under purpose groupings given in Table 10 and under origin groupings in Table 12.

## Subsection 1.-Manufactures Grouped by Chief Component Materials

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920 . The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, a number of minor changes were made, the most important being the elimination of central electric stations and the dyeing, cleaning and laundry industry from the compilation in 1936. Revisions due to these changes have been carried back to 1917 in so far as possible.

Recent Changes in Manufacturing Production.-Table 8 shows the effects of the depression, the recovery since 1933, and the impact of the War of 1939-45 upon the main groups of industries with regard to the numbers employed, the salaries and wages paid, and the gross value of products. Owing to the price decline during the depression, money values of both wages and products were naturally affected more than number of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output than that of wage-earners. Therefore, there are several reasons why the variation in number of employees should be less than that of money values. The figures of Table 8 are to be compared with those of Table 6 which show changes in volume of production. Compared with 1939, the number of employees in 1943 increased by 88.6 p.c. as against an increase of 76.6 p.c. in the physical volume of production. Salaries and wages paid were $169 \cdot 3$ p.c. higher and the gross value of production $151 \cdot 3$ p.c. higher. Another signficant change is the increase in the proportion of women engaged in manufacturing. Whereas in 1939, there were 281 females to every 1,000 males employed, in 1943 this figure jumped to 392.
8.-Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups Compared for Significant Years, 1929-43
Nota.-The highest pre-depression year was 1929, while the lowest depression year was 1933.

Detailed Statistics by Groups and Individual Industries.-Table 9 presents for the year 1943 detailed statistics regarding the individual industries under which all industrial plants in the Dominion are classified. The industries are further assembled under nine main groups according to the principal component material of their products.

The incidence of the War resulted in a rearrangement in the rank of many industries. Industries producing supplies and equipment for the Armed Forces naturally advanced while those industries producing for the domestic consumer market declined in importance. To supply the raw materials needed by the industries engaged principally in war production, it became necessary to restrict or prohibit the manufacture of many products such as pleasure cars, radios, washing
(Concluded on page 406)

machines, electrical equipment, household appliances, agricultural implements, etc. Though these industries were forced to change over to wartime production, the changes did not affect the value of their output and consequently their importance as producers of manufactured goods did not alter drastically. To analyse the effects of the War on any industry, it is necessary to compare the nature of the products made before the War with that of the present. This should be borne in mind in making industrial comparisons with pre-war years. For example, the number of employees engaged in the agricultural implements industry increased by 7,208 between 1940 and 1943; this in spite of the fact that the output of agricultural implements remained at about the same level. The increase was due to a changeover of some of the plants to war production. It is therefore impossible to trace industrial trends from the principal statistics alone, as published in this report.

## Subsection 2.-Manufactures Classified by the Purpose of the Products

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. On the basis of percentage to gross value of production, the most striking change is in the food group which showed a substantial decline from $28 \cdot 2$ p.c. of the total in 1922 to $22 \cdot 6$ p.c. in 1939 and 16.8 p.c. in 1943 . The producer materials group, which took the lead from the food group in 1923, showed a steady increase up to 1939, since when it has remained at about 32 p.c. of the total. Due to the production of war equipment, vehicles and vessels increased from $7 \cdot 7$ p.c. in 1939 to $14 \cdot 6$ p.c. in 1943 and industrial equipment from $15 \cdot 2$ p.c. to $17 \cdot 1$ p.c. The other groups with the exception of "miscellaneous" showed slight declines during the war years.
10.-Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, Significant Years 1922-43, and in Detail for 1943.

1 For the year 1922 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this Chapter.

Table 11 has been included in order to give the amount and value of each of the principal commodities produced by the manufacturing industries of Canada. The list is not intended to be complete since a large number of commodities are produced in such small quantities that it would extend the table considerably without adding proportionately to its value to include them. The commodities listed, however, cover approximately 75 p.c. of total production.

## 11.-Quantities and Values of the Principal Commodities Produced by the Manufacturing Industries of Canada, Grouped by Purpose, 1943

| Commodity | Unit of Measure | Quantity | Value |
| :---: | :---: | :---: | :---: |
| Food- |  |  | \$ |
| Biscuits, all kinds. | ton | 73,035 | 23,700, 297 |

## Subsection 3.-Manufactures Classified by Origin of the Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to the non-ferrous metals so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods. A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumer goods, exceeds that of the mineral group. In 1943 the industries of the mineral group had by far the greatest capital investment, employed the largest number of persons and paid out the highest amount in salaries and wages; capital invested per employee was $\$ 5,441$ and average salaries and wages $\$ 1,831$. For the industries of the farm origin group the respective averages were $\$ 4,417$ and $\$ 1,297$.

## Subsection 4.-Leading Manufacturing Industries

In the following statement, the rank of the ten leading industries in 1943, from the standpoint of gross value of production, is compared with their respective ranks in significant years since 1922.
THE TEN LEADING INDUSTRIES, 1943, COMPARED AS TO RANK, SIGNIFICANT YEARS 1922-43
Nort.-Where a dash is given it indicates that the industry did not rank among the forty leading industries.

| Industry | Rank in- |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1943 | 1942 | 1941 | 1939 | 1937 | 1933 | 1929 | 1922 |
| Non-ferrous metal smelting and refining .............. | 1 | 1 | 1 | 1 | 1 | 2 | 9 |  |
| Miscellaneous chemical products....................... | 2 | 5 | 19 | 38 | - | - | - | - |

| Primary iron and steel. . . . . . . . . . . . . . . . . . . . . . . . . | 10 | 7 | 7 | 11 | 12 | 31 | 16 | 20 |

A prominent feature of Canadian manufacturing development in recent years has been the rapid growth of non-ferrous metal smelting. This industry, based upon the rich base metal resources of the country, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and livestock resources. The incidence of the depression resulted in a rearrangement in the ranking of many industries; in some cases this has proved to be temporary. Under the impetus of war production, the industries engaged in producing the equipment needed by the Armed Forces, such as shipbuilding, aircraft, automobiles, miscellaneous chemical products, and primary iron and steel, advanced to higher positions.

## 13.-Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of Products, 1943

## 14.-Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of Products, 1944

Note.-Statistics of "Capital invested" not collected in 1944.

[^141]
## Section 4.-Principal Factors in Manufacturing Production

The subjects treated under this Section, in as much detail as limitations of space permit, include capital, employment, salaries and wages and size of establishments.

## Subsection 1.-Capital Employed

The remarkable increase in capital employed in Canadian manufactures from the beginning of the twentieth century has, of course, run parallel with the rapid growth in industrial operations. From 1900 to 1905 the capital increased from $\$ 446,900,000$ to $\$ 833,900,000$, and advanced to $\$ 1,958,700,000$ in 1915 . During this period returns were received from establishments with 5 hands or over and, while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capitai investment in 1943 in all establishments, irrespective of the number of employees, but exclusive of central electric stations, was $\$ 6,317,000,000$ as compared with $\$ 2,334,000,000$ in 1917, an increase of 171 p.c., while wholesale prices declined about 13 p.c. in the same period.
15.-Percentage Distribution of Capital Employed in the Manufacturing Industries, by Provinces and Industrial Groups, Significant Years, 1917-43

| Province or Industrial Group | 1917 | 1920 | 1929 | 1933 | 1939 | 1941 | 1942 | 1943 |

## Subsection 2.-Employment in Manufactures

Using a base and taking the percentages of the wage-earners and the total employees in each year, and dividing these percentages into the corresponding volumes of manufacturing production (see p. 397 for the index of volume), tentative conclusions are arrived at regarding the efficiency of production per wage-earner 50871-27
and per employee. These indexes of the efficiency of production are, of course, affected by the changes in the method of computing the number of wage-earners adopted in 1925, and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. Comparability exists, however, between the figures prior to 1926 and subsequent to 1930 . Table 17 shows only the latter period. Unfortunately, the period covered is rather limited for the purpose in view, but it is suggested that the reader compare these data with the comparable figures for 1917-30 at p. 421 of the 1939 Canada Year Book. Up to the beginning of the War of 1939-45 the indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. With the outbreak of war unemployed skilled workers were first absorbed into industry, with the result that the efficiency of production was slightly bettered. As the War progressed, however, manufacturers were forced more and more to employ unskilled workers. The decline in the efficiency of production in 1942 and 1943 may, therefore, be attributed to this cause as well as to absenteeism for various causes.
17.-Salaried Employees and Wage-Earners in Manufacturing Industries, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1931-43.
$(1935-39=100)$
Note.-Figures, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

| Year | Salaried Employees | WageEarners | Total Employees | Percentages Relative to 1935-39 |  | Index Number of Volume of Mf'd. Products | Indexes of Efficiency of Production |  |

Monthly Record of Employment in Manufactures.-Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods, and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. After the setback of 1929, employment in 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment in June, 1929, when 575,693 wage-earners were on the payrolls, was surpassed in September, 1937, with 582,305 wage-earners. With the outbreak of war the improvement in employment became increasingly rapid. A new high record was attained in August, 1943, when 1,067,890 wage-earners were employed, an increase of 96.4 p.c. over the same month in 1939.

## 18.-Wage-Earners Employed in the Manufacturing Industries of Canada, by Months and Sex, Significant Years, 1922-43

Hours Worked by Wage-Earners.-From 1932, the first year for which figures on hours worked per week by wage-earners are available, to 1943, each firm was required to report the number of hours worked by all its wage-earners during the month in which the greatest number had been employed, the only exception being the years 1938 and 1939 when one week in a month of normal employment was reported. In 1938 the number of hours worked per week were compiled by sex, and a change was also made in the analysis of the weekly hours worked. Since 1940 the hours worked per week include overtime while prior to that overtime was excluded. These changes make it impossible to measure accurately the changes in the number of hours worked per week. In any case, the figures in Tables 19 to 22 do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is more significant as in this case it coincides for a great number of firms engaged in the same industry.

For all wage-earners, the hours worked per week declined from 48.9 in 1932 to $47 \cdot 2$ in 1939, and reached $50 \cdot 6$ in 1941, some of this increase no doubt being due to the inclusion of overtime. For 1942 and 1943 there was a counter movement in the hours worked, especially among females, due to the employment of many workers
on a part-time basis. Whereas in 1939 there were only 2.8 p.c. of the male and $5 \cdot 3$ p.c. of the female wage-earners working under 30 hours per week, in 1943 these percentages rose to $4 \cdot 6$ p.c. and $10 \cdot 1$ p.c., respectively. Also the number of hours worked by females averaged $5 \cdot 6$ less than the number of hours worked by their male co-workers.
19.-Wage-Earners in Manufacturing, Working Specified Numbers of Hours' per Week in the Month of Highest Employment, 1938-43
Nore.-Hours worked per week in 1932-37 are given at p. 386 of the 1942 edition of the Canada Year Book.

[^143]22.-Female Wage-Earners in the Forty Leading Industries Working Specified Weekly Hours ${ }^{1}$ in Month of Highest Employment, 1943

Nors.-Industries ranked according to the annual number of female wage-earners employed.

[^144] are not available.

## Subsection 3.-Salaries and Wages in Manufacturing Industries

In 1943 the 27,652 establishments covered employed 193,195 salaried employees and $1,047,873$ wage-earners, a total of $1,241,068$ persons. Out of every 1,000 persons employed in manufacturing 156 were classed as salary earners and 844 as wageearners; the former earned $19 \cdot 6$ p.c. and the latter 80.4 p.c. of the total amount paid out as remuneration for services.

A notable feature during the past few years was the reduction in the disparity between average annual salaries and wages. Whereas, in 1939 average annual wages were only $55 \cdot 8$ p.c. of average annual salaries, in 1943 the percentage rose to 75.8 This tendency towards equalization was, in part, due to the controls adopted by the Government which tended to stabilize salaries more so than wages. The increase in average wages was also influenced by the fact that large numbers of wageearners were employed in the highly paid iron and steel industries and by the increase in number of hours worked, some of it at overtime pay.

Ontario has a larger proportion of females among its salaried employees than the other provinces. The same situation prevails in Quebec with regard to wageearners, due, no doubt, to the textile industries of the Province. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that of all female wage-earners engaged in the manufacturing industries of Canada, 30 p.c. were found in the textile group. Normally the percentage is much higher. In 1942 and 1943 large numbers of female wage-earners were employed in the aircraft and miscellaneous chemical industries. For this reason the percentage employed in the textile industries declined.

The average salary in 1943 amounted to $\$ 2,013$ which was $\$ 267$ or $15 \cdot 3$ p.c. higher than in 1939. Salaried employees in Ontario with $\$ 2,107$ received the highest salary. Quebec came second with $\$ 1,994$ and British Columbia third with $\$ 1,935$. The fact that head offices of many large corporations are located in Montreal, Toronto, Vancouver and Winnipeg tends to raise the average salaries in the provinces in which these cities are located.

${ }^{2}$ For a subdivision of annual earnings of wage-earners, by sex, see Table 26.
The average wage in 1943 amounted to $\$ 1,525$ which was $\$ 550$ or $56 \cdot 4$ p.c. higher than in 1939. Manufacturing industries in British Columbia paid the highest average wages of $\$ 1,799$, followed by Ontario with $\$ 1,591$, Nova Scotia $\$ 1,456$, Quebec $\$ 1,424$, Saskatchewan $\$ 1,378$, etc. The high figures shown for Yukon and the Northwest Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative. Statistics of the distribution of employees by provinces and groups as well as average annual earnings are given in Table 23, and a subdivision of wage-earners, by sex, in Table 26.

Average Annual Earnings in the Forty Leading Industries.-In only 6 industries did average salaries exceed $\$ 2,500$ in 1943 ; bridge and structural steel, pulp and paper, breweries, petroleum products, cotton yarn and cloth and automobiles. In 22 average salaries ranged between $\$ 2,000$ and $\$ 2,500$, in 9 between $\$ 1,500$ and $\$ 2,000$, and in the remaining 3 they were below $\$ 1,500$. The lowest salaries were reported by the sawmilling and butter and cheese industries each of which includes a large proportion of small establishments.

The highest wages, those above $\$ 1,900$, were paid in 6 industries, in all of which the proportion of skilled workers is high and the proportion of female workers is low. The automobile industry with $\$ 2,351$ was the highest in this group, followed by shipbuilding and repairs with $\$ 2,036$, bridge and structural steel $\$ 2,025$, petroleum products $\$ 1,947$, miscellaneous iron and steel products $\$ 1,946$, and railway rollingstock $\$ 1,925$. In 13 other industries average wages ranged between $\$ 1,600$ and $\$ 1,900$ in all of which the proportion of female workers was low. In 14 other industries average wages ranged between $\$ 1,100$ and $\$ 1,600$ while in the remaining 7 they were below $\$ 1,100$. The latter group includes industries made up of a large number of small establishments and in which the proportion of female workers is high. Employment by sex and average annual earnings in the 40 leading industries is given in Table 24, and annual earnings by sex in Tables 27 and 28.

## 24.-Salaries and Wages Paid in the Forty Leading Industries, 1943, with Comparative Figures of Average Salaries and Wages Paid in 1942

Nore.-Industries ranked according to the aggregate salaries and wages paid. For a subdivision of annual earnings of wage-earners, by sex, see Tables 27 and $\mathbf{2 8}$.

Average Annual, Weekly and Hourly Earnings.-In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has very definitely a regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in these latter industries naturally command relatively higher wages than those employed in industries whose employees are routine workers.

The ranking of provinces and industries as regards annual earnings is in many cases different to that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture. So that, while in general the same observations apply, a close study of the differences between the averages shown in Tables 23 and 24 will be of value to the student.

The figures given in Tables 25 to 28 are based on an analysis of a pay-list covering one week in the month of highest employment. For this reason the figures do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all the firms. For a particular industry, however, the month of highest employment is more significant as in such case it coincides for a great number of firms engaged in the same industry.

Average weekly earnings of male wage-earners for manufacturing as a whole amounted to $\$ 33.80$ in 1943 , an increase of $\$ 11.57$ or 52.1 p.c. as compared with 1939. Average hourly earnings advanced from $46 \cdot 2$ cents in 1939 to $67 \cdot 1$ cents in 1943. Due to an increase of $2 \cdot 3$ hours in the working week, the increase in hourly earnings was only $45 \cdot 3$ p.c. Annual earnings at $\$ 1,726$ were $60 \cdot 4$ p.c. higher.

Female wage-earners received on an average $\$ 19 \cdot 33$ per week in 1943, an increase of $\$ 6.55$ or $51 \cdot 3$ p.c. as compared with 1939 . Hourly earnings at $43 \cdot 1$ cents were $52 \cdot 3$ p.c. higher, while annual earnings at $\$ 987$ were $59 \cdot 5$ p.c. higher.

## 25.-Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners, 1934-43

Real Earnings of Employees in Recent Years.-When the index number representing the average yearly wages is divided by the index number of the cost of living, on the same base, a measure of "real" wages is obtained. Index numbers for 1931 to 1943 are given in Table 29. In 1933, the height of the depression, real wages were 88.3 on the 1935-39 base. From then on they rose steadily and stood at $139 \cdot 0$ in 1943, an increase of about 57 p.c
29.-Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1931-43
Note.-Figures on the 1917 base, with qualifications as to comparability, for 1917 to 1930 are publishea at p. 421 of the 1939 Canada Year Book.

Percentages of Salaries and Wages to Net Value of Products.-Table 30 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent and taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, due to decreased industrial activity, the percentage of salaries to value added was above normal. It should be borne in mind, however, that salaried employees increased 176 p.c. during the period 1924-43 while wage-earners increased but 151 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more rapidly adjusted to the activity of the industry and wage levels likewise may be more readily adjusted to the price levels of the products. Of the increase in the net value of production since 1939 amounting to $\$ 2,285,361,640$, $\$ 1,249,481,231$ or $54 \cdot 7$ p.c. was passed along in increased salaries and wages.
30.-Percentages of Salaries and Wages Paid to the Total Net Values of Manufacturing Production, 1924-43

${ }^{1}$ Equivalent to "net value of products"' see footnote 1, Table 1, p. 389.

## Subsection 4.-Size of Manufacturing Establishments

The size of the manufacturing establishment is generally measured either by the value of product, or by the number of employees, but each of these methods has its limitations. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to an increase in production concurrently with a decrease in the number of employees. The former measure has to be adjusted for changes in the price level; and, as between industries, it makes those in which the cost of raw materials is relatively high, appear to operate on a larger scale.

Size as Measured by Gross Value of Products.-While in 1922 the 420 establishments each producing over $\$ 1,000,000 \mathrm{had}$ an aggregate value of products of $\$ 1,268,056,129$ or 51 p.c. of the total production of all manufacturing industries the 719 establishments producing over $\$ 1,000,000$ each in 1929 had an aggregate value of products of $\$ 2,516,064,954$, or 62 p.c. of the grand total for all manufacturing establishments-a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over $\$ 1,000,000$ dropped again to 482 , their output being valued at $\$ 1,451,658,954$, or 53 p.c. of the total. With the increased production resulting from war needs, the number of plants with a production of $\$ 1,000,000$ or over jumped to 1,287 in 1943 , and their output was about 76 p.c. of the total value of manufactures.

## 31.-Manufacturing Establishments, Grouped According to Gross Value of Products, with Totals and Average Values of Products in each Class, for Canada, 1929, 1939, 1942 and 1943.

[^148]Size as Measured by Number of Employees.-In 1923, establishments employing 501 hands or over accounted for 21.4 p.c. of the total number of employees engaged in manufacturing. By 1929 the proportion had increased to $27 \cdot 3$ p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to $20 \cdot 5$ p.c. (central electric stations included). With the recovery in production since 1933 the percentage has risen again, and in 1939 stood at $25 \cdot 6$. The same also holds true for establishments employing 101 hands or over. In 1923 they employed 58.6 p.c. of the total, in $1929,61.9$ p.c., in 1933, $55 \cdot 7$ p.c., in $1939,61.5$ p.c.

The impact of the War on the concentration of war industries into large units is illustrated by the increase in the number of establishments employing 500 hands or over. In 1939 such establishments numbered 172 and employed $25 \cdot 6$ p.c. of the total number of employees engaged in manufacturing. By 1943 the number had increased to 378 and the percentage of total employees to $\mathbf{4 9 \cdot 0}$. In a further subdivision of this group in 1943 it was found that 219 establishments employed between 500 and 999 persons, 55 between 1,000 and 1,499 , and 104 employed over 1,500. All told, there were 5 plants employing over 10,000 persons, all of these being engaged in war production. The largest one had an employment of a little over 14,000 , with the next two employing between 11,000 and 12,000 , and the fourth and fifth largest plants employing 10,000 to 11,000 persons.

## 32.-Manufacturing Establishments, Classified by Number of Employees, by Provinces, 1943

33.-Establishments and Employees in Canadian Manufactures, Grouped According to Number of Employees per Establishment, 1929, 1939, 1942 and 1943

${ }^{1}$ Includes central electric stations, dyeing, cleaning and laundry establishments. ${ }^{2}$ Exclusive of Yukon and the Northwest Territories.

Size of Establishment in Leading Industries.-Table 34 summarizes the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of automobiles, railway rolling-stock, aircraft, cotton yarn and cloth, shipbuilding and repairs, miscellaneous chemical products, non-ferrous metal smelting and refining, and pulp and paper; whereas in the case of bread and other bakery products, women's factory clothing, butter and cheese, and sawmills, the degree of concentration is low. This concentration is analysed in detail for each of the twenty-five leading industries in the tables following.
34.-Percentage Importance of Establishments, each Employing $\mathbf{3 0 0}$ or more Persons in the Twenty-Five Leading Industries, 1943

${ }^{1} 500$ or more employees.

## PART II.-PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

This Part of the Chapter is introduced by a general analysis of the concentration of the manufacturing industries in the provinces. In the sections that follow, the principal features of the manufactures of each province are brought out and finally the distribution of manufacturing throughout the principal cities and towns of the Dominion is shown.

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1943 amounted to $\$ 7,073,300,000$ or over 81 p.c. of the gross value of manufactured products of the Dominion. The proximity of Ontario to the coalfields of Pennsylvania, the water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of textiles and chemicals, but in each of the other groups Ontario has the greater production. The standing of these two provinces is most nearly approached by British Columbia in the case of the wood and paper products group, where the latter province accounts for $15 \cdot 8$ p.c. of the gross production compared with $37 \cdot 1$ p.c. for Ontario and $33 \cdot 7$ p.c. for Quebec; in each of the other groups the positions of Ontario and Quebec lead by a wide margin. Previous to 1941, Table 1 has shown the value of production in each province, by industry. With the establishment of many vital war plants throughout Canada, it is not possible to publish this detail, and the provincial distribution by groups instead of by industries is given. In this way the publication of figures relating to individual establishments has, in many cases, been avoided.

## 1.-Summary Statistics of Manufactures of Each Province, Classified by Industrial Groups, 1943

${ }^{2}$ Includes non-ferrous metal products.

The degree of concentration of manufacturing production in large units is illustrated in Table 2. In the Province of Quebec $55 \cdot 3$ p.c. of all persons engaged in manufacturing were employed in establishments having 500 or more employees, as compared with 51.0 p.c. for Canada as a whole. Ordinarily, Ontario ranks second in the concentration of manufacturing production. In 1942, however, British Columbia with $47 \cdot 2$ p.c. came second, this being due to the large shipbuilding plants located there. In 1943 Ontario resumed her normal position in second place with 53.6 p.c., while British Columbia came third with $44 \cdot 7$ p.c., followed by Nova Scotia with $43 \cdot 2$ p.c., Manitoba $35 \cdot 7$ p.c., New Brunswick $35 \cdot 4$ p.c. and Alberta $27 \cdot 9$ p.c.

## Section 1.-The Manufactures of the Maritime Provinces, 1943

In Prince Edward Island the predominant agricultural and fishery resources make butter and cheese, fish curing and packing, and slaughtering and meat packing the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries, as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, shipbuilding and repairs, fish curing and packing, sawmills, pulp and paper, and butter and cheese. In addition to this, important petroleum refineries and coke and gas plants add to the diversification of manufacturing in the Province. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries, although fish and agricultural products add to the varied output. Sugar refining and the production of railway rolling-stock also form important branches of manufacturing production.

${ }^{1}$ Net value is derived from gross value by deducting cost of materials, fuel and electricity.
${ }^{2}$ Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island; slaughtering and meat packing, iron castings, sheet metal products. fertilizers, cotton and jute bags; in Nova Scotia; cotton yarn and cloth, aircraft, miscellaneous iron and steel products, wire, coke and gas and petroleum; in New Brunswick; sugar refineries, railway rolling-stock, cotton yarn and cloth, silk and artificial silk goods.

## Section 2.-The Manufactures of Quebec, 1943

Among the assets of Quebec that have tended to develop manufacturing industries in the Province may be mentioned its natural resources of forests, water powers, minerals, and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going shipping to reach its main centres of population. Added to these natural advantages, there is a stable and industrious population, which is an important factor in industries such as textiles, clothing, boots and shoes, etc., where a large labour force is required.

The most notable change among the manufactures of Quebec in recent years has been the development of the non-ferrous metal smelting industry. This industry first appeared among the forty leading industries of the Province in nineteenth place in 1927. It has been in second place since 1935, with the exception of 1942 when it was in first place.

Quebec, with about 33 p.c. of the Dominion output, is the second largest manufacturing province. The production of pulp and paper is normally the dominant industry, but in 1943 it was displaced by the miscellaneous chemical products industry for the premier position. In addition to supplying about 6 p.c. of the gross value of Quebec manufactures, the pulp and paper industry furnishes about 48 p.c. of the Dominion total for this industry. The value of tobacco products forms approximately 88 p.c., cotton yarn and cloth 75 p.c., women's factory clothing 68 p.c., leather boots and shoes 65 p.c., men's factory clothing 57 p.c., railway rolling-stock 54 p.c., and non-ferrous metal smelting and refining 51 p.c. of the Dominion totals of these products. The Province of Quebec is thus an outstanding manufacturing province rather on account of her large individual industries than because of the diversification of her industrial activities.

${ }^{1}$ Net value is derived from gross value by deducting cost of materials, fuel and electricity. $\quad{ }^{2}$ Statistics for sugar refining, which is also one of the leading industries of this Province, cannot be published, since there are fewer than three establishments reporting.

## Section 3.-The Manufactures of Ontario, 1943

The gross value of the manufactured products of Ontario in 1943 represented about 48 p.c. of the total for the whole Dominion, while that of Quebec amounted to about 33 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario, as the following percentages show: 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900,50 p.c.; 1890,51 p.c.; and 1880, 51 p.c. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the Dominion.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible; the wide range of natural resources of forests, minerals, water powers, and agriculture; a large population and excellent water and rail transportation facilities to other parts of the country, have all encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment within the Province of branch factories of United States industries, as in automobile manufacturing.

Industries producing capital or durable goods, which constitute an important factor in the manufactures of Ontario, were particularly hard hit during the early years of the depression preceding the War of 1939-45. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted in a lowering of the manufacturing production of the whole Province relatively to that of other provinces less affected by these influences. With the recovery since 1933 and the expansion in production resulting from the War, these industries in general have made good progress, and Ontario, which accounted for 49 p.c. of
the gross value of all products manufactured in the Dominion in 1933, had by 1942 increased the relative value to $50 \cdot 5$ p.c. In 1943 the percentage dropped again to $48 \cdot 3$, indicating a relatively greater expansion of war production in other provinces.

Ontario also has the greatest diversification of manufacturing production of any province. The outstanding industries in which this Province is pre-eminent are automobiles, agricultural implements and starch manufacture which are carried on practically in this Province alone. Other important industries in which Ontario leads, with the percentage which the production of each bears to that of the Dominion total, in 1943 are as follows: leather tanneries 88, rubber goods 77, primary iron and steel 71, electrical apparatus and supplies 69, fruit and vegetable preparations 62, castings, iron, 61 , flour and feed mills 58 , furniture 57 , and hosiery and knitted goods 56.

## Section 4.-The Manufactures of the Prairie Provinces, 1943

The leading industries of these Provinces are those based on their agricultural resources-their grain-growing, cattle-raising, and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The widespread use of motor-vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other provinces. Its natural resources of accessible water powers, forests, and, more recently, minerals, have given rise to quite a diversification of industrial production.

Considering the three Prairie Provinces as an economic group, slaughtering and meat packing had the largest gross value of production in 1943, amounting to $\$ 213,029,871$, followed by flour and feed mills with $\$ 61,866,161$, butter and cheese $\$ 55,722,185$, petroleum products $\$ 39,919,567$, and railway rolling-stock $\$ 21,558,745$. These five industries accounted for about 60 p.c. of the total production of the Prairie Provinces. Other leading industries, in the order named, were: bread and other bakery products, miscellaneous iron and steel products, sawmills, breweries, miscellaneous foods, men's factory clothing, etc.

## 6.-Statistics of the Leading Industries of the Prairie Provinces, 1943

[^151]6.-Statistics of the Leading Industries of the Prairie Provinces, 1943-concluded

[^152]
## Section 5.-The Manufactures of British Columbia, 1943

British Columbia in 1943 was again the-third most important manufacturing province of the Dominion. Normally its rich forests give the wood industries a pre-eminence in the Province. Due to the exigencies of the War which resulted in the establishment of a huge shipbuilding industry on the Pacific Coast, the iron and its products group displaced wood and paper as the dominant factor in British Columbia manufacturing production. As a result, the shipbuilding industry with a gross value of production of $\$ 155,536,396$ contributed 24 p.c. of the total output of the Province. This industry was in sixth place in 1940 when the output was valued at only $\$ 9,943,941$. It furnished employment to 31,238 persons or $30 \cdot 6$ p.c. of the total number engaged in manufacturing in 1943. Emphasizing the importance of the forests in the industrial life of the Province, the sawmilling industry ranked second with a gross value of production of $\$ 87,069,697$, and the pulp and paper industry fourth with $\$ 28,881,845$. Third in importance was fish curing and packing, based principally on the estuarial salmon fisheries. British

Columbia accounted for 50 p.c. of the total production of this industry in Canada. Other important industries were: slaughtering and meat packing, petroleum products, planing mills, machinery, fruit and vegetable preparations, etc. The varied resources of the Province and its position on the Pacific Coast have resulted in a wide diversification of its manufactures.
7.-Statistics of the Leading Industries of the Province of British Columbia, 1943

${ }^{1}$ Net value is derived from gross value by deducting cost of materials, fuel and electricity.
${ }_{2}$ Includes other leading industries, statistics of which cannot be published because there are fewer than three establishments in each industry. Such industries are: aircraft, bridge and structural steel and non-ferrous smelting and refining.

## Section 6.-Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the west the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 8, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over $\$ 1,000,000$ each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns in 1943 accounted for 90.8 p.c. and 90.2 p.c., respectively, of the totals for those provinces, while in the Maritime Provinces and British Columbia, where sawmilling, fish-packing, and dairying are leading industries, the proportions fell to 71.4 p.c. and $79 \cdot 1$ p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

## 8.-Cities and Towns Each with a Gross Manufacturing Production of Over $\mathbf{\$ 1 , 0 0 0 , 0 0 0}$. Number of Establishments and Total Gross Production in such Urban Centres as a Percentage of the Grand Total, by Provinces, 1943.

Norr.-Statistics published in this table are in some cases higher than the figures published in Table 10, since, in the table below are included statistics of towns with less than three establishments and production of over $\$ 1,000,000$ each. It was not possible to publish this information, except in summary form in Table 10 without disclosing the operations of individual establishments.

## 9.-Principal Statistics of the Manufacturing Industries of the Six Leading Manufacturing Cities of Canada, 1933-43

Nors.-The dyeing, cleaning and laundry industry is included for the years prior to 1936.

| City and Year | Estab-lishments | Capital | Employees | Salaries and Wages | Cost of Materials | Gross Value of Products ${ }^{1}$ |

## CHAPTER XV.-CONSTRUGTION

Section 1 of this Chapter deals with the Government controls made necessary by wartime conditions, Government aid to civil construction under the Dominion Housing Acts, and emergency housing under Wartime Housing Limited and the Veterans' Land Act.

Section 2 gives the value of construction contemplated, as shown by contracts awarded and building permits issued, to the end of 1945 , and is therefore in the nature of a forecast of work still to be undertaken. Section 3 includes a statement on the recently instituted annual survey of dwelling units constructed in Canada. It also combines statistics of the Annual Census of Construction in summary form; these statistics cover the bulk of building and construction work actually completed to the end of 1944 and are comprehensive inasmuch as they include all types of construction dealt with in Sections 1 and 2 that were actually completed by the end of the year stated; they are not, however, all-inclusive as is pointed out at p. 467.

## Section 1.-The Government and the Construction Industry

## Subsection 1.-Government Control Over Construction*

From the outbreak of war to 1941, the rapid expansion of industry had taxed the nation's resources to such an extent that Canada was forced to impose restrictions on new construction, repairs and alterations and, for this purpose, the Department of Munitions and Supply established a Construction Control.

The Control immediately placed on a permit basis almost all construction projects other than those of a minor nature. Until the latter part of 1944 a very strict licensing policy was followed and licences were granted only to those projects that were most essential to the war effort.

As prospects of an end of the War in Europe improved, licences were granted more freely to allow the construction of dwellings and of industrial projects likely to provide post-war employment. Further relaxations in the Control were put into effect following V-E Day in May, 1945, and V-J Day in August, 1945. All remaining restrictions were removed on Dec. 5, 1945, and the Control itself was dissolved on that date.

Public Contracts.-Previous to the War, Dominion Government contracts for the construction and maintenance of public buildings, harbour facilities, bridges, etc., were let by the Department of Public Works. During the war years, such contracts for civilian purposes continued under the jurisdiction of that Department, though all war construction contracts were let by the Department of Munitions and Supply, the Department of Transport and the Department of National Defence.

[^154]Since the establishment of the Department of Reconstruction and Supply in January, 1946, government reconstruction programs, so far as they concern construction projects, are determined as to urgency and put into execution in order of importance. Also, each project is scored as to whether the available labour and materials required might be deterring any more necessary housing construction. Close liaison is being carried on between the Department of Reconstruction and Supply and the Department of Public Works.

## Subsection 2.-Government Aid to Civil Housing

The construction industry, characteristically sensitive to general economic influences, suffered far more during the severe depression of 1929-36 than most sections of industry. To alleviate depressed conditions in such an important industry, and also in recognition of the widespread benefits that result directly and indirectly from construction activity, the Dominion Government did much after 1934 to stimulate building by encouraging private construction.

The Dominion Housing Act of 1935 is outlined at pp. 473-474 of the 1938 Year Book; Part I is the only section of that Act under which loaning operations are still carried on. The numbers of loans granted under the Government Home Improvement Plan, which was in existence from Nov. 1, 1936, to Oct. 31, 1940, are shownat pp. 370-371 of the 1941 Year Book. An outline of the provisions of the National Housing Act, 1938, appears at pp. 469-470 of the 1940 Year Book. Loans made under the Housing Acts and the Home Improvement Plan between 1935 and the outbreak of war aggregated about $\$ 100,000,000$ which, of course, represented only part of the capital actually spent, since the borrowers contributed large amounts on their own account.

The National Housing Act, 1944.-The National Housing Act, 1944, the third general housing Act proclaimed in Canada, was proclaimed (with the exception of Part IV which makes provision for Home Extension and Home Improvement Loans) on Jan. 18, 1945. It has been administered since Jan. 1, 1946, by the Central Mortgage and Housing Corporation, which was created to act in place of, or on behalf of, the Minister of Finance in the operation of the National Housing Act and provide discounting facilities for the loan and mortgage companies.

As of Dec. 31, 1945, 31,700 family housing units had been erected under the three Acts, the average loan made for the construction of each unit being approximately $\$ 3,270$.

This Act covers the entire housing field and makes provision for:-
(1) Loans to prospective home-owners wishing to build for themselves.
(2) Loans to assist in the construction of co-operative housing projects.
(3) Loans to builders who intend building either for sale or for rental purposes.
(4) Loans to limited-dividend corporations undertaking the construction of low-rental housing projects.
(5) Guarantees to life insurance companies investing funds in the construction of low-rental and moderate-rental housing projects.
(6) Assistance to municipalities collaborating with limited-dividend corporations or life insurance companies in slum-clearance schemes.
(7) Housing research and community planning.

The following statistics relate to the 1944 Act only and cover the period from Jan. 18, 1945, to Dec. 31, 1945 : number of loans made 4,838; number of family housing units, 5,386 ; amount of loans approved $\$ 22,512,225$; average amount of loan \$4,655.

Loans to Prospective Home-Owners.-Loans are made through any of the 48 approved lending institutions authorized to make loans under the National Housing Act of 1944. Twenty-five per cent of the money borrowed is loaned by the Dominion Government and 75 p.c. by the lending institution. The rate of interest charged is 4.5 p.c. per annum, and the period of the loan is usually 20 years but may be increased to as much as 30 years, where approved community planning and proper zoning regulations exist.

Houses must be designed and built according to minimum standards and specifications laid down by Order in Council and must meet with the approval both of the lending institution and of the Central Mortgage and Housing Corporation. The Corporation provides, free of charge, a booklet of low-cost house designs and working drawings may be obtained at a cost of $\$ 10$ per set.

The maximum loan procurable under the Act for building a single-family house is $\$ 6,400$, and then only for a house containing four or more bedrooms. For smaller houses the amount is reduced. The required equity, or down payment, on a loan of $\$ 6,400$ is $\$ 1,600$; and the rate of repayment on a loan of this amount over a 20 -year period is $\$ 40 \cdot 35$ per month, plus one-twelfth of the estimated annual and school taxes.

Loans to Co-operative Groups.-Loans to groups of prospective home-owners who intend to build co-operative housing projects are made in much the same manner as to an individual. The usual maximum loan for any single-family housing unit, whether the project consists of separate houses or of a block of apartments, is $\$ 6,400$. The interest rate is $4 \cdot 5$ p.c. per annum, and the normal period of amortization is 20 years. In a co-operative group of this nature, if any one shareholder fails to make his payments on the loan, the responsibility for them devolves upon the other members of the group. There is considerable interest being shown at the present time in co-operative housing. This subject is dealt with in Chapter XVII, pp. 617-618.

Loans to Builders.-Loans to builders building for sale are handled in a manner similar to those made to individual home-owners-except that 25 p.c. of the total amount of the loan is withheld until the house has been sold to a satisfactory purchaser who can assume the National Housing Act mortgage from the builder.

Financing the builder who proposes to rent his houses is slightly different. In such cases, the loan may not exceed 80 p.c. of the lending value of the project and, except in the Province of Quebec, a chattel mortgage must be given in addition to the original mortgage for any rental project containing more than four familyhousing units. The chattels referred to are such apparatus and equipment as form an integral part of the property which is security for the joint loan (refrigeration equipment, gas and electric stoves, etc.). Further, even though approved community planning and proper zoning regulations exist, the period of the loan (which is normally 20 years) cannot be increased to more than 25 years.

Loans to Limited-Dividend Housing Corporations. - A limited-dividend housing corporation is a corporation or group of persons who decide to erect a large-scale low-rental housing project from which they will receive not more than 5 p.c. profit per annum on their original investment.

Let us assume that they wish to purchase a tract of land and to erect on it two or three hundred low-rental houses. The total scheme will cost, say, $\$ 1,000,000$. The corporation can borrow up to $\$ 900,000$ from the Central Mortgage and Housing Corporation for their purpose-provided, of course that the Government is satisfied as to the soundness of the project both from a financial and from a constructional point of view.

The corporation will pay 3 p.c. interest per annum on the loan, the period of which is the life of the project up to a maximum of 50 years. After that period the project must be disposed of according to pre-determined arrangements. Meanwhile, the limited-dividend housing corporation will have been permitted to make only 5 p.c. profit per annum on their original $\$ 100,000$ investment.

Guarantees to Life Insurance Companies.-By provision of the National Housing Act, life insurance companies may invest up to 5 p.c. of their total assets in Canada in the purchase of land and the erection thereon of low-rental and moderaterental housing projects, including accommodation for retail stores, shops, offices, etc., but not including hotels. Any life insurance company so investing may receive from the Dominion Government a guarantee of a net return of 2.5 p.c. per annum of the cost of the project for the period of the project's useful life, up to a maximum of 50 years.

If the company chooses to accept this guarantee on its investment, it must retain ownership of the project, and it must also establish a reserve comprising all net earnings in any year after its completion in excess of 6 p.c. per annum on the cost of the project. Out of this reserve any advances made under the guarantee must be repaid.

In addition to insurance companies, any approved lending institution may be declared by the Order in Council to be eligible for the advantages available under this particular section of the National Housing Act.

Slum Clearance.-Let us suppose that a municipality wishes to clear an objectionable slum area with the assistance of the National Housing Act and to rebuild it with low-cost housing. First, it must buy the land and properties concerned. Then, having cleared them, it must sell the land to a limited-dividend housing corporation or to an insurance company that intends to construct a housing project of the kind previously referred to. The municipality may then obtain a grant from the Dominion Government of 50 p.c. of the amount by which the cost of acquiring and clearing the land has exceeded the price obtained for it from the insurance company or corporation, provided that the remaining 50 p.c. is borne by the municipality, either alone or with the help of its Provincial Government.

Housing Research and Community Planning.-Provision is also made under the Act for the following kinds of research and specialized public services: (a) investigation into housing conditions and measures to be taken for their improvement; (b) preparation of plans of low-cost houses; (c) public education on the subject of community planning, etc.; (d) research into all aspects of building; (e) studies of land utilization in co-operation with municipalities; (f) technical development.

The following table brings together the loans made under the housing legislation passed since 1935.

## 1.-Loans Approved under the Dominion Housing Act, 1935, and Part I of the National Housing Acts of 1938 and 1944, by Provinces, 1937-45

#### Abstract

Note.-This table is a combined statement of the net loans (cancellations and new loans) made under the three Acts named. Loans and amounts approved under the 1935 Act from October, 1935, to December, 1936, are given at p. 447 of the 1945 Year Book.

${ }^{1}$ Loans cancelled exceeded loans approved by the number and amount stated.

## Subsection 3.-Wartime Construction and Emergency Housing

Wartime Construction.-Material on construction for war purposes appears at pp. 447-448 of the 1945 Canada Year Book. During the War, this type of construction was controlled by the Department of Munitions and Supply, which was amalgamated on Jan. 1, 1946, with the Department of Reconstruction and renamed the Department of Reconstruction and Supply. The construction contracts awarded for war purposes are given in Table 2.

## 2.-Construction Contracts (Commitments) Awarded for War Purposes Through the Department of Munitions and Supply, 1910-45

Nors.- In addition to the totals shown, orders have been placed by the Department of Transport for defence construction work on account of the U.S. Forces and other agencies. The Department of National Defence incurred expenditures for war projects not included above, largely where Service labour has been used. In addition, substantial construction work has been undertaken by private companies, notably the Aluminum Company of Canada Ltd.

${ }^{1}$ Awarded by Wartime Housing Limited.
Wartime Housing Limited.-In February, 1941, the Department of Munitions and Supply had decided upon definite measures to relieve housing pressure in congested areas. Wartime Housing Limited, a Crown Company, was created by Order in Council and charged with the duty of finding accommodation for war workers and their families in areas where the need for Government action was apparent. Where possible, the Company obtained lands from the municipality, always with a view to getting improved property; where it was not improved, new townsites had to be constructed. In this way, entire new communities were set up by the Company to accommodate plants located in remote areas. Up to May 1, 1944, Wartime Housing Limited had either erected or under construction the following buildings in connection with war workers:-
17,344 Houses
69 Staff houses
15 Bunk houses
3 Men's centres
10 Women's centres
19 Dining halls
30 Schools
2 Manning pools
7 Administration buildings
1 Marine school
${ }_{20}$ Port control building
20 Community halls
2 Chinese living quarters
1 Building for coloured people
2 Hospitals
1 General store
1 Help's quarters
1 Hiring hall
1 Wood camp
4 Waterworks buildings

In the later stages of the War and since the end of hostilities, some munition workers' houses were moved and converted to houses for service men and veterans, and certain staff houses and other buildings were declared surplus as the need for them disappeared with the removal of wartime conditions.

The housing situation, even by May 1, 1944, had become very acute in a number of municipalities. Where the situation affected the general population, it was found that the families of men in the Armed Forces were under a handicap in securing proper housing accommodation because the head of the family was at that time overseas. It was therefore decided that, where a municipality could show a definite need for housing, the Government would proceed with the construction of houses for the
families of persons in the Armed Services. Under this plan, Wartime Housing Limited started during 1944 and completed in 1945, 1,287 houses (37 apartments) for veterans in various centres as follows:-

| Sea Island, B.C. | 25 apts. | Sarnia, Ont. | 50 houses |
| :---: | :---: | :---: | :---: |
| Vancouver, B.C | 100 houses | Toronto, Ont | 250 |
| Brantford, Ont | 100 | Windsor, O | 250 |
| Hamilton, Ont | 200 | Hull, Que. | 125 |
| London, Ont. | 50 | Saint John, | 50 |
| Oshawa, Ont | 75 | Halifax, N.S | 12 apts. |

During the latter half of 1945, an extensive program for houses for service men and returning veterans was entered upon. Contracts were placed for 6,711 houses in the centres listed, all of which were completed and occupied early in 1946. A larger program of building low-rental houses is planned for completion by the end of 1946.

Construction Plans under the Veterans' Land Act.-In May, 1944, in anticipation of the needs of the post-war period, a construction program was set up which provided for the building of 3,000 homes on small holdings of one acre, to be sold under the terms of the Veterans' Land Act.

No actual construction was undertaken in 1944. Activities were confined to the surveying and purchasing of land suitable for subdivisions of one-acre lots, and to the organizing of sources of supply of seasoned lumber.

By April, 1945, construction of 3,000 homes was under way, centred mainly, on the perimeters of the following points:-
Maritimes-
Moncton ..... 20
Truro. ..... 15
Charlottetown ..... 10
Miscellaneous. ..... 30
Quebec-
Montreal ..... 117
Sherbrooke. ..... 30147

[^155]$\square$-

A great many difficulties were encountered due to the insufficiency and inefficiency of labour, both skilled and unskilled, to the lack of materials and consequent delays in deliveries and to extremely bad weather conditions during critical stages of construction. Consequently, the program was seriously retarded, and the costs rose above carefully prepared estimates.

Although only approximately 60 p.c. of the program was completed by Dec. 31, 1945, the balance will be available by June 1, 1946.

## Section 2.-Contracts Awarded and Building Permits Issued

In this Section barometric statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the Census of Construction. Further, values of contracts awarded, and especially of building permits, are estimates (more often underestimates) of work to be done. Obviously, these statistics and those of Section 3 cannot be expected to agree, since much work contracted for towards the end of any one year is often not commenced until the next and, especially as regards large contracts or contracts undertaken late in any year, extends into more than one year. The figures here given are, therefore, supplementary to those of Section 3 and are valuable as showing from year to year the work immediately contemplated during the period.

Construction Contracts.-The figures published by MacLean Building Reports, Limited, for construction contracts awarded during 1945 showed a total of $\$ 409,032,700$. This represented a 40 p.c. increase over 1944 and was the highest value reached since 1930 . A peak of $\$ 577,000,000$ was recorded in 1929; and a depression low of $\$ 97,000,000$ in 1933 . The large volume of work in 1945 was carried out despite difficulties in the supply of building materials and construction labour.

The volume of residential building, which accounted for almost one-half of the total value of all construction, showed an increase of 49.4 p.c. over 1944. This was largely in single-family dwellings, apartment construction being down $\$ 2,570,000$ or $29 \cdot 1$ p.c. from the previous year. It is expected that residential construction in 1946 will exceed the 1945 total as the demand for new homes has not begun to be met. At the present time, the only limiting factor in house construction is the availability of materials and labour.

Industrial construction showed an increase of 28.7 p.c. over 1944, while activities in road-building and hydro-electric projects were responsible for the rise of $53 \cdot 3$ p.c. in engineering construction. Business or commercial construction was up 25.8 p.c. from the 1944 total; with the exception of public building construction, every subdivision in this classification showed an increase.

The centre of construction activity in the Dominion in 1945 was Ontario with awards totalling $\$ 151,856,000$, or $37 \cdot 1$ p.c. of the total. Quebec followed with $29 \cdot 8$ p.c., and British Columbia with $9 \cdot 3$ p.c. The greatest percentage increases over 1944 were shown by Saskatchewan and Manitoba, amounting to 181.6 p.c. and $72 \cdot 2$ p.c., respectively.

## 3.-Values of Construction Contracts Awarded in Canada, 1912-45

Building Permits.-Statistics of building permits were first collected in 1910, when the series covered 35 cities; in 1920 it was extended to cover 58 municipalities, including unincorporated suburban areas as, with the advent of the automobile, a growing percentage of persons working in cities were residing outside the municipal boundaries of the cities in which they earned their living. In 1940 the series was again extended to cover 204 municipalities.

Building permits issued in 1945 registered an increase of 53.2 p.c. compared with 1944.

## 5.-Values of Building Permits Issued by 204 Municipalities in Canada, 1944 and 1945

Norz.-Statistics for these series covering years previous to 1944 will be found in the corresponding table of earlier editions of the Year Book. For the 35 cities marked - the record goea back to 1910; the 23 places marked o were added in 1920 .

The indexes given in Table 6 show, so far as possible, the fluctuations in building costs and their effect upon construction work and employment. At various times attempts have been made to determine the relative proportions of material and wage costs in general building; such proportions vary with the type of building and the centres studied, and accurate and representative data are difficult to obtain. Pre-war experience, the result of a study made in 15 cities, indicates that the average proportions of materials to labour in all kinds of construction were about two-thirds for the former to one-third for the latter. The increase in the cost of building operations in the war years has probably been much more than is indicated by the increase in the indexes of wholesale prices and wages shown in Table 6 and the proportions of these items to total costs have, no doubt, undergone some variation due to changes in types and methods of construction and to the greater use of machinery.

## 6.-Values of Building Permits Taken Out in 35 Cities and Index Numbers of the Building Construction Industries, 1930-45

Nors.-These cities are the 35 referred to ( $\bullet$ ) in Table 5. Figures for the years 1910-29 are given at p. 422 of the 1942 Year Book.

| Year | Value of Building Permits | Average Index Numbers of- |  |  |
| :---: | :---: | :---: | :---: | :---: |

[^156]Employment in Building Construction, 1945.-The Dominion Bureau of Statistics makes current surveys of the employment afforded by industrial establishments normally employing 15 or more persons. The index of employment in building construction, calculated ( 1926 average $=100$ ) from data furnished by some 1,167 employers, averaged $101 \cdot 6$ in 1945 an increase of $6 \cdot 3$ points from the 1944 index.

## Section 3.-Statistics of Completed Construction

The Annual Survey of Dwelling Units Constructed in Canada.*-The Dominion Bureau of Statistics, in collaboration with various other Government agencies concerned, recently instituted an annual survey to ascertain the number of new houses and dwelling units being constructed in Canada, commencing with the year 1945. The data resulting from the survey will relate to the type of building, the general pattern or type of construction, and the locality, and also will show the number of new dwelling units created by the conversion or reconversion of existing buildings to provide additional housing.

Commencing with 1946, it is planned to have the statistics reported progressively as construction of the new houses, or dwelling units, is completed, so that current data on new housing construction may be available.

The Survey is an outgrowth of an informal inter-departmental Housing Statistics Committee formed in March, 1945, when the need for additional information by the various agencies of government concerned with housing problems was most urgent in view of the critical nature of the housing situation. At that time, it was found that there were no co-ordinated statistics available on the number of dwelling units built each year. The National Housing Administration and Wartime Housing Limited (see pp. 455 and 459) did compile figures relating to their respective jurisdictions, but these represented only a small percentage of total dwelling units completed. After examining various statistical methods of approach, the Committee recommended that nothing less than an actual count should be adopted: sampling and other methods of estimating were not suited to work of this kind, since construction of dwelling units showed a strong tendency to be concentrated not only in certain parts of the country and particularly urban sections but also in certain areas of those sections.

The Committee reported that municipalities were the most basic and potentially comprehensive sources of information because of their property-taxing interest and because they have experienced assessment organizations. When the Bureau of Statistics was requested to make the survey, the method instituted, therefore, was to have municipal authorities fill out a questionnaire for each housing unit completed in such a way that the data would be available as soon as possible after its completion. This method also lends itself to the extension of statistical work in the housing field to provide additional information to meet possible future requirements.

Figures from this survey for 1945, as shown in Table 7, provide a much needed measure of this type of construction and enable the problem of housing in Canada to be factually analysed. It should be clearly understood that the figures of the Annual Census of Construction below, are inclusive of the survey figures given in this table. The survey merely segregates the construction of houses and dwellings from the broader field. About 41,000 new dwelling units were completed between Jan. 1 and Dec. 31, 1945, and, in addition, nearly 6,000 dwelling units were completed by conversion or reconversion. A comparison of the total number of dwelling units, exclusive of conversions, with the total number of new buildings, shows that there was an average of 1.32 dwelling units per building.

The Annual Census of Construction.-The annual Census of Construction undertaken by the Dominion Bureau of Statistics covers all construction, maintenance and repair work undertaken by contractors, builders and public bodies (except the smaller municipalities) throughout Canada. It does not include maintenance and repair work on steam and electric railways, telegraph and telephone systems and the lesser public utilities when such work is done by the employees of these concerns in the ordinary way: nor can it include a substantial amount of construction in the aggregate done by farmers and other individuals who might be otherwise unemployed, performing work on their own structures. It is doubtful whether a great deal of the work of railways and utilities is construction in the sense understood in the census: for instance, the routine "maintenance of way" expenditures so far as they relate to inspection work, are not construction although, so far as they concern rebuilding of line for roadbed or structures, they might be said to fall in that category.

The following statement shows the expenditures by steam and electric railways, telegraph and telephone systems. Most of this work is done by employees but, as a proportion is also done by contractors, some duplications would result if these totals were added to the value of general construction as shown in Tables 8 to 11.

EXPENDITURES BY STEAM AND ELECTRIC RAILWAYS, AND TELEGRAPH AND TELEPHONE SYSTEMS ON MAINTENANCE OF WAY AND STRUCTURES AND MAINTENANCE OF EQUIPMENT, 1941-44.

Industrial Statistics of Construction.*-A census of construction was made by the Dominion Bureau of Statistics for 1934, but the basis of compilation was not standardized until 1935 so that, with the completion of the 1944 figures, comparable statistics are now available covering the years 1935-44. Returns are received from general trade and subcontractors, municipalities, the Harbours Board, and Dominion and Provincial Government departments. The figures cover alterations, maintenance and repairs, as well as new construction. Summary statistics are given in Tables 8, 9 and 10.

No relationship exists between the total value of construction as shown in these tables, and the value of contracts awarded as indicated in Table 3 of Section 2, p. 462. In the latter case all values are included as soon as awards are made, irrespective of whether the contract is completed or even begun in that year, whereas the following tables cover construction work carried on and actually performed in the calendar year.

* Revised in the Construction Statistics Branch, Dominion Bureau of Statistics.

## 8.-Principal Statistics of the Construction Industry in Canada, 1941-44

The Construction Industry in Canada, 1944.-The value of work performed by the construction industry in 1944 amounted to $\$ 449,838,059$ as compared with $\$ 572,426,551$ in the preceding year, a decrease of $21 \cdot 4$ p.c.

The value of building construction fell from $\$ 301,884,888$ in 1943 to $\$ 220,299,940$ in 1944. The construction of industrial buildings showed a sharp decline from $\$ 140,396,554$ to $\$ 71,131,759$, while the construction of armouries, barracks, hangars, etc., was reduced from $\$ 58,216,173$ to $\$ 15,001,136$. On the other hand, the value of residential building advanced from $\$ 63,684,367$ to $\$ 83,927,360$, institutional from $\$ 13,148,233$ to $\$ 21,005,720$, and commercial from $\$ 26,439,561$ to $\$ 29,233,965$. Construction work involving engineering, harbours, rivers, etc., declined from $\$ 203,527,830$ in 1943 to $\$ 153,123,802$ in 1944.

In the industry as a whole, employment was provided for a total of 123,892 persons in 1944, recording a decrease of 31,408 from the total for the preceding year, while the aggregate of salaries and wages at $\$ 197,703,984$ was $\$ 53,729,809$ lower. The cost of materials used in 1944 was $\$ 200,801,042$, a decline in expenditure for this purpose of $\$ 78,087,342$.

In 1944, reports received numbered 16,121 as compared with 12,600 in 1943. A good part of the increase was recorded in the number of reports received from owner-builders due, in all likelihood, to the number of persons, desperately in need of housing accommodation, who erected their own homes because they were unable to obtain the services of a contractor. These statistics are included in the tables showing the operations of general contractors, trade contractors and subcontractors. Although the increase in the number of reports was considerable, the comparatively small extent of their operations does not appreciably affect other totals.

## 10.-Principal Statistics of the Construction Industry in Canada, by Provinces and Groups, 1944

Nors.-Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

Table 11 classifies the various types of construction carried out in 1944. The item "Trade Construction" covers such items as bricklaying, carpentry, plumbing, heating, electrical work, etc., reported by contractors who confine themselves to a specific type of work. Details by provinces and more complete information regarding the industry will be found in the reports of the Bureau of Statistics on the construction industry.

## 11.-Description, Classification and Value of Construction in Canada, 1944

Note.-Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

| Type of Construction | New Construction | Repairs, Alterations and Maintenance | Total Value |

Employment in Construction.-In Tables 12 and 13 the employment figures, shown on a monthly basis, reflect the fact that the industry is not as decidedly seasonal as is sometimes thought. The month of highest employment in the industry as a whole, in 1944, was August with 122,606 wage-earners and the lowest was February with 72,321.

## 12.-Fmployment of Wage-Earners in the Construction Industry and Their Remuneration, by Months, 1943 and 1944

## General Review

It is accepted as a commonplace that prosperity in this country is dependent to a large degree on foreign trade. This has been true for the best part of Canada's existence as a nation, but it is, perhaps, even more important to-day. In this Chapter of wartime editions of the Year Book, the fundamental changes that have taken place during the war years in the character of Canada's external trade have been emphasized. As a result of the War, all the major primary resources of Canada were in abnormal demand and exports rose to unprecedented levels-a condition that resulted in a high domestic prosperity. At the same time, the insatiable demands for munitions of war and the wave of new capital investment developed, in some degree, a one-sided economy and built up a capital structure out of relationship with normal export requirements.

The changes brought about are clearly reflected in the export figures of the period which reached a level of $\$ 3,500,000,000$ in 1944 . These figures, for convenience, are summarized in chart form on p .474 but are analysed in detail at pp. 540-551. Values of exports more than tripled during the war years. This probably represented more than a doubling in physical volume after compensating for the increase in prices during the period. In any case, it indicates the enormous increase in the capacity for wartime production for export that has resulted from: (a) the restriction of domestic consumption during the war years; (b) the assured outlet

## DOMESTIC EXPORTS (INCLUDING GOLD) BY MAIN GROUPS

for all goods produced and the removal of financial restrictions normally limiting internstional transactions and (c) the large volume of new capital investments made in Canada during the War period.

In the chart, exports are shown by main groups and the years that have been selected are: 1928, the year of highest peacetime exports; 1932, the lowest year of the depression of the 30's; 1939, the latest pre-war year; and the years 1941, 1943, 1944 and 1945, to show the growth of wartime exports to their maximum point in 1944. It will be noticed that, compared with peacetime years, increases were substantial in all groups but particularly in iron and its products, miscellaneous war supplies, and vegetable products. The two first groups include such exports as ships and vessels, aircraft, military vehicles, guns, rifles, cartridges, shells, explosives, special electrical apparatus, army and navy stores, etc.-definitely wartime products -and, whereas in 1939 such exports were less than 9 p.c. of total exports, in 1944 they reached 38.5 p.c. But, even apart from purely wartime exports, the huge increases that have taken place in many other directions, notably grains and meats, have been brought about by conditions of war and cannot be expected to hold such levels under peacetime conditions of trade.

It is the post-war task to readjust this abnormal position to peacetime conditions and to seek outlets for the new productive capacity where possible, so as to maintain a satisfactory standard of living. The problem, however, is complicated because it is dependent not only on efforts and policies made within Canada, but on the ability of other countries to meet their own reconstruction problems-countries that have come out of the War in a far weaker position than Canada has, and that will depend on help of a substantial sort before they can hope to re-establish themselves in world markets.

The Minister of Trade and Commerce has laid down four main principles that should govern Canada's post-war trade policy: (1) A full share should be taken in supplying stricken peoples; (2) Canada's place in the British market must be kept; (3) new markets must be found; and (4) business must be prepared to give increasing emphasis to the importance of export trade and not regard it merely as an adjunct to the domestic market. The conditions and circumstances behind these principles and what has been done by the Government to facilitate their application is reviewed below.

Mutual Aid was Canada's recognition of the necessity of providing a method of financing Allied needs for Canadian goods and services which were necessary for the the prosecution of the War and for which the receiving countries were not able to pay because of insufficient dollar resources. But even with Lend-Lease and Mutual Aid, the War led to a serious deterioration of the international financial position of most belligerent nations overseas. This was particularly true of the United Kingdom whose external assets were greatly reduced in the earlier years of the War and whose liabilities to other countries grew rapidly as a result of overseas war expenditures. At the same time reconstruction, difficulties of internal industrial reconversion, and the accumulation of demands which were deferred during the War, built up an extraordinarily heavy demand for commodities in those countries, such as Canada, which were more fortunately situated with respect to supply. Consequently, when wartime financial measures were discontinued after the War, it was necessary to introduce some new method of financing commodity movements regarded as essential for the restoration of the economies of overseas countries and the eventual revival of international trade on a more normal basis. Without
special financial measures the desirable volume of international trade could not be reached because, during the transitional years, many countries would have insufficient income from their own exports of goods and services and inadequate liquid reserves to cover their abnormal transitional requirements for commodities.

Loans and export credits by the Canadian Government have been designed to replace Mutual Aid as post-war means of enabling the needs of overseas customers for Canadian goods to be met during the transition period, or until such time as the war-torn countries receiving them have re-established their trade and finances. Such credits are adjusted to the financial position of the customer and differ from Mutual Aid in that they are credits repayable in the future when the countries concerned can discharge them. Under the post-war conditions now existing, they are as necessary to the healthy maintenance and development of Canadian export trade as they are to the rehabilitation of the countries receiving the goods exported. In this connection, it is well to remember that Canada in proportion to her newfound productive capacity enjoys a very limited internal market. This points to a large unused capacity in the exporting industries under post-war conditions if efforts are not made to promote trade. The nation will be called upon to import more, over the long run, if she is to increase exports. For, while it is true that Canada has emerged from the War with a large export surplus financed largely by export credits, there still remains the necessity for a substantial long-term increase in imports once the abnormal financing of exports in the transitional years has terminated.

Already Canada is committed to an outlay of $\$ 2,000,000,000$ on export credits. Of this, $\$ 1,250,000,000$ will go to the United Kingdom, and the remainder to other nations, including $\$ 242,500,000$ to France and smaller amounts to China, the Low Countries and some other countries. Only a portion of the $\$ 2,000,000,000$ will be used during 1946; a small amount of some export credits was spent in 1945. The loan of $\$ 1,250,000,000$ to the United Kingdom is made to facilitate the United Kingdom's purchase of goods and services in Canada and to assist in the restoration of external commercial and financial relations. Already the financial agreement with the United Kingdom has produced most constructive results in the comprehensive manner in which the outstanding accounts between the two countries have been cleared and the way prepared for maintaining a desirable flow of trade through normal channels during the next few years. The agreement provides for the final clear-cut settlement of the claims and obligations arising out of the wartime collaboration between Canada and the United Kingdom.

The total of Canada's financial aid to the United Kingdom and other countries is shown in the following statement which gives all Mutual Aid, gifts, loans and export credits for the War and post-war period to Mar. 31, 1946.

WAR AND POST-WAR ASSISTANCE TO THE UNITED KINGDOM AND OTHER COUNTRIES
(1) Contribution to the United Kingdom-

War Appropriation (U.K. Financing) Act, 1942..................... $\$ 1,000,000,000$
(2) Mutual Aid (Expenditures according to preliminary accounts to

WAR AND POST-WAR ASSISTANCE TO THE UNITED KINGDOM AND OTHER COUNTRIES-concluded

## ${ }^{1}$ Reported to House of Commons as at Feb. 28, 1946.

In addition to the above, there is the Loan to the United Kingdom of $\$ 1,250,000,000$ under the financial agreement signed Mar. 6, 1946, by the Governments of Canada and the United Kingdom and later approved by legislation passed by the Canadian Parliament on May 7, 1946.

The indebtedness of the United Kingdom to Canada under the British Commonwealth Air Training Plan agreements, the disposition of which is covered by Article 7 of the financial agreement between Canada and the United Kingdom, was carried in the accounts of Canada as an advance under Section 3 of the War Appropriation Acts.

At pp. 477-484 of the 1945 Year Book an outline is given of the Government organization set up to promote trade under wartime conditions.

One of the most promising fields of post-war trade to Canadian exporters, viz., that offered by Latin America, has been keenly explored by the Trade Commissioner Service of the Department of Trade and Commerce. Most-favourednation treaties have now been concluded between Canada and nearly all South American and Central American countries. Canadian trade with Latin America is expected to exceed $\$ 100,000,000$ during 1946. The total value of imports of the Latin American Republics from all countries in immediate pre-war years was about $\$ 1,000,000,000$. This indicates the extent of the market, yet Canada exported only $\$ 19,000,000$ worth of goods to ten Latin American Republics in 1939 at a time when this trade was being encouraged. An examination of Latin American imports shows that many commodities required by these countries are produced in Canada, such as iron and steel, chemicals, wood and manufactures of wood, vehicles,
paints, wheat, mining and industrial machinery, electrical apparatus, etc. For the year 1945, Canada's exports to Latin America amounted to $\$ 54,000,000$ a substantial increase compared with the $\$ 19,000,000$ for 1939 , especially considering that war was still being waged for most of the year, but Canada's imports from Latin America reached $\$ 66,000,000$ compared with $\$ 15,000,000$ in 1939 . While the figures, therefore, show the opportunities for reciprocal trade that now exist between Canada and the Latin Americas, they also indicate that the balance of trade so far has been very definitely against Canada.

For economic as well as political reasons, the two continents of North and South America have been drawn closer together as a result of the War. Due to the cessation of supplies from Germany and Japan, from which Latin America drew heavily, and the decline in imports from the United Kingdom and other European countries, Latin American countries were increasingly dependent on North America in the war years for materials and finished goods to keep their economies functioning. The goodwill Canada has built up in these markets should stand her in good stead in the years ahead.

Turning now to the last principle of trade policy mentioned on p. 475, it is clear enough that the present shortage of all kinds of goods is so serious that considerable time will elapse before it will be possible to satisfy all the urgent needs at home let alone demands from abroad. The tendency and even the temptation, therefore, will be to take the narrow view and look to this ready-to-hand and profitable domestic market at the expense of the more specialized export field. Such a policy might well lead to the building up of quite the wrong kind of productive organization.

The goal that has been officially set for Canada's post-war foreign trade, while fairly high, is not unreasonably so in the opinion of Government experts who have closely studied the world situation. But to attain it and hold it, Canadian exporters need to take the long view and plan in terms of the years ahead when competition will be much keener. Even in the case of export staples that Canada has always shipped abroad in large quantities, producers will need to keep closely in touch with changing requirements abroad. The immediate outlook for farm products including live-stock products is definitely promising. Newsprint and lumber will be in strong demand for several years, as will the products of the mines, such as most metals, asbestos, etc.

The above review has dealt almost entirely with commodity trade. However, external trade in commodities is only a part, though a very important part, of the broader field made up of the international exchange of values comprising goods, services, securities, etc. This relationship is shown in its proper proportions in Part III of this Chapter. However, since commodity exports and imports constitute the largest factor in Canada's international transactions, and the one in which the greatest majority of Canadians are most vitally interested, this Chapter is devoted chiefly to the consideration of commodity trade.

## PART I.-THE GOVERNMENT AND EXTERNAL TRADE

## Section 1.-The Development of Tariffs

A short sketch of trade and tariffs prior to Confederation is given at pp. 480-482 of the 1940 edition of the Year Book. The 1942 Year Book, at pp. 427-428, traces the development from Confederation to the adoption of the present form of preferential tariff in 1904.

Owing to the limitations of space in the Year Book, it has been necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships at present in force, and to summarize as much as possible historical data and details of preceding tariffs, giving references where possible to those editions of the Year Book where extended treatments can be found.

## Subsection 1.-The Canadian Tariff Structure

The Canadian Tariff consists mainly of three sets of rates, viz., Preferential, Intermediate, and General. British Preferential rates consisted at first (1898) of a remission of 25 p.c. of the duties ordinarily paid but later (1900) were advanced to $33 \frac{1}{3}$ p.c. and, after 1904 , took the form of a specially low rate of duty on almost all imported dutiable commodities. This is the first broad category of the tariff structure and these rates are applied to specified goods from British countries if shipped direct to Canada. On certain goods special rates may be applied under the British Preferential tariff; these special rates are lower on those goods than the ordinary British Preferential scale.

The second stage in the tariff edifice is the Intermediate rates. These rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. To certain non-British countries, a special concession under the Intermediate rates may be granted and rates lower than the Intermediate apply by agreement.

The third class of duties is the General Tariff. This is levied on all imports that are not covered by Preferential or Intermediate rates.

British Preferential rates apply to all countries within the Empire. They may, however, be modified downwards in their application to specific countries when trade agreements are being revised or discussed between Canada and other Dominions. The whole tariff structure is a very complicated piece of administrative machinery. Almost every budget that is brought down in the House of Commons changes the incidence of the tariff in some particulars. It would be impossible at this place to attempt to discuss the tariff schedules themselves. The schedules and rates in force at any particular time may be obtained from the Department of National Revenue, which is responsible for administering the Customs Tariff.

In all cases where the tariff applies, there are provisions for drawbacks of duty on imports of semi-processed goods used in the manufacture of products later exported. The purpose of these drawbacks is to give Canadian manufacturers a fair basis of competition with foreign producers of similar goods, where it is felt to be warranted. There is a second class of drawbacks known as "home consumption" drawbacks; these apply mainly to imported materials used in the production of specified classes of goods manufactured for home consumption.

Too often one-sided competition arises out of unfair practices, such as dumping or the manipulation of exchange advantages. Wide powers have been given in certain instances to supplement tariff provisions. Thus the Minister of National

Revenue or through him the customs officials have at times been empowered to establish a "fair market value" as a basis of applying duties to be collected. The term "fair market value" is vague and open to various interpretations and has been frequently criticized, but in exceptional cases for which they are designed such valuations have proved effective.

The exchange situation as it affects the Tariff is a different problem. A foreign currency that has become considerably depreciated in relation to the Canadian dollar enables the country concerned to export goods to Canada under a very definite advantage and customs officials have been given power under conditions such as these to value imports from such countries at a "fair rate of exchange". Much, of course, depends on the manner in which the above powers are applied by the administrative officials and their understanding of the reasons for their application, and, while the powers of fixing "fair market value" and "fair rate of exchange" have been applied to meet extraordinary conditions in the past, these powers have lately been modified by clauses in trade agreements drawn up with individual countries.

The Tariff Board.-The Canadian Tariff Act was written in 1907 and, although there have been many changes and revisions, there has been no complete overhaul since that time. In 1931, a Tariff Board was established to make inquiry into and report on any matter in relation to goods that are subject to or exempt from customs or excise duties or on which the Minister of Finance desires information. The duties of this Board are more specifically described at pp. 965-966 of the 1941 Year Book. Since the start of the War in 1939 and in view of the turn taken by wartime trade, the Tariff Board has been inoperative. Its officers and experts worked with various war bureaus and its earlier research is now unrelated to the wide changes that have been brought about in industry and trade as a result of the War. In the post-war formulation of Canadian trade and tariff policies, a change has been introduced by the setting up of a special Interdepartmental Committee. The Canadian Tariff Board has not been abolished, indeed the Chairman of the Board is also head of the Interdepartmental Committee, but will resume its functions along with the Committee. The Committee is to hear representations from industrialists and businessmen. These arrangements should serve a useful purpose in providing valuable guidance to the Government in the formulation of trade policy.

## Subsection 2.-Tariff Relationships with Other Countries

Trade agreements entered into by Canada with the United Kingdom, Eire, Australia, New Zealand, Union of South Africa, Southern Rhodesia* and the British West Indies are dealt with at pp. 383-386 of the 1941 Year Book. Reciprocal tariff arrangements of Canada with Argentina, Brazil, Chile and Ecuador are reviewed in the 1942 Year Book at pp. 429-431. Canada's trading position as affected by commercial agreements in respect of Bolivia, Colombia, Costa Rica, Dominican Republic, Guatemala, Haiti, Panama, Paraguay, Portugal, Salvador, Spain, Sweden, Switzerland, United States, Uruguay and Venezuela, continues as outlined in the 1941 Year Book at pp. 387-393.

Reinstatement of Agreements Suspended During War.-During the War, Canadian trade agreements and similar commercial treaty arrangements with several countries were terminated automatically or suspended by applica-

[^159]tion of Enemy Trade Regulations (see p. 492). Since the end of hostilities, however, trading has been resumed with a number of friendly countries that had been under enemy occupation and the trade agreements with them have been reinstated. An exchange of notes of July 19-24, 1945, between Canada and Czechoslovakia terminated the suspension of the Convention of Commerce of Mar. 15, 1928, between the two countries. A similar arrangement was made with the Netherlands by an exchange of notes of Feb. 1-5, 1946, reinstating the Convention of Commerce of July 11, 1924, between Canada and the Netherlands including Curaçao and Surinam but, since trade had not been resumed between Canada and the Netherlands East Indies, it was agreed that the Convention would not, for the present, be operative for that territory. Canada has now accorded to Belgium and Luxembourg, Denmark, France, Norway and Yugoslavia the benefits of the trade agreements made with them but suspended during the period of hostilities. As regards Syria and Lebanon, trading has been resumed and the benefits of the French Convention are being temporarily accorded to them pending notification that the formalities respecting the cancellation of the French Mandate are completed.

Since it has not been possible to resume private trading with Poland, the Convention of Commerce signed July 3, 1935, with that country remains suspended as regards the relations between Canada and Poland. However, reductions made in the Canadian tariff under that Convention continue to be accorded to countries granted most-favoured-nation treatment by Canada. The benefits of the intermediate rates of the Canadian tariff and any lower duties of the Canada-France and Canada-United States Agreements also apply to most-favoured-nations.

Extension of Trade Agreements with Latin America.-A Canadian Trade Mission visited Mexico, Central America and Colombia in February, 1946, and further extended Canada's friendly trade relations with Latin America by the conclusion of trade agreements with Mexico and Colombia. An Exchange of Notes with Honduras affirmed that the Governments of both countries desire to place their commercial relations on a more satisfactory basis by the conclusion of a modus vivendi.

The Trade Agreement with Mexico provides for the exchange of most-favourednation treatment between the two countries in matters concerning customs duties and subsidiary charges as well as in respect of rules and formalities connected with importation and of laws and regulations affecting the taxation, sale, distribution or use of imported goods. Under the Agreement, imports into Canada from Mexico, previously subject to the general tariff, are accorded the intermediate tariff and any lower rates granted by Canada to other foreign countries. The tariff treatment accorded by Canada to other British countries is excluded from the operation of the Agreement. No immediate reduction in customs duties was made by Mexico for Canadian goods as the Mexican tariff consists of a single column of duties applicable equally to imports from all countries, and any tariff reductions made by Mexico in favour of a particular country, for example those arising out of the MexicoUnited States Agreement of 1942, were generalized and made applicable to all other countries including Canada. The Agreement came into force provisionally on Feb. 8, 1946, the date of its signature and, during its provisional application, may be terminated on three months' notice by either party. Thirty days after exchange of ratifications in Ottawa the Agreement is to go into force definitively for two years. Its duration is automatically continued thereafter for one-year periods, subject to termination on six months' notice by either party.
50871-31

The Trade Agreement with Colombia was signed on Feb. 20, 1946. This Agreement will come into effect thirty days after exchange of ratifications in Ottawa and is to remain in force for two years and thereafter until terminated on six months' notice by either party. In general, it consolidates the existing tariff treatment extended by each country to the other as provided by a Treaty of Commerce between Colombia and the United Kingdom concluded in 1866 and which governed also Canada's trade relations with Colombia. The new Agreement marks the establishment of the first direct trade convention between Colombia and Canada and it provides in general, for the exchange of most-favoured-nation treatment as described above with respect to the treaty of Mexico. The same concessions are given by Canada to Colombia as to Mexico and, in return, Canada receives the benefit of duty reductions established by the 1935 Colombia-United States Agreement.

While the Trade Mission was in Honduras in February, 1946, it was agreed that Canada and Honduras would conclude a modus vivendi providing for the exchange of most-favoured-nation treatment respecting customs duties, formalities and the laws and regulations regulating sale or distribution of imported goods pending the conclusion of a formal trade agreement.

Trade Agreements at Present in Force.-At the present time (Mar. 31, 1946), Canada's tariff relations with other countries are affected by trade agreements, conventions of commerce or similar arrangements made directly between Canada and the country concerned or by participation in treaties made by the United Kingdom with foreign powers, listed as follows:-

Empire Countries

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| United Kingdom..... | Trade Agreement signed Feb. 23, 1937; in force Sept. 1, 1937. (Modified by United KingdomUnited States Trade Agreement of Nov. 17, 1938.) | Various concessions on both sides, increasing preference formerly granted. Also extends preferential system between Canada and the Colonial Empire. Made until August 20,1940 , and thereafter until terminated on six months' notice. |
| Eire. | Trade Agreement signed Aug. 20, 1932; in force Jan. 2, 1933. | Canada concedes British Preferential Tariff in return for most-favoured-nation treatment in Eire. Made for five years and thereafter until terminated on six months' notice. |
| Australia............ | Trade Agreement signed July 8, 1931; in force Aug. 3, 1931. | Each country accords the other reduced rates on schedules of goods, and otherwise (with a few exceptions in Australia) exchange their British Preferential Tariffs with each other. Made for one year and thereafter until terminated on six months' notice. |

Empire Countries-concluded

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| New Zealand......... | Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. | Exchange specific preferences on scheduled goods and otherwise concede British Preferential Tariffs reciprocally. Made for one year, but kept in force by short-term extensions. Since Sept. 30, 1941, in force until terminated by six months' notice. |
| Union of South Aprica. | Trade Agreement signed Aug. 20, 1932; in force Oct. 13; 1932. | Agreement extends list of preferences formerly exchanged in absence of formal Agreement. Made for five years and thereafter until terminated on six months' notice. |
| British West Indige. | Trade Agreement signed July 6. 1925; in force Apr. 30, 1927. | Exchange of specific margins of preferences. Made for twelve years and thereafter until terminated on one year's notice. A Canadian notice of Nov. 23, 1938, terminating the Agreement, was replaced by one of Dec. 27, 1939, continuing the Agreement subject, to termination on six months' notice. |

## Section 2.-Adjustments in Government Administration to Meet the Post-War Needs of External Trade*

During the war years the Department of Trade and Commerce reorganized and adapted its administrative machinery to war conditions. Agencies were created to control the flow of civilian commodities to and from this country and generally adapt foreign trade functions to vital needs. The Government has already relaxed the controls of these wartime bodies as much as possible or readjusted or reorganized

[^160]their functions to assist in the transitional period until a full peacetime trade program is reached. Controls exercised by the Export Permit Branch have been eased on many commodities except those in short supply. The former Export Planning Branch has gore out of existence, its unfinished business being carried out by a new Export Division of the Foreign Trade Service. The work of the Shipping Priorities Committee is also almost completed. With the wartime shipping controls ended on Mar. 3, 1946, the Canadian Shipping Board announced that only a modified form of maritime control will be carried on for a further transitional period of six months.

As will be apparent from what has been told in earlier editions of the Year Book, the Department of Trade and Commerce was, during the latter years of war, considering plans for post-war trade expansion. The Department then laid the foundations for the recently organized Foreign Trade Service to assist Canadian and foreign exporters and importers in every phase of foreign trade. Built around an expanded Trade Commissioner Service, new divisions were added and old divisions reorganized to cope with every angle of foreign trade. A special section was organized to foster the country's new interest in imports.

## Subsection 1.-Foreign Trade Service

Formerly called the Commercial Intelligence Service, this branch of the Department of Trade and Commerce has been appropriately renamed the "Foreign Trade Service" in recognition of its greatly increased functions as compared with the services offered in the past. These functions are now carried out by seven divisions: Trade Commissioner Service, Export Division, Import Division, Commercial Relations and Foreign Tariffs Division, Wheat and Grain Division, Industrial Development Division, and Trade Publicity Division. Other Divisions may be added later to deal with special phases of foreign trade promotion.

Trade Commissioner Service.-The Trade Commissioner section might be defined as the sales department of the Foreign Trade Service. Consisting of a headquarters at Ottawa and 32 offices in 15 foreign and 17 British Empire countries, the organization seeks to place Canada in as many world markets as possible. The work of the Trade Commissioners in the field is co-ordinated at Ottawa by four global areas headed by area chiefs. The area officers are thoroughly familiar with every aspect of foreign trade in their geographical or political areas. They are responsible to the Director of the Division for the presentation of official information on all trade matters in their respective territories. The four territories are the British Empire, Europe, Latin America and Asia.

Trade Commissioners represent Canada in the 32 foreign offices. These Foreign Service Officers bring together exporters and importers of Canada and other countries. They study potential markets for specific Canadian products, report on the exact kind of goods wanted, competitive conditions, trade regulations, tariffs, shipping and packaging regulations. Enquiries for Canadian goods are passed to Ottawa or directly to interested Canadian firms. For the Canadian importer, Trade Commissioners look for sources of raw materials and other goods wanted in Canada, and give assistance to the foreign exporter who wishes to market his produce in Canada.

In countries where Canada maintains a diplomatic mission as well as a Trade Office, Trade Commissioners form an integral part of the mission and assume the titles of Commercial Counsellor, Commercial Secretary, Commercial Attaché, Consul
or Vice Consul, according to their status as Foreign Service Officers. To refresh their knowledge of the Canadian industrial picture as a whole, trans-Canada tours are arranged from time to time for Trade Commissioners. Contacts with Canadian exporters and importers are made or re-established, and the Trade Commissioners are given an opportunity to pass on information regarding the trade conditions and potentialities of their territories directly to those most concerned.

Certain foreign offices, closed before or during the War, are being re-opened, including offices at Singapore, Shanghai, Batavia, Hong Kong, Oslo, The Hague (instead of Rotterdam), Athens, and possibly Calcutta. New offices are planned for São Paulo, Stockholm, Leopoldville in the Belgian Congo and possibly for Central America.

Trade Commissioner Offices are located at the following centres: Argentina; Australia (Melbourne and Sydney); Belgium; Brazil; British India; British West Indies (Trinidad and Jamaica); Chile; Colombia; Cuba; Egypt; France; Ireland; Mexico; Netherlands; Newfoundland; New Zealand; Norway; Peru; Portugal; South Africa (Johannesburg and Cape Town); United Kingdom (4 offices in London, one office in Liverpool and one in Glasgow); and the United States (Washington, New York City, Chicago, and Los Angeles).

Export Division.-The Export Division of the Foreign Trade Service is the link between Canadian exporters and the Trade Commissioner Service in the promotion of export trade. The Division is organized in 13 commodity sections headed by specialists in each commodity field. Commodity officers maintain close liaison with Canadian exporters, actual and prospective, and, in conjunction with the Trade Commissioner Service, advise them on potential markets for their products, the selection of agents and trade regulations and practices. At the present time the commodity sections are: animals, fish and animal products; plant products; chemicals and allied products; textiles; leather and rubber; iron and steel; machinery; non-ferrous metals; non-metallic minerals and products; consumers' durable goods; radio and electronic equipment; pulp and paper; lumber and wood products; and transportation equipment.

The Export Division maintains an Exporters' Directory which lists Canadian export firms and details of their products. Copies of this Directory are on hand in every Trade Commissioner's office and are used as a means of keeping foreign buyers in touch with Canadian manufacturers offering desired commodities.

It is the general aim of the Department to relax or remove wartime export controls as quickly as possible so that trade expansion may proceed. When the Export Division came into existence in November, 1945, the Export Permit Branch was brought under its jurisdiction. Controls over more and more items are being removed but there are commodities still in short supply, particularly foodstuffs, textiles and clothing, steel, lumber, etc., whose distribution still demands close surveillance. Permits are required for these short-supply materials to maintain a planned international allocation, thus ensuring the fulfilling of Canada's obligations to UNRRA, the United Kingdom and liberated areas, and to protect domestic supplies. In many cases export control must be continued to recover governmentpaid subsidies required to maintain the domestic price ceiling.

Although the Export Planning Division went out of existence as such with the formation of the Export Division, most of the unfinished business of this Division has been taken over by the Commodity Officers. The commodity export quotas still required are prepared by the Commodity Officers in conjunction with the Wartime Prices and Trade Board or the Department of Reconstruction and Supply.

Import Division.- On the basis that, in the long view, a great exporting nation must also be a great importing nation, the Import Division has been created. Parallel with the plans for Canadian export expansion, the Import Division is developing Canada's import trade by the following objectives: the re-establishment of import connections severed because of the War; the development of new sources of supply of low-cost raw materials and food products; the fostering of direct instead of indirect imports where this will produce a saving to importers; the obtaining of recognition for Canada as a buyer as well as a seller in foreign markets; the enlargement of the Canadian market for imports; the removal of war-engendered obstacles and restrictions to import trade; and the investigation of import requirements generally. A Trade Investigation Section is being organized to co-ordinate the large amount of investigation and research required to carry out the functions of the Import Division. Every angle of import trade will be analysed where necessary from the viewpoint of value, volume, demand and supply, substitutes, practices, etc. Study will be made of import conditions from the angle of reducing difficulties that might be encountered by Canadian importers and foreign exporters. Details of Canadian import regulations including invoicing, packaging, marking of goods and general handling will be examined and passed on to the Trade Commissioners who will be able to advise the foreign exporter and thus facilitate the flow of import goods into Canada.

The Import Division has set up a Directory of Canadian Importers in which importers are being invited to register the detail of their trade field. The Directory will be used by the Trade Commissioners as a guide and an assistance in Canadian import activities in their respective territories.

The Import Division has taken over the work of the import section of the Shipping Priorities Committee and is now responsible for securing shipping space for Canadian imports affected by shipping priorities still in existence and, in conjunction with other administrative authorities, seeing that Canada receives a fair allocation of products subject to international control of distribution.

Commercial Relations and Foreign Tariffs Division.-The Commercial Relations and Foreign Tariffs Division collects and makes available to Government agencies and exporters, data on trade agreements and trade relationships with other countries, tariffs, import and exchange regulations, quotas and embargoes. More generally, questions related to trade agreements and commercial policies of other countries are of concern to this Division. This involves minute investigation into all aspects of commercial policy and research into tariff and financial developments, as well as the preparation of data required for preliminary study and preparation of new trade agreements, trade agreement renewals and revisions.

The Foreign Tariffs Section of this Division supplies information to Canadian exporters and other branches of the Government on tariffs, quotas, embargoes, documentation and other technical factors in the import regulations of foreign countries. New foreign trade laws and tariff regulations are perused constantly so that a record of up-to-date information is maintained and available upon request.

The Commercial Relations Section collects and records data required for prospective trade negotiations. Problems related to tariff hindrances and other trade obstructions are studied. The value of mutual concessions with trading countries is examined. The Section deals with representations made by Canadian exporters and initiates or advises regarding appropriate action. In carrying out these functions
it is often necessary for the Research Section to seek the assistance of specialists from other government departments in the various phases of export industry such as agriculture, forestry, mining, etc.

The Economic Section, still in the development stage, will be designed to carry out studies of special subjects (e.g., non-tariff restrictions to world trade, export subsidies, quantitative controls, and import permits).

Wheat and Grain Division.-The problems of Canada's grain trade and milling industry are handled by this Division, close liaison being maintained with the various organizations connected with the trade. The Division acts as a procurement agency in securing supplies of cereals and certain cereal products for the Supply Missions of various countries and also for UNRRA's requirements. The Director of the Division serves as the Secretary to the Wheat Committee of the Cabinet and as the Departmental liaison officer to the Canadian Wheat Board. In addition, the Director represents Canada on the Executive Committee of the International Wheat Council.

Trade Publicity Division.-The Trade Publicity Division must educate the exporters and importers of Canada and foreign countries as to the assistance offered by the Divisions of the Foreign Trade Service. The Division seeks to make Canadian businessmen and the public generally, conscious of the large part export and import trade will play in the future prosperity of the country, and to make foreign businessmen aware of Canada both as a source of a wide variety of products and as a good market. News items and articles presenting Canada as a trading nation are submitted to domestic and foreign daily papers and periodicals. The Trade Publicity Division has taken over the weekly publication of the Commercial Intelligence Journal. The Journal serves as a vehicle for Trade Commissioners' reports on the constantly changing trade conditions of the countries in which they are stationed and it is circulated to Canadian businessmen and manufacturers interested in exports and imports. Other publications and booklets are planned to give Canadian exporters and importers an informed approach on all foreign trade matters. Pamphlets and other advertising material are produced in foreign languages to stimulate interest in Canada's foreign trade with other countries. Advertising campaigns in Canada and abroad will assist in the attainment of these objects.

Industrial Development Division.-This Division will be devoted to work in connection with the establishment of new industries and the development of new products that are adaptable to manufacture in Canada, especially those for which markets are known to exist abroad. A large staff is not envisaged, the work consisting principally of close collaboration with the industrial development agencies of the provinces and municipalities as well as the railways, banks, power companies and other private interests.

## Subsection 2.-Canadian Commercial Corporation

Organized to meet a wartime need, in January, 1944, by Order in Council P.C. 70, the Canadian Export Board served as a procurement agency for large quantities of civilian commodities required by UNRRA and foreign purchasing
missions in cases where for a variety of reasons private trading was not feasible. Operating on a completely non-profit basis, the Canadian Export Board, before the establishment of the Canadian Commercial Corporation, awarded contracts totalling $\$ 404,275,000$.

A direct result of this service to foreign governments was the preservation of overseas contacts for Canadian goods and in many instances the establishment of sound trading relationship with new markets and for new products. Drawing on the resources of the various sections of the Foreign Trade Service and other Divisions of Trade and Commerce, the Canadian Export Board offered procurement missions the best service possible in terms of price and supply.

By Order in Council P.C. 1218 of Mar. 29, 1946, the Canadian Commercial Corporation was established to succeed the Canadian Export Board in purchasing for UNRRA and the governments of other countries. This Corporation will also become an agency for the purchase of Canadian import requirements in cases where these purchases cannot be made by private firms without a Government intermediary. Such cases are expected to arise in connection with the procurement of supplies from territory under military occupation or where commodities in short supply are allocated by international agreement.

## Subsection 3.-Export Credits

For the general purpose of protecting and expanding Canadian foreign trade interests, the Export Credits Insurance Act was passed by Parliament in August, 1944. The Act is in two Parts, Part I incorporating the Export Credits Insurance Corporation, and Part II providing for loans or guarantees to governments of other countries or their agencies.

Export Credits Insurance Corporation.-Administered by a board of directors, including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada, the Corporation insures exporters against credit losses involved in the export or an agreement for the export of goods. Policies are issued on a yearly basis, covering exporters' sales to all countries and protecting them against the main risks of loss involved in foreign trade. The main risks covered by Export Credits Insurance Policies include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation or non-renewal of an import licence or the imposition of restrictions on the import of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc. in the buyer's country; and additional transport or insurance charges occasioned by interruption or diversion of voyage outside Canada or the continental United States of America.

The insurance is available under two main classifications: (i) General Commodities, (ii) Capital Goods. Coverage for General Commodities can be procured by exporters under two types of Policies: (i) the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received; or (ii) the Shipments Policy, obtainable at lower rates of premium, and which covers the exporter from the time of shipment until payment is received. Insurance of 50871-32 $\frac{1}{2}$

Capital Goods offers protection to exporters of such commodities as plant equipment, heavy machinery, etc., which are subject to extended credit of longer periods than is customary for General Commodities. Specific Policies are issued for transactions involving Capital Goods, but the general terms and conditions are the same as those applicable to Policies for General Commodities.

The Corporation insures exporters under all Policies up to 85 p.c. of the contract price, or gross invoice value of shipments. This co-insurance plan also operates in the distribution of recoveries obtained after payment of a loss, and these recoveries are shared by the Corporation and the exporter in the proportion of 85 p.c. and 15 p.c., respectively.

Loans to Foreign Governments.-Part II of the Export Credit Insurance Act provides for the extension of loans to foreign countries for the purpose of developing trade between Canada and those countries. The Act empowers the Governor in Council, on the recommendation of the Minister of Finance and the Minister of Trade and Commerce "if he deems it advisable for the purpose of facilitating and developing trade between Canada and any other country", to make loans to, guarantee the obligations of or purchase, acquire or guarantee any security issued by the government or by the agency of the government of such country. These loans, guarantees, acquisitions or purchases must be requested by the government concerned who must undertake to indemnify the Government of Canada against the loss in connection therewith.

The aggregate of the loans to be made and securities held was increased from $\$ 100,000,000$ to $\$ 750,000,000$ on Dec. 8,1945 . See also p. 477 .

## Section 3.-The Easing of Controls on Enemy Trading Regulations

Because of occupation by an enemy State, or by reason of real or apprehended hostilities, a number of countries, during the years 1939 to 1942, were brought within the scope of the provisions of the Enemy Trading Regulations (originally brought into force by Order in Council P.C. 2512 of Sept. 5, 1939, and later provided for under "Revised Regulations Respecting Trading with the Enemy, 1943", Order in Council P.C. 8526 dated Nov. 13, 1942). A list of these countries or territories and the dates on which they were brought under the Regulations is given at p. 474 of the 1945 Year Book.

The Regulations prohibited trading or attempting to trade with "enemy territories"; dealing in the property of enemies for the purpose of enabling them to obtain money or credit thereon; aiding or abetting any person, whether resident in Canada or not, to so deal in enemy property; knowingly discharging any enemy debt, promissory note or bill of exchange, or purchasing enemy currency.

Beginning late in 1943, it became possible to grant permission for the resumption of trade with certain liberated areas and also for the opening up of communications and the making of remittances. The areas to which such permission has been granted and the dates (to Apr. 30, 1946) are listed in the following statement:-

| Territory | Permission to Resume- |  |  |
| :---: | :---: | :---: | :---: |

## PART II.-STATISTICS OF EXTERNAL COMMODITY TRADE*

Actually about 75 to 80 p.c. of Canada's enormous export business since 1940 belongs in the category of temporary, abnormal, wartime trade, with only about 20 to 25 p.c. in the category of normal and permanent trade. Nevertheless, this remaining trade, amounting to about $\$ 600,000,000$ a year is very important and still plays a vital role in sustaining the agricultural and industrial life of the country. Canada's normal pre-war customary export markets have been cut off during the past five years and, in most of those remaining open, imports of many classes of goods from Canada have had to be reduced because of shipping shortage, the conservation of exchange for more urgent requirements, or for other reasons.

The statistics in this Chapter of the Year Book, which bring the analyses down to the end of 1945 , reflect the changing conditions in the trade economy of Canada, as exemplified by the increase in exports of foodstuffs to the United Kingdom and the importation of machine tools, followed later by the export of munitions and transport vehicles to the United Nations from 1940-44. See the article on "Changes in Canadian Manufacturing Production from Peace to War, 1939-44", at pp. 364-381 of the 1945 Year Book. The 1945 figures indicate the ṣhift of Canada's trade from wartime material.

[^161]General Explanations Regarding Canadian Trade Statistics.-External trade statistics are derived by recording the physical movement of goods outwards or inwards across the frontiers or through ocean ports and the valuations placed upon them at the time of movement. Such statistics cannot take cognizance of the complex financial transactions involved in this physical movement of goods, which transactions may take place prior to or subsequent to the actual shipment (although in investigating the balance of international payments, as in Part III of this Chapter, such financial transactions are the sole consideration). Certain problems of procedure arise in recording trade statistics and it is necessary to explain these.

For the correct interpretation of the statistics of external trade, it is necessary that the following definitions and explanations of terms used, as well as certain features of the statistics that necessitate adjustments to the external trade figures, be carefully kept in mind, if the true position of trade in relation to the total of Canada's international transactions is to be understood.

Quantities and Values.-In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: Valuation.-"Imports" means imports entered for consumption. "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which, and at the time when, said merchandise was exported directly to Canada; but the value shall not be less than the actual cost of production at the time of shipment plus a reasonable advance for cost of selling and profit. (See Sects. 35 to 45 of the Customs Act.) Under these provisions and amendments thereto, some imports are given arbitrary valuations differing from those upon which actual payments for the imports are made.

For Customs entry purposes, the value of the currency of the country of export is converted to Canadian currency at exchange ratios as authorized by law and Orders in Council. (See Sect. 55 of the Customs Act and Orders in Council respecting currency valuations.) Differences arising from fluctuations in the exchange rates of foreign currencies are treated more fully below under the heading "Discrepancies in Trade Statistics between Canada and Other Countries".

Canadian Exports: Valuation.-"Canadian produce"' exported includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminum extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual cost or the value at the time of exportation at the points in Canada whence consigned for export.

Foreign Exports: Valuation.-"Foreign produce"' exported consists of foreign merchandise that had previously been imported (entered for home consumption). The value of such commodities is the actual cost.

Countries to which Trade is Credited.-Imports are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence dispatched, after longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market at London, England; Canadian statistics record such imports as coming from the United Kingdom.

Exports are credited to the country of final destination, i.e., the country to which they are consigned, whether that country possesses a seaboard or not. The country of final destination is the country to which goods exported from Canada are intended to pass, without interruption of transit save in the course of transhipment or transfer from one means of conveyance to another.

Discrepancies in Trade Statistics between Canada and Other Countries.-Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies, among which are the following:-

1. Differences in the basis of the Canadian valuations and those of the valuations of other countries.

Disturbed currency relations between countries introduces an additional element of difference in valuations. Thus imports from the United Kingdom have been valued all along at $\$ 4 \cdot 86$ 조 to the $£$, although for two years after Sept. 21,1931 , the actual value of the $£$ was below that figure, dropping as low as $\$ 3 \cdot 70$, and the actual value of imports from the United Kingdom was thereby greatly exaggerated. More recently, when the exchange value of the $£$ was above par, imports from the United Kingdom were under-valued. Similar difficulties have resulted from disturbances in exchange levels with other countries, and the placing of arbitrary valuations upon their currencies.

A further discrepancy in valuation of imports from the United Kingdom existed from 1920 to Mar. 31, 1935, in connection with distilled spirits, an important item in imports from that country. The valuation of Canadian imports of spirits from the United Kingdom included, during this period, the excise duty in addition to the British export valuation, an excess valuation aggregating over $\$ 200,000,000$ for the period 1920-34. The excise duty has been excluded from the valuation of such imports since Apr. 1, 1935.
2. Even where the statistics cover the same period of time, there are quantities of goods on their way from the exporting to the importing country at the beginning and the end of the period.
3. By far the greatest discrepancies occur from the impossibility of determining the country of final destination for exports or the actual country of origin for imports. A considerable proportion of Canada's exports to overseas countries ( 30.7 p.c. in 1944) is shipped via the United States. Some of this is credited by importing countries to the United States. Canadian grain exports, for example, are frequently routed through the United States in bond. Most of this grain leaves Canada with the United Kingdom as the stated destination, but large quantities are later diverted to other European or overseas countries and some is taken out of bond for consumption in the United States. Thus, the Canadian record of exports to the United Kingdom may be $\$ 100,000,000$ or more in excess of Canadian products actually received by the United Kingdom, while stated exports to other overseas countries are short this amount. Again, United States grain is routed through Canada and shipped from Montreal and is, therefore, frequently shown by other countries as imported from Canada, while it is included in United States statistics as an export to Canada.

Treatment of Gold in Trade Statistics.-The fact that gold is a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, the movement of gold in international trade is determined, almost exclusively, by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. In addition, gold is generally acceptable. It does not have to surmount tariff barriers and is normally assured a market at a relatively fixed price. It should also be noted that gold does not move in international trade in any direct or normal relation to sales and purchases. Changes in the Bank of Canada's stock of gold under earmark do not enter, therefore, into the trade statistics.

The publication of statistics showing the gross imports and exports of gold has been temporarily suspended as from September, 1939. Trade statistics for periods prior to that time have been revised accordingly, to exclude all gold formerly included in the total of merchandise exports.

In previous years a historical table was published showing the movement of coin and bullion in each year since 1868. In the 1940 Year Book this table appears at p. 528. During the war years, 1939-45, the information was not released but the table will be made available as soon as possible.

Statistics showing the net exports of non-monetary gold, including changes in stocks held under earmark, which supplement the trade figures, are given below.
I.-NET EXPORTS OF NON-MONETARY GOLD, 1939-45

| Month | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 |

| Totals | $184 \cdot 4$ | $203 \cdot 0$ | 203.7 | 184.4 | 142.0 | 109.7 | 96.0 |

## Section 1.-Historical Statistics of Canadian Trade

For the period covered in Table 1, it will be seen that, on the whole, imports have fluctuated much more than exports. In only 4 of the 27 years imports exceeded exports and in 2 of these years, viz., 1920 and 1931, the amounts of the excess were quite moderate. On the other hand, what is generally referred to as the "favourable balance of trade" has been, on the average, quite substantial, indeed embarrassingly so for the past four years, due to the export of the vast quantities of munitions of war that the Canadian economy has been geared to produce.

## 1.-Trade of Canada (Excluding Gold) with All Countries, 1919-45

Note.-These figures are available on a calendar-year basis only since 1919; for figures for the years ended Mar. 31, 1868-1919, see the Canada Year Book 1940, p. 526.

| Year | Imports |  |  | Exports |  |  | Balance of Trade: Excess of Exports ( + ), Imports (-) |

## Section 2.-Geographical Distribution of Canadian Trade

Since Confederation the records of Canadian trade have emphasized the importance of trade relationships with the United Kingdom and the United States. In the early years of the Dominion, when the United Kingdom was lending Canada capital on a considerable scale, that country supplied more than half of the Canadian imports, even though, as a purchaser of Canadian goods, she took second place to the United States. To-day, though there have been vast changes and shifting trends, Canadian trade is still carried on predominantly with these two countries.

## Subsection 1.-Canada's Place in the World Economy

An outline of Canada's place in the world economy before the outbreak of war is given at pp. 404-408 of the 1941 Year Book.

## Subsection 2.-Changes in Distribution in Recent Years

The War altered the structure of world trade and Canada, being a leading trading nation, was immediately affected. The Government controls of trade and the exchange restrictions that were of necessity imposed indicate some of the difficulties that existed in the international trade field under war conditions.

The main transformation took place in trade with belligerent countries. With the Allied Nations, especially with the United Kingdom (exports) and the United States (imports and exports) trade bounded forward, and trade with neutral countries maintained a satisfactory level considering all existing conditions. With enemy countries, however, including all the extensive occupied areas, trade was, of course, cut off entirely and the resulting situation was one of great abnormality.

Exports to Principal Destinations.-In 1939 purchases of the United Kingdom and United States represented $76 \cdot 6$ p.c. of all Canadian exports; in 1944 they took $73 \cdot 7$ p.c. and in $1945,67 \cdot 1$ p.c., a decrease of about 12 p.c., marking the decline of wartime trade. Exports to the United Kingdom increased from \$328,100,000 in 1939 to $\$ 963,200,000$ in 1945 . These figures do not include shipments of food and war material on British Account consigned from Canada direct to theatres of war such as Egypt, French Africa and Italy. Exports to these destinations on British Account were credited in Canadian trade statistics to the country of consignment, rather than to the United Kingdom. Shipments of agricultural products consisting mainly of wheat and flour rose from $\$ 94,200,000$ in 1939 to $\$ 237,000,000$ in 1945 , while animal and animal products advanced from $\$ 73,600,000$ to $\$ 226,900,000$, the increase in this group being concentrated in the food items of canned fish, meats, cheese and eggs. The flow of guns, trucks, tanks and military vehicles of all kinds to the United Kingdom swelled the exports in the iron group from $\$ 16,000,000$ in 1939 to $\$ 297,400,000$ in 1944 ; this group, however, decreased to $\$ 162,500,000$ in 1945. The non-ferrous metals-aluminum, copper, nickel, lead, zinc, etc.already at a high level in 1939 , advanced from $\$ 83,400,000$ to a peak of $\$ 135,300,000$ in 1944 but decreased to $\$ 78,400,000$ in 1945. Exports of chemicals and products to the United Kingdom valued at $\$ 5,700,000$ in 1939 reached a peak of $\$ 31,100,000$ in 1942 and amounted to $\$ 16,400,000$ in 1945 . The miscellaneous commodities group includes shipments of shells, aircraft, ships and Canadian military stores,
and for this reason the value of exports to the United Kingdom under this heading soared from $\$ 4,400,000$ in 1939 to $\$ 261,600,000$ in 1944; the figure for 1945 was $\$ 120,500,000$, less than one-half the 1944 total.

Exports to the United States showed a more rapid rate of increase after 1941 than during the earlier years of the War, reflecting the effects of the Hyde Park Agreements. There was also a higher percentage of civilian goods in Canada's trade with the United States and other Western Hemisphere countries than with countries which were in actual war theatres. The increased demand for civilian supplies from Canada was due, in part, to the loss of European sources of supply. One example of this condition is shown in the greatly increased shipments of wood-pulp to the United States, a market in peacetime for imports from the Baltic countries. Exports of agricultural products to the United States in 1945 amounted to $\$ 279,000,000$, a decrease of $\$ 175,300,000$ from the all-time high value of $\$ 454,300,000$ reached in 1944 but an increase of 250 p.c. compared with $\$ 79,500,000$ in 1939 ; the increases were made up largely of unprecedented amounts of wheat, barley and oats. Sales of non-ferrous metals to the United States reached the highest point in 1945, valued at $\$ 214,600,000$ an increase of 37 p.c. over 1944. Exports to the United States classified under the miscellaneous group reached a record level in 1943 at $\$ 221,000,000$ but declined to $\$ 161,300,000$ in 1944 and $\$ 125,100,000$ in 1945 . The more important items in this category were shells and ammunition, ships and aircraft.

Exports from Canada to European countries other than the United Kingdom were valued at $\$ 57,900,000$ in 1939 . With the enemy occupation of France, Belgium, the Netherlands and other territories, the value dropped to $\$ 11,600,000$ in 1941, when the U.S.S.R. received the largest proportion, $\$ 5,300,000$. The trend of the War as well as Canada's increasing contribution of material aid can be traced in the distribution of exports after 1941. Shipments of war materials to the U.S.S.R. accounted for the major part of exports to other Europe in 1942 and 1943. The value of goods to other Europe reached $\$ 322,800,000$ in 1944 and $\$ 406,000,000$ in 1945. The invasion of Italy in 1943 was reflected in exports to that country in 1944 valued at $\$ 160,100,000$; but dropped to $\$ 89,500,000$ in 1945 . After the Normandy invasion, direct shipments to France amounted to $\$ 15,900,000$; in 1945 they had increased to $\$ 76,900,000$.

The figures on exports to Africa bear witness to the progress of the War in that theatre. In 1939 the value was comparatively small at $\$ 22,700,000$. By 1941, with exports to Egypt at $\$ 79,200,000$, the value to Africa had risen to $\$ 125,400,000$. War material for all the Mediterranean and Near East continued to pour into Egypt from Canada during 1942, the value soaring to $\$ 213,100,000$. The invasion of North Africa was followed by exports to French Africa, valued at $\$ 71,300,000$ in 1943 while in the same year Egypt took material to the value of $\$ 188,700,000$. Direct shipments to Italy in support of the 1944 campaign reduced the value of supplies consigned to French Africa to $\$ 32,200,000$ in 1944 and $\$ 16,900,000$ in 1945 while goods to Egypt dropped to $\$ 108,300,000$ in 1944, and $\$ 36,400,000$ in 1945.

During the war period, Canadian shipments to Switzerland consisted almost entirely of relief supplies and Red Cross parcels to prisoners of war. The extent of this aid is indicated by the value of exports to Switzerland amounting to $\$ 11,600,000$ in 1943 and $\$ 16,100,000$ in 1944 with a slight decrease to $\$ 10,900,000$ in 1945. Canada's gift of wheat for relief in Greece accounts for the value of exports to that Country amounting to $\$ 6,100,000$ in $1943, \$ 8,600,000$ in 1944 and $\$ 25,600,000$ in 1945.

Exports to Asia have also undergone major alterations. In 1939 this trade was valued at $\$ 44,800,000$ featured by exports to Japan amounting to $\$ 28,200,000$. After Pearl Harbor, Canadian material to the value of $\$ 167,900,000$ was sent to British India in 1942. The next year the value of supplies to India amounted to $\$ 134,600,000$, in 1944 to $\$ 174,800,000$ and in 1945 to $\$ 307,500,000$. Exports to China in 1942 were valued at $\$ 7,800,000$. No shipments were possible in 1943 but in 1944 war material consigned to China amounted to $\$ 14,900,000$ and in 1945 to $\$ 6,600,000$. Exports to other Asiatic countries were: to Iraq, $\$ 20,200,000$ in $1942, \$ 22,100,000$ in $1943, \$ 5,700,000$ in 1944, and $\$ 3,500,000$ in 1945; to Turkey, $\$ 14,500,000$ in 1943, $\$ 7,100,000$ in 1944 and $\$ 700,000$ in 1945.

The entrance of Japan into the War affected Canadian exports to Australia. This trade showed little change until 1942 when it increased to $\$ 78,900,000$ compared with $\$ 37,300,000$ in 1941. Materials shipped to New Zealand in 1942 were valued at $\$ 30,300,000$ as against $\$ 10,000,000$ in 1941 . Due to increasing supplies being available from United States shipments to this area declined in 1943 and 1944; a slight increase was shown in 1945 over the previous year.

Trade with South America showed only normal variations during the war years consisting as it did of civilian goods with no war theatre included in that territory, but increased from $\$ 25,900,000$ in 1944 to $\$ 47,600,000$ in 1945.

For statistical purposes, North America (United States excluded) embraces Newfoundland, Mexico, Central Amercia, West Indies, Bermuda and other smaller countries. Exports to this group rose from $\$ 28,700,000$ in 1939 to $\$ 108,600,000$ in 1945. Goods supplied to Newfoundland in 1939 were valued at $\$ 8,500,000$ whereas in $19+5$ the value was $\$ 40,500,000$. Normally, civilian supplies for Newfoundland come principally from United Kingdom and United States and the loss of these sources of supply during the war years has been met by Canadian goods. Exports to Mexico and the various countries of the West Indies and Central America have also shown large increases during this period, no doubt indicating that, despite shipping and production difficulties, Canada has aided to a great extent in supplying civilian requirements affected by the closing of European and other sources of supply.

Table 2 gives the value of the exports of Canada to principal destinations for the years 1941-45.

Imports from Principal Sources.-The value of imports to Canada increased almost 135 p.c. between 1939 and 1944, but the figures for 1945 show a decline of about 10 p.c. Imports from Europe, with the exception of the United Kingdom, were greatly curtailed from 1939, but imports from all other sources increased at practically the same high rate. The value of supplies from the United States more than doubled in the two-year period 1939-41. This was the time of preparation for greatly increased productive capacity of war factories and the bulk of imports consisted mainly of machinery, machine tools, and industrial equipment of all kinds as well as raw materials and components. The imports of aircraft and other supplies for the Air Training Plan also swelled the volume during the same period both from the United Kingdom and the United States. Since 1941 the rate of increase has slackened but the demands of the war program for materials, fuel and equipment have kept imports at a very high level. During 1943-44 the value of imports reached an average of over $\$ 145,000,000$ per month as compared with a monthly average of less than $\$ 63,000,000$ in 1939 . The submarine warfare and lack of available shipping curtailed shipments from some sources. War with Japan stopped the flow of strategic materials from the Straits Settlements and the

East Indies and for a time greatly reduced shipments from other eastern countries. Table 2 sets forth the value of imports from principal geographical sources from 1941 to 1945.

## Subsection 3.-Trade by Continents and Leading Countries

Trade by Continents.-The continued increase in Canada's imports in 1944 was not contributed to in equal measure by all continents, the effect of the War on the re-orientation of the channels of trade being shown in Table 2. Imports from the United Kingdom, for instance, were still further reduced: those from the United States again increased. A large part of the increase in imports was occasioned by the necessity of importing raw materials and finished parts for the vast flow of munitions of war to the United Kingdom. As would be expected, imports from Continental Europe remained at a low level. By 1945, however, imports from the United Kingdom had increased by $27 \cdot 1$ p.c. while those from the United States decreased 16.9 p.c. On the other hand, North America supplied 80.6 p.c. of Canada's imports in 1945 as compared with 68.4 p.c. in 1939; the United Kingdom percentage was only 8.9 p.c. as compared with $15 \cdot 2$ p.c. in 1939.

As regards exports, United States, which led in 1939, gave place to the United Kingdom in 1940 and 1941, owing largely to the export of munitions of war, but resumed first place from 1942. The same traffic accounted for the increases in the percentages of Canada's exports to Africa during the war years. Other North America (chiefly Newfoundland), after reaching a high point of 4.8 p.c. in 1941, declined to $3 \cdot 1$ p.c. in 1943 and 1944 and $3 \cdot 4$ p.c. in 1945 . Exports to South America, which declined from 1.9 p.c. of the total in 1941 to 0.7 p.c. in 1943, increased to 1.5 p.c. in 1945.
2.-Trade of Canada (Excluding Gold), by Continents, 1941-45

| Item and Continent | Values (Millions of Dollars) |  |  |  |  | Percentages of Totals |  |  |  |  |

Trade by Countries.-Table 3 shows how predominant are the two great English-speaking countries as sources of supply of Canadian imports and as customers for Canadian exports. Trade with these two countries is more fully covered in Subsections 4 and 5 of this Section.

## 3.-Trade of Can ada (Excluding Gold), by Leading Countries, 1939 and 1943-45

${ }^{2}$ Less than $\$ 1,000$.
Imports from Principal Countries.-Over 75 p.c. of Canada's imports in 1945 came from the United States, although purchases from that country decreased 16.9 p.c. as compared with 1944 . The value of goods received from British Empire countries increased by $23 \cdot 3$ p.c. over 1944, and while purchases from foreign countries as a whole showed a drop, notable increases were shown in imports from Russia, Switzerland, Venezuela, Honduras and Cuba. In Table 4 will be found the values of imports from all important countries in recent years.

Exports to Principal Countries.--The United States and the United Kingdom together took $67 \cdot 1$ p.c. of Canada's exports in 1945 . In Table 5 will be found the values of exports to all important countries in recent years.

It should be carefully noted that in the figures of Canadian exports, by countries, all the goods shown as exported to certain countries may not finally be consumed in those countries, while, on the other hand, some countries may ultimately buy and consume more Canadian goods than the Canadian export statistics indicate. In many cases the country of final destination is not known at the time when goods leave Canada and, therefore, exports to countries such as the United Kingdom, which carries on a large entrepôt trade, are higher than would be the case if the exports in question were credited to the countries of final consumption. Exports to other countries, such as Switzerland (which obtains Canadian goods indirectly), would be correspondingly higher than the Canadian export statistics indicate.

## Subsection 4.-Trade with the United Kingdom and the British Empire

Trade with the United Kingdom.-The trade of Canada for many years has been carried on predominantly with the United Kingdom and the United States, both great trading countries, whose people speak the English language, and with whose standards of living and tastes Canadians have much in common. The fluctuating positions of the two countries in this regard, from Confederation to the outbreak of War in 1939 are discussed at pp. 414-415 of the 1941 Year Book.

From 1929 to 1938, Canada sold the British people about $\$ 2,800,000,000$ worth of goods, and purchased less than half that amount from the United Kingdom. In each of the seven years prior to 1939 the United Kingdom was the greatest single buyer of Canadian exports. Previous to the War of 1939-45, Canada had a customer in the United Kingdom who was able to buy from her without regard to the amount of trade in the opposite direction and who was able to pay in cash of a kind that could be readily converted and used anywhere. The British people now face many problems: British exports have fallen to a low level; there will probably be a reduction in the earnings of British shipping; and there will certainly be a very heavy decline in the return from British investments abroad, due to the extent to which it has been necessary to liquidate those investments during the War. The United Kingdom's post-war trade policy, therefore, particularly as it affects imports, may radically concern the degree to which Canada is going to be able to sell goods in post-war years in the country that has been literally the sheet-anchor market for many of the products by which the economy of both Western and Eastern Canada has been sustained.

In 1940 the United Kingdom regained the position as the chief market for Canadian exports which she had held since 1932, with the single exception of the year 1939; this position was retained in 1941. Since 1942 the United States has been Canada's best customer.

The values and proportions of import and export trade with the United Kingdom for certain fiscal years ended 1886 to 1921 and for the calendar years from 1926 are shown in Table 6. Details of the commodities that made up that trade in the calendar years 1942-45 appear in Tables 14 and 15 of this Chapter.

Trade with the British Empire.-Generally, this trade, has been marked by a larger proportion of exports than of imports. The percentage of both import and export trade with the Empire, other than the United Kingdom, has increased considerably in the period covered since 1886 although during war years this trend has been interrupted. The industrial organization of Canada draws increasing imports of raw materials from other Empire countries, which in turn provide an expanding market for Canada's manufactured and specialized products. A record of the value and proportion of trade with the British Empire for representative years since 1886 is given in Table 6.

The Preferential Tariff and Empire Trade.-Canada was the first of the British Dominions to grant a preference on goods the produce and manufacture of the United Kingdom and reciprocating British Dominions and possessions. This preference was extended from time to time to other portions of the British Empire until now it is applicable to practically every British Dominion and possession. In the case of Newfoundland, in addition to the preference, Canada grants free admission to fish and fish products. The British West Indies receives special concessions under the Agreement of 1925 referred to at p. 385 of the 1941 Year Book.

The British Preferential Tariff enacted in 1897 has had the effect of stimulating Canada's Empire trade. When this preference became effective in 1897, Canada's total imports from the United Kingdom amounted to only $\$ 29,401,000$, compared with imports in 1887 valued at $\$ 44,741,000$ and in 1873 at $\$ 67,997,000$, so that from 1873 to 1897 imports from the United Kingdom declined by $\$ 38,596,000$ or 56.8 p.c. After the introduction of the British Preferential Tariff, the downward trend in the value of imports from the United Kingdom was reversed, although the proportion of total imports coming from the United Kingdom continued to decline.

Imports from other Empire countries, which were insignificant before the beginning of the century, have increased both in actual value and proportion of total imports.

Table 9, at p. 511, shows the average ad valorem rates of duty on imports from the United Kingdom, the United States and all countries in each year since 1919.

## 7.-Dutiable and Free Imports from Principal British Empire and Foreign Countries, 1944 and 1945

| Country | Imports, 1944 |  |  | Imports, 1945 |  |  |

## Subsection 5.-Trade with United States and Other Foreign Countries

The relative importance of the United Kingdom and the United States in the trade of Canada from Confederation to the outbreak of the War of 1939-45 is discussed at pp. 414-415 of the 1941 Year Book.

Since the outbreak of war in 1939 there has been a sharp expansion in imports from the United States. To a large extent this was a reflection of the war expenditures of the Dominion Government. The large volume of British purchases in Canada also contributed to this rise since the United States was the source of many of the parts and materials required as well as of machine tools and other capital equipment employed in new kinds of production. Furthermore, the increased volume of industrial activity accompanying the War enhanced the national income with the result that the greater demands for consumer goods also led to increased imports from the United States.

While Canada's imports from the United States have increased since the start of the War, this increase has not been as great as in the case of exports, the percentage increases for 1944 as compared with 1939 being $242 \cdot 1$ for exports and $191 \cdot 3$ for imports. In 1945, however, imports declined 17 p.c. and exports 8 p.c. The exchange situation as it has developed since the War is described in the Section on the balance of international payments, pp. 560-569.

A record of the value and proportion of trade with the United States since 1886 is given in Table 6, pp. 507-509. The commodities of Canadian import and export trade with the United States are shown for the calendar years 1942-45 in Tables 14 and 15, pp. 520-551.

Canadian Trade via the United States.-Imports from overseas countries via the United States declined steadily in immediate pre-war years, especially those from the British Empire. This decrease has followed: (1) encouragement of the use of Canadian sea and river ports; (2) additional concessions to goods imported under the Preferential Tariff if they come direct. Provision has been made, in trade treaties and agreements negotiated with foreign countries, that goods must be imported via a Canadian sea or river port in order to obtain the full benefits of special rates of duty. This provision was cancelled so far as wheat is concerned, under the United Kingdom-United States Trade Agreement that came into effect Jan. 1, 1939. Between 1920 and 1939 imports via the United States decreased from 9.5 p.c. to 2.7 p.c. of the total imports from overseas countries. During the war years, the situation changed such imports rising from 4.6 p.c. in 1940 to 21.8 p.c. in 1944.

The proportion of exports from Canada to overseas countries going via the United States also showed a considerable decline between the fiscal years 1927 and 1938, the percentages by fiscal years being: 1927, $39 \cdot 4 ; 1930,33 \cdot 7 ; 1932$, $18 \cdot 7 ; 1935,16 \cdot 7 ; 1936,18 \cdot 4 ; 1937,16 \cdot 6 ; 1938,11 \cdot 4$; and calendar year 1939, $10 \cdot 8$. Owing to war conditions, they rose from 14.4 p.c. in 1940 to 43 p.c. in 1943, but showed a decline in 1944 to 30.7 p.c.

## 10.-Values and Percentages of Trade with Overseas Countries via the United States, 194

Nots.-Comparable figures for 1941 and 1942 are given at pp. 469-471 of the 1943-44 Year Book, and for 1943 at p. 505 of the 1945 edition.

Trade with Other Foreign Countries.-During the War of 1914-18 and the years immediately following when production and exports by many European countries were curtailed, imports from the United States rose to a high proportion, while those from other foreign countries declined. The proportion of imports from other foreign countries has remained surprisingly constant, at about one-tenth to one-eighth of total imports, over the period of nearly half a century, until a declining trend became evident again in the disturbed European conditions preceding the outbreak of the War of $1939-45$. Canadian exports to 'other foreign countries' increased from 4.5 p.c. in 1886 to 22.9 p.c. in 1929 but they have since declined, and in 1940 amounted to 6.8 p.c. of the total value of exports; wartime exports caused the percentage to rise to $15 \cdot 1$ in 1944 and to $16 \cdot 6$ in 1945. One of the 50871-33
brighter spots in this trade is that exports to Latin American countries elimbed from $\$ 19,000,000$ in 1939 to $\$ 54,000,000$ in 1945 . A record of the value and proportion of trade with other foreign countries since 1886 is given in Table 6, pp. 507-509.

## Section 3.-Commodity Analyses of Canadian Trade

## Subsection 1.-Trade of Canada by Main Groups

The expansion in Canada's trade that followed the depression of the early 1930's experienced some interruption in 1938 but was continued in 1939 and 1940. The impact of the War on the Canadian economy resulted in an increase in both imports and exports. In 1941 imports in all groups showed increases over the preceding year, except animals and products and wood and paper; in 1942, decreases were shown in the value of agricultural and vegetable products, iron and its products and non-ferrous metals, and in the volume of animals and products, wood and paper and chemicals and allied products, in addition to the three groups whose value had decreased. In 1943 increases were posted in all groups except miscellaneous commodities which includes aircraft, articles for the Imperial Army and Navy and war materials imported under special orders in council for which a very high increase had been recorded in 1942 and was well maintained in the later year. In 1944 increases were shown in the value of agricultural and vegetable products, wood, wood products and paper, iron and its products, non-metallic minerals and their products and chemicals and allied products. In 1945 decreases were shown in all the main groups except agricultural and vegetable products, animals and products, fibres and textiles, and wood and paper. Miscellaneous commodities showed the largest decrease amounting to $41 \cdot 3$ p.c., while iron and its products decreased $10 \cdot 2$ p.c. These two groups accounted for large shipments of war materials and were mainly responsible for the $9 \cdot 8$ p.c. decrease of total imports in 1945.

Canadian domestic exports for 1943 totalled $\$ 2,971,000,000$, more than three times greater than the value of the 1939 exports. Well over 80 p.c. of the 1943 exports were materials used directly in the carrying on of total war, and were sent where they would best serve the cause of the United Nations.

Exports in 1944 showed increases in all groups except the non-metallic minerals and products and miscellaneous. In the agricultural and vegetable group the outstanding items were the grains (wheat, barley, oats, rye, flax) and flour. Other important commodities in this category were potatoes, fodders and rubber manufactures. The increase in the value of animal products exported reflected the heavy shipments of meats, cheese, canned fish and eggs, particularly to the United Kingdom. Under fibres and textiles are recorded certain war materials such as parachutes, uniforms, blankets and web equipment, increasing the value of this group of exports in 1944 to over four times the 1939 value. Unlike all other commodity groups, the wood and paper products category contains a high percentage of essential civilian goods, but nevertheless, the values have almost doubled since 1939 due to increased demands for lumber, newsprint, wood pulp and other products. Shipments of military vehicles of all kinds and of guns accounted for a large proportion of the increases recorded in the iron group. Other war equipment including aircraft, shells, ships and Canadian military stores, grouped under miscellaneous commodities, showed a drop of one-third from the peak of $\$ 578,500,000$ in 1943.

In 1945, although the total exports showed a decrease of 6.4 p.c., this was largely accounted for by the decline in miscellaneous commodities and iron and its products. Agricultural and vegetable products, and wood and paper continued to show increases.

The following statement shows values of exports of foods, munitions and war materials during the years 1939-45. Included are the shipments of finished war equipment such as vehicles, guns, shells, aircraft and ships as well as raw material for their production. The main items of food are listed together with certain com-50871-33 $\frac{1}{2}$
modities for civilian use such as newsprint, wood-pulp, lumber and pulpwood. The item of non-ferrous metals includes aluminum, brass, copper, lead, nickel and zinc, mainly in primary forms, and in addition large amounts of finished radio equipment. The exports of non-metallic minerals consist principally of asbestos, artificial abrasives, coal and petroleum oils.
II.-EXPORTS OF FOODS, MUNITIONS AND WAR MATERIALS, 1939-45
(In Millions of Dollars)

| Item | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 |

## Subsection 2.-Principal Commodities Imported and Exported

Canada's Principal Imports.-In the interpretation of the trends in imports, it should be borne in mind that no individual year is entirely free of abnormalities in some particulars. In the matter of price fluctuations, which affect the significance of trade figures when expressed by value, the Bureau of Statistics index number of wholesale prices, on the 1926 base, was $59 \cdot 3$ in the calendar year 1889, $52 \cdot 1$ in 1899 , $59 \cdot 5$ in 1909, $134 \cdot 0$ in 1919, $86 \cdot 6$ in 1930, $82 \cdot 9$ in 1940, $90 \cdot 0$ in 1941, $95 \cdot 6$ in 1942, $100 \cdot 0$ in 1943, 102.5 in 1944 and $103 \cdot 6$ in 1945.

The effect of both long- and short-term fluctuations on the trends of trade is summarized at pp. 425-426 of the 1941 Year Book and a table at pp. 426-427 of that volume gives comparative figures of imports for five decades to 1939 , the latest year for which comparisons can be made upon a peacetime basis.

At pp. 463-464 of the 1942 Year Book, the impact of the early years of the War on the trade is discussed. The War has naturally upset the normal pattern of imports and it would serve no useful purpose to attempt to define a trend during the six years of war. For one thing it is quite impossible to define, in each category, how much of a certain commodity was imported specifically for war requirements and how much of such imports were of a normal nature.

The figures of Table 12 serve, in a broad way, to show the wide fluctuations that have taken place and, by going back to the 1941 Year Book at pp. 426-427, Table 14, and comparing these figures with those shown in Table 12 on p. 518, the reader will obtain some idea of the disruption that has taken place.

The change in actual order of commodities is not so wide as the change in value. It must be remembered, however, that the values of imports have shown sharp increases during the war years and therefore are quite misleading as a measure of the quantities imported.

## 12.-Leading Imports Over Three Decades, 1920-45

Nots.-Commodities are arranged in order of importance in 1945, and include only those valued at $\$ 5,000,000$ or more. Imperial Army and Navy stores, and war material entered under special conditions, are not included.

| Commodity | $1920{ }^{1}$ | 1930 | 1940 | 1943 | 1944 | 1945 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | \$ | \$ | 8101 | \$ ${ }^{\text {\% }}$ | \$ |

## ${ }^{1}$ Year ended Mar. 31.

${ }^{2}$ None recorded.
Canada's Principal Exports.-In the interpretation of the figures of the commodities exported, as shown in Table 13, the same qualifications apply regarding price changes and business fluctuations as in the case of imports. Furthermore, factors influencing world trade have an important bearing upon trends in Canadian exports. Since agricultural products are still an important element in Canadian exports, variations in crop conditions here and in other parts of the world cause important fluctuations in the year-to-year volume and value of exports.

At pp. 427-428 of the 1941 edition of the Year Book the effect of long- and short-term fluctuations in Canada's exports is discussed.

The change from pre-war to wartime export trade was marked by trends as significant as in the imports, but the changes were not nearly as erratic.

Canada's trade took on a one-way aspect and while total imports increased from $\$ 751,055,534$ in 1939 to $\$ 1,758,898,197$ in 1944 , with a slight decrease to $\$ 1,585,775,142$ in 1945 , exports grew steadily from $\$ 924,926,104$ to $\$ 3,439,953,165$ in 1944 and showed but a minor decrease in $1945, \$ 3,218,330,353$. It is natural that the growth of food staples, munitions of war, and commodities needed in waging war should have shown a steady growth until peak production was attained in the summer of 1944.

The expansion of industralization is indicated in the very great increases shown in the exports of automobiles, electrical apparatus, locomotives, farm implements and machinery in many other forms.

As would be expected during the war years, exports of food production, cheese, milk products, eggs, meats, fish, etc., have made great advances. With the continued food shortages in occupied countries and shipments to UNRRA, it is expected exports of these products will continue to remain high.

## 13.-Leading Exports (Excluding Gold) Over Three Decades, 1920-45

Nors.-Commodities are arranged in order of importance in 1945 and include only those valued at $\$ 5,000,000$ or more. Certain war materials, such as guns, aircraft, explosives, shells and cartridges, are not included.

| Commodity | $1920{ }^{1}$ | 1930 | 1940 | 1943 | 1944 | 1945 |
