# THE <br> CANADA YEAR BOOK <br> 1947 

THE OFFICIAL STATISTICAL ANNUAL OF THE RESOURCES, HISTORY, INSTITUTIONS, AND SOCIAL AND ECONOMIC CONDITIONS OF THE DOMINION

Published by Authority of
The Honourable James A. MacKinnon, M.P
MINISTER OF TRADE AND COMMERCE

## PREFACE

On July 1st of this year Canada celebrated her eightieth birthday. This event was also a milestone in the history of the Canada Year Book which (although not always under its present name and form) has traced statistically, the economic and social developments of the country year by year over the entire period since Confederation.

During war years the need for a co-ordinated picture of the War Effort to supplement the chapter material gave rise to the inclusion of an Introduction for the first time. This innovation is now continued with the purpose of giving a coordinated peacetime economic picture in much the same way. This edition goes to press at a time when it is possible to review the effects of the first full year of peace on the economy and the present Introduction, pp. xxix to xxxv, is written from that standpoint. In editions of the Year Book previous to the Second World War, the same purpose was behind the inclusion of current happenings, under the heading "Principal Events of the Year" in the final Chapter-The Annual Register. From the viewpoint of the average reader it is doubtful whether that material adequately served the desired purpose.

The chapters themselves show the changes that have taken place so far as data were available when the various sections were sent to press. Thus, since the Year Book normally takes nine months to pass through all stages of editing and printing, it is not possible to give a really up-to-date picture in either the earlier chapters or, to a progressively lesser degree, in some of the later ones.

In the editions published between 1939 and 1946 a considerable amount of standard textual analysis was either unduly condensed or eliminated from the chapters in order to provide the necessary space for special material on the War Effort. This condition is now being gradually remedied and the peacetime balance restored.

The chapters in the present volume have been re-arranged: related subjects are now brought together so that the treatment is not only more logical but permits of more convenient cross reference-a very important consideration in a publication of this type. For instance, Physiography, History, Government, Population and Vital Statistics which have always held a prior place in the chapter arrangement are now followed immediately by chapters that measure phenomena associated with Population in its social aspects, such as Public Health, Welfare, Crime and Delinquency, and Education and Research. The general Survey of Production, which appears next, is followed by the individual primary industries, then the secondary industries, then Services, Trade, Prices, Finance and Banking and finally by certain unclassified and miscellaneous material.

The regular statistical and textual data contained in each chapter have been carefully revised or brought up to date to reflect changing conditions. It is possible to mention here only the most outstanding cases.

The relatively new chapter on Welfare Services has required substantial adjustment each year since it was introduced in the 1945. Year Book. This Chapter is being developed gradually to cover operations that were formerly dealt with in less detail in several other chapters and the changes parallel closely the developments of the new Federal Department of National Health and Welfare on the welfare side. As these re-alignments take place the opportunities for presenting better coordinated statistics of related activities are considerably improved.

In Chapter IX-Crime and Delinquency-the current situation in regard to Juvenile Delinquency is analysed at pp. 247 to 263 , and the relationships of the Royal Canadian Mounted Police and of the Provincial and Municipal Police Forces to the control and suppression of crime are developed. The Ticket-of-Leave System in Canada is also the subject of special treatment.

In the Chapter on Education, the important place occupied by Libraries in Canada is indicated by summary statistics compiled from the latest biennial Survey of Libraries in Canada and an outline of the purpose and operations of the United Nations Educational, Scientific and Cultural Organization (UNESCO) of which Canada became a Member in August, 1946, appears at pp. 313 to 315.

The important and basic Chapter on Agriculture has been considerably built up this year. In relation to the work of the Food and Agriculture Organization of the United Nations, the treatment as it appears at pp. 206 to 211 of the 1946 Year Book is developed and expanded particularly as it concerns Canada's part in the agricultural aspects of the work of FAO. During recent years the Government through the Federal Department of Agriculture has carried on extensive field studies and initiated important projects in connection with irrigation in the semi-arid areas of the Prairie Provinces. At pp. 375 to 379 the program is described in detail and is followed by a treatment of the irrigation projects carried out or planned in British Columbia.

In the Forestry Chapter the always popular description of Canadian tree species that last appeared in the 1940 Year Book is reintroduced in up-to-date form at pp. 384 to 387 and the Furs and Fisheries Chapters have also been recast.

The phenomenal growth of industrial 'know-how' during the war years brought stupendous changes in manufacturing processing and techniques. It is not possible to cover all aspects of this development in any one issue of the Year Book and the plan of dealing with individual industries, one at a time, suggests itself as a convenient solution. In this edition an up-to-date review of the Automobile Industry in Canada is included in the Manufactures Chapter at pp. 521 to 525.

The orderly readjustment to peacetime conditions is now almost completed. The final stages were marked by the lifting of a long list of price controls on Sept. 15, 1947, involving the removal of many subsidies. Operations leading up to this are traced in the Prices Chapter. By reference to pp. 885 to 893 of the 1945 Year Book, pp. 851 to 858 of the 1946 edition and pp. 916 to 924 of the currefit volume, readers will be able to get a good summary of the activities of the Wartime Prices and Trade Board-the key organization responsible for holding the price ceilings during the crucial years. Legislation passed during the 1947 Session of Parliament continues some of these powers, such as control of rentals, fats, 0 oils, meats and other key items including certain exports and imports to March 31, 1948, but in the main the control of prices is now a closed chapter.

The Department of Reconstruction and Supply is a co-ordinating and planning body, although, of course, it also administers those Crown Companies that are continuing, or have not yet been wound up. To some extent, therefore, the Reconstruction Chapter may appear to deal with matters already referred to elsewhere in the Year Book. This, however, is true only in so far as it is found necessary to summarize what is said in other chapters for purposes of relating the facts to a common plan or policy. It is for this reason, too, that this Chapter takes its place in order after the production chapters and towards the end of the volume.

All Canadians are interested in the new Citizenship Legislation which has appeared on the Statute Books since the 1946 Year Book was published. A detailed treatment of this legislation is now given in the Miscellaneous Administration Chapter at pp. 1166 to 1171.

The substitution of a Directory of Official Sources of Information for the detailed lists of publications previously given in the Sources of Official Information Chapter has been decided upon: this Directory appears at pp. 1184 to 1202. The former detailed lists of publications were not easy of reference, since they were presented on a Departmental basis and a convenient subject classification was not possible. Moreover, most Federal and Provincial Departments publish individual lists of their own, classified and arranged for ready reference. For this reason, as well as to render better service to the public by directing general inquiries for official information to the proper sources, this Directory is felt to be desirable.

In addition to the chapter revisions, only the most important of which are touched on above, special articles are included on the National Agricultural Program and Policy in the Agriculture Chapter, Noxious Forest Insects and their Control in the Forestry Chapter, the History and Development of the Canadian Broadcasting Corporation in the Transportation and Communications Chapter, the Operations of the Canadian Wheat Board 1939-46, in the Domestic Trade Chapter, and Insurance in Canada during the Depression and War Periods in the Insurance Chapter.

More than the average number of maps and diagrams appear in the current volume. Additional ones have been printed in black and white to save expense. This is a feature of the Year Book to which greater emphasis is given in view of the popularity of visual means of interpretation at the present time. The expense and work involved in preparing such charts are considered to be more than offset by their usefulness in explaining the text.

The present volume has been edited by A. E. Millward, Editor, Canada Year Book, assisted by the Staff of the Year Book Division of this Bureau. Charts, graphs and layouts have been made by or under the direction of J. W. Delisle, Senior Draughtsman of the Bureau.

Acknowledgments are hereby tendered to the numerous officials of the Federal and Provincial Governments, and to others who have contributed material. Whenever possible, credit is given to the various persons and services concerned by means of footnotes to the respective sections.

With a view to the improvement of future editions, the Bureau will be glad to hear of any errors that may have escaped notice and to receive suggestions with regard to omissions or to methods of treatment.

HERBERT MARSHALL, Dominion Statistician.

Dominion Bureau of Statistics, Ottawa, Sept. 30, 1947.

## DISTANCES BETWEEN PRINCIPAL POINTS IN CANADA.*

Nork.-Generally, the distances given are the shortest by railway.

A knowledge of distances in miles between principal points constitutes very useful information in these days of wide travel, but when an attempt is made to compile such data difficulties are at once encountered. Railway distances are the logical choice, even though road distances are of increasing interest to a vast bedy of travellers by automobile and are a useful alternative. Railway distances represent usually the shortest practicable land distances bet ween two points ant even to-day the bulk of freight and passenger traffic is by rail. Again, distances by air (sometimes called 'bee-line' distances) are only useful in practice to those who travel by air. This is a growing phase of transportation, of course, but has not yet assumed such proportions that its tabulation should displace the more usuat one Akain, it is not a difficult matter to estimate air-line distances from a map made to convenient scale, whereas the ordinary reader is not able to obtain railway distances casily

Even though it be decided to adopt railway distances as most useful, it is necessary to decide whether the most travelled soute bet ween two places or the shortest railway route should govern. In the tables given below, the distances between points are the shortest distances by railway and not neressarily the most travelled routes or the routes by which main trains travel. They are compiled principally from the railway time tables. The main table includes the capital of each provance and some of the main shipping points chosen principally, but not alogether, by population; the subsidiary tables include distances of local importance. Included in the distances from Charlotetown is the distance from Borden to Cape Tormentine, over which the trainsare transported by ferry; similarly, the train ferry distance bet ween Mulgrave and Point Tupper is included in the distance from Halifax to Sydney. In the main table all the distances from Victoria include the distance travelled by beat from Victoria to Vancouver. However, wherever possible, railway distances only are used. In certain distances from Three Rivets and from Quelec it is possible, by the use of ferries, to travel by shorter routes than those given in the tables, the ratl route only being taken in these cases.

Where boat routes are given, the best approximation of the distance travelled is used. The air-line distances used are not necessarily the straight-line distances between points, but are the distances over the routes usually travelled by aeroplanes in good weather.

# ARTICLES AND MISCELLANEOUS TEXT MATERIAL (PUBLISHED IN FORMER EDITIONS) CLASSIFIED BY SUBJECT 

Norr.-It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions, and the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1947 Year Book with its predecessors in respect to matters that have not been subject to wide change. Those sections of chapters, such as Population, which are automatically revived when new material is made available from a later census, and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article takes in ground not covered in the later one. When articles cover more than one subject they are listed under each appropriate heading.

## WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada, as a rule, the imperial system of weights and measures is followed. An exception, however, is the ton where, unless otherwise stated, the short ton of $2,000 \mathrm{lb}$. is meant.

The following table shows the weights and measures used in Canada in connection with the principal field crops and for wheat flour and fruits:-

## Relative Weights and Measures, Imperial and United States

The following tables of coefficients may be used to translate amounts expressed in one unit to the other or vice versa.

1 Imperial pint $=20$ fluid ounces.
1 United States pint $=16$ fluid ounces.
1 Imperial quart $=40$ fluid ounces.
1 United States quart $=32$ fluid ounces.
1 Imperial gallon $=160$ fluid ounces.
1 United States gallon $=128$ fluid ounces.

1 Imperial proof gallon=1.36 United States proof gallon.
1 short ton $=2,000$ pounds.
1 long ton $=2,240$ pounds.
1 barrel crude petroleum $=35$ Imperial gallons.

## FISCAL YEARS OF DOMINION AND PROVINCES

The Federal Government fiscal year ends on Mar. 31.
The dates on which the fiscal years of the provinces end are as follows:-

| Prince Edward Island. . . . . . .Mar. 31 | Manitoba.......... .. .. .. .Apr. 30 |
| :---: | :---: |
| Nova Scotia...... .. . . . Nov. 30 | Saskatchewan.... ... ..... ....Apr. 30 |
| New Brunswick....... . . . . . . Oct. 31 | Alberta...... .. .. .. ... Mar. 31 |
| Quebec.... .. .. .. .. .. ... Mar. 31 | British Columbia.... .. .. .Mar. 31 |

Throughout the Year Book, fiscal-year figures are so indicated in the text and headings of tables; in all other cases figures are for calendar years.

## STATISTICAL SUMMARY OF THE PROGRESS OF CANADA, 1871-1946

Note.-In the following summary, the statistics of fisheries (1871-1911), trade, shipping, the Post Office, the public debt, revenue and expenditure, and the Post Office and Government savings banks relate to the fiscal years ended June 30 up to 1906 ; subsequently to years ended Mar. 31, except in the case of trade, where, as indicated by footnotes, calendar-year figures are given for certain later years. Agricultural, dairying, fisheries (from 1922), mineral, manufacturing, banking, insurance, loan and trust companies, construction, road transportation, vital, hospital, and immigration statistics relate to the calendar years, and railway statistics to the years ended June 30, 1871-1911, and to the calendar years 1921 and 1931-45. Canal statistics are those of the navigation seasons. The telegraph statistics relate to the fiscal years for, Government lines and to the calendar years for other lines.

## STATISTICAL SUMMARY OF THE PROGRESS OF CANADA

Area of the Dominion of Canada in square miles: Land, 3,462,103; Fresh Water, 228,307;-Total 3,690,410.
Note.-Dashes in this table indicate that comparable data are not available for the years so indicated.

6 Fiscal year. ${ }^{7}$ For statistics of population in its social aspects, e.g., education, culture, crime, health and welfare, see the end of the summary, p. xxvi-xxvii. ${ }^{8}$ Figures for the decennial census years 1871-1921 are for the next preceding years; those for 1871 are for the four original provinces only. ${ }^{9}$ Cwt. census figures.

STATISTICAL SUMMARY OF THE PROGRESS OF CANADA-continued

${ }_{1}$ Figures are subject to revision.
${ }^{2}$ On farms only. $\quad{ }^{3}$ Figures for the decennial census years 18811921 are for the next preceding years. In the Censuses of 1881 and 1891 values only were given of factory butter and cheese; quantities have been calculated by reckoning cheese at 10 cents per 1 b . and butter at 25 cents.

4 Data shown for 1942-46 represent cheddar and factory cheese other than cheddar in all provinces; prior to 1942 the figures include other cheese for Quebec only.

STATISTICAL SUMMARY OF THE PROGRESS OF CANADA-concluded

[^8]
## INTRODUCTION

This introduction serves both to give a summary review of the current situation in such a way as to present a general picture of the various parts of the economy of the country and to bring up to date statistics in certain chapters which, because of the need for sending them to press early in the year, are behind hand in their relation to other statistics given towards the end of the book.

Since the end of the War, the domestic picture has been both a challenging and difficult one for business. Selective decontrol as production of consumer goods increased (see Chapter XXIV) has been followed by upward price adjustments. This was to be expected as Government subsidies were withdrawn. However, during 1946 the situation was aggravated by labour troubles of considerable severity for pivotal industries. Disruption of production due to serious strikes occurred, for instance, in the automobile, logging, rubber, steel, electrical apparatus, textiles, coal, base metals and shipping industries, as well as many subsidiary activities. Maladjustment in the supply of materials, especially in the construction industries, resulted: this together with the dislocation of cost-price relationships had an adverse effect so that expected production, which would normally have acted as a counterpoise to rising prices, did not materialize. Many goods and commodities are still (September, 1947) difficult to obtain. The price structure is in places out of balance and in need of adjustment in relation to other economic factors. Nevertheless, in the face of all these difficulties prices have been kept within reasonable bounds and despite the gradual withdrawal of the energizing force funnelled into industry between 1939 and 1945 by Government funds, production has been sufficient to dull the edge of demand. Business has now definitely entered a more selective and competitive phase than at any time since 1939.

Among the more important factors indicating the basic strength of the domestic business situation are: the very strong financial position shown by many companies for the first post-war year; the high activity in the heavy industries, the excellent production and profit record of the pulp and paper and other forest products industries; the sound position of agriculture and the continued prosperity of farmers generally; and the high average pay of industrial workers. All these are influences that point to sustained prosperous conditions if only the international situation can be composed and trade re-established on something like normal lines. A particularly bright spot in the economic picture is the forest products industries. Lumber and pulp and paper are in great demand and this situation promises to continue for some time to come. A heavy responsibility rests upon the Provincial and Federal Governments to see to it that undue depletion of forest resources is not permitted. Fortunately, there is evidence that the authorities are alive to the implications. When it is realized that insect pests and fire actually destroy
about 26 p.c. more wood each year than is used by the huge pulp and paper industry which provides a higher export value than any other branch of manufacturing and gave employment in 1945 to about 40,000 employees, the vital need for conservation becomes more apparent.

The national income reflects the sustained level of economic activity and has been maintained at a point that compares well with war years, partly it must be admitted, as a result of higher prices (see Chapter XXIV). No lasting solution of present problems is to be found in a mere bolstering of national income in terms of high prices, but rather in the building up of real values by high and increasing productivity and it is therefore in the direction of increased volume of production that healthy adjustment must be looked for. The demands of consumers have risen with income as goods have become available. For 1946 the national income is estimated at $\$ 9,212,000,000$ not far below the figure for 1945 , viz., $\$ 9,587,000,000$. This is more than twice the average annual pre-war national income. For the firsu six months of 1947 all indications point to this level having been maintained.

Foreign trade-the means by which surplus production is exchanged for needed commodities from other parts of the world-is the keystone in the arch of international co-operation and is relatively more important in the case of Canada than in those countries where the production capacity is smaller, population is denser and the level of domestic consumption higher. In this country all surpluses of raw materials, agricultural products and manufactured goods must be exchanged for widely diversified imports. The widening of trade relations that is being promoted by the Department of Trade and Commerce is directed to lessening the present extreme concentration of trade and the building up of a more balanced position.

Never before in peacetime has Canada's foreign trade reached such high levels as in the months following the latest war. In 1946, Canada exported goods valued at $\$ 2,312,215,000$ while imports at the rate of $\$ 1,927,279,000$ were recorded. During that year 73 p.c. of all imports came from the United States, whereas only 38 p.c. of exports were taken by that country. Since January 1, 1947, the over-all trade position has strengthened considerably. Thus, for the six months ending June, 1947, total exports of $\$ 1,328,459,000$ have been about balanced by imports of $\$ 1,256,735,000$, but the position vis-a-vis the United States has not improved: in fact it has slightly deteriorated inasmuch as almost 80 p.c. of imports over the six-month period came from the United States, whereas only about 36 p.c. of exports were taken by that country. The seriousness of this trade picture lies in the fact that the 64 p.c. of exports taken by countries other than the United States were financed to a large extent by loans and credits made by the Federal Government to the importing countries, which are without effective purchasing power of their own. On the other hand, Canada must continue to meet the large debit balance with the United States from her diminishing United States dollar reserves.

If Canada's greatly expanded industrial capacity is to find export outlets, markets must be found for surplus production on a sound commercial basis. Canada for some time to come must reckon with an impoverished world and with great
uncertainties in regard to foreign currencies and exchange controls. The rapid deterioration in Britain's supply of United States dollars, coupled with the failure of European production to expand more rapidly, has made the current situation extremely uncertain. Prospects for the next few years hinge heavily on the rate at which production in European and other countries recovers and this in turn is closely tied up with the amount of aid which may be forthcoming under the Marshall Plan.

Thus our post-war position, although by and large that of a creditor nation, is not without anxiety and depends on the discovery of some formula in the relatively near future whereby collective and competitive factors may be brought into play. Lend-Lease and Mutual Aid were replaced after the War by assistance given to Europe through the machinery of UNRRA. This organization, in turn, has lately terminated its work. It was never intended to be more than a short-range assistance plan until more lasting arrangements could be brought about and, if UNRRA has not fulfilled its first promise of achieving economic recovery for Europe, it has at least avoided collapse. Yet the need for help exists to an extent as great as ever and must be met without loss of time if the interests of all countries, including Canada, are to be best served.

The following paragraphs bring up to date under the various headings the statistics of the national economy and are intended as an Economic Review of the period 1946-47

Employment.-When the War ended in August, 1945, Canada was faced with the task of changing over suddenly from a wartime to a peacetime basis. Industries engaged in war production had to reconvert their plants and this meant releasing workers until the necessary changes in tools and equipment could be made. In some industries such as aircraft, shipbuilding and the munitions industries many plants were closed down completely and the workers had to seek employment elsewhere. Other new entrants to the labour market arose with the large scale demobilization of armed service personnel which in about a year and a half after the War's end added almost 700,000 to the civilian population, the majority of them returning to civilian employment. A number of factors made it possible for the economy to provide employment for these workers with sufficient ease to avoid the development of serious unemployment. To begin with, from 300,000 to 400,000 persons, many of them women, withdrew from the labour market shortly after the War's end. In addition, many industries which had been short of labour during the War began to expand their employment as soon as more labour became available. This helped to take up slack until plants were ready to start producing on a peacetime basis. The most notable expansions occurred in the construction industry and some of the related material industries, in the telephone industry and in the manufacturing of furniture, farm implements and newsprint. By the middle of 1947 unemployment had fallen to about 90,000 , less than 2 p.c. of the total labour force and a near minimum level. At the same time the civilian labour force was nearing the $5,000,000$ level and total civilian employment was estimated at about

4,800,000. Many industries were still looking for additional employees and both Provincial and Federal Governments were sponsoring immigration from Europe to help meet this shortage.

Income and Prices.-This high level of employment is symptomatic of the volume of demand for goods of almost every kind. Business firms are building new plants and replacing machinery which was allowed to depreciate during the War. Individuals, in some instances using their accumulated savings, are buying new homes, automobiles, refrigerators, stoves and many other consumer durables which they were denied during the war period. Foreign buyers, aided by the Government's program of loans, have also sought Canadian products of many types especially food and machinery. All of these, when added to the day-to-day requirements of the people for food, clothing and other necessities, have created a demand which the domestic economy cannot immediately fill even when working at its maximum employment level. The consequent pressure of this demand in excess of the available supply of goods has tended to force up price levels as the Government proceeded with its program of orderly decontrol of prices. Higher income levels have accompanied this upward price movement. Between the War's end at August, $19 \ddagger 5$, and the middle of 1947 the cost-of-living index advanced almost 13 p.c. During this same period food and clothing prices have each increased about 17 p.c. and home furnishings have increased about 19 p.c. Average hourly earnings of manufacturing wage-earners have just kept pace with this price increase with a gain of almost 15 p.c. This gain has not been evenly distributed for many individual industries have shown average gains of 20 p.c. or more. On the other hand, other groups have received little or no increase in income during this period.

Construction.-The war period, during which Canada's entire productive apparatus was focussed on gaining victory, left in its wake many shortages. One of the most severe was in housing accommodation and this shortage became very acute as returning veterans attempted to re-establish homes. Though hampered by a shortage of materials, the industry expanded sufficiently to produce a record total of about 64,000 homes in 1946. A substantial part of this total was built under the Government's Wartime Housing Program, in which the veteran received a priority on occupancy. Despite this progress, the shortage continued and there were indications that high prices throughout the field were causing many people to defer their plans for building new homes. Meanwhile industrial and business construction has continued at a high level and total employment in the industry was back at about its previous peak reached in 1929.

Agriculture.-An acute world shortage of food became clearly apparent shortly after the War's end and has not shown any improvement up to the present (September, 1947). This has helped to sustain the demand for farm products at high levels and farmers as a result have enjoyed continued prosperity. Current estimates place Canada's 1947 grain crops at a level somewhat below that of the previous year but with the higher prices now prevailing this should not result in any marked decline in farm incomes. Shortages of feed grains arising partly out
of the late wet spring which curtailed seeding operations and partly out of the dry weather in Western Canada may cause some reduction in the output of live-stock products during the winter months. Current prospective feed-grain supplies are at their lowest level in six years and, inasmuch as a substantial part of these supplies are in Western Canada, special efforts will be needed to move sufficient quantities eastwards to meet the requirements of eastern live-stock producers. Prospects are for a better than average fruit crop in 1947, though in most instances production will be below the 1946 level.

Forestry, Fishing and Trapping.-Expansion in the forestry industries in the past two years has been marked. With the removal of restrictions on the use of electric power in the pulp and paper industry, production of newsprint increased rapidly in the face of an extremely strong demand. This, together with a keen demand for lumber, both at home and on the export market, has brought activity in the woods to record levels. Higher earnings in the logging industry, average weekly earnings are now about 30 p.c. above their level two years earlier, have attracted more than sufficient labour into the woods to replace the departing prisoners of war and employment has risen about 20 p.c. since the War's end. Accompanying this expansion there have been sharp rises in the prices of newsprint, lumber and similar forest products.

During the War the fishing indústry gained substantially and by 1945 its value of production was almost three times as high as its average level in the period 1935 to 1939; slightly over one-half of this increase was the result of higher prices, the remainder being due to greater output. The industry has continued to rely on export markets for two-thirds or more of its total output and its future is tied up with these demands. Prices continued to advance after the end of the War and by the end of 1946 , reached a peak of $220 \cdot 6$ on the base $1935-39=100$. Since then prices have receded slightly but they are still higher in comparison with the pre-war period than the prices of other types of meat.

Receding prices have also been present in the fur industry. A decline which set in about the middle of 1946 had brought prices by June, 1947, to the lowest level since early 1941 and only about 15 p.c. above the 1935-39 average. In this industry also the value of production had increased to almost triple the pre-war level by 1945-46, but about two-thirds of this increase was due to higher prices. Here again the export market takes a major part of the industries product and falling prices have been reflected in a sharp drop in the value of furs exported during 1947.

Mining.-Activity in Canada's base metal mines has continued at a high level in the post-war period though in most instances production has receded from wartime peaks. The total value of metallic ores produced in 1946 was down about 9 p.c. from 1945. Gold production is rising but, squeezed between rising wage and material costs and the 10 p.c. decline in its price during 1946, it is still substantially below its pre-war level. Sharply higher prices were allowed for almost all of the non-ferrous metal group at the end of 1946 and a further rise occurred in the spring of 1947 when price controls were discontinued.

78375-c

In response to the greatly increased demand for building materials, a post-war expansion has been shown in the clay products and other structural materials group. The value of output in this group increased about 27 p.c. during 1946.

Electric Power.-Following a temporary decline in the demand for electric power during the reconversion period consumption has risen sharply and by the winter of 1946 a shortage had developed in some areas. The Hydro-Electric Power Commission of Ontario has begun construction on a number of projects which will add substantially to this industry's productive capacity over the next few years. In comparison with actual expenditures on new capital equipment of $\$ 27,000,000$ in 1945 and $\$ 57,000,000$ in 1946 , the industry has planned to spend $\$ 124,000,000$ in 1947

Manufacturing.-One of the major developments during the war period was the increased contribution of manufacturing to the nation's products. Much of the gain centred in such war industries as aircraft, shipbuilding and munitions of various kinds and it was accompanied by the construction and equipment of a large number of new manufacturing plants under a Government-financed program. At the War's end, when these industries were forced to reduce their production sharply, many of these factories became available for peacetime uses. Some were sold to new or expanding industries; others were purchased directly by the company which had operated the plant during the War.

The extent to which this wartime shift to manufacturing will be retained on a permanent basis is not yet clear. Canada's new synthetic rubber industry and her expanded steel industry are two examples of an expanded industrial capacity which has continued at a high level. Electrical apparatus is another industry that has greatly increased in importance and it now employs more than double the number it did in the pre-war period. On the other hand, because of the present intense demand for goods of all types, Canada is importing many manufactured goods which may be produced to a greater extent in this country when shortages become less acute. Employment in manufacturing fell off sharply at the end of the War but as reconversion progressed it moved up rapidly and currently accounts for about 27 p.c. of total employment (June 1947).

Transportation.-In some respects the return to peacetime production has seen an accentuation rather than an easing of the burden on Canada's railway system. Carloadings have risen to the limit permitted by the available equipment and priorities have been necessary to ensure that the most urgent needs are met. This problem was accentuated by the necessity of diverting lake shipping from grain to coal in the fall of 1946 . As a result, during the winter of 1946, the railways were required to haul to export positions a large amount of grain which would normally have been shipped by water. Addition to the railways' equipment was deferred while Canada's output of railway cars and locomotives was sent largely to foreign markets during the first post-war year. Only in early 1947 were substantial orders placed by Canadian railways. Faced with rising costs the railways have applied for permission to increase their freight rates by 20 p.c. and their case is currently being considered by the Board of Transport Commissioners.

Finance.-Government expenditures dropped off sharply at the War's end but revenues, despite a reduction in tax rates, were sufficiently well maintained to yield a surplus of $\$ 352,000,000$ for the fiscal year 1946-47. Further reductions in the personal income tax became effective at July 1, 1947, and the 15 p.c. excess profits tax will cease at the end of 1947. In the current year revenues have continued to run ahead of expenditures and for the first four months of the fiscal year a surplus of $\$ 388,300,000$ has been accumulated. Because of lower tax rates in force during the remainder of the year the surplus is not expected to continue at this high level, but it has been a factor in helping to reduce the pressure towards higher prices during the current period.

## ERRATA

p. 428-Last line of paragraph 2 should read ", buy bait" instead of "by weight"
p. 459 , Table 11 -footnote 1 should read " $\$ 333,218$ in 1945 " instead of " $\$ 335,218$ in 1945"

## CHAPTER I.-PHYSIOGRAPHY

## CONSPECTUS

## PART I.-GEOGRAPHY*

Main Geographical Features.-Canada comprises the whole northern part of the North American Continent with its islands, except the United States territory of Alaska and the territory of Newfoundland (with Labrador). It embraces the whole Arctic Archipelago between Davis Strait and the connecting waters northward to the 60th meridian on the east and the 141st meridian on the west.

Canada is bounded on the west by the Pacific Ocean and Alaska; on the south by the United States; on the east by the Atlantic Ocean, the waters between Newfoundland and the Gulf of St. Lawrence, Labrador, Davis Strait and the dividing waters between Ellesmere Island and the Danish territory of Greenland; northward it extends to the North Pole.

The southernmost point is Middle Island in Lake Erie, in north latitude $41^{\circ} 41^{\prime}$ From east to west Canada extends from about west longitude $57^{\circ}$ at Belle Isle Strait to west longitude $141^{\circ}$, the boundary of Alaska. Canadian territory thus extends over $48^{\circ}$ of latitude and $84^{\circ}$ of longitude.

The area of the Dominion is $3,690,410$ square miles, a figure that may be compared with that of $3,608,787$ square miles for Continental United States and Alaska; $3,776,700$ the total area of Europe; 2,974,514 the area of Australia; 3,275,510 the area of Brazil; $1,581,079$ the area of India (excluding Burma); 120,849 the area of the British Isles. Canada's area is 28 p.c. of the total area of the British Empire, as it is shown at p. 141 of the 1943-44 Year Book.

The sea coast of Canada, one of the longest of any country in the world, comprises the following mileages:-

Mainland—Atlantic 3,068, Pacific 1,579, Hudson Strait 1,245, Hudson Bay 3,157 , Arctic 5,771; total 14,820 miles.
Islands- Atlantic 1,518, Pacific 3,979, Hudson Strait 60, Hudson Bay 2,307, Arctic 26,786; total 34,650 miles.

[^9]The Canada-United States Boundary is $3,986 \cdot 8$ miles long and that between Canada and Alaska is $1,539 \cdot 8$ miles; the Canada-Labrador Boundary has not been surveyed but is estimated at 1,990 miles.

The St. Lawrence-Great Lakes system of navigable waterways provides ship transportation from the sea into the very heart of the continent. From the Strait of Belle Isle at the northern entrance to the Gulf of St. Lawrence, the sailing distance to the head of Lake Superior is 2,338 miles; from Montreal to Fort William, the great Canadian grain-shipping port, the distance is 1,215 miles. Throughout its length the waterway gives access to a region rich in natural and industrial resources.

The potentialities of these inland waterways of Canada are enormous since modern canal systems by-pass the unnavigable portions of the St. Lawrence River, link up the various bodies of water of the Great Lakes and are bound to have a much greater economic influence on the future wealth and progress of the nation. There are no tides in these Lakes although considerable variation in water levels is sometimes occasioned by strong winds or heavy precipitation. At the Great Lakes ports and harbours, ships load and unload their cargoes to and from all points in the Dominion.

## 1.-Approximate Land and Fresh-Water Areas, by Provinces and Territories

Nore.-For a classification of land area as agricultural, forested, etc., see pp. 32-33.

| Province or Territory | Land | Fresh Water | Total | Percentage of Total Area |
| :---: | :---: | :---: | :---: | :---: |
|  | sq. miles | sq. miles | sq. miles |  |
| Prince Edward Island. | 2,184 | 1 | 2,184 | $0 \cdot 1$ |
| Nova Scotia. | 20,743 | 325 | 21,068 | 0.6 |
| New Brunswick | 27,473 | 512 | 27,985 | 0.8 |
| Quebec. | 523,860 | 71,000 | 594, 860 | 16.1 |
| Ontario. | 363,282 | 49,300 | 412,582 | 11.1 |
| Manitoba. | 219,723 | 26,789 | 246,512 | 6.7 |
| Saskatchewan | 237,975 | 13,725 | 251,700 | 6.8 |
| Alberta. | 248,800 | 6,485 | 255, 285 | $6 \cdot 9$ |
| British Columbia. | 359, 279 | 6,976 | 366,255 | $9 \cdot 9$ |
| Yukon.. | 205,346 | 1,730 | 207,076 | $5 \cdot 6$ |
| Northwest Territories- |  |  |  |  |
| Franklin.............. | 541,753 | 7,500 | 549,253 | 14.9 |
| Keewatin. | 218,460 | 9,700 | 228,160 | 6.2 |
| Mackenzie. | 493,225 | 34, 265 | 527,490 | $14 \cdot 3$ |
| Canada | 3,462,103 | 228,307 | 3,690,410 | 100.0 |

${ }^{1}$ Too small to be enumerated.

## Section 1.-Physical Geography

The physical features of Canada are considered under this heading in six natural divisions into which the country is divided, each of which is defined and shown in the map on p. 4.
(1) The Appalachian Region, comprising the Maritime Provinces and most of that part of Quebec lying south of the St. Lawrence River. It is a hilly or mountainous region and is made up largely of disturbed beds.
(2) The St. Lawrence Region, a lowland belt bordering the St. Lawrence River and extending westward through southern Ontario to Lake Huron. It is underlain chiefly by flat or gently dipping strata of Palæozoic age.
(3) The Canadian Shield, a vast V-shaped area of ancient rocks surrounding Hudson Bay.
(4) The Interior Plains. Region of Manitoba, Saskatchewan, and Alberta which stretches down Mackenzie Valley to the Arctic Ocean. It is underlain by only slightly disturbed Palæozoic and Mesozoic strata.
(5) The Cordilleran Region, including the mountainous country of the Pacific Coast which is developed on highly disturbed rocks.
(6) The Arctic Archipelago, with which is linked the Hudson Bay Lowland. The former includes the islands lying north of the Canadian Shield, while the latter is a broad, flat region, underlain by flat-lying Palæozoic beds.

The physiographic details of each division described above with the geology of the same areas are given at pp. 19-29, under the heading "Geology"

## Subsection 1.-Hydrographical Features*

The oceanic areas immediately surrounding the northern half of North America play a vital role in the national life of Canada. The immense navigable waterways which extend into the heart of the continent have been of greatest importance to the discovery, exploration and mercantile development of the Dominion. The energizing influence of the ocean, brought far inland by remarkable coastal physiography, has had marked effect on the lives and character of the inhabitants. The serried Atlantic and Pacific Coasts provide excellent harbours for great fishing fleets and are natural sites for the ports required for transhipment of primary and manufactured products

To present a comprehensive description of these adjacent seas, the good offices of oceanography, geology, marine biology, meteorology, and many other sciences would have to be invoked, but in the space allotted it would be impossible to deal with so many aspects. The basic factor in any utilitarian study of the oceaniccontinental margin is the physical relief of the sea-floor, a subject that has been widely investigated in recent years. As an arbitrary limit must be set, the scope of this subsection is restricted to a consideration of some of the more salient features of the hydrography of the marginal seas surrounding Canada.

The Dominion authority for conducting hydrographic surveys is the Hydrographic Service of Canada, under the administration of the Surveys and Engineering Branch of the Department of Mines and Resources. The work with which it is charged includes the charting of coastal and inland waters, the investigation of tides and tidal streams, and the recording of fluctuations of the waters comprising the Great Lakes-St. Lawrence waterway. This Service produces and circulates the official Canadian hydrographic aids to navigation: charts, volumes of pilots' and sailing directions, tide tables and related nautical publications.

[^10]

The hydrographical descriptions of the marginal seas are dealt with under the headings, Atlantic, Arctic and Sub-Arctic, and Pacific, in the following paragraphs.

Atlantic.-Incursions of the sea in the Atlantic Coast are formed in depressions between crests of the Appalachian Mountain Range as it dips into the ocean. Seaward from the shore protrudes the submerged Continental Shelf, the zone that effects the transition from continental to oceanic regions. In contrast to the narrowness and comparative smoothness of submarine plateaux in many parts of the world, the shelf extending off the Atlantic Coast of Canada is distinguished by great width and diversity of relief. From the coast of Nova Scotia it extends 60 to 140 miles; from Newfoundland 120 to 270 miles. In the latter region, the oceanward edge of the submerged plateau is over 600 miles from the Canadian coast, the shelf there being taken to embrace within its confines the Island of Newfoundland. Owing to the great paucity of soundings, the width off Labrador is uncertain but indications are that it varies from about 150 miles at Belle Isle to 50 miles at the entrance to Hudson Strait. Northward it merges into that of the Polar Sea.

The outer edge of the shelf is known as the Continental Shoulder. There, the sea-floor drops suddenly to the main oceanic basin, several miles deep, the steep declivity being referred to as the Continental Slope. Depths of the sea over the top of the Shoulder vary considerably in different regions and, in consequence, this boundary line between continental and the deep oceanic features cannot be uni-

A cross-section showing a portion of the Continent and the Continental Shelf, vicinity of Saint John, Halifax and Sable Island.
versally defined in terms of a constant bathymetric contour. Off the Canadian and Newfoundland coasts, soundings of from 100 to 200 fathoms are reached before the Shelf suddenly gives way to the steep declivity leading to abysmal depths.

From the relations between widths and depths as given above, it is evident that the over-all gradient of the Atlantic Continental Shelf is slight. It is far from smooth, however, the whole area being studded with such impressive forms as shoals, plateaux, banks, ridges and islands. The deeply indented Atlantic coasts of Nova Scotia and Newfoundland are fringed by scraggy islets and rock shoals. Off Nova Scotia the 40 -fathom line lies at an average distance of 12 miles from shore. This submarine contour constitutes the danger line for coastwise shipping but close within it lie some formidable menaces to navigation. Seaward, rise the extensive fishing banks known as Georges, Browns, La Have, Sambro, Middle, Misaine, Banquereau, Sable Island, St. Pierre and the Great Banks of Newfoundland. Sable Island, the

Plan showing the extent of the Continental Shelf in the Northwest Atlantic.
dry top of a long undersea ridge, lies 90 miles off the nearest point of the continental coast and less than 25 miles from the rim of the deep oceanic basin. This Island is reported to be moving oceanward owing to the action of sea and wind, the sea encroaching on the western end and the land extending eastward.

The whole floor of the marginal sea appears to be traversed with channels and gulleys, as yet imperfectly charted but sufficiently so to indicate the general outlines. The outer edge of this submerged flank of the continent is trenched with deep submarine ravines cutting well into the shelf. Outstanding of these is a bold, canyonlike depression which commences in the deep Atlantic Basin south of the Great Banks of Newfoundland and separating St. Pierre Bank on the porth and Banquereau on the south. It continues northwestward through Cabot Strait, crosses the open Gulf of St. Lawrence to the north of the Magdalen Islands, thence runs past the Gaspe Coast into the broad estuary of the St. Lawrence. Branches extend for some distance into the northeast arm of the Gulf towards Belle Isle, and also along the northeastern coast of Anticosti Island. Depths in this trough vary from nearly 300 fathoms in Cabot Strait, to 100 fathoms in the St. Lawrence Estuary a short distance below the Saguenay. In referring to the Estuary of the St. Lawrence it is of interest to record that, off the mouth of the Saguenay, the water of the St. Lawrence is salt; at the lower end of Orleans Island it is brackish and the range of tide here reaches its maximum; at Quebec the water is fresh. The true head of the Estuary, therefore, is at the lower end of Orleans Island.

The main features of the topography of the Atlantic marginal sea-floor are attributed to glacial origin, but other agencies are at work constantly modifying the submarine relief. Land erosion is an important factor, eroded materials from the continent being carried by rivers, ice, or winds to the foreshores from whence the solid detritus is spread over wide areas by sea and ice. Stones, gravels, sand and muds are thus transported. Wave action against cliffs and shore banks accounts for enormous masses of continental substances being washed away and deposited over the surrounding sea-floor. The processes of erosion on a great scale are apparent in the Magdalen Islands area in the centre of the Gulf of St. Lawrence. There, the comparatively soft sandstone cliffs are continually being nibbled into fantastic shapes, or worn away by the violent seas to which the coast is exposed. As a result, shallow submarine flats and sand-bars are formed, and bottom contours fluctuate to a considerable degree.

Sea ice, also, is an active agent in the processes of littoral erosion, transport and deposition of eroded materials. A very good illustration can be seen each spring in Cabot Strait where, for many weeks prior to the opening of navigation, an extensive procession of winter ice from the Gulf and River St. Lawrence and Chaleur Bay streams out along the Atlantic coast of Cape Breton on its journey to the sea. The ice which was formed in shallow water and along the shores is laden with erosion products, the mud, sand or clay scoured from the bottom, or swept from the land by gales. The origin of such ice can be recognized: that formed in the St. Lawrence River and Chaleur Bay is dark with the characteristic muds and clays conveyed from those regions, while the ice from the Northumberland Strait area is red with the coloured sand peculiar to the southern part of the Gulf. Ice navigators and coastal dwellers refer to the latter as "red" ice-a welcome sight in the spring as it moves down the coast of Cape Breton for, being the last of the winter ice to flow out of the Gulf, it heralds the opening of navigation. Much of this ice-borne material is carried well out on the Continental Shelf, some of it reaching even beyond Sable Island before the ice deteriorates.

Icebergs, also, are partly responsible for continental shelf-building. Each year a great number of these 'bergs, calved on the shores of Greenland and carrying detritus gouged from the land, are brought south by the Labrador Current. Some become stranded off the Labrador Coast, some on the Great Banks of Newfoundland, others drift until melted by the warmer water of the Gulf Stream. In any case, they succeed in transporting and depositing quantities of stones, mud and other solid material. Wave motion and tidal currents complete the work of distribution. The configuration of the continental sea-floor is continually changing, and vigilance is necessary to keep navigation charts of Canada's eastern seaboard up to date.

Arctic and Sub-Arctic.-The submerged plateau protruding from the northern coast of North America is a major part of the Great Continental Shelf surrounding the North Polar Sea and on which lie all the Arctic Islands of Canada, Greenland,

Plan showing the extent of the Continental Shelf that surrounds the North Polar Basin.

Iceland and most of the islands north of Europe and Asia. In the Canadian segment of the Arctic, the Polar Shelf develops its maximum width and attains its "Farthest North". Hudson Bay, connected to the Arctic by Foxe Channel, and to the Atlantic by Hudson Strait, is a shallow flooding of this same Continental Plateau.

On the 80th meridian of west longitude the Polar Shelf reaches the greatest width of any submerged continental plateau. A cross-section of the Shelf on this meridian intersects the southern extremity of James Bay, Hudson Bay and the north coast of Ellesmere Island-a total distance of over 2,000 miles, the Continental Shoulder being only 300 miles from the Pole. Owing to the very limited amount of charting that has been done in the Arctic, the bottom topography on this profile would be somewhat hypothetical. Sufficient is known, however, to indicate an abrupt break of the continental margin at its northern oceanward edge. There, the sea-floor drops from a depth of about 100 fathoms to depths of over two miles in the North Polar Basin. This steep continental terrace borders the whole western side of the Canadian Archipelago and it constitutes one of the most striking and significant features of the Polar Regions. From this great declivity a number of deep, well-developed troughs, apparently cut by glaciers, enter between the western groups of islands. Off Baffin Island, on the submerged shelf which joins the eastern side of the Archipelago with Greenland, is an isolated depression reported to be considerably over a mile in depth. A ridge across Davis Strait, on which the depth is about 200 fathoms, separates this basin from the open Atlantic.

The incursions of the sea, Hudson Bay and Hudson Strait, bite deeply into the continent. Hudson Bay is an inland sea, about 250,000 square miles in area. Into it is poured the water drained from $1,500,000$ square miles of the continentnearly three times that of the Atlantic drainage system. In this respect, the Bay resembles an enormous estuarial basin, the great flood of fresh water into it accounting for the low salinity of the upper layers and partly for its great temperature ranges. Still more pronounced in estuarial character is James Bay to the south. This projection, with general depths of 20 to 30 fathoms in its central part and with extensive, drying mud-flats off its shores, is studded with islands. Numerous rivers discharge into James Bay and, as a result, the water is brackish.

In Hudson Bay, soundings are too few to give a complete picture of submarine relief, but the average depth is about 70 fathoms. It has been ascertained that a deepwater channel is carried from Hudson Strait into an irregular-shaped depression in the centre of the Bay where a greatest charted depth of 141 fathoms has been found. Of the hydrography of the east side of the Bay, little is known beyond the fact that it is bordered by groups of islands and rocks lying as far off as 100 miles. Ship navigation inside these islands would be subject to great risk owing to the scarcity of chart soundings. Strikingly different is the western side of Hudson Bay which is low and flat, almost devoid of islands except well to the north where a few small islets are found. Between James Bay and Cape Churchill the water deepens gradually, the 50 -fathom contour lying about 50 to 90 miles off shore. Northward of Churchill this contour approaches within 15 to 30 miles of the coast.

Hudson Strait, 430 miles in length, is a deep arm of the sea separating Baffin Island from the continental coast and connecting Hudson Bay with the Atlantic Ocean. Widths of the Strait vary from 37 miles at the entrance to 120 miles near its western extremity. The coasts are generally high and bold, broken by many bays and fiords which afford excellent harbourage. Its greatest charted depth of 481 fathoms is found close inside the Atlantic entrance. There the sea-floor is
extremely irregular and deep, swift tidal currents striking the nearly vertical rock walls of submarine valleys are deflected sharply upward to cause the disturbance referred to by the explorer Davis as "the furious overfall" Throughout the whole Strait, great irregularities of the bottom are indicated but, except in inshore waters, few hazards to navigation have been located.

Pacific.-The marine zones of Canada-Atlantic, Pacific and Arctic-exhibit individual characteristics, the marginal sea of the Pacific differing strikingly from the others. In contrast to the more symmetrical and subdued hydrography of the eastern seaboard, the corresponding coastal belt of British Columbia is characterized by bold, abrupt relief-repetition of the mountainous landscape. Dominant features of the Pacific Marginal Sea are the great detached island land-masses, their western slopes lying close to the edge of the deep oceanic basin. Whereas the Atlantic Coast is broken by bays and inlets of moderate length and depth, the western seaboard of Canada is characterized by a well-developed fiordal system which penetrates the mountainous coast for distances of 50 to 75 miles.

Plan showing the extent of the Continental Shelf off the Pacific Coast of Canads.

The inlets of British Columbia are occasionally straight, but most are winding and branch off at intervals to form webs of off-shoots and ramifications. They are usually a mile or two in width, have steep, almost canyon-like sides, and are attributed to glacial origin. Many have been only sketchily surveyed, but in some which have been sounded, depths of well over 100 fathoms are indicated. True to their fiordal character, depths inside the inlets are considerably greater than those in the entrances and the immediate approaches are often strewn with islets and sunken rocks.

Along the whole stretch of coast continuous navigation is afforded in an "Inside Passage", sheltered from the sea by a protective barrier of islands. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating great caution in navigation. Fortunately, kelp grows on nearly every danger having a rocky bottom and can be seen on the surface during the summer months especially in those channels where the water is in constant motion. During the winter and spring, however, this useful plant is not always visible and in harbours where there is little water movement it is often absent.
"Ripple Rock", the worst danger on the Coast, lies in the main ship passage between Vancouver Island and the mainland. This formidable menace rises suddenly from depths of 200 and 300 feet in the fairways on either side. During low water of spring tides the two heads on the rock are only 9 and 21 feet below the surface. The tide race, here, attains velocities up to 14 knots, creates great turbulence and whirlpools, and renders the passage unnavigable to all but the highestpowered vessels, except during the brief period of slack water.

From the islet-strewn coast of British Columbia the Continental Shelf extends from 50 to 100 sea-miles to its oceanward limit where depths of about 200 fathoms are found. There the sea-floor drops rapidly to the Pacific Deeps, parts of the western slopes of Vancouver and Queen Charlotte Islands lying only 4 miles and 1 mile, respectively, from the edge of this steep declivity. These high islands are partially submerged mountain ridges, their slopes broken by numerous seainundated valleys. An outstanding feature of the marginal sea-belt off the British Columbia coast is the submerged ridge which joins the Queen Charlottes to the chain of smaller islands fringing the mainland. This body of water, Hecate Strait, connects the two much deeper arms of the sea-Queen Charlotte Sound on the south and Dixon Entrance on the north. Widths of Hecate Strait vary from 80 to 30 miles, and depths on it decrease from over 100 fathoms in the southern part to from 4 to 20 fathoms in the northern portion. Characteristic of the sea-floor of the whole Pacific Coast, the submerged shelf here is furrowed and deeply ravined.

Extensive areas lying off British Columbia have, as yet, been only partially charted and, in consequence, much of the intricate submarine relief has not been developed. Owing to the great depths encountered, sounding by lead and line was a slow process, but with the advent of automatic echo-sounding, progress of hydrographic work has received great impetus. As charting progresses along the coast, unexpected submarine features come to light, new rocks are located and safe passages
which clear them are found, prospective fishing banks are delineated and new navigation charts are produced. For detailed hydrographic information on specific localities, the reader is referred to these and related nautical publications.

## Subsection 2.-Lakes and Rivers

The fresh-water area of Canada is unusually large constituting over 6 p.c. of the total area of the country. The outstanding feature is the Great Lakes, details concerning which are given in Table 2.

Particularly notable are the depth of Lake Superior and the shallowness of Lake St. Clair and Lake Erie.
2.-Areas, Elevations, and Depths of the Great Lakes

| Lake | Elevation Above Sea-level | Length | Breadth | $\underset{\text { Depth }}{\text { Maximum }}$ | Total Area | Area on Canadian Side of Boundary |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | ft. | miles | miles | ft. | sq. miles | sq. miles |
| Superior. | $602 \cdot 23$ | 383 | 160 | 1,302 | 31,820 | 11,200 |
| Michigan. | $580 \cdot 77$ | 321 | 118 | 923 | 22,400 | Nil |
| Huron... | 580.77 | 247 | 101 | 750 | 23,010 | 13,675 |
| St. Clair. | $575 \cdot 30$ | 26 | 24 | 23 | 460 | 270 |
| Erie.... | 572.40 | 241 | 57 | 210 | 9,940 | 5,094 |
| Ontario.. | $245 \cdot 88$ | 193 | 53 | 774 | 7,540 | 3,727 |

Lake Superior, with an area of 31,820 square miles, is the largest body of fresh water in the world. The International Boundary between Canada and the United States passes through the waters of Lakes Superior, Huron, St. Clair, Erie and Ontario. The great obstacle to navigation on this waterway-the rise of 326 feet between Lakes Ontario and Erie-is surmounted by the Welland Ship Canal, the river itself dropping over the escarpment at Niagara creates the best known waterfall in the world. The Great Lakes, with the St. Lawrence River, form the most important system of waterways on the continent and one of the world's most notable fresh-water transportation routes. In addition to the Great Lakes there are many other remarkably large lakes; the eleven following, with their areas in square miles in parentheses, are all over 1,000 square miles in area: Great Bear ( 12,000 ), Great Slave $(11,170)$, Winnipeg $(9,398)$, Athabaska $(3,058)$, Reindeer $(2,444)$, Winnipegosis $(2,086)$, Nipigon $(1,870)$, Manitoba $(1,817)$, Dubawnt $(1,600)$, Lake of the Woods $(1,346)$ and Southern Indian $(1,060)$. Apart from these lakes, named as notable for their size, there are innumerable other lakes scattered all over that major portion of the area of Canada lying within the Canadian Shield. In an area of 6,094 square miles, accurately mapped, just south and east of Lake Winnipeg, there are 3,000 lakes; in an area of 5,294 square miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes. Table 3 gives a list of the principal lakes of Canada, by provinces, with their elevations in feet and their areas in square miles.

## 3.-Areas and Elevations of Principal Canadian Lakes, by Provinces

Note. - In the case of those reservoirs and lakes for which two elevations are given, HW means high water, LW low water, and N normal level.

[^12]The river systems of Canada, excluding the Arctic islands, are best studied by segregating the main drainage basins as shown in Table 4.

## 4.-Drainage Basins in Canada

Note.-Classified by the Dominion Water and Power Bureau, Department of Mines and Resources Ottawa.

| Drainage Basin | Area Drained ${ }^{1}$ | Drainage Basin | Area <br> Drained ${ }^{1}$ |
| :---: | :---: | :---: | :---: |
|  | sq. miles |  | sq. miles |
| Atlantic Basin |  | Arctic Basin |  |
| Atlantic or Maritime Provinces. Great Lakes and St. Lawrence River.. | 61,151 359,312 | Great Slave Lake. Arctic............. | 370,681 559,676 |

| Southwest Hudson Bay | 283, 997 | Total. | 400,730 |
| Western Hudson Bay | 383,722 | Gulf of Mexico Basin. | 10,121 |
| Total. | 1,379,160 | Area, Canada Less Aretic Archipelago | 3,157,662 |

${ }^{1}$ Areas are approximate and are exclusive, for all rivers, of those portions of their basins that lie in United States territory.

It is noteworthy that the greater part of Canada drains into Hudson Bay and the Arctic Ocean; the Nelson River drainage is exceptional in running through the most arable and the most settled part of the West, but otherwise the rivers of Western Canada east of the Rockies run away from the settled areas towards the cold northern salt waters and this adversely affects their industrial utility. The Mackenzie, which drains Great Slave Lake is, with its headwaters, the longest river in Canada ( 2,514 miles) and its valley constitutes the natural transportation route through the Northwest Territories down to the Arctic Ocean. From Fort Smith, on the Slave River, large river boats run without any obstruction down to Aklavik in the delta of the Mackenzie, a distance of 1,292 miles. In Eastern Canada it is the Great Lakes and St. Lawrence drainage basin that dominates all others and has undergone the greatest development. The St. Lawrence River and the Great Lakes provide a water route from the Atlantic as far as Fort William and Port Arthur, twin cities situated on Lake Superior and only 419 miles from Winnipeg, the half-way mark in distance across the Dominion. The main tributaries of the St. Lawrence all flowing south (most of which have lakes available for reservoiring), together with the main river itself, have developed and undeveloped water powers the economic value of which it would be difficult to over-estimate. Apart from the plains region of the West, the rivers of Canada have a vast power potentiality well distributed over the country. Table 5 gives the lengths of the principal rivers with their tributaries classified according to the four major drainage basins.

## 5.-Lengths of Principal Rivers and Tributaries in Canada

Note.-In this table the tributaries and sub-tributaries are indicated by indentation of the names. Thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

PROFILE
Following C.PR Main Line, Montreal-Vancouver

## Subsection 3.-Mountains

The predominant orographical feature in Canada is the great Cordilleran Mountain System. The principal named peaks exceeding 11,000 feet in elevation are given in Table 6.

## 6.-Mountain Peaks $\mathbf{1 1 , 0 0 0}$ Feet or Over in Elevation, by Provinces and Mountain Ranges

Nore. - The highest point on the mainland of Eastern Canada (peaks of the Torngats in Labrador rise to about 5,500 feet) is Mount Jacques Cartier, a peak of Tabletop Mountain in N. lat. $48^{\circ} 59^{\prime}$ W. long. $65^{\circ} 56^{\prime}$, Gaspe district, Quebec, the summit of which is 4,160 feet above sea-level.

${ }^{1}$ This peak is on the interprovincial border between Alberta and British Columbia. ${ }_{3}{ }^{2}$ This peak is on the international boundary between British Columbia and Alaska. ${ }_{3}$ The enumerated peaks in Yukon are on or near the Yukon-Alaska Boundary.

There are no elevations in the rest of Canada that come anywhere near rivalling those of the Cordilleran Region. Only small areas in northeastern Quebec rise above 2,000 feet in elevation; there are no great eminences, but the surface is generally accidented by many hills and hollows with countless numbers of lakes and streams.

South and east of the River St. Lawrence, the St. Lawrence Lowlands are bordered by extensions and outliers of the Appalachian Mountains. The Appalachian System, in fact, extends through the Maritime Provinces and the Gaspe Peninsula of Quebec. The whole area may be regarded as a peninsula jutting out with bold and broken coast line to separate the Gulf of St. Lawrence from the Atlantic. Peaks in this area, notably the Notre Dame and the Shickshock Mountains, reach elevations up to $4,000 \mathrm{ft}$.

## Subsection 4.-Islands

The islands of Canada are among its most remarkable geographic features. They include the very large group lying in the Arctic Ocean, the fringe of both large and small islands off the Pacific Coast, those of the Maritime Provinces and Quebec in the Atlantic Ocean and the Gulf of St. Lawrence, together with the islands of the Great Lakes and other inland waters. The Pacific Coast islands, with the exception of Vancouver Island and the Queen Charlotte group, are small and dot the coast of British Columbia from Dixon Entrance to the southern boundary of the Province. Vancouver Island is 285 miles long and from 40 to 80 miles broad, covering an area of about 12,408 square miles; the mountain range which forms its backbone rises again to form the Queen Charlotte Islands farther north. These islands figure largely in the mining, lumbering and fishing industries of the West and, together with the bold and deeply indented coast line, provide a region for scenic cruises rivalling those of Norway.

On the eastern coast of the Dominion are the island province of Prince Edward Island, the Islands of Cape Breton (an integral part of Nova Scotia), Anticosti, and the Magdalen group (included in the Province of Quebec), and the Islands of Grand Manan and Campobello (part of the Province of New Brunswick) in the Bay of Fundy. Prince Edward Island is 2,184 square miles in area, Cape Breton 3,970 and Anticosti about the same. Fishing activities in these eastern islands are important, while agriculture on Prince Edward Island and mining on Cape Breton are the chief occupations of the inhabitants.

Manitoulin Island and the Georgian Bay islands in Lake Huron and the Thousand Islands group in the St. Lawrence River, at its outlet from Lake Ontario, are the more important islands of the inland waters.

## Section 2.-Political Geography

Politically, Canada is divided into nine Provinces and two Territories. From east to west these are: the Maritime Provinces of Prince Edward Island, Nova Scotia and New Brunswick; Quebec; Ontario; the Prairie Provinces of Manitoba, Saskatchewan and Alberta; and the most westerly province, British Columbia. North of the area included in the provinces the country is divided into the Yukon Territory and the Northwest Territories. The political characteristics and the resources of each of these areas are reviewed at pp. 23-27 of the 1946 Year Book. Each of the provinces is sovereign in its own sphere, as set out in the British North America Act (see pp. 40-60 of the 1942 Year Book) and, as new provinces have been organized from the Dominion lands of the Northwest, they have been granted political status equivalent to that of the original provinces. Yukon and the Northwest Territories with their boundaries of to-day are administered by the Dominion Government.

## PART II.-GEOLOGY*

The following geological time scale will assist the reader by showing the relationship of the various formations mentioned in this article.

GEOLOGICAL TIME SCALE

| Era | Sub-Era | Period | Orogeny |
| :---: | :---: | :---: | :---: |
|  | Quaternary....... $\{$ | Recent <br> Pleistocene |  |
| Cenozorc............................ | Tertinry | Pliocene Miocene Oligocene Eocene | Laramide |

| Proterozorc (late Precambrian).... |  | Keweenawan Huronian | Killarnean |
| Archean (early Precambrian)...... |  | Timiskamian Keewatin | Algoman <br> Laurentian |

In the section on Physical Geography, pp. 2-3, the natural physiographic divisions have been briefly described and are illustrated by the map at p. 4. These physiographic divisions depend fundamentally on underlying differences of geological structure and hence are geomorphic ones as well as physiographic. For this reason the detailed descriptions of these divisions are taken up here from the standpoint of both physiography and geology.

The Appalachian and Acadian Regions.-The Appalachian and Acadian Regions include that part of Canada lying south of the St. Lawrence River and east of a line running from Quebec city south to the foot of Lake Champlain. The Appalachian Region, whose eastern boundary in Canada is the Restigouche River and Chaleur Bay, is a continuation of the Appalachian Mountain system of the eastern United States. The Acadian Region lies to the southeast and comprises the Provinces of New Brunswick, Nova Scotia, and Prince Edward Island.

The region is for the most part mountainous or hilly. In southeastern Quebec the Notre Dame Mountains, consisting of three roughly parallel ridges trending northeast, reach elevations up to 3,100 feet and in Gaspe Peninsula, the Shickshocks, actually a continuation of the same range, have heights up to 4,160 feet. Many of the mountain summits are flat-topped, showing that the region is really a dissected plateau. The Acadian Region is also largely one of plateaux, ridges, and valleys. In central New Brunswick is a rugged area with summits rising over 2,000 feet.

[^13]To the east of this is a lowland area of some 10,000 square miles comprising the eastern portion of the Province and all of Prince Edward Island. This area nowhere rises over 600 feet above the sea. Nova Scotia is largely an upland region which, in the northern part of Cape Breton Island, reaches elevations of 1,500 feet.

The rocks of the Appalachian and Acadian Regions include sediments, volcanics, and intrusives, chiefly of Palæozoic age. In a few places rocks of Precambrian age are known and along the Bay of Fundy coast are a few areas underlain by Mesozoic rocks. The lowland area of eastern New Brunswick is underlain by littledisturbed Carboniferous beds. Elsewhere, however, throughout the region, the rocks are nearly everywhere thrown into folds with axes trending in a northeast direction and are, in addition, broken by faults giving rise to a complex structure typical of the Appalachian Region in general. The chief period of deformation in this part of Canada, however, was during the Devonian, whereas to the south, in the United States, the greatest disturbances took place later during the Permian at the close of the Palæozoic.

At Saint John city, in southern New Brunswick, is exposed a series of early Precambrian rocks made up of limestone, dolomite, quartzite, and gneiss. It is overlain by a thick succession of late Precambrian volcanic rocks upon which rest Cambrian strata. Precambrian rocks also occur in Cape Breton Island. In Gaspe Peninsula along the north side of Chaleur Bay the Macquereau series, composed largely of quartzite, rests unconformably below Ordovician strata and may be Precambrian. Precambrian rocks have been described as occurring in central New Brunswick and in southwestern Quebec. Some of the occurrences are probably, however, of Palæozoic age.

In the mainland of Nova Scotia a thick series of altered sediments, known as the Meguma or Gold-bearing series, covers wide areas and is believed to be of late Precambrian age. The lower half of its 35,000 feet thickness consists dominantly of quartzites and the upper half of slates. The series is folded along northeast lines and is broken by northwest faults, the horizontal displacement of some of which exceed a mile. The rocks are intruded by dykes and sills of diabase and by batholithic masses of grey and red granites of Devonian age.

Cambrian formations occur in southeastern Quebec, in southern New Brunswick, and in northeastern Cape Breton. In early Ordovician times sediments were deposited in the St. Lawrence River Region. The Sillery formation of red and green shales with interbedded sandstone has, at Quebec city, a thickness of 2,000 feet. A younger series, called the Lévis, consists of dark shales and thin-bedded limestones with a thickness of possibly as much as 5,000 feet. It forms a band varying in width from 6 to 35 miles; its beds have been folded, faulted and, in places, overturned. Mid-Ordovician rocks occur in southwestern Quebec and in Gaspe and northern New Brunswick. Late Ordovician rocks are developed in the Matapédia River and Chaleur Bay districts. At the close of the Ordovician there were extensive mountainbuilding movements. Masses of peridotite which intrude the Ordovician and older rocks may have originated at this time.

Silurian rocks are exposed in southeastern Quebec, in Gaspe, in New Brunswick, and in Nova Scotia at Arisaig and a few other places. The next marine invasion was in Lower Devonian time when great thicknesses of sediments with interbedded volcanics accumulated in New Brunswick and Gaspe. During the Middle Devonian, a thick series of sandstones accumulated in Gaspe. In the Upper Devonian there
was deposited in the vicinity of Maguasha, on the Gaspe coast, a group of conglomerates, sandstones, and shales, one member of which is noted for the fossil fish it has yielded. Towards the close of the Middle Devonian, the whole Appalachian and Acadian Regions were affected by mountain-building movements accompanied by the intrusion of batholithic masses of granite.

Rocks of Carboniferous age underlie the lowland belt forming much of the southeastern half of New Brunswick, the part of Nova Scotia north of the Cobequid Mountains, part of the lowland south of these mountains, southwestern and northeastern Cape Breton Island and all of Prince Edward Island. With the Lower Carboniferous or Mississippian rocks occur the extensive gypsum deposits and the salt beds of Nova Scotia and New Brunswick and also the bituminous shales of these Provinces. The Upper Carboniferous or Pennsylvanian strata contain the coal measures which occur at Sydney and other places in Nova Scotia, and at Minto in New Brunswick. The Carboniferous beds have in places been folded and faulted but there are wide areas in which the strata have been but little disturbed since they were deposited.

Red sandstones deposited during the Triassic period are exposed in a number of small areas along the Bay of Fundy coast. In places, as at North Mountain, Nova Scotia, the beds are accompanied by lava flows. During the Pleistocene the region was glaciated. At certain stages there were apparently local gathering grounds for glaciers in central New Brunswick and in central Gaspe.

The chief mineral deposits of the Appalachian and Acadian Regions include coal, asbestos; gypsum and barite. The coal and gypsum, as has already been mentioned, occur in the Carboniferous measures. Asbestos occurs in serpentinized peridotite in southeastern Quebec. Chromite also occurs with the peridotite. Gold occurs in quartz veins in the Gold-bearing series of Nova Scotia. Many of the deposits are located on domes or pitching anticlines. Zinc-lead deposits occur in central Gaspe in veins cutting lower Devonian beds. At Stirling in the southern part of Cape Breton Island, zinc, lead, and copper sulphides occur in a series of volcanic rocks. Copper and iron pyrite deposits occur in southern Quebec. Salt occurs in Nova Scotia and New Brunswick.

The St. Lawrence Region.-The St. Lawrence Region is a lowland which stretches westward from Quebec city for a distance of some 600 miles to Lake Huron. It begins as a narrow strip bordering each side of the St. Lawrence River and gradually widens until at Montreal it has a width of 120 miles. Its northern border continues on up the Ottawa River but 50 miles west of Ottawa the belt is interrupted by a projection of the Canadian Shield known as the Frontenac axis which extends southward crossing the St. Lawrence between Kingston and Brockville. West of this axis the lowland occupies a triangular area lying between Lakes Ontario, Erie, and Huron and an east and west line drawn from Kingston to the south end of Georgian Bay. This western part in turn falls into two divisions separated from each other by a prominent topographic feature, the Niagara escarpment, an abrupt, eastward-facing rise of 250 to 300 feet, extending from Niagara River in a northwest direction to Bruce Peninsula. Still farther to the northwest, the escarpment is continued by the northward-facing cliffs of Manitoulin and adjacent islands.

The St. Lawrence Region is underlain by Palæozoic strata ranging in age from late Cambrian to late Devonian. For the most part the beds lie flat or at low angles. In places, however, as in southwestern Ontario, they are folded into broad low domes
and elsewhere, as in the vicinity of Ottawa, they are traversed by faults of considerable magnitude. In general the beds dip away from the Canadian Shield so that as one proceeds in a direction leaving the Shield, progressively younger strata are encountered.

The strata are almost wholly of marine origin and were deposited in seas that spread out over a large part of the continent. Differential movements caused these seas to advance and retreat, so that the sediments which were deposited in them vary considerably. There are also local gaps in the sedimentary sequence caused by these movements, but the movements were so gentle that there are no angular unconformities.

The oldest of the Palæozoic formations is the Potsdam sandstone of Upper Cambrian age. It is followed by a thick succession of Ordovician strata. In the Ottawa-Montreal region these beds have a thickness of about 6,000 feet and are the youngest measures there are. They include Beekmantown or early Ordovician dolomitic limestones, Chazy sandstones, shales, and limestones, Black River limestone, and Trenton limestone deposited during the Middle Ordovician, and Upper Ordovician beds made up of the Utica shale, Lorraine shales with limestone and sandy layers, and the Richmond group of shales and limestones. The Lorraine and Richmond rocks are developed chiefly southeast of the St. Lawrence.

West of the Frontenac axis and east of the Niagara escarpment, the middle division of the St. Lawrence Region is also underlain by Ordovician strata. Along the escarpment these beds are succeeded by Silurian measures of which the lowest group is the Medina composed of sandstone, shale, and shaly limestone. These beds are succeeded by shales and limestones of the Clinton group which in turn are followed by the Rochester shale and Lockport dolomite of the Niagara group. Above the Lockport is the Guelph dolomite and this in turn is overlain by the Cayuga group made up of the Salina formation and the Lower Munroe dolomite and shale. The total thickness of the Silurian measures is around 1,750 feet.

The Cayugan beds are terminated by an erosion surface upon which rest Devonian beds about 1,000 feet in thickness. The succession from bottom to top is as follows: Sylvania sandstone, Upper Munroe dolomite, Oriskany sandstone, Onondaga limestone, Delaware limestone, Hamilton limestone and shale, Huron shale, and Port Lambton shale.

The only intrusive rocks of the St. Lawrence Region occur in the eastern part in what are known as the Monteregian Hills. These are eight in number occurring along an approximately east and west line some 50 miles long. The most westerly is Mount Royal at Montreal. The hills are circular or oval in outline and rise abruptly to elevations of from 600 to 1,200 feet above the surrounding flat country. The flanks of the hills consist of altered and hardened sediments and the centres are composed of intrusive rocks, including various alkali types such as nepheline syenites, essexites, etc. The age of these intrusives may be as late as Pliocene.

The whole region was overrun by Pleistocene ice sheets and much of the bedrock is covered by debris left by these glaciers. At Toronto, stratified deposits carrying plant and animal remains lie between deposits of glacial material. These layers show that the region was crossed at least three times by ice sheets coming from central Ungava and that between these advances the region had a climate considerably milder than at present. In late Pleistocene time the region was depressed and an arm of the sea extended up the St. Lawrence Valley as far at least
as Brockville and up the Ottawa River valley beyond Ottawa. At Ottawa, the sea stood at least 688 feet above its present level. In this sea, layers of clay were deposited and along its shores deposits of sand accumulated. Eventually uplift of the land caused the withdrawal of this sea to which the name Champlain is given.

The chief mineral occurrences of the St. Lawrence Region include petroleum and natural gas which are produced in southwest Ontario, salt from the counties bordering Lakes Huron and St. Clair, and gypsum from the Grand River valley. Other materials which are available at many places include limestone and dolomite used in chemical and metallurgical industries, rock for construction purposes and clay for brick, tile, and cement manufacture.

The Canadian Shield.-Comprising an area of nearly 2,000,000 square miles, or more than one-half of the whole of Canada, this plateau-like region rises only locally to more than 1,500 or 2,000 feet above sea-level, except in Labrador where altitudes up to 5,000 feet are reached in certain places. Its most characteristic feature is its low relief. Standing anywhere on an elevation an even skyline meets the eye in every direction. Throughout most of the region the hills and ridges rise no more than 100 or 200 feet above the level of the adjacent lakes and valleys; however, along the southern margins of the Shield and in northeastern Quebec along the Labrador border, the relief is considerably more rugged. Though the general relief is low, the region in detail has a very irregular topography consisting of low, hummocky hills and ridges separated by depressions which are commonly occupied by lakes or muskegs. Lakes of all sizes and shapes, and containing numerous islands, dot practically the entire area, in places giving the appearance of a drowned area with only the ridge tops appearing. The rivers as a rule are mere successions of lake expansions connected by stretches in which rapids and waterfalls are numerous.

The rocks of the Shield are mainly of Precambrian age. They form a continental mass which in Precambrian time extended out in all directions beyond the present limits of the Shield. During the succeeding Palæozoic and Mesozoic Eras the Shield was many times at least partly flooded by seas which advanced over it and later retreated. The sediments that accumulated in these seas were largely swept away by later erosion.

From the beginning of the Cambrian period on to the present, the Shield has been a stable mass. During this time it has suffered vertical movement at intervals but it has been unaffected by any folding or mountain-building deformation. Its earlier or Precambrian history, however, was very complex and included periods of volcanism, sedimentation, folding, mountain-building, and igneous intrusion, and also long intervals of quiescence in which erosion was the active process.

Precambrian time can be conveniently divided into two major divisions, the Archæan or early Precambrian and the Proterozoic or late Precambrian. The Archæan in turn falls into two subdivisions, in the earlier of which volcanism took place on a tremendous scale and lavas and tuffs, usually referred to as Keewatin, accumulated over wide areas in thicknesses measured in thousands of feet. With the volcanics are locally associated sediments, in many places altered to mica schists and gneisses. In the Rainy Lake region of western Ontario a thick succession of such sediments, known as the Couchiching series, lies below the Keewatin lavas. In northern Manitoba and Saskatchewan, interbedded lavas and sediments of probably similar age are referred to as the Wekusko group. In eastern Ontario and southwestern Quebec a thick series composed of limestone, quartzite, and sedi-
mentary gneiss, known as the Grenville series, is also usually regarded as having been deposited during this first part of the early Precambrian Era. This period was terminated by widespread but gentle folding movements accompanied by some intrusions of granite.

During the second period of the early Precambrian, a thick formation of clastic sediments was deposited. These are commonly referred to in northern Ontario and Quebec as the Timiskaming series. In northern Manitoba and Saskatchewan similar sediments apparently occupying a corresponding stratigraphic position are referred to as the Missi series. Certain series of sediments, such as the Sudbury of the Sudbury region, the Doré at Michipicoten, the Ridout of the Woman River area, and others, are of disputed age being regarded by some geologists as Timiskamian and by others as belonging in the Keewatin. The period of Timiskamian sedimentation was succeeded by a mountain-building revolution which was accompanied by widespread intrusion of granite, commonly referred to as the Algoman batholiths. The time of the Algoman intrusions was a great mineral-forming epoch. Most of the gold ores of the Shield, and the copper-zinc sulphide replacement deposits, such as those of Noranda, Flin Flon, Sherritt-Gordon, and many others, were formed at this time from mineralizers given off by these intrusives. A long period of quiescence followed in which erosion reduced the region to one of low relief.

The Proterozoic or late Precambrian included the long era during which thick series of sediments were deposited on this eroded complex of Archæan rocks. These strata are best developed in the region around Lake Superior and north of Lake Huron. They belong to two systems, an older known as the Huronian and a younger called the Keweenawan. North of Lake Huron the Huronian strata consist of an older series called the Bruce-made up of conglomerates, quartzites, and impure dolomitic limestone, totalling in thickness up to 12,000 feet-and a younger series named the Cobalt-made up of boulder conglomerate and other materials of probable glacial origin, overlain by quartzite and slightly calcareous quartzite, the whole having a thickness up to 10,000 feet. These two series are separated by an unconformity but the time interval represented was probably not great. The beds for the most part lie with only gentle dips except on the north shore of Lake Huron and eastward where they stand at high angles as a result of mountain-building movements. The Huronian rocks are intruded by dykes and sills of quartz diabase extending over wide areas of northeastern Ontario. These intrusions of what is called the Nipissing diabase attracted the silver-cobalt camp of Cobalt, and subsidiary camps. Copper is associated with this diabase in the western part of the region. The Huronian rocks are cut by masses of Killarney granite intruded during the mountain-building period at the close of the Huronian to which reference has been made, and both the Huronian sediments and the Nipissing diabase are cut by small masses of a younger granite which is rich in alkalies.

At Sudbury a series of volcanic and sedimentary rocks filling the basin of the nickel irruptive is known as the Whitewater series. It has usually been referred to as Upper Huronian. The nickel-bearing irruptive was intruded at the base of this series as a saucer-shaped sill or laccolith, 37 miles long and 17 miles wide. It differentiated from norite at the base to micropegmatite at the top. This intrusive is the source of the nickel-copper ores of the region, the deposits occurring along the outer margins of the mass or in offsets where the mass injects the surrounding rocks. Cutting all these rocks are trap and olivine diabase dykes.

North of Lake Superior is a group of late Precambrian rocks which has been described under the term Kaministikwan. The group includes the Animikie series of conglomerate, iron formation, and shale; the Sibley series of conglomerate, sandstone, limestone, and tuff; and the Osler series of lavas, conglomerate, sandstone, and tuff. Strata resembling the Animikie rocks of the Lake Superior region also occur in the central part of Ungava Peninsula and on the Belcher Islands and the east coast of Hudson Bay.

In the Northwest Territories a group of Proterozoic rocks known as the Great Slave group consists of sediments and volcanics and rests on an old erosion surface crossing granitic intrusives and the upturned edges of Archæan sediments. The group consists of a lower part made up of conglomerate, sandstone, quartzite, shale, iron formation, limestone, tuff, agglomerate, andesite, and dolomite, and an upper part of dolomite, shale, limestone, sandstone, and lavas with interbeds of argillite. Still farther north in the Bathurst Inlet region of the Arctic coast are Proterozoic strata. Resting on granite is the Epworth dolomite which has a thin basal conglomerate and grades up through arkose into a cherty dolomite. Above this is the Kanuyak formation, made up of fine-grained calcareous tuffs and tuff-conglomerates, which at one place shows a structural unconformity with the Epworth beds. A still younger formation is the Goulburn quartzite which contains rounded fragments apparently of the Epworth and Kanuyak. The next younger rocks are those of the Coppermine River series to which reference will be made later.

The Keweenawan, the later division of the Proterozoic, saw the accumulation of great thicknesses of clastic deposits, in places accompanied by volcanic rocks, over various parts of the Shield. The type area is on the south side of Lake Superior where thousands of feet of sediments and lavas are exposed. On the Canadian side several smaller areas occur on the east coast of Lake Superior.

In the northwestern part of Canada are wide areas underlain by flat-lying or only gently dipping beds which are regarded as late Precambrian in age and are commonly correlated with the Keweenawan. The beds consist for the most part of sandstone and arkose with some conglomerate and shale. South of Lake Athabaska is a broad area of these rocks to which the term Athabaska series has been applied. Smaller patches also occur north of the lake and to the northeast is another considerable area along the Dubawnt River. Interbedded basaltic flows and diabase dykes occur in places with these rocks. On Great Slave Lake the-Et-then series of clastic sediments is considered to be of equivalent age, while farther north on the Coppermine River and at Bathurst Inlet a series of interbedded sediments and volcanics is known as the Coppermine River series. It carries notable copper deposits. Trap dykes, commonly considered as Keweenawan in age, are of wide occurrence over the entire Shield and are the youngest of the Precambrian rocks.

During the Pleistocene or Glacial period, the Shield was heavily glaciated by huge glaciers of continental extent. One of these sheets had its gathering ground west of Hudson Bay and another in the heart of Labrador. From these centres the ice moved out in all directions. In its advance it scoured off the residual soil, smoothed down the topography, polished and striated the rock surface and, by scattering debris irregularly over the surface, completely disorganized the drainage. The result was the formation of the numerous lakes which are everywhere so characteristic a feature of the region. On the retreat of the glaciers, large temporary lakes stood in places in front of ice and in these accumulated clay and other fine stratified deposits forming what are known as clay belts.

The Canadian Shield is a great store-house of mineral wealth and hence offers an attractive field to the prospector. It is not because its rocks are of Precambrian age that such is the case. It is rather because parts of it offer geological conditions favourable for the occurrence of minerals. Ore deposits the world over have, for the most part, resulted from mineralizing solutions given off from masses of igneous rocks during the late stages of their intrusion and cooling and, where there is an association of older rocks invaded by intrusives, mineralization is usually found, no matter what age the rocks may be. During the Precambrian age the rocks of the Shield, as has already been mentioned, were extensively invaded from time to time by intrusive masses of composition varying from acid to basic. Reference has been made to the nickel-copper deposits associated with the Sudbury irruptive, the silver-cobalt ores occurring with the Nipissing diabase, the gold deposits of Ontario and Quebec associated with porphyry and other granitic rocks. The gold-bearing copper ores of western Quebec, the zinc-copper ores of northern Manitoba, the pitchblende and silver deposits of Great Bear Lake are other important mineral occurrences which are being developed. In eastern Ontario and western Quebec, where granite has intruded limestone and other sediments of the Grenville series, there occur deposits of mica, graphite, feldspar, magnesite, fluorite, kaolin, molybdenite, talc, apatite, and other minerals.

The Interior Plains.-The Interior Plains division of Canada is part of a great plains region in the interior of the continent stretching from the Gulf of Mexico to the Arctic Ocean. In Canada it extends from the Canadian Shield on the east to the Cordillera on the west. At the United States border it has a width of 800 miles but in the extreme northwest at the mouth of the Mackenzie River it is less than 100 miles wide. Throughout most of the region the underlying Palæozoic, Mesozoic, and Tertiary rocks are nearly flat-lying. In the northwestern part of the area, however, the Franklin Range, which lies between Great Bear Lake and Mackenzie River, is composed of folded strata. In western Alberta, also, the rocks are folded and faulted.

Geologically the region falls into three zones. On the east a narrow plain known as the Manitoba Lowland is developed on flat-lying Palæozoic strata which range in age from Ordovician to Devonian. In Manitoba, the Ordovician beds rest on the Precambrian rocks of the Canadian Shield and commonly present a low escarpment facing the Shield. To the northwest this zone broadens to form the Mackenzie Lowland. Here over wide areas Silurian measures form the base of the Palæozoic section. In the Franklin Mountains, however, red quartzites and sandstones of the Mount Clark formation are regarded as of probable Lower Cambrian age. They are succeeded by Middle and Upper Cambrian sandstones and shales. Beds regarded as of probable Ordovician age are also known to occur at the base of Mount Kindle east of Wrigley and beneath the Silurian dolomite of the Great Slave Lake area. Over considerable areas strata of Cretaceous age also occur in the Mackenzie Lowland region, as for example on Liard River, on the western shores of Great Bear Lake, and at several places along the Mackenzie. At the mouth of Bear River is an area covered by partly consolidated Tertiary sands and claycarrying lignite beds.

The second zone includes much of southwestern Manitoba and southern Saskatchewan and Alberta. It is a broad belt underlain by Cretaceous rocks. Its eastern border, where these strata overlap the underlying Palæozoic sediments, is an abrupt
rise known as the Manitoba escarpment. Its surface gradually rises from an elevation of from 1,000 to 2,000 feet at the escarpment to from 4,000 to 5,000 feet at the border of the mountains on the west.

The third zone consists of the plateaux of Wood Mountain and the Cypress Hills which rise up to elevations of 1,000 feet above the level of the surrounding region. They are composed of flat-lying beds of Tertiary age.

In Pleistocene time glacial drift was widely scattered over the region. On the retreat of the ice deposits, clay accumulated in lakes which stood in front of the waning ice sheet. Much of southern Manitoba formed the bed of glacial Lake Agassiz.

The Interior Plains Region is the great wheat-producing area of Canada. Coal mining is an important industry. Bituminous coal and lignites are produced in large quantities in Alberta and in small amounts in Saskatchewan from Cretaceous and Eocene beds. Natural gas is produced in large quantities from various horizons of the Cretaceous in Alberta. Petroleum has been found in the Devonian beds of the lower Mackenzie Valley north of Norman, in Cretaceous strata at a number of localities in Alberta, and in Palæozoic rocks in Turner Valley. Along the Athabaska River the basal member of the Lower Cretaceous, known as the McMurray or the Tar sands, is heavily impregnated with bitumen. Gypsum is obtained from the Palæozoic rocks of Manitoba and also occurs in northern Alberta. Deposits of lead and zinc occur in Devonian limestones at certain places south of Great Slave Lake.

The Cordilleran Region.-The Cordilleran Region comprises the mountainous country bordering the Pacific Ocean. The part of it that lies in Canada has an average width of 400 miles, a length in a northwest direction of 1,500 miles, and an area of 600,000 square miles. It is made up of three principal zones. On the east is the Rocky Mountain Range; along the coast is a broad belt of mountains known as the Coast Range, while between these two lies a third or intermediate belt made up of plateaux and mountain ranges. The Rocky Mountains have a maximum width of 100 miles and have many peaks with elevations of from 10,000 to 12,000 feet. The Coast Range, varying in width from 50 to 100 miles, rises abruptly from the coast to peaks which along the axis of the range reach elevations of from 7,000 to 10,000 feet. The interior plateau and mountain belt is represented in the north by the Yukon plateau, a gently rolling upland broken into a series of flat-topped ridges by valleys several thousand feet deep. In the southern part of British Columbia the interior region is a plateau rising 3,000 to 4,000 feet above sea-level and cut by valleys a thousand or so feet in depth. To the west this plateau either joins the Coast Range directly or else is separated from it by the Cascade Range and other mountains. To the east between the plateau and the Rocky Mountains are a series of ranges separated by northwest-trending valleys. The Selkirk Range with peaks over 11,000 feet is the most important of these.

The rocks of the Cordilleran Region range in age from Precambrian to Recent. The Rocky Mountain belt is composed of great thicknesses of Precambrian, Palæozoic, and Mesozoic sediments, in most places unaccompanied by plutonic or volcanic rocks. The Coast Range is essentially a complex batholith of granite of late Jurassic or early Cretaceous age cutting and enclosing sediments and volcanic rocks of earlier Mesozoic age. The Interior belt of plateaux and mountain ranges is underlain by Palæozoic, Mesozoic, and Tertiary sediments and volcanic rocks. The preTertiary beds are cut by numerous bodies of plutonic rocks and in several districts strata of Precambrian age are exposed.

The geological history of the Canadian Cordilleran Region may be briefly summarized as follows: In Precambrian time sediments which now are in the form of limestones, gneisses, and schists were deposited in the interior belt. In Yukon these strata are known as the Yukon group and in central British Columbia as the Shuswap group. These have been altered by intrusive rocks and included with them may be metamorphosed phases not only of Precambrian rocks but also of much later rocks. In late Precambrian time a thick series of argillites and related sediments accumulated on the site of the southern Rockies and farther west in the region now occupied by the Purcell Mountains. The Purcell series, consisting dominantly of quartzites, has a thickness of over 20,000 feet.

From the Cambrian to the Carboniferous, sedimentation progressed in the Rocky Mountain and Purcell region. Cambrian strata are best known in the Bow and Kicking Horse Valleys along the main line of the Canadian Pacific Railway, where a total thickness of more than 18,000 feet of Cambrian beds are exposed. Another thick section can be seen in the Mount Robson district along the Canadian National Railway. In both these areas the Cambrian beds are succeeded by Ordovician strata. Silurian limestone occurs south of Kicking Horse River, in Yukon, and in the western part of Mackenzic Mountains. In Devonian time the whole eastern Cordilleran Region was submerged and calcareous beds, in places several thousand feet thick, were deposited. In the western part of the Rocky Mountains they in places succeed Silurian beds, but in the south and at various places in the eastern part of the Rockies they rest on late Precambrian or Cambrian strata. Carboniferous beds succeed the Devonian strata at many places in the Rockies. Around Banff they include a thickness of 5,000 feet. In the interior belt around Kootenay Lake, Carboniferous beds rest directly on Precambrian rocks.

During the Triassic and Jurassic, sedimentation and volcanism on a vast scale occurred in the region from the Rocky Mountains westward to the Pacific Ocean, and on the site of what are now Vancouver Island and the Queen Charlotte Islands. In late Jurassic and early Cretaceous times this whole region was deformed. The Selkirk and Coast Ranges were produced and the Coast Range batholith was intruded. In later Cretaceous time, sediments were deposited on both sides of these Jurassic Ranges.

Long-continued erosion in late Cretaceous time reduced the mountains to a peneplain and unroofed their granite cores. During the Eocene occurred the great Laramide revolution which produced the Rocky Mountains. The rocks of this belt were folded and faulted and in places great blocks of older rocks were thrust over younger beds. Local intrusions of igneous rock accompanied the deformation. In the Oligocene, local movements accompanied by igneous intrusions again took place. During the Miocene period great fissure eruptions took place while during the succeeding Pliocene period there was further volcanism with general uplift and subsequent valley cutting. In the Pleistocene or Glacial period most of the Cordilleran Region with the exception of some of the higher ridge tops was covered by what is known as the Cordilleran ice sheet. The whole region was depressed at this time but in post-glacial time there has been uplift ranging from 450 to 1,000 feet.

The Cordilleran Region is a great mineral area. Most of the deposits are related to the Coast Range batholith. They occur principally along the borders of the batholith and in the older rocks surrounded by the intrusives and were produced by mineralizing solutions given off from the igneous masses. Some of the more important deposits are the copper ores of Hidden Creek, Britannia, and Allenby

Mountain, the gold-silver deposits of Salmon River district, the silver-lead-zinc ores of the Slocan, and the Sullivan ore body, the largest silver-lead-zinc mine in the world. Other mineral deposits include coal, which occurs in the Rocky Mountains and on Vancouver Island in beds of Cretaceous and also of Tertiary age, iron ores in Vancouver and Queen Charlotte Islands, placer gold in Yukon and in the Cariboo country in gravels of Tertiary age. and numerous other mineral occurrences.

The Arctic Archipelago and Hudson Bay Lowland.-The Arctic Archipelago includes the islands lying north of the Canadian Shield. They have a land area of over 500,000 square miles. Except for a northward extension of the area of the rocks of the Canadian Shield, the islands for the most part are a series of plateaux formed of gently dipping strata.

The main Precambrian belt extends through Baffin Island to Ellesmere Island. Its rocks consist chiefly of granite and granite-gneiss intrusive into various types of gneisses and schists. Palæozoic strata, including Cambrian, Ordovician, Silurian, Devonian, and Carboniferous beds, cover most of the remaining area. Triassic rocks occur on the Sverdrup Islands and a number of areas are underlain by Tertiary beds some of which are coal-bearing. Coal is also associated with some of the Upper Carboniferous strata at a number of places.

The Hudson Bay Lowland bordering the west side of Hudson Bay has a length in a northwest direction of 800 miles, a width of from 100 to 200 miles and an area of 120,000 square miles. It rises from sea-level with a scarcely perceptible gradient to a height of about 400 feet. It is underlain by flat-lying rocks most of which are of Palæozoic age ranging from Ordovician to Devonian. An area of Mesozoic beds carrying lignite occurs in the Moose River Region.

The seas in which the Palæozoic rocks which are now exposed in the Arctic Archipelago, the Hudson Bay Lowland, and the St. Lawrence Region were deposited extended at times widely over the Canadian Shield. Palæozoic outliers are known on Lake St. John, Lake Nipissing, and Lake Timiskaming in the south, and on Lake Nicholson west of Hudson Bay. These outliers are mere remnants which have survived the erosion of Mesozoic and Tertiary time.

## PART III.-SEISMOLOGY

That branch of science which treats of earthquakes has received considerable attention in Canada during recent years. It has been generally recognized that earthquakes are frequent in regions of adjustment of strata and are characteristic of the newer mountain and coast regions where steep level-gradients occur. The energy radiated from an earthquake in the form of elastic waves in the earth is, however, recorded on sensitive seismographs up to great distances, even to the antipodes of the earthquake. Seismological researches, while regularly recording the routine statistical data regarding earthquakes, seek also to determine particular causes. Moreover, they endeavour to ascertain the physical properties of the earth's crust and interior as revealed by the peculiarities in the 'time-distance curves' for earthquakes.

For further information on this subject, see pp. 7-9 of the 1943-44 edition of the Year Book. A description of the Cornwall-Massena Earthquake, Sept. 5, 1944, is given in the 1945 edition, pp. 24-26.

The British Columbia Earthquake, June 23, 1946.*-One of the most severe earthquakes on record, which has affected any part of Canada, occurred along the central east coast of Vancouver Island on June 23, 1946, at $10^{\mathrm{h}} 13^{\mathrm{m}} 19{ }^{\mathrm{s}}$, a.m., P.D.T. The tremors were well recorded on seismographs at all stations in North America and excellent seismological records were also obtained from a number of stations in Europe.

The epicentre, tentatively designated by the triangulation from seismograph records, was at Lat. $49^{\circ} 9^{\prime}$ N., Lat. $125^{\circ} 3^{\prime}$ W., a point about ten miles S.S.W. of Campbell River. This position and also the focal time given above are subject to minor amendment when the collected seismograms now being assembled are studied later at the Dominion Observatory, Ottawa.

A field study of the earthquake indicates that the epicentre was not even approximately a point, but was certainly a line extending along the eastern edge of Vancouver Island from Deep Bay, opposite the south end of Denman Island to Campbell River. Parts of Quadra Island and Read Island were also affected.

The tremors continued, at Deep Bay for example, for about 30 seconds. This was the estimate of reliable observers throughout much of the main epicentral region above designated.

There were marked changes in the land, particularly at Maple Guard Spit which flanks Deep Bay, at Goose Spit and Drew Harbour on the east side of Quadra Island and near Burdwood Bay on the east coast of the southern promontory of Read Island. Cracks many feet in depth and up to 18 inches in width opened up for lengths to several hundred feet on the sand spits. An area of flat land, 15 to 20 acres in extent was down-dropped in level cultivated fields on Read Island. Some of the faces of the drops were 20 to 30 feet in depth. In addition there was much surface damage of a general nature such as broken chimneys, damaged goods in stores, broken crockery and glassware, windows, etc.

At many places along the coast from Deep Bay to above Campbell River, water spouts were seen; these were described in some cases as 30 feet in height and left permanent records on the sand spits, in the form of craters or "sand blows", which varied from a few inches across to craters five feet in diameter and three feet in depth, after several weeks of exposure to rain. At the time of the earthquake some of these "could not be bottomed with a twelve-foot pole"

The coastal waters in many places were found to have increased in depth just off shore, by measured amounts up to 100 feet. At the west end of Comox Lake, a measured water depth of 33 feet was left where, previously, there had been a beach, well above water. No report, authenticated or otherwise, indicates any place where a rise in the ground occurred, or where marine depths were lessened, except for a long welt which appeared on the beach at Westview, on the mainland south of Powell River. It is believed that all marine depth changes will be in the nature of increases.

In addition to the epicentral region of which no doubt is entertained, there is another section which may have participated in the true tectonic shock. This includes Powell River (unlikely), the Alberni Canal opposite Franklin Creek, and some inlets near the outer end of Alberni Canal (unlikely).

[^14]On the Alberni Canal opposite Franklin Creek, considerable changes in depth certainly occurred near the shore, and seem, according to some soundings made, to have been found also in the channel. More than a mile of telegraph cable was lost at this point by the Canadian Pacific Railway Telegraphs and soundings indicated increases in depth of more than 100 feet at some points.

There were many landslides, not only in the primary and secondary epicentral regions, but on most of the lakes on Vancouver Island and even in the Fraser Valley, more than 40 miles east of Vancouver. In many cases, an alluvial fan, extending from the steep rocks bordering the shores of these lakes and resting with its submerged outer rim on the marginal shelf, slipped off into deep water, leaving a steep cliff face, sometimes 30 feet or more in height, at the point where the fan broke from. the shore. Local waves of some violence occurred at such points, but general "tidal waves" did not result. Seiches of moderate height were observed for some hours on many of the lakes.

Damage, becoming notably less with increasing distance from the epicentre, was reported throughout Vancouver Island, adjacent territory on smaller islands and on the mainland. The tremors were felt as far south as Portland, Ore., U.S.A., and as far east as Kelowna in the Okanagan Valley, B.C. The point farthest north from which a report was received was Smithers, but it was not a general experience north of Ocean Falls and Bella Coola. The evidence is conclusive that this earthquake was not associated with the Queen Charlotte Islands nor with any submarine fault off the Continental Shelf in the Pacific.

The earthquake was, in general experience, preceded and accompanied by a heavy subterranean roar. At several places, however, competent observers indicate that there was absolutely no sound until the heavy shock occurred.

Unique among earthquakes of this magnitude, only one aftershock was recorded. This was felt generally throughout the main and secondary epicentral districts but was not sufficiently strong to cause any damage. Two other light tremors were reported.

## PART IV.-FAUNA AND FLORA

See list at the front of this edition for special material, under this heading, published in previous editions of the Year Book.

## PART V.-LANDS, PARKS, SCENIC AND GAME RESOURCES

Canada is a comparatively new country with resources that are, for the most part, in the early stages of development. The fur, fishery and forest resources have, it is true, been the basis of trade for two or three hundred years, but exploitation on the present commercial scale is of relatively recent growth. Nevertheless, much effort has been directed to conservation in the cases of those resources that admit of such methods. Details of such policy are given in the chapters dealing with the individual resources.

Numerous surveys and investigations of the extent and value of the resources have been made from time to time and the results have been reviewed in special publications. Detailed information regarding individual natural resources will be found in the later chapters.

The treatment of resources considered below is concerned only with those summary phases of the subject that can be regarded as falling under the definition of physiography used in its wider interpretation. A classification of lands resources, information on the National Parks and resources in game and scenery properly fall under this head.

## Section 1.-Lands Resources

The figures of Table 1 are based on estimates from the Decennial Census of 1941 in regard to agricultural lands, the Dominion Forest Service as regards forested lands, and from the Surveyor General and Chief of the Surveys and Engineering Branch as regards total areas of Canada and of the provinces; they show how the total land area of Canada is made up as between present and potential agricultural lands, present and potential forested lands, and lands that are unproductive as regards surface resources. Between the totals of present and potential agricultural lands and the totals of forested lands there is, of course, duplication to the extent of the agricultural lands under forest.
1.-Land Area of Canada, Classified as Agricultural, Forested or Unproductive

Note.-The land area of Canada is shown classified by tenure in Chapter XXXI.

| Description | Prince Edward Island | Nova Scotia | New Brunswick | Quebec | Ontario | Manitoba |

## Section 2.-National and Provincial Parks

National Parks of Canada.*--The National Parks of Canada $\dagger$ had their beginning in 1885 when an area of 10 square miles around the hot mineral springs at Banff, Alta., was reserved for public, use. In little more than 60 years the system has grown to include 26 parks with an area of over 29,660 square miles, and stretches from the Selkirk Mountains in British Columbia to the east coast of Cape Breton Island, Nova Scotia. These parks_are developed and maintained by the National Parks Bureau at Ottawa, for the use and enjoyment of the people of Canada, and have become a tourist attraction of first-rate importance. They serve

[^17]as a means of preserving regions of outstanding beauty and interest and the native wild life therein. In these areas wild life is rigidly protected and scientifically managed in the public interest, the natural phenomena and flora protected, and the scenic attractions made more easily accessible by the construction of roads and trails throughout the park areas. There are at present 699 miles of surfaced roads, 151 miles of secondary roads, 359 miles of fire roads, and 2,348 miles of trails through these parks. To assist in forest conservation and other aspects of park administration, 1,188 miles of telephone lines have been constructed. A number of these lines link lookout towers and wardens' cabins with park headquarters, and in some of the parks two-way radios are employed to maintain communications between headquarters and actual fire-fighting operations. Administrative buildings, community centres, camp-grounds, facilities for recreation, and other conveniences, are provided by the National Parks Bureau, while hotel, bungalow, cabin and other types of tourist accommodation have been left to private enterprise. Park waters are kept stocked with game-fish reared in government fish hatcheries. Municipal services are provided where there is a permanent resident population. Recreational and cultural activities are fostered and supervised and, in some of the parks, winter sports are actively promoted. The resources of the National Parks are not exhausted by use and may be drawn upon indefinitely, provided a policy of adequate maintenance, supervision and protection is continued.

Scenic and Recreational Parks.-The scenic and recreational parks include regions of unsurpassed grandeur in the Rocky and Selkirk Mountains of Western Canada. Among these are: Banff, Jasper and Waterton Lakes National Parks in Alberta, on the eastern slope of the Rockies; Kootenay and Yoho Parks in British Columbia, on the western slope of the Rockies; and Glacier and Mount Revelstoke Parks (also in British Columbia), in the Selkirks. While these parks bear a general resemblance to one another, each possesses individual characteristics and phenomena, varying fauna and flora and different types of scenery. Banff Park contains the famous resorts, Banff and Lake Louise, and in Jasper Park is the well-known tourist centre, Jasper. Direct connection between these points is provided by the BanffJasper Highway.

Eastward from the mountains are found Prince Albert National Park in Saskatchewan, a typical example of the forest-and-lake country bordering the northwestern plains region, and Riding Mountain National Park in Manitoba, a well-timbered area dotted with numerous lakes, and at a general altitude of 2,000 feet above sealevel. In Ontario are three small park units established primarily as recreational areas. They are Point Pelee, Georgian Bay Islands and St. Lawrence Islands National Parks.

In the Maritime Provinces, two remarkable areas have been established as National Parks. Cape Breton Highlands National Park, situated in the northern part of Cape Breton Island, Nova Scotia, has an area of 390 square miles. Its rugged and picturesque shore line, indented by numerous bays and coves, and its rolling mountainous interior provide a delightful setting reminiscent of Scotland. Girdled on its eastern, northern and western sides by a spectacular highway called the Cabot Trail, and possessing such features as trails, beaches, tennis courts and a golf links, the park offers many diversions to the visitor. Prince Edward Island National Park, containing an area of 7 square miles, extends for a distance of about 25 miles along the northern shore of the island province. Its chief attractions are magnificent sand beaches which permit salt-water bathing under ideal conditions.

The park also contains "Green Gables", the farmhouse made famous by the novels of L. M. Montgomery. A fine golf links, tennis courts, camp-grounds and marine drives enhance its attractions.

Gatineau Park.-Gatineau Park differs from the other National Parks by being under the administration and control of the Federal District Commission, a body established in 1899 by Parliament for the beautification and improvement of Ottawa and environs. The park is situated in the Province of Quebec about 8 air miles from the Federal Capital. It comprises at present about 17,000 acres of wooded hills, valleys, lakes and streams located in the southerly fringe of the Laurentians, the oldest mountains in Canada, and is being preserved in its natural state for the enjoyment of the public.

The park is a game sanctuary. Deer, bear, fox, beaver, mink, raccoon and other fur-bearing animals are quite numerous. Well-located trails, picnic spots and camping sites afford the maximum of pleasure and healthful recreation for the many thousands who patronize this beautiful natural park located at the very doorstep of Canada's capital city. Gatineau Park furnishes excellent opportunities for the enjoyment of skiing and is the principal centre in the Ottawa district for this popular winter sport.

In the further development of this park, it is expected that its area will be increased to 50,000 acres, that overnight cabins will be provided and that administration buildings, shelters, refectories, bath-houses and other essential structures will be added.

Animal Reserves.-The special animal parks were established for the protection of such species of mammalian wild life as buffalo, elk and pronghorned antelope, which at one time were rapidly dwindling in numbers. These reserves include Elk Island National Park in Alberta, 30 miles from Edmonton, which contains a large herd of buffalo and numerous deer, elk and moose. This park also includes a recreational development at Astotin Lake, where bathing, camping, tennis and golf may be enjoyed.

The National Historic Parks and Sites.-A further extension to the National Parks system was made in 1941 when seven areas, previously acquired and administered as historic sites, were designated as National Historic Parks. They are associated with events of outstanding interest in the early history of the Dominion and as such merit the distinction now conferred on them.

Of the National Historic Parks, one of the most interesting is Port Royal in Nova Scotia. This park area, situated on the shores of Annapolis Basin at Lower Granville, contains a replica of the Port Royal Habitation, a group of buildings constructed to shelter the first permanent European settlement in Canada. The present buildings stand on the exact site of the original Habitation erected in 1605 by DeMonts, Champlain and Poutrincourt and destroyed by an English force in 1613. The other National Historic Parks are listed in Table 2, pp. 37-38.

The National Parks Bureau is also charged with the preservation, restoration and marking of historic sites throughout Canada. In the work of acquiring and selecting sites worthy of commemoration, the Bureau has the assistance of the Historic Sites and Monuments Board of Canada, a group of recognized authorities on the history of the section of the country they represent. Of the total number
of sites that have been considered by the Board, more than 330 have been suitably marked by the Department of Mines and Resources and many others recommended for future attention.
2.-Locations, Years Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1946

| Park | Location | Year Established | Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | sq. miles |  |
| Scenic and Recreational Parks |  |  |  |  |
| Banff................ | Western Alberta, on east slope of Rockies. | 1885 | 2,585.00 | Mountain playground containing famous resorts, Banff and Lake Louise. Typical example of central Rockies, with massive ranges, ice-fields, alpine valleys, glacierfed lakes and hot mineral springs. Biggame sanctuary. Recreations: climbing, motoring, riding, bathing, golf, tennis, fishing, skiing. |
| Yoho................. | Eastern British Columbia, on west slope of Rockies. | 1886 | 507.00 | Rugged scenery on western slope of Rockies. Contains famous Yoho Valley, with its numerous waterfalls; Kicking Horse Valley; Emerald, O'Hara, and Wapta Lakes; natural bridge. Alpine climbing centre. |
| Glacier............... | Southeastern British Columbia, on the summit of the Selkirk Range. | 1886 | 521.00 | Superb example of Selkirk Mountain region, with snow-capped peaks, glaciers, luxuriant forests, alpine flower-gardens, numerous big game. Illecillewaet and Asulkan Glaciers; Rogers Pass; and famed Macdonald tunnel. |
| Waterton Lakes...... | Southern Alberta, adjoining Glacier Park in Montana, U.S.A. | 1895 | $220 \cdot 00$ | Canadian section, Waterton-Glacier International Peace Park. Mountains noted for beauty of colouring; lovely lakes, picturesque trails, waterfalls. Recreations: motoring, riding, fishing, tennis, golf, camping. |
| Jasper................ | Western Alberta, on east slope of Rockies. | 1907 | 4,200.00 | Rich in historical associations. Immense region of majestic peaks, deep canyons, beautiful lakes, containing famous resort, Jasper. Also Miette Hot Springs, Maligne Lake, Mount Edith Cavell and Columbia Ice-field. Big-game sanctuary. Recreations: motoring, climbing, riding, bathing, fishing, golf, tennis, skiing. |
| Mount Revelstoke.... | Southeastern British Columbia, on the west slope of Selkirks. | 1914 | $100 \cdot 00$ | Alpine plateau on summit of Mount Revelstoke, accessible by spectacular 18 -mile drive from Revelstoke. Contains mountain lakes, alpine flora, camp-sites. Game sanctuary; winter sports centre. |
| St. Lawrence Islands. | In St. Lawrence River between Morrisburg and Kingston, Ont. | 1914 | $\begin{aligned} & 190 \cdot 00 \\ & \text { (acres) } \end{aligned}$ | Mainland reservation and thirteen islands among "Thousand Islands" Recreational area; camping, fishing, bathing. |
| Point Pelee.......... | Southern Ontario, on Lake Erie. | 1918 | 6.04 | Most southerly mainland point in Canada ( $41^{\circ} 54^{\prime} \mathrm{N}$.). Recreational area with unique flora and fine beaches. Resting place for many migratory birds. Bathing, camping. |
| Kootenay............ | Southeastern British Columbia, on the west slope of Rockies. | 1920 | $543 \cdot 00$ | Mountain park bordering VermilionSinclair section of Banff-Windermere Highway. Contains Sinclair Canyon, Radium Hot Springs, Marble Canyon. Big-game sanctuary. Recreations: motoring, bathing, camping. |

2.-Locations, Years Established, Areas and Characteristics of the National Parks

| Park | Location | Year Established | - Area | Characteristics |
| :---: | :---: | :---: | :---: | :---: |
| Scenic and Recreational Parks-con. |  |  | sq. miles |  |
| Prince Albert. ....... | Central Saskatchewan, north of Prince Albert. | 1927 | $\begin{aligned} & 1,869 \cdot 00 \\ & \text { (approx.) } \end{aligned}$ | Forested lakeland of northwestern Canada with extensive waterways and fine beaches. Interesting fauna; summer resort. Recreations: boating, bathing fishing, camping, tennis, golf. |
| Riding Mountain..... | Southwestern Manitoba, west of Lake Winnipeg. | 1929 | 1,148.08 | Rolling woodland, with crystal lakes, on summit of Manitoba escarpment. Natural home for big game, including elk, deer, moose. Summer resort. Recreations: bathing, boating, fishing, tennis, golf, camping. |
| Georgian Bay Islands (including Flowerpot Island Reserve) | In Georgian Bay, near Midland, Ont. | 1929 | 5-37 | Thirty islands in Georgian Bay. Recreational and camping area, boating, bathing, fishing. Unique limestone formations and caves on Flowerpot Island. |
| Cape Breton Highlands. | Northern part of Cape Breton Island, N.S. | 1936 | $\begin{array}{r} 390.00 \\ \text { (approx.) } \end{array}$ | Outstanding example of rugged coast line with mountain background. Remarkable views of Atlantic Ocean and Gulf of St. Lawrence visible from highway; Cabot Trail. Recreations: bathing, boating, golf, tennis, deep-sea fishing, camping. |
| Prince Edward Island. | North shore of Prince Edward Island. | 1937 | 7.00 | Strip 25 miles long on north shore. Recreational area with magnificent beaches. Contains famed "Green Gables" farmstead. Recreations: bathing, boating, fishing, golf, bowling, camping. |
| Animal Parks and Reserves |  |  |  |  |
| Buffalo.............. | Eastern Alberta, near Wainwright. | 1908 | 197.50 | Fenced area originally set aside for the preservation of buffalo and other big game. |
| Elk Island........... | Central Alberta, near Lamont. | $\begin{gathered} 1913 \\ \text { (Re-- } \\ \text { served } \\ 1906) \end{gathered}$ | $51 \cdot 20$ | Fenced reserve containing a large herd of plains buffalo; also numerous deer, elk and moose. Recreational area at Astotin Lake; camping, boating, bathing, tennis and golf. |
| Nemiskam........... | Southern Alberta, near Foremost. | 1922 | $8 \cdot 50$ | Fenced reserve established to protect pronghorned antelope, a species native to the region. |
| Wood Buffalo ${ }^{1}$. | Partly in Alberta ( $13,675 \mathrm{sq}$. miles) and partly in Northwest Territories ( $3,625 \mathrm{sq}$. miles), west of Athabaska and Slave Rivers. | 1922 | $\begin{aligned} & 17,300 \cdot 00 \\ & \text { (approx.) } \end{aligned}$ | Immense unfenced area of forests and open plains, dotted with lakes and coursed by numerous streams and rivers. Contains a large herd of buffalo, developed from the native "woodland"' type and surplus plains buffalo from Buffalo National Park; also bear, beaver, caribou, deer, moose and waterfowl. Area as yet undeveloped. |
| Historic Parks |  |  | acres |  |
| Fort Anne.......... | Nova Scotia (Annapolis Royal). | 1917 | 31 | Site of early Acadian settlement of Port Royal. Contains well-preserved fortifications of earthworks type; also museum housing a fine historical library and numerous exhibits relating to early periods. |

[^18]
## 2.-Locations, Years Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1946-concluded

\begin{tabular}{|c|c|c|c|c|}
\hline Park \& Location \& Year Established \& Area \& Characteristics \\
\hline \begin{tabular}{l}
Historic Parks-conc. \\
Fort Beauséjour
\end{tabular} \& New Brunswick, near Sackville. \& 1926 \& acres

59 \& Site of French fort erected in middle of 18th century. Renamed Fort Cumberland by British on capture in 1755 ; original name since restored. Contains museum with many exhibits relating to history of region. <br>
\hline Fortress of Louisbourg. \& Cape Breton Island, N.S., 25 miles from Sydney. \& 1941 \& 340 \& Old walled city and strategic military and naval station built by the French, 1720-40. Captured by the British in 1758, it was destroyed in 1760. A museum on the site contains interesting mementoes of historic past. <br>
\hline Port Royal. \& Lower Granville, N.S., 8 miles from Annapolis Royal. \& 1941 \& 17 \& Reconstruction on the exact site of the Port Royal "Habitation". erected by DeMonts and Champlain in 1605. The original group of buildings, which sheltered the first permanent European settlement in Canada, was destroyed in 1613. <br>
\hline Fort Chambly....... \& Chambly Canton, Que. \& 1941 \& $2 \cdot 5$ \& French fort first constructed in 1665 on Richelieu River. Rebuilt of stone in 1711, it figured in several wars. Contains a museum housing many interesting exhibits. A military cemetery outside walls of fort is included in park area. <br>
\hline Fort Lennox. . . . . . . \& Ile-aux-Noix, Que., near St. Johns. \& 1941 \& 210 \& Military post constructed by British on site of early French fort, to command Richelieu River water route from south. Several well-preserved stone buildings together with the earthworks and moat remain. <br>
\hline Fort Wellington...... \& Prescott, Ont....... \& 1941 \& $8 \cdot 5$ \& Contains well-preserved earthworks, blockhouse and other buildings constructed by British as base for defence of communications between Kingston and Montreal. The block-house contains a small museum. <br>
\hline Fort Malden......... \& Amherstburg, Ont. . \& 1941 \& 3 \& Situated on the banks of the Detroit River, the site of one of the principal frontier military posts in Upper Canada. A new museum building contains interesting exhibits of the region. <br>
\hline Fort Prince of Wales. \& Northern Manitoba, near Churchill. \& 1941 \& 50 \& Massive stone fort built 1733-71, to secure control of Hudson Bay for Hudson's Bay Company and England. The fort was captured and partially destroyed by a French force in 1782. <br>
\hline
\end{tabular}

SUMMARY OF THE AREAS OF NATIONAL PARKS, BY PROVINCES

| Province | Area | Province | Area |
| :---: | :---: | :---: | :---: |
|  | sq. miles |  | sq. miles |
| Prince Edward Island. | 7.00 | Saskatchewan.. | 1,869.00 |
| Nova Scotia.. | $390 \cdot 60$ | Alberta..... | 20,937.201 |
| New Brunswick | 0.09 0.33 | British Columbia...... | $1,6725 \cdot 00$ 3,625 |
| Ontario. | 11.72 |  |  |
| Manitoba. | 1,148-16 | Total | 29,660.10 ${ }^{2}$ |

[^19]${ }^{2}$ Not including area of Gatineau Park, 25 sq. miles in extent (see p. 35).

Provincial Parks.-In addition to the National Parks already described, most of the provinces have established provincial parks. The purpose is the same-to maintain areas of great scenic or other interest for the benefit of present and future generations. The provincial parks are administered by the Provincial Governments concerned, and in most cases they have not yet reached the degree of development which marks the National Parks. Following are brief descriptions of the principal provincial parks, by provinces.

British Columbia.-With its spacious scenic areas, no province lends itself more to the creation of parks than does British Columbia. Far exceeding all other provinces in the matter of provincial park acreage, British Columbia has 3 classifications of parks: Class A, of high recreational value with 17; Class B, large parks allowing multiple land use and 4 in number; Class C, a community-type park with 27. These 48 parks have a combined area of 11,480 square miles. In addition there are five Special Act Parks with a total area of 5,415 square miles.

Mount Seymour Park near Vancouver and Manning Park on the Hope-Princeton highway are two of the most important Class A parks and provide both summer and winter recreational opportunities. Böth Tweedsmuir and Wells Gray Park of Class B listing possess outstanding mountain, lake and river scenery and some of the finest fishing and big-game areas in the Province. Tweedsmuir Park with its area of 5,400 square miles is the largest wilderness park in North America. Garibaldi Park of 973 square miles and lying a short distance from Vancouver is the most outstanding of the Special Act Parks. This rugged alpine area of peaks, glaciers and snowfields is famous for its meadows of vivid wild flowers and strange geological features. Liard River Park on the Alaska Highway and Strathcona Park in the centre of Vancouver Island are other Special Act scenic areas rapidly coming into prominence. The smaller Class C parks are strategically located throughout the Province to provide many communities with opportunities for convenient outings.

Alberta.-Although Alberta has a larger area of National Parks than any other province, many small park areas have also been set apart by the Provincial Government. These include:-

Aspen Beach Park, 17 acres on the shore of Gull Lake, west of Lacombe, primarily for bathing, outing and picnic purposes; Saskatoon Island Park, 250 acres reserved mainly for picnic purposes, west of Grande Prairie; Gooseberry Lake Park, 320 acres on the shore of Gooseberry Lake north of Consort, has a sports ground and a number of cottages, and accommodation for transients is available in the town of Consort; Lundbreck Falls Park, $13 \frac{1}{2}$ acres, a pleasant little beauty spot on the Crowsnest Pass highway west of Macleod, popular with fishermen and motorists; Sylvan Lake Park, $8 \cdot 6$ acres on the shores of Sylvan Lake, 11 miles west of Red Deer, a popular bathing place; Hommy Park, $5 \frac{3}{4}$ acres in the vicinity of Albright, established to serve residents of the district with picnic and outing facilities; Ghost River Park, 535 $\frac{1}{2}$ acres on a beautiful artificial lake on the Ghost and Bow Rivers west of Calgary; Park Lake Park, $37 \cdot 2$ acres set aside to provide picnic facilities for the districts north and west of Lethbridge; Assineau Reserve, on the Assineau River south of Lesser Slave Lake, set aside to preserve a fine stand of large spruce; Dillberry Lake Reserve, 78.4 acres on the Alberta-Saskatchewan boundary near Chauvin, to preserve the natural beauty of a picturesque lake; Writing-on-Stone Reserve, 796 acres on the Milk River east and north of Coutts, to preserve natural obelisks on which appear hieroglyphics which have never been
deciphered; Saskatoon Mountain Reserve, 3,000 acres preserving a fine lookout point in the Grande Prairie district; Little Smoky Reserve, $34 \cdot 7$ acres, a picnic ground and big-game hunting base on Little Smoky River, 12 miles south of Falher; Bad Lands Reserve, 1,800 acres north of Drumheller, established to stop unauthorized removal of fossilized remains of pre-historic animals; Wapiti Reserve, 21.8 acres on a canyon in the Wapiti River ten miles south of Grande Prairie, established as an outing centre for the rural district and also for the use of big-game hunters.

Saskatchewan.-Saskatchewan's seven permanent park reserves are distributed over the southern part of the Province. They are well treed and contain many beautiful lakes providing facilities for quiet recreation, camping, hiking, fishing and boating. They are: Cypress Hills Park, south of Maple Creek and a few miles from the United States boundary, beautifully located in the heart of a provincial forest area; this park has modest bungalow, lodge and cabin accommodation, and an auto-camp equipped with camp kitchens, spring water, and wood for fuel. Moose Mountain Park, an area of 192 square miles honeycombed with lakes and thickly covered with poplar and white birch, is located about 15 miles north of Carlyle, and is popular with visitors from the United States because of its fine scenery and good fishing. Katepwe Park, about 60 miles northeast of Regina, on the famous Qu'Appelle Lakes, has camp kitchens and bathhouses and offers boating, fishing and safe bathing. Good Spirit Lake Park, 20 miles west of Canora, also offers good fishing and bathing, and has excellent camp and picnic grounds with kitchen and bath-house. Greenwater Lake Park is an area of 35 square miles in the forest belt north of Kelvington; it consists mainly of virgin forests and lakes affording good bathing and fishing. Little Manitou Park is an area of about 4 square miles on Manitou Lake, renowned for its medicinal qualities: chateau, cabin, and touristcamp accommodation are available. Duck Mountain Park, 15 miles northeast of Kamsack, presents a well-forested area and beautiful Madge Lake, which has a shore line of 47 miles, densely wooded and with sandy beaches. Wild life is plentiful and the lake is well stocked with fish.

Manitoba.-Although Manitoba has many areas attractive to the sightseer and vacationist, the Province has as yet established officially, only one which may be described as a provincial park. This is the area set aside in 1930 as the Whiteshell Forest Reserve, a rugged section of the Precambrian part of eastern Manitoba, covering 1,088 square miles. The physical cbaracteristics of this area account for its distinctiveness as a recreational, fishing and hunting reserve. More than 200 lakes and several rivers provide a network of canoe routes throughout the park. Lichen-covered rock cliffs rise steeply from the water and much of the land is rough, hilly and thickly forested with the contrasting green of pine, spruce, poplar, birch and tamarack. Although much of the northern Whiteshell remains in its primitive state, several southern lakes have been developed as resorts. West Hawk, Falcon, Caddy, Brereton, and White Lakes have become most popular. Fishing is an outstanding attraction of the Whiteshell, with northern pike, pickerel, lake trout, bass and perch the most prevalent species. A large sport-fish hatchery with a capacity of 500,000 eggs was constructed in 1942. Game-bird and big-game hunting have long been popular in the northern Whiteshell, though much of the southern portion has been set aside as a game preserve. Early maps show that La Vérendrye was the first white man to explore what is now the Whiteshell Provincial Park. In 1734 he followed the turbulent Winnipeg River, which roughly outlines its northern boundary. Manitoba's "Land of the Granite Cliffs" has had a colourful past and plans for new scenic highways in this region promise it an interesting future.

Ontario.-There are six provincial parks in Ontario. With the exception of Ipperwash Beach Park, which is maintained exclusively for camping, picnicking and swimming, they were all dedicated primarily to the preservation of the forests, fish, birds, and all forms of wild life. The recreational possibilities which they provide are varied and extensive.

Algonquin Provincial Park, 2,741 square miles, is a wilderness area accessible by highway from the southern boundary. There are good camping facilities, with excellent fishing and attractive canoe trips. Quetico Provincial Park, 1,770 square miles, also a wilderness area, affords good camping facilities, fishing and canoe trips. Lake Superior Provincial Park, 540 square miles, is another wilderness area. Camping facilities have not yet been provided nor canoe routes defined but there is good fishing. Sibley Provincial Park, 61 square miles, is a wilderness area as yet without camping facilities. Rondeau Provincial Park, 8 square miles, is partly cultivated, with fine timber stands and highly developed camping facilities. There are some enclosed animals and others running wild: fishing is fair and special duck shooting licences are obtainable. There are no canoe routes in this park. Ipperwash Beach Provincial Park consists of 109 acres of sandy beach and woodland area with highly developed camping facilities. There are no wild animals, but the fishing is fair. Special fishing licences are available in Algonquin and Quetico Parks.

Quebec.-There are four provincial parks in this Province, located in distinctive areas which enables each to offer some special interest. Like those in the other provinces, they have been established in order to preserve natural beauty and to protect the fauna and flora.

Laurentide Park is an area of about 4,000 square miles, beginning a short distance north of the city of Quebec, and has an altitude of about 3,000 feet. It is remarkable for its numerous lakes and tumultuous rivers and its fine speckled trout. Moose, deer, black bears, wolves, and all the fur-bearing animals of the Province abound, but no hunting is permitted. There are two well-organized hotels and about twenty fishing camps. Mount Orford Park has an area of 9,425 acres, located on Orford Mountain, with an altitude of 2,860 feet. The slope of the mountain makes it one of the best skiing tests in Canada, and it also has a picturesque ninehole golf course. Gaspe Park, 350 square miles, has a flora dating back to an era prior to the Great Continental Glacier. The main object of this park is to preserve the last herds of caribou on the south shore of the St. Lawrence. Speckled trout abound in the lakes and rivers of the park. The Mont Laurier-Senneterre Highway Reserve, 2,600 square miles, in the western part of the Province, is crossed on its full length by the road leading from Montreal to the Abitibi region. It is remarkable for its numerous lakes and rivers which provide favourable conditions for long canoe excursions. Fish include grey trout, northern pike, pickerel, black bass, and, in a limited number of lakes, speckled trout. There are two establishments for the accommodation of travellers, also a stopping place maintained by the Department of Game and Fisheries where cabins and boats may be rented.

Maritime Provinces.-There are National Parks in Prince Edward Island and Nova Scotia, and many civic parks, but none in any of the Maritime Provinces which comes within the classification of Provincial Parks.

## Section 3.-Game and Scenery

The resources of Canada from the standpoints of the sportsman and tourist are both unique and varied. In the wooded and unsettled areas of each province there are many moose, deer, bear and smaller game, while in the western part of the Dominion there are also wapiti, caribou, mountain sheep, mountain goat, grizzly bear and lynx. Mountain lion, or cougar, are found in British Columbia and in the mountains of Alberta, while in the Northwest and the Far North there still exist herds of buffalo and musk-ox, which are given absolute protection by the Dominion Government.

Ruffed and spruce grouse are found in the wooded areas of Canada from coast to coast. Prairie chicken and Hungarian partridge inhabit the open prairies and the partly timbered areas of the three mid-western provinces. The Franklin grouse is native to the mountains of the West and the ptarmigan, an Arctic grouse, lives in the treeless northern plains and is also found in the high mountains of Alberta and British Columbia.

The valleys of Nova Scotia and New Brunswick, the broken lake-country of northern Quebec, Ontario, Manitoba and Saskatchewan, as well as the mountain districts of British Columbia and Alberta, offer a variety of attractions including innumerable game preserves that have won for the Dominion a reputation as a paradise for sportsmen and campers. And not only are these attractions available to those who travel by land; the lakes and rivers that form a network over the eastern part of the country particularly, make water travel in smaller craft feasible and attractive. Further, winter sports, the unusual attractions of winter scenery and the bracing though rigorous winter climate may be enjoyed at many winter and year-round resorts. In both Dominion and Provincial Parks, while angling is permitted, the hunting of game is forbidden, and the wild-life resources preserved. Elsewhere, however, there is available for the hunter, at proper seasons, a wealth of game species.

Migratory Birds Treaty.-This Treaty and the legislation making it effective throughout Canada are administered by the National Parks Bureau of the Department of Mines and Resources and the Royal Canadian Mounted Police. The Treaty, which has been effective since 1916, has as its object the protection of the valuable migratory bird life of Canada and the United States. Information concerning the Treaty, and regulations enacted for its enforcement, may be obtained from the Controller, National Parks Bureau, Department of Mines and Resources, Ottawa.

## PART VI.-CLIMATE, METEOROLOGY, ETC.

## Section 1.-Climate

From time to time articles pertaining to weather, temperature and precipitation in Canada have been published in previous editions of the Year Book. These articles are listed at the front of this edition under the heading "Climate and Meteorology"

## Section 2.-Meteorology

See list at the front of this edition, under the heading "Climate and Meteorology", for special material published in previous editions of the Year Book.

## Subsection 1.-Investigations of Weather Cycles Made by the Dominion Observatory*

It has long been known that auroral displays and terrestrial magnetism fluctuate with the eleven-year sunspot cycle. This was explained a third of a century ago as due to the fluctuation in ultra-violet light from the sun thus causing a variation in the ionization of the upper atmosphere. The changing ionization causes variations in the development of haziness and cloudiness thus inducing fluctuations in the weather and in living conditions. This view is still maintained; and with this rational theory as to causes, numerous investigations of fluctuations in meteorology and forms of life have been made. A short outline of some of the results is given herewith.

Temperature records in Canada show, in the mean, higher values at sunspot minimum than at maximum. Some of the prairie stations exhibit ranges as high as $4^{\circ} \mathrm{F}$. in the mean sunspot cycle. However, since the records cover a short span of years a smoothing formula is used, thus: $0.25(a+2 b+c)$ where $b$ is the mean value for the year of the cycle in question and a and $c$ the values for the year before and the year after. This gives a conservative value for the range.

In the following table the smoothed mean eleven-year cycles in temperature are given for 13 stations in Canada. The years are for sunspot minima, 1 year after, 2 years after, and so on. The mean cycle for these stations shows the progressive influence of the sunspot cycle, the excess at minimum over maximum averaging $1 \cdot 4^{\circ} \mathrm{F}$.

TEMPERATURES, SMOOTHED MEAN ELEVEN-YEAR CYCLES

[^20]The sunspot influence on temperature is reflected in earlier dates of freeze-up at sunspot maximum than at minimum, the records of "first ice", 1910-37, for Quebec and Montreal, harbours showing a range of 7 days in the smoothed mean December dates, being as follows:-

| Year...... | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | Range <br> $\mathrm{F}!$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| First Ice, December Dates, Quebec, 1910-1937 |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $8 \cdot 0$ | $8 \cdot 3$ | 6.7 | $3 \cdot 3$ | 2.8 | $2 \cdot 6$ | 1.9 | 2.4 | $3 \cdot 7$ | $3 \cdot 4$ | $2 \cdot 6$ | 8.1 | $6 \cdot 4$ |
| First Ice, December Dates, Montreal, 1911-1937 |  |  |  |  |  |  |  |  |  |  |  |  |
| 12.5 | 11.8 | $9 \cdot 4$ | 6.2 | $5 \cdot 6$ | 4.4 | $4 \cdot 6$ | $8 \cdot 2$ | $9 \cdot 0$ | $7 \cdot 6$ | $7 \cdot 9$ | $10 \cdot 6$ | $8 \cdot 1$ |
| Mean, Quebec and Montreal |  |  |  |  |  |  |  |  |  |  |  |  |
| $10 \cdot 3$ | $10 \cdot 1$ | $8 \cdot 1$ | $4 \cdot 8$ | $4 \cdot 2$ | $3 \cdot 5$ | $3 \cdot 3$ | $5 \cdot 3$ | $6 \cdot 4$ | $5 \cdot 5$ | 5•3 | $9 \cdot 4$ | $7 \cdot 0$ |

Precipitation in Canada follows, in general, a direct phase response to the sunspot cycle in coastal regions (oceanic or aquene type) and an inverse phase for the interior (inland type or terrene type). Intermediate regions show various blends of the two, sometimes exhibiting two pulses in the eleven-year cycle. Direct and inverse types are given in the following statement:-

## PRECIPITATION, SMOOTHED MEAN ELEVEN-YEAR CYCLES (INCHEs)

| Year....... | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | Range <br> p.c. |

| Kamloops, British Columbia, 1895-1925 |  |  |  |  |  |  |  |  |  |  |  |  |

Increased ionization at sunspot maximum causes increased cloudiness and greater precipitation near the ocean where water vapour is plentiful. At sunspot minimum the greater clarity of the atmosphere causes greater heating of the inland
regions, with greater evaporation and upward convection currents, resulting in more thunderstorms at sunspot minimum than at maximum, as shown in the following statement:-

| Year..... | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | Range <br> p.c. |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

| Mean. | $22 \cdot 1$ | $25 \cdot 3$ | 19.4 | $20 \cdot 6$ | 16.8 | 21.2 | 17.6 | 17.5 | 16.0 | 19.9 | 21.2 | 21.0 |  |
| Smoothed.. | $22 \cdot 6$ | $23 \cdot 0$ | 21.2 | 19.4 | 18.9 | $19 \cdot 2$ | 18.5 | 16.9 | 16.9 | 19.3 | 20.8 | 21.3 | 36 |
| Manitoba Thunderstorms, 2 and 3 Stations, 1901-1912, 1919-1922 |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Mean. | 16.2 | $17 \cdot 6$ | 14.0 | 17.2 | 16.0 | 12.8 | 16.2 | 11.8 | $19 \cdot 0$ | $15 \cdot 6$ | 14.0 | 21.5 |  |
| Smoothed.. | $17 \cdot 9$ | 16.4 | $15 \cdot 7$ | $16 \cdot 1$ | $15 \cdot 5$ | 14.5 | $14 \cdot 3$ | 14.7 | 16.4 | $16 \cdot 1$ | $16 \cdot 3$ | $18 \cdot 3$ | 28 |
| Canada Thunderstorms, 1901-1912, 25 Stations: |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Alberta, 4; Saskatchewan, 4; Manitoba, 2; Ontario, 10; Quebec, 5 |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Mean...... | 16.8 | $17 \cdot 3$ | 13.8 | $15 \cdot 2$ | 14.3 | 14.7 | 14.0 | 12.8 | 13.7 | 14.8 | $16 \cdot 1$ | 14.7 |  |
| Smoothed.. | 16.4 | $16 \cdot 3$ | 15.0 | $14 \cdot 6$ | 14.6 | $14 \cdot 4$ | 13.9 | 13.4 | $13 \cdot 7$ | $14 \cdot 8$ | $15 \cdot 4$ | $15 \cdot 6$ | 22 |

The greater cloudiness at and after sunspot maximum resulting in lessened, evaporation, is an important factor in the discharge of the Niagara River, 1860-1926, which shows a striking influence of the sunspot cycle as follows:-

| Year. $\ldots \ldots \ldots$ | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

| Niagara River Discharge, in 1,000 cu.ft. per sec., 1860-1926 |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mean | 203 | 201 | 197 | 202 | 214 | 207 | 211 | 209 | 206 | 208 | 200 | 196 |
| Smoothed. | 201 | 200 | 199 | 204 | 209 | 210 | 209 | 209 | 207 | 206 | 202 | 199 |

Such important meteorological variations in the sunspot cycle cause serious organic fluctuations such as revealed by the annual growth-rings in trees. The type of response to the eleven-year cycle in general follows the type exhibited by precipitation for the region; thus the trees give some idea of the nature of meteorological fluctuations in regions where no records have been kept.

## Section 3.-Standard Time and Time Zones in Canada

See list at the front of this edition for special material under this heading published in previous editions of the Year Book.

## CHAPTER II.-HISTORY AND CHRONOLOGY

## CONSPECTUS

## PART I.-HISTORY

## Section 1.-Outlines of Canadian History

See list at front of this edition for material under this heading published in previous editions of the Year Book.

## Section 2.-A Bibliography of Canadian History

See list at front of this edition for material under this heading published in previous editions of the Year Book.

## Section 3.-Historical Records

See list at front of this edition for material under this heading published in previous editions of the Year Book.

## PART II.-CHRONOLOGY

[^21]1621. Code of laws issued and register of births, deaths, and marriages opened in Quebec. Nova Scotia granted to Sir William Alexander by King James I.
1622. Lake Superior discovered by Brûlé.
1623. First British settlement of Nova Scotia.
1627. New France and Acadia granted to the Company of 100 Associates.
1628. Port Royal taken by Sir David Kirke.
1629. Apr. 24, Treaty of Susa between France and England. July 20, Quebec taken by Sir David Kirke.
1632. Mar. 29, Canada and Acadia restored to France by the Treaty of St. Germain-en-Laye.
1633. May 23, Champlain made first Governor of New France.
1634. July 4, Founding of Three Rivers.

1634-35. Exploration of the Great Lakes by Nicolet.
1635. Dec. 25, Death of Champlain at Quebec. Founding of the first college at Quebec.
1638. June 11, First recorded earthquake in Canada.
1640. Discovery of Lake Erie by Chaumonot and Brebeuf.
1641. Resident population of New France, 240.
1642. May 17, Founding of Ville-Marie (Montreal) by Maisonneuve.
1646. Exploration of the Saguenay by Dablon.
1647. Lake St. John discovered by de Quen.
1648. Mar. 5, Council of New France created.
1649. Mar. 16-17, Murder of Fathers Brébeuf and Lalemant by Indians and massacre of the Hurons.
1654. August, Acadia taken by an expedition from New England.
1656. Acadia granted by Cromwell to La Tour, Temple, and Crowne.
1659. June 16, Francois de Laval arrived in Canada as Vicar-Apostolic.
1660. May 21, Dollard des Ormeaux and sixteen companions killed by Iroquois at the Long Sault, Ottawa River.
1663. Company of 100 Associates dissolved. Feb. 5, Severe earthquake. April, Sovereign Council of New France established.
1664. May, Company of the West Indies founded.
1665. Mar. 23, Talon appointed Intendant.
1666. Feb.-Mar. First Census: population of New France, 3,215.
1667. July 21, Acadia restored to France by the Treaty of Breda.
1668. Foundation of the "Little Seminary" at Quebec by Laval. Mission at Sault Ste. Marie founded by Marquette.
1670. May 2, Charter of the Hudson's Bay Company granted.
1671. Population of Acadia, 392.
1672. Apr. 6, Comte de Frontenac appointed Governor.
1673. June 13, Cataraqui (Kingston) founded.
1674. Oct. 1, Laval became first Bishop of Quebec.
1675. Population of New France, 7,832 .
1678. Niagara Falls visited by Hennepin.
1679. Ship Le Griffon built on Niagara River above the Falls by La Salle.
1681. Population of New France, 9,677
1682. Frontenac recalled.
1685. First issue of card money.
1686. Population of New France, 12,566; of Acadia, 894.
1687. Mar. 18, La Salle assassinated.
1689. June 7, Frontenac reappointed Governor. Aug. 5. Massacre of whites by Indians at Lachine.
1690. May 21, Sir William Phips captured Port Royal but was repulsed in an attack on Quebec (Oct. 16-21).
1692. Population of New France, 12,431. Oct. 22, Defence of Verchères against Indians by Madeleine de Verchères.
1693. Population of Acadia, 1,018 .
1695. Population of New France, 13,639.
1697. Sept. 20, By the Treaty of Ryswick, places taken during the war were mutually restored. D'Iberville defeated the Hudson's Bay Company's ships on Hudson Bay.
1698. Nov. 28, Death of Frontenac.
1701. La Motte Cadillac built a fort at Detroit. Population of Acadia (north part of peninsula), 1,134 .
1703. June 16, Sovereign Council of Canada became Superior Council and membership increased from 7 to 12.
1706. Population of New France, 16,745.
1708. Death of Laval.
1709. British invasion of Canada.
1710. Oct. 13, Port Royal taken by Nicholson.
1711. Sept. 1, Part of the British fleet, proceeding against Quebec, wrecked off the Seven Islands.

The Government of Canada was established under the provisions of the British North America Act of 1867.* This Statute of the Imperial Parliament, as from time to time amended, forms the written basis of the Constitution of Canada. Subsequent sections of this Chapter describe in some detail the processes by which the Constitution has developed and the institutions, as at present constituted, by which Canada is governed.

The several stages in the development of the status of the Dominion have been authoritatively described in the reports of successive Imperial Conferences including that held at London in 1926, which defined the group of self-governing communities consisting of the United Kingdom and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations" That Conference also recognized that, as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advist the Crown in all matters relating to its own affairs" Simultaneously, with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations, there developed, as a complementary aspect of nationhood, the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations, the exercise of treaty-making

[^22]powers and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of Canada. More explicit recognition of the implications of the principles of equality of status was. accorded in the Statute of Westminster of 1931, which provided for the removal of the remaining limitations on the legislative autonomy of the Dominions.

## PART I.-THE CONSTITUTION AND GENERAL GOVERNMENT OF CANADA

Canada is the largest in area and the most populous of the great self-governing Dominions of the British Empire, which also include the Commonwealth of Australia, the Union of South Africa, the Dominion of New Zealand, Southern Rhodesia and the island colony of Newfoundland (with Labrador). The Dominions enjoy responsible government of the British type, administered by Executive Councils (or Cabinets) acting as advisers to the representative of the Sovereign, themselves responsible to and possessing the confidence of the representatives elected to Parliament by the people, and giving place to other persons more acceptable to Parliament whenever that confidence is shown to have ceased to exist.*

Of these Dominions, Canada, Australia and South Africa, extend over enormous areas of territory, each of the first two approximating Europe in area. Each section of these countries has its own problems and point of view; a local Parliament for each section, as well as the central Parliament for each country, is required. The local Parliaments, established when transportation and communications were more difficult and expensive than at present, were chronologically prior to the central body, to which on its formation they either resigned certain powers, as in the case of Australia, or surrendered their powers with certain specified exceptions, as in Canada and South Africa. Of such local Parliaments, Canada at the present time has nine, Australia six and South Africa four.

Besides the Dominions above enumerated, the great Empire of India in its internal administration has been placed on the road, formerly traversed by the Dominions that are now fully self-governing, towards responsible government. Indeed, the whole evolution of the Empire, throughout all parts that are more than mere fortresses or trading stations, is in the direction of responsible government, to be attained in the dependencies as it has been in what used to be called the Colonies, by the gradual extension of self-government in proportion to the growing capacities of their respective populations. It has been and is the recognized aim of British administrators, by the extension of educational facilities and by just administration, to develop these capacities to the utmost.

## Section 1.-The Evolution of the Constitution of Canada Down to Confederation

The process of the development of free government in the Dominion of Canada down to Confederation is given in an article appearing at pp. 34-40 of the 1942 Year Book. Also in an Appendix to that artic'e, pp. 40-60, the text of the British North America Act is presented.

[^23]
## Section 2.-The Development of the Constitution Since Confederation

A specially prepared article bringing the developments since Confederation up to date is published at pp. 41-47 of the 1943-44 Year Book. See also list of Special Articles under "Constitution and Government" at the front of this volume.

## PART II.-LEGISLATIVE AND EXECUTIVE AUTHORITIES Section 1.-Dominion Parliament and Ministry

The Dominion Parliament is composed of the King (represented by the Governor General), the Senate and the House of Commons. As a result of the working out of the democratic principle, the 'part played by the King's Representative and the Upper Chamber of Parliament in the country's legislation has been, in Canada as in the United Kingdom, a steadily decreasing one, the chief responsibilities involved in legislation being assumed by the House of Commons.

## Subsection 1.-The Governor General of Canada

The Governor General is appointed by the King as his representative in Canada, usually for a term of five years, with a salary fixed at $£ 10,000$ sterling per annum, which is a charge against the consolidated revenue of the country. The Governor General is bound by the terms of his commission and instructions and can exercise only such authority as is expressly entrusted to him. He acts under the advice of his Ministry, which is responsible to Parliament, and, as the acting head of the Executive, summons, prorogues and dissolves Parliament, and assents to or reserves bills. In the discharge of these and other executive duties, he acts entirely by and with the advice of his Ministry (the Governor General in Council). The royal prerogative of mercy in capital cases, formerly exercised on the Governor General's own judgment and responsibility, is now exercised pursuant to the advice of the Ministry. The practice whereby the Governor General served as the medium of communication between the Canadian and the British Governments was given up in July 1, 1927, and direct communication is now conducted between His Majesty's Government in Canada and His Majesty's Government in the United Kingdom.

## Subsection 2.-The Ministry

Canada's system of government is based upon that of the British, by which a Cabinet or Ministry (composed of members of the House of Commons or the Senate), is responsible to Parliament. The Cabinet is actually a committee of the King's Privy Council for Canada. Without enlarging upon the features of the system, it may be sufficient to note that the Cabinet is responsible to the House of Commons and, following established precedent, resigns office when it becomes evident that it no longer holds the confidence of the people's representatives Members of the Cabinet are chosen by the Prime Minister; each generally assumes charge of one of the various Departments of Government, although a Minister may hold more than one portfolio at the same time, or may be without portfolio.

## 2.-Prime Ministers Since Confederation

Nore.-A complete list of the members of Dominion Ministries from Confederation to 1913 appears in the 1912 Year Book, pp. 422-429. Later Ministries will be found in the corresponding tables of subsequent editions of the Year Book.

| Ministry | Prime Minister | Length of Administration |
| :---: | :---: | :---: |
| 1 | Right Hon. Sir John A. Macdonald | July 1, 1867 - Nov. 6, 1873 |
| 2 | Hon. Alexander Mackenzie. | Nov. 7, 1873 - Oct. 16, 1878 |
| 3 | Right Hon. Sir John A. Macdonald | Oct. 17, 1878 - June 6, 1891 |
| 4 | Hon. Sir John J. C. Abrott | June 16, 1891 - Dec. 5, 1892 |
| 5 | Hon. Sir John S. D. Thompson | Dec. 5, 1892 - Dec. 12, 1894 |
| 6 | Hon. Sir Mackenzie Bowell. | Dec. 21, 1894 - Apr. 27, 1896 |
| 7 | Right Hon. Sir Charles Tupper. | May 1, 1896-July 8, 1896 |

${ }^{1}$ The ordinary legal limit of duration for each Parliament is five years.

## Subsection 3.-The Senate

From an original membership of 72 at Confederation, the Senate through the addition of new provinces and the general growth of the Dominion, now has 96 members, the latest change in representation having been made in 1915. The growth of representation in the Senate is traced at pp. 47-49 of the 1940 edition of the lear Book and is summarized, by provinces, in Table 6.*

[^24]6.-Growth of Representation in the Senate, 1867-1946

## Subsection 4.-The House of Commons

In Section 37 of the original British North America Act of 1867 (30 Vict., c. 3) it was provided that "The House of Commons shall, subject to the provisions of this Act, consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, sixty-five for Quebec, nineteen for Nova Scotia, and fifteen for New Brunswick" * Further, under Section 51, it was enacted that, after the completion of the Census of 1871 and of each subsequent decennial census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time, as the Parliament of Canada provided, subject to and according to certain rules set out in the original Act.

Readjustments in Representation.-The representation of the provinces in the Dominion Parliament as at 1867 and the readjustments that took place with the admission of the newer provinces into Confederation and with each Decennial Census up to 1931, are outlined at pp. 57-59 of the 1946 Year Book. The number of representatives of each province elected at each of the twenty general elections since Confederation is given in Table 8.

[^25]

| Totals | 181 | 200 | 206 | 211 | 215 | 213 | 214 | 221 | 235 | 245 | 245 |

Redistribution for 1941 Postponed.-For the first time since Confederation, the redistribution of parliamentary constituencies required by the B.N.A. Act after each decennial census, has been postponed. A resolution to that effect was presented to Parliament and forwarded to London in the form of an Address to His Majesty the King. His Majesty caused a Bill to be laid before the Parliament of the United Kingdom for the enactment of the provisions of the resolution; this was duly passed through all stages by July 22, 1943. The Bill provides that "notwithstanding anything in the British North America Acts, 1867 to 1940, it shall not be necessary that the representation of the provinces in the House of Commons be readjusted, in consequence of the completion of the decennial census taken in the year One Thousand Nine Hundred and Forty-One, until the first session of the Parliament of Canada commencing after the cessation of hostilities between Canada and the German Reich, the Kingdom of Italy and the Empire of-Japan" During the first Session of the Twentieth Parliament, the House of Commons and the Senate of Canada petitioned the Imperial Government, requesting an amendment to Section 51 of the B.N.A. Act. As a result, that section of the Act was repealed and the following substituted therefor:-

[^26](d) In the event that Rules One and Two cease to apply in respect of a province then, for the purpose of computing the number of members to be assigned to the provinces in respect of which Rules One and Two continue to apply, the total population of the provinces shall be reduced by the number of the population of the province in respect of which Rules One and Two have ceased to apply and the number Two hundred and fifty-four shall be reduced by the number of members assigned to such province pursuant to Rule Three.
(e) Such readjustment shall not take effect until the termination of the then existing parliament.
(2) The Yukon Territory as constituted by C. 41 of the Statutes of Canada, 1901, together with any part of Canada not comprised within a province which may from time to time be included therein by the Parliament of Canada for the purposes of representation in parliament, shall be entitled to one member."
9.-Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Twentieth General Election, June 11, 1945.

```
Speaker.
The Honourable Gaspard Fauteux
Clerk of the House. ...... .... ...A. Beauchesne, K.C., C.M.G., M.A.
Leader of the Opposition.. ... .John Bracken
```

Nore.-This information, except the populations of constituencies, has been supplied by the Chief Electoral Officer, Ottawa, who publishes an official report giving the total vote cast for each candidate. Party affiliations are unofficial. The vote is summarized by provinces for this general election in Table 11. p. 74. By-elections taking place between the date of this election and Jan. 1, 1947, are indicated by footnotes and are summarized in Table 10, p. 72. The leaders of the political parties are indicated by asterisks ( ${ }^{*}$ ).

## Subsection 5.-The Franchise at Dominion Elections*

It was provided by the British North America Act, 1867, that, until otherwise directed by Parliament, clections to the House of Commons should be governed by the electoral laws of the several provinces. The qualifications of electors throughout the Dominion consequently varied but remained the same for both Dominion and

[^34]provincial elections in any one province until, in 1885, Parliament legislated on the subject by passing the Electoral Franchise Act (47-48 Vict., c. 40). That Act defined a uniform qualification for voters throughout Canada for Dominion purposes, the basis of this new franchise being the ownership or occupation of land of a specified value, although the sons of owners, and particularly farmers' sons, were given the right to vote under special conditions. This Dominion franchise remained in force for thirteen years, but between 1898 and 1920, under the Franchise Act of the former year ( $59-60$ Vict., c. 14 ), the provincial franchises were again made applicable at Dominion elections. The adoption of the provincial franchise laws for Dominion purposes was temporarily modified by the War-time Elections Act (7-8 Geo. V, c. 39), which admitted certain female relatives of members of the military forces, or of the naval forces, to vote at Dominion elections. Three years later, on the adoption of a New Dominion Elections Act (10-11 Geo. V, c. 46), the provincial franchises were again wholly abandoned and a new electoral qualification was established for Dominion elections throughout Canada. The right to vote was conferred by the new Act upon all British subjects, men and women, of 21 years and upwards, who had resided in Canada for a year, and for two months in the electoral district in which they desired to vote. Women were granted general franchise in Canada in 1918 (8-9 Geo. V, c. 20), and have voted at all Dominion elections held since that date.

Franchise Legislation now in Force.-The right to vote is at present provided for in the Dominion Elections Act, 1938 (2 Geo. VI, c. 46, as amended by 6 Geo. VI, c. 26). The franchise is conferred upon all British subjects, men and women, who have attained the age of 21 years and who have been ordinarily resident in Canada for 12 months prior to polling day at a Dominion election, and ordinarily resident in the electoral district on the date of the issue of the writ for such election. Lists of electors are prepared afresh for use at each Dominion election. Those denied the right to vote are:-

1. Judges appointed by the Governor in Council;
2. The returning officer for each electoral district;
3. Persons undergoing punishment as inmates of any penal institution for the commission of any offence;
4. Indians ordinarily resident on an Indian reservation who did not serve in the First or Second World Wars;
5. Persons restrained of their liberty or management of their property by reason of mental disease;
6. Eskimos, whether born in Canada or elsewhere;
7. Persons who are disqualified by reason of race from voting at an election of a member of the Legislative Assembly of a province in which they are residing, and who did not serve in the First or Second World Wars;
8. Doukhobors, residing in the Province of British Columbia, whether born in Canada or elsewhere;
9. Persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices;
10. Inmates of an institution which is maintained by any government or municipality for the housing of the poor, if such persons are disqualified from voting at an election of a member of the Legislative Assembly of the province, and did not serve in the First or Second World Wars;
11. Every Japanese who resided in the Province of British Columbia on July 1, 1938. and on Dec. 7, 1941, who did not serve in the First or Second World Wars.

## 11.-Voters on the Lists and Votes Polled at the General Elections of 1930, 1935, 1940 and 1945

#### Abstract

Note.-Corresponding statistics for the general elections of 1911, 1917, 1921 and 1925 will be found at p. 82 of the 1926 Year Book and those for the general election of 1926 at p. 66 of the 1945 edition.

[^35]According to a special procedure prescribed by the Canadian War Service Voting Regulations, 1944, every Canadian on war service in any of His Majesty's Naval, Military, or Air Forces, man or woman, irrespective of age, and whether stationed within or without Canada, was entitled to vote by ballot for the candidate of his choice at a general election held during the Second World War, and such votes applied to the electoral district in which such war service elector ordinarily resided prior to his enlistment, enrolment, appointment, or call-up on war service.

According to the Canadian Prisoners of War Voting Regulations, 1944, any person eligible to vote under the Canadian War Service Voting Regulations, 1944, who became a prisoner of war, or interned in a neutral country, was entitled to vote by proxy at a general election held in Canada during the Second World War, such proxy being his or her next of kin, as officially recorded at Headquarters, and such vote was cast in the polling division in which such next of kin was entitled to vote as a civilian elector.

## Section 2.-Provincial Governments

In each of the provinces, the King is represented by a Lieutenant-Governor appointed by the Governor General in Council and governs with the advice and assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body. The legislatures of all the provinces, with the exception of Quebec, are now unicameral, consisting of a Legislative Assembly elected by the people. In Quebec there is a Legislative Council as well as a Legislative Assembly.
12.-Provinces and Territories of Canada, with Present Areas, Dates of Admission to
Confederation, and Legislative Process by which Admission was Effected

## 13.-Lieutenant-Governors of Provinces and Territories, 1867-1946, Legislatures and Prime Ministers, 1934-46, and Present Ministries as at Jan. 1, 1947

Note.-The Lieutenant-Governor of a province is addressed "His Honour" and is also styled "Honourable" throughout his life. Where a knighthood or other honour was conferred during the term of office, it is shown. Many Lieutenant-Governors were knighted after their term had expired. Legislatures and Ministries from Confederation to 1923 will be found at pp. 75-84 of the 1924 Year Book, and for 1924-34 at pp. 110-118 of the 1938 Year Book. When two or more dates are shown for the appointment of a Minister, the first denotes the original appointment to the Ministry and the second or last to the portfolio held at present.

## YUKON TERRITORY

Note.-The Yukon, formerly a District of the Northwest Territories, was made a separate Territory in 1898. The Yukon Act provides for a local government composed of a Chief Executive, styled Commissioner but since classified as Controller; also an elective Legislative Council of three members having a three-year tenure of office. The Yukon Territorial Council performs much the same functions as do the Provincial Governments. The Controller functions in lieu of the Provincial Cabinet and the three members of the Territorial Council function in lieu of the Provincial Parliament. The seat of local government is at Dawson, but the Controller acts under instructions from the Governor General in Council or the Minister of Mines and Resources at Ottawa. The Commissioners who held office previous to the present are listed at p. 78 of the 1946 Year Book.

Controller
John Edward Gibben (Acting)
July 25, 1946
Territorial Council
(Three members elected 1944, for 3 years)

## THE NORTHWEST TERRITORIES

Note.-In 1888, the Districts of Alberta, Assiniboia, Athabaska, and Saskatchewan, then called the Northwest Territories, with their capital at Regina, were given responsible government, and the forme Northwest Council was replaced by the Northwest Legislature, which existed until Aug. 31, 1905. When the area included in these Districts was formed into the Provinces of Alberta and Saskatchewan on Sept. 1 1905, these provinces were given systems of government similar to the other provinces of the Dominion The prevailing form of government for the remaining part of the Territories was discontinued in 1905 and

## THE NORTHWEST TERRITORIES-concluded

the office of Lieutenant-Governor abolished. In its place, government was vested in a Commissioner and a Council, now composed of six members, one of whom may be appointed Deputy Commissioner. The administration of the various Acts, Ordinances, and Regulations pertaining to the Northwest Territories is supervised by the Director of the Lands, Parks and Forests Branch, Department of Mines and Resources, who is also Deputy Commissioner. The seat of government is at Ottawa. The Lieutenant-Governors from Confederation to 1905 are listed at p. 73 of the 1945 Year Book.

Territorial Counctl
(Appointed by the Governor General in Council)
Commissioner-Hugh L. Keenleyside.
Deputy Commissioner-Roy Alexander Gibson.
Members of the Council-Austin Louis Cumming; Kenneth Robinson Daly; Robert Alexander Hory; Stuart Taylor Wood.
Secretary-James Goldwin Wright.

## Section 3.-Dominion-Provincial Relations*

The genesis of the current phase of Dominion-Provincial relations was the Dominion-Provincial Conference of December, 1936. At that time drought and depressed prices had led the Government of Alberta into partial default on its outstanding debt, and the Governments of Saskatchewan and Manitoba made clear at the Conference that in default of assistance they would be forced to take similar action. On the invitation of the Dominion Minister of Finance and the Premiers of the three Prairie Provinces, the Bank of Canada undertook an examination of their financial positions. The Bank's report on Manitoba was made public on Feb. 15, on Saskatchewan on Mar. 15, and on Alberta on Apr. 7, 1937 The Bank Report recommended certain interim financial assistance from the DominionGovernment but concluded that no solution seemed possible other than that which might be provided by a complete inquiry into the financial powers and responsibilities of Canadian governing bodies at all levels. In addition to the special difficulties of the Prairie Provinces, the burden of relief had weakened the financial position of all provincial and municipal governments, and had finally proved completely beyond their capacity to bear in its entirety.

Royal Commission on Dominion-Provincial Relations.-By P.C. 1908 on Aug. 14, 1937, the Royal Commission on Dominion-Provincial Relations was established. The Chairman was the Hon. N. W. Rowell, Chief Justice of Ontario, and the members were the Hon. Thibaudeau Rinfret, Justice of the Supreme Court of Canada, Dr. J. W. Dafoe of Winnipeg, Dr. R. A. MacKay of Dalhousie University, and Professor H. F. Angus of the University of British Columbia. Subsequently the Hon. Justice Rinfret was compelled to retire owing to ill health and was replaced by Dr. Joseph Sirois of Quebec. Illness also forced the resignation of Chief Justice Rowell in 1938 and Dr. Sirois was appointed Chairman to succeed him. The Commission has consequently been generally known as the Rowell-Sirois or Sirois Commission. The report, submitted on May 3, 1940, recommended important financial and jurisdictional changes, $\dagger$ of which the chief were: (1) exclusive Dominion jurisdiction in income tax, corporation tax and succession duty fields; (2) acceptance by the Dominion of responsibility for relief to able-bodied unemployed; (3) assumption by the Dominion of net provincial debt charges; and (4) payment by the Dominion of national adjustment grants designed to put each Provincial Government in a position to provide average standards of services without imposing higher than average rates of taxation.

[^38]Dominion-Provincial Conference, January, 1941.-A Dominion-Provincial Conference was called in January, 1941, to consider the Royal Commission Report. The Conference broke down on the second day in the face of opposition from the Premiers of Ontario, British Columbia and Alberta.

Wartime Tax Agreements.-Later in the year the Dominion Government proposed that, in order to meet the exigencies of the War, the Provincial Governments (and their municipalities) should suspend imposition of income taxes and corporation taxes for the duration of the War and one year after, and be reimbursed by the Dominion on the basis of either the 1940 revenues of the particular Province from these sources, or the amount of that Province's net debt service less succession duty collections in 1940. There were also some relatively small fiscal-need subsidies proposed and an offer to guarantee provincial gasoline tax revenues at the 1940 level. Agreements were negotiated with all the Provincial Governments in 1941 and the necessary legislation was passed in the spring of 1942 . Under these agreements, which brought into effect an important part of the Sirois Report recommendations for the duration of the War, the Dominion was given a free hand in the income and corporation tax fields and developed these sources of revenue very substantially as an aid both in financing the War and in combating inflation. The other chief problems with which the Sirois Report dealt, such as provincial debts and unemployment and agricultural relief, were for the time being thrust into the background.

Dominion-Provincial Conference, 1945-46.-Since the Wartime Tax Agreements were of temporary duration only and since a number of the pre-war financial and constitutional problems promised to arise in even more aggravated form upon the termination of these agreements, the Dominion formulated proposals for a new agreement. These proposals were submitted at a Dominion-Provincial Conference called in August, 1945. They were broader in scope than the Sirois Report recommendations, primary stress being placed on the maintenance of a high and stable level of employment and income. To this end, not only important fiscal changes but also greatly developed public investment and social security policies were suggested. The agreement was proposed initially for a three-year period and would involve no constitutional changes, although there was one recommendation for a constitutional amendment to provide for delegation of powers from the Dominion Government to a Provincial Government or vice versa whenever desired by both Governments.

The fiscal proposals were that the Provinces should withdraw from the personal income tax, corporation tax and succession duty fields in return for annual subsidies which would not fall below a guaranteed minimum and which would rise proportionally with population and increases in per capita gross national product. The amount of the subsidies proposed was approximately 50 p.c. above provincial receipts under the Wartime Tax Agreements.

The public investment proposals outlined a substantial expansion in the Dominion program for natural resource development, conservation, and public works, and also a large increase in Dominion assistance to provincial services and construction projects either through joint participation or by grants-in-aid. Particular emphasis was put upon, and tangible encouragement offered to, the advance planning of works and, in so far as practicable, the timing of public investment expenditures with a view to helping to stabilize employment and offset fluctuations in the business cycle.

The social security proposals were among the most extensive undertaken by any country. Family allowances had already been put into effect in 1945. The Dominion now proposed in addition, to pay a $\$ 30$ a month old-age pension without a means test to everyone 70 years of age or over; to contribute 50 p.c. to provincially administered old-age assistance under a means test for people from 65 to 69; to make grants to the Provincial Governments for general preventive public-health work and for the prevention and cure of tuberculosis, mental diseases, venereal disease, and other specific ills; to contribute approximately 60 p.c. of the cost of provincially administered health insurance schemes; to make low-interest loans for hospital construction; to provide assistance for all unemployed able and willing to work, not covered by unemployment insurance, at the scale of approximately 85 p.c. of the unemployment insurance benefits; to provide and assist in the provision of greatly expanded vocational training and other rehabilitation services to improve employability.

The Dominion-Provincial Conference in August adjourned, after five days' discussion, to consider the proposals and any alternatives or amendments to them. A Co-ordinating Committee under the chairmanship of the Prime Minister of Canada, consisting of three Dominion Ministers and the nine Provincial Premiers, was established and subsequently held three meetings in camera from Nov. 26 to Nov. 30, 1945, from Jan. 28 to Feb. 1, 1946, and on Apr. 25 and 26, 1946. An Economic Committee, consisting largely of technical representatives of the different Governments, was also established and met for three weeks in December, 1945, and January, 1946, for the exchange of information and the development and clarification of the proposals in detail. The Economic Committee under its terms of reference made no collective report, but its members reported to their respective Governments. The Co-ordinating Committee reported back to a full plenary session of the Dominion-Provincial Conference when it reassembled on Apr. 29, 1946.

The Dominion put forward a number of modifications that had been made in its original proposals in the light of discussions in the Co-ordinating Committee.* The most important of these were: an increase in the guaranteed minimum annual subsidy from $\$ 12$ per capita to $\$ 15$; an optional provision in connection with succession duties which would enable any province that wished to continue levying succession duties subject to an adjustment in its annual subsidy and with provision for offsetting credits to the taxpayer; and an expression of willingness by the Dominion to withdraw from certain tax fields as requested by some of the Provincial Governments in return for an adequate financial equivalent.

By this time submissions in relation to the Dominion proposals had been made by all the Provincial Governments. Most of these submissions accepted the Dominion proposals in principle but contained a number of suggested modifications. The submission of the Government of Ontario suggested an alternative approach and differed in principle on some important issues. After five full days of discussion it was found that too wide a gap existed to enable an agreement to be reached at that time and the Conference adjourned sine die. The Dominion advised that it would have to proceed with the formulation of its Budget policies in the light of these circumstances.

The Budget Proposals of June, 1946. -The Budget of June 27, 1946, included proposals for a tax agrecment which could be entered into by any individual province. In compliance with the Wartime Tax Agreements, the Dominion under-

[^39]took to reduce the standard corporation income tax from 40 p.c. to 30 p.c. and also to reduce personal income taxes for 1947 The Dominion would also give a tax credit of the amount of personal income tax paid any province up to 5 p.c. of the tax payable to the Dominion. The Dominion proposed to double its succession duty tax, but to provide a credit against this tax of the amount of succession duties paid to a Provincial Government up to 50 p.c. of the Dominion tax. If a province was prepared to agree to withdraw from income tax, corporation tax and succession duty fields for five years, the Dominion would undertake to pay the annual per capita subsidy under the terms proposed at the Conference. Agreeing provinces would be required to levy a 5 p.c. tax on net corporate income within the province to be collected by the Dominion, and the proceeds of this tax would be deducted from the annual subsidy.

The objective of the Budget proposals was to secure tax agreements with the provinces, but the proposals were designed to enable a Province which might prefer to continue its own taxation to do so without unduly penalizing its taxpayers.

Dominion-Provincial Tax Agreements.-Following the Budget Address, several provinces entered into negotiations with the Dominion. During the course of these negotiations the formula on which Dominion payments to the provinces would be based was expanded. Three alternatives were offered: (1) the formula as proposed in the Budget Speech, with increases based on increases in gross national production and population applying to the $\$ 15$ per capita minimum or, in the case of British Columbia and Prince Edward Island, to the lump sum minimum which they had elected; (2) a combination of $\$ 12 \cdot 75$ per capita of 1942 population, plus 50 p.c. of provincial income and corporation income tax receipts in 1940, plus the statutory subsidies, increased according to increases in gross national production and population; or (3) $\$ 15$ per capita of 1942 population plus the statutory subsidies, increased according to increases in gross national production and population.

If all provinces should conclude agreements with the Dominion, and assuming that each took the option most favourable to it, the guaranteed minimum annual payment to each province and the amount payable in 1947 as estimated at the beginning of that year, as compared with the total receipts under the Wartime Tax Agreements and from succession duties and statutory subsidies, would be as follows:-

|  | Proposed Agreement |  | Total Annual Receipts during Wartime from Wartime Tax Agreements, Succession Duties, and Statutory Subsidies |
| :---: | :---: | :---: | :---: |
|  | Guaranteed Minimum | Estimated $1947$ |  |
|  | \$'000,000 | \$'000,000 | \$'000,000 |
| Prince Edward Island. | $2 \cdot 1$ | 2.3 | 1.2 |
| Nova Scotia............ | $10 \cdot 9$ | $12 \cdot 1$ | $4 \cdot 2$ |
| New Brunswick....... | $8 \cdot 8$ | $9 \cdot 4$ | $4 \cdot 8$ |
| Quebec.. | 56.4 | $63 \cdot 0$ | $31 \cdot 3$ |
| Ontario................ | $67 \cdot 2$ | $74 \cdot 0$ | $44 \cdot 3$ |
| Manitoba. | 13.5 | 14.2 | $8 \cdot 0$ |
| Saskatchewan.. | $15 \cdot 2$ | $15 \cdot 7$ | $8 \cdot 2$ |
| Alberta........ | $14 \cdot 0$ | 14.8 | $8 \cdot 2$ |
| British Columbia..... | $18 \cdot 1$ | $21 \cdot 4$ | $14 \cdot 3$ |
| Totals... | $206 \cdot 2$ | 226.9 | $124 \cdot 5$ |

The Dominion Government also undertook to withdraw, on Mar. 31, 1947, its wartime tax on gasoline of 3 cents a gallon, leaving this field of taxation, which was yielding the Dominion approximately $\$ 35,000,000$ annually, entirely to the provinces.

Six provinces-Prince Edward Island, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia-have agreed in principle to rent their corporation tax, income tax and succession duty fields to the Dominion for five years in exchange for the payments as shown above. Legislation will be introduced in the Dominion and Provincial Houses in the spring of 1947 in order to implement these agreements. On the other hand, the Governments of Ontario and Quebec announced in March, 1947, their budget proposals for the fiscal year 1947-48. These proposals included a 7 p.c. corporation tax, the maintenance of existing succession duties, and no personal income tax. At the time of its Budget announcement, the Government of Ontario made it clear that it would like to see the DominionProvincial Conference reconvened in the hope of arriving at a general tax agreement. The Dominion Government has committed itself to holding a Dominion-Provincial Conference to deal with the social security and public investment proposals of the 1945 Conference as soon as tax agreements are concluded with all provinces.

## PART III.-CANADA'S EXTERNAL RELATIONS

## Section 1.-Canada's Growth in External Status

The evolution of Canada in its external relations is reflected in the growth of its Department of External Affairs. A review of the organization and development of that Department is given at pp. 74-79 of the 1945 edition of the Year Book.

## Section 2.-Canada and the United Nations

A special article on Canada and the United Nations is given at pp. 82-86 of the 1946 edition of the Year Book.

PART IV--DIPLOMATIC REPRESENTATION* Section 1.-Representatives of Canada in Other Countries<br>Subsection 1.-High Commissioners Within the British Commonwealth of Nations

[^40][^41]Australia.-The High Commissioner for Canada in Australia: Mr. Kenneth A. Greene, appointed March, 1947. Address: State Circle, Canberra.

Previous High Commissioners:-
Mr. Charles J. Burchell, 1939-41
Major-General Victor Odlum, 1941-42
The Hon. Thomas C. Davis, 1942-46.
New Zealand.-The High Commissioner for Canada in New Zealand: DR. A. Rive, appointed on June 1, 1946. Address: Government Life Insurance Building, Customs Quay, Wellington.

Previous High Commissioner:-
Dr. W A. Riddell, 1940-46.
South Africa.-The High Commissioner for Canada in the Union of South Africa: Mr. E. D. McGreer, appointed Nov. 6, 1946. Address: Barclays Bank Building, 206 Church Street West, Pretoria.

Previous High Commissioners:-
Dr. Henry Laureys, 1940-44
Mr. Charles J. Burchell, 1944-45
Mr. J. C. Macgillivray, 1945-46 (Acting).
Ireland.-The High Commissioner for Canada in Ireland: The Hon. W F. A. Turgeon, appointed Nov. 6, 1946. Address: 92 Merrian Square, West, Dublin.

Previous High Commissioners:-
Mr. John H. Kelly, 1940-41
Mr. J. D. Kearney, 1941-45
Mr. Merchant M. Mahoney, 1945-46.
Newfoundland.-The High Commissioner for Canada in Newfoundland: Mr. J. Scott Macdonald, appointed May 4, 1944. Address: Circular Road, St. John's.

Previous High Commissioner:-
Mr. Charles J. Burchell, 1941-44.
India.-The High Commissioner for Canada in India: Mr. J. D. Kearney, appointed Dec. 23, 1946. Address: New Delhi.

## Subsection 2.-Representatives in Foreign Countries

Embassies and Legations
Argentina.-Ambassador: Mr. Warwick F. Chipman. Presented Letter ot Credence Oct. 1, 1945. Address: Bartolome Mitre, 478, Buenos Aires.

Previous Minister:-
The Hon. W. F. A. Turgeon, 1941-44.
Chargé d'Affaires ad interim:-
Mr. K. P. Kirkwood, 1944-45.

Belgium.-Ambassador: Mr. Victor Dore. Presented Letter of Credence Jan. 21, 1947 Address: 46 Montoyer Street, Brussels.

Previous Ministers and Ambassadors:-
Ministers:-
Mr. Jean Desy, 1939-40.
Major-General George P Vanier, 1943-45.
Chargé d'Affaires ad interim:-
Mr. Pierre Dupuy, 1940-43.
Ambassador:-
The Hon. W F A. Turgeon, 1945-47.
Brazil.—Ambassador: Mr. Jean Desy. Presented Letter of Credence Jan. 18, 1944. Mr. Jean Desy was Minister from 1941 until 1944. Address: Avenida President Wilson, 165, 7th Floor, Rio de Janeiro.

Chile.-Ambassador: Mr. C. F. Elliott. Appointed Nov. 6, 1946. Address: Bank of London and South America Building, Santiago.

Previous Ministers and Ambassadors:-
Ministers:-
The Hon. W. F. A. Turgeon, 1942-43
Mr. Warwick Chipman, 1943-44.
Ambassador:-
Mr. Warwick Chipman, 1944-46.
Chargé d'Affaires ad interim:-
Mr. Jules Leger, 1945-46.
China.-Ambassador: The Hon. T. C. Davis. Appointed Nov. 6, 1946. Address: No. 3 Tien Chu Road, Nanking.

Previous Ambassador:-
Major-General Victor W Odlum, 1942-46.
Cuba.-Minister: Mr. Emile Vaillancourt. Presented Letter of Credence May 8, 1945. Address: Avenida de las Misiones No. 17, Havana.

Czechoslovakia.-Minister: Major-General George P. Vanier. Appointed Nov. 30, 1942.

Chargé d'Affaires ad interim:-
Mr. R. M. Macdonnell. Appointed February, 1947 Address: Prague.
Denmark.-Minister: Dr. Henry Laureys (Nominated).
Previous Minister:-
Mr. J. D. Kearney, 1946-47
France.-Ambassador: Major-General George P Vanier. Presented Letter of Credence Dec. 20, 1944. Major-General George P Vanier was Minister from 1938 until 1944. Address: 75 Foch Avenue, Paris.

Previous Minister:-
The Hon. Philippe Roy, 1928-38.
Greece.-Ambassador: Major-General the Hon. L. R. LaFleche. Presented Letter of Credence Sept. 28, 1945. Address: 31 Queen Sofia Blvd., Athens.

Previous Minister:-
Major-General George P. Vanier, 1943-45.

Luxembourg.-Minister: Mr. Victor Dore. Presented Letter of Credence Mar. 4, 1947 Address: 46 Montoyer Street, Brussels.

Previous Minister:-
The Hon. W. F. A. Turgeon, 1945-47.
Mexico.-Ambassador: Mr. S. D. Pierce (Nominated). Address: Edificio Internacional, Paseo de La Reforma, No. 1, Mexico City.

Previous Ambassadors:-
The Hon. W. F. A. Turgeon, 1944-45 Dr. H. L. Keenleyside, 1945-47

Netherlands.-Ambassador: Mr. Pierre Dupuy. Presented Letter of Credence Mar. 18, 1947. Mr. Pierre Dupuy was Minister from 1945 until 1947 Address: Sophialaan 1A, The Hague.

Previous Ministers:Mr. Jean Desy, 1939-40 Major-General George P. Vanier, 1943-45.
Chargé d'Affaires ad interim:Mr. Pierre Dupuy, 1940-43.

Norway.-Minister: Dr. Henry Laureys (Nominated). Address: Fridtjof Nansens Place, 5 Oslo.

Previous Ministers:-
Major-General George P. Vanier, 1943-46
Mr. J. D. Kearney, 1946-47.
Peru.-Ambassador: Mr. J. A. Strong (Nominated). Address: Edificio Boza, Plaza San Martin, Lima.

Previous Ambassador:Dr. Henry Laureys, 1944-47.

Poland.-Minister: Major-General George P. Vanier. Appointed Nov. 30, 1942.

Chargé d'Affaires ad interim:-
Mr. K. P. Kirkwood. Appointed February, 1947. Address: Warsaw.
Sweden.-Minister: Vacant.
Chargé d'Affaires ad interim:-
Mr. F. H. Palmer. Appointed February, 1947 Address: Strandvägen 7-C.

Switzerland.-Minister: Vacant.
Chargé d'Affaires ad interim:Mr. P. E. Renaud. Appointed March, 1947 Address: Berne.

Union of Soviet Socialist Republics.-Ambassador: Mr. L. D. Wilgress. Presented Letter of Credence Feb. 29, 1944. Mr. L. D. Wilgress was Minister from 1942 until 1944. Address: 23 Starokonyushny Pereulok, Moscow.

United States of America.-Ambassador: Mr. H. H. Wrong. Presented Letter of Credence on Nov. 8, 1946. Address: 1746 Massachusetts Avenue, Washington, D.C.

Previous Ministers and Ambassadors:-
Ministers:-
The Rt. Hon. Charles Vincent Massey, 1927-30
The Hon. W D. Herridge, 1931-35
The Hon. Sir Herrert Marler, 1936-39
Mr. Loring C. Christie, 1939-41
The Hon. Leighton G. McCarthy, 1941-43.
Ambassadors:-
The Hon. Leighton G. McCarthy, 1943-44
Mr. L. B. Pearson, 1944-46.
Military and Liaison Missions
Germany.-Head of Military Mission: Lieutenant-General Maurice Pope. Address: Commonwealth House, 40 Johannesberger St., Wilmeredorf, Berlin.

Japan.-Head of Liaison Mission: Mr. E. H. Norman. Address: 16 OmoteMachi, 3 Chome, Akaska-Ku, Tokyo.

## Consulates

China.-Vice-Consul: Mr. P G. R. Camprell, Address: Shanghai.
Portugal.-Acting Consul General: Mr. L. S. Glass. Address: Rua Rodrigo Fonseca, 103-40, Lisbon.

United States of America.-Consul General: Mr. H. D. Scully. Address: 620 5th Avenue, New York, N.Y

Honorary Vice-Consul:-
Mr. A. Lafledr. Address: Office 503, 120 Exchange Street, Portland, Maine.
Venezuela.-Acting Consul General: Mr. C. S. Bissett. Address: No. 805, Edificio America, Esquina Veroes, Caracas.

Section 2.-Representatives of Other Countries in Canada
Subsection 1.-Representatives of the Governments of the British Commonwealth of Nations
High Commissioner for the United Kingdom: The Hon. Sir Alexander Clutterbuck. Previous High Commissioners:-

Sir William H. Clark, 1928-34
Sir Francis Floud, 1935-38
Sir Gerald Campbell, 1938-41
The Rt. Hon. Malcolm MacDonald, 1941-46.
Address: Earnscliffe, Ottawa.
High Commissioner for the Commonwealth of Australia: The Rt. Hon. Francis M. Forde. Previous High Commissioners:-

Major-General the Hon. Sir William Glasgow, 1940-45
The Hon. Alfred Stirling, 1945-46.
Address: 114 Wellington Street, Ottawa.

High Commissioner for New Zealand: The Hon. David Wilson. Address: 107 Wurtemburg Street, Ottawa.

High Commissioner for the Union of South Africa: The Hon. P. R. Viljoen. Previous Accredited Representative: Mr. David de Waal Meyer. Address: 15 Sussex Street, Ottawa.

High Commissioner for Ireland: The Hon. John J. Hearne.
Address: 140 Wellington Street, Ottawa.

## Subsection 2.-Diplomatic Representatives of Foreign Countries

Argentina: (Established 1041.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Dr. Juan Carlos Rodriguez (Jan. 13, 1947).

Address: 18 Rideau Street, Ottawa.
Belgium: (Established 1937.)
Ambassador Extraordinary and Plenipotentiary: His Excellency A. Paternotte de la Vaillee (July 20, 1945).

Address: 395 Laurier Avenue East, Ottawa.
Brazil: (Established 1941.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Dr. Acyr do Nascimento Paes (Apr. 26, 1946).

Address: 400 Wilbrod Street, Ottawa.
Chile: (Established 1942.)
Ambassador Extraordinary and Plenipotentiary: His Excellency General Arnaldo Carrasco (Nominated).

Address: 56 Sparks Street, Ottawa.
China: (Established 1942.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Dr. Liu Shin Shun (Feb. 26, 1944). (Absent.)

Address: 201 Wurtemburg Street, Ottawa.
Cuba: (Established 1945.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Dr. Mariano Brull (Nov. 2, 1945).

Address: 499 Wilbrod Street, Ottawa.
Czechoslovakia: (Established 1942.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Frantisek Nemec (Mar. 11, 1947).

Address: 171 Clemow Avenue, Ottawa.
Denmark: (Established 1946.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency G. B. Holler (Mar. 7, 1946).

France: (Established 1928.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Count Jean de Hauteclocque (Feb. 21, 1945).

Address: 42 Sussex Street, Ottawa.

Greece: (Established 1942.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Constantine Sakellaropoulo (Nov. 12, 1945).

Address: Chateau Laurier, Ottawa.
Mexico: (Established 1944.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Dr. Luis I. Rodriguez (Apr. 23, 1946). (Absent.)

Address: 87 Sparks Street, Ottawa.
Netherlands: (Established 1939.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Dr. J. H. van Royen (Nominated).

Address: Suite 515, 56 Sparks Street, Ottawa.
Norway: (Established 1942.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Daniel Steen (Apr. 2, 1942).

Address: 45 Rideau Street, Ottawa.
Peru: (Established 1944.)
Ambassador Extraordinary and Plenipotentiary: His Excellency Alfredo Benavides (Mar. 29, 1945).

Address: 36 Elgin Street, Ottawa.
Poland:
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Dr. Alfred Fiderkiewicz (May 31, 1946).

Sweden: (Established 1943.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Per Wijkman (Aug. 4, 1943).

Address: 720 Manor Road, Rockcliffe Park.
Switzerland: (Established 1945.)
Envoy Extraordinary and Minister Plenipotentiary. His Excellency Dr. Victor Nef (Apr. 25, 1946).

Address: Chateau Laurier, Ottawa.
Turkey: (Established 1944.)
Envoy Extraordinary and Minister Plenipotentiary: His Excellency Sevki Alhan (Mar. 6, 1944).

Address: Chateau Laurier, Ottawa.
Union of Soviet Socialist Republics: (Established 1942.)
Chargé d'Affaires ad interim: Nikolai Belokhvostikov. (Dec. 4, 1945.)
Address: 285 Charlotte Street, Ottawa.
United States of America: (Established 1927.)
Ambassador Extraordinary and Plenipotentiary: His Excellency the Hon. Ray Atherton (Nov. 19, 1943).

Address: 100 Wellington Street, Ottawa.
Yugoslavia: (Established 1942.)
Envoy Extraordinary and Minister Plenipotentiary. His Excellency Mato Jaksic (Nominated).

Address: 259 Daly Avenue, Ottawa.

The records accumulated at the decennial censuses of Canada, since the creation of the Dominion in 1867 to the latest census to date, 1941, make a valuable contribution to the demographic history of the nation. Each successive decade has added to the vast scope of the material; the detailed statistical analyses and the numerous monographs and studies available under the several aspects of demography and agriculture have made the census a most important statistical measure of accomplishment and progress.

The salient aspects of population growth under each main heading shown in the conspectus are covered but not necessarily in any one edition. The Canada Year Book can do no more than summarize the broad results of the census. More detailed information can be obtained from the census publications.

The main legal reason for a periodic census under the Constitution of Canada is to determine representation in the House of Commons: this, according to the British North America Act, is based on population (see p. 63). The payment of provincial subsidies on a per capita basis is adjusted annually on population estimated from the census data. In view of this, the de jure principle of census enumeration is used, i.e., each person is counted as belonging to the locality of his regular domicile, rather than to the place he may be at the date of enumeration, a method followed in some other countries.

The modern Dominion-wide census, however important this redistribution purpose, has a much wider sphere of usefulness. It constitutes, through the data collected directly from the people, a true measure of the social and economic progress of the country and can therefore be used in the regulation of general administration and public affairs, social security and rehabilitation programs, etc.

History of the Census in Canada.-In 1666, Talon, the Intendant of New France, took an official census of the Colony for the purpose of measuring the increase in population that had taken place since the founding of Quebec by Champlain in 1608. These figures are, however, of historical interest rather than accurate census data. (For further details, see Census of Canada, 1931, Vol. I, pp. 133-153.)

[^42]Similar censuses of New France, which grew in detail, were taken no less than thirty-six times during the years intervening between 1666 and 1739 and many more times from that date to the close of the French regime in 1763. During the following years (see the 1942 Year Book, p. 83) a series of less elaborate reports supervened, with censuses appearing at irregular intervals, until the year 1841 when an Act was passed on Sept. 18, after the union of Upper and Lower Canada, which provided that a census should be taken in the year 1842 and every fifth year thereafter. Under this Act a census of Upper Canada only was taken: the Act was amended in 1842 and a census of Lower Canada was taken in 1844. (See Census of Canada, 1931, Vol. I, p. 36.)

In 1847, legislation was passed creating a Board of Registration and Statistics which took a census of Upper Canada in 1848 and a general census in 1850.

In 1851, Royal Assent was given to an Act to provide more effectually for the taking of the census in 1852 (these figures were later linked with those taken by the colonies of Nova Scotia and New Brunswick in 1851, and in Prince Edward Island in 1848 to give reasonably comparable totals, circa 1851, for these sections of British North America), 1861 and every tenth year thereafter. An unbroken series of census records, taken at regular decennial periods, is therefore available for all provinces constituting the Dominion of Canada over a period of ninety years. With the opening up of settlement in the three western provinces, immigration developed on such a scale that an Act was passed in 1918 providing that a census of population and agriculture be taken in the Provinces of Manitoba, Saskatchewan and Alberta in 1926 and every tenth year thereafter. Thus censuses of the Prairie Provinces are now taken quinquennially and of the Dominion as a whole decennially. The primary purpose of the former is to fix the basis for subsidies payable on a per capita basis to the western provinces by the Dominion Government. (See Census Legislation in Canada, Census of Canada, 1931, Vol. I, p. 29; or Statutes 49 Vict., c. 46, s. 5; 4-5 Edw. VII, c. 3, s. 18B; 4-5 Edw. VII, c. 42, s. 18B.)

Growth of Population in Canada.-A brief résumé of the population history of Canada from the first census in 1666, when it numbered 3,215 persons, to the eighth Dominion Census of 1941, when the figure was 11,506,655, places Canada among the leading countries of the British Empire in the rate of population growth. The inflow of capital and the opening up of new and vast areas with the consequent stimulation of immigration began with the opening of the twentieth century and was the latest episode in the transformation of the central prairie region, which, in the course of forty years, has been organized into provinces and developed with such promise. The population of the Dominion of Canada at the end of the nineteenth century was approximately $5,400,000$; it had about doubled this figure by 1931. The general increase in the population of European countries during the entire nineteenth century was approximately three-fold; Canada equalled this rate of progress during the sixty years from 1871 to 1931 .

In the decade 1901-11 immigration, alone, totalled $1,800,000$. This figure was the main factor in the gain of $34 \cdot 2$ p.c.-the total population of "Canada registered in that decade-which was relatively larger than the growth of any modern country during the same period.

The next decade started out with an intensification of this immigration movement, but with the outbreak of the War of 1914-18 a recession set in. The effects of that War upon the Canadian population were both direct and indirect. Nearly 60,000 members of the Canadian Forces died overseas and approximately 20,000 took their discharge in the United Kingdom. To these may be added 50,000 deaths from the war plague, influenza. In addition large numbers of British Isles residents in Canada, most of them recent immigrants, left Canada to join the Armed Forces of the United Kingdom and did not return; the same is true of enemy nationals who passed in considerable numbers into the United States immediately before and after the declaration of hostilities. The fluidity of the Canadian population accordingly rendered the War costly in personnel far beyond actual casualties. However, the net result over the ten years was a population increase of 21.9 p.c. or the largest increase for any modern country with the exception of Australia where an increase of 22.0 p.c. was recorded.

The Census of 1931 showed a further increase of $18 \cdot 1$ p.c. over 1921. Natural increase and immigration contributed $1,325,256$ and $1,509,136$, respectively, although the net gain was only $1,588,837$ since estimated emigration was $1,245,555$, for the 10 years. Census returns of Great Britain for 1921-31 showed an increase of 4.7 p.c., equalling that of the previous decade. New Zealand in the tenyear interval between 1911-21 showed an increase of 19.8 p.c. and between 1921-31, $19 \cdot 3$ p.c. A census of Australia was not taken in 1931, but the official estimate of population based on the Census of 1933 gives an increase of $19 \cdot 8$ p.c. as against 22.0 p.c. for the period 1911-21. Census figures for the United States showed an increase of population of $14 \cdot 9$ p.c. between $1910-20$ and $16 \cdot 1$ p.c. from 1920-30.

The eighth census of Canada taken June 2, 1941, gave the population as $11,506,655$ as compared with $10,376,786$ as of June 1, 1931, an increase of $1,129,869$ or 10.9 p.c. in the decade. During the greater part of this decade Canada, along with all other countries, was face to face with a prolonged and severe economic depression; immigration was still further restricted by government regulations as well as by economic necessity. The figures for immigrant arrivals were actually reduced from $1,166,004$ in the ten-year period 1921-31 to 140,361 in 1931-41. The natural increase for this period showed a reduction of about 7 p.c. and, since immigration was reduced more than 88 p.c. over the decade, the net increase in population was due almost entirely to the favourable birth and death rates of the established population.

## PART I.-STATISTICS OF GENERAL POPULATION

## Section 1.-Census Statistics of General Population

Since the creation of the Dominion of Canada in 1867, decennial censuses have been taken as of Apr. 2, 1871, Apr. 4, 1881, Apr. 5, 1891, Apr. 1, 1901, June 1, 1911, 1921, 1931 and June 2, 1941. Summary figures are given in Tables 1 and 2.

## 1.-Population of Canada, by Provinces and Territories, Census Years 1871-1941

Note.-The populations of the Prairie Provinces in 1906, 1916, 1926 and 1936, are shown at p. 147 of the 1937 Year Book. Intercensal estimated populations from 1867-1904 will be found at p. 141 of the 1936 Year Book; from 1905-30 at p. 127 of the 1946 edition; and from 1931-46 in Table 3 of the present edition.

[^44]
## Section 2.-Intercensal Estimates of Population

The exact statement of the population of Canada given at ten-year intervals by the Census must be supplemented by estimates for intervening years. These are essential for the calculation of per capita figures in production and trade, and particularly for use as a base in birth and death comparisons.

The caleulation for Canada as a whole is easier than that for its component parts. The number of births, deaths and immigrants each year is known and reasonably accurate estimates can be made of the amount of emigration from the immigration reports of the countries to which Canadians most frequently move, principally the United States and the United Kingdom.

The analysis according to provinces normally involves a large error, particularly in the time of rapid movement of population within the country. The period since 1941 has been characterized by particularly heavy movements of population, but fortunately ration-book figures available provide a very satisfactory means of ascertaining these estimates. During the war years the numbers of members of the Armed Forces whose homes were in the respective provinces were added to the rationed population, in order to secure the total number of persons legally resident in each province-the annual estimated figure comparable with the Census.

## 3.-Estimates of the Population of Canada, by Provinces, Intercensal Years, 1931-46

Note.-At every census the previous post-censal data are adjusted to the newly recorded population figures. Figures for 1867-1904 will be found at p. 141 of the 1936 Year Book and for 1905-30 at p. 127 of the 1946 edition.

[^45]The present trends of growth as applied to the future are reviewed in a short analysis in the 1946 Year Book at pp. 127-128. Further details on this subject may be found in Bulletin F-4 "The Future Population of Canada", published by the Dominion Bureau of Statistics.

## PART II.-CENSUS ANALYSES OF GENERAL POPULATION

## Section 1.-Rural and Urban Population

The population residing in cities, towns and incorporated villages has been defined for census purposes as 'urban' and that outside of such localities as 'rural' The distinction between rural and urban populations in Canada, therefore, is a distinction of provincial legal status rather than of size of aggregation of population within a limited area. Since the laws of the various provinces differ in regard to the population necessary before a municipality may be incorporated as urban,* the line of demarcation between rural and urban population is not uniformly drawn throughout the Dominion.

This basis of comparing rural and urban populations adhered to throughout the census analyses is adopted for Canada because the necessary comparable data over a long period of years required for comparison by degree of urbanization does not exist. Obviously, the populations of villages of less than 1,000 cannot be regarded as truly urban, although there is reason, for certain purposes, to distinguish them from the surrounding rural populations, in that they enjoy definite cultural advantages not possessed by the strictly rural municipalities.

Table 1 has been prepared to overcome some of the difficulties involved, and to provide a basis for comparison of urban centres by size with those of other countries. These data enable places outside any required size limits to be readily excluded. Similar data, by provinces, will be found in Vol. II of the Census of 1941.

During the latest four decades there has been a radical shifting in the distribution of the Canadian population from rural to urban district. The change has been continuous throughout the period. In the decade ended 1941 the proportion of urban population increased from $53 \cdot 7$ p.c. to 54.3 p.c. Urban communities absorbed nearly $60 \cdot 2$ p.c. of the total increase in population during that decade and the urban population of Canada in 1941 exceeded the rural by 998,177 Out of every 1,000 persons in the country, 457 were resident in rural and 543 in urban communities on June 2, 1941, as compared with 463 in rural and 537 in urban communities on June 1, 1931; 505 in rural and 495 in urban on June 1, 1921; and 546 in rural and 454 in urban on June 1, 1911. In this trend to urbanization of population, Canada is by no means unique. The same change has characterized virtually all western nations to a greater or lesser degree during the past century.

Table 1 gives the distribution of urban population in Canada by size of urban centres; the rural-urban trend is very strongly indicated by the increased size of the larger cities and towns at a time when immigration, which in former decades (especially that of British origin) tended to concentrate in urban centres, was negligible.

${ }^{1}$ Royal Canadian Navy (485) included in rural total.
Montreal, the largest city in Canada, increased by 84,430 in the decade 1931-41, from 818,577 to 903,007 ; Toronto, the only other city of over half a million population, increased by 36,250 from 631,207 to 667,457 . Vancouver and Winnipeg went up to 275,353 and 221,960 , respectively; Hamilton, Ottawa and Quebec were all over 150,000; Windsor over 100,000 ; and the western cities of Edmonton and Calgary 93,817 and 88,904 , respectively. These latter cities exceeded London, which also came in the 75,000 to 100,000 class in 1941.

All the larger cities have in their neighbourhoods growing 'satellite' towns or other densely settled areas in close economic relationship with the central municipality. It has, therefore, been advisable to calculate the total populations for the metropolitan areas of these greater cities. Table 3 shows comparative figures for these greater cities for 1931 and 1941.

## 3.-Population of Greater Cities in 1941 Compared with 1931

| Greater City | 1941 | 1931 | Greater City | 1941 | 1931 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. |  | No. | No. |
| Montreal. | 1,139,921 | 1,023,158 | Hamilton. | 176,110 | 163,710 |
| Toronto. | 900,491 | 810,467 | Windsor. | 121,112 | 110,385 |
| Vancouver | 351,491 | 308,340 | Halifax. | 91, 829 | 74,161 |
| Winnipeg. | 290,540 | 284,295 | London. | 86,740 |  |
| Ottawa. | 215,022 | 175, 988 | Victoria | 75, 218 |  |
| Quebec. | 200, 814 | 172,517 | Saint John | 65,784 | 58,717 |

${ }^{1}$ Not included in Greater Cities in 1931.

## 4.-Urban Centres With Populations of Over $\mathbf{3 0 , 0 0 0}$ in 1941 Compared with Census Years 1871-1931

Note.-Urban centres in which a Board of Trade exists are indicated by an asterisk (*), and those in which there is a Chamber of Commerce by a dagger ( $\dagger$ ). In all cases the populations for previous censuses have been adjusted to cover the same area as in 1941.

| Rank | Urban Centre and Province | Populations |  |  |  |  |  |  |  |

## Section 2.-Movement of Population

A short review of the rural and urban movement of population in 1941-44, the migration between the nine provinces of Canada during the decade 1931-41, and the estimated net civilian immigration by provinces, 1941-44, appears at pp. 120-122 of the 1945 Year Book.

## Section 3.-Area and Density of Population

The area and density of the population per square mile is given by locality in the following tables.
6.-Area and Density of Population, by Provinces and Territories, Census Years

| Province or Territory | Land Area in Sq. Miles | Population, 19111 |  | Population, 1921 |  | Population, 1931 |  | Population, 1941 |  |

## 8.-Densities of Population in Various Countries

Note.-In the past, this table has been based on census data. Owing to the incidence of the War and the postponement of regular census-taking in most countries, it was decided to substitute density figures based on estimated population in those cases marked with an asterisk (*), rather than give census dats that is not representative of existing conditions. Total area is used, except in the cases of Canada, the Netherlands, Norway, Sweden and the United States, where figures of land area are available. Source: Statistical Year Book of the League of Nations, 1942-44.

## Section 4.-Sex Distribution

The sex distribution of the Canadian people is characterized, as is that of any 'young' population, by a preponderance of males, although this condition has been greatly modified in recent times, especially since the rigid control of immigration following the First World War. In 1666, during the early years of settlement by the French-speaking immigrants, $63 \cdot 3$ p.c. of the population were males. In 1784, when the English-speaking immigration to Canada was commencing, there were 54,064 males and 50,759 females and by the middle of the nineteenth century
there were 449,967 males to 440,294 females in Lower Canada, and 499,067 males to 452,937 females in the more newly settled Upper Canada. Since Confederation the newer sections of Canada-the west and the northwest-have shown the greatest excess of males.

From 1871 to 1941, for Canada as a whole, the percentage of males never dropped below 51 p.c. of the total population, whereas for Western Canada it varied between 53 p.c. and 59 p.c.

${ }^{1}$ Includes 485 members of the Royal Canadian Navy, who were recorded separately in 1921.
Immigration has influenced the sex distribution of the population, as between provinces, in widely different degree. In the older settlements of Quebec and parts of New Brunswick and Ontario, where the populations are of French basic stock, immigration has not played as great a part in upsetting the normal distribution of the sexes as it has in the other provinces. Even in Ontario immigrants from Continental European countries do not settle as readily and are not assimilated as completely as in the newer western provinces.

A characteristic of population distribution since 1911 has been the rapid growth of urban centres due to the far-reaching developments in manufacturing that have entirely changed the economic picture. Summary figures showing the disparity between the sexes in the matter of urban concentration in 1911, 1921, 1931 and 1941 in the total population are given in the following tabulation. Where the percentage
of urban males is large the percentage of females is also large. Each decade emphasizes the greater opportunities for female employment in urban centres as compared with rural.

| Item | 1911 | 1921 | 1931 | 1941 |
| :---: | :---: | :---: | :---: | :---: |
| Excess of all males over all females per 100 of total population.. | 6.07 | 3.09 | . 59 | 56 |
| Percentage of females in urban centres to all females. | $47 \cdot 12$ | 51.78 | 55.98 | 56.61 |
| Percentage of males in urban centres to all males. | 43.91 | 47.41 | 51.57 | $52 \cdot 18$ |

${ }^{1}$ White population only.

## Section 5.-Age Distribution

The age distribution of a population is fundamental to most, if not all, other analyses, for the age factor influences employment, marriage, birth rates and death rates, education, immigration, criminology and a multitude of events and activities that are of great importance in the national life.

Immigration has a strong influence on age distribution: it does not directly affect the very young sections of the population except to a very small degree, but it immediately affects the age groups between the 'teens' and the 'twenties' and its effects are carried to the older groups as time goes by. Thus, the influence of the very heavy immigration of the early years of the century (1900-11) is indicated by the fact that, in $1901,175 \cdot 1$ persons per 1,000 of the total population were in the age group 20-29 years and 130-5 persons per 1,000 in the group 30-39 years: a decade later, $190 \cdot 3$ per 1,000 were in the former group and $142 \cdot 6$ in the latter. Since immigration was cut down very severely after the outbreak of war in 1914, the influence of these earlier accretions to the population has crept through the upper age groups year by year it has now reached those of the population in the 'fifties'
11.-Male and Female Populations, by Age Periods, Census Years 1921-41

Note.-For comparable data for census years 1891-1911, see the 1943-44 Year Book, p. 95.

Between 1931 and 1941 a more pronounced general ageing of the population is shown owing to practically non-existent migration and a lower birth rate-factors that were emphasized during the depression years. In 1921 the number per 1,000 of total population between 40 and 59 years of age was $183 \cdot 0$; it was 2011 in 1931 and 209.5 in 1941. Greater proportional increases, however, are shown by the group 60 years of age or over; this group represented $75 \cdot 1$ per 1,000 of the total population in 1921, $83 \cdot 9$ in 1931 and no less than $102 \cdot 1$ per 1,000 in 1941.

More detailed tables on this subject are given at pp. 94-96 of the 1943-44 edition of the Year Book.

## Section 6.-Conjugal Condition

Next to the sex and age distribution of a population, that of conjugal condition is probably the most fundamental. Its incidence is twofold: 'vital' and 'economic and social'

The vital basis lies in the influence of the marriage state on the fertility of a population and, from this angle, close analyses of conjugal condition, by age, are important. The ages of females (see Table 11), between 15 and 45 years have more significance than those of males; if the proportion of females in this group is small, the expected proportion of births will also be small. It has been shown that for the Canadian population the combined influences of age of the population, age of the married females, and proportion of females married has become steadily more favourable to the birth rate from 1871 to 1921 but that, since the latter date, the trend has been less favourable.

## 12.-Conjugal Condition of the Population, 15 Years of Age or Over, by Sex, Census Years 1911-41

Note.-Figures for censuses previous to 1911 are not comparable.

| Year and Sex | Single |  | Married |  | Widowed |  | Divorced and Legally Separated |  | Total ${ }^{1}$ |

${ }^{1}$ Includes conjugal condition not stated; percentages are based on stated condition.
In Canada as a whole there are more married males than married females. Other striking statistics of conjugal condition are the great preponderance of widows compared to widowers and the large and increasing numbers of divorced or legally separated persons.

Conjugal condition of the 1941 population 15 years of age or over, by provinces and sex, is shown at p. 102 of the 1945 Year Book.

## Section 7.-Racial Origins

A population composed of divers racial stocks gives rise to political, economic and social problems quite different in nature from those of one with a small admixture of foreign elements, although, to the extent that certain racial stocks are more readily assimilated than others, the problems are mitigated. It is equally true that the different educational, moral, economic, religious and political backgrounds of a people of mixed origins lend variety and diversity to the national life.

The two basic stocks of the Canadian people are the French and the English: historically the French is much the older and, excepting for the Census of 1921, has exceeded in numbers any one of the basic British Isles stocks.

It will be seen from Table 13 that, at the time of Confederation, the largest of the groups comprising the British Isles races was the Irish and that the Irish and the Scottish together outnumbered the English by almost two to one. The English, however, exceeded the Irish by 1891, while the Scottish took second place in 1921. From 1881 to 1901 , those of Irish origin increased only $3 \cdot 3$ p.c.: the smaller proportion of Irish to English and Scottish was due not alone to a decline in immigration but to their emigration from Canada. The relative gains from 1911 to 1921 of the British Isles races as a group brought them to over one-half ( $55 \cdot 4$ p.c.) of the total population. The English (with 28.9 p.c.) ranked first in 1921 of all races in Canada, the French were second ( 27.9 p.c.), the Scottish were third ( 13.4 p.c.), and the Irish fourth ( $12 \cdot 6$ p.c.). In 1931 the French again assumed the premier position and the English ranked second, outnumbered by 187,000, yet there were only 54 French to every 100 persons of English, Scottish, Irish and Welsh descent combined. There was a relative reduction in the British Isles races from 57 p.c. of the total population in 1901 to $49 \cdot 7$ p.c. in 1941. The causes for this relative decrease were mainly: declining immigration from the British Isles,
digration to the United States of the Anglo-Saxons, repatriation of large numbers French Canadians from the United States, and the generally higher rate of crease on the part of the French as compared with the various Anglo-Saxon peoples. re factors of immigration and emigration are transitory and change rapidly but e rate of natural increase has been persistently favourable to the French.

For the British Isles races the inter-decennial increases have fallen consistently رm 1911 to 1941. Between 1911 and 1921 the increase was 869,657; for the llowing decade it was 512,333; and from 1931 to 1941, 334,833.

The British Isles and French groups taken together constituted 80 p.c. of e population in 1941, as was the case in 1931; this compared with 33 p.c. in 1921, p.c. in 1911, 88 p.c. in 1901, 89 p.c. in 1881 and no less than 92 p.c. in 1871. is pronounced decline has been due, in the main, to immigration of Continental aropeans to Canada during the past 40 years.

From the beginning of the present century the proportion of the European ces (other than British and French) increased from $8 \cdot 5$ p.c. in 1901 to $17 \cdot 8$ p.c. 1941. The rate was such as to more than double the numbers of these European ocks in one decade (1901-11) and was much higher for specific origins: for instance e Belgians and Scandinavians trebled; the Jews and Italians increased more an fourfold; the Poles and Finns, respectively, were numerically five and six nes stronger in 1911 than in 1901.

The second decade of the century showed declining rates of growth; this period cluded three years of the heaviest immigration in the history of the Dominion id four years of war. The net result was that the European stocks increased jm 944,783 to $1,247,103$ or 32 p.c.

Several significant changes occurred in the third and fourth decades; European ocks (other than British and French) rose from 1,247,103 in 1921 to 2,043,926
1941 or by 63.9 p.c. With the resumption of moderate immigration from ontinental Europe in 1921 and the relatively higher birth rate among earlier ontinental European immigrants, foreign European stocks increased nearly four id one-half times more rapidly than the British in 1921-31.

${ }^{8}$ Includes Bukovinian, Galician and Ruthenian.

Racial origins of the population by provinces and territories in 1941 are given at p. 106 of the 1945 edition of the Year Book.

## Section 8.-Religions

At each census the actual numbers attached to any religious denomination, as reported by the persons enumerated, have been recorded. The growth of the different denominations from an early date is traced statistically in Table 14.

Over the period from 1871 to 1941 approximately 40 p.c. of the population of Canada has been of the Roman Catholic faith. This proportion has been remarkably constant over the 70 years. The 1941 percentage (inclusive of Greek Catholics) was $43 \cdot 3$ p.c. Methodists were $15 \cdot 7$ p.c. of the population in 1871 but fell to $13 \cdot 2$ p.c. in 1921. Presbyterians increased from $15 \cdot 6$ p.c. in 1871 to 16 p.c. in 1921; they were reinforced by the considerable immigration from Scotland after the beginning of the century. The organization of the United Church of Canada in 1925 left the Presbyterians and the Congregationalists much weaker in membership. Almost all Methodists, the main body of Congregationalists and a large number of Presbyterians united to form that Church.

Among some of the numerically larger European races in Canada, the leading religious denominations at the 1941 Census were: German origin- $32 \cdot 0$ p.c. Lutheran, $25 \cdot 0$ p.c. Roman Catholic and $14 \cdot 2$ p.c. United Church; Ukrainian origin $-62 \cdot 3$ p.c. Roman Catholic and 29.1 p.c. Greek Orthodox; Scandinavian origin- 59.8 p.c. Lutheran, $17 \cdot 0$ p.c. United Church and 6.8 p.c. Anglican; Netherlanders$30 \cdot 5$ p.c. Mennonite, $28 \cdot 1$ p.c. United Church, $11 \cdot 4$ p.c. Anglican and $7 \cdot 6$ p.c. Baptist. About 81 p.c. of the people of Polish origin were Roman Catholic and 91 p.c. of the Italians reported this religious denomination. It is interesting to
note that $13 \cdot 6$ p.c. of the Chinese stated that they belonged to the United Church and 7 p.c. to the Presbyterian Church, while 21.4 p.c. of the Japanese reported United Church as their religious denomination.

## 14.-Religious Denominations of the Population, Census Years 1871-1941, with Percentage Distribution for 1941

| Religion | 1871 | 1881 | 1891 | 1901 | 1911 | 1921 | 1931 | 1941 |  |

[^51]Details of leading religious denominations by provinces are given at p. 109 of the 1945 edition of the Year Book; those of the population of the nine leading sities are shown in Table 14 of the 1946 Year Book at p. 107

## Section 9.-Birthplaces

The population of Canada by broad nativity groups-Canadian born, other British born, United States born and other foreign born-is shown in Table 15.

The effects of the large immigration at the beginning of the century are seen in all columns of the percentage figures after 1901. Whereas in $1871,83 \cdot 3$ p.c. of the total population were Canadian born, $14 \cdot 1$ p.c. other British born, and $2 \cdot 6$ p.c. foreign born, the corresponding proportions in 1941 were 82.5 p.c., $8 \cdot 7$ p.c. and 8.8 p.c., respectively.

The smallest element in the population, viz., the foreign born other than United States born, actually shows the greatest percentage increase. These "other foreign born" increased rapidly from 0.85 p.c. in 1871 to 7.5 p.c. in 1931 . The decline of the group indicated for 1941 is attributable to a restricted immigration policy (see Chapter V).
15.-Nativity of the Population, Census Years 1871-1941

Table 27, p. 113 of the 1943-44 Year Book gives, for 1941, the nativity of the population analysed by sex and province.

Table 16 gives the total population by country of birth for census years 1871 1941. The census, under birthplace, collects information on both the country of birth of the immigrant arrivals in Canada and the province of birth of the nativeborn population.

Comparative figures for country of birth for census periods to 1921 and those taken more recently are difficult to obtain because of the many geographical changes in Europe after the War of 1914-18; for instance, a person who, early in the century, migrated to Canada from a certain part of Austria or Hungary might not realize that in 1931 he should have recorded his birthplace as Poland or Roumania in line with the new national boundaries. In comparing the census figures of several decades these facts should be considered and a regrouping of certain European countries whose boundaries were changed in later censuses is carried back to earlier censuses to maintain comparability. Table 16 is as far as the census can go in supplying strictly comparable figures along these lines. In this table no change has been made affecting the census figures thamselves: they have been merely regrouped geographically.
16.-Birthplaces of the Population, Census Years 1871-1941

[^52]More detailed information on this subject will be found at pp. 111-117 of the 1943-44 Year Book.

## Section 10.-Citizenship

Until the passage of the Canadian Citizenship Act in 1946 (the Act came into force on Jan. 1, 1947), the basic legislation governing Canadian nationality was to be found in the Immigration Act. The new legislation was referred to briefly at p. 1137 of the 1946 Year Book and the statistics and other information resulting from its administration will be given in the Section entitled "Department of the Secretary of State" in the Miscellaneous Administration Chapter of this and subsequent editions.

At the decennial censuses, information on aliens and Canadian nationals is compiled and until now such figures have been the only available index of Canadian citizenship and nationality. As new data become available from the Department of the Secretary of State, it is possible that the census figures in this field will not have the significance they have carried in the past.

Table 17 shows that, at the Census of 1941 , less than 1 p.c. of the total Canadianborn and other British-born population had lost their Canadian citizenship through renunciation or marriage. Over 80 p.c. of the United States-born persons in Canada, who form 2.7 p.c. of the total population, had become Canadian citizens together with 74.7 p.c. of the Continental European-born; of those born in Asiatic countries 72.7 p.c. remained aliens. Of the total population, only 2.4 p.c. were aliens.

## 17.-Citizenship of the Total Population, by Nativity, 1941

| Birthplace | Canadian <br> Nationals | Aliens | Not Stated | Total |
| :---: | :---: | :---: | :---: | :---: |
| Canada. | 9,475, 252 | 12,521 | 35 | 9,487,808 |

| Totals | 11,210,310 | 274,340 | 490 | 11,506,655 ${ }^{1}$ |

: Includes 21,515 British-born persons who have not acquired Canadian domicile.

## Section 11.-Languages and Mother Tongues

Official languages are not to be confused with mother tongues. Mother tongue, being used in the home, is natural to a person even if he is unable to speak it on account of youth, infirmity or for some other reason, whereas the official language or languages are those recognized by statute for general use. Thus, the immigrants to a new country bring with them their mother tongues and continue to use them in their homes, but these have no relation to the official languages in the country of their adoption.

Canada is officially bilingual, the two languages being English and French. The number speaking one, both or neither of the official languages is given below.
18.-Population Speaking One, Both or Neither of the Official Languages of Canada, by Racial Origin, 1941
Note.-Children under 5 years of age were classed as speaking the language of the home.

| Racial Origin | Language Spoken |  |  |  | Total Population |

[^53]Mother tongues spoken are dealt with in Table 19 which shows that 1,663,712 persons did not have either English or French as a mother tongue. Of the nine provinces, Ontario has the largest number of persons $(425,189)$ speaking foreign languages as mother tongues; Saskatchewan has the highest percentage ( 39 p.c.).

## 19.-Mother Tongues of the Total Population, 1941

Note.-Children under 5 years of age were classed as speaking the language of the bome.

## Section 12.-School Attendance

Statistics under this heading for the Census date of 1941 will be found at p. 138 of the 1943-44 Year Book.

## Section 13.-Blind and Deaf-Mutes

Detailed statistics of the blind and of deaf-mutes are given in Vol. IV of the 1941 Census.

Blind.-Persons who had lost the sight of one eye only were not regarded as blind. According to the standards applied by the Census, the blind in the nine provinces in 1941 numbered 9,962 or $8 \cdot 7$ per 10,000 of the population as compared with 3,266 or $6 \cdot 1$ in 10,000 at the beginning of the century.

Deaf-Mutes.-Deaf-mutism, unlike blindness, is preponderantly an infirmity originating at birth or an early age. The number of deaf-mutes in the nine provinces of Canada increased from 5,368 in 1881 to 7,194 in 1941. The number of blind deaf-mutes in Canada is $158,39 \cdot 9$ p.c. of whom are in Quebec; 29.7 p.c. in Ontario; 8.2 p.c. in Nova Scotia; $5 \cdot 7$ p.c. in Alberta; $5 \cdot 1$ p.c. in British Columbia; 3.8 p.c. in each of the Provinces of Prince Edward Island and Manitoba; and 1.9 p.c. in the Provinces of New Brunswick and Saskatchewan.

${ }^{1}$ Not including blind deaf-mutes.

## Section 14.-Occupations

For a summary of the occupations of the Canadian people for the 1941 Census, see Appendix III, pp. 1062-73, of the 1943-44 Year Book.

Figures for Canada, excluding Yukon and the Northwest Territories, show that $3,676,563$ males and 833,972 females, 14 years or over, or a total of $4,510,535$ persons, including members of the Armed Forces, were gainfully occupied at the time of the 1941 Census. Males represented 81.5 p.c. and females 18.5 p.c. of the total gainfully occupied. The population of the nine provinces consisted of $5,890,683$ males and $5,599,030$ females or a total of $11,489,713$ persons. The total gainfully occupied, therefore, accounted for $39 \cdot 3$ p.c. of the total population; gainfully occupied males representing 62.4 p.c. of the total male population and gainfully occupied females 14.9 p.c. of the total female population. Nearly 84 p.c. of the males and about 20 p.c. of the females, 14 years of age or over, were gainfully occupied at the 1941 Census.
21.-Numbers and Percentages of Gainfully Occupied Males and Females, 14 Years of Age or Over, by Sex, Census Years 1921-41
(Exclusive of Yukon and the Northwest Territories)

| Service..... | 339,307 | 316,313 | $9 \cdot 4$ | 418,111 | $50 \cdot 2$ |
| Clerical. | 204, 666 | 182, 823 | $5 \cdot 4$ | 155, 208 | $18 \cdot 6$ |
| Labourers ${ }^{\text {s }}$ | 273, 925 | 251,889 | $7 \cdot 5$ | 11,655 | 1.4 |
| Not stated. | 39,166 | 9,695 | $0 \cdot 3$ | 1,718 | $0 \cdot 2$ |
| All Occupations | 3,613,045 | 3,363,111 | $100 \cdot 0$ | 832,8ı0 | $100 \cdot 0$ |
| Males on Active Service not gainfully occupied prior to enlistment. | 63,518 | - | - | - | - |
| Total. | 3,676,563 | - | - | - | - |

${ }^{1}$ Total "A" includes males on Active Service with a gainful occupation prior to enlistment. ${ }^{9}$ Total " B " includes occupied males minus those on Active Service.
${ }^{3}$ Based on column 2. There is very little difference in the percentage distribution of males by occupation groups with Active Service included. ${ }^{4}$ Less than 0.05 p.c. ${ }^{5}$ This group does not include agricultural, fishing, logging, or mining labourers.

## Section 15.-Dwellings, Households and Families*

Buildings and Dwellings.--According to Table 23, the number of occupied dwellings in Canada $\dagger$ at the 1941 Census was 2,597,969 as compared with 2,227,000* at the 1931 Census. The number of persons per dwelling was highest in Quebec at $5 \cdot 1$ and lowest in British Columbia at $3 \cdot 7$. In addition, there were 62,008 vacant dwellings in the Dominion on June 2, 1941. It should be explained that the total number of buildings used for habitation-2,181,564-was somewhat less than the number of dwellings since, in the case of apartment buildings, rows and semidetached structures, each building would contain one or more dwellings.

Definitions of Dwellings and Dwelling Types.-The Census defines a dwelling as "a structurally separate set of self-contained living premises having its own entrance from outside of the building containing it or from a common passage or stairway inside" According to this definition a single-dwelling house is a permanent structure in which there is only one self-contained dwelling unit. A.semi-detached dwelling house, sometimes known as a "double house" is a two-dwelling structure with separate entrances to each dwelling, and divided by a solid partition extending from attic to cellar. This distinguishes the semi-detached from the "duplex" or two-dwelling apartment house where the division, with upper and lower apartments, is on a horizontal basis. Apartment dwellings or suites are found in apartment blocks, each dwelling having a separate exit to a common hall or landing. A flat is structurally similar to an apartment house except that each dwelling unit has an independent entrance from the outside.

[^54]Households and Families.-The number of households in the nine provinces at the 1941 Census was $2,706,089$ and the average size of all households was $4 \cdot 3$ persons per household. Private families in Canada totalled 2,525,299, the average number of persons per family being $3 \cdot 9$. The average size of households and of families was largest in Quebec and smallest in British Columbia.

Definitions of Household and Family.-In the Census a household is defined as "a person or a group of persons living in one housekeeping community. The persons may or may not be related by ties of kinship, but if they live together with common housekeeping arrangements, they constitute a household" Persons on Active Service were included as members of their family households whether actually living at home or not at the date of the Census.

The family membership is restricted to persons having the husband-wife or parentchild relationship and thus is not always comparable with the group of persons composing the household. The latter often consists of two or more families and very frequently includes persons related to the head, such as uncle, niece, grandmother, etc., but who are not members of his immediate family.
23.-Numbers of Buildings, Dwellings, Households and Families, and Average Numbers of Persons per Dwelling, per Household and per Family, by Provinces, 1941.

${ }^{1}$ Buildings used for habitation only.
${ }^{2}$ Does not include dwellings with tenure not stated.
For further details concerning tenure and kind of dwellings, composition and size of family and households, see pp. 121-125 of the 1946 edition of the Year Book.

## Section 16.-Quinquennial Census of the Prairie Provinces

The Census and Statistics Act of 1905 and the Statistics Act of 1918 provide for a census of population and agriculture for the Provinces of Manitoba, Saskatchewan and Alberta, to be taken in 1906 and every tenth year thereafter, in addition to the Dominion Decennial Census.

The latest Prairie Provinces Census was taken on June 3, 1946, and detailed results of this Census will be published by the Dominion Bureau of Statistics.

As in the past, this Census covers both population and agriculture. In addition, a housing census was taken in cities and towns of 5,000 population or over. The population census also ascertains age, sex, marital condition, birthplace, place of residence in 1941, nationality, mother tongue, and degree of education. In addition, every person 14 years of age or over reported his occupation, the industry in which he was employed and his occupational status, as employer, wage-earner, own account, etc. Wage-earners reported their earnings for the twelve months immediately preceding the census date. Questions were asked to determine the amount of unemployment at the date of the Census given above.

The Census of Agriculture ascertained the farm population and the number of farm workers; the area, condition and value of farm lands; the area and production of crops; the numbers of live stock and the production of animal products; farm facilities; mortgage indebtedness; farm expenditures and gross revenues of farms.

So far as the lear Book is concerned, only final figures are published and these will not be available for some time. Preliminary figures will be available in bulletin form.

## PART III.--INTERNATIONAL STATISTICS OF POPULATION <br> Section 1.-Area and Population of the British Empire

Statistics showing official estimates of the area and population of the British Empire by continents and countries are given in Table 52, pp. 141-142 of the 1943-44 Year Book.

## Section 2.-Area and Population of the World

Statistics showing the areas and the populations of the various continents and details of each country, as in 1931, are given in a table at pp. 168-169 of the 1934-35 Year Book. The lack of statistical data, and the dislocations caused by the War, preclude the compilation of later information.

## Section 1.-Immigration

## Subsection 1.-Growth of Immigration

In 1851 the population of Upper and Lower Canada, Nova Scotia and New Brunswick totalled 2,312,919 and in 1941 the population of the Dominion was $11,506,655$. During that period no fewer than $6,703,891$ persons were admitted as immigrants, not all of whom stayed in the Dominion, for numbers eventually found their way to the United States while others returned to the land of their birth.

The years between 1900 and 1914, a period of general expansion and industrialization which accompanied a great inflow of capital from Great Britain, witnessed the heaviest movement of immigrants into Canada. The highest figure was reached in 1913, when 400,870 persons were admitted. After the outbreak of war in 1914, immigration declined to a fraction of the pre-war movement and on the conclusion of peace it did not immediately revive; even the post-war boom of 1920 was accompanied by an immigration of less than 140,000 . However, towards the end of the 1920's, the numbers increased somewhat. During this period, the immigration policy of the Dominion Government was one of active encouragement, but the depression that began late in 1929 necessitated restrictions that greatly reduced immigration throughout the 1930's. The outbreak of war in 1939 still further reduced the numbers entering Canada but the downward trend changed in 1943 due to the movement to Canada of dependents of the Armed Forces. In January, 1942, provision was made to furnish the dependents of members of the Armed Forces serving overseas with free transportation from their home in country of residence to destination in Canada. From 1942 to 1946, 62,077 dependents, comprising 42,098 adults and 19,979 children, were admitted to Canada.

After the end of the War, it was considered advisable to permit a somewhat increased movement of immigrants to Canada and at the same time provide for the admission of a number of refugees or displaced persons. Consequently, under

[^56]Orders in Council P.C. 2071, dated May, 1946, and P.C. 371, dated January, 1947, permission was granted for the entry of the following:-
(1) The wife, unmarried son, daughter, brother or sister, father or mother, widowed daughter or sister with or without unmarried children under 18 years of age, the orphan nephew or niece under 18 years of age, of any person legally admitted to and resident in Canada who is in a position to receive and care for such relatives.
(2) An agriculturist having sufficient means to farm in Canada.
(3) An agriculturist entering Canada to farm, when destined to a father, father-in-law, son, son-in-law, brother, brother-in-law, uncle or nephew engaged in agriculture as his principal occupation who is in a position to receive such immigrant and establish him on a farm.
(4) A farm labourer entering Canada to engage in assured farm employment.
(5) A person experienced in mining, lumbering or logging entering Canada to engage in assured employment in any one of such industries.

## 1.-Immigrant Arrivals in Canada, 1892-1946

## 2.-Immigrant Arrivals in Canada from the United Kingdom, the United States and Other Countries, 1921-46

#### Abstract

Note.-The 1936 edition of the Year Book shows, at p. 186, statistics of immigration on this basis, by calendar years from 1881 to 1900 and by fiscal years from 1901 to 1935. Calendar-year figures are given for 1908 to 1920 at p. 153 of the 1942 edition.

| Year | $\underset{\text { from- }}{\text { Immigrant Arrivals }}$ |  |  | Total | Year | $\begin{aligned} & \text { Immigrant Arrivals } \\ & \text { from- } \end{aligned}$ |  |  | Total |

## Subsection 2.-Sex and Conjugal Condition of Immigrants

Females constituted 71.4 p.c. of the total immigrants to Canada in 1946, as sompared with $66 \cdot 1$ p.c. in 1945 . Prior to 1931 males normally exceeded females.

## Subsection 3.-Mother Tongues and Racial Origins of Immigrants

Mother Tongues of Immigrants.-At the Census of 1941, only 115,414 persons or 1 p.c. of the total population were unable to speak either English or French, but the percentages, by racial origins, of those speaking neither official language varied greatly. (See pp. 122-123.)

The Immigration Branch does not record the ability of immigrants to speak the official tongues of the Dominion; the statistics appearing in Table 5 relate only to the mother tongue of the immigrant. The great majority of those coming from the United States naturally give English as their mother tongue, regardless of their racial origin. In the calendar year 1946, 620 persons (10 years of age or over) coming from the United States, many of whom were undoubtedly of FrenchCanadian origin, gave French as their mother tongue. In that year, persons from all countries giving English as their mother tongue constituted $89 \cdot 4$ p.c. of the total and those giving French 1.9 p.c.
5.-Mother Tongues of Immigrants, 10 Years of Age or Over, 1937-46

Note.-Dashes in this table indicate that no immigrants were reported for the corresponding stub item.

|  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |

${ }^{1}$ Includes Ruthenian and Ukrainian.
Racial Origins of Immigrants.-The great bulk of Canadian immigration of the past generation has been drawn from the English-speaking countries and from those Continental European countries where the population is ethnically closely related to the British, though for some years there was an increasing immigration of Slavs. Since the outbreak of war in 1939, the predominant racial origins of immigrants have been British, French, Jewish and Netherlander.

## 6.-Racial Origins of Immigrants into Canada, 1942-46

Note.-Dashes in this table indicate that no immigrants were reported for the corresponding stub items. Figures for $1926-41$ will be found in the corresponding table of previous Year Books beginning with the 1939 edition.

## Subsection 4.-Nationalities of Immigrants

In the calendar year 1946, $83 \cdot 0$ p.c. of total immigrants into Canada were British subjects and 13.4 p.c. were citizens of the United States.

## 7.-Nationalities of Immigrants into Canada, 1942-46

Note.-Dashes in this table indicate that no immigrants were reported for the corresponding stub items. Figures for $1930-41$ will be found in the corresponding table of previous Year Books beginning with the 1936 edition.

| Nationality | 1942 | 1943 | 1944 | 1945 | 1946 | Nationality | 1942 | 1943 | 1944 | 1945 | 1946 |

## Subsection 5.-Destinations and Occupations of Immigrants

Destinations.-Immigrants entering the Dominion are required to give the province of intended destination, but it does not necessarily follow that this is the province of eventual residence. It is believed, however, that the figures for later years give a truer picture of actual residence than did those for the earlier years, when 'boom' conditions tended to create a class of 'floaters' who flocked to new jobs, quite possibly in other provinces, as soon as the ones on which they were originally employed ended. Of the provinces, Ontario has received the largest number of immigrants in each year since 1905 with the exception of 1929 when Manitoba took the lead. In 1930 and 1931, Manitoba was in second place; since that time Quebec has stood second as the immediate destination of new arrivals.

## 8.-Destinations of Immigrants into Canada, by Provinces, 1935-46

[^58]| Year | Maritime Provinces | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British Columbia and Yukon | N.W.T. | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1940. | 1,642 | 2,556 | 4,447 | 314 | 250 | 458 | 1,653 | 4 | 11,324 |
| 1941. | 1,717 | 1,931 | 3,365 | 193 | 186 | 288 | 1,647 | 2 | 9,329 |
| 1942. | 1,299 | 1,399 | 3,315 | 209 | 118 | 287 | 949 | ${ }_{\text {Nil }}$ | 7,576 |
| 1943 | 1,852 | 1,369 | 3,852 | 190 | 171 | 310 | 760 |  | 8,504 |
| 1944 | 2,674 | 2,066 | 5,361 | 493 | 423 | 596 | 1,186 | 2 | 12,801 |
| 1945. | 4,049 | 3,428 | 9,342 | 1,168 | 1,067 | 1,401 | 2,264 | 3 | 22,722 71,7191 |
| 1946. | 8,655 | 9,712 | 29,604 | 4,615 | 4,711 | 5,771 | 8,639 | 8 | 71,719 ${ }^{1}$ |

${ }^{1}$ Includes 4 persons whose destinations were not given.
Occupations.-Immigrants are classified as follows: farming, labouring, mechanics, trading and clerical, mining, female domestics, and other. Of late years, the last-named class has accounted for about 60 p.c. of the total, owing to the curtailment of immigration and to the numbers of wives and children of service men. The statistics of occupations are, therefore, meaningless and have been discontinued until circumstances warrant the reappearance of the data.

## Subsection 6.-Rejections of Immigrants

Prohibited Immigrants.-The immigration of certain classes of persons into Canada is prohibited. These classes include persons who are physically or mentally unable to earn a living, criminals, beggars, persons who believe in the overthrow of government by revolutionary influence, etc. The particular subsection of the Immigration Act defining this class is worded as follows:-
(n) Persons who believe in or advocate the overthrow by force or violence of the Government of Canada or of constituted law and authority, or who disbelieve in or are opposed to organized government, or who advocate the assassination of public officials, or who advocate or teach the unlawful destruction of property.
Section 3 of the Immigration Act (R.S.C. 1927, c. 93), dealing with prohibited immigrants, was quoted in extenso in the editions of the Year Book published between 1934 and 1940.

Rejections and Deportation.-The Immigration Act provides for the rejection and deportation of immigrants belonging to the prohibited classes, and also for the deportation of those who become undesirables within five years after legal entry.

## 9.-Rejections of Prospective Immigrants upon Arrival at Ocean Ports, by Principal Causes and by Nationalities, 1935-46

Note.-Figures for the calendar years 1931-34 are given at p. 159 of the 1940 Year Book; those for the fiscal years ended Mar. 31, 1903-34 will be found at p. 222 of the 1934-35 edition.

While the majority of persons included in the figures of Table $\mathbf{1 0}$ have been previously shown in the statistics of immigration, a certain number of deserting seamen are included who have, of course, never been included in the immigration statistics. This situation became intensified during the war years.

## 10.-Deportations of Immigrants, including Accompanying Persons, after Admission, by Principal Causes and by Nationalities, 1935-46

Note.-Figures for the calendar years 1930-34 are given at p. 120 of the 1941 Year Book; those for the fiscal years ended Mar. 31, 1903-39 will be found at p. 160 of the 1940 edition.

## Subsection 7.-Juvenile Immigration

Juvenile immigration, apart from children accompanying their parents, has not been a large factor since 1931, when the Dominion Government ceased to grant financial assistance for this particular form of immigration. In 1941 there were 33 juvenile immigrants but since that year none have been admitted. An outline of juvenile immigration, including those children brought to Canada under the British Empire Settlement Agreement, is given at p. 121 of the 1941 Year Book.

## Subsection 8.-Oriental Immigration

Under wartime conditions, Oriental immigration ceased to be a problem and the economic effect of the presence of persons of Oriental origin can best be studied from census figures. An outline of the background and legislation connected with the immigration of Orientals into Canada is given at pp. 122-124 of the 1941 edition of the Year Book, and the table below presents statistics of Oriental immigration since 1906, the earliest year for which figures are available. These figures are given by sex at pp. 175-176 of the 1945 Year Book.
11.-Oriental Immigration to Canada, 1906-46

According to the Census of 1931, there were 46,519 persons of Chinese origin residing in Canada. In 1941 the number was 34,627 , a decrease of almost 12,000 . This decrease is mainly attributable to the fact that for several years prior to the War, numbers of Chinese returned to China without registering, which meant that they could not come back to Canada as returning:residents and could be admitted only if they could comply with the requirements of the law as immigrants. Undoubtedly those who left without registering intended to remain permanently in China. Over the years, the number in this class would be very considerable.

## Section 2.-Emigration and Returning Canadians

Emigration from Canada is an important factor tending to offset the immigration activities of the past and the movement from Canada to the United States has attained considerable proportions at certain periods. The two main factors have been the migration to the United States of Europeans originally immigrating to Canada and the emigration of native-born Canadians.

Since 1924 immigration officers have recorded the number of Canadians returning to Canada from the United States after having left Canada to reside in that country. Statistics of that movement are given in Table 12.
12.-Canadians ${ }^{1}$ Returned from the United States, 1926-46

${ }^{1}$ Not including aliens with Canadian domicile.
A question of considerable interest to Canadians is that of the permanent movement of population between Canada and the United States. In view of the lack of Canadian statistics on emigration, the following table has been compiled from figures supplied by the Immigration and Naturalization Service of the United States Department of Justice. Not all of the statistics are available by months, so that it has not been possible to present the figures on a calendar-year basis; they are, therefore, shown on that of the United States fiscal year, July 1-June 30. The column headed "Deportable Aliens Destined to Canada" covers persons permitted to return to Canada in lieu of deportation proceedings.

${ }^{1}$ Estimated.
Statistics of the permanent migration between Canada and the United Kingdom published by the British Board of Trade, are available from Jan. 1, 1924, to June 30, 1939. These are given at p. 169 of the 1942 Year Book.

Commencing Apr. 1, 1938, an enumeration was made of returning Canadians and other non-immigrants entering the Dominion from Newfoundland. The table below gives details of this movement for the calendar years 1944-46.

## 14.-Returning Canadians and Other Non-Immigrants Entering the Dominion from Newfoundland, 1944-46

| Subsection 3. Maternal Mortality . . . . | 172 |
| Section 4. Natural Increase... | 174 |

A short historical outline of the early collection of vital statistics in Canada is given at pp. 104-105 of the 1940 edition of the Year Book. Co-operation of the provinces in the collection of comparable statistics was finally brought about as a result of the establishment of the Dominion Bureau of Statistics, under the Statistics Act of 1918. From 1921 to 1925 comparable vital statistics were compiled by the Bureau for all provinces, except Quebec. Quebec has been included in the registration area since Jan. 1, 1926. From then on, vital statistics have been on a comparable basis for all provinces.

The main tables of the Summary and of Sections 2 to 5 which follow cover statistics for the nine provinces. 'Section 6 deals with those of Yukon and the Northwest Territories; the reasons for this separation are given there. A Section on communicable diseases is at the end of the Chapter.

Classification of Vital Statistics.-Until recently, vital statistics were all classified by place of occurrence. In 1944, however, the classification of births and deaths by residence was begun; births being classified by the residence of the mother. A number of special tabulations by residence have been made for a few years before 1944; in Tables 2 to 5 the figures for 1941-45 are given by residence. In all the other tables of this Chapter, only the figures for 1944 and 1945 are by residence, except in Tables 11, 12, 13, 23, 28 and 34. Headnotes of the tables throughout show the classification used.

For most provincial figures and rates, the change in classification makes comparatively little difference. But for individual localities, the differences may be quite large. In such cases, the figures for the years 1941 and after are not comparable with the five-year averages for the earlier years.

## Section 1.-Population and Summary of Vital Statistics

Population by Sex and Age.-In calculating many vital statistics rates it is necessary to know not only the total population but also the distribution by sex and age. Hitherto, such calculations have usually been restricted to the years about the Census, since it was thought that estimates of population by sex and age for more than two or three years before or after each Census were not sufficiently accurate. On the other hand, the use of such estimates can fill important gaps in our knowledge of vital statistics phenomena.

[^60]Table 1 shows the population of Canada by sex and age for the years 1931 to 1945. The figures for 1931 and 1941 are those of the Census. For the other years they are estimates, calculated from the census figures, the births and deaths in each year, and known migration into and out of the country.

The starting point in this calculation was the population of the 1931 Census The Census is taken at the beginning of June. The number of children under one year of age on June 1 of each year was obcained by subtracting the number who had died during the previous 12 months from the number who had been born. At each other year of age, the deaths at that age were subtracted from the census figures to give an estimate of the number at the next higher age in the following year. This process was carried forward for each year to 1941, and gave what may be called the 'expected' figures of population for that year. These expected figures were then compared with the actual figures of the 1941 Census, the differences at each age noted, and the estimates for the previous years revised in the light of these differences. The differences for each year were distributed between the two sexes and the different ages in the same ratio as the differences between the actual and 'expected' figures in 1941. The sum of the differences in 1941 was about 90,000 and is believed to be largely due to unrecorded migration into and out of the country.

The estimates for the years after 1941 are being made in the same way as the estimates for the years before 1941. The figures for 1942 to 1945 will be revised after the 1951 Census; those for the years 1932 to 1940 are now final.

The population of Canada in 1931 and 1941 by sex and age is shown graphically in the Chart following p. 185. Tables 2 to 6 give a summary of the vital statistics of Canada and the provinces for the years 1926 to 1945.

In comparing the birth, death and marriage rates of the provinces, it is useful to bear in mind that part of the differences observed may be due to differences in the sex and age distribution of their populations. Similarly, changes in these rates may be partly due to changes in this distribution. For example, the birth rate of Quebec is approximately the same as that of New Brunswick, and considerably higher than that of Prince Edward Island. Yet the fertility of the female population is highest in New Brunswick and approximately equal in the other two provinces. Over the past 15 years, the death rate in British Columbia has been rising, while in Ontario it has been more or less stable, with the result that, though 15 years ago the death rate in Ontario was considerably higher than in British Columbia, at present they are about equal. This does not mean, however, that the mortality rates at each age have risen in British Columbia. On the contrary, they have been falling. The death rate for the population as a whole has been rising because the increase in the proportion of the population in the higher age groups has more than outweighed the fall in the mortality rates at each age.

These remarks also apply to international comparisons of birth, death and marriage rates.

## 2.-Live Births and Birth Rates, per 1,000 Population, by Provinces, 1941-45, witl Five-Year Averages, 1926-45

Note.-Figures are by place of occurrence previous to 1941 ; for 1941 and subsequent years they are by residence.

[^62]6.-Marriages and Rates per 1,000 Population, by Provinces, 1941-45, with Five-Year Averages, 1926-45

Note.-Marriages are classified by place of occurrence.

${ }^{1}$ Exclusive of the Territories.
Canadian Life Tables.-Life tables have been calculated on the basis of the population of 1941 and the deaths of 1940-42. These are the second official life tables for Canada to be published, the first having been calculated on the basis of the deaths of 1930-32 and the population of 1931. The two life tables are given in abbreviated form in Tables 7 and 8.

Life tables give a summary of the health and general conditions of survival of the population in a conventional, standard form. A hypothetical number $(100,000)$ births of each sex is assumed. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. Thus, for example, in 1940-42, of 100,000 males born, 6,250 died in their first year, so that 93,750 survived to one year of age; 676 died in their second year, so that 93,074 survived to two years of age; and so on. At 100 years of age, only 50 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally,the expectation of life is the average number of years which a person might expect to live if the mortality rates in the given years remained constant.

## 7.-Canadian Life Tables, 1941, Based on Population, 1941, and Deaths, 1940-42

## 8.-Canadian Life Tables, 1931, Based on Population, 1931, and Deaths, 1930-32

A comparison of the two life tables shows a striking reduction during the ter years in the mortality rates for both males and females. Mortality rates for males are higher at all ages than for females, particularly in infancy. Infant mortality in 1940-42 was 62 per 1,000 live births for males compared to 49 per 1,000 for females Because infant mortality is still so high, the expectation of life at birth is less fo: both sexes than at age 1. Males who have survived their first year have an expecta tion of life of 66 years and females of 69 years. The expectation of life of a boy at age 15 is 54 years, and of a girl 56 years. At age 25, it is 45 years for men anc 47 for women. At age 70, when people become eligible for old age pensions, it is 11 years for men and 11 years for women. In 1930-32 mortality rates for female from 25 to 40 years of age were higher than those for males. In 1940-42, however because of the reduction in maternal mortality, this was not so.

## Section 2.-Births

Birth rates in most countries of Europe and in North America fell between 192 and 1939. In many countries of northwestern Europe, this fall had already set is many years earlier. Its immediate effect on the natural increase of the population was partly offset by a simultaneous fall in the death rate. Available statistics shor that since 1939, the fall in the birth rate has, for the time being, ceased. In Canad and the United States there was a great increase in births during the war period.

The birth rate for England and Wales was 29.9 per 1,000 in 1891-1900 and 27 per 1,000 in 1901-10. It fell to $16 \cdot 5$ in 1926-30, to $14 \cdot 4$ in 1933, and to its lowes figure of $14 \cdot 2$ in 1941. Since then it has risen to $15 \cdot 8$ in 1942, $18 \cdot 0$ in 1944, 16 . in 1945.

In France, the birth rate began to fall almost 100 years ago. It fell from 24 . per 1,000 in 1891-1900 to $20 \cdot 9$ per 1,000 in 1901-10 and 18.2 in 1926-30. It wa $15 \cdot 3$ in 1935, $13 \cdot 3$ in 1940 and $16 \cdot 4$ in 1945.

In Germany the fall in the birth rate began later than in France and Englan and was faster. From $36 \cdot 1$ per 1,000 in 1891-1900 it fell to $33 \cdot 0$ in 1901-10, t $18 \cdot 4$ in 1926-30, and to its lowest figure of $14 \cdot 7$ in 1933. After the Nazis came $t$ power, it rose to 18.9 in 1935 and to 20.0 in 1940 . In 1941, no doubt owing t the War, it fell to 18.6 and in 1942, the last year for which figures are availabl to $14 \cdot 9$.

In the United States, birth registration has included all States since 193: In 1920, in the registration area of that year ( 24 States with the great majority ( the population) the birth rate was 23.7 per 1,000 . In 1926-30 it was 19.7 and fe to $16 \cdot 6$ in 1933. It was $16 \cdot 9$ in 1935, 17.9 in $1940,21 \cdot 9$ in $1943,19 \cdot 8$ in 1945.

In Canada, in 1921, the birth rate was 29.4 per 1,000. Since a rate of 35 pt 1,000 is very high for countries of modern western civilization, the Canadian birt rate had probably not fallen far or for long before then. But it fell continuousl until 1937, when it was 20.0 per 1,000 . Since then, owing to economic recover and the War it rose to 21.5 in 1940 , to $24 \cdot 0$ in 1943 and to 23.9 in 1945. The birt rate in the provinces followed the same general trend, though in the Maritimı the fall stopped before 1930. The fall during the depression and the subsequel rise was greatest in the industrial provinces of Ontario, Quebec and British Columbi

## 9.-Live Births by Sex, Birth Rates, and Ratio of Males to Females, by Provinces, 1941-45

Note.-Figures for 1944 and 1945 are by residence; for previous years by place of occurrence.

| Province and Year | Total Live Births | Rate per 1,000 Population | Males |  | Females |  | $\begin{aligned} & \text { Males } \\ & \text { to } 1,000 \\ & \text { Females } \end{aligned}$ |

Sex of Live Births.-Wherever birth statistics have been collected, they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless it is so much of an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada in 1941-45 has varied between 1,057 and 1,067 .

Hospitalization and medical attendance at birth have increased in Canada. In 1926-30, only 22 p.c. of live births occurred in hospitals, while in 1940-42 the proportion was 49.5 p.c. and in 1945, 63 p.c. The provinces still differ greatly in this respect. In Quebec, less than one-third of births take place in hospitals, and in New Brunswick less than one-half. In Nova Scotia 72 p.c. of births were hospitalized in 1945, in Ontario 82 p.c., in the Prairies 87 p.c., and in British Columbia 93 p.c.

International Comparisons.-A comparison of the birth rates in Canada and the provinces with those in other countries is shown in Table 10. For Germany, Italy and most countries that were occupied by the enemy, the figures are given for 1939. Later figures, even when available, cannot be considered reliable. This also applies to later tables showing international comparisons, i.e., Tables 22, 37 and 38.

## 10.-Birth Rates per $\mathbf{1 , 0 0 0}$ Population of Various Countries of the World Compared with Canada and the Provinces for Recent Years

Births in Urban Centres.-Table 11 shows the number of live births in the arban centres of Canada with 10,000 population or over in 1941. The five-year ıverages for $1936-40$ show births by place of occurrence. Many of these births were to women who lived elsewhere. The figures for 1941-45 are by the residence ff the mother, and show the number of births, wherever occurring, to residents of sach centre. The two sets of figures are thus not comparable.

## (1.-Live Births in Urban Centres of $\mathbf{1 0 , 0 0 0}$ Population or Over, 1941-45, with Five-Year Averages, 1936-45

Nore.-Figures are by place of occurrence previous to 1941 ; for 1941 and subsequent years they are jy residence.

Illegitimacy.-Less than 5 p.c. of live births in Canada are illegitimate. This percentage is comparatively low. Its apparent increase since 1926 is partly due to the more complete registration of illegitimate births, which has been brought about by the co-operation of provincial registration officials and social welfare agencies, and by their more sensible and sympathetic treatment of illegitimacy.

Table 12 shows the number of illegitimate live births in Canada and the provinces, and their proportion to all live births.
12.-Illegitimate Live Births, and Percentages of Total Live Births, by Provinces, 1941-45, with Five-Year Averages, 1926-45
Nore.-Figures are by place of occurrence previous to 1941; for 1941 and subsequent years they are by residence.

${ }^{1}$ Exclusive of the Territories.
Stillbirths.-Table 13 shows the number of stillbirths in Canada and the provinces, together with the rates per 1,000 live births. The rate of stillbirths has been falling since 1926, though not equally in all provinces. The rate of illegitimate stillbirths per 1,000 illegitimate live births is considerably higher than the rate of legitimate stillbirths, and consequently higher than the over-all rate. The difference, however, has been getting smaller.

## 13.-Stillbirths, and Rates per $\mathbf{1 , 0 0 0}$ Live Births, by Provinces, 1941 - $\mathbf{4} 5$ with Five-Year

 Averages, 1926-45Nore.-Figures are by place of occurrence previous to 1941 ; for 1941 and subsequent years they are by residence.

[^64]Multiple Births.-Approximately one confinement in 85 in Canada results in the birth of more than one child. In 1926-45, there have been 57,740 such confinements, of which 57,214 were twins and 519 were triplets. There have been six sets of quadruplets, including two in 1945. The Dionne quintuplets were born in 1934.

Table 14 shows that the proportion of stillbirths is higher among multiple than among single births. It is about twice as high for twins and between two and six times as high for triplets.

## 14.-Single and Multiple Births, Live and Stillborn, 1941-45, with Five-Year Averages, 1936-45

Nore.-Figures for 1944 and 1945 are by residence; for previous years by place of occurrence.

Fertility Rates.-The sex and age distribution of the population is an important factor in determining birth, death and marriage rates. Since more than 95 p.c. of children are born to women between the ages of 15 and 50 , differences in the proportion of women of these ages to the population as a whole will cause differences in the birth rates of different countries or regions, even though the fertility of women at each age may be the same. Measures of fertility which are independent of the sex and age distribution of the population have therefore been devised. The best known of these are age-specific fertility rates and reproduction rates.

Table 15 shows the fertility of women in the age groups 15 to 50 years in Canada and the provinces. The three-year averages 1930-32 and 1940-42 have been calculated using the census figures; for the single years the estimated population figures have been used.

The fertility rates and gross reproduction rates given in Table 15 make it possible to compare fertility in the provinces after the effect of differences in the sex and age distribution of the population has been eliminated. The figures of 'total fertility' show the average number of children that would be born to 1,000 women living through the child-bearing age ( 15 to 50 ), assuming that the fertility at each age remained constant. They are obtained by adding the fertility rates of the seven age groups and multiplying the sum by 5 (since each age group covers 5 child-bearing years).

The gross reproduction rates are obtained by reducing the figures of 'total fertility' in the same proportion of female to total births, and then dividing by 1,000 . For example, the ratio of female to total births in Canada in 1940-42 was 1,000 to 2,059. The gross reproduction rate for 1940-42 is therefore obtained by multiplying total fertility of 2,857 by $1 / 2,059$. The gross reproduction rate shows how far, assuming current fertility and no deaths, the present child-bearing generation of women is reproducing itself for the future. A gross reproduction rate greater than 1 shows that the number of child-bearing women is increasing, and a rate of less than 1 that it is declining.

For comparison with the Canadian figures, the gross reproduction rate of England and Wales was 0.850 in 1940; it was 1-092 in the United States in 1939-41 and 1.063 in Germany in 1936. These are countries of relatively low fertility. In Italy the gross reproduction rate was 1.425 in 1935-37, in Poland $1 \cdot 705$ in 1931-32, and in Bulgaria 1.673 in 1933-36. In Australia and New Zealand the rate was 1.075 and 1.074 , respectively, in 1937 and 1154 and $1 \cdot 370$, respectively, in 1941.*

Apart from the wartime 'boom' in births, fertility in Canada has been declining. Nevertheless, it is still comparatively high, and the Canadian population is a long way from the point of actual decline. Fertility in British Columbia and Ontario is, however, much nearer the level of an eventually declining population.
*Figures from the Statistical Year Book of the League of Nations, 1942-44, pp. 56-57.

${ }^{1}$ No correction has been made in these figures for under-registration of births. To this extent they e slightly lower than the figures in "Gross and Net Reproduction Rates, Canada and the Provinces, 30-42" published by the Dominion Bureau of Statistics.

Age of Parents.-The numerical and percentage distribution of legitimate live urths by the ages of the parents, is given in Table 16, of illegitimate live births by re age of the mother, in Table 17, and of stillbirths by the age of the mother in able 18. The average ages of the parents are also given.

It will be seen that the average age of parents is now slightly lower than it was 1 1930-32. Besides the fertility rates at each age, two other factors help to deterine the average age of parents having children. First, the average age of potential arents, that is, of the population between the ages of 15 and 50 . The average age men between 15 and 50 was $30 \cdot 9$ in 1931 and $30 \cdot 7$ in 1941; the average age of omen was $30 \cdot 4$ in 1931 and again $30 \cdot 4$ in 1941. The changes are thus very small. zondly, the proportion of first and second births in the total. Other things being jual, a high proportion of first and second births will result in a lower average age of arents. In 1930-32, first births were slightly less than one-quarter of all births, 1d second births less than one-fifth. First and second births thus were 43 p.c. of te total. In 1940-42, first births were over one-third of all births, and second births zarly one-quarter. First and second births together thus were 56 p.c. of the total. hese changes are very great and account for the lower average age of parents.

A number of other facts are shown in Tables 16, 17 and 18. In the first place, the average age of fathers of legitimate children is about 4 years greater than the average age of mothers. Secondly, the average age of mothers of illegitimate children is about 5 years less than the average age of mothers of legitimate children; in 1930-32 the difference was 6 years. The fact that over two-thirds of illegitimate children are born to mothers of less than 25 years accounts for this difference. Thirdly, the average age of mothers of stillborn children is higher than that of liye born. Table 18 shows that the rate of stillbirths per 1,000 live births increases with age of the mother. It is twice as high among mothers of 40-44 years as it is among mothers of 20-24, and over three times as high among mothers of 45-49.

${ }^{1}$ Less than one-tenth of one per cent.
${ }_{2}{ }^{2}$ This figure gives the number of children whose fathers and mothers were born in the same country. The difference between this figure and the total number of births represents the number of children whose parents were born in different countries. the percentage of children whose fathers and mothers were born in the same country.

Origin of Parents.-Table 20 shows the numbers and percentages of children born to parents of the principal racial or ethnic groups in Canada. A person's origin is usually traced through the father. For example, if the father is English
and the mother French, the person's origin is said to be English. Illegitimate children, however, are usually classified by the origin of their mother, since the origin of the father is seldom known.

Table 20 shows that about two-thirds of Canadian children are born to parents who are both of the same origin; one-third are born to parents of different origins. A certain amount of this inter-mixture has no doubt been going on for many years. It is clear that, more than biology or 'race', geography, language, religion and economic resources contribute primarily to the formation of different ethnic or cultural groups.

## 20.-Numbers and Percentages of Live Births to Parents of Specified Origins, 1941-45, with Five-Year Averages, 1936-45

Nore.-Figures for 1944 and 1945 are by residence; for previous years by place of occurrence.

## 20.-Numbers and Percentages of Live Births to Parents of Specifled Origins, 1941-45, with Five-Year Averages, 1936-45-concluded

| Origin of Parents and Year |  | Numbers |  |  | Percentages |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Section 3.-Deaths

Except for wars and their after-effects-military and civilian deaths in the First and Second World Wars must be counted in tens of millions-impressive declines in the death rate have been recorded during the past century in many countries of the world.

In England and Wales, the death rate was 22.4 per 1,000 in 1861-70. It fell to $15 \cdot 4$ in 1901-10 and 12.1 in 1921-30. It was $12 \cdot 9$ in 1941, $12 \cdot 1$ in 1943 and $11 \cdot 4$ in 1945. In Germany, the death rate was $26 \cdot 8$ per 1,000 in 1861-70. It fell to $18 \cdot 7$ in 1901-10 and to $12 \cdot 6$ in 1921-30. It was $11 \cdot 6$ in 1938 and $12 \cdot 6$ in 1939. Other European countries in which the death rate is now very low are the Netherlands, Denmark, Sweden and Switzerland. It is also very low in Canada, the United States, Australia and New Zealand.

Another way of measuring mortality is by life tables and the expectation of life that they show. In England and Wales the expectation of life at birth in 1933-35 was 59.7 years for males and $63 \cdot 6$ years for females. In Germany, in 1932-34, it was 59.9 years for males and 62.8 for females, and in the Netherlands, in 1931-35, $65 \cdot 1$ for males and 66.4 for females. The Netherlands had, before the War, the longest expectation of life of any European country.

Expectation of life in Canada in 1940-42 was $63 \cdot 0$ years for males and $66 \cdot 3$ years for females. In the United States in 1939-41, it was $61 \cdot 6$ years for males and $65 \cdot 9$ years for females. New Zealand has the longest expectation of life of any country; in 1934-38 it was $65 \cdot 5$ years for males and $68 \cdot 5$ years for females.

## Subsection 1.-General Mortality

The number of deaths fell steadily from 113,515 in 1929 to 101,582 in 1934. The high number of deaths in $1937(113,824)$ and in $1943(118,635)$ was partly due to higher mortality from influenza, bronchitis and pneumonia.

Since 1931, the Canadian death rate has fluctuated between 10.3 and 9.4 per 1,000. It has been more or less stable in Ontario, has been falling in the Maritimes and Quebec and has been rising slightly in the Prairie Provinces and British Columbia. The exceptionally low death rates in the Prairie Provinces are partly due to their younger population. The slow rise in the death rate in the Prairie Provinces and British Columbia, is due to the increasing proportion of people in the older age groups. In all parts of Canada, however, the 1941 life tables show that public health and general living conditions have improved.

Throughout Table 21, with one exception, the death rate is higher for males than for females.

## 21.-Deaths and Death Rates, by Sex and by Provinces, 1941-45

Nors.-Figures for 1944 and 1945 are by residence; for previous years by place of occurrence.

| Province and Year |  | Total Deaths | Rate per 1,000 <br> Population | Males |  | Females |  |

| England and Wales. Netherlands....... | 1945 1944 | 11.4 11.7 | Egypt. | 1944 | 34.8 |

Deaths in Urban Centres.-Deaths in urban centres of 10,000 population or over in 1941 are shown in Table 23. Taking the years in which deaths are classified by residence, the death rate in urban centres varies only slightly from the death rate of their respective provinces. However, due to the influx of people from the rural areas, the age distribution of the population in urban centres is often more favourable to a low death rate than that of the provinces as a whole.

## 23.-Deaths in Urban Centres of $\mathbf{1 0 , 0 0 0}$ Population or Over, 1941-45, with Five-Year Averages, 1936-45

Note.-Figures are by place of occurrence previous to 1941 ; for 1941 and subsequent years they are by residence.

Sex and Age Distribution of Deaths.-Despite reductions in infant mortality, more deaths still occur in the first year of life than in any other year. The number of children who die under five years of age has been reduced from an average of 25,174 in 1930-32 to 17,949 in 1940-42 and 17,572 in 1945. The proportion which deaths of young children are of the total has fallen from 23.8 p.c. in $1930-32$ to $15 \cdot 9$ p.c. in $1940-42$ and $15 \cdot 5$ p.c. in 1945 . Only a small part of this reduction is due to the lower proportion of children under five years in the total population which fell from 10.4 p.c. in 1931 to 9.1 p.c. in 1941 and, because of the large number of births in recent years, rose again to $10 \cdot 3$ p.c. in 1945.

Table 24 shows that the percentage distribution of deaths has changed greatly since 1930-32. The percentages of deaths at all ages up to 50 years have declined, and the percentages at ages over 50 have increased. The average age at death has gradually risen. The reduction in mortality rates in the early and middle years of
life increases the number of people in the older age groups and raises the average age of the population as a whole. In 1931, $16 \cdot 6$ p.c. of the population was 50 years of age or over. The average age of all males was 29.0 years and of all females 28.1 years. In 1941, 19.7 p.c. of the population was 50 years of age or over, and the average age of all males had risen to $30 \cdot 7$ years and of all females to $30 \cdot 2$ years. Compared to most European countries, however, the Canadian population is still young.

Causes of Death.-About nine-tenths of deaths in Canada are due to the 28 causes specified in Table 25. About three-quarters are due to the 10 leading causes: diseases of the heart, cancer, intracranial lesions, violent deaths, nephritis, diseases of early infancy, pneumonia, tuberculosis, influenza and diseases of the arteries.

The classification of the causes of death is according to the revision of the International List of 1938, which was first used in Canada in 1941. Each revision of the International List makes continuity of classification difficult. This applies especially to diseases of the heart, intracranial lesions (cerebral hæmorrhage) and diseases of the arteries.

The rise in the average age at death has been noted above. Causes of death that affect mainly children and young adults have declined. Diphtheria, for example, has very nearly been wiped out. Tuberculosis has also been greatly reduced. On the other hand, the ageing of the population increases the proportion of deaths from the causes that affect mainly older people. Thus, cancer, nephritis and diseases of the heart now account for a substantially larger proportion of all deaths, than they used to.
25.-Deaths and Death Rates per 100,000 Population, by Principal Causes, 1941-45

Nore.-Figures for 1944 and 1945 are by residence; for previous years by place of occurrence.

## Subsection 2.-Infant Mortality

The energy devoted in recent years to reducing infant mortality has brought about large reductions in many countries. In Canada, the Dominion, provincial and municipal health authorities, together with private welfare agencies, have all taken part in the effort, with the result that the figures from 1926 to 1945, show a :striking improvement. To illustrate, of the children born in 1941-45, approximately $\$ 54,000$ lived to their first birthday who would have died at the rate prevailing in 1926-30.

Infant mortality of males is 25 to 30 p.c. higher than that of females. It was pointed out earlier that there were between 1,057 and 1,067 males born to every 1,000 females. Because male infant mortality is higher, the excess of males is much less at the end of the first year. For example, in 1940-42, 397,038 male children were born, compared with 374,908 female children, an excess of 22,130 or $5 \cdot 9$ p.c.; 25,024 male children died during their first year compared with 18,646 female children, that is 6,378 more. The excess of males at one year of age is thus 15,752 , or $4 \cdot 4$ p.c.

By the age of 52 , according to the life table, the number of males and females will have become equal.

Infant mortality figures and rates per 1,000 live births by sex are given for Canada and the provinces in Table 26. The rates vary considerably between the provinces. One of the principal causes of these variations appears to be the different proportions of births which take place in hospitals under proper medical care. Examples of these differences have been given earlier on p. 148 . Along with this increased hospitalization has come better and more wide-spread pre-natal and postnatal care. Other factors, particularly the supervision of water supplies, improved sanitation and the pasteurization of milk have also been important. Further extension of public-health services to provide for all the population will, no doubt, further reduce infant mortality, particularly in the areas where it is still high.
26.-Infant Mortality and Rates per $\underset{1941-45}{\text { 1,000 Live Births, by Sex and by Provinces, }}$

Note.-Figures for 1944 and 1945 are by place of residence; for previous years by place of occurrence.

Infant Mortality in Various Countries.-New Zealand has had for many years the lowest rate of infant mortality. In 1945 the rate was 28 per 1,000 live births, compared with 68 in 1905, 51 in 1920 and 34 in 1930. Sweden, Iceland and Australia also have very low rates. In England and Wales the rate has been reduced from 128 per 1,000 in 1905 to 60 in 1930 and 47 in 1945. In the United States the rate has been reduced from 162 in 1900 to 47 in 1940 and 38 in 1945.

## 27.-Infant Mortality per $\mathbf{1 , 0 0 0}$ Live Births in Various Countries of the World Compared with Canada and the Provinces for Recent Years

(Sources: League of Nations Year Book and other official sources. In certain cases final figures are not available and provisional data are shown.)

[^71]Infant Mortality in Urban Centres.-Infant mortality rates in individual cities and towns usually vary widely from year to year. Many cities and towns have, however, maintained consistently low rates. Vancouver has a splendid record; Calgary, Toronto and Winnipeg have exceptionally low rates and Montreal has shown steady improvement. The greatest fall has been in Three Rivers, where infant mortality has been cut more than half in 1941-45 compared with earlier years.

| Urban Centre |

Infant Mortality by Causes of Death.-Of the infant deaths that occur in Canada, about 90 p.c. are due to the nine causes and groups of causes specified in Table 29. One cause alone, premature birth, accounts for over 20 p.c. The rates from nearly all causes are higher for male than for female children; the only exception shown in the table is for communicable diseases in 1944.

## Subsection 3.-Maternal Mortality

As in the case of infant mortality, the number of mothers who die in pregnancy and childbirth has been greatly reduced. Maternal mortality in Canada and the provinces is shown in Table 30. Although the number of births has been much greater in recent years, the number of maternal deaths has been well below a thousand
a year. The rate of maternal mortality is now less than 3 per 1,000 live births. The last two columns of the table show that mortality among unmarried mothers is much higher than among married mothers.

${ }^{1}$ Exclusive of the Territories.
Age at Maternal Death.-Table 31 shows the distribution of maternal deaths by age, together with the average age at death. This average is slightly more than two years greater than the average age of all mothers at the time of childbirth. The rates per 1,000 live births by age groups show that age is a most important factor in maternal mortality. Though all the rates are much lower than they used to be, the inequalities between the age groups remain. The rate at 30-34 years is nearly twice as high as the rate at 20-24 years, and above the age of 40 it is over four times as high. The slightly higher rate in the first age group shown in Table 31, compared with the second, is due to the high proportion of illegitimate children born to young mothers.
31.-Maternal Mortality and Rates per 1,000 Live Births, by Age Groups, 1944 and 1945, with Three-Year Averages, 1930-32 and 1940-42

[^74]Maternal Deaths by Causes.-Table 32 shows, by causes, the numbers and rates of maternal deaths per 100,000 live births. Until recently, puerperal sepsis and toxæmias of pregnancy were by far the most important causes. Since the introduction of sulpha drugs in 1936, the rates from these two causes have been halved.

## Section 4.-Natural Increase

In 1926-30 the rate of natural increase in Canada was 13 per 1,000 population. It fell to $9 \cdot 7$ in 1937 Owing partly to the depression, the birth rate fell more than the death rate. Since then, the rate has risen to $12 \cdot 6$ in $1940-42$ and $14 \cdot 5$ in 1945.

The rates of natural increase in the provinces followed generally the rate for Canada as a whole. In the earlier years, Saskatchewan and Quebec had the highest rates. The high rates in the Prairie Provinces were partly due to their relatively younger populations and consequent very low death rates. In Quebec, on the other hand, the death rate in 1926-30 was high; it has declined steadily since. Quebec now has the highest rate of natural increase in Canada and one of the highest in any civilized area.

Table 33 shows the numbers and rates of natural increase in Canada and the provinces. Numbers and rates by sex are also shown. It can be seen that in almost all cases, the rates are higher for females than for males. There are two reasons for this. First, the excess of male over female births is relatively smaller than the excess of males over females in the population as a whole, especially in the western provinces. Hence the birth rate for males is lower than the birth rate for females. Secondly, as already noted, the death rate for males is higher than for females.

In a country with a fairly young population such as Canada, in which immigration has been large, an excess of males is to be expected. The higher rate of natural increase for females is the means by which this excess is gradually reduced. Eventually, there will no doubt be an excess of females, as there now is in most European countries.

## 33.-Natural Increase and Rates of Natural Increase, by Sex and by Previnces, 1941-45

Natural Increase in Urban Centres.-The classification of births and deaths by residence makes it possible to calculate rates of natural increase for urban centres; the figures are given in Table 34. In most of the larger cities, the rate is lower than in their respective provinces. Urban population is also increased by the influx of people from the rural areas.
34.-Natural Increase in Urban Centres of 10,000 Population or Over, 1941-45, with Five-Year Averages, 1936-45

Nore.-Figures are by place of occurrence previous to 1941 ; for 1941 and subssquent years they are by residence.

# Section 5.-Marriages and Divorces 

## Subsection 1.-Marriages

In modern industrial countries, the marriage rate varies with the level of economic prosperity. Marriage rates fell during the depression and recovered in the later 1930's. In Canada, England and the United States, the number of marriages was exceptionally high in 1940-42. There has been a considerable drop since then. There were 86 p.c. more marriages in 1942 than the average for 1931-35 and 104 p.c. more than in 1932, the lowest year. There were 20 p.c. fewer marriages in 1944 than in 1942 and 15 p.c. fewer in 1945 than in 1944.

Numbers and Birthplaces of Brides and Bridegrooms.-Table 35 shows the number of marriages and the marriage rates per 1,000 population in Canada and the provinces. Percentages of brides and bridegrooms according to place of birth are also given.

The proportion of brides and bridegrooms born in Canada is increasing. The average in 1941-45 was more than 10 p.c. greater than in 1931-35. In the western provinces, over one-third of the marriages solemnized in 1931-35 were between persons born outside Canada. In 1941-45, taking Canada as a whole, approximately 88 p.c. of all bridegrooms and 92 p.c. of all brides were born in Canada. In the western provinces the proportions were 76 p.c. and 86 p.c., respectively. The higher proportion of marriages between persons born in Canada is due to the smaller immigration of recent years.
35.-Marriages and Marriage Rates, by Provinces, together with Percentage Distri-
$\therefore$ bution of Grooms and Brides by Nativity, 1941-45, with Five-Year Averages,
1936-45.

${ }^{1}$ Does not include marriages of Canadians overseas.
Age and Marital Status of Brides and Bridegrooms.-The distribution of brides and bridegrooms by age and marital status is shown in Table 37. Nearly 90 p.c. of marriages are between persons who have not previously been married. The average age at marriage of bachelors is about 27 years and that of spinsters between 24 and 25 years. The average age of widowers and widows at the time of re-marriage is more than 20 years greater than that of bachelors and spinsters, being 50.3 years in 1940-42 and $51 \cdot 7$ in 1945 for widowers and $46 \cdot 4$ and $45 \cdot 4$, respectively, for widows. The age distribution of widowers and widows at the time of re-marriage is, of course, very different from that of bachelors and spinsters.

Widowers and widows were 6 p.c. and 5 p.c., respectively, of all bridegrooms and brides in 1945. This compares with 3.8 and $2 \cdot 7$ p.c., respectively, in 1940-42. Divorced persons are 2.5 p.c. of the total.
37.-Marriages, by Age and Marital Status of Contracting Parties, 1943-45

${ }^{1}$ Less than one-tenth of one per cent.

[^76]Religious Denominations of Brides and Bridegrooms.-The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a, whole. Table 38 shows the very strong influence that religion has on brides and bridegrooms. Approximately 70 p.c. of all marriages are between persons of the same religious denomination. The proportion of brides and bridegrooms of the same denomination is over 60 p.c. for all denominations except Anglicans, Lutherans, Baptists, Presbyterians and Eastern Orthodox. The proportion of brides and bridegrooms of the same denomination is highest among those of Jewish faith, with 97 p.c. in 1940-42. The percentage among Roman Catholics was 88.

## 38.-Marriages by Religious Denominations of Contractinz Parties, 1913-15

${ }^{1}$ Less than one-tenth of one per cant. the same religious denomination.

## Subsection 2.-Dissolutions of Marriage (Divorces)

For many years after Confederation, the number of divorces in Canada was very small. It was less than 20 in every year before 1900 . There were 23 divorces in 1903, 51 in 1909 and 60 in 1913. These numbers were less than 1 per 1,000 of the yearly number of marriages.

One effect of the First World War was to increase the number of divorces. The generally unsettled conditions and the long separation between men on active service and their wives contributed to this increase. Changes in law and procedure which made it easier to obtain divorce was a further factor. A decision of the Privy Council in 1918 gave the Prairie Provinces jurisdiction over divorce. At present, Quebec is the only province in which applicants for divorce must secure a private Act of Parliament.

There were 114 divorces in Canada in 1918 and 608 in 1926. There were 700 in 1931, 1,570 in 1936 and 2,369 in 1940. In every year since the number of divorces has been greater than in the year before. The figures for the most part cover only final decrees of dissolution of marriage which alone constitute divorces; annulments and legal separations are excluded.

The statistics of dissolutions of marriage were revised in 1941 with the cooperation of the provincial authorities and the Clerk of the Divorce Committee of the Senate of Canada.

## RECORD

OF

## VITAL STATISTICS

$1926-45$
of each year is not very accurately known. As these Territories contain less than one seven-hundredth of the population of Canada, the error due to the omission of their vital statistics from the total is very small.

## Section 7-Communicable Diseases

The national reporting of communicable diseases in Canada was undertaken in 1933 by the Dominion Bureau of Statistics, at the request of the Department of Pensions and National Health and in co-operation with the Provincial Departments of Health. Since then, the Vital Statistics Division of the Bureau has been responsible for the compilation and analysis of weekly communicable disease reports, except for a short period in 1939-40, when the work was transferred to the Department of Pensions and National Health. Under arrangements with the Department of National Health and Welfare, the Vital Statistics Division is now analysing the accumulated records of communicable diseases in its files, many of which date back to 1924. The reports of cases of venereal disease are included in the current analyses and a standard report form is used by all the provinces.

Table 40 shows the number of cases of communicable diseases reported to the Dominion Bureau of Statistics by the Provincial Departments of Health in 1945. The reporting of two diseases, dysentery and rubella, is not compulsory in all provinces. The totals for Canada should therefore be considered with caution.

## Section 1.-Administration

In Canada public health is administered by Dominion and Provincial Governments through their respective Health Departments.

The Dominion has jurisdiction only respecting such public-health matters as are exclusively international, national and interprovincial. The Dominion Government makes grants to Provincial Departments of Health and to voluntary organizations engaged in public-health work. Treatment for members and ex-members of the Armed Forces is provided by the Department of Veterans Affairs in veterans services and public hospitals.

The Dominion Council of Health, created originally in 1919, is responsible for correlating and co-ordinating the activities of Provincial Departments of Health; it comprises the Deputy Minister of Health of each of the provinces as well as a representative of agriculture, labour, and urban and rural women, respectively. The personnel includes a scientific adviser on public health.

## Subsection 1.-Public Health Activities of the Dominion Government

The Act of Parliament (8 Geo. VI, c. 22, 1944) creating the Dominion Department of National Health and Welfare, clearly defines its functions. The Department is divided into two branches. The functions of the Welfare Branch are dealt with in the ehapter on Welfare Services, pp. 210-233, while those of the National Health Branch are: to maintain a maritime and aerial navigation quarantine for the purpose of excluding infectious diseases; to advise the Immigration Service regarding the health of immigrants; to provide medical care for sick and injured seamen serving on vessels paying sick mariner service dues; to supervise the health conditions of workmen engaged on public works; to set the standards and control the quality of food and drugs; to control the importation, distribution or exportation of habitforming drugs such as morphine, cocaine, etc; to care for lepers; to promote and conserve the health of civil servants and other government employees; to furnish medical advice required in implementing pensions for the blind; to administer the Proprietory or Patent Medicine Act; to advise the Canadian Broadcasting Coiporation in regard to broadcasts relating to health.

The Health Branch of the Department of National Health and Welfare is empowered by the above-mentioned Act to assist Provincial Departments of Health by conducting investigations and research into public health problems, and by co-operating with them in the preservation and improvement of the public health.

The responsibility for the care of the health of Indians and Eskimos was transferred to the Health Branch of the Department in 1945. This involves the operation of hospitals and a field medical staff across Canada and in the Arctic.

Special arrangements, made for the study of existing facilities and future requirements in the fields of medical, dental, nursing and hospital services and for the purpose of investigating various methods of providing such services, including health insurance, are continuing.

To carry on the above-mentioned activities the following Directorates and Divisions have been organized within the Health Branch:-

| Directorate of Health Services | Quarantine, Immigration and Sick |
| :--- | :---: |
| Blindness Control |  |
| Child and Maternal Health | Mariner Service |
| Civil Service Health | Lenereal Disease Control |
| Dental Health | Laboratory of Hygiene |
| Epidemiology | Directorate of Indian Health Service |
| Hospital Design | Directorate of Food and Drug Divisions |
| Industrial Health | Inspection |
| Mental Health | Laboratory |
| Narcotics | Proprietory and Patent Medicine |
| Nutrition | Public Health Engineering |

The National Physical Fitness Program.-This program has a close association with both health and welfare. It is, however, administered under the Welfare Division and is dealt with at pp. 232-233.

## Subsection 2.-Public Health Activities of the Provincial Governments

Prince Edward Island.-During the session of the Legislature in March, 1946, the Department of Public Welfare, which administered both Health and Welfare, was reorganized under the title of "Health and Welfare" with one Minister responsible for both Divisions. The Health Division is under the supervision of the Chief Health Officer, who superintends the work of the Central Division, including the Provincial Laboratory, and the Nursing and Sanitary Division. The Province is divided into five Districts: a public-health nurse is assigned to each District and is responsible for the inspection of school children, home visiting, home-nursing classes, immunizing clinics, etc. One nurse specially trained in venereal disease and another specially trained in tuberculosis have the entire Province as their field of operation. The Provincial Laboratory operated by a Laboratory Director and a competent staff, is of great assistance to the practising physicians of the Province.

The compilation of the vital statistics of the Province is handled by the Welfare Division and all births, deaths and marriage certificates are micro-filmed for the Dominion Bureau of Statistics.

The Provincial Government operates a Provincial Sanatorium of 145 -bed capacity under a Board of Commissioners and an annual grant is made to assist ex-sanatorium patients when required and to help other indigent tubercular persons awaiting admission and their families. Field work, in regard to tuberculosis, is a
public-health responsibility and clinics are held periodically at central points in the Province. The Prince Edward Island Tuberculosis League, a voluntary organization supported by the sale of Christmas Tuberculosis Seals, works in close cooperation with the Provincial Sanatorium and Health Division.

Provision for annual grants is made to the general hospitals which, in turn, accept as free patients all indigent persons requiring hospital treatment. Expenses in connection with the operation of a hospital for the insane are borne practically in full by the Provincial Government.

The Department of Health operates two venereal-disease clinics, one at Charlottetown and the other at Summerside; hospital beds are provided for selected cases. All necessary medication is supplied free of charge to persons who are not within reach of public-health clinics.

Nova Scotia.-The Province is divided into six health districts with a competent medical director in charge of each, assisted by a staff of public-health nurses, sanitary inspectors, clerks and stenographers. Under the direction of the central Ministry of Health, these units carry on generalized public-health programs.

The city of Halifax with a trained medical health officer and staff constitutes a separate health unit and each town and municipality has a part-time medical health officer, board of health and sanitary inspector. The Provincial Unit Officers provide leadership and endeavour to standardize and correlate the work of the municipal services.

Attached to the central office are the Minister of Health, a Deputy Minister of Health, a Medical Statistician and Epidemiologist, a Public Health Engineer, a Superintendent of Public Health Nursing, Bacteriological, Pathological and Industrial Hygiene Laboratories, a division of Physical Fitness and Nutrition, a "Kenny" treatment clinic for poliomyelitis and a staff of statistical and general clerks and stenographers. A cancer clinic is operated in connection with the Victoria General hospital, a government-owned and operated institution.

Nurses, specially trained in the epidemiology of venereal diseases, are at work and ten treatment clinics with part-time directors are in operation in the health districts.

New Brunswick.-The Department of Health, under the administration of a Minister of Health, was established in 1918. It provides the following services: general sanitation, including supervision of water supplies and sewage disposal; control of communicable diseases, including tuberculosis and venereal diseases; public-health laboratory and the supply of biologicals; medical inspection of schools; collection of vital statistics; public-health nursing and child welfare; nutrition; health education; and general supervision and co-ordination of the work of the subdistrict boards of health.

Under the Minister, the Department is directed by the Chief Medical Officer, who is also Registrar General of Vital Statistics. The staff consists of an Assistant Registrar General, a Director of Laboratories, seven full-time Medical Health Officers, a full-time Director of Venereal Disease Control, a Director of Public Health Nursing Service and eleven Public Health Nurses assigned to the different counties.

The Province assumes the costs of sanatorium care for tuberculosis patients; all hospital care for poliomyelitis patients treated at the Provincial Clinic at Fredericton; and about 60 p.c. of the costs of hospital care for mental patients.

Quebec.-The Provincial Government, by legislation passed in 1946, authorized the establishment of a Department of Social Welfare and Youth. Since then, the Ministry of Health, which in reality has existed since 1936, deals only with matters relating to health, preventive medicine and public charities. From 1936 to 1941 provincial health matters were under the Department of Health which, in the former year, replaced the Health Service that operated under the Provincial Secretary. Since 1926 the system known as "County Health Units" has been in operation. The purpose of this system is to provide a regular full-time service for each county or group of two or three adjoining counties that are included in the scheme. There are now 62 units of this kind, covering 73 counties. The Health Officers of the old districts, whose number is now reduced to 7 , supervise the few counties not organized into sanitary units. Many municipalities, such as Montreal, Sherbrooke, Westmount and Quebec, have their own Health Bureaus.

The Department of Health maintains, in addition to its administrative service, the following divisions: Laboratories, Sanitary Engineering, Demography, Mental Health, Public Charities, Health Districts and Units, Epidemiology, Industrial Health, Nutrition (including Maternal Hygiene and Child Welfare), Venereal Diseases, Tuberculosis, Health Education, Dental Health Education, Publicity, etc.

Service is rendered in the form of consultations, public lectures, school inspections, itinerant clinics of pediatry and tuberculosis, inquiries of all kinds, immunizations, sanitation improvement, etc. Twenty-seven anti-tuberculosis dispensaries have been established and 70 clinics of pediatry, including those sponsored by the Provincial Government.

An Act was introduced at the 1946 Session of the Quebec Legislature designed to combat the spread of tuberculosis in the Province. This Act authorized the Minister of Health to organize facilities for the detection of cases of tuberculosis and contribute to the construction and maintenance of sanatoria for consumptives and the training of specialists in the treatment of the disease as well as to carry on educational campaigns in the fight against tuberculosis. An Advisory Board was also set up to ensure the practical and efficient carrying out of the legislation.

Ontario.-The Department of Health is organized under a Minister, a Deputy Minister and an Assistant Deputy Minister. The activities of the Department include, in addition to the usual public-health functions, the operation and maintenance of Provincial Mental Hospitals.

The public-health services of the Province are organized under the following branches: the Assistant Chief Medical Officer is responsible for the co-ordination of the work of Municipal Boards of Health; the Public Health Administration Branch; Public Health Nursing; Maternal and Child Hygiene; Dental Services; and Epidemiology, concerned primarily with the control of acute communicable diseases. Separate branches are organized to deal with each of the following special health services: Venereal Disease Prevention; Tuberculosis Prevention; Industrial Hygiene; Laboratory Services; and Sanitary Engineering. Branches concerned with the supervision of certain aspects of medical treatment centres throughout the Province include: Public and Private General Hospitals; and Nurse Registration. Particular emphasis has been given in recent years to the development of a more effective form of local public-health administration through the development of County Health Units with full-time well-qualified staffs.

Mental-health services throughout the Province are organized under a Director of Hospitals, who is responsible for the administration and operation of 14 provincial mental hospitals. This Branch also organizes and operates a community mentalhealth service through travelling clinics and district consultant psychiatrists.

Serving all branches of the Department of Health, as required, are: the Legal Branch; the Medical Statistics Branch; and the Main Office which includes divisions responsible for accounts; pay, purchasing, central registry, library, etc.

Manitoba.-Manitoba has an organized Department of Health and Public Welfare. The Health and Public Welfare Act states that the Minister shall preside over, and have the management and direction of the Department, and the Department shall have administrative jurisdiction over all matters in the Province that relate to health and public welfare. The Department is organized into four main Divisions: General Administration; Health Services; Psychiatric Services; and Public Welfare Services.

The Division of General Administration includes the general executive offices, and the Sections of Farms Management, Statistics and Records, Accountancy, Provincial Laboratories, Health and Welfare Education, and Administrative Research.

The Division of Health Services has three Sections: (1) Environmental Sanitation, which consists of the Bureaus of Public Health Engineering, Food and Milk Control, and Industrial Hygiene. The latter Bureau was started in 1943 to take care of the many hazards now appearing in industries, particularly those that have to do with the personnel employed by industry. (2) Preventive Medical Services, which consists of the Bureaus of: Disease Control, responsible for the control of acute communicable disease, venereal diseases and tuberculosis; Maternal and Child Hygiene, responsible for an educational program in maternal health, infant health, pre-school health, and school health; Public Health Nursing, responsible for nursing education, field supervision, licensing and control of practical nurses, registry for crippled children, and general administration of all public-health nursing services. (3) The Extension Health Services Section administers the provisions of the Health Services Act, and consists of the Bureaus of: Local Health Services, responsible for the establishment, supervision, and general administration of local health units throughout the Province, the control of local part-time medical officers of health, consultative services to local and municipal health departments in Manitoba; Diagnostic Services, responsible for the establishment and general administration of diagnostic units set up in general hospitals in Manitoba; Medical Care, responsible for the approval of contracts for pre-payment medical care between a municipality, or municipalities, and the contracting physician, and for the payment of government grants to the municipalities in aid of such service under conditions specified in Part III of the Act; Hospitalization, responsible for the organization and supervision of the establishment of hospital districts, medical-nursing units, and hospital areas under the provisions of Part IV of the Act together with the supervision of hospitals throughout the Province and the payment of Provincial Government grants to them as provided under the Hospitals Aid Act; and the Bureaus of Dental Services, Physical Fitness and Nutrition Research.

The Division of Psychiatric Services consists of the Bureaus of: Mental Institutions, responsible for the supervision and control of the four institutions-the Psychopathic Hospital, Winnipeg, the Hospitals for Mental Diseases at Selkirk
and Brandon, and the Manitoba School for Mentally Defective Persons at Portage la Prairie; and Community Mental Health Services, responsible for out-patient services, child-guidance clinics, services to courts and child-caring agencies, boardinghome care for the mentally ill, and teaching facilities.

Saskatchewan.-The Department of Public Health has been organized since 1923 under a Minister and a Deputy Minister and consists of 15 Divisions: (1) The Division of Administration co-ordinates the activities of the Department as a whole. (2) The Division of Public Health Nursing conducts a generalized program which includes all phases of public-health nursing, infant and maternal welfare, school work, venereal disease epidemiology, etc. This Division also supervises maternity grants and nursing homes. (3) The Division of Communicable Diseases administers provisions of the Public Health Act relating to control of communicable diseases and regulations relating thereto. It distributes free vaccines and sera to doctors and hospitals and supervises anterior poliomyelitis clinics, boards of health, medical health officers, medical examination of food handlers, burial, disinterment and transportation of the dead and promotes immunization programs. (4) The Division of Sanitation has supervision of water-works, sewerage systems and drainage; food supplies including milk; urban and rural sanitation. (5) The Division of Laboratories does routine public-health work in bacteriology, serology, chemistry and pathology and provides clinical diagnostic laboratory service for rural physicians. (6) The Division of Vital Statistics administers the Vital Statistics Act and the Marriage Act. (7) The Division of Mental Services administers the Mental Hygiene Act. Its duties include: the care and treatment of patients in institutions for the mentally ill and mental defectives, and in the psychopathic ward in Regina; and the supervision of mental hygiene clinics in connection with the preventive work of mental hygiene. (8) The Division of Venereal Disease Control administers a program for the control of venereal disease, which is divided into the following functional sections: diagnostic and treatment services; epidemiology; and education. (9) The Division of Health Education conducts a wide program of education for the purpose of modifying public opinion and attitudes in favour of higher standards of personal and community health. (10) The Division of Nutrition is largely educational in function, creating interest in better food habits; emphasis is placed on nutrition of children with special attention to school lunches. (11) The Division of Medical Services supervises payment of grants to physicians, dentists and approved hospitals for adequate medical services to needy residents in any part of the Province outside municipal jurisdiction; insulin is supplied free to diabetics who are unable to purchase it; medical, hospital and drug services are provided to old age and blind pensioners and their dependents, and to recipients of mothers' allowances and their children. (12) The Division of Physical Fitness and Recreation stimulates, organizes and assists social, cultural and athletic activities. (13) The Division of Industrial Hygiene provides a consulting service for management, labour and governmental agencies on matters pertaining to industrial health. (14) The Division of Air Ambulance Service, by means of two specially equipped Norseman craft, staffed by pilots, nurses and engineers, provides emergency service at a nominal charge of $\$ 25$ per flight. (15) The Division of Dental Hygiene became operative on Jan. 1, 1947.

Health Regions.-The Province has been divided into 14 proposed health regions, five of which have been established: Swift Current No. 1; WeyburnEstevan No. 3; Assiniboia No. 2; Moose Jaw No. 6; Meadow Lake No. 14.

Health Services Planning Commission.-The Commission, appointed under authority of the Health Services Act, 1946, is concerned with improving the standards of medical care throughout the Province. All hospital planning and administration, and all approved hospitals come under its supervision. The Commission acts as an advisory and consultative body to local regions, municipalities, local improvement districts, mutual benefit and hospital associations, and Union hospitals and is responsible for the administration of medical care grants: it assesses hospital facilities and advises on needed hospital expansion. It must approve bylaws and contracts for all types of municipal health schemes.

The Saskatchewan Hospitalization Act, 1946.-The Saskatchewan Hospital Services Plan, administered by the Health Services Planning Commission, went into effect Jan. 1, 1947 It provides for hospital care on a public-ward basis for every resident of the Province. An annual tax of $\$ 5$ per person with a family maximum of $\$ 30$ provides a fund out of which the hospital bills are paid.

Cancer Commission.-This Commission, created in 1930, has established consultative, diagnostic, surgery and treatment clinics for cancer at Regina and Saskatoon. Radon is manufactured at a plant in Saskatoon.

Poliomyelitis.-Free treatment of cases is available at Saskatoon and Regina.
Tuberculosis.-Free diagnostic and treatment services are available in three sanatoria and a number of clinics operated by the Saskatchewan Anti-Tuberculosis League. These are financed by government grants and per capita charges on municipalities. Annual surveys are carried out throughout the Province financed by voluntary subscription.

[^78]Under the authority of the Poliomyelitis Sufferers Act, 1938, provision is made for the free treatment in special hospitals of patients suffering from this disease. Provision is also made for academic instruction, vocational training, and rehabilitation of those suffering from paralysis resulting from this disease.

The Department of Public Health has inaugurated a cancer service in the Province. Diagnostic cancer clinics have been established at Edmonton and Calgary and are conducted weekly. Patients found to require deep X-ray or radium therapy or surgery are treated free of charge. Hospitalization may be authorized by the cancer clinic up to a maximum of 14 days.

An Act to provide free hospitalization for maternity patients came into force on Apr. 1, 1944. Any woman: (a) who has been a resident of the Province for 12 consecutive months out of the 24 months immediately preceding her admission to hospital as a patient; (b) who by reason of circumstances arising out of the War-wives of men in the Armed Services-is entitled to free hospitalization for herself and child for a maximum period of 12 days.

Alberta's Rural Health Districts, of which there are now 18, have been operating successfully since 1931 . In sparsely populated, outlying areas, 36 Provincial District Nurses provide a diversified medical and public-health service.

Under an amendment to the Solemnization of Marriage Act, which went into effect July 1, 1945, each party to a marriage contract is required to have a specimen of blood taken by a qualified physician and forwarded to the Provincial Laboratory or other approved laboratory for serological examination. All positive serologic tests must be reported to the Director of the Division of Social Hygiene. Certain outlying areas in which medical service is not available may be exempted from these requirements.

Municipal Hospitals.-Under the Municipal Hospitals Act passed by the Alberta Legislature in 1917, there are 47 hospitals now operating, with 6 new hospitals being built this year and 7 additional Districts contemplating coming under the Act.

During 1945, there were 38 municipal hospitals in operation, with a total bed capacity of 1,289 . Total number of patients admitted was 32,190 and the total hospital days 275,$270 ; 3,877$ maternity patients were admitted and 3,952 babies were born in municipal hospitals during the year. Major operations performed numbered 2,782 , minor operations 6,484 , and 13,433 medical cases were treated. The average patient day cost of operation was $\$ 4.43$ and the average revenue per patient day was $\$ 4 \cdot 51$. The number of graduate nurses employed was 221 . The approximate population served by these hospitals was 237,788 , covering an area of 27,272 sq. miles.

British Columbia.-The Department of Health and Welfare of British Columbia is organized into two branches with a Deputy Minister of Health and a Deputy Minister of Welfare. The Deputy Minister of Health, who is also Provincial Health Officer, is in charge of the technical details of the Health Services.

The Provincial Health Services are divided into two Bureaus-the Bureau of Administration and the Bureau of Local Health Services-and six Divisions.

The Bureau of Local Health Services is a part of the central office of the Health Services and is under the direct supervision of the Deputy Provincial Health Officer. In addition to correlating the services of the various Divisions, it is responsible for technical supervision of all local health services. Such publichealth specialities as maternal and child welfare, communicable-disease control, public-health dentistry, public-health nursing and some phases of industrial hygiene are all part of the responsibilities of this Bureau. Included in this Bureau is the Director of Public Health Nursing who supervises the public-health nursing program, with the aid of a travelling consultant.

A nutrition consultant service has been established as part of the Bureau of Local Health Services. Special assistance is provided to the field staff in problems relating to nutrition.

Different types of local health services have been developed in the Province. These include large city health departments such as the Vancouver Metropolitan Health Committee and the Victoria City Health Department, Health Units, Public Health Nursing Services, and certain practising physicians who act as part-time Medical Health Officers and School Health Inspectors.

A Health Unit consists of a full-time Medical Director who is a physician trained in public health, a number of public-health nurses determined by the population served, one or two trained sanitarians, and a statistical clerk.

The entire Province has been divided into Health Unit Areas. Six of these units are now in operation and it is expected that the remainder will be in operation within a few years. As of Jan. 1, 1947, the administration of all Rural Health Units has been reorganized to provide a more unified administrative system. All public-health field staff are now employed directly by the Provincial Government.

The Division of Public Health Engineering is responsible for all matters of environmental sanitation, including water supplies, sewage disposal, food and milk control, swimming pools, the supervision of the sanitation in lumber, mining, construction and cannery camps, certain phases of garbage disposal, shellfish supervision, and housing.

The Division of Vital Statistics is responsible for the registration of all births, deaths and marriages in the Province, including adoptions and divorces.

The Assistant Provincial Health Officer is in charge of special preventive and treatment services, which include correlation of the work of three special DivisionsTuberculosis, Venereal Disease, and Laboratory-with that of Local Health Services.

The Division of Tuberculosis Control is responsible for the diagnosis and treatment of tuberculosis in the Province. This Division operates two tuberculosis hospitals-one at Tranquille and another adjacent to the Vancouver General

Hospital at Vancouver. Three other hospital services are operated by the Division in conjunction with the Royal Jubilee Hospital and St. Joseph's Hospital at Victoria and St. Joseph's Oriental Hospital at Vancouver.

Tuberculosis diagnostic clinics are provided in the form of stationary clinics at the larger centres and four travelling clinics. In addition, two Survey Chest Clinic Units provide free X-ray service to the larger centres and to all industries. Out-patient treatment and pneumo-thorax refills are made available by the Division at all the stationary clinics and at strategic points utilizing pneumo-thorax equipment provided by the Division. Consultative and advisory service is furnished to local Health Departments, physicians and hospitals.

The Division of Laboratories, in addition to operating the large main laboratory at Vancouver, buys branch laboratory public-health service from hospitals at Victoria, Nanaimo, Prince Rupert, Kamloops, Nelson and Kelowna. Laboratory service and biological products are provided free to all physicians and Health Officers.

The Division of Venereal Disease Control operates diagnostic and treatment clinics at Vancouver, Victoria, Trail, Oakalla Gaol, New Westminster, and the Peace River area in co-operation with the Local Health Units. Physicians are paid for venereal disease treatment of indigents where no clinic service is available. Free drugs, consultative and advisory service, including public-health education, are made available throughout the Province.

The Division of Public Health Education is responsible for correlation of the health-education programs of all Divisions, as well as the provision of materials such as bulletins, pamphlets, and films. A consultative service to local health services is provided on problems of public-health education in the field.

## Section 2.-Institutional Statistics*

Under authority granted by the Dominion Government in 1930, the Dominion Bureau of Statistics has, since that date, co-operated with the provincial authorities through the Census of Institutions, and now collects, on a Dominion-wide basis, statistics for the following types of institutions: (1) Hospitals-institutions primarily engaged in the prevention and cure of physical sickness and disease, such as hospitals for the sick, sanatoria, and institutions for incurables and those under the heading "Dominion" in Table 1. (2) Mental and neurological institutions-such as asylums for the insane, institutions for the feeble-minded, epileptic, etc., devoted to the treatment and care of mental ailments. (3) Charitable and benevolent institutionscaring for the poor and the destitute of all ages, such as homes for the aged, county refuges, orphanages, etc. Statistics of penal and corrective institutions are also collected through the Census of Institution; they are dealt with under crime and

[^79]delinquency at p. 276. The latest statistics available regarding charitable institutions appear at pp. 677-682 of the 1943-44 Year Book.

${ }^{2}$ Includes newborn.
Table 3 gives statistics on a provincial basis for all public hospitals reporting to the Dominion Bureau of Statistics. Available facilities, the staff and the movement of populations are shown for the year 1945. For Canada as a whole, 588 such hospitals reported for that year. Of these, 498 were general public hospitals and 90 were other public hospitals. A total of 492 of the reporting hospitals were equipped with X-ray facilities, 309 reported clinical laboratories and 266 had physio-therapy facilities.

During the year the total patients under treatment reached $1,351,955$ persons: there were $1,143,554$ admissions and $1,272,455$ discharges. Live births numbered 171,407 and deaths 39,804 . Total collective days' stay amounted to $15,706,159$. Total receipts for the year amounted to $\$ 74,696,393$ and expenditures $\$ 74,059,491$. The average cost for the entire Dominion per patient day was $\$ 4 \cdot 45$.

3.-Summary Statistics of Reporting Public Hospitals, by Provinces, 1945-concluded

[^82]Organized Services in Public General Hospitals.-Organized services, which are analysed in Table 4, may be defined as specialized hospital departments or services in charge of specialists with up-to-date equipment and a technical staff specially devoted to problems in the indicated fields. Facilities available in a hospital merely for the use of general practitioners are not considered as organized services. Organized services in public general hospitals only are considered here but it is in these hospitals that the majority of such services are found. Many of the smaller public general hospitals have facilities for study and treatment in the fields indicated here, but since they are not organized services as defined above, such facilities are not included in the figures. In 1945, of the 498 public general hospitals, 235 had organized medical staffs with 7,949 staff doctors.

## 4.-Organized Services and Staffs in Public General Hospitals, by Provinces, 1945

Note.-A dash in this table means that an organized service was not reported in the case so indicated.

Out-Patient Departments.-Out-patient departments are operated in connection with hospitals or other institutions, and treat patients who do not occupy beds in the hospital. The extension of out-patient services to patients of modest means has far-reaching and beneficial effects. It may replace admission to hospital, or may serve to secure necessary and beneficial hospitalization. As a general rule out-patient departments are subsidized from the funds of the general hospital and separate records are not kept. Until a uniform system of accounting is adopted, it will not be possible to give the average cost per patient.

## 5.-Out-Patient Departments of Public Hospitals, by Provinces; 1945

Note.-Figures of tuberculosis sanatoria and government and municipal clinics held in hospitals are not included.

| Province | Out-patient Departments | Patients | Treatments |
| :---: | :---: | :---: | :---: |
| New Brunswick. | 2 | 21,099 | 31,022 |
| Quebec.. | 29 | 426, 438 | 913,297 |

| British Columbia. | 2 | 9,733 | 25,265 |
| Totals. | 59 | 809,394 | 1,519,647 |

Tuberculosis Institutions.-The statistics regarding institutions for the treatment of tuberculosis shown in Table 6, include special units for the treatment of tuberculosis in general hospitals and Dominion hospitals as well as the specialized
sanatoria shown separately in Table 1. The deaths in these institutions from tuberculosis in 1945 were $39 \cdot 1$ p.c. of the total deaths from the disease in Canada as shown under Vital Statistics at p. 166 of this edition. However, the death rate from this disease has shown an encouraging decline since 1926.

${ }^{2}$ Includes other personnel.

## Subsection 2.-Statistics of Dominion Government Hospitals

Dominion Government Hospitals.-Hospitals operated by the Dominion Government are conducted for special purposes connected with departmental administration such as the care of war veterans and members of the Permanent Force, the quarantine and care of immigrants and lepers, the care of Indians as wards of the Government, etc.

Table 1 shows the number of Dominion hospitals compared with those in other categories for 1945. Table 7 gives the hospital accommodation as at Dec. 31, 1946, in hospitals administered by the Department of Veterans Affairs, including pavilions erected at the expense of that Department as additions to civilian hospitals and in which a definite number of beds are reserved for the treatment of Departmental patients. Tables 8 and 9 record the treatment activity in these institutions for the calendar year 1946 .

In the present edition of the Year Book statistics of the hospitals administered by this Department, only, are presented in detail, but an endeavor will be made to compile tables covering the other Departments and link up with the series given in the 1939 Year Book, pp. 1041-43. During the intervening years, many changes and transfers of jurisdiction have taken place.

Hospitals Under the Department of Veterans Affairs.-During the calendar year 1946 accommodation in hospitals operated by the Department of Veterans Affairs was increased by the taking over of 15 former Service hospitals with a normal capacity of 4,315 beds. In addition, new construction and alterations, which had been delayed by shortages of materials and other factors, provided extra wings to Departmental hospitals, as well as an active convalescent hospital and Veterans Homes. The first wing of the 1,550-bed Sunnybrook Hospital near Toronto was taken into use. As the patient load declines commencing in the spring of 1947 and as new construction is completed, former Service hospitals will be released. New construction is expected to provide an additional 1,675 beds within six months and another 1,700 beds within twelve months, while an additional 600 beds will be available at a later date.
7.-Hospital Accommodation in Departmental Institutions, by Districts and Provinces, as at Dec. 31, 1946

The four main types of treatment institutions operated by the Department of Veterans Affairs are as follows, the number in brackets representing the number of each in operation at Dec. 31, 1946: (a) Active Treatment (23); (b) Active Convalescence (6); (c) Special Treatment Centres (10); (d) Veterans Homes (7). Active Treatment hospitals provide treatment for general, medical and surgical
conditions, and the larger ones for such special conditions as arthritis and those involving orthopædic surgery, plastic surgery, neuro-surgery, neuro-psychiatry, etc. Active Convalescence institutions are ordinarily referred to as Health and Occupational Centres and provide physical and occupational therapy and physical re-training to convalescent patients. Special Treatment Centres are chiefly tuberculosis sanatoria; a hospital for the care of paraplegics and one for neuroses are also included under this heading. Veterans Homes provide domiciliary care for veterans who require it.

The large number of veterans requiring treatment severely taxed all Departmental treatment resources throughout the calendar year 1946. Eligibility for treatment is disappearing in a large number of cases and it is anticipated that the maximum patient load will have been passed in the late spring of 1947 The movement of hospital population for the calendar year 1946 is shown in Table 8 and Table 9 records the main types of treatment provided and classifies the recipients.
8.-Movement of Population in Departmental Hospitals and Number of Clinical Treatments, by Months, 1946

| Month | Movement of Population |  |  |  | Clinical Treatments |

## Subsection 3.-Statistics of Mental Hospitals

At Dec. 31, 1945, there were 48,056 patients in mental institutions in Canada and 4,190 on parole or otherwise absent, making a total of 52,246 , whereas the normal bed capacity was only 45,124 , showing a seriously over-crowded situation if the patient population on Jan. 1, 1945, and the admissions and separations during the year are considered. This over-crowded condition was specially marked in the western provinces and in Quebec. Of the 48,056 resident patients in 1945, 36,643 were insane, 10,443 were mentally deficient, 716 were epileptic and 254 mental cases were otherwise classified.

The number of resident patients in mental institutions per 100,000 population on Dec. 31, 1945, was $396 \cdot 5$, as compared with $394 \cdot 8$ on the same date of 1944, $394 \cdot 8$ in 1943, $394 \cdot 2$ in 1942, $392 \cdot 5$ in 1941, $388 \cdot 0$ in 1940, $352 \cdot 8$ in 1935 and $305 \cdot 4$ on June 1, 1931.

Data are not available to indicate to what extent the increasing trend of patients per 100,000 population is due to more complete diagnosis and care than formerly, or to what extent there is an actual increase in the proportion of the population requiring treatment for mental diseases.

## Section 3.-The Victorian Order of Nurses for Canada

The Victorian Order of Nurses is a voluntary public-health agency, national in scope and having as its primary object the care of the sick in their own homes by visiting nurses. In 1946 there were 102 branches of the Order distributed as follows: Nova Scotia 16; New Brunswick 8; Quebec 5; Ontario 59; Manitoba 1; Saskatchewan 3; Alberta 2; and British Columbia 8. The affairs of each branch are directed by a local board, which raises the money necessary to carry on the work. However, the policies and professional standards set by the national organization are accepted by the branches. The Board of Governors of the national organization is made up largely of representatives appointed by the branches.

Registered nurses are empleyed by the Order and have, in addition, postgraduate training in public-health nursing. All appointments are approved by Headquarters at Ottawa, which also assumes responsibility for the supervision of the nurses' service.

A complete maternity service is offered. This includes instruction before the baby arrives, attendance at the time of confinement and nursing care and health supervision of mother and baby. If the baby is born in hospital the mother on
her return home may request the services of a Victorian Order nurse to demonstrate the baby's bath and help to establish a plan for the infant's care. The nurse will continue to visit as long as health teaching and supervision is indicated.

During 1946 approximately 475 nurses in the field gave nursing care to 116,361 patients. Health teaching is an important function of the visiting nurse, and her entry into so many homes provides an unparalleled opportunity to make a worthwhile contribution toward the up-building of the health of the Canadian people.

The Order provides a community service available to everyone in the area served, regardless of race, creed or economic status. The nurses give care on a visit basis to medical, surgical, and maternity patients under medical direction and thus care for a large group of people who would otherwise be without skilled care. The budget of the average man makes very little allowance for the cost of illness. The patient is expected to pay the cost of the visit but the fee is adjusted to suit the family income and service is never refused because of inability to pay. Of the 852,873 visits made in 1946, 51 p.c. were free, 22 p.c. were paid, 16 p.c. were paid in part and 11 p.c. were paid for by insurance companies for care to patients. The cost of the service to those unable to pay is provided for by municipal grants and funds collected by means of campaigns.

In smaller centres where the Victorian Order nurse is the only public-health nurse the program of work is usually enlarged to include school-nursing service, child-hygiene centres, assistance at immunization clinics and other public-health services.

An increasing number of Victorian Order branches are giving part-time nursing service to industrial plants where the number of employees is not large enough to require the full-time services of a nurse.

## Section 4.-The Canadian Red Cross Society

The Canadian Red Cross Society in both its wartime and peacetime work is closely allied in a voluntary capacity with the Dominion and Provincial Governments. The Society was founded in 1896 and incorporated in 1909, its purpose being to furnish volunteer aid to the sick and wounded of armies in time of war and, in time of peace or war, to carry on and assist in work for the improvement of health, the prevention of disease and the mitigation of suffering throughout the world. Organization includes National and Overseas Offices, Provincial Divisions and 2,500 Branches. The Society has a senior and junior membership of over 2,500,000 in Canada.

While the year 1946 was devoted in large part to the development and expansion of an extensive peacetime program in Canada, the needs of liberated peoples in Europe and Asia were by no means forgotten. During 1945 and 1946 some $\$ 18,000,000$ worth of relief goods was poured into these countries both direct from Canada and from the Society's warehouses in the United Kingdom.

Assistance to Service Personnel and Dependents Returning to Canada.This work was exceptionally heavy during 1946, the Government having entrusted to the Red Cross the task of meeting returning men and their dependents at ports of entry and conducting them on trains to their destinations. Red Cross conducting officers on all trains looked after the distribution of supplies, attended to the despatch of telegrams to relatives, organized reception centres and mobile canteens, and performed many other services.

For nearly three years now, the Canadian Red Cross has been escorting wives and children of Canadian service men from their homes in England, and later also from the Continent, to their Canadian destinations, including an escort service across the Atlantic. Approximately 61,200 persons, 41,400 brides and 19,800 children, were cared for by the Red Cross. In addition, about 9,000 Far East returned personnel, including 1,500 Canadian survivors of Hong Kong, were welcomed and helped en route to their homes in Canada or while crossing the Dominion bound for the United Kingdom.

Peacetime Services.-The aims of the Red Cross Society in peace are the same as in war-to improve health, prevent disease and mitigate suffering anywhere and everywhere in Canada to the full extent of its resources.

Veterans Aid.-This assistance is given, through Red Cross Lodges (recreational centres) adjacent to all large veterans hospitals in Canada; a summer Convalescent Hospital; residence Clubs for disabled war pensioners; regular visiting of all hospital patients who are supplied with extra comforts, library facilities, transportation, shopping service, instruction in handicraft, film service and other entertainment. Dental assistance, surgical supplies, clothing and other aid are provided for needy veterans and families.

Outpost Hospital Service.-At the end of 1946, a chain of 54 Red Cross Outpost Hospitals and Nursing Stations were in operation in the frontier districts of the Dominion, bringing medical science within reach of these isolated communities. A large number of new Outposts are planned to meet the needs of isolated regions and will be in operation during 1947.

Blood Transfusion Service.-Following an intensive survey, it was found that many hospitals in Canada are without the blood and facilities necessary for their transfusion needs. Every day, lives (mothers in childbirth, accident victims, operative cases) are being lost because of this deficiency. It is the aim of the Red Cross to supply sufficient blood so that everyone in Canada in need of a transfusion can have it, immediately, free of charge. The Society plans to operate its own Blood Depots and Sub-Depots across Canada (first Depot opened in Vancouver on Jan. 21, 1947) which will eventually provide blood to all Canadian hospitals. The blood will be provided by volunteer donors, as during the War.

Junior Red Cross.-This organization, devoted to the principles of health good citizenship and international friendliness, has helped over 25,000 crippled children since its inception. At the end of 1946 , there were about 900,000 members in over 30,000 branches in schools in Canada and Newfoundland. These Juniors have given magnificent service in providing relief for child war victims throughout the world and have embarked upon an extensive peacetime service program which includes aid to handicapped children, assistance for disabled veterans in hospital, and many community projects.

First Aid, Swimming and Water Safety.-The Swimming and Water Safety Program was enthusiastically received from coast to coast throughout Canada in 1946. The Red Cross undertook this service in an endeavour to cut down the more than 1,000 drownings that take place in Canada each year. Through this nationwide service, the Red Cross joins with other agencies in this field. A wide First Aid Instruction Program also made good headway in 1946.

Health and Other Activities.-Improvement of the health of the Canadian people is one of the primary aims of the Society. Besides the health projects mentioned above, home-nursing instruction and nutrition service are important activities. Home-nursing courses are being conducted all over Canada to give women and girls elementary instruction in proper procedures of caring for the sick in their own homes. In this project, doctors, dentists, trained nurses and dietitians give their services free. The nutrition service expanded widely in 1946 with trained Red Cross dietitians servicing nearly all provinces. Attracting international interest is the first intensive long-range study ever made under controlled conditions of the effect of a school-meal program on the health and efficiency of a large group of school children, which was initiated in the autumn of 1946 by the National Nutrition Department. The purpose of this study is to obtain scientifically accurate information and to apply this information for the betterment of the health of school children not only in Canada but throughout the world.

## Section 5.-The Order of St. John*

The origin of the Order of St. John goes back to the Crusades and the Knights of St. John and Malta. His Majesty the King is supreme head of the Order which has headquarters at London, England, and units in all parts of the British Empire. In Canada, the Governor General is the Prior and meetings of the Order are held at Government House. The organization in Canada is the Priory in Canada of the Grand Priory of the British Realm of the Venerable Order of the Hospital of St. John of Jerusalem, usually referred to as the Order of St. John.

The Priory in Canada has its headquarters and national offices at St. John House, Ottawa, Ont., with branches in every province and local centres in hundreds of cities and towns throughout Canada. There are two distinct branches: the Association whose members train instructors, conduct classes and issue various certificates; and the Brigade, members of which are in uniform under a form of military discipline, receive constant supplementary training, and are available for call whenever the need arises. The Brigade strength is approximately 15,000 persons, about equally divided between the Ambulance Division (men) and the Nursing Division (women), and organized into about 325 divisions from coast to coast.

The primary purpose of the Association is to teach first aid and home nursing and other kindred subjects to citizens of Canada, irrespective of age, and to provide trained and organized personnel to help in time of disaster or national emergency. The work was started in 1895 and since then more than $1,000,000$ persons have received certificates and other awards. Many thousands of these went to members of the Armed Forces to which trained instructors and textbooks have been provided in large numbers. The railways of Canada and many large industrial concerns maintain their own St. John centres.

[^84]The scheme of Voluntary Air Detachment Training inaugurated in 1943 provided trained personnel for overseas and, in addition, a number of members have been trained for service in Royal Canadian Army Medical Corps hospitals in Canada as well as for civilian hospitals.

The return of peace saw the Order of St. John revert to its wide field of peacetime service. The Brigade performs a very special function. At port cities it assists the regular R.C.A.M.C. doctors and nurses, helps in hospitals and merchant seamen's hostels and also assists shipwrecked seamen. Uniformed St. John Brigade members are to be found at all exhibitions, large demonstrations or wherever crowds gather. St. John First Aiders have also proved their worth on the ski-runs in the Laurentians, on Mount Royal, on the Gatineau Hills, at Fort William and other places where skiing is one of the major Canadian sports.

The Order of St. John is carrying on an extensive peacetime program of home nursing, first aid and blood grouping. The training of Brigade members as bloodtyping technicians was commenced in 1943. The entire personnel of large industrial firms are being typed so that, in the event of serious accident, blood transfusions may be given in the quickest possible time.

## CHAPTER VIII.-WELFARE SERVICES*

From a historical as well as a constitutional point of view, the responsibility for social welfare in Canada has rested on the provinces, which, in turn, have delegated a large share of this responsibility to the municipalities. It is but recently, relatively speaking, that the concept of public welfare has grown to include more than poor relief, sanitation and institutions of confinement and that the provinces have undertaken to meet these expanding needs by maintaining institutions of one kind or another, child welfare services, and other specialized programs. Thus, the provinces themselves have latterly assumed the major role in public welfare and, even though the municipalities have continued to carry substantial burdens, the Provincial Governments have taken a direct part in co-ordinating the work and assisting by subsidies and other means.

At the same time, an increasing measure of responsibility on the part of the Dominion has been in evidence: this was especially noticeable during the pre-war depression decade in the fields of unemployment relief, agricultural relief and old age pensions. While constitutional authority has not changed, except with respect to unemployment insurance, the pressure of events in the depression decade obliged the Dominion Government to help the provinces to shoulder their financial burdens by grants-in-aid, etc. To-day, therefore, the responsibility of the Dominion Government for problems arising in these fields has become fairly well established by custom rather than constitutional change, although what remained of unemployment relief after the introduction of unemployment insurance was turned back in 1941 to the provinces. A real effort was made by the Rowell-Sirois Commission to bring about the necessary redistribution of administrative and financial responsibility essential to the proper functioning of the Dominion and Provincial authorities in the complicated economic circumstances that are an outgrowth of the present century. This effort has been carried forward, but with varying success, in the proposals of the Dominion Government to the provinces with regard to social security, during the Dominion-Provincial Conferences held in 1945 and 1946 (see pp. 85-89).

Historically, welfare work begins with the care of the most needy and the care of the indigent, aged and infirm, homeless orphans, dependent, neglected and delinquent children, and the dependent deaf and blind. These classes have been recognized as a public responsibility since the earliest days, but the actual work of caring for them was, in great degree, undertaken by religious and philanthropic

[^85]bodies, many of which were incorporated during the latter part of the nineteenth century. In many cases, Government aid was granted, with official inspection as the natural corollary. As early as 1752 an orphanage was opened at Halifax, N.S., for orphans and deserted children and in Upper Canada an Act was passed, towards the end of the century, to provide for the education and support of orphaned children. In the different colonies before Confederation, under various Acts of the Legislatures, houses of refuge, homes for the aged, orphanages and other charitable institutions were provided. The most serious welfare problems, particularly in Upper and Lower Canada, were those connected with immigration. Many immigrants were destitute on their arrival and were dependent on charity. In 1822, an immigrant hospital was opened at Quebec for the care of the indigent sick. Throughout the colonies before Confederation an interest in child welfare found expression in the incorporation of numerous institutions for friendless orphans and physically incapacitated children. These orphanages were largely supported by the philanthropy of societies or individuals and, if grants of public money were received, the management was subject to Government supervision. During this period, the orphanage was all that was available to the child who lacked normal home care.

Since Confederation, the principle has become generally recognized that the indigent, aged and infirm, orphans, dependent and neglected children, the deaf and dumb and the blind should be the responsibility of the State. Numerous acts of the Provincial Legislatures have recognized municipal and provincial responsibility for these classes of the population by establishing institutions, welfare services, or other provisions for their care. In every province of Canada, public-welfare organizations now exist to look after their protection and well-being. Childwelfare work, as it is known to-day, was not recognized as a special field for case work until the close of the nineteenth century. Now, noteworthy contributions are being made in this field by the provincial child-welfare authorities, the Children's Aid Societies and other social agencies. Of the 468 institutions that reported at the Census of 1941, 76 were controlled by Provincial and County Governments, 61 by municipalities, 104 were under private auspices and 227 under religious and fraternal organizations.

The field of social welfare is a very wide one and includes the work of many voluntary organizations. The Canadian Welfare Council gives national direction to, and co-ordinates the work of, the local welfare agencies; specialized organizations, such as the Canadian National Institute for the Blind and the Canadian Federation of the Blind, occupy a somewhat similar role in their particular fields. The various Community Chest organizations and service clubs assist welfare work by helping to finance local organizations, and the great work of the Young Men's Christian Association, the Young Women's Christian Association, the Catholic Youth Organization and the Young Men's Hebrew Association, the Boy Scouts, Girl Guides and similar youth organizations, in what may be described as preventive rather than curative work, cannot be overlooked. Day nurseries provide services to many mothers who are obliged to work. Most of the activities of these organizations are not susceptible to statistical measurement. In the case of the Canadian Red Cross, the Victorian Order of Nurses, and the Order of Saint John, their fields of effort are more closely related to public health and are therefore treated in Chapter VII, at pp. 205-209.

An outline of the welfare work being carried on by the Dominion Government and by each of the Provincial Governments follows.

## Section 1.-Dominion Welfare Services

The creation of the Department of National Health and Welfare (8 Geo. VI, c. 22, 1944), established for the first time a Department of the Federal Government in which matters of welfare are a primary responsibility. Prior to that time, the administration of Acts pertaining to social security and welfare was assigned to existing Departments or, as in the case of unemployment insurance, to a commission set up for the purpose. The Act of 1944 places under the Minister of National Health and Welfare the administration of any Acts, orders or regulations relating to welfare which are not by law assigned to any other Department.

Other functions of the Department more particularly relating to welfare are, in brief: the promotion of social security and social welfare of the people of Canada over which the Dominion has jurisdiction; investigation and research; the preparation and distribution of information on social and industrial conditions affecting the health and lives of the people; co-operation with provincial authorities with a view to co-ordination of efforts in providing for the social security and welfare of the people of Canada.

The Welfare Branch of the Department administers the Family Allowances Act, the Physical Fitness Act and the federal Old Age Pensions Act including pensions for the blind. The War Charities Act and the Voluntary War Relief Division, formerly administered by the Deparment of National War Services, were transferred to the Department of National Health and Welfare by Order in Council and have been administered by the Welfare Branch since Feb. 1, 1947.

The welfare of Indians and Eskimos is the responsibility of the Department of Mines and Resources (see Chapter XXXI). Other welfare services are administered by the Department of Labour, the Unemployment Insurance Commission and the Department of Veterans Affairs, as indicated on pp. 214-215.

Family Allowances.-The Family Allowances Act, 1944, was introduced for the purpose of equalizing opportunity for the children of Canada. The allowances are paid monthly to mothers and must be spent exclusively towards the maintenance, care, training, education and advancement of the child. If it is satisfactorily shown to the authorities that the money is not being spent for this purpose, payment can be discontinued or made to some other person or agency on behalf of the child. It is further set out in the Act that if any person is dissatisfied with a decision as to his right to be paid an allowance or as to the amount of allowance payable to him or as to any other matter arising under the Act, he may appeal against such decision to a tribunal established for that purpose.

To be eligible for allowances, children must have been born in Canada or have lived in this country for three consecutive years, except the children of men or women who have served in the Armed Forces. Children of members of the three Armed Services are eligible even though born outside the country. A further important clause in the eligibility regulations concerns education. The allowance is not payable to a child who, being above the age of six years and physically fit to attend school, fails to do so or to receive equivalent training. The allowance ceases when a child reaches the age of sixteen.

The allowances, which are tax free, are paid by cheque monthly at the following rates:-

$$
\begin{array}{lll}
\text { Children under 6 years of age. } & & \$ 5 \\
\text { Children from 6-9 years of age, inclusive.. } & \ldots & \$ 6 \\
\text { Children from 10-12 years of age, inclusive. } & & \$ 7 \\
\text { Children from 13-15 years of age, inclusive... } & \$ 8
\end{array}
$$

The allowances are reduced after the fourth child as follows: one dollar reduction for the fifth child, two dollars each for the sixth and seventh child and three dollars for each additional child.

The Family Allowances administration is highly decentralized. Reporting to the National Director at Ottawa are Regional Directors in each of the provipcial capitals and a Regional Director for the Northwest Territories and Yukon. Each regional office is divided into two main sections-the administrative, which carries out all matters of policy, and the treasury division, which devotes itself exclusively to the issuance of the monthly cheques. The Regional Treasury Officers report to the Chief Treasury Officer of the Department of National Health and Welfare.

Each regional office has a Supervisor of Welfare Services who acts as adviser to the Regional Director in social welfare matters and directs the staff of the Welfare Section. On the Dominion level, similarly, a Chief Supervisor of Welfare Services acts as adviser to the National Director.

Study of the statistics (p. 213) reveals a steady increase in the number of children in receipt of allowances, accounted for in large part by the fact that the number of children reaching age 16, and thus becoming ineligible, was more than offset by the number of births. The lower average age of the children, which has resulted from this change in distribution by age, is reflected in a reduced average allowance per child. In addition, the number of new one-child families coming into the plan together with the retirement of elder children reaching age 16 proved sufficient to reduce the average number of children per family. Average allowance per family has, therefore, decreased. It may be noted, however, that continuance of this trend depends on the effect that further shifts in the age distribution of the children may have on average allowance per child and size of average family.

It will be noted that between December, 1946, and March, 1947, there was a sharp increase in the number of families to whom allowances were paid. This is explained by an amendment to the Income War Tax Act effective Jan. 1, 1947. Prior to that date, through income tax adjustment, the Government recovered on a sliding scale a proportion of the allowance actually received. In 1946, 100 p.c. recovery was reached at an income level of $\$ 3,600$. Hence, many in the upper income brackets did not apply for the allowance. Under the amended Act, it was to their advantage to apply because the amount deductible from taxable income is the same for all children who are eligible to receive the allowance irrespective of registration under the Act.

Unemployment Insurance.-In 1940, by an amendment to the British North America Act, the Dominion Government was given complete jurisdiction in the field of unemployment insurance and since that time a national system of unemployment insurance administered by the Unemployment Insurance Commission has been in operation. (See Chapter XX on Labour.)

National Physical Fitness Program.-Under the Physical Fitness Act, which came into force on Oct. 1, 1943, the Dominion Government provides financial assistance to those provinces desiring to promote and carry out physical fitness and recreational projects. This subject is dealt with under Section 3, pp. 232-233.

Veterans Allowances.-In addition to war pensions, allowances are paid to certain non-pensionable veterans at 60 years of age, or earlier if the veteran is permanently unemployable or to eligible veterans who, having served in a theatre of actual war, are incapable and unlikely to become capable of maintaining themselves because of economic handicaps combined with disabilities. These allowances are dealt with in Chapter XXX on Veterans Affairs.

Dependents Allowances.*-The Dependents' Allowance Board is charged with the payment of allowances to dependents of members of the Armed Forces, the main purpose of which is to promote the well-being and efficiency of His Majesty's Forces by relieving financial anxieties with respect to the domestic welfare of their dependents.

The Board consists of a civilian chairman and representatives from the three Armed Services and the Treasury, and administers all allowances. Where investigation is necessary, it is carried out through the field staffs of the Department of National Health and Welfare, the Soldier Settlement Board, provincial welfare services, and private welfare organizations such as Children's Aid Societies and Family Welfare Bureaus.

A special Family Welfare Section has been instituted by the Board to administer allowances when the recipient is infirm or where domestic difficulties necessitate the intervention of a third party. The wife of a service man may request administration of her allowance in case of illness or of her financial affairs becoming involved. The Section maintains the closest co-operation with the various welfare agencies.

Veterans Unemployment Assistance.-The Department of Veterans Affairs does not place veterans in employment, but works closely with the Department of Labour in connection with veterans' problems. Out-of-work benefits are authorized in certain cases as outlined in Chapter XXX.

Government Annuities. $\dagger$-Under the Government Annuities Act (c. 7, R.S.C. 1927, amended by c. 33 , 1931) passed in 1908, the Dominion Government carries on a service that permits and encourages Canadians, during the earning period of their lives, to make provision for their old age. The Act is now administered by the Minister of Labour.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in quarterly instalments (unless otherwise expressly provided) for life and may be guaranteed for ten, fifteen, or twenty years in any event. The minimum amount of annuity obtainable on the life of one person or on the lives of two persons jointly is $\$ 10$ a year and the maximum amount is $\$ 1,200$ a year.

Annuity contracts are of two classes, deferred and immediate, under each of which there are various plans available. Deferred annuity contracts are for purchase by younger persons desiring to provide for their old age, purchase being made by monthly, quarterly or yearly premiums, or by single premium. Immediate annuity contracts are for purchase by older persons who wish to obtain immediate regular incomes through their accumulated savings.

The property and interest of the annuitant in a contract for a Government annuity is neither transferable nor attachable. In the event of the death of the annuitant before the date fixed for the annuity to begin, all money paid is refunded to the purchaser or his legal representatives with interest at the rate of 4 p.c. per annum, compounded annually.

Although in the majority of cases annuities issued on the lives of individuals have been purchased by the individuals themselves, provision is made in the Act whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members. This provision has been

[^86]taken advantage of increasingly in the past few years through group annuity plans, under which the purchase money required is derived partly from the wages of employees and partly from employer contributions.

The group annuity plans in effect cover a wide variety of industries and many municipal corporations, well distributed throughout Canada. Benefits under annuities sold under group plans in recent years are now providing retirement income for many of the older members of the groups.

From Sept. 1, 1908, the date of the inception of the Government annuities system, up to and inclusive of Mar. 31, 1946, the total number of annuity contracts and certificates issued was 151,038 . Of these, 17,651 have been cancelled, leaving in force on Mar. 31, 1946, 133,387 contracts and certificates. The total amount of purchase money received during the same period was $\$ 318,780,755$.

Up to Mar. 31, 1946, 433 corporations, institutions and associations had entered into agreements with the Government to purchase annuities, and on that date 45,416 employees or members were purchasing deferred annuities thereunder, agreements being drawn up according to specific requirements in each case. The number of annuities for the year under review included 17,355 deferred annuity certificates issued under the system whereby one group contract is issued for each group, the employee or member receiving a certificate.

Up to June, 1940, annuity payments were, with certain exceptions, exempt from taxation under the Income War Tax Act. Under contracts issuel after thąt date, income was fully taxable until the Act was amended in 1945. Under the amendment, the capital element in contractual annuities issued since June, 1940, was declared exempt from taxation, the portion representing interest being subject to tax as income. The change applies to income of 1945 and subsequent years.

## 2.-Government Annuities Contracted, and Purchase Money Received, Years Ended Mar. 31, 1925-46

Note.-Figures for the years 1809 to 1924 will be found at p. 873 of the 1942 Year Book.

4.-Numbers and Values of Annuity Contracts, as at Mar. 31, 1945 and 1946

## Section 2.-Provincial Welfare Services*

Provincial health and welfare services are, in many instances, interrelated and administered by the same Provincial Departments. In view of this fact, it is sometimes difficult to set a definite demarcation between the two services. So far as possible, this Section deals with the well-being of the people with regard to social aid, child welfare, allowances and pensions for mothers and the aged and blind. Public health and related institutions are dealt with in Chapter VII, pp. 186-209.

[^87]
## Subsection 1.-Welfare Services of the Individual Provinces

Prince Edward Island.-The Department of Health and Welfare of the Province of Prince Edward Island administers the following statutes:-
(1) The Public Health Act.
(2) The Old Age Pensions Act.
(3) The Children's Act.
(4) The Vital Statistics Act.
(5) The Electrical Inspection Act.
(6) The Falconwood Hospital and Infirmary Act.
(7) The Premarital Health Examination Act.
(8) The Venereal Disease Prevention Act.

It also administers direct relief payments, and extra-mural treatment for tuberculosis, and supervises all Governmental medical services, including the Provincial Sanatorium, the Hospital for the Insane, and the Infirmary for the care of the aged and infirm. In the Province there are two orphanages, one Protestant and one Roman Catholic, operated as private institutions. Two Children's Aid Societies are active and operate under authority of the Children's Act.

There is no system of workmen's compensation or mothers' allowances in the Province, but persons employed under the Dominion Government are provided for under the schedules of the New Brunswick Workmen's Compensation Act.

Old Age Pensions and Pensions for the Blind.-The Province has co-operated in the Dominion-Provincial Old Age Pension plan since July 1, 1933, and with the amendment to the Act providing for the payment of pensions to blind persons since Dec. 1, 1937. For statistics see pp. 229-231.

Nova Scotia.-The Public Welfare Services are administered by the Minister of Public Welfare in the Department of Public Welfare and are specifically concerned with the following matters:-

Child and Family Welfare.-This branch of the Department includes:-
(1) Child protection.
(2) Assistance to and supervision of Children's Aid Societies.
(3) Supervision of children in adoptive and foster homes.
(4) Family case work.
(5) Psychiatric service for children and families under (3) and (4), and for the public schools on request of the Education Department.
(6) Inspection of all child-caring institutions and ownership of, and responsibility for, the operation of the Nova Scotia Training School for Mentally Deficient Children.
These Services include six juvenile courts and probation officers; financial aid and technical advice given to 12 Children's Aid Societies; inspection of foster homes and shelters; inspection of and per capita financial assistance to reformatory institutions. Most of the wards of the Children's Aid Societies are in either free foster homes or family boarding homes, although some are in the regular child-caring institutions. Maintenance is paid on a $40-60$ p.c. basis between the Province and the municipalities. Financial provision for the maintenance of children in reformatory institutions is at the rate of $\$ 175$ per annum from the municipality
and an equal amount from the Province. For children in the Training School for the Mentally Defective, the municipality pays $\$ 200$ per child per annum, all other expenses being borne by the Province.

A considerable volume of work has been done for the Dominion Government in connection with soldiers' families.

Mothers' Allowances.-Enabling legislation was passed in 1930 and became effective on Oct. 1 of that year. Statistics under the Act are given at pp. 226-228.

Public Charities.-These services are varied and include aid to persons who have no legal claim on any municipality in the Province or any specific poor district but who require public assistance.

Old Age Pensions and Pensions for the Blind.-The Province has co-operated with the Dominion-Provincial Old Age Pension plan since March, 1934, and with the amendment to the Act providing for the payment of pensions to blind persons since Oct. 1, 1937. For statistics see pp. 229-231.

In addition to the above matters, the following subjects, though not part of the public welfare program proper, are controlled by the Province:-

Homes for the Aged.-Although no provincial grants are paid to homes for the aged operated by municipalities, religious or private bodies and subject to provincial inspection, many such homes receive public funds indirectly. In certain cases old age pensioners boarding in these homes may pay their pensions directly to the institution or by private agreement pensions may be paid to the institution by the Pension Board of the Department if the pensioner is incapable of managing his own affairs.

The Workmen's Compensation Board.-This legislation was passed in 1915, but did not come into operation until Jan. 1, 1917 The subject of workmen's compensation is not as directly related to welfare as the other services dealt with. The Province, in its control of trade and industry, enacts compensation legislation and supervises its administration, but workmen's compensation is financed by and is essentially the responsibility of industry. See also Chapter XX on Labour.

New Brunswick.-The welfare services provided by the Government of New Brunswick are under the direct supervision of the Minister of Health and Social Services and consist of:-
(1) Children's Protective Service.
(2) Mothers' Allowances.
(3) Old Age Pensions and Pensions for the Blind.
(4) Homes for the Aged.
(5) Workmen's Compensation.

Children's Protective Service.-This Service includes the administration of the Children's Protection Act and the Adoption Act; services under these Acts are carried out by a Child Welfare Officer. Children's Aid Societies are organized in all counties, some of which employ full-time agents. Orphanages are under the auspices of religious or private bodies, but there are certain municipal institutions that receive adults and children: these are subject to provincial inspection.

Mothers' Allowances.-The Mothers' Allowances Act was passed on Apr. 6, 1944, and provides for allowances to mothers who are widowed or who, for other reasons, are without means of support. See pp. 226-228.

Old Age Pensions and Pensions for the Blind.-The Province has co-operated with the Dominion-Provincial Old Age Pension plan since July 1, 1936, and with the amendment to the Act providing for the payment of pensions to blind persons, since Sept. 1, 1937. For statistics see pp. 229-231.

Homes for the Aged.-These are operated under municipal, religious, fraternal or private auspices and are subject to provincial inspection.

Workmen's Compensation.-The Workmen's Compensation Act was passed in 1918 and came into force on Jan. 2, 1919. See also Chapter XX on Labour.

Quebec.-The Quebec Department of Health and Public Welfare administers a comprehensive plan of social welfare, including aid to, and the supervision of, the numerous welfare institutions operated by religious orders or private charity. In Quebec, the administrative policy of welfare services is somewhat different from that of other provinces in that the responsibilities ordinarily assumed by the public authorities are, in many cases, delegated to recognized religious and private welfare agencies, aided by substantial grants from public funds. The Provincial Relief Act provides for assistance without undue interference with the life of the family.

A noteworthy feature in the line of preventive work is that carried out by the Family Registry Office, whereby children from tubercular families, who have not been infected but for whom there is reason to be apprehensive, are boarded out with rural families. This Office works in conjunction with local ministers and doctors, as regards the moral and physical supervision of these children.

Another aspect of the welfare program in this Province is the colonization scheme, whereby needy families are settled on the land in newly opened districts, and are supervised and granted financial aid until they become self-supporting.

The Government of the Province of Quebec is aware that the future of the Province and the survival of its institutions, including the numerous grave problems bearing on the future of youth, depend largely on the long-term policies adopted by the Government in regard to such matters. An Act was passed at the 1946 Session of the Quebec Legislature to set up a Department of Social Welfare and Youth which shall study such problems and administer all laws of the Province of Quebec having for their object the social welfare of the people and assistance to youth in preparation for its future.

Mothers' Allowances.-The Needy Mothers' Assistance Act, 1937, became effective in December, 1938. For statistics of operations under the Act, see pp. 226-228.

Workmen's Compensation.-The Quebec Workmen's Compensation Commission was established in 1928 by authority of cc. 79 and 80 of the Statutes of that year. The Act was brought into force by proclamation on Mar. 22, 1928, operations of the Commission commencing as of Sept. 1, 1928. Under this Act, the Quebec Commission did not insure employers against their liability. On Apr. 4, 1931, a new Act ( 21 Geo. V, c. 100), effective Sept. 1, 1931, provided for such insurance, along the lines of the Workmen's Compensation Act of Ontario. See also Chapter XX on Labour.

Old Age Pensions and Pensions for the Blind.-The Province has co-operated with the Dominion-Provincial Old Age Pension plan since Aug. 1, 1936, and with the amendment to the Act providing for the payment of pensions to blind persons since Oct. 1, 1937. For statistics, see pp. 229-231.

> Ontario.-The Department of Public Welfare administers the following forms of assistance:-

Child Welfare Division.-In this Division are included:-
(1) The Children's Aid Branch, which is responsible for the administration of the Children's Protection Act, the Children of Unmarried Parents Act and the Adoption Act; supervision of 53 Children's Aid Societies in the Province. Since the cessation of hostilities, this Branch has co-operated with the Dominion Department of Veterans Affairs in assisting with the re-establishment of returned veterans and family welfare problems.
(2) The Day Nurseries Branch. An Act respecting day nurseries passed by the Ontario Legislature in 1946 provides for the establishment of day nurseries in Ontario, serving the pre-school child. Under the Act, any municipality may establish a nursery and receive provincial contribution equal to one-half operation and maintenance expenditures. The Act also provides for the supervision of all day nurseries throughout Ontario.
(3) The British Child Guests Branch, which continues the supervision of British children evacuated from the United Kingdom during the War who still remain in Ontario.
(4) Supervision of institutions for children.

Mothers' Allowances.-Since 1920, allowances have been paid by the Province to widows and other necessitous mothers. In addition to basic allowances, free medical services, including necessary drugs, are provided, as well as a 20 p.c. cost-ofliving bonus. In addition, the Commission has discretionary authority to increase any beneficiary's allowance, up to $\$ 10$ per month, where need is shown. See also pp. 226-228.

Soldiers' Aid Commission.-Through the Commission, advice and emergency assistance is extended to ex-service men of the First and Second World Wars and their families.

Old Age Pensions and Pensions for the Blind.-The Province has co-operated in the Dominion-Provincial Old Age Pensions plan since Nov. 1, 1929. Benefits reach a maximum of $\$ 25$ per month, plus a $\$ 3$ maximum cost-of-living bonus paid by the Province, which also provides free medical services, including necessary drugs. In 1937, Ontario was one of the first provinces to pay pensions to the blind under provisions of the Old Age Pensions Act. For statistics, see pp. 229-231.

Homes for the Aged.-Homes for the aged are incorporated under the Houses of Refuge Act, the Houses of Refuge in Districts Act and the Charitable Institutions Act, and are operated by cities, counties, districts and religious or benevolent societies under provincial supervision.

Unemployment Relief.-The Unemployment Relief Act of Ontario authorizes contribution on the part of the Department of Public Welfare toward alleviation of distress of unemployable persons. The municipalities of the Province are reimbursed 50 p.c. of the expenditures, while in the unorganized areas the Province administers and pays the total cost of aid rendered.

Workmen's Compensation.-The Workmen's Compensation Act came into force on Jan. 1, 1915. See Chapter XX on Labour.

Manitoba.-For the organization of the Department of Health and Public Welfare of the Province, see p. 190. The Welfare Division of that Department has two broad subdivisions:-
(1) Public Welfare Services and Assistance includes the administration of Mothers' Allowances throughout the Province, social assistance in the unorganized territory of the Province, and the care of transient nonresidents. It also includes child care and protection services and the supervision of five Children's Aid Societies covering practically the whole Province. Grants to charitable institutions are made upon the recommendation of the Welfare Supervision Board. A Public Welfare Advisory Committee appointed by the Lieutenant-Governor in Council in May, 1945, acts in an advisory capacity to the Minister on all aspects of public welfare.
(2) Old Age Pensions and Pensions for the Blind. As at May 1, 1945, the Welfare Division assumed responsibility for the general administration of old age pensions and pensions for the blind. For statistics, see pp. 229-231.
Mothers' Allowances.-Manitoba was the first province to enact this type of legislation, the Act having come into force on Mar. 10, 1916. Statistics of operations are given on pp. 226-228.

Social Assistance.-This includes provision for unemployable and unemployed persons in unorganized territory and the maintenance of aged and incurable persons from unorganized territory in and outside institutions.

Workmen's Compensation.-The Workmen's Compensation Act came into force Jan. 1, 1917. See also Chapter XX on Labour.

Saskatchewan.-The Department of Social Welfare is charged with the responsibility of administering all Acts concerning welfare which have been placed on the Statutes of the Province. The Department is divided into three main Branches:-
(1) Child Welfare Branch.
(2) Old Age Pensions Branch.
(3) Social Aid Branch.

In addition, the Department is divided into the following Divisions: Administrative Division, Welfare Services Division, Mothers' Allowance Division, Home for the Infirm, and Industrial School for Boys.

The Social Welfare Board, which consists of the Directors of the three main Branches with the Deputy Minister as Chairman, deals with all applications for assistance under the various Acts administered by the Department.

Child Welfare.-This Branch supervises and directs the Child Welfare activities of the Province and deals mainly with delinquent children, wards, children of unmarried parents, orphaned and neglected children, education of blind children, foster homes, children's shelters, supervision of institutions, and adoptions.

A children's shelter is being operated by the Branch at the present time and another is in course of construction which will provide for the needs of orphaned and neglected Métis children in the northern and outlying districts of the Province. There are Children's Aid Societies in the three largest cities, two of which maintain shelters.

Some of the older wards are being maintained in homes and on farms under Wage Agreements and, after allowing a reasonable amount for their requirements, arrangements are made to place the balance of their wages in a trust fund to be used at a later date for establishing them.

All institutions or homes operated in the Province for the betterment and wellbeing of children are subject to supervision and inspection by the officials of the Branch so that a uniform standard may be maintained.

Where a child, other than a child born out of wedlock, is committed as a ward of the Minister of Social Welfare, the judge committing the child may order the municipality in which the child was residing at the time of apprehension to pay the sum of not less than $\$ 3.50$ per week until the child becomes 16 years of age. No charge is laid against the municipality where the total of such maintenance charges exceeds one mill of the tax rate to be applied towards the maintenance of the said child.

Old Age Pensions and Pensions for the Blind.-This Branch administers the payment of old age pensions and pensions for the blind under supervision of the Social Welfare Board which was set up under the provisions of the Social Welfare Act, 1944. Saskatchewan was the second province in Canada to inaugurate the payment of old age pensions, the agreement became effective on May 1, 1928, while the payment of pensions to the blind commenced on Nov. 15, 1937 For statistics, see pp. 229-231.

Social Aid.-This Branch makes provision for indigent persons in co-operation with the various municipal units of the Province; such aid is shared on a $50-50$ basis by the Province and the municipality concerned. Social aid is provided for transient indigent persons, the cost of which is borne entirely by the Province. The Branch operates a farm on which it employs a number of Métis families who were formerly recipients of social aid. This farm is proving to be a valuable asset and progress is being made in re-establishing these people by teaching them modern farm methods, and in making them self-supporting by paying them wages for services rendered. A school for Métis children was established at Crescent Lake in 1946 and another is under consideration for the Duck Lake district.

Arrangements are being made for the opening of a hostel in Regina to provide suitable living quarters for teen-age girls who are wards of the Minister of Social Welfare.

Provision for the payment of Mothers' Allowances is made in the Child Welfare Act and was originally enacted in 1917 as the Mothers' Pensions Act. More recently the administration of mothers' allowances has been made the responsibility of the Social Aid Branch. See also pp. 226-228.

Industrial School for Boys.-The Department has assumed the management and operation of the School which provides corrective training and academic instruction for delinquent boys of from 10 to 16 years of age.

Home for the Infirm.-The Department also operates a Home for the Infirm which provides accommodation for approximately 90 aged and infirm people. The Department also has supervisory powers over all privately operated homes in the Province which render similar service. Plans are under way for the construction of another Home to be operated by the Department which will accommodate approximately 150 to 200 aged and infirm persons.

Workmen's Compensation.-The Workmen's Compensation Act came into force July 1, 1930. See Chapter XX on Labour.

Alberta.-The Department of Public Welfare, established Apr. 1, 1944, administers a comprehensive program of welfare activities. The following Statutes are administered by the Department:-
(1) Bureau of Public Welfare.
(2) Métis Population Betterment Act.
(3) Child Welfare Act.
(4) Relief Liability Act.
(5) Improvement District Act (Sects. 43, 44 and 45).
(6) Unemployment Relief Act.
(7) Old Age Pension Act.
(8) Mothers' Allowance Act.
(9) Homes for Aged or Infirm Act.

Bureau of Public Welfare.-This Bureau, commonly known as the Relief Branch, provides assistance to the needy who have no municipal residence. It also provides grants and aid to municipalities which have given assistance to resident unemployed employables.

Two hostels for men are maintained at Edmonton and Calgary where destitute single men without permanent municipal domicile are cared for, and two welfare depots are maintained in the country. Single ex-service men are cared for in Calgary and Edmonton without being institutionalized. The Bureau has been successful in the rehabilitation of families by resettling them on the land.

Mettis Rehabilitation Branch.-The rehabilitation of the Métis-those of mixed Indian and White blood who do not qualify under the Indian Act-has been carried out by the setting aside of tracts of land as Métis Settlement Areas, where the settlers have exclusive fishing, hunting and trapping rights and where they are encouraged to engage in lumbering, agriculture and stock-raising. Educational and social services are provided and Government-operated stores sell goods at cost price.

Child Welfare Branch.-Care of children who become wards of the Province either by neglect, delinquency or by indenture and agreement come under the exclusive control of the Child Welfare Commission. They may be placed either in foster homes, in paid boarding homes or in institutions depending on the individual cases. Maintenance in boarding homes or institutions is paid by the Province. The Province does not maintain any reform schools for delinquent children; such children are placed in carefully selected homes under constant supervision and are inspected periodically by Departmental officials.

The education of deaf and blind children is the responsibility of the Department of Education, which maintains children in special schools outside the Province. Grants are made to sight-saving classes and classes for sub-normal children in the larger cities.

Old Age Pensions and Pensions for the Blind.-The Province has been cooperating in the Dominion-Provincial Old Age Pension plan since Aug. 1, 1929, and with the amendment to the Act providing for the payment of pensions to blind persons since Mar. 1, 1938. For statistics, see pp. 229-231.

Mothers' Allowance Branch.-The Mothers' Allowance Act was passed in 1919 and became effective in that year. For statistics, see pp. 226-228.

Homes for Aged or Infirm.-The Homes for the Aged and Infirm Act came into effect on Mar. 28, 1945, and provides for the payment of a grant to municipalities maintaining either aged or infirm residents in licensed homes.

British Columbia.-Welfare services operated by the Province come under the administration of the Social Welfare Branch of the Department of Health and Welfare. Such services include:-
(1) Child Welfare.
(2) Mothers' Allowances.
(3) Social (family and individual) Allowances.
(4) Old Age Pensions.
(5) Provincial Home.
(6) Girls' Industrial School.
(7) Boys' Industrial School.

In British Columbia all social workers-general, medical and psychiatric-are employed by, and come under, the direction of the Social Welfare Branch and are included in the Field Service Division. Social workers are trained to give a generalized service and are required to do case work for all the services mentioned above. In addition, case work is done for mental institutions, tuberculosis hospitals, venereal disease clinics, infirmaries, etc., and for the Federal Departments.

Medical services and prescribed drugs are provided for all types of social welfare cases. In organized municipalities the Province bears half the cost and in unorganized territory the whole cost.

Child Welfare.-The Child Welfare Division of the Social Welfare Branch is responsible for child welfare work and covers the protection of children, adoptions, placements in foster homes, children of unmarried parents, juvenile delinquency, etc. In Vancouver and Victoria the work is carried out in co-operation with Children's Aid Societies but elsewhere all activities are directly administered by the Division.

Mothers' Allowances.-Mothers' allowances are administered by the Social Welfare Branch, the Act being in force since July, 1920. For statistics, see pp. 226-228.

Social Allowances.-Social allowances are administered by the same Branch under the Social Assistance Act that came into force on Apr. 1, 1945. Under this Act provision is made for all those categories not otherwise dealt with. The Province contributes 80 p.c. of the cost for municipal cases.

Old Age Pensions and Pensions for the Blind.-Old age pensions, which have been paid in the Province since Sept. 1, 1927, are administered by a Board under the jurisdiction of the Social Welfare Branch of the Department of Health and Welfare and all social work is done by the Field Service Division of the Social Welfare Branch. Supplementary assistance is also being given to old age pensioners for the protection of their health and comfort. Pensions have been paid to blind persons since Dec. 1, 1937 For statistics, see pp. 229-231.

Provincial Home.-The Social Welfare Branch operates a Provincial Home for the care of aged male persons. Several cities and municipalities also operate homes for the aged.

Industrial Schools.-Industrial schools for boys and girls are operated by the Social Welfare Branch. Social services in cities and municipalities have been amalgamated in order to do away with dual administration and combined services act in close co-operation with the health services.

Workmen's Compensation.-The Workmen's Compensation Act, effective Jan. 1, 1917, provides compulsory accident insurance in almost every industrial occupation carried on in the Province. See Chapter XX on Labour.

## Subsection 2.-Rates and Statistics of Mothers' Allowances

All provinces, except Prince Edward Island, provide for allowances to mothers who are widowed or who, for other reasons, are without means of support. Manitoba was the first to enact such legislation in 1916. Five other provinces followed between 1917 and 1920. The Nova Scotia and Quebec Acts came into effect in 1930 and 1938, respectively. A New Brunswick statute of 1930, proclaimed in effect in 1943, was replaced by a new Act in 1944.

Except in Alberta, where 25 p.c. of an allowance is borne by the municipality, the whole cost is provided from provincial funds. In Quebec, not more than 5 p.c. of the amount of the allowances paid may be imposed on municipalities, but no levy has been made under this provision.

Each Act stipulates that an applicant must be a resident of the province and, except in Alberta, have resided there for a certain period. Alberta merely requires that the husband should have had his home in the Province at the time of his death, committal to an institution or desertion of his wife. In New Brunswick an allowance was paid for the child of a member of the Forces during the Second World War if such member resided in the Province when he enlisted and the child was resident there.

Except in Saskatchewan and Alberta, an applicant must be a British subject or the widow or wife of a British subject or her child must be a British subject. In Nova Scotia, the applicant herself must be a British subject. In Quebec, she must have been a British subject for 15 years or by birth. In New Brunswick and Manitoba, the child is eligible if he is a British subject, even if the mother is not. In British Columbia, a woman may be eligible if she is or was a British subject by birth or naturalization.

An applicant must be a widow, or a wife whose husband is mentally incapacitated, or, except in Alberta, permanently disabled. The British Columbia Act specifies a disability which may reasonably be expected to continue for at least one year. In New Brunswick, Nova Scotia and Saskatchewan, a mother is declared eligible if her husband is confined to a sanatorium for tuberculosis or in New Brunswick if discharged and following treatment at home. Foster-mothers caring for children whose parents are.dead or disabled are also eligible, except in Nova Scotia and Alberta.

Deserted wives who meet specified conditions are eligible except in Nova Scotia, but the period that must elapse after desertion varies from province to province. Mothers who have been divorced or legally separated from their husbands for two
years are eligible in British Columbia, and a mother who is divorced may be paid an allowance in Saskatchewan. In British Columbia and Saskatchewan, the wives of inmates of penal institutions are eligible.

In Nova Scotia, New Brunswick and Saskatchewan, allowances may be paid in respect of a legally adopted child. In Manitoba, Saskatchewan, Alberta and British Columbia, allowances are paid in some cases for children born out of wedlock.

Mothers of one or more children are eligible in New Brunswick, Quebec, Ontario, Saskatchewan, Alberta and British Columbia. In Nova Scotia the mother of one dependent child is eligible if she is incapacitated, if she has residing with her a husband permanently disabled or if the welfare of the one child requires it.

In Manitoba, an only child under 15 years of age is not eligible unless the mother is confined to a hospital for mental diseases or is physically incapacitated, or there is a child 15 years of age or over who is mentally or physically incapacitated.

The age-limit for children is 16 , except in Manitoba where it is 14 , or over 14 if the child is incapable of self-support. On certain conditions, allowances may be paid in British Columbia for a child between 16 and 18 and also for a child living temporarily apart from its mother. The Alberta Act as amended in 1946 permits payment to children between 16 and 18 years if satisfactory progress is being made at school. In New Brunswick, when a child reaches 16 and is attending school, payments may be continued until the end of the school year; no allowance may be paid for a child not attending school as required by law.

Rates of Allowances.-In Nova Scotia, a maximum of $\$ 80$ per month per family and in New Brunswick $\$ 60$ is fixed by Statute, but in other provinces the administrative authority fixes the rate. In Nova Scotia, the monthly amount payable to a mother and one child is determined by family need. In New Brunswick the maximum monthly amount for a mother with one child is $\$ 27 \cdot 50$ and $\$ 7 \cdot 50$ for each additional child. An extra $\$ 7 \cdot 50$ may be paid for rental under special circumstances. Quebec allows $\$ 35$ monthly to a woman with one dependent child in cities and towns of over 10,000 population; $\$ 30$ in other localities. An additional one dollar per month is paid to each of the second, third, fourth and fifth children, $\$ 2$ each to the sixth and seventh and $\$ 3$ to the eighth and subsequent children. An extra $\$ 5$ is allowed when the beneficiary is unable to work, or when a disabled husband is living at home. In Ontario, the maximum for a mother and one child is $\$ 42$ per month in a city, $\$ 36$ in a town of over 5,000 and $\$ 30$ in a rural district, with $\$ 6$ for each additional child. The allowance may be increased by $\$ 10$ per month per beneficiary where need is evidenced; a winter fuel allowance is also paid according to need. The maximum monthly amount in Manitoba paid to a mother and one enrolled child, excluding winter fuel, is $\$ 40$ with additional allowances for other children; a disabled father in the home receives $\$ 13$ maximum monthly. The allowance may be augmented up to $\$ 25$ where special need is shown but the monthly maximum, excluding winter fuel, to any family with or without father at home is $\$ 121$. In Saskatchewan, the maximum monthly allowance payable is $\$ 10$ for a mother, $\$ 10$ for a disabled father at home, $\$ 15$ for the first child, $\$ 10$
for the second and $\$ 5$ for each succeeding child for a maximum of ten children. The maximum monthly allowance per family is $\$ 85$. The allowance in Alberta is not to exceed $\$ 35$ per month for a mother with one child and may rise to a maximum of $\$ 100$ where there are nine children or more. In British Columbia, the maximum monthly allowance is $\$ 42 \cdot 50$ for a mother with one dependent child, $\$ 7 \cdot 50$ for each additional child and a further $\$ 7 \cdot 50$ for a totally disabled husband living at home. The following table gives statistics for the individual provinces providing mothers' allowances.

## 5.-Summary Statistics of Mothers' Allowances, 1941-46

| Province and Year | Families Assisted | Children Assisted | Benefits Paid |
| :---: | :---: | :---: | :---: |
| Nova Scotia-1 | No. | No. | 8 |

## Section 3.-The Dominion Government in Co-operation with the Provinces

## Subsection 1.-Old Age Pensions and Pensions for the Blind

Legislation respecting old age pensions (R.S.C., 1927, c. 156) was adopted by the Dominion Parliament in 1927. Under this Act, the Dominion Government paid 50 p.c. of the net cost of all pensions paid under the Act. An amendment passed at the 1931 Session of Parliament (c. 42, Statutes of 1931) provided that the Dominion's share of the net cost of pensions be increased from 50 p.c. to 75 p.c. The Dominion contribution of 75 p.c. was made effective from Nov. 1, 1931; the provinces have since been reimbursed on this basis. By Orders in Council passed under the authority of the War Measures Act, the maximum pension has been increased from $\$ 240$ to $\$ 300$ a year and the maximum income (including pension) from $\$ 365$ to $\$ 425$ a year.

In the Speech from the Throne on Jan. 20, 1947, and in later statements in the House, the Government announced its intention to introduce amendments to the Old Age Pension Act designed to incorporate permanently into the Act provisions of the wartime Orders in Council referred to above and, in addition, to enlarge the scope of the Act by providing increases to the pensions payable and the income allowable to pensioners and by modifying certain of the eligibility requirements for pension.

In certain provinces old age pensions are augmented by a supplement paid for entirely by the province. In British Columbia the supplementary pension of $\$ 5$ monthly was increased, in light of the Federal Government's intention, to $\$ 10$ retroactive to Jan. 1, 1947. In Saskatchewan, the supplementary pension was increased from $\$ 3$ to $\$ 5$ at approximately the same time. Alberta continues to pay a $\$ 5$ monthly supplement. . The supplementary allowance in Manitoba is an amount up to $\$ 1 \cdot 25$ per month if the pension is less than $\$ 21 \cdot 25$ monthly. In Ontario it is 15 p.c. of the pension based on a maximum pension of $\$ 20$ a month. At the discretion of the pension authority in Nova Scotia, a supplement of $\$ 5$ monthly may be given if the total income, including pension and supplement, does not exceed $\$ 365$ annually.

To qualify for an old pension, the applicant must, in addition to proving need, have reached the age of 70 years; he must be a British subject, and must have resided in Canada for the immediately preceding 20 years and in the province in which application is made for the preceeding five years. The new regulations passed by Order in Council, May, 1947, liberalized the means test by providing for a more generous interpretation of income and property qualifications.

By an amendment to the Old Age Pensions Act in 1937, provision was made for the payment of pensions to blind persons over the age of 40 years. The maximum income (including pension) is higher in the case of a blind pensioner than for an old age pensioner. The maximum income in different cases is set forth in the Old Age Pensions Act. Amendments made under the War Measures Act apply to blind pensioners who also receive provincial supplements corresponding to those mentioned above for old age pensioners.

The Dominion Old Age Pensions Act is now operative in all provinces and in the Northwest Territories. In 1945 administration of the Act was transferred from the Department of Finance to the Department of National Health and Welfare.

## 6.-Old Age Pensions Statistics, Years Ended Mar. 31, 1943-47

## Subsection 2.-The National Physical Fitness Program

The National Physical Fitness Act (c. 29, 1943) came into force by proclamation on Oct. 1, 1943, and by Orders in Council 509 of Feb. 15, 1944 and 1394 of Mar. 2, 1944. It is administered by the Physical Fitness Division of the Welfare Branch of the Department of National Health and Welfare.

Under the terms of the Act, Parliament makes available to the provinces, on a per capita basis, an amount not exceeding $\$ 225,000$ annually for the promotion of physical fitness and recreational projects. Financial assistance is given only to those provinces that have signed specific agreements with the Dominion Government as provided in the Act. At present, the participating provinces and the maximum amounts available for annual grants from the National Physical Fitness Fund are: Prince Edward Island, $\$ 1,861$; Nova Scotia, $\$ 11,318$; Manitoba, $\$ 14,290$; Saskatchewan, $\$ 17,546$; Alberta, $\$ 15,591$; and British Columbia, $\$ 16,016$. In the event that a province's expenditures for physical fitness fall below the maximum Federal contribution, that contribution matches only the actual provincial outlay. In some of the participating provinces the program is administered by the Provincial Department of Health, in others by the Department of Education.

The actual carrying out of physical fitness and reareational projects is a provincial and community responsibility. The office of the Physical Fitness Division at Ottawa acts as a clearing house among the provinces for the latest information about physical fitness, recreation, physical education, community centres, sports and allied activities. It keeps in touch with the latest developments abroad and circulates reports on them. It has begun publication of a distinctively Canadian series of pamphlets designed to cover a wide range of sports, recreational activities and kindred subjects. In co-operation with the National Film Board, it is developing a recreational and sports preview film library to ensure that accurate and up-to-date films, both of Canadian origin and from abroad, will be brought to the attention of groups and individuals desiring to purchase films for use in their respective provinces and also for distribution through regular film-lending agencies. The Division is also building up a reference library of printed materials with a view to providing resource and reference information. It has interested itself in the Wetzel Grid as a basis of classification for activity, and for achievement tests relating to sports and games. Research is being carried on regarding the possibility of using such information to determine the relationship between individual performance ability and the level of physical development attained (determined on a height, weight, age, and type-of-physique basis). It has worked with the Dcminion Departments of Labour and Veterans Affairs in the preparation of a course of study for community recreation leaders under the Vocational Training Plan. In addition, the Division has co-operated with educational leaders in the preparation of a suggested university curriculum for a degree course in health, physical education and recreation. Other divisions or departments of Góvernment working in related fields use its consultative services, as do large numbers of individuals and organizations desiring information and advice.

The Act provides for the appointment by the Governor in Council of a National Council on Physical Fitness (composed of not fewer than three and not more than ten members) of which the National Director of Physical Fitness is chairman. The Provinces are represented on the present Council either by their Provincial Directors of Physical Fitness, or by representatives from their Provincial Departments of Health or Education, or by persons closely associated with recreation.

The Council meets semi-annually to discuss the general, national aspects of physical fitness, to receive briefs and submissions presented by interested private agencies, and to advise the Minister of National Health and Welfare on aspests of the Physical Fitness Program. In some provinces, provincial physical fitness and cultural councils function on lines comparable to those of the National Council.

## Section 4.-Care of Dependent and Handicapped Groups*

This series of data from the Census of Institutions is made available quinquennially. Detailed statistics of charitable and benevolent institutions in Canada as reported for the 1941 Census appear at pp. 677-682 of the 1943-44 Year Book. Compilations from the 1946 Census of Institutions are not yet completed, but the summary table below gives preliminary figures of these institutions as of June 1, 1946.

Canadian Criminal Law and Procedure.-A review of the development of the Criminal Code in Canada is given at pp. 1085-1087 of the 1934-35 edition of the Year Book; it includes a résumé of procedure and an account of the jurisdiction of the various classes of judges and magistrates.

The statistics presented in this Chapter are summarized from the "Annual Report of Statistics of Criminal and Other Offences", and are collected directly from the criminal courts in the different judicial districts throughout the Dominion. There are 159 judicial districts, including 2 sub-districts, divided by provinces as follows: Prince Edward Island 3, Nova Scotia 18, New Brunswick 15, Quebec 26, Ontario 48, Manitoba 6, Saskatchewan 21, Alberta 12, British Columbia 8, Yukon 1, and the Northwest Territories 1.

Crime is divided into two definite classes, criminal or 'indictable' offences, which include all serious crimes covered by the Criminal Code (see pp. 237-238), and summary or 'non-indictable' offences, which comprise less serious crimes and breaches of municipal by-laws (see p. 243). Indictable offences consist of all cases proceeded against by the higher Courts of Justice-those triable before a Supreme Court Judge with jury and those triable by Judges under the Speedy Trials Act and Summary Trials Act. The more serious crimes only, such as murder, manslaughter, and robbery with violence, are triable by a Supreme Court Judge with jury, without election of the accused. Lesser indictable offences are tried by County Judges with a jury, or "Speedy Trial" (trial by Judge without jury, by election of the accused). Non-indictable offences, breaches of municipal by-laws, traffic laws, etc., are usually dealt with summarily by Police Magistrates or other Justices and Recorders under the Summary Convictions Act.

Heretofore, the presentation of judicial statistics in this Chapter has opened with a general analysis of combined adult and juvenile crime. This year the two classes have been considered separately for the following reasons. Offences of young people under the age of 16 , especially minor offences, are of a different nature from those committed by adults and to combine them with non-indictable

[^90]crimes does not give a comprehensive picture of the trend of crime throughout the country. One class is apt to over-balance the other and give a distorted view. Furthermore, the disposition of adult cases is totally unlike the disposition and treatment of juvenile offenders so that, here again, the logical treatment is two separate analyses. This does not prevent those who wish to pursue the method of comparison used in previous editions of the Year Book from doing so as the combination of tables is still possible.

## PART I.-CRIME OF ADULTS*

## Section 1.-Total Offences

After the First World War, there was a gradual increase in crime. This is a common experience, especially in the non-indictable class of offences, when men who have been under arms for several years are rapidly demobilized. The latest year for which data can be given is 1945 , but the really significant period will be the years immediately following the close of the War. There is some reason to believe that the same pattern as was in evidence after the First World War is being followed.

During 1945 there were 504,181 cases of adult offenders handled by the courts as compared with 479,351 cases in 1944 . Of this total 48,263 charges were of an indictable nature while 455,918 were non-indictable. The corresponding figures

for 1944 were 48,624 indictable and 430,727 for non-indictable crimes. The total convictions in 1945 numbered 497,883 an increase of $5 \cdot 2$ p.c. as compared with 1944.

## ADULT CONVICTIONS PER 100,000 POPULATION

|  | Post-War Period | Indictable | Non-indictable | Total |
| :---: | :---: | :---: | :---: | :---: |
| First World War- |  |  |  |  |
| 1917. |  | 193 | 1,221 | 1,414 |
| 1918.. |  | 213 | 1,300 | 1,513 |
| 1919. |  | 222 | 1,343 | 1,565 |
| 1920. |  | 215 | 1,684 | 1,899 |
| 1921. |  | 221 | 1,795 | 2,016 |
| Second World War- |  |  |  |  |
| 1944.. |  | 355 | 3,597 | 3,952 |
| 1945. |  | 346 | 3,762 | 4,108 |

Ontario led the provinces in total convictions per 100,000 population during 1945, the ratio being 5,669. Quebec was second with 4,723 , and Manitoba third with 3,443 , the same order as that of the previous year. The figures for the other provinces follow: British Columbia, 2,778; Yukon and the Northwest Territories, 2,571; New Brunswick, 2,365; Nova Scotia, 1,917; Alberta, 1,789; Prince Edward Island, 1,766, and Saskatchewan, 1,325 .

The most significant figures are those of convictions for the more serious crimes-offences against the person and offences against property with violence. These increased from 1944 to 1945 by 12 p.c. and $0 \cdot 1$ p.c., respectively, although the total number of indictable convictions showed a decrease of 1.3 p.c. in the same comparison.

In 1945 non-indictable crime increased for two-thirds of the classes shown in Table 12. In connection with these increases it should be remembered that, while the Criminal Code undergoes little change over a period of time, the figures for summary convictions are greatly influenced by the customs of the people and show a tendency to fluctuate as municipal regulations are more strictly enforced or allowed to lapse.

## 1.-Total Convictions of Aḍults, Classified by Indictable and Non-Indictable Offences, Years Ended Sept. 30, 1941-45

Nore.-Classification of indictable crimes is given in Table 3, p. 237, and of non-indictable crimes in Table 12, p. 243.

| Class of Offence | TOTAL NUMBER OF CONVICTIONS |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Non-indictable offences........ | 92.8 | 4,758 | 93.7 | 4,989 | 91.8 | 3,939 | 91.0 | 3,597 | 91.6 | 3,762 |
| Totals................. | 100:0 | 5,129 | $100 \cdot 0$ | 5,326 | $100 \cdot 0$ | 4,293 | $100 \cdot 0$ | 3,952 | $100 \cdot 0$ | 4,108 |

## Subsection 1.-Indictable Offences

The progress of a community, from a moral point of view, is often judged by the number of convictions for indictable offences, as these are less affected than non-indictable offences by extraneous circumstances and the varying methods of law enforcement in different areas and in different years. However,.in the study of such statistics it is important to have comparable figures over a period of years. Table 2, along with the figures published in earlier editions of the Year Book (see headnote to table), provides the necessary background.

In 1935 the total number of convictions for indictable crimes was 33,531 ; in 1945 they had increased to 41,965 or by $25 \cdot 2$ p.c. The increase in the population during the same period was 11.7 p.c.

## 2.-Convictions of Adults for Indictable Offences, by Provinces, Years Ended Sept. 30, 1936-45

Nore.-Figures for 1900-20 are given at p. 1016 of the 1933 Year Book, for 1921-30 at p. 908 of the 1942 edition and for 1931-35 at p. 1108 of the 1946 edition.

| Year | P.E.I. | N.S. | N.B. | Que. | Ont. | Man. | Sask. | Alta. | B.C. | Yukon | N.W.T. | Canada |

[^91]
## 3.-Indictable Offences of Adults, by Classes, Years Ended Sept. 30, 1944 and 1945concluded

Theft, burglary (house- and shop-breaking), gambling and lotteries, and common assault account for the highest percentages of convictions for indictable offences in 1945. Theft, including theft of automobiles, comprised $29 \cdot 3$ p.c. of all indictable crimes. Crimes against the person, which represented 14.8 p.c. of all indictable offences, showed a gain of 117 p.c. over 1944.

Analyses of Convictions for Indictable Offences.-Table 4 shows that 82 p.c. of those convicted of indictable crimes in 1945 had not gone beyond elementary school grades; that $25 \cdot 5$ p.c. of the crimes were committed by youths between the ages of 16 and 21 years and that approximately 82 p.c. of those convicted were dwellers in urban districts.
4.-Convictions for Indictable Offences, Classified by Occupation, Conjugal Condition, Birthplace, Religion, etc., of Person Convicted, Years Ended Sept. 30, 1941-45

Multiple Convictions.-The total number of convictions for any one year must not be confused with the total number of persons convicted for the same period since a number of persons tried for indictable offences have been convicted for more than one offence at the same trial. The trend of such multiple convictions is of value to students of sociology.
5.-Persons Convicted of More than One Offence at the Time of Trial Compared with Persons Convicted of One Offence, Years Ended Sept. 30, 1941-45

| Persons Convicted of - | 1941 | 1942 | 1943 | 1944 | 1945 |

| 11 to 20 offences. | 56 | 74 | 60 | 47 | 50 |
| 21 offences or over | 18 | 15 | 11 | 11 | 11 |
| Totals, Convicted of More than One Offence. . . | 3,079 | 2,965 | 3,581 | 3,568 | 3,498 |
| Totals, Convicted of One Offence.............. | 32,692 | 29,340 | 31,019 | 31,716 | 31,097 |
| Grand Totals. | 35,771 | 32,305 | 34,600 | 35,284 | 34,595 |

Convictions of Females.-Although the number of convictions against men has gradually increased since 1942, those against women have declined considerably since 1943. The number in 1945 was 3,275 or just over one-half of the 1943 figure of 6,132 . It is this decrease that offsets the male increase in 1945, resulting in a more favourable total of all adult convictions for indictable crimes as compared with the previous year. The sharp reduction in female convictions in 1945 is mainly accounted for by the fact that, in 1944, the city of Montreal conducted a campaign against houses of ill repute. Decreases in convictions of females for indictable offences were shown in all provinces except Ontario, Saskatchewan, Alberta, and Yukon and the Northwest Territories.

## 6.-Convictions of Females for Indictable Offences, by Provinces, Years Ended Sept. 30, 1941-45

| Province or Territory | Numbers of Convictions |  |  |  |  | Percentages of Females Convicted to Totals Convicted |  |  |  |  |

## Subsection 2.-Non-Indictable Offences

The following statistics relate to non-indictable offences of adults disposed of by Police Magistrates or other Justices of the Peace, under authority of the Summary Convictions Act. Such convictions showed an increase of $5 \cdot 8$ p.c. during 1945 as compared with 1944, but were lower than any year from 1940 to 1943, inclusive. An increase in 1945 was shown in every province except Alberta. Yukon and the Northwest Territories showed a reduction.

## 11.-Convictions of Adults for Non-Indictable Offences, by Provinces, Years Ended Sept. 30, 1936-45

Note.-Figures for 1900-12 are given at p. 1020 of the 1933 Year Book, for 1913-30 at p. 913 of the 1942 edition and for 1931-25 at p. 1113 of the 1946 edition.

Analyses of Convictions for Non-Indictable Offences.-Breaches of traffic regulations account for the largest number of non-indictable convictions. In 1945 , they comprised 62.9 p.c. of the total number of such crimes (see p. 244 for further statement). Offences against revenue laws showed the highest percentage increase in 1945 over 1944 amounting to 56.5 p.c.; the 1945 figure was, however, below those for 1942 and 1943. Other high percentage increases were shown in offences against the liquor, prohibition and temperance Acts ( 30 p.c.), loose, idle, disorderly conduct and disturbing the peace ( 29.4 p.c.) and non-support of family and neglecting children ( 28.9 p.c.).

Convictions for Drunkenness.-The number of convictions declined slightly in 1943 and 1944 but increased by over 5,000 in 1945. This may be due, to some extent, to stricter enforcement and the return of men from overseas. New Brunswick, Alberta, British Columbia and the Northwest Territories, all showed decreases in such convictions. The highest percentage increase was in Yukon followed by Prince Edward Island, Nova Scotia and Manitoba.

## 13.-Convictions for Drunkenness, by Provinces, Years Ended Sept. 30, 1936-45

Nore.-Figures for 1900-10 are given at p. 1021 of the 1933 Year Book, for 1911-30 at p. 914 of the 1942 edition and for 1931-35 at p. 1114 of the 1946 edition.

Offences Against the Liquor Acts.-Until the War of 1914-18, alcoholic liquors were generally sold under specified conditions by licensed hotels or licensed shops. Offences against the Liquor Acts usually represented a breach of the conditions of sale. During that War, prohibition was generally established but, in more recent years, the Provincial Governments have taken_over the sale"oflliquor through commissions. Eight of the nine provinces now have such Liquor Commissions, Prince Edward Island being the only province in which prohibition prevails. In 1945, the number of convictions for offences against the Liquor Acts reached the highest figure on record, 22,237, an increase of 30 p.c. over 1944. All the provinces contributed to this increase-Ontario's share was numerically the highest though Quebec more than doubled the number of its convictions and those for Prince Edward Island were two and three-quarter times higher than in 1944.

## 14.-Convictions for Offences Against the Liquor Acts, by Provinces, Years Ended Sept. 30, 1936-45

Nore.-Figures for 1900-20 are given at p. 1022 of the 1933 Year Book, for 1921-30 at p. 915 of the 1942 edition and for 1931-35, at p. 1114 of the 1946 edition.

Breaches of Traffic Regulations.-At the beginning of the present century, when the motor-car was scarcely known and to-day's speeds even for freight movement were unheard of, convictions for breaches of traffic regulations numbered only 185 for all Canada. By 1942 the total convictions had risen to 399,957 , the highest number ever recorded, and accounted for 69 p.c. of all non-indictable offences in that year.

A strong influence in reducing convictions under breaches of traffic regulations in 1943 and 1944 was the removal, owing to wartime restrictions, of a large number of private and passenger vehicles from the highways. The number of convictions in $1943(274,573)$ was the lowest since $1936(237,183)$. The 270,021 convictions for 1944 was a further decline, representing a decrease of 33 p.c. from the peak year of 1942. However, 1945 showed an increase of $6 \cdot 2$ p.c. over 1944. With the lifting of tire and gasoline restrictions, a further increase in the infringement of traffic regulations may be anticipated.

## 15.-Convictions for Breaches of Traffic Regulations, by Provinces, Years Ended Sept. 30, 1936-45

#### Abstract

Nore.-Since 1937 convictions for driving a car while drunk have been classed as indictable offences. In 1938 and later years dangerous and reckless driving was so classed and since 1939 leaving the scene of an accident has also been so classed. Figures for 1900-20 are given at p. 1023 of the 1933 Year Book, for 1921-30 at p. 915 of the 1942 edition and for 1931-35 at p. 1115 of the 1946 edition.

[^92]For the year 1945, Ontario, which had $44 \cdot 3$ p.c. of the registrations of motorvehicles in Canada, had $52 \cdot 3$ p.c. of the total convictions; Quebec in the same year had $15 \cdot 3$ p.c. of the motor-vehicles and $35 \cdot 1$ p.c. of the convictions, and Manitoba $6 \cdot 2$ p.c. of the motor-vehicles and $5 \cdot 2$ p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. Thus, the above three provinces have large urban centres, while in provinces with lower degrees of urbanization such as the Maritimes, Saskatchewan and Alberta, convictions were low in proportion to the number of motor-vehicles registered.

Convictions of Females.-In 1945, all the provinces showed increases over the previous year in the number of convictions of females for non-indictable offences except New Brunswick and Manitoba. No non-indictable offences were recorded in the Northwest Territories but the Yukon Territory increase shot up 68.8 p.c., British Columbia was next with 371 p.c. followed by Quebec with an increase of 33.3 p.c.

Among the more important offences listed, breaches of street-traffic regulations were the most numerous single offences by women, accounting for 9,001 in 1945 as against 8,763 in 1944. Drunkenness came next with 3,451 , an increase of 445 over the previous year. Vagrancy accounted for 2,801 convictions as compared with 1,780 in 1944, an increase of $57 \cdot 4$ p.c. Convictions recorded as infractions of Liquor Laws numbered 1,829 as against 1,196 in 1944, an increase of $52 \cdot 9$ p.c. Of a total of 23,323 convictions in 1945 , no less than 676 were for the relatively minor offence of operating a radio receiving set without a licence.

## Section 2.-Appeals

In the calendar year $1945,14 \cdot 4$ p.c. of the appeals in indictable cases resulted in the convictions being quashed. Appeals were dismissed in $63 \cdot 0$ p.c. of the cases, and new trials were directed in $4 \cdot 7$ p.c. In non-indictable cases, 52.8 p.c. of the appeals were dismissed.

## PART II.-JUVENILE DELINQUENCY

## Section 1.-Causes and Court Treatment of Juvenile Delinquency

It is generally accepted that boys and girls are not wholly responsible for their offences and that the child's family and the community in which he lives must share the blame. The statement that a community deserves the delinquency it has, places the responsibility in each locality firmly on the shoulders of every adult citizen.

A review of various studies* into the cause of juvenile delinquency shows the most generally accepted conditions predisposing to children's anti-social behaviour are as follows:-
(1) Broken homes, where one parent is absent, or where parents do not live in harmony.
(2) Vicious homes, characterized by drunkenness and cruelty.
(3) Poor and overcrowded living quarters.
(4) Lack of discipline and parental interest with consequent improper training in the home.
(5) Low income.
(6) Physical disability.
(7) Lack of wholesome recreation and community welfare services.

These conditions create a feeling of insecurity in the life of a child, a lack of confidence in himself, a need for affection without which he has a sense of rejection by his family or by society. The result, in many cases, is anti-social behaviour. The elimination of the causes of misbehaviour is, therefore, more important as a means of prevention and control of juvenile delinquency than is punishment. The Juvenile Delinquents Act, passed in 1908 and revised in 1929, was framed with this purpose in mind. It embodies the principle underlying the proper handling of juvenile offenders.

Under the provisions of the British North America Act, the Parliament of Canada is given power to declare juvenile delinquency to be a crime, but it has no jurisdiction to legislate regarding the civil status of delinquency except as it might be related to legislation respecting criminal law.

The Juvenile Delinquents Act defines a 'child' as "any boy or girl apparently or actually under the age of 16 years" Provision is made, however, by which the Governor in Council may proclaim that in any province the definition of a 'child' shall be broadened to include any person "under the age of 18 years" This has been done in British Columbia, Alberta, Manitoba and Quebec.

According to the Juvenile Delinquents Act, a child over the age of seven is capable of committing a crime, but should be dealt with not as an adult to be punished but as an adolescent requiring good health, encouragement and supervision.

For uniformity, the figures relating to juveniles compiled by the Dominion Bureau of Statistics refer only to those under 16 years of age. In this connection, it is interesting to note that the Conference on the Prevention and Control of Juvenile Delinquency called by the Attorney General of the United States in Washington in November, 1946, recommended that the "under the age of 18 years" as describing a juvenile delinquent be adopted throughout the United States.

[^93]The provisions of the Juvenile Delinquents Act may be put in force in any province by proclamation, after that province has passed an Act providing for the establishment of juvenile courts or the designation of any existing courts as juvenile courts, and has provided detention homes for children. Provision is also made to secure the benefits of the Federal Act for any specific city, town or area in any province in which legislation has not been enacted as a provincial measure. In this case, it is necessary for the Government of Canada to designate some judge or magistrate presiding over a provincial court to be the juvenile court judge.

Juvenile courts differ from other courts in many respects. The procedure, of the juvenile court is informal and more in the nature of a social clinic, though it does not lack dignity. Children are dealt with separately from adults. Their cases are heard at different times and preferably in a different place. The child, his parent or guardian, and the probation officer or social worker are the only persons present. The press is excluded and may not use the name of the child in reporting the offence.

A preliminary investigation of the child's case is made and the information with the complete social data should be in the hands of the judge hearing the case. The place of detention should be in a building separate from one where adult criminals are housed and must be suitable for children.

Probation is the very essence of juvenile court treatment. It entails a study of the individual in his own environment with a view to ascertaining the causes of his anti-social conduct and in the light of these to readjusting him in society. It may be, of course, that it is the environment that needs to be changed. Through probation officers, who should be specially trained for their work, the court can keep in constant touch with the child who has appeared before it. If probation officers are not appointed, a voluntary committee of interested citizens should be available to assist the court.

Taking children from their parents is avoided whenever possible. However, children needing institutional care are sent to training schools or specialized institutions for further education and training rather than to prisons. In the treatment of juvenile offenders provision exists for the trial and punishment of parents, guardians or other adults who have contributed to a child's delinquency, directly or indirectly.

The qualifications of the judge who hears juvenile cases have more to do with the success or failure of the work than any other single factor. It is imperative that, as well as having legal knowledge, he or she be a socially minded person, sympathetic to the principles underlying juvenile court law, with a flexible attitude so necessary in this work, and that his or her personality be such as to win the confidence of the child. It is preferable that the judge give his full time to juvenile court work but, when other duties must be carried, it is important that sufficient time be allowed to keep him in touch with the administrative side of the juvenile work and the work of the probation officers.

## Section 2.-Juvenile Delinquency Statistics

Characteristics and Limitations of Juvenile Court Statistics.-The problem of juvenile delinquency and adult crime differ in their cause, nature and treatment to such an extent that, although one may lead to the other, it is advisable to study them separately. For this reason the Dominion Bureau of Statistics, since 1922, has compiled statistics for juvenile delinquency separately from those of criminal and other offences committed by adults.

Statistics published by the Dominion Bureau of Statistics deal primarily with delinquency cases disposed of by the courts and serve to further the program of the treatment of young offenders.

The tabulations are based on data received from 121 juvenile courts in Canada and from those judges and magistrates before whom are brought the children whose conduct is contrary to the law. The fact that juvenile court statistics furnish the most comprehensive figures collected on a Dominion-wide basis makes it important that the limitations of these statistics are understood.

In the first place, it is impossible for any report to give a complete picture of juvenile delinquency, as many instances of minor offences are not detected, while others are settled by the police, social agencies, or school authorities without the necessity of apprehending the child. This is particularly true in rural districts where the courts are not as accessible and difficulties are apt to be settled in a neighbourly fashion.

Secondly, the number of cases brought before the courts is influenced by such factors as the personnel and facilities of the court, and community interest and understanding of the function of a juvenile court. Furthermore, it must be remembered that as time goes on more courts are established and the added returns may exaggerate an apparent increase in delinquency or may under-estimate a decrease.

Thirdly, the figures refer to the number of charges dealt with by the courts rather than to the number of children. Some of the children may be brought to court more than once within a year and are recorded as separate individuals each time they appear on new complaints. The figures, therefore, should not be ${ }_{i}$ nterpreted as representing the number of delinquent children.

Lastly, the number of delinquency cases reported by the courts is affected, to a considerable extent, by variations in the policies of the courts in the disposition of cases. Some courts handle certain cases unofficially, that is, in these cases legal papers are not prepared and the case is adjusted by the judge or other officer of the court without a formal court hearing. Although some of the courts report the cases as adjourned sine die, others consider the interview as an "occurrence" meaning that the case is not recorded as a charge. When the number of these occurrences goes up, the number of official cases goes down. For the compilation of statistics these variations are unsatisfactory, though from a social point of view such practice may be in the best interest of the child provided that a case history of the individual is filed for future reference.

Judicial Districts.-Of the 157 Judicial Districts in 1945, 137 reported juvenile offences, 13 made 'nil' reports and 7 failed to report at all.

The reporting area for 1945 , as for earlier years, was particularly representative of the larger urban centres, and included 106 of the 190 cities and towns in Canada with populations of 4,000 or over. Fifty-three cities not reporting are in the Province of Quebec. There is no legislation covering the establishment of juvenile courts for the whole of this Province, but Social Welfare Courts may be established in centres of 25,000 population or over.

The numbers of cities and towns of 4,000 population or over reporting juvenile cases in the years 1941 to 1945 were 64, 82, 88, 101 and 106, respectively.

## Subsection 1.-Total Juvenile Offences

The terms 'indictable and non-indictable' are applied only to offences of adults, similar offences committed by juveniles are termed 'major' offences and 'minor' offences, respectively.

Delinquents Brought Before the Coürts.-The number of juvenile delinquents brought before the courts in Canada during 1945 was 9,756 , a decrease of $15 \cdot 6$ p.c. from the total of 11,554 cases tried during 1944. Juveniles charged with major offences showed a decrease from 7,292 in 1944 to 6,121 in 1945, or $16 \cdot 1$ p.c.; a total of 3,635 juveniles charged with minor offences were brought before the courts during 1945, as compared with 4,262 during 1944, a decrease of $14 \cdot 7$ p.c.

Table 1 shows the number of cases brought before the courts, by provinces, from 1941 to 1945. In 1945, a decrease was apparent in each of the provinces, except Prince Edward Island and British Columbia, as compared with the previous year.

## 1.-Juvenile Offenders Brought Before the Courts, by Provinces, Years Ended Sept. 30, 1941-45

| Province | 1941 | 1942 | 1943 | 1944 | 1945 | Percentage Change, 1944-45 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | No. | No. | No. |  |
| Prince Edward Island. | 75 516 | 103 | 89 715 | 109 | 118 598 | +8.3 -13.2 |
| Nova Scotia. | 516 | 555 | 715 | 689 475 | 598 341 | - $\begin{array}{r}13.2 \\ -28.2\end{array}$ |
| New Brunswick. | 438 | 352 | 430 3 3 | - 2.621 | 2,390 | - 28.2 |
| Quebec. | 4,074 | 4,284 | 3,373 5,573 | 2,621 5,388 | 2,390 4,190 | -8.8 |
| Ontario... | 4,910 469 | 5,835 649 | 5,573 467 | 5,388 445 | 4,190 366 | -22.2 -17.8 |
| Saskatchewan | 322 | 483 | 429 | 437 | 339 | -22.4 |
| Alberta....... | 753 | 908 | 493 | 599 | 563 | -6.0 |
| British Columbia | 580 | 633 | 656 | 791 | 851 | +7.6 |
| Totals | 12,137 | 13,802 | 12,225 | 11,554 | 9,756 | -15.6 |

The peak in delinquency among girls was reached in 1943, a year later than for boys, followed by a decline in numbers for both sexes. The ratio between boys and girls charged in court shows a gradual up-grading for the girls, though the actual number of girls appearing in court in 1945 was the lowest since 1940.

## 2.-Ratio of Boys and Girls Brought Before the Courts, Years Ended Sept. 30, 1936-45

| Year | Total Charges | Boys |  | Girls |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | p.c. |  | p.c. |
| 1936... | 8,768 | 8,060 | 91.9 91.8 | 708 789 | $\begin{array}{r} 8.1 \\ 8.2 \end{array}$ |
| 1937.. | 8,675 8,929 | 8,886 8,086 | 91.8 90.6 | 789 843 | 8.2 9.4 |
| 1939. | 9,497 | 8,514 | 89.6 | 983 | $10 \cdot 4$ |
| 1940. | 9,976 | 8,857 | 88.8 | 1,119 | 11.2 |
| 1941. | 12,137 | 10, 812 | $89 \cdot 1$ | 1,325 | $10 \cdot 9$ |

Trends in Juvenile Delinquency.-During the years from 1922-45, economic and social events had their influence on the activities of young people. From 1922 to 1929, a period of comparative prosperity, the after-effects of the First World War were reflected in a gradual rise in the number of major and minor convictions from 6,298 to 8,185 (1927). Fluctuations were less noticeable in the period of financial depression and the pre-war years from 1930 to 1939. The top mark of juvenile offences $(8,425)$ in those ten years was reached in 1930, and the low $(7,035)$ in 1938 with the intervening years not going beyond 7,806 .

The first three years of the Second World War, 1940-42, were marked by a serious increase in juvenile delinquency. The figures reached an all-time high in 1942 with 11,758 convictions. Since then, convictions have gradually declined; the 1945 figure of 8,909 , however, is still higher than in any year from 1922 to 1941.

It is difficult to explain the reason for the decrease in juvenile delinquency since 1943. The socially maladjusted child of from 7 to 15 years of age was at the time of the outbreak of war between 3 and 11 years of age and, in the intervening four years, may have become adjusted to war conditions in the home. During the same period the feeling of excitement, anxiety and tension on the part of the parents at
the beginning of the War may have lessened and this change may have been reflected in the less emotional disturbance of the child. Then, too, it is reasonable to suppose that, as the fathers and older brothers have returned home their presence has had a disciplinary effect on the younger members of the family.
3.-Total Convictions of Juveniles for All Offences, by Provinces, 1922-45

${ }^{1}$ Includes 1 conviction in Yukon.
${ }^{2}$ Includes 1 conviction in the Northwest Territories.
During the years 1942, 1943, 1944 and 1945, surveys of juvenile delinquency were undertaken in several of the larger centres* because some of the adult population were gravely concerned about the increase in the number of misbehaving children. The resulting action on the part of communities probably had some effect on the prevention and control of juvenile delinquency. There are reports of the appointment of a recreation director in one city, of the provision of leadership training courses, of the establishment of community centres, of the increase of Home and School Associations and branches of the Big Brother movement, of the replacement of the old-time school attendance officer by teachers with social work training, etc.

In one Judicial District, the Judge of the Juvenile Court gives credit for improved conditions to the better and more intelligent co-operation of the police. On the

[^94]other hand, there may have been fewer apprehensions in other places due to shortage of police personnel.

The gradual decline of juvenile delinquency in Canada since 1943 is hopeful, but the picture would not be as encouraging if the figures included young offenders up to the age of 18 years (see Table 9). There is no reason for satisfaction until all the recognized means of prevention have been pursued to the utmost.

## Subsection 2.-Major Offences

Table 4 shows the convictions of juveniles for major offences for the years 1922-45.

${ }^{1}$ Includes 1 conviction in Yukon. ${ }^{2}$ Includes 1 conviction in the Northwest Territories.
From 1922 to 1945 the number of convictions per 100,000 of the population for major offences varied from 44 (1939) to 60 (1942), the latter being higher by 5 per 100,000 than any other year. The number in 1945 was 47 which is well below the median (50) for the 24 -year period.

The number of offences against the person, the most serious of juvenile crimes, has remained the same at 2 per 100,000 population since 1922 , except for 1931 . At no time during the period under consideration have they been more than $4: 8$ p.c. of the total number of convictions for major offences.

The crimes most prevalent among juveniles are offences against property without violence. This group includes all thefts without violence. They account for more than one-half of the total convictions, varying from 68.2 p.c. (1926) to 51.5 p.c. (1945).

Offences against property with violence (robbery, burglary, house- and shopbreaking) have increased since 1938. In 1944 and 1945 they constituted more than one-quarter of the total convictions for those two years.

Types of Major Offences Related to Age and Sex of Offenders.-Analysing these classes of offences during the past five years, the main reasons for reference to the court in boys' and girls' delinquency cases for major offences for the period

1941 to 1945 are summarized under sixteen principal headings in the following table. The most frequent violations among the boys in 1945 were theft ( $43 \cdot 8$ p.c.); burglary, breaking and entering ( $26 \cdot 6$ p.c.) the latter being a form of misdemeanor which offers more risk and excitement than any others; and malicious damage to property which includes arson ( $16 \cdot 6$ p.c.). The infractions against the law most prevalent among girls were theft ( $52 \cdot 1$ p.c.); offences against public morals ( 11.2 p.c.); and burglary, breaking and entering ( $11 \cdot 2$ p.c.).

As children become older the percentage of major offences tends to increase. Generally speaking, boys of 8 years of age commit more than double the number of offences as the 7 year-olds and those of 9 years twice as many as the 8 year-olds. Over the 24 -year period $1922-45,58$ p.c. of the major offences were committed by boys of 13,14 and 15 years of age, and the latter age was responsible, on an average, for 22 p.c. of the major offences. In 1945 the number of offenders was lower for all ages than that of the previous two years except at the age of 15 years. (See Table 7.)

Girls of the 13 to 15 age group were answerable, on an average, for 64 p.c. and those of 15 years for $27 \cdot 6$ p.c. of the total female convictions.

Education and Delinquency.-In 1945, 64 p.c. of the convictions for major offences were for offences committed by children of 13,14 and 15 years of age. Presuming that the age of entering school is six years, 77 p.c. of the above group were one or more years behind in school work, while of all the children convicted 72 p.c. were backward. This retardation may be due to other factors besides dullness, such as illness, change of residence, etc.

In only 3 p.c. of the total convictions were the children ahead of the normal rating in the school and only 8 p.c. had attended high school.
7.-Age, Sex and School Grade of Juvenile Delinquents Committing Major Offences, Year Ended Sept. 30, 1945
( $\mathrm{B}=$ Boys; $\mathrm{G}=$ Girls)

Birthplace of Parents of Delinquent Children.-Statistics show that juvenile delinquents are predominantly of Canadian origin. Out of 55,921 major offenders during the 10 -year period $1936-45,7,364$, or $13 \cdot 2$ p.c., were of alien parentage. These figures are misleading, however, and viewed as they should be by population ratio will bear out to some extent the theory of difficult adjustment for those children whose parents are not born in this country, with the exception of those whose parents are born in the United States.

The actual number of delinquent children of foreign-born parents is small. When taken in relation to the population in the same age group ( 7 to 15 years) and in the same birthplace of parents, as approximately calculated from birth statistics, the results do not disclose any surprising differences. The juvenile delinquents of parents born in the British Isles or in a British possession are relatively more numerous than those of parents born in foreign countries or in Canada, while those whose parents were born in foreign countries, excluding the United States, show only a slightly higher ratio than those of Canadian-born stock. Those juvenile delinquents, whose parents were born in the United States, are only half the proportion of delinquent children of foreign-born or Canadian-born parents. This may be partly due to the fact that the families coming to Canada from across the border are fairly stable and in a high economic group.*

It must be pointed out that in the five-year period (1941-45) in an average of 427 cases the birthplace of parents was not reported each year. Had these been included they might affect considerably the ratio in any of the above groups.

[^95]
## 8.-Birthplaces of Parents of Canadian-Born Juvenile Delinquents, Average 1941-45

| Birthplace of Both Parents | Average 1941-45 |  |  |

| Other foreign countries.. | 487 | 136, 925 | 3.6 |
| Not given or not known.... | 427 | - | - |

${ }^{1}$ Rates of offenders are per 1,000 population of the same age and whose parents have the same birthplace.
Convictions of Juvenile and Young Adult Offenders.-While, officially, juveniles are persons under 16 years of age, in response to increased public interest in offences committed by young persons, the following table has been compiled, in which the convictions for indictable offences of persons aged 16 to under 21 have been added to the figures of juveniles found guilty of major offences. The rates per 100,000 population are the proportions of the offences committed by persons in any one age group.

## 9.-Convictions of Juveniles for Major Offences and of Young Adults for Indictable Offences, Years Ended Sept. 30, 1939-45

Note.-The population figure used for 1941 is from the 1941 Census; population figures for all other years are official estimates.

| Year | Juveniles (7-15 inclusive) |  |  | Juvenile Adults (16-18 inclusive) |  |  | Adults (19-20 inclusive) |  |  |

Repeaters.-Through the years from 1922 to 1945, approximately one in every four children brought before the court failed to heed the first warning of the court and has made at least a second appearance.

The 1945 figures show that in almost three-quarters of the cases ( $73 \cdot 5$ p.c.), the children appeared before the court for the first time, $14 \cdot 1$ p.c. of them were second offenders, $5 \cdot 9$ p.c. third, 2.4 p.c. fourth and $4 \cdot 1$ p.c. had been up five or more times.

Previous court experience of boys and girls who have been committed for major offences is shown in the following table, covering the period 1936-45.
10.-First Offenders and Repeaters of Major Offences, 1936-45

Disposition of Cases of Major Offenders.-Placing the child on probation of the court, fines and suspended sentences account mainly for the disposition of cases for major offences. Court probation takes care of the largest proportion and seems to be the alternative to the imposition of fines. When the figure for one rises, that for the other drops. For the 10 -year period 1936-45, on an average, 36 p.c. of the sentences have been court probation. Suspended sentence was given in approximately 25 p.c. of the cases with very little variation and 13.6 p.c. were sent to training schools. Such schools have been used to a greater extent since 1938 in commitments for both major and minor offences, in spite of the fact that some of these institutions were commandeered for military purposes during the war years.

The following table shows the disposition of delinquents who committed major offences during the period 1922-45. Under "Probation of Court" are listed those children who have been placed in foster homes by Children's Aid Societies and Provincial Child Welfare Departments, or who have been given into the care of Probation Officers, Big Brothers Associations, Big Sisters Associations, etc. "Detained Indefinitely" may represent any period of detention from a few days to about a month in which the child is under observation or is awaiting his hearing.

## Subsection 3.-Minor Offences

Like convictions for major offences, those for minor offences are on the decline to the extent of 10.9 p.c. in 1944 as compared with 1943 and of another 7 p.c. in 1945 compared with 1944.

Table 12 gives a summary of convictions of juveniles for minor offences by provinces from 1922 to 1945.
12.-Convictions of Juveniles for Minor Offences, by Provinces, Years Ended Sept. 30, 1922-45

| 1944. | 637 | 18.8 | 199 | $5 \cdot 8$ | 873 | $25 \cdot 8$ | 498 | $14 \cdot 7$ | 267 | $7 \cdot 9$ | 914 | 27.0 | 3,388 | 100 |
|  | 487 | $15 \cdot 5$ | 216 | $6 \cdot 8$ | 838 | $26 \cdot 6$ | 424 | 13.5 | 222 | $7 \cdot 0$ | 964 | $30 \cdot 6$ | 3,151 | 100 |

Disposition of Cases of Minor Offences.-In contrast to the sentences for major offences, the majority of delinquents for minor offences up to 1937, with the exception of two years, were reprimanded and allowed to go under supervision. Since 1938, this proportion has been cut down to approximately one-third as a result of greater use being made of training schools. Before 1937, less than 10 p.c. of the commitments were to training schools, while since then the number averaged 13.9 p.c.; in 1945 it was as high as 18.9 p.c.

Through the depression years the percentage of fines imposed was low, due no doubt to inability to collect them, while from 1922 to 1930 and from 1940 to 1945 they averaged approximately 25 p.c. of the sentences.

There have been fluctuations in the percentage of suspended sentences from 8.5 p.c. to 46.4 p.c. Since 1932 sentence has been suspended, on an average, in well over 25 p.c. of the cases; the years 1938 and 1939 showed over 40 p.c. while the figure dropped to $18 \cdot 2$ p.c. in 1945.

The figures for 1945 run farrly close to the apportionment of sentences since 1938. that is 35.4 p.c. of the children were reprimanded and allowed to go under supervision; 18.2 p.c. of the cases were suspended, adjourned sine die or otherwise disposed of $; 18.9$ p.c. were sent to training schools, which is a slightly higher proportion than those placed in schools for more serious offences during the year; 271 p.c. were fined or had to make restitution.

## Subsection 3.-Suggested Preventive Measures

To co-ordinate the work of delinquency control at all levels of government, it has been proposed* that a Federal Bureau of Delinquency be established which would collect data and would plan and integrate the work of Provincial and Municipal Governments in comformity with a national scheme.

In the provinces, the development of juvenile courts has been uneven, and it is well recognized that chere is a need for:-
(1) Appropriate legislation so that the benefit of the Juvenile Delinquents Act can be fully realized.
(2) A juvenile court in each Judicial District, county, city, or other area where the demand, based on population, requires it, together with a full-time juvenile court judge supported by a staff of specially trained probation officers, social workers, a part-time physician, psychologist and psy-chiatrist where medical and psychiatric clinics are not available.
(3) Specialized institutions to take care of the differing requirements of those children who have come up against the law, so that the mentally dull and physically handicapped may receive the training their disabilities demand and so that they may not retard those who are capable of better achievement.
(4) The extension of foster-home care as an alternative to institutional care.

[^97]The treatment of juvenile delinquents in training schools and reformatories is not enlarged upon in this article, not because of its unimportance, but rather because of its importance which requires more space than can be given here. Furthermore, the field of this phase of the control of delinquency might better be reviewed at a later date when the changes and reforms, now under way in several of the provinces, have had time to show results. Suffice it to say that the trend is towards institutions run on progressive educational lines with emphasis on training and treatment for children with special needs, and not on retribution and punishment; a place of opportunity for those who have failed to make a good start on the road to healthy maturity.

There is a general consensus of opinion that, on the municipal level, juvenile delinquency could be substantially retarded by:-
(1) The co-operation of all agencies, both public and private, that work with young people.
(2) Neighbourhoods that offer social, religious and recreational facilities for all ages.
(3) Improved housing conditions and low rentals.
(4) The employment by the schools of properly qualified visiting teachers to form a link between the home and school life of a child; the provision of facilities for educational and vocational guidance in the schools and a school program so planned that children of all grades of intelligence may obtain successful achievement in their school life.
(5) The establishment of medical and psychiatric clinics.

At all levels, Dominion, Provincial and Municipal, there is a need for research, supported by uniform statistics.

## PART III.-POLICE FORCES IN CANADA*

The Police Forces operating in Canada are organized under three groups: (1) the Federal Force, which is the Royal Canadian Mounted Police and whose operations cover a very wide field in addition to purely police work; (2) the Provincial Police Forces-the Provinces of Ontario, Quebec and British Columbia have organized their own Provincial Forces, but the other Provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their boundaries; (3) the Municipal Police-every city of reasonable size employs its own police organization which is paid for by the local taxpayers and which attends to purely police matters within the borders of the municipality concerned.

The organizations under these three headings are described in turn below

## Section 1.-The Royal Canadian Mounted Police

Name and Status.-The Royal Canadian Mounted Police is a Civil Force maintained by the Dominion Government. It was organized in 1873 as the North West Mounted Police, whose duties were confined to what was then known as the Northwest Territories. By 1904, the work of the Force received signal recognition when the prefix "Royal" was bestowed upon it by King Edward VII. In 1905,

[^98]when Alberta and Saskatchewan were constituted Provinces, an arrangement was made whereby the Force continued to discharge its duties as formerly, each Province making a contribution towards defraying the cost. This was continued until 1917.

In 1918, the Royal North West Mounted Police was assigned the duty of the enforcement of Dominion legislation for the whole of Canada west of Port Arthur and Fort William. Soon after the end of the War of 1914-18, an extension of governmental activities made it obvious that the enforcement of Dominion statutes throughout Canada must be the responsibility of a Dominion Force and, therefore, the jurisdiction of the Royal North West Mounted Police was extended to the whole of Canada early in 1920. In that year, the name of the Force was changed to the Royal Canadian Mounted Police and the former Dominion Police with Headquarters at Ottawa, whose duties were largely connected with guarding public buildings in that city and the Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., were absorbed by the Royal Canadian Mounted Police.

Control and Organization.-The Force is controlled and administered by a Minister of the Crown (at present the Minister of Justice) and, as stated above, may be employed anywhere in Canada. Its officers are commissioned by the Crown and for many years have been selected from serving non-commissioned officers.

The Force is divided into 13 Divisions of varying strength, distributed over the entire country. Recruiting in Canada is once again in full swing, after the long period of the War, during which the Force received no recruits. The term of engagement for recruits is five years, and the minimum age for a third-class constable is 21 years.

Recruits are trained at Regina, Sask., and Rockcliffe, Ont. Police Colleges are also maintained at these centres, where courses of training and instruction are given to keep the Force abreast of the latest developments in criminology. In 1937, a Reserve was established which now numbers over 500: units are located principally at such large centres as Montreal, Toronto, Winnipeg, Edmonton, Calgary and Halifax, where men can be congregated easily, and where instruction can be given in the evenings.

From a total of 300 in 1873, the Force grew to over 4,700 by 1944 and in 1946 had a strength of approximately 3,000 . Its means of transport consists of 143 horses, 837 motor-vehicles, 4 aeroplanes and 280 sleigh dogs; 17 trained police dogs are maintained for tracking. Its Marine Section at present consists of 170 officers and men and 21 vessels of various sizes. The R.C.M. Police Aviation Section has a personnel of 12 .

Duties.-The Royal Canadian Mounted Police has the responsibility of enforcing Dominion laws throughout Canada and is specially empowered to deal with infractions against smuggling by sea, land and air. It also enforces the provisions of the Excise Act, and is responsible for the suppression of traffic in narcotic drugs. In all, the Force has responsibility in almost 50 Dominion Acts including the Indian Act. It also assists many departments of the Dominion Government in administrative duties and is responsible for the protection of Government buildings and property and some of the more important dockyards. It is the sole police force operating in the Northwest Territories and Yukon. Furthermore, it undertakes secret and security services for the Dominion Government. In
addition to its Dominion duties, 1he Force has agreements with the Provinces of Alberta, Saskatchewan, Manitoba, New Brunswick, Nova Scotia and Prince Edward Island, whereby the services of the Royal Canadian Mounted Police can be secured to enforce provincial laws and the Criminal Code in rural districts upon payment for such services. These agreements have been in force for more than 15 years.

During recent years, the Force has also entered into agreements for the policing of certain cities, towns and municipalities within the six Provinces mentioned above. There are at present over 70 such agreemonts in existence.

Services to Other Police Forces.-The Royal Canadian Mounted Police maintains two scientific laboratories for the examination of exhibits of all kinds, and these services, as well as its central fingerprint, modus operandi, and firearms bureaus, anti-counterfeiting and other facilities are available to all police forces. It also maintains two Police Colleges where selected personnel from other police forces may send candidates.

Personnel Department.-The Force is continually working to keep abreast of the times, and a few years ago established a Personnel Department, which looks after all recruiting and attempts to see, from psychological and other points of view, that the right man is assigned to the right place. The Force also employs the services of dietitians.

Youth and the Police.-Since the autumn of 1945, members of the Royal Canadian Mounted Police have made a concerted effort to assist the youth of Canada in developing a healthful outlook towards the police, law, order and responsible citizenship. This is being done in many ways. Volunteer speakers, who are qualified for the work, go before youth groups of all kinds and speak on such subjects as Discipline in Everyday Life, History of the Royal Canadian Mounted Police, Courtesy and Kindness, Functions of the Police in Society With the permission of the Departments of Education and local school boards, all the schools in each province are being covered as well as youth groups supervised by service clubs and churches. Considerable interest is also being taken by members of the Force in various training schools set up to handle delinquents.

An effort is made to show the policeman as a public servant, essential to the well-being of the country, a referee in a game the rules of which have been made by members of the community for the greater comfort and security of all. The program does not compete with other youth work and co-operation with them is desired. The work with youth has created a demand from adult groups interested in youth guidance, for speakers to tell how the program functions. The program has been well received and is considered as having had a good effect on the children it has reached. By the end of the school year in June, 1947, approximately 500,000 children will have heard speakers from the Force. Considerable use is made of films but their showing is incidental to the other aspects of the program.

The Force is also doing invaluable voluntary work in supervising recreational facilities, teaching first aid, coaching hockey and baseball teams and many other recreational activities. This phase of youth work is in keeping with the thought that the excess energy of youth should be directed into healthful and creative channels. The key-note of the program is co-operation between the Royal Canadian Mounted Police, other police forces and all agencies interested in the future of the youth of Canada.

78375-18

## Section 2.-Provincial Police Forces

Quebec Provincial Police Force.-The Quebec Provincial Police Force is responsible for upholding law and order over the whole territory of the Province and extending from the provincial boundary between Ontario and Quebec to the Magdalen Islands in the Gulf of St. Lawrence.

This Force, composed of about 600 men, is in charge of a Director who acts under direct orders from and is responsible to the Attorney-General of the Province.

To facilitate operations, the territory is divided into two almost equal parts designated as the District of Montreal and the District of Quebec. The Director has his office at Montreal and an Assistant Director at Quebec city. Working under these Directors, are two deputies.

The Police Force is itself divided into three sections: the devective corps, the constabulary and the traffic officers, each of which, in the two Districts, is in charge of a captain supported by a number of lieutenants and sergeants. This Police Force, which has for years enjoyed an enviable reputation for the successful policing of Quebec's highways and for its great efficiency in solving crimes, has been in course of reorganization for the past three years. During this time, the highway motorcycle patrol has been gradually replaced by a fleet of automobiles which have proved much more efficient, especially during the winter months.

The first installation of a province-wide frequency modulation radio-communication system has been established in the District of Montreal. A main station is operating on the top of Mount Royal which is directing radio-equipped cars over an area of between 60 and 80 miles around Montreal; broadcasting is made in the $35 \cdot 22$ band. Statistics are not available at the present time, but an idea of the amount of work done is easily conceived from the fact that over 20,000 calls were put through the antenna of the main radio station during 1946. Sub-stations are operating at each of the eight bridges giving access to or exit from the city of Montreal itself and a number of cars, all equipped with frequency modulation three-way radio units, are patrolling the surrounding country day and night.

The Quebec Provincial Police Force, well-trained and alert, is in a position to provide the citizens of the Province with the protection they have a right to expect from it.

Ontario Provincial Police.-The Ontario Provincial Police is maintained by the Government of the Province of Ontario under the Attorney-General's Department. The Force is responsible for law enforcement in the rural and unorganized parts of the Province, and in certain municipalities by contract.

History relates that in July, 1875, John Wilson Murray was appointed to act as "Detective for the Provincial Government of Ontario" to pursue criminals and "run them down" in their havens of refuge. Murray performed his varied duties under the direction of Sir Oliver Mowat, the Attorney-General of the Province. At the time of Confederation and the first session of the first Parliament of Ontario in December, 1867, there were a number of rural, or Provincial Police. These officers were unpaid and if any remuneration was received for their services it was derived through the fee system.

In 1877 a major reform occurred when under the Constables Act (R.S.O. 1877, c. 72) the necessity of giving certain constables jurisdiction throughout the Province was recognized. County judges were authorized to allocate Provincial Constables to every county and district in Ontario.

Later, the opening up of the mining areas in the north of the Province and the accompanying lawlessness brought to the fore the realization that more adequate law-enforcement measures were a necessity. Consequently, an Order in Council dated Oct. 13, 1909 (confirmed by 10 Edw. VII, c. 39, 1910) was passed providing for the establishment of the "Ontario Provincial Police Force", to be composed of a Superintendent and such inspectors and constables as were deemed necessary. The officers were stationed throughout the northern portion of the Province and at all border points in southern Ontario. The Force was completely reorganized; in 1921, under the authority of the Ontario Provincial Police Act, the appointment of a Commissioner of Police for Ontario was made and the strength of the Force considerably increased.

The Constables Act was amended in 1929 with a view to establishing closer relationship and co-operation between the Provincial Police Force and County Constabularies. Twenty-eight counties took advantage of this legislation and a member of the Ontario Provincial Police was appointed as Acting High Constable in each of these counties. In 1929 also, an Ontario Provincial Police Training School was established at General Headquarters for the tuition and guidance of recruits.

In March, 1930, the control and administration of the officers who had been enforcing the Highway Traffic Act under the supervision of the Department of Public Highways was transferred to the Department of the Attorney-General under the Commissioner of the Ontario Provincial Police. A combined Provincial and Municipal Police Training School was inaugurated at Toronto in March, 1935. This school provides advanced training in medical, legal, scientific and technical activities for provincial and municipal police officers.

In the foreboding days of August, 1939, when war appeared inevitable, the Ontario Government organized "The Veterans' Guard of the Ontario Provincial Police" with a maximum strength of 750 . The duties of this guard, under the direct supervision of the Ontario Provincial Police, were to guard all Ontario Hydro Power Commission hydraulic plants and dams throughout the Province. It is a point worthy of note that during the entire period of international conflict not one case of sabotage was reported.

By the Police Act, 1946, proclaimed Feb. 1, 1947, all former legislation and amendments dealing with constables were repealed. Under this Act, the duties and responsibilities of police forces are, for the first time in the history of the Province, definitely defined. Up to Mar. 31, 1947, 34 municipalities have availed themselves of the provisions of the Police Act, for the policing of their municipalities by the Ontario Provincial Police.

At present the Force, with a strength of approximately 650, consists of a General Headquarters at Toronto and 14 Districts with headquarters at: Chatham, London, Dundas, Niagara Falls, Aurora, Mount Forest, Barrie, Belleville, Perth, Haileybury, Sudbury, Cochrane, Port Arthur, and Kenora. Each district is divided into detachments to adequately meet law-enforcement requirements. A Criminal Investigation Branch of the Force, under the command of a Chief Inspector, is maintained at Toronto. This Branch investigates crimes of a major nature. At the present time, a frequency modulation radio-communication system is being installed to assist the Force in coping with the ever-increasing demands of law enforcement.

British Columbia Provincial Police.-The organization of a permanent police force in British Columbia followed the influx of gold seekers on the Fraser River in 1858. Prior to this time police protection on Vancouver Island had been of a volunueer nature, the settlers themselves forming posses to apprehend flagrant law breakers.

On July 7, 1858, a Commissioner of Police was appointed together with a chief constable, a sergeant and four or five constables and a staff to maintain a gaol for Vancouver Island. The Governor was alive to the necessity of a police force for the gold-field area of British Columbia and Gold Commissioners were appointed under "The Goldfields Act" to each of whom were assigned six police officers. Instructions, however, came from the Governor.

The Commissioner continued the supervision of the police on Vancouver Island, acting at the same time as Magistrate for the community at Victoria.

It will be seen from these regulations that control of the police was somewhat divided but in 1866 the Crown colonies of Vancouver Island and Bricish Columbia were united and the police came under one head at Victoria. New territory was opened up and local justices of the peace were empowered to swear in special constables in cases of necessity.

In these early days the duties of a constable were interwoven with the tasks of other Government branches such as the collection of revenue and other offices unrelated to law enforcement. As time went on, however, the duties gravitated to full-time police service and police districts were established under the control of a Chief Constable who, in turn, was responsible to the Chief Inspector (later the Superintendent). With minor changes, this system continued until 1923 when, by the Police and Prisons Regulations Act, 1923, semi-military ranks were adopted and the Province was divided into Divisions, Districts and Detachments for administration purposes. There are now 5 Divisions, 2 Subdivisions, 27 Districts and 114 Detachments with a total strength of 431 all ranks.

A training school is operated at Headquarters, shortwave radio is used extensively connecting 23 key stations throughout the Province and 8 police boats patrolling the coast are also equipped with shortwave and voice transmission. A Criminal Investigation Branch is operative at Headquarters.

Provincial Police also assist Dominion as well as Provincial Departments seeking their aid and municipalities in 1925 were afforded the opportunity to contract Provincial Police Protection; 44 cities have signed these contracts since the amendment.

The Provincial Police has contributed invaluable help to youth activities. Talks are given on such subjects as, behaviour, good citizenship, traffic safety, firearms and explosives, camping and camp precautions, first aid, etc. Voluntary assistance is also rendered to promote sports and games, and youth organizations call upon individual members of the Provincial police for instruction.

## Section 3.-Municipal Police Statistics

Police statistics were collected from 190 cities and towns of 4,000 or over population in 1945. The aggregate population of this group of cities and towns was $5,108,995$ (1941) and the total number of policemen was 6,086 or one for every 839 of population.

A total of 501,294 offences were reported to the police. Arrests numbered 142,135 and 245,795 summonses were issued.

Automobiles stolen numbered 10,805 with 10,775 recovered. Bicycles stolen numbered 18,856 with 15,705 recovered. The value of other goods reported to the police as stolen was $\$ 3,632,294$. Value of stolen goods recovered totalled $\$ 1,951,770$.

Automobile accidents recorded numbered 46,826 as the result of which 503 persons were killed and 14,282 injured; other accidents reported, 679 persons were killed and 9,983 injured.

Persons given shelter in police stations numbered 34,363 as against 30,226 in 1944 , and 10,070 stray children were returned to their homes.

## PART IV.-PENITENTIARY AND REFORMATORY INSTITUTIONS

Section 1.-Penitentiary Statistics*

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries of Canada. Seven institutions are included in the system, the two largest of which are at Portsmouth, Ont., and St. Vincent de Paul, Que., while the other five are at Dorchester, N.B.; Prince Albert, Sask.; Stony Mountain, Man.; New Westminster, B.C.; and Collins Bay, Ont. During the fiscal year ended Mar. 31, 1946, the average daily population of these institutions was $3,174 \cdot 5$ and the total net cash outlay for the year was $\$ 3,165,042$ or $\$ 2 \cdot 73$ per convict per diem, compared with 3,028 average daily population and $\$ 2,689,059$ total net cash outlay or $\$ 2.43$ per convict per diem for the year 1941.

Female convicts given penitentiary sentences in the different provinces are sent to the penitentiary at Kingston, Ont., where special quarters and staff are maintained for their detention and supervision. Female convicts in custody on Mar. 31, 1946, numbered 52 compared with 43 in 1944 and 46 in 1941.

Movement of Population of Penal Institutions.-Penal institutions may be classified under three headings: (1) penitentiaries, with slow turnover, since prisoners have long sentences; (2) reformatories and training schools, also with rather slow turnover; and (3) common gaols, where the turnover is extremely rapid. If the average population for the year be taken as the average of the figures for inmates at the beginning and at the end of the year, and the number discharged be the turnover, the percentage turnover in fiscal year 1945-46 was: in penitentiaries, $48 \cdot 1$ p.c.; in reformatories and training schools, 164 p.c.; in gaols, no less than 1,728 p.c. In dealing with these figures it must be borne in mind that the common gaol population changes from day to day, and is partly made up of accused persons awaiting trial who may be either liberated or sent to a penitentiary or reformatory.

[^100]1.-Population of Penal Institutions, for Twelve-Month Periods (Circa) 1943-45

| Year and Type of Institution | In <br> Custody, Beginning of. Year | Admitted <br> During Year | Discharged During Year | In Custody, End of Year |

| Totals, 1945 | 11,205 | 68,424 | $\mathbf{6 5 , 8 3 0}$ | 11,799 |

Tables 2 and 4 give the more important penitentiary statistics as reported to the Bureau of Statistics. The number of convicts in penitentiaries was 1,865 in 1911, rose to 2,118 in 1916 and declined to 1,468 in 1918. After demobilization and the depression of 1921, the number of convicts rose to 2,640 in 1922, declined to 2,225 in 1924 and then increased to 4,587 in 1933. The increase was particularly rapid after 1929, amounting to 1,818 or $65 \cdot 7$ p.c. in three years. The number of convicts in 1936 , at 3,098 , was lower than in any year since 1929, but in 1937 there was an increase of 5.4 p.c. with further increases of 9.7 p.c. in 1938 and $6 \cdot 2$ p.c. in 1939. By 1943 a decrease of 21.9 p.c. over the 1939 figure was shown, but in 1946 there was an increase of $7 \cdot 4$ p.c. over 1945. The number of paroles (ticket-of-leave) was 216 in 1946.

| Totals, Discharged. | 1,697 | 1,562 | 1,561 | 1,421 | 1,561 |
| In Custody, Ends of Years | 3,232 | 2,969 | 3,078 | 3,129 | 3,362 |

Table 3 shows the ages of convicts by groups. In 1946, of the total of 3,362, 13 p.c. were under 21 years of age and 45 p.c. between 21 and 30 years of age; thus, 58 p.c. were 30 years of age or less. In 1914, there were 2,003 convicts of whom $9 \cdot 3$ p.c. were under 20 and 44.4 p.c. between 20 and 30 , a total of $53 \cdot 7$ p.c. under 30 . In 1923 , there were 2,486 convicts and $11 \cdot 3$ p.c. were under $20,46 \cdot 6$ p.c. between 20 and 30 , or $57 \cdot 9$ p.c. under 30 years of age. Detailed statistics of the place of birth, conjugal state, sex and religion of convicts are presented in Table 4.

## Section 2.-The Ticket-of-Leave System*

The Ticket-of-Leave or Parole System rests on the power of the court to suspend, conditionally, the imposition or the execution of a sentence.

Its aim is to achieve, through the substitution of a form of control or treatment, the reformation or civil rehabilitation of a prisoner outside of close imprisonment. The beginning of the British ticket-of-leave system began in 1660 by statute, when power was given judges to transport prisoners to the colonies, where, after a penal settlement period was fulfilled, they were allowed for the remainder of their sentence the freedom of the colony, under certain restrictions. All such prisoners were prohibited from carrying firearms and had to report monthly, quarterly or yearly for inspection to the authorities. By 1840, transportation of prisoners was disallowed but a new policy of imprisonment was inaugurated under which all longterm convicts must pass through the prisons for a period before conditional release on Ticket-of-Leave could be granted. When released, the convict is kept under the surveillance of the police and reports at stated periods. He is returned to prison for any infraction of this Ticket-of-Leave licence. The British system is altogether automatic in operation.

[^102]Other countries have also adopted the parole system. It was accepted in Germany in 1871, the Netherlands in 1881, Japan in 1882, the French Republic in 1885 and has since been used by Austria, Italy and Portugal. A number of the States in the United States have now a system of parole or conditional liberation in force for prisoners.

In Canada the parole system was first adopted for penitentiaries in 1899 and was later extended to include gaols and reformatories. In this the Canadian system differs from every other parole system in the world. The parole system was legalized under R.S.C. 1927, c. 197, and is known as the Ticket-of-Leave Act.

It is the duty of the Minister of Justice to advise the Governor General on all matters connected with or affecting the administration of the Ticket-of-Leave Act. By an order in writing, under the hand and seal of the Secretary of State, the Governor General may grant to any prisoner under sentence of imprisonment in a penitentiary, gaol or other public prison or reformatory Ticket-of-Leave to be at large in Canada or any specified part thereof during such portion of his or her term of imprisonment and upon such conditions in all respects as the Governor General may see fit.

The working of the Ticket-of-Leave Act in Canada is in this manner:-
Any convict serving a prison term, or any person on behalf of a prisoner, may make application through the Minister of Justice for a Ticket-of-Leave. Each application, whether received from the most humble petitioner or from a person of high standing in the State or the community, receives the same very careful attention. Reports and opinions are requested from the trial Judge, the police who handled the case and the warden of the prison where the prisoner is incarcerated. The past environment and the previous criminal record, if any, of the prisoner are studied. All the circumstances in each case are carefully considered by well qualified investigators in the Remission Service Branch of the Department of Justice. If the consensus of opinion is that the prisoner has profited by the time spent in prison and it is felt that an exercise of clemency at that time will result in the prisoner becoming rehabilitated and again a useful member of society; and if honest, gainful employment and proper supervision are assured, then the Solicitor General recommends to His Excellency the Governor General that the subject be released to serve the remainder of his sentence under the restraint of a Ticket-of-Leava. The Governor General approves by plasing his official signature thereon. The offender is then issued with a Ticket-of-Leave licence under the hand and seal of the Secretary of State and is relcased from prison to serve the remaining portion of his sentence at large, subject to the conditions and provisos laid down in his licence.

The Commissioner of the Royal Canadian Mounted Police has been designated by the Ticket-of-Leave Act to enforce the conditions under which each Ticket-ofLeave subject is liberated. This he does through the Ticket-of-Leave Section, Identification Branch, located at Ottawa.

Every holder of a Ticket-of-Leave licence, upon release, is required to notify the place of his residence to the Chief Officer of Police or Sheriff of the city, town or district in which he resides and, whenever he is about to leave a city, town, county or district he is obliged to notify such intention to the said Police Officer or Sheriff of that place stating the place to which he is going and, if possible, his intended address. Upon arrival at his new destination he is required to notify the local Police Officer or Sheriff. Further, each male Ticket-of-Leave subject
is required to report once each month, so long as his Ticket-of-Leave period is in force, to the Chief Police Officer or Sheriff of the place in which he resides, unless this condition has been remitted by the Order of the Governor General.

A Ticket-of-Leave subject must produce his licence if called upon to do so by a magistrate or police officer; he is required to abstain from any violation of the law; shall not habitually associate with notoriously bad characters such as reputed thieves and prostitutes; he shall not lead an idle and dissolute life without visible means of obtaining an honest livelihood and is required to carry out any further additional condition that has for reason been attached to his licence.

The Ticket-of-Leave Branch receives very efficient co-operation from the police forces throughout the country. Through their help, record is kept of each Ticket-of-Leave subject at large in Canada and monthly reports are forwarded to Headquarters. Most police forces treat Ticket-of-Leave information as strictly confidential; exercise care in protecting those concerned from embarrassment; give sympathetic consideration to the problems of these unfortunates and are ever ready to give assistance and helpful advice to anyone who is honestly endeavouring to rehabilitate himself.

He who fails to carry out the minor provisions of his release is at first admonished and given another chance. If, however, no heed is taken of rebuke, the Governor General may order the licence of the subject so transgressing to be revoked. In this case the culprit will be, by warrant, recommitted to prison to serve the portion of his sentence that was unsatisfied at the time he was granted Ticket-of-Leave.

If any holder of a licence under the Ticket-of-Leave Act is convicted of an indictable offence, his licence is forfeited. This is the only automatic feature of the Canadian Ticket-of-Leave system. In the case of forefeiture, the subject must first complete the sentence given on account of the indictable offeace; he is then recommitted by warrant to prison to serve the portion of the former sentence that remained unsatisfied when he was granted Ticket-of-Leave.

The Ticket-of-Leave subject is not pampered. He is made to realize that he has been justly punished by imprisonment for offence committed and that judgment has been tempered with mercy by permitting him to serve part of his just sentence at large under the mild restraint of a Ticket-of-Leave licence. On the other hand, no unjust advantage may be taken of him. He has all the rights and liberties of any free Canadian citizen to engage in any honest enterprise or occupation and is fully protected by law from any impositions whatever.

The number of prisoners released on Ticket-of-Leave each year from penitentiaries, gaols and reformatories varies between 700 and 1,000 persons. From the time the system was inaugurated in the year 1899 to the fiscal year ended Mar. 31, 1946, 34,156 offenders have been so released. During the 47 years Ticket-ofLeave has been in operation in Canada, only $5 \cdot 5$ p.c. of the total number released have lapsed into crime that has necessitated return to prison.

Criticism is occasionally heard when publicity is given to some case of a Ticket-of-Leave subject who is again convicted of crime. Because of the strictly confidential nature of this work, nothing is ever heard of the more than 90 p.c.
of subjects who become useful and respected citizens. The Canadian Ticket-ofLeave system has indeed proven well worth while from a humanitarian as well as from an economieal standpoint. The following statement gives a report of the Ticket-of-Leave Section from its inauguration to Mar. 31, 1946.

## Section 3.-Statistics of Corrective and Reformative Institutions

On June 1, 1946, there were 24 corrective and reformative institutions in Canada with a total inmate population of 3,662 ; of this number 2,930 were males and 732 were females. Of the total number of institutions, 13 were for males and 11 for females.

## 5.-Inmates of Corrective and Reformative Institutions, by Age Groups, as at June 1, 1946

Nore.-These institutions report at five-year intervals: figures given in this table are preliminary figures for the year 1946.

Section 5. Canada and ÜNESCOO.. $\quad 313$

According to the British North America Act, education is a function of the Provincial Governments and, therefore, the schools and universities, teacher training and other matters involved in the formal educational field are planned, financed and controlled by the provinces.

However, in a broad sense, education cannot be limited to merely what is taught in schools and colleges. It is as broad as life and experience itself and, for that reason, this Chapter of the Year Book deals also with such subjects as libraries, art and scientific research. Certain agencies of the Dominion Government, while not in any sense in conflict with the formal field of education ascribed by the Constitution to the provinces, have functions that concern education. Among these agencies are the National Film Board and the Canadian Broadcasting Corporation. Thus, while the Canadian Broadcasting Corporation is engaged more in the field of entertainment and recreation than in that of education, there are aspects of its work that are properly included in the broader field. These are dealt with in Section 3 of Part II of this Chapter and cross references are given to those noneducational features of these agencies that are dealt with elsewhere in the Year Book.

## PART I.-THE FORMAL EDUCATIONAL FIELD IN GANADA

## Section 1.-The Current Situation in Canadian Education

The impact of two world wars, improved transportation and communication, and other contributing factors have not only complicated living, provided more leisure and annihilated former geographic barriers but have also increased the need for formal education and made greater demands for successful citizenship. Realization of the possible contribution of the schools to the economic and social life of the State has given an impetus to education and resulted in co-operation, as well as friendly rivalry, among the provinces.

[^103]Certain non-government educational bodies, begun on provincial or lower level, have now become national in scope. These include: the Canadian Education Association, the Canadian School Trustees' Association, the Canadian Teachers' Federation, the Canadian Federation of Home and School, and the Canadian Association for Adult Education.

In addition, there are a number of organizations primarily directed to other ends that devote considerable effort to education: for example, the Junior Red Cross, the Boy Scouts, the Girl Guides, the cadet leagues, etc. The National Film Board and the Canadian Broadcasting Corporation, while not primarily interested in formal education, have been, with the collaboration of school authorities, extending their services to the schools of all provinces (see pp. 304-307).

Again, proximity to the United States and close relationship with other members of the British Commonwealth, particularly with Great Britain, have enabled Canada's education departments to benefit greatly from innovations and experiments conducted outside Canada.

The educational press is still essentially provincial in scope, although a quarterly publication, Canadian Education, designed for national circulation, was established by the Canadian Education Association in 1945.

In past years, there has been a tendency for Canadian teachers to restrict their experience to the provincial area where they have received their training, particularly in those provinces where average salaries are comparatively high. Superannuation funds require continuity in service and proposals to enter other provinces have not been encouraged, irrespective of the qualifications of the teacher. During the war years, however, the acute shortage of teachers tended to modify this practice. Another influence counteracting this 'provincialism', is an arrangement for the exchange of teachers carried out under an interprovincial committee of the Canadian Education Association. In 1946, 50. Canadian teachers were on exchange with provinces other than their own, 17 of whom were in Ontario. There were also 20 visiting teachers from Great Britain in that Province. To facilitate such exchanges, private interests have donated 50 bursaries of $\$ 50$ each to help defray the travelling expensės of teachers taking exchange positions in other provinces or in Newfoundland. Unfortunately, the effect of this exchange, apart from being beneficial to the teachers concerned, is not felt outside the larger urban areas. The Canadian Education Association, working in co-operation with the League of Empire, hopes to arrange from 20 to 30 exchanges between Canada and the United Kingdom for the 1947-48 school year.

Advantages having an equally broadening effect as those that accrue to pupils from the exchange of teachers come from increased use of visual aids in social studies and select radio programs that are designed to build more accurate concepts of, and healthier attitudes towards other people. Correspondence with 'pen pals' in other countries is becoming more popular and helps to break down racial prejudice and insularity.

Teacher Supply.-Shortage of teachers is still prevalent in most provinces. The fact that comparatively few pupils are without all educational facilities and few schools remain closed for lack of teachers, is due to the transportation of pupils to neighbouring schools and use of correspondence courses. Teacher supply has been a serious problem for some time and will continue as such for the next few years at least.

The Canadian Education Association, at its convention in 1946, devoted time to a consideration of the problem of teacher supply and expedients to overcome the shortage, including the preparation of booklets setting forth facts and figures relating to the teaching profession and showing advantages from joining its ranks. In Alberta, the Normal Schools were absorbed by the College of Education so that all teachers are now college entrants on the way to obtaining a degree in education. They may interrupt their college course at the end of any year to engage in teaching and return at any time to pick up additional credits. The Alberta Government has made provision for paying tuition amounting to about $\$ 145$ for promising students. Saskatchewan now credits training in Normal as one year in college. The College of Education offers an undergraduate degree while continuing their classes for graduate students towards the M.Ed. degree. Saskatchewan offers veterans a short Normal course of six months if enough apply to ensure a class of 12. Twenty units have employed veteran teachers in an audio-visual capacity to provide film shows for schools and adult groups in the district.

Manitoba has provided the first residential Normal School in Canada capable of housing sufficient students for replacments in the teaching profession. By making provision for the students to work part time and to borrow money where necessary, no student is kept from professional training by lack of funds and each is sure of a position when graduated.

The in-service training of teachers has received considerable attention and varies from planning institutes culminating in convention programs to better supervision and library facilities. Teachers are still encouraged to attend summer schools, take extra-mural classes and enroll for advanced work. Departmental and other libraries have been provided, from which teachers are encouraged to borrow professional books. New courses are being organized for summer schools stressing rural sociology, citizenship training, shopwork and industrial arts while more opportunity is given for diversification in high-school courses through the organization of composite high schools, and municipal or other larger unit high schools in rural areas. Increased and improved supervision has been effected to raise the standard of teaching.

Teachers' Salaries.-To offset the serious exodus of teachers from the profession, considerable headway has been made in adjusting salaries to a scale more in keeping with the duties and responsibilities involved and so making the profession more attractive to those who have the ability and character to make it a life-work.

While a comparison of average salaries in pre-depression years with those received now is not possible for all provinces, available data for certain provinces are indicative of trends although they do not tell the whole story. In New Brunswick in the school years ended in 1930, 1940 and 1945, male third-class teachers received an average of $\$ 534, \$ 391$ and $\$ 611$, respectively, while female third-class teachers received $\$ 519, \$ 391$ and $\$ 593$. Second-class male teachers received $\$ 762$, $\$ 499$ and $\$ 860$ while female teachers received $\$ 666, \$ 510$ and $\$ 815$ for the same years. The same trend is shown for first-class teachers although the grouping of first-class and superior-school teachers in 1945 makes a comparison of salaries more difficult. Grammar-school teachers on an average received $\$ 2,042, \$ 1,918$ and $\$ 2,380$ for 1930, 1940 and 1945, respectively.

In Ontario the principal of a secondary school received average salaries of $\$ 3,293$, $\$ 2,942$ and $\$ 3,169$ for the school years ended in 1930, 1940 and 1945, respectively. The averages for male assistants for the same years were $\$ 2,698, \$ 2,325$ and $\$ 2,627$
and for female assistants $\$ 2,175, \$ 1,994$ and $\$ 2,207$ For the same years a male teacher in a public school received averages of $\$ 1,720, \$ 1,434$ and $\$ 2,023$ and a female teacher received $\$ 1,190, \$ 1,077$ and $\$ 1,355$. A male public-school teacher in a city received $\$ 2,320, \$ 2,257$ and $\$ 2,586$ and a female teacher received $\$ 1,514$, $\$ 1,559$ and $\$ 1,652$; a male teacher in a rural district received $\$ 1,195, \$ 888$ and $\$ 1,335$ and a female teacher in a rural area $\$ 997, \$ 714$ and $\$ 1,167$, respectively, for the same years.

In Saskatchewan urban male first-class teachers received, on an average, $\$ 1,768, \$ 1,019$ and $\$ 1,840$ (estimate), respectively, and female teachers received $\$ 1,245$, $\$ 525$ and $\$ 1,440$ (estimate) for school years ended in 1929, 1939 and 1945. Rural male first-class teachers received $\$ 1,774, \$ 598$ and $\$ 1,300$ and female rural first-class teachers received $\$ 1,057, \$ 525$ and $\$ 1,250$ for the same periods. Secondclass urban male teachers received $\$ 1,358, \$ 849$ and $\$ 1,565$ and similarly qualified female teachers $\$ 1,130$, $\$ 822$ and $\$ 1,359$; males with similar qualifications in rural schools received $\$ 1,040, \$ 574$ and $\$ 1,262$ and females received $\$ 822$, $\$ 524$ and $\$ 1,207$, respectively, for the same years.

The number of teachers on the staffs of provincially controlled schools, classified according to salary, is given in Table 5, p. 285.

Adult Education.-For many years "adult education" was concerned only with the provision of night classes for adults who had not had the advantage of publicschool education. Classes were at first in charge of day-school teachers who repeated lectures prepared for their day classes. At a later date secondary-school academic subjects were offered and while such classes have been continued they now represent but a small part of adult education as we know it. Courses offered in the secondary schools have increased in scope to include a wide variety of languages, technical and hobby pursuits, drama, art, journalism, public speaking and many others. The "lighted schoolhouse" idea is spreading to remote areas.

The essential values and satisfactions found in meetings of adult members of a community for debate and discussion have multiplied and leadership is received from the Canadian Association for Adult Education. The most important functions of that Association are: to organize a national workshop, to co-ordinate the work of the major adult educational agencies in Canada, to provide ideas and motivation, to make available existing aids and supplies and to conduct experiments and research. At present the major part of the activity comes under: the National Farm Radio Forum; the Citizens' Forum; the publication of Food for Thought and the study outlines prepared for Citizens' Forum; the preparing of an integrated pattern of adult education in co-operation with other national organizations in the field of adult education and general leisure-time activities; and the planning of conferences, etc. The work has been expanding so rapidly that the financing of it has become a difficult task.

Universities from coast to coast provide extension courses in general education which vary from lectures and demonstrations to correspondence courses. St. Francis Xavier, for example, fosters co-operative organizations which benefit Nova Scotia and in this regard has earned for itself an international reputation.

In several provinces the Provincial Governments provide directors who help to organize groups in the Province. Saskatchewan fosters action-study-groups, in part as a reaction to studying for studying's sake.

School Buildings.-The need for school buildings of the new 'functional' type is acute. The Canadian Education Association had an exhibit of school building plans from most provinces at their 1946 annual convention. The plans ranged from one-room rural units to large city structures and included community schools of various sizes. It is now generally recognized that the type and location of school units should be based on the needs of the community. The replacement of single-unit schools by more modern structures on a large scale would leave education still saddled with an inefficient and wasteful organization of districts with insufficient wealth or population to provide modern education. The trend towards community high schools increases the number in attendance and improves the quality of the work accomplished. The latest plans include features for the proper use of such educational aids and devices as radio, television and motion pictures. New movable fixtures further indicate the functional, flexible purpose of the school. Painting, decorating and lighting are done with consideration for the psychological effects of colour and the removal of glare and eye strain.

The Relationship of Earnings to Years at School.-While monetary income is not the only benefit to be received from schooling and, in fact, may not be the most important, there is supporting evidence from the 1941 Census to indicate that increased income is associated with increased schooling. In interpreting the data given in Table 1, however, it should be kept in mind that the graded school is a rather highly selective institution. In most of the provinces a fairly high percentage of pupils leave school through lack of ability, others through lack of interest or personality defects, while still others withdraw for economic reasons. Only some of the latter are comparable in aptitude with those who continue at school.

Increase in income is not due entirely to benefits from schooling. Table 1 shows that there is some increase in income with increased age until the category "65 years or over" is reached, irrespective of years at school. This might be attributed to maturing, experience on the job, more adequate social adjustment, or added acceptance of responsibility. But average earnings of heads of families of $\$ 786, \$ 1,054, \$ 1,457$ and $\$ 2,118$ for groups with $1-4,5-8,9-12$ and 13 or more years of schooling can be related closely to years at school-either from advantages due to material learned, habits acquired, or from training in schools as selective institutions. Percentage increase in earnings is more than enough to compensate for the expense of the additional years of education and the fact that one is not earning while in attendance at school. Those attending 5-8 years earn 133 p.c. as much as those with 1-4 years of schooling; those with 9-12 years of schooling earn 190 p.c. as much as those with 1-4 years of schooling and those 13 or more years earn 269 p.c. of the amounts earned by those who attended 1-4 years.

Only 1.9 p.c. of the heads of families reported "no schooling" while 8.2 p.c. reported 1-4 years; $47 \cdot 8$ p.c. reported $5-8$ years; $34 \cdot 5$ p.c. reported $9-12$ years; 7.5 p.c. reported 13 or more years of schooling and 0.1 p.c. did not report schooling received. Just what would happen to earnings of the groups if larger percentages received more education is hard to conjecture but there is the possibility that, due to additional competition, income in the higher brackets would be reduced.

Similarity of trend is shown in rural and urban areas for all provinces of Canada. Urban averages, by provinces, are given in Table 1 together with rural and urban averages for all Canada.
1．－Average Yearly Earnings of Heads of Families，Classified by Years of Schooling and Age，for Urban and Rural Canada and Urban

## Section 2.-Schools, Colleges and Universities

This Section summarizes the enrolment in all the educational institutions in Canada which include four types: provincially controlled schools, privately controlled schools, universities and colleges and Dominion Indian Schools. The provincially controlled schools are, of course, under the Constitution, the most important group and account for about 90 p.c. of the total enrolment shown in Table 2. A system of public elementary and secondary education, financed mainly by local school authorities but assisted by provincial grants, has developed in each province. There are private schools in all provinces (i.e., schools that are not conducted by publicly elected or publicly appointed boards and are not financed out of public money) but their enrolment is not large in comparison with that of the public schools. At the level of higher education, there is a provincial university in each of six provinces and one or more colleges supported out of provincial funds in the remaining three provinces. (Agricultural schools and colleges are dealt with at pp. 203-213 of the 1943-44 Year Book.)

## Subsection 1.-Provincially Controlled Schools*

Enrolment and Attendance.-Enrolment in provincially controlled schools is given for the latest school year in Table 2 and average daily attendance is shown in Table 3. The average daily attendance figures are more comparable, as between provinces, and probably more significant for most purposes than those of enrolment.

## 3.-Average Daily Attendance in Provincially Controlled Schools, by Provinces, School Years Ended 1936-45

Nore.-Figures for years prior to 1911 will be found at pp. 839-840 of the 1932 Year Book, those from 1911-25 at p. 963 of the 1937 edition and for 1926-35 at p. 1028 of the 1946 edition.

| Year | P.E.I. | N.S. | N.B. | Que. | Ont. | Man. | Sask. | Alta. | B.C. | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1936. | 13,140 | 92,279 | 71,132 | 539,675 | 601,758 | 115,671 | 161,104 | 132,725 | 101,873 | 1,832,357 |
| 1937 | 13,313 | 92,713 | 72,691 | 541,681 | 605,778 | 117,244 | 165,465 | 133, 109 | 104,044 | 1,846,038 |

${ }^{1}$ Figures are for 1943-44; later figures not available.
Teaching Staffs.-The teaching staffs of day schools under provincial control in Canada consisted, in 1945, of 74,957 teachers ( 15,155 males and 59,802 females). Table 5 gives statistics of rates of salary by provinces, except for Quebec for which comparable data are not available. A separate report, "Teachers' Salaries and Qualifications in Eight Provinces, 1945", deals in detail with the classification of teachers, their teaching experience and rates of salary paid.

[^105]

Financial Statistics.-Table 6 presents a comparable statement of the finances of the Boards operating provincial schools so far as this can be done with existing records.

## 6.-Financial Suppart of Provincially Controlled Schools, by Provinces, for Specifled Provincial Fiscal Years Ended 1926-45

Note.-The receipts shown in the following table do not include any amounts raised by loans or the sale of bonds or debentures, as all revenue of this nature must be repaid ultimately with money raised by local taxation. With the exception of the Maritime Provinces, for which the information is not available, the total debenture indebtedness of the schools of each province is given annually, thus showing the net increase or decrease per year. Figures for 1914-25 will be found at pp. 985-987 of the 1936 Year Book and those for intervening years from 1926 in the corresponding table of subsequent editions.

[^107]
## Subsection 2.-Private Schools

Private Elementary and Secondary Schools.-Enrolment in private elementary and secondary schools in the eight provinces, other than Quebec, has increased during the past ten years at about the same rate as the total population. In 1938 there were 33,624 pupils enrolled, 8,679 of whom were in residence, while in 1945, 39,294 were enrolled and 11,494 were in residence. Girls were slightly in the majority in 1938 but were about one-third above the enrolment of boys in 1945. In 1938 there were 2,018 teachers, 570 of whom were males and in 1945 there were 2,230 teachers of whom 577 were males and 375 were classed as part-time teachers.

The age of the school population in private schools does not follow the usual pyramid form found in the public schools. It increases regularly from age 6 to age 15 where it is two and a half times as great. Almost 10 p.c. drop out at 16 , 25 p.c. of the remainder at 17,40 p.c. the following year and for ages 19 or over the number is about equal to attendance at age 6 . In the publicly controlled schools attendance is at its peak from 9 to 13 , then falls rapidly. At age 15 it is considerably below age 7 and total enrolment from 16 up is less than at 7

The ratio of male teachers in private schools in 1945 was about one-quarter whereas in the publicly controlled schools it was about one-fifth.

## 7.-Enrolment in Private Elementary and Secondary Schools, by Provinces, Specified School Years Ended 1921-45

Nore.-Figures for intervening years will be found in corresponding tables in the 1937, 1942 and 1946
Year Books.

| Year | P.E.f. | N.S. | N.B. | Que. | Ont. | Man. | Sask. | Alta. | B.C. | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1921. | 682 | 3,047 | 2,607 | 54,671 | 9,961 | 3,149 | 1,608 | 2,274 | 3,159 | 81,158 |
| 1926. | 580 | 2,956 | 3,528 | 54,767 | 10,126 | 4,534 | 2,358 | 2,281 | 4,624 | 85,754 |
| 1931. | 570 | 2,746 | 3,625 | 57,320 | 12,214 | 5,864 | 2,853 | 2,944 | 5,276 | 93.412 |
| 1940. | 576 | 2,719 | 2,707 | 53,561 | 13,515 | 4,632 | 2,037 | 3,739 | 4,911 | 88,397 |
| 1941 | 638 | 2,986 | 2,935 | 55,847 | 13,458 | 4.509 | 1,985 | 3,813 | 5,003 | 91.174 |
| 1944 | 803 | 3,452 | 3,631 | 61,828 | 14,967 | 4,659 | 2,545 | 3,767 | 5,757 | 101,409 |
| 1945 | 754 | 3,913 | 2,843 | , | 15,911 | 4,593 | 3,544 | 2,032 | 5,704 | ${ }_{1}$ |

${ }^{1}$ Figures for Quebec were not available at time of going to press.
Business Colleges.-Business colleges in 1938 (exclusive of Quebec) enrolled 18,576 pupils of whom 9,648 were full-time day students, 2,141 part-time day students, and 6,787 evening students. About one-third of the pupils were males. In 1945, enrolments numbered 23,226 including 10,386 full-time, 1,413 part-time, and 11,427 evening pupils. This increase is no more than should be expected considering the increase in population. The fact that in 1945 only one-quarter to one-third completed courses and most of them had many employment offers is indicative of conditions in business and industry at that time. In 1938, there were 441 teachers and in 1945, 526 teachers. The number of male teachers increased from 133 to 156 during the same period.

## 8.-Enrolment in Private Business and Commercial Schools (Business Colleges), by Provinces, Specified School Years Ended 1921-45

Note.-Figures for intervening years will be found in the corresponding table of the 1937, 1942 and 1946 Year Books.

${ }^{1}$ Figures for Quebec were not available at time of going to press.

## Subsection 3.-Higher Education

The outstanding achievement of Canadian universities and colleges in 1916, was the development and implementation of the university training program provided for ex-service men and women under the terms of the Veteran's Rehabilitation Act.

A high proportion of veterans are taking advantage of this opportunity to fit themselves for positions of leadership, with the result that Canada has embarked upon a large-scale experiment in adult education. The number of veterans now enrolled in Canadian universities is equal to the total full-time enrolment of university students in Canada immediately preceding the Second World War.

University Training under the Veterans' Rehabilitation Act.*-The Veterans' Rehabilitation Act provides for the payment of tuition and other fees, as well as an allowance of $\$ 60$ per month with extra allowances for dependents, for each veteran commencing a regular university course within 15 months after discharge. The allowances are paid only while the student is actually at college and are continued, if needed, for as many months as his active service, provided that he passes all examinations en route. If he fails in a year's work, no further assistance is available for university studies. On the other hand, if he is of scholarship calibre, allowances may be continued on a year-to-year basis beyond his period of entitlement and an outstanding or exceptionally able student may be assisted in post-graduate study when such is in the public interest.

On the recommendation of the Advisory Committee on University Training for Veterans, established by P.C. 3206, May 3, 1945, legislation was introduced to financially assist Canadian universities in their efforts to provide adequate facilities for qualified veterans. In addition to the regular tuition and other fees, the Department of Veterans Affairs was authorized to pay an additional grant to a university, not to exceed $\$ 150$ per veteran, for the period July 1, 1945, to June 30 , 1946, for the purpose of assisting in defraying the instructional, counselling and administrative costs incurred by the university. This action resulted in an enrolment in Canadian universities of 34,000 veterans as at Feb. 1, 1947

[^108]At least 40 p.c. of the veterans either lacked certain university entrance requirements or needed refresher courses before entering university. Through the facilities of Canadian Vocational Training, the Provincial Departments of Education organized tutorial classes and facilities for from 10,000 to 15,000 veterans. (See also Section 5 on Canadian Vocational Training, Chapter XX.)

The provision of classroom and living accommodation presented a major problem and could be solved only on an emergency basis. At least 25 p.c. of the veterans were married and about 19 p.c. of the unmarried students were living at home. To meet the emergency, a Committee of University Requirements was set up by P.C. 7129, Dec. 4, 1945, and, through the co-operation of the Department of National Defence, the Department of Public Works and War Assets Corporation, temporary facilities were made available to the universities. A Committee on Education Overseas was established under P.C. 4161, Aug. 7, 1945, to make provision for certain Service personnel discharged overseas to resume or commence special studies, usually at the graduate level, in overseas institutions prior to return to Canada.

To shorten the delay between the date of discharge and that of admission to university, the larger institutions adopted a system of staggered admission dates during the year. In addition to the annual opening date and the summer-school terms, special courses were begun in mid-term, usually January and May, for firstand second-year courses in Arts and Science where the greatest bottleneck was experienced. Three continuous sessions during the year, made it possible for some students to shorten the time required to obtain a degree by as much as six months or a year. As the peak of enrolment has been passed, this system, except in a few cases, is being discontinued. It is recognized that the strain on teaching staff and students is too great.

Up to Jan. 31, 1947, some 48,985 veterans had received assistance from the Government to enable them to receive university or pre-university training. Approvals for this training had been granted by provinces according to the following statement; Head Office approvals were for training outside Canada. Some minor variations will occur where provincial and Department of Veterans Affairs district boundaries do not coincide:-

|  | No. |  | No. |
| :---: | :---: | :---: | :---: |
| Nova Scotia. | 2,072 | Saskatchewan. | 4,079 |
| Prince Edward Island. | 190 | Alberta. | 3,755 |
| New Brunswick. | 1,515 | British Columbia. | 6,716 |
| Quebec.. | 6,301 | Head Office. | 1,096 |
| Ontario.. | 18,865 |  |  |
| Manitoba. | 4,396 | Total. | 48,985 |

A survey was prepared as at Feb. 15, 1947, to determine the division of university students according to course of studies and year of study; the result of the survey is given in Table 9 .

78375-19

Teaching Personnel.-The latest available statistics on university teaching staffs-for the academic year 1944-45-do not indicate the full increase in staff incurred by the influx of ex-service students which began largely in January, 1946. In addition to a portion of the new staff required by increased registration, the statistics for 1944-45 include the initial staff required for new courses established by the larger universities, and some adjustments between part-time and full-time teachers occasioned by the return of permanent personnel. Comparison of the personnel reported for 1943-44 compared with 1944-45 is as follows:-

As the registration increased during 1945-46, the problem of staff became acute. One potential source of teaching personnel was the student veteran group enrolled for post-graduate training. Through co-operation with the Department of Veterans Affairs, a system of part-time teaching was developed for such students to the mutual advantage of university and veteran.

Financial Status.-Including the grants made by the Dominion Government for the training of student veterans, the resources of the universities were heavily taxed during 1945-46 to meet the necessary expansion of permanent buildings and teaching facilities. Considerable capital expenditure was necessary to overcome the effects of delayed expansion and building projects deferred during the War. As in the case of teaching personnel, the latest available statistics do not include all such expenditures.

Current expenditures increased more than $\$ 850,000$ in 1944-45 over the previous year for the larger institutions. Colleges and universities responsible for 80 p.c. of the enrolment reported current expenditures amounting to $\$ 19,000,000$. About 45 p.c. of this expenditure was covered by Government grants including Dominion and municipal contributions. Student fees represented 30 p.c. of the current income of $\$ 19,153,149$ reported by the same group.

The value of land, buildings and equipment advanced about $\$ 448,000$ over $1943-44$ to a total of $\$ 97,454,000$. Endowment and trust funds increased $\$ 3,427,000$ to a high of $\$ 84,566,000$. About 85 p.c. of this amount was centralized in the institutions of Ontario and Quebec.

## 10.-Statistics of Income and Capital Resources of Universities and Colleges, Specified Years Ended 1921-45

Note.-The larger universities and many of the colleges in Canada are included and represent an enrolment of approximately $80 \mathrm{p.c}$. of the full-time students of university grade throughout the period. The institutions omitted are mainly those conducted by religious orders, where teachers receive little or no salary, and the financial returns consequently do not represent a comparable record.

## Subsection 4.-Dominion Indian Schools

The administration of Indian affairs by the Indian Affairs Branch of the Department of Mines and Resources is dealt with in Chapter XXXI.

Educational work carried on by the Dominion Government for the benefit of Indians is now very extensive. In the year ended Mar. 31, 1946, a total of 346 Indian schools were in operation, including 76 residential schools for Indians with an enrolment of 9,149 and 262 day schools for Indians with an enrolment of 9,532 Indian pupils, also 8 combined public and Indian schools with 124 Indian pupils enrolled. The total enrolment of Indian ${ }^{7}$ pupils at school increased from 12,799 in 1915-16 to 18,805 in 1945-46; average attendance fluctuated during the period between 62.7 p.c. and 82.4 p.c. of enrolment. Continuation and high-school work is now being taught in several of the day and residential schools. The amount spent on Indian education in the school year 1945-46 was $\$ 2,298,320$.

## 12.-Enrolment and Average Attendance at Indian Schools, School Years Ended 1937-46

Note.-Figures for the years 1916-29 will be found at p. 1063 of the 1940 Year Book, and for 1930-36 at p. 929 of the 1942 edition.

| Year | Residential Schools |  | Day Schools ${ }^{1}$ |  | All Schools |  |  |

| 1946. | 9,149 | 8,264 | 9,656 | 6,779 | 18,805 | 15,043 | $80 \cdot 0$ |

[^112]The enrolment by provinces for the year 1945-46 was as follows: Prince Edward Island, 28; Nova Scotia, 533; New Brunswick, 357; Quebee, 1,548; Ontario, 4,426; Manitoba, 2,650; Saskatchewan, 2,652; Alberta, 1,987; British Columbia, 4,160; Yukon, 192; and Northwest Territories, 272.

## Subsection 5.-Schools in the Northwest Territories

Educational facilities in the Northwest Territories are largely in the hands of two religious denominations, the Roman Catholic Church and the Church of England, and consist of residential or day schools located at the main settlements. Their construction was made possible by grants from the Dominion Government, and their maintenance is assisted by annual Government grants. In addition, the Government furnishes certain equipment and school supplies.

The only public school maintained by local taxation is located at the fastgrowing mining town of Yellowknife. There is also a non-denominational day school located at Fort Smith which is maintained by fees. In both these cases, the Government assists with an annual grant.

Educational matters are administered by the Northwest Territorial Council, (see p. 85), which functions in both a legislative and advisory capacity to the Minister of Mines and Resources. In the summer of 1946 the first Inspector of Schools was appointed, who subsequently visited all schools in the Mackenzie District. On the basis of his findings and recommendations, a number of revisions in the organization and administration of education in the Northwest Territories are now under way.

Of interest is a recent decision by the Northwest Territorial Council to make a grant of $\$ 150,000$ toward the construction of a new modern public school at Yellowknife. This building will be up-to-date in every detail and will make provision for instruction in several lines of vocational training, including commercial work, domestic science, machine-shop practice and carpentry. Other plans call for the organization of day schools at a number of points where educational facilities are not as yet available.

The school children in the Territories include Indians, Eskimos, half-breeds and Whites. The majority of them attend residential schools because of distance and the essentially nomadic nature of much of the population. Despite great handicaps and privations, the staffs of the various schools have been carrying on, in commendable fashion, the work of adjusting the native children to the inroads of modern civilization.

## PART II.-OTHER EDUCATIONAL ACTIVITIES

## Section 1.-The Relationship of Art to Education

Fine Art.-Fine art appears as an elective subject in the curricula of the Faculties of Arts in a number of the English-language universities, where it may be taken as one subject among five for a year or two. In some, e.g., Acadia University, N.S., there are half a dozen or more elective courses. In Mount Allison University, N.B., and in the University of Toronto, Ont., there are a sufficient number of courses to allow the taking of a Bachelor degree with specialization in fine art.

There are also Schools of Art, both English and French, not requiring any fixed academic standing for admission, which concern themselves more exclusively with the technical development of the artist. The most widely known of these are:-

Nova Scotia College of Art, Halifax, N.S.<br>Ecole des Beaux-Arts, Quebec, Que.<br>Ecole des Beaux-Arts, Montreal, Que.<br>School of Art and Design, Art Association of Montreal, Montreal, Que.<br>Ontario College of Art, Toronto, Ont.<br>Winnipeg School of Art, Winnipeg, Man.<br>Provincial Institute of Technology and Art, affiliated with the University of Alberta, Calgary, Alta. (Summer session at Banff, Alta.)<br>Vancouver School of Art, Vancouver, B.C.

Courses in these schools vary in length with the requirements of the individual student, but may extend over as many as four years.

Public art galleries and museums in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and often concerts are features of the programs of the various galleries. In many cases these institutions supply their surrounding areas with travelling exhibitions, while the National Gallery of Canada carries on a nation-wide program of this nature (see p. 297).

The principal art galleries and museums* are:-

```
New Brunswick Museum, Saint John, N.B.
Museum of the Province of Quebec, Quebec, Que.
Art Association of Montreal and Museum of Fine Art, Montreal, Que.
National Gallery of Canada, Ottawa, Ont.
National Museum of Canada, Ottawa, Ont.
London Public Library and Art Museum, London, Ont.
Art Gallery of Toronto, Toronto, Ont.
Royal Ontario Museum, Toronto, Ont.
Willistead Library and Art Gallery, Windsor, Ont.
Winnipeg Art Gallery, Winnipeg, Man.
Saskatoon Art Centre, Saskatoon, Sask.
Edmonton Museum of Arts, Edmonton, Alta.
Vancouver Art Gallery, Vancouver, B.C.
```

Creative Arts.-A development of special interest in the field of the creative arts was the establishment, in December, 1945, of the Canadian Arts Council. The Council grew out of the united action taken by its constituent associations in the spring of 1944, when they presented an integrated series of briefs to the Special Committee of the House of Commons on Reconstruction and Re-establishment. These briefs looked forward to a post-war society in which the arts would be "more widely distributed and more closely integrated with the life of our people" The Council has accordingly taken a very active interest in the development of the Community Centre idea.

The basic situation claimed by the Council is that "in Canada there are millions who have never seen an original work of art, nor attended a symphony concert or a professionally produced play, while in our largest cities thousands of professional creative artists enjoy a field so limited that they are forced into activities unsuited to their talents" Chief among the proposals for remedying the situation is the

[^113]establishment of "a government body to promote a national cultural program and provide music, drama, art, and film services for all our people" Other proposals have in view the improvement of industrial design, and housing and town planning.

To list the names of the sixteen bodies constituting the Council is to give some indication of the range of professional organization in the field of the Arts in Canada:-

The Royal Canadian Academy of Arts<br>The Royal Architectural Institute of Canada<br>The Sculptors' Society of Canada<br>The Canadian Society of Painters in Water Colour<br>The Canadian Society of Painter-Etchers and Engravers<br>The Canadian Group of Painters<br>The Canadian Society of Graphic Arts<br>The Federation of Canadian Artists<br>The Canadian Authors' Association<br>La Société des Ecrivains Canadiens<br>The Music Committee<br>The Canadian Society of Landscape Architects and Townplanners<br>The Dominion Drama Festival<br>The Canadian Handicrafts Guild<br>The Canadian Guild of Potters<br>The Arts and Letters Club.

The Role of the National Gallery of Canada.*-The opening words of the 1945 National Gallery Report are an indication of the importance attached by the National Gallery to its educational work. These read: "....The art gallery of to-day is no mere repository of dead civilizations. It functions not for the sake of a small minority but for the whole people. It must be a vital organization, aware of its time, seizing upon every opportunity to participate in public education"

The work of the National Gallery has many facets. Gradually having widened the scope of its activities, the Gallery to-day plays a vital role in the complex system of adult education and at the same time acts as a valuable adjunct to primary, secondary and even to college systems of instruction.

Founded in 1880 by the Marquis of Lorne, the National Gallery at first served as an exhibition gallery. Provided with an Advisory Arts Council in 1907 and incorporated under a Board of Trustees in 1913, the Gallery has been assembling its permanent collection largely during the past 40 years. Though this was only the beginning, a collection of pictures and sculpture representing the styles of past and present of various parts of the world was recognized as invaluable in terms both of the public's enjoyment and of study for the improvement of arts and industrial products. More than that, however, it was a necessary basis for any program of education. The collection of the National Gallery to day is of international repute. It is, moreover, accessible to the whole nation by means of a published catalogue, photographs and colour reproductions. The Canadian section, naturally the most inclusive, is the best available source for the study of Canadian art.

In 1946, the Massey Collection of English Painting was presented by the Right Hon. Vincent Massey, C.H., and Mrs. Massey as trustees of the Massey Foundation. Comprising 75 pictures, the collection makes the National Gallery a leading centre for the study of modern British art, and is the largest gift in the history of the Gallery.

[^114]Meanwhile the newer function of general education has grown up. The National Gallery has pioneered in the assembling and circulation of exhibitions over a very large territory. To-day travelling exhibitions of the arts of Canada and other countries are shipped throughout Canada under the auspices of the National Gallery. Fifteen such exhibitions, including those of the several chartered art societies, are now being circulated. Art galleries, schools and other responsible organizations in various regions draw annually upon the services of the Gallery as the source of most of their offerings to the public. Recent developments have led to the fitting of new community centres into this scheme, and these in turn send exhibits (their own and those from the National Gallery) to smaller communities in their districts. An instance is at London, Ont., where the regional circuit includes Kitchener, St. Thomas, Ingersoll, Chatham and other centres. Loans of pictures from the National Gallery to small or new museums have had much the same beneficial effect as the travelling exhibitions. In these ways actual works of art are constantly being brought to the attention of the people throughout the entire country and much more will be done after the development of an integrated system of community centres throughout the Dominion. No place need be too small or remote to profit from current exhibitions.

The National Gallery has devised certain methods of education in the arts which apply more specifically to young people and are designed, in part, to supplement regular school work and aid the teacher. The Gallery has co-operated with, advised and provided material for schools and colleges throughout the country. Written lectures illustrated by lantern slides on all fields of art history have long been available for loan to all parts of Canada; reproductions of paintings, with introductory texts for art appreciation, and photographs have also been offered for loan; classes for school children at the Gallery, exhibitions of children's work, conducted tours of the Gallery's collections and educational demonstrations have been features of the program for a number of years. In addition, the National Gallery holds public lectures at Ottawa, Ont., and lecture tours throughout Canada are arranged from time to time.

Some interesting newer techniques of education have also been utilized. A series of school broadcasts entitled Adventures in Canadian Painting was inaugurated in 1945 and continued in 1946. These programs on the lives and work of Canadian artists are heard from coast to coast through the co-operation of the Canadian Broadcasting Corporation and aim at telling the story of Canadian art in such a way as to awaken the interest of young people. An essential part of each program is a reproduction of a picture in the National Gallery supplied to the pupil at a nominal price. About 120,000 pictures are distributed each year.

The use of the motion picture is familiarizing school children and the general public with the work of Canadian artists; for instance, the colour and sound film, Canadian Landscape, made in conjunction with the National Film Board, features the work of modern Canadian artists against a historical background of landscape painting in Canada since Krieghoff. The silk screen prints by Canadian artists, already famous in many parts of the world as the result of their distribution to the Armed Forces of Canada and the Allies, have now been made available to schools and the public generally. These and other reproductions (see the Gallery's publication, Reproductions on Sabe and Loan Collections) are now in considerable demand in Canadian schools.

At the university level, the National Gallery co-operates with university departments of art and art history. An important new channel of information is furnished by the magazine Canadian Art, in the organization of which the National Gallery has taken a leading part.

In these ways the National Gallery has been fulfilling the terms of its charter which assigns to it not only the care of the collections but also "the encouragement and cultivation of artistic taste and Canadian public interest in the fine arts, the promotion of the interests generally of art in Canada" It has been assisted in this endeavour by the attitude of the people of Canada, who are already recognizing the important part that art can play in the complex civilization of to-day, by providing a means of communication between people, by filling the individual's leisure time to his own enjoyment and mental growth, and by advancing the country's material welfare through the improvement of the industrial arts.

Museums and Art Galleries.-At pp. 1025-1026 of the 1939 Year Book a list of the museums (including art galleries) in Canada employing full-time staff is published, showing floor space and average daily attendance at each. There has been no official detailed report published by the Dominion Bureau of Statistics on this subject since 1938. In 1945, however, a complete list of art museums, societies and schools in Canada was published in the American Art Annual (New York).

## Section 2.-Scientific and Industrial Research in Canada

## Subsection 1.-Research Facilities

The field of scientific research in Canada is too broad to be covered in detail in each edition of the Year Book but since all research work, whether government or private, is co-ordinated in the National Research Council, a description of the development and work of the Council is given in Subsection 2.

Research work is carried on by the Departments of Agriculture, Mines and Resources, Fisheries, the Board of Grain Commissioners and the Dominion Observatories. These bodies have trained permanent scientific staffs for investigation and research in their own fields such as soil problems, crops, breeding and testing of animals, processing and marketing, extractive and physical metallurgy, silvicultural and forest products, hydrography, ocean and mollusk fisheries, etc.

The Board of Grain Commissioners employs a staff of seven chemists and 21 assistants in the main research laboratories for milling, baking, malting, etc., while the Dominion Observatories carry out research in the fields of solar physics, astrophysics, seismology, terrestrial magnetism, gravity and other studies.

Universities often show bold initiative in exploring the field of scientific research but with the limited facilities at their disposal the task of carrying their discoveries to a conclusion is not always easy. Government and industrial laboratories are often able to pick up and carry on where the universities leave off.

A special field of research is also being performed by the Research Foundations. The Ontario Research Foundation, established in 1928, has conducted its activities in four buildings adjoining Queen's Park, Toronto, Ont. The object of the Foundation is to provide an independent non-profit-seeking scientific organization available to the public and to industry for assistance in matters of a technological character.

The Banting Research Foundation is used to support the work of the Banting and Best Chair of Medical Research in the University of Toronto and to aid medical research throughout Canada.

The Rockefeller Foundation has given assistance to various agencies in Canada for the purpose of furthering scientific research in medical science, natural science, social science and public health.

A detailed account of scientific and industrial research in Canada is given at pp. 970-1012 of the 1940 Year Book.

## Subsection 2.-National Research Council*

Historical.-Organized research on a national scale in Canada dates from 1916 when, at the suggestion of the Government of Great Britain, the Canadian Government established the "Honorary Advisory Council for Scientific and Industrial Researches" under a Committee of the Privy Council. Fifteen members were thus brought together primarily in order that the ingenuity and skill of Canadian scientists in all branches might be brought to bear on the solution of the many urgent problems confronting the Government of that day in the prosecution of the First World War. A secondary purpose was to promote research on peacetime problems of national interest. A survey, made in 1917, showed that industrial research in Canada was practically non-existent and that the supply of men, with such post-graduate training as to enable them to undertake independent investigations, was entirely inadequate to permit of any general application of scientific research to Canadian industrial problems.

Provision was therefore made for the co-ordination of research work and the organization of co-operative investigations; the post-graduate training of research workers; and the prosecution of research through grants-in-aid to university professors. This was the basis of the Council's work from 1916 to 1924.

The Council early recommended the establishment of national laboratories and a Special Committee of Parliament, appointed to study this recommendation, endorsed the proposal after having heard many witnesses give their opinions. Financial difficulties intervened, but in 1924 public opinion made it possible to have the Research Council Act passed by Parliament. Temporary laboratories were secured and a research on the utilization of magnesian limestones for refractories was carried out so successfully that a wartime industry, established during the First World War, was re-established on a large scale, and has become an important producer of materials that have found world-wide markets. As a result, in 1929-30, the Government provided funds for new laboratories.

Establishment of Laboratories.-The National Research building on Sussex Street, Ottawa, was commenced in February, 1930, and was opened at the time of the Imperial Conference in 1932. Laboratory divisions were established in applied biology, chemistry, physics, and electrical engineering, and there was a division of research information. In April, 1936, the division of physics and electrical engineering was reorganized and mechanical engineering was established as a separate division. Work of this division continued in temporary laboratories but these quarters soon became inadequate.

[^115]Early in 1939 a site of 85 acres, adjacent to the Ottawa Air Station, was secured and 45 acres adjoining this site were transferred to the Council by the Department of National Defence. Plans for the construction of new buildings on this site were made but, as the inevitability of war became more apparent, it was decided to proceed immediately with the construction of only such structures as would have a direct wartime use in dealing with aeronautical engineering problems. Construction of the aerodynamics building was started on Oct. 17, 1939, and later several other buildings were erected. These included the shops and separate laboratories for research on engines, gas and oil, hydraulics, explosives and structures. In all of these units the facilities were extensively employed on important projects during the War.

War Activities.-Closest co-operation with Departments of Government and other research institutions was fostered and maintained in the promotion of war research. Early in the War, following a survey of laboratories made by the Council, facilities in many universities and industrial establishments were freely offered to the Council for the conduct of special investigations. As a result, the Council became responsible in the later years of the War for research in more than a score of establishments outside of Ottawa. A radio station was set up near Ottawa to enable adequate research to be carried on in this field. The Council was officially named as the civilian research establishment of the Navy, Army and Air Force, and research for these three Services was carried out as required throughout the War.

The contribution of Canadian scientists.in the development of new devices, methods and products during the War was widely recognized in such fields as radiolocation, aids to the Navy in mine and submarine detection, control of gunfire and other ballistic problems, new and more powerful explosives, emergency methods of food storage and transport under war conditions, development of special types of clothing, and other equipment for Navy, Army and Air Force requirements. Problems relating to the physical well-being of the troops involved studies in nutrition, housing, sanitation, medical examination of recruits and treatment of the injured and sick. Special subjects such as burns and the treatment of shock became important. Blood banks necessitated research on methods of storage and preservation. Conferences on amputations were held to bring work in this field into focus. Special medical committees were created to deal with specific subjects.

On the civilian side, the National Research Council was able to offer constructive aid in the testing of inspection gauges used in all munitions plants. Glass production methods were evolved for the manufacture of needed telescope and other instrument lenses and a new industry was established. Radiology was applied to the inspection of castings, and teams of individual workers from industrial plants were trained in its use. Paints, rubbers, textiles, metals for special purposes, and defence measures against the possible use of gas in warfare were investigated. A new process for the production of metallic magnesium found commercial application in both the United States and Canada. Synthetic rubber research was linked with similar work elsewhere and applied to industrial operations. Cold-weather problems were given special attention to meet the requirements of the Armed Forces working in northern latitudes.

The National Research Council was largely responsible for the organization of Research Enterprises, Limited, a wholly Government-owned Company formed for the purpose of manufacturing in quantity special secret military equipment from prototypes developed in the National Research Laboratories. The policy of
separating development and manufacturing functions proved wise, and despite the separation in control and administration, there was always the closest collaboration between the two organizations.

Peacetime Reconversion.-By the end of 1946, the National Research Council had completed the reconversion of its activities from war to peace. In 1939 it proved a major task to convert the then existing peacetime organization into a powerful weapon for war; so, too, in 1946 reconversion posed large and even more arduous problems. War research facilities that had attained great proportions had to be discontinued or modified to meet the growing industrial requirements of peace. Most of the staff recruited to serve the country's war effort in research were absorbed into the peacetime establishment but many of the younger members left to complete their academic studies which had been interrupted by the War. Other matured and skilled scientists who had had years of intensive research training as members of the Council staff, found suitable avenues of advancement in the service of Canadian industries and thus indirectly extended the influence of the Council far beyond its own laboratories. The Council proceeded to recruit the necessary personnel, choosing only those of the highest calibre, to bring its peacetime establishment up to full strength.

Canada's wartime research organization has thus been modified to suit post-war needs, and existing facilities are being greatly expanded to provide the best possible laboratory services for Canadian industry. Three new divisions and several new sections of the National Research Laboratories have been established; radar and other war equipments are being adapted to commercial use; hundreds of investigations are in progress; and the Council is actively engaged in the promotion and co-ordination of scientific research in all parts of the Dominion.

An Atomic Energy Research Division has been established at Chalk River, Ont., to investigate the applications of atomic energy and the use of its products in industry and medicine. A Division of Medical Research has been organized to stimulate and support investigations in this broad field of human interest. A Building Research Division is shortly to be set up to study practical problems relating to construction materials and their use. Work is progressing on the building of a Prairie Regional Laboratory at Saskatoon, Sask., for the promotion of studies on the better utilization of agricultural surpluses, notably wheat, and farm waste products such as straw. An Electrical Engineering and Radio Branch has been created to co-ordinate and direct work in this growing field. The Chemistry Division has been freed from wartime requirements for routine testing and its activities have been regrouped into two new branches: (1) Fundamental Chemistry, and (2) Chemical Engineering. The tailless glider designed and built in the aeronautical laboratories, was test-flown successfully in the autumn of 1946 at Namao airport near Edmonton, Alta. A Flight Research Section has been established at Arnprior, Ont., in co-operation with the Royal Canadian Air Force. A new section of the Mechanical Engineering Division has been formed to deal with problems in gas dynamics, including work on gas turbines and jet propulsion.

Atomic Energy Research.-In June, 1946, the Dominion Parliament passed the Atomic Energy Control Act. This Act provides means for the development of atomic energy and for the control of work in this field as may be required in the interest of public safety and in the fulfilment of international obligations. A Board of five members was set up to act under the general direction of, and to
report to the Chairman of the Committee of the Privy Council on Scientific and Industrial Research. The President of the National Research Council is an ex officio member of the Atomic Energy Control Board; other members are appointed by the Governor in Council and hold office during pleasure.

The engineering, construction and operation of the vast plant and townsite at Chalk River, Ont., were carried out by Defence Industries Limited, under contract with the Department of Reconstruction and Supply. As the project developed, both Defence Industries Limited and the Government authorities came to the conclusion that, as the undertaking was really a pilot plant which must be closely integrated with the Research Laboratories, it would be better if one Government organization were to assume the over-all operating responsibilities of both the research laboratories and the industrial establishments. On consideration of this problem, the Atomic Energy Control Board at its first meeting recommended that the National Research Council be asked to undertake the integration of the various projects and their operation on behalf of and in accordance with the policy of the Atomic Energy Control Board. This was agreed to and on Feb. 1, 1947, the Council took over responsibility for the administration and operation of the entire atomic energy development at Chalk River, and will carry on these activities in accordance with broad general policies fixed from time to time by the Atomic Energy Control Board.

Information Services.-In the newly established Division of Information Services, which includes sections dealing with the library, liaison offices, Canadian Journal of Research, and technical inquiries, all activities relate to various phases of the collection and distribution of scientific and technical information. Of special interest are numerous reports on technical developments in Germany. Recent studies carried out in that country confirm the view that, on the whole, the United Nations have not lagged behind in scientific and technical progress; in a number of fields, however, Germany had worked out improved methods of production and developed special products of direct interest to Canadian industrialists. Reports on enemy science and technology are being distributed to industrial and scientific organizations in Canada.

Medical Research.-Most of the activities of the Division of Medical Research will be carried on, as heretofore, in the laboratories of the medical schools and hospitals throughout Canada. In addition to considering applications for grants-inaid of research and making recommendations to the Council concerning these, the Division, through its Advisory Committee, reports to the Council in respect of medical research fellowships, which were established last year. It is hoped that these fellowships, which are open to Canadian medical graduates, will be the means of training young men and women so that their lives may be devoted to research and teaching in the medical schools of Canada.

Building Research.-For several years the National Research Council has been engaged in various research projects that have had for their object the improvement of building materials or the betterment of housing construction. Intensive work was initiated some years ago on the requirements for structures and the National Building Code was subsequently published. This is a document designed for use as a model in the drafting of municipal building by-laws. A model zoning by-law was also prepared. Both of these publications have been used extensively as reference works by Canadian municipalities.

In the laboratories, numerous studies have been directed towards the amelioration of various conditions in housing. Mention may be made of studies on efficiency in lighting, research on sound-deadening in walls and floors, investigations on the relative values of different types of insulating materials, and measurements on vapour barriers used to prevent condensation of moisture in outside walls. Work has been done on ventilation, and reports have been issued on heat losses through windows and moisture on windows. Tests are being made continuously on oil burners to ensure their safe operation. One of the earliest studies made by the Council was on the subject of fuel-saving possibilities in house heating.

Among the newer projects in this long series is the current investigation on problems involved in 'panel' or radiant heating. The purpose of this study is to find satisfactory answers to many questions raised by heating engineers regarding this new plan of heating whereby the source of heat is in or under the floor or in the ceiling instead of being supplied by conventional-type radiators. Two experimental houses have been built on the Montreal Road site for this study.

Another important advance in the matter of low-cost housing has been made in the development of a modular system for the construction of prefabricated houses. By means of prefabricated wall panels and flat-roof panels incorporating structural strength, insulation, vapour barrier, finished surfaces, and a connection system, the construction of houses almost entirely in the factory under mass production methods will be feasible. The various standard wall panels, all with identical over-all dimensions, permit the adoption of practically any floor plan to suit the requirements of the site and the builder. Further work on the details of panel fabrication is in progress.

With the establishment of the proposed Building Research Division, all of this work will be brought sharply into focus and new projects will be initiated as required to provide complete coverage of Canada's most pressing problem, the provision of adequate and efficient housing for its people.

In all of its activities the National Research Council seeks to provide an effective medium for leadership and co-operation in the training of competent research workers and in the application of scientific knowledge in the universities and industries throughout the Dominion.

## Section 3.-The Educational Functions of the National Film Board and the Canadian Broadcasting Corporation

The National Film Board.*-This Board serves the Canadian people by means of visual interpretations of their country's life and culture; its social problems; its national resources and industries; and its achievements in art, science, research and medicine. It serves Canada abroad by picturing Canada to the peoples of other lands, and it brings to Canadians many aspects of international affairs that are of public interest.

Since its creation in 1939, through the passing of the National Film Act, the Board has included in its activities the production and distribution of 35 mm (theatre size) and 16 mm (non-theatre size) films, as well as photographs, filmstrips, small informational and large photographic displays. At the request of Government Departments, the Board also designs posters and publications. Its films ( 16 mm and 35 mm , sound and silent, black-and-white and colour, English, French and other

[^116]languages) cover a wide range of subjects such as agriculture, arts and crafts, economics, education, engineering, geography and travel, history, labour, medicine, manufacturing, natural resources, physics, psychology, public health and nutrition, social problems and planning, transportation and communications. During the year ended Mar. 31, 1946, 310 short subjects in these categories were produced and 65,000 photographs and photo mats were distributed to daily and weekly newspapers and other publications in Canada. In addition, the Board produced 13 filmstrips and a considerable number of displays and other graphic materials.

The Board is made up of two Ministers of the Dominion Government, three senior Civil Servants, and three members of the public chosen for their interest in film and knowledge of its importance as an instrument of public policy. The chief executive officer is the Film Commissioner, whose responsibility it is to direct, advise upon, and co-ordinate Government film services in Canada. Besides its own considerable production program of informative films and graphic materials, the Board is also the production and distribution agency for films for all Departments of the Government. Among the branches of the Government for which the Board produced films and other visual materials in 1946 were the Departments of Agriculture, External Affairs, Finance, Fisheries, Insurance, Labour, Mines and Resources, Munitions and Supply, National Defence, Post Office, Public Printing and Stationery, Reconstruction, Secretary of State, Trade and Commerce, Veterans Affairs, National Health and Welfare and the National Research Council, National War Finance Committee, Canadian Mutual Aid Board, the Canadian Information Service, the National Gallery and the Wartime Prices and Trade Board.

Although it issues 35 mm films each month in English and French in the Canada Carries On, World in Action and Coup d'Oeil series, which enter the theatres on an ordinary commercial basis, most of the Board's production is intended for 16 mm (non-theatre) libraries and circuits.

In Canada, the backbone of urban 16 mm distribution is the film libraries that have been established throughout the nine provinces by the Board and by local bodies such as public libraries, normal schools, provincial departments of education, university extension departments and, more recently, community film councils. The majority of Canadian communities with a population of more than 5,000 now have their own film libraries and more than 70 Film Councils assist in encouraging the use of informative and educational films from this source.

The showing of special programs of films to workers in factories and at tradeunion meetings is a feature of urban distribution. The labour-union project is sponsored jointly by the Canadian Congress of Labour, the Trades and Labour Congress of Canada, the Workers' Educational Association and the National Film Board. Special discussion trailers and study material, which have been found very successful in stimulating audience interest, accompany each film distributed to the labour unions. Similar special services are being developed for industry, women's organizations, scientific and engineering groups, health and medical bodies, and in other specialized fields such as education, science, welfare, reconstruction and housing to build approved programs of films and other materials for all interested organizations. To serve their film needs, the Board maintains at Ottawa a Preview Library with 2,000 titles.

Introduced as an experiment in January, 1942, the original 30 mobile units, formed to bring regular monthly film programs to rural audiences, have now increased to a total of 124 , reaching an average audience of 300,000 per month. Of
this number many circuits are partly or wholly supported by the Provincial Governments or by the agencies co-operating with the Board. The careful planning of these rural film programs, together with discussion booklets for teachers and group leaders, relate them closely to the work and interests of the communities that they serve. Each Rural Circuit reaches about 20 locations each month bringing in the afternoon to school children and in the evening to general audiences, films chosen for the value and interest of the information they contain. The program for schools is chosen in consultation with the Department of Education in each province. Through their co-operation with the wheat pools, extension departments of universities and Provincial Departments of Education, the Board's rural representatives have come to be regarded as valued servants of the community.

Outside of Canada, the Board's films and other productions are widely distributed in the United States, the United Kingdom, Australia, Central and South America and other countries through the Board's offices at New York, Chicago and Washington in the United States, Mexico City, Mexico, Sydney, Australia, and London, England, and through Canadian trade and diplomatic offices in 35 countries. Other distribution channels are through commercial theatres and Government and other non-theatre film circuits.

The Board's films and photographs have helped to clarify Canada's position in the international scene at such world gatherings as the Food and Agriculture Organization Conference at Quebec, the San Francisco Conference, the International Labour Organization Conference at Philadelphia, the UNRRA Conference at Montreal, the Quebec Conferences, the UNESCO Conference at Paris and the United Nations gatherings in New York.

Education by Radio.*-Radio as an educational medium is playing an increasingly large part in Canadian life. The Canadian Broadcasting Corporation devotes a large portion of its broadcast time on the English- and French-language networks to programs of an educational nature, both for children and adults. Program planners aim at a good balance of information and education on the one hand, and entertainment and showmanship on the other. Wherever possible, these factors are combined.

School Broadcasts.-In all nine provinces of Canada, the CBC co-operates with Provincial Departments of Education in broadcasting special programs related to the courses of study conducted in school classrooms. In Quebec, French-language school broadcasts are heard under the title "Radio-Collège" English-language stations in Quebec carry the Ontario school broadcasts, for the benefit of Englishspeaking listeners.

In the 1946-47 season, the CBC prepared and financed a series of 27 "National School Broadcasts", heard in school classrooms from coast to coast. These programs presented the dramatized stories of famous Canadian explorers, outstanding Canadian poets and artists, a series on the animals and birds of Canada, and a complete dramatic presentation of Shakespeare's Macbeth, in which leading radio actors played the title roles, and for which special music was written. Several programs were exchanged with the "American School of the Air", produced by the Columbia Broadcasting System in the United States. One full week in the "American School of the Air" series was devoted entirely to programs from Canada.

[^117]Each of the CBC's "National School Broadcasts" was preceded by a tenminute review of the leading news event of the week, specially prepared for young listeners by the CBC News Service.

Adult Education.-Programs of an adult educational nature are presented on all CBC networks in a variety of talks, commentaries, interviews, discussion periods, and semi-dramatized programs on a wide range of subjects. Citizens' Forum, a discussion program originating at public meetings, and now in its fourth year on the air, dealt during the past season with major questions ranging from the control of atomic energy to domestic industrial relations and the problem of post-war Germany. Citizens' Forum is produced in co-operation with the Canadian Association for Adult Education, which has organized about 200 listening and study groups across the country. This Association, with the Canadian Federation of Agriculture, helps in the preparation of another series, National Farm Radio Forum, on which farmers from all parts of Canada are able to exchange views and discuss their problems. In its seventh season on the air, the series is followed each week by more than 1,300 listening groups throughout rural Canada. Both of these discussion programs have their counterparts on the CBC French network.

In order to present commentaries on the European scene, the CBC maintains an Overseas Bureau with headquarters at London, England.

Programs dealing with veteran rehabilitation problems were continued during the season. Special programs for women, in both English and French, offered practical information on household problems. The annual series School for Parents, with its French counterpart L'Ecole des Parents, dealt with child care and psychology. As part of a policy to have the women of Canada hear the voices of women in other lands discussing problems of interest to all women, the CBC produced the series New World Calling, in which outstanding women from 18 countries expressed their views on education for the modern girl.

Music and Drama.-In the 1946-47 season, the CBC invited a noted Australian musician, Professor Bernard Heinze, to visit Canada for a series of radio concerts, during which Canadian listeners were introduced to new Australian compositions. This was in addition to regular symphonic concerts, for which the CBC pays leading Canadian symphony orchestras some $\$ 50,000$ annually. Many young Canadian musicians were introduced in recital series, and the Corporation also presented special musical programs for children.

By far the greatest number of dramatic presentations on both English- and French-language networks were the work of Canadian authors. Significant productions were the dramatization of the Canadian novel Two Solitudes by Hugh McLennan, and the world premiere, in a radio dramatization, of the poem Behind the Log, by the noted Canadian poet, E. J. Pratt.

## Section 4.-Libraries

The Dominion Bureau of Statistics publishes biennially a Survey of Libraries in Canada; the latest edition lists public, university, government and other special libraries, showing the location, size, etc., of each. The latest report issued is the Survey for 1944-46 which contains detailed information on library service for 1945.

Canadian Library Association.-The year 1946 is memorable in the history of Canadian libraries as the inaugural year of the Canadian Library Association. The Organizational Conference was held at McMaster University, Hamilton, Ont.,

June 14-16. Delegates representing every phase of administrative and professional responsibility within the Canadian library scene were present. A Constitution was adopted and representative executive officers: were elected including a fulltime National Secretary.

The proposed program of activities for the Association includes projects of national interest in the field of public-library service; improvement of the professional qualifications of librarians with a corresponding improvement in salary schedules; promotion of recommendations for the adoption of modern methods of community library service and extra-curricular activities for libraries; co-operation with the Dominion Government on such matters as distribution of government publications and participation in the work of the United Nations Educational, Scientific and Cultural Organization.

Public Libraries.-Public libraries in Canada are primarily urban institutions. In cities of over 10,000 population about 92 p.c. of the people have some measure of library service; in smaller urban centres the proportion is 42 p.c. While only 5 p.c. of the rural population is at present provided with library service, the recent interest being shown in rural library service provided by regional and travelling libraries promises to alter this situation in the near future. In interpreting the provincial statistics of public libraries, it should be kept in mind that in the predominantly rural provinces like the Maritimes and the Prairie Provinces urban libraries cannot serve more than one-third of the population, while in the more urban provinces of Ontario, Quebec and British Columbia it is possible for them to serve nearly double that number. Other types of library service, figures for which are not included with those of public libraries, provide more of the public's reading material in some provinces than in others. For instance, church or parish libraries, are known to be fairly numerous and commercial lending libraries are an important source of reading, especially of fiction, though no statistical information has been collected for these since the Census of 1931. Consideration should also be given to private libraries of the home and, since no record of them is possible, it is necessary to consider the statistics of public libraries as the record of a certain type of institution rather than as a complete record of the libraries to which the public has access. Individual libraries for 1945 may be classified by the following population units, according to the returns of the 1941 Census.
1.-Distribution of Public Libraries by Population Unit, 1945

| Population Unit | Cities and Towns | $\begin{aligned} & \text { Towns } \\ & \text { and } \\ & \text { Villages } \end{aligned}$ | Rural ${ }^{1}$ |
| :---: | :---: | :---: | :---: |
|  | No. | No. | No. |
| Under 1,000 . | - | 201 176 | 4 19 |
| $1,000-4,999 \ldots \ldots .$ | - | 176 46 | 221 |
| 10,000-19,999... | 27 | - | - |
| 20,000-39,999... | 20 | - | - |
| 40,000-99,999 $\ldots$ | 8 | - | - |
| 100,000 or over.... | 13 |  |  |

${ }^{1}$ Size of unit based on the Annual Report of the Ontario Department of Education and of the British Columbia Library Commission.

Included in these groups are some 300 "one-man" libraries, and an additional 100 libraries staffed partly or entirely by volunteer workers. Some of the latter are conducted by members of religious orders and a larger proportion of them by members of local organizations.
2.-Summary Statistics of Public Libraries, by Provinces, Library Years Ended in 1945, with Totals for Alternate Years 1931-43

| Year and Province or Territory | Volumes | Circulation | Registered Borrowers | Expenditure on Books, Periodicals and Repairs | Total Expenditure |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | No. | \$ | \$ |
| Totals, 1931. | 4,516,206 | 21,135,354 | $1{ }^{1}$ | 509,322 | 1 |
| Totals, 1933. | 4,770,981 | 22,376,349 | 1,114,201 | 421,142 | 1 |
| Totals, 1935. | 4,848,793 | 21,106,742 | 1,097,247 | 448,251 | ${ }^{1}$ |
| Totals, 1937. | 5,070,132 | 19,560,375 | 1,062,187 | 502,509 | 2,041,486 |
| Totals, 1939 | 5,175,811 | 20,728,151 | 1,045,521 | 494,776 | 2,131,199 |
| Totals, 1941 | 5,495,543 | 20,283,618 | 1,057,336 | 530,064 | 2,154,437 |
| Totals, 1943. | 5,681,291 | 20,056,094 | 1,105,990 | 611,891 | 2,484,705 |
| 1945 |  |  |  |  |  |
| Prince Edward Island | 63,707 | 171,058 | 23,992 | 5,201 | 15,863 |
| Nova Scotia. | 122,416 | 162,444 | 15,547 | 4,637 | 18,478 |
| New Brunswick | 104,378 | 165,763 | 30,192 | 5,899 | 25, 164 |
| Quebec. | 712,040 | 960,513 | 78,959 | 44,657 | 275,580 |
| Ontario. | 3,862,543 | 13,351,620 | 784,784 | 436,482 | 1,838,683 |
| Manitoba | 129,749 | 742,865 | 43,754 | 26,643 | 113,228 |
| Saskatchewan | 251,548 | 885,831 | 59,599 | 30,212 | 141,285 |

| Totals, 1945. | 5,956,889 | 20,016,292 | 1,254,467 | 669,006 | 2,890,476 |

[^118]In the larger centres the main libraries are conducted as municipal institutions usually by a board appointed by the city, or town council. The more numerous smaller libraries are conducted by voluntary associations. Small provincial grants are given to libraries of both types in most of the provinces, but not in New Brunswick, Quebec and Manitoba. There is a provincial centre for the direction and encouragement of public-library development in the Public Libraries Branch of the Ontario Department of Education, and in the Public Library Commission of British Columbia. This seems to be one of the most effective means of assisting the library movement; public-library service is more complete in Ontario and British Columbia than in the other provinces. Prince Edward Island now possesses a centre in the headquarters of its provincial library, and Nova Scotia in its recently founded Regional Libraries Commission. The Province of Saskatchewan has undertaken extensive reorganization of the libraries and a program of regional libraries is in process of development.

Circulation.-The circulation of books in the Dorninion is confined to about 40 p.c. of the population and averages about five books per person per year. It is estimated that about one-quarter of the patrons of libraries are children, which is approximately the same proportion that school enrolment bears to the total population of the country.
3.-Circulation Reported by Public Libraries, by Provinces, Library Years Ended in 1945

[^119]An analysis of the circulation of non-fiction books indicates that, among communities of different size, persons living in the larger communities read more philosophy, and those living in the smaller communities more religion. Sociology and the arts are studied to a greater extent in the larger communities (except where there are regional libraries), while the smaller centres are high in literature, history and travel. Biography is popular everywhere; next to travel books, it is on the whole the most popular class of non-fiction.

Receipts and Expenditures.-Except for the cities of Quebec Province, where recent provincial assistance and the inclusion of several association libraries lowered the proportion of municipal support, between 80 and 96 p.c. of all money received comes from local taxes. The amounts shown under that heading in Table 4 contain, on an average, about 2 p.c. from school boards, townships, counties or rural municipalities.
4.-Public Library Receipts, by Provinces, Library Years Ended in 1945, with Totals for Alternate Years 1937-43

The distribution of expenditure advocated is from 50 to 55 p.c. for salaries; 25 p.c. for book stock, including binding and repairs; and the balance for other items of maintenance. This procedure is followed closely by all cities.

[^120]University and College Libraries.-The statistics summarized in Table 6 represent returns from 166 university and college libraries for 1945. Comparatively few such libraries keep circulation statistics. The use of the libraries for reference and critical reading by students makes the circulation statistics of little value as a standard of measurement. In the two years previous to 1941, the increase was 300,000 volumes, but in the period 1941-43 the increase was only 40,000 , due to the difficulty of obtaining new books and replacements during that period. The returns for 1945 show an increase of 400,000 volumes over those for 1943.

## 6.-Summary Statistics of University and College Libraries, Library Years Ended in 1945, with Totals for 1941 and 1943

[^121]Government Libraries.-Returns from the Dominion and Provincial Government libraries include the Parliamentary Library, the Legislative Libraries of the nine provinces and the various departmental and research libraries maintained for reference and record. Numerically, the Dominion Government libraries are almost double those of the provinces but, exclusive of the Dominion Parliamentary Library which contains 500,000 volumes, the available book stock of the provincial libraries is equal to that of the Dominion libraries.

One outstanding feature of the provincial libraries is the teachers' libraries. Over 150,000 volumes are available for the use of approximately 75,000 teachers employed in the publicly controlled schools of Canada. In 1945, they borrowed, postage free, 110,000 books from the reference libraries established by the provincial authorities in education.

Business Libraries.-The past decade has seen some expansion in the number, size and classification of the libraries termed "business"; those of financial institutions, such as banks and insurance companies, comprise the greater number. Since the War, new libraries have been established by firms engaged in production processes that require special techniques and research; libraries of the larger newspapers and public utility corporations are included in this group.

Technical Society Libraries. - Law, medicine, pharmacy, entomology, engineering, art, astronomy and other professional and technical libraries are included in technical society libraries. The larger libraries contain as many as 30,000 volumes, the smaller ones from 500 to 1,000 . Statistics of these libraries are given in Table 7.
7.-Summary Statistics of Business, Technical Society and Government Libraries, Library Years Ended in 1945, with Totals for 1941 and 1943

Regional Libraries.-In the early 1930's, with the assistance of the Carnegie Corporation of New York, several experiments were undertaken with a view to providing more adequate library service to smaller communities and rural districts. These experiments were undertaken in the belief that the county or similar district, rather than the isolated city or town, is the proper unit of library work and administration. The Fraser Valley experiment in British Columbia, the first to be undertaken, has become a permanent regional library, and two other similar libraries have been established. in the Province; in Prince Edward Island it has become a permanent provincial library system. Nova Scotia, in 1938, established the Regional Libraries Commission, which employed a full-time director to assist interested areas of the Province in organization. A small regional library was established in New Brunswick in 1937 In Ontario a number of county library schemes have been established in the southwestern part of the Province where co-operation on a county or township basis has been developing. In 1946, the Province of Saskatchewan passed legislation providing for the establishment of regional libraries, and a full-time librarian was appointed to supervise their organization in the Province.

## Section 5.-Canada and UNESCO*

In the United Nations Charter, drafted at San Francisco in the spring of 1945, the nations undertook to promote (Article 55) "international cultural and educational co-operation", and (Article 56) "to take joint and separate action in co-operation with the Organization for the achievement of the purposes set forth in Article 55" Article 57 provided that "specialized agencies", established by intergovernmental agreement in cultural, educational and related fields could be brought into relationship with the Economic and Social Council of the United Nations, by agreements approved by the General Assembly.

With a view to establishment of a "specialized agency" in the field of educational and cultural relations the British Government, and the French Government in association with it, invited the nations to be represented at a conference in London, England, beginning Nov. 1, 1945. Forty-four of the United Nations arranged for representation. The Canadian Government sent a delegation of six persons. The Conference had before it, when it met, a draft constitution for a United Nations Educational and Cultural Organization which had been prepared by the Conference of Allied Ministers of Education with the assistance of the United States Department of State, together with a draft submitted independently by the French Government which was based on its experience with the League of Nations Organization for International Intellectual Co-operation. By Nov. 16, agreement had been reached, by the representatives of the 44 nations, on a revised draft of a charter for an Educational, Scientific and Cultural Organization, to be presented to their Governments for formal approval. In the process of revision the word "Scientific" had been added to the proposed name, and the Organization became known as UNESCO. A Preparatory Commission was established at the same time.

In the course of the ensuing 12 months the Governments of 27 countries formally undertook to adhere to the constitution as drafted (Canada, in August, 1946), and the Preparatory Commission organized the First Conference to be held in Paris, France, during November and December, 1946. The Preparatory Commission carried on its work at London until late September, then moved to Paris,

[^122]which had been agreed upon as the permanent headquarters of the Organization. To the Paris Conference, the Canadian Government sent a delegation of 11 persons.

The purpose of UNESCO as defined in its Constitution "is to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law and for the human rights and fundamental freedoms which are affirmed for the peoples of the world, without distinction of race, sex, language or religion, by the Charter of the United Nations"

The Secretariat is organized in seven program sections: (1) Education; (2) Media of Mass Communication (press, radio and films); (3) Libraries, Museums, and Archives; (4) Natural Sciences; (5) Social Sciences and Humanities; (6) Creative Arts; (7) Rehabilitation and Reconstruction. The work in rehabilitation and reconstruction concerns all of the other sections. It is expected to be of a shortterm character, but is of great immediate importance to the war-devastated countries. The Paris Conference approved the organization of a special campaign for voluntary contributions from individuals and organizations-in the more favourably circumstanced countries, with an objective of $\$ 100,000,000$. Donations of suitable goods (school supplies, scientific equipment, etc.) are acceptable as well as money.

The Chairman of the Executive Board is the Honourable Victor Doré, Canadian Ambassador to Belgium. At a meeting in April the Executive Board agreed that the work of the Education Section should be focussed this year on "fundamental education" and "education for international understanding" Fundamental education is envisaged as a long-term, world-scale "attack upon ignorance", in which UNESCO will provide guidance to countries where the rate of illiteracy is high. Pilot projects are planned in Haiti, China and British East Africa. Activities under the heading "education for international understanding" will include assistance in the revision of textbooks and teaching materials, establishment of international study centres, international relations clubs in schools, etc. Progress will be reviewed at the next annual conference, to be held at Mexico city in the autumn of 1947.

The Mass Communications Section in its first year is to prepare a report on the feasibility of a world-wide radio network, to supply talks and discussions on UNESCO matters for national networks, to obtain signatures to a convention to facilitate the exchange of films, to help set up and operate a United Nations Film Board, to stimulate the establishment of national visual councils, to work toward the revision of international copyright conventions, to collaborate in a world press conference, and to investigate postal, wireless and cable costs.

In the field of the Creative Arts particular emphasis is to be placed on facilitating the movement of personnel and works of arts as between countries. Preservation of the art and culture of-primitive and non-industrial peoples is to be aided, and "the freedom of the creative artist to accomplish his proper purpose as an artist in any nation", since it is "a matter of concern to the peoples of all nations", is to come under the protection of UNESCO "wherever it is put in danger"

The Libraries and Museums Section is to develop a world bibliographical and inter-library loan service, a document reproduction service, to work toward the development of public-library service and the reduction of such barriers as customs tariffs and carriage charges. Though they have less of the spectacular about them than activities of some of the other sections, they are of first importance to the two remaining sections, which are those concerned primarily with scholarship, and the increase of knowledge.

The Natural Science Section will work closely with the international scientific unions. The list of approved projects and procedures to be followed is long. Of particular interest is the plan to send teams of nutritional scientists to China and India, and to undertake, on a broader basis, the study of problems of living in the vast Amazon forest belt, which, could it be made inhabitable, might be expected to support a population of many millions.

The Social Science Section, too, envisages a number of basic studies: a study of tensions conducive to war, a study of population distribution and problems, and a study of the influences of modern technological developments. The philosophers and other scholars in the Humanities will, among other matters, give attention to plans for translation of the world's classics.

The constitution of UNESCO provides for participation of national bodies in the work of the organization, in the following terms: (1) Each Member State shall make such arrangements as suit its particular conditions for the purpose of associating its principal bodies interested in educational, scientific and cultural matters with the work of the Organization, preferably by the formation of a National Commission broadly representative of its Government and such bodies. (2) National Commissions or national co-operating bodies, where they exist, shall act in an advisory capacity to their respective delegations to the General Conference and to their Governments in matters relating to the Organization and shall function as agencies of liaison in all matters of interest to it.

In October, 1946, the Department of External Affairs called together at Ottawa a representative group of persons connected with educational, scientific and cultural organizations for the following purposes: (1) to advise on the composition of the Canadian delegation to the Paris Conference; and (2) to make recommendations on the means whereby the principal Canadian bodies interested in educational, scientific and cultural matters might be associated with the work of the Organization whether by the formation of a Canadian National Commission or by other means.

# GHAPTER XI.-SURVEY OF PRODUCTION* 

## CONSPECTUS

| Section 1. Leading Branches of Production. $\qquad$ | Page 316 | Section 3. Leading Branches of Production in each Province. | PAGE <br> 320 |
| :---: | :---: | :---: | :---: |
| Section 2. Provincial Distrirution of Production | $319$ | duction in each Province.......... | 320 |

The present study is limited to a consideration of the gross and net value of commodity production. The operations of the nine branches of industry considered here are directed either through primary or secondary phases toward the production of commodities rather than services.

Net production, in general, represents an estimate of the amount contributed to the national economy by the leading industrial groups engaged in commodity production. It is made up of the total value less the cost of materials, fuel, purchased electricity and process supplies consumed in the production process. For purposes of ordinary economic discussion, the net figure should be used in preference to the gross, in view of the large amount of duplication that the latter includes.

Current Trends.-The gross value of commodities produced in Canada was greater during 1944 than in any other year, the peak of war production being reached in that year. Net production was valued at $\$ 6,737,000,000$ in 1944 against $\$ 2,899,000,000$ in 1938 , an increase of 132.4 p.c. which may be compared with an advance of only 30.4 p.c. in the index of wholesale prices during the same period. Thus, the gain in net value of production was due largely to a change in volume rather than in prices. The relationship of the value and price advances in 1944 over 1943 suggests that the volume of production was slightly greater in the later year.

The ending of the War in 1945 brought about an immediate reduction in the output of Canadian industry and the index of industrial production averaged over 14 p.c. less than in 1944. The receding trend was continued in 1946. General employment was $4 \cdot 3$ p.c. lower in 1945 than in 1944 and was still less favourable in 1946.

The index of wholesale prices, on the other hand, was only fractionally greater in 1945 as compared with 1944, but the advance was quickened somewhat during 1946. The rise in prices in recent months was doubtless insufficient to offset the decline in volume, and production in 1944 established a maximum which obviously has not been equalled during the subsequent period.

## Section 1.-Leading Branches of Production

Table 1 shows the gross and net values of production, by industries, for the years 1939 to 1944. A new method of compiling gross and net values of agricultural production has been recently devised: the gross is now obtained by adding cash sales to the value of goods produced and consumed on the farm by the farm family and adjustment is then made for the changes in grain and live-stock inventories;

[^123]the cost of materials, such as purchased seed and feed, gasoline and oil, repair parts, twine, fertilizers and insecticides, is deducted from the gross to give the net value. As a result of this change and an adjustment in the primary data for the duplication that exists between the forest industry and agriculture, the figures in Table 1 have been revised since the publication of the 1946 Year Book. A general description of the method used in computing gross and net production figures is given in the "Survey of Production", an annual report issued by the Dominion Bureau of Statistics.

Each of the nine industrial groups shown in Table 1, except mining and construction, was more productive in 1944 than in 1943. The most outstanding increase was in agricultural production, the net value of which rose more than 23 p.c. to a total of $\$ 1,533,000,000$. This was a greater output than was shown in any other year. The percentage increase in the net value of fisheries production was 3 p.c. and the total for manufactures moved up more than 5 p.c. from the high level of the preceding year.

The net value of agricultural production in 1944 was $22 \cdot 8$ p.c. of the total for the nine groups compared with $19 \cdot 9$ p.c. in 1943. Minor increases in relative position were also shown in forestry, trapping and custom and repair, with manufacturing remaining the same as in 1943. Over the six-year period 1938 to 1944, manufacturing has recorded a marked improvement in relative importance. The proportion of the net value of manufactured products to net total production rose from $49 \cdot 3$ p.c. in the pre-war year to $59 \cdot 6$ p.c. in 1944.

## 1.-Gross and Net Values of Production, by Industries, 1939-44

Norz.-Net production represents total value under a particular heading, less the cost of materials,
fuel, purchased electricity and supplies consumed in the productive process.

[^124] under other headings above.

Table 1 classifies industry into"primary and secondary production, but naturally many stages of the manufacturing industries are closely connected with the primary resources. Fish-curing and -packing plants, for instance, are operating in close relationship to the fishing fleets; sawmills with forestry, and smelters and refineries with metal mines. The gross and net values of production of such processing industries are given separately in Table 2. This table is designed to indicate the method of computing the duplication between primary industries and manufactures and consequently to establish the levels of "manufactures, not elsewhere stated"
2.-Gross and Net Values of Production of the Processing Industries, 1943 and 1944

## Section 2.-Provincial Distribution of Production

Ontario produced about 40 p.c. of the Canadian output in 1944, leading other provinces by a considerable margin. The importance Quebec as a producer of commodities rose from $25 \cdot 1$ p.c. in 1938 to $28 \cdot 2$ p.c. in 1944 . Due mainly to increases in farm output, the position of Saskatchewan was raised from 4.8 p.c. to 7.6 p.c. The relative importance of the other seven provinces was somewhat less in the year of maximum wartime production than in 1938. Each of the nine provinces participated in the industrial expansion of wartime but war industries were largely concentrated in the Provinces of Ontario and Quebec. The increase of about $\$ 1,400,000,000$ in the commodity production of Ontario over the six-year period exceeded the achievement of any other province. However, Quebec increased its production by 161 p.c., while Ontario advanced 113 p.c. The expansion in Quebec was relatively greater than in any other province in Eastern Canada. The output of Nova Scotia was nearly doubled, and Prince Edward Island and New Brunswick showed gains of 123 p.c. and 113 p.c., respectively.

Production in Saskatchewan was particularly heavy during 1944 due to favourable farming conditions and the higher price level, the value of output being about 369 p.c. greater than in 1938. The British Columbia total was almost 130 p.c. higher, the Manitoba total 116 p.c. higher and the Alberta total about 99 p.c. more.
3.-Gross and Net Values of Production, by Provinces, 1943 and 1944

${ }^{1}$ Based on estimated population figures as given at p. 100.
Per Capita Production.-The Dominion total of net commodity production in 1944 at $\$ 563$ per capita was $\$ 33$ above the figure for 1943 , the estimated increase in the population having been only 1 p.c.

Each of the provinces showed per capita betterment in 1944 over the preceding year, except Prince Edward Island and British Columbia. Ontario, with its pre-eminent industrial position and diversification, was in first place in this respect, with a net commodity output of $\$ 682$ per capita, a gain of approximately $\$ 16$ over the level of 1943. Saskatchewan ranked second and British Columbia third.

## Section 3.-Leading Branches of Production in Each Province

Maritime Provinces.-The predominance of farming as a source of income is apparent in Prince Edward Island, accounting for 61 p.c. of the income of that Province in 1944. In Nova Scotia, the total output of manufactures was 49 p.c. of the net production of the nine groups operating in the Province. Manufacturing as a whole constituted 46 p.c. of the net output of New Brunswick, while forestry, including sawmilling and pulp and paper, accounted for 31 p.c.

Quebec.-The production of manufacturing plants amounted to 71 p.c. of the provincial total; agriculture produced 11 p.c., indicating the marked disparity between the two main industries of the Province.

Ontario.-In Ontario, the outstanding position of manufactures in the field of production is evident from the records. After eliminating the processing industries, the share of manufacturing in 1944 was somewhat greater than two-thirds of the total. The predominance of the group was accentuated during the war period.

Prairie Provinces.-The advance in the output of agriculture and manufactures was the determining factor in the wartime contribution of Manitoba, the relative importance of the two main groups in 1944 having been 46.9 p.c. and 38.5
p.c., respectively. The output of Saskatchewan is subject to marked fluctuation due to the dominant position of agriculture as a source of income; amounting to nearly 84 p.c. of the provincial total in 1944. The output of agriculture in Alberta at 61 p.c. was considerably greater than the return from all other activities concerned with the production of commodities.

British Columbia.-The advance in manufacturing production in British Columbia overshadowed the wartime gains in other industrial groups. The proportion of the total in 1944, after the elimination of duplication, was nearly 46 p.c. compared with 20 p.c. for forestry and 10 p.c. for agriculture.

## 4.-Gross and Net Values of Production, Classified for Each Province, by Industries, 1943 and 1944

Note.-For Dominion totals, see Table 1.

Agriculture, including stock raising and horticulture, is the most important single industry of the Canadian people, employing, according to the Census of 1941, $25 \cdot 3^{*}$ p.c. of the total gainfully occupied population and $30 \cdot 6^{*}$ p.c. of the gainfully occupied males. In addition, agriculture provides the raw materials for many Canadian manufactures, and its products in raw or manufactured form constitute a very large percentage of Canadian exports. For a statement of the occupied and the available agricultural lands in Canada, see pp. 32-33 of this volume.

An introductory outline of the historical background of Canadian agriculture is given at pp. 187-190 of the 1939 Year Book. The present Chapter treats of current governmental activities in an article prepared in the Department of Agriculture and includes comprehensive statistics of agriculture, collected and compiled by the Agricultural Branch of the Dominion Bureau of Statistics. These data cover farm income, values of agricultural production and farm capital, field crops, farm live stock and poultry, dairying, fruit, special crops, prices and miscellaneous statistics. World statistics of agriculture, formerly compiled from the publications of the International Institute of Agriculture, have not been available for recent editions of the Year Book because of war conditions though a United States Government estimate of world wheat production is given at pp. 382-383.

## THE 1946-47 NATIONAL AGRICULTURAL PROGRAM AND POLICY $\dagger$

Canadian agriculture began the year 1947 in a strong financial position. Farm debt had been reduced, cash income and net income increased and large quantities of new equipment had been acquired. Moreover, Parliament had enacted legislation that was designed to give farmers greater economic stability.

## Production Programs

During the war years, production programs were formulated annually at conferences between Dominion and Provincial Departments of Agriculture, along with representatives of organized farmers. These conferences are being continued in the post-war period and plans were laid for 1947 production at a conference held in December, 1946, at which it was recommended that, in general, production

[^126]for 1947 should be maintained at the level of the previous year. Special emphasis was placed on live stock and live-stock products, along with feed grains. Detailed recommendations are shown in the following statement:-

The main factors contributing to the present high level of farm output include improvements of mechanization; greater use of fertilizer and lime; more general use of improved varieties of crops-higher yielding, earlier maturing, insect- or disease-resistant varieties; and improved breeding and feeding of live stock and poultry.

## Farm Income

Changes in the agricultural production pattern during the war. years, changes in the nature and volume of domestic and export demand, and changes in farm prices, resulted in significant increases in cash and net farm income. Cash income from the sale of farm products since 1942 has been above the 1928 high of $\$ 1,100,000,000$. Net income of farm operators from farming operations doubled between 1939 and 1945.

## Post-War Subsidy and Price Policy

With the return to peacetime conditions, the policy of the Government is to relax its wartime controls. As production of civilian goods is resumed in sufficient volume to justify such action, price control is being abandoned. Already, a large number of products have been removed from ceiling regulations.

In keeping with this policy, subsidies, too, are being eliminated. The Department of Agriculture discontinued subsidies on milk for fluid use and for evaporated milk at the end of September, 1946, and on butter and cheese at the end of April, 1947. Subsidies on beans, canning crops, berries for jam and on the transportation of fertilizer have also been eliminated. As subsidies are removed, the Wartime Prices and Trade Board permits upward adjustments of the price ceiling. Although action is being taken to free the national economy of restrictions as rapidly as conditions permit, it is the declared policy of the Government to insure an orderly adjustment. New subsidies were announced on Mar. 17, 1947. Because of an increase in the prices of oats and barley and the continuation for the time being of the price ceilings on animal products, payments of 10 cents per bushel for oats and 25 cents per bushel for barley were authorized under the same conditions as the 25 cent payments on wheat purchased for feeding. These new subsidies were authorized to July 31, 1947.

With regard to price support-as distinct from price control represented by the imposition of ceilings-the situation is different. During the War, farmers accepted ceilings on their products at a time when most of these products would have brought higher prices. The Government in return gave assurances that prices would not be permitted to collapse when the War ended. Thus, in 1944, Parliament passed the Agricultural Prices Support Act, which provides for the support of agricultural prices during "the transition from war to peace". The duration of the period is not otherwise defined. The Act is administered by a Board comprised of three members. Under it, a support price may be established for any farm product except wheat, this product being dealt with under special legislation. In maintaining the price of any product, the Board may resort to purchase and sale activities, purchases to be made in the market and sales in any manner considered desirable by the Board. As an alternative to a purchase program, the Board may make deficiency or equalization payments equal to the difference between the established price and the average price at which a product sells in the market during a stated period, provided such prices are less than the established price.

In conducting its operations, the Board is to promote orderly agricultural adjustment and to endeavour to secure a fair relationship between the returns from agriculture and those from other occupations. A revolving fund of $\$ 200,000,000$ is provided for the Board's activities.

At the present time (February, 1947), the authority of the Board is being used in two respects: one has to do with the marketing of potatoes and the other concerns the administration of certain contracts with the United Kingdom.

Potato Marketings.-In connection with potatoes of the 1946 crop, the Board has undertaken to support prices by: (1) the payment of stated prices for potatoes used chiefly for the manufacture of starch and the sale of such potatoes to processors at prices regularly paid for processing potatoes; and (2) the guarantee of a stated price for potatoes delivered to the Board after Apr. 1, 1947.

These undertakings are to apply only to potatoes produced in Prince Edward Island and New Brunswick, where substantial quantities of potatoes are produced for export. It is expected that the conduct of such a purchase program in these provinces will stabilize the price of potatoes in other parts of Canada. As a part of the prices support program, the Board has negotiated the sale to the United Kingdom of a minimum quantity of $2,500,000$ bushels at prices that will net the grower at least 60 cents per bushel.

United Kingdom Contracts.-A second or complementary aspect of the Government's agricultural program relating to price support is represented in the extension and expansion of the contract system developed during the War. Existing contracts with the United Kingdom, which have been extended to cover periods up to four years, involve many of the major agricultural products as well as others of lesser importance, and are expected to provide a substantial measure of support to agricultural prices as a whole.

Such export contracts with the United Kingdom for farm products have played an important role in the Canadian agricultural economy from the commencement of war to the present time. They have been an incentive to greater production and, in that respect, have enabled Canada to contribute substantially to the needs of the United Kingdom since 1939.

The first contracts were for bacon and cheese. As supplies available to the United Kingdom from other sources were curtailed, first by the invasion of western European countries and then by the extension of the War to the Pacific, both the variety and size of the contracts increased. Prices, too, increased somewhat, although Britain's monetary position, the Canadian stabilization program and other factors, combined to hold price advances within reasonable limits. Where the contract price was insufficient to balance increased production costs or to provide the incentive necessary to ensure the desired production and delivery to the United Kingdom, a subsidy in one form or another was provided by Canada.

Forward commitments made by Canada in the form of contracts with the United Kingdom have been carried into the post-war years. These are as follows:-

Bacon.-The contract for the calendar year 1947 covers a minimum of $\$ 350$,$000,000 \mathrm{lb}$. of bacon and ham at a price of $\$ 25$ per 100 lb . Grade A Wiltshire, f.a.s. Canadian seaboard, between Jan. 1-11; of $\$ 27$ between Jan. 11 and Sept. 1; and $\$ 29$ thereafter. A commitment covering $400,000,000 \mathrm{lb}$. has also been made for the calendar year 1948. Current bacon contracts call for 75 p.c. of shipments to be Wiltshire sides.

Beef.-The contract for the calendar year 1947 covers $120,000,000 \mathrm{lb}$. of carcass beef at a price of $\$ 2110$ per 100 lb ., frozen weight, medium quality steer carcasses bone-in-basis, f.o.b. Canadian seaboard. The beef contract was extended to cover the year 1948. The United Kingdom offered to take up to $120,000,000 \mathrm{lb}$. during that year.

Other Meats.-Contracts with respect to lamb, mutton, offals and other meat products are being extended to 1947

Cheese.-Current contracts for the export of cheese to the United Kingdom extend to Mar. 31, 1948. Quantities contracted for cover $125,000,000 \mathrm{lb}$. for each of the two years ending Mar. 31, 1947, and Mar. 31, 1948, the price being 20 cents per lb., first grade, f.o.b. factory shipping point for the year ended Mar. 31, 1947, and 25 cents per lb . for the contract year ending Mar. 31, 1948. The British Government has under discussion a further agreement to purchase $125,000,000 \mathrm{lb}$. of cheese in the year ending Mar. 31, 1949, at a price to be determined later.

Evaporated Milk.-Current contracts for shipments of evaporated milk to the United Kingdom also extend to Mar. 31, 1948. In each of the years ending Mar. 31, 1947, and Mar. 31, 1948, Canada is under contract to ship 600,000 48-lb. cases of British standard evaporated whole milk at a price of $\$ 4.95$ per case, f.o.b. ship or R.R. car Montreal, Vancouver, or New Westminster.

Eggs.-A contract covering the years ending Jan. 31, 1948, and Jan. 31, 1949, calls for the shipment of 7,500 long tons of sugar-dried egg powder and $1,750,000$ cases of shell eggs in each of these years.

Wheat.-Canada has entered into a contract covering a period of four years, commencing Aug. 1, 1946, for the delivery of specific quantities of wheat to the United Kingdom. Quantities covered by the contract are $160,000,000 \mathrm{bu}$. for each of the first two years, 1946-47 and 1947-48, and 140,000,000 bu. for each of the last two years of the agreement. Within the total quantities, provision is made for minimum amounts of flour to be included. The price, basis No. 1 Northern in store at Fort William, Port Arthur, Vancouver and Churchill, is $\$ 1.55$ per bushel during each of the first two years; prices for each of the third and fourth years are to be negotiated, but in any event will not be less than $\$ 1.25$ per bushel for the 1948-49 crop year, and $\$ 1$ per bushel for the crop year 1949-50. The contract is subject to modification to conform with any international arrangement entered into subsequently and to which both Governments are party.

The Agricultural Products Act.-To enable the Dominion Government to fulfil its obligations under the food agreements and also to export food supplies to distressed countries, Parliament, in the spring of 1947, passed the Agricultural Products Act (Bill 25). Under this Act, the Minister of Agriculture may sell or export agricultural products and establish commodity boards vested with the necessary regulatory powers. The Act comes into force immediately at the expiration of the National Emergency Transitional Powers Act, 1945, and is to expire on Dec. 31, 1947, or such other date as may be fixed by Parliament.

## Section 1.-Government in Relation to Agriculture

It is provided in Sect. 95 of the British North America Act that "in each province the legislature may make laws in relation to agriculture in the province"; it is also declared "that the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature
of a province relative to agriculture-shall have effect in and for the province as long and as far only as it is not repugnant to any Act of the Parliament of Canada" As a result of this provision, there exists at the present time a Department of Agriculture, with a Minister of Agriculture at its head, in the Dominion and in each of the nine provinces.

## Subsection 1.-Canada's Relationship with FAO*

The first Session of the Conference of the Food and Agriculture Organization of the United Nations (FAO), which was held at Quebec city from Oct. 16 to Nov. 1, 1945, was attended by representatives of 37 countries which became Members of the Organization, and representatives of four observer countries (four other Member Nations were not represented at the Conference).

The permanent organization was created by the signing of the Constitution by the representatives of the countries attending; the Chairman and the Heads of Committees of the Interim Commission, which had been established at the Conference at Hot Springs, Virginia, in May-June 1943, presented reports of their work; a Director-General and an Executive Committee of 15 members were elected and reports were prepared on the organization and administration of FAO and on the policies and programs of work to be undertaken.

FAO is designed essentially to provide a focal point for the collection, analysis, interpretation and dissemination of information concerning all aspects of the production, distribution and consumption of food. It may also promote and recommend national or international action and, on request, may furnish technical assistance to nations that are themselves unable to carry out the recommendations of the Organization.

FAO has not, within itself, power to enforce the putting into effect of all the policies it may consider to be desirable as a means of eliminating freedom from want throughout the world. It is limited to advice and recommendation, but this restriction should not limit unduly its ability to give service. It simply means that the Member Nations must maintain the same spirit of co-operation and sincerity that prevailed at the first meeting of the Organization. No organization of this kind can achieve its goal without the wholehearted working together of the Member Nations. Once a staff of experts and specialists has been assembled, the first activity of FAO will, undoubtedly, be an appraisal of the world situation from both the production and the consumption side on the basis of data already available or secured by special surveys where necessary. The information so assembled will be made available to all Member Nations and will include not only basic statistics, but all scientific knowledge including that of biologists, technologists, nutritionists and scientists in other related fields.

Major interest at the second Conference of the Food and Agriculture Organization held at Copenhagen, Denmark, Sept. 2-13, 1946, centred in the proposals for a World Food Board submitted by the Organization's Director-General, Sir John Boyd Orr. The interest in the proposal was so great, it appeared for a time that other matters of major concern might not receive the attention they deserved. The discussion and the decision reached indicate that there was general agreement on the need for international machinery of some sort to deal with a long-range world food program. This agreement is reflected in the following recommendations

[^127]adopted by the conference: (1) Developing and organizing production, distribution and utilization of the basic food to provide diets on a health standard for the peoples of all countries; (2) stabilizing agricultural prices at levels fair to producer and consumer alike.

Emergency Food Problems.-While the Committee dealing with the longrange problems represented in the proposals outlined above was at work, a second Committee concerned itself with the food shortage now evident in many countries. Despite some improvement in the world food situation, there was still a gap of $8,000,000$ tons of bread grains between the needs of deficit countries and the supplies likely to be available for export. The Conference, acting on this Committee's recommendations, urged the continuation of the special measures agreed upon at the Washington meeting for control and economies in the use of basic foods.

The Conference at Work.-In conducting its work, the Conference divided into three Commissions comprising ten Committees. The Agricultural Committee outlined measures that may be taken to improve production in under-developed countries and to reorganize the agriculture of devastated countries. The Fisheries Committee dealt with the urgent need for rehabilitation of the fishing industry, recommending that fish and other marine products should be placed under a World Food Board if and when such a body is created.

The Economic Committee outlined the basic information that will be needed for the successful prosecution of the work of FAO. The provision of adequate statistics, including a world census of agriculture, was considered to be imperative. The report of a special mission that had been studying the agricultural and economic problems of Greece was brought before the Conference. This was the first of such efforts launched to increase food supplies and improve the welfare of a people.

## Subsection 2.-The Dominion Government*

All the pre-war governmental activities in agriculture are being carried forward into the post-war period. As indicated in the article on pp. 324-328, many of the wartime activities are being maintained and some of the pre-war activities enlarged. This is especially true in the case of farm credit.

## Farm Credit

The Dominion Government has set up several agencies to handle the matter of farm credit; the Farm Loan Board is empowered to make long-term loans to farmers $\dagger$ and the chartered banks, under the Farm Improvement Loans Act, to provide intermediate-and short-term credit.

The Canadian Farm Loan Board. $\ddagger$-This Board was appointed by the Governor in Council under the provisions of the Canadian Farm Loan Act (c. 66, R.S.C. 1927, as amended by c. 46, Statutes of 1934 and c. 16, Statutes of 1935) and, as an agency of the Crown in the right of the Dominion, administers a system of long-term mortgage credit for farmers throughout Canada.

[^128]The Board is empowered to loan money to farmers for the payment of debts, for the purchase of farm equipment and live stock, to assist in the purchase of farm lands, for farm improvements or for any other purpose considered as improving the value of the land for agricultural purposes.

Loans may be granted on the security of first mortgages on farm lands actually operated by the borrower up to an amount not exceeding 50 p.c. of the appraised value of such farm lands but, in any event, not in excess of $\$ 5,000$; such loans are repayable on an amortized plan of repayment over a period not exceeding 25 years.

By virtue of amendments to the Act enacted in 1934 and 1935, the Board is also empowered to make further advances to farmers who, having obtained a firstmortgage loan from the Board, require additional funds. The amount of such additional advance is not to exceed 50 p.c. of the amount of the first-mortgage loan, nor the aggregate of first- and second-mortgage loans to exceed two-thirds of the appraised value of the farm lands mortgaged as security for the loan, nor in any event an aggregate amount of $\$ 6,000$. The interest rate on loans made on or after Apr. 2, 1945, is $4 \frac{1}{2}$ p.c. on first-mortgage loans and 5 p.c. on second-mortgage loans. The interest rate on loans made prior to $\Lambda$ pr. 2,1945 , is 5 p.c. on firstmortgage and 6 p.c. on second-mortgage. Operations are now carried on in all provinces of Canada.

Particulars regarding the capital requirements of the Board, rates of interest charged and other details appear at p. 185 of the 1940 Year Book.

Farm Improvement Loans Act.*-The Farm Improvement Loans Act, 1944 (c. 41, Geo. VI, 1944), is designed to provide short-term and intermediateterm credit to farmers. Under its provisions, the Dominion Government authorizes the chartered banks of Canada to make loans over a three-year period and up to $\$ 250,000,000$ under a 10 p.c. Government guarantee against. loss. The maximum of an individual loan is $\$ 3,000$, the interest rate is 5 p.c. simple interest, and the repayment periods are from one to ten years, depending upon the amount borrowed and the purpose for which the loan is obtained. The Act restricts loans to farmers.

There are two broad aims behind this legislation, the first of which is the improvement and development of farms. Loans will be made to enable a farmer to equip his farm with modern, labour-saving equipment, more and better live stock, and to make such other improvements necessary to maximum farm production. The second is the improvement of living conditions on farms. These loans will enable the farmer to provide his home with electrification, refrigeration, heating systems, water systems, and all those things that make for comfort and convenience in living and that do so much to eliminate the drudgery of the farm housewife.

There are seven classes of Farm Improvement Loans: (1) Purchase of agricultural implements; (2) purchase of live stock; (3) purchase of agricultural equipment or installation of a farm electrical system; (4) alteration or improvement of a farm electrical system; (5) fencing or drainage; (6) construction, repair or alteration of, or addition to, farm buildings; and (7) general improvement or development of the farm.

Despite the shortage of material, supplies and labour to Dec. 31, 1946, a total of 13,030 loans have been made under thtis Act for an amount of $\$ 9,808,566$.

## Research and Experimentation

In its efforts to aid the farmer in the solution of his problems, the Department of Agriculture conducts, on a broad scale, scientific research and experimentation on the control of pests and diseases, the nutritional requirements of plants and animals, the micro-biology of soils and foods, the breeding and testing of new varieties of plants and animals, investigations of crop production and cultural methods and many other matters. The two main divisions of the Department that carry on such work are Science Service and Experimental Farms System.

Science Service.-The work of Science Service is directed toward the solution of practical problems of agriculture through the application of scientific investigation. The work is carried on in co-operation with other agencies within the Department, not only at the central laboratories at Ottawa but at branch laboratories all across the country.

Throughout the war period, much of the research work was concentrated on pressing problems connected with the need for greater food output. Now, attention is being given to other matters of importance to the future welfare of agriculture in Canada.

In the field of animal pathology, special study is being given to such cattle disorders as contagious abortion or Bang's disease and to hæmaturia or redwater disease. Swine fever and the causes of losses in young pigs are being investigated, while with poultry major attention is focussed on pullorum disease and on the control of coccidiosis.

[^129]Dairy research has for one of its major objectives the development of methods of measuring the quality of raw milk. The resazurin test developed in the Departmental laboratories has been accepted as an official method for milk analysis and further study is being given to the use of this test. Projects have been set up to study and control defects of flavour and texture in the making of cheddar cheese and also for determining setting time in cheesemaking. Control of quality in butter and of the development of surface discoloration of print butter are being investigated.

Studies in food micro-biology are aimed at determining the factors that affect quality in dried-egg products as well as the preservation of fruits and vegetables by freezing and the causes of spoilage in canned vegetables.

Fundamental studies of soil organisms are being conducted as a basis for application to practical problems. Research is also being conducted on the inoculation of seed and soil by nitrogen-fixing bacteria; on micro-biological methods of evaluating soil fertility; and on soil micro-organisms in relation to soil-borne plant diseases and plant deficiencies.

Weeds constitute one of the more important problems with which the farmer must contend. In the botanical laboratories, research is in progress on the occurrence and distribution of weeds throughout Canada. Life histories of weeds are studied together with methods of control of certain species. Physiological studies on the effects of herbicides are being carried on.

A wide range of plant-disease problems is under investigation at the pathological laboratories across the country. Attention is being given to the destructive diseases that affect the native forest species and to the pathological effects of silvicultural treatment of forest stands. Investigations are being made into the destruction of timber caused by wood-destroying fungus species.

In an effort to reduce the losses from seed-borne diseases of crop plants, seedtesting techniques are being investigated with a view to determining the presence of pathogenic organisms in or on the seed. Various commercial disinfectants and seed-treating machines are under test to determine their value in the control of seedborne diseases.

Diseases of cereal and forage crops are under constant study with the object of evolving effective measures and developing resistant varieties which will produce satisfactory crops in the presence of disease organisms. Similar investigations are under way with horticultural crops. Here the emphasis is on crop protection and disease control rather than on the development of resistance. In the case of certain crops, however, notably potatoes, breeding for disease resistance is being carried on co-operatively with certain experimental farms.

In the chemical laboratories of Science Service, research projects are in progress on animal nutrition, food investigations, vitamin study, soil fertility and plant chemistry. Factors affecting the digestibility of feeds and an evaluation of feeding stuffs on the basis of digestibility trials with different classes of farm animals will provide useful information for the live-stock feeder. Vitamin research includes studies of the technique of biological assay, the interrelationship between Vitamin D and certain minerals, methods of determining the content of Vitamin D and the mode of action of Vitamin A. Of interest also to the stockman is the work in progress on the tattooing of live stock for identification purposes.

Soil fertility investigations include a study of the influence of crop rotations on the nitrogen and organic-matter content of prairie soils, the effects of rotations in maintaining soil fertility in the production of canning factory crops, the effects of ground limestone at varying rates of application on soil reaction and the development of potato scab, studies of the minor element content of soils and of the occurrence of brown heart in turnips. Special investigations are in progress on phosphate fixation, reclamation of saline soils resulting from flooding by sea water and on the fertilizing value of industrial by-products.

Research in plant chemistry includes studies on carotene, the effects of storage on oil-bearing seeds, factors affecting the quality of silage, methods of curing and storing hay, leaf symptoms of mineral deficiency in orchard crops, investigational work on Vitamin C content of fruit and vegetable products and the preservation of fruits and vegetables by freezing.

Investigations under way in the field of entomology embrace insects affecting man and animals, forests, fields, gardens, orchards, factories, and materials and products in transit or in storage. Specific projects relate to the collection and identification of insects; studies of the life histories, habits, and distribution of harmful and beneficial forms; appraisal of insect damage; means of salvaging injured products, of protecting susceptible crops and materials, and of destroying the pests themselves; and the design and performance of mechanical devices required in the application of control measures. The methods of control under study include management practices, cultural measures, chemicals, and the production and dissemination of parasites and diseases that attack noxious insects.

Studies on insects attacking man and animals include a wide range of household pests, fleas, and such enemies of cattle as warbles, ticks, and lice; the preparation and testing of repellents for protection from biting flies; and control of mosquitoes and houseflies over extensive areas. Much attention is being given to the use of the newer insecticides and practical methods for their application.

Forest-insect control activities embrace the nation-wide forest insects survey, begun in 1936, which has been intensified in recent years in an effort to devise a reliable means of forecasting impending outbreaks and as a guide to timing the cutting in advance of threatened destruction in Canada's vast forests. Biological and control studies have also been expanded, particular attention being given to such widespread destructive pests as the spruce budworm and sawflies attacking conifers, to the hemlock looper and bark beetles in British Columbia, and to the bronze birch borer in the Maritimes. Control investigations centre around longterm forest-management projects, the use of parasites and diseases, and the exploration of the possibilities of chemical control.

Field-crop and garden insect investigations include such important pests as grasshoppers, wheat-stem sawfly, wireworms, cutworms, white grubs, European corn borer, root maggots, potato aphids, and nematodes. The abundance and distribution of these pests are measured annually by extensive field surveys which provide a basis for planning large-scale control campaigns. Insecticides are widely employed in investigations upon the control of garden insects and even for certain pests of field crops, but for most of the latter cultural contrc has been highly developed.

Of the orchard pests, codling moth, European red mite, eye-spotted budmoth, apple maggot, oriental fruit moth, oystershell and San Jose scales, and pear psylla are the subjects of major study. Emphasis is being placed on the use of recently
developed insecticides; on the use of sprays combining fungicides and insecticides, and on the effect of spray programs upon the whole biotic structure of the orchard. Insect control by parasites and diseases and by orchard management is receiving increased attention.

Research on stored products insects embraces such pests as the rust-red grain beetle, the Indian meal moth, and mites; warehouse infestations by spider beetles; and pests of special products, such as beetles attacking powdered milk and eggs. Practical controls have been developed utilizing fumigants, abrasives, and mechanical methods; and prevention of infestation has been secured through proper storage construction and plant management.

Special consideration is given at the Dominion Parasite Laboratory, Belleville, Ont., to the importation and production of parasites for distribution in forests, fields, gardens, orchards, and greenhouses. At present, parasites are employed in Canada against about thirty important insect pests.

Activities designed to prevent the introduction into Canada of foreign pests are centred in the Plant Protection Division of Science Service. Fumigation with various lethal materials under varying conditions is being investigated as a means of destroying insect life in imported plants and plant materials. Effects of fumigants on suitability of products for human consumption or for seed are also under study.

Experimental Farms Service.-For over sixty years, since 1886, the Experimental Farms Service of the Dominion Department of Agriculture has been engaged in experimental and investigational work directed to the progressive improvement of practical agriculture in Canada. The facilities of this Service include (at the beginning of 1947) 36 experimental farms, stations and large substations; 211 smaller substations and illustration stations, and 8 branch laboratories, distributed throughout the agricultural regions of Canada. The headquarters of this system are at the Central Experimental Farm, Ottawa, where are located the administrative offices of the Director, and the offices and laboratories of the technical Divisions through which the work of all Experimental Farm units is supervised and coordinated. The field of agricultural enquiry covered by each of the ten technical Divisions is indicated by their titles, as follows: Animal Husbandry, Bees, Cereal Crops, Economic Plant Fibre (flax, etc.), Field Husbandry (soil management and engineering), Forage Crops, Horticulture, Illustration Stations, Poultry and Tobacco. Work on each of the Branch Farms is supervised by a resident Superintendent, who is responsible to the Director and who directs the various phases of experimental work at his unit in consultation with the relevant Division at Ottawa.

The fundamental function of the Experimental Farms Service is to enable Canadian farmers to make direct application of the results of scientific research. By its constitution, this Service is a repository for information on scientific farming, continually expanding, and kept alive by constant application under actual farming conditions. This applies to the multitude of details of land management, crop growing, live-stock production, and the use of machinery and equipment which together constitute the art of agriculture. During the present post-war period, the Experimental Farms are concerned with the maintenance of their regular services to agriculture, but with special attention to the greater conservation and better utilization of the agricultural resources of Canada.

Of primary importance, though of somewhat belated recognition, is the problem of soil conservation. Considered broadly, soil conservation involves the maintenance of fertility as well as the control of soil erosion. Over a long period of years, Experi-
mental Farms throughout Canada have conducted experiments with manures, fertilizers, crop rotations and other means of maintaining or increasing soil fertility. This work has demonstrated that the decline in productivity which has become increasingly evident on many Canadian farm lands could be avoided and is remediable. In recent years, increasing attention has been given to problems of soil erosion. Particularly in the Prairie Provinces, under the Prairie Farm Rehabilitation Act (P.F.R.A.) program much experimental work has been done on the control of wind erosion or soil drifting. As a result, measures have been developed which, if generally applied, should prevent any recurrence of the dust storms of the 1930's. On all Branch Farms on the prairies, as well as on smaller Substations, soil drifting is at all times a subject of study. Mention should be made here of the Dominion Soil Research Laboratory, established in 1936 at the Swift Current, Sask., Experimental Station, where fundamental research on soil erosion problems is in progress. To a lesser extent, but with growing emphasis as a post-war line of investigation, water erosion of soils is being investigated. Experiments in terracing, dyking and contour cropping have been started on several Farms and Substations, and on the Central Farm an elaborate erosion research project is now in operation to determine the effects of erosion, as well as practical control measures. Expansion of this work to other points in Canada is contemplated. Altogether, the soil-conservation program of the Experimental Farms, embracing problems of fertility, erosion, drainage, irrigation, etc., should have an increasingly important bearing on post-war agricultural developments in Canada.

Basic to soil conservation, and indeed to all agricultural activities, is an inventory of the Dominion's soil resources as regards distribution, classification and properties. This is the function of the Soil Survey, in which the Experimental Farms Service is taking an increasing part. It should be noted that the principles and methods of soil surveying, as applicable to Canada, were originally developed by agricultural colleges in the three Prairie Provinces and Ontario. Subsequent participation by the Experimental Farms has been largely in support of provincial programs, with Dominion and provincial personnel working in close co-operation in the several provinces. The purpose, already well advanced, is to secure a complete inventory of all agricultural soil resources in Canada within a short period of years. To this end, the soil-survey staff of the Experimental Farms has been considerably augmented since the end of the War. In this connection, mention should also be made of vegetation surveys, hitherto developed in the Prairie Provinces for the better management of rangeland, but now being extended in the interests of better land utilization.

Plant breeding for the creation of high-quality crop varieties adapted to different conditions of soil and climate, and with resistance to drought, disease and insect pests, is a major function of Experimental Farms work. One result of this work has been the expansion of areas in which profitable crops can be grown, notably with cereals in the Northwest and with shelled corn and soybeans in Ontario. The creation of disease-resistant plants such as rust-resistant wheat, and of varieties resistant to insect attack, as in the case of the new sawfly-resistant Rescue wheat,
are additional examples. Further development of the whole plant-breeding program of the Experimental Farms, essential to improved land utilization, is being vigorously prosecuted.

Expansion is also taking place in the field of plant processing. During the War, the processing laboratories of the Experimental Farms at Kentville, N.S., and Summerland, B.C., were able to make appreciable contributions to the conservation of perishable plant products through improvements in the dehydration of fruits and vegetables, quick-freezing practices, and the better storage and packaging of fresh fruits and juices. More recently a fruit and vegetable processing laboratory and sorghum syrup plant has been established at Morden, Man., for work in the Prairie Provinces; while a similar laboratory is projected at Lethbridge, Alta., to serve the processing needs of growers in the irrigated districts of Alberta. At Portage la Prairie, Man., a new fibre-flax pilot mill, for research in processing prairie flax products, is in operation. More attractive and nutritious products, better seasonal marketing, and the use of by-products and material formerly wasted, are objectives of this processing program.

Nutritional research, together with further improvements in breeding, are developing major post-war phases of Experimental Farms work in animal production. In particular, studies on the relationship between nutrition and animal health are being carried on with increasing intensity. In the breeding program, the development of high-class Yorkshire bacon-type hogs for the important United Kingdom market and of improved sheep breeds for western ranches, are isolated examples of the work in progress. Both in the nutrition and breeding of live stock and poultry, the Branch Farms play an important role, some serving mainly as nutritional centres, others as breeding centres, but practically all conducting experimental work of importance in their several districts.

Entering all phases of agriculture, the engineering services of the Experimental Farms, with laboratories and workshops at Ottawa and Swift Current, Sask., reflect in their expanding operations the trend to greater and more efficient mechanization of the post-war period. In general, these engineering activities are directed to the design of new labour-saving devices, the improvement of existing equipment, and the better co-ordination of mechanical outfits and farm production. One interesting development has been in the experimental repair and new construction of dykes and aboiteaux in the Bay of Fundy area, conducted by the Experimental Farm at Nappan, N.S.

Geographically, the Experimental Farms Service has, throughout the years, expanded with the growth of settlement. The most recent move has been to the Northwest Territories and Yukon, with the establishment of Substations at Fort Simpson, N.W.T., and Whitehorse, Yukon. While these measures are relatively small in themselves, and definitely not in the interests of increased settlement, they are mentioned here in view of the growing interest in and importance of the Canadian northland.

## Subsection 3.-Provincial Departments of Agriculture

Each of the nine provinces, under Sect. 95 of the British North America Act, has a Department of Agriculture, which directs its general agricultural policies, administers the provincial legislation affecting agriculture, and provides extensive services to assist the rural people in its respective area. The work of these Departments is outlined at pp. 213-218 of the 1946 Year Book.

## Subsection 4.-Provincial Agricultural Colleges and Schools

A treatment of this subject appears at pp. 203-213 of the 1943-44 Year Book.

## Section 2.-Statistics of Agriculture*

Crop-Reporting Service.-Through the voluntary crop-reporting service of the Dominion Government, accurate, timely and independent reports on crop conditions throughout the Dominion are published.

Census Statistics.-In addition to the statistics collected annually, which are the subject of this Section, valuable information is published following each Decennial Census of the Dominion and Quinquennial Census of the Prairie Provinces. The more important data at present available from the 1941 Census, are given at pp. 250-254 of the 1946 Year Book.

## Subsection 1.-Farm Cash Income

Canadian farmers received a cash income (exclusive of supplementary payments) of $\$ 1,742,300,000$ from the sale of farm products in 1946 as compared with receipts totalling $\$ 1,697,700,000$ in 1945 . The 1946 income was $\$ 86,200,000$ less than that received in the record year 1944, when receipts totalled $\$ 1,828,500,000$.

Cash receipts from sales of grains, seeds and hay increased. $\$ 15,900,000$ in 1946, as a result of payments on wheat participation certificates for preceding crop years amounting to $\$ 33,300,000$. Gains were also recorded for 1946 in receipts from fruits, vegetables and special crops. However, these increases were offset to a considerable extent by a decline in cash income from the sale of live stock due to a much lower volume of hog marketings. Cash income from the sale of farm products was higher in 1946 in all provinces except New Brunswick, Saskatchewan and Alberta. The decline in New Brunswick was accounted for in large part by lower income from potatoes and live stock; in Saskatchewan and Alberta lower marketings of grain and live stock were responsible for the decreases.

The estimates of cash income are based on reports of marketings and prices received by farmers for principal farm products and include the amounts paid on account of wheat participation certificates, the oats and barley equalization payments and those Dominion and Provincial Government Payments that farmers receive as subsidies to prices. Payments made under the Wheat Acreage Reduction Act, the Prairies Farm Assistance Act and the Prairie Farm Income Act are not included with cash income but are included in the total in the year in which payment is made under the heading "Supplementary Payments"

[^130]

## 3.-Cash Income from the Sale of Farm Products, by Sources, 1945 and 1946

## Subsection 2.-Value of Agricultural Production and of Farm Capital

Publication of the series formerly known as "Gross and Net Values of Agricultural Production" has been discontinued. These series contained duplications and, as a result, were not comparable with value of production estimates for other industries. Work is now under way on new series which will replace those previously published.

Value of Farm Capital.-The items included in the term "farm capital" as used in Table 5 are: lands and buildings; implements and machinery, including motor-trucks and automobiles; and live stock, including poultry and animals on fur farms. The value of lands and buildings for intercensal years are based on the value of occupied farm lands reported annually by crop correspondents; annual values of farm implements and machinery are estimated on the basis of sales reported each year.
5.-Current Value of Farm Capital, by Provinces, 1944 and 1945

${ }^{1}$ Revised since the publication of the 1946 Year Book.
${ }^{2}$ Includes poultry and fur farms.
Average Values of Farm Lands.-Land values as reported by crop correspondents represent the average value per acre of all occupied land and include a considerable percentage of unimproved land. Consequently, these values are well below current market prices for improved farm land.

The values of farm lands show considerable increases since 1940, but present values are substantially below those recorded prior to the collapse in land values in 1929 and no serious inflation of land values similar to that which followed the First World War is as yet in evidence. A decline from the high values of that time occurred prior to 1926 and a second sharp decline followed 1929, values per acre reaching their lowest point in 1934 at $\$ 23$ per acre. For 1946, the average value indicated was $\$ 32$ per acre.

## Subsection 3.-Acreages, Yields and Values of Field Crops

The fourth annual Dominion-Provincial Agricultural Conference met at Ottawa in December, 1945, to draft proposals for the agricultural production program for the coming year. One of the major problems faced by this Conference was the distribution of Canada's agricultural land resources in such a way as to provide a maximum production of the major grain crops needed for human food and live-stock feeding. After considering all aspects of the problems involved, the Conference recommended that the wheat acreage for 1946 be maintained at the 1945 level of $23,414,000$ acres, while that of oats be decreased 1 p.c. and that of barley increased 9 p.c. when compared with 1945 acreages of $14,393,000$ and $7,350,000$, respectively. At the same time, it was urged that summerfallow acreage be maintained at $19,397,000$ acres, the same as in 1945. However, the price relationships existing between the various grains at seeding time appeared to be the deciding factor, and the Conference proposals on these items met resistance, with the 1946 wheat acreage rising to $25,900,000$ acres, the increase being obtained for the most part at the expense of oats, barley and summerfallow. The acreages of each of the two coarse grains, oats and barley, declined by approximately 9 p.c., while that of summerfallow was down by 5 p.c.

A week of extremely hot, dry weather in the Prairie Provinces during the latter part of July and the first part of August, together with a July frost, caused some deterioration in what might otherwise have been a near-record wheat crop. As a result, wheat production for all Canada amounted to $420,725,000$ bu., which, despite the set-back, was still above average and some $102,213,000 \mathrm{bu}$. in excess of the 1945 production.

The smaller 1946 acreages of oats and barley practically offset the gain from increased yields of these crops and total feed-grain production was only a little larger than in 1945. Rye production was up by 25 p.c. while flaxseed was down slightly. The gross farm value of all the major field crops produced on $63,341,000$ acres in 1946 amounted to $\$ 1,247,624,000$ as compared with a gross farm value of production of $\$ 1,151,285,000$ from $62,828,000$ acres seeded to the same crops in 1945 .

## 7.-Acreages and Values of Field Crops, by Provinces, 1940-46

Note.-Some of the figures in this table, particularly the values, have been revised since the publication of the 1946 Year Book.

## 8.-Acreages, Yields and Values of Principal Field Crops Grown in Canada

Nore.-Comparative figures for the Dominion as a whole for the years 1908-28 are given in the 1929 Canada Year Book, pp. 230-232; for 1929-38 in the 1939 Canada Year Book; pp. 203-205; for 1939-41 in the 1943-44 Canada Year Book, p. 217. For certain figures for earlier years of acreage, production and value, see Statistical Summary of the Progress of Canada at the beginning of this volume. For the majority of crops, the long-time average covers the years 1908-40. Figures for 1946 are preliminary and therefore subject to revision.

${ }^{1}$ Subject to revision.

Stocks of Grain in Canada.-Table 10 shows the stocks of Canadian grain on hand on July 31, for the years 1936-46, in both Canada and the United States as well as the amounts held on farms at that date. Farm stocks are given for Canada and the Prairie Provinces separately, while an additional column indicates the amounts held in country elevators in the Prairie Provinces.

## ${ }^{1}$ Subject to revision.

## Subsection 4.-Live Stock

The growth of the live-stock industry in Canada from decade to decade is indicated in summary form in Table 11.
11.-Live Stock in Canada, Censuses of 1871-1941

| Item | 1871 | 1881 | 1891 | 1901 | 1911 | 1921 | 1931 | 1941 |

| Swine............. | 1,366,083 | 1,207,619 | 1,733,850 | 2,353,828 | 3,634,778 | 3,404, 730 | 4,774,828 | 6,174,309 |

${ }^{1}$ Cows in milk or in calf. $\quad{ }^{2}$ Cows and heifers, two years old or over, kept mainly for milk purposes.

Live stock on farms as obtained from the census data cannot be separated from the total numbers except for the past three census years. Table $\mathbf{1 2}$ gives the numbers of live stock on farms for those years.
12.-Live Stock on Farms, Censuses of 1921, 1931 and 1941

| Item | 1921 | 1931 | 1941 |
| :---: | :---: | :---: | :---: |
|  | No. | No. | No. |
| Horses. | 3,451,752 | 3,113,909 | 2,788,795 |

| Milk cows. | 3,228,6831 | 3,523,001 ${ }^{1}$ | 3,626,025 |
| Other cattle | 5,140,856 | 4,450,080 | 4,890,982 |
| Sheep........ | 3,200,467 | 3,627,116 | 2,839,948 |
| Swine. | 3,324,291 | 4,699,831 | 6,081,389 |

${ }^{1}$ Cows in milk or in calf. $\quad{ }^{2}$ Cows and heifers, two years old or over, kept mainly for milk purposes.

However, annual estimates based on census data are made of numbers of animals on farms. The indexes in Table 13 are the estimates of live stock for the respective years expressed as percentages of the numbers on farms during the period 1935 to 1939. Table 14 gives the absolute figures by provinces for $1942-46$ and Table 15 the average values per head of farm live stock in the same years.

## 13.-Index Numbers of Animals on Farms, 1937-46

(Average $1935-39=100$ )
Note.-Comparable figures for 1906-36 are given at pp. 211-212 of the 1945 Year Book.

| Year | Horses | Milk Cows | Other Cattle | $\underset{\text { Cattle }}{\text { All }}$ | $\begin{aligned} & \text { Sheep } \\ & \text { and Lambs } \end{aligned}$ | Swine |

## 15.-Average Values per Head of Farm Live Stock, by Provinces, 1942-46

Nore.-Values shown in this table are not strictly comparable; for 1942 they are based on the 1941 census figures, and for the other years they are derived from reports of crop and live-stock correspondents.

Wool.-Total wool production in Canada in 1946 amounted to $19,001,000 \mathrm{lb}$., a reduction of $625,000 \mathrm{lb}$. from the 1945 output. This reduction was attributable to a decline of over $800,000 \mathrm{lb}$. in shorn wool production. Increased slaughterings of sheep and lambs resulted in a higher pulled wool output. There were large imports of wool during the year and the apparent domestic disappearance was over $45,000,000 \mathrm{lb}$. higher than in 1945, but, as data are not available on stocks of wool in storage, the figures for actual consumption in any individual year could be quite different from the apparent disappearance.

Gross income and cash income from shorn wool rose steadily during the war years, but decreased production through 1945 and 1946 has caused a subsequent drop in income. Average farm prices for Canada were 27.7 cents per lb. in both 1945 and 1946.

## 16.-Estimated Production, Exports, Imports and Apparent Consumption of Wool, 1937-46

Note.-All estimates are on a 'greasy' basis. Comparable statistics of production for the years 1920-29 are given at p. 219 of the 1939 Year Book and for 1930-36 at p. 214 of the 1945 edition.

| Year | Shorn |  |  |  | Pulled | Total Production | Exports | Imports | Apparent Consumption |

## Subsection 5.-Poultry and Eggs

The number of live poultry on farms in Canada in 1946 was only slightly above the 1945 level, while the value increased by 111 p.c. Hens and chickens accounted for the increase in number, since, for Canada as a whole, there were fewer turkeys, geese and ducks than in the previous year. In each case, however, the value was higher than for 1945.

The production of eggs was lower in 1946 than in 1945, due to a reduction of chick hatchings in 1945 as compared with the previous year, and a consequent decrease in 1946 layers. There was also a slight decrease in the production of poultry meat in 1946 as compared with 1945.

## Subsection 6.-Dairying

The development of dairying enterprises which commenced at the beginning of the War reached a peak in 1945. Milk production on farms was stimulated by producer subsidies during the entire war period, while payment of consumer subsidies tended to increase the sales of fluid milk for direct consumption. During the six-year period, 1939 to 1945 , milk production increased approximately $1,800,000,000 \mathrm{lb}$. and the industry as a whole made an immense contribution to the food supplies of both Canada and the United Kingdom. After the collapse of Germany in May, 1945, production suffered from a reactionary development which became more pronounced after the final cessation of hostilities in August. The retreat from dairying in the Prairie Provinces following the bountiful harvest of 1944 with higher prices paid for grain and live stock, and the cumulative effects of the labour shortage, all played a part in halting the upward swing in dairying production in the Western domain. On the other hand, dairying continued to expand in Eastern Canada, so that no decline was shown in the total output for Canada until 1946.

A notable feature of the dairy situation is the shift in production in recent years; Western Canada is now contributing a larger share of the total. In 1920, Ontario and Quebec contributed approximately 67 p.c. of the total milk production of the Dominion; the Prairie Provinces produced 22 p.c., while the Maritimes and British Columbia shared to the extent of 9 p.c. and 2 p.c., respectively. By 1945 (the peak year), Ontario and Quebec were supplying only 62 p.c. of the milk production while the Prairie Provinces produced 28 p.c., the remaining 10 p.c. being divided between the Maritimes and British Columbia in the ratio of approximately 6 to 4 .

Milk Production and Utilization.-The total production of milk reached a high point in 1945. In 1946, a decline of $790,000,000 \mathrm{lb}$. was recorded, reducing the total to $16,937,000,000 \mathrm{lb}$. During the 1920 's and 1930 's, the tendency in milk utilization was toward greater use of milk for fluid sales and for the production of factory dairy products, while that employed for manufacturing on farms declined. With the outbreak of war in 1939, this trend was accentuated due to an increase in the demand for fluid milk and to the payment of Government subsidies on creamery butter-fat (from July, 1942). In 1946, the proportion of the milk supply used for fluid sales was 25 p.c. as compared with an average (1941-45) of 21 p.c. On the other hand, factory dairy products absorbed 52 p.c. as compared with an average (1941-45) of 56 p.c. The percentage used on farms remained about the same at 23 p.c. All provinces showed reductions in milk production over 1945, the largest declines being in Prince Edward Island at $5 \cdot 7$ p.c., and Ontario at $5 \cdot 3$ p.c.

Butter Production.-Creamery butter production suffered a reduction in 1946 over 1945 of over $22,000,000 \mathrm{lb}$. or $7 \cdot 6$ p.c. Declines occurred in every province.

The dairy butter make of $54,225,000 \mathrm{lb}$. was approximately $900,000 \mathrm{lb}$. above the output of 1945, only Quebec and British Columbia having shown a reduced make. A point that should be noted, however, is that the Prairie Provinces continue to produce considerable quantities of dairy butter, most of which is made in Saskatchewan where the 1946 output represented 26 p.c. of the total production of Canada.

Cheese Production.-Cheddar cheese production in 1945 was the highest since 1942 , being approximately $187,000,000 \mathrm{lb}$. as compared with $206,000,000 \mathrm{lb}$. in that year; in 1946 it declined to $143,509,000 \mathrm{lb}$. The total factory production of $147,320,000 \mathrm{lb}$. (including $3,811,000 \mathrm{lb}$. of cheese other than cheddar) in 1946 represented a decrease of 22 p.c. from that of 1945 . Farm-made cheese amounted to $740,000 \mathrm{lb}$., being slightly less than that produced in 1945.

During recent years a wider range of cheese products has been manufactured in Canada. Roquefort and Cheshire types of cheese are now being produced in small quantities; Oka and Trappist cheese have been made in the Trappist monasteries for a number of years, and limited quantities of Limburger and lesser-known varieties are also being produced to meet the needs of a special trade. Processed cheese, a secondary product with cheddar cheese representing about 18 p.c. of the poundage, is another industry which has developed considerably during the past few years. In $1946,26,000,000 \mathrm{lb}$. was manufactured in comparison with $12,000,000 \mathrm{lb}$. ten years ago. Then, too, greater use is being made of by-products from cheese. Lactose, which is made from milk-sugar crystals obtained from whey by a process of evaporation, is used for many purposes but it has gained special importance as a media for the growth of the mould from which penicillin is obtained.

Concentrated Milk Products.-Total production of all concentrated milk products combined in 1946 amounted to approximately $302,005,000 \mathrm{lb}$. as compared with an outpait of $299,265,000 \mathrm{lb}$. in the preceding year. In recent years there has been a greater demand for evaporated milk, condensed milk and whole-milk powder for export markets and larger quantities of these products are now being manufactured. Comparing the 1946 figures with those of 1939, evaporated milk moved from $116,885,000 \mathrm{lb}$., to $192,188,000 \mathrm{lb}$.; condensed milk from $7,571,000$ to $31,257,000$ lb. , and whole-milk powder from approximately $6,584,000 \mathrm{lb}$. to $15,934,000 \mathrm{lb}$. Of the concentrated milk by-products, skim-milk powder is, of course, the most important item. The output of this product advanced from approximately $25,339,000 \mathrm{lb}$. to $42,246,000 \mathrm{lb}$. The remainder of the products increased approximately 84 p.c. in production as compared with 1939.

Ice Cream Production.-The output of ice cream was $15,783,000$ gal. in 1946 as compared with $16,352,000$ gal. in 1945 . This decrease was due to the continuation of restrictions on the quantity manufactured for civilian use, which had been ordered during the war years to provide more cream for other purposes, and to the closing of military establishments during the past year.

Domestic Disappearance of Dairy Products.-Milk consumption statistics reveal the increasing popularity of this product as an article of food. Per capita consumption (including cream expressed as milk) has increased steadily from 0.87 pint per capita in 1939 to 1.01 pints in 1946.

The domestic disappearance of all butter, which was estimated at 33.12 lb . per capita in 1942, showed a reduction of nearly 5 lb . per capita in the following year as the result of butter rationing. In 1946 the estimated disappearance was 25.64 lb . per capita. Cheese, on the other hand, showed an almost continual increase from 1942 to 1945 . In the latter year the per capita disappearance reached 5.06 lb ., but in 1946 it fell to 4.15 lb ., the lowest point in four years. During the past six years the disappearance of concentrated whole-milk products advanced from less than 11 lb . per capita to over 13 lb . in 1946.

Sales Income.-Farmers have been receiving large incomes from the sale of dairy products during the war years as a result of the subsidies and bonuses now paid by the Government. In 1945, the income from dairying amounted to $\$ 270,000,000$ as compared with $\$ 148,000,000$ at the commencement of the War in 1939. The relationship of dairy sales income to that of total farm income was only 12 p.c. in 1926; during the course of the next four years it moved up to 24 p.c., and reached the high point of 33 p.c. in 1931. As other lines of farming became more profitable, declines began to develop. In 1936 this relationship fell to 24 p.c. and, regardless of important advances in dairy production and prices, the 1946 income represented only 16 p.c. of the total farm income of Canada.

During the past twenty-six years, the trend in sales income from dairy products has been in two directions. In 1920 it stood at $\$ 153,000,000$; sharp declines occurred in the two subsequent years and in 1922 it amounted to only $\$ 105,000,000$. This was followed by several increases, and in 1928 it registered the highest point since

CHEDDAR CHEESE

1920, when farmers realized $\$ 121,000,000$ from their dairy products. In 1930 it moved up to $\$ 150,000,000$ but, owing to exceptionally low prices in the depression period which followed, it was reduced in 1932 to a figure comparable with that of 1928. From 1933 there has been an almost continual increase in income, reaching a total of $\$ 286,000,000$ in 1946.

Value of Dairy Production.-The farm value of milk showed an increase of $\$ 23,000,000$ in 1946 over 1945 and the total value of dairy products an increase of $\$ 22,000,080$ in the same comparison. Farm value figures shown in Tables 26 and 28, which include sales income and income in kind, reflect the extensions that have taken place in dairy farm undertakings. In 1946, 25 p.c. of the farm value of milk production originated in the Prairie Provinces while the two central provinces contributed 65 p.c.

## 20.-Production and Utilization of Milk in Canada, 1912-16, and by Provinces, 1945 and 1916

Note.-Figures for the years 1920-41 are given at p. 4 of the report "Dairying Statistics of Canada, 1946'; for the years 1939-41 at p. 237 of the 1946 Year Book.

${ }^{1}$ Since the figures in this table are rounded to thousands, the estimated value of farm-made cheese in Prince Edward Island, which amounted to $\$ 200$ in both 1945 and 1946 , is not shown.

## 28.-Values of Production, Cost of Milk at Plants, and Income from Dairying, 1942-46, and by Provinces. 1945 and 1946

Nore.-The first two columns of this table represent values based on total production, the entire milk supply being accounted for in each case. The third column is the cost of milk delivered for fluid and for manufactured purposes; while the fourth column represents the income received from the sale of milk, butterfat and dairy butter. Figures for the years 1920-41 are given at p. 19 of the report "Dairying Statistics of Canada, 1946"'; for the years 1939-41 at p. 241 of the 1946 Year Book.

## Subsection 7.-Horticulture

Annual statistics of commercial horticulture are now confined to production and value of fruits. Until 1943 a survey of the floriculture and nursery-stock industry was conducted annually, but as a wartime measure the collection and publication of this information was suspended. No estimates of the acreage and annual production of vegetables are as yet available but an attempt is being made to collect this information for the major crops. Details of acreage production, and value of all the common vegetables grown in 1940 and 1941 will be found in a series of bulletins issued by the Census Division of the Bureau of Statistics.

Fruit Production.-The production of fruit in Canada on a commercial scale is confined to the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Fruit production in each of these Provinces is concentrated for the most part in fairly well defined sections. In Nova Scotia, for example, the Counties of Annapolis and Kings-the Annapolis Valley-and to a lesser extent Hants County are the main fruit-producing areas. In New Brunswick there are two chief centres for fruit growing, the most important being St. John River Valley, which includes the Counties of Queens, Kings, Sunbury and York. The other district is located in Westmorland County adjacent to Nova Scotia. The fruit areas in Quebec can be roughly divided as follows: the Montreal area including Montreal and Jesus Islands; the North Shore area including the Counties of L'Assomption, Terrebonne and Two Mountains; the Eastern Townships including Châteauguay, Huntingdon, St. Jean, Missisquoi and Rouville Counties; and the Quebec City district including the Counties of Portneuf, Montmorency, Lévis, Bellechasse, L'Islet and Quebec. In Ontario, the fruit-producing area is much more widespread and is located in the counties adjacent to the St. Lawrence River and the Great Lakes as far as Georgian Bay. The most famous fruit section is the Niagara district which includes Welland and Lincoln Counties. There are two other well-known sections: the north shore of Lake Ontario and the St. Lawrence River including the Counties of Dundas, Grenville, Leeds, Hastings, Prince Edward, Lennox and Addington, Northumberland, Durham and Ontario; and the equally well-known section in the Georgian Bay district, including the Counties of Grey, Bruce and Simcoe. In British Columbia there are four well-defined areas of fruit production, the most extensive and best known is the Okanagan Valley. In addition, there are the Fraser Valley, the Kootenay and Arrow Lakes section and Vancouver Island.
29.-Estimated Commercial Production and Shipping-Point Values of Fruit, 1940-45, with Five-Year Averages, 1935-39

| Kind of Fruit and Year | Quantity | Weight | Value | Average Value per Unit of Quantity |

## Subsection 8.-Special Agricultural Crops

Maple Sugar and Syrup.-Maple sugar and syrup production in 1946 improved somewhat from the unusually small crop of 1945. Production of both sugar and syrup, expressed as syrup, amounted to $2,144,000$ gal. compared with $1,530,000$ gal. The 1946 crop, however, was still considerably below the ten-year average level of $2,606,000 \mathrm{gal}$. The season opened early in March and lasted well into April. Sap was very sweet and the quality of both sugar and syrup was better than usual. In Quebec, where the bulk of the crop is produced, the season lasted for approximately 50 days. Warm weather at the end of March prompted some producers to collect and store their equipment but others who re-tapped made good quantities of syrup in April. Prices received for both sugar and syrup were, for the most part, at or near the ceiling and average prices remained practically unchanged from 1945.

${ }^{1}$ To nearest thousand.
Sugar Beets and Beetroot Sugar.-Sugar beets are grown in Quebec, Ontario, Manitoba and Alberta, six beet-sugar factories being located in these Provinces. In Quebec, sugar beets have been grown only since 1942 and production centres around St. Hilaire, south of Montreal in the Eastern Townships. The area harvested in Quebec in 1945 was 1,425 acres although the plant at St. Hilaire has a capacity to handle production from 10,000 acres. In Ontario, sugar-beet factories are located at Wallaceburg and Chatham. The acreage in Ontario has declined steadily from 38,169 in 1940 to only 9,287 in 1943 . Since that year, however, the acreage has again expanded and in 194517,661 acres were cropped, though production still remained well below the capacity of the two plants and only the Chatham factory processed beets in 1945. Sugar-beet production in Manitoba also declined during the war years. In 1940 the area harvested was 15,682 acres while in 1945 the area amounted to only 9,827 acres. The sugar-beet plant in Manitoba is located at Fort Garry. Sugar-beet production in Alberta is carried on in the neighbourhood of Raymond and Picture Butte. This area has seen a steady increase during the past six years with the acreage in 1945 amounting to 30,344 acres.

> 32.-Acreages, Yields and Values of Sugar Beets, and Quantities and Values of Refined Beetroot Sugar Produced, 1938-45
> Nore.- Figures for the years $1911-20$ will be found at p. 1057 of the 1932 Year Book; for 1921-30 at p. 257 of the 1933 edition; and for $1931-37 \mathrm{at}$ p. 222 of the 1942 edition.

Fibre Flax.-Table 33 shows that under the stimulus of the wartime demand for fibre-producing crops, the area devoted to this crop increased from 10,536 acres in 1939 to 47,070 acres in 1942. Through action of the Agricultural Supplies Board, the entire industry is on a mechanized basis, and mill-processing machinery as well as mechanical pullers and lifters for field work are now manufactured in Canada. Canadian flax fibre and tow find a ready market in the United Kingdom and the United States.

The prospect of high returns encouraged many inexperienced growers to seed flax on poor land in 1942. With the low yields in 1942 and 1943 enthusiasm waned, growers preferring to plant crops with more certain yields and higher cash returns. In 1944 the season was late and it was not until the end of June that much of the crop was planted. While the area in 1944 was greater than in 1943, yields on the late-sown acreage were disappointing. Spring weather in 1945 was also backward but after the experience of 1944 there was little late seeding, the acreage, as a result, was down considerably. A further sharp reduction was shown in 1946.

## 33.-Acreages, Yields and Values of Flaxseed, Fibre and Tow, 1938-46

Note.-Figures for the years 1915-30 will be found at p. 284 of the 1934-35 Year Book, and for 1931-37 at p. 224 of the 1942 edition.

[^138]Tobacco.-Production of tobacco in 1945 amounted to $92,345,000 \mathrm{lb}$., a 12 p.c. decline from the near record crop of $105,415,500 \mathrm{lb}$. produced in 1944. The area planted in 1945 was 93,277 acres as compared with 88,495 acres in 1944, and the reduction in output was the result of a poor growing season and consequent lower yields per acre. The average price paid to farmers for leaf tobacco showed a substantial advance at an average of 33.2 cents per lb . compared with 29.4 cents per lb. during the previous season. All types, with the exception of pipe tobacco, brought higher average returns.

## 34.-Acreages, Production and Values of the Commercial Crop of Leaf Tobacco, 1938-45

Note.-Figures for representative years 1900-28 are given at p. 228 of the 1939 Year Book, and for the vears 1929-37 at p. 225 of the 1940 edition.

36.-Acreages, Production and Values of the Commercial Crop of Leaf Tobacco, by Main Types, 1939-45

| Type and Year |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |

Apiculture.-Keeping of bees in Canada is as much an industry as any other form of Canadian enterprise and has, in some cases, developed into a 'big business' involving more than a thousand colonies producing many thousands of pounds of honey. Annual statistics of honey production have been published since 1924 when 22,200 beekeepers were engaged in producing honey. Since then the number has almost doubled and in 1945 there were 43,300 beekeepers. Ontario continues to be the chief honey-producing province and normally contributes about one-half of Canada's total. In 1945, however, Ontario produced only 27 p.c. of the total followed by Saskatchewan with 22 p.c., Alberta with 18 p.c., Manitoba with 15 p.c., Quebec with 14 p.c., British Columbia with 3 p.c. and the Maritime Provinces with 1 p.c. The farm value of the Canadian honey crop in 1945 was estimated at $\$ 5,439,000$. While this was 11 p.c. below the value of production in 1943 , it was 60 p.c. higher than the five-year $1938-42$ average of $\$ 3,392,000$. The average price received by producers showed a further increase in 1945 to 16 cents per lb., compared with 15 cents per lb. in 1944.

## 37.-Beekeepers and Colonies, Production and Values of Honey and Beeswax, 1938-45

Nore.-Statistics by provinces are shown in the "Quarterly Bulletin of Agricultural Statistics" Dominion totals for 1924-37 are given at p. 227 of the 1940 Year Book.

## ${ }^{1}$ No sales reported.

Index Numbers of Agricultural Prices.-The series of index numbers of field crop prices, shown in Table 41, has been discontinued as of July 31, 1946; that table gives the last figures to be published. The new series, figures for which are given in Table 42, is much more complete in that it includes prices received by farmers for live stock and products, fruits, vegetables and several special crops such as honey, maple products, etc. To date, index numbers by months only are available; compilation of those by products is not yet complete.

# 41.-Index Numbers of Farm Prices ${ }^{1}$ of Field Crops, Crop Years Ended July 31, 1937-46 

( $1935-36$ to $1939-40=100$ )
Note.-For the formulæ used in the calculation and for index numbers by provinces, soe "Quarterly Bulletin of Agricultural Statistics", January-March, 1942. Indexes for the years 1931-32 to 1939-40 based on average prices, 1926-27, are given at p. 230 of the 1940 Year Book. Indexes on the present base, for the years 1909-10 to 1935-36, are given at pp. 180-181 of the 1941 Year Book.

## Subsection 10.-Agricultural Statistics of the Census

Agricultural statistics from the Census of 1941, dealing with farm population, farm workers, and farm tenure, values and indebtedness are given at pp. 250-254 of the 1946 Year Book. Information regarding types of farm, farm machinery and farm revenues and expenditures appears at pp. 238-240 and 243-245 of the 1945 edition.

## Subsection 11.-Agricultural Irrigation

Irrigation on the Canadian Prairies.*-The first phase of irrigation development on the Canadian prairies dates back sixty years or more when some of the early ranchers undertook to grow winter feed by diverting water from the smaller streams to irrigate native meadow lands.

By the early 1890's the possibilities of irrigation had been demonstrated and in 1894 the North-West Irrigation Act was passed by the Parliament of Canada. This Act embodied the best features of irrigation laws in other countries and provided the basis for sound irrigation development on the prairies. Following prolonged drought during the 1880's and 1890's, there was increased interest in irrigation and by 1895 some 112 individual projects had been constructed at an estimated cost of $\$ 100,000$ to serve more than 79,000 acres of land.

The second phase of irrigation expansion in this region started with the construction of large-scale company projects. The first of these was put into operation in 1901 when water diverted from the St. Mary River near the International Boundary line was carried to Lethbridge through the works of the Alberta Railway and Irrigation Company.

Other large projects were built during this era including the Canadian Pacific Railway Company projects at Strathmore and Brooks and the Canada Land and Irrigation Company project at Vauxhall. The construction of these four projects cost some $\$ 28,000,000$. The total area irrigated is 328,000 acres, though the works of these projects were originally designed to serve a much larger area.

The third phase of development took place mainly during the 1920's when a number of community projects were constructed by locally organized irrigation districts and financed by the issue of bonds guaranteed by the Alberta Government. The irrigation districts were formed under provincial statute passed in 1915 and the projects built during this period included the Taber, Lethbridge Northern,

[^141]New West, Magrath, Raymond, United, Little Bow and the Mountain View irrigation districts. The construction of these projects cost some $\$ 6,800,000$ and the total area irrigated from these works is 180,800 acres.

With the transfer of the natural resources in 1931 the administration of water rights, excepting international streams, became a provincial responsibility. The total expenditure on irrigation up to that time was estimated at $\$ 50,000,000$, including cost of construction, maintenance and operation, replacements and betterments. The total area of irrigable land at that time was nearly 608,000 acres including large projects in Alberta and small projects in Alberta and Saskatchewan.

The financing of irrigation development up to that time was based on the idea that the water users should and could pay the total cost of construction including interest on unpaid principal in addition to maintenance and operation. The benefits of irrigation had been demonstrated but the returns to the water users, particularly during the early development years, proved inadequate in most cases to meet the obligations water users then had to assume. Irrigation farmers were especially hard hit by the adverse economic conditions that followed the War of 1914-18 and some drastic reductions in capital charges were found necessary.

The rebuilding of the beet-sugar factory at Raymond, Alta., in 1925, and the introduction of phosphate fertilizers in the late 1920's marked the beginning of more intensive irrigation farming in that Province.

The drought of the 1930's increased the demand for irrigated land but there was little or no prospect of any new construction during the early depression years. The Canadian Pacific Railway initiated its policy of withdrawing from irrigation development by turning over its holdings at Brooks, Alta., to the water users and the Provinces were not in financial position to undertake any development work of this nature. As a result, irrigation expansion was at a complete standstill when the Prairie Farm Rehabilitation Act was passed by the Parliament of Canada in 1935.

This marked the beginning of a new phase in irrigation development on the prairies whereby the Dominion Government was to undertake construction of large irrigation works, to provide assistance for individual projects as well as to conduct surveys and prepare plans.

The P.F.R.A. is broad in scope and water development has, from the outset, been regarded as a major activity in the comprehensive rehabilitation program initiated under the Act. With funds made available from the Dominion Treasury the P.F.R.A. organization is undertaking, with the co-operation of the provinces concerned, to complete the job of irrigation development on the prairies.

Construction work was largely held up during the War, but considerable surveying and designing work was carried on and in 1946 construction was started on a huge irrigation system in southeastern Alberta known as the St. Mary-Milk Rivers Project. When completed this system will provide water for 345,000 acres of new irrigable land and, in addition, give a full supply of water for some 120,000 acres served by existing works. This project extends mainly along the railway line between Lethbridge and Medicine Hat. The lands to be served, therefore, are located in the low-precipitation, high-temperature zone of the prairies in which a wide range of crops are successfully grown where irrigation is available to supply the normal moisture deficiency.

The Project will be the largest irrigation system on the Canadian prairies and the dam, for which the contract has been let, will be 185 feet high and half a mile long at its crest. This will be the highest earth dam so far undertaken in Canada. Construction will extend over a number of years and the total cost, which will exceed $\$ 15,000,000$, will be divided among the Dominion Government, the Province of Alberta
and the water users. When the St. Mary-Milk Rivers Project is fully developed, Canada will be able to fully utilize the share of water allotted to it in 1921 by the International Joint Commission and, thereby, will be in a position to safeguard this right.

Surveys of a number of other large projects are in progress to determine their engineering, agronomic and economic feasibilities. These surveys include land classification to determine the acreage in each project that is suitable for irrigation as well as engineering studies. Brief descriptions of the larger proposed projects are presented below.

In this connecton it is important to note that surveys and planning presently in progress on large P.F.R.A. irrigation works are not necessarily for immediate execution. The main objective of this work is to explore thoroughly, various irrigation possibilities, and to prepare construction plans in detail, so that costs and probable benefits can be determined, and construction undertaken if and when desired with a minimum of delay.

Red Deer River Project.-This project would involve the construction of a large dam on the Red Deer River at a point near the village of Ardley, Alta., some 25 miles east of the town of Red Deer. Water impounded by this dam would provide for hydro-electric power development, the irrigation of several hundred thousand acres of land, and the maintenance of flow in many rangeland streams which normally become dry in the summer. As this project lends itself to considerable expansion, further soil and engineering surveys are required before its ultimate possibilities can be determined.

South Saskatchewan River Development.-The main feature of this project would be the construction of a large dam across the South Saskatchewan River at a point near Elbow, Sask., to provide for irrigation and hydro-electric development, and possibly for the gravity diversion of water to supplement the erratic flow in the Qu'Appelle River. In this connection, the possibility of improving the water supplies for the cities of Moose Jaw and Regina is being explored. Surveys indicate that much of the irrigable land in this project, lying roughly on both sides of the South Saskatchewan in the Elbow-Saskatoon district, are at too high an elevation to be irrigated by gravity flow. For this reason the plans in hand call for the use of hydro-electric power to raise water to the necessary levels by pumping, the cost of such pumping in summer to be offset by the sale of electric power during the winter period of peak demand. Soil surveys of approximately $1,000,000$ acres of land tributary to the dam site indicate that about 800,000 acres are suitable for irrigation, on a large portion of which the distribution of water is expected to be an engineering feasibility. Further surveys, both soil and engineering, are necessary to fully assess this project. The South Saskatchewan scheme is the largest so far proposed for construction under the P.F.R.A.

Bow River Development.-Essentially an enlargement of the existing Canada Land and Irrigation project in Southern Alberta, the Bow River Development is designed to supplement water supplies to 55,000 acres already under irrigation, and to bring water to 180,000 acres of new land extending east from Lomond to Medicine Hat. Plans for this project, which lends itself to development by stages, are advanced to a point where construction can be started when conditions warrant.

All large P.F.R.A. irrigation projects are constructed under agreement between the relevant province and the Dominion.

A score or more of community irrigation projects have been built by P.F.R.A. or expanded with P.F.R.A. assistance since 1935, varying in size from several hundred to several thousand acres each. These projects were designed to provide
water for a total of more than 100,000 acres of land and are located mainly in southwestern Saskatchewan and southern Alberta. The highest degree of utilization of these projects is in the lower rainfall area but, owing mainly to higher rainfall since 1939, irrigation development has lagged in some cases. In some instances land control is a factor.

Small water developments have been greatly expanded under P.F.R.A. and since 1935 nearly 33,000 projects have been completed in the three Prairie Provinces. These are mainly for stock-watering and household use. However, nearly 1,100 small or individual irrigation projects have been completed under the P.F.R.A. self-help program. These serve an estimated potential area of 35,000 acres. Heavier rainfall has lessened the need for irrigation and the development of many of these projects has lagged. Moreover, many of the older individual irrigation systems have fallen into disuse. There are, nevertheless, some 1,500 authorized projects of this type in Alberta and Saskatchewan serving an estimated area of 48,000 acres. In Manitoba, where rainfall conditions are somewhat better than farther west, no largescale irrigation developments have yet taken place. P.F.R.A. water-development work in this Province has been largely confined to water-storage projects.

The total area now under irrigation on the Canadian prairies, therefore, amounts to some 656,000 acres including large and small developments. The completion of the St. Mary-Milk Rivers Project will bring the area of irrigated land to more than $1,000,000$ acres.

Table 43 shows the larger irrigation developments in Alberta. In addition, there are 630 private irrigation schemes, with a total irrigable area of 70,813 acres.

${ }^{1}$ Includes other small projects.
Irrigation in British Columbia.-Irrigation may be said to have officially iun almost as soon as there was an organized authority in this territory. The $t$ right to the use of water for agricultural purposes was granted in 1858, three aths after the passing of an Act by the Imperial Government establishing the wn Colony of British Columbia.
During the early years of settlement in the Province, irrigation was used tly for raising hay, in valley bottom lands where it was easy to divert water of the streams. By the end of the century the settlers were becoming bolder, les were longer and water was being conveyed to the benches and higher lands, ;ially where it became apparent that the climate and the benchlands were ble for growing tree fruits on a commercial scale.
Jompanies were formed to buy up large holdings, subdivide them into small ls, and construct irrigation systems to supply them with water. Most of companies have passed into history and the irrigation systems they started jeen taken over and operated by Improvement Districts under the Water Act Municipalities. At first these systems were constructed largely with earth is and wooden flumes, but as the large water losses from such structures $\rho$ apparent, many ditches have been lined with concrete or asphalt, and wooden
flumes replaced with metal or concrete, so that to-day the large irrigation systems of the Province are good examples of hydraulic structures. Owing to the generally rugged topography, irrigation engineering has been faced with many difficult problems, so that, compared with other parts of the world, many interesting features will be found which are peculiar to the varied topography that had to be traversed. The generally prevalent condition of agricultural development following, of necessity, the rather narrow valleys does not lend itself to simple and cheap irrigation systems.

Due to the wide variation in climate and soil types found throughout the Province, three methods of irrigation are in use. Sprinkling is practised in fairly humid areas, where the precipitation is moderate but insufficient during the growing period, also on heavy soils, and on rough topography. In the dry areas delivery by ditch or flume and distribution over the ground by furrows is general for fruit and vegetable crops. Irrigation by flooding is common in stock-raising areas on hay meadows. Most of the irrigation is by gravity supply, but pumping from lakes and rivers is also practised. In general, pumping is a more costly method and only warrantable in favoured areas for the growing of high-priced specialty crops. Any general reduction in power pumping rates would probably induce increased irrigation by pumping.

Irrigable and Irrigated Lands.-Estimates of the area of irrigable and irrigated lands of the Province are only approximate, as in the case of the former no over-all complete survey has ever been made, and in the latter case apart from the organized irrigation districts and companies for whom records are available, there are hundreds of individually irrigated farms and ranches for which no exact figures exist. The best estimate of irrigated lands in the Province is 150,000 acres, but approximately 35,000 acres of this are inadequately irrigated. The provision of additional storage dams and the improvement of conveying works to reduce seepage losses would provide water for much of this land. An additional 85,000 acres are under water licence and capable of being irrigated. A large proportion of this area will be under irrigation by individual effort by the time the works called for under the licences are completed in the next few years. In addition, there are some 200,000 acres which could be brought under irrigation, but at a cost greater than that of existing works.

Table 45, based on the best available figures, shows the irrigable and irrigated areas at present under the control of public and private organizations.

Nearly 100,000 acres are irrigated by individual effort, the majority being hay and grain for stock-ranches, and for field crops.

The Conservation Fund.-The original water companies, subsidiaries of land selling companies, built their irrigation systems more with an eye to selling land than with any thought of permanence and serviceability, so that when the water users at a later date were forced for their own protection to acquire and operate the systems, and formed irrigation districts, they were immediately faced with a costly program of replacements and reconstruction, and appealed to the Provincial Government for help. While the first irrigation districts were not incorporated until 1920, the Conservation Fund was set up in 1918 to provide funds for assisting towards reconstruction, the moneys so expended to be a charge against the lands involved.

It was intended to be a revolving fund out of which further loans could be made as the earlier ones were paid off, but after 1922, falling fruit prices with consequent difficulty in collecting revenues by the districts resulted in their defaulting. In 1928, Legislative relief was granted the districts which reduced their indebtedness by about 25 p.c. The depression years of the 1930's increased their financial difficulties and in 1933 a further reduction of approximately 45 p.c. of the remaining indebtedness was granted. During the next five years the districts failed to pay the reduced instalments, and also failed to properly maintain their systems. This condition brought about the 1938 adjustment, providing for a substantial reduction of the instalment payments to the Conservation Fund on condition that the districts expended or set aside certain sums for replacement of works. This arrangement is still in effect, although the payments under it have been reduced in some cases on the plea of special circumstances.

The present status of irrigation loans under the Conservation Fund is as follows: total loans, $\$ 3,314,283$; repayments received, principal and interest $\$ 1,571,988$; total relief granted, principal and interest, $\$ 2,859,278$.

## Subsection 12.-International Agricultural Statistics

The chief source of international agricultural statistics prior to the Second World War was the International Institute of Agriculture at Rome. Compilations of the Institute were interrupted during the war years and it was not possible to carry in the Year Book statistics of world production of cereals and potatoes, trade in wheat and flour, and numbers of live stock in principal countries. However, the Food and Agriculture Organization of the United Nations has taken over the work formerly carried on by the International Institute of Agriculture in the field of agricultural statistics. Accordingly, it is expected that world statistics for many important food and agricultural commodities again will become available during 1947 and will appear in the 1948 Year Book.

The following table is summarized from a report of the Office of Foreign Agricultural Relations, United States Department of Agriculture, and gives the 1946 wheat acreage and production by leading wheat-producing countries of the world, compared with 1945 and the average for 1935-39.

## 46.-Estimated Acreages and Production of Wheat in Specified Countries, Year of Harvest, 1945 and 1946, with Averages, 1935-39

Note.-Estimates for countries having changed boundaries have been adjusted to pre-war boundaries except as noted. Years shown refer to years of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere, which immediately follow; thus, the crop harvested in the Northern Hemisphere in 1946 is combined with the Southern Hemisphere harvest which began late in 1946 and ended early in 1947. Figures throughout the table refer to harvested areas so far as possible.

${ }^{1}$ Totals include allowance for missing data for countries shown and for other producing countries not shown. ${ }^{2}$ Estimates for 1944 to date include Southern Dobrudja and are, therefore, not strictly comparable with earlier years shown. ${ }_{3}$ Estimates for 1945 and 1946 are adjusted to pre-war boundaries. ${ }^{4}$ Figure for 1935 only. ${ }^{5}$ Average of less than five years. ${ }^{6}$ Includes Lebanon; estimates for Syria and Lebanon not shown separately prior to 1944 .

## CHAPTER XIII.-FORESTRY*

## CONSPECTUS

The forests of Canada cover a vast region in the north temperate climatic zone, reaching from the Atlantic Ocean to the Pacific; they extend northward from the International Boundary to beyond the Arctic Circle. Wide variations in climatic, physiographic and soil conditions cause marked differences in the character of the forests in different parts of the country, hence more or less well-defined forest regions may be recognized.

## Section 1.-Forest Regions

At pp. 184-188 of the 1941 edition of the Year Book the forest regions of Canada are separately described, together with the dominant and associated tree species common to each.

## Section 2.-Important Tree Species

In Canada there are more than 125 tree species of which 33 are conifers, commonly called "softwoods" While the number of deciduous or "hardwood" species is large, only about a dozen of these are of much commercial importance in the lumber trade, and about 80 p.c. of the volume of merchantable timber is made up of softwoods.

Spruce.-The five native spruces are all of commercial importance, furnishing over one-quarter of the total production of lumber in Canada and over two-thirds of the total quantity of pulpwood consumed in Canadian pulp mills. Light colour, freedom from resin, and the desirable characteristics of its fibres make spruce the premier pulpwood of the world. The wood of all the spruces, when seasoned, is practically tasteless and odourless and, consequently, is much in demand for food containers. It is very widely used for construction, interior finish, boxes and crating, and many specialty purposes. Of the five native spruce species, the white spruce (Picea glauca) is the most abundant and the most important commercially. With black spruce (Picea mariana), it ranges from the Atlantic Coast to Alaska, extending to the limit of tree growth. The black spruce is a smaller, slowergrowing tree, often confined to swampy sites and reaching sawlog size only under

[^143]

favourable conditions of growth. It is particularly valuable for pulp, as its wood is heavier than that of other spruces. The red spruce (Picea rubens) is confined to the Province of Quebec and the Maritime Provinces and its wood is similar to that of the white spruce, with which it is commonly marketed. The western species, Engelmann (Picea Engelmanni) and Sitka spruce (Picea sitchensis) are confined to the interior and coastal regions of British Columbia, respectively. Engelmann spruce is similar to white spruce. Owing to the large size of the trees, Sitka spruce lumber may be obtained in greater dimensions free from defects than that of the other spruces. It is therefore used extensively in aircraft.

Pine.-There are nine pine species native to Canada, six of which are of commercial importance. Eastern white pine (Pinus Strobus) is the most valuable coniferous wood in Canada and for many years was the most important in point of quantity of lumber sawn and square timber produced. Owing to increased scarcity of good material, production has fallen and is now surpassed by spruce, Douglas fir and hemlock. The wood of the white pine is soft, easy to work, and has the valuable quality of holding its shape with a minimum of shrinkage or swelling, making it a most valuable wood for patterns. The western white pine (Pinus monticola) is similar in most respects to the eastern species but does not grow in pure stands as the eastern species often does. It is confined to the Province of British Columbia, while eastern white pine is found from eastern Manitoba to the Atlantic Coast.

The wood of the red or Norway pine (Pinus resinosa) of Eastern Canada is valued as structural timber as well as sawn lumber. It is easy to work and seasons uniformly, being slightly stronger than eastern white pine. Ponderosa pine (Pinus ponderosa) occurs in Canada only in the southern interior of British Columbia, where it is a valuable source of lumber for boxes and other requirements of the fruit industry of that region. The sapwood yields a fine quality lumber, light in weight, fairly soft, similar in texture to white pine, and suitable for pattern stock, fine woodwork, and other exacting uses. The heartwood is considerably heavier than the sapwood. Jack pine (Pinus Banksiana) occurs across Canada from Nova Scotia to Alberta and the valley of the Mackenzie River, and is used in large quantities for lumber, railway ties, pit-props, and poles; the manufacture of certain kinds of pulp from jack pine is also well established. Trees that reach lumber size are often cut and marketed with other species, such as spruce. Lodgepole pine (Pinus contorta var. latifolia), found in British Columbia and western Alberta, resembles jack pine and is put to the same uses.

Douglas Fir.-Douglas fir (Pseudotsuga taxifolia) occurs in Canada from the east slope of the Rocky Mountains to the Pacific. It occurs commercially in the southern interior of British Columbia, but its main economic development is on the Pacific Coast. From the point of view of lumber production in Canada, it is second only to spruce. It is Canada's largest tree and is noted for its strength, relative durability, and the large dimensions of structural timber and clear lumber that can be obtained from it. It is used extensively for structural purposes, interior and exterior finish, flooring, and veneers for plywoods, as well as for railway ties and mining timbers.

Hemlock.-There are three hemlock species in Canada, two of which are valuable timber trees. The eastern hemlock (T'suga canadénsis) is abundant throughout its range in the eastern provinces but is not found west of the Province of Ontario.

The wood is used chiefly in construction, especially for house-framing and bridgeplanking, but it also supplies the demand for a moderately strong wood for many purposes, including railway ties and mining timbers, while its bark is a valuable source of tannin. Western hemlock (Tsuga heterophylla) is found in Canada only in the Province of British Columbia. It has always been used extensively for box shooks and for pulp, but in the past its use for lumber has been overshadowed by Douglas fir. More recently, however, its excellent lumber properties and large size have resulted in its increasing use for all but the heaviest construction.

The True Firs.-In the genus Abies-the true firs-there are four commercial species. Lowland fir (Abies grandis) and amabilis fir (Abies amabilis) occur on the ceast of British Columbia, alpine fir (Abies lasiocarpa) in the mountainous regions of British Columbia, and balsam fir (Abies balsamea) in Northern and Eastern Canada from the Atlantic to the Yukon. The wood of the four species is similar and is put to much the same uses, although the two western-coast species attain a much larger size than the others. The true firs usually grow in stands intermixed with spruce or hemlock and are usually cut with these woods, no differentiation being made between the species when marketed as Iumber. They provide excellent wood for pulp and are used extensively for that purpose.

Cedar.-There are two species of the genus Thuja native to Canada. They are both of commercial importance, each in its own range. White cedar (Thuja occidentalis) is found from the Atlantic to the southeastern part of Manitoba, but does not extend as far north as some of the other conifers and is nowhere very plentiful, being confined to moist locations. Western red cedar (Thuja plicata) is found only in British Columbia. It is one of the giants of the Pacific Coast, being surpassed in size only by Douglas fir. Both the eastern and western species are extremely durable, surpassing the other conifers in this respect, and are used extensively as poles, posts and lumber, and generally where resistance to decay is important. The cedars produce over 70 p.c. of the wooden shingles cut in Canada. Western red cedar provides important amounts of long, clear, straight-grained material, and is being increasingly used for plywood. The light weight and durability of the wood make it especially suitable for construction of boats and canoes.

Tamarack or Larch.-Of the three native larch, two are of commercial importance. The eastern species (Larix laricina) is found in every province of the Dominion east of the Rocky Mountains, and grows usually in swampy locations. It is one of the strongest softwoods of Eastern Canada. While not an important lumber species, it is valuable for uses such as railway ties, piling and boat-building on account of its hardness, strength and durability. The western larch. (Larix occidentalis) is found only in the southern interior of British Columbia and grows to a greater size than the eastern tamarack. The wood is hard, heavy and strong, resembling Douglas fir in these respects, and is used for railway ties, small structural timber, piling, and exterior and interior finish.

Birch.-Birch is Canada's most important hardwood. There are seven native species, but only two are of much commercial importance. Yellow birch (Betula lutea) grows in Ontario, Quebec, and the Maritime Provinces, and is the source of valuable lumber for flooring, furniture, cabinet-work and interior finish. It is used extensively for veneers and plywoods, as well as for railway ties. It is a hard, heavy, strong wood that works easily and takes a smooth finish.

The white birch (Betula papyrifera) has a wider distribution, being common from the Atlantic to the Pacific Coasts and is more abundant throughout its range than yellow birch. The tree does not attain the size of yellow birch, nor is the wood as heavy and strong. When of sufficient size it may be sawn into lumber, but for the most part its use is restricted to spoolwood and certain classes of turnery. The tough, easily split bark of this tree was used by the Indians for centuries for covering their canoes. A variety (Betula papyrifera var. commutata) occurs on the east and west coasts and in British Columbia where it often reaches sawlog size and is used for furniture and plywood.

Maple.-The maple is the second most important hardwood in Canada and is represented by ten native species scattered from the Atlantic to the Pacific. The sugar maple, or hard maple (Acer saccharum), produces the most valuable lumber and, like birch, is used for furniture, vehicle stock and interior finishing. The sap of this tree is the principal source of the maple syrup and sugar of commerce. Red maple (Acer rubrum), often called "soft" maple, has much the same uses as sugar maple except for exacting requirements of hardness and strength. Broad-leaved maple (Acer macrophyllum) occurs on the British Columbia coast, where it is manufactured locally into furniture and flooring.

Poplar. - The poplar species (Populus), of which there are eight native to Canada, are widely distributed, one or more species being found in every province. The tree is fast-growing and produces a light-coloured, general utility wood of light weight. It is being used increasingly for veneers, match splints and boxes, and in the manufacture of pulp, particularly soda pulp. In the Prairie Provinces, where other species are not plentiful, it is also used for fuel.

Basswood.-Basswood (Tilia a mericana) is a valuable wood of light weight for cabinet-work of all kinds, cigar boxes and, in fact, wherever stability is required in a soft homogeneous hardwood. Its distribution is limited to the southern part of Eastern Canada.

Elm.-Elm is represented in Canada by three species, white elm (Ulmus americana), slippery elm (Ulmus rubra), and rock elm (Ulmus Thomasi). The wood of these species is hard, heavy and tough, and is used for cooperage, boxes, veneer products for baskets and cheese boxes, vehicle stock, agricultural implements, and hockey sticks. Rock elm is a particularly valuable wood in boatframing.

Minor Species.-Beech, oak, ash and red alder are all cut into lumber in various parts of the Dominion but, because of small supply or limited range, do not reach great commercial importance.

## Section 3.-Forest Resources

The forested area of Canada is estimated at $1,290,960$ sq. miles, or 37 p.c. of the total land area. In comparison, only 16 p.c. of the land area is considered to be of present or potential value for agriculture, and only 7 p.c. is now classed as "improved and pasture" The forested area within the boundaries of the nine provinces totals $1,167,960$ sq. miles, or 58 p.c. of the provincial land area. About 478,000 sq. miles of the existing forests are classed as "unproductive" They are made up of small trees which cannot be expected to reach merchantable size because they are growing on poorly drained lands, or at high altitudes, or are subject to other adverse site conditions. These unproductive forests, however, perform
valuable functions. They help to protect watersheds and conserve water supplies; they provide fuel and building materials to natives and travellers in remote areas; and they are the habitat of valuable fur-bearing and game animals.

The productive forests covering more than 813,000 sq. miles are considered capable of producing continuous crops of timber suitable for domestic and industrial purposes. A considerable proportion of these forests is not yet accessible to commercial operations, but constitutes a valuable reserve for the future. About 435,000 sq. miles of productive forests are considered to be economically accessible at the present time. One-half of the productive forest area bears trees large enough for use as sawlogs, pulpwood or fuel wood, and the other half is occupied by young growth of various ages, kinds and degrees of stocking.

The total stand of timber of merchantable size is estimated to be $311,201,000,000$ cu. ft., of which $191,347,000,000 \mathrm{cu} . \mathrm{ft}$. is accessible. These cubic volumes are volumes of wood that can actually be used. Expressed in commercial terms, the accessible timber is made up of $250,250,000,000 \mathrm{dd}$. ft . of logs in trees large enough to produce sawlogs and $1,684,710,000$ cords of smaller material suitable for pulpwood, fuel, posts, mining timbers, etc.

Forest inventory surveys are conducted by the Dominion and Provincial authorities. Inventories for Manitoba and New Brunswick have been completed by the Dominion Forest Service and those of Nova Scotia and Prince Edward Island are now in progress. Publications describing the forest resources of Ontario and British Columbia have been issued by the forest authorities of those Provinces.

## 1.-Estimate of Total Stand of Timber in Canada, by Type and Size, and by Provinces and Regions

| Province and Region | Conifers |  |  | Broad-Leaved |  |  | Totals |  |  |

[^144]
## NOXIOUS FOREST INSECTS AND THEIR CONTROL

Nore.-This article has been prepared by J. J. de Gryse, Chief, Forest Insect Investigations, Division of Entomology, Department of Agriculture, Ottawa. This account of the activities of the Forest Insect Investigations Unit of the Dominion Division of Entomology would not be complete without acknowledgment of the generous co-operation received from numerous outside organizations, foremost among which are the Dominion and Provincial Forest Services, the Canadian Pulp and Paper Association, the Ontario Forest Industries Association, the Quebec Forest Industries Limited and the Canadian Lumbermen's Association. Special mention should be made of the assistance given by the Quebec Forest Entomological Service in the Dominion Forest Insect Survey. In all projects common to Canada and the United States, the closest contact has been maintained with the United States Bureau of Entomology and Plant Quarantine, the forest entomologists of the northeastern States and the several boards and committees organized by the industry for the promotion of forest insect control.

## Extent and Characteristics of the Problem

A sound appreciation of the losses caused by forest insects over a given period of time cannot be based only on an estimate of damage to productive forests because insect outbreaks in inaccessible stands may have an important bearing on the fate of commercial forests. A common but erroneous practice is to evaluate insect damage by a measure of dead or dying stands and to ignore the depreciation entailed by the ravages of insects which actually do not kill the timber but merely render it unfit for profitable utilization. Loss of increment resulting from repeated attacks of defoliators is rarely, if ever, taken into consideration. The same may be said of. loss of vitality, the effects of forest depletion on the so-called forest influences, the deterioration of fire-killed timber and of logs left in the woods. Increased fire risk in insect-killed stands, damage to stored stock, and even to manufactured articles, as well as a number of other factors should be taken into account to give a true idea of the destructive role played by insects affecting forests and forest products.

The losses thus sustained in Canada, as a result of insect depredations, although they cannot be accurately computed, are no doubt appalling. Some years ago an outbreak of the European larch sawfly destroyed practically all commercial larch stands in Eastern Canada. Since 1909, the spruce budworm has taken a toll of about $250,000,000$ cords of spruce and balsam. The eastern spruce bark-beetle, the hemlock looper, the jack pine sawfly, the black-headed budworm, the balsam woolly aphid, and several other species have all, at one time or another, appeared in destructive numbers over large areas. In some cases the changes brought about in the composition of the forest by insect outbreaks have been distinctly prejudicial to the commercial value of succeeding stands-more useful species having been replaced by less valuable ones. When fire follows in the wake of such outbreaks it may take centuries to repair the damage. At best, a merchantable forest crop, once lost, cannot be replaced in less than 50 to 100 years.

## Extent of Recent Losses and Insect Pests Causing Them

The Spruce Budworm.-The first authentic report of a spruce budworm outbreak in Canada dates back as far as 1807, when parts of Maine, New Brunswick and Quebec were affected. Information on this outbreak is rather fragmentary; how much damage was caused is unknown. Seventy years later another outbreak was active in the same general region. Damage was severe and extensive. This outbreak lasted probably about 4 or 5 years. Then, after a lapse of 30 years, the budworm again appeared on the scene. This was in 1909. It is difficult to under-
stand how very few people realize what has transpired in the Canadian forests since that date. One outbreak after another has occurred in an uninterrupted series. As previously stated, about $250,000,000$ cords of spruce and balsam have fallen prey to the budworm between 1909 and 1946. Statistics of this kind make little or no impression on our imagination. Let us put it another way. Suppose that all the spruce and balsam killed in Canada by the budworm in the past 37 years were sawn into $4-\mathrm{ft}$. logs. Suppose also that, after the fashion of piling a cord measure, we attempted to heap this wood in lots 8 feet long, 4 feet wide and 4 feet high, each pile being contiguous with the next. When our job is finished we would have a band. of wood 4 feet in height and 60 feet in width, completely encircling the earth at the equator.

The following statement shows the extent of the areas infested by spruce budworm during the period 1936-45:-

|  | Ontario | Quebec |
| :---: | :---: | :---: |
| Large portion of balsam, dead or injured beyond recovery | $\begin{aligned} & \text { sq. miles } \\ & .19,000 \end{aligned}$ | sq. miles |
| Balsam heavily attacked, beginning to die singly or in groups. | 24,500 | 15,520 |
| Total area seriously affected Total area lightly infested. . | $\begin{array}{r} 43,500 \\ 115,000 \end{array}$ | $\begin{aligned} & 18,880 \\ & 20,000^{1} \end{aligned}$ |
| Grand Totals. | 158,500 | 38,880 |

${ }^{1}$ Approximate.
These figures represent over-all measurements of the areas affected. They give no idea of the actual size of white spruce and balsam stands in these areas. The apparent spread eastward into Quebec, practically as far as the St. Maurice Valley, is the most important recent development in the spruce budworm situation.

To place a value in dollars and cents on these losses either to the Government in stumpage dues or to industry in raw materials, would be extremely difficult. Some parts of the destroyed forest had probably little or no commercial value, others could have yielded substantial financial returns. Such computations of direct losses, either in money or raw material, are little better than a post-mortem: they are apt to obscure our undertanding of the real issues involved. The repercussions of a budworm epidemic are felt for many years after the trees have died. Increased fire hazard is perhaps the most immediate effect. It is humanly impossible to control a fire in an area littered with dead trees, nor is it usually possible to confine it to that area. Such fires burn with unbelievable intensity, often causing serious damage to the site, after which floods and erosion put the finishing touch to this picture of desolation.

But the most far-reaching consequence of a budworm outbreak, and the one which should cause us more concern than any other, is the profound change in the composition of the succeeding stands. For years lumbermen, paper manufacturers, and foresters have noticed, with serious apprehension, the apparent inadequate regeneration of spruce and its consequent replacement by balsam in many forest areas. This state of affairs is by no means general, but it obtains in a great number of the most accessible localities. Failure of spruce regeneration is attributed to several causes inherent in the species: (1) inability of spruce seedlings to root in thick layers of moss, raw humus, or forest floor debris; (2) lower seed production than balsam (less frequent seed years); (3) lower degree of shade tolerance than balsam. Two external factors should be added; namely, certain methods of cutting, and the spruce budworm. The latter are interdependent to a considerable extent.

FLUCTUATIONS IN SPRUCE BUDWORM OUTBREAKS IN THE FORESTS OF EASTERN CANADA
$1909-44$

It has been observed, over and over again, that after a budworm outbreak, the percentage of balsam in the new stand is noticeably higher than it was in the old. The extraordinary accumulation of debris on the surface, while seriously hampering spruce regeneration, seems to offer no obstacle to the rooting of balsam. Root competition and competition for light further impede the growth of spruce that may succeed in becoming temporarily established. Generally speaking, the predominance of balsam is such as to reduce materially the possibility of its replacement by the residual spruce for several rotations if not forever. Under absolutely normal conditions, it is conceivable that sooner or later-in some localities-a spruce climax might develop from such antecedents. However, when repeated spruce budworm outbreaks enter into the picture, all such hopes vanish. It is a conservative estimate-probably an understatement--to say that, in many regions, any forest containing over 30 p.c. of balsam is more than likely to succumb to budworm attack upon reaching maturity. When this happens, not only the balsam but the greater part of the white spruce associated with it will be killed and the forest will enter a new and more advanced stage in the succession towards a pure balsam stand.

The European Spruce Sawfly.-In 1930 it was discovered that over an area approximately 2,000 square miles in extent, situated in the Gaspe Peninsula of the Province of Quebec, the spruce trees had been severely defoliated by the larvæ of a sawfly. Specimens submitted to specialists in the United States and in England were determined as Gilpinia hercynice (Htg.), a species native to Europe. By 1938 the area of heavy infestation had increased to approximately 12,000 square miles and the insect was known to be present in greater or lesser numbers throughout Eastern Canada as far west as Sudbury, Ont., and in the United States as far south as New Jersey.

The sawfly attacks all species of spruce grown in Canada. The larvæ feed principally on the old needles and ysually do not attack the new growth until the supply of old needles has been exhausted. This type of feeding has the effect of retarding the decadence and death of infested trees. The ability of the tree to survive repeated attacks of the sawfly is offset somewhat by the fact that the insect is exceedingly prolific. Its progeny consists almost exclusively of females, and mating is unnecessary for fertilization of the eggs. The sawfly, moreover, is able to survive the most rigorous climatic conditions and, being of European origin, was at first almost completely free from attack by parasites. The main control factors operating against it, at that time, were small mammals, principally mice and shrews. These fed upon the cocoons in which the larvæ overwinter under the debris on the forest floor. Although perhaps between 40 and 50 p.c. of the cocoons was destroyed yearly in this way, the ultimate control effected by mammals, birds, native predacious and parasitic insects, was not sufficient to prevent a marked yearly increase in the intensity and spread of the infestation.

Estimates made in 1939 showed that, in the heavily infested areas on the upper Cascapedia River, 24.8 p.e. of the volume of white spruce and $27 \cdot 4$ p.c. of the black spruce were killed by the sawfly. These figures do not include the mortality due to an apparently independent outbreak of the eastern spruce bark-beetle between 1931 and 1934. During this period, $44 \cdot 4$ p.c. of the white and $5 \cdot 6$ p.c. of the black spruce were destroyed by the beetle, giving a total mortality for the region of about 69 p.c. of white and 33 p.c. of black spruce. In other parts, the mortality rates varied considerably from locality to locality. However, the number of trees actually killed by the sawfly did not give a true appraisal of the situation; the chances of
survival of the remaining trees constituted an equally, if not more, important factor. In many extensive areas in Gaspe and elsewhere the probability of recovery was gradually decreasing year by year and in the older centres of infestation it was virtually nil. Then a remarkable thing happened. In 1936, entomologists studying the spruce sawfly infestation began to discover indications of the presence of a mysterious disease which caused a high percentage of mortality among the larvæ in a number of localities. This disease appeared to be caused by a virus and spread with phenomenal rapidity over practically the entire range of the distribution of the sawfly. In heavy infestations the mortality of larvæ reached as high as $99 \cdot 7$ p.c. By 1942, the spruce sawfly problem had, for the time being, been relegated to secondary rank in economic importance.

The Jack Pine Budworm.-While the European spruce sawfly was gradually making inroads into the forests of Eastern Canada, the jack pine budworm, a native species, began to appear in outbreak form in northwestern Ontario and Manitoba. Although there can be no parity between the two infestations from the standpoint of the national economy as a whole, the jack pine budworm presents a problem of the first rank for the lumber and paper industries in the affected territory.

The jack pine budworm is either a new species or a biological race or strain of the notorious spruce budworm from which it differs in habits rather than in form. It exhibits such a marked preference for pine instead of spruce or balsam that, from an economic standpoint, it must be considered as constituting a distinct problem. The principal injury caused by the budworm consists in the defoliation of the host-tree. Usually the tops of the crowns suffer more severely than the lower parts, resulting in the formation of stag-heads which are a striking characteristic of infested stands. Repeated heavy defoliation or complete defoliation before the formation of the next year's buds is fatal. Although large trees are likely to succumb first, young trees growing under them are frequently killed by larvæ which drop from the older trees. Thus far, comparatively few trees have been killed outright, but the production of stag-heads is very general in heavily-infested stands and is likely to favour the entrance of rots and secondary insects which may ultimately either kill the tree or render it unfit for utilization except as firewood.

## The Approach to the Problems Involved

The widespread belief that such insects as the spruce budworm, the spruce bark-beetle, the European spruce sawfly, etc., are inherently noxious and that the sole reason for their existence is to cause calamities, should be deprecated "in season, and out of season". In the natural order of things, insects are part and parcel of that great economy commonly referred to as the "balance of nature" The forest is a vast biological unit composed of plants and animals; it is perpetually subject to changes through the succession of species and individual organisms competing with each other for a place in the sun, and its composition at any one point of time is the resultant of the complicated interaction of all its vegetational and animal components, itself again dominated by climatic and edaphic conditions. In this intricate scheme of relationships insects play a dual regulatory role. Some, namely the herbivorous species, act upon the vegetation while others, endowed with carnivorous instincts, control the excessive multiplication of the first. Vegetarian insects may be roughly divided into two great classes: those that feed upon healthy, living trees and are therefore designated as primary; and those that attack only sickly, dead, or dying trees and, as such, are usually considered as secondary.

From the standpoint of man's economy, the primary insects are, potentially at least, the most injurious, and the majority of so-called destructive species are found among them. From the standpoint of nature's economy, they really act as useful protectors of those tree species whose existence becomes threatened by the undue dominance of others. Generally speaking, secondary insects, by hastening the death of weakened trees or by contributing to the decomposition of dead trees, are useful agents in the regeneration of forests, by the removal of trees that have reached the natural limit of their existence.

When, therefore, we refer to insects as pests or destructive enemies of the forest we speak in terms of human relationships and we forget that, more than often, man himself is the prime mover in the calamities which are visited upon him. Knowledge of insect ecology is still very imperfect and it would be absurd to pretend that all the causal relationships underlying the rise and fall of any one insect outbreak can be determined. However, the fixing of man's responsibility is, in many cases, a comparatively simple matter. Improvident and reckless exploitation, ill-planned reforestation, destruction of wild life, fire, and the importation of insect species from foreign lands are broad categories under which man's offences may be readily classified. In planning measures of prevention and control, our first concern must be the regulation of man's activities and the correction of his mistakes. In some cases, appropriate legislation is the only course, in others the education of the individual will be more effective. In any event, whether legislative or educational procedure is to be adopted, it should be based at all times upon as thorough a knowledge of natural processes as it is possible to obtain.

## Dominion Government Organizations for and Method of Dealing with the Problem

The study of forest insect problems in Canada is entrusted to the Forest Insect Investigations unit of the Division of Entomology, Science Service, Department of Agriculture. Forest entomology, as distinct from other phases of entomology, became a special section of the Dominion Entomological Service in 1911 and was formally established as a division in 1916. In the course of the recent general reorganization of the Department of Agriculture, forest entomology was ranked as a unit or section of the Division of Entomology. The headquarters of this service is at Ottawa and laboratories are maintained at Ottawa, Ont.; Sault Ste. Marie, Ont.; Fredericton, N.B.; Winnipeg, Man.; Indian Head, Sask.; Vernon, B.C.; and Victoria, B.C. Sub-laboratories are operated at Laniel, Que.; the Petawawa Forest Experiment Station at Chalk River, Ont.; Trinity Valley, B.C.; and Cowichan, B.C. Temporary field stations and camps exist at a number of places throughout the Dominion. The personnel engaged in forest entomology consists of 20 permanent employees, 138 temporaries, and a number of labourers who are hired whenever need for their services arises. Recommendations for increase in permanent staff have been submitted; the greater part of the present permanent staff consists of officers specially trained in entomological research. The work accomplished by the unit may be classified under four headings: surveys, fundamental studies, emergency projects and control operations.

## Surveys

Surveys provide the basic information both for fundamental studies and for the treatment of emergencies. Not only are they indispensable in the timely discovery of incipient outbreaks, but they furnish a systematic inventory of assets
as well as liabilities in the rational management of the forest insect fauna. In view of the enormous expanse of territory to be covered, any survey system of this kind must rely on the close co-operation of all parties interested in forest conservation. An efficient organization has been in operation in Canada since 1936. Practically all the important government and commercial agencies concerned with forestry or forest exploitation take an active part, and extensive use is made of their personnel (approximately $2,500 \mathrm{men}$ ) in the collection of information. The country has been divided into five regions roughly corresponding to some of the natural divisions of the forest. In each of these a central laboratory serves as a clearing house for specimens and information received. The complete results for the entire Dominion are collated yearly at the Ottawa headquarters. At present, the system is based on the collection of samples of live insects and the submittal of concise, pertinent reports by rangers and wardens. All specimens are reared at the various laboratories receiving them. A wealth of information on insect conditions, heretofore unavailable, has already been collected in this way and is being used for further study and for practical application in control operations. An idea of the progress made may be gained from a comparison of the number of reports received during the years 1936-44.

| Year | No. of Reports | Year | No. of Reports | Year | No. of Reports |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1936. | 528 | 1939. | 8,310 | 1942. | 13,210 |
| 1937. | 3,703 | 1940 | 10,081 | 1943. | 10,254 |
| 1938. | 5,117 | 1941. | 11,326 | 1944. | 10,238 |

The instruction of forest rangers on making observations and insect collections is an important phase of this work. Whenever possible, short courses are given at various points during the winter or spring and these are supplemented by field demonstrations throughout the summer season.

Seventeen forest insect rangers were appointed by the Dominion Government in 1945 for the express purpose of directing the field work of the rangers employed by the Provincial Services and the forest industries. In 1946, an additional 25 specially trained rangers were added to the original number and, eventually, a corps of approximately 75 men will be available for this work throughout the Dominion. Besides instructing and guiding the regular forest rangers, these forest insect rangers will make special collections and reports in their respective territories and will be employed singly or in groups on projects of many kinds, such as estimating damage, laying out sample plots, rearing insect material, and supervising mass collections whenever the occasion demands.

## Fundamental Studies

Fundamental studies are designed particularly with a view to unravelling the mysterious maze of relationships which underlies the fluctuations in insect populations. Although, at present, they are purely scientific in scope, there cannot be the least doubt that ultimately they will lead to eminently practical results in the prevention and control of insect outbreaks. The thorough investigation of the biotic and physical factors influencing insect behaviour and reproduction will eventually eliminate much that is now empirical and uncertain from the practice of forest entomology. In the future all such fundamental studies will be conducted by the personnel of the laboratory at Sault Ste. Marie, Ont. This laboratory was erected in 1945 by the Department of Lands and Forests of the Province of Ontario and has been placed at the disposal of the Dominion Department of Agriculture with
the understanding that the institution will be operated jointly by the two Departments concerned. The building and its maintenance are contributed by the Provincial Government, while equipment and staff are provided by the Dominion. A Board, consisting of representatives of both Departments, acts as the co-ordinating agency. The erection of this new laboratory marked one of the most important developments in forest entomology in Canada. The over-all dimensions of the structure are 150 feet by 64 feet. Two refrigerator rooms and four air-conditioned rearing rooms are located in the basement together with the machinery required for their operation. Storage space for field and laboratory equipment, a photographic room and a laboratory equipped with incubators of various types to be used in special experiments occupy the remaining space underground. The ground floor contains three administrative offices, a combined library and lecture room, a large general laboratory, five private laboratories, a drafting room and a spacious hall which serves as a museum. Advantage has been taken of all known advances in laboratory construction and the building itself is modern in design.

Unfortunately, owing to the scarcity of adequately trained forest entomologists in this country, it may take several years to bring this laboratory to the peak of its efficiency. Two sub-laboratories at Petawawa, Ont., and Laniel, Que., are engaged in field studies of ecological factors: the first is concerned with forests under intensive management; the second with forests under more or less natural conditions.

## Emergency Projects

The last subdivision of activities in forest entomology is the one which deals with emergencies or, in other words, the problems of the hour. That it should have a more universal, popular appeal than the other two is readily understood. Sudden and spectacular outbreaks of insects, whether of local or country-wide importance, usually cause considerable alarm, and urgent appeals are made for immediate action. The entomologist must resort, at first, to his stock-in-trade, that is to say, to palliatives and remedies of more or less proved or even sometimes uncertain value. He must do as best he can and, in the meantime, make use of every opportunity to increase his knowledge and improve his methods. For this reason, any extensive operation in forest-insect control is always accompanied by a thorough-going study of the bionomics of the species involved.

## Control Operations

Control operations may be broadly classified as silvicultural, biological, chẹmical and mechanical. Mechanical and chemical methods have only a limited application under conditions such as prevail in the Canadian forests. In nurseries, plantations, small parks and resorts, and in small-scale operations in the forest, they have a definite place. In recent years some of them have been successfully employed in the control of bark-beetles by the burning of brood trees; in the prevention of injury from wood-borers by brushing over log piles and immersion of logs in water; in the reduction of hemlock-looper and spruce budworm infestations by means of poisons distributed from aeroplanes. It is becoming increasingly evident that silvicultural and biological methods offer the best solution of the majority of our forest-insect problems. At the same time, it should be realized that usually a combination of several methods is required to attain the best results as it is a serious but common mistake to place too much confidence in the efficacy of any one single procedure.

[^145]First among these is the fact that operators generally have not arrived at a realization of either the necessity or the advantages of rational silvicultural practices. In other words, they do not consider them profitable under the present conditions. This is no doubt due, primarily, to the fact that virgin stands are still available. As time goes on and as the depletion of the forest progresses, the present attitude towards silviculture in commercial forestry will gradually become altered; in fact, some companies are already looking towards scientific management of their forests with a view to ensuring continuous production. The second difficulty arises from the necessity of having to admit that knowledge of the factors involved is, as yet, extremely rudimentary. One principle seems to be fairly well established, namely, that the application of cultural practices will neither be effective nor profitable in the prevention or reduction of insect infestations unless the conditions that are favourable to the growth of trees are also, at the same time, either unfavourable or less favourable to the development of insects. Experience has shown that, in many cases, such a mutual inverse relationship exists. But there are exceptions. Other generalizations concerning the composition of the stand, the influence of site, density, crown cover, age, cutting methods, etc., cannot be made without considerable caution. The characteristics of each insect, of each tree species, and of each locality need to be investigated.

Cultural practices have been recommended in the case of the spruce budworm, the jack pine budworm, the bronze birch borer, the white-pine weevil, the locust borer, and many other insect pests of the forest; very often, however, many years will be required before such recommendations can be put into practice.

Recently, as a result of recommendations of the Advisory Committee on Forest Entomology and Pathology of the Woodlands Section, Canadian Pulp and Paper Association, arrangements have been made to establish an area in northern New Brunswick for the investigation of the problems of managing a balsam-spruce forest so as to prevent, or reduce to a minimum, loss from spruce budworm outbreaks. The Green River watershed appeared particularly suitable for several reasons, not the least of which was the willingness of one of the leading pulp and paper companies operating in this area to co-operate in the work. This Company has given every assistance possible by making available their records and maps and facilitating examination of the region.

A committee was appointed to plan the work, to study the results, and to make recommendations regarding the management of the area.

The original purpose of the project was to determine for a specific area the kind of management necessary to produce and maintain resistance to budworm outbreaks. This cannot be considered separately from the other objects of management, all of which contribute to the ultimate end, namely, profitable continuous operation of the area. Sustained yield will be impossible if periodic outbreaks are allowed to destroy a large part of the forest. At the same time, the methods used to create resistance to insect damage must also give protection from wind, fungi and fire, and produce the maximum practicable growth of the kind of wood needed. They must aim at regulating the cut so as to create a forest with a distribution of age classes which will permit approximately equal annual cuts of mature timber in the future.

Biological Control.-Of late, most important advances have been made in biological control. Although the use of natural enemies, more particularly insect parasites and predators, in fighting destructive insects has been practised for
centuries in many countries, it is only in comparatively recent years that this method of control has been placed on a scientific basis and applied on a large scale. The campaign against gypsy and browntail moths in the United States was largely responsible for this development in entomology.

Biological control has been used almost exclusively in dealing with insects accidentally imported from other countries. This was a most logical deduction from the realization that introduced insects constitute a special menace by the very fact that they are free from the parasites and predators which help in keeping them in check in the country of their origin and that, usually, they are quite immune from attack by native species. In Canada, the importation and propagation of foreign parasites have produced gratifying results. The European Lecanium scale and the satin moth have been successfully combated and a considerable measure of control has apparently been achieved in some areas by the introduction of parasites against the European larch sawfly. It was only natural, therefore, that when the problem of the European spruce sawfly arose, the importation of suitable parasitic species should have been resorted to at once. The seriousness of the situation fully warranted the expenditure of all the effort put forth in an attempt at stemming the progress of the infestation. In all, some 23 species have been tested to date and, although many of them have not been recovered in the field since the day of their liberation, this should not be interpreted too readily as being a sign of absolute failure. As a matter of fact, the latest reports tend to show that the efficacy of introduced parasites is very definitely increasing. The species most likely to play an important role in the control of the spruce sawfly are the cocoon parasite Dalbominus (Microplectron) fuscipennis (Zett.) and four larval parasites: Exenterus amictorius (Fab.), E. claripennis (Thom.), E. vellicatus (Cush.) and a species of Sturmia. It would appear that, for the present at least, Exenterus and Sturmia are more persistent than Microplectron when the numbers of the host are at low levels. In spite of many difficulties attending the collection of material for study and the consequent likelihood that actual parasitism may have been underestimated, more larval parasites were collected in 1945 than in the eight previous years combined. It seems quite probable, therefore, that at least the four abovementioned species will increase in effectiveness from year to year.

The extensive use of insect parasites in combating introduced pests in itself constitutes an argument for further investigation of similar practices in dealing with certain native species. Several lines of endeavour are more or less clearly indicated. Among others are: the study of the effect of species already introduced; new introductions for specific purposes, especially when it appears that native parasites are not adequate; and also more intensive studies of native parasitic fauna and of methods by which its present effectiveness might be increased. Some steps have already been taken in this direction and it may reasonably be expected that, in years to come, this phase of biological control will become increasingly important in the field of applied entomology. In their work on parasites, the forest entomologists co-operate closely with the Dominion Parasite Laboratory at Belleville, Ont. This Laboratory is one of the most modern institutions of its kind in the world. It is adequately equipped for the importation, propagation and liberation of parasites in large numbers.

In the paragraph on losses resulting from insect outbreaks, casual mention was made of the "virus" disease of the European spruce sawfly. The spectacular manner in which this malady contributed to the rapid decline of one of the most dangerous
forest pests has brought about a fairly general realization of the potentialities of disease organisms as factors in the control of insects. Although the case of the spruce sawfly disease is perhaps better known than any other by the general public, it does not stand alone in the history of entomology. In the past, too little attention has been paid to disease as a potential ally of man in his struggle against insects. Belief in the efficacy of diseases has been lacking partly because, under natural conditions, their spread is sometimes too slow to prevent serious damage by the insects and partly because many previous attempts at dissemination of disease have met with utter failure. In the opinion of experts, this lack of success should be largely attributed to lack of information concerning the viruses themselves and to failure to appreciate some of their unusual characteristics. In the light of advances made in the past few years, it seems safe to assert that any method by which these diseases may be speeded in their spread and activity is economically justifiable. With this object in mind, the Division of Entomology recently initiated a preliminary program of studies of diseases attacking the spruce sawfly and the black-headed budworm. In 1946, these studies were intensified and extended to include investigations of new possibilities in connection with the control of the spruce budworm and other major forest pests. It is planned to erect a special laboratory for the study and propagation of insect diseases at Sault Ste. Marie, Ont., in 1947.

Chemical Control.-The discovery of the insecticidal properties of DDT has greatly stimulated both research and public interest in the field of chemical control. DDT is one of the most powerful insect poisons known to science. Its uses will be many and varied. It is not likely, however, that it will ever become the "nostrum" into which it has been built up by well-meaning but ill-informed publicity. In forest entomology its uses will be limited, like those of any other insecticide, by the physical and financial difficulties attending its application. The best that may be hoped for is that it will serve as a temporary means of protection of comparatively small areas supporting valuable stands and, in some cases, as an efficient method of stopping outbreaks before they reach excessive proportions. The usefulness of spraying operations of any kind will always be conditioned by several prerequisites, especially by continuous and thorough forest-insect surveys.

## Preventive Measures

Control of Importation.-The realization that "an ounce of prevention is better than a pound of cure" is of particular value in dealing with foreign pests. For this reason, the Plant Protection Division of the Department of Agriculture exercises continual, unrelenting vigilance over the importation of plants and plant products from other countries. The function of this Division is well summarized in Regulation I of the Destructive Insect and Pest Act:-

All trees imported are subject to the requirement of a permit issued by the Secretary of the Destructive Insect and Pest Act Advisory Board. The importations must enter through one of several ports of importation established in Canada, and in addition to being accompanied by a certificate of inspection from the country of origin, are subject to reinspection on arrival in Canada either at the port of importation or after delivery to the premises of the importer. No importations may be released from customs without authority under the above Act involving an inspection or clearance certificate issued in Canada, in addition to the permit.
Special regulations are drafted whenever new emergencies arise and are so designed as to ensure as complete protection as is humanly possible against the introduction of dangerous insects and diseases into Canada. Several important interceptions of forest pests have been made from time to time under these regulations.

## Salvage of Affected Timber

No matter how efficient the organization for combating forest insects may become, it will always be necessary to devise ways and means for the profitable utilization of timber damaged in the course of infestations. Under present conditions, forest entomologists are required to give advice on salvage in connection with almost every infestation of importance. Full information concerning the present and future state of the forest is required as the basis for cutting plans whereby losses due to insects may be reduced to a minimum. To make pronouncements in such matters places a very grave responsibility upon the entomologist and requires a knowledge of all important factors in the development of outbreaks. It is practically necessary to study each outbreak and each area individually and to determine the condition of the forest, the severity of the attack, the probable rate at which the infestation will develop in the near future, as well as the rate of deterioration of the timber subsequent to death from insect attack. Therefore, in the collection of data, the co-operation of companies and forest services is indispensable. A system of regular reporting has been developed for this purpose. Special report forms have been prepared for those who wish to avail themselves of this service. Prognostications and recommendations are made on the basis of these reports, but it will be readily understood that exact measurements of probabilities are not always possible.

## The Forest Insect Control Board

The latest development in the organization of forest entomology is the establishment of the Forest Insect Control Board. On Sept. 14, 1945, this Board was officially set up by Order in Council P.C. 6018, under the Department of Reconstruction. Its object and functions are aptly expressed in the following extracts from the text of the Order:-
(1) That, in line with the conservation and development of natural resources, it is proposed to establish a Forest Insect Control Board for the purposes herein noted.
(2) That the losses through forest insects, particularly the current outbreak of the spruce budworm, represent a serious threat to the future of Canadian forest industries and that the seriousness of the situation warrants immediate special action.
(3) That, while the primary responsibility for the actual institution of control measures has been normally left with the Provinces, the epidemic has now reached the stage where national action is required.
(4) That the most direct course of action is to establish one body charged with the co-ordination of all efforts, whether Dominion, Provincial or otherwise, in an endeavour to control forest insect outbreaks.
(5) That, if established, it shall be the duty of the Board to take all possible steps, both separately and in co-operation with the Provinces and Forest Industry, to control forest insect outbreaks, particularly the spruce budworm.

According to the Order in Council, the Board is to be composed of representatives, one from each of the following: Department of Reconstruction and Supply, which representative will act as Chairman; Department of Agriculture; Department of Mines and Resources; Maritime Provinces, a representative to be nominated by joint agreement of the Minister of Lands and Mines of New Brunswick and the Minister of Lands and Forests of Nova Scotia; Province of Quebec, a representative to be nominated by the Minister of Lands and Forests; Province of Ontario, a representative to be nominated by the Minister of Lands and Forests; Province of British Columbia, a representative to be nominated by the Minister of Lands and Forests; Pulp and Paper Industry, a representative to be nominated by the President of the Canadian Pulp and Paper Association.

Subject to the approval of the Minister of Reconstruction, the Board shall have the power to enter into agreements with other Dominion Government Departments, provinces, municipalities, companies or other agencies or individuals for co-operative control measures.

The Minister of Reconstruction, under authority of Subsection 3 of Section 3 of the Department of Reconstruction Act, 1944, may, with the approval of the Governor in Council, appoint to the Board such temporary technical and other staff as in his judgment is required for the effective carrying out of the Board's duties and responsibilities and may obtain on loan the services of any officer of a Dominion Government Department required for these purposes.

## Section 4.-Forest Depletion and Increment

Depletion.-The average annual rate of depletion of reserves of merchantable timber during the ten years $1935-44$ was $3,227,000,000 \mathrm{cu} . \mathrm{ft}$. Of this total 74 p.c. was felled for domestic and commercial use and 26 p.c. was destroyed by fire and pests. Of $2,380,000,000 \mathrm{cu} . \mathrm{ft}$. utilized, 38 p.c. was used in sawlogs, 30 p.c. for fuel, 28 p.c. for pulpwood, and 4 p.c. in miscellaneous products. Between 75 and 80 p.c. of the total cut was of softwood species. Losses by fire averaged $347,000,000 \mathrm{cu} . \mathrm{ft}$. annually, and insects and tree diseases destroyed about $500,000,000 \mathrm{cu} . \mathrm{ft}$.

Forest Fires.-The area burned and damage caused by forest fires in 1945 were considerably less than the average for the previous ten years. Losses in British Columbia were, however, unusually heavy; nearly half of the area burned and more than half of the total damage for the whole of Canada occurred in that Province. Elsewhere the losses sustained were much below normal.

Summary statistics of fire losses are given in Tables 2 and 3, while fuller details by regions are given in the Annual Report of the Department of Mines and Resources for the fiscal year ended Mar. 31, 1946.

Increment.-Practically all of the depletion or drain on the forest is concentrated on the 435,000 sq. miles of productive forest which is classed as accessible, and'replacement of normal depletion by this area alone requires an average annual growth rate of about $12 \mathrm{cu} . \mathrm{ft}$. per acre. Complete estimates of the rates at which the forests of Canada grow are not yet available. The vast size of the country, the diversity of growing conditions, and the complex character of the forests themselves, place great difficulties in the way of estimating growth. Numerous studies have been made by the Dominion Forest Service which indicate, beyond reasonable doubt, that over considerable tracts annual growth exceeds 25,30 or even $40 \mathrm{cu} . \mathrm{ft}$. per acre per annum; however, there are other areas classed as productive on which the growth is much less.

Natural reproduction of forest tree species in Canada is fortunately prolific except in a few localities. After an area has been cut over or burned, young growth usually appears within a short time. Thus, the re-establishment of some sort of forest growth is a less difficult problem than it is in many other countries. There is, however, no guarantee that the species reproduced will be of the kinds desired by industry. Most of the wood used in Canada is softwood and, in general, softwood reproduction is fairly good; but there are considerable areas in which a combination of overcutting and repeated fires have resulted, not in the permanent destruction of the forest, but in the replacement of valuable stands by new ones of inferior type.

There is no room for doubt that the introduction of better methods of forest management, including the provision of more adequate forest protection, can make the forests of Canada more productive than they have ever been. It is true that stocks of very large trees, whose growth required upwards of 300 years, are disappearing and will not be replaced; but, though the forest industries of the future must use smaller logs than did those of the past, good forest management can make possible a considerable expansion of those industries as and when market conditions warrant.

The potential capacity of many forest soils to produce more usable wood in a given period than they have ever done in the past is already being demonstrated on such areas as the Dominion Forest Experiment Station at Petawawa, Ont., and on some of the better-managed farm woodlots.

## Section 5.-Forest Administration

## Subsection 1.-Administration of Dominion and Provincial Timber-Lands

Although the forest resources are, generally speaking, under the control of the provinces, forests of the National Parks, Forest Experiment Stations and the Northwest Territories and Yukon are administered by the Dominion Government.

In Canada, the general policy of both the Dominion Government and the Provincial Governments has been to dispose of the timber by means of licences to cut, rather than to sell timber-land outright. Under this system, the State retains ownership of the land and control of the cutting operations. Revenue is received in the form of Crown dues or stumpage (either in lump sums or in payments made as the timber is cut); ground-rents and fire-protection taxes are collected annually. Both ground-rent and Crown dues may be adjusted at the discretion of the Governments.

The Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island practically all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia 71 p.c. of the forest land is privately owned; nearly one-half of this is in holdings exceeding 1,000 acres. In New Brunswick nearly 50 p.c. is under private ownership. The percentages of privately owned forest land in the other provinces are as follows: Quebec, 7.2 p.c.; Ontario, 6.0 p.c.; Manitoba, 12.7 p.c.; Saskatchewan, 11.9 p.c.; Alberta, 77 p.c.; and British Columbia, $3 \cdot 4$ p.c.

## 4.-Forest Reserves in Canada, by Provinces, 1946

Norx.-Areas of National Parks (which are also forest reserves) are not included in this table, but may be found on p. 38.

| Province | $\begin{aligned} & \text { Dominion } \\ & \text { Forest } \\ & \text { Experiment } \\ & \text { Stations } \end{aligned}$ | Provincial Forest Reserves | Total |
| :---: | :---: | :---: | :---: |
|  | sq. miles | sq. miles | sq. miles |
| Prince Edward Island. | Nil | Nil | - |
| Nova Scotia...... |  |  | $172 \cdot 16$ |
| Quebec.......... | $7 \cdot 25$ | 5,371.00 | 5,378.25 |
| Ontario.... | $97 \cdot 10$ | 19,526.00 | 19,623•10 |
| Manitoba. | $25 \cdot 25^{1}$ | 3,799.09 | 3,799-09 |
| Saskatchewan. | Nil | 14, $070 \cdot 68$ | 14,070-68 |
| Alberta. | $62 \cdot 60$ | 14, $317 \cdot 23$ | 14, $779 \cdot 83$ |
| $\underset{\text { British Columbia. }}{\text { Northwest Territo }}$ | ${ }_{\text {Nil }}$ | $\xrightarrow{31,134 \cdot 05}$ | 31, 134.05 |
| Totals | $202 \cdot 11$ | 88,355.05 | 88,557-16 |

${ }^{1}$ Under National Park reservation and therefore not included in total.
Forest Lands under Dominon Control.-The forests under Dominion control are administered by the Department of Mines and Resources. The National Parks Bureau has charge of the National Parks, and the Bureau of Northwest Territories and Yukon Affairs administers the timber in those areas. The Indian Affairs Branch administers, in trust for the Indians, the timber within their reservations. The Dominion Forest Service has charge of the Forest Experiment Stations.

Forest Lands under Provincial Control.-With the exception of relatively small areas owned by the Dominion Government, the Crown lands and the timber on them are administered by the provinces in which they lie. As new regions are explored, their lands are examined and the agricultural land disposed of. Land suitable only for forest is set aside for timber production, and the policy of disposing of the title to lands fit only for the production of timber has been virtually abandoned in every province of Canada. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on a community basis. Information regarding forest administration in the individual provinces is given at pp. 234-236 of the 1942 Year Book.

Royal Commissions on Fórestry.-In 1944, a Royal Commission on Forestry was established by the Province of British Columbia with Mr. Justice (now Chief Justice) Gordon Sloan sitting as sole Commissioner. Over a period of two years the Commission held a series of hearings and received representations from the Government, the forest industries, and the public. In his report, the Commissioner presented a review of the whole forest situation in the Province; a number of the recommendations were implemented by legislation shortly after the report was presented. One recommendation which the Government considered unacceptable was that the administration of the forest resources of the Province should be placed in the hands of a more or less independent commission. The Premier of the Province stated that it was the view of his Government that administration should continue to lie with the Department of Lands and Forests.

In 1945, the Province of Saskatchewan appointed a Royal Commission, under the chairmanship of Frank Eliason, to conduct inquiries into forestry matters. Two interim reports have been published recommending more adequate fire protection and the curtailment of the annual cut on forest areas under provincial control to an amount roughly approximating one-twentieth of the estimated stand of merchantable spruce timber in each particular area. A new policy of timber disposal replaced the old practice of selling timber on a stumpage basis with a system of cutting and processing timber by contract. All timber for re-sale from Crown lands will remain the property of the people of the Province, and will be turned over at rail-head to the Saskatchewan Timber Board for marketing.

In 1946, the Province of Ontario appointed a Royal Commission, under the chairmanship of Major-General Howard Kennedy, C.B.E., M.C., to investigate all phases of Ontario's forest industries and to work out a comprehensive policy towards the economic development and perpetuation of the forest resources of the Province.

In the five other forest provinces, although formal public inquiry has not been considered necessary, forestry problems are receiving close attention from governments and from industry, and steps are being taken to improve and strengthen administrative and protective services.

## Subsection 2.-Forest Protection

Fire Protection.-The Dominion Government administers the forests of the National Parks, Forest Experiment Stations and the Northwest Territories and Yukon, and is, therefore, responsible for fire-protection measures therein. Each of the Provincial Governments, except that of Prince Edward Island, maintains a fire-protection organization co-operating with owners and licensees for the protection
of all timbered areas, the cost being distributed or covered by special taxes on timber-lands. In each province, with the exception just mentioned, provincial legislation regulates the use of fire for clearing and other legitimate purposes, and provides for close seasons during dangerous periods. An interesting development in this connection in the Province of Quebec is the organization of a number of co-operative protective associations among lessees of timber-limits. These associations have their own staffs, which co-operate with those of the Board of Transport Commissioners and the Provincial Government. The latter contributes money grants, and also pays for the protection of vacant Crown lands lying within the area of the associations' activities.

In the matter of forest-fire protection along railway lines, the provincial services are assisted by the Dominion Railway Act administered by the Board of Transport Commissioners. This Act gives to that body wide powers relating to fire protection along railway lines under its jurisdiction. Certain officers of the various forest :luthorities are appointed ex-officio officers of the Board of Transport Commissioners and co-operate with the fire-ranging staffs which the railway companies are required to employ under the Dominion Railway Act.

In certain districts in Canada, aircraft are used to good effect for the detection and suppression of forest fires. Where lakes are numerous, seaplanes or flying boats can be used for detection, and for the transportation of fire-fighters and their equipment to fires in remote areas. Radio-equipped aircraft are employed on forest fire-protection operations; these enable the observer to report the location of a fire as soon as it has been detected.

In the more settled areas with better transportation facilities, fire detection is carried out by means of lookout towers fitted with telephone or radio for reporting fires. Field staff and equipment are maintained at strategic points ready to deal with fires when they are reported. These staffs, when not engaged on fire control duties, are employed on the construction and maintenance of roads, trails, telephone lines, fire guards and other necessary improvements.

Portable gasoline pumps, which usually weigh between 60 and 100 pounds each, and linen hose are important equipment. These pumps can be carried to a fire by canoe, motor-boat, automobile, aircraft, pack-saddle or back-pack and can provide hose pressures up to 200 lb . per square inch, depending upon the elevation above and distance from the water supply. Hose lines over a mile in length are frequently used. Small hand-pumps supplied by 5-gallon portable containers are also used effectively in many cases.

In addition to these improved measures, the enactment of legislation has tended to reduce the fire menace. The establishment of close seasons for brush-burning, and seasons during which permits are required for setting out fires and for travel in the forests during dangerous dry periods, have been of enormous value as preventive measures.

Another important advance in forest protection is the development by the Dominion Forest Service of methods for the daily measurement of the actual degree of forest-fire danger. In the forest types and regions in which the necessary research has been completed the forest authorities are able, not only to gauge the trend of increasing fire danger at any given time but, by the aid of weather forecasts, to anticipate the trend one or two days in advance and so regulate their activities to meet hazardous conditions as they develop.

The various governmental forest authorities conduct forest conservation publicity work independently and in co-operation with the Canadian Forestry Association. Since its beginning in 1900, that Association has played an important part in securing popular co-operation in reducing the fire hazard. By means of its magazine, which has a large circulation, by railway lecture cars and motor-trucks provided with motion-picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of the Dominion. Special efforts are made through the schools by specially appointed junior forest wardens and other means, to educate the younger generation as to the value of forests, the devastation caused by fire and the means of preventing such destruction.

Forest Insect Control Board.-The composition, object and functions of the Forest Insect Control Board are dealt with in the special article at pp. 399-400.

## Subsection 3.-Scientific Forestry

The great forestry problem is the management of Crown forests, first under provisional and later under more intensive working plans, so as to ensure a sustained yield. Forest research activities in this direction are now assuming great importance. The Dominion Forest Service operates five forest experiment stations with a total area of 227 sq. miles.* Here investigations of the underlying principles governing the growth of forests are made and practical methods of management are tested.

About 600 technically trained foresters are employed by the Dominion, by provincial forest services or by pulp, paper, and lumber companies. A number of foresters are actively engaged in commercial logging operations and, in addition to administrative work, these men carry on forest surveys either for the estimation of timber-stands and making of maps, or to determine natural growth and reproduction conditions and factors.

Through the use of air photographs taken by the Royal Canadian Air Force and base maps prepared by the mapping organizations of the Departments of Mines and Resources and National Defence, the Dominion Forest Service has taken a leading part in the development of methods for the interpretation of air photographs for forestry purposes. Most of the provincial forest services and many timberowning companies are also making extensive use of aerial photographs. It is now possible not only to map the areas occupied by the different forest types but to estimate the volume of standing timber with an accuracy that compares favourably with ground sur'veys. Aerial photographs drawn to scales suitable for mapping purposes and covering about $1,000,000$ sq. miles are now available in the National Air Photographic Library of the Department of Mines and Resources, and about 123,000 sq. miles of forest have been mapped and classified from the photographs. Still greater use of air photographs for forestry purposes is expected in future.

Research Work in Forestry.-The work at present being conducted on the control of forest insects is dealt with at pp. 395-400. In a special article on Scientific and Industrial Research in Canada, which appears at pp. 979-1012 of the 1940 Year Book, a comprehensive review is given of all phases of scientific research work being undertaken by the various Government Departments.

[^146]Forestry and FAO. - In October, 1944, the Food and Agriculture Organization of the United Nations was formally established and held its first conference at Quebec. The functions of the Organization generally, and as they concern agriculture particularly, are given at pp. 329-330. The Conference decided that the Organization should include a Division on Forestry and Forest Products, because the promotion of human welfare requires provision of shelter and warmth as well as sufficient and suitable food. Furthermore, it was recognized that forestry and agriculture are alternative forms of land use and, in many cases, the two activities are complementary. The Canadian delegation included five representatives of forestry, headed by the Dominion Forester.

The FAO international forestry office is assembling information respecting forest resources, forestry conditions and practices, and forest industries on a worldwide basis. It assists in the compilation of up-to-date statistics, and will be required to advise the appropriate international authorities respecting measures that might be adopted to correct shortages of forest products in different parts of the world. Technical missions are being organized to give advice on forest management problems.

Canada has undertaken to co-operate in the forestry work of FAO, and should benefit by the new services to be provided. In particular, improvements in the completeness and accuracy of information respecting world supplies and demands for forest products should help to stabilize the export markets that are so vital to Canada's forest industries.

## Section 6.-Forest Utilization

## Subsection 1.-Woods Operations

In connection with operations in the woods, it should be borne in mind that the forests not only provide the raw material for the sawmills, pulp-mills, wood distillation, charcoal, excelsior and other plants, but that they also provide logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products, which are finished in the woods ready for use or exportation. There are also a number of minor forest products, such as Christmas trees, maple sugar and syrup, balsam gum, resin, cascara, moss and tanbark, that go to swell the total.

It has been estimated that operations in the woods in Canada in 1944 gave employment during the logging season amounting to $35,551,000$ man days, and distributed over $\$ 195,000,000$ in wages and salaries.

6.-Wood Cut in Operations in the Woods, Equivalents in Merchantable Wood and Total Values, by Chief Products, 1944, with Comparative Totals, 1926-43

Nore.-Details by chief products and by, provinces for the years $1926-44$ will be found in the "Annual Estimate of Operations in the Woods, 1944", published by the Forestry Branch, Dominion Bureau of Statistics. A change in computing the converting factor was introduced in 1944-45 and is described at p. 265 of the 1946 Year Book.

| Year and Product | Quantity <br> Reported or Estimated | $\underset{\text { Factor }}{\text { Converting }}$ | Equivalent Volume of Merchantable Wood | Total Value |

## Subsection 2.-The Pulp and Paper Industry

The rapid development of this industry in Canada is traced briefly at p. 265 of the 1940 Year Book. Summary statistics for the combined pulp and paper industries are given at pp. 412-414 of this volume.

There are three classes of mills in the industry. These, in 1945, numbered 29 mills making pulp only, 48 combined pulp and paper mills and 32 mills making paper only.

The industry in Canada includes three forms of industrial activity, the operations in the woods with pulpwood as a product, the manufacture of pulp and the manufacture of paper. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. Less than one-fifth of the pulpwood cut in Canada is exported in the raw or unmanufactured form and a large proportion of such exports is cut from private lands.

## 8.-Production, Consumption, Exports and Imports of Pulpwood, 1931-45

Nore.-Figures for earlier years will be found in the corresponding table of previous Year Books.

| Year | Apparent Total Production of Pulpwood in Canada |  |  | Canadian Pulpwood Used in Canadian Pulp-Mills |  | Canadian Pulpwood Exported Unmanufactured |  | Imported Pulpwood Used in Canada |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ All quantities are given in terms of rough or unpeeled wood.
${ }^{2}$ Less than one-tenth of one per sent.

The manufacture of pulp is the second stage in this industry. This is carried on by mills producing pulp alone and also by paper manufacturers operating pulpmills in conjunction with paper-mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species of wood for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulpmill, but in Canada there are a number of 'cutting-up' and 'rossing' mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for exportation. Pulpwood is measured by the cord ( $4^{\prime}$ by $4^{\prime}$ by $8^{\prime}$ of piled material). One cord of rough pulpwood contains approximately $85 \mathrm{cu} . \mathrm{ft}$. of solid wood, and one cord of peeled pulpwood $95 \mathrm{cu} . \mathrm{ft}$.

Pulp Production.-Growth of pulp production was steady up to 1920, when $1,960,102$ tons of pulp were produced. With the exception of 1921 and 1924, each year up to 1929 showed consistent growth in the annual production, 1929 reaching a total of $4,021,229$ tons. Figures from 1931 are given in Table 9.
9.-Pulp Production, Mechanical and Chemical, 1931-45

Nore.-Figures for earlier years will be found in the corresponding table of previous Year Books.

| Year | Mechanical Pulp ${ }^{1}$ |  | Chemical Fibre ${ }^{1}$ |  | Total Production |  |

| 1942. | 3,308,118 | 65, 208,919 | 2,298,343 | 126, 936,143 | 5,606,461 | 192, 145, 062 |
| 1943. | 3,033,751 | 63,721,703 | 2,239,079 | 130,797,449 | 5,272, 830 | 194, 519, 152 |
| 1944. | $3,113,142$ | 72,097, 231 | 2,157,995 | 138, 944, 181 | 5,271, 137. | 211, 041,412 |
| 1945. | 3,393,426 | 86,990,626 | 2,207,388 | 144,882, 496 | 5,600,814 | 231, 873, 122 |

${ }^{1}$ Includes screenings. $\quad{ }^{2}$ Includes unspecified pulp.
During 1945, 77 establishments turned out $5,600,814$ tons of pulp valued at $\$ 231,873,122$, as compared with $5,271,137$ tons of pulp, valued at $\$ 211,041,412$ in 1944. Of the 1945 total for pulp, $3,956,182$ tons, valued at $\$ 116,404,915$ were made in combined pulp and paper mills for their own use in manufacturing paper. The remainder was made for sale in Canada or for export. As in the case of pulpwood, a part of the product at this stage of the industry provides raw material for the later stages, while the remainder has a definite market value as pulp.

Over 59 p.c. of the production in 1945 was groundwood pulp and over 18 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite, bleached and unbleached sulphate, soda fibre and groundwood and chemical screenings made up the remainder. A considerable market has developed for screenings in connection with the manufacture of rigid insulating boards.

The manufacture of the $5,600,814$ tons of pulp produced in 1945 entailed the use of $7,478,508$ cords of rough pulpwood valued at $\$ 122,347,847$, and the total value of materials used in the manufacture of pulp was $\$ 140,668,147$.

## 10.-Production of Wood-Pulp, by Chief Producing Provinces, 1931-45

Nore.-Figures for earlier years will be found in the corresponding table of previous Year Books.

${ }^{1}$ Includes production in British Columbia, Manitoba, New Brunswick and Nova Scotia.
Pulp Exports.-Total exports of wood-pulp from Canada in the years 1936-45 are given in Table 11. A table at p. 201 of the 1941 Year Book gives the exports of wood-pulp from the principal producing countries for 1913, 1938 and 1939. The latter figures are incomplete, owing to exigencies of war, and consequently the table has not been continued.
11.-Exports of Wood-Pulp, 1936-45

| Year | Quantity | Value | Year | Quantity | Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | tons | \$ |  | tons | \$ |
| 1936. | 754,496 | 31,246,695 | 1941. | 1,411,724 | 85, 897,736 |
| 1937. | 870,716 | 41, 815,731 | 1942. | 1,510,746 | 95, 266, 873 |
| 1938. | 554,037 | 27,730,738 | 1943. | 1,556,457 | 100,012,775 |
| 1939. | 705,515 | 31,000,602 | 1944 | 1,408,081 | 101,563,024 |
| 1940. | 1,068,517 | 60,930,149 | 1945 | 1,434,527 | 106, 054,911 |

Paper Production.-During 1945, 80 establishments produced 4,359,576 tons of paper and paper board with a total value of $\$ 282,837,614$, as compared with $4,044,376$ tons, valued at $\$ 255,545,841$ produced in 77 establishments in 1944. In addition to newsprint, Canadian mills have a highly developed production of fine paper, wrapping paper, tissues, paper board and other cellulose products: in fine paper Canada produces close to 600 types. In 1945, newsprint paper made up 76.2 p.c. of the annual paper production in Canada; the newsprint production increased in volume by 9.3 p.c. and in total value by 14.1 p.c. as compared with 1944. The remainder of the paper production was divided as follows: 13.7 p.c. paper boards, $3 \cdot 7$ p.c. wrapping paper, $3 \cdot 7$ p.c. book and writing paper, and about $2 \cdot 7$ p.c. tissue and miscellaneous papers.
12.-Paper Production, by Type, 1931-45

Nors.-Figures for earlier years will be found in the corresponding table of previous Year Books.

World Production of Newsprint.-Since the very early years of the Second World War, figures of world production of newsprint have not been available. The latest official information given in the Year Book appears at p. 203 of the 1941 edition where production is given by leading countries for the years 1938 and 1939, as well as the average production over the period 1928-39.

Although it is not possible to continue this series of official figures, a useful estimate of world newsprint production is provided by the Chairman of the Rationing Committee of British Newsprint Supply in collaboration with the British Ministry of Supply. This estimate placed the production of countries outside North America at $1,583,000$ short tons for the year 1946 , which was $2,250,000$ short tons less than the average production of these same countries for 1937-38; on this basis the world production for 1946 would be $6,803,000$ short tons, which explains the acute situation that is now being experienced as regards newsprint. Every mill in Canada is working to capacity and yet the world situation is far from being relieved. Until the European mills are rehabilitated and the backlog of demand has been met, a sellers market in newsprint will continue to prevail. A comparison of United States and Canadian production with world production is shown in the chart on p. 413. As official data are made available, the pre-war series of newsprint production by countries will be continued.

Exports of Newsprint Paper.-Total exports of newsprint paper from Canada in the years 1936-45 are given in Table 14.
14.-Exports of Newsprint Paper, 1936-45

| Year | Quantity | Value | Year | Quantity | Value |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | tons | \$ |  | tons | \$ |
| 1936. | 2,993, 089 | 103,639,634 | 1941. | 3,262,012 | 154,356,543 |
| 1937. | 3,455, 240 | 126, 466, 412 | 1942.. | 3,005, 291 | 141,065,618 |
| 1938. | 2,424,655 | 104,615,042 | 1943 | 2,810,288 | 144,707, 065 |
| 1939. | 2,658,723 | 115,687, 288 | 1944. | 2,805,776 | 157, 190, 834 |
| 1940. | 3,242,789 | 151,360, 196 | 1945 | 3,058,946 | 179, 450, 771 |

Since 1913 Canada has led the world in the exportation of newsprint. In 1938 the quantity of newsprint exported by the 11 principal newsprint-producing countries was $3,806,737$ short tons, of which Canada contributed $63 \cdot 7$ p.c. World comparisons for later years are not available.

Statistics of the Combined Pulp and Paper Industries.*-The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries, for they are frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into towels, stationery and other highly processed paper products are often combined in one plant. This

[^147]
further converting of paper within the pulp and paper industry itself represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper mills in this industry are now attributed to the particular industrial group of converting plants to which they properly belong. The figures for 1937 and subsequent years, therefore, exclude all information pertaining to paper converting, which tends to lower perceptibly all the principal statistics of the pulp and paper industry and to render these figures not strictly comparable with those of previous years. Including manufacturing operations as far as the basic paper-making stage, there were altogether 109 mills in operation in 1945. The employees numbered 39,996 and their salaries and wages amounted to $\$ 80,462,644$. If the pulp made for their own use in combined pulp and paper mills is disregarded, the total of materials and supplies used in the industry as a whole can be considered as amounting to $\$ 179,369,499$ in 1945 , $\$ 157,995 ; 141$ in 1944 and $\$ 143,956,462$ in 1943 ; the gross value of production as $\$ 398,804,515$ in $1945, \$ 369,846,086$ in 1944 and $\$ 344,411,614$ in 1943; and net value of production, $\$ 180,401,885$ in $1945, \$ 174,492,103$ in 1944 and $\$ 164,244,088$ in 1943.

The pulp and paper industry is one of the leading single manufacturing industries in Canada. It was first in gross value of production from 1925 to 1934, but was replaced in 1935 by non-ferrous smelting and refining; it was first for many years in capital invested, in net value of production and in wages and salaries paid. During the war years, because of the extraordinary demands for munitions, vehicles and certain food products, such industries as non-ferrous metal smelting and refining, miscellaneous chemical products, slaughtering and meat packing, shipbuilding and repairs, iron and steel products and automobiles advanced temporarily to higher positions. This situation was quite abnormal, however, and the pulp and paper industry is resuming its former place as the leading peacetime industry in Canada. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. In world trade, generally speaking, pulp and paper are Canada's main commodities; usually greater than wheat and far greater than nickel. Newsprint alone, over a considerable period, has brought Canada more export dollars than wheat, nickel or any other single commodity*. The United States market absorbs, annually, practically all pulpwood exports, over 75 p.c. of the pulp and the paper shipments of Canada. About one-half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

[^148]
## Subsection 3.-The Lumber Industry

The manufacture of sawn lumber is the second most important industry in Canada depending on the forest for its raw materials.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills and mills for cutting-up and barking or rossing of pulpwood that reported in 1945 was 5,295 , as compared with 5,506 in 1944. Employees numbered 44,040 and wages and salaries amounted to $\$ 54,017,500$. The logs, bolts and other materials and supplies of the industry were valued at $\$ 126,006,754$ and the gross value of production was $\$ 231,108,030$. The net production in 1945 was $\$ 103,153,766$.

Lumber production in Canada reached its maximum quantity in 1911 at almost $5,000,000,000 \mathrm{ft}$. b.m. The maximum value was reached in 1945. Average values were fairly uniform up to 1916, but increased rapidly from 1917 to 1920 , only to decline gradually during the following years to the lowest level for the entire period, which was reached in 1932. With the exception of 1938, increases took place each year from 1933 to 1945.

British Columbia came first in total production in 1945, contributing 45.5 p.c. of the total cut of lumber and $87 \cdot 4$ p.c. of the shingles. Quebec followed in second place, Ontario was third and New Brunswick fourth. In 1945, spruce was the most important kind of lumber sawn; it is produced in every province. Douglas fir, which is sawn almost entirely in British Columbia, came second, with hemlock, white pine, cedar, yellow birch and jack pine next in order of importance. Cedar was the most important shinglewood sawn. The conifers usually form between 90 and 95 p.c. of the total cut of all kinds of wood.

Lumber Exportation.-The hewn square-timber trade reached its maximum development in the 1860's; thereafter it declined gradually and has now almost entirely disappeared. Simultaneously with its decline came the increased exportation of deals and other sawn lumber, first to the United Kingdom and later to the United States. From the first, trade with the latter country has been confined largely to planks, boards and dimension stock. During the American Civil War, exports of forest products of all kinds to the United States for the first time exceeded those to the United Kingdom, but in late years this has become the rule. The total quantity of sawn lumber and square timber exported changed little from 1900 to 1929, averaging about $2,000,000,000 \mathrm{ft}$. b.m. per annum, but decreased considerably in the next three years, reaching its lowest level of $790,000,000 \mathrm{ft}$. b.m. in 1932 . Since that time lumber exports have resovered.

## Subsection 4.-Manufactures of Wood and Paper

Sawmills and pulp and paper mills draw their raw material directly from the forest in the form of logs and pulpwood, and produce sawn lumber, other sawmill products and pulp and paper. There are also a number of important industries that use these products as raw material for further manufacture. Some of them produce commodities made almost entirely of wood, wood-pulp or paper, some
manufacture articles in which wood is the most important component, and others produce articles in which wood is necessary but forms only a small proportion of the value. There are, in addition, a number of industries that use wood indirectly in the manufacture of articles that do not contain wood as a component part. The first class includes the manufacture of paper, sash, doors, other mill-work and planing-mill products; boxes, baskets, cooperage and other containers; canoes, boats and small vessels; kitchen, bakery and dairy woodenware; wooden pumps, piping, tanks and silos; spools, handles, dowels and turnery. The second class includes the manufacture of furniture, vehicles and vehicle supplies, coffins and caskets, etc., and the use of paper in printing and the manufacture of paper boxes, bags, stationery and paper goods. The third class, where wood has a secondary importance, includes the manufacture of agricultural implements, railway rolling-stock, musical instruments, brooms and brushes, etc. The fourth class can be said to include practically every form of industrial activity, as few, if any, of these are entirely independent of the use of wood, directly or indirectly.

A classification based on the chief component material in the products of each manufacturing establishment is now largely used in compiling manufacturing statistics and for external trade purposes. Under this system most of the forest industries fall in the wood and paper group. In 1944, this group, comprising 10,452 establishments, gave employment to 189,674 persons and paid out $\$ 284,436,559$ in salaries and wages. The gross value of its products was $\$ 1,093,725,822$ and the net value, $\$ 550,826,986$.

Exports of Wood and Paper Products.-The forests of Canada contribute substantially to the export-trade values. During the calendar year 1945, exports of wood and paper products amounted to $\$ 488,040,542$ and made up $15 \cdot 2$ p.c. of the total value of Canadian exports for the period, amounting to $\$ 3,218,330,353$. Domestic exports of wood and paper products were exceeded by those of agricultural (vegetable and animal) products, which made up 37.8 p.c. of the total, and by mineral products with $30 \cdot 1$ p.c. Wood and paper products are prominent among the individual items of export. Even more impressive is the contribution made by products of the forest and forest industries toward Canada's excess of exports over imports. In 1945, this excess from trade in all commodities (excluding gold) was $\$ 1,681,649,146$. In comparison, the gross total contribution from trade in "wood, wood products and paper" only, amounted to $\$ 438,300,000$.

## Section 7.-Post-War Timber Control

An outline of the controls applied to meet the dislocation in the lumber industry during the war years is given at pp. 277-280 of the 1946 Year Book. Since the end of the War, the domestic demand for lumber for all purposes including construction, railway maintenance and general industrial use, has been extraordinarily high, and export demand has also reached unprecedented heights because of the needs for reconstruction throughout the world. Preliminary estimates for 1946 indicate a production of $4,776,000,000 \mathrm{ft}$. b.m. of lumber in Canada and it is expected that in 1947 it will reach a record of $5,000,000,000 \mathrm{ft}$. b.m. Because of the differences in domestic ceiling prices and world prices, it is necessary to continue the rigid control of exports. The policy followed is a middle course between unrestricted exports resulting in demoralization of Canadian construction, and no exports resulting in the
ruination of Canada's export trade, chaos in the industry and the necessity of increasing domestic prices, as well as placing Canada in the position of refusing to help in the reconstruction of shattered countries.

In 1946, Canada retained approximately $2,693,000,000 \mathrm{ft}$. b.m. of lumber for domestic use and exported $2,083,000,000 \mathrm{ft}$. b.m. or $43 \cdot 6$ p.c. of the total production. It was estimated that there should be enough lumber in Canada to provide for the building of 60,000 houses; this left $2,168,000,000 \mathrm{ft}$. b.m. for industrial and other building, mines, railways, packaging, and other industrial uses.

In retaining the price ceilings in Canada, it was necessary to make certain price concessions to encourage increased production. Such price increases were permitted on doors, window sash, window frames, shingles, and on certain other items where producers could show financial need. Although Canadian ceiling prices assisted the Canadian consumer, they created a great amount of pressure from exporters and manufacturers desirous of participating in the higher world markets. It has, therefore, been necessary to require manufacturers to obtain, from the Timber Control, approval on their Canadian shipments before credit is obtained to export.

The supply and distribution of fuel wood was of prime importance during the war years, since normally one-half of the households in Canada rely on wood for fuel and over 25 p.c. of the annual forest depletion is used for that purpose. Every effort was made to encourage production and subsidies were paid to enable dealers to contract for supplies and sell them within consumer price ceilings. These price ceilings were maintained during 1946 and subsidies were continued on wood for the 1946-47 season.

Pulpwood operations in Canada were brought under the direction of the Timber Control at the end of 1941. Consumption of pulpwood by domestic mills was substantially higher during the war years than in the pre-war period and shortages of labour made it necessary to draw heavily on accumulated inventories. As a result, the continued operation of many mills now depends on suitable weather conditions and the availability of adequate bush labour. Until inventories can be built up, some measure of control of exports of pulpwood appears to be inevitable.

In 1946, pulpwood prices were again raised, east of the Rockies, and certain changes were made in the set-up of the Orders in Council to prevent dealers and brokers being forced into a position where they were compelled to give away part of their legitimate service fees to the producer. At the same time, export prices, which in Quebec and the Maritimes had been controlled by United States OPA Order, were brought in line with the new Canadian prices and, during the year, OPA price orders were done away with by Washington.

During 1946, due to the building of new mills and the expansion and extension of mills already operating, domestic consumption of pulpwood increased by 17 p.c. over the year 1945. The over-all picture of labour in the pulpwood year 1946-47 shows a heavy increase in numbers and it is anticipated that, if weather conditions continue favourable, most companies will meet their programs.

During 1946 the export quota to the United States was maintained at 1,800,000 cords, rough basis, the same as in 1945.

# CHAPTER XIV.-FUR RESOURCES AND FUR PRODUCTION 

## CONSPECTUS

## Section 1.-The Fur Trade

Historical Sketch.-A historical outline tracing the development of the fur industry is published at pp. 281-282 of the 1946 Year Book. See also list of Special Articles under Fur Trade at the front of this volume.

The Modern Industry.-During the present century the fur trade has changed greatly. With the advance of settlement, trapping has moved northward in all provinces but by far the most important development has been the establishment of fur farming independently or as an ancillary branch of specialized agriculture. This is dealt with in Section 2, pp. 420-422 however, and the purpose here is to trace the recent changes that have marked the trapping of fur-bearing animals in the wild state.

The conservation of fur-bearers, which has marked the policy of federal and provincial authorities to an increasing extent, has been made necessary by an increasing demand for furs coupled with decreasing supplies. The resulting substantial rise in prices also brought about a tendency to 'over-trapping', and it has been found necessary to control the 'take' by prohibition, close seasons and the enforcement of trapping regulations. However, in a country of such extent, where trappers, both White and Indian, are scattered over a vast wilderness, prohibition of capture of certain animals with the aim of conserving future catches is not always effective. Such furs become higher priced because of this scarcity and the temptation to violate protective measures is great.

One noteworthy reconstructive measure that appears to have had a very beneficial influence on the rehabilitation of certain fur-bearers, especially beaver and muskrat, is the organized development of marshlands where these animals are actively assisted to increase their numbers in their natural habitat.

All provinces to-day have their trapping regulations and licence individual trappers. Some provinces register trap lines. The Saskatchewan Government has recently inaugurated a system whereby districts are assigned to individual licensed trappers. The licensee in his own interests will see to it that poaching on his preserve is stopped.

The Dominion Bureau of Statistics began the annual collection of returns from dealers in raw furs in 1919 with the co-operation of the Provincial Governments which supply lists of licensed dealers.

The first year of the record showed that raw furs taken in the 1919-20 season had a value of $\$ 21,048,670$; this figure, however, was abnormally high as compared with the average season. For instance, during the 1929-30 season the value was
$\$ 9,982,000$ and ten years later it was $\$ 11,523,000$. During the War years 1939-45, prices rose rapidly with the result that the $1944-45$ value amounted to $\$ 21,390,000$, ( $\$ 31,001,456$ less $\$ 8,611,456$, the contribution of fur farms), almost the same as in 1919-20. Muskrat contributed the greatest part of this amount, about $\$ 6,300,000$.

In spite of the growth of fur farming, wild life still produces the greater portion of Canadian furs. Over an area of about $1,550,000$ square miles, which is about 45 p.c. of the total land area of Canada, wild life, though a subordinate resource, is relatively more productive than agriculture, and of the products of wild life, furs are the principal item and the principal support of the population in that area.

Wars have always been disruptive to the normal flow of trade and during each of the two wars of the present century the Canadian fur trade suffered severely from severance of contact with London, England, which was the world's leading fur-trading centre. Prior to the War of 1914-18 and during the inter-war period, Canada marketed her pelts mainly through London. Since that market was practically dormant during hostilities, Canada was obliged to develop other outlets in the United States and in the Latin American countries. To what extent these channels will grow or remain is not yet clear. In 1945, the United Kingdom took vigorous steps to revive and develop her world position in the fur trade and the degree to which the trade will revert to its former channels remains to be seen.

The first Canadian auction sale was held in Montreal, Que., in 1920 after the First World War and since then that city has been the leading Canadian fur mart. To-day auction sales are also held at Vancouver, B.C., Edmonton, Alta., Regina, Sask., and Winnipeg, Man., and at Regina the Saskatchewan Government maintains a Fur Marketing Service to assist the producers of that Province.

## Section 2.-Fur Farming*

In the early days of the fur trade, it was the practice in Canada for trappers to keep foxes alive until the fur was prime, and from this custom has arisen the modern fur-farming industry. The earliest authentic record of raising foxes in captivity comes from Prince Edward Island, where about 65 years ago a number of foxes were raised on a farm near Tignish. After 1890, a period of rising prices for furs encouraged fox-farming and the industry grew rapidly. The beauty of the fur of the silver fox and the consequent high prices realized from the sale of the pelts, caused attention to be directed chiefly to this breed, which is a colour phase of the common red fox established through selective breeding carried on by the pioneer fox farmers. While experiments were being carried on in Prince Edward Island, attempts at raising foxes in captivity were also being made in other provinces; the records show that foxes were successfully bred in Quebec in 1898, in Ontario in 1905 and in Nova Scotia in 1906. Fur farming is now carried on in all provinces of the Dominion and the number of farms, until the outbreak of war in 1939, showed a steady increase. An experimental fox ranch is operated by the Dominion Government at Summerside, P.E.I., where problems of breeding, feeding, housing and general care are studied.

[^149]Although the fox was the first fur-bearing animal to be raised in captivity, many other kinds are now being bred-mink, raccoon, skunk, marten, fisher and rabbit. Mink are the most numerous and the most valuable of such farm-raised animals. From 1920 to 1939 there was a rapid expansion of fur farming in Canada and during that period there was a marked change in the type of furs that were most acceptable to the market. Black fox was popular 25 years ago. A few years later the highest prices were being paid for quarter and half silvers and during recent years the full silver and new types have been setting the upper price limit. The development of new colour phases in foxes and mink has proven to be a new incentive to the fur-farming industry. New-type fox such as platinum, platinumsilver, pearl-platinum and white-marked are meeting a ready market as are the new-type mink including silver-sable, platinum, silver-blue, snow-white and a number of other colour phases.

In 1939, the Dominion Government introduced a system of fur-grading under the Department of Agriculture. One of the Department's main objectives in grading is to secure uniformity so that'furs may be bought by grade without the necessity of buyers from foreign countries personally examining the pelts. Grading offers many benefits to the producer as well as to the trade in general: (1) it educates the rancher as to the proper value of his pelts, and creates an incentive to improve the quality of his product; (2) it furnishes much-needed guidance in the planning of future matings; (3) it raises the standard of quality of the entire crop of pelts; and (4) it raises the level of prices for the higher-quality pelts.

Statistics of Fur Farming.-The following tables give the numbers and values of the fur farms and animals, for recent years.
1.-Fur Farms, Land and Buildings, and Fur-Bearing Animals, by Provinces, 1942-44

| Province or Territory | Fur Farms |  |  | Values of Land and Buildings |  |  | Values of Fur-Bearing Animals |  |  |

The annual revenue of the fur farmer arises from two sources, the sale of animals and the sale of pelts. In the early years of the industry the value of animals sold from fur farms exceeded the value of pelts sold; in 1944 the latter figure was over seven times the former.

## Section 3.-Total Fur Production*

Early records of raw-fur production are confined to the decennial censuses, when account was taken of the numbers and values of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of rawfur production, basing its statistics on information supplied by the licensed fur traders. This survey was continued for some years. More recently, annual

[^150]statements, based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are now used in the preparation of the statistics issued annually by the Bureau. In Prince Edward Island, the statistics are based on returns supplied directly to the Bureau by fur traders who deal in furs produced in the Province.

## 4.-Pelts of Fur-Bearing Animals Produced with Percentages Sold from Fur Farms, Years Ended June 30, 1922-45

| Year | Pelts |  | Approximate P.C. of Value Sold from Fur Farms | Year | Pelts |  | Approximate P.C. of Value Sold from Fur Farms |

| 1931. | 4,060,356 | 11, 803, 217 | 26 | 1943 | 7,418, 971 | 28,505, 033 | 24 |
| 1932. | 4,449,289 | 10, 189,481 | 30 | 1944 | 6,324,240 | 33,147, 392 | 28 |
| 1933. | 4,503,558 | 10, 305, 154 | 30 | 1945 | 6,994,686 | 31,001, 456 | 31 |

Ontario is the leading province in respect to value of fur production. The relation that the value of each province and territory bore to the total for Canada in the year ended June 30, 1945, was: Ontario, 22•6; Quebec, 16•3; Manitoba, 15.6; Alberta, $12 \cdot 5$; British Columbia, $10 \cdot 0$; Saskatchewan, 7.5; Northwest Territories, $5 \cdot 6$; New Brunswick, $3 \cdot 0$; Prince Edward Island, 2•8; Yukon, 2•2; and Nova Scotia, 1.9 p.c.

## 5.-Pelts of Fur-Bearing Animals Produced, by Provinces, Years Ended June 30, 1944 and 1945

| Province or Territory | Pelts |  | Values |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1944 | 1945 | 1944 | 1945 |
|  | No. | No. | \$ | \$ |
| Prince Edward Island. | 24,706 | 26,945 | 890,362 | 875,785 |
| Nova Scotia.. | 101, 913 | 100,353 | 764,863 | 593,551 |
| New Brunswick | 70,159 | 88,078 | 834,741 | 927,158 |
| Quebec. | 519,155 | 534,783 | 6,167, 605 | 5, 059,995 |
| Manitora | 1,049, 371 | 992, 802 | 7,129, 781 | 7,003, 877 |
| Saskatchewan. | 1,106,354 | 1,511, 240 | $3,832,641$ $3,437,777$ | $4,818,625$ $2,310,760$ |
| Alberta. | 1,513,951 | 1,772,381 | 4,686,311 | 3,884,998 |
| British Columb | 682,371 | 1,696,751 | 2,736,991 | $3,113,780$ |
| Yukon.... | 78,005 | 87,292 | 467,188 | 669,217 |
| Northwest Territories | 297, 633 | 258,931 | 2,199, 132 | 1,743,710 |
| Canada. | 6,324,240 | 6,994,686 | 33,147,392 | 31,001,456 |

The total number of pelts taken from all fur-bearing animals in 1945 amounted to $6,994,686$ as compared with $6,324,240$ in 1944. The total value of pelts decreased to $\$ 31,001,456$ in 1945 from $\$ 33,147,392$ in 1944. Average prices for chinchilla
pelts increased from $\$ 15 \cdot 60$ to $\$ 30 \cdot 00$, for mink pelts from $\$ 19 \cdot 55$ to $\$ 22 \cdot 38$, muskrat from $\$ 2 \cdot 28$ to $\$ 2 \cdot 65$, rabbit from $\$ 0 \cdot 30$ to $\$ 0 \cdot 59$, marten from $\$ 46 \cdot 31$ to $\$ 47 \cdot 99$ and white fox from $\$ 32 \cdot 83$ to $\$ 35 \cdot 58$. Most other kinds of pelts decreased in average value.

## 6.-Pelts of Fur-Bearing Animals Taken, by Kinds, Years Ended June 30, 1944 and 1945

| Kind of Pelt | Pelts |  | Total Values |  | Average Values |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Section 1.-The Early Fisheries

Historical records show that European fishing vessels frequented the waters of Canada's Atlantic Coast 400 years and more ago, and the prolific grounds have been fished continuously ever since that time. When John Cabot reached the North American mainland at the close of the fifteenth century he found Basque fishing vessels off the coast. When Jacques Cartier sailed up the St. Lawrence in the earlier part of the sixteenth century he too found that fishermen from the Old World had been there before him. As a matter of fact, there is some evidence that before the time of Cabot and Cartier the fishing grounds of the continent had been frequented by fishermen from Europe. The industry to-day is an enterprise of great importance throughout the country-on the Pacific Coast and in the inland provinces, as well as in the Atlantic area. The Census of 1941 showed that 36,297 persons reported fishing as their principal occupation. Many others, of course, worked in the fisheries, though not in full-time employment.

More detailed reference to the history of the fisheries of the Atlantic Coast will be found in the 1934-35 Year Book, p. 348.

## Section 2.-The Canadian Fishing Grounds

Canada's fishing grounds fall naturally into three main divisions, Atlantic, freshwater or inland, and Pacific, and are among the most extensive and prolific in the world. A detailed description of each, the fish obtained from it, and the methods of fishing, is given on pp. 222-225 of the 1932 Year Book.

## Section 3.-Governments and the Fisheries

## Subsection 1.-The Dominion Government*

While the right of fisheries regulation for all parts of Canada rests with the Federal Government (Fisheries Act, 22-23 Geo. V, c. 42), fisheries administration is carried out by different authorities in different areas. The tidal or sea fisheries are all administered by the Federal Department of Fisheries, except in Quebec where, by agreement between the Provincial and Federal Governments, all fisheries, both sea fisheries and those in freshwater areas, are under provincial administration. The Federal Department also administers the non-tidal fisheries of Nova Scotia as well as the fisheries of Yukon and the Northwest Territories. On the other hand,

[^152]the non-tidal fisheries of New Brunswick and Prince Edward Island and those of Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, are administered by the respective provinces. In British Columbia, Prince Edward Island and New Brunswick, however, the Federal Department carries on some protective work in connection with non-tidal fisheries.

Revenue received by the Federal Government from the fisheries in the year ended Mar. 31, 1946, was $\$ 1,109,484$, as compared with $\$ 479,665$ in the preceding year. Expenditures in connection with the fisheries in 1945-46 were $\$ 3,374,102$ as compared with $\$ 2,213,203$ in 1944-45. Included in the outlays in both years were expenditures in connection with the International Pacific Salmon Fisheries Commission and the International Fisheries Commission, or Pacific Halibut Commission, as well as the costs of departmental administration, etc. During much of the war period 1939-45, Federal outlays in connection with the fisheries included large amounts in special war expenditures, which represented, in the main, fish supplied to Allied Nations under various governmental agreements. In 1945-46, such special expenditures were considerably smaller than in some of the carlier years but, nevertheless, totalled $\$ 6,853,879$.

Conservation.-Since the time of Confederation in 1867, intelligent conservation of the country's fisheries resources has been a prime objective of the Federal fisheries authorities. In general, this effort to maintain and increase fish abundance is achieved by such steps as the control of fishing seasons, the regulation of fishing operations including control of types of gear, the imposition of catch limitations where found desirable, the prevention of obstruction or pollution of fishing waters, and the prohibition of the capture of undersized fish.

In assisting in the maintenance and increase of fish stocks, the Department of Fisheries has carried on for many years a program of fish culture in various areas where fisheries administration is a Federal responsibility. In 1945, the Fish Culture Branch operated 13 hatcheries, 6 rearing stations, 6 salmon retaining ponds, and several egg-collecting stations, at a cost of $\$ 192,895$. During the year, more than $30,100,000$ trout and salmon fry and fingerlings, plus some older fish, were transferred from the fish cultural establishments to suitable selected waters.

For some years, the Department has been carrying on successfully a program for the development of 'farms' for the commercial rearing of oysters in Atlantic regions where oyster areas are under Federal jurisdiction-in Prince Edward Island where the program was begun, Nova Scotia and some parts of New Brunswick. Wartime conditions during 1939-45 slowed down development somewhat but very substantial progress has been made. Oyster farming takes place on grounds made available to lessees by the Department on prescribed conditions, and the methods of operation followed by the lessees are those advised by the Fisheries Research Board. In British Columbia the oyster areas are under provincial jurisdiction.

Direct Assistance to Fishermen.-With the co-operation of the Fisheries Research Board, the Department makes available to fishermen and fish producers instruction and advice as to the most efficient methods of fish handling and processing. Fisheries inspectors employed by the Department are qualified by courses of training to assist fishermen as regards the handling and processing methods. In appropriate districts instruction in particular methods of processing is given by special officers employed by the Department for this work. Instruction is given orally, by method or by operational demonstrations. In addition, informa-
tion brought out by the Research Board through studies and experiments at its six permanent stations or research centres, is put freely at the disposal of the fishing industry. Under arrangements made by the Department, adult-education specialists from the University of St. Francis Xavier, Antigonish, N.S., the Social Economic Service, Ste. Anne-de-la-Pocatiere, Que., and the University of British Columbia, Vancouver, B.C., assist fishermen in studying their problems and in devising plans for meeting those problems through joint action. The cost of this special educational work is met by the Department.

A lecture-demonstration program is carried on in different parts of the country by the Department, through qualified home economists, in order to assist in increasing the demand for fishermen's products by widening public knowledge of the nutritive values of Canadian fish foods and best methods of preparing them for the table. The program has been in progress for some years.

During wartime, considerations relating to national defence made it necessary to discontinue the special broadcasts of weather reports for fishermen which had been made previously but this service has now been resumed, and extended, in appropriate areas. The reports and forecasts are prepared by the Dominion Meteorological Service. Broadcasts are made several times daily from stations of the Canadian Broadcasting Corporation which cover the fishing areas concerned, and are also available to other stations.

In order to assist in increasing fisheries production to meet special food demands of wartime, subsidies on the construction of fishing vessels of certain types were paid by the Department of Fisheries for several years. Under this plan, 20 vessels of the packer-seiner type were built on the Pacific Coast. A smaller number of draggers, approximately 15, were constructed on the Atlantic Coast where the subsidy is still operative.

Fishing Bounty.-A bounty, representing interest on the Halifax Award, is paid annually to fishermen and owners of fishing boats and vessels on the Atlantic Coast under prescribed conditions. The bounty was established under authority of legislation to assist in sea-fisheries development and construction of fishing vessels and boats ( 45 Vict., c. 18,1882 , and $54-55$ Vict., c. 42 , 1891).
1.-Government Bounty Paid to Fishermen, by Provinces, 1944 and 1945

| Province | Bounties Paid |  | Amounts of Bounties Paid ${ }^{1}$ |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1944 | 1945 | 1944 | 1945 |

| Totals. | 19,709 | 18,541 | 158,230 | 159,875 |

${ }^{1}$ Amounts include payments to owners of vessels and boats.
Scientific Research.-Operating under the control of the Minister of Fisheries, -the Fisheries Research Board of Canada, known for some years as the Biological Board, is, in effect, the scientific division of the Department. Reference to 78375-28 $\frac{1}{2}$
fisheries research will be found in a special article on scientific and industrial research which appears at pp. 998-1001 of the 1940 Year Book. The Poard conducts six permanent fisheries research stations-two on the Pacific Coast, three on the Atlantic Coast, and one at Winnipeg, which is concerned entirely with freshwater studies-and one or two sub-stations. Fisheries scientists and technicians carry on at these stations, or from these stations as bases, year-round investigations and experiments in connection with problems of the Canadian fisheries. Some of the stations are concerned with biological studies, others with investigations and experiments relating to fish handling and fish processing.

International Problems.-From time to time in the past, the problem regarding United States privileges in connection with fisheries in Canadian Atlantic waters has been of considerable importance and an outline of this problem will be found at pp. 351-352 of the 1934-35 Year Book. Since 1933, under the modus vivendi plan which grew out of the unratified treaty of 1888, United States fishing vessels have again been permitted entry to Canadian Atlantic ports to purchase bait and other supplies. Port privileges have also been extended on the Pacific Coast to United States halibut fishing vessels for some years past and, more recently, to United States vessels fishing for black cod and several other species. Similar privileges in United States ports on the Pacific Coast have been granted by the United States Government to Canadian fishing vessels. The privileges include permission to tranship catches by weight, ship crews, and so on.

In the Great Lakes region, international questions relating to the fisheries are complicated by the fact that Provincial and State Governments may be concerned, as well as the national authorities of Canada and the United States. However, on Apr. 2, 1946, a Convention between the two countries was signed at Washington, D.C., to provide for the development, protection and conservation of the Great Lakes fisheries through joint action. Under the Convention, which followed a study of Great Lakes fisheries matters by a board representative of Canada and the United States, the two Governments agreed to establish and maintain a Joint Commission which "shall undertake to develop a comprehensive plan for the effective management of the fisheries resources of the Great Lakes for the purpose of securing a maximum use of these resources consistent with their perpetuation" As defined for convention purposes, the term "Great Lakes" includes Lake Ontario, Lake Erie, Lake St. Clair, Lake Huron, Lake Michigan, Lake Superior, and the connecting waters, bays and component parts of each lake, and also the St. Lawrence River from Lake Ontario to the 45 th parallel of latitude.

Pacific Coast fisheries problems of outstanding importance which have been the objects of joint action by Canada and the United States in comparatively recent years are the preservation of the halibut fishery and the restoration to its former proportions of the sockeye salmon fishery of the Fraser River system. The International Fisheries Commission, equally representative of either country, deals with the halibut fishery and, following research carried on under theCommission and regulatory controls based on that research, the halibut stocks
have now been greatly increased in abundance. In 1930, the halibut resources of the North Pacific and Bering Sea were apparently nearing depletion. Since that time the stocks, in the principal fishing areas at least, have more than doubled. Like the Halibut Commission, the International Pacific Salmon Fisheries Commission is equally representative of Canada and the United States. The major project which it has so far undertaken in its program for restoring the Fraser sockeye fishery has been the conquest of conditions at Hell's Gate Canyon, a narrow gorge on the Fraser River in British Columbia, which Commission research had shown to be the main factor in the way of rebuilding the sockeye run. Large-scale fishways were cut through the rock on either side of the Canyon, following intensive scientific and engineering studies by Commission experts, and they have been successful in enabling spawning salmon to make their way past Holl's Gate at water levels which had previously prevented large numbers of the fish from ascending above the Canyon, and had, therefore, kept down the size of the run by reducing reproduction.

FAO and Its Relation to Fisheries.-The word "agriculture" in FAOUnited Nations Food and Agriculture Organization-is used in a sufficiently broad sense to include the fisheries and forestry. The functions of the Organization as they concern the fisheries in particular are given at pp. 291-294 of the 1946 Year Book.

## Subsection 2.-The Provincial Governments

The work that is being done by the different Provincial Governments in connection with the administration of commercial and game fisheries, assistance to the industry, educational and research work, and conservation is outlined at pp. 279-286 of the 1945 Year Book.

## Section 4.-The Modern Fishing Industry*

## Subsection 1.-Primary Production

The latter half of the nineteenth century saw the commencement of expansion in the commercial fishing industry of Canada. In 1844, the estimated value of the catch was only $\$ 125,000$. By 1900 , it had reached almost $\$ 22,000,000$ and the growth continued with little interruption until 1918 , when it reached $\$ 60,000,000$. This figure was not again reached until 1941, owing largely to lower prices rather than to smaller catches, but in that year a new peak of $\$ 62,258,997$ was reached. In the three latest years further increases were recorded, the 1945 figure of $\$ 113,690$,630 showing a gain of $82 \cdot 6$ p.c. over 1941. The figures given represent the total value of fish as marketed, whether in a fresh, dried, canned or otherwise prepared state.

[^153]2.-Values of the Products of the Fisheries, 1870-1945

| Year | Value | Year | Value | Year | Value | Year | Value |

In the early days of the industry, Nova Scotia held the leadership among the provinces, but British Columbia now occupies first place with $39 \cdot 2$ p.c. of the total value of products in 1945, Nova Scotia comes second with $27 \cdot 0$ p.c., and New Brunswick third with 11:7 p.c.

${ }^{1}$ Includes the Northwest Territories, reported for the first time in 1945.
The cod of the Atlantic and the salmon of the Pacific were rivals for first place in the earlier years of the fishing industry; since 1895 salmon has definitely taken the lead, with lobster in second place in recent years until the War reduced the foreign market. In 1945, cod, with an increase over 1944 of $24 \cdot 1$ p.c. in the quantity caught, took second place in order of marketed value; herring was third.

Statistics showing the quantity of sea and inland fish landed have been collected for many years, but historical figures have not been published since it was felt that to add the large quantities of cheap fish, such as herring, to those of such expensive varieties as salmon or lobster had little significance so far as the domestic catch was concerned. The organization of international food bodies following the Second World War, however, has changed this outlook and made it advisable to record the total quantities of sea-food available in view of world requirement for fisheries products and adequate knowledge of world resources. Tables 4 and 5 give the figures from 1918 to 1945.

${ }^{1}$ Includes Yukon for all years and the Northwest Territories for 1945.
In Table 6 the quantities given are those of primary products caught, but the values are those of all products marketed, both primary and secondary. The grand totals are subdivided to show the values of the sea fisheries and inland fisheries, respectively, as compared with the whole. More detailed tables of quantities and values of both sea and inland fish marketed may be found in "Report on Fisheries Statistics", published by the Dominion Bureau of Statistics.

## 6.-Quantities Caught and Values of All Products Marketed of the Chief Commercial Fishes, 1941-45

Nore.-The catch as shown in this table is in each case exclusive of the quantity of livers landed, but the value includes the value of the livers as marketed. As the 1945 figures were entered in proof the order of importance is that of 1944.

## 7.-Percentages of Total Value and Indexes of Volume of Fisheries Production, by Principal Kinds of Sea and Inland Fish, 1934-45

Nore.-Based on values as marketed and quantities caught. Since 1945 figures were entered in proof,
order of importance is that of 1944 . the order of importance is that of 1944.

[^156]The capital investment in the fisheries industry, represented by vessels, boats, nets, traps, piers and wharves, etc., used in the primary operations of catching and landing the fish, had a total value in 1945 of $\$ 40,883,797$ of which $\$ 33,614,976$ or 82 p.c. was credited to the sea fisheries. The number of men engaged in fishing during the year was 67,423 ; of this number 47,998 were employed in the sea fisheries and 19,425 in the inland fisheries, a gain of 1,577 for the sea fisheries and 1,638 for the inland fisheries over the previous year.

## Subsection 2.-The Fish-Processing Industry

A special article on Developments in Fish Processing, prepared by the Deputy Minister of Fisheries, Ottawa, appears in the 1941 Year Book, pp. 225-226.

Among the fish-processing establishments in operation in Canada in 1945, the salmon canneries comprised the principal group with an investment valued at $\$ 12,248,403$, or 36 p.c. of the total for all establishments. About 59 p.c. of the value of production of the establishments was in the form of fish canned, cured or otherwise prepared, and 41 p.c. fish marketed for consumption in a fresh state.

A short historical outline of the development of the mineral industry in Canada is given at pp. 309-310 of the 1939 Year Book and a special article on the Development of Canada's Mineral Resources in Relation to the War Effort, so far as that development had taken place by the middle of 1940, appears at pp. 289-309 of the 1940 edition. An article on the Outlook for the Mineral Industry in Relation to the Economic Development of Canada is given at pp. 302-314 of the 1946 edition.

## Section 1.-Mining Laws and Government Administration

## Subsection 1.-Mining Laws and Regulations

The mineral lands of Canada, like other Crown lands, are administered by either the Dominion or the Provincial Governments. The Dominion Government administers the mineral lands of Yukon and the Northwest Territories as well as those in Indian Reserves and in National Parks; all other mineral lands lying within the boundaries of the several provinces are administered by the respective Provincial Governments.

Mining Laws and Regulations on Dominion Lands. $\dagger$-Dominion lands to which these regulations apply are those administered by the Lands, Parks and Forests Branch, Department of Mines and Resources, and lie within Yukon and the Northwest Territories. Titles issued for Dominion lands, the property of the Dominion Government, in these Territories reserve to the Crown the mines and minerals that may be found on or under such lands, together with the right of operation.

[^160]The Acts and regulations governing mining and quarrying on Dominion lands are: Yukon ond the Northwest Territories-Alkali Mining Regulations; Carbon-Black Regulations; Coal Mining Regulations; Potash Regulations; Petroleum and Natural Gas Regulations (which provide that no person shall explore for petroleum or natural gas in Yukon or the Northwest Territories without first obtaining a permit to do so from the Minister of Mines and Resources); and Domestic Coal Permits. Yukon-Yukon Placer Mining Act. (R.S.C., 1927, c. 216); Yukon Quartz Mining Act (R.S.C., 1927, c. 217); Dredging Regulations. Northwest Territories-Quartz Mining Regulations; Placer Mining Regulations; Dredging Regulations; Quarrying Regulations; and Permits to remove sand, stone and gravel from beds of rivers.

Copies of these regulations are available from the Lands, Parks and Forests Branch of the Department of Mines and Resources, Ottawa.

Provincial Mining Laws and Regulations.*-The granting of land in any province, except Ontario, no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. Some early grants in British Columbia, New Brunswick and Quebec also included certain mineral rights. Otherwise, mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (usually metallic ores), fuel (coal, petroleum, gas) and quarrying. Under these divisions of the provincial mining industry, regulations may be summarized as follows:-

Placer.-In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held and the royalties to be paid.

General Minerals.-These are sometimes described as quartz, lode minerals or minerals in place. The most elaborate regulations apply in this division. In all provinces, except Alberta, a prospector's or miner's licence to search for mineral deposits, valid for a year, must be obtained. A claim of promising ground of a specified size may then be staked. This claim must be recorded within a time limit, with the payment of recording fees. Work to a specified value per annum must be performed upon the claim for a period up to five years, when a grant or lease of the mining rights may be obtained, subject to fees or annual rental. The taxation most frequently applied is a percentage of net profits of producing mines.

Fuels.-In those provinces in which coal occurs, the size of holdings is laid down and the conditions regarding work and rental under which they may be held. In some cases royalties are provided for. In the cases of petroleum and natural gas, a permit to drill on promising ground is usually first obtained. If oil or gas is discovered, the operator may obtain the lease or grant of a limited area subject to rental or fees. A royalty on production is sometimes payable.

Quarrying.-Regulations under this heading define the size of holding and the terms of lease or grant.

[^161]The legislation controlling mining and minerals in each province is given at pp. 278-279 of the 1942 Year Book. Copies of the legislation and regulations and details concerning them may be obtained from the following authorities:-

Nova Scotia.-Minister of Mines, Parliament Buildings, Halifax.
New Brunswick.-Department of Lands and Mines, Fredericton.
Quebec.-Minister of Mines, Quebec.
Ontario.-Department of Mines, Parliament Buildings, Toronto.
Manitoba.-Director, Mines Branch, Department of Mines and Natural Resources, Winnipeg.
Saskatchewan.-Department of Natural Resources and Industrial Development, Regina.
Alberta.-Department of Lands and Mines, Edmonton.
British Columbia.-Department of Mines, Victoria.

## Subsection 2.-Government Administration and Controls

The operation of various Government agencies which were formed during the War to stimulate production of major non-ferrous metals, petroleum and coal are reviewed at pp. 295-296 of the 1945 Year Book. The Non-Ferrous Metals Control under the Department of Munitions and Supply was dissolved at the end of November, 1945. The Administration of Non-Ferrous Metals under the Wartime Prices and Trade Board, however, at that time assumed full control over supply and distribution of non-ferrous metals in addition to continuing controls over prices. In November, 1945, the Steel Control was also ended by the Department of Munitions and Supply, and the Wartime Prices and Trade Board assumed supply and distribution problems in this field as well as continuing controls over prices. However, early in 1946, as a result of the steel industry strikes in the United States, the Steel Control was re-instituted under the Department of Reconstruction and Supply. The Oil Control and the Crown Company, Wartime Oils Limited, which operated under its direction, were also dissolved in November, 1945.

Dominion Fuel Board.*-The Board was created in 1922 to meet the need for a permanent organization responsible to the Government for a thorough and systematic study of the fuel situation and recurrent shortages experienced throughout Canada. It was composed of permanent members of the Dominion Civil Service and the staff of the Board constituted a Division in the Bureau of Mines and Geology, Department of Mines and Resources.

In 1941, the duties, functions and establishment of the Dominion Fuel Board were transferred to the Coal Administration under the Wartime Prices and Trade Board, and in the following year an Emergency Coal Production Board was established to extend financial assistance to coal operators with a view to increasing production. In 1943, the Coal Administration became the Coal Control and was placed under the jurisdiction of the Department of Munitions and Supply. The Emergency Coal Production Board was dissolved as at Mar. 31, 1946, and the Coal Control as at Dec. 31, 1946.

The Dominion Fuel Board was reconstituted under authority of Order in Council P.C. 5236 of Dec. 19, 1946, with the following appointed as members: Deputy Minister of Reconstruction and Supply (Chairman), Deputy Minister of Finance; and Secretary and Chief Executive Assistant, Department of Mines and Resources. (See also Chapter XXVIII on Post-War Reconstruction.)

[^162]Bounties.-Government bounties or subsidies for protective duties on various minerals have been paid in the past years; for further details see Section 6, Part I of Chapter XXII on Domestic Trade.

## Section 2.-Summary of Mineral Production

The importance of mineral production as compared with other primary industries in Canada is indicated in Chapter XI while its part in the foreign trade of Canada is dealt with in Chapter XXIII, Part II, especially Section 3, Subsections 2 and 5.

## Subsection 1.-Value and Volume of Mineral Production

Historical Statistics.-Definite records of the annual value of mineral production go back only to 1886 , although actual production began with the earliest settlements. The figures given in Table 1 are not strictly comparable throughout the whole period, minor changes having been adopted in methods of computing both the metallic content of ores sold and the valuations of the products. Earlier methods resulted in a somewhat higher value than those now in use would have shown. However, the changes do not interfere with the general usefulness of the figures in showing the broad trends in the mineral industry.
1.-Value of Mineral Production, 1886-1946

| Year | Total Value | Value per Capita | Year | Total Value | Value per Capita | Year | Total Value | Value per Capita |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^163]
and stimulated prospecting to such a degree that many new mines were discovered. In addition, parts of Canada not hitherto of commercial importance were opened up and new communities were established with resultant markets for consumer goods and mine supplies. Base-metal prices declined to low levels, but the improvements that low prices and competition had brought about in productive facilities during the 1920 's, together with the presence in the ores of small but appreciable quantities of precious metals, enabled the producing companies to carry on. After a period of readjustment, production expanded again. However, the serious reduction in industrial and construction operations materially restricted the production of coal, non-metallics other than fuels, and the various structural minerals.

The situation, therefore, prior to the outbreak of war in 1939 was that Canada's mineral industries were in a particularly strong position so far as their ability to make a substantial contribution to the country's war effort was concerned. Such a possible contribution had two aspects, namely:-
(1) The production at reasonable cost of those minerals that were essential for the manufacture of armaments, munitions and other war supplies as well as for non-war requirements.
(2) The creation of essential foreign credits by the production of gold and silver and of other minerals, surplus to national needs, for export sale to other countries.

The production of gold was reaching new high records each year so that, in 1940, Canada stood second among the countries of the world with 12.9 p.c. of the total world production. Developments in connection with base metals enabled Canadian companies to produce large supplies of copper, nickel, lead and zinc on a low-cost basis. The policy of the Department of Mines and Resources was to encourage and assist in the location of deposits of metals and minerals that were formerly imported, important among which were tungsten, molybdenite and magnesium. Metallurgical processes were extended to include final refining operations of sufficient capacity to handle the major part of Canadian production. In this field, while no aluminum ores are mined in Canada, with the availability of low-cost hydro-electric power, metallurgical plants were established for the production, from imported ores, of refined aluminum on a large scale. At the beginning of the War, producers of base metals entered into voluntary agreements with the Government of the United Kingdom to sell the surplus above Canadian requirements at practically no advance on the low prices prevailing before the War, thus assuring to the United Kingdom a supply of these essential materials without the risk of advancing prices.

In the case of fuels, non-metallics other than fuels, and structural materials, productive capacity in Canada before the War for many essential minerals was more than sufficient to provide for the then-existing industrial and civil requirements. Thus the expanding demands of war industries and the construction operations necessitated by various features of the war program were readily met.

Canada's mineral production in 1946 was estimated at $\$ 493,840,428$ or $\$ 5,000,000$ less than in 1945. The value of the metals group was down 9 p.c. to $\$ 289,704,209$, which was the lowest figure since 1936, but clay products and structural materials rose 27 p.c. to $\$ 61,414,604$, fuels increased 8 p.c. to $\$ 100,734,412$, and other nonmetallics advanced 6 p.c. to $\$ 41,987,203$. Recoveries of base metals were considerably lower than in 1946. The tonnage of copper was down 22 p.c.; nickel and zinc declined 22 p.c., and 9 p.c., respectively. Output of lead, however, was up slightly. Gold production in 1946 totalled $2,807,643$ fine oz. valued at $\$ 103,180,880$, a gain of 4 p.c. in quantity over 1945 , but a decline of 1 p.c. in value because of the
return in mid-year of the Canadian dollar to parity with that of the United States. Coal production was up 7 p.c. in tonnage and 10 p.c. in value, but the quantities of natural gas and of crude petroleum were slightly lower than the corresponding 1945 figures. All structural materials except lime showed substantial increases over 1945, the volume of cement being higher by more than 34 p.c., sand and gravel 22 p.c., and stone 10 p.c. Brick and other clay products advanced 37 p.c. in value.

[^164]Analysis of Current Value and Volume.-In order to interpret more clearly and simply the trends in mineral production in Canada over the past ten years, Table 3 gives the percentage of the total value contributed by each principal mineral in each year. Values upon which percentages in this table are based are the annual values of mineral production expressed in Canadian currency as published in Tables 1 and 2.

## 3.-Percentages of the Total Value of Mineral Production, by Principal Minerals, 1936-45

| Mineral | 1936 | 1937 | 1938 | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 |

Although the year 1926 was not a normal year in mineral production to the same extent as in some other productive fields, the rapid changes that have resulted from circumstances arising since then can be seen more clearly by using 1926 as a base year. Table 4 shows the indexes of volume of mineral production by principal minerals, for the years 1936-45. The very large increases in the production of petroleum and platinum metals are especially noteworthy.
4.-Indexes of Volume of Mineral Production, by Principal Minerals, 1936-45 ( $1926=100$ )
Note.-Indexes for 1927-35 will be found at p. 319 of the 1940 Year Book.

| Mineral | 1936 | 1937 | 1938 | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 |

## Subsection 2.-Provincial Distribution of Mineral Production

Since 1907, Ontario has been the principal mineral-producing province of Canada. In 1940, Ontario's production was $49 \cdot 4$ p.c. of the total but it has declined steadily to 38.2 p.c. in 1946. The rise in the price of gold has been especially favourable to Ontario's mineral production, while the Sudbury nickel-copper deposits are another outstanding feature in the mineral resources of the Province. For many years British Columbia, where most of the important metals are found and substantial quantities of coal exist, was in second place, but for the past nine years Quebec has held that position. A great part of Quebec's mineral production is made up of gold, copper and asbestos. Nova Scotia and Alberta are the most important coal-producing provinces. The discovery and development of the Flin Flon and Sherritt-Gordon orebodies resulted in the Provinces of Manitoba and Saskatchewan becoming important producers of base metals, gold and silver. Alberta, besides being a big producer of coal, is the most important province for the production of petroleum and natural gas.

## 5.-Mineral Production, by Provinces, 1936-46

Nors.-Figures for the years 1899-1910, inclusive, will be found at p. 345 of the 1933 Year Book; for 1911-28 at p. 323 of the 1939 edition; and for 1929-35 at p. 323 of the 1946 edition.

## Section 3.-Industrial Statistics of Mines and MineralsCapital, Labour, Wages, etc.

The scope of the annual statistics on mineral production published by the Dominion Bureau of Statistics includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc, and nickel-copper industries, as well as a section on metallurgical works. Additional data published at irregular intervals, include such features as capital employed, numbers of employees, wages and salaries paid and net value of sales.

The figures for "net income from sales" of industries given in Tables 7 and 8 are those reported by the operators and are, in each case, the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table 2 of this Chapter where, in the cases of copper, lead, zinc and silver, the values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity
and other supplies consumed in the production process. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum where imported ore only is used and of cobalt which now comes mainly from African ores. The net sales of these plants include, therefore, the net value of the metals recovered from these imported ores and, to this extent, the net sales shown in Tables 7 and 8 include products of other than Canadian origin.

${ }^{1}$ Includes freight and smelter charges and cost of ores treated for 1937 and subsequent years. ${ }^{2}$ Not available.

A summary of the industrial statistics of the principal mineral industries operating in Canada in 1943, 1944 and 1945 is presented in Table 8. The difficulties imposed by the War in the way of labour shortages, lack of new equipment and essential supplies necessary for the mines, resulted in a steady drop in the gross value of production for the entire auriferous quartz mining industry. The value of recoverable metals, gold, silver, etc., which was $\$ 179,000,000$ in 1941 fell to $\$ 161,000,000$ in $1942, \$ 117,000,000$ in $1943, \$ 94,000,000$ in 1944 and $\$ 86,000,000$ in 1945.

${ }^{3}$ Includes natural abrasives.

## Section 4.-Production of Metallic Minerals

The metals of chief importance in Canada are copper, gold, iron, lead, nickel, those of the platinum group, silver and zinc. These metals are dealt with individually in the following subsections. In addition, there are a number of metals produced in minor quantities, principally as by-products in the treatment of metalliferous ores (see Tables 2 and 6).

## Subsection 1.-Copper

Canada is a leading producer and exporter of copper, producing $371,085,128 \mathrm{lb}$. in 1946, including refined copper and the copper content of concentrates and matte exported. The earliest important copper-mining district in Canada was in the Eastern Townships of Quebec, but the most important copper-bearing ore deposits are now located in northwestern Quebec, the Sudbury district in Ontario, the Flin Flon area in Manitoba and Saskatchewan, and in British Columbia. Production from the Sudbury district became important about 1889 and from the mines of British Columbia about 1896. From 1899 to 1929, British Columbia was the leading copper-producing province, production coming from the Rossland and Boundary districts, the Copper Mountain mine, and the Britannia and Hidden Creek mines along the coast. Shortly after the First World War, large development programs were carried out in connection with the Noranda, Waite-Amulet and other copper-producing properties in western Quebec, the Flin Flon and Sherritt-Gordon properties in western Manitoba, and a very large expansion program at the nickel-copper properties of Sudbury. In 1946, the mines in Ontario accounted for 48 p.c. of the Dominion's copper production; Quebec was credited with 19 p.c.; Saskatchewan, 16 p.c.; Manitoba, 11 p.c.; and British Columbia, 6 p.c.

A refinery at Montreal East, Que., treats anodes from the smelter at Noranda, Que., and also the blister copper from the smelter at Flin Flon, Man. The refinery at Copper Cliff, Ont., treats the blister copper from the smelter of the International Nickel Company of Canada, Limited, at Copper Cliff. The Falconbridge Mines Limited, Falconbridge, Ont., regained possession of its refinery at Kristiansand, Norway, in May, 1945, and resumed shipments of matte to that point for treatment. The concentrates from mines in British Columbia are shipped to a United States smelter at Tacoma, Wash.

## 9.-Copper Produced, by Provinces, with Total Values, 1936-16

Note.-Figures for the years 1886-1910, inclusive, will be found at p. 272 of the 1916-17 Year Book; for the years 1911-28 at p. 335 of the 1939 edition; and for 1929-35 at p. 331 of the 1946 edition.

[^170]As copper occurs in association with precious metals and with other base metals which are normally in heavy demand, it is likely that copper production will continue at a fairly uniform rate.

## Subsection 2.-Gold

Canada has been a gold-producing country for over 75 years. During the latter half of the nineteenth century production was chiefly from placer operations in British Columbia and Yukon, while during the present century there has been a rapid growth of production from lode mining both of auriferous quartz and of gold in association with other metals. Gold production in Canada attained its earlier maximum at $1,350,057$ fine oz., in 1900 , when the Yukon production reached its highest point. The quantities and values of gold produced in Canada are given by provinces for 1936 and subsequent years in Tables 10 and 11.

Gold is produced in Nova Scotia, at points across the Canadian Shield from Quebec to the Northwest Territories, and in the Cordilleran Region of British Columbia and Yukon. Except for comparatively small amounts obtained from alluvial workings in Yukon, British Columbia, Saskatchewan and Alberta, the production is derived from lode mining either of auriferous quartz or of other metallic ores such as copper, nickel and zinc that carry varying amounts of gold. The principal producing districts are: western Quebec; the adjacent districts of Porcupine and Kirkland Lake in Ontario, with other smaller camps scattered across northern Ontario to the western boundary; the Rice Lake and Gods Lake areas in eastern Manitoba and the Flin Flon district on the Manitoba-Saskatchewan boundary; the Bridge River district and the Zeballos camp in British Columbia. Developments in the Yellowknife district in the Northwest Territories have resulted in several producing mines. At the present time the leading gold producer in Canada is the Hollinger mine in the Porcupine camp, the second is the Lake Shore mine in the Kirkland Lake camp, both in northern Ontario, and the third is Noranda, a copper-gold mine in western Quebec. In 1946, about $82 \cdot 6$ p.c. of the total production came from auriferous quartz mines; about $15 \cdot 2$ p.c. from mines in which gold was associated with ores of copper, nickel, zinc, etc.; and about $2 \cdot 2$ p.c. from alluvial operations. The auriferous quartz mining industry suffered severely from the shortage of labour and of essential supplies in the later war years; the number of producing mines decreased from 232 in 1939 to 88 in 1946 and their employees dropped from 29,001 to 17,889 during the same period.

## 10.-Quantities of Gold Produced, by Provinces, 1936-46

Nore.-Figures for the years 1862-1910, inclusive, will be found at pp. 268-269 of the 1916-17 Year Book; for the years 1911-28 at p. 336 of the 1939 edition; and for 1929-35 at p. 332 of the 1946 edition.

[^172]
## Subsection 3.-Iron

Bog iron ore was first mined and smelted in the Province of Quebec early in the eighteenth century and from that time until 1883 the industry was carried on almost exclusively at Three Rivers. Other furnaces, using local ore, were operated at Radnor Forges and Drummondville, the last to shut down being the Drummondville furnace in 1911.

Deposits of iron ore in Canada are many and widespread, but because of the availability of low-cost, higher-grade ores in the Lake Superior ranges of the United States and the Wabana deposit in Newfoundland, no iron ore from domestic sources was produced in Canada from 1924 to 1939, inclusive.

In 1937 development work began at the New Helen mine of the Algoma Ore Properties Limited, in the Michipicoten area of Ontario and the first sinter was produced in July, 1939. The high-grade deposits being worked by the Steep Rock Iron Mines Limited, 135 miles west of Port Arthur, Ont., and the more recent discoveries of large deposits of iron ore in the Quebec-Labrador Boundary region have greatly raised the potentialities of Canada as a producer of iron ore. In 1946 there were $1,581,063$ tons of iron ore produced, all of which came from Ontario.

## 12.-Iron-Ore Shipments and Production of Pig-Iron, Ferro-Alloys and Steel Ingots and Castings, 1936-46

Note.-Figures for the years 1886-1910, inclusive, will be found at p. 373 of the 1936 Year Book; for the years 1911-28 at p. 340 of the 1939 edition; and for 1929-35 at p. 333 of the 1946 edition.

## Subsection 4.-Lead

Lead has been produced in Canada since 1887, and is obtained largely from the ores of British Columbia. Bounties were paid on lead produced in Canada from 1899 to 1918 but the highest production of this period was $63,200,000 \mathrm{lb}$. in 1900 . However, the successful solving by the Consolidated Mining and Smelting Company; of the metallurgical problems connected with the separation and reduction of these lead-zinc ores accounts to a considerable extent for the rapid growth in lead production during recent years.

In the East and West Kootenay districts of British Columbia there are many important mines, the principal of which is the Sullivan lead-zinc mine near Kimberley which accounts for about 95 p.c. of the total Canadian output. One of the world's largest smelters treats these ores at Trail, B.C. The lead-zinc mines in western Quebec account for most of the remainder of Canada's production, the concentrates from these properties being shipped to the United States for treatment. There was a small production in 1945 from the silver-lead-zinc ores in the Mayo district of Yukon and from northwestern Ontario. Production by provinces in 1945 is shown in Table 6, p. 449. Table 13 gives the total quantities and values of lead produced in Canada from 1936 to 1946.

## 13.-Quantities and Values of Lead Produced from Canadian Ores, 1936-46

Note.-Figures for the years 1887-1910, inclusive, will be found at p. 367 of the 1929 Year Book; for 1911-28 at p. 341 of the 1939 edition; and for 1929-35 at p. 333 of the 1946 edition.

${ }^{1}$ Subject to revision.

## Subsection 5.-Nickel

The greater part of the world's output of nickel is produced in Canada and the source of all but a small percentage of the $190,811,179 \mathrm{lb}$. produced in 1946 came from the nickel-copper ores of the Sudbury district. Some nickel is also obtained as a by-product from the treatment of cobalt-silver ores. The nickel-copper industry includes the mining, smelting and, to a certain extent, the refining of nickel-copper ores. The ore is mined principally for the nickel-copper content, but silver, gold, selenium, tellurium and metals of the platinum group are profitably recovered in the metallurgical processes, although they are present in relatively small quantities. Smelting and copper refining operations are carried on by the International Nickel Company of Canada, Limited, at Copper Cliff, Ont., in close proximity to the mines, and refined nickel is produced at Port Colborne, Ont. The Falconbridge Mines Limited, has a smelter at Falconbridge, Ont., but the matte from this plant is shipped to Norway for refining. During the War, the Falconbridge matte was treated by the International Nickel Company at Copper Cliff.

## 14.-Quantities and Values of Nickel Produced, 1936-46

Norg.-Figures for the years 1889-1910, inclusive, will be found at p. 368 of the 1929 Year Book; for 1911-28 at p. 342 of the 1939 edition; and for 1929-35 at p. 333 of the 1946 edition.

## Subsection 6.-Metals of the Platinum Group

Metals of the platinum group include palladium, rhodium, ruthenium, osmium and iridium, with platinum and iridium the most important. These metals occur in the nickel-copper ore of the Sudbury district and are recovered in the tank residues from the nickel refinery at Port Colborne, Ont.; the crude residues are sent to the refinery at Acton, England, for refining. The great increase in the output of nickelcopper ores has made Canada the leading producer of platinum since 1934, when it displaced Russia. The industrial uses of the platinum metals have expanded considerably in recent years, particularly in electrical and chemical equipment, jewellery and in medical and dental appliances. Canada produced 666,908 ounces of platinum metals for a total value of $\$ 26,688,084$, in 1945 . Production was greatly reduced in 1946.

## 15.-Quantities and Values of Platinum and Palladium Produced, 1936-46

Nore.-Records of the platinum production in Canada go back to 1887 but, prior to 1921, the amounts were comparatively small and the basis of calculation was not comparable with that now used. Figures for the years 1921-35 will be found at p. 340 of the 1940 Year Book.

## Subsection 7.-Silver

Silver mining is not a distinct industry in Canada as the silver-bearing minerals occur in association with other metals of economic value. Most of the metal is obtained from the treatment of base-metal ores although substantial amounts are
recovered from gold-quartz ores and from alluvial gold deposits. For many years the famous camp at Cobalt, Ont., supplied the bulk of Canada's silver, but output from this ${ }^{7}$ area has been quite small in recent years. In 1946, $47 \cdot 7$ p.c. of Canada's silver came from British Columbia, $21 \cdot 0$ p.c. from Ontario, $15 \cdot 3$ p.c. from Quebec, $4 \cdot 2$ p.c. from Manitoba, 11.7 p.c. from Saskatchewan and 0.1 p.c. from Yukon and the Northwest Territories. Consumption of silver in Canada has increased substantially in recent years and now amounts to about $8,000,000$ fine oz. annually.

## 16.-Quantities and Values of Silver Produced, 1936-46

Note.-Figures for the years 1887-1910, inclusive, will be found at p. 361 of the 1933 Year Book; for the years 1911-28 at p. 344 of the 1939 edition; for 1929-35 at p. 334 of the 1946 edition.

| Year | Quantity | Value | Year | Quantity | Value |

[^174]
## Subsection 8.-Zinc

Zinc production in Canada in 1946 showed a decrease of 8.8 p.c. over 1945. In the later year, British Columbia accounted for 58 p.c. of the total, Manitoba and Saskatchewan for 23 p.c. and Quebec for about 19 p.c.

The principal zinc-mining regions of British Columbia are situated in the Kootenay district, where there are large deposits of silver-lead-zinc ore. The chief producing mine is the Sullivan near Kimberley, while other mines are located in the

Ainsworth and Slocan divisions of the West Kootenay district. The Britannia mine on Howe Sound, while primarily a copper-gold property, produces zinc concentrates when the market is favourable.

In northwestern Manitoba, the Flin Flon and Sherritt-Gordon mines have ores in which zinc is closely associated with copper and gold, and refined zinc has been made at the Hudson Bay Mining and Smelting Company's smelter from Flin Flon ores since the autumn of 1930. During 1945, zinc concentrates were shipped by the Waite-Amulet Mines, the Normetal Mining Corporation and the Golden Manitou Mines in the Rouyn district in Quebec, and by the New Calumet mines, near Renfrew, Ont. Production by provinces in 1945 is given in Table 6, p. 450.

Domestic requirements now take about 60,000 tons of refined zinc compared with 20,000 tons in pre-war years.

## 18.-Quantities and Values of Zinc Produced, 1936-46

Nore.-Figures for the years 1911-28 are given at p. 347 of the 1939 Year Book; for 1929-35 at p. 335 of the 1946 edition.

| Year | Quantity ${ }^{1}$ | Value | Average Price per lb. | Year | Quantity ${ }^{1}$ | Value | Average Price per lb. |

${ }^{1}$ Estimated foreign smelter recoveries and refined zinc made in Canada. $\quad{ }^{2}$ Subject to revision.

## Subsection 9.-World Production of Metallic Minerals

Complete figures of world production of such metals as gold, silver, copper, lead and nickel are not available for the war years. Tables 19 and 20 give historical figures of world production of gold and silver up to 1941, while Table 21 gives the available production of these metals by countries for 1943 and 1944.

## 19.-Quantities and Values of World Production of Gold, 1891-1941 ${ }^{1}$

(From the Annual Report of the Director of the United States Mint)
Note.-Figures for intervening years from 1900-25 are given at p. 335 of the 1946 Year Book.

| Year | Quantity | Value | Year | Quantity | Value |

${ }^{1}$ World totals for the years since 1941 have not been published.
${ }^{2}$ At the average par price of a fine ounce of silver in London, excepting the years 1918-22, inclusive, and 1931-41, for which the means of the New York bid and asked prices were used.

## 21.-Quantities and Values of the World Production of Gold and Silver, by Principal Countries, 1943 and 1944

Note.-Abridged from the Annual Report of the Director of the United States Mint; many of the figures are estimates, the sources of which are given as footnotes to the U. S. Mint table. It is not possible to obtain official figures or even reliable estimates for many countries, mainly European, during the war years, which were shown in the corresponding table of the Canada Year Book for pre-war years. World totals have therefore been omitted.

| Country | 1943 |  |  |  | 1944 |  |  |  |

## Section 5.-Production of Fuels

## Subsection 1.-Coal

The Coal Reserves of Canada.*-A description of the coal deposits and coal resources of Canada appears in the 1946 Year Book, pp. 337-347 The classification of coals described in that article and indicated on the legends of the accompanying maps and on the map that accompanies this summary, is the uniform scientific classification of the coals of the North American continent as a whole which was evolved and later adopted after almost ten years of united research by the Committee of the American Society of Testing Materials, and the Canadian Associate Committee on Coal Classification that was set up in 1928 by the National Research Council of Canada.

On referring to this classification, which for convenience is repeated below, it will be noted that the coals have been divided into four main classes and thirteen groups. The adoption of this classification made possible for the first time an accurate comparison of the coal deposits of Canada with those of the United States as shown on the map of the Coal Fields in Canada and the United States that appears in the 1946 article. Prior to this investigation, coal deposits in these two countries having identical chemical and physical characteristics were being assigned to different groups and even to different classes.

The classification of coals by rank is based on the fact that different coals represent different stages in the process of metamorphism from the original vegetation through the series of peat, lignite, sub-bituminous, bituminous, and anthracite, and that each of these stages shows a different percentage of fixed carbon content and a different calorific value as calculated on the mineral-matter-free basis (ash free). The higher rank coals are classified according to the percentage of fixed carbon on a dry basis, whereas the lower rank coals, i.e., those containing less than 69 p.c. fixed carbon, are classified according to B.t.u. per pound on the moist (as mined) basis. The limits of the thirteen groups and the four main classes are indicated in the following statement.

[^176]With respect to the coal reserves of Canada, the estimate of Canada's coal reserves, as compiled by the late Dr. D. B. Dowling for the Twelfth International Geological Congress, Toronto, 1913, and as reproduced in Geological Survey of Canada, Memoir 59, 1915, should be regarded only as a rough approximation of coal occurring in the earth as a geological phenomenon-not as an estimate of coal that may be considered an economic asset. It was stated also that an estimate of mineable coal reserves of Canada was being prepared for the Royal Commission on Coal. This preliminary estimate appears in Table 22 and is shown in a series of diagrams at the base of the accompanying map.

It will be noted that the estimated coal reserves are arranged in five different groups as opposed to the ten groups shown on the map legend. The reason for this is that more than one rank of coal occurs in some of the deposits and the tonnages of some of these are so small or indefinite, due to the lack of chemical analysis, that it is difficult or impossible to separate the different ranks. For example, the known deposits of anthracitic coals in Canada are relatively small and such reserves as do exist have been included with those of Low Volatile Bituminous Coals in Group I of the tabulation and the graphical diagrams. On the other hand Group II of the estimate consists almost entirely of Medium Volatile Bituminous Coal, whereas Group III of the table includes the three ranks of High Volatile Bituminous Coals, A, B and C. Group IV includes the three ranks of Sub-bituminous Coals A, B and C, and Group V includes the two groups of lignitic coals-Lignite Coal and Brown Coal.

The reserves of each of these groups are calculated under the heacings "Probable Reserves" and "Possible (Additional) Reserves" The Probable Reserves are those that have been calculated on considerable geological, drilling, and mining development data, whereas the Possible (Additional) Reserves are those based on geological data of much more limited extent. The probable reserves are indicated on the five diagrams by a lined pattern whereas the possible reserves are indicated by a blank colour.

In estimating the mineable coal reserves of Canada, it was found that no common yardstick with respect to minimum thickness of coal and maximum depth of mining could be employed as these differed materially in different provinces. The limits with respect to these factors that have been adopted are those found practical in the different coalfields under existing mining conditions.

Thus, in Nova Scotia where coal mining is at present being carried to a depth of almost 4,000 feet and in the submarine areas of the Sydney Coalfield where it is estimated that mining operations within this depth can be carried seaward for a distance of at least five miles from the outcrop, these limits have been set for economic mining development. The minimum thickness of coal seam that can be profitably mined at these limits of depth and distance is placed at 3 feet. In the Joggins coal area of the Cumberland Coalfield, N.S., however, coal seams $2 \frac{1}{2}$ feet thick are being mined profitably, and there a relatively small tonnage has been accordingly included.

In New Brunswick the coal seam being mined averages 18 inches in thickness and everywhere lies within 500 feet of the surface, and these figures have been used as the limits of economic development.

In Saskatchewan the lignite seams being mined are everywhere less than 500 feet in depth and, with the exception of the near-surface mining in the Kelfield coal area of western Saskatchewan, where the coal seam being mined is about 30 inches thick, all the coal seams under development are over 3 feet in thickness.

A thickness of 3 feet or more and a maximum depth of 500 feet are accordingly set as the limits in estimating the mineable coal reserves.

In the Plains areas of Alberta, the limits of profitable mining for the sukbituminous coal deposits are placed at a minimum thickness of 3 feet and a maximum depth of 1,000 feet.

In the Foothills belt of Alberta and eastern British Columbia where bituminous coals of Lower and Upper Cretaceous and of Tertiary ages occur, the economic limits of mining are placed at 3 feet thickness and a maximum depth $\sigma^{\circ}$ cover of 2,500 feet.

In southern, central and northern British Columbia and in Yukon Tenitory, where coals of lignitic and bituminous ranks occur, the limits of economic mining are set at 3 feet thickness of coal seam and 1,000 feet maximum depth. On Vancouver Island and Graham Island where coal deposits of Upper Cretaceous age and of bituminous and anthracitic rank occur, the limits in estimating mineable reserves are placed at a minimum thickness of 3 feet and a maximum depth of 2,000 fett.

Very few data pertaining to the thickness and ranks of the coal deposits in the Northwest Territories and especially in the Arctic Islands are available. The estimates of mineable reserves that have been made are based on limited areas near the coal occurrences and on an assumed minimum thickness of seam of 3 feet. In calculating the reserves, 1.29 has been taken as the specific gravity of the coal, which is about 80 pounds of coal per cubic.foot, 1,750 short tons of coal per acre foot, and $1,120,000$ short tons of coal per square mile foot.

The reserves of mineable coal, as given in Table 22, cannot be compared with the estimates of total coal reserves published by the Geological Survey in G.S.C. Memoir 53, 1913, for reasons given previously (p. 466). These Geological Congress estimates of 1913 must, however, be retained for comparative geological purposes until a complete re-estimate of the mineable or recoverable coal reserves throughout the world has been made. The current estimate of mineable reserves may be considered a very conservative one and doubtless it will be considerably increased as greater exploration and additional knowledge relating to the deposits of the different coalfields is acquired. In most of the coalfields only a small fraction of the area likely to be underlain by coal has been used in the computation, the extent of such areas being determined by the known occurrences of coal and the thicknesses of the seam or seams at the different localities.

The current estimate of mineable coal is less than one-tenth of the 1913 estimate of total coal. The estimates show a slight change also in the relative standing of the different coal-bearing provinces. Alberta, though retaining the leading position, is credited with only 48 p.c. of the mineable coal reserves of Canada as against the former estimate of 85 p.c. Saskatchewan holds second place with 24 p.c. of the mineable reserves replacing British Columbia which has only 19 p.c. of the mineable reserves. The Saskatchewan coal, however, is of lignitic rank whereas that of British Columbia is largely of bituminous and sub-bituminous ranks. Nova Scotia stands fourth with more than 3 p.c. of the total mineable coal reserves, most of which is of High Volatile A Bituminous Coal. Northwest Territories stands fifth with slightly less than 3 p.c. of the total mineable reserves, Yukon sixth with about 2 p.c., and New Brunswick, Manitoba and Ontario combined possess the remaining reserves which amount to less than 0.5 p.c. of the total mineable coal. The percentages of the estimates of probable and possible reserves and of the coals of the five groups indicated in Canada as a whole and in its several coal-bearing provinces, are indicated in Table 22.

Coal Production.-The fuel situation in Canada is somewhat anomalous as, in spite of the enormous resources of coal and oil, output is relatively small in comparison with domestic requirements.

The Canadian coal areas are situated in the eastern and western provinces, while the areas of densest population and greatest industrial development, those of Ontario and Quebec, are more easily and economically supplied with coal from the nearer United States coalfields of Pennsylvania and Ohio. The coal produced in Nova Scotia, New Brunswick and British Columbia is all classed as bituminous, while Alberta produces semi-anthracite, bituminous, sub-bituminous and lignite, and Saskatchewan and Manitoba lignite only.

## 23.-Coal Production, by Provinces, 1936-46

Note.-Figures for the years 1874-1910, inclusive, will be found at p. 419 of the 1911 Year Book; for the years 1911-28 at p. 348 of the 1939 edition; and for 1929-35 at p. 347 of the 1946 edition.

${ }^{1}$ Subject to revision.
Coal Consumption.-The sources of coal consumed in Canada in the calendar years 1936-45 are shown in Table 26 and detailed figures of coal made available for consumption in 1945 are given in Table 27; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not "cleared for consumption" until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally, the coal made available for consumption is greater than the apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond but, while remaining in bond at the port, it is available for domestic consumption if required.

## 24.-Imports of Anthracite, Bituminous and Lignite Coal into Canada, 1936-46

Nore.-Anthracite dust is included under anthracite coal. Figures for the years 1868-1910, inclusive, will be found at p. 420 of the 1911 Year Book; for the years 1911-28 at p. 349 of the 1939 edition; and for 192935 at p. 348 of the 1946 edition.

${ }^{1}$ Coal reaching Canadian ports whether or not it is cleared from customs.

## Subsection 2.-Natural Gas

The producing natural gas wells in Eastern Canada are in southwestern Ontario, and near Moncton, N.B. In Western Canada the principal producing fields are in Alberta and include the Turner Valley (about 35 miles southwest of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost, Bow Island and Wetaskiwin. Wainwright, Alta., is supplied with gas from the Maple Leaf Well in the Fabyan field. Near Lloydminster, in Saskatchewan, a well was brought into production during 1934 and there was a substantial increase in 1946 in output from this area. In 1946, Alberta was credited with 62 p.c. of the total value and 86 p.c. of the total quantity, while Ontario produced over 35 p.c. of the value and over 12 p.c. of the total quantity

## 28.-Quantities and Values of Natural Gas Produced, by Provinces, 1936-16

Notr.-For the years 1892-1919, see the Annual Report on the Mineral Production of Canada, 1928. p. 188; for the years 1920-28 see p. 347 of the 1940 Canada Year Book; and for 1929-35, p. 350 of the 1946 edition.

## Subsection 3.-Petroleum

A brief account of the development of the petroleum industry in Canada is given at pp. 266-267 of the 1941 Year Book. The development of oil production in the Northwest Territories is covered in the 1943-44 edition, pp. 316-317.

The quantity of crude petroleum produced in 1946 was $9 \cdot 6$ p.c. less than that produced in 1945. This decline was due chiefly to the decrease in production from the Turner Valley of Alberta. However, the important feature in the 1946 Canadian oil situation was the production of the Lloydminster area straddling the AlbertaSaskatchewan boundary. This district is now second in importance among the oil-producing areas in Canada.

[^179]The Alberta Oil Fields.*-Over 90 p.c. of Canada's oil is produced from the wells of Alberta. The year 1942 was the peak year for oil production in that Province when, for the first time in its history, the oil fields produced over $10,000,000$ bbl. Since then there has been a steady decline in production. In 1946, oil production for Alberta as a whole showed a decrease of $917,747 \mathrm{bbl}$. as compared with the previous year. This was the result of a decrease of $1,050,489 \mathrm{bbl}$. in the production of Turner Valley wells, less an increase of $132,742 \mathrm{bbl}$. from fields outside the Valley.

Fields outside the Turner Valley continued to show increases as in previous years, with the exception of Vermilion. Taber, Conrad and Lloydminster provided the most noticeable increases in 1946. The Lloydminster field was the centre of interest during the year. Situated some 30 miles to the east of Vermilion, it lies partly in Alberta and partly in Saskatchewan. Production on the Alberta side totalled $76,187 \mathrm{bbl}$. in 1946, an increase of 47,866 over 1945. On the Saskatchewan side, the total was 136,863 bbl., an increase over the preceding year of $120,355 \mathrm{bbl}$.

With the falling off of production in the Turner Valley field the great need in Western Canada was for the discovery of a second major field. Outside of Turner Valley and Norman Wells, the extensive efforts and the large amounts of capital expended had not been really fruitful. It is true that Lloydminster has made pronounced strides and is still enlarging its activities, but this did not answer the problem. In February, 1947, Leduc No. 1 Well was brought in by Imperial Oil

[^180]and this drew immediate attention to a new field situated about 18 miles south of Edmonton and 10 miles west of the town of Leduc. From the first this well showed signs of being a major producer, and it was immediately followed by three other wells in the same area which also proved to be in the major production class. As at June 15,1947 , four more wells were being drilled in the proven area, all of which appear to be assured of high production. While, of course, time and the results of large-scale drilling programs alone will tell the actual significance of the new field, results to date are very promising.

The work of exploration for new Alberta oil fields is continuing by the application of scientific research and the drilling of test wells. Many new structures are being explored, among which that of the Smoky River area between Entrance and Grande Prairie is of special interest.

The Tar Sands and Bituminous Developments.-Alberta, in its bituminous sands deposit at McMurray, has the greatest known oil reserve on the face of the earth. Estimates vary between that of Canadian geologists at $100,000,000,000$ tons and that of the United States Bureau of Mines at $250,000,000,000$ tons. The yield at present is about one barrel of oil per ton of sands.

At Bitumount, 50 miles north of McMurray on the Athabaska River, an Oil Sands Limited plant has been erected and experimentation regarding processing of the sand in that area is being carried out. Overburden covering the outcrop is very light at Bitumount and the product, being soft, lends itself more readily to separation than the harder outcrop in other parts of the reserve.

Another feature of the Bitumount area is the question of usage of the separated sand for glass manufacture. The sand analysed for such purpose has been favourably reported on, and quantities have been transported to points of manufacture.

A rich deposit of 'liquid bitumen' has been uncovered by Dominion Government geologists on the west side of the Mildred-Ruth Lakes Area, opposite the mouth of Steepbank River, 20 miles north of Fort McMurray in northeastern Alberta. The estimate of bitumen content per acre ranges as high as $350,000 \mathrm{bbl}$. The deposit is located within 20 miles of the north terminus of the Northern Alberta Railway at Waterways, and is about 250 miles north and east of Edmonton.

Within the area of best-grade material in the deposit, the 18 holes assayed thus far give a good indication of the quality and size of the deposit and, while they are quite insufficient for any precise estimates, the presence of a deposit large enough to warrant consideration of commercial development is indicated.

Discovered in the course of wartime exploration operations, the deposit will be turned over to Abasand Oils Limited, the operation of which was taken over by the Alberta Government during the War years to speed commercial development of the 'tar sands'

## Subsection 4.-Empire and World Production of Fuels

Coal.-The total estimated coal production of the world in 1938, the latest year for which complete figures are available, amounted to about $1,420,000,000$ long tons, a decrease of 6 p.c. from the previous year.

Petroleum.*-Oil production for the world, in 1945, reached a total of $2,493,680,000 \mathrm{bbl}$.; this figure is exclusive of production in Russia and in countries previously controlled by the Axis Powers. The countries contributing the major part of this total were: United States, 1,754,190,000 bbl.; Venezuela, 295,550,000 bbl.; Near and Middle East, $184,690,000$ bbl.; and Mexico, $42,340,000$ bbl. The production of each of these countries showed an increase over 1944.

The British Empire produces only about 2 p.c. of world production of petroleum. Table 30 shows Empire production for the years 1942 to 1945.
31.-Petroleum Production in the British Empire, 1942-45

| Country | 1942 | 1943 | 1944 | 1945 | P.C. of Total 1945 |

| P.C. British Empire of World. ... | $2 \cdot 15$ | 1.95 | $2 \cdot 27$ | $2 \cdot 15$ | - |

A general estimate of world oil production for 1946, with presently procurable figures, gives an average daily production of $7,750,000 \mathrm{bbl}$. or an approximate grand total for the year of over $2,800,000,000 \mathrm{bbl}$. The United States, responsible for 60 p.c. of world production as in former years, stood first in quantity of production. Venezuela came definitely in second place, followed by the Middle East, the oilproducing countries under this heading being the Persian Gulf, Iran, Iraq, Saudi Arabia, Bahrein Island, Kuwait, Qatar and Egypt. Russia came fourth. Figures for 1946 are not at present available for all countries of the British Empire.

[^181]
## Section 6.-Production of Non-Metallic Minerals (Excluding Fuels)

The most important minerals in this group are asbestos, gypsum, salt and sulphur, but it also includes numerous other items such as feldspar, graphite, iron oxide, magnesitic dolomite, mica, nepheline-syenite, silica brick, sodium sulphate, soapstone and talc.

## Subsection 1.-Asbestos

The asbestos produced in Canada is practically all of the chrysotile variety and comes entirely from the serpentized rock in the Eastern Townships of Quebec. The value of the annual production of asbestos increased from less than $\$ 24,700$ in 1880 to $\$ 22,805,157$ in 1945 and $\$ 24,490,695$ in 1946 . The Canadian deposits are the largest known in the world. The producing centres are Thetford mines, which has been producing since 1878, Black Lake, East Broughton, Vimy Ridge, Asbestos, and St. Remi de Tingwick. The veins of chrysotile asbestos vary in width from one-quarter inch to one-half inch and occasionally fibre has been obtained several inches in length. The fibre is of good quality and well adapted to spinning.

The world's largest market is in the United States and Canada's proximity to this market is very advantageous to the asbestos industry in this country.

## 32.-Quantities and Values of Asbestos Produced, 1936-46

[^182]| Year | Quantity | Value | Year | Quantity | Value |

[^183]
## Subsection 2.-Gypsum

The use of gypsum in the building trades has made rapid progress and Canada has extensive deposits of gypsum favourably situated for commercial developments. They are chiefly located in Hants, Inverness and Victoria counties, N.S.; Hillsborough, N.B.; Hagersville and Caledonia, Ont.; Gypsumville and Amaranth, Man.; and Falkland, B.C. The Hillsborough deposit of gypsum in New Brunswick is of very high grade. Gypsum is exported from Canada in crude form mainly to the United States for the manufacture of gypsum products. Canadian production of gypsum amounted to $1,833,717$ tons in 1946.
33.-Gypsum Produced, by Provinces, 1936-46

Note.-Figures for the years 1926-35 are given at p. 321 of the 1943-44 Year book.

[^184]
## Subsection 3.-Salt

Salt is obtained from brine wells in the Provinces of Ontario, Manitoba and Alberta. while at Malagash, N.S., it is recovered by mining rock salt and by evaporation from brine. The centres of production in Ontario of the salt industry are in Amherstburg, Goderich, Sandwich and Windsor. The market for salt in Canada is steadily increasing. Domestic production is sold principally to the dairy, meatcuring and -canning industry, to fisheries, to highways and transport departments, to agriculturists for use as a soil sweetener, to the chemical industries, and as table salt. In 1946, Ontario produced 435,677 tons' of salt, 82 p.c. of the Canadian total. About one-half of the Dominion's output is used in making caustic soda, soda ash and related chemicals.
34.-Salt Produced, by Provinces, 1936-46

Note.-Figures for the years 1926-35 are given at p. 354 of the 1945 Year Book.

## Subsection 4.-Sulphur

Sulphur production statistics given in Table 35 represent the quantity and value of sulphur contained in iron pyrites shipped plus the quantity and value of sulphur reclaimed for acid manufacture, etc., from smelter fumes. As thus defined, the commercial output of sulphur in Canada during 1946 totalled 231,476 short tons
valued at $\$ 1,766,119$ compared with 250,114 tons worth $\$ 1,881,321$ in 1945. Production in 1946 comprised 96,854 tons of sulphur in iron pyrites and 134,622 tons recovered from smelter gases. Output by provinces was: Quebec 92,854 tons valued at $\$ 386,899$; Ontario, 15,322 tons at $\$ 153,220$; and British Columbia, 123,300 tons at $\$ 1,226,000$.

Sulphur is used in Canada chiefly in the production of sulphite pulp and in the production of artificial silk and newsprint. It is used to a large extent also in the manufacture of sulphuric acid, explosives and rubber goods and in the production of ammonium sulphate fertilizers.

## 35.-Quantities and Values of Sulphur Produced, 1936-46

Note.-Figures for the years 1926-35 are given at p. 355 of the 1946 Year Book.

## Section 7.-Production of Clay Products and Other Structural Materials

Production of clay products and other structural materials is dependent upon the activity of the construction industry in Canada; output in 1946 reached a record value of $\$ 61,414,604$. This group includes cement, clay, and clay products (brick, drain tile, sewer pipe, etc.), lime, sand, gravel and stone. The cement industry in C'anada began with the manufacture of hydraulic or natural rock cement. Production was probably first obtained at Hull, Que., between 1830 and 1840. The manufacture of Portland cement began about 1889 and the largest production is now in Quebec and Ontario, although there are active plants in Manitoba, Alberta, and British Columbia. Common clays, suitable for the production of building bricks and tile are found in all the provinces of Canada, although production is greatest in Ontario and Quebec which are the chief areas of population.

Stoneware clays are largely produced from the Eastend and Willows area in Saskatchewan and shipped to Medicine Hat, Alta., where, owing to the availability of cheap gas fuel, they are used extensively in the manufacture of stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs near Shubenacadie and Musquodoboit in Nova Scotia, some of the Musquodoboit clay is used for pottery, but it, has not been developed extensively for ceramic use. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia.

Important deposits of high-grade, plastic, white burning clays occur in northern Ontariu, and clay deposits which yield a high-grade of china clay have been found along the Fraser River in British Columbia, but china clay has been produced commercially only from the vicinity of St. Remi D'Amherst, Papineau County, Que., where mining operations were carried on prior to 1923.

Ball clays of high bond strength occur in the "White Mud" beds of southern Saskatchewan, but these have not been developed to any extent.

## 36.-Values of Clay Products_and Other Structural_Materials Produced, by Provinces, $\mathbf{1} 1936-46$

Nots.-Figures for the years 1926-35 are given at p. 355 of the 1946 Year Book.

[^185]Deposits of sand and gravel are numerous throughout eastern Canada, with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits, as their cost to the consumer is governed largely by the length of the haul. This accounts for the large number of small pits and the small number of large plants. Every province, except New Brunswick and Prince Edward Island, produces natural bonded sand. By far the greatest part of production comes from the Niagara Peninsula, Ont.

Some grades of sand particularly suitable for certain industries demand a much higher price than ordinary sand. Commercial production of sand and gravel is greatest in Quebec and Ontario, these two provinces contributed 73 p.c. of the total quantity in 1946.

The greater part of the output of gravel and sand is used in road improvement, concrete works and railway ballast, and most of the commercial plants are:equipped for producing crushed gravel, a product that can compete with crushed stone.

The stone industry in Canada has two main divisions, stone quarrying and tre stone products industry. The kind of stone quarried in Canada includes granite, limestone, marble, sandstone and slate. The products of these quarries yield highgrade structural and decorative materials and also supply requirements for chemical and other allied industries. The gross value of stone of all varieties produced in Canada in 1945 totalled $\$ 8,166,700$.

## Section 1.-Water Power

Canada as a whole has been very favourably endowed with water-power resources. A country of great lakes and rivers, its large areas of favourable topography, combined with adequate, well-distributed precipitation in most sections, present great opportunities for the development of water power. Precipitation, the raw material of water power, varies from more than 103 inches annually on the Pacific Coast to about 12 inches in certain sections of the Prairies and Northwest Territories; in Ontario and Quebec, the annual average is 24 to 40 inches; in Nova Scotia it is about 45 inches. The run-off from this precipitation, much of it from considerable altitudes, creates in its descent to the sea sources of potential energy at every rapid and fall along the streams and rivers. Canada's innumerable lakes, which have a total area in excess of 200,000 square miles, also provide storage basins for the regulation and control of its stream flow, thus enhancing its potential power. The distribution of available power resources, more than one-half of which occur in Ontario and Quebec, has fostered great industrial development and has compensated in large degree for the lack of commercial fuel deposits in these provinces.

Since the turn of the present century, water power has been a dominant factor in the evolution of the Canadian economy. In 1900, Canada was predominantly an agricultural country and water power, with the advent of longdistance transmission of electricity, was just beginning to exert its influence in the development of large-scale industry In the succeeding decades, this influence grew rapidly and so encouraged the economic utilization of the natural resources of land, mine and forest throughout the Dominion that Canada has attained a position of first-rate importance among the manufacturing countries of the world. Water-power installations, which totalled only $173,000 \mathrm{~h}$. p. in 1900 , grew to 977,000 h.p. in $1910,2,516,000 \mathrm{~h} . \mathrm{p}$. in $1920,6,125,000 \mathrm{~h} . \mathrm{p}$. in $1930,8,584,000 \mathrm{~h} . \mathrm{p}$. in 1940 , and at the beginning of 1947 had reached a total of $10,312,123 \mathrm{~h} . \mathrm{p}$. This places Canada in a position second only to the United States, the foremost country in

[^187]POTENTIAL AND INSTALLED WATER POWER 1 N
CANADA
$1920-46$

the world in the development of water power and, on the commonly accepted basis of one horse-power being the equivalent of the work of ten men, furnishes energy equal to that of more than $100,000,000$ workers.

From hydro-electric developments ranging in size from a few hundred to more than $1,000,000$ horse-power, networks of transmission lines carry power not only to most urban centres in Canada and to industries in isolated locations but also in increasing degree to rural areas in many parts of the Dominion.

Low-cost hydro-electric energy is fundamental to the economic mining, milling and refining of base and precious metals, and enables these metals to be fabricated into a multitude of manufactured products. It supplies the enormous power needs of pulp, paper and other wood-products industries, and of the lesser but important needs of food processing, textile, and many other industries throughout Canada. It has contributed largely to a high standard of living in Canada by providing low-cost domestic service to homes and farms, a service being rapidly extended in the post-war period.

Canada's great hydro-electric undertakings, built to meet the domestic and industrial requirements of the country in peacetime, have been of incalculable value to the Dominion's participation in two world wars. This is particularly true of the War of 1939-45 in which mechanization played such an important part. During the six years of that War more than $2,000,000 \mathrm{~h} . \mathrm{p}$. was added to Canada's waterpower installation, virtually all of which was utilized for war production; great quantities of power also were diverted from peacetime to wartime use. About one-third of all electric energy generated in Canada during the war years was devoted entirely to war purposes, enabling this country to produce materials and munitions of war on a scale entirely disproportionate to its population.

During 1946, the power industry entered energetically into the task of readjustment and return to normal peacetime services. Contrary to some previous expectations, the fall in the demand for power in 1946, the first full post-war year, did not generally materialize. Of the new generating capacity added during war years, part has been absorbed by the normal growth in demand for power which was restricted during wartime and part now provides the normal emergency reserves conducive to good service. In certain instances there has been a surplus of power but the channelling of this capacity into such activities as steam generation has been proceeding in orderly manner. In other districts, new hydro-electric developments have been undertaken or are being planned to provide for the growing needs of farms, communities and industries.

## Subsection 1.-Water-Power Resources and Their Development

Table 1 presents a summary of the water-power resources of Canada according to the Dominion Water and Power Bureau's records as of Dec. 31, 1946. In the case of developed power the figures for 1945 are listed for comparative purposes.
1.-Available and Developed Water Power by Provinces, 1945 and 1946

| Province or Territory | Available 24-Hour Power at 80 p.c. Efficiency December, 1946 |  | Turbine Installation |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { At Ordinary } \\ & \text { Minimum } \\ & \text { Flow } \end{aligned}$ | At Ordinary Six-Month Flow | Dec. 31, 1945 | Dec. 31, 1946 |
|  | h.p. | h.p. | h.p. | h.p. |
| Prince Edward Island. | 3,000 | 5,300 | 2,617 | 2,617 |
| Nova Scotia... | 20,800 | 128,300 | 133,384 | 133,384 |
| New Brunswick | 68,600 | 169,100 | 133,347 | 133,347 |
| Quebec... | $8,459,000$ | 13,064,000 | 5,848,572 | 5, 848, 572 |
| Ontario.. | 5,407, 200 | 7,261,400 | 2,673, 290 | 2,679,740 |
| Manitoba.... | 3, 309, 000 | 5,344,500 | 422,825 | 446,825 |
| Saskatchewan | 542,000 | 1,082,000 | 90, 835 | 90, 835 |
| Alberta........... | -507,800 | 1,258,000 | 94,997 | 93,060 |
| British Columbia................ | 7,023, 000 | 10,998,000 | 864,024 | 864,024 |
| Yukon and Northwest Territories. | 382,500 | 813,500 | 19,719 | 19,719 |
| Canada. | 25,722,900 | 40,124,100 | 10,283,610 | 10,312,123 |

The figures listed in the first and second columns of Table 1 represent 24-hour power and are based upon rapids, falls and power sites of which the actual drop, or the head possible of concentration, has been measured or at least carefully estimated. Many unrecorded rapids and falls of undetermined power capacity exist on rivers and streams from coast to coast; these will become available for tabulation only as more detailed survey work is completed, particularly in the less-explored northern districts. Also, unless definite studies have been carried out and the results made matters of record, no consideration has been given to the power concentrations that are feasible on rivers and streams of gradual gradient, where economic heads possibly may be created by the construction of power dams.

The third and fourth columns give the total capacity of the water wheels actually installed throughout the Dominion; these figures should not be placed in direct comparison with those in the first and second columns to deduce the percentage of the available water-power resources developed. At developed sites, the water-wheel installation throughout the Dominion averages 30 p.c. greater than the corresponding calculated naximum available power figures included in the second column and covering the same sites. The above figures, therefore, indicate that the at present recorded water-power resources of the Dominion will permit of a turbine installation of more than $52,000,000 \mathrm{~h} . \mathrm{p}$.; also, the turbine installation at Dec. 31, 1946, represents roughly only 20 p.c. of recorded waterpower resources and the figures in the first and second columns may be said to represent the minimum water-power possibilities of the Dominion.

The figures given in the table are shown in graphic form in the diagram on p. 481 which also includes the probable economic maximum turbine installation that would be reached if present known water-power resources were developed.

## Subsection 2.-Statistics of the Growth of Water-Power Development

The growth of installed turbine capacity from 1900 to 1946 is shown by the figures given in Table 2, covering decades to 1940 and years 1941 to 1946.
78375-31 $\frac{1}{2}$

## 2.-Hydraulic Turbine Horse-Power Installed by Provinces, as at Dec. 31, Decennially for 1900-40 and Annually for 1941-46

Note.-Statistics for intervening years 1900-30 are given on p. 361 of the 1939 Year Book and those for 1931-40 at p. 362 of the 1945 edition.

| Year | Prince Edward Island | Nova Scotia | New Brunswick | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British Columbia | Canada ${ }^{1}$ |

[^188] 1900 to 1940 was, $5 \mathrm{~h} . \mathrm{p}$. in $1900,3,195 \mathrm{~h} . \mathrm{p}$. in $1910,13,199 \mathrm{~h} . \mathrm{p}$. in 1920 and 1930 , and $18,199 \mathrm{~h} . \mathrm{p}$. in 1940 ; the removal of a 3,180-h.p. plant reduced the installation for $1943-46$ to 15,019 h.p. In 1941, a $4,700-\mathrm{h} . \mathrm{p}$. plant came into operation in the Northwest Territories.

Table 2 shows clearly the consistent growth in capacity since the beginning of the century; also the heavy increase in installation during the war years 1942 and 1943. The 1946 increase was small, but new installations at present under construction have a capacity in excess of $400,000 \mathrm{~h} . \mathrm{p}$.

## Subsection 3.-Utilization of Hydraulic Power Installations

Table 3 has been prepared to show under three classifications the purposes for which the developed water power is primarily utilized.

## 3.-Developed Water Power by Provinces and Industries, as at Dec. 31, 1948

| Province or Territory | Turbine Installation |  |  | Total ${ }^{4}$ |
| :---: | :---: | :---: | :---: | :---: |
|  | In Central Electric Stations ${ }^{1}$ | In Pulp and Paper Mills ${ }^{2}$ | $\begin{gathered} \text { In } \\ \text { Other } \\ \text { Industries }^{3} \end{gathered}$ |  |
|  | h.p. | h.p. | h.p. | h.p. |

| British Columbia | 703,167 | 105,950 | 54,907 17,719 | 864,024 19,719 |
| Yukon and Northwest Territories. | 2,000 |  | 17,719 |  |
| Canada | 9,349,904 | 633,441 | 328,778 | 10,312,123 |
| Percentages of total installation | $90 \cdot 7$ | $6 \cdot 1$ | $3 \cdot 2$ | $100 \cdot 0$ |

${ }_{1}$ Includes only hydro-electric stations that develop power for sale. $\quad{ }^{2}$ Includes only water power ${ }^{3}$ Includes only water power actually developed by industries other than central electric stations and the pulp and paper industries.
${ }^{4}$ All water wheels and hydraulic turbines installed in Canada.

It may be noted that central electric station classification totalling 9,349,904 h.p. represents more than 90 p.c. of the total developed water power as of Dec. 31, 1946. In 1900 the corresponding percentage was $33 \cdot 5$, thus showing the tremendous growth in the central electric station industry since the inception of successful long-distance transmission of electricity. Central stations produce 98 p.c. of all electricity sold in or exported from Canada.

The pulp and paper turbine installation total of $633,441 \cdot \mathrm{~h}$. p. shown in Table 3 includes only water power actually developed and directly used by pulp and paper companies. In addition, this industry is the greatest purchaser of central station power, buying about 50 p.c. of all power sold for industrial purposes. Part of the purchased power is classed as secondary, being used for steam generation by electric boilers which have a capacity of more than $1,750,000 \mathrm{~h} . \mathrm{p}$. The motor installations for the use of primary purchased power aggregate approximately $1,370,000 \mathrm{~h} . \mathrm{p}$.

The "other industries" group of Table 3, column 3, develops a total of 328,778 h.p. solely for their own use. These diversified industries also provide a broad market for the power sold by the central electric stations.

The figure of total hydraulic installation in Canada, $10,312,123 \mathrm{~h} . \mathrm{p}$. is the cumulative total of installation for all water wheels and hydraulic turbines. It has been adjusted to Dec. 31, 1946, by the addition of any installations made during the year even though this equipment may not be in use; adjustments are also made covering turbines or water wheels that have been removed. Somewhat similar figures are reported by the annual Census of Industry but they differ slightly since they are compiled on a different basis; they represent only the sum of the installations in the plants actually in operation during the year being reported by the Census, not total installation; also census data are usually not available until some time after the end of the period.

Additional information regarding Canada's water-power resources is included in the 1940 Canada Year Book, pp. 353-364. Comparison is made with the resources of other countries and an extensive review is given of problems connected with the development, distribution and merchandising of power in Canada.

## Subsection 4.-Progress in Hydro-Electric Development

During 1946, the water-power industry made very good progress in the transition from wartime to normal peacetime service, notwithstanding certain dislocations such as those caused by the drop in production of aluminum which had absorbed large quantities of power during the war years. Shortages of material and labour delayed the development of uses for secondary power and of various planned post-war extensions of service including the provision of power to farms and rural communities. However, although the demand for primary power fell slightly, total production of electric energy showed a rising trend.

To provide for the anticipated normal post-war growth demand in various districts, a number of hydraulic undertakings were under active construction during 1946. The more extensive projects are located in Ontario and British Columbia but the program also included new construction in the Northwest Territories, Alberta, Manitoba and Quebec.

The Hydro-Electric Power Commission of Ontario had three large installations under construction; at DeCew Falls near St. Catharines work was continued on the addition of a new 70,000-h.p. unit to the plant and on other incidental works;
at Stewartville on the Madawaska River, construction was active on a development of $81,000 \mathrm{~h} . \mathrm{p}$.; and on the Aguasabon River in the Thunder Bay district construction was begun on a new $53,000-\mathrm{h} . \mathrm{p}$. development. Preliminary work was also initiated on a large development at Des Joachims Rapids on the Ottawa River, present plans being for a capacity of $360,000 \mathrm{~h} . \mathrm{p}$.

In British Columbia, active construction was under way on a $50,000-\mathrm{h} . \mathrm{p}$. development at Elk Falls on the Campbell River, Vancouver Island, by the British Columbia Power Commission. On the mainland, the British Columbia Electric Railway Company began construction on its Bridge River project, the first stage of which includes a diversion dam and other works and the installation of a $62,000-\mathrm{h} . \mathrm{p}$. unit.

In the Northwest Territories, the Dominion Government, through the Department of Mines and Resources, initiated the construction of an 8,000-h.p. development on the Snare River to augment the supply of power to mines and other users in the Yellowknife area.

The Calgary Power Company, Limited, virtually completed the construction of a 13,500-h.p. development on the Kananaskis River near Seebe, Alberta, which will be linked with the Company's other plants on the Bow and Cascade Rivers serving a large part of Alberta from a transmission network.

In Manitoba, the Winnipeg Hydro-Electric System added two new units of $12,000 \mathrm{~h} . \mathrm{p}$. each to the Slave Falls power station on the Winnipeg River.

In Quebec, the Lower St. Lawrence Power Company is building a new 6,000-h.p. hydro-electric development on Metis River, one mile below its present plant. The Gatineau Power Company proceeded with the installation of the fifth and final unit of $24,000 \mathrm{~h} . \mathrm{p}$. in its plant at Farmers Rapids on the Gatineau River. The Shawinigan Water and Power Company is undertaking an important addition to its installation at Shawinigan Falls by the construction of a new power house to contain three $65,000-\mathrm{h} . \mathrm{p}$. units which will take at least two years to complete.

## Section 2.-The Central Electric Station Industry

An article dealing with Government control of power in wartime is given at pp. 336-337 of the 1945 Canada Year Book.

Summary of Energy Generated by Type of Station, 1944 and 1945.Central electric stations are companies, municipalities or individuals selling or distributing electric energy, whether generated by themselves or purchased for resale. Stations are divided into two classes according to ownership, viz., (1) commercial-those privately owned and operated by companies or individuals, and (2) municipal-those owned and operated by municipalities or Provincial Governments. These are subdivided according to the kind of power used into (a) hydraulic, (b) fuel, and (c) non-generating. This last sub-class purchases practically all the power it resells; a few of these stations have generating equipment that is held for emergencies. The hydraulic stations contain water turbines and wheels with approximately 88 p.c. of the total capacity of hydraulic installations in all industries in Canada and the generators driven by this hydraulic equipment generate 98 p.c. of the total output of all central electric stations.
4.-Electric Energy Generated, by Type of Station and by Provinces, 1944 and 1945.

## Subsection 1.-Statistics of Central Electric Stations

The growth of the central electric stations industry has been almost continuous since 1919, when statistics of kilowatt hours generated were first made available. The depression that occurred in the early 1930's resulted in decreased output of power for several years but output soon recovered. During the war years 1939-44 the equipment was used to the practical maximum capacity, the output increasing by 42 p.c. from 1938 to 1944 . The output declined slightly in 1945 but reached a new record in 1946 at 102 p.c. of the 1944 figure.

The central electric stations industry is one that is particularly suited to largescale operation, because of the huge outlays of capital necessary. Capital invested and total horse-power installed increased almost continuously even during the depression years, mainly because large power projects, planned before the depression, were in process of construction. Off-peak and surplus power, used mainly in electric boilers of pulp and paper plants, grew steadily to a peak of $7,803,000,000 \mathrm{kwh}$. in 1937 but, owing to war requirements for firm power, it was reduced in 1940-45, and amounted to only $6,645,822,000 \mathrm{kwh}$. in the latter year.
5.-Summary Statistics of Central Electric Stations, 1931-45

Nore.-Figures for the years 1917-30 will be found at p. 369 of the 1940 Year Book.

Although the amount of power used by domestic customers or for residential purposes hạs been only between 4 and 8 p.c. of the total production of central electric stations, this service is exceedingly important. Details of the number of domestic customers served, the kilowatt hours delivered and the costs to the customers, exclusive of direct Dominion, provincial and municipal taxes on such service, are shown in Table 6. The average consumption per customer and average cost per kilowatt hour vary considerably as between municipalities and also as between provinces; there are smaller differences between the average bills.

## 6.-Summary Statistics of Domestic Consumption of Electricity, 1931-45

Equipment of Central Electric Stations.-Auxiliary equipment includes only thermal engines and generators operated by them in hydraulic stations and in non-generating plants and does not include spare equipment in thermal stations or spare hydraulic equipment in hydraulic stations. Such equipment is classed as main-plant equipment. The capacities of the equipment are the manufacturers' ratings and, for water wheels and turbines, vary with the supply of water. The majority of the hydraulic stations are large, serving wide areas over transmission lines, whereas most of the plants with thermal engines are small, serving the needs of the local municipality in each case.
7.-Main-Plant Equipment of Central Electric Stations, by Provinces, and. Total Auxiliary Equipment, 1944
Note.-Kva. means kilo-volt-amperes.

Farm Service Furnished by Central Electric Stations.-Table 9 shows the number of farm customers, the average annual consumption, average annual revenue exclusive of the 8 p.c. Federal tax, and the average revenue per kilowatt hour sold to these customers in each province for 1945.

Effective Jan. 1, 1944, the Ontario Hydro-Electric Power Commission reclassified its rural customers, including under "farm customers" only farm contracts whereby one or more dwellings occupied by persons engaged in the operation of the farm would be counted as one customer. This classification excluded other rural dwellings, stores, garages, repair shops, etc., also small properties of five acres or less except under special conditions. This change in classification explains the apparent decrease in farms served as shown in previous years. The Ontario Government pays for part of the cost of installing services to farm customers, which accounts in part for the lower average revenue per kilowatt hour in Ontario as compared with the other provinces.

## Subsection 2.-Public Ownership of Central Electric Stations*

Water power is developed in Canada by provincial commissions, by municipalities and by private companies-hydro-electric plant. The first such provincial commission was formed in Ontario in 1906 to act as trustee for a group of munici-

[^189]$78375-32$
palities to develop and distribute electricity. It now generates and purchases power, transmits it to urban municipalities, serves large power customers and distributes power in rural municipalities. Somewhat similar commissions have since been formed in each of the other provinces.

## 10.-Summary Statistics of Publicly Owned Central Electric Stations, 1930-45

| Year | Power Plants | Customers | Electric <br> Energy Generated | Power Equipment |  |

## ${ }^{1}$ Not available.

A large portion of the power development in Quebec is connected with pulp and paper plants and with the aluminum industry. There power plants are operated as separate organizations and deliver power to the parent companies at relatively low rates. Also, substantial blocks of power are produced in Quebec for export to Ontario.

Table 11 shows statistics of municipally or publicly owned central electric stations, by provinces, for 1945 . Table 21 at p. 501' shows comparable statistics for commercial stations.

## ${ }^{1} 1944$ figures. Later statistics not available.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities
has been attempted in most provinces. The governing bodies of the provincial electric power commissions, their functions and activities are summarized by provinces below.

Nova Scotia.-In 1909 legislation was first enacted in Nova Scotia relating to the use of water power in "An Act for the Further Assisting of the Gold Mining Industry" This was the most advanced legislation until the development of water power within the Province of Nova Scotia was initiated under the Acts of 1914 and carried on in an investigatory manner in co-operation with the Dominion Government until 1919, when the Nova Scotia Power Commission was created under the Power Commission Act. Certain investigatory work is still carried on in Nova Scotia by the Dominion Government through the Dominion Water and Power Bureau with which the Nova Scotia Power Commission is closely associated. The control of the water resources of the Province is vested in the Crown and administered under the provisions of the Nova Scotia Water Act of 1919. The Commission pays the regular fees for water rights.

The function and policy of the Commission is the supply of electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail serviice. It provides for financial assistance to equalize cost and revenue of extensions, the construction of which have been approved by the Governor in Council as qualifying under the Act. In 1941, an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transformation, transmission, distribution, supply and use of power in the Province.

Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30,1946 , showed fixed assets of $\$ 19,084,690$, work in progress of $\$ 169,077$, current assets $\$ 184,641$, contingency and renewal reserves $\$ 2,189,878$, sinking fund reserves $\$ 2,777,977$ and special and general reserves of $\$ 1,232,868$.

The initial development of the Commission was an 800-h.p. installation on the Mushamush River, which went into operation in 1921 and delivered $192,000 \mathrm{kwh}$. in the first complete year of operation. This and later developments are shown in Table 12.
12.-Present Developments with Initial Capacities of Undertakings of the Nova Scotia Power Commission

| Grand Total | - | - | - | - | 239,372,767 |

[^190]The nine systems comprised $1,836 \cdot 37$ miles of combined transmission and distribution lines and served 35 wholesale and 10,837 retail customers at Nov. 30 , 1946. Nineteen generating stations and 38 generating units are in service with a total installed capacity of $77,924 \mathrm{~h} . \mathrm{p}$. , and a steam installation of $1,125 \mathrm{kw}$. in two units. The total delivery to customers, which is somewhat variable, has reached $249,449,505 \mathrm{kwh}$. per year.

New Brunswick.-The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. Generating stations owned and operated by the Commission are as follows:-

| Plant | Type | Capacity |
| :---: | :---: | :---: |
| Musquash. | Water power.. | h.p. |
| Grand Lake | Steam...... | 26, 800 |
| Kouchibouguac | Water power. | 200 |
| Grand Manan. | Diesel. | 310 |
| St. Quentin. | Diesel. | 280 |
| Total Capacity. |  | 37.590 |

The Musquash, Grand Lake and Kouchibouguac plants are inter-connected and operate in parallel at all times.

Transmission Lines.-The transmission system consists of a 66,000 -volt line from Musquash to Moncton, and five lines from Grand Lake, vi $\%$, two 33,000-volt lines to Fredericton, one 66,000 -volt line to Newcastle, one 66,000 -volt line to Moncton, and one 66,000 -volt line from Coal Creek to Hampton.

Power is sold en bloc to the cities of Saint John, Moncton, Fredericton and the town of Sussex.

The statistical information given below shows the growth of the Commission's undertaking since 1924.

Quebec.-The National Electricity Syndicate, 1937 (Geo. VI, c. 24), was established to develop electricity generating plants and distributing systems in the Province. It was abolished in 1940 (4 Geo. VI, c. 22) and its powers, duties, and contractual obligations were then transferred to the Quebec Streams Commission.

The Quebec Streams Commission.-Created in 1910 by 1 Geo. V, c. 5, and given additional powers by $3 \mathrm{Geo} . \mathrm{V}$, c. 6 (see R.S.Q., c. 46 ), by 20 Geo . V, c. 34 and by 4 Geo. VI, c. 22, the Commission was authorized to ascertain the water résources of the Province, to make recommendations regarding their control, to construct certain
storage dams and operate them so as to regulate the flow of streams, and to undertake the direct production of electric power. The Commission has assisted companies engaged in such work by the systematic collection of data on the flow of the principal rivers and on the meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mainly by the regulation of the flow of the principal power streams through the construction of storage dams. Early in 1942, the Quebec Streams Commission completed the construction of a $48,000-\mathrm{h} . \mathrm{p}$. ( 3 units) generating plant at Rapid 7 on the Upper Ottawa River, at a cost of $\$ 9,600,000$. About $16,000 \mathrm{~h} . \mathrm{p}$. is being supplied to the Noranda Mines. A fourth unit is to be installed when warranted and when the flow of the drainage area above Rapid 7 has been regulated. Act 4 Geo. VI, c. 22, conferring on the Quebec Streams Commission powers to undertake the direct production of electric power, was abolished in 1944 and the same powers were granted to the Quebec Hydro-Electric Commission by 8 Geo. VI, c. 22. By the said Act, the administration of the Hydro-Electric Plant at Rapid 7 was entrusted to the Quebec Hydro-Electric Commission.

From 1912 to 1925, a number of storage reservoirs were built or acquired, charges being made to benefiting companies to cover interest and amortization on the capital invested as well as the cost of operation. Since 1925, companies or persons have availed themselves of the latitude given them by R.S.Q., 1925, c. 46, s. 6, to build the necessary dams. Such storages, of which there were 28 in 1944, have been transferred to and are operated by the Commission, the cost of operation only being charged annually to the interested companies or persons.

Among the rivers controlled by the Commission either by means of dams on the rivers themselves or by controlling the outflow of lakes at their headwaters, together with the horse-power now developed, are: the St. Maurice, 1,026,050 h.p.; the Gatineau, 504,000 h.p.; the Lièvre 274,000 h.p.; the St. Francis, 100,000 h.p.; the Chicoutimi, $41,400 \mathrm{~h} . \mathrm{p}$. ; and the Au Sable, $33,200 \mathrm{~h} . \mathrm{p}$. Most of these developments are capable of being extended to produce more power than is now installed.

Other storage reservoirs operated by the Commission are: the Lake Metis Reservoir, the Savane River and Lake Brûlé Reservoirs on Ste. Anne de Beaupré River, nine reservoirs on North River and one reservoir on Rivière-du-Loup (en bas).

Among storage reservoirs not controlled or operated by the Commission are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River, and the Onatchiway on the Shipshaw River. Power developments on the Saguenay River, benefiting from the Peribonca and Lake St. John Reservoirs, amount to over $1,500,000 \mathrm{~h} . \mathrm{p}$. , since the Chute-à-Caron (Shipshaw) project has been completed.

The Quebec Hydro-Electric Commission.-The Quebec Hydro-Electric Commission was established by 8 Geo. VI, c. 22 , with the object of supplying power to the municipalities, industrial or commercial undertakings and citizens of the Province of Quebec at the lowest rates consistent with sound financial administration.

On Apr. 15, 1944, in accordance with the provisions of this enactment, the Commission took over: (a) the undertaking of Montreal Light, Heat and Power ('onsolidated for the generating and distributing of electricity; (b) the undertaking
of Montreal Island Power Company for the generating and distributing of electricity; and (c) all the shares of the capital stock of Beauharnois Light, Heat and Power Company. Thus, Quebec Hydro-Electric Commission acquired the control, among other assets, of the following hydro-electric plants:-

The Commission operates a public utility system which supplies electric light and power requirements to Greater Montreal and surrounding districts embracing a population of nearly $1,500,000$.

From the Cedars Plant, electric energy is supplied to the Aluminum Company of America at Massena, N.Y., and through Beauharnois Light, Heat and Power Company power is sold to the Hydro-Electric Power Commission of Ontario. The quantities involved are in the neighbourhood of 100,000 h.p. to Massena, N.Y., and $250,000 \mathrm{~h} . \mathrm{p}$. to Ontario.

| Totals. | 784,000 | 827,000 | 942,000 | 897,000 | 883,000 | 947,000 |

In addition to the ownership and operation of these generating and distribution systems, the Quebec Hydro-Electric Commission administers the $48,000 \mathrm{~h}$. p. Upper River plant at Rapid 7 Primary power statistics for this Northern Quebec System (Cadillac-Noranda district) are as follows: 1941, 14,010 h.p.; 1942, 14,660 h.p.; $1943,15,030$ h.p.; $1944,16,820$ h.p.; $1945,14,720$ h.p.; and $1946,15,750$ h.p.

Ontario.-The Hydro-Electric Power Commission.-An account of the inception and operations of the Commission is given at pp. 377-378 of the 1940 Year Book.

To meet the constantly expanding power demands of the undertaking, the Commission has constructed its own generating plants, and has acquired several privately owned generating plants. Of the 55 hydro-electric power plants operated by the Commission in 1945, the largest was the Queenston-Chippawa development on the Niagara River, which was constructed by the Commission and has a normal operating capacity of $500,000 \mathrm{~h} . \mathrm{p}$. By the end of the War of 1939-45, provision for existing needs was made-including plants and power under contract for delivery-up to an aggregate of about 2,672,000 h.p.

Hydro-Electric Power Commission Statistics.-The Annual Reports of the Commission present in great detail descriptions and statistics of operation, construction, municipal work and transmission and distribution. The Commission exercises supervisory functions over the electrical utilities owned and operated by the partnermunicipalities.

The initial capital expenditure required to serve about twelve municipalities amounted to approximately $\$ 3,600,000$. At Oct. 31,1945 , the total capital investment amounted to $\$ 521,643,563$, of which $\$ 375,361,480$ were investments by the Commission in generating plants, transmission systems, etc., including electric railway and other properties operated by the Commission for the major systems under their control, and $\$ 146,282,083$ were investments by municipalities in local distributing systems of their own, including other assets. Similarly, total reserves of the Commission and of the municipal electrical utilities for sinking fund, renewals, contingencies and insurance purposes amounted to $\$ 382,287,778$, of which $\$ 252,283,473$ represented reserves of the Commission and $\$ 130,004,305$ of the municipalities.
16.-Growth of the Ontario Hydro-Electric Power Commission, Years Ended Oct. 31, 1931-45
Note.-Statistics for 1910-30 are given at p. 288 of the 1941 Year Book.

${ }^{1}$ These three systems combined are known now as Southern Ontario System. ${ }^{2}$ Manitoulin District in 1944 and Timiskaming District in 1945, now part of the Northern Ontario Properties.

Statistics of Urban Municipal Electrical Utilities of Ontario Served by the Commission.-Statistics of the assets and liabilities of the electrical departments of urban municipalities served by the Hydro-Electric Power Commission show, for 1945 , total assets of $\$ 221,284,434$, as compared with liabilities of $\$ 16,277,777$. Of the difference, $\$ 118,313,345$ was allotted as reserves. In computing the percentage of net debt to total assets, the equity in Hydro systems is not taken into account. Between 1933 and 1945 total assets increased by $\$ 85,581,182$ while total liabilities decreased by $\$ 33,642,977$.

Rural Electrical Service in Ontario.*-During past years substantial progress has been made in Ontario in the field of rural electrification, and the Commission's rural operations are now an impertant feature of its work. The Ontario Government, pursuant to its policy of promoting agriculture-a basic industry-contributes, in the form of 'grants-in-aid', 50 p.c. of the initial capital cost of distribution lines and equipment. In 1930, the Ontario Government passed legislation providing for advances up to $\$ 1,000$ to actual farm owners of lands and premises in rural power districts for the installation of electrical wiring, the purchase of equipment and providing for the fixing of low maximum service charges for all classes of rural service.

[^192]Manitoba.-The Manitoba Power Commission commenced its operations in 1919 under the authority of the Electrical Power Transmission Act. This Act empowered the Commission to make provision for generating electric energy, to enter into contracts for the purchase of power in bulk from generating agencies, and for its transmission and sale to municipalities, corporations and individuals. The first stretch of transmission line was completed in 1920 from Winnipeg to Portage la Prairie.

Power was purchased in bulk from the Winnipeg Hydro System for the first ten years. At the expiration of this period, the Seven Sisters Agreement between the Manitoba Government and the Winnipeg Electric Company provided for the reservation of a block of power for the Power Commission.

The Manitoba Power Commission Act of 1931 provided for the establishment of a three-member Commission. The new Commission reorganized the administration of the utility by cancelling bulk contracts and beginning service direct to the consumer and to municipalities and towns having contracts for street lighting only, thus making possible the adoption of a policy by which the Commission might eventually establish standard rates for all towns and villages regardless of distance from the source of supply or sparsity of population.

The tremendous expansion of the utility since 1931 shows the importance of this reorganization. In 1931 there were 56 cities, towns and villages on the System; over 200 communities were served in 1946. The revenue of the utility over the same period increased from $\$ 700,000$ to over $\$ 2,000,000$. Rate reductions, meanwhile, have reduced the average customer cost per kilowatt by 50 p.c. in the past 15 years.

The successful growth of the network to the majority of the cities, towns and villages of the Province, made it possible for the Commission to consider a project of extending electrical service to the farms.

The Manitoba Electrification Enquiry Commission appointed by the Government in 1942 to study the feasibility of farm electrification in the Province, reported that it would be practicable to bring electrical service to over 90 p.c. of the farms. The War prevented immediate execution of farm extension plans, but in 1945 sufficient materials were available to conduct a farm electrification test by which nearly 1,000 farms received electrical service. The success of the test led the Commission to plan extension at the rate of at least 5,000 farms annually. However, shortage of materials restricted 1946 construction to 1,500 farms and, for the same reason, it is expected that 1947 construction will be limited to 2,500 farms.

The Commission enters actively into the appliance merchandising field as a service to customers and as part of a load-building program designed to raise revenue by increasing consumption which, in turn, will permit the lowering of rates.

Saskatchewan.-The Saskatchewan Power Commission was established in 1929 under the Power Commission Act (R.S.S. 1940, c. 33) which authorized the Commission to manufacture, sell and supply electric energy, to acquire and develop water-power sites, to acquire or construct steam and oil plants, to construct transmission lines, to purchase power and to enter into contracts with municipalities for the supply of energy.

The Commission's main system is centred on its generating plant at Saskatoon. North Battleford and Swift Current also have generating plants owned and operated by the Commission. Electric energy is furnished in bulk to the city corporaticns,
which own and operate their own distribution systems. In the town of Battleford, electric energy is supplied by the Commission, in bulk, by transmission line from the Commission's plant at North Battleford. In all the municipal corporations on its system (211 in number, including those on the former system of Prairie Power Company Limited), the Commission supplies approximately 20,654 individual consumers directly and 17,481 indirectly. In 1946, 2,387 miles of transmission lines were owned and operated, including those taken over from Prairie Power Company Limited.

During the years 1929 to 1945 the Commission purchased certain generating plants, and constructed and purchased transmission lines and also distributing systems in towns and villages. These were improved, enlarged or supplemented. Particulars of these acquisitions and constructions are given in the 1941 Year Book and subsequent editions.

In 1946 approximately 125 miles of transmission lines were constructed including the following: Webb to Gull Lake, Assiniboia to Willow Bunch, Estevan to Stoughton, Outram to Torquay, Expanse to Ardill, and Watson to Dafoe Airport, the last-mentioned line being part of a project including lines from Watson to Naicam and Watson to Quill Lake, which were under construction at the end of the year. The above-mentioned lines brought the villages of Willows, Readlyn, Verwood, Benson, Ardill and Torquay and the hamlets of Antelope, Expanse and Outram into the Commission's system and effected interconnection with the system of the Dominion Electric Power Limited at Estevan, Gull Lake and Assiniboia.

Short transmission lines from the cities of Regina and Saskatoon were built to serve three radio broadcasting stations. A short tap was also built from the town of Oxbow to serve the summer resort of Beaver Park.

Distribution systems were constructed in the subdivided areas of Highland Park, near Regina, North Annex and Churchill Downs (a veterans settlement), and service supplied with power purchased from the city of Regina. A short tap and distribution system were also constructed to serve the veterans settlement known as "Montgomery Place", near Saskatoon.

Of the 16 generating plants owned and operated by the Commission in 1946, those at Saskatoon and North Battleford were steam plants, and the remainder were equipped with compression-ignition engines. The total installed capacity of the generating plants was $32,713 \mathrm{~h} . \mathrm{p}$. There are no hydro-electric plants in the Commission's system, the primary power being: steam-reciprocating engines 530 h.p.; steam turbines $34,333 \mathrm{~h} . \mathrm{p}$.; and internal combustion engines $9,930 \mathrm{~h} . \mathrm{p}$. The Commission purchases several blocks of power from, and contracts for, the interchange of power with private interests.

Regina and Weyburn, as well as several towns and villages, own and operate municipal plants and distributing systems. There are two private corporations owning and operating electrical generating plants, transmission lines and distributing systems in the Province. Control and regulatory powers regarding franchises for the supply of electric energy and the rates to be charged therefor are conferred upon the Local Government Board by Part III of the Public Utilities Companies Act (R.S.S. 1940, c. 118). The Power Commission is charged with the administration of the Electrical Inspection and Licensing Act (R.S.S. 1940, c. 261), and is given certain control and regulatory powers regarding public electrical utilities under Part III of the Power Commission Act.

${ }^{1}$ The Commission's operations in the two towns served commenced in November, 1929. ${ }^{2}$ Information not available. $\quad{ }^{3}$ The Commission's operations in most of the municipalities served did not commence until late in the year.

Alberta.-Public ownership of power-generating and distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately owned systems is the Board of Public Utility Commissioners, which has jurisdiction over the distribution and sale of electricity. The Board has general power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates.

Three privately owned utilities are the chief sources of power for the municipalities. One has in operation 4 hydro-electric power plants totalling $91,000 \mathrm{~h} . \mathrm{p}$. on the Bow River and tributaries west of Calgary, with supplementary storage at Lake Minnewanka and Upper Kananaskis Lake totalling 240,000 acre feet. It operates, under lease, the city of Calgary's $14,000 \mathrm{~h} . \mathrm{p}$. steam plant, and has interchange arrangements and transmission-line ties with the city of Edmonton and the city of Lethbridge. Another utility supplies a number of towns and villages to the north and northeast of the city of Drumheller from a steam plant, and towns and villages north and east of the town of Vegreville from diesel-engine plants at Vegreville and Lloydminster; this utility also services the Grande Prairie district from a diesel-engine plant. A third utility services the town of Peace River and villages surrounding, from a diesel-engine plant situated at Peace River.

Edmonton generates power from coal and operates its own distribution system; in addition, there is a reciprocal arrangement with one of the privately-owned utilities for exchange of power at peak periods. Calgary and Red Deer own their distributing systems but purchase power from the same private source as Edmonton. Certain other large cities and towns such as Medicine Hat and Cardston own their power plants and those beyond reach of the three private utilities referred to above are served by other small privately owned power plants.

British Columbia.-Authority was given to the British Columbia Power Commission under the provisions of the Electric Power Act, assented to Mar. 28, 1945, to enter the public ownership field. The Commission has done so by acquiring the electrical system of the West Canadian Hydro Electric Corporation, operating a water-power plant at Shuswap Falls in the northern portion of the Okanagan Valley; the Nanaimo-Duncan Utilities Limited system, operating water-power plants and steam plant near Nanaimo, Vancouver Island; the British Columbia Electric Railway Company's system operating a water power and sieam plant at Kamloops in the interior of the Province; the National U'tilities Limited systems at Port Alberni, Parksville, Qualicum and Royston on Vancouver Island, operiting a diesel plant at Port Alberni and purchasing electric energy for distribution at Parksville, Qualicum and Royston; and has also purchased several smaller privately owned utilities and municipal plants throughout the Province. The Commission has completed surveys on Campbell River, Vancouver Island, for the construction of a hydroelectric plant designed for an ultimate production of $150,000 \mathrm{~h} . \mathrm{p}$. The first phase of this development called for the construction of a head dam at Irene Pool, on ('ampbell River, and the installation of a $50,000-\mathrm{h} . \mathrm{p}$. unit is well under way. Tenders have been called for the construction of a giant dam at Ladore Falls, which will provide ample storage for $100,000 \mathrm{~h} . \mathrm{p}$.

Grand Forks, Kaslo, Nelson, Prince George and Revelstoke each distribute electric energy generated by eitherfuel or water power, while Courtenay, Cranbrook, Fernie, Kelowna, Ladysmith, Merritt, New Westminster, the municipalities of Penticton and Summerland, the village of McBride and the Improvement Districts of C'ranberry, Westview and Wildwood each purchase energy at wholesale rates and undertake distribution.

## Subsection 3.-Private Ownership of Central Electric Stations

Summary statistics of privately owned central electric stations are given for the vears 1930 to 1945 in Table 20.
20.-Summary Statistics of Privately Owned Central Electric Stations, 1930-45

| Year | Power Plants | Customers | Electric Energy Generated | Power Equipment ${ }^{1}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| 1945 |  | 766,554 | $25,530,857$ |  |  |

The predominant position of Quebec in the electric-power field can be seen from the column in Table 21 showing electric energy generated. Of the total power generated in Canada by all central electric stations in 1945, 44 p.c. was generated by privately owned or commercial stations in the Province of Quebec; this percentage decreased from 57 in 1943 as a result of the taking over in 1944 of the Montreal Light, Heat and Power Company and the Beauharnois Power Company by the publicly owned Quebec Hydro-Electric Commission.

All stations in Ontario produce less than one-half as much power as the Quebec: stations and only 20 p.c. of the total for Ontario stations is produced by privately owned stations.

## 21.-Privately Owned Central Electric Stations, by Provinces, 1945

| Province | Power Plants ${ }^{1}$ | Customers | Electric Energy Generated | Power Equipment ${ }^{1}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Alberta. | 68 | 39,223 | 352, 794 | 91,000 | 102,822 |
| British Columbia and Yukon. | 63 | 191,646 | 2,794,896 | 706,267 | 716,807 |
| Totals. | 424 | 766,554 | 25,530,857 | 6,175,674 | 6,373,523 |

${ }^{1} 1944$ figures; later statistics not available. $\quad{ }^{2}$ Power generation in Saskatchewan is entirely by fuel plants. There is one hydro-electric station but the power is used in Manitoba and the statistics are included with those of Manitoba.

## Subsection 4.-Export of Electric Power

Electric energy is exported from Canada only under licence and an export tax of 0.03 cents per kwh. is levied. The export duties for the fiscal years ended Mar. 31, 1943 to 1946 were $\$ 618,953, \$ 641,253, \$ 639,320$ and $\$, 694,518$ respectively.

Exports for the calendar years 1943-46 are shown in Table 22. There are also large interprovincial movements of electric energy from Quebec to Ontario, and smaller movements from Quebec to New Brunswick and from British Columbia to Alberta.

The water allowed to be diverted at Niagara Falls for power purposes was increased by $5,000 \mathrm{cu} . \mathrm{ft}$. per second to the Canadian side in November, 1940, owing to a diversion of water from Long Lake and the Ogoki River from the James Bay watershed to the Great Lakes watershed. In 1941 a further increase of 9,000 c.f.s. to the Canadian plants and 12,500 c.f.s. to the United States plants was permitted. This increased water with greater development of plants on the St. Lawrence River made possible the increased export of both firm and secondary power to the United States, mainly to plants producing war materials ( 5,000 c.f.s. will produce around 150,000 h.p. at the Queenston, Ont., plant).

## 22.-Electric Energy Exported from Canada, by Companies, 1943-46

## Section 3.-Power Equipment in Canadian Industry

The Dominion Bureau of Statistics has compiled tables showing the power equipment installed in the manufacturing and mining industries of Canada from 1923 to 1944. Table 24 gives the combined statistics for both industries from 1934. The figures for the 11 years show that primary power increased from $1,680,325$ h.p. to $2,318,676 \mathrm{~h} . \mathrm{p}$. or by 38.0 p.c. while the installation of electric motors operated by purchased power shows an increase of no less than $61 \cdot 6$ p.c. In considering the increase in the latter figures, it must be borne in mind that the shift from belts and shafting to individual motors at each machine does not necessarily mean that an amount of power is used equivalent to the increased capacity.

Of the total primary power installed, manufacturing establishments accounted for $87 \cdot 6$ p.c. and mines for 12.4 p.c., while of the total electric motors operated by purchased power, manufacturing accounted for $86 \cdot 6$ p.c. and mining for $13 \cdot 4$ p.c.

The mining industry showed an uninterrupted increase in the amount of equipment operated by purchased power from 1933 to 1941 ; the total amount of power equipment installed showed a drop in 1932, but resumed the upward trend in 1933; the same is true of the capacity of total electric motors installed but that of motors operated by power generated within the establishment dropped sharply from 1930 to 1933 and did not attain a figure equal to the 1930 total until 1937, when a very sharp rise over the 1936 figure occurred. This would indicate a tendency of mining companies to rely more and more upon purchased power rather than to attempt to generate their own, a very natural tendency in northern Canada where water power is abundant and fuel scarce.

In manufacturing, a steady growth is indicated in total power equipment installed, total electric motors and in motors operated by purchased power. In the capacity of motors operated by power generated within the establishment, the figures fluctuated between 1929 and 1935 and from there rose steeply to a peak of 890,917 in 1942; later figures are slightly below that level.

## 23.-Percentage of Electric Rating to Total Power Equipment in the Manufacturing and Mining Industries, 1934-44

Note.-Figures exclude central electric stations and include idle and reserve equipment. Figures for 1923-33 are given at p. 295 of the 1941 Year Book.

| Year |  | Total Power Equipment Installed | Electric Power |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Total Motor Capacity | Per Cent of Total |
|  |  |  | h.p. | h.p. | p.c. |
| 1934.. |  | 4,850,743 | 3,781,779 | 78.0 |
| 1935.. |  | 5,019,958 | 3,889,366 | $77 \cdot 5$ |

## Section 4.-Power Generated from Fuel

Fuel is used quite generally throughout the industrial field for the generation of power by means of steam- and internal-combustion engines. It is also used for the heating of plants and for providing the heat necessary to some manufacturing processes. The most important industries where heat is applied to materials to facilitate or accomplish a desired transformation are: foundries and machine shops; brick, tile, lime and cement works; petroleum refineries; the glass industry; distilleries; food preparation plants; rubber goods industry; etc. The figures of Table 25 cover fuel used for such heating purposes and for power. Fuels that constitute the raw materials to be transformed, such as coal in the coke and gas industries and crude petroleum in the refining industry and electricity used in metallurgical processes, such as in the electrolytic refining of non-ferrous metals, are excluded.

The value of fuel consumed in the manufacturing and mining industries in 1944 showed an increase of $71 \cdot 5$ p.c. over 1940 . Of the 1944 fuel account, the requirements of Ontario amounted to $48 \cdot 1$ p.c. of the total, of Quebec 30.4 p.c., of British Columbia 6.8 p.c. and of Nova Scotia $5 \cdot 0$ p.c.

The iron and its products group used $21 \cdot 1$ p.c. of the fuel consumed by manufacturing industries, wood and paper products 18.7 p.c., non-metallic mineral products 16.8 p.c., non-ferrous metal products 14.9 p.c. and vegetable products $11 \cdot 6$ p.c.

Gas.-In southwestern Ontario, gas comes from natural gas wells, from light end gases sold by a Sarnia company which draws from a refinery in that city, and from the coke plants of the steel city, Hamilton. With the advent of greatly increased industrial activity in the Niagara Peninsula and the southern half of southwestern Ontario, the normal Ontario consumption of about $10,000,000,000$ $\mathrm{cu} . \mathrm{ft}$. of natural gas per year rose to over $13,000,000,000$ in 1940. At that time some natural gas fields completely played out, and others showed signs of exhaustion. At this peak capacity, insufficient gas was available to continue supplying industrial requirements and at the same time provide enough for household use.

When a crisis appeared imminent in 1942, the Power Control of the Department of Munitions and Supply arranged for the installation of new manufacturing facilities. These new facilities included some propane plants and a new coke oven and gas plant at Hamilton. Thirty-six ovens were completed by the spring of 1943, but even this added capacity was not enough and 18 more ovens were installed. With the completion of the 18 additional ovens in December, 1943, the situation eased somewhat. As a result of these various measures to expand production, the annual output of gas in southwestern Ontario rose by about $4,000,000,000 \mathrm{cu} . \mathrm{ft}$.

This Chapter deals with manufacturing industries in Canada in two main Parts. Part I gives general analyses of manufactures in the Dominion including: the historical development of manufacturing in Canada in so far as statistical data are available; production by industrial groups and individual industries, i.e., a detailed treatment of current production under various groupings and individual industries; general analyses of the principal factors in manufacturing production under such sub-headings as capital, employment, salaries and wages and size of establishment. Part II deals with the provincial and local distribution of manufacturing production.

With regard to the first Section of Part I, dealing with historical development, it is impossible to give absolutely comparable statistics over a long period of years. From 1870 to 1915 , statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, in so far as possible, back to 1917

The far-reaching influence of the First World War was, of course, the outstanding factor in the growth recorded prior to 1940 . It was during those years that Canadian manufactures began to develop on a really large scale. Munitions contracts totalled well over $\$ 1,000,000,000$ exclusive of shipbuilding and aviation. Shipbuilding construction alone amounted to $\$ 35,000,000$ in $1917, \$ 75,000,000$ in 1918 and $\$ 86,000,000$ in 1919. In the same three years, employees in the shipbuilding industry numbered $12,000,22,000$ and 25,000 , respectively.

Canada's effort in the Second World War brought manufacturing production to a much higher level than ever before. The ouptut of manufactured products in 1945 amounted to $\$ 8,250,368,866$ which represented an increase of 137.4 p.c. over the pre-war year of 1939 but a decrease of $9 \cdot 1$ p.c. from 1944.

[^196]
## PART I.-GENERAL ANALYSES OF MANUFACTURING IN CANADA

## Section 1.-Growth of Manufacturing

## Subsection 1.-Production of Manufactured Products

This Section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials, and values of products. Other useful comparisons are made in Table 4 and figures of consumption are given in Table 5. Tables 6 and 7 show volume comparisons.

## 1.-Historical Summary of Statistics of Manufactures in Canada, 1917-45

#### Abstract

Note.-Statistics of manufactures from 1870 have been published, but between that year and 1917 they are not on a comparable basis to the series given below. They will be found at p. 363 of the $1943-4$ edition of the Year Book. Statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

| Year | Estab-lishments | Capital | Employees | Salaries and Wages | Cost of Materials | Net Value of Products ${ }^{1}$ | Gross <br> Value of <br> Products |

The figures in Table 4 trace the tendencies in Canadian manufacturing industries as clearly as possible through the latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values from 1914 through the immediate post-war period and the drop in prices of commodities during the depressions following 1921 and 1930, the figures for these periods are not completely comparable. One very important figure, however, which shows the trend of development clearly, is concerned with the use of power. The total horse-power employed increased from $1,658,475$ in 1917 to $6,468,439$ in 1944, an increase of about 290 p.c. In the same period, horsepower per wage-earner showed an interrupted trend from 3.06 to 10.82 in 1933 and 9.46 in 1939. With the large increase in the number of wage-earners on war production, and the more efficient utilization of the equipment available, the horse-power per wage-earner dropped to $6 \cdot 28$ in 1944. The significant feature is the increase in both the absolute figure of power employed and the averages per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 reduced the averages for the years 1934 to 1937 and again for 1940 to 1943. Other interesting comparisons are the trend of value added by manufacture, per employee, and of average salaries and wages paid since 1929.

## Subsection 2.-Consumption of Manufactured Products

One of the beneficial results of adopting the same classification for foreign trade and for production is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from these statistics. For example, the value of all manufactured commodities made available in 1945 was $\$ 7,015,471,944$, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports.

Before 1940, there had always been large amounts of manufactured animal, wood and non-ferrous metal products available for consumption in Canada with considerable surplus left for export. With the commencement of the War, however, it was necessary to export more and more of such goods to the United Kingdom, and while this was done mainly by increasing production, Government control of consumption at home grew stronger as the War advanced. In the case of manufactured vegetable products, the figures for 1945 showed large excesses of exports over imports for such products as cereal foods (including flour), canned and dehydrated vegetables, etc. Excesses of imports were chiefly confined to cocoa, tea, coffee and preserved fruits and fruit juices, in which cases domestic production cannot be substituted.

On balance, Canada, in the past, imported large quantities of iron and steel, textile and non-metallic mineral products in spite of large home production. The urgent requirements for munitions of war brought about an expansion of the iron and steel, chemical and non-ferrous metals industries that will enable Canada to meet most requirements for home consumption in the future.

## Section 2.-Value and Volume of Manufactured Products

Value of Manufactured Products.-In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at $114 \cdot 3$ in 1917, $155 \cdot 9$ in 1920, $97 \cdot 3$ in 1922, $95 \cdot 6$ in 1929, $67 \cdot 1$ in 1933, $84 \cdot 6$ in 1937, $75 \cdot 4$ in 1939 and $102 \cdot 5$ p.c. in 1944 . Index numbers of the prices of fully or chiefly manufactured goods were: $113 \cdot 5$ in 1917, $156 \cdot 5$ in 1920, $100 \cdot 4$ in 1922, $93 \cdot 0$ in 1929, $70 \cdot 2$ in 1933, $80 \cdot 5$ in $1937,75 \cdot 3$ in 1939 and $93 \cdot 6$ in 1944.

Volume of Manufacturing Production.-Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The index of volume (Table 6) is based on the quantities of manufactured products reported. The industry indexes are weighted according to the values added by manufacture. The indexes for the years 1923-31 are based on the values added in 1926. The weights and products were changed in 1931, in 1936 and again in 1941. By changing the weights and products used in the construction of the index every five years, current changes in production are thereby reflected more accurately.

The physical volume of manufacturing production increased $50 \cdot 2$ p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only $11 \cdot 3$ p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would, therefore, be about 111 p.c. Exports of partly and fully manufactured goods increased from $\$ 591,830,000$ in the fiscal year ended Mar. 31, 1924, to $\$ 686,876,000$ in the fiscal year 1929-30, the increase in exports representing about $3 \cdot 6$ p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

A similar analysis of the volume of manufactures since 1929 in relation to population and exports shows that the decline in the depression preceding the Second World War was due, chiefly, to reduced exports and a cessation in production of capital equipment. As a result of the expansion in production resulting from the demands created by the War, the physical volume of production in 1943, when production was at an all-time high, increased by $76 \cdot 6$ p.c. since 1939 and by $85 \cdot 1$ p.c. since 1929 . The chemical and allied products group, with an increase of 262.5 p.c., reported the greatest expansion in output since 1939. This was followed by the iron and its products group with an increase of $222 \cdot 2$ p.c., nonferrous metal products 129.9 p.c., miscellaneous industries 68.0 p.c., non-metallic mineral products 55.6 p.c., animal products 40.4 p.c., textile and textile products $33 \cdot 7$ p.c., vegetable products $24 \cdot 6$ p.c., and wood and paper products 21.4 p.c. There was also an increase in the volume of consumer goods. As was to be expected, the increase was not so great as that for the output of equipment and supplies needed by the Armed Forces. Drink and tobacco increased by 50.4 p.c., food 26.8 p.c. and clothing $24 \cdot 7$ p.c.

In 1944 , the index of the physical volume of production at 180.8 represented a drop of 3.7 p.c. from the high mark of the previous year. Chemicals and allied products had the sharpest decline of 14.2 p.c., followed by non-ferrous metal products with 10.1 p.c., iron and its products 8.5 p.c. and textiles and textile products 2.9 p.c. The vegetable, animal, miscellaneous industries, wood and paper and nonmetallic mineral products groups, on the other hand, each reported an increased volume of production. The volume of consumer goods continued to rise with the drink and tobacco group reporting an increase of 14.9 p.c., food 8.7 p.c. and clothing 0.6 p.c. Industrial equipment and producers materials were both down with declines of 7.5 and 4.8 p.c., respectively. Vehicles and vessels also declined by 0.9 p.c.

## Section 3.-Production by Industrial Groups and Individual Industries

For the purposes of the Census of Manufactures, the main detailed analysis is made under a classification in which industries are grouped according to the chief component materials of the goods manufactured. This is, therefore, the grouping used in Table 9, where the statistics of individual industries are presented in detail and in the historical series shown in Table 3. However, there are also less detailed analyses under purpose groupings given in Table 10 and under origin groupings in Table 12.

## THE AUTOMOBILE INDUSTRY IN CANADA*

Although Canada's automobile industry is now over 40 years old, it has become one of the major units in the economy of the Dominion. In value of products, in labour directly and indirectly employed, and in capital investment it ranks high among the manufactures of the nation and exercises far-reaching influence on the affairs of the people. In the period from 1917-45 the automobile and automobile-parts companies paid out more than $\$ 1,000,000,000$ in salaries and wages and spent over $\$ 3,000,000,000$ on manufacturing materials. Production to the end of 1945 totalled $4,500,000$ complete cars worth $\$ 3,250,000,000$ at factory prices. Meanwhile, automobile registrations in Canada increased steadily, except during the war years, numbering $1,500,000$ in 1945, or an average of one car to every eight persons.

The Canadian industry is, to a large extent, an off-shoot of the industry in the United States where manufacturing methods in this field have reached their highest state of development; the leading concerns in Canada are branches of the parent organizations in the United States. It was in 1904 that the Ford Motor Company of Canada Limited was incorporated and commenced operations. Its original capital of $\$ 125,000$ was subscribed by 60 shareholders and its charter gave it the right to make and sell Ford products in Canada and in practically all of the British Empire except the British Isles. It also acquired the right to use thenexisting and all future patents, designs, inventions and trade marks of the Ford Motor Company of the United States. From 1904 to 1909, prior to the introduction of the Model ' T ' Ford car, the Company operated on a very small scale, the total output during this period amounting to only 1,353 units. By 1925, the annual production had risen to 79,000 units and in 1939, the last pre-war year, it was 61,000 units. At that time, the Company had its main plant at Windsor, Ont., and assembly units at Winnipeg, Man.; Vancouver, B.C., and Saint John, N.B.

Another pioneer in the industry was the McLaughlin Motor Car Company Limited, Oshawa, Ont., which was formed in 1907 with contracts for the right to make Buick cars in this country. Chevrolet rights were also acquired in 1915 and three years later the enlargement of the two McLaughlin Companies was effected to form the General Motors of Canada Limited, a subsidiary of the General Motors Limited of the United States. Operations of this Company expanded steadily until output in 1925 totalled 44,000 units and in 1939 reached 54,000 units for the domestic and export markets. An assembly plant was opened at Regina, Sask., in 1929.

The other member of the "big three" of the present Canadian industry is the Chrysler Corporation of Canada Limited, which entered the Canadian field in 1925 to take over the Windsor factory of the Maxwell Chrysler Corporation of Canada Limited established in the previous year in succession to the ChalmersMaxwell Motor Company of Canada. A few years later, about 1928, this Company absorbed the Dodge Motor Company Limited, which had operated in Canada from 1923. Continued growth has established this firm as one of the principal producers in the Dominion.

The above-mentioned concerns constitute the core of the industry, but numerous other plants have been in existence from time to time. Some of these were merely assembly units, branches of United States companies set up to take advantage of

[^203]tariff preferences in the Canadian or Empire markets, others were on a larger and more permanent basis but failed to withstand the exigencies of this highly competitive industry. Willys-Overland Limited had a large works at Toronto, Ont., which operated continuously from about 1922 to 1933; Durant Motors of Canada Limited operated at Leaside, Ont., from 1922 to 1930, being taken over in the next year by Dominion Motors Limited which continued until 1933; and the Studebaker Corporation Limited had a substantial assembly plant at Walkerville, Ont., from 1922 until the beginning of the War. Other concerns in the passenger-car field included: Gray-Dort Motors Limited, Chatham, Ont., 1922-25; Graham Brothers, Toronto, Ont., 1926-28; Graham-Paige Motors (Canada) Limited, Walkerville, Ont., 1931-35; Hudson Essex of Canada Limited, Tilbury, Ont., 1931-37; Hudson Motors of Canada Limited, Tilbury, Ont., 1938-39; Packard Motor Car Corporation of Canada Limited, Windsor, Ont., 1931-37; and the Hupp Motor Car Corporation Limited, Windsor, Ont., 1939.

In addition to the Ford, General Motors and Chrysler companies, there are now three concerns making or assembling trucks in Canada. The International Harvester Company of Canada Limited, Chatham, Ont., has operated continuously since 1923; the Reo Motor Company of Canada Limited has recently started to make trucks and buses at Leaside, Ont.; and the Hayes Manufacturing Company Limited, Vancouver, B.C., makes heavy-duty trucks and logging trailers. Other concerns which at one time or another have made or assembled trucks in Canada are: the National Steel Car Corporation Limited, Hamilton, Ont., 1923-29; the White Company Limited, Montreal, Que., 1931-44; Eastern Motor Trucks, Hull, Que., 1922; Maple Leaf Manufacturing Company Limited, Montreal, Que., 1922; Barton and Rumble, London, Ont., 1922-23; Beaver Truck Builders Limited, Hamilton, Ont., 1922; Gotfredson Joyce Corporation, Windsor, Ont., 1922-29; Harmer-Knowles Motor Truck Company, London, Ont, 1922; Seagrave and Lougheed Company Limited, Sarnia, Ont., 1922-23; Canadian Yellow Cab Manufacturing Company, Orillia, Ont., 1924-25; Thornycroft (Canada) Limited, Montreal, Que., 1928-30; Trucks and Parts Limited, Windsor, Ont., 1929-30; Vancouver Engineering Works Limited, Vancouver, B.C., 1929; Leyland Motors Limited, Montreal, Que., and Toronto, Ont., 1931-37; Federal Truck Company of Canada Limited, Windsor, Ont., 1931-37; Gotfredson Trucks Limited, Windsor, Ont., 1931; and the Stewart Truck Corporation of Canada Limited, Fort Erie, Ont., 1932-35.

The Pre-War Industry.-In 1939 there were only eight companies manufacturing or assembling motor-vehicles in Canada. These concerns had seven plants in Ontario, two in British Columbia and one each in Quebec, Manitoba and Saskatchewan. They employed capital amounting to $\$ 59,000,000$ and gave work to a monthly average of 14,427 persons to whom $\$ 20,500,000$ was paid for salaries and wages. Their expenditure for fuel, electricity and materials for use in manufacturing totalled $\$ 72,500,000$.

Output of automobiles in that year totalled 155,426 units valued at $\$ 99,173,916$ at factory selling prices, including 108,369 passenger cars at $\$ 71,101,204 ; 47,057$ trucks and commercial vehicles at $\$ 28,072,712$. Parts, accessories and other products were valued at $\$ 8,289,435$. Of the passenger cars, 75,145 units were intended for sale in Canada and 33,224 were for export; of the trucks, 24,058 were for the Canadian market and 22,999 were for export.

The pre-war record for the industry was established in 1929 when the 17 plants made 262,625 cars and trucks valued at $\$ 163,500,000$ and parts at $\$ 13,800,000$, a total value for the industry of $\$ 177,300,000$.

The Industry During the War Years.-The production of military vehicles was one of Canada's biggest war jobs. The industry received its first military order-for gun tractors-in the autumn of 1939, and delivery of the first tractor was made in March, 1940. The initial contracts were for Canadian requirements, but before production was fully in its stride France had capitulated and the British Armies had been forced to abandon nearly all their equipment on the beaches at Dunkirk. It was then that Britain turned to Canada to replace these catastrophic losses. By 1941, Canada was the prime source of mechanized equipment for the British Commonwealth. Canadian-built trucks not only helped to bolster defences in the United Kingdom, but they played an important part in the East African campaign, in the reconquest of Abyssinia, in Italy, and later in France, Belgium and Holland.

At the high point of output, more than 100 different types of motorized military equipment poured from assembly lines of Canada's major automobile plants at the rate of 3,500 units of mechanized transport and 30 fighting vehicles per week. The list included universal carriers, scout cars, artillery tractors and trailers, troop transports, ammunition trucks, service workshops, radio trucks, fire trucks and ambulances.

To co-ordinate the work on military orders, a Motor Vehicle Controller was appointed in February, 1941, and to make possible the tremendous output of war essentials and to conserve raw materials, the manufacture of passenger cars was stopped in June, 1942, and trucks were placed on a permit basis. Output of vehicles in recent years was as follows:-

| Year | Civilian |  | Military |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | For Sale in Canada | $\begin{gathered} \text { For } \\ \text { Export } \end{gathered}$ | For Sale in Canada | $\begin{gathered} \text { For } \\ \text { Export } \end{gathered}$ | For Sale <br> in Canada | $\underset{\text { Export }}{\text { For }}$ |
|  | No. | No. | No. | No. | No. | No. |
| 1938. | 109,128 | 56,958 | Nil | Nil | 109,128 | 56,958 |
| 1939. | 99,203 | 56, 223 | Nil | Nil | 99, 203 | 56,223 |
| 1940. | 124,384 | 67,197 | 23,418 | 8,014 | 147, 802 | 75,211 |
| 1941. | 116, 253 | 33,568 | 42,317 | 78,053 | 158,570 | 111,621 |
| 1942. | 16,360 | 10,185 | 86,139 | 115,609 | 102,499 | 125, 794 |
| 1943. | 4,086 | 2 | 75,204 | 98,772 | 79,290 | 98,774 |
| 1944. | 8,979 | 134 | 57,034 | 91,891 | 66,013 | 92,025 |
| 1945. | 21,021 | 25,017 | 33,591 | 53,016 | 54,612 | 78,033 |

In addition, the automobile industry produced a tremendous volume of repair parts and accessories and also participated in other phases of the over-all war program, such as in the manufacture of gun carriages and gun parts. Employment in the industry increased from 12,997 in September, 1939, to a peak of 25,549 in December, 1942, and at the end of 1945 stood at 13,886 . In value of output, the peak was reached in 1943 at $\$ 352,000,000$. In 1945 the output value was $\$ 229,000,000$.

The Industry at the Close of the War.-In 1945 there were only six plants in the automobile industry as follows: Chrysler Corporation of Canada Limited, Windsor, Ont.; Ford Motor Company of Canada Limited, Windsor, Ont.; General Motors of Canada Limited, Oshawa, Ont.; International Harvester Company of Canada Limited, Chatham, Ont.; Reo Motor Company of Canada Limited, Leaside, Ont., and Hayes Manufacturing Company Limited, Vancouver, B.C.

The assembly plants formerly operated by the Ford Motor Company at Toronto, Ont., Winnipeg, Man., and Vancouver, B.C. were closed during the War as was also the plant of the General Motors of Canada Limited at Regina, Sask.

For most of 1945, the industry was still occupied on military orders and it was not until October that the first post-war passenger car came off the assembly line. For the entire year only ${ }_{5}^{7} 1,868$ passenger cars were produced, while the output of trucks totalled 130,777 units of which 85,677 were for military use. The total value of output in 1945, including automobile parts and other products, was $\$ 229,000,000$, and the average employment was 17,915 .

In early 1946 the post-war reconversion brought further important developments to the industry. The Studebaker Corporation of Canada Limited purchased the large plant at Hamilton, Ont., which had been used by the Otis Fensom Elevator Company Limited, for the manufacture of anti-aircraft guns during the War. This plant is being tooled up for the manufacture of cars on an extensive scale. The Canadian Car and Foundry Company Limited re-equipped its aircraft factory at Fort William, Ont., and is turning out transit-type buses. The White Company Limited is building an extensive truck plant at Montreal, Que., and the Reo Motor Company of Canada Limited has taken over part of the Research Enterprise Limited at Leaside, Ont., to make complete buses.

The Automobile Parts Industry.-In addition to the companies that make or assemble complete motor-vehicles, there is a large number of establishments. occupied in making parts and accessories for use in these central assembly plants. In 1945, there were 108 works in this parts and accessories industry, and the value of production was $\$ 127,000,000$. Output included such items as wheels, radiators, bumpers, bodies, spark plugs, starting motors, generators, springs, etc. Including tires, batteries and such other items as are made in other industries, the total output value of automobile parts and accessories was $\$ 245,000,000$ in 1945 and $\$ 281,000,000$ in 1944.

Apparent Supply of Automobiles, 1938-45.-The apparent supply of motor-cars for the Canadian market may be determined approximately by adding the number of cars made for sale in Canada to the imports and deducting the reexports of imported cars. On this basis the supply in recent years, excluding military vehicles, works out as follows:

| Year | Passenger | Commercial | Year | Passenger | Commercial |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | No. |  | No. | No. 94,619 |
| 1938. | 99,202 | 24,938 | 1942. | 8,914 | $94,619$ |
| 1939. | 91,523 | 25,744 | 1943. | 20 | 79,922 |
| 1940. | 109,874 | 54,792 | 1944. | 30 | 69,229 |
| 1941. | 84,589 | 77,663 | 1945. | 2,099 | 49,295 |

Retail Sales of New Motor-Vehicles.*-Statistics on retail sales were not collected for 1944 and 1945 because distribution was under strict control and releases were made only for essential uses. Data for earlier years were as follows:

| Year | Passenger Cars |  | Trucks and Buses |  |
| :---: | :---: | :---: | :---: | :---: |
|  | No. | \$ | No. | 8 |
| 1938 | 95,751 | 105, 006, 462 | 25,414 | 30,005, 446 |
| 1939. | 90,054 | 97, 131, 128 | 24,693 | 28,836, 393 |
| 1940. | 101,789 | 114,928, 833 | 28,763 | 33, 916, 445 |
| 1941. | 83,642 | 108,923, 942 | 34,431 | 42,944,963 |
| 1942. | 17,286 | 23,899,745 | 13,070 | 18,979,777 |
| 1943. | -984 | 1,378,200 | 3,814 | 6,179,200 |

[^204]Motor-Vehicles Withdrawn From Use.-The number of cars scrapped or withdrawn from use in any year may be estimated by adding the apparent supply to registrations in the previous year and deducting current year registrations. In this compilation it is not possible to eliminate military vehicles as they are included in registrations and a separate record is not available.

Canadian Automobiles in Foreign Trade.-Exports.-Foreign markets have been very important to Canada's automohile industry. In normal times from 30 to 35 p.c. of the passenger-car production and from 40 to 50 p.c. of the trucks are for the export trade. In 1939, the best markets were Australia, British South Africa, New Zealand, British India, Straits Settlements, British West Indies, the United Kingdom, Southern Rhodesia and British East Africa. Regular trade was interrupted, of course, during the War, but great numbers of military vehicles were shipped to the war areas and these are included in the following summary:-

| Year | Exports of Canadian-Made Cars |  | Year | Exports of Canadian-Made Cars |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Passenger | Trucks |  | Passenger | Trucks |
|  | No. | No. |  | No. | No. |
| 1938. | 40,386 | 17,382 | 1942. | 5,283 | 159,377 |
| 1939. | 38,548 | 19,955 | 1943. | 172 | 165, 910 |
| 1940. | 18,145 | 66,047 | 1944. | 62 | 144, 151 |
| 1941.. | 12,315 | 130,304 | 1945. | 44 | 122,768 |

The value of exports of motor-vehicles was $\$ 207,000,000$ in 1945 and $\$ 22,000,000$ in 1939, and in addition $\$ 94,000,000$ of parts were exported in the former year and $\$ 3,000,000$ in the latter.

Imports.-In the immediate post-war years foreign-made cars accounted for about 15 p.c. of the Canadian market. Imports, mostly from the United States, were as follows:-

| Year | Imports of - |  | Year | Imports of - |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Passenger Cars | Trucks |  | Passenger Cars | Trucks |
|  | No. | No. |  | No. | No. |
| 1938. | 13,445 | 1,709 | 1942. | 485 | 560 |
| 1939. | 16,585 | 1,699 | 1943. | 104 | 712 |
| 1940. | 15,386 | 1,633 | 1944. | 364 | 1,851 |
| 1941. | 2,909 | 799 | 1945. | 549 | 1,542 |

Imports of automobiles amounted to $\$ 7,000,000$ in 1945 compared with $\$ 16,000,000$ in 1939; and automobile parts $\$ 72,000,000$ in 1945 and $\$ 25,000,000$ in 1939.

Registrations and Gasoline Consumption.-These subjects, which have an important bearing on the automobile industry, are dealt with in the Transportation Chapter at pp. 681 and 688.

## Subsection 1.-Manufactures Grouped by Chief Component Materials

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the foreign trade classification and the classes of industry were somewhat altered to conform with industrial developments. Subsequently, a number of minor changes were made, the most important being the elimination of central electric stations and the dyeing, cleaning and laundry industry from the compilation in 1936. Revisions due to these changes have been carried back to 1917 in so far as possible.

Recent Changes in Manufacturing Production.-Table 8 shows the effects of the depression, the recovery since 1933, and the impact of the Second World War upon the main groups of industries with regard to the numbers employed, the salaries and wages paid, and the gross value of products. Owing to the price decline during the depression, money values of both wages and products were naturally affected more than number of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output than that of wage-earners. Therefore, there are several reasons why the variation in number of employees should be less than that of money values. The figures of Table 8 are to be compared with those of Table 6 which show changes in volume of production. Compared with 1939, the number of employees in 1944 increased by 85.8 p.c. as compared with an increase of $70 \cdot 1$ p.c. in the physical volume of production. Salaries and wages paid were $175 \cdot 1$ p.c. higher and the gross value of production 1611 p.c. higher. Another significant change is the increase in the proportion of women engaged in manufacturing. Whereas in 1939, there were 281 females to every 1,000 males employed, in 1944 this figure jumped to 403.
8.-Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups Compared for Significant Years, 1929-44
Note.-The highest pre-depression year was 1929, while the lowest depression year was 1933.

Detailed Statistics by Groups and Individual Industries.-Table 9 presents, for the year 1944, detailed statistics regarding the individual industries under which all industrial plants in the Dominion are classified. The industries are further assembled under nine main groups according to the principal component material of their products.

In interpreting the statistics of individual industries it should be remembered that the figures on employment, production, etc., do not refer to individual products but to all the products made in an industry. For example, the value of production of the biscuit and confectionery industry amounting to $\$ 86,011,499$ in 1944 doas not mean that this was the value of biscuits and confectionery produced. What it means is that the firms whose principal products were biscuits and confectionery had a value of production of $\$ 35,011,499$. This figure, in addition to biscuits and confectionery, includes all the subsidiary products made by these firms, such as ice cream, which was valued at $\$ 1,558,335$, and bread and other bakery products amounting to $\$ 4,092,076$. Biscuits and confectionery are also produced as subsidiary products by firms credited to other industrial classifications. The bread and other bakery products industry, for example, reported an output of $\$ 270,401$ worth of biscuits while the miscellaneous food industry reported $\$ 221,990$ worth of confectionery. Quantities and values of principal individual products manufactured in Canada are given in Table 11.

The incidence of the War resulted in a rearrangement in the rank of many industries. Industries producing supplies and equipment for the Armed Forces naturally advanced while those industries producing for the domestic consumer market declined in importance. To supply the raw materials needed by the industries engaged principally in war production, it became necessary to restrict or prohibit the manufacture of many products such as pleasure cars, radios, washing machines, electrical equipment, household appliances, agricultural implements, etc. Though these industries were forced to change over to wartime production, the changes did not affect the value of their output and, consequently, their importance as producers of manufactured goods did not alter drastically. To analyse the effects of the War on any industry, it is necessary to compare the nature of its pre-war products with those produced during the war years. For example, the number of employees engaged in the agricultural implements industry increased by 7,196 between 1940 and 1944; this in spite of the fact that the output of agricultural implements remained at about the same level. The increase was due to a change-over of some of the plants to war production. It is, therefore, impossible to trace industrial trends from the principal statistics alone, as published in this Chapter.

## Subsection 2.-Manufactures Classified by the Purpose of the Products

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. On the basis of percentage to gross value of production, the most striking change is in the food group which showed a substantial decline from 28.2 p.c. of the total in 1922 to $22 \cdot 6$ p.c. in 1939 and $18 \cdot 8$ p.c. in 1944 . The producers materials group, which took the lead from the food group in 1923, showed a steady increase up to 1939, since when it has remained at about 30 p.c. of the total. Due to the production of war equipment, vehicles and vessels increased from $7 \cdot 7$ p.c. in 1939 to $15 \cdot 7$ p.c. in 1944 and industrial equipment from $15 \cdot 2$ p.c. to $16 \cdot 7$ p.c. The other groups, with the exception of "miscellaneous", showed slight declines during the war years.
10.-Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, Significant Years 1922-44 and in Detail for 1944.

${ }^{1}$ For the year 1922 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this Chapter.

Table 11 has been included in order to give the amount and value of each of the principal commodities produced by the manufacturing industries of Canada. The list is not intended to be complete since a large number of commodities are produced in such small quantities that to include them would extend the table considerably without adding proportionately to its value. The commodities listed, however, cover approximately 75 p.c. of total production.

## Subsection 3.-Manufactures Classified by Origin of the Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to the non-ferrous metals so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumer goods, exceeds that of the mineral group. Average salaries and wages in 1944 totalled $\$ 1,905$ for the mineral origin group and $\$ 1,372$ for the farm origin group.
12.-Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Material Used, by Main Groups, Significant Years, 1929-44.
Nors.-Figures for 1924, the first year for which this classification is available, are given at p. 411 of the 1946 Year Book.
