## Subsection 4.-Leading Manufacturing Industries

In the following statement, the rank of the ten leading industries in 1944, from the standpoint of gross value of production, is compared with their respective ranks in significant years since 1922 .

THE TEN LEADING INDUSTRIES, 1944, COMPARED AS TO RANK, SIGNIFICANT YEARS, 1922-44
Note.-A dash indicates that the industry did not rank among the forty leading industries.

| Industry | Rank in- |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1944 | 1943 | 1942 | 1939 | 1937 | 1933 | 1929 | 1922 |
| Slaughtering and meat packing. | 1 | 3 | 2 | 3 | 3 | 3 | 2 | 3 |
| Non-ferrous metal smelting and refining | 2 | 1 | 1 | 1 | 1 | 2 | 9 | - |
| Miscellaneous chemical products. | 3 | 2 | 5 | 38 | - | - | - | - |
| Aircraft............................ | 4 | 8 | 18 | - | $\bar{\square}$ | - | - |  |
| Pulp and paper. | 5 | 7 | 3 | 2 | 2 | 1 | 1 | 2 |
| Shipbuilding and repairs. | 6 7 | 4 | 6 4 | $\overline{5}$ | $\overline{4}$ | 11 | 4 | $\overline{6}$ |
| Electrical apparatus and supplies | 8 | 9 | 9 | 5 | 8 | 16 | 8 | 17 |
| Miscellaneous iron and steel products | 9 | 5 | 12 | $\overline{4}$ | $\overline{6}$ | $\overline{5}$ | $\overline{6}$ |  |
| Butter and cheese................. | 10 | 11 | 8 | 4 | 6 | 5 | 6 | 5 |

A prominent feature of Canadian manufacturing development in recent years has been the rapid growth of non-ferrous metal smelting. This industry, based upon the rich base-metal resources of the country, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources. The incidence of the depression resulted in a rearrangement in the ranking of many industries; in some cases this has proved to be temporary. Under the impetus of war production, the industries engaged in producing the equipment needed by the Armed Forces, such as shipbuilding, aircraft, automobiles, miscellaneous chemical products, and primary iron and steel, advanced to higher positions. With a minor decline in the production of war equipment during 1944, the food industries, by reason of the continuing demand for their products, bettered their position; slaughtering and meat packing advanced from third to first place and butter and cheese from eleventh to tenth place.

## 13.-Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of Products, 1944

Note.-Statistics of "Capital invested" were discontinued in 1944.

| Industry | Estab-lishments | Employees | Salaries and Wages | Cost of Materials | Value of Products |  |

${ }^{1}$ On a broader classification basis, the primary textile industry, which includes the production of cottons, woollens, silk, hosiery and knitted goods, and the dyeing and finishing of textiles, ranks first in number of employees, second in salaries and wages paid and third in gross value of production,

## Section 4.-Principal Factors in Manufacturing Production

The subjects treated under this Section include capital, employment, salaries and wages and size of establishments.

## Subsection 1.-Capital Employed

The collection of statistics on capital invested in manufacturing industries was discontinued in 1944. However, figures for each year from 1917 to 1943 are given in Table 1 of this Chapter, and by provinces for significant years of the same period in Table 2. A table showing the forms of capital employed for certain years from 1924 to 1943 is given at p. 417 of the 1946 Year Book.

## Subsection 2.-Employment in Manufactures

Using a base and taking the percentages of the wage-earners and the total employees in each year, and dividing those percentages into the corresponding volumes of manufacturing production, tentative conclusions are arrived at regarding the efficiency of production per wage-earner and per employee. These indexes are, of course, affected by the changes in the method of computing the number of wage-earners adopted in 1925, and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production per employee. Comparability exists, however, between the figures prior to 1926 and subsequent to 1930. Up to 1939, there was a general gain in volume of production per person employed. At the outbreak of war unemployed skilled workers were first absorbed into industry, with the result that the efficiency of production was slightly improved. As the War progressed, however, manufacturers were forced more and more to employ unskilled workers. The decline in the efficiency of production in 1942, 1943 and 1944 may, therefore, be attributed to this cause as well as to absenteeism for various causes.

## 15.-Employees in Manufacturing Industries, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1931-44

Norg.-Figures, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Year Book.

| Year | Salaried Employees | WageEarners | Total Employees | Percentages Relative to 1935-39 |  | Index Number of Volume of Mf'd. Products | Indexes of Efficiency of Production |  |

Monthly Record of Employment in Manufactures.-Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then,
textile industries are preparing winter goods, and industry generally feels the active demand of the agricultural purchasing power resulting from the prospect of the season's harvest. After the setback of 1929, employment declined steadily until the middle of 1933. The peak of employment in June, 1929, when 575,693 wageearners were on the payrolls, was surpassed in September, 1937, with 582,305 wage-earners. With the outbreak of war the improvement in employment became increasingly rapid and a new high record was attained in August, 1943, when $1,067,890$ wage-earners were employed. The highest employment during 1944 was attained in June when 1,049,557 wage-earners were recorded.

Hours Worked by Wage-Earners.-Since 1932, each firm has been required to report the number of hours worked by all its wage-earners during the month of highest employment, except for the years 1938 and 1939 when one week in a month of normal employment was reported. In 1938, the number of hours worked per week were compiled by sex, and a change was also made in the analysis of the weekly hours worked. Since 1940, the hours worked per week include overtime. These changes make it impossible to measure accurately the changes in the number of hours worked per week. The figures in Tables $\mathbf{1 7}$ to $\mathbf{2 0}$ represent the summation of the different months of highest employment as reported by all firms.

For all wage-earners, the hours worked per week declined from 48.9 in 1932 to 47.2 in 1939, and reached 50.6 in 1941, some of this increase no doubt being due to the inclusion of overtime. For 1942, 1943 and 1944 there was a counter movement in the hours worked, especially among females, due to the employment of many workers on a part-time basis. Whereas in 1939 there were only $2 \cdot 8$ p.c. of the male and $5 \cdot 3$ p.c. of the female wage-earners working under 30 hours per week, in 1944 these percentages rose to $5 \cdot 3$ p.c. and $12 \cdot 5$ p.c., respectively. Also, the number of hours worked by females averaged $5 \cdot 5$ less than the number of hours worked by their male co-workers.

## 17.-Wage-Earners in Manufacturing, Working Specified Numbers of Hours ${ }^{1}$ per Week

 in the Month of Highest Employment, 1938-44Note.-Hours worked per week in 1932-37 are given at p. 386 of the 1942 edition of the Year Book; in 1940 at p. 392 of the 1943-44 edition.

[^207]
${ }^{1}$ Including overtime.
${ }^{2}$ Exclusive of "dairy factories" and "fish-curing and -packing" plants.

## Subsection 3.-Salaries and Wages in Manufacturing Industries

In 1944, the 28,483 establishments covered, employed 192,558 salaried employees and $1,030,324$ wage-earners, a total of $1,222,882$ persons. Out of every 1,000 persons employed in manufacturing 157 were classed as salary earners and 843 as wage-earners; the former earned 20.6 p.c. and the latter 79.4 p.c. of the total amount paid out as remuneration for services.

A notable feature during the past few years was the reduction in the disparity between average annual salaries and wages. Whereas in 1939 average annual wages were only $55 \cdot 8$ p.c. of average annual salaries, in 1943 the percentage rose to 75.8 and declined to 72.0 in 1944. This tendency towards equalization was, in part, due to the controls adopted by the Government which tended to stabilize salaries more so than wages. The increase in average wages was also influenced by the fact that large numbers of wage-earners were employed in the highly paid iron and steel industries and by the increase in number of hours worked, some of it at overtime pay.

Ontario has a larger proportion of females among its salaried employees than the other provinces. The same situation prevails in Quebec with regard to wageearners, due, no doubt, to the textile industries of the Province. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that of all female wage-earners engaged in the manufacturing industries of Canada in 1944, 29 p.c. were found in the textile group. Normally, the percentage is much higher. In 1942 to 1944 large numbers of female wage-earners were employed in the aircraft and miscellaneous chemical industries and for this reason the percentage employed in the textile industries declined.

The average salary in Canada in 1944 amounted to $\$ 2,171$ which was $\$ 425$ or $24 \cdot 3$ p.c. higher than in 1939. Salaried employees in Ontario with $\$ 2,273$ received the highest salary. British Columbia came second with $\$ 2,190$ and Quebec third with $\$ 2,159$. The fact that head offices of many large corporations are located at Montreal, Toronto, Vancouver and Winnipeg tends to raise the average salaries in the provinces in which these cities are located.
21.-Salaries and Wages Paid in Manufacturing Industries, by Provinces and Industrial Groups, 1944, with Totals for Significant Years, 1917-43

| Year | Salaries |  |  |  | Wages |  |  |  |

${ }^{1}$ The averages of wage-earners and earnings for the years 1931 to 1943 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years -as for the earliest-represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts only to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.
${ }^{2}$ The increase in the number of salaried employees in 1931 is due to the following changes in method: (1) Prior to 1931 working proprietors, such as bakers, sawmill operators, small clothing manufacturers, etc., were required to report themselves as wage-earners. In 1931 and subsequent years, however, all such proprietors reported themselves as salaried employees. (2) In 1931 travelling salesmen who were attached to the plant, and devoted all or the greater part of their time to selling the products of that plant, were included with salaried employees. Prior to this they were not reported ạt all.

${ }^{1}$ For statistics of annual earnings of wage-earners, by sex, see Table 24. p. 557
The average wage in Canada in 1944 amounted to $\$ 1,564$ which was $\$ 589$ or 60.4 p.c. higher than in 1939. The manufacturing industries of British Columbia paid the highest average wages of $\$ 1,809$ per annum, followed by Ontario with $\$ 1,618$, Nova Scotia $\$ 1,570$, Quebec $\$ 1,473$, Manitoba $\$ 1,452$, etc. The high figures shown for Yukon and the Northwest Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative. Statistics of the distribution of employees by provinces and groups as well as average annual earnings are given in Table 21, and for a subdivision of wage-earners by sex, see Table 24.

Average Annual Earnings in the Forty Leading Industries.-In only nine industries did average salaries exceed $\$ 2,500$ in 1944; pulp and paper, bridge and structural steel, breweries, automobiles, petroleum products, men's factory clothing, railway rolling-stock, silk, and cotton yarn and cloth. In 24 industries they ranged between $\$ 2,000$ and $\$ 2,500$, in four they ranged between $\$ 1,500$ and $\$ 2,000$, and in the remaining three they were below $\$ 1,500$. The lowest salaries were reported by the sawmilling, butter and cheese, and bread industries, each of which includes a large proportion of small establishments.

The highest annual wages, those above $\$ 1,900$, were paid in nine industries, in all of which the proportion of skilled workers is high and the proportion of female workers is low. The automobile industry had the highest average wages in this group, $\$ 2,347$, followed by bridge and structural steel with $\$ 2,111$, shipbuilding and repairs $\$ 2,055$, railway rolling-stock $\$ 2,010$, aircraft $\$ 1,998$, miscellaneous iron and steel products $\$ 1,983$, petroleum products $\$ 1,953$, primary iron and steel $\$ 1,930$, and scientific and professional equipment $\$ 1,923$. In twelve other industries average wages ranged between $\$ 1,600$ and $\$ 1,900$ in all of which the proportion of female workers is low. In fifteen other industries average wages ranged between $\$ 1,100$ and $\$ 1,600$, while in the remaining four they were below $\$ 1,100$. The latter group includes industries made up of a large number of small establishments in which the proportion of female workers is usually high. Fruit and vegetable preparations, biscuits and confectionery, hosiery and knitted goods, and leather boots and shoes are the industries included in this group. Employment by sex and average annual earnings in the forty leading industries is given in Table 22, and the annual earnings by sex in Tables 25 and 26.

## 22.-Salaries and Wages Paid in the Forty Leading Industries, 1944, with Comparative Figures of Average Salaries and Wages Paid in 1943

Note.-Industries ranked according to the aggregate salaries and wages paid. For a subdivision of annual earnings of wage-earners, by sex, see Tables 25 and 26.

Average Annual, Weekly and Hourly Earnings.-In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has very definitely a regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in these latter industries naturally command relatively higher wages than those employed in industries whose employees are routine workers.

The ranking of provinces and industries as regards annual earnings is in many cases different to that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture. So that, while in general the same observations apply, a close study of the differences between the averages shown in Tables 21 and 22 will be of value to the student.

The figures given in Tables 23 to $\mathbf{2 6}$ are based on an analysis of a pay-list covering one week in the month of highest employment. For this reason the figures do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the

78375-36 $\frac{1}{2}$
different months of highest employment as reported by all the firms. For a particular industry, however, the month of highest employment is more significant as, in such case, it coincides for a great number of firms engaged in the same industry.

Average weekly earnings of male wage-earners for manufacturing as a whole amounted to $\$ 34.95$ in 1944 , an increase of $\$ 12.72$ or $57 \cdot 2$ p.c. as compared with 1939. Average hourly earnings advanced from $46 \cdot 2$ cents in 1939 to $71 \cdot 2$ cents in 1944 , an increase of $54 \cdot 1$ p.c. Annual earnings at $\$ 1,761$ were $63 \cdot 7$ p.c. higher than in 1939.

Female wage-earners received on an average $\$ 20.89$ per week in 1944, an increase of $\$ 8.11$ or 63.5 p.c. as compared with 1939 . Hourly earnings at 47.9 cents were $69 \cdot 3$ p.c. higher, while annual earnings at $\$ 1,051$ were $69 \cdot 8$ p.c. higher.

[^212]Real Earnings of Employees in Recent Years.-When the index number representing the average yearly wages is divided by the index number of the cost of living, on the same base, a measure of "real" wages is obtained. Index numbers for 1931 to 1944 are given in Table 27. In 1933, the height of the depression, real wages were $88 \cdot 3$ on the $1935-39$ base. From then on they rose steadily except in 1938, and stood at 1411 in 1944, an increase of about 60 p.c.

## 27.-Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1931-44

Nore.-Figures on the 1917 base, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Year Book.

| Year | Wages Paid | Average WageEarners | Average Yearly Earnings | Index Numbers ( $1935-39=100$ ) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Percentages of Salaries and Wages to Net Value of Products.-Table 28 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come, in the long run, are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent, taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929 , while from 1931 to 1935 and again in 1938 and 1939, due to decreased industrial activity, the percentage of salaries to value added was above normal. It should be borne in mind, however, that salaried employees increased 174 p.c. during the period 1924-44 while wage-earners increased but 147 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more rapidly adjusted to the activity of the industry and wage levels likewise may be more readily adjusted to the price levels of the products. Of the increase in the net value of production since 1939 amounting to $\$ 2,484,724,109$, $\$ 1,291,810,217$ or $52 \cdot 0$ p.c. was passed along in increased salaries and wages.
28.-Percentages of Salaries and Wages Paid to the Total Net Values of Manufacturing Production, 1924-44

| Year | Value Added by Processes of Manufacture ${ }^{1}$ | Salaries Paid | Wages Paid | Percentages- |  |  |

${ }^{1}$ Equivalent to "net value of products"; see footnote 1, Table 1, p. 510.

## Subsection 4.-Size of Manufacturing Establishments

The size of the manufacturing establishment is generally measured either by the value of product, or by the number of employees, but each of these methods has its limitations. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to an increase in production concurrently with a decrease in the number of employees. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high, appear to operate on a larger scale.

Size as Measured by Gross Value of Products.-While in 1922 the 420 establishments each producing over $\$ 1,000,000 \mathrm{had}$ an aggregate value of products of $\$ 1,268,056,129$ or 51 p.c. of the total production of all manufacturing industries, the 719 establishments producing over $\$ 1,000,000$ each in 1929 had an aggregate value of products of $\$ 2,516,064,954$, or 62 p.c. of the grand total for all manufacturing establishments-a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over $\$ 1,000,000$ dropped again to 482 , their output being valued at $\$ 1,451,658,954$, or 53 p.c. of the total. With the increased production resulting from war needs, the number of plants with a production of $\$ 1,000,000$ or over jumped to 1,376 in 1944, and their output was about 75 p.c. of the total value of manufactures.
29.-Manufacturing Establishments, Grouped According to Gross Value of Products, with Totals and Average Values of Products in each Class, for Canada, 1929, 1939, 1943 and 1944.

[^213]Size as Measured by Number of Employees.-In 1923, establishments employing 501 hands or over accounted for 21.4 p.c. of the total number of employees engaged in manufacturing. By 1929 the proportion had increased to $27 \cdot 3$ p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to 20.5 p.c. (central electric stations included). With the recovery in production since 1933, the percentage has risen again and in 1939 stood, at $25 \cdot 6$. The same also holds true for establishments employing 101 hands or over. In 1923, they employed 58.6 p.c. of the total, in $1929,61 \cdot 9$ p.c., in $1933,55 \cdot 7$ p.c., !n 1939, $61 \cdot 5$ p.c.

The impact of the War on the concentration of war industries into large units is illustrated by the increase in the number of establishments employing 500 hands or over. In 1939 such establishments numbered 172 and employed $25 \cdot 6$ p.c. of the total number of employees engaged in manufacturing. By 1944, the number had increased to 383 and the percentage of total employees to $\mathbf{4 7 \cdot 0}$. In a further subdivision of this group in 1944 it was found that 226 establishments employed between 500 and 999 persons, 56 between 1,000 and 1,499, and 101 employed over 1,500 . All told, there were 12 plants employing over 7,000 persons. The largest one had an employment of approximately 13,000 with the next three largest employing between 9,000 and 10,000 . Three other plants employed between 8,000 and 9,000 persons while the remaining five plants in this group employed between 7,000 and 8,000 workers.

${ }^{1}$ Includes central electric stations, dyeing, cleaning and laundry establishments. ${ }^{2}$ Exclusive of Yukon and the Northwest Territories.

Size of Establishment in Leading Industries.-Table 32 summarizes the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of automobiles, railway rolling-stock, aircraft, cotton yarn and cloth, shipbuilding and repairs, miscellaneous chemical products, non-ferrous metal smelting and refining, and pulp and paper; whereas in the case of bread and other bakery products, women's factory clothing, butter and cheese, and sawmills, the degree of concentration is low.

## 32.-Percentage Importance of Establishments, each Employing 200 or more Persons in the Twenty-Five Leading Industries, 1944

|  | Industry | Number of Such Establishments | Percentage of Total Number in the Industry | Percentage of Total Production in the Industry |
| :---: | :---: | :---: | :---: | :---: |

| 25 | Fruit and vegetable preparations. | 9 | $2 \cdot 0$ | 29.4 |

## PART II.-PROVINGIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

This part of the Chapter is introduced by a general analysis of the concentration of the manufacturing industries in the provinces. In the sections that follow, the principal features of the manufactures of each province are brought out and finally the distribution of manufacturing throughout the principal cities and towns of the Iominion is shown.

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1944 amounted to $\$ 7,269,483,000$ or over 80 p.c. of the gross value of manufactured products of the Dominion. The proximity of Ontario to the coalfields of Pennsylvania, U.S.A., the water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of textiles and chemicals, but in each of the other groups Ontario has the greater production. The standing of these two provinces is most nearly approached by British Columbia in the case of the wood and paper products group, where the latter province accounts for 16.5 p.c. of the gross production compared with $35 \cdot 7$ p.c. for Ontario and $34 \cdot 5$ p.c. for Quebec; in each of the other groups the positions of Ontario and Quebec lead by a wide margin.

[^215]1.-Summary Statistics of Manufactures of Each Province, Classified by Industrial Groups, 1944-concluded

${ }^{1}$ Includes non-ferrous metal products.
The degree of concentration of manufacturing production in large units is illustrated in Table 2. In the Province of Quebec, $51 \cdot 3$ p.c. of all persons engaged in manufacturing were employed in establishments having 500 or more employees, as compared with 46.9 p.c. for Canada as a whole. Ordinarily, Ontario ranks second in concentration of manufacturing production. In 1942, however, British

Columbia with 47.2 p.c. came second; this was due to the large shipbuilding plants located there. In 1944, Ontario resumed her normal position in second place with $47 \cdot 3$ p.c., while Nova Scotia came third with $45 \cdot 8$ p.c., followed by British Columbia with $45 \cdot 2$ p.c., Manitoba $35 \cdot 7$ p.c., New Brunswick 26.9 p.c., Alberta $24 \cdot 3$ p.c. and Saskatchewan $15 \cdot 6$ p.c.

## Section 1.-The Manufactures of the Maritime Provinces, 1944

In Prince Edward Island the predominant agricultural and fishery resources make butter and cheese, fish curing and packing, and slaughtering and meat packing the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries, as well as its extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, shipbuilding and repairs, fish curing and packing, sawmills, pulp and paper, and butter and cheese. In addition to this, important petroleum refineries and coke and gas plants add to the diversification of manufacturing in the Province. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries, although fish and agricultural products add to the varied output. Sugar refining and the production of railway rolling-stock also form important branches of manufacturing production.

## Section 2.-The Manufactures of Quebec, 1944

Among the assets of Quebec that have tended to develop manufacturing industries in the Province may be mentioned its natural resources of forests, water powers, minerals, and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going shipping to reach its main centres of population. Added to these natural advantages, there is a stable and industrious population, which is an important factor in industries such as textiles, clothing, boots and shoes, etc., where a large labour force is required.

The most notable change among the manufactures of Quebec in recent years has been the development of the non-ferrous metal smelting industry This industry first appeared among the forty leading industries of the Province in nineteenth place in 1927. It has been in second place since 1935, with the exception of 1942 when it was in first place.

Quebec, with about 32 p.c. of the Dominion output in 1944, was the second largest manufacturing province. The production of pulp and paper normally constitutes the dominant industry, but in 1943 and 1944 was displaced from the premier position by the miscellaneous chemical-products industry and non-ferrous metal smelting and refining. In addition to accounting for about 6 p.c. of gross value of Quebec manufactures in 1944, the pulp and paper industry furnished about 50 p.c. of the Dominion total for this industry. The value of tobacco products totalled approximately 89 p.c., cotton yarn and cloth 75 p.c., women's factory clothing 67 p.c., leather boots and shoes 65 p.c., men's factory clothing 58 p.c., railway rolling-stock 53 p.c., and non-ferrous metal smelting and refining 51 p.c., of the Dominion totals of these products. Quebec is thus an outstanding manufacturing province by reason of her large individual industries and not so much on account of the great diversification of her industrial activity.

## Section 3.-The Manufactures of Ontario, 1944

The gross value of the manufactured products of Ontario in 1944, represented about 48 p.c. of the total for the whole Dominion. This premier position in manufacturing has been fairly uniformly maintained by Ontario, as the following percentages show: 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880,51 p.c. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the Dominion.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible; the wide range of natural resources of forests, minerals, water powers, and agriculture; a large population and excellent water and rail transportation facilities to other parts of the country, have all encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment, within the Province, of branch factories of Unites States industries, as in automobile manufacturing.

Industries producing capital or durable goods, which constitute an important factor in the manufactures of Ontario, were particularly hard hit during the early years of the depression preceding the Second World War. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted in a lowering of the manufacturing production of the whole Province relatively to that of other provinces less affected by these influences. With the recovery since 1933 and the expansion in production resulting from the Second World War, these industries in general have made good progress, and Ontario, which accounted for 49 p.c. of the gross value of all products manufactured in the Dominion in 1933, had by 1942 increased the relative value to $50 \cdot 5$ p.c. In 1944, the percentage dropped again to $47 \cdot 8$, indicating a relatively greater expansion of war production in other provinces.

Ontario has the greatest diversification of manufacturing production of any province. Outstanding among the industries in which this Province is pre-eminent are those of automobiles, agricultural implements and starch manufacture which are carried on practically in this Province alone. Other important industries in which Ontario leads, with the percentage which the production of each bore to that of the Dominion total in 1944, are as follows: leather tanneries 86 , rubber goods 85 , primary iron and steel 70 , electrical apparatus and supplies 64 , iron castings 62 , fruit and vegetable preparations 59, flour and feed mills 58 , furniture 57 , and hosiery and knitted goods 55 .

## Section 4.-The Manufactures of the Prairie Provinces,

The leading industries of the Prairie Provinces are those based on their agricultural resources-grain-growing, cattle-raising, and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The widespread use of motor-vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other provinces. Its natural resources of accessible water powers, forests and, more recently, minerals, have given rise to quite a diversification of industrial production.

Considering the Prairie Provinces as an economic unit, slaughtering and meat packing had the largest gross value of production in 1944, amounting to $\$ 273,197,731$, followed by flour and feed mills with $\$ 69,775,479$, butter and cheese $\$ 56,483,771$, petroleum products $\$ 42,472,090$, railway rolling-stock $\$ 24,394,795$. These five industries accounted for about 60 p.c. of the total production of the Prairie Provinces. Other leading industries, in the order named, were: miscellaneous food products, bread and other bakery products, breweries and sawmills.

## Section 5.-The Manufactures of British Columbia, 1944

British Columbia in 1944 was again the third most important manufacturing province of the Dominion. Normally its rich forests give the wood industries a pre-eminence in the Province. Due to the exigencies of the War which resulted in the establishment of a huge shipbuilding industry on the Pacific Coast, the iron and its products group displaced wood and paper as the dominant factor in British Columbia manufacturing production. As a result of this, the shipbuilding industry, with a gross value of production of $\$ 124,175,065$ and accounting for 19 p.c. of the total output of the Province in 1944, was the dominant industry. This industry which rose from sixth place in 1940 when the output was valued at only $\$ 9,943,941$, reached its maximum expansion in 1943 when the output was valued at $\$ 155,536,396$ and the persons employed totalled 31,238 . Operations declined during 1944, the gross value of production dropping by $\$ 31,361,331$ and the number of persons employed by 6,623 . Emphasizing the importance of the forests in the industrial life of the Province, the sawmilling industry ranked second with a gross value of production of $\$ 98,381,844$, and the pulp and paper industry fourth with $\$ 32,726,647$. Third in importance was fish curing and packing, bąsed principally on the estuarial salmon fisheries. British Columbia accounted for 48 p.c. of the total production of this industry in Canada. Other important industries were: slaughtering and meat packing, petroleum products, fruit and vegetable preparations, machinery, butter and cheese, etc. The varied resources of the Province and its position on the Pacific Coast have resulted in a wide diversification of its manufactures.

## Section 6.-Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the west, the cities are more largely distributing centres though manufactures are rapidly increasing there also.

Table 8, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over $\$ 1,000,000$ each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns in 1944 accounted for 89.5 p.c. and $91 \cdot 1$ p.c., respectively, of the totals for those provinces, while in the Maritime Provinces and British Columbia, where sawmilling, fish-packing, and dairying are leading industries, the proportions fell to 70.9 p.c. and 77.5 p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

## 8.-Urban Centres with Gross Manufacturing Productions of Over $\mathbf{\$ 1 , 0 0 0 , 0 0 0}$, Number of Establishments and Total Production in such Centres as a Percentage of the Grand Total, by Provinces, 1944.

Nors.-Statistics published in this table are in some cases higher than the figures published in Table 10, since, in the table below are included statistics of towns with less than three establishments and production of over $\$ 1,000,000$ each. It was not possible to publish this information in Table 10 without disclosing the operations of individual establishments.

| Province or Territory | Urban Centres with a Gross Production of over $\$ 1,000,000$ each | Establishments <br> Reporting in Urban Centres Producing over <br> $\$ 1,000,000$ each | Total Production in Urban Centres Producing over <br> $\$ 1,000,000$ each | Total Production in each Province | Production in Urban Centres as a Percentage of Total Production in each Province |

# CHAPTER XIX.-CONSTRUCTION 

## CONSPECTUS

Page

The purpose of this Chapter is to co-ordinate such official statistics on the construction industry as are available and to give, so far as possible, a complete picture of construction from year to year. Official statistics, although constantly undergoing improvement, have many gaps and it is necessary to try to bridge these by presenting data from outside sources. For instance, Section 3 contains data from a private source on construction contracts awarded during specified years. These are in the nature of a forecast of the amount of construction work contemplated in a given year. It is usually some time after contracts are awarded that work actually starts and, in the case of contracts of large-scale undertakings, the work is seldom finished within one year. On the other hand, the official statistics of the Annual Census of Construction given in Section 4 cover work of all kinds actually completed in a given year.

## Section 1.-The Government and the Construction Industry

## Subsection 1.-Public Contracts

Since the establishment of the Department of Reconstruction and Supply in January, 1946, Government reconstruction programs, so far as they concern construction projects, are determined as to urgency and put into execution in order of importance. Also, each project is scored as to whether the available labour and materials required might be deterring any more necessary housing construction. Close liaison is carried on between the Department of Reconstruction and Supply and the Department of Public Works.

## Subsection 2.-Government Aid to Civil Housing*

Canada's supply of adequate housing falls far short of actual needs. While this condition undoubtedly existed prior to the 1930's, it was not widely recognized With the general depression of economic activity through the period 1929-36, residential construction fell to such a low level that already-existing overcrowding and obsolescence were further aggravated. The high vacancy rate in the depression years, particularly for apartment dwellings, was a product not of an over-supply of dwellings, but of enforced "doubling-up" of families whose incomes were not sufficient to provide separate living quarters.

The construction industry had not recovered from the slump of the early 1930's when war production began to drain off materials and labour required for housing construction. At the same time, increased personal income allowed many

[^224]families to expand into separate or larger dwelling units. These two factors, coupled with unprecedented marriage rates during the war years and the months immediately following, compounded an already critical shortage of living quarters throughout the Dominion.

The Central Mortgage and Housing Corporation.-To provide, coordination in the housing field, the Central Mortgage and Housing Corporation was incorporated by an Act of the Twentieth Parliament (December, 1945). Briefly, its purpose and functions are: (1) to administer the National Housing Act, 1944, and earlier housing legislation; (2) to provide facilities for the rediscounting of mortgages by lending institutions; and (3) to administer the Emergency Shelter Regulations.

As a result of further consolidation of the Dominion Government's operations in the housing field, the Central Mortgage and Housing Corporation also directs the activities of Wartime Housing Limited.

Wartime Housing Limited.-Wartime Housing Limited, a Crown Company, was formed on Feb. 28, 1941. By the end of 1946, more than 25,000 houses had been built across Canada by the Company, exclusive of the many auxiliary buildings such as hospitals, schools, community centres and fire-halls.

Originally created to provide accommodation for war workers and their families near industrial developments essential to the prosecution of the War, the Company now constructs homes for veterans on a rental basis. All homes built since 1944 and those vacated by war-workers are rented to veterans. By the end of 1946, 51 p.c. of all such units were occupied by ex-service men and their families.

The municipality co-operates with the Dominion Government in providing shelter for veterans, supplying a fully developed lot for building purposes to the Company for $\$ 1$. The Company agrees to pay, in lieu of taxes, $\$ 24$ per annum for each house of two or fewer bedrooms, and $\$ 30$ per year on those with three or more bedrooms, plus $\$ 1$ per year per house for street lighting. Rentals are from $\$ 22$ to $\$ 40$ per month. At the end of an agreed period, determined by cost of construction, Wartime Housing agrees to sell the houses to the municipality for $\$ 1,000$ each.

At present, many requests are being received from individuals for permission to purchase these houses, and consideration is being given these inquiries. Conditions must be agreed upon by the municipality and the Dominion Government.

Housing Legislation.-The Dominion Government, since 1935, has administered legislation designed to assist in the financing and improvement of housing in Canada. The Dominion Housing Act of 1935 was the first general housing Act proclaimed, its provisions being outlined on pp. 473-474 of the 1930 Year Book. Some of the loans made to house builders under the provisions of this Act are outstanding, but otherwise it is now inoperative.

The Home Improvement Loans Guarantee Act, 1937, followed. The number of loans granted under this Act are shown on pp. 370-371 of the 1941 Year Book. This Act is also now inoperative, with the exception of a few outstanding loans.

In 1938, to encourage the builders of new homes by means of the provision of long-term housing loans, the first of the National Housing Acts was made law. An outline of its provisions appears at pp. 469-470 of the 1940 Year Book.

The present legislation is the National Housing Act 1944, which came in force on Jan. 18, 1945. Details of this Act are given below. The following table shows the number of loans made, and the amounts approved under the housing legislation passed since 1935.
2.-Numbers and Amounts of Loans Approved under Dominion Housing Legislation, by Provinces, 1938-46
Nors.-This table is a combined statement of the net loans (cancellations and new loans) made under the three Acts named in the preceding text. Loans and amounts approved under the 1935 Act from October, 1935, to December, 1937, are given at p. 447 of the 1945 Year Book.

${ }^{1}$ Loans cancelled exceeded loans approved by the number and amount stated.

${ }^{1}$ Loans cancelled exceeded loans approved by the number and amount stated.

National Housing Act, 1944.-Features of this Act as originally proclaimed appear at pp. 455-457 of the 1946 Year Book. In 1946 amendments were introduced to certain portions of the Act to encourage farm housing, and to put in force the Home Extension Loan Plan (Part IV; NHA, 1944). The Act was amended also, to correspond with the administrative changes involved in the transfer to the Minister of Reconstruction and Supply of the duties, powers and functions of the Minister of Finance, under the National Housing Act, 1944, except the authority of the Minister to pay moneys out of the consolidated revenue fund or to make grants for slum clearance.

Operations carried on under the provision of the 1944 Act over the period Jan. 18, 1945 to Dec. 31, 1946, are summarized as follows: number of loans made, 7,313 ; number of family housing units assisted, 11,763 ; amount of loans approved, $\$ 55,585,540$; average amount of loan, $\$ 4,725$.

An outline of present status of the Act, operations carried out under it and of related legislation (Emergency Shelter) is given below.

Loans to Prospective Home Owners.-While the essential features of the joint loan conditions have been retained, certain changes were introduced to offset increases in construction costs and to ease the burden of families who have been forced to buy homes. Lending values were increased to approximate current building costs, and the usual period of amortization was increased from 20 to 25 years, the 30 -year maximum being retained in special cases. The maximum loan now available is $\$ 7,000$ with a required equity of $\$ 1,300$. On loans up to this maximum, lending value is calculated as 90 p.c. of the first $\$ 4,000$, plus 70 p.c. of any excess over $\$ 4,000$ value.

Integrated Housing Plan.-The purpose of the Integrated Housing Plan is to encourage residential construction by providing financial assistance and building material priorities to builders. Conditions of the Plan include: (a) a maximum, pre-determined sales price; (b) priorities assistance to the builder in minimum quantity of building materials; (c) agreement of builder to have cach house roofed within 4 months of starting dates; (d) guarantee by the Central Mortgage and Housing Corporation to purchase unsold houses within six months of date of com.pletion; (e) restriction of sale to veterans (1939-45).

Co-operative Housing.-The terms under which loans are made to cooperative groups intending to build housing projects are given at p. 456 of the 1946 Year Book.

Home Conversion Plan.-Another measure designed to provide additional housing units with minimum delay was the Home Conversion Plan, established by a series of Orders in Council of which the first was P.C. 2641 of Apr. 1, 1943, giving the Government authority to lease buildings in certain cities for conversion into multiple housing units and to sublet them to suitable tenants. By Dec. 31, 1946, 2,108 new housing units had been provided from 260 conversion projects in 16 Canadian cities.

With the shortage of building materials, high costs, and lack of dwellings suitable for conversion, further developments of this Plan will not be pressed by Central Mortgage and Housing Corporation.

Housing Enterprises of Canada Limited.-Amendments to the National Housing Act in 1945 made it possible for the major lending institutions to form companies for the purpose of constructing housing projects for rental purposes. Agreements between Housing Enterprises of Canada and the Central Mortgage and Housing Corporation provide that all low-rental housing projects financed under the National Housing Act be approved by the Corporation as to location, costs, rental charges, etc. The Company is required to invest 10 p.c. of the cost of the project, while the remaining 90 p.c. is financed by the Central Mortgage and Housing Corporation through a mortgage loan with interest at 3 p.c.

By Dec. 31, 1946, Housing Enterprises of Canada and its subsidiary companies had 2,811 housing units under construction, but no dwellings had been completed.

Loans to Primary Producers for Housing of Employees.-To assure satisfactory living quarters for employees engaged in the production of primary goods in outlying areas, the National Housing Act provides that assistance be given to primary producers in the construction of housing projects. An incorporated company engaged in mining, lumbering, logging or fishing may borrow up to 80 p.c. of the lending value of the project, with interest at 4 p.c. The amortization period varies with the location but must not exceed 15 years.

The Act requires that basic family accommodation be provided by the company, with available community facilities. These projects must be of a size to assure economy in construction and operation.

Farm Housing.-In 1946, Part III of the National Housing Act dealing with rural housing was amended, enabling the Corporation to proceed with organization of procedures for its administration.

Joint loans may be made to assist in the construction of houses on farms. Where the farm is not mortgaged or is without other encumbrance, the amount of the loan is limited to the least of $\$ 5,000$, the cost of building the house, or two-thirds of the appraised value of the farm. If there is already a mortgage or other encumbrance, the loan is the least of $\$ 8,000$, the sum of the cost of building the house and existing indebtedness or two-thirds of the appraised value of the farm. In this second instance it must be shown that the mortgage was not secured to increase the amount of the new loan.

Loans for farm housing carry interest at $4 \cdot 5$ p.c. per annum, and are repayable up to 20 years after the date of completion of the house. Such dwellings must conform to standards approved by the Central Mortgage and Housing Corporation.

Home Extension Loans.-This portion of the Act is intended to assist home owners in creating additional dwelling units within their homes. The loans are not intended for improvement of already existing dwellings unless the changes are a part of the conversion plan.

By Dec. 31, 1946, 25 Home Extension Loans, creating 53 housing units for a total sum of $\$ 76,315$ had been approved. The loans may be made through any chartered bank or approved instalment credit agency, under arrangement with Central Mortgage and Housing Corporation.

Emergency Shelter Regulations.-This legislation is intended to assist municipalities in converting unoccupied houses, barracks or other suitable buildings for the accommodation of families suffering actual distress or hardship through lack of shelter. In December, 1945 (P.C. 7502), administration of these Regulations was changed from the Wartime Prices and Trade Board to the Central Mortgage and Housing Corporation.

Briefly, the functions of the Emergency Shelter Administration are: to help municipalities procure surplus Government buildings for conversion purposes, to assure that all vacant houses are occupied, to maintain liaison with veteran and social-welfare agencies and to assist universities to provide living accommodation for married veteran students.

By the end of 1946, the Dominion Government had expended more than $\$ 2,000,000$ for Emergency Shelter of which about $\$ 725,000$ was for the housing of married student veterans. More than 7,000 dwelling units were in operation at that time, in leased quarters valued at nearly $\$ 6,000,000$.

Housing Research and Community Planning.-Provision for research and community planning is made in Part V of the National Housing Act, 1944, and for enquiries into problems of mortgage transactions of the Central Mortgage and Housing Corporation.

There are three main branches of research carried on: economic and statistical enquiries; technical research in materials, equipment, standards, etc., of housing; and design of housing. Competitions in housing design have been set up across the Dominion.

Veterans' Land Act.-Under the terms of the Veterans' Land Act a program of construction of homes on small holdings outside urban areas was set up. This project remains a responsibility of the Minister of Veterans Affairs. (See also Chapter XXX on Veterans Affairs, Sect. 5, Subsection 3.)

Farm Improvement Loans Act.-One of the broad aims behind this legislation is the improvement of living conditions on farms, by the provision of electrification, refrigeration, heating systems, water systems, etc. The Act is more fully dealt with in the Agriculture Chapter, at p. 332.

## Section 2.-The Annual Survey of Dwelling Units Constructed

The survey of dwelling units and new residential buildings completed in Canada, was commenced by the Bureau of Statistics in 1945, and continued during 1946. The basic data for this survey was obtained from 623 incorporated municipalities, while provincial authorities and agencies of the Dominion Government also provided similar information for unorganized areas of the provinces, the Northwest Territories and Yukon. This group of municipalities includes all those in the 12 metropolitan areas, others having a population of 5,000 or over, and a further selected number chosen on the basis of scientific sampling technique, that is, a "random" sample of approximately 10 p.c. and 5 p.c., respectively, of other urban and other rural municipalities having a population under 5,000 . The 623 municipalities represent 16.2 p.c. of the total number of incorporated municipalities in Canada, or approximately 67 p.c. of the total population in these areas.

The results of this survey during the calendar year 1946, compared with similar statistics for 1945 , are summarized in the tables on pp. 589-590. It is estimated that there were 63,637 new dwelling units created in 1946, as compared with 48,599 completed in 1945, an increase of $30 \cdot 9$ p.c., and that the total number of new buildings containing dwelling units completed in 1946 was 53,199 , as compared with 37,112 completed in 1945 , an increase of $43 \cdot 4$ p.c.

The 1946 total is comprised of 58,828 dwelling units ( $92 \cdot 4$ p.c.) resulting from new construction, and 4,809 dwelling units ( $7 \cdot 6$ p.c.) from conversions, as compared with 42,617 dwelling units ( $87 \cdot 7$ p.c.) by new construction, and 5,982 dwelling units ( $12 \cdot 3$ p.c.) by conversions, in 1945 . Thus, for new housing construction excluding conversions, the number of dwelling units completed in 1946, increased by 38.0 p.c. as compared with the previous year.

The largest number of dwelling units completed in 1946 were single dwellings and $67 \cdot 3$ p.c. of all new residential construction were buildings of wood frame with wood siding and shingles construction; those of wood frame with stucco on lath construction ranked second. A comparison of the total number of dwelling units, exclusive of conversions, with the total number of new buildings, shows that there was an average of 110 units per building for 1946, compared to 115 for 1945; this is accounted for by the larger proportion of single dwellings built in 1946, as compared with the previous year.

The results of new building construction during 1946 indicate that the weight of new residential construction is taking place in urban centres other than metropolitan areas. While new dwelling unit completions in metropolitan areas increased by over 14 p.c. in 1946 as compared with 1945 , these represented only $32 \cdot 1$ p.c. of the total for 1946, as against $36 \cdot 8$ p.c. of total 1945 completions. Completions in other urban areas, however, reflect a marked change in both respects, these having increased in 1946 by over 49 p.c. of the 1945 total, and represented $39 \cdot 2$ p.c. of total completions in 1946, as compared with $34 \cdot 3$ p.c. of the 1945 total.

## Section 3.-Contracts Awarded and Building Permits Issued

In this Section, statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the Census of Construction. Further, values of contracts awarded, and especially of building permits, are estimates (more often underestimates) of work to be done. Obviously, these statistics and those of Section 3 cannot be expected to agree, since much work contracted for towards the end of any one year is often not commenced until the next and, especially as regards large contracts or contracts undertaken late in any year, extends into more than one year. The figures here given are, therefore, supplementary to those of Section 3 and are valuable as showing from year to year the work immediately contemplated during the period.

Construction Contracts.-The figures published by MacLean Building Reports, Limited, for construction contracts awarded during 1946 showed a total of $\$ 663,355,100$. This amount represented an increase of 62 p.c. over the $\$ 409,032,700$ reported for 1945 and exceeded the previous peak of $\$ 577,000,000$ reached in 1929.

Every type of construction, as shown in Table 9, contributed to this increase. The value of residential building amounted to $\$ 213,050,500$ or 32 p.c. of the total value of all construction, an increase of 8.7 p.c. over 1945. A great part of this construction was made up of single and multiple residences although the value of apartment construction was more than three times the amount of the previous year.

Industrial construction increased $83 \cdot 1$ p.c. over 1945, engineering construction $144 \cdot 6$ p.c. and business or commercial construction $116 \cdot 5$ p.c.

Regionally, Ontario accounted for the greatest volume with total awards of $\$ 252,787,400$, or $38 \cdot 1$ p.c. of the total, followed by Quebec with $34 \cdot 2$ p.c. The greatest percentage increases over 1945 were shown by New Brunswick and Quebec, amounting to 149 p.c. and 86 p.c., respectively.

## 8.-Values of Construction Contracts Awarded, 1912-46

Building Permits.-Statistics of building permits were first collected in 1910, when the series covered 35 urban centres; in 1920 it was extended to cover 58 municipalities, including unincorporated suburban areas as, with the advent of the automobile, a growing percentage of persons working in cities were residing outside the municipal boundaries of the urban centres in which they earned their living. In 1940 the series was again extended to cover 204 municipalities.

Building permits issued in 1946 registered an increase of 94.5 p.c. compared with 1945.

## 10.-Values of Building Permits Issued by 204 Municipalities, 1945 and 1946

Note.-Statistics for these series covering years previous to 1945 will be found in the corresponding table of earlier editions of the Year Book. For the 35 cities marked - the record goes back to 1910; the 23 places marked o were added in 1920.

The indexes given in Table 11 show, so far as possible, the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied. Pre-war experience, the result of a study made in 15 cities, indicates that the average proportions of materials to labour in all kinds of construction were about two-thirds for the former to one-third for the latter. The increase in the cost of building operations in the war years has probably been much more than is indicated by the increase in the indexes of wholesale prices and wages shown in Table 11 and the proportions of these items to total costs have, no doubt, undergone some variation due to changes in types and methods of construction and to the greater use of machinery.

The estimated cost of building permits issued in 1946 for the 35 cities referred to in Table 11 was the highest recorded since 1910, being $\$ 13,930,468$ over the previous high figure of $\$ 214,277,386$ for 1929.

Four of the largest cities Montreal, Toronto, Winnipeg and Vancouver accounted for $\$ 115,868,724$ or $50 \cdot 8$ p.c. of this total. In 1929 the same cities showed a value of $\$ 126,387,555$ or 59 p.c. of the total permits.

## 11.-Values of Building Permits Taken Out in 35 Cities and Index Numbers of the Building Construction Industries, 1930-46

Nors.-These cities are the 35 referred to ( $\bullet$ ) in Table 10. Figures for the years 1910-29 are given at p. 422 of the 1942 Year Book.

Employment in Construction.-In Tables 12 and 13 the employment figures, shown on a monthly basis, reflect the fact that the industry is not as decidedly seasonal as is sometimes thought. The month of highest employment in the industry as a whole, in 1945, was October with 148,894 wage-earners and the lowest was February with $\mathbf{7 8 , 1 6 7}$.

## 12.-Employment of Wage-Earners in the Construction Industry and Their Remuneration, by Months, 1944 and 1945

Norz.-Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

## Section 4.-Annual Census of all Types of Construction

The annual Census of Construction undertaken by the Dominion Bureau of Statistics covers all construction, maintenance and repair work undertaken by contractors, builders and public bodies (except the smaller municipalities) throughout Canada. It does not include maintenance and repair work on steam and electric railways, telegraph and telephone systems and the lesser public utilities when such work is done by the employees of these concerns in the ordinary way: nor can it include a substantial amount of construction in the aggregate done by farmers and other individuals who might be otherwise unemployed, performing work on their own structures. It is doubtful whether a great deal of the work of railways and utilities is construction in the sense understood in the Census: for instance, the routine "maintenance of way" expenditures, so far as they relate to inspection work, are not construction although, so far as they concern rebuilding of line for roadbed or structures, they might be said to fall in that category.

The following table shows the expenditures by steam and electric railways, telegraph and telephone systems. By subtracting the work sublet by contractors from expenditures, duplication with the Census figures is eliminated and the net totals shown are additional to the Census of Construction figures.
14.-Expenditures by Steam and Electric Railways, and Telegraph and Telephone Systems on Maintenance of Way and Structures and Maintenance of Equipment, 1942-45.

${ }^{1}$ Not available.
Statistics of Construction.*-A census of construction was made by the Dominion Bureau of Statistics for 1934, but the basis of compilation was not standardized until 1935 so that, with the completion of the 1945 figures, comparable statistics are now available covering the years 1935-45. Returns are received from general trade and subcontractors, municipalities, the Harbours Board, and Dominion and Provincial Government departments. The figures cover alterations, maintenance and repairs, as well as new construction. Summary statistics are given in Tables 15, 16 and 17.

No relationship exists between the total value of construction as shown in these tables, and the value of contracts awarded as indicated in Tables 8 and 9 of Section 3, pp. 591-592. In the latter case all values are included as soon as awards are made, irrespective of whether the contract is completed or even begun in that year, whereas, the following tables cover construction work carried on and actually performed in the calendar year.

[^225]
## 15.-Principal Statistics of the Construction Industry, 1942-45

| Provincial Government Departments | 33, 157, 163 | 34, 109, 733 | 36,520,088 | 43, $13,580,741$ |
| Dominion Government Departments | 6,213,882 | 6,231,345 | 7,014,450 | 13,580,741 |
| Type of Work Performed |  |  |  |  |
| Building construction. | 351,774, 680 | 301, 884,888 | 220, 299.940 | 288, 092,582 |
| Street, highway, power, water, etc., tion. | 199,432, 471 | 186, 913,006 | 142,431, 180 | 146, 216, 938 |
| Harbour and river construction... | 17,846,591 | 16,614, 824 | 10,692, 622 | 12,690,727 |
| Trade construction. | 66,595, 828 | $67,013,833$ | 76,414,317 | 96,579,586 |

The value of work performed by the construction industry in 1945 amounted to $\$ 543,579,833$ as compared with $\$ 449,838,059$ in the preceding year, an increase of 20.8 p.c.

The value of building construction increased from $\$ 220,299,940$ in 1944 to $\$ 288,092,582$ in 1945 . The construction of industrial buildings increased from $\$ 71,131,759$ to $\$ 82,800,022$ while the construction of armouries, barracks, hangars,
etc., was reduced from $\$ 15,001,136$ to $\$ 6,445,275$. On the other hand, the value of residential building advanced from $\$ 83,927,360$ to $\$ 125,524,346$, institutional from $\$ 21,005,720$ to $\$ 30,449,556$ 'and commercial from $\$ 29,233,965$ to $\$ 42,873,383$. Construction work involving engineering, harbours, rivers, etc., increased from $\$ 153,123,802$ in 1944 , to $\$ 158,907,665$ in 1945.

In the industry as a whole, employment was provided for a total of 146,530 persons in 1945, recording an increase of 22,638 over the total for the preceding year, while the aggregate of salaries and wages at $\$ 233,991,454$ was $\$ 36,287,470$ higher. The cost of materials used in 1945 was $\$ 275,621,996$ an increase in expenditure for this purpose of $\$ 74,820,954$.

In 1945 , reports received numbered 19,025 as compared with 16,121 in 1944. A good part of the increase was recorded in the number of reports received from owner-builders due, in all likelihood, to the number of persons, desperately in need of housing accommodation, who erected their own homes because they were unable to obtain the services of a contractor. These statistics are included in the tables showing the operations of general contractors, trade contractors and subcontractors. Although the increase in the number of reports was considerable, the comparatively small extent of their operations does not appreciably affect other totals.

## 17.-Principal Statistics of the Construction Industry, by Provinces and Groups, 1945

Note.-Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

| Province or Group | Employees | Salaries and Wages | $\begin{gathered} \text { Cost } \\ \text { of } \\ \text { Materials } \end{gathered}$ | Values of Work Performed |  |  |

Table 18 classifies the various types of construction carried out in 1945. The item "Trade Construction" covers such items as bricklaying, carpentry, plumbing, heating, electrical work, etc., reported by contractors who confine themselves to a specific type of work. Details by provinces and more complete information regarding the industry will be found in the reports of the Bureau of Statistics on the construction industry.

## 18.-Values of New and Other Construction Classified by Type, 1945

Nore.-Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

## Section 1.-The Government in Relation to Labour

## Subsection 1.-The Dominion Department of Labour

The Department of Labour of the Dominion Government was established in 1900 by the Conciliation Act which provided machinery to aid in preventing and settling labour disputes, and required the Department to collect, compile and publish statistical and other information. The Department assumed, too, the administration of the Fair Wages Policy which was adopted in the same year for the protection of workmen employed in the execution of Dominion Government contracts and on works aided by grants from public funds.

At the present time, in addition to the statutory duty of disseminating information concerning labour and industrial matters, the Minister is responsible for the administration of certain statutes: Conciliation and Labour Act; Fair Wages and Hours of Labour Act, 1935; Vocational Training Co-ordination Act, 1942; Unemployment Insurance Act, 1940; Reinstatement in Civil Employment Act, 1946; and Government Annuities Act. The Fair Wages Policy is incorporated, with respect to public and subsidized works, in the Fair Wages and Hours of Labour Act, but with respect to equipment and supplies for Government use it is embodied in Orders in Council. The Industrial Disputes Investigation Act, enacted first in 1907, was suspended by the Wartime Labour Relations Regulations.

Fair Wages Policy.-Wages and hours for work on contracts for the manufacture of equipment and supplies for the Dominion Government and for construction were governed for some years by a Resolution of the House of Commons (1900) which was later incorporated in an Order in Council and amended from time to time. Contracts for construction are now regulated under the Fair Wages and Hours of Labour Act, 1935 and, to some extent, by an Order in Council of June 7, 1922, as amended Apr. 9, 1924. Hours on such work are limited to eight per day and

[^226]44 per week except in an emergency or when declared exempt by Order in Council; wages to be paid are those current for the type of work in the district concerned or, if there are no current rates, fair and reasonable ones are determined by the Minister.

Wages and hours for work on contracts for equipment and supplies are regulated by the Order in Council of 1922 as amended on Dec. 31, 1934, and on Oct. 4, 1941. The hours on such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current, or fair and reasonable and, for men and women over 18 years of age, may not in any case be less than 35 cents and 25 cents per hour, respectively. Lower minimum rates are fixed for workers under 18 years of age and for learners. Where minimum rates fixed by provincial authority are higher than these rates the provincial rates apply. In both construction and supplies contracts, the term "current wages" and, in the latter contracts, the term "hours fixed by the custom of the trade", mean the standard conditions fixed by agreement between employers and unions or, failing agreements, the actual conditions prevailing.

Wartime Labour Regulations.-The Wartime Labour Relations Regulations (P.C. 1003) of Feb. 17, 1944, were designed to facilitate collective bargaining and the settlement of labour disputes in order to stimulate the production of war materials. The Regulations applied to transport and communication agencies extending beyond the bounds of one province and, by authority of the War Measures Act, to certain specified industries deemed essential to the prosecution of the War or to the life of the community. In addition, if the Legislature of a province so enacted, the Regulations were applied to other industries within its borders. This action was taken in British Columbia, Manitoba, Ontario, New Brunswick and Nova Scotia.

Of the wartime regulations made under the authority of the War Measures Act, 1917, and continued under the National Emergency Transitional Powers Act, 1945, the Wages Control Order was relaxed by stages and on Nov. 28, 1946, it was rescinded; the Selective Service Regulations for the control of manpower were repealed gradually, the last of such controls being removed on Apr. 1, 1947. The Wartime Labour Relations Regulations, 1944 (P.C. 1003) would, without further legislation, lapse on May 15, 1947, with respect to those labour relations which fall within provincial jurisdiction. With respect to transport and communication agencies and any other industries in the Dominion field, they may be continued provisionally until replaced by a permanent statute.

The National Labour Relations Board administers the Regulations in respect to war industries with the assistance of Provincial Boards, except in Alberta and Prince Edward Island.

By the Regulations, employers are required to negotiate with trade unions or employees' associations comprising a majority of all their employees or of those in an appropriate unit. Discrimination against trade union members is an offence. Disputes concerning union membership or representation are determined by the Labour Relations Board. Disputes arising out of an agreement are subject to compulsory arbitration if the agreement does not set out appropriate procedure. Disputes over the terms to be included in a collective agreement are referred to a Conciliation Officer or Board, and strikes and lockouts are prohibited until 14 days after the Board has reported to the Minister.

Up to Mar. 1, 1947, the National Board had certified representatives in 278 cases, rejecting 61. The Provincial Boards had issued 3,625 certificates and rejected 574. Between Mar. 20, 1944, and Feb. 28, 1947, of 124 disputes in which Government conciliation services were used, 163 were settled by Conciliation Officers and 103 by Conciliation Boards. In 65 cases no agreement was reached following a Board's report. Other cases are still pending.

## Subsection 2.-Provincial Labour Departments

Labour legislation in Canada is, for the most part, a matter for the Provincial Legislatures since it usually governs, in some respect, the contracts of service between employer and employee or the contracts between members of a trade union which form the basis of the union, or it regulates conditions in local work-places. The right to contract is a civil right and the British North America Act, which distributes legislative powers between the Parliament of Canada and the Provincial Legislatures, grants to the provinces power to enact laws in relation to "civil rights" and, with certain exceptions, "local works and undertakings"

In each province, except Prince Edward Island, a special Department or Bureau is charged with the administration of labour laws. In Alberta the Board of Industrial Relations under the Minister of Trade and Industry administers statutes concerning wages, hours and labour welfare, and the Department of Public Works has charge of factory legislation. Other provinces have Departments of Labour. Legislation for the protection of miners is administered by Departments dealing with mines.

Factory legislation in eight provinces, and shops legislation in several provinces prohibit child labour, regulate the hours of women and young persons, and provide for safety and health. Other labour statutes in most provinces include minimumwage legislation and maximum-hours laws, laws for the settlement of industrial disputes, legislation to ensure freedom of association and promote collective bargaining, and laws to provide for apprenticeship and the licensing of certain classes of workmen. The Industrial Standards Acts in Alberta, Saskatchewan, Ontario, New Brunswick and Nova Scotia, and the Fair Wage Act in Manitoba enable the wages and hours of work agreed upon by representatives of employers and employed to be made legal throughout the industry concerned. The Quebec Collective Agreement Act permits agreements between employers and trade unions to be made binding on all in the industry Workmen's compensation laws in all provinces, except Prince Edward Island, are administered by independent boards.

For information regarding individual Provincial Departments of Labour, reference should be made to the annual reports of the Departments concerned or to the Deputy Ministers of Labour of the Provincial Governments.

## Subsection 3.-Provincial Labour Legislation in 1946

Summary.-During the Provincial Legislative Sessions of 1946, a number of important changes were made in existing legislation; also in New Brunswick a new Factories Act and in British Columbia a Holidays with Pay Act was passed.

The school-leaving age was raised to 16 for New Brunswick cities and towns, and in Nova Scotia the causes for exemption from school attendance were cut down and workmen's compensation benefits provided for a child up to the age of 18 for education. A minimum age of 14 was established for New Brunswick shops, hotels, restaurants and places of amusement, and in Saskatchewan the minimum for factories was raised to 16 years.

Maximum hours of work were reduced in British Columbia from 48 to 44 in a week; in both Quebec and Ontario the Minimum Wage Board was authorized to fix special hourly rates for overtime. In Nova Scotia maximum hours and minimum wages may now be established under the Industrial Standards Act for construction jobs in any part of the Province, and in Manitoba the Government was authorized to designate any industry in which hours and wages may be regulated by an Order in Council based on agreement between substantial proportions of the employers and workers.

Holidays with pay may be required in Quebec under the Collective Agreement Act and the Minimum Wage Act. An Order to this effect has been made under the latter Act. Ontario made provision for a proportionate holiday after less than a year's employment.

Conditions for workmen's compensation were made more liberal in British Columbia and workers' contributions to the cost of medical aid were discontinued.

In Ontario the Dominion Labour Relations Regulations are to continue in effect after their lapse under Dominion authority. In Saskatchewan changes were made in the Trade Union Act to make its original purpose more effective.

Improved conditions are to be provided for coal miners in British Columbia and for factory workers in New Brunswick.

Nova Scotia.-Under the Workmen's Compensation Act, the maximum payable for funeral expenses was raised from $\$ 100$ to $\$ 150$. Children's benefits were made payable up to the age of 18 to enable education to be continued, and the provision for compensation for silicosis was extended to any industry where silica may be inhaled.

The Coal Mines Regulation Act was amended to add a qualified electrical engineer to the examining board, to set out new qualifications for electricians', coal miners' and electrical machine operators' certificates, and to make more stringent rules for the use of explosives underground.

The Industrial Standards Act, previously applying only to construction in Halifax and Dartmouth, was extended to any other city or area determined by the Governor in Council.

School attendance is now required of a child until the end of the school year in which he attains the school-leaving age ( 16 in urban and 14 in rural districts). A child is no longer exempt on the ground of poverty or on the ground that, being 12 years of age or over, he has passed Grade 9 or its equivalent.

New Brunswick.-The revised Factories Act applies not only to manufacturing, dry-cleaning establishments, and laundries, but in some respects to hotels, restaurants, shops, places of amusement and office buildings. The minimum age of 14 years for factories now applies to all the above establishments unless with permission from the Minister of Labour.

An employer may not permit a worker, other than one on a shift of eight hours or less, to work for more than six hours without an interval for food and rest. Seats must be provided for all factory workers and not only for women. New rules require provision of toilet rooms, safe drinking water and, if the Minister considers it necessary, properly equipped wash-rooms and accommodation for street clothing and work-clothes. The Minister may direct the provision of a satisfactory eating and rest room without charge to the workers. Safety equipment required to be worn must be provided and paid for by the employer.

The rules are more stringent as to reporting accidents, and provision is made for appointment of an accident prevention officer. New sections provide that, on the Minister's order, the employer must forbid food to be taken into a room where manufacturing is being carried on, that an employer must not allow a workman to enter a tank, chamber, pit, pipe, flue or other confined space unless there is means of easy egress and unless the place has been ventilated and tested and the workman is wearing suitable apparatus, and must not permit an employee to enter a coal, sulphur or grain bunker or like dangerous structure without the prescribed safety equipment. Where there are harmful materials or gases or extremes of temperature or humidity, shower baths, wash basins and sufficient hot and cold water must be provided. If heat, light, or ventilation is unsatisfactory, or injurious conditions obtain, the Inspector may order remedial measures, and if they are not taken within 30 days the Minister may take what action he considers necessary.

The Stationary Engineers Act, 1946, reproduces provisions made in 1937 and sets forth qualifications required for licences to operate boilers and pressure vessels, making special provision for war veterans and merchant seamen.

The minimum school-leaving age was raised to 16 but the age of 14 may be retained by the ratepayers of any school district except cities and incorporated towns with school boards appointed in part by the town council and in part by the Governor in Council. Where the age is 14, a child may, as formerly, be exempted if he has passed Grade 8; where the age is 16, if he has passed Grade 11.

Quebec.-Changes in the Labour Relations Act increase from three to five, the members of the Labour Relations Board and authorize the Board to prescribe the necessary conditions of membership in an association to enable it to be regarded as representative of employees or of employers.

To the wages, hours, and apprenticeship provisions of an agreement, which may be made generally binding under the Collective Agreement Act, were added the provisions concerning holidays with pay. A joint committee was authorized which may give financial aid to any apprenticeship committee incorporated under the Apprenticeship Assistance Act.

The Minimum Wage Board was empowered to determine overtime rates for hourly-rated employees and to provide for holidays with pay.

Ontario.-Changes in the Minimum Wage Act permit minimum hourly rates to be fixed for overtime work and for work of less than 40 hours in a week.

Under the Hours of Work and Vacations with Pay Act, regulations were authorized to prescribe the period during which working hours must fall and to provide for paying a proportionate sum in lieu of a holiday to a worker employed for less than a year.

The Fire Departments Act now permits a municipal council to adopt, as alternative to a two- or three-platoon system, any system of hours or platoons, provided that, except in serious emergency, the hours of work or on duty do not exceed 72 in a week.

The Labour Relations Board Act enables the Government to apply the regulations under the Act to all employees within provincial jurisdiction when the Dominion Wartime Labour Relations Regulations cease to have effect.

The Apprenticeship Act now permits employment without a contract of apprenticeship during a probationary period of three months.

Manitoba.-The Fair Wage Act was amended to empower the Government to bring any business or undertaking, except agriculture, within Part II of the Act. This Part, like the Industrial Standards Acts in other provinces, permits minimum wages and maximum hours of work to be fixed by Order in Council for a particular industry if the conditions have been agreed upon by a sufficient number of the employers and employees concerned.

Saskatchewan.-The Trade Union Act, 1944, was amended to stipulate that where a member of a union is dismissed and the union alleges that he was discharged for union activities, the allegation shall be presumed to be true unless the contrary is proved. To determine which union represents a majority in an appropriate bargaining unit, the Labour Relations Board may order a secret ballot and must do so on application of any union which has, within the past six months, been indicated as bargaining representative by 25 p.c. or more of the workers in any appropriate unit. The Board may refuse to order a vote if satisfied that another union has a majority or if, within the past six months, it has taken a vote in the same unit on the same union's application. A collective agreement must remain in force for one year and thereafter from year to year, but either party may give notice of termination or revision not less than 30 nor more than 60 days before the expiry date, and within that period any union claiming a majority may apply to the Board to have its claim substantiated.

Changes in the Workmen's Compensation (Accident Fund) Act bring telephone operators within its scope, and add to the list of diseases for which compensation may be paid. Amendments in the Workmen's Compensation Act, 1911, under which the individual employer is liable for compensation and which applies to certain classes of railway workers not covered by the (Accident Fund) Act, stipulate that a workman's injury or death must be presumed to have arisen out of and in the course of employment whether or not he assumed any risk or acted contrary to the employer's instructions, and the fact that he did so is not to be a defence under the Act. Where a workman accepts an advance on account of compensation, he is not thereby debarred from proceeding independently of the Act against the employer.

The minimum age of employment in factories was raised to 16 years from 14 for boys and 15 for girls, but in the revised Child Welfare Act the age under which employment is forbidden between $10 \mathrm{p} . \mathrm{m}$. and $6 \mathrm{a} . \mathrm{m}$. is lowered from 16 to 13 years.

Village councils may pass by-laws, subject to the Child Welfare Act, fixing the age and conditions under which a child under 16 may be employed in a billiard-room or bowling alley.

Alberta.-The Alberta Bill of Rights Act,* which will not be prociaimed until its validity has been determined by the Courts, sets out certain rights of citizenship. These include: for every citizen between the ages of 19 and 60 years opportunity to engage in gainful employment or, if such employment is not availabie, a social security pension of not less than $\$ 600$ a year on the basis of the 1945 price level; for every citizen under 19 the necessities of life adequate for health and physical well-being, free public- and high-school education and opportunity for further training if aptitude and ability are shown, and free medical, surgical, hospital, and dental care; for every citizen on retirement at the age of 60 , a pension of such amount as may be authorized, but not less than the current social security pension, and medical benefits; and for the disabled, a social-security pension and medical benefits.

[^227]British Columbia.-Amendments in the Workmen's Compensation Act provide that where disability lasts more than six days (instead of 14 , as formerly) compensation shall be paid from the first day; abolish workers' contributions to the cost of medical aid; authorize the Workmen's Compensation Board to provide for replacement and repair of dentures, eye-glasses, and artificial appliances, including artificial members, broken in the course of employment; and permit the Board to bring under the Act industries not previously covered. Additional medical aid not furnished under the Canada Shipping Act may be given to a master, mate, engineer, seaman, steward, fireman or person employed on a vessel where he is entitled under the Canada Shipping Act to certain medical aid from the Sick Mariners' Fund.

From July 1, 1946, the maximum weekly hours under the Hours of Work Act, are reduced from 48 to 44 , except under special conditions. The Act applies to mines, factories, shipyards, lumbering, construction, road transport, shops, bakeries, hotels, restaurants and operation of elevators.

In industries to which the Male Minimum Wage Act applies, that is, all except agriculture and domestic service, the Board of Industrial Relations is given power to limit working hours of men, an authority it already had with regard to women, under the Female Minimum Wage Act. New provisions in both Minimum Wage Acts enable the Board, where it has granted permission for the working hours of any employee to exceed the ordinary statutory limit, to fix a minimum overtime rate.

The Annual Holidays Act, in effect since July 1, 1946, 'provides one week's holiday with pay for all employees who work 280 days or more in a year in any industry, trade or occupation, except agriculture and domestic service.

An amendment to the Coal Mines Regulation Act, to come into force on Proclamation, requires that in mines employing more than 15 workers below ground, washing facilities must be provided for all workers, together with accommodation for drying and changing clothes, and that bunk-houses, cook-houses, dining-rooms and wash-houses must be maintained in a clean and sanitary condition.

Yukon and the Northwest Territories.-In the Yukon, the Mining Safety Ordinance, which repeals the Miners' Protection Ordinance, is similar to a 1943 Ordinance of the Northwest Territories. The new law forbids employment of women except in clerical, professional, technical or domestic work, and the employment of boys under 16 years of age in or about a mine, or under 18 below ground. No person under 18 may operate an elevator or power-driven crane in metallurgical works or have charge of a hoisting engine in a mine. Where men are carried, the person in charge of the hoisting machinery must be 21 and experienced. Underground miners and hoist-operators have a maximum work-day of eight hours with provision for overtime in emergencies or to avoid Sunday work. Safety and health regulations similar to those in the provincial mining Acts are included, with special safeguards for persons exposed to silica dust or employed where radio-active minerals are mined, concentrated, or tested.

The Fair Wages Ordinance, in effect June 1, 1946, and applying to retail and wholesale establishments and places where services are sold, provides for fair wages and an eight-hour day and a 44-hour week. Wages must be fair and reasonable and not less than the pay received when the Ordinance was enacted.

An amendment in the Northwest Territories Sanitary Control Ordinance removes the limit of $\$ 2.50$ a day on the liability of employers operating labour camps of 50 men or more for medical, surgical, and hospital treatment of employees.

## Section 2.-Occupations of the Gainfully Occupied Population

Detailed statistics on the occupations.of the Canadian people in 1941 will be found in Vol. VII, Census of Canada, 1941. A special review of this subject, based on the 1941 Census figures, appears at pp. 1062-1073 of the 1943-44 Year Book, and further information at pp. 1168-1169 of the 1945 edition.

## Section 3.-Employment and Unemployment

## Subsection 1.-Employment and Unemployment Statistics of the Census

Detailed statistics of earnings, employment and unemployment as at June 1, 1941, will be found in Vol. VI, Census of Canada, 1941.

## Subsection 2.-Employment and Payrolls as Reported by Employers*

Since 1921, the Dominion Bureau of Statistics has made monthly surveys of employment in major industries excluding agriculture, domestic and personal service, and government administration. The broad industrial groups covered by these surveys are: logging, mining, manufacturing, construction, transportation and storage, communications, trade, services (chiefly hotels, restaurants and laundries) and finance. From Apr. 1, 1941, the surveys of employment were extended to cover the current earnings of those in recorded employment and since late in 1944, monthly data on man-hours and hourly earnings have been collected. Enquiries into the sex distribution of the persons on the payrolls of reporting establishments were undertaken on a monthly basis commencing Feb. 1, 1946, replacing the annual and the semi-annual surveys of the past few years.

For practical reasons associated with problems of collection, the current enquiries are limited to firms and branches ordinarily employing 15 persons or over. The restriction results in the inclusion of industrial samples of varying size in the monthly surveys, the variation depending upon the organization of the industry in large or in small units; from the equally important geographical aspect, however, much greater uniformity exists in the provincial coverage of total employees. It is important to note that in all cases the coverage is large.

During 1945, the employment index (based on 1926 as 100) declined from a high of 180.4 in January to a low of 168.7 in October, followed by a contra-seasonal upswing at the end of the year. The downward trend in the earlier months was to be expected during the first stages of reconversion from war to peace; it was in this period that the greatest adjustment took place. In 1946, retooling was completed in many factories, and the majority of service men had been discharged from the Armed Forces. The backlog of demand for civilian goods and services replaced the demand for the articles of war. During 1946, seasonal fluctuations were largely wiped out as a result of post-war changes in the labour market, including conversion to a distribution of employees which was much more similar to that prevailing prior to the outbreak of war than in any immediately preceding year. On the other hand, major strikes in Canada and United States, with their resulting labour tie-ups and material shortages, seriously affected the situation during 1946. The index declined slightly from January to March, and then climbed, except for a slight recession in August, to reach a high point of $185 \cdot 7$ in December. It is interesting to note that it was then only 4.8 points below that reported at the date of highest employment, Dec. 1, 1943.

[^228]Relatively greater increases in the non-manufacturing industries than in manufacturing during 1946 resulted in an industrial distribution which differed markedly from that existing during the War, but which compared much more closely with the pre-war distribution. In 1946, employment in manufacturing declined by 8.5 p.c., compared with an increase of 10.4 p.c. in the remaining industries taken as a whole. In the non-manufacturing group, the co-operating employers in construction and maintenance employed an additional 26,000 workers, and in trade, 22,000. Relatively, the greatest gain was in communications, where employment in 1946 increased by 20 p.c. over the preceding year.

The employment of women reached the highest point on record at Oct. 1, 1944, when 261 persons per 1,000 in recorded employment in the eight leading industries in Canada were women. Since that date, the proportion has declined as war industries have closed, and personnel discharged from the Armed Forces. At Oct. 1, 1946, only 222 out of every 1,000 employees reported were women, a ratio slightly lower than that at Oct. 1, 1942, when the first survey of sex distribution was made. The industries such as trade, service and non-durable goods manufacturing, which had shown unusually large gains in the proportion of female workers employed between October, 1942, and October, 1944, reported the greatest declines in the year ended Oct. 1, 1946. The number of women employed in trade and service increased with the greater availability of labour during 1946, the decline in the ratio of females resulting directly from the employment of relatively larger numbers of male workers. When compared with the same date in 1943, the percentage of female workers at Oct. 1, 1946, was lower in each of the main industry groups except communications. The total number of employees reported by the co-operating establishments increased between October, 1945, and October, 1946, by some 99,000 persons; in the same period, the number of female workers declined by 14,000 .

During 1946, the Dominion Bureau of Statistics tabulated monthly returns from an average of 16,066 establishments in the eight leading industries, which reported an average of $1,771,481$ employees. Similar figures for the previous year were 15,358 firms and branches, with an average of $1,787,751$ employees. The index of employment $(1926=100)$ was $173 \cdot 2$ in 1946 , compared with $175 \cdot 1$ in 1945. The average weekly payroll of the persons in recorded employment in Canada in 1946 was $\$ 57,409,624$, totalling approximately $\$ 2,985,300,000$ for the year. The index of payrolls $(1941=100)$ declined only from $142 \cdot 6$ in 1945 to 142.4 in 1946, compared with a drop of $1 \cdot 2$ p.c. in employment in the same comparison. The average weekly earnings of the typical individual in recorded employment were $\$ 32 \cdot 38$ in 1946, compared with $\$ 31 \cdot 99$ in 1945 . In 1942, the first full year for which the current record was available, the average was $\$ 28 \cdot 56$.

With the exception of a slight recession at June 1, the average weekly earnings increased from month to month during 1946. At December 1, 1946, the average was $\$ 2 \cdot 31$ higher than at the same date a year earlier. The per capita weekly earnings in manufacturing as a whole followed a somewhat similar trend, the average increasing by $\$ 2 \cdot 10$ in the year under review, in spite of the falling off in the average of hours worked. Thus, during 1946, while the indexes of employment and payrolls in manufacturing declined, the loss was of a greater proportion in employment resulting in an increase in per capita earnings.

At Dec. 1, 1946, the hourly earnings in manufacturing as a whole averaged 74.5 cents, the highest in the 26 months, during which the record of average hourly earnings is available. At the same date, the average hours worked were 43.2 in
the week preceding, compared with $44 \cdot 8$ hours in the week of Dec. 1, a year earlier. The average weekly wages of hourly rated wage-earners increased by $7 \cdot 8$ p.c., to $\$ 29.89$ in the year under review, as compared with $\$ 27 \cdot 72$ in 1945 . The decline in average hours worked during 1946 was partly the result of the reduction in the length of the standard work week in many establishments and industries, in accordance with industrial agreements signed during the year, but a reduction in the amount of overtime was also a factor, as was the loss of time due to industrial disputes.

The trend towards shorter hours and higher pay in manufacturing was general in all provinces. At Dec. 1, 1946, the hours worked in British Columbia were lower than in any other province, being only $39 \cdot 3$ for the week preceding. The average hourly earnings in that Province were the highest in the Dominion, at $90 \cdot 1$ cents. The mean in New Brunswick, on the other hand, was below the general average of hourly earnings in Canada, standing at 67.8 cents. The hours per week in that Province averaged 45.9 in 1946. The averages in the various provinces depend largely on their respective industrial distributions.

[^229]

Employment and Payrolls by Economic Areas.-The contraction in employment previously noted in Canada as a whole, was not uniform in all areas during 1946. The trend during this reconversion stage depended largely on the industrial distribution of the individual area. Employment declined in the Maritimes, Quebec and British Columbia; Ontario showed little change as the expansion of civilian industries, restricted during wartime, counterbalanced declines in industries producing munitions. The only region in which the yearly index was higher in 1946 than in 1945 was the Prairie area, in which the pre-war trend towards increased industrial activity continued during the 12 months under review.

When the situation at Dec. 1, 1946, is compared with that indicated one year previously, it will be noted that the index was higher in all areas except the Maritimes, there being increased industrial activity in the latter part of the year in Quebec and British Columbia, in spite of the decline in the yearly index numbers in those areas. Even in the Maritime Provinces, general improvement was noted in the autumn and winter, although the gain was not enough to raise the annual index to the level of the previous year.

The rate curve of aggregate weekly payrolls did not follow completely the trends shown by employment. In most areas in which employment declined, accompanying reductions in payrolls were not so great. At the same time, a more-than-proportional increase in the salaries and wages took place in those areas where employment was on the upswing. Consequently, the average weekly earnings for 1946 compared favourably with those for 1945 and earlier years in all areas, except the Maritimes. In the latter area, the general decline was very slight. The greatest increase was noted in the Prairies, where the annual average per capita weekly earnings increased by 98 cents, to a new high of $\$ 33 \cdot 28$ in 1946.

## 2.-Index Numbers of Employment as Reported by Employers in Economic Areas, by Months, 1945 and 1946, with Yearly Averages since 1921

Nors.-These indexes are calculated as at the first day of each month, on the base $1926=100$. The relative weights show the proportion of employees reported in each economic area to the total reported by all employers making returns in Canada at Dec. 1, 1945.

${ }^{1}$ Since the average for the calendar year 1926, including figures up to Dec. 31, 1926, is the base used in computing these indexes, the average index here given for the 12 months Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100 .
${ }^{2}$ Percentages of Canada total.
Employment and Payrolls by Cities.-The annual average index of employment in Canada's eight leading cities, taken as a whole, declined in 1946 from 1945 by $4 \cdot 1$ p.c. compared with an increase of 1.4 p.c. indicated in the other parts of Canada; the general reduction in the country as a whole, amounted to 1 p.c. The difference is not unexpected in the reconversion period since, during the War, especially pronounced expansion in employment in munitions manufacturing had taken place in the large centres while industrial activity in the smaller areas had, in many cases, been impeded by a shortage of labour during the same period. Further examination shows that among the eight leading cities, the indexes for Ottawa and Winnipeg compared very favourably with those for the preceding year. Proportionally, the recession in 1946 from 1945 was greatest in Quebec, where shipbuilding and munition industries had been very active during the war years. Employment in all eight cities showed decided improvement at the end of the year under review. The index for Windsor, in particular, showed a marked gain over one year earlier, when employment had been seriously affected by industrial disputes.

The trend of aggregate payrolls ran almost parallel to that of employment, all cities, with the exception of Ottawa and Winnipeg, showing a decline from 1945. Little or no change in per capita earnings was noted for Montreal, while increases in the average weekly salaries and wages were noted for Toronto, Ottawa and Winnipeg. With changes in the industrial distribution in Quebec and Windsor, the per capita earnings dropped considerably in 1946; in the case of the latter, important losses were sustained, directly and indirectly as a result of the widespread strikes in 1946.

## 3.-Index Numbers of Employment as Reported by Employers in Leading Cities, by Months, 1945 and 1946, with Yearly Averages since 1929

Nore.-These indexes are calculated as at the first day of each month on the base $1926=100$. The relative weights show the proportion of employees reported in each city to the total reported by all employers making returns in Canada at Dec. 1, 1945. Averages for 1921-28, inclusive, are given at p. 772 of the 1938 Year Book.

Employment by Industries.-Although the average yearly employment index $(1926=100)$ for the eight leading industries in Canada declined from $175 \cdot 1$ in 1945 to $173 \cdot 2$ in 1946, the year-end picture was much more encouraging, the index in all industries showing marked advances at Dec. 1, over the same date in the preceding year. The dominant role now played by manufacturing in the Canadian economy is emphasized by the fact that the drop in employment in this industry was directly responsible for the over-all decline in the average yearly index for all industries. The averages for the remaining major industrial divisions showed appreciable gains over 1945.

Dec. 1, 1943, was the date when the employment index reached its peak. The following is a short synopsis of the employment situation from 1939-1946.

At Dec. 1, 1939, over 52 p.c. of all employees reported by co-operating establishments were engaged in manufacturing industries. With wartime expansion, this proportion increased to 63 p.c., the ratio indicated when recorded employment reached its highest level, at Dec. 1, 1943. At the same date in 1946, the ratio was almost back to its pre-war level, standing at 54 p.c. While employment in both the durable and non-durable manufactured goods sections declined, on the whole, during 1946 as compared with 1945, the recession was particularly marked in the former group, as the change-over from heavy war industries to a peacetime economy continued. Employment in the production of both classes of goods was adversely affected during 1946 by important strikes, those in the lumber, iron and steel, and electrical apparatus industries causing particularly heavy losses. As in the case of most of the non-manufacturing industries, employment in the heavy and the light manufactured goods industries at Dec. 1, was well above the level of a year earlier.

Employment in logging, which had been hard hit by a shortage of workers during the war years, was once more on the ascent to meet the heavy demands for lumber and pulp and paper products. The index for December 1, 1946, was higher than at the same date in any other year since 1937.

Expansion in many branches of mining had also been retarded during the war years, the industry in certain areas having had low priority in obtaining labour. This is the only industry for which the index was lower at Dec. 1, 1946, than at the same period in 1939. At the same time, while 7 p.c. of all persons in recorded employment were so engaged in 1939, only 4 p.c. of the total employees reported in the eight leading industries in 1946, were classed in mining.

Although the trend of employment in the transportation and communications industries was upward in 1946, the gain was most marked in the latter, the index rising from $126 \cdot 7$ at Dec. 1,1945 , to $154 \cdot 7$ at the same date in 1946. Employment in both these industrial divisions was well above that reported in 1943. The trend in the service industries followed a similar pattern, the index in that group being 226.8 at Dec. 1, 1946, compared with 197.4 at the same date in 1943.

Construction, the post-war shock absorber, has been seriously curbed by the shortage of material. In spite of this fact, the co-operating contractors employed an average of 166,014 persons in 1946, compared with 139,756 in the preceding year. At December 1, of the year under review, the index was higher than at the same date for any year since wartime construction was at its peak in 1942; it was also well above its 1939 level.

Employment in trade continued to climb, reaching a new maximum in 1946 when the index of $191 \cdot 2$ p.c. showed an advance of 9.4 p.c. over the preceding year. The recorded employees in this industry averaged 214,210 , as compared with 192,295 in 1945. Both retail and wholesale trade showed marked gains. During the war years, the industry employed an increasingly large proportion of women. At Oct. 1, 1944, there were almost as many women as men reported in trade. By Oct. 1,1946 , this ratio had declined to 419 per 1,000 workers of both sexes.

The annual average of aggregate weekly payrolls increased during 1946 in all industries with the exception of manufacturing, in which the loss as compared with 1945 was largely a result of the declines in employment in the higher-paying durable goods section, and the retarding influence of strikes. Even in manufacturing the decline in the average earnings was slight, amounting only to 15 cents per person per week. Logging showed the largest gain in per capita weekly earnings, these increasing from an average of $\$ 26 \cdot 89$ in 1945 , to $\$ 29 \cdot 03$ in 1946.

## 4.-Index Numbers of Employment, by Industrial Groups and by Months, 1945 and 1946, with Yearly Averages since 1929

Nots.-These indexes are calculated as at the first day of each month, on the base $1926=100$. The relative weights show the proportion of employees reported in each industry to the total reported by all employers making returns in Canada at Dec. 1, 1945. Averages for 1921-28, inclusive, are given at p. 773 of the 1938 Year Book.

${ }^{1}$ Except agriculture (see p. 608).

## Subsection 3.-Labour Force Surveys

During the War, there was a rapid and marked growth of the total labour force of Canada (including the Armed Services) in response to the greatly expanded manpower needs of war industry, agriculture and the Armed Services. It was expected that there would be a gradual reduction in the permanent labour force as the women and students, who entered the labour market during the war emergency, again resumed their normal activities, such as keeping house and attending school. Since the end of the War, however, the retirement of temporary, wartime entrants into the civilian labour force has been counterbalanced by the influx of ex-service personnel.

It would be practically impossible to measure this movement by a census of total coverage apart from the fact that the expense would be too great. Its importance, however, led to the application of the sampling method to the problem. In November, 1945, the Dominion Bureau of Statistics began a series of labour force surveys. These surveys are carried out quarterly and are based on interviews with about 25,000 households chosen by scientific sampling methods in nearly 100 different areas across Canada. Their aim is to provide periodic estimates of the employment characteristics of the civilian non-institutional population of working age. The classification of persons used in the labour force surveys is not based on normal or usual activity, but on current activity or status during the specific weeks covered by the survey.

Every person 14 years of age or over is classified in one of the following groups: (1) working; (2) looking for work; (3) with a job but not at work; (4) non-workers. However, anyone with a dual status, such as a housewife who worked part-time, is counted in whichever one of the two classifications is higher on the above scale. The labour force of Canada is comprised of all those persons who are either employed or are seeking work and those with a job but not at work.

Changes in regional employment conditions since the first survey are summarized in Table 5. It should be noted that these figures are all subject to sampling error.

## 5.-Summary Statistics Resulting from the Labour Force Surveys, by Regions, November, 1945, to March, 1947

## Subsection 4.-Unemployment as Reported by Trade Unions

Quarterly statistics on unemployment are compiled and published in the Labour Gazette by the Department of Labour. These are based, at the present time, on returns received from about 2,300 local trade union branches, having an aggregate membership of more than 400,000 workers. "Unemployment" means involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or idle because of illness, are not considered as unemployed, while union members retired or in the Armed Forces and members of unions involved in industrial
disputes are excluded from the tabulation. As the number of unions making returns varies from one date to another, with consequent variation in the membership upon which the percentages of unemployment are based, it should be understood that the figures for each month have reference only to the reporting organizations.

## 6.-Percentages of Unemployment in Trade Unions, by Provinces, Half-Yearly, 1933-44 and Quarterly, 1945 and 1946

Nore.-For percentages of unemployment as at June 30 and Dec. 31 from 1915 to 1930, see p. 827 of the 1934-35 edition of the Year Book. For monthly data from 1921, see successive issues of the Year Book commencing with the 1922-23 edition. Quarterly figures were first published for 1945.

${ }^{1}$ Less than one-tenth of one per cent.

## Section 4.-Unemployment Insurance

The Unemployment Insurance Act, which came into operation on July 1, 1941, applies to all employed persons with the following exceptions: workers in specified industries or occupations, such as agriculture, forestry, fishing, lumbering and logging (unless in an area where the Commission has prescribed that persons employed in lumbering and logging shall be insured; limited at present to the Province of

British Columbia), stevedoring, private domestic service, private-duty nursing, certain director-officers of corporations, workers on monthly or other rates higher than weekly who earn more than $\$ 2,400$ per year, or on weekly rates who earn $\$ 3,120$ or more per year and (except by consent of the Commission), employment in a hospitai or charitable institution not carried on for gain. All employees paid by the hour, day or on piece rate (including a mileage rate) are insured regardless of amount of earnings, together with all employees who receive $\$ 2,400$ or less per year under monthly or semi-monthly rates or less than $\$ 3,120$ per year under a weekly rate. An amendment, effective Oct. 1, 1946, insured employment in transport by water, previously one of the major employments which were excluded.

Unemployment Insurance Fund.-Both employers and employees contribute to the Fund, the total paid by each group being approximately equal. The Dominion Government contributes an amount equal to one-fifth of the combined employer-employee contributions, and also assumes the cost of administration. From July 1, 1941, to Dec. 31, 1946, employers and employees contributed $\$ 336,389,719$ to the Fund and the Dominion added $\$ 67,277,776$. Interest and profit on sale of securities amounted to $\$ 23,706,803$, making a total revenue of $\$ 427,374,298$.

Benefit first became payable on Jan. 27, 1942, and from that date to Dec. 31, 1946, of the 939,560 initial and renewal claims filed at local offices, 910,953 were forwarded to the regional and district offices for adjudication and 702,308 of these were allowed. Total benefit payments amounted to $\$ 70,151,801$, leaving a balance of $\$ 357,222,497$ in the Fund. Reserves of the Fund are invested in Dominion of Canada bonds and, at the end of 1946, the par value of bonds held amounted to \$337,632,000.

Contributions and Benefit.-The rates of contribution and benefit are indicated in the following statement.

No benefit is payable during the first nine days of unemployment in a benefit year. After that time, the duration of benefit is related to the employment and contribution history of the employee, the number of days' benefit being equal to one-fifth the number of contribution days during the previous five years, less onethird of the number of benefit days in the previous three years. Insurance benefit is paid as a right on fulfilment of four statutory conditions:-
(1) The payment of not less than thirty weekly (or 180 daily) contributions within two years, while in insured employment. (The two-year period may be extended in certain circumstances.)
(2) Not more than 50 p.c. of contributions within one year preceding the claim being at the lowest rate specified in the Second Schedule.
(3) Proper presentation of claim.
(4) Claimant being at least 16 years of age.

Disqualifications for benefit include: loss of work due to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or an institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside of Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be made if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause.

WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT

| Class | Earnings in a Week | Weekly Contributions ${ }^{1}$ |  | Denomination of Stamp ${ }^{2}$ | Weekly Benefits ${ }^{3}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\underset{\text { Employee }}{\mathrm{By}}$ | $\begin{gathered} \text { By } \\ \text { Employer } \end{gathered}$ |  | Single <br> Person | Person With One or More Dependents |
|  |  | \$ | \$ | \$ | \$ | \$ |
| 0 | Less than 90 cents daily (or under 16 years of age). | 4 | $0 \cdot 27$ | $0 \cdot 27$ | 4 | 4 |
| 1 | \$ 5-40 to \$ 7-49............... | $0 \cdot 12$ | 0.21 | 0.33 | $4 \cdot 20$ | $4 \cdot 80$ |
| 2 | \$ 7.50 to \$ $9.59 . \ldots . . . . . . . . .$. | 0.15 | 0.25 | $0 \cdot 40$ | $5 \cdot 10$ | 6.00 |
| 3 | \$ 9.60 to $\$ 11 \cdot 99 . . . . . . . . . . . .$. | 0.18 | 0.25 | 0.43 | 6.00 | $7 \cdot 20$ |
| 4 | \$12.00 to $\$ 14.99 . . . . . . . . . . . .$. | 0.21 | 0.25 | 0.46 | $7 \cdot 20$ | $8 \cdot 40$ |
| 5 | \$15.00 to \$19.99............... | 0.24 | 0.27 | 0.51 | $8 \cdot 10$ | $9 \cdot 60$ |
| 6 | \$20.00 to $\$ 25.99 . . . . . . . . . . . .$. | $0 \cdot 30$ | $0 \cdot 27$ | 0.57 | $10 \cdot 20$ | 12.00 |
| 7 | \$26.00 or more. | 0.36 | $0 \cdot 27$ | 0.63 | $12 \cdot 30$ | 14.40 |

${ }^{1}$ The daily rate of contribution in respect of each class is one-sixth of the weekly rates. ${ }_{3}^{2}$ Unemployment insurance stamps combine both employer and employee contributions. ${ }^{3}$ Rates calculated on assumption that the person is in the same class for two years. Daily or weekly benefit for an insured person without dependents is 34 times his average daily or weekly contributions, and 40 times the average employee contribution for married persons mainly or wholly maintaining one or more dependents. The actual daily rate paid is reckoned to the nearest five cents. "Workers in this class make no contributions and are not eligible for benefit. They may, however, accumulate benefit rights on the basis of employer contributions.

Statistics of Unemployment Insurance.*-Benefits under the Unemployment Insurance Act first became payable in January, 1942. Except for a period of some nine months following the cessation of hostilities in Europe in the spring of 1945, the monthly figures on claims filed have shown a definite seasonal variation. The typical seasonal movement involves increasing monthly totals in the autumn and winter months and decreasing totals in spring and summer. In 1942, the monthly average of claims filed was 2,448 , the range being from 663 to 4,629 . The 1943 monthly average was 3,055 with the monthly totals ranging from 1,013 to 6,562 . During 1944, the monthly average was 7,575 with a range from 3,106 to 13,770. With the end of the War in August, 1945, the monthly totals in the last half of the year increased sharply, resulting in an average of 24,699 claims per month for 1945, monthly totals of claims ranging from 8,430 to 57,612 . In 1946, the monthly average of claims filed was 40,722 while the monthly totals of claims filed ranged from 25,115 to 71,932 .

The number of beneficiaries each month has fluctuated with the number of claims filed, subject to a lag of approximately one month. Because of re-employment, or because of the provisions of the Act governing the receipt of benefits, the number of beneficiaries in any month is usually less than the number of claimants. Only when the claims received are falling off sharply, is the number of beneficiaries in a period likely to exceed the number of claimants.

An indication of the extent of recorded unemployment among workers covered by unemployment insurance is given by the numbers signing the live unemployment register in the last week of each month. Those maintaining a live claim for benefit must sign the register once a week, thus certifying that they are unemployed, are capable of and available for work but unable to find suitable employment.

[^232]The same seasonality has been evident in these figures as in those of claims filed but the live register supplies a measure of recorded unemployment at a given time whereas claims filed indicate the number of cases of recorded unemployment in a period.

In addition to the monthly material on the operation of the Act, annual tabulations of the persons employed in insurable employment are prepared from returns covering the book exchange at Apr. 1, and annual data are published on benefit years established and benefit years terminated.

The number of persons insured under the Unemployment Insurance Act, shown in Table 7, was assumed to be those working in insurable employment as at Apr. 1, as indicated from returns on those receiving insurance books and contribution cards at that time.

Table 8 presents information on the persons for whom current benefit years were in existence during 1945. A benefit year is established under the Unemployment Insurance Act when an insured person, upon becoming unemployed, submits a claim and proves that at least 180 daily contributions have been made on his behalf during the preceding two years. Because of other provisions of the Act or because he may regain employment before he actually receives benefit, the setting up of a benefit year does not necessarily result in the receipt of benefit payments. When a benefit year is established it means, merely, that the claimant's right to receive benefit at a certain rate at any time during the succeeding twelve months is determined. Thus, although 270,413 persons held benefit years current in 1945, only 181,428 actually drew benefit in that year.

In almost all cases (excluding death, etc.), a benefit year remains in existence either until the authorized benefit rights are exhausted or until twelve months have passed since the date of its establishment, whichever occurs first. Some benefit years established in 1944 were carried over into 1945 so that, although 223,286 persons established benefit years in 1945, a total of 270,413 persons held benefit years currently available in 1945.

The amount of benefit paid, as presented in Table 8, is secured by multiplying each daily rate of benefit by the number of days paid at that rate on the cards representing benefit years upon which benefit was drawn in 1945.

In Table 9, the persons with current benefit years in 1945 are classified according to the number of benefit days paid. Table 10 classifies those who drew benefit by the daily rate at which they were paid. The daily rate of benefit is determined by the amount of the daily average contribution paid on behalf of the claimant during the past two years and upon whether or not he has a dependent within the meaning of the Act.

The persons who established benefit years in 1945, those whose benefit years terminated in 1945, with those whose benefit years terminated by exhaustion of rights, shown separately, are classified by age groups in Table 11. In Table 12 the persons who established benefit years in 1945 and the benefit days paid on those benefit years are presented by industrial group and age.

Table 13 classifies those who established benefit years in 1945 and the days paid on those benefit years by occupation group.

A more detailed analysis of these data, by sex and province, is available in the publication "Annual Report on Current Benefit Years Under the Unemployment Insurance Act" issued by the Dominion Bureau of Statistics.

## 7.-Persons Insured under the Unemployment Insurance Act, Classified by Industrial Groups and Sex, 1944 and 1945

Note.-These figures include only those who exchanged an unemployment insurance book or were issued a book for the first time in April. They therefore represent an estimate of the number employed
in insurable employment as at Apr. 1. in insurable employment as at Apr. 1.

${ }^{1}$ Subject to adjustment for errors and omissions in final payments. The total of this column is the summation of the benefit paid to each individual during the calendar year. This is the accepted annual figure. This total exceeds the total of the 12 monthly figures published for the year 1945 by an estimated $\$ 2,000,000$, due largely to the practice followed in the Treasury Offices of closing their books on the 20th of each month. Thus the total of the monthly figures for 1945 relate actually to the period Dec. 20, 1944, to Dec. 19, 1945.

Employment Service.-The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act, 1940. The public employment offices, which had functioned under a joint DominionProvincial arrangement for more than two decades, were taken over on Aug. 1, 1941, and added to by the Commission in all provinces except Quebec. The Commission also established offices in Quebec and the Provincial Government thereupon reduced the number of its own offices.

## 14.-Applications for Employment, Positions Offered and Placements Effected by Employment Offices, 1933-45, and by Provinces, 1944 and 1945

Note:-For figures by provinces from 1920 to 1943, see corresponding table of previous Year Books, commencing with the 1926 edition. Totals for the years 1920-32 are given at p. 766 of the 1938 edition.

## Section 5.-Canadian Vocational Training*

During 1946, the Dominion Department of Labour, in co-operation with the Provincial Governments, carried on various training projects under the Vocational Training Co-Ordination Act, 1942: (1) Youth Training; (2) Assistance to Students and Universities; (3) War Emergency Training; (4) Apprenticeship Training; (5) Training for peacetime occupations of workers released from gainful employment; (6) Vocational Training on the secondary school level; (7) Training of Discharged Members of the Forces $\dagger$.

In regard to the last-named project, the training of discharged members of the Forces is controlled by the Department of Veterans Affairs although it is effected by the Department of Labour. In Subsection 1, the administration of the

[^233]program by the Department of Labour is outlined under the appropriate heading and, in Subsection 2, the relationship of the Department of Veterans Affairs to the training of veterans is explained.

The Vocational Training Advisory Council, appointed under the authority of the Act, continued to advise the Minister on the general aspects of training plans. This Council is representative of employers, organized labour, vocational education authorities, veterans' and women's organizations.

## Subsection 1.-The Vocational Training Program of the Department of Labour

The following table shows the allotment of Dominion funds to the provinces for the year ended Mar. 31, 1946, and the total payments made by the Dominion against these allotments.
15.-Dominion Allotments for Vocational Training for the Year Ended Mar. 31, 1946 and Claims Paid to Apr. 30, 1946, by Provinces

Youth Training.-Each province submitted to the Department of Labour a list of the various types of training it proposed to carry on. These, on approval by the Minister of Labour, were incorporated into appropriate schedules which set forth the regulation governing the operation of the different plans. The training consisted, for the most part, of various general and specialized courses for rural young people in agriculture, home craft and handicrafts, and other related subjects.

Assistance to Students and Universities.-One part of the Youth Training Agreement in each province was devoted to assistance to students, including not only university students but in several provinces prospective teachers and nurses. Eligible for assistance were students of good academic standing who, without financial aid, could not continue training. At the discretion of the provincial authorities, assistance could be given in the form of a grant or a loan or a combination of both.

The special Student Aid Fund, begun in previous years, was used to assist students to attend a university in another province; payments were made solely by the Dominion, 50 p.c. as a grant and 50 p.c. as a loan.

The Department of Labour continued its grants to universities to assist in meeting the additional costs of accelerated courses in medicine and dentistry, which were started some years ago at the request of the Department of National Defence. During the year these grants amounted to about $\$ 48,900$.

War-Emergency Training.-This type of training was discontinued during 1946, except for the streamlined courses for foremen and supervisors. The support of industry for these intensive classes continued and there was an enrolment during the year of 36,417 . At the end of the fiscal year, the Provincial Governments were notified that in future the cost of supervisory training would be shared with them on a $50-50$ basis. Previously, these costs had been borne entirely by the Dominion. Supervisory training expanded in many Dominion Government Departments.

Apprentice Training.-Apprenticeship Acts are in force in all provinces and Agreements for Dominion assistance have been completed with all except Prince Edward Island and Quebec. The trades designated under Provincial Acts have been added to and, at the end of the year, included all the building trades, motor mechanics and, in some provinces, barbering, hairdressing and other skilled trades. In Quebec, in some areas, under the Act of 1945, apprenticeship is regulated in the building trades, shoemaking, motor-vehicle repair, printing, lithographing, barbering and hairdressing, and watch repairing. In the Montreal Building Trades Centre, in its first 11 months of operation, 194 apprentices completed their preapprenticeship training and were placed in industry. The Shoemaking Apprenticeship Commission has given courses to 1,482 employees. The other Commissions are preparing their plans and courses.

The amounts spent by the Department of Labour under these Agreements are shown in Table 15, p. 629.

Re-Training of Civilian Workers.-During the summer of 1945, the Reestablishment Training Agreements for co-operation between the Dominion and the provinces in training or re-training for peacetime occupations workers released from employment, chiefly war industries, was approved by the Dominion Government for a three-year period ending Mar. 31, 1948. The Dominion Department of Labour will pay from 75 p.c. to 80 p.c. of the cost. Workers are to be selected for training by representatives of the Provincial Governments and the National Employment Service.

The Agreement has been signed by the Provinces of British Columbia, Alberta, Saskatchewan, Nova Scotia and New Brunswick but up to the present time (May, 1947) little use has been made of its terms. It has been generally considered that veteran-training should receive attention first and this training has taxed the capacity of the training centres. The Dominion appropriation for the re-training of civilian workers for the year was $\$ 1,500,000$, but up to the end of April, 1946, the total claims paid were only $\$ 1,395$.

Dominion Assistance to Vocational Schools.-Ten-year agreements were made with all provinces for Dominion financial aid in vocational training on the secondary-school level. Each province receives an annual grant of $\$ 10,000$; $\$ 1,910,000$ is to be allotted each year among the different provinces in proportion to the number of young persons in the province in the age-group 15 to 19 years. A further contribution of $\$ 3,000,000$, allotted on the same basis, was made available
over a three-year period for capital expenditures for building and equipment. Except for the $\$ 10,000$ grant, the Provincial Government must match the Dominion contribution dollar for dollar.

Training of Discharged Members of the Forces.-The training of discharged members of the Forces was carried on under a part of the War-Emergency Training Agreement which expired on Mar. 31, 1946. It is now provided for in the Re-establishment Training Agreement. The rapid demobilization and conversion from wartime to peacetime production imposed a severe strain on the training schemes. There was serious difficulty and delay in obtaining the buildings, equipment and supplies necessary for an efficient pre-employment training. By the end of the year, however, most of these difficulties had been overcome.

General Administration.-The same method of administration was followed in 1946 as in the previous year, with all the Provincial Governments co-operating with the Department of Labour in the field of education. The staff of Canadian Vocational Training has been augmented as training developed. During the year, Superintendents of Rehabilitation Training and Supervisors of Women's Training were appointed in all the provinces. In all appointments, preference has been given to veterans with overseas service.

Close relatiòns were maintained with the Department of Veterans Affairs and with the National Employment Service, both at Headquarters and through the district offices of the two Departments and the local employment offices.

Enrolment.-On Mar. 31, 1945, enrolment in all types of training was 3,607; this was increased by Mar. 31, 1946, to 36,341 . The number of man-days' training in the special C.V.T. Training Centres during the year was $1,917,786$.

There has been some lack of balance in the numbers applying for training in the different occupations in spite of efforts of D.V.A. Counselors and C.V.T officials to divert applicants from occupations in which there appears to be danger of overcrowding. However, in certain building trades the number of veterans enrolled appeared to be far below the expected demands.

Training Facilities and Equipment.-Use has been made during the year of approximately 106 private schools, 200 business colleges, 48 provincial and municipal schools and 68 special C.V.T. Training Centres. At the outset of the program, the policy was laid down that training of veterans should be given on day shifts only, but shortage of equipment prevented rigid adherence to this rule, and the majority of Training Centres are now operating two shifts.

Substantial quantities of equipment have been given by the Armed Forces to the Canadian Vocational Training but much of it has been purchased from War Assets Corporation handling surplus Army supplies. Other equipment has been purchased in the open market, but at the end of the fiscal year some Training Centres were still inadequately equipped.

Pre-matriculation Training.-The wide range of individual academic attainments of ex-service men and women, as well as the differences in the subjects required, necessitated the provision of schools for the intensive training of those who lacked the requirements to enter either university or certain trades. There has been a rapid and unexpected increase in the number desiring pre-matriculation training.

Training-on-the-Job.-The most successful method of obtaining skill in many industrial occupations is training-on-the-job. During the year, this type of training became increasingly important, in that it afforded training for wider employment
opportunities for veterans and also relieved the strain on many of the pre-employment schools. Special publicity has been given through bulletins to employers as well as radio and newspaper publicity, and the National Employment Service has co-operated most effectively in finding suitable training opportunities.

## Subsection 2.-Vocational Training of Veterans*

The rehabilitation training program procedure in dealing with discharged persons who made application for training benefits previously came under the Post Discharge Re-establishment Order. This Order has now been replaced by the Veterans' Rehabilitation Act and the regulations and procedures governing training have been modified and consolidated so that there is now a comprehensive uniform plan in operation throughout Canada.

Veterans are being trained in approximately 100 specially organized institutes or training centres, operated by the Dominion-provincial organization known as Canadian Vocational Training. Use is being made of facilities provided by private, provincial and municipal schools and training institutions.

Of the total number of veterans receiving vocational training under the rehabilitation program as at Jan. 31, 1947, $69 \cdot 7$ p.c. were receiving full-time training in schools and institutions; 21.5 p.c. were being trained on the job in industrial and commercial establishments; 4.9 p.c. were receiving assistance by way of fees for correspondence or part-time courses; $0 \cdot 1$ p.c. were blind veterans being trained for suitable occupations under the auspices of the National Institute for the Blind; and 3.8 p.c. were receiving matriculation training prior to the vocational training.

Training is provided for approximately 300 occupations in the schools and training centres throughout the Dominion, and training-on-the-job is provided in over 250 trades and occupations, many of which are included in the 300 previously quoted.

Table 16 indicates the growth of the program since its inception. The numbers remained very small during 1942 and 1943 , due to the relatively small numbers being demobilized and the demand for workers in war industries at high rates of pay.

[^234]16.-Veterans Receiving Vocational Allowances during Each Month, 1942-47

| Month | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| January. | 138 | 275 | 573 | 1,892 | 21,998 | 39,134 |
| February. | 218 | 264 | 646 | 2,407 | 27,511 | 38,909 37 |
| March. | 271 | 246 | 764 | 3,081 | 29,756 | 37,385 |
| April. . | 258 | 202 | 763 | 3,330 | 32,184 | 31,871 29,527 |
| May... | 247 | 181 | 814 | 3,651 3,962 | 34,157 35,598 | ${ }_{26,115}^{29,527}$ |
| June. | 202 171 | 224 310 | 774 863 | 3,962 3,990 | 35,598 36,165 | 26,115 |
| July... | 171 | 310 271 | 863 950 | 3,990 4,145 | 36,165 35,827 | .......... |
| August.... | 172 | 330 | 1,083 | 4,332 | 36,882 |  |
| October. | 211 | 335 | 1,360 | 5,980 | 39,057 | ..... |
| November | 263 | 394 | 1,596 | 8,523 | 40,422 | . ........ |
| December. | 287 | 459 | 1,700 | 16,457 | 39,630 | ......... |

The regulations provide for a maximum training period of 12 months subject to extension up to, but not exceeding, the period of active service. Those who served less than 12 months may receive training allowances for only as many months as they served on active rates of pay.

The average length of vocational training courses is approximately six months. In the case of highly skilled trades, veterans approved for advanced technical courses and those indentured as apprentices may receive assistance by way of grants or subsidies for two years or more provided they have served the necessary period to establish entitlement. Where veterans are trained on the job, the employer is expected to pay wages on a graduated scale commensurate with the earning capacity of the traince and subject to the limitations of the Act. The Department of Veterans Affairs subsidizes these wage rates up to approximately 80 p.c. of the amount the trainee will receive from the employer on completion of the subsidized training period.

From the inception of the Vocational Training Scheme until January, 1947, some 67,890 veterans had been granted allowances to enable them to take advantage of the training:-

|  | Year and Month | No. |  | Year and Month | No. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Nov. | 1941-Mar. 1942. | 238 | Apr. | 1945-Mar. 1946. | 17,929 |
|  | 1942-Mar. 1943. | 783 | Apr. | 1946-Jan. 1947 | 42,458 |
|  | 1943-Mar. 1944. | 1,497 |  |  |  |
| Apr. | 1944-Mar. 1945. | 4,985 |  | Totals. | 67,890 |

The following subdivision of veterans according to the province in which the application for training was approved, is based upon Department of Veterans Affairs districts (applications approved at Head Office were for training outside Canada) and is liable to minor errors where D.V.A. district boundaries and provincial boundaries do not coincide:-

| Province | No. | Province | $N o$. |
| :---: | :---: | :---: | :---: |
| Prince Edward Island | 350 | Saskatchewan | 4,504 |
| Nova Scotia. | 3,149 | Alberta. | 5,715 |
| New Brunswick | 2,357 | British Columbia | 7,374 |
| Quebec. | 10,570 | Head Office. | 559 |
| Ontario... | 26,272 |  |  |
| Manitoba. | 7,040 | Totals. | 67,890 |

The status of the 32,788 veterans actually in receipt of allowances on Jan. 31, 1947, was as follows:-

| Nature of Training | Men | Women | Total |
| :---: | :---: | :---: | :---: |
|  | No. | No. | No. |
| In schools and training centres | 18,364 | 2,966 | 21,330 |
| Training-on-the-job | 7,028 | 156 | 7,184 |
| Prematriculation prior to vocational training........... | 1,065 | 216 | 1,281 |
| Semi-professional training. | 1,615 | 277 | 1,892 |
| Correspondence courses: Employed persons | 933 | 11 | 944 |
| Correspondence courses: In hospitals and institutions.. | 155 | 2 | 157 |
| Totals. | 29,160 | 3,628 | 32,788 |

In addition to the above there were 1,986 men who were training-on-the-job without allowances, due to the fact that employer-trainers pay self-sustaining wages prior to the expiration of the training period.

As would be expected, certain trades and occupations, approximately 50 in number, account for the majority of the trainees; of the 67,890 veterans approved for training the following trades or occupations have been selected by over 300 veterans in each case:-

| Trade or Occupation | Veterans Trained or in Training | Trade or Occupation | Veterans Trained or in Training |
| :---: | :---: | :---: | :---: |
|  | No. |  | No. |

## Section 6.-Organized Labour in Canada

Information concerning trade unions in Canada is published in the Annual Report on "Labour Organization in Canada" issued by the Department of Labour.

At the close of 1945 there were 711,117 trade union members in Canada. The membership of the Trades and Labour Congress of Canada, as compiled from reports of unions to the Department of Labour, was 312,391 in 2,394 branches of affiliated and directly chartered unions; that of the Canadian Congress of Labour was 244,750 in 955 branches and local unions; that of the Canadian and Catholic Confederation of Labour, 68,205 in 310 branches; the independent railroad brotherhoods, 37,273 in 371 branches; and independent local unions 7,356 in 55 branches.

Trades and Labour Congress of Canada.-The Congress is the oldest of the central labour organizations in Canada. After the disbanding of the Canadian Labour Union, which had drawn together local unions in Ontario from 1873 to 1877, inclusive, there was no central organization until 1883 when the Trades and Labour Council of Toronto called a conference of local unions and plans were made to establish a Dominion organization which was formally set up in 1886.

Affiliated with the Trades and Labour Congress at the present time are "international" trade unions, almost all of which are also affiliated with the American Federation of Labor, a number of Canadian or "national" unions and a number of directly chartered labour unions.

Canadian Congress of Labour.-This Congress was organized in September, 1940, when the All-Canadian Congress of Labour, formed in 1927, amended its constitution to permit the affiliation with the Congress of the Canadian branches of those international unions which, in the United States, are affiliated with the Congress of Industrial Organizations. The Canadian Congress has also among its members a number of unions to which it has granted charters. An exception to the statement concerning international unions is the United Mine Workers of America which is linked in Canada with the Canadian Congress of Labour but, in the United States, with the American Federation of Labor.

Canadian and Catholic Confederation of Labour.-National Catholic Unions in Canada date from 1901. In 1921 these local Catholic Syndicates, which are grouped in federations according to industry so far as possible, formed a central organization, the Canadian and Catholic Confederation of Labour. These unions are confined to the Province of Quebec.
17.--Membership of Trade Unions in Canada, 1913-45

Canada and the International Labour Organization.-The International Labour Organization was established in 1919 in association with the League of Nations under the Treaties of Peace with the object of improving labour conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization at its 29th Session at Montreal, Que., on Oct. 2, 1946, and by the United Nations General Assembly on Dec. 14, 1946, the Organization became a specialized agency of the United Nations.

An association of nations, financed by their Governments and controlled by representatives of those Governments and of their organized employers and workers, the Organization comprises: (1) the General Conference of representatives of the Member States; (2) the International Labour Office; and (3) the Governing Body of the Office.

The Conference in normal times meets at least once a year, and is composed of four delegates from each Member State, two representing the Government and two representing employers and workers, respectively. Decisions of the Conference are in the form of Conventions or Recommendations. The former, when given legislative effect and ratified by Member States, are legally binding on them and their enforcement within such countries is a matter for annual consideration by the Conference. The I.L.O. Constitution requires, however, that every Convention must be brought before the competent authority or authorities for legislative or other action. In Canada, the competent authorities in respect to the subject matter of most of the Conventions and Recommendations are the Provincial Legislatures. Amendments to the Constitution adopted by the Conference in 1946 included new provisions concerning the obligations imposed on federal countries with respect to the manner of dealing with Conventions and Recommendations when ratified by two-thirds of the Member States. These changes in procedure are expected to facilitate the adoption of Conventions and Recommendations by the constituent States or Provinces of federal countries.

The International Labour Office acts as the permanent secretariat of the Organization and as an information centre and publishing house.

The Governing Body consists of 32 persons, 16 Government representatives, eight employers' and eight workers' representatives, of whom all but the representatives of the eight States of chief industrial importance, which hold permanent seats, are elected triennially by the Conference. The Governing Body, which usually meets quarterly, has general supervision of the International Labour Office, frames its budget and fixes the agenda of the Conference when the Conference itself does not do so. Three sessions were held at Montreal during 1946-in May, September and October.

There have been 29 sessions of the Conference at which 80 draft Conventions and 80 Recommendations have been adopted covering a wide range of subjects: hours of work; weekly rest; holidays; minimum age for employment; night-work of women and young persons; minimum wages; health and safety; workmen's compensation; seamen's conditions; insurance against unemployment, sickness, old age and death; colonial labour problems; protection of migrant workers; and many other aspects of the protection of workers' rights and interests. There have been 921 ratifications of these Conventions from 51 countries.

Eight International Labour Conventions have been given legislative effect by Dominion Parliament and have been ratified by the Government, six relating to seamen, one to dockers and one to statistics.

During 1946, the third regional Conference of the American members of the I.L.O. was held at Mexico city, Mexico. The 28th Session of the Conference was held at Seattle, U.S.A., and the 29th at Montreal, Canada. Canada was represented at Mexico (April) by a tri-partite delegation of workers, employers and Government members. Twenty-eight resolutions were adopted dealing chiefly with industrial relations, labour inspection and vocational training. The Maritime Conference at Seattle in June, at which Canada had 12 representatives, adopted nine Conventions concerning minimum wages and maximum hours of work, food on board ship, crew quarters, holidays with pay and social security.

In September-October at Montreal, 46 countries were represented by 429 delegates, advisers, official observers and others'. The Minister of Labour of Canada was elected President. Three Conventions were adopted concerning medical
examination of children and young persons for employment in industry and in nonindustrial occupations; and the restriction of night work of children and young persons in non-industrial occupations. Recommendations were made concerning medical examination in industry and concerning night work in non-industrial occupations.

Four of the standing committees set up in 1945 by the Governing Body to provide special machinery for considering the labour problems of major world industries held their first meetings during 1946. These were: the Iron and Steel at Cleveland, Ohio, U.S.A., in April; the Metal Trades at Toledo, Ohio, in May; the Textiles at Brussels, Belgium, in November; and the Building, Civil Engineering and Public Works at Brussels in December.

Fuller information concerning these various meetings may be found in the Labour Gazette.

## Section 7,-Industrial Accidents and Workmen's Compensation

## Subsection 1.-Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the Dominion Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other government authorities, from departmental correspondents and press reports.
20.-Fatal Industrial Accidents, by Industries, 1943-46

Causes of Fatal Accidents.-During 1946, the largest number of fatal accidents to gainfully employed persons, 391, were caused by moving trains, vehicles, etc. Falls of persons caused 226 fatalities and falling objects 164 . Other fatal accidents included: 155 caused by dangerous substances, 55 by striking against or being struck by objects, 26 by animals, 23 by hoisting apparatus, 23 by working machines, 16 by prime movers and 13 by handling objects. Included in the category "other causes" were 253 fatalities of which 158 were due to industrial disease, strain, etc. The number of accidents, fatal and non-fatal, dealt with by the provincial Workmen's Compensation Boards are shown in Subsection 2.

## Subsection 2.-Workmen's Compensation*

In all provinces, except Prince Edward Island, legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease, except where the workman is disabled for less than a stated number of days. To ensure payment of such compensation, each provincial Act provides for an accident fund, administered by a Board, to which employers are required to contribute at a rate determined by the Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation, as determined by the Board, and pay a proportion of the expenses of administration. A Dominion Act provides for compensation for accidents to Dominion Government employees according to the conditions laid down by the Act of the province in which the accident occurs. In Prince Edward Island, where there is no provincial Act in effect, compensation is paid to Dominion Government employees according to the provisions of the New Brunswick Act. Dominion Regulations of 1945 under the War Measures Act providing compensation for seamen who are not under a provincial Workmen's Compensation Act were replaced in 1946 by the Merchant Seamen Compensation Act which makes like provision.

Free medical aid is given to workmen during disability in all provinces.
Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus. In all provinces, except New Brunswick, silicosis is compensated under certain conditions. The other diseases compensated vary according to the industries of the provinces.

Scope of the Acts.-The Acts vary in scope, but, in general, they cover construction, mining, manufacturing, lumbering, fishing, transport and communications and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta and British Columbia.

Benefits.-Under each Act, a fixed period must elapse between the date of the accident and the date when compensation begins but in all cases medical aid is given from the date of the accident. This waiting period varies from three to seven days and in some provinces compensation is paid for the waiting period, if disability continues beyond it.

At present, compensation in fatal cases is paid as follows:-
Burial expenses, $\$ 100$ in New Brunswick, $\$ 150$ in Manitoba and Nova Scotia, $\$ 175$ in Quebec, and $\$ 125$ in the other provinces. In certain cases costs of transporting the body are also allowed.

To a widow or invalid widower, or to a foster mother as long as the children are under the age-limit, a monthly payment in Manitoba and Ontario of $\$ 45$ and in the remaining provinces $\$ 40$; in addition a lump sum of $\$ 100$ is paid in New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia.

For each child in the care of a parent or foster-mother receiving compensation, a monthly payment is made of $\$ 10$ in New Brunswick, Nova Scotia, Quebec, Ontario and British Columbia, but in the latter province $\$ 12.50$ is paid to children between

[^235]16 and 18 years of age attending school; in Manitoba $\$ 12$ for the eldest child, $\$ 10$ for the second, $\$ 9$ for the third, and $\$ 8$ for each additional child; in Alberta and Saskatchewan, $\$ 12$ for each child. To each orphaned child $\$ 20$ per month is paid in Nova Scotia, Saskatchewan, Alberta and British Columbia and $\$ 15$ in the other provinces with a maximum of $\$ 80$ per month to one family in Nova Scotia and British Columbia.

Except in the case of invalids, payments to children are not continued beyond the age of 16 in Nova Scotia, Ontario, Manitoba and Saskatchewan, 18 in Quebec, Alberta and British Columbia, and 16 for boys and 18 for girls in New Brunswick. In Manitoba, Nova Scotia, Ontario and Saskatchewan payments for children may be made up to the age of 18 if it is desirable to continue their education. In British Columbia and Manitoba payments to invalid children are continued until recovery, while the other provinces make payments only for the length of time the Boards consider that the workman would have contributed to their support.

Where the only dependents are persons other than consort or children, all the Acts provide that compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly sum to be paid to all such dependents is limited to $\$ 40$ in Manitoba, $\$ 70$ in Alberta, $\$ 45$ in Nova Scotia and $\$ 55$ in British Columbia. In British Columbia, however, if there are also dependents such as widow, invalid widower or children, the maximum payable to other dependents is $\$ 40$ per month. In all provinces, compensation to dependents other than consort or children is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Alberta, Saskatchewan and British Columbia, maximum benefits payable to dependents in case of death of the workman are two-thirds of the earnings. The minimum payable to a consort and one child in Quebec is $\$ 50$ per month or $\$ 12.50$ per week if there is more than one child; in Manitoba and Saskatchewan the minimum is $\$ 12 \cdot 50$ per week ( $\$ 15$ per week in Manitoba if there is more than one child). In Ontario, the minimum for a consort and one child is $\$ 55$ per month, irrespective of the workman's earnings, with an additional $\$ 10$ per month for each additional child unless the total compensation exceeds the workman's average earnings in which case compensation is an amount equal to such earnings or $\$ 55$, whichever is greater.

The rate for permanent total disablement in all provinces except Saskatchewan, is a weekly payment for its duration equal to $66 \frac{2}{3}$ p.c. of the average weekly earnings; in Saskatchewan it is 75 p.c.; except in New Brunswick, the Acts fix a minimum weekly sum that must be paid unless earnings fall below that minimum, in which case a sum equal to the earnings is paid. This minimum is $\$ 12 \cdot 50$ in Nova Scotia, Ontario, Alberta and British Columbia, and $\$ 15$ in Manitoba, Quebec and Saskatchewan. For partial disablement similar provision is made in all provinces, except New Brunswick, Saskatchewan and Alberta, i.e., two-thirds of the difference in earnings before and after the accident; in Saskatchewan, 75 p.c. In New Brunswick and Alberta, the amount is determined by the Board according to the impairment of earning capacity, but in New Brunswick two-thirds of the diminution of earnings is payable for temporary partial disablement. In Nova Scotia, if there is little or no difference, in New Brunswick in any case, and in the other provinces if the difference is 10 p.c. or less, a lump sum may be given.

The average earnings on which compensation is based must be computed in the manner best calculated to give the rate per week or per month at which the worker was remunerated but must not exceed $\$ 2,500$ in British Columbia, Saskatchewan and Ontario, and $\$ 2,000$ in the other provinces. If the workman's earnings at the time of the accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. The rate of compensation of workmen under 21 years of age may be later increased if it is probable that their earning power, had the injury not occurred, would have increased.

The statistics of workmen's compensation published by the provincial boards are not on a comparable basis and are therefore presented as a series of tables.

## 21-Operations of the Nova Scotia Workmen's Compensation Board, 1936-45

## Section 8.-Strikes and Lockouts

Statistics of strikes and lockouts in Canada have been collected by the Department of Labour since its establishment in 1900.

Summary tables of the figures, with details as to strikes and lockouts in 1945 and 1946, will be found in the Labour Gazette for March, 1946, and for March, 1947, respectively.

Strikes and Lockouts in Recent Years.-The period of reconversion of industry to peacetime production during 1946 was marked by a series of strikes in certain key industries. These involved large numbers of workers and were of unusually long duration. While the total number of stoppages during the year was not substantially higher than in the two previous years, the number of workers involved was greater than in any of the war years, except 1943. The loss of working time due to strikes was greater than in any other year on record and exceeded the total for all the war years, 1939 to 1945. However, if allowance is made for the great increase in industrial employment, the time-loss was not as great as in 1919, the first year after the First World War.

In 1946, more than 62 p.c. of the workers involved in strikes and more than 83 p.c. of the total time-loss were in manufacturing. In coal mining, the number of strikes was slightly higher than in the previous year but the time-loss was less, being only 1 p.c. of the total for the year. Twelve strikes involved 63 p.c. of the total number of workers and caused 90 p.c. of the total time-loss. During 1946, the loss of working time was five days in every 1,000 of available working time. Comparative figures for certain earlier years were: 1945, 1.6 days; 1944, 0.5 day; 1943, 11 days; 1942 and 1941 about 0.5 day each; and for 1919 , the estimate was 6.4 days. Each wage and salary worker lost on the average about 1.5 days in 1946 and 0.5 day in 1945. For 1919, the estimate was 2 days.

Since the strike-record was started, the demand for increases in wages has been generally, year by year, the most important single cause of strikes. The year 1945 was an exception. While more strikes were due to this cause than to any other, they resulted in a very small proportion of the total time-loss in that year. Most of the idleness in 1945 arose from disputes concerning unionism. In 1946, the demand for wage increases was a major issue in about 30 p.c. of the strikes and, combined with various union questions, was the principal cause in many others, with a resulting time-loss of about 95 p.c. of the total.

Since 1935, the proportion of strikes settled by public conciliation services and by reference to various other Government agencies has increased. Before that year about one-half the work stoppages were settled by direct negotiation. In 1946, about one-half the strikes were settled by the conciliation services or by reference to Government labour boards or to arbitration.

## Section 9.-Wages and Hours of Labour

## Subsection 1.-The Regulation of Wages and Hours of Labour

Except as an emergency measure, the regulation of wages and hours of persons in private employment in Canada is within provincial jurisdiction, and all the provinces, except Prince Edward Island, have legislation on the subject. In New Brunswick, wage orders apply only to particular establishments or to particular industries in certain areas. The New Brunswick Minimum Wage Act, 1945, came into force July 1, 1946. The Nova Scotia Male Minimum Wage Act, 1945, has not been proclaimed in force.

In Nova Scotia, the minimum wage law applies only to women, while in Ontario, though the Act applies to both sexes, only one order (relating to the textile industry) applies to men. In Alberta, there are separate orders for men and women and also in British Columbia, but in the latter Province certain orders cover both sexes. In Manitoba, Quebec and Saskatchewan orders apply to both sexes in so far as both are employed in the industries covered.

In Quebec, under the Collective Agreement Act, hours and wages, and also apprenticeship, family allowances and holiday provisions established by a collective agreement voluntarily entered into by employers and trade unions or groups of employees may be generalized by Order in Council in the district covered by the agreement, if the parties are sufficiently representative of the industry. In 1946, new agreements in Quebec, made legally binding for the first time, applied to retail stores at Farnham, Richmond and Melbourne, grocers and butchers at Joliette, garages and service stations at Mégantic, municipal employees (permanent), and employees of the gas and electrical departments at Sherbrooke, woodwork and wooden furniture industry at Ste. Agathe (the last-named was later repealed). An agreement for wholesale trade employees at Sherbrooke was repealed.

The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta provide that the wages and hours agreed upon at a conference of representatives of employers and employees called by the Minister of Labour may be made legally binding on the industry in the area concerned. The Nova Scotia Act applies only to construction work and the New Brunswick Act to construction work exceeding $\$ 25$ in value and to work on motor-vehicles. In Ontario in 1946, schedules of wages and hours were made binding on carpenters at Port Arthur and Fort William, Sarnia, Guelph and Orillia, sheet-metal workers (construction) at Ottawa, barbers at Aylmer and Tillsonburg and vicinity and for employees of retail gasoline service stations at Windsor. In Alberta, schedules for employees of garages and service stations at Medicine Hat and Lethbridge were legalized.

Part II of the Manitoba Fair Wage Act provides similar machinery for fixing wages and hours in any business, trade or undertaking, except agriculture. Up to the present, barbering and hairdressing, printing and engraving, shoe-repairing, wood-sawing, baking, laundering and dry cleaning, road trucking and hauling have been brought within its scope.

Legislation in all provinces, except Prince Edward Island, which applies to mines, factories or, in some cases, to shops, restricts the hours of work of women and young persons or, in some provinces, of all workers. In Nova Scotia, Quebec, Ontario, Alberta and British Columbia, there are also statutes dealing only with hours of work. The Nova Scotia Act is not in force. Several Minimum Wage Acts give authority for the regulation of hours as well as wages.

Minimum Wage Regulations.-Table 31 shows the minimum wage rates in effect in December, 1946, for several classes of establishments in the principal cities. In Alberta, in British Columbia and in Manitoba the rates for men apply throughout the Province. In other provinces, lower rates are in effect outside each of the indicated urban areas of the province. The rates given in the table apply to the hours specified or, except in Montreal and Winnipeg, to the normal work-week of the establishment if less.

The rates in effect under provincial minimum wage legislation at the end of 1941 are summarized in the 1942 Year Book, pp. 714-716 and later changes are given in subsequent editions. The changes made in 1946 are as follows: since June 30, 1946, when the Dominion Wages Control Order ceased to restrict the raising of wages provided the increase is in accordance with a provincial statutory Order, minimum rates have been raised in British Columbia, Nova Scotia, Quebec and Saskatchewan.

In British Columbia, an interim blanket Order increased by 20 p.c. the rates in 37 Orders. Of these Orders some have been replaced and others will later be replaced by revised Orders. In factories, the new weekly rate for experienced workers fixed in 1946 was $\$ 15 \cdot 40^{*}$ as compared with $\$ 14$; in shops, $\$ 17$ as compared with $\$ 12 \cdot 75$; in offices, $\$ 18$ as compared with $\$ 15$; and in hotels and catering the increase was from $\$ 14$ to $\$ 18$. The maximum weekly hours in British Columbia in mines, factories, logging, shipyards, construction, shops, catering and road transport were reduced on July 1, 1946, from 48 to 44.

In Nova Scotia, all minimum rates were increased by $\$ 1$, making the new minima for experienced women workers $\$ 13$ in places of 17,000 population or over and $\$ 12$ in other towns.

In Quebec the new minimum for teachers is $\$ 600$ yearly instead of $\$ 300$ and higher minimum rates were fixed for industrial and commercial establishments, offices, road transport, hotels, taverns, lodging houses and for certain miscellaneous occupations. The previous rates for factories and shops of $26,24,22$ and 20 cents an hour in the four zones of the Province have been raised to $35,32,28$, and 25 cents an hour.

In Saskatchewan, the weekly rates of $\$ 16.80$ for cities and $\$ 14$ for towns have been increased to $\$ 18 \cdot 50$ in cities and larger towns and $\$ 16$ in smaller towns and villages.

* On Feb. 1, 1947, this minimum was increased to 40 cents an hour.

[^237]Regulation of Hours and Annual Holidays.-The limitations on hours which are imposed by statute or under statutory authority are summarized in the 1942 Year Book, pp. 717-718.

The Ontario Hours of Work and Vacations with Pay Act, 1944, fixed an 8-hour day and a 48-hour week for workers in any industry and in any business or occupation prescribed by regulation. The Act does not apply to persons employed in a managerial, supervisory or confidential capacity and by regulation excluded also are most professions, agriculture, domestic service, employees of railway and steamship companies and of municipal fire departments, stevedores, commercial fishermen and others. The British Columbia Hours of Work Act, as amended in 1946, limits hours in the industries to which it applies to eight in a day and 44 in a week.

In all provinces, longer hours may be worked in an emergency or by permission of the administrative authority.

In Alberta and Saskatchewan, time and one-half is payable for all hours in excess of 48 or of the regular work week, and in British Columbia after 44 hours. In most classes of industrial establishments in Quebec, time and one-half is payable after 48 hours.

Five provinces, Alberta, British Columbia, Ontario, Quebec and Saskatchewan, have provided for a yearly holiday with pay for work people in most trades and industries. This action was taken in 1946 in Alberta, Quebec and Saskatchewan.

The Ontario Act of 1944 provides for one week with pay in each year for employees in industrial undertakings, except professional workers, the funeral directing and embalming business, farming and domestic service.

In Saskatchewan, the Annual Holidays Act, proclaimed July 1, 1946, provides for a holiday of two weeks with pay for all employees, except those in farming, ranching or market gardening.

A week's holiday with pay after a year's employment is given in Quebec under a Minimum Wage Order, in British Columbia by statute, and in Alberta by regulations under the Labour Welfare Act. For employment of less than a year, Quebec grants a half-day for each month. The Order covers most workers but exemptions include domestic servants, farm labourers, workers in seasonal industries, building construction, forest operations, janitors and watchmen.

In Alberta, two weeks' holidays are given to all workers other than coal miners, farm labourers and domestic servants after two years' employment. Coal miners are entitled to one day's holiday with pay for every 23 days worked in any calendar month ( 22 in February) but not more than two weeks' holiday in a year.

## Subsection 2.-Statistics of Wage Rates and Hours for Various Classes of Labour*

Statistics of rates of wages and hours of labour have been collected for many years by the Dominion Department of Labour and were published in the Labour Gazette and, later, in annual reports supplementary to the Labour Gazette. The first report was issued in 1921 but the records begin in many cases, with the year 1901. The index numbers show the general movement of wage rates for the main industrial groups as well as for individual industries, but these cannot be used to compare

[^238]78375-42
wage rates in one industry with another. The statistics are average straight-time wage rates or average piece-work straight-time earnings and therefore do not include over-time or other premium payments.

Tables 32 and 33 show the index numbers of wage rates by main industrial groups and by industries. From 1930 to 1933 there was a general decrease in wage rates but increases have been general each year since that time. During the period 1939-45, the rise in wage rates amounted to 41.8 p.c.

## 32.-Index Numbers of Wage Rates for Certain Main Groups of Industries, 1921-45

 ( $1939=100$ )Note.-Figures back to 1901 may be obtained from the report "Wage Rates and Hours of Labour in Canada, $1945^{\prime \prime}$. published by the Department of Labour as a supplement to the Labour Gazette.

| Year | Logging | Coal <br> Mining | Metal <br> Mining | Manu-facturing | Con-struction | Water Trans-portation | Steam Railways | Electric Railways | Telephones | Laundries | General Average |

Wages of Farm Labour.-With few exceptions, farm wage rates in Canada during 1946 continued their upward trend. Wages reported in the Maritime Provinces at Aug. 15, 1946, indicated a levelling off or a slight decline from those reported for the same date of 1945 , while a weakening of some of the monthly wage rates was evident in the Prairie Provinces. Current rates of wages paid to male hired help on farms have more than doubled since 1940, the year in which the series of wage rates shown in Table 37 was begun. Average wage rates are shown on the basis of rates paid with board provided by the employer and without board. The information is provided by farm correspondents located in all provinces.

## 37.-Average Wages of Male Farm Help per Day and per Month, as at Jan. 15, May 15 and Aug. 15, 1943-46

Note.-Figures for 1940-42 are given at pp. 732-733 of the 1943-44 Year Book.

## Subsection 3.-Census Data on Earnings and Employment

The total number of wage-earners in Canada reporting earnings for the census year ended June 2, 1941, was $2,769,461$, or $98 \cdot 3$ p.c. of all wage-earners 14 years of age or over, and the total amount of their earnings was $\$ 2,402,895,700$. Of this number, $2,078,734$ were males with earnings amounting to $\$ 2,064,500,900$ or $85 \cdot 9$ p.c. of the total, and 690,727 were females with earnings of $\$ 338,394,800$. Table 38 gives final figures of total earnings and average earnings by wage-earners in each of the provinces for 1941.

## 38.-Wage-Earners, 14 Years of Age or Over, by Sex, Together with Total and Average Earnings during the Twelve Months Prior to the Census Date, June 2, 1941, by Provinces.

Nore.-Comparable data for the Censuses of 1911, 1921 and 1931 are given at p. 789 of the 1937 Year Book.

Detailed information on earnings and employment of wage-earners, covering the twelve-month period prior to the Census date, June 2, 1941, is given in Vol. VI, Census of Canada 1941, for Canada, the provinces, counties and census divisions, for urban centres of 1,000 population or over and for certain metropolitan areas. Wage-earners are there classified by occupation, industry, conjugal condition, age and sex, earnings and weeks employed. Preliminary data on the number of wageearners by amount of earnings are available from the 1946 Census of the Prairie Provinces for urban centres of 5,000 population or over in Bulletin 7-6010.

Canada, nearly 4,000 miles in length from east to west, with the main topographic barriers running in a north-south direction, and a relatively small population of $12,307,000$ (1946 estimate) thinly distributed along the southern strip of this vast area, presents unusual difficulties from the standpoint of transportation. Different parts of the country are shut off from each other by areas of rough, rocky forest terrain, such as the region lying between New Brunswick and Quebec, the areas north of Lakes Huron and Superior, dividing the industrial region of Ontario and Quebec from the agricultural areas of the prairies, and the barriers interposed by the mountains of British Columbia. To such a country with a population so
distributed and producing mainly for export, as do western agriculturists, or for consumption in distant portions of the country itself, as do manufacturers, cheap transportation is a necessity of life.

In order to appraise the value of each of the agencies of transportation, this Chapter of the Year Book, after treating of Government control over agencies of transportation and communication in Part I, deals with the four main agencies, namely, carriers by rail, road, water and air, in Parts II, III, IV and V, respectively. In each Part the arrangement is intended to show: (1) the plant, equipment and facilities available; (2) the cost to the Canadian people; and (3) the traffic carried or services performed, in so far as statistics are available for each agency.

Scarcely less important, from the social and economic viewpoints, is the development of communications in a country so vast and with population centres so scattered. The Post Office has been a great factor in promoting solidarity among the people of different parts of the Dominion, and this same desirable object is now being further aided by radio. Telegraphs and telephones have done much to annihilate distance-the rural telephone, in particular, being of great social and economic benefit in country districts. The press, assisted by cheap telegraph and cable rates, and by low second-class mail rates to all parts of the country, has been helpful in developing national sentiment. These means of communication are dealt with in Parts VI, VII, VIII and IX.

## PART I.-GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION

## Section 1.-Government Control Over Agencies of Transportation*

With the modern development of new forms of transportation, it is becoming increasingly important to realize that the several agencies of transportationcarriers by rail, road, water and air-are, or should be, inter-related parts of an integral whole where each agency has its place in the efficient provision of necessary transportation in Canada. The Dominion Department of Transport was organized on Nov. 2, 1936, under authority of c. 34 of the Statutes of 1936, to unify in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology.

The business of transportation and communications is, generally speaking, a 'natural monopoly', i.e., a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. For this reason there has been a strong tendency toward consolidation and amalgamation over the past half century. The outstanding example of these consolidations in Canada in recent years is the concentration of control of the railways of the country in the hands of the Canadian Pacific Railway Company and the Canadian National Railways.

Such control inevitably brings with it elements of monopoly and possible overcharge, and it has been deemed advisable in Canada, as in other countries, to set up authorities to control the rates to be charged and the other conditions under which services to the public are to be rendered by common carriers. This control, so far

[^239]as the railways within the jurisdiction of the Dominion Government are concerned, is now in the hands of the Board of Transport Commissioners. From time to time the regulatory authority of the Commission has been extended to a limited extent to other utilities (see under "Air Transport Board" below).

Besides the Board of Transport Commissioners, there exist, in several of the provinces, bodies that undertake among their duties the supervision and control of local public utilities operating under the jurisdiction of the provinces, and the regulation of their rates for service. Among these are the Ontario Department of Municipal Affairs (formerly the Railway and Municipal Board of Ontario, established in 1906), the Quebec Commission of Public Utilities established in 1909, the Nova Scotia Board of Commissioners of Public Utilities and the Public Utilities Commission of Manitoba. In the three most westerly provinces these same duties are performed by provincial Departments of Railways.

The Board of Transport Commissioners for Canada. - An explanation of the situation that led to the introduction of railway regulation by commission in Canada, as well as other information relating to the organization of the Board, procedure, judgments, etc., is given at pp. 633-634 of the 1940 Year Book.

Powers of the Board.-With regard to transport by rail, these cover matters relating to the location, construction and operation of railways. The most important of these powers has to do with rate regulation. Passenger rates are divided into standard and special; freight rates into standard, special and competitive. Standard rates are maximum rates and the only ones that must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval, provided that a change of rates has been advertised. Important rate adjustments, however, usually come to the notice of the Commission, for a changed rate alters the extent of the territory in which a shipper can compete and on this account he is likely to appeal the case to the Commission.

By an amendment to the Railway Act, the regulation of telephone, telegraph and express rates was given to the Commission, but with narrower powers than were given to it in dealing with railways. By the Transport Act, 1938, (as amended by 8 Geo. VI, c. 25, 1944, and by an Act passed during the first session, twentieth Parliament, 9 Geo. VI, c. 32, 1945) and since Jan. 15, 1939, following a proclamation of the Governor in Council to that effect, the Board has power to issue licences to ships engaged in the transportation of passengers or goods on the Great Lakes and the Mackenzie River, as defined in Sect. 2, Subsection 1 (f) and (hh) of the Transport Act, 1938. The Board is required to perform the functions vested in it under the Transport Act and the Railway Act with the object of co-ordinating and harmonizing the operations of all carriers engaged in transport by railways and ships. The Board may require every applicant for a licence under the Transport Act to establish public convenience and necessity to its satisfaction and take in to consideration the financial responsibility of a licensee or applicant. The Board may, in the licence, state the ports between which the ships named therein may carry goods or passengers and the schedule of services which shall be maintained; every standard tariff and every amendment and supplement thereto shall require. the approval of the Board before it becomes effective.

Air Transport Board.-The responsibilities of the Board of Transport Commissioners relating to the control of civil aviation were transferred to the Air Transport Board by an amendment to the Aeronautics Act (8 Geo. VI, c. 28, 1944),
which was proclaimed in effect as from Oct. 31, 1944. The Board is to advise the Minister of Transport on civil aviation; to license all forms of commercial air transport on the basis of public convenience and necessity; and to exercise economic control in the matter of financial responsibility, schedules, rates and charges, insurance and other matters. The organization of the Board comprises the Secretary's Branch, which includes the Administrative and Licensing Divisions, and the Traffic and Research Aeronautical Engineering Branches. The economic analyses, surveys and statistical reports of the Board are prepared in the Bureau of Transportation Economics, established in 1947 under the Board of Transport Commissioners to co-ordinate under one department all economic studies pertaining to air, rail and water transportation in Canada.

Under the 1944 amendment, all commercial air transport flying must be licensed; previously only scheduled services required licensing. Also, an operating certificate, issued by the Civil Aviation Division of the Department of Transport, must be held by the air carrier certifying that he is adequately equipped to operate a safe service.

Amendments to the Aeronautics Act were passed under 9-10 Geo. VI, c. 9, assented to Dec. 15, 1945, extending the definition of a commercial air service to include, "any use of aircraft in or over Canada for hire or reward" and further determined the rights and duties of the Board.

The Board is required, under Section 13 of the Aeronautics Act, to review all licences respecting commercial air services issued prior to the establishment of the Board and, to this end, in collaboration with the Department of Reconstruction and Supply, the Board commenced a Dominion-wide traffic pattern survey in 1945. During 1946, two members of the Board toured and inspected practically all the air services under review and the full Board conducted public hearings across Canada to review evidence and hear representations from the licensees and any interested parties. All the information secured, supplemented by statistical data accumulated by the Board, has now been studied and the Board's report on the Review of Licences was issued early in 1947

Since its inception, the Board has issued a limited number of Iicences for new scheduled services and a considerable number for non-scheduled services throughout the Dominion.

Wartime Controls.-During the War, the Government took steps to ensure that the vital transportation requirements of the war effort would be met and many important measures were put into effect. The chief agencies of transportation control were: the Canadian Shipping Board; the Controllers of Ship Repairs; Transport and Transit; the Administrator of the Wartime Prices and Trade Board and the Director of Merchant Seamen. These controls which, with the exception of the Transport Controller and the Merchant Seamen Branch, have now been dissolved, are dealt with in the wartime editions of the Year Book.

Transport Control freight orders governing maximum carloading, and fruit and vegetable regulations affecting refrigerator cars, also orders fixing penalties for prolonged holding of refrigeration, box, gondola, hopper, covered hopper and ballast cars are still in effect. The continued heavy volume of freight traffic moving and the short supply of railway equipment both in Canada and the United States makes this necessary.

## Section 2.-Government Control Over Agencies of Communication*

The development and control of radio-communication in Canada from the beginning of the century is outlined at pp. 644-646 of the 1945 Year Book.

The present phase of national radio broadcasting in Canada was entered upon in 1936, when, with the passage of the Canadian Broadcasting Act, 1936, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission (see pp. 737-740). The new Act gave the Corporation much wider powers in the operation of the system, and was modelled very largely along the lines of the Act governing the British Broadcasting Corporation. The technical control of all broadcasting stations reverted to the Minister of Transport, who was also empowered to make regulations for the control of any equipment liable to cause interference with radio reception.

However, pursuant to the provisions of the Public Service Rearrangement and Transfer of Duties Act, and of the War Measures Act, the duties, powers and functions vested in the Minister of Transport under the Radio Act, 1938, and the Canadian Broadcasting Act, 1936, were transferred to the Minister of Munitions and Supply by Orders in Council passed in July and September, 1940. An Order in Council, passed in June, 1941, transferred jurisdiction over the broadcasting activities of the Canadian Broadcasting Corporation to the Minister of National War Services and in October, 1945 (P.C. 6552), it was transferred to the jurisdiction of the Minister of National Revenue. Further Orders in Council in October and November, 1944, transferred the duties, powers and functions in respect to radio, previously vested in the Minister of Munitions and Supply, to the Minister of Reconstruction, and they were again transferred to the Minister of Reconstruction and Supply under the provisions of the Department of Reconstruction and Supply Act, 1945, which was assented to on Dec. 18, 1945.

In addition to being subject to the provisions of the Radio Act, 1938, and of the regulations issued thereunder, the administration of radio in Canada, including broadcasting, is subject to the International Telecommunication Convention (Madrid, Spain, 1932) and the Radio-communication Regulations annexed thereto (Revision of Cairo, Egypt, 1938); as well as to regional agreements such as the Inter-American Radio-communications Convention, the North American Regional Broadcasting Agreement, Havana, Cuba, 1937, the Inter-American Arrangement respecting Radio-communications, jucluding the revision thereto, of Santiago de Chile, January, 1940, and the Third American Radio Conference of Rio de Janeiro, Brazil, September, 1945

## PART II.-RAILWAYS $\dagger$

The treatment of rail transportation is divided into three Sections dealing, respectively, with steam railways, electric railways and express companies.

## Section 1.-Steam Railways

The steam railway is the most important transportation agency from the standpoint of investment and of traffic handled and the statistical field is more completely covered for this form of transportation than for any other.

[^240]Historical.-A brief historical sketch of the development of steam railways in Canada is given at pp. 635-638 of the 1940 Year Book. Other details are given at pp. 616-623 of the 1922-23 Year Book, at pp. 601-603 of the 1926 Year Book and at pp. 694-698 of the 1934-35 Year Book. An article at pp. 648-651 of the 1945 edition deals with the wartime role of the steam railways of Canada.

## Subsection 1.-Mileage and Equipment of Steam Railways

Although construction was begun in 1835 on the first railway in Canada-the short link of 16 miles between Laprairie and St. Johns, Que.-there were only 66 miles of railway in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and Great Western railways, as well as numerous smaller lines, were built. The building of the Intercolonial and the Canadian Pacific railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building from 1900 to 1917, the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

During the past decade, there has been a tendency for railway mileages to decline slightly because of the abandonment of unprofitable lines. Of the 42,352 miles of single track operated in 1945, 21,571 were part of the Canadian National System.
1.-Record of Steam-Railway Mileage, 1900-45

Nore.-Corresponding figures of total mileage of single track for the years 1835 to 1899 are given at
p. 546 of the 1941 Year Book.

${ }^{1}$ As at June 30 for this and previous years.
${ }^{2}$ As at Dec. 31 for this and later years.
Rolling-Stock.-The figures in Table 2 may be supplemented by the statement that between 1920 and 1945, the average capacity of box cars increased from $34 \cdot 779$ tons to $42 \cdot 459$ tons, of flat cars from $33 \cdot 459$ to $43 \cdot 110$ tons, of coal cars from 43.404 tons to $56 \cdot 590$ tons, and of all freight cars from $35 \cdot 141$ tons to $43 \cdot 905$ tons. The average tractive power of the locomotives increased from $31,112 \mathrm{lb}$. in 1920 to $41,854 \mathrm{lb}$. in 1945.

## Subsection 2.-Finances of Steam Railways

The tables in this Subsection deal with capital liability, capital investment, earnings, operating expenses, employees and their earnings and Government aid to steam railways. However, the presentation of the financial statistics of railways in Canada would not be complete without some detailed consideration of the finances of the Government-owned railways. This is given in the latter part of the Subsection. Further statistics of revenue are included in Table 13, where they are shown in relation to traffic. Statistics of individual railways, covering singletrack mileage, capital, earnings and operating expenses, may be found in the annual report "Statistics of Steam Railways of Canada", published by the Bureau of Statistics.

Capital Liability.-The great increase after 1922 in the capital liability of the steam railways of Canada is due to the inclusion of all Government loans to railways and investment in road and equipment of Government railways as part of the capital liability of the railways. The reduction after 1937, brought about by the Canadian National Capital Revision Act (c. 22, 1937), is explained at p. 644 of the 1939 Year Book.

## 3.-Capital Liability ${ }^{1}$ of Steam Railways, 1926-45

Note.-Figures for the years 1876 to 1925, inclusive, are given at p. 649 of the 1927-28 Year Book.

${ }^{1}$ Does not include Canadian railway capital owned by Canadian railways.
Capital Investment.-The capital structure of the Canadian National Railways, changed by the Capital Revision Act, 1937, was reduced by $\$ 262,770,972$ (see p. 644 of the 1939 Year Book). The excess of capital liability as shown in Table 3 over the investments in road and equipment shown in Table 4 is accounted for by loans and advances from the Government to cover deficits of the Canadian National Railways and by the fact that some railway stock issues represented little actual investment in physical property. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property to other Government Departments, etc.

${ }^{1}$ Most of the figures for 1943 and 1944 have been revised since the publication of the 1946 Year Book. ${ }^{2}$ Includes $\$ 74,728,521$ transferred to depreciation reserve and a credit of $\$ 34,534,220$ transferred to premium on capital and debenture stocks. ${ }^{3}$ Details of this item are given in the annual report "Statistics of Steam Railways of Canada" issued by Transportation and Public Utilities Division of the Bureau of Statistics.

Earnings and Expenses.-The operating ratio, or ratio of expenses to revenues, of Canadian railways increased from around 70 p.c. to above 90 p.c. between 1917-20, and remained high thereafter. The United States Government
took over the operation of the United States railways and increased the rates of pay of the railway employees when that country entered the War of 1914-18. The Canadian railways were also obliged to make corresponding increases and these have been the chief factor in increased operating ratio. Declining revenues without corresponding reductions in expenses during the depression period also maintained the high ratio. The period from 1938 to 1943 showed a sharp decline in this ratio, due primarily to the greatly increased freight traffic occasioned by the War of 1939-45 and a subsequent acceleration in gross earnings. A rising trend was again in evidence in 1944 and 1945.

## Gross Earnings and Operating Expenses of Steam Rallways

## 5.-Earnings and Operating Expenses of Steam Railways, 1936-45

Note.-Gross earnings and operating expenses for the years 1875 to 1914 are given at p. 434 of the 1916-17 Year Book. The analyses per mile of line and per train mile go back to 1908 only and are given for 1908 to 1916 at p. 435 of the 1916-17 Year Book. Corresponding figures for the years 1915 to 1925 are given at p. 550 of the 1941 Year Book and for 1926 to 1935 at p. 585 of the 1942 Year Book.

Railway Salaries and Wages.-The number of employees increased during the war years (1945 over 1938) by 41.4 p.c. but salaries and wages increased by $90 \cdot 6$ p.c. The latter rise was due to an increase in time worked per employee as well as to increased rates of pay. Maintenance of equipment employees, on hourly rates, worked 12.4 p.c. more hours and were paid 43.9 p.c. more wages per employee and transportation employees worked an average of 9.5 p.c. more hours for an increase in pay of $39 \cdot 7$ p.c.

## 7.-Steam Railway Employment and Salaries and Wages, 1936-45

Note.-Corresponding figures for the years 1912-35 are given at p. 551 of the 1941 Year Book.

[^241]Government Aid to Railways.-In order that the private railways of Canada might be constructed in advance of settlement, as colonization roads, or through thinly settled districts where little traffic was available, it was necessary for Dominion and Provincial Governments and even for municipalities to extend some form of assistance. The form of aid was generally a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land other than for right-of-way were also made.

As the country developed, the objections to the land-grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that system, except those for
rolling-stock, have been guaranteed by the Dominion Government. No new land grants or cash subsidies have been advanced by either the Dominion or Provincial Governments since 1939 and the situation, as it existed at Dec. 31, 1940, is set out at pp. 587-588 of the 1942 Year Book.

During the era of railway expansion before the War of 1914-18, Provincial Governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railways. As these bonds mature they are paid off by the Canadian National Railways in large measure through funds raised by the issue of new bonds with Dominion Government guarantee. In this manner bonds guaranteed by the Governments of Ontario, Manitoba, Saskatchewan and Alberta have been eliminated in recent years.
8.-Railway Bonds Guaranteed by Dominion and Provincial Governments, as at Dec. 31, 1945

## Financial Statistics of Government-Owned Railways

A description of the origin and growth of Government-owned railways in Canada is given at pp. 601-603 of the 1926 Year Book. That article describes their consolidation under the Canadian National Railways in 1923. The Hudson Bay Railway is a direct liability of the Dominion Government and has been operated by the Canadian National for the Government since Apr. 1, 1935, but is not included in the data for Canadian National Railways. To Mar. 31, 1946, the total cost of this railway was $\$ 33,620,333$, exclusive of the expenditure of $\$ 6,274,113$ on the terminal at Nelson and a loss of $\$ 3,650,167$ on operation. The operating deficit for the fiscal year $1945-46$ was $\$ 499,669$.

The major portion of Dominion Government investments in railways consists of construction costs of the Intercolonial System, the National Transcontinental Railway and the Hudson Bay Railway, and the purchase price of small railways in the Eastern Provinces. The terminals at Churchill consisting of a grain elevator, a warehouse and docks have been transferred to the National Harbours Board and the investment removed from the railway account. Loans and advances to the Canadian National Railways for payment of operating deficits were charged to the Consolidated Revenue Account of the Dominion and also cleared from the railway account and other adjustments were made under the Canadian National Railways Capital Revision Act, 1937.

The Canadian National Railways Capital Revision Act (c. 22 of the Statutes of 1937) is dealt with at p. 644 of the 1939 Year Book. In the same edition, a table at pp. 644-645 shows a condensed consolidated balance sheet as at Dec. 31, 1936, adjustments authorized by the Capital Revision Act and the revised balance sheet as at Jan. 1, 1937.

${ }^{1}$ Includes demand loans and deposits.
${ }^{2}$ Increase in current liabilities $\$ 8,801,945$.
Operating Finances of the Canadian National Railways. - Gross revenues, operating expenses and net revenues include only those from steam railway and commercial telegraph operations, but the deficits are for the entire system, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Under the Canadian National Railways Capital Revision Act (c. 22, 1937), interest on Dominion Government loans, amounting to $\$ 530,832,598$, and Government claims for interest, amounting to $\$ 43,949,039$, were cancelled as liabilities of the Railway and these have been eliminated from Table 10 as fixed charges. Also loans of $\$ 270,037,438$ for capital and $\$ 373,823,120$ for deficits were cancelled.

## 10.-Gross Revenues, Operating Expenses, Net Revenues, Fixed Charges and Deficits of the Canadian National Railways, ${ }^{1}$ 1936-45

Nore.-Appropriations, etc., for the Hudson Bay Railway are not included with these data; although the Railway was returned to the Government while under construction, it is not now a part of the Canadian National Railways. For figures for the years 1911-25, see p. 660 of the 1936 Year Book and for 1926-35, see p. 590 of the 1942 edition.

#### Abstract

${ }^{1}$ Includes the Central Vermont Railway, Inc. $\quad{ }^{2}$ Includes appropriations for insurance fund and excludes interest on Government loans eliminated by the Capital Revision Act, $1937 .{ }^{3}$ Contributed by the Dominion Government.

Capital Structure and Debt of Canadian National Railways.-The share capital on Dec. 31, 1922, consisted of $\$ 165,627,739$ stock of the Grand Trunk Railway held by the Dominion Government and $\$ 100,000,600$ of the Canadian Northern Railway stock also held by the Dominion Government. There was also outstanding $\$ 4,591,975$ stock of constituent lines held by the public. Table 11 shows the capital liabilities of the Canadian National Railways other than shareholders' capital. The amounts shown under "Active Assets" represent largely temporary loans and explain the large increases during the war years.

## 11.-Debt of the Canadian National Railways, as at Dec. 31, 1937-45

Note.-Figures for the years 1922-36 are given at p. 591 of the 1942 Year Book.

## Subsection 3.-Steam Railway Traffic

Passenger and Freight Traffic.-Table 13 shows the passenger and freight statistics for all steam railways for the years 1936-45. A separate analysis is given in Table 14 of the operations and traffic of the Canadian National Railways, since, being controlled by the Dominion Government, the information is considered of special interest.

## 13.-Statistics of Passenger and Freight Services and Revenue Receipts, 1936-45

Note.-Corresponding figures for 1910-15 are given at pp. 628-629 of the 1922-23 Year Book, for 1916-30 at pp. 652-653 of the 1937 Year Book and for 1931-35 at pp. 592-593 of the 1942 Year Book.

${ }^{1}$ Includes express, baggage, mail, etc., cars. $\quad{ }^{2}$ Duplications included. ${ }^{3}$ Includes caboose miles and excludes miles made in passenger and non-revenue trains. ${ }^{\text {a }}$ Duplications eliminated; see Table 15 for details of freight carried.

Mileage and Traffic of the Canadian National Railways.-At Dec. 31, 1945, steam railway track mileage of the C.N.R. (including lines in the United States but exclusive of the Northern Alberta Railways and Toronto Terminals Railway, which are controlled jointly by the Canadian National and the Canadian Pacific Railways) was 23,535. Including the Thousand Islands Railway, $4 \cdot 51$ miles, and the Muskegon Railway and Navigation Co., $5 \cdot 25$ miles, controlled but separately operated, the total steam mileage was 23,545 . Including $115 \cdot 4$ miles of electric lines, the grand total was $\mathbf{2 3 , 6 6 0}$ miles.

## 14.-Train Traffic Statistics ${ }^{1}$ of the Canadian National Railways (Canadian and United States Lines) 1944 and 1945

| Item |
| :---: |
|  |
|  |

## ${ }^{1}$ Excludes electric lines. $\mathbf{2}^{2}$ Work service excluded.

Commodities Hauled.-Revenue freight hauled by the railways reached a peak in 1944 at $155,326,332$ tons and declined in 1945 to $147,348,566$ tons but the average haul increased from 424 to 430 miles and consequently the ton miles showed a smaller decline. The large decreases occurred in crude petroleum, gasoline and petroleum oils, which were moved in large quantities between United States stations and through Canada in 1942, 1943 and 1944. The movement of automobiles for war purposes also affected the rail traffic in this group and caused a reduction in 1945 ; coal declined by $1,915,366$ tons or 8.4 p.c.

## 15.-Commodities Hauled as Freight on Steam Railways, 1941-45

Nore.-In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National System, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

${ }^{1}$ Included with lignite prior to 1945.
Railway Accidents.-All injuries to passengers are included in Tables 16 and 17 but only injuries that keep the employee from his work for at least three days during the ten days following the accident are recorded for employees. "Others" in Table 16 include trespassers walking along tracks, stealing rides, etc., also persons crossing tracks at level crossings.

## 16.-Passengers, Employees and Others Killed or Injured on Steam Railways, 1936-45

Note.-For the years ended June 30, 1888 to 1900, see Canada Year Book, 1910, p. 378; for the years 1901 to 1919, the 1922-23 edition, p. 635 ; for 1920 to 1935, the 1938 edition, p. 662.

| Year | Passengers |  | Employees |  | Others |  | Totais |  |

| 1944. | 8 | 562 | 103 | 13, 187 | 242 | 630 | 353 | 14,379 |
| 1945. | 10 | 499 | 98 | 13,147 | 246 | 705 | 354 | 14,351 |

These accidents include all accidents in which railway trains were involved and accidents on railway property. The classification of accidents used in the Bureau's vital statistics treats collisions between motor-vehicles and trains as motor-vehicle accidents; provincial statistics also class them as motor-vehicle accidents and, consequently, adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor-vehicle.

## Section 2.-Electric Railways

Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. Before many years their safety and convenience resulted in the discarding of the older systems. The first electric railway line in Canada, and probably the first in North America, ran between Windsor and Walkerville and was established early in June, 1886 (it is recorded that it was in active operation before June 11).

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life. In the cities of Eastern Canada, electric street railways are generally operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the street railways are owned and operated by the municipalities.

## Subsection 1.-Equipment of Electric Railways

The single overhead-trolley system is used by all electric railways but Edmonton, Montreal and Winnipeg have begun to use also a double overhead trolley and trackless trolley-buses ( 67 of these buses being in service in 1945). Of the 33 systems, 23 operated both electric cars and motor-buses in 1945, the buses numbering 1,454 . The main advantage of the bus is that it is not confined to a fixed route and, in the case of both motor-buses and trolley-buses, the expense of track maintenance is eliminated.

A summary of the equipment operated by electric railway companies is given in Table 18.

## Subsection 2.-Finances of Electric Railways

When electric railways have ceased to operate because of either a decline in traffic or the substitution of motor-buses, their statistics have been excluded from the following table. Consequently, fluctuations in revenues, etc., have been affected by variations in traffic and also by changes in the mode of local transportation. Despite these changing conditions, the gross revenues of electric railways have continued to increase since the low point reached in 1933, and very marked increases have been shown each year since 1940.

## 19.-Financial Statistics of Electric Railways, 1936-45

Nore.-Available figures for the years 1901-1907 are given at pp. 608 and 609 of the 1926 Year Book; for the years 1908-1918 at pp. 681 and 682 of the 1936 Year Book; and for 1919-1935 at p. 665 of the 1938 Year Book.

## Subsection 3.-Electric Railway Traffic

The passenger mileage travelled by electric cars in 1945 amounted to 127,954,458, by trackless trolley-buses $2,168,204$ and by motor-buses $45,375,858$. The number of passengers carried by electric railways in the years since 1939 showed an especially sharp rise over previous years due to increased traffic resulting from improved conditions, and the curtailment of passenger automobile traffic as a result of the War. The $1,316,571,540$ passengers carried in 1945 was by far the greatest traffic ever handled by these systems, the increase over 1944 being $5 \cdot 4$ p.c.

## 20.-Statistics of Electric Railway Operations, 1936-45

Nors.-Figures will be found at p. 676 of the 1933 Year Book for the years 1901 to 1910; at p. 681 of the 1936 Year Book for the years 1911 to 1918; and at p. 667 of the 1938 Year Book for 1919 to 1935.

| Year | Miles of Road |  | Electric Car and Bus Mileage |  |  | Fare <br> Passengers Carried ${ }^{1}$ | Freight Carried ${ }^{1}$ |

## Section 3.-Express Companies

Express service is an expedited freight service on passenger trains, but express companies do not own the means of performing their services; they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have had close relations with the railways practically from the beginning.

Goods are sent by express for quick transit, so that express rates do not generally compete with freight rates. Thus, in its first tariff the Dominion Express Co., in pursuance of its contract with the Canadian Pacific Railway, gave a rate of $2 \frac{1}{2}$ times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue. The rates paid by the shipper are subject to the approval of the Board of Transport Commissioners. Express companies are all organized under powers conferred by Acts of the Dominion Parliament and their business consists in the expeditious shipment of valuable live stock, and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels, and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper.

Express Company Operations.-Four express organizations operate in Canada-three Canadian and one American. The Canadian Pacific Express Co., formerly the Dominion Express Co., is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National system and Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency, Inc., operates over the Canadian sections of United States railways and over the route from Skagway to points in Yukon. No statistics are available regarding the volume of traffic carried by express. Much of the traffic, of course, consists of parcels and small lots which would make statistical classification and measurement very difficult. However, there is also an important movement in car lots of live stock, fresh fish, fruit, vegetables and other perishable commodities.

The amounts paid by express companies to the carriers, i.e., railways, steamship lines, etc., for transporting express matter, are shown in Table 22 under the heading "Express Privileges"

## 22.-Mileages Operated, Revenues and Expenses of Express Companies, 1936-45

Note.-Corresponding figures for the years ended June 30, 1911 to 1918, are given at p. 673 of the 1927-28 Year Book, and for the years 1919 to 1935 at p. 669 of the 1938 edition.

## PART III.-ROAD TRANSPORTATION*

Since the recent development of highways in Canada has been almost exclusively for the purpose of providing roadbed for motor-vehicle traffic, highways and motorvehicles are treated as related features of transportation. After an introductory section, which briefly summarizes provincial regulations regarding motor-vehicles and motor traffic, the whole subject of road transportation is dealt with under the headings of facilities, finances and traffic, similar to the treatment extended to other forms of transportation.

[^243]
## Section 1.-Provincial Motor-Vehicle and Traffic Regulations $\dagger$

Nore.-In this Section, it is obviously impossible to include the great mass of detailed regulations in force in each province. The purpose in view is to provide only the more important general information. The sources of information for detailed regulations for specific provinces are given at pp. 678-679.

General.-The licensing of motor-vehicles and the regulation of motor-vehicle traffic lies within the legislative jurisdiction of the Provincial Governments in Canada. Regulations that are common to all the provinces are summarized here:-

Operator's Licences.-The operator of a motor-vehicle must be over a specified age (usually 16 years) and must carry a licence, obtainable only after prescribed qualification tests and renewable annually Special licences are required for chauffeurs and, in some cases, for those granted licences who have not reached the specified age.

Motor-Vehicle Regulations.-In general, all motor-vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back, in the case of trailers). In order to conserve metal for war purposes, most of the provinces and both territories have issued only one licence plate for each vehicle in recent years. A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days) in any year to visiting private vehicles registered in another province or a State that grants reciprocal treatment. Further regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes, and provide that equipment include non-glare headlights, a proper rear light, a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

Traffic Regulations.--In all provinces, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. Speed limits, usually of 50 miles per hour, are in effect; slower speeds are always required in cities, towns and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motor-vehicles must not pass a street car that has stopped to take on or discharge passengers except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and any driver involved must not leave the scene of accident until he has rendered all possible aid and disclosed his name to the injured party

Penalties.-These ascend in scale from small fines for minor infractions of any of the regulations to a suspension of the operator's driving permit, impounding of the car, or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting, while intoxicated, to operate a motor-vehicle.

There is such a wide variation in the different provinces regarding the basis of licences and fees, the regulation of public commercial vehicles, details of traffic rules, speed, and the use of motor-vehicles, that it is impossible even to outline them satisfactorily in the space available here. For the most important features see the annual bulletin published by the Dominion Bureau of Statistics.

[^244]Safety Responsibility Legislation.-Manitoba was the first province to adopt safety responsibility measures. In 1945, the Manitoba Legislature passed new legislation amending the Highway Traffic Act, under which, generally speaking if a motorist is unable to furnish proof of financial responsibility by insurance or otherwise at the time of an accident, whether the accident was his fault or not, drastic penalties ensue. These penalties include impoundment of the motorvehicle and suspension of driver's licence and motor-vehicle registration. The objects of the law are: (1) To place the victim of an irresponsible, uninsured motorist in as good a position as he would have been in if the motorist had been insured; and (2) to promote safe driving by emphasizing by suspension of licence, etc., the fact that unsafe driving or irresponsible driving carries drastic, immediate and automatic penalties.

At the 1947 session of the Ontario Legislature, the Highway Traffic Act was amended so as to provide for the automatic suspension of the driver's licence and motor-vehicle permit of: (1) Every person convicted of any offence under the Act if any personal injury or property damage occurs in connection therewith; (2) Every person convicted of any offence under the Act if the penalty imposed includes suspension of driver's licence or owner's permit; (3) Every person convicted of a criminal offence involving the use of a motor-vehicle.

The suspensions remain effective until proof of financial responsibility is filed. The object of this law is to encourage safe driving by imposing this additional penalty on persons convicted of offences arising out of motor-vehicle accidents. Provision is also made for the forfeiture to the Crown of a motor-vehicle operated while the permit for same is under suspension. These amendments became effective July 1, 1947.

The Act was also amended to require the payment of all judgments arising out of motor-vehicle accidents either for personal injuries or property damage up to a maximum of $\$ 5,000$ for one person or $\$ 10,000$ for two persons and $\$ 1,000$ for property damage arising out of one accident. If judgments are not satisfied by the judgment debtors, provision is made for their payment out of an Unsatisfied Judgment Fund to be created. The judgment debtor is then prohibited from holding a driver's licence or having a motor-vehicle registered in his name until the judgment debtor repays in full to the Fund the amount paid out, together with interest at 4 p.c. from the date of such payment, and also files proof of ability to satisfy a judgment for $\$ 11,000$ which may arise out of any future accidents. This part of the Act is to be brought into effect by proclamation.

The authorities responsible for the administration of motor-vehicles and the legislation governing vehicles and traffic are given below for each province.

Prince Edward Island.-Administration.-The Provincial Secretary, Charlottetown. Legislation.-The Highway Traffic Act (c. 2, 1936) and amendments.

Nova Scotia.-Administration.-Motor Vehicle Branch, Department of Highways and Public Works, Halifax. Legislation.-The Motor Vehicle Act (c. 6, 1932) and amendments, and the Motor Carrier Act (c. 78, R.S.N.S. 1923) as amended.

New Brunswick.-Administration.-Motor Vehicle Division, Department of Public Works, Fredericton. Legislation.-The Motor Vehicle Act (c. 20, 1934) and amendments.

Quebec.-Administration.-Motor Vehicle Bureau, Provincial Revenue Offices, Treasury Department, Quebec. Legislation.-The Motor Vehicle Act (c. 142, R.S.Q. 1941) and amendments.

Ontario.-Administration.-Motor Vehicles Branch, Department of Highways, Toronto. Legislation.-The Highway Traffic Act (c. 288, R.S.O. 1937) and amendments. The Public Vehicle Act (c. 289, R.S.O. 1937) and the Commercial Vehicle Act (c. 290, R.S.O. 1937).

Manitoba.-Administration.-Provincial Treasurer, Winnipeg. Legislation.The Highway Traffic Act (c. 93, R.S.M. 1940) and amendments.

Saskatchewan.-Administration.-Treasury Department, Taxation Branch, Highway Traffic Board, Revenue Building, Regina. Legislation.-The Vehicles Act (c. 98, 1945).

Alberta.-Administration.-Motor Vehịcle Branch, Department of the Provincial Secretary, Edmonton, and Alberta Highway Traffic Board, Edmonton. Legislation.-The Vehicles and Highway Traffic Act (c. 275, R.S.A. 1942) and amendments, the Public Service Vehicles Act (c. 276, R.S.A. 1942), and Rules and Regulations. The Vehicles and Highway Traffic Act is administered by the Department of the Provincial Secretary, and the Public Service Vehicles Act by the Alberta Highway Traffic Board, Department of Public Works.

British Columbia.-Legislation.-The Motor Vehicle Act (c. 195, R.S.B.C. 1936), and the Highway Act (c. 116, R.S.B.C. 1936) and amendments thereto, as well as the Motor Carrier Act (c. 36, R.S.B.C. 1939). Administration.-Enforcement of the Motor Vehicle Act, the Highway Act and the Motor Carrier Act is vested in the Commissioner of Provincial Police, Victoria, while the Highway Act is administered by the Minister of Public Works, the Motor Carrier Act by the Public Utilities Commission, and the Motor Vehicle Act by the Superintendent of Motor Vehicles.

Yukon.-Administration.-Territorial Secretary, Dawson, Yukon. Information regarding regulations may also be obtained from the Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa. Legislation.-The Motor Vehicle Ordinance, No. 14, 1914, and amendments.

Northwest Territories.-Administration.-Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa. Legislation.-The Motor Vehicle Ordinance, assented to Mar. 26, 1941, and amendments.

## Section 2.-Roads and Vehicles

## Subsection 1.-Roads and Highways

With the rapid increase in the percentage of motor-car owners to population up to 1941, the demand for improved roads has become more and more insistent since the War of 1914-18. Furthermore, the advantages to be gained by attracting touring motorists have been a powerful incentive to governing bodies to improve trunk roads and scenic highways within their jurisdictions. One sphere where the motor-car and truck has been of special economic advantage has been in rural areas. As a result, according to the Census of 1941, there was ons motor-vehicle for every 1.8 farms. This widespread rural ownership of automobiles and trucks has, in turn, brought about an improvement of secondary rural roads.

The table of road mileages below includes all roads under provincial jurisdiction and local roads in the Maritime Provinces and Ontario and estimates of local roads in the four western provinces. There are great stretches of country in the northern portions of Quebec, Ontario, the Prairie Provinces and British Columbia with very few people and very few roads, but the southern portions are well supplied. The Trans-Canada Highway provides a strategic link between Eastern and Western Canada that permits motorists to traverse the Dominion without entering United States territory.

## 1.-Classification of Highways, by Provinces, 1945

Note.-The date for which the mileage was reported is indicated for each province. The figures for Canada are the sums of the mileages so reported. Urban streets are not included in the figures. Dashes indicate that no mileages were reported under corresponding stub items.

The Alaska Highway. - The Alaska Highway, a 1,600 -mile roadway, 24 to 36 feet wide, extends from Fort St. John, B.C.,* through Whitehorse, to Fairbanks, Alaska. It was virgin territory, and a pioneer air route, in the spring of 1942; on Nov. 20, 1942, it was officially opened for wheeled traffic. About 10,000 United States engineer troops and 4,000 civilians, of whom half were Canadians, hewed their way through the bush, bridged the rivers, overcame mountain grades and surfaced a roadbed, to permit a continuous journey by car. The maximum grade in hill country is 10 p.c.; in foothill country, 5 p.c. The Dominion Government supplied the right-of-way and exempted all shipments of construction equipment and material from customs duty and the United States Government carried out the work. On Apr. 3, 1946, the Canadian section of the Highway, from Edmonton to the Alaska border, together with the Northwest Staging Route airfields, telephone system and other defence projects (see 1945 Year Book, pp. 706 to 711) were taken over by Canada from the United States under agreement between the two countries.

[^245]The Northwest Highway System as it is now called will, for the present, be operated by the Canadian Army, but will be opened for civilian traffic as soon as possible.

Statistics of urban streets have been collected since 1935 from cities and principal towns; the small municipalities omitted would increase the totals very little. For 1945 the total number of miles of street reported was 14,245 , composed of: 3,350 miles of bituminous pavements; 880 miles of portland cement concrete; 2,027 miles of bituminous surfaces; 3,274 miles of gravel and crushed stone; and 399 miles of other surfaces; making a total of 9,930 miles of surfaced streets and 4,315 miles of earth roads. These figures for urban streets or roads are not included in the table of highway mileage.

## Subsection 2.-Motor-Vehicles

Registration.-Automobiles were registered in Canada for the first time in 1904 and Ontario was the only province to issue licences in that year. New Brunswick began registering cars in 1905; Quebec, Saskatchewan and Alberta in 1906; British Columbia in 1907; Manitoba in 1908; Nova Scotia in 1909; Prince Edward Island in 1913 and Yukon in 1914.

In 1905 only 565 motor-vehicles were registered, by 1915 the number had risen to 95,284 , and by the end of the next decade to 724,048 . A peak of $1,572,784$ was reached in 1941, including $1,279,536$ passenger cars, 278,771 commercial cars and 14,477 motorcycles. During the war years the number of commercial cars continued to increase, advancing to 322,829 in 1945 , including 315,606 trucks 5,988 buses and 1,235 miscellaneous vehicles; motorcycles were slightly less at 14,194 . Passenger cars, however, declined each year to $1,160,058$ in 1945, due to restrictions on the manufacture of cars for private use, tires and gasoline, inability to secure repair parts and shortage of garage mechanics. The full effect of the lifting of wartime restrictions may not be felt for some time, since material shortages have continued to keep down production.

Revenues from motor-vehicle licences, operators' permits, etc., amounted to $\$ 32,000,000$ in 1945 compared with $\$ 28,000,000$ in 1939 and $\$ 13,400,000$ in 1925.

## 2.-Motor-Vehicles Registerred, by Provinces, 1936-45

${ }^{1}$ Includes taxis. $\quad{ }^{2}$ Includes service cars, tractors, etc.
Apparent Consumption of Automobiles.-The apparent consumption of sutomobiles in Canada in any year may be computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor-vehicle sales in Canada are given at pp. 834-835 of this volume. The figures as now presented for the war years (Table 4), are not quite comparable with the earlier statistics as they have been revised and improved in several respects over this period.

## Section 3.-Finances of Road Transportation

The cost of road transportation to the people of Canada may be summarized under the following headings: expenditures on roads and highways; expenditures of individuals and corporations on owned motor-vehicles; expenditures for freight and passenger services rendered by motor-vehicle public carriers such as taxi, bus and motor-transport companies; and expenditures on garages, service stations, etc. Since expenditures on roads and highways are made almost entirely by governmental bodies, fairly complete statistics are available regarding them but, owing to the tremendous number of individuals and organizations that would have to be canvassed and the difficulties involved, complete statistics are not available under the other headings. Sales of gasoline are given at p. ©89, and revenues of motorcarriers at p. 685.

Expenditures on Roads and Highways.-Roads in Canada, except in the Territories and the National Parks are under the jurisdiction of provincial and municipal authorities. During the war years, capital expenditures on highways, bridges and ferries have shown a decided drop as compared with the years immediately preceding the War. On the other hand, maintenance expenditures have increased considerably.

## 5.-Capital, Maintenance and General Expenditures on Rural Highways, Bridges and Ferries in Canada, by Provinces, 1941-45

Nors.-Provincial expenditures are for their respective fiscal years. Figures for each year since 1931 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

## Provincial Funded Debt Incurred for Highways.-By far the greater

 portion of the highway expenditure has been made by the provinces and consequently must be paid out of provincial taxes. Payment for much of the construction costs has been deferred and this has accounted for part of the rapid increase inprovincial funded debt since 1919. In 1919 the net funded debt of all the provinces was $\$ 270,338,092$; in 1944 (the latest year for which provincial figures are available) it has reached $\$ 1,454,917,000$, the portion chargeable to highways being $\$ 822,599,145$ or more than three times the net debt for all purposes in 1919. Proir to 1919 the provincial expenditures on highways were relatively small.

${ }^{1}$ Not reported. $\quad{ }^{2}$ Treasury notes included.
Provincial Government Revenues from Motor-Vehicles.-The taxation of motor-vehicles, garages, chauffeurs, etc., is an important source of Provincial Government income. In every province licences or permits, duly issued by the provincial authorities, are required for: motor-vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. A sales tax on gasoline is also levied by each province and to Mar. 31, 1947, there was also a Dominion tax of 3 cents but this was withdrawn on that date and for the most part provincial taxes were increased to absorb the Dominion rate. The rates at present in effect are: for each of the three Maritime Provinces 13 cents; Quebec and Ontario 11 cents; Manitoba 9 cents; Saskatchewan 10 cents; Alberta 9 cents; British Columbia 10 cents and Yukon 3 cents. The more important sources from which provincial revenues from motor-vehicles are derived are shown in Table 7 Federal Government revenues from import duties, excise and sales taxes are not included.

Motor-Carriers.*-The lack of statistical information in regard to the increasing amount of passenger and freight traffic on the highways of Canada led to the institution of a census of motor-carriers in 1941. The carriers were divided into two main classes: (1) passenger and (2) freight. Each of these was subdivided into two classes: (a) carriers with revenues less than $\$ 20,000$, and (b) carriers with revenues of $\$ 20,000$ or over. Bus companies handling urban traffic exclusively were compiled as a class. Many street railway systems operate motor-buses, but the statistics of such systems are not included here; they are included in electric railway statistics. Licensed carriers doing highway construction work, building air fields, etc., were excluded from the compilations. Taxi operators and urban delivery trucks also were excluded, except where their operations included interurban business. Carriers operating as both passenger and freight carriers were classed as passenger or freight according to the preponderance of the revenue. The passenger revenue of trucking companies and the freight revenue of bus companies were small percentages of their total revenues.

Operators with revenue of less than $\$ 8,000$ in 1941 were excluded from the 1942 and subsequent compilations. The figures given below are therefore not comparable in all respects with those for 1941 published at pp. 602 and 603 of the 1943-44 Year Book.

[^249]
## 8.-Capital, Revenues, Employees and Equipment of Motor-Carriers, 1944 and 1945

Nors.-Large freight carriers include those with annual revenues of $\$ 20,000$ or over; small freight carriers those with annual revenues of from $\$ 8,000$ to $\$ 20,000$.

## Section 4.-Road Traffic

Up to the present the motor-vehicle has affected passenger traffic of the steam and electric railways more than freight traffic. This diversion of passenger traffic has been effected largely by the private automobile, although the motor-bus is rapidly becoming more important and now operates between all large centres. The motor-truck also carries a considerable amount of freight.

As explained at p. 685, certain statistics in regard to motor-carriers are collected, and those relating to freight and passengers carried are presented in Table 9. Traffic data were not available for the majority of the small operators. Many truck operators failed to report tons of freight carried and others reported only estimates; consequently these data are not very informative. A difficulty in compiling weights, which is quite understandable, is that much traffic was carried on a load basis and not a weight basis. Records of passengers appear to be fairly complete, possibly because tickets were sold and accounted for, and the unit was not so complex as for freight carried.
9.-Traffic Carried by Motor-Carriers, 1944 and 1945

Note.-Large freight carriers include those with annual revenues of $\$ 20,000$ or over; small freight carriers those with annual revenues of from $\$ 8,000$ to $\$ 20,000$.

Motor-Vehicle Accidents.-Motorists are required to report accidents but comprehensive statistics are not available for all provinces. The Vital Statistics Division of the Bureau of Statistics compiles statistics on all deaths from motorvehicle accidents and these are shown in Table 10. A direct comparison of such statistics between the provinces is of little value due to differences in size, population, motor-vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor-vehicles has also been tabulated. These data still give no weight to differences in use of motor-vehicles, differences in climate, roads, tourist cars, etc., all of which are factors in accidents.

Table 11 shows the number of persons killed or injured in automobile accidents as reported by the motor-vehicle branches of the Provincial Governments. It is quite possible that the latter reported some persons as injured who subsequently.
died from the injuries and these would be included in the fatalities of the vital statistics shown in Table 10, also accidents that occurred late in December and resulted in deaths would be charged to December by the provincial authorities but to January of the next year in the vital statistics. Consequently, the figures of fatalities of Tables $\mathbf{1 0}$ and $\mathbf{1 1}$ are not in complete agreement.

## 10.-Deaths Resulting from Motor-Vehicle Accidents, by Provinces, 1936-45

Nore.-This table was compiled in the Vital Statistics Division. Dominion Bureau of Statistics. Figures for the years 1926-35 will be found at p. 578 of the 1941 Year Book.

Gasoline Consumption.-All provinces require retail sales of gasoline to be reported and a tax is imposed on all gasoline, consumed by motor-vehicles using the highways and streets and also on that used for an increasing number of other purposes. However, the taxable gasoline is still largely consumed by motor-vehicles and indicates in a general way the increase or decrease in their use. Net sales are the differences between the total or gross sales reported and the quantities on which the tax is refunded in whole or in part, or on which the tax is not imposed at the time of sale.

Figures to the end of 1940 show a steady increase in gasoline sales since depression years. Later figures are, of course, materially affected by the conservation measures taken in 1941, and the system of gasoline rationing effective from April 1942 to August, 1945.

## PART IV--WATERWAYS*

The Canada Shipping Act.-Legislation regarding all phases of shipping was consolidated under the Canada Shipping Act (c. 44, 1934). The Act was a sequel to the passage of the Statute of Westminster in 1931, under which the Parliament of Canada accepted full responsibility for the regulation of Canadian shipping. The Canada Shipping Act is a comprehensive piece of legislation and constitutes, in fact, the incorporation in the shipping law of Canada of features of international agreements and of British and previous Canadian legislation. A brief summary of the Act is given at pp. 681-683 of the 1938 Year Book.

## Section 1.-Equipment and Facilities

The developments and equipment to facilitate water traffic are classified under the sub-headings of shipping, aids to navigation and miscellaneous works, canals and harbours. A subsection is added giving figures of administrative activities regarding pilotage service, steamship inspection, personnel and accidents to shipping.

## Subsection 1.-Shipping

Since all waterways, including canals and inland lakes and rivers, are open upon equal terms, except in the case of the coasting trade, to the shipping of all countries of the world, the commerce of the Dominion is by no means entirely dependent upon Canadian shipping. However, a large part of the inland and coast-wise traffic is carried in ships of Canadian registry.

Canadian Registry.-Under Part I of the Canada Shipping Act, every ship that falls under the definition of "British Ship" given in Sect. 6 of the Act and is controlled as to management and use in Canada must, unless registered elsewhere in the Empire, be registered in Canada. An exception is made in the case of ships not exceeding 10 tons register and engaged solely in coastal or inland navigation. A ship (whatever her qualification for British registry) that is not registered

[^251]in any part of His Majesty's dominions, is not entitled to the privileges accorded to British ships. Vessels about to be built may be recorded, and vessels being built or equipped must be recorded, by a registrar of British ships under the Act.

For a record of the number and tonnage of ships engaged in the carrying trade of Canada, see pp. 704-712. The tables are included there under traffic statistics because they relate more direetly to traffic and services than merely to the shipping available. For an account of the shipping services operated by the Federal Government, see pp. 694-696.
1.-Vessels on Canadian Shipping Registry, by Provinces, as at Dec. 31, 1940-44

Note.-Figures for 1935-39 are given at p. 581 of the 1941 Year Book.

## Subsection 2.-Aids to Navigation and Miscellaneous Works

Included under this heading are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the inland rivers and lakes, and at the entrances to harbours - a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described under marine services at pp. 694-695. As a further aid to safe navigation, there are chains of radio signal and directionfinding stations which are described under radiotelegraphy, at pp. 734-735.

Aids to navigation, excepting very minor ones, are listed in three annual publications of the Department of Transport covering the Atlantic Coast, Inland Waters and Pacific Coast, respectively. A summary table showing marine danger signals maintained in Canada during the fiscal years 1929-40 is given at p. 581 of the 1941 Year Book.

A great deal has been done to improve navigable waters by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Probably the largest task of this nature has been the St. Lawrence River Ship Channel. An extensive floating plant is in service to maintain and improve the deep-water channel from Montreal to the sea for ocean-going shipping. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and also the control of roads and bridges that cross navigable channels. In order to prolong the season of navigation in important waters that freeze over in winter, ice-breaking operations are
carried on at both the beginning and end of winter. This is particularly the case in connection with sea-going shipping from Montreal: these operations are primarily intended to prevent flood conditions during the spring ice break-up.

## 2.-Duration of the Season of Open Navigation on the St. Lawrence Ship Channel, 1933-46

Norg.-Figures for the years 1882-1911 are given at p. 756 of the 1934-35 Year Book and for 1912-32 at p. 615 of the 1942 edition.

1 "Channel Open" means the route can be navigated although there may be floating ice in the river.

## Subsection 3.-Canals

Before the period of extensive railway construction, which commenced for Canada in the 1850 's, the water routes, more especially the St. Lawrence, the Great Lakes, and the Ottawa River, were the chief avenues of transportation. These routes were interrupted at certain points, necessitating portages and, to eliminate the toil of unloading, transporting and reloading at the portages, canals were constructed.

The earliest mention of canals in Canada is in connection with the Lachine Canal, begun by early French settlers in 1700 . Only after the conquest of Canada by the British, however, were improvements of the main water routes made. In the early part of the nineteenth century increased internal and foreign trade and the introduction of steam navigation resulted in more attention being given to this work. Although some of the early canals were constructed primarily for military purposes, they soon became essential to the commercial life of the country. However, since the development of railways in Canada and, even more, since the growth of motorvehicle traffic, the canals, with the exception of those on the Great Lakes-St. Lawrence River Route, are playing a less important part in the transportation activities of the country.

The principal canals of Canada are under the jurisdiction of the Federal Department of Transport and each is accessible from the Atlantic Ocean. They serve six routes: (1) Montreal to Port Arthur and Fort William, via the St. Lawrence River and Great Lakes; (2) Montreal to the International Boundary near Lake Champlain, via the Richelieu River; (3) Montreal to Ottawa, via the Ottawa River; (4) Ottawa to Perth and Kingston, via the Rideau and Cataraqui Rivers; (5) Trenton, at the mouth of the Trent River on Lake Ontario, to the mouth of the Severn River on Lake Huron; and (6) St. Peters, Nova Scotia, on the Atlantic Ocean, to the Bras d'Or Lakes. The aggregate length of these six routes is 1,844 miles, the total of actual canal being 535 miles.

The names of the various canals along these routes, their locations and lengths, together with the number and dimensions of the locks thereon and other information may be found in the bulletin "Canals of Canada", published by the Department of Transport. A table showing the length and lock dimensions of canals as at the end of 1941 will be found at p. 583 of the 1941 edition of the Year Book.

Under the jurisdiction of the Federal Department of Public Works are the St. Andrews Lock (length, width and draft, respectively, 215, 45 and 17 feet) at Selkirk on the Red River, Man., and the lock at Poupore, Que. There are also a few small isolated locks, each controlled under the authority of the province in which it is situated.

## Subsection 4.-Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil, grain, etc. Facilities may include cold-storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil-storage tanks and, in the chief harbours, dry-dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Seven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours coming under the direct supervision of the Department of Transport of which 131 are in charge of harbour masters.
A.t most ports, in addition to the harbour facilities operated by the National Harbours Board or other operating commission, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil, sugar industries, etc. At a number of ports there are also graving docks which are dealt with separately.

## 3.-Facilities of Six of the Principal Harbours, as at Dec. 31, 1946

Nore.-The facilities include those under the control of other agencies as well as those of the National Harbours Board at these ports.

National Harbours Board.-A description of the origin and functions of the National Harbours Board is given at pp. 679-681 of the 1940 Year Book. The Board is responsible for the administration and operation of the following properties
(representing a capital investment of approximately $\$ 225,000,000$ ) : port facilities such as wharves and piers, transit sheds, grain elevators, cold-storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal and the Second Narrows Bridge at Vancouver. Operating revenues and expenses for these properties are given in Table 16, p. 702.

Public Harbours and Harbour Masters.-As stated above, there are 300 public harbours in Canada, created by proclamation under Part X of the Canada Shipping Act, 1934. These harbours are under the jurisdiction of the Minister of Transport and are administered under rules and regulations approved by the Gqvernor in Council. Harbour masters have been appointed by the Minister of Transport for 131 of these harbours, their remuneration being made from fees levied on vessels under the terms of the Act.

Graving Docks.-The Department of Public Works of the Federal Government has constructed five dry docks. The dock at Kingston, Ont., is under lease to the Kingston Shipbuilding Company, while the old Esquimalt dry dock was temporarily transferred to the Department of National Defence on Nov. 1, 1934. This transfer is to be effective until such time as the dock is commercially required, when it will be returned to the control of the Department of Public Works. The large dry docks at Lauzon, Que., and Esquimalt, B.C., can be divided into two parts and were built at a cost of approximately $\$ 3,850,000$ each. Under the Dry Dock Subsidies Act ( $9-10$ Edw. VII, c. 17, 1910), several docks have been subsidized by payments of 3 to $4 \frac{1}{2}$ p.c. per annum on the original cost for a given number of years, as shown in Table 5.

## 4.-Dimensions of Graving Docks Owned by the Federal Government

| Location | Length | Width at- |  |  | Depth of Water on Sill | Rise of Tide |  |

## 5.-Dimensions and Cost of Graving Docks Subsidized under the Dry Docks

 Subsidies Act, 1910

## Subsection 5.-Marine Services and Operations of the Federal Government

The services covered by this Subsection are those dealing with steamship inspection, pilotage service, sea-faring personnel and accidents to shipping, and the operations are those of the Canadian Government Merchant Marine, and the Canadian National (West Indies) Steamships.

Steamship Inspection.-The Steamship Inspection Service provided for under Part VII of the Canada Shipping Act, 1934, consists of a headquarters staff, at Ottawa, and staffs of inspectors at the principal ocean and inland ports. The Act provides for a Board, known as the Board of Steamship Inspection, which decides on questions arising out of the administration of the Act. The Steamship Inspection Service is responsible for the administration and carrying out of the provisions of the Act respecting the periodic inspection of power-driven ships and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading or unloading ships; and also for the administration and carrying out of the provisions relating to the certification and employment of marine engineers.
6.-Steamship Inspection, by Inspection Divisions, Year Ended Mar. 31, 1946

| Port | Vessels Subject to Inspection when in Commission |  | Vessels Inspected |  |  |  | Vessels NotInspected |  |

Pilotage.-This service functions under the provisions set forth in Part VI of the Canada Shipping Act, 1934. Qualified pilots may offer their services to the stranger in local and confined waters. At the same time, pilotage might also be considered as a method of insurance.

There are 42 pilotage districts in Canada, 9 of which (Sydney, Bras d'Or Lakes, Halifax, Saint John, Quebec, Montreal, St. Lawrence-Kingston-Ottawa, Churchill and British Columbia) are under the Minister of Transport as pilotage authority. The other districts function under local pilotage authorities appointed by the Governor in Council under the provisions of the Canada Shipping Act.

Table 7 shows, by major ports, the number and aggregate tonnage of ships using pilots during the fiscal years 1944-45 and 1945-46. Corresponding statistics are not available for the St. Lawrence-Kingston-Ottawa district.
7.-Pilotage Service by Districts, Years Ended Mar. 31, 1945 and 1946

| District | 1945 |  | 1946 |  |
| :---: | :---: | :---: | :---: | :---: |

| Churchill, Man.. | 6 | 6,868 | 1 | 1,503 |

Seamen Shipped and Discharged.-Seamen shipped and discharged at Canadian ports under the provisions of the Canada Shipping Act, 1934, during the year ended Mar. 31, 1946, numbered 30,361 and 27,042 , respectively. Corresponding figures for the years 1908 to 1917 are given at p. 690 of the 1938 edition the Year Book, and for the years 1918 to 1939, at p. 587 of the 1941 edition. The publication of this information was not permitted during the war years 1939 to 1945.

Canadian Government Merchant Marine.-The circumstances under which the Canadian Government became possessed of, and responsible for, the operations of a merchant marine are explained at p. 776 of the 1934-35 Year Book. A table showing the operating results from 1919 to 1936 is given at p. 689 of the 1937 Year Book.

The original fleet of the Canadian Government Merchant Marine, Ltd., consisted of 66 vessels with a total deadweight tonnage of 391,212 . The original cost of the fleet was $\$ 79,661,921$ and the capital loss thereon was $\$ 74,239,356$, the total capital recovery of $\$ 5,422,565$ being made up as follows: (1) the sale of 56 vessels for $\$ 2,378,018$; (2) the proceeds of insurance on 4 vessels lost, amounting to $\$ 2,111,475$; (3) the sale of 6 vessels to the Canadian National (West Indies) Steamships, Ltd., for $\$ 933,072$.

The charter of the Canadian Government Merchant Marine, Ltd., and its subsidiary companies, although inactive since 1936, had not been surrendered and in 1940 the Company was reconstituted and is operating on behalf of the Canadian Government certain ships seized in prize and either requisitioned for use by the Canadian Government or condemned by the Court.

Canadian National (West Indies) Steamships.-In conformity with the Canada-West Indies Trade Agreement Act of 1926 (16-17 Geo. V, c. 16), the Federal Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships, Ltd. Due to war restrictions, no information later than that published at p. 588 of the 1941 Year Book has been made available.

## Section 2.-Financial Statistics of Waterways

The principal statistics available that give any idea of the cost of waterborne traffic consist of the record of public expenditures on waterways. Such expenditures may be classified as capital expenditures, or investments and expenditures for maintenance and operation. Revenues from operation are also recorded. Undoubtedly, in so far as capital expenditures for the permanent improvement of waterways are concerned, those of the Federal Government cover the major part. There has been some expenditure by municipalities on local harbour facilities, and private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian Government Merchant Marine and the Canadian National (West Indies) Steamships, has come almost entirely from private sources. No figures are available regarding private investments in shipping except those appearing in the reports of the operating companies which cover only a portion of the field. Neither are there statistics showing the revenues of ship operators from passenger and freight traffic.

Capital Expenditures.-So far as capital expenditures on Canadian waterways are concerned, the only figures available are those compiled from the Balance Sheet of the Dominion or the annual reports of the Departments of Transport, Public Works and Finance, but such investments or capital expenditures cannot be regarded as any indication of the present worth of the undertakings represented. The costs of building canals and other waterways and permanent works to facilitate water transportation in Canada are represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of earlier works where they had been superseded, as in the first Welland Canals for instance. To this extent such figures are an overstatement of the present value of the works in use. There is a further limitation that should be noted in regard to such figures: they do not include the costs of maintenance and improvements or the operation of these works, such charges having been made to the Consolidated Deficit Account as annual expenditures and not to capital account. Table 9, which shows capital expenditures on canals, marine service and miscellaneous water-transport facilities to have reached the grand total of over $\$ 383,000,000$, must be interpreted with the above qualifications in mind. In Table 10 the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1945 and 1946: these are in addition to the capital expenditures of Table 9. These figures reflect the capital situation in regard to the national harbours of Canada far better than do those of Table 9
in the case of waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they have also been subject to deductions for depreciation and the scrapping or abandonment of plant and more nearly spproach the present value of the properties under the administration of the National Harbours Board.
9.-Capital Expenditures of the Federal Government on Canals, Marine Service and Miscellaneous Water Transport Facilities, as at Mar. 31, 1945 and 1946
Nore.-Compiled from the Annual Reports of the Department of Transport, the Department of Finance and the Department of Public Works.

[^252] Schedule "K" to the Balance Sheet.
10.-Capital Values of Fixed Assets Administered by the National Harbours Board, as at Dec. 31, 1945 and 1946
Norz.-Compiled from the Annual Reports of the National Harbours Board.

Waterway Expenditures and Revenues on Consolidated Fund Account.Expenditures under this heading (Tables 12 to 14) are mainly for the operation and maintenance of varous facilities for water transport, but unfortunately the line between operation and maintenance expenditure is not as finely drawn as is desirable.

In addition to the recurrent expenditures to facilitate water transportation shown here, the Federal Government annually expends a considerable amount to cover deficits of the Canadian National (West Indies) Steamships, Ltd., and of the National Harbours Board, for mail subsidies and steamship subventions as shown in Table 17, and for the maintenance and operation of radio stations to aid navigation as shown in Table 3 of Part VII at p. 731. Operating expenditures and revenues of facilities administered by the National Harbours Board are shown separately in Table 16. The National Harbours Board operates as a statutory corporation. The improvement in the financial results since control was unified under the Board, is indicated by the increase of consolidated operating income from $\$ 2,452,000$ in 1935 to $\$ 5,062,221$ in 1946.

In addition to the regular subsidies indicated above, additional assistance was given during the year ended Mar. 31, 1946, to certain subsidized lines, from the Steamship Subsidies War Stabilization Fund, established by Order in Council, July 2, 1942, P.C. 5653, and amended by Order in Council, July 25, 1946, P.C. 3020, for the purpose of refunding to such lines actual amounts paid out by them as war bonuses to crews, war risk insurance, and increased costs of fuel and marine insurance over the basic period Sept. 15 to Oct. 11, 1941. Amounts paid were:-
Vancouver and northern British Columbia ports ..... \& 156,641
Mulgrave and Canso ..... 9,822
Mulgrave and Arichat ..... 1,611
Grand Manan and the mainland ..... 9,669
Victoria and west coast Vancouver Island ..... 42,684
Mulgrave and Guyshorough. ..... 310 ..... 310

Sydney and Bay St. Lawrence. ..... 4,737
Sydney and Whycocomagh ..... 3,144
Total. ..... \$ 346,965

## Section 3.-Water Traffic and Services

Complete statistics, comparable with those given for the railways, showing all the freight carried by water, are not available. Indeed it would be very difficult to obtain a record of the traffic handled by small independent coasting vessels. However, there is a record of the number and tonnage of ships calling at all ports at which there are customs collectors, of cargoes of vessels trading between Canadian and foreign ports and of all cargoes that pass through the canals.

## Subsection 1.-Shipping

A brief description of the early development of Canadian shipping is given at pp. 597-598 of the 19,41 edition of the Year Book. Shipping statistics are compiled from reports collected by customs officers at customs ports: consequently they are affected by customs regulations and include only data for vessels trading in and out of ports at which such officers are employed.

For years prior to and including the year ended Mar. 31, 1937, the statistics were summarized by the customs officer at each port and compiled by the Department of National Revenue; for subsequent years, compilations were made by the Dominion Bureau of Statistics. Effective Apr. 1, 1940, each vessel departing from port makes a statistical report which is forwarded to the Bureau and from these reports all compilations of shipping statistics are made.

With this change of procedure, changes have been made in the recording of the data. Cargoes are required to be reported in tons of $2,000 \mathrm{lb}$. or in tons of $40 \mathrm{cu} . \mathrm{ft}$. Although previous reports did not define the ton, it is quite probable that for many cargoes the long ton of $2,240 \mathrm{lb}$. was used. Reports are not made now for vessels of less than 10 registered net tons and the tonnage of tugs is the gross ton and not the net ton used for cargo vessels. Fishing vessels are not required by customs regulation to report when operating from certain ports; consequently, the data are not on the same basis as data for cargo vessels.

[^255]19.-Vessels Entered at Each of the Principal Canadian Ports, 1945

Nore.-For details of shipping at all ports in Canada, see "Shipping Report" of the Dominion Bureau of Statistics.

[^256][^257]Vessels in coasting service and vessels fishing in Canadian waters are not required by customs regulations to report any details of cargoes loaded or unloaded so that cargo data are available only for vessels in foreign service. The cargoes are not cargoes on board but cargoes unloaded and loaded at the respective ports.

## 20.-Cargoes Loaded and Unloaded at Canadian Ports by Vessels in Foreign Trade, by Provinces, 1942-45

## Subsection 2.-Canal Traffic

Since the canals of Canada are open to the vessels and traffic of all nations upon equal terms, United States traffic constitutes an important part of the total carried through certain canals, especially the Welland Ship Canal. This is shown in Tables 21 and 23. More complete details of the traffic through canals may be found in the annual report "Canal Statistics" published by the Dominion Bureau of Statistics.

## 21.-Traffic Through Canadian Canals, by Nationality of Vessels and Origin of Freight, Navigation Seasons, 1936-46

Nore.-Figures include duplications where cargoes use two or more canals. For Canadian canal traffic from 1886-99, see the 1902 Year Book, p. 398; for figures for 1900-10, the 1933 Year Book, p. 697; and for 1911-35, p. 703 of the 1938 edition.

| Navigation Season | Nationality of Vessel |  |  |  | Origin of Freight Carried |  |  |  |  |

${ }^{1}$ Figures for the United States include a small percentage to or from ports of other foreign countries.
The figures in Tables 21 and 23 include duplications where the same freight passes through two or more canals, but in Table 24 duplications in the traffic passing through the St. Lawrence and Welland Ship Canals and the Canadian lock at Sault Ste. Marie, which amounted to $3,881,423$ tons in 1945 and $3,242,872$ tons in 1946, have been eliminated.

Grain transhipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne or other transhipping port.

${ }^{1}$ Through both Canadian and United States locks at Sault Ste. Marie.
Traffic through the Sault Ste. Marie canals, Canadian and United States, has been approximately twice as heavy as the traffic through the Panama Canal during the latest ten years for which records are available, and in 1940 was almost three times as heavy. It has varied from a low of $20,484,000$ tons in 1932, which was less
than the Panama traffic, to a high of $120,200,814$ tons in 1942. The dominant traffic, from a tonnage aspect, is iron ore. During the past 50 years this has fluctuated from $4,901,000$ tons in 1892, an average of $50,000,000$ tons in the 1920 's, a low of $3,607,000$ tons in 1932 and to a peak of $94,326,578$ tons in 1942. Although wheat has ranged as low as only 7 p.c. of the iron-ore tonnage, its value has generally been greater than that of the iron-ore traffic, and has been the most valuable single commodity passed through the canals; in 1928 the value of wheat passed through the canals was 40 p.c. of the value of all traffic. Other grains have been about one-quarter to one-fifth of the wheat tonnage and a smaller ratio of the value.

Bituminous coal has generally been second in tonnage to iron ore and a large part of it is carried by the ore vessels when returning for a cargo of ore.

The tonnage of the three principal commodities and the tonnage of all freight passed through the canals for the years 1913 to 1946, inclusive, are shown by the following chart.

The Panama Canal. - The Panama Canal, which was opened to commercial traffic on Aug. 15, 1914, has been a waterway of great importance to British Columbian ports, from which vessels leave direct for British and European ports throughout the year. As an alternative route to that of the transcontinental railway lines, such a passage by water is of vital importance in the solution of the larger transportation problems of the continent, and while its influence is perhaps more potential than actual, such a check on transcontinental rail rates is a valuable one. During the First World War the great expectations based upon the opening of
the Canal were not realized, owing to the scarcity of shipping. However, with the post-war decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe took place and, while the proportion carried in vessels of Canadian registry was comparatively small, the cargo tonnage nevertheless assumed considerable proportions. During the war years 1940-45, the volume of Canadian traffic through the Canal was greatly reduced.

## 25.-Traffic To and From the East and West Coasts of Canada via the Panama Canal, Years Ended June 30, 1329-16

${ }^{1}$ Approximate-exact figures not available.
A table at p. 636 of the 1942 Year Book shows the total commercial traffic through the Panama Canal during the years 1929-40.

## Subsection 3.-Harbour Traffic

The freight movement through a large port takes a number of different forms. The overseas movement, i.e., the freight loaded into or unloaded from sea-going vessels, frequently constitutes a surprisingly small part of the total. Usually the volume coming in and going out by coastwise vessels is larger. Then there is the 'in transit' movement in vessels that pass through the harbour without loading or unloading. Finally there is the movement from one point to another within the harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled in all the ports and harbours of Canada, as many of them are small, and without the staff necessary to obtain a detailed record of freight handled. The National Harbours Board reports annually the water-borne cargo loaded and unloaded at the eight ports under its control. Six of these are among the principal ports of Canada and the cargo handled in each is shown in Table 26. The figures include freight carried by coastwise and inland international, as well as by sea-going shipping; they include all cargo loaded or unloaded whether by facilities under the Board or at private docks and terminals in these ports. Cross-harbour movements, ballast (non-revenue), bunkers, ships' stores, mail and passengers' baggage are excluded.

## PART V-CIVIL AIR TRANSPORTATION*

Norg.-The treatment of military activities and organization falls more properly under the subject of National Defence (see "Air Force, Royal Canadian" in the Index).

## Section 1.-History and Administration

## Subsection 1.-Historical Developments

About the turn of the century W. R. Turnbull, who may be termed the "father of aeronautical research in Canada", was experimenting with aerofoils and propellers at Rothesay, N.B., where, in 1902, he set up the first small wind tunnel in Canada. He discovered the laws of the centre of pressure movement on aerofoils, and made deductions from these laws which explained the longitudinal stability of aeroplanes. He also propounded the static laws of air propellers and in later years evolved and developed the controllable-pitch propeller.

At the time that Mr. Turnbull was beginning his work, Dr. Graham Bell was experimenting with kites and air-screws in laboratories at his summer home at Baddeck, Cape Breton Island. The "Aerial Experiment Association", formed in 1907, comprised five members: Dr. Bell, J. A. D. McCurdy and F. W Baldwin, two young Canadian engineering graduates, Glen Curtiss, a motor-cycle engine builder from New York State, and Lieut. Selfridge, on leave from the United States Army. As a result of the work of these associates, the first flight in Canada was made at Baddeck on Dec. 7, 1907, in the Cygnet, a tetrahedral kite, which was towed by a steam tug. On Feb. 23, 1909, McCurdy's aeroplane, the Silver Dart, was taken out for tests on the ice at Baddeck. With its designer as pilot and under its own power, it flew for half a mile, rising thirty feet above the ice. This was the first aeroplane flight by a British subject. The Silver Dart was an advance on any aircraft previously flown, notable features being a three-wheel undercarriage, tapered wings, and the use of aileron controls.

Progress was rapid throughout the civilized world in the development and design of heavier-than-air flying craft from 1908 to the outbreak of the First World War and this progress was accelerated during the War by the intensity of competition for superiority in the air, and by the wide field for experiment which the war activities provided. Officially, Canada took little part in these developments. However, many young Canadians entered the flying service of Britain and, to facilitate their recruitment and preparation, training units were established in Canada. To provide the aircraft for training purposes, Canadian Aeroplanes, Limited, was organized by the Imperial Munitions Board and, by the end of the War no less than 2,900 'planes had been built by this industry. In the latter part of the War, owing to the extension of submarine raiding to the Atlantic Coast of America, a Royal Canadian Naval Air Service was organized to patrol the coasts of the Maritime Provinces and the Gulf of St. Lawrence. Bases were established at Halifax and Sydney, N.S., and patrols inaugurated on Aug. 25, 1918.

At the end of the War, thousands of young men with training and experience in the British flying services returned to Canada, full of enthusiasm for aviation, and seeking an opportunity to apply their new knowledge to peacetime developments. At the same time, governments were disposing of their surplus stocks of 'planes at

[^258]bargain prices. Action was necessary to supervise and control aviation in Canada. The Lir Board was appointed in June, 1919, with authority for the full regulation of civil aeronautics. Branches were organized to deal with licensing of aircraft and personnel, to conduct operations for other Government services, and to provide technical services.

The immediate post-war circumstances of a large number of trained pilots and many surplus aircraft resulted in great activity in flying. However, much of this was in the form of exhibition flying, joy-riding and flying instruction. Patronage of these activities soon waned as the novelty of flying wore off among the general public. However, the foundations for real progress were laid by a few more far-sighted men who sought to apply the facilities of aircraft to practical purposes in forest reconnaissance, surveying, and transportation in inaccessible areas of the country. In the summer of 1919 successful flights were made for forest protection and survey work at Lac à la Tortue in Quebec. In the summers of 1920 and 1921 bases were established by the Air Board, with provincial co-operation, at various points across Canada from which forest patrols and survey work were carried on. In addition, some large corporations established their own air services for forest patrol, surveys and transportation. The discovery of crude oil at Fort Norman on the Mackenzie River in the Northwest Territories in the autumn of 1921 led to the first large-scale attempt by commercial interests to establish air transportation in the far north. As a result of the development of mining activity at Rouyn in northwestern Quebec, the first regular freight and passenger air-transport service was inaugurated in 1924.

From these beginnings the expansion has been rapid. The speed and ease of air transport has played a very important part in the development of mining activity throughout many areas of the Canadian Shield during recent years. Aircraft have been regularly used all across Canada for forest sketching, patrol and fire suppression, while very large areas have been mapped each year by aerial photography. The basic reasons for this progress of flying in the north country are simple. The only alternative means of transportation in many cases-the canoe in summer and the dog team in winter-are arduous, tedious, very costly, and slow for long distances. Furthermore, the lakes which dot the country everywhere provided, from the first, readily available landing places for aircraft equipped with floats in summer and with skis in winter. The flying could all be done in daylight hours and trips could generally be postponed if weather conditions were unfavourable. As a result, commercial flying throughout the north country was able to perform a very real economic service and to show substantial progress without governmental subsidies of any kind. Numerous governmental functions are being carried out with increased efficiency and economy through the aid of flying.

The situation was wholly different in the older settled parts of Canada. Here other forms of dependable and efficient transportation were already in existence and in some phases over-developed. The only advantage flying could offer was a saving of time, and to effect this an elaborate system of ground facilities was necessary. On account of the expense entailed, the development of inter-city air transportation was left in abeyance at first until progress elsewhere would give a clearer indication of its success and value. However, the success of inter-city air services in Europe and the steady growth of the United States airway system led to a reconsideration of Canada's position in 1927 As a step in establishing a chain of airports across Canada and also to provide for the training of personnel, the flying-club movement was started with the offer of government grants and gifts of aireraft. Twenty-three flying clubs were established in the principal cities of Canada in 1928 and 1929.

Aerodromes established by municipalities or by these flying clubs formed the nucleus for the Trans-Canada Airway, the Federal Government having to provide intermediate landing fields, especially through the Rocky Mountains and across northern Ontario, and the weather-reporting, lighting, and radio services.

At the beginning of 1923 , in the unification of the defence forces under the Department of National Defence, the Air Board, established in 1919, was abolished and the administration of aviation was placed under the Department of National Defence. At this period when both military and civil flying services were small and in the early stages of their development, the advantages of combining their administration in one department were manifest. However, the two functions inevitably developed along different lines, these differences applying both to types of aircraft and to training of personnel. With the growth of both military and civil flying, their administration in one Department became less convenient and stability in the administration of aviation in the Dominion was finally reached in the autumn of 1936 by the complete separation of the military and civil functions, the latter being transferred to the new Department of Transport. Civil aviation has now become so important a part of the transportation facilities of Canada that it can best be administered by the Department that deals with railway and shipping services, to which aviation is complementary.

Trans-Canada Airway.-An article describing this Airway appears at pp. 703-705 of the 1940 Year Book.

Transatlantic Air Service.-The work done to establish an air service between Canada, the United States and the British Isles via Newfoundland up to the outbreak of war is described at pp. 705-707 of the 1940 Year Book.

Pre-War Civil Aviation and the Defence Program.-An article describing the developments of importance in civil aviation prior to the outbreak of war in 1939, and also the contribution that civil aviation made to the air defence program, is given at pp. 608-612 of the 1941 Year Book. An article describing the development and progress of the British Commonwealth Air Training Plan is given at pp. 1090-1099 of the 1946 Year Book.

Administration.-The 1942 Year Book, at pp. 638-639, outlines the administrative arrangements for the control of civil aviation. Present control under the Air Transport Board is given at pp. 657-658.

## Subsection 2.-Recent Developments

The transition of civil aviation from war to peace was completed in 1946 when then existing wartime controls of aviation were removed; airports and aerodromes, constructed for war purposes, were acquired for civilian use and considerable construction work was undertaken to convert some of these to meet the requirements of heavy transport 'planes; airway controls were extended; additional aids to air navigation were provided; and construction was commenced on new airports to meet the demand for expansion of Canada's airway system which had been temporarily halted by the War.

Disposal of Airports.-Most of the airports and aerodromes built for or adapted to war use by the British Commonwealth Air Training Plan have been acquired by the Department of Transport since the cessation of hostilities. Post-war civilian use was envisioned for many of these aerodromes when they were built; those declared surplus by the Royal Canadian Air Force have been transferred, through the
medium of the Crown Assets Allocation Committee, to the Department of Transport and have, in most cases, been retained for civilian use. Most airports leased from municipalities are being returned to them; many of the newly constructed fields also have been leased to interested municipalities or other responsible bodies.

Many of the R.C.A.F. buildings on the airports taken over have been retained for departmental or municipal use or have been made available at nominal yearly charges to reorganized local flying clubs. Buildings not required for these purposes or as storage warehouses for the War Assets Corporation have been turned over to the Crown Assets Allocation Committee to alleviate housing and other building shortages.

New Development.-With the acquisition by the Department of Transport, of extended airway and airport facilities constructed by the United States Army Air Force in northern Canada for Hemisphere defence purposes, the Department has undertaken the further development of the Edmonton-Norman Wells route via Fort McMurray. The Northwest Staging Route (for details, see article on Canada's Northern Airfields, pp. 705-712 of the 1945 Year Book) from Edmonton to Whitehorse, originally constructed by the Department of Transport and extended during the War, remains for the present under the operational control of the R.C.A.F. with the exception of the Radio Range and Meteorological Services. No decision has been reached as to the use or disposal of airport facilities on the "Crimson Route" or Northeast Staging Route extending from The Pas to Churchill, Man., Southampton Island, N.W.T., and Goose Bay, Labrador.

Detailed surveys were undertaken during the year for proposed airport sites in the Provinces of Alberta, Ontario, Quebec and New Brunswick, at Banff, Red Lake, Atikokan, Gore Bay, Wiarton, Caribou Island, Chibougamau, Matane and Fredericton. Also, by arrangements with the Department of Mines and Resources, construction of a second landing strip was started on the airport at Yellowknife, N.W.T., to enable larger-type aircraft to carry supplies into this important mining centre at all seasons of the year.

Revival of Commercial Flying.-Commercial flying in Canada is still awaiting the appearance of the latest types of civil aircraft. In the meanwhile a number of converted military aircraft have been brought into commercial-flying service, Construction of commercial aircraft in Canada has been greatly hampered by lack of materials and component parts but it is expected that early in 1947 commercial air-carriers in Canada will be in a position to acquire much needed new 'planes and other equipment necessary to their expansion. Many of Canada's war-trained air and ground crews have passed the necessary tests for Certificates of Competency in civilian flying and as air engineers. It is anticipated that as new equipment is made available there will be considerable expansion in commercial flying in Canada.

Private Flying.-Indications are that, as equipment is made available, there will be a spectacular come-back in private flying which, so far, has been held back in spite of military surpluses by lack of equipment and lack of hangar and other aerodrome facilities.

Revival of the Club Movement.-There has been marked activity among Royal Canadian Flying Clubs and many airmen returning from overseas have been actively associated in the revival of this movement. The Royal Canadian Flying Clubs were, in practically all cases, actively engaged during the war years in primary training work for the R.C.A.F.

The Department of Transport Air Services has done much to encourage the revival of Flying Clubs throughout the Dominion and, where possible, has granted special privileges on departmental aerodromes. In co-operation with the R.C.A.F. wartime buildings have been retained at airports and made available to the Clubs at nominal yearly leases.

## Canadian Scheduled Air Transport Services

Trans-Canada Air Lines in 1946.-Continued expansion and improvement in service featured the operations of Trans-Canada Air Lines in 1946. New routes were opened, frequencies on some existing routes were intensified and passenger accommodation was materially increased with the addition of new and larger aircraft to the T.C.A. fleet. The Air Lines' growth had the effect of a further relative contraction in Canada's vast distances while enhancing international relations.

A great increase in the number of revenue 'plane miles flown by the Company resulted. The figure of $14,162,377$ miles represented an increase of $3,656,302$ 'plane miles over the previous year. A good part of this additional mileage was flown over the 1,212 miles of new routes which T.C.A. inaugurated during the year. The new routes brought the total mileage up to 6,511 as compared with 5,299 at the end of 1945. Passenger traffic and express showed sharp gains but air-mail figures declined considerably. Sixty-seven per cent more passengers were carried than in 1945, the total of 305,442 being an increase of 122,321 , while air express reached $1,043,713 \mathrm{lb}$., $93,390 \mathrm{lb}$. above that of 1945 . Air-mail volume at $2,325,977 \mathrm{lb}$. showed a decrease of $1,103,255 \mathrm{lb}$.

Under the provisions of the 1945 contract, Trans-Canada took delivery during the year of 24 21-passenger DC-3 aircraft, bringing the DC-3 fleet up to 27 at the end of 1946. These 'planes, as received, were put in operation to replace the smaller Lockheed aircraft and are now flying most of T.C.A.'s Canadian and transborder routes, the Lockheeds being confined mostly to Western Canada on the Lethbridge-Vancouver run. Disposal of part of the Lockheed fleet had begun by the end of summer.

In the spring, an extra daily flight was added to the Toronto-New York service, now four flights daily in each direction. In July, a new service between Toronto and Chicago was inaugurated and three flights daily are made between these points. A month later another important United States city was added to the Air Lines' network when Toronto was joined to Cleveland, Ohio, in a daily service. Two daily flights are operated on this route, via London, Ont. The next international link was forged in September when a daily flight service was introduced between Port Arthur-Fort William, Ont., and Duluth, Minn., and the rapid expansion extended into the following month. In November, operations were commenced on the Victoria-Seattle route while, simultaneously, the existing service between Vancouver and Victoria was increased to eight flights daily. A fourth daily transcontinental service between Montreal and Vancouver went into operation on Apr. 1, 1947.

Canadian Government Transatlantic Air Service.-During 1945, the Canadian Government Transatlantic Air Service, operated by Trans-Canada Air Lines, made its 1,000 th crossing of the Atlantic. The service was greatly accelerated, with flight frequencies increased from three a week to one every day, and every scheduled flight was completed. Flights were extended to London, England. The new four-engine 40-passenger aircraft, the North Star, which will
be used by T.C.A. in trans-ocean and transcontinental services, was test-flown in July, 1946, made a flight across Canada in September and its first transatlantic flight in April, 1947. This airliner is largely the product of Canadian ideas and manufacture.

Canadian Pacific Air Lines.-During the year 1946, Canadian Pacific Air Lines experienced a general improvement in traffic. A considerable portion of this improvement can be attributed to the increase in activity in the mining areas of the country which first evidenced itself during the latter part of 1946. C.P.A.L. has continued its policy of greater standardization of its fleet by acquiring during the year additional units of new and larger aircraft types, including 10 Douglas C-47's, 9 Norsemen and 4 Cansos.

In 1946, the component companies of the C.P.A.L. flew $6,813,907$ miles in revenue service as compared with $5,373,403$ miles in 1945; carried 175,461 revenue passengers compared with 125,$110 ; 16,514,741 \mathrm{lb}$. of freight as against $9,419,556 \mathrm{lb}$.; and $1,722,733 \mathrm{lb}$. of mail as compared with $1,253,537 \mathrm{lb}$. in 1945.

Independent Air Lines.-In addition to Trans-Canada Air Lines and Canadian Pacific Air Lines, there are only four other domestic air lines licensed to operate scheduled services in Canada. These are:-
(1) Maritime Central Airways of Charlottetown, P.E.I.
(2) Northern Airways Limited, Carcross, Y.T.
(3) Leavens Brothers Air Services Ltd., Toronto, Ont.
(4) M and C Aviation Co., Ltd., Prince Albert, Sask.

Most of the independent air lines are operating non-scheduled services which, with few exceptions, are charter services from designated bases. It is in this field that the greatest development has taken place in the immediate post-war period. These non-scheduled air services not only provide effective means of access to sections of the Dominion that are inaccessible by other means of transportation, but also act as feeders to the scheduled air lines.

It is in the charter-service field of commercial aviation that ex-service men, particularly Air Force personnel, have shown the greatest interest, inasmuch as they can commence operations in a modest way and the capital required is not exorbitant.

At the close of 1946, operating certificates issued by the Air Services Branch of the Department of Transport included 70 non-scheduled commercial charter services from designated bases and three such services operating between qualified points.

Foreign Scheduled Services.-Operating certificates issued to foreign scheduled services flying into Canada number five and consist of the following:-
(1) Pan-American Airways, Inc., operating between Seattle, Wash., and Fairbanks, Alaska, with refuelling stop at Port Hardy, B.C., and points of call at Juneau, Alaska, and Whitehorse, Y.T.
(2) United Air Lines, Inc., operating between Vancouver, B.C., and Bellingham, Wash.
(3) American Airlines Inc., operating between Toronto, Ont., and Buffalo, N.Y., and also the Canadian portion of the route between Buffalo, N.Y., to Windsor, Ont., and Detroit, Mich.
(4) Colonial Airlines, Inc., operating between Montreal, Que., and Burlington, Vt.; between Ottawa, Ont., and Burlington via Montreal; between Montreal and Syracuse, N.Y.; and between Ottawa and Syracuse.
(5) British Overseas Airways Corporation with Canadian Terminal at Montreal Airport (Dorval).

## Section 2.-Airports and Aircraft

## Subsection 1.-Summary Statistics of Civil Aviation

From commercial operators of aircraft, aeroplane clubs, etc., the Bureau of Statistics collects and compiles civil aviation statistics, with the exception of data on licences and accidents, which are reported by the Civil Aviation Division of the Department of Transport.

The commercial companies are divided into two classes, those engaged principally in international flying between Canada and the United States and those engaged exclusively or almost exclusively in flying between Canadian stations. Regular flying on the Montreal to Vancouver portion of the Trans-Canada Airway began toward the end of 1938. The statistics for 1939 were the first to include extensive operations of the Trans-Canada Air Lines. The companies operating in the north country carry passengers, freight and supplies into and out of the mincs and account for the large volume of freight carried by air in Canada. Because of this feature of civil aviation in Canada, it is difficult to make comparisons with other countries where the traffic is principally inter-urban passenger traffic between well-established airports.

## 1.-Summary Statistics of Civil Aviation, 1940-45

Note.-Figures for 1921-23 will be found at p. 616 of the 1924 edition of the Year Book, for 1924-29 at p. 661 of the 1930 edition, for 1930-34 at p. 698 of the 1936 edition and for 1935-39 at p. 640 of the 1942 Year Book. Statistics for the Trans-Canada Airway were included for the first time in 1939, and figures after.
1938 are not comparable with previous years (see text on p. 719) 1938 are not comparable with previous years (see text on p. 719).

## Subsection 2.-Ground Facilities

Early ground facilities for civil aviation in Canada consisted chiefly of municipal or flying-club airports adjacent to the larger urban centres, and of numerous terminals from which commercial flying services operated, mainly into the northern mining regions. A large air terminal was built at St. Hubert, Que., seven miles south of Montreal, with immigration, customs and postal facilities available. These earlier airports formed the nucleus which, with many additions and improvements, became the chain of aerodromes constituting the Trans-Canada Air Lines. The development of this airway and the use and expansion of the ground facilities for military purposes during the Second World War affected the status and facilities of many former municipal airports.

## Subsection 3.-Aircraft

The construction in Canada of aircraft and equipment is essential to the development of flying. Before the War several manufacturers were producing original types especially suited to operation in Canada, and a number of manufacturers from England and the United States formed branches in Canada for the assembly and servicing of their products. There were also a number of plants for the manufacture of landing gear, especially skis and pontoons, designed to meet the particular requirements of Canadian conditions. Plants equipped to manufacture
civil aircraft and parts were changed over during the War to the production of military types and the industry expanded by many additional plants and firms. The principal statistics of the aircraft industry are shown for the latest available year in the Manufactures Chapter (Table 9, p. 576).

## Section 3.-Finance and Employees

## Subsection 1.-Dominion and Other Expenditures and Revenues

The status of civil aviation in Canada has changed considerably in recent years as regards both civil and military requirements. Until the institution of the TransCanada Air Lines, the development of civil aviation was limited to the provision of private, commercial and administrative services for the more remote sections of Canada, chiefly in the northern mining, forestry and trapping regions. Recently, however, the Dominion Government has improved existing airports and constructed others for civil and for military purposes. In addition to direct expenditures, the Department of Transport has given assistance to municipalities for the construction and development of airports amounting to $\$ 3,707,311$.
3.-Investment, Operation and Maintenance Expenditures and Revenues of the Department of Transport in Connection with Civil Aviation, Years Ended Mar. 31, 1944-46.

Note.-Compiled from Department of Transport Records. The Departmental Investment Section has been revised from previous years to include Canadian Government Transatlantic Air Service; the Operation and Maintenance Expenditures Section has been revised to include expenditures from war appropriations: and the Revenues Section has been revised to include revenue relating to War Approoriations under the appropriate classification of Revenue instead of showing the total in one amount as heretofore.

${ }^{1}$ Exclusive of 67 employees paid $\$ 185,021$-Canadian domiciled employees of international carriers.

## Section 4.-Aerial Traffic

Table 1, p. 720, shows large increases in passenger traffic during the years from 1940 to 1945. The amount of freight carried by aircraft grew rapidly, increasing from $2,372,467 \mathrm{lb}$. in 1931 to a record of $24,317,610 \mathrm{lb}$. in 1937; it decreased considerably during the war years, amounting to $14,462,400 \mathrm{lb}$. in 1945 , due mainly to the decline in the gold-mining industry and the restrictions in the use of aircraft for trapping and other operations. In the years before the War, a large part of the air freight was mine machinery and supplies to gold-mining companies. Many of these mines, located in the northern parts of Quebec, Ontario and the Western Provinces and in the Northwest Territories, were accessible only by canoe in the summer and dog team in the winter or by aircraft, and aircraft transportation was the cheapest and most effective method of transportation. Further information regarding air-mail services appears in Part VIII of this Chapter, p. 745.

Statistics for international carriers include only traffic over Canadian territory for both Canadian and foreign operators. A small traffic across Canadian territory and between foreign stations is also included. Statistics for Canadian carriers operating international routes are included both as "International" and "Canadian" but duplications are excluded in the totals.

## 6.-Operations of Civil Aircraft in Canada, 1945

Nore.-The basis of presentation of these statistics differs from that of previous years.

## PART VI.-WIRE COMMUNICATIONS*

## Section 1.-Telegraphs

The early history of telegraphic communication in Canada is given at p. 778 of the 1934-35 Year Book.

Dominion Government Telegraph Service.-This service is operated by the Government Telegraph and Telephone Branch of the Department of Public Works. Its general object is to furnish wire communications for outlying and

[^261]sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest.

In addition to the following facilities the Branch is responsible for the control of installations of Government telephones both in Ottawa and in all other parts of Canada: telegraph and telephone services to scattered settlements along the coast of Cape Breton Island; cable services to Campobello, Grand Manan and other islands in the Bay of Fundy, to Prince Edward Island and a number of small islands in the Gulf of St. Lawrence; telegraph services along the north shore of the St. Lawrence River from Quebec to the Straits of Belle Isle and Labrador; cable connections with Pelee and Manitoulin Islands in Ontario; some lines to northern outlying districts in Saskatchewan; telegraph lines from Edmonton to the Athabaska and Peace River country in Alberta; telegraph and telephone communications around the coast of Vancouver Island and adjacent islands; service to fishing, lumber and mining centres in the interior; an overland telegraph and telephone line serving communities from Ashcroft, B.C., to the whole of the Canadian north country in British Columbia and Yukon.

Telegraph Systems.-The Canadian telegraph syștems are composed of lines owned by the Dominion Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world, and are operated under great climatic and geographical disadvantages.

## 1.-Summary Statistics of All Canadian Telegraphs, 1936-45

Nore.-Figures for the years 1920-30 will be found at p. 722 of the 1938 Year Book and for 1931-35 at p. 637 of the 1943-44 edition.

| Year | Gross Revenue | Operating Expenses | Net Operating Revenue | Pole- Line Mileage | Wire Mileage | Employees ${ }^{1}$ | Offices | Messages, Land | Cablegrams $^{2}$ | Money <br> Transferred |

${ }^{1}$ Excludes commission operators.
${ }^{2}$ Excludes messages relayed to the United States.
Submarine Cables.-Sixteen transoceanic cables have termini in Canadafourteen of them on the Atlantic Coast and two on the Pacific. In addition, there are eight cables between Atlantic coastal stations in Canada and the United States. The year in which the cable was first demonstrated to be of commercial value was 1866, and up to the present its use has greatly increased. The Atlantic cables are controlled by English and United States interests. The Pacific cable, from Canada to Australia and New Zealand, has been in operation since 1902, and was owned by a partnership of the Governments of the United Kingdom, New Zealand, Australia and Canada. As a result of the recommendation of the Imperial Wireless and Cable Conference of 1928, in view of increased wireless competition, it was decided to
dispose of the Pacific and West Indian Islands cable systems to the Imperial and International Communication Co., a company formed to take over all Empireowned cables, and lease the Empire-owned beam wireless systems. The necessary legislation was passed by the United Kingdom in February, 1929, and by Canadz in June, 1929.

## Section 2.-Telephones

A brief historical account of the early development of telephones in Canada is given at p. 781 of the 1934-35 Year Book.

## Subsection 1.-Systems and Equipment

Telephone Systems.-The 3,151 telephone systems existing in 1945 included the three large provincial systems in Manitoba, Saskatchewan and Alberta, and smaller governmental systems in Ontario, Quebec and New Brunswick, together with the system operated by the Dominion Department of Public Works and National Parks of Canada, Department of Mines and Resources. They also included 24 municipal systems, the largest operated by the cities of Edmonton, Fort William and Port Arthur. Of the 2,368 co-operative telephone companies no fewer than 1,121 were in Saskatchewan alone, 785 in Alberta and 212 in Nova Scotia. The largest among the 527 stock companies operating telephone systems in 1945 were the Bell Telephone Co., and the British Columbia Telephone Co. Over 60 p.c. of the total telephone investment in Canada belongs to the Bell Telephone Co., and their telephones in Quebec and Ontario constitute 57 p.c. of the total for Canada.

Telephone Equipment.-During the years 1935-45 there has been an increase of 639,979 in the number of telephones in use, representing an increase of 38 p.c. in telephones per 100 population.

Of the $1,848,794$ telephones in Canada in 1945, 1,037,015 or 56 p.c. were operated from automatic switchboards. The remainder were operated from manual switchboards. Automatic switchboards have completely displaced manual switchboards in the principal cities of the Prairie Provinces and are displacing them in the other provinces.

## 2.-Mileages of Pole Line and Wire, and Telephones in Use, 1936-45

Nore.-Figures for the years 1911-30 will be found at p. 724 of the 1938 Year Book and for 1931-35 at p. 639 of the 1943-44 edition.

| Year | Systems | Pole-Line Mileage | Mileage of Wire | Telephones in Use |  |  |  |  |  |

[^262]The density of telephones in the different provinces is naturally influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.

## Subsection 2.-Telephone Finances

Important trends for the telephone industry in Canada are indicated in Tables 4 and 5. There were setbacks in revenues, operating expenses, salaries and wages, etc., during the depression years, but these were not so marked as in most other branches of industry.

## 4.-Financial Statistics of Telephones, 1936-45

Nore.-Figures for the years 1911-30 will be found at p. 725 of the 1938 Year Book and for 1931-35 at p. 640 of the 1943-44 edition.

${ }^{1}$ Includes wages charged to expenses and to capital. $\quad{ }^{2}$ Statistics of Bell Telephone Co. in Quebec and Ontario are included in Quebec. ${ }^{3}$ Excludes employees and wages for rural systems.

## Subsection 3.-Telephone Calls

Systems operating almost 90 p.c. of all telephones in Canada made estimates by actual count on days of normal business and, after adjustment for incompleted calls, holidays, Sundays, etc., the average was multiplied by 365 . The longdistance calls, in practically all cases, were the actual long-distance calls put through or completed.
6.-Local and Long-Distance Calls and Averages per Telephone and per Capita, 1936-45

Note.-Figures for 1928-35 will be found at p. 718 of the 1939 Year Book.

| Year | Local Calls | LongDistance Calls | Total Calls | Total Calls per Capita ${ }^{1}$ | Averages per Telephone |  |  |

[^264]
## PART VII.-RADIO-COMMUNICATIONS*

The Canada Year Book, 1945, at pp. 644-646, gives an outline of the development of administrative control over radio-communication in Canada.

[^265]
## Section 1.-Administration

## Subsection 1.-Technical Control and Licensing

All radio stations within the Dominion of Canada are required to be licensed, whether used for transmission or reception, or both. The issuance of all classes of licences, the assignment of call signs and frequencies, and the inspection and monitoring of radio stations in Canada is carried out by the personnel of the Radio Division. There were 86,961 radio stations of all classes inspected by departmental radio inspectors during 1945-46. Examinations for certificates of proficiency in radio are conducted by the inspection staff of the Radio Division. Certificates of all classes to the number of 13,553 were issued up to Mar. 31, 1946.

The Radio Regulations for Ship Stations issued under the Canada Shipping Act, 1934, lay down the specifications of radio equipment to be carried on certain classes of vessels, and also designate the qualifications of the operators required.

To ensure safety of life at sea, certain passenger steamers and cargo vessels, by international regulation, must carry radio equipment manned by competent operators holding certificates of proficiency in radio. The Department maintains a complete radio inspection service to enforce this regulation. Inspectors, located at major ports throughout the Dominion, are responsible for checking the efficiency of the radio equipment on ships calling at. Canadian ports, regardless of their nationality, and for seeing that only competent operators are carried. Under the Canada Shipping Act, 1934, ships of foreign and Canadian registry, while in Canadian ports, are surveyed with a view to the issuance of safety certificates.
1.-Radio Stations in Operation, by Class, as at Mar. 31, 1942-46

${ }^{1}$ Includes licences issued free, numbering 8,435 in 1946, 8, 375 in 1945, 7, 896 in 1944, 7,465 in 1943, 6,998 in $1942,6,796$ in 1941, and 5,862 in 1940.

## Subsection 2.-Expenditures and Revenues of Radio Administration

Prior to Apr. 1, 1939, the licence fee for private commercial broadcasting stations was $\$ 50$. Since that date, however, the fee has been determined by the power of the station and the density of population within its service radius and varies from $\$ 50$ per annum in the case of low-power, short-wave, and non-commercial university stations, to $\$ 10,000$ per annum in the case of 50 kw commercial stations.

## 3.-Expenditures and Revenues of Radio Services, Department of Transport, Years Ended Mar. 31, 1943-46

| Item | 1943 | 1944 | 1945 | 1946 |

| Miscellaneous. | 1,340 | 29,327 | 31,744 | 21,752 |
| Totals, Revenues | 326,459 | 402,980 | 396,323 | 449,331 |

[^267]There are two classes of private receiving licences, one for battery-operated receivers (fee $\$ 2$ per annum), and the other for electrically operated receivers (fee $\$ 2 \cdot 50$ per annum). Free licences are issued for crystal receiving sets and to blind persons, schools, hospitals and charitable institutions; aiso for receiving sets installed in barracks, mess-halls, canteens or recreational rooms for the gratuitous entertainment of members of naval, military or air forces and merchant seamen; and sets operated by persons whose names appear on the diplomatic list of the Department of External Affairs and consuls general of career as listed in the Annual Report of the Department of External Affairs.

Exact figures of revenues received from private receiving licences are not available by provinces. This is partly due to the fact that commissions paid for the issuance of licences vary according to the classification in which the issue falls, that is, post office, radio dealer, house-to-house vendor, etc. In Table 4, therefore, total revenue received from the sale of private receiving licences has been estimated according to the number of licences issued in each province.

## 4.-Revenues from Private Receiving Licences Issued, by Provinces, Years Ended Mar. 31, 1940-46

## Subsection 3.-Investigation and Suppression of Inductive Interference

Twenty-four cars equipped with sensitive apparatus for the investigation of interference to radio reception operate from permanent inspection offices located in 21 cities across the Dominion. The inspectors in charge of these cars interview broadcast listeners who have reported interference, and determine the actual source. Tests are then made to ascertain whether or not the interference can be suppressed effectively and economically. The owners of the interfering apparatus are advised of the results of the tests carried out and are given full information regarding the most effective means of suppressing or eliminating the interference.

The Radio Division has been co-operating with the Canadian Standards Association in drafting specifications on interference suppressors and measurements of radio interference, also on interference from street railways, power lines, motorvehicles, low-voltage apparatus, etc. Many special types of interference suppressors have been developed and have proven superior to those previously used.

## Section 2.-Operation of Radio-Communications

## Subsection 1.-Federal Government Radio Stations

Department of Transport, Marine Service.-Four distinct networks of stations provide a complete radio aids-to-navigation service for ships. These networks serve the following areas: Great Lakes; Gulf of St. Lawrence and Atlantic Coast; Hudson Bay, Strait, and Sub-Arctic; and Pacific Coast. The first three networks are interlocking. The Department of Transport maintains communication between Ottawa and the east and west coasts, and Hudson Bay and Strait by means of high-frequency stations.

During the fiscal year 1945-46, Government radiotelegraph stations on the east coast, west coast, the Great Lakes, and Hudson Bay and Strait handled 789,139 messages or $19,749,036$ words, compared with 515,708 messages or $17,724,696$ words handled during 1944-45.
6.-Type of Service Performed and Areas Served by Marine Radio Stations, as at Mar. 31, 1946

| Service Performed | Area Served |  |  |  | No. of Stations |
| :---: | :---: | :---: | :---: | :---: | :---: |

Department of Transport, Aeronautical Service.-The radio services provided for aviation may be divided into two categories: first, those furnished on behalf of aircraft flying trans-Canada and Newfoundland routes; and secondly those intended for aircraft flying transatlantic routes. This phase of radio in Canada
is being rapidly developed. Aviation radio range stations now extend from coast to coast providing aid to air navigation for the Government-owned Trans-Canada Air Lines as well as for any other aircraft flying such routes.

During the fiscal year 1945-46 departmental airway radio stations handled $1,674,889$ messages or $40,669,632$ words, compared with $1,788,069$ messages or 29,645,259 words during 1944-45.
7.-Type of Service Performed and Routes Served by Aeronautical Radio Stations, as at Mar. 31, 1946

| Service Periormed | Routes Served |  |  | No. of Stations |

Department of Mines and Resources.-This Department operates 59 stations-1 private commercial station and 1 experimental station at the Dominion Observatory for the transmission of time signals, 29 private commercial stations in the National Parks of Canada, 2 receiving stations, 9 fixed and 17 portable private commercial stations.

Department of National Defence.-Militia Services (Royal Canadian Corps of Signals) operates, in addition to stations established for military purposes, 11 permanent stations and 2 summer stations situated along the Mackenzie River and in Yukon Territory on behalf of the Department of Mines and Resources, Bureau of Northwest Territories and Yukon Affairs.

Department of Public Works.-The Department of Public Works operates a total of 23 stations- 12 to provide emergency communication between the mainland and certain islands, 9 to provide emergency links in existing landline circuits, and 2 for Departmental communication.

Department of National Revenue.-Two private commercial stations are operated by the Department of National Revenue.

## Subsection 2.-Provincial Government Radio Stations

Provincial Governments operate radio stations as follows: Nova Scotia, 2; New Brunswick, 4; Quebec, 18; Ontario, 236 (including 12 aircraft stations); Manitoba, 34; Saskatchewan, 63; Alberta, 135; and British Columbia, 267, in addition to which the British Columbia Provincial Police Department operates 37 stations to provide communication berween police headquarters and the various units of the force. The Police Departments of 86 municipalities throughout the Dominion also operate radio stations.

## Subsection 3.-Privately Owned Commercial Stations

From Table 1 it will be noted that there were 6 limited coast stations, 58 public commercial stations, and 1,673 private commercial stations in operation in the Dominion at Mar. 31, 1946. A public commercial station situated at Drummondville, Que., provides transoceanic radiotelegraph and radiotelephone services to the United Kingdom, Australia, Bermuda and Jamaica, and a radiotelephone service to Newfoundland. These stations are owned and operated by private individuals or companies.

The limited coast stations are, as a rule, privately owned and provide a ship-to-shore communication service with ships owned or operated by the licensees only. One such station is, however, owned and operated by the Canadian Marconi Company. It is situated at Drummondville, Que., and provides a long-range radiotelephone service to ships at sea. The facilities of this station are open to the general public. The services performed by commercial stations, both public and private, are many and varied. These stations are located in areas not served by telephone, telegraph, or other means of telecommunication. The majority perform point-to-point radiotelegraph or radiotelephone service. These stations provide an invaluable means of contact with mining camps, lumber mills, exploration and survey parties, trading posts, and many points that would otherwise be out of touch with current affairs.

Private commercial stations may be used only for the handling of messages relative to the private business of the licensee.

## Section 3.-The Canadian Broadcasting Corporation*

The Canadian Broadcasting Corporation, operating the first nationally owned broadcasting system in North America, marked its tenth anniversary on Nov. 2, 1946. The following article gives a picture of the history and development of the CBC during those ten years, while the subsections following the article cover in more detail the administration, present operations and finances of the Corporation.

## HISTORY AND DEVELOPMENT OF THE CANADIAN BROADCASTING CORPORATION

The organization of a national radio system in Canada was based on the conditioning factors of the Dominion's vast territory, its two official languages, its often widely separated communities, and the varying interests and cultural background of its people. In the early 1920's, there was a tendency to concentrate radio stations in the large urban centres, with the result that much of Canada's rural population was not able to enjoy the new medium of entertainment and information.

Established by Parliament in 1936, to succeed the Canadian Radio Broadcasting Commission formed in 1932, the Canadian Broadcasting Corporation was instructed to build a chain of high-power stations across Canada in order to serve as many Canadians as possible. The Corporation was designed to operate in the public interest, as provided for under the Canadian Broadcasting Act, 1936. The revenue is derived from an annual licence fee of $\$ 2 \cdot 50$ paid by listeners, together with revenue from commercially sponsored programs.

When the CBC began operating in 1936, network broadcasting was being carried on for six hours daily, and only about 60 p.c. of the population was being reached. With instructions from Parliament to proceed as rapidly as possible with a plan for national coverage, the Board of Governors of the newly formed CBC called on its engineering staff for technical surveys and recommendations for improving national radio service. A comprehensive plan was drawn up, and the CBC began at once to expand the publicly owned broadcasting facilities. Among the projects which have been completed are the following: 50,000 -watt stations at Montreal, Que., Toronto, Ont., Sackville, N.B., and Watrous, Sask.; an increase in power to 5,000 watts at CBR, Vancouver, B.C.; new 5,000-watt transmitters for CBM, Montreal, and CJBC, Toronto; and the establishment of CBC stations at Quebec city and Chicoutimi, Que., and Halifax, N.S. In addition, CBC engineers have designed special low-power relay transmitters, which operate almost automatically at isolated points along the CBC network in the interior of British Columbia, in northern Ontario and in New Brunswick. Though the work on the plan for national coverage was brought to a virtual standstill during the war years, it has since been resumed with the building of a 50,000 -watt station in Alberta. Another is scheduled to be built in Manitoba. The power of CJBC, Toronto, is to be increased to 50,000 watts, and the power of stations at Halifax, N.S., Chicoutimi, Montreal and Quebec city, Que., Ottawa, Ont., and Vancouver, B.C., is also to be increased.

[^269]In 1936, one stumbling block in the way of a national radio system for Canada was lack of agreement among the nations of North and South America as to the use of radio wavelengths, or channels. While the network taken over by the CBC in 1936 served about 60 p.c. of the population in the daytime, this coverage was reduced to about 49 p.c. at night by interference from high-power stations in the United States and Mexico using some of the same channels in use by Canadian stations. As one of its first acts, the CBC asked the Canadian Government to initiate steps which, ultimately, resulted in the Havana Regional Radio Conference held in March, 1937, and the Inter-American Radio Conference of November, 1937, at which the North American Regional Broadcasting Agreement was signed. Wavelengths were allocated to the various countries on a basis providing protection from interference for stations on the same channels, according to the territory they were to serve. The agreement provided Canada with a sufficient number of "clear" channels (on which the signal of a high-power station is protected from interference up to long distances or to the borders of the country in which it is situated) to carry out the plan of national coverage.

When the new 50,000 -watt stations CBL and CBF, at Toronto and Montreal, were put into operation during the fiscal year 1937-38, the day-and-night coverage of the Corporation's network was increased to about 80 p.c. of the population. Network broadcasting was increased first to 12 hours, and then to 16 hours a day, on both the English-language and French-language networks.

While technical improvements continued, the Corporation was steadily expanding its program service. During the 1937-38 season, the CBC broadcast a series of radio symphonic concerts from Montreal. These concerts were presented as an addition to the regular schedule of concerts by existing symphonies in other large centres. The Corporation adopted a policy of obtaining the best programs, both commercial and sustaining, available in the United States and Great Britain, in addition to increasing its own Canadian productions.

In the autumn of 1938, the Corporation undertook what was then its most ambitious project: a series of 11 Shakespearean plays, in which leading Shakespearean actors were featured. Among the guest artists were such well known personalities as Sir Cedric Hardwicke, Margaret Anglin, Charles Warburton, Walter Huston, Eva LeGallienne, Walter Hampden, and Dennis King. The CBC held 500 auditions while selecting the supporting casts, and unearthed much new talent.

The summer of 1939 brought the CBC what was probably the greatest task ever undertaken in broadcasting up to that time-the visit of the King and Queen to Canada. Many months before the Royal Visit, preparations were going on within the CBC engineering division so that adequate facilities and equipment would be available to cover the visit. Complete new broadcasting facilities were designed by CBC engineers, and equipment built to rigid specifications was distributed across Canada well ahead of time. CBC commentators were able, by this means, to keep Canadians completely informed of Their Majesties' progress over a period of six weeks and a distance of 7,000 miles. A total of 91 special broadcasts was devoted to the Royal Visit.

In late August, 1939, as the International situation became acute and events moved with ever-increasing momentum toward war, the whole program pattern of the CBC was changed almost overnight to meet the public demand for an extended service of news bulletins, analyses and informed comment. A CBC Program Unit of one commentator and one engineer accompanied the First Canadian Division
when it sailed for the United Kingdom in December, 1939, and a series of historic recordings were sent back to Canada by short-wave after their arrival. Later, this Program Unit was expanded and became the CBC Overseas Unit. It was equipped with armoured, mobile recording vans so that correspondents and engineers could follow the Canadian troops wherever they went, and report their progress to Canadians at home. During the course of the War these vans saw service in England, Africa, Sicily, Italy, France, the Low Countries and Germany, and CBC correspondents were able to provide a service of war reports unequalled by any other network.

In the field of community life, the development of listening groups as a corollary to educational broadcasts was the subject of an experimental project fostered by the CBC and the Canadian Association for Adult Education in 1940. Over 550 listening groups were formed across Canada to follow a series entitled "Enquiry into Co-operation", with the provision of study material and reading lists. This series set the pattern for two later discussion series, "Of Things to Come", in which 20,000 people were members of listening groups, and the present annual series, "Citizens' Forum"

A similar discussion series designed especially for the rural audience was begun in 1940 under the title "National Farm Radio Forum" This series-a joint project of the CBC, the Canadian Federation of Agriculture and the Canadian Association for Adult Education-gives farmers in all parts of Canada an opportunity to exchange views and opinions on common problems.

The 1940-41 season brought other important developments in Canada's national radio system. The CBC National News Service was established, with a central newsroom at Toronto and regional newsrooms at Halifax, Montreal, Winnipeg and Vancouver, to provide a complete service of news bulletins written especially for radio. School broadcasts, prepared in co-operation with Provincial Departments of Education, were begun in the Maritimes, British Columbia and Quebec. National School Broadcasts, prepared and presented by the CBC itself, began the following year. These broadcasts, developed with the advice of the National Advisory Council on School Broadcasting, are designed to strengthen the sense of Canadian citizenship in the younger generation.

Perhaps the most interesting war work for the members of the CBC engineering division who were not overseas with the troops was the assistance given to the Free French Forces in establishing a powerful short-wave transmitter at Brazzaville, in French equatorial Africa. Members of the CBC engineering division spent considerable time abroad on initial plans for the transmitter, and the engineering offices at Montreal were able to render vital assistance in preparing engineering layouts, and mechanical and electrical blueprints.

Their work on the short-wave transmitter for the Free French Forces stood the engineers in good stead when they were called on to design and build a powerful short-wave station for the Canadian Government. The preparations for a Canadian short-wave service had begun as early as 1938, and an Order in Council authorizing the establishment of the CBC International Service was passed in 1942. CBC engineers chose Sackville, N.B., as the site, and designed a directional, high-gain antenna system for short-wave broadcasting. By means of remotely controlled switches, the two 50,000 -watt transmitters in the short-wave plant can be attached to any one of three antenna systems, and each of these can be reversed. In effect, this means that Canadian short-wave programs can be aimed in any one of six
directions, to cover every important land area. The CBC International Service transmitters are so effective that they provide the strongest and steadiest signal heard in the United Kingdom from the North American continent.

While the International Service is making Canada's name and her people better known abroad, the CBC is striving continually to improve its domestic service. In its ten years of broadcasting, the CBC has made tremendous contributions to the cultural life of Canada. It has done more than almost all other bodies put together to make it possible for musicians of all kinds to devote themselves entirely to their art. The Corporation is the greatest single support of Canadian symphony orchestras, paying the leading orchestras, at Vancouver, Toronto and Montreal, a total of $\$ 50,000$ annually for broadcast concerts. In the past ten years, the CBC has paid almost $\$ 10,000,000$ in fees to Canadian musicians, actors and writers.

## Subsection 1.-Administration of the CBC

The Corporation operates under the Canadian Broadcasting Act, 1936, and is headed by a Board of nine Governors, chosen to give representation to the principal geographic divisions of Canada, and a full-time Chairman. The Board determines and supervises policy, but day-to-day operations and administration are the responsibility of the General Manager. The Administrative organization of the CBC consists of the following Divisions: Executive, Personnel and Administration, Finance, Engineering, Program, Press and Information, Commercial, Broadcast Regulations, and Station Relations.

Under the Canadian Broadcasting Act, the CBC is responsible for regulations controlling the establishment and operation of networks, the character of any and all programs broadcast over its own and privately owned stations, and the proportion of time that may be devoted to advertising in broadcast programs. The CBC neither exercises, nor authorizes any private station to exercise on its behalf, censorship of any broadcast program. The responsibility of seeing that the regulations are observed rests with the individual station management.

## Subsection 2.-Operations of the CBG

Broadcasting Facilities.-Under Sect. 24 of the Act, the CBC is required to review all applications for licences for new stations as well as applications for increases in power and changes in frequency or location. Two considerations are involved: the first is non-interference with the present and proposed facilities of the CBC, and the second is that high-power transmission facilities, on both longand short-wave bands, are reserved for use by the CBC. Within these limitations, it is the policy of the Board to serve community interests by giving every practical encouragement and assistance to local stations.

The CBC operates three networks: the Trans-Canada and Dominion networks, serving English-language audiences from Atlantic to Pacific, and the French network, serving French-language listeners in Quebec. The Trans-Canada network is made up of 24 basic stations: 7 CBC-owned and 17 privately owned. The Dominion network consists of 29 basic stations, of which 28 are privately owned. The French network has 3 basic CBC-owned stations, and 9 privately owned stations. Four of the 11 CBC-owned stations have 50,000 -watt transmitters. The CBC leases some $\mathbf{2 5 , 0 0 0}$ miles of wire lines each day in order to carry on net-
work operations in Canada, which lies across five of the world's time zones. In order to present programs at suitable times, and to give expression to varying interests in the five regions, CBC maintains regional offices and production facilities at Halifax, N.S.; Chicoutimi, Quebec city, and Montreal, Que.; Ottawa and Toronto, Ont.; Winnipeg, Man.; and Vancouver, B.C.

## 8.-Broadcasting Stations of CBC Networks, as at Jan. 10, 1947

(Basic Stations)
Note.-The stations marked with an asterisk (*) are CBC-owned.

CBC International Service (Short-Wave).-Canada's international shortwave broadcasting facilities (1947) employ ten languages: English, French, Czech, Dutch, German, Danish, Norwegian, Swedish, Spanish and Portuguese, in regular transmissions to Europe, the West Indies, Central and South America. Plans for the year include the inauguration of transmissions to Australia, New Zealand and South Africa, expansion of the services to South America and the Scandinavian countries and the inauguration of transmission to Belgium in French and Flemish.

The CBC International Service fransmitters are located on reclaimed marshland near Sackville, N.B. Linked by land-line with the studios and program headquarters in Montreal, the two 50,000 -watt transmitters used by the CBC International

Service can operate in any of the international short-wave bands. The frequencies used depend on climatic conditions, the geographical area served, the season of the year and the time of day.

The service was opened officially Feb. 25, 1945. During the first two years of operation more than 20,000 letters were received from listeners in all parts of the world, testifying to the strength with which Canadian short-wave programs are received and to the interest in Canada which they either arouse or help to satisfy. Listeners in Europe report constantly that CBC International Service programs are heard more clearly and loudly than any other broadcasts from the Western Hemisphere.

Listeners receive, upon request, free illustrated monthly schedules giving details of programs, frequencies and transmission times, as well as photographs and general information about Canada. Reception reports from listeners are also verified and inquiries on trade conditions, social, scientific and education matters are given attention.

The service has provided short-wave listeners abroad with comprehensive day-to-day reports and actuality broadcasts from all major international conferences held in North America since the end of the War in 1945. Supplementing the regular programs in ten languages, special events broadcasts of all kinds are arranged whenever necessary to give CBC listeners in other lands full reports on activities in Canada that are of particular interest to them. Visitors from abroad frequently use the CBC short-wave service to report back to their home countries on their impressions of Canada.

The CBC International Service short-wave transmitters at Sackville, N.B., were completed by the Corporation for the Canadian Government.

Domestic Program Service and Development.-During the fiscal year ended Mar. 31, 1946, 55,934 programs representing 17,062:25 hours of broadcasting were presented over the CBC Trans-Canada, Dominion and French networks. Of the total broadcasting hours, $81 \cdot 2$ p.c. were devoted to non-commercial and public service programs, and the remaining 18.8 p.c. to commercial presentations. The Trans-Canada network, operating 16 hours a day, released 64.4 p.c. of the network broadcasting hours. The Dominion network, operating at present only in the evening hours, released 8.2 p.c. of the network hours. French network operations, operating 16 hours a day, accounted for $27 \cdot 2$ p.c. of all network hours of broadcasting.

The CBC originated and produced 78.7 p.c. of its network broadcasts. Of the remainder, 2.6 p.c. came from private stations, $15 \cdot 3$ p.c. were exchange programs from the United States, and 3.4 p.c. were exchange programs from the BBC. Various categories of light music made up the greatest number of broadcast hours, followed in order by news, drama, variety, classical music, talks, agriculture programs, educational broadcasts, religious periods, and programs devoted to the interests of women, sport fans, and children. Table 9 shows the proportion of total time devoted to sustaining as compared with commercial programs, and analyses those made up of music as compared with the spoken word.

## 9.-Classification of CBC Programs, Year Ended Mar. 31, 1946

Nors.-Dashes in this table indicate that no programs were reported under these particular sub-items.

## Subsection 3.-Finances of the CBC

Revenue from the sale of receiving and broadcasting licences increased each year until 1943-44, but has since shown a decrease. It has been recognized that there is a limit to the amount of revenue to be received from licence fees, although an increase over the 1945-46 figure may be shown as post-war radio receivers become more readily available to the public. Commercial revenues showed an increase over the preceding year, but the drop in licence revenue and an increase in overhead expenditures resulted in a deficit.

The balance sheet of the Corporation, as at Mar. 31, 1946, showed an operating deficit of $\$ 78,426$ for the fiscal year, before providing allowance for depreciation and obsolescence. Since depreciation rates have been generous in the past, no further allowance has been provided for under expenditures for the 1945-46 fiscal year. During the year the fixed assets of the Corporation were increased by approximately $\$ 219,000$, the major project being the completion of the National

Program Administration Building and Studios at 354 Jarvis Street, Toronto, Ont. Improvements to leased properties amounted to approximately $\$ 35,000$, the main items being improvements to studios and offices in Halifax, Quebec City, Montreal and Ottawa.

Operating costs in percentage terms for the past three years were:-

| Item | 1945-44 | 1944-45 | 1945-46 |

## PART VIII.-THE POST OFFICE

For Departmental administration Canada is divided into fifteen postal districts each in charge of a District Director, Postal Service. The territory thus served is more extensive in area than that of any other country excepting the U.S.S.R. or the United States: because of the relatively small population compared with the vast area served, the problems are intensified. Canada's railway mail service is one of the most extensive in the world; the rural mail delivery service operates over 4,000 routes and the air-mail system supplies a widely scattered population with speedy and efficient postal service.

A brief account of the development of postal services in Canada is given at pp. 789-790 of the 1934-35 Year Book. The wartime growth and accomplishments of the Post Office are outlined at pp. 721-724 of the 1946 Year Book.

Many facilities and services, temporarily suspended during the war years, were restored during 1946. Mail services, parcel post and money-order services were resumed to many countries.

Air-Mail.-The air-mail service was a development of the war years and, at first, was based on heavy mailings to and from members of the Armed Services at home and abroad. This service has now become readjusted to post-war traffic levels and its present position is shown in the following figures showing weight of mail conveyed by air:-

| $\begin{aligned} & \text { Calendar } \\ & \text { Year } \end{aligned}$ | T.C.A. | All Air <br> Services | Calendar Year | T.C.A. | All Air Services |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | lb. | lb . |  | lb. | lb. |
| 1939. | 392,931 | 1,994,643 | 1943. | .3,726,607 | 6,877,338 |
| 1940. | 634,444 | 2,739,473 | 1944. | .3,739,529 | 8,013,593 |
| 1941. | 1,329,232 | 3,350,431 | 1945. | .3,429,233 | 8,158,876 |
| 1942. | 2,308,812 | 4,793,491 | 1946. | .2,325,978 | 5,589,366 |

A fourth transcontinental daily air-mail flight was established over the T.C.A. in March, 1946. Domestic air-mail schedules were revised and frequencies increased over some sections. A new air-mail service was inaugurated late in 1946 linking Moncton, N.B., Kentville, Yarmouth and Halifax, N.S.

During 1946, a number of new air-mail services to the United States were inaugurated including services between Ottawa and Washington; Montreal and Washington; Ottawa and New York; Montreal-Toronto-Chicago; Toronto-London and Cleveland; Fort William and Duluth and Victoria and Seattle. Daily flights now take place in both directions between Dorval (Montreal), Que., and London, England, and air-mail services with many other overseas countries have been resumed. A reduction in air-mail postage rates from Canada to numerous countries in every quarter of the globe became effective late in 1946 when the unit of weight was established at one-quarter ounce instead of one-half ounce.

## Section 1.-Post Office Statistics

Gross postal revenue of the Post Office Department reached the highest point on record during the year ended Mar. 31, 1946, amounting to $\$ 83,763,007$. Despite the fact that Armed Forces mails had subsided, the drop in volume was more than counterbalanced by the development of domestic postal business generally, and by the increases in commercial and relief parcels to Europe.
1.-Post Offices in Operation, by Provinces, as at Mar. 31, 1941-46

| Province or Territory | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |

[^270]Postage.-The net revenue receipts shown in Table 3 are received mainly in the form of postage. The gross value of the postage stamps, post cards, etc., sold during each of the latest nine fiscal years, was: $\$ 28,808,513$ in $1938, \$ 28,836,457$ in $1939, \$ 29,530,247$ in $1940, \$ 31,425,593$ in $1941, \$ 35,716,908$ in $1942, \$ 38,959,795$ in $1943, \$ 50,062,214$ in $1944, \$ 53,250,630$ in 1945 and $\$ 52,135,846$ in 1946 . Receipts from postage paid in cash were as follows: $\$ 10,865,895$ in 1938, $\$ 11,065,527$ in 1939, $\$ 11,792,311$ in $1940, \$ 13,459,526$ in $1941, \$ 15,777,816$ in $1942, \$ 16,057,366$ in 1943 , $\$ 18,728,050$ in 1944, $\$ 20,498,106$ in 1945, and $\$ 23,252,162$ in 1946.

## Section 2.-Auxiliary Postal Services

The auxiliary postal services include the issuing of money orders (including postal notes) and the facilities offered by the Post Office Savings Bank. In 1868, there were 515 money-order offices in operation, issuing orders to an amount of $\$ 3,342,574$; the following tables show the magnitude of operations in recent years. Statistical tables showing deposits with the Government Savings Banks and the business of the Post Office Savings Bank are included in the chapter on Currency and Banking (Chapter XXVI).

## PART IX.-THE PRESS

Statistics of the press as published in the Year Book have in the past been compiled from Mc Kim's Directory and the tables were presented on a basis of circulation of the various types of publication by provinces down to the year 1941 and for both English-language and French-language sections of the press. Mc Kim's Directory was suspended during the War and there appears to be no prospect of its reappearance in the near future. Under these circumstances, it has been decided to begin a new series of these statistics in the Year Book based on Canadian Advertising. Since these data are not comparable to the former series the continuity is definitely broken and it has been decided to begin the new series with the years 1945 and 1946. As opportunity permits, the figures will be worked back to 1939 in order to give better background to the data.

Full details of the circulation have not been available in all cases, however, but it is felt that a fair average of Canadian publication statistics is given in the following material.

Daily Newspapers.-Three types of daily newspapers are published in Canada, English-language, French-language and foreign-language newspapers. The number of these papers has remained about the same in 1946 as in 1945, but Table 1 shows an increase in circulation in the later year.

French daily newspapers have, as would be expected, a wide circulation in the Province of Quebec and some of the larger of these papers have been established in the Province for over 60 years. Ten of the 11 French-language papers are published in this Province, the other being in the adjoining Province of Ontario. Over 93 p.c. of the total circulation of the English and French dailies is in the urban centres of 20,000 population or over.

Weekly Newspapers.*-The weekly newspapers have a somewhat wider circulation; only 61 p.c. of the stated circulation of weekly English-language newspapers is in cities of 20,000 population or over and about 77 p.c. of the Frenchlanguage weeklies.

Canada is well served by foreign-language weekly newspapers. In 1946, these newspapers had a stated circulation of 190,500 copies among which Ukrainian papers had a circulation of 64,937 copies, German 32,165 , Yiddish 28,262 and Polish 15,157 copies.

Other Publications and Periodicals.-Tables 6 and 7 give the number of publications other than newspapers published in Canada. Monthly and weekly magazines and periodicals enjoy the largest circulation while those dealing with agricultural and rural topics, general magazines, dealing with household, social, fiction, etc., and religious and education papers are the most popular types.

[^272]

The diverse resources of the various parts of the country have led to a vast exchange of products and the task of providing goods and services where they are required for consumption or use by a population of $12,307,000$ (1946 estimate) accounts for a greater expenditure of economic effort than that required for the prosecution of Canada's great volume of Empire and foreign trade, high though the Dominion ranks among the countries of the world in this field.

Domestic trade is broad and complicated: it encompasses all values added to commodities traded in, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services including those directed to the amusement of the people, such as theatres, sports, etc. In fact domestic trade covers a large part of those activities of the people that add to the 'form' utilities (production), dealt with in the various preceding chapters, the utilities of 'place', 'time' and 'possession', including personal and professional services. However, not all phases of this broad field are covered here, the arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles and cross reference to other chapters is 8 more convenient way of dealing with certain subjects. The Index will be found useful in this respect.

## PART I.-GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

Section 1.-Transition Controls Affecting Distribution and Trade, 1946-47*

Shortages of various goods persisted through 1946. Though domestic production showed considerable improvement and toward the end of the year was expanding rapidly, supplies of many goods had not yet overtaken the heavy demand. Acute world-wide shortages of foodstuffs and materials both sustained the external demand for a number of basic Canadian products at extraordinarily high levels and restricted the supplies available to Canada from other countries of such important commodities as sugar, vegetable oils, tin, and cotton yarns and fabrics.

The rationing of meat, butter and sugar was maintained and the directives to manufacturers of essential garments were continued in 1946. In the case of farm machinery, lumber, base metals, certain pulp and paper products and other goods, export controls were employed to ensure supplies for domestic requirements at ceiling prices in the face of the large demand and higher prices prevailing in external markets. Some metals and various pulp and paper products were also subject to controls regulating their domestic distribution. A few controls respecting the distribution of food were discontinued during the year and the controls over textiles and certain other products were somewhat relaxed. In January, 1947, the consumer credit regulations which had been imposed in October, 1941, were revoked.

Export Controls.-The need for export controls arises from the fact that, owing to the success of the stabilization program, the Canadian price level is substantially below that of most countries. This creates a heavy potential drain on domestic supplies, particularly of certain essential raw materials and goods. By means of export controls, it is possible to protect domestic requirements and at the same time make provision for limited shipments to traditional export markets. The original extensive scope of these controls has been considerably reduced in the past ${ }^{2}$ few years, though the restrictions continue to apply to a number of important items including certain foods, feed grains, lumber, metals, pulp and paper products, farm machinery and automobiles.

Export controls are imposed by the Department of Trade and Commerce at the request of and in collaboration with the Wartime Prices and Trade Board. The type of control depends upon the supply situation in respect to the particular commodity. In the case of items in very short supply each application for an export permit is considered separately, while for others export permits are issued against an established quota. For a further class of commodities permits are freely issued, , the machinery of export control being retained to permit prompt action if the supply $t$ situation should deteriorate.

Import Controls.-Import controls, like those on exports, owe their existence to world shortages of certain items. They are essential to ensure that imports of zany item allocated by an international organization do not exceed that allocation. oIImport controls are administered by the Department of National Revenue in coyoperation with the Wartime Prices and Trade Board. Their scope has been much

[^277]less extensive than that of export controls. Commodities at present under import control include sugar, molasses, sugar syrups and other high sugar-content items, oils and fats and oil-bearing materials, prunes, currants and raisins, canned meats and canned poultry, dairy products*, wheat and wheat products†.

Equitable Distribution Policy.-The policy of equitable distribution governing goods in short supply was further relaxed in 1946 and early 1947. Under the original system, manufacturers and wholesalers of scarce goods were required to allocate supplies to their customers on the basis of 1941 sales to these customers. Towards the end of 1945, the policy was revised by exempting from the application of equitable distribution controls some goods such as automobiles and electrical appliances for which the 1941 pattern of distribution was no longer appropriate, and by permitting free distribution of 20 p.c. of current supplies of some other goods provided that reasonable quantities were made available to ex-service men. During 1946, several other items were released from equitable distribution controls and in January, 1947, all goods remaining subject to the policy were placed in the category that allowed freedom of distribution with respect to 20 p.c. of current supplies. At the same time, a number of additional goods were entirely freed from the application of the policy. Goods exempted from price control automatically ceased to be subject to the controls of equitable distribution as did also those that were no longer in short supply.

Foods.- $\ddagger$ Most Canadian crops in 1946 were very good especially in comparison with the relatively small yield of 1945 . Output of some dairy products, however, showed significant decreases from the preceding year. The combination of a decline in total milk production in 1946 and the continuance of a heavy volume of fluid milk sales reduced the amount available for the production of butter and cheese. Hog slaughterings in 1946 showed a substantial drop from 1945 and cattle marketings, though still large, were somewhat smaller than in the previous year. Sugar supplies were moderately above the low level of 1945 but other imported items, particularly oils and fats, remained very scarce.

Urgent export requirements, heavy domestic demands and the reduced production of some foods made it necessary to continue a number of restrictions on the domestic consumption of food. The rationing of butter, meat and sugar was maintained, restrictions on cream sales were continued and controls on the distribution of evaporated milk were extended.

However, a number of controls affecting foods were removed during 1946. The excellent crops of wheat, fruit and vegetables made possible the lifting of restrictions imposed in March, 1946, on the use of wheat for milling and the elimination of distribution controls on canned fruits and vegetables except tomatoes and tomato juice. By the end of 1946, the bulk purchasing of all dried fruits except raisins, currants and prunes had been discontinued and in January, 1947, the tea and coffee trade was advised that no further bulk purchases of tea and coffee would be undertaken when current contracts were completed.

[^278]Meat.-The weekly meat ration, varying from one to three pounds depending upon the type of meat, remained unchanged, except for a minor change in November, 1947, when the number of tokens for canned sausages was reduced.

Hog slaughtering regulations, which were part of the machinery of meat rationing, were revised several times. In April, 1946, controls over hog slaughterings were tightened to check abuses by which some operators were obtaining hogs in excess of their quotas.

Butter.-Less butter was produced in 1946 than in the preceding year. The butter ration had been reduced from 7 ounces to 6 ounces per week in January, 1946, and then to 4 ounces in March. As the supply situation eased in the spring season, the rate was increased to $5 \frac{1}{3}$ ounces in the middle of May and further raised to 6 ounces in June.

Distribution irregularities, arising out of the tight supply position, necessitated some measure of control over the butter sales of Prairie wholesalers. A practice developed whereby Prairie wholesalers were buying up, in addition to their usual requirements, the stocks that would normally have been sold to wholesalers in other provinces. These wholesalers thus had to purchase their supplies at the wholesale price and had no margin left. To correct this situation, monthly sales of Prairie wholesalers to wholesalers in other provinces were limited to the amount sold these customers in the corresponding months of 1945.

Cram.-For several years, sales of cream have been subject to certain restrictions designed to conserve butterfat for the production of butter. Thus, the butterfat content of fluid cream was limited to 18 p.c. and the monthly sales of cream distributors in most of the important markets were limited on the basis of their sales in June, 1944. Control over fluid milk was returned to the provincial milk boards when the consumer milk subsidy was discontinued in June, 1946.

Cheese.-The production of cheddar cheese in 1946 was only about threequarters of the output in 1945. Because of this and the requirements of the contract with the United Kingdom, supplies available to the domestic market were limited and steps had to be taken to secure fair distribution. In August, 1946, the Board took control of all stocks of cheese held by processors and dealers in excess of 75 p.c. of their holdings on Aug. 1, 1945, and required all persons holding more than 5,000 pounds of cheddar cheese to report such stocks. In October, a further and more extensive step was taken to check the diversion of cheese from normal trade channels. Wholesalers were prohibited from selling without permission any cheddar cheese manufactured in Ontario or Quebec after Oct. 12, 1946, and were required to hold such cheese for disposition under direction of the Administrator.

Evaporated Milk.-The declining production of evaporated milk made it necessary to extend in November, 1946, the distribution controls designed to assure supplies for essential requirements. Under the priority system as established in October, 1943, sales of evaporated milk in areas adequately supplied with fresh milk had been restricted to infants and invalids, while in "deficiency areas" these users received first priority. During the following two years, however, it had been possible to relax the regulations by removing controls in areas deficient in fresh
milk and also by lifting all restrictions in the western provinces. Since early in 1945, therefore, restrictions had been in force only in the southern parts of Ontario and Quebec where adequate supplies of fresh milk were available. In November, 1946, the controls were extended to additional areas and included for the first time as "restricted areas" some parts of the Maritimes. At the same time, the regulations governing the issue of evaporated milk coupons for infants were tightened to ensure closer control over sales.

Sugar and Preserves.-The international allocation of short supplies of sugar continued throughout 1946. The total supply available to Canada improved sufficiently to permit several increases for quota users and an extra allotment to consumers in the last three months of the year. At the beginning of the second quarter of 1946, the quotas of sugar for industrial users were raised and they were further increased in the second half of the year. Quotas then stood at the following proportions of 1941 usage: bakers, 80 p.c.; biscuit and cereal manufacturers, 75 p.c.; others, such as soft drink, confectionery and candy manufacturers, 70 p.c. The allotments of quota users, such as hotels, restaurants and lumber camps, were also adjusted upward.

Sugar and preserves rationing had been combined under a single scheme in January, 1946. Generally, two sugar preserve coupons (good for one pound of sugar, 24 ounces of jam, jelly or marmalade, or appropriate amounts of other preserves) became valid each month. In the months of March and April, three coupons were validated to allow additional preserves in the period of the reduced butter ration. During the last four months of the year an additional three pounds of sugar was made available to consumers. In December, 1946, canned fruits as well as cranberry sauce and baby foods containing fruit were removed from rationing in view of the excellent fruit packs that year. Pie fillers, fruit fillers and fountain fruits continued to be rationed only if they contained 66 p.c. or more of sugar and thus were classified as jams. Maple products were removed from rationing in February, 1947, though industrial users were still required to obtain permission for the use of maple syrup or maple sugar in the manufacture of other products. On Apr. 1, 1947, an increase of 14 p.c. in the individual sugar ration became effective, raising the ration from 7 to 8 pounds in each quarter. At the same time, the industrial ration was also increased.

Textiles.-Canada's total textile supply, though somewhat larger in 1946 than in 1945, was still inadequate. Difficulties continued to be experienced in securing adequate imports of broadwoven cotton fabrics and imported fine count cotton yarns were also scarce. Domestic production of cotton yarns and fabrics was restricted by industrial disputes which also affected rayon fabric output. The production of certain rayon fabrics was hampered, in addition, by inadequate imports of filament yarns. In the case of wool, the chief difficulty was the shortage of imported wool tops (particularly merinos), and supplies of worsted yarns and fabrics were not fully adequate.

Several wartime procurement arrangements came to an end in 1946. Early in the year, the procurement of wool yarn and fabric allocations from the United Kingdom, previously purchased in part by the Canadian Wool Board, was returned to private importers. Towards the end of 1946, the United States announced the termination of their system of cotton yarn and fabric export allocations.

Directed Production.-In view of the continuing inadequacy of yarn and fabric supplies in 1946, the Board maintained the system of "production directives" designed to secure the largest practicable output of essential garments. Articles under directive during the year included men's suits and shirts, work clothing, most types of children's garments, women's lingerie, and knitted underwear and hosiery for men, women and children. In addition, production directives applied to men's overcoats in the second half of the year which is the heavy production season. Directives on knitted outerwear for adults and men's work socks were dropped on Mar. 1, and Apr. 1, respectively, while the women's rayon dresses program was terminated at the end of June.

The directive program carried over into 1946 was more flexible and informal than that of 1945 . In the case of woollens and worsteds, the system was simplified by the abolition of "fabric purchase authorizations" under which manufacturers of garments under directive had received their supplies of woollens and worsteds. The flow of fabrics to manufacturers continued to be guided along the general lines established when the authorizations were in effect.

Rayon garment directives were modified in the latter half of 1946 and the directive on dresses was dropped. The lingerie, children's wear, and lining fabric directives were continued in respect of total yardage but the provisions for distribution were relaxed somewhat.

Production under the woollen garment directives was generally very good, and was reasonably satisfactory in the case of rayon. The output of woven cotton garments, particularly men's fine shirts, was restricted by fabric shortages and labour difficulties, and insufficient supplies of the finer count cotton yarns hampered the production of knitted underwear.

The improvement in supplies of woollens and rayons by the end of 1946 made possible the termination of most directives. Garment manufacturers were advised to continue in 1947 the pattern of production and distribution of the previous year. Directives for garments using cotton woven fabrics were also discontinued in view of the termination of United States export allocations of cotton yarns and fabrics. Hosiery and knitted underwear directives are being continued into 1947 in their original form.

Service Mcn's Suit Priority Program.-The special priority system under which each discharged service man received priority in the purchase of a suit remained in effect throughout most of 1946. In July, demobilization was well advanced and the regulation requiring manufacturers to set aside 35 p.c. of their production for delivery against priority certificates was withdrawn. Priority certificates were issued until Oct. 30, 1946, and retailers and merchant tailors were required to honour them up to Dec. 31, 1946. This priority system was successful in meeting the heavy demands of service men for suits.

Removal of Style Restrictions.-With one exception, the few remaining standardization and simplification restrictions respecting clothing were withdrawn during 1946. In March, the regulations limiting manufacturers of women's and misses' coats, suits and jackets to 50 styles each season was revoked and, in November, controls governing the length and sweep of garments and eliminating unessential accessories were lifted. The restriction limiting the use of fleece fabrics to essential garments was continued.

Pulp and Paper Products.-While the output of pulp and paper products reached a high level in 1946, it was necessary to continue distribution controls over many items to prevent an excessive drain to the higher priced external markets and to provide for the most essential users.

Since the end of 1945, when the allocation of newsprint to export markets was discontinued, domestic supplies had been provided for by directives to the mills. When manufacturers' ceiling prices were suspended in May, 1946, informal arrangements were made with the mills to continue to supply Canadian customers on the basis of their established quotas and, in addition, to make available to them a fair share of any increased supply for sale on the North American market. This arrangement was continued until June, 1947.

The allocation of wood-pulp and paper board to domestic users also continued in 1946 in view of the urgent requirements at home and the pressure of export demands. Supplies of waste paper were inadequate and controls governing its distribution to various users were maintained.

Special measures were taken to meet the heavy demand for packaging materials for building products and food for both the export and domestic markets. To permit an increase in the production of multi-wall sacks for these purposes, kraft paper was diverted from use for wrapping paper, brown envelopes and bags. The distribution of shipping cases was governed by a priority system under which preference in delivery was given to orders from essential users such as food and building material manufacturers.

Metal Products.-Metals.-Continuing shortage of some metals, aggravated in several cases by work stoppages, necessitated various controls over their distribution and use. The output of iron and steel was seriously restricted by labour disputes, chiefly in the steel and coal industries of the United States and the Canadian steel industry. The Steel Control of the Department of Reconstruction and Supply was re-established in January, 1946, and throughout the year directed the production and distribution of basic steel products with the object of securing the maximum output of the finished steel articles most urgently required. Certain subsidies were necessary to maintain uneconomic production which otherwise would have been discontinued. Some transportation subsidies were also provided where the diversion of steel, although uneconomic and unusual, would bring about a greater supply of needed finished products.

In the case of copper, lead and zinc, higher external prices constituted a potential heavy drain on supplies and, to protect domestic requirements, producers were required to allocate sufficient quantities to the Canadian market.* As a result of a work stoppage involving the principal domestic manufacturer of copper and brass mill products, the sale of these products was for a time restricted by permit to the most essential uses such as housing, refrigerators and farm implements.

Tin remained in short supply throughout the world owing to the slow recovery of exports from Malaya, and Canada's supply continued to be bulk purchased and allocated to the various users. The shortage of tin necessitated the continuance of restrictions on the use of metal containers.

Metal Containers.-Following the steel strike in the United States, the regulations on metal containers were tightened by further restricting the list of products that could be packed in cans and by requiring the manufacturers of tin

[^279]mill products to give priority to materials for containers required for these essential products. With the easing of the situation in April, the use of metal containers was permitted for additional products but, at the same time, limitations were placed on the quantities of cans that would be used for packing some of these items. The priority system governing the production of tin mill products was discontinued in February, 1947.

Motor-Vehicles.-In August, 1946, the Department of Reconstruction and Supply withdrew its regulations respecting the distribution of new motor-vehicles. It had become increasingly difficult to decide the relative essentiality of various needs and, in addition, the interruptions to the production of new cars interfered with the operations of the priority system. The essentiality certificate system governing the sale of used cars was discontinued in May, 1946.

## Section 2.-Combinations in Restraint of Trade*

Dominion legislative measures for aiding and regulating trade include specific prohibitions of operation against the public interest by monopolies and similar commercial combinations. Monopolistic trade arrangements tending to eliminate competition in price, supply or quality of goods, and thereby to increase unduly costs or prices, are illegal under laws including the Combines Investigation Act and Sect. 498 of the Criminal Code. These laws are designed to assist in achieving the widest desired use of the nation's economic resources by promoting reasonable competitive opportunities for the expansion of production, distribution and employment.

The first Federal legislation in this field was enacted in 1889 and is still effective in amended form as Sect. 498 of the Criminal Code. Legislation providing for investigation of trusts or combines was first enacted in 1897 as part of the Customs Tariff Act. In 1910 a separate Combines Investigation Act was provided and succeeding Acts were enacted in 1919 and 1923.

The Combines Investigation Act.-The Combines Investigation Act (c. 26, R.S.C. 1927, as amended in 1935, 1937 and 1946) provides for investigation of trade combinations, mergers, trusts and monopolies alleged to have been formed or operated in restraint of trade and to the detriment of the public. Organizations or commercial arrangements of this class which operate to the detriment of the public by enhancing prices, fixing common prices, restricting competition, limiting production or otherwise restraining or attempting to restrain trade, are defined in the Act as combines. Participation in the formation or in the operation of a combine is an indictable offence, subject to penalties up to $\$ 25,000$ or two years' imprisonment. Investigations of alleged combines under the Act are conducted under the direction of the Combines Investigation Commissioner who reports to the Minister of Justice. The Act provides for publication of reports of such investigations and for prosecution when a combine is found to exist.

An inquiry into the nature and effects of international cartels and other similar types of private monopolistic controls affecting Canadian trade was completed in 1945. This involved a survey of the principal kinds of international industrial combinations which had restrictive or monopolistic effects upon the production and distribution of commodities entering into Canada's foreign and domestic trade

[^280]in the pre-war period. It included an examination of needs for the prevention or public control of types of commercial combinations that were capable of unduly restricting Canadian trade. The results of the inquiry were published in a report entitled "Canada and International Cartels", made by the Commissioner of the Combines Investigation Act to the Minister of Justice in October, 1945. The report included recommendations that the Act be strengthened in certain matters of procedure; that more adequate facilities be provided for investigations; that wider use be made of Government powers to prevent the development of combines and that Canada co-operate in the establishment of an inter-governmental body dealing with international aspects of undesirable cartel practices.

The 1946 amendments to the Combines Investigation Act gave legislative form to the recommendations respecting procedure and facilities for investigation, including investigation of alleged breaches of Sects. 498 and 498A of the Criminal Code which concern offences related to those covered by the Combines Investigation Act. The section in the cartel report showing how patents may be used to assist in monopolization of trade against the public interest is reflected in the amendment authorizing the Exchequer Court to prevent by court order certain uses of patents or trade marks in undue restraint of trade.

During the war years, no formal investigations were conducted under the Combines Investigation Act as the greater part of trade and industry in Canada remained subject to the extensive wartime control measures administered by the Wartime Prices and Trade Board, the Department of Munitions and Supply and other governmental wartime agencies. Accordingly, matters which in times of peace would have been subjects for investigation under the Combines Investigation Act were dealt with by the appropriate wartime authority. Since the cessation of hostilities and with the gradual relaxation of wartime controls, the need for resumed activity under the Act has been recognized by reorganization of staff, amendment to the Act, and increased investigation activity.

Action initiated in 1943 in the Exchequer Court to impeach certain optical goods patents was still pending at the end of 1946. The action had arisen from an earlier investigation under the Combines Investigation Act.

Inquiries were made during 1946 in a number of industries and trades in which it was alleged that trade practices of a restrictive or discriminatory character were being followed.

In several cases where possible conflict with combines legislation might have arisen, representatives of trade associations have, during 1946, discussed their tentative plans with the Combines Investigation Commission and have avoided the adoption of restrictive policies that might have been questioned as being possibly contrary to the Act. In dealing with such matters, much may be accomplished in a preventive way where the organizations concerned are prepared to discuss their tentative programs in the light of the need for maintenance of competitive conditions and to see that the public interest therein is not likely to be prejudiced by the policies that may be adopted.

International Restrictions in Trade.-In December, 1945, the Government of the United States published a document entitled "Proposals for Expansion of World Trade and Employment" copies of which were transmitted to other govern-
ments of the world. These proposals, which had been the subject of discussion with the United Kingdom, contemplated international action for the removal of barriers to trade, including those resulting from private restrictive business practices commonly referred to as cartel agreements. The suggestion of the Government of the United States that the United Nations should convene a world conference on trade was followed by the adoption of a resolution in February, 1946, by the Economic and Social Council setting up a preparatory committee to prepare a draft convention and to make recommendations for the holding of a general conference. Representatives from 17 countries, including Canada, met at London, England, in the autumn of 1946 as the Preparatory Committee of the International Conference on Trade and Employment. The Commissioner of the Combines Investigation Act was a member of the Canadian delegation and sat on the Working Committee on Restrictive Business Practices. After several weeks of deliberation, delegates on this sub-committee reached general agreement on recommendations to the main preparatory committee as to arrangements that might be instituted by an International Trade Organization to receive and investigate complaints of restrictive business practices which hamper world trade and to transmit the results of such inquiries to the participating countries. The conclusions of the Preparatory Committee were to be considered at committee sessions to be held at Geneva, Switzerland, in the spring of 1947 prior to a general conference in the autumn of that year.

## Section 3.-Patents, Copyrights and Trade Marks*

Patents.-Letters patent, which in England have been in the gift of the Crown from the time of the Statute of Monopolies (1624) and earlier, are and always have been a statutory grant in Canada. An Act was passed in Lower Canada in 1824 wherein provision was made for the granting of patent rights to inventors who were British subjects and inhabitants of the Province. Upper Canada passed an Act in 1826, and Nova Scotia and New Brunswick passed Acts at later dates. In 1849, after the Union, a consolidating Act was passed applying to both Upper and Lower Canada, and the B.N.A. Act (1867) assigned the granting of patents exclusively to the Parliament of Canada. The Dominion Patent Act of 1869 repealed the provincial Acts and has formed the basis of all succeeding legislation.

Letters patent are now issued subject to the provisions of c. 150, R.S.C., 1927 as consolidated in c. 32,1935 , and application for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa, Canada.

The Patents, Designs, Copyright and Trade Mark (Emergency) Order, 1939, was passed to deal with conditions arising out of the War of 1939-45. The Order confers on the Commissioner of Patents power to extend the time for doing anything prescribed by the Patent Act, the Design Act and the Copyright Act; to grant licences to manufacture under enemy-owned patents, designs and copyrights; to vary existing agreements; to hold secret or to withhold from publication any disclosure that might be of service to the enemy; and to grant permission to file patent applications abroad. The main object of the licensing provisions under the Order is to permit and encourage the working in Canada of inventions protected by enemyowned patents, which for that reason could not be utilized during the War.

[^281]1.-Patents Applied for, Granted, etc., in Canada, Years Ended Mar. 31, 1941-46

| Item | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Applications for patents............ No. | 9,064 | 9,678 | 10,024 | 11,227 | 12,672 |  |
| Patents granted.................... " | 7,834 | 8,346 | 7,686 | 7,803 | 7,084 | 7,412 |
| Granted to Canadians.............. " | 608 | 595 | 500 | 480 | 486 | ${ }^{495}$ |
| Caveats granted.................. " | 318 7,728 | 246 7488 | $\begin{array}{r}233 \\ 8 \\ \hline\end{array}$ | 223 7857 | 802 | 421 |
| Fess received, net.................. | 7,728 333,646 | 7,488 351,553 | 8,530 348,036 | 7,857 366,254 | 8,265 388,593 | 8,9644 |

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 12,542 in 1923 and has remained between 7,000 and 8,500 for the past ten years. Of the 7,412 patents granted in 1946, 5,845 or 79 p.c. were from inventors resident in the United States, 495 from Canadian residents and 734 from residents of the United Kingdom, while residents of Switzerland applied for 94, of Sweden for 55, of Germany for 52, of the Netherlands for 44, of France for 27, and of other countries for 66.

During the past decade, inventions in the chemical arts (chemicals, fuels, oils, plastics, medicines, pulp, metallurgy and electrochemistry) have been the most numerous, followed by inventions in the electrical class (generation, power, distribution, lighting, heating, intelligence transmission). In 1946 over one-half of the patents applied for fell in these two classes. In chemistry, the trend was pronounced in the development of acrylic and vinyl resins and plastics. Applications re synthetic dyes, the preparation, use and regeneration of catalysts, and lubricating compositions were also numerous, and those re therapeutic substances, especially sulfa drugs, penicillin and other substances produced from moulds, received much attention.

In the electrical field, inventions re rectification systems, circuit breakers, electronic and condenser welding and high-frequency heating were numerous. In radio, the outstanding trend was in the development of electronic devices, radar developments and radio relay transmission systems.

Inventions for warfare, except in aeroplane structure, declined, though variable pitch propellers and hydraulic and electrical controls for aeroplanes have retained the interest of inventors. In gas engines, attention was directed to jet propulsion, superchargers and fuel and ignition systems. In farm machinery, development continued in combines and other harvesters. Building construction was very active, especially in structural details for portable and knock-down houses. Increased interest was also shown in metal cans and boxes, shaft packing using natural and synthetic rubber, the lasting of shoes, the use of plywood in boats, photo-sensitive emulsions, toys and games, cigarette lighters, can openers, etc.

Copyrights, Industrial Designs and Timber Marks.-Registration of copyright is governed by c. 32, R.S.C., 1927, and applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Copyright Act of 1921 (consolidated in c. 32, R.S.C., 1927) sets out, in Sect. 4, the qualifications for a copyright and, in Sect. 5, its duration: "Copyrights shall subsist in Canada in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death"

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union, and the United States of America, as well as in Canada.

Protection of industrial designs and of timber marks is afforded under the Trade Marks and Design Act (c. 201, R.S.C., 1927) and amendments, and the Timber Marking Act (c. 198, R.S.C., 1927) and amendments. Registers of such designs and marks are kept under the Copyright Branch of the Patent Office, and information regarding them is published in the Patent Office Record.

Trade Marks and Shop Cards. - The Trade Marks Office, a Branch of the Department of the Secretary of State, is charged with the administration of the Unfair Competition Act, 1932, which repealed all previous Acts governing trade marks, and also with the Shop Cards Registration Act, which came into force on Sept. 1, 1938. Applications for registration of trade marks and/or shop cards should be addressed to the Registrar, Trade Marks Office, Ottawa, Canada.

A Register of Trade Marks is kept, in which, subject to the provisions of the Act, any person may cause to be recorded any trade mark he has adopted, and notification of any assignments, transmissions, disclaimers and judgments relating, to such trade mark. In order that the public may be kept informed in the matter of trade-mark registration, a list of marks registered appears in the Patent Office Record which is issued weekly.

The Shop Cards Registration Act is designed to afford a measure of protection to organizations, such as trade unions, that formerly were able to register their particular designations as Union Labels under the Trade Mark and Design Act. Registrations under the Act may be renewed every 15 years.

## Section 4.-Weights and Measures*

The object of weights and measures administration is to maintain uniformity and accuracy in the use of legal standards of the country in industry and commerce. An outline of the principal legislation and legal standards is given at p. 527 of the 1941 Year Book. The Weights and Measures Service is administered by the Department of Trade and Commerce. For purposes of administration, the Dominion is divided into 19 districts, each in charge of a District Inspector.

The total revenue collected by the Service in the years ended Mar. 31, 1945 and 1946 amounted to $\$ 408,629$ and $\$ 414,522$, respectively, while the expenses, including salaries, amounted to $\$ 420,389$ and $\$ 425,930$, respectively.

## Section 5.-Electricity and Gas Inspection $\dagger$

The Electricity and Gas Inspection Branch of the Department of Trade and Commerce administers three Acts: the Electricity Inspection Act (c. 22, 1928), the Gas Inspection Act (c. 82, R.S.C., 1927) and the Electricity and Fluid Exportation Act (c. 54, R.S.C., 1927).

The Gas Inspection Service was inaugurated on July 1, 1875, and the Electricity Inspection Service in 1894, at which time these two Services were merged to form the Electricity and Gas Inspection Services and constituted as a Branch of the Department of Inland Revenue. When the Department of Inland Revenue was merged with other Departments in September, 1918, the Electricity and Gas Inspection Services became a Branch of the Department of Trade and Commerce.

For the purpose of this administration, Canada is divided into 3 divisions and 20 districts: the total staff is 109 . The nature of the work performed by these Services is entirely technical and comprises the control of all types of electricity and gas meters used throughout Canada, and the testing and stamping of every

[^282]meter used for billing purposes, the object being to ensure the correct measurement of electricity and gas sold. Manufactured gas is also tested to determine its heating value wherever sold in Canada.

The latest report of the Branch shows 534,192 electricity and gas meters tested in the year ended Mar. 31, 1946, as compared with 473,878 in the preceding year. The total revenue derived from electricity and gas inspection was $\$ 367,197$ as compared with an expenditure of $\$ 280,364$. The Branch also collected $\$ 695,243$ as export duty and licence fees under the provisions of the Electricity and Fluid Exportation Act.

Related statistics collected in the administration of the Electricity and Fluid Exportation Act will be found in the Power Chapter of this volume, pp. 501-502.

## 5.-Electricity and Gas Meters in Use, Years Ended Mar. 31, 1937-16

Nore.-Figures for the years 1916-36 are given at pp. 561-562 of the 1942 Year Book.

6.-Sales of Manufactured and Natural Gas, 1942-46

## Section 6.-Bounties and Subventions

Bounties.-In cases where it is considered advisable to encourage the production of a particular commodity, bounties paid by the Government are recognized substitutes for protective duties. In the past they have been used in Canada to a considerable degree*, but the only bounty that has involved payments by the Federal Government during the past ten years is a bounty of $49 \frac{1}{2}$ cts. per ton on bituminous coal mined in Canada and used in the manufacture of iron or steel. The bounties paid for the years ended Mar. 31, 1931 to 1941, are given at p. 562 of the 1942 Year Book; those for fiscal years since that time are as follows:-

|  | Year Ended <br> Mar. 31- | Tonnage on Which Bounty Paid | Bounty <br> Paid |
| :---: | :---: | :---: | :---: |
| 1942 |  | 765,775 | \$379, 059 |
| 1943 |  | 766,144 | 379, 241 |
| 1944 |  | 646, 875 | 320,203 |
| 1945. |  | 709,091 | 351,000 |
| 1946. |  | 656,781 | 325,107 |

Following the outbreak of war in 1939, Dominion and provincial wartime bonuses were introduced to encourage the production of particular commodities and had an effect similar to that of bounties (the Province of Alberta, for instance, instituted a bonus of 4 cts. per lb . on wool during this period). These bonuses were dealt with in the various sections of wartime editions of the Year Book where they had a direct relationship to production.

Bounties are also paid by certain Provincial Governments. The Government of Nova Scotia, under the Mines Act relating to coal, pays a rebate of lease rental under specified conditions, the amount of which was $\$ 4,140$ for each of the years 1943 and 1944, $\$ 4,260$ for 1945 and $\$ 4,230$ for 1946. In Ontario, under the Iron Ore Bounty Act passed in 1937, the following amounts have been paid: $\$ 118,705$ in $1939, \$ 313,864$ in $1940, \$ 302,016$ in 1941 and $\$ 306,090$ in 1942 ; no bounties have been paid since 1942. Provision also exists in British Columbia for the payment of bounties on the production of pig iron from ore and steel, but at present these materials are not being produced in that Province.

Subventions on Coal. $\dagger$-This form of assistance to Canadian coals was inaugurated in 1926. In that year a Special Committee of the House of Commons recommended that trial shipments of Alberta domestic coal be made by rail and lake to parts of Central Canada and that the Government should consider the question of granting assistance to the carrier or the agency handling the coal in order to enlarge the markets for Maritime coals.

Growing out of test movements then made, a system of Federal aid developed. This assistance took the form of transportation subventions granted by Order in Council. In general, the Federal Government contributed the approximate difference in laid-down costs of Canadian coals compared with imported coals. The methods adopted to achieve this were: (1) Payment on individual movements of the actual difference between the laid-down cost of Canadian coals and imported coals at the point of delivery; (2) reduction of the freight rate on coal by payment to the carrier of either an allowance per ton-mile or a percentage of the set rate; (3) payment of $\$ 2 \cdot 50$ per ton on an $\$ 8$ rate offered by the railways for the movement of Alkerta coal into Central Canada.

[^283]The assistance extended to Nova Scotia coals from the beginning of subventions in 1928 to 1944 has averaged between 58 cents per ton in the first year to $\$ 2.87$ in 1943 and $\$ 2.42$ per ton in 1944 (this included authorized payments between 1932 and 1942 on Nova Scotia coal converted into coke in the Maritimes up to a maximum of $\$ 1$ per ton).

Assistance to New Brunswick coal between 1928 and 1944 varied between $\$ 1.75$ per ton in 1928 and $\$ 1.95$ per ton in 1930 down to 77 cents per ton in 1944.

Alberta and British Columbia coals have received aid in the form of a reduction in freight rate. During the first year, 1930, this amounted, in the Maritimes and Head of the Lakes area, to one-eighth of a cent per ton-mile, in 1931, one-seventh of a cent per ton-mile with a maximum of $\$ 1 \cdot 50$ per ton. In 1932, this maximum was reduced to $\$ 1 \cdot 20$ per ton and in 1934 the reduction of rate was fixed at onetwelfth of a cent per ton-mile and the maximum at 20 cents per ton.

In the case of British Columbia coal shipped to Ontario points where the freight rate was $\$ 8$ per ton or more, the railways offered, in 1933, a flat rate of $\$ 8$ to all points in Ontario where existing rates equalled or exceeded that figure, provided the Government paid a flat subvention of $\$ 2.50$ per ton. Thus the freight rate to the consumer was $\$ 5 \cdot 50$ per ton. Previous to 1933 , the cost to the Federal Government had varied between $\$ 5 \cdot 96$ per ton in 1928 and $\$ 5 \cdot 09$ in 1932.

Some Saskatchewan lignite, moved to Manitoba and to a lesser extent to the area of the Head of the Lakes, received assistance to compensate for that extended to bituminous coal that has varied between 50 cents per ton in 1930, 23 cents in 1935, 1937 and 1938, to 93 cents per ton between 1941 and 1944.

The total cost to the Federal Government of coal subventions granted between 1928 and 1944, inclusive, has been $\$ 37,275,230$ apportioned as follows:-

In addition, $\$ 41,495,032$ has been granted in the form of statutory assistance under the Domestic Fuel Act and the Coke Bounties Act; this assistance for the main part has been directed to the encouragement of the use of coke made from Nova Scotia coal in the manufacture of iron or steel (see under Bounties).

## Section 7.-Control and Sale of Alcoholic Beverages*

A brief historical outline of Dominion and provincial legislation passed from time to time concerning the control and sale of alcoholic beverages is given at p. 563 of the 1942 Year Book.

The provincial liquor control Acts have been framed to establish provincial monopolies of the retail sale of alcoholic beverages, with the practical elimination of private profit therefrom. Partial exception is made in the retail sale of beer by brewers, or others which certain provinces permit, while reserving regulative rights

[^284]and taxing such sales heavily. The provincial monopoly extends only to the retail sale and not to the manufacture of alcoholic beverages. The original liquor control Acts have been modified from time to time as deemed advisable.

During the war years, restrictions were placed on the manufacture, advertisement, importation and sale of alcoholic beverages, but by Aug. 30, 1945, most of such measures had been rescinded. They are outlined at p. 586 of the 1946 Year Book.

The exigencies of war had a profound effect on the operations of this industry. Due to the great demands for industrial alcohol, the production of potable alcohol had to be curtailed, with the result that the quantity of beverage spirits produced during the year and placed in bond for maturing declined from 9,009,874 proof gal. in 1942 to $2,699,050$ proof gal. in 1943. On the other hand, the output of unmatured alcohol increased from $9,761,725$ proof gal. to $20,325,529$ proof gal. In 1944, the production of unmatured alcohol rose to $26,721,560$ proof gal. and that of beverage spirits also rose to $8,502,038$ proof gal., while in 1945 unmatured alcohol dropped to $19,263,005$ proof gal. and beverage spirits rose to $16,708,576$ proof gal.

There were also changes in the nature of the materials used for distilling. The use of wheat increased from $319,647,661 \mathrm{lb}$. in 1943 to $402,535,232 \mathrm{lb}$. in 1944, but dropped to $360,472,179 \mathrm{lb}$. in 1945 . Wheat flour (alcomeal) increased from $3,855,803 \mathrm{lb}$. in 1943 , to $77,268,410 \mathrm{lb}$. in 1944 , but dropped to $73,443,114 \mathrm{lb}$. in 1945 . The quantity of molasses used, dropped from $93,895,056 \mathrm{lb}$. in 1942 to $622,951 \mathrm{lb}$. in 1943 and $4,658 \mathrm{lb}$. in 1944, but rose to $4,021,965 \mathrm{lb}$. in 1945 . The quantity of corn used was $22,970,249 \mathrm{lb}$. in $1943,15,833,741 \mathrm{lb}$. in 1944 and $45,191,740 \mathrm{lb}$. in 1945.

Net Revenue from Liquor Control.-In connection with the provincial figures of net revenue shown in Table 7, it is essential to note that they include not only the net profits made by Liquor Control Boards or Commissions, but also additional amounts of revenue received for permits, licences, etc., which are often paid direct to Provincial Governments. In addition to these figures, the Federal Government, for the fiscal year ended Mar. 31, 1946, collected in excise duties, customs duties, excise taxes, licence fees, etc., $\$ 70,399,161$ on spirits; $\$ 48,228,671$ on malt and malt products and $\$ 2,607,232$ on wines.*

* These figures do not include sales tax, details of which are not available for separate commodities.

## 7.-Total Net Revenue Received by the Provincial Governments from Liquor Control, by Provinces, 1940-46

Note.-These figures are for provincial fiscal years ended on the following dates: N.S., Nov. 30; N.B., Oct. 31; Que., Apr. 30; Ont., Mar. 31; Man., Apr. 30; Sask., Mar. 31; Alta., Mar. 31; and B.C., Mar. 31.

| Year | Nova Scotia | New Brunswick | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British <br> Columbia |

| 1946 | 9,020,665 | 6,890,562 | 23,095,957 | 30,373, 016 | 6,101,352 | 6,605, 448 | 8,248,814 | 11,194, 187 |

Apparent Consumption of Liquor in Canada.-It is not possible to obtain accurate figures on Canadian consumption of liquor. Certain Liquor Boards do not publish figures to show sales on a gallonage basis, and even were such data available for all provinces they would not necessarily represent total consumption. For example, the quantities consumed by tourists reach a considerable amount. Further, there is no definite information regarding the illegal traffic in liquor, though there is reason to believe that such illicit business has, at times, reached fairly large proportions.

Obviously, figures of consumption are subject to error for the reasons mentioned above, and also because no consideration has been given to increases or decreases in the quantities held in stock by the Boards or by licensees.

Spirits.-Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown as "entered for consumption" are released from warehouses, duty paid, presumably for consumption for beverage purposes in Canada.

Malt Liquors.-Only a small part of the output of malt liquors is placed in warehouses. The available supply is, therefore, made up of (1) production; (2) changes in warehouse stock; and (3) imports.

Wines.-The apparent consumption of native wines is obtained by dividing the rates of excise tax into the total tax collections.
8.-Apparent Consumption of Beverage Spirits, Years Ended Mar. 31, 1937-46

Note.-Figures for the years 1924-36 are given at p. 532 of the 1941 Year Book.

| Year | $\begin{aligned} & \text { Entered } \\ & \text { for } \\ & \text { Consump- } \\ & \text { tion } \end{aligned}$ | Add Exports in Bond | Add <br> Imports | Deduct Re-Exports of Imported Spirits | Deduct Total Domestic Exports | Apparent Consumption |

## PART II.-THE MOVEMENT AND MARKETING OF COMMODITIES

## Section 1.-Interprovincial Freight Movements*

Statistics on interprovincial trade are difficult to collect because there are no barriers to this trade. The only comprehensive statistics available are the loadings and unloadings of freight carried by the railways. The railway traffic is segregated into 76 classes of freight and the differences between loadings and unloadings are the imports and exports by rail for the respective provinces. But freight might be imported by rail and exported by water, such as western grain moved to the Ontario ports of Fort William and Port Arthur. Consequently, the statistics of Table 1 must not be taken as a measure of total interprovincial trade: they indicate only the interprovincial movement of railway freight which is one aspect of that trade.

[^286]1.-Railway Revenue Freight Movement, by Provinces, 1945 and 1946

${ }^{1}$ The freight originating and that terminating will not agree because that which originates within a certain year does not all terminate within the same year. On the other hand, some that terminated in 1946, for instance, originated within the previous year.

## Section 2.-Post-War and Pre-War Levels of Food Consumption in Canada

A special study of consumption in Canada of the major foods was undertaken during the war years by the Agricultural Division of the Bureau of Statistics in recognition of the national and international significance of such information. While data on total consumption of certain commodities such as wheat, alcoholic beverages, meats, etc., have been available for a considerable period, it was found necessary to establish a per capita level of consumption of a wide range of products on a comparable basis.

The study has been continued during the past two years but, whereas the comparison during war years was between peacetime and wartime levels of consumption, the comparison is now made between pre-war and post-war levels.

The series in Table 2 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1935-39 as an average for comparison with the post-war crop years ending June 30, 1946 and 1947 (the estimates for the year 1946-47 are preliminary and subject to revision).

The figures represent available supplies including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations have been made at the retail stage of distribution, except meats for
which the figures are worked out at the wholesale stage. The amounts of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reached the hands of the consumer. It should also be pointed out there are minor discrepancies in certain of the figures since storage stocks in the hands of retailers and consumers were not available. In the main, however, the figures represent the best summary of food consumption data that has been compiled for Canada.

All basic foods have been classified under 14 main commodity groups. Totals for each group have been computed using common denominators for the group, as for example: milk solids (dry weight) in the case of the dairy products group; fat content in the case of fats and oils; and fresh equivalent in the case of fruits. All foods have been included in their basic form that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

## Section 3.-The Grain Trade

## Subsection 1.-Governmental Agencies Regulating or Co-operating with the Grain Trade

The agencies exercising control of the grain trade in Canada are: the Board of Grain Commissioners, which administers the provisions of the Canada Grain Act, 1930; and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act, 1935. An account of the organization and functions of the Board of Grain Commissioners, prepared by J. Rayner, Secretary of the Board, appears at pp. 481-482 of the 1941 Year Book.

## THE CANADIAN WHEAT BOARD, 1939-46*

The Canadian Wheat Board operates under the Canadian Wheat Board Act which was passed on July 5, 1935. The Wheat Board first began to function in the autumn of that year. It could hardly be termed a sudden departure from previous methods of grain marketing. There had been Government boards in operation during the First World War and immediately thereafter, and, even more recently, the Federal Government had been active in the wheat market through the so-called stabilization measures of the period 1931-35.

The origin and operations of the Board are traced down to February, 1939, in an article which appears in the 1939 Year Book at pp. 569-580. The present article carries the record forward to December, 1946, and covers the critical years of the Second World War. During recent years the activities of the Canadian Wheat Board have been considerably widened becoming of great significance in the Canadian economy as well as in the international sphere.

The personnel of the Board as constituted at the time when the former article was written was as follows: Chief Commissioner, George H. McIvor; Assistant Chief Commissioner, R. C. Findlay; Commissioner, W. Charles Folliott. In those

[^288]early years, an Advisory Committee was appointed, under Sect. 6 of the Act, of which the membership is given at p. 574 of the 1939 Year Book. Its services were dispensed with on Dec. 3, 1935. This Advisory Committee was not reconstituted until 1940 as noted on p. 783.

The Crop Year, 1938-39

## Summary

The crop year 1938-39 will be remembered as a period of political uncertainty and of world-wide surplus conditions. Since the initial price paid by the Board was 80 cents per bushel for No. 1 Northern in store at Fort William/Port Arthur and since realizable market prices were consistently well below this figure, there could not fail to be a sizeable loss on the Board's operations. In the late winter and early spring of 1939, political tension in Europe and unfavourable growing weather in the United States winter wheat belt were the dominant market factors. While prices remained generally low, there were spurts of buying that helped prices and permitted the Board to make good sales. Early in July, however, the picture changed and the Liverpool market descended to register all-time lows. The Winnipeg July future fell to $49 \frac{7}{8}$ cents on July 24 . Board sales during this period were quite restricted.

## Changes in the Canadian Wheat Board Act

During the 1939 session of Parliament, the Canadian Wheat Board Act was amended in several important respects.
(1) A section was added limiting Board purchases of wheat to 5,000 bushels from any one producer in any one crop year, with the further provision that the aggregate of Board purchases from any one farm or group of farms operated as a unit must not exceed 5,000 bushels in any one crop year. Penalties were provided for infractions of this limitation.
(2) The fixed initial price was established under the amendment at 70 cents for No. 1 Northern at either Fort William/Port Arthur or Vancouver. Previously, it was the responsibility of the Board to determine the initial price with the approval of the Governor in Council, and this price was only a Fort William/Port Arthur basis. In 1935-36 and in 1938-39, by regulation, the Board included Vancouver on the same basis as Fort William/Port Arthur.
(3) Previous legislation, whereby the Governor in Council could approve of the extension of the provisions of the Act to oats, barley, rye or flax was repealed.
(4) A section was added whereby the provisions of the Act shall apply mutatis mutandis to wheat produced in the Eastern Division, the initial price to be fixed by the Board, with the approval of the Governor in Council.
These amendments came into force on Aug. 1, 1939.

## Exports

During the crop year, exports of Canadian wheat and wheat flour approximated $165,000,000$ bushels. Despite the relatively higher prices ruling for wheat at the Lakehead, $39,470,915$ bushels of wheat were exported via Pacific Coast ports, this wheat moving westward from the most favourable freight differential points. Nearly $1,000,000$ bushels were also shipped out of Churchill.

## Operations of the Board

Purchases from producers during the crop year amounted to $292,360,030$ bushels and there was an unsold carryover of $86,539,554$ bushels shown at July 31 , 1939. This wheat was sold during the following crop year, 1939-40, but the account for the 1938 crop was not closed out until Apr. 24, 1942, when the final funds were received from the Department of Finance. The deficit resulting from the Board's operations in 1938-39 was then placed at $\$ 61,525,691$.

## The Crop Year, 1939-40

## Summary

This first year of war was characterized by nervous markets, necessitating flexible policies to keep up with the changing conditions.

With the initial wheat price both East and West, set at 70 cents per bushel for top grades, the Board was again responsible for the handling of a large proportion of the Canadian wheat crop.

In chronological review of the year from the standpoint of prices and sales, it is evident that there was some improvement during August. On Aug. 24 and again on Aug. 29, sales of $5,000,000$ bushels were made to the British Food (Defence Plans) Department. At the first of September, when war broke out, there was a rise of about 20 cents per bushel in wheat prices, bringing No. 1 Northern up to about 80 cents per bushel by Sept. 7-some 10 cents above the Board's initial price. The Board's position was uncertain because it lacked control of marketable wheat supplies, having only about $110,000,000$ bushels of 1938 and 1939 crop wheat. However, good sales were made during this period of rising prices and good demand. In the last half of September both the price and demand fell and with the market price then approximating the Board initial price, deliveries to the Board increased, although farmers still held large quantities on storage tickets in the hope of a market rise. The Board's supply position being more secure, good sales were made in October although buying methods precluded any price advance from the 70 -cent level. During this period and continuing into November, there were bullish crop reports from the United States and Argentina. At the end of November, No. 1 Northern was selling at $75 \frac{3}{4}$ cents. By Dec. 18, this price had risen to $87 \frac{1}{4}$ cents under good buying. During this month most of the farmers' deliveries were sold at the higher open-market prices. January was a period of lower prices but good sales were made, mostly to the Cereals Import Committee of the United Kingdom. Most of the January price decline was recovered in February and prices held steady in March. Another price advance took place during the first three weeks of April, bringing the May future up to $91 \frac{1}{8}$ cents on April 20. Large sales to the United Kingdom were made during this period. The German invasion of Denmark and Norway, beginning Apr. 9, removed two more wheat markets. The month of May was featured by the German invasion of the Low Countries and the Allied retirement from Norway. Good markets prevailed until May 10 but on May 11 a sharp price decline began, aggravated by the invasion of France on May 15. On May 18, at the request of the Board, trading in Winnipeg wheat futures was forbidden below the closing prices of May 17, namely, 70 $\frac{3}{8}, 71 \frac{3}{8}$ and $73 \frac{5}{8}$ for the May, July and October futures, respectively. In the remainder of the month, the price showed minor advances but market sales were limited. On May 31, a sale of $50,000,000$ bushels in the form of October futures was made to the United Kingdom. June was a month of declining prices as the Germans over-ran France and began bombing the United Kingdom. Prices fell to the pegged levels and all country deliveries were sold to the Board. This condition persisted throughout July, but during this period exports of wheat continued to the United Kingdom, the exporters covering with the Board by taking back equivalent amounts of futures from the $50,000,000$ bushel block sale. Negotiations for a further sale of $100,000,000$ bushels began in July and were completed on Aug. 8.

Congestion developed in Canadian elevators during the crop year despite the Board's efforts to use all the available space. Ocean shipping was scarce and expensive, and had to be concentrated at St. Lawrence and Atlantic ports. About $10,400,000$ bushels of wheat were shipped from Pacific ports compared with $39,500,000$ bushels in 1938-39. Further shipments of $1,800,000$ bushels were made from Churchill.

## Acreage and Production

In 1939, $26,756,500$ acres were seeded to wheat in Canada. This was the highest acreage since 1932, all of the increase having taken place in the Prairie Provinces. Total production of wheat was estimated at $520,623,000$ bushels or approximately $160,000,000$ bushels more than in the previous year.

## Operations of the Board

Wheat.-Western Division.-During the crop year $342,400,000$ bushels were delivered to the Board and $160,300,000$ bushels of 1939 wheat were sold, leaving a balance of $182,100,000$ bushels held by the Board at July 31, 1940.

The balance of the 1938 crop that had amounted to $86,500,000$ on July 31, 1939, was sold during the crop year, the last sales of significance taking place in June and being part of the $50,000,000$ bushel sale to the United Kingdom. Altogether, during the crop year, net Board sales amounted to $246,800,000$ bushels.

Eastern Division.-The Board opened an office in Toronto and accepted deliveries of Ontario winter wheat at 70 cents per bushel for No. 1 grades, basis Montreal export rail freights. Deliveries amounted to about 4,125,000 bushels, all of which was sold within the crop year. A surplus of about $\$ 80,000$ resulted and this was paid out to producers on their participation certificates.

## Changes in Personnel

On Oct. 26, 1939, C. Gordon Smith of Winnipeg was appointed Assistant Chief Commissioner of the Board and R. C. Findlay assumed the position of Comptroller.

The Crop Year, 1940-41

## Summary

The only real similarities between the 1939-40 and 1940-41 seasons were the initial price of 70 cents and the large wheat crops harvested in both years, with the preponderance of deliveries to the Board. Contrasts were far more in evidence:
(1) The futures market was used very little in 1940-41. Minimum prices remained in effect throughout the crop year and bulk sales were the main method of wheat disposal, covering $220,000,000$ bushels.
(2) Delivery controls were made necessary by the addition of a large 1940 crop to the large remaining surplus from the previous harvest..
(3) There was a considerable improvement in exports of both wheat and wheat flour.

## Changes in the Canadian Wheat Board Act

Rather extensive revisions of the Canadian Wheat Board Act, given Royal Assent on Aug 7, 1940, included:-
(1) The maximum membership of the Advisory Committee was increased in number from seven to eleven.
(2) The 5,000 bushel limitation on deliveries to the Board was removed.
(3) Provision was made for the making of an interim payment under certain conditions, and when such can be made without any possibility of loss or cost to the Government.
(4) Provision was made for storage payments on farm-stored wheat at a rate not greater than the established country elevator tariff rate.
(5) The Board was given power to regulate deliveries by producers at country mill and terminal elevators and loading platforms.
(6) The provision that the Board sell "continuously", was deleted. (Obviously, continuous sales are not possible under war conditions.)
(7) The penalty clauses were made more severe.
(8) The Board was made responsible for the collection of a processing levy not to exceed 15 cents per bushel on wheat utilized for human consumption. The levy also applies to imported wheat and wheat products, which may only be imported by permission of the Board. The proceeds of the levy go into the ordinary revenues of the Board. (Subsequently, the levy was fixed at 15 cents per bushel by Order in Council and Regulations framed for its collection.)

## Acreage and Production

A further substantial increase in wheat acreage took place in 1940 when 28,726,200 acres were seeded in Canada. Total production was estimated at $540,190,000$ bushels-a near record crop for the second year in succession.

## Operations of the Board

Wheat.-Western Division.-The balance of the 1939 crop remaining for sale on July 31,1940 , amounted to approximately $182,000,000$ bushels and during the crop year 1940-41, this amount was reduced by sales to approximately $115,000,000$ bushels. As at July 31, 1940, with valuations as of that date, the 1939 crop account showed a deficit on the books of over $\$ 14,000,000$.

Deliveries by producers to the Board on 1940 Crop Account amounted to approximately $395,357,000$ bushels of which about $141,644,000$ bushels were sold during 1940-41, leaving 253,713,000 bushels unsold at July 31, 1941. At that time, the 1940 Crop Account also showed an operating deficit, approaching $\$ 4,500,000$.

Eastern Division.-With the initial price again fixed at 70 cents per bushel for No. 1 grades, basis delivered Montreal, the deliveries to the Board were much lower at about $1,333,000$ bushels. This wheat was all sold within the crop year at a profit of nearly $\$ 100,000$ that was distributed to the producers on their participation certificates.

Processing Levy.-A gross revenue of $\$ 5,966,792$ resulted from the application of the processing levy (see Item 8, above) and, after deducting expenses of administration, a net revenue of $\$ 5,867,129$ was credited to the 1940 Crop Account-Western and Eastern Divisions.

Delivery Quotas.-In order to divide the available elevator space as fairly as possible among the producers, delivery permits were made necessary for each farm. Quotas were established for the deliveries from each farm and as more space became available due to the shipping and disposal of grain, the quotas were gradually increased. Finally, with the co-operation of the producers and the elevator companies, it was possible to take delivery of all the marketable grain. Extensive building of temporary annexes to country elevators helped materially in expediting the deliveries. Farm storage payments, amounting to $\$ 6,147,524.03$ were made to producers on all wheat delivered between Oct. 31, 1940 and July 31, 1941.

## Advisory Committee

Acting under one of the 1940 amendments to the Canadian Wheat Board Act, the Government appointed an Advisory Committee of eleven members under the chairmanship of D. G. McKenzie to assist the Board. Six of the appointees represented the producers.

During the latter half of the 1940-41 crop year the Board and the Advisory Committee gave close study to the wheat position and made a series of recommendations to the Cabinet Wheat Committee, including limitation of wheat deliveries to the amount that could be sold at home and abroad, establishment of basic wheat acreages for delivery purposes for each western farm, and the use of delivery quotas.

## The Crop Year, 1941-42

## Summary

In 1941-42, the activities of the Canadian Wheat Board reflected the trend toward diversification of western grain production. The restrictive effect of the third year of war upon the international movement of wheat resulted in enlarged accumulations of surplus wheat in the four exporting countries-a surplus which increased from $635,000,000$ bushels on July 31, 1939, to $1,430,000,000$ bushels on July 31, 1942.

Exporting countries generally were concerned with problems of surplus wheat, problems of storage, and problems of financing wheat in all its aspects. Although Canada had supplied the bulk of the United Kingdom wheat requirements since the outbreak of war, exports of wheat had not been sufficient to take care of the large crops harvested in 1939 and 1940, with the result that the Canadian carryover had increased to record proportions on July 31, 1941, when year-end stocks in all positions amounted to $480,000,000$ bushels.

Confronted with temporary abundance of wheat and a great need for expansion in production of live stock and live-stock products based upon increased feed grain production, the grain program for 1941-42 was the subject of intensive study on the part of the Federal Government, the Canadian Wheat Board and the Advisory Committee to the Canadian Wheat Board. There developed a common agreement that wheat deliveries must be restricted to the amount of wheat that could be sold at home and abroad during the crop year $1941-42$ and that the accumulated reserve of wheat as at July 31, 1941, would be carried as a wartime reserve. At the same time, the need for increased production of feed grains was stressed in the grain program for 1941-42.

## The 1941-42 Grain Program

Wheat.-The statutory fixed initial price of 70 cents per bushel basis in store Fort William-Port Arthur or Vancouver remained in effect.

The 1941-42 wheat delivery program was provided for in Order in Council P.C. 3849 of May 30, 1941. This program called for the limitation of wheat deliverics for the crop year 1941-42 to approximately $230,000,000$ bushels for the whole of Canada. In the administration of the limitation on total marketings in the West, the Board established an "authorized acreage" for delivery purposes for each producer on the basis of 65 p.c. of his declared wheat acreage in 1940. At the same time, facilities were provided for the upward adjustment of authorized wheat acreages in the case of producers who had seeded an unusually low wheat
acreage in 1940. Other producers had their authorized acreages lowered because of unusually high wheat acreages seeded in that year. The adjustment of these extremes modified the inequities arising from the use of a single base year.

The number of bushels per authorized acre to be marketed in 1941-42 was left open until the size and pattern of the 1941 crop were known.

In accordance with the powers granted to the Board by Sect. 7 (h) of the Canadian Wheat Board Act, as amended in 1940, farm storage payments were made to producers on the same basis as in 1940-41, namely at the rate of $\frac{1}{45}$ of a cent per bushel per day. Farm storage commenced on Oct. 8 and was paid on all grades of wheat delivered to the Board between Nov. 1, 1941, and July 31, 1942.

By Order in Council P.C. 5844, dated July 31, 1941, the section in the Canadian Wheat Board Act providing for the collection of the Processing Levy was repealed. In accordance with this Order in Council the Board discontinued the Processing Levy at the close of business on July 31, 1941, and in the 1941-42 crop year merely completed the collection of levies due to the Board up to and including July 31, 1941.

Special Measures.-During the crop year 1941-42 certain special measures were taken by the Federal Government in regard to wheat and flaxseed. These were:-

Ontario Winter Wheat.-On June 25, 1941, by Order in Council P.C. 4535, the price of 70 cents per bushel, basis delivered in Montreal, for No. 1 grades of Canada eastern winter wheat, was continued for another year.

On July 8, 1941, by Order in Council P.C. 5040, prices of No. 2 and No. 3 grades were fixed at 68 cents and 65 cents per bushel, respectively.

Owing to the small wheat crop in Ontario in 1941, the price of Ontario wheat rose far above the Board's initial price with the result that only a very small amount was delivered to the Board. Under the circumstances, the Government, by Order in Council P.C. 7700, dated Oct. 4, 1941, announced that the Canadian Wheat Board would accept Ontario winter wheat only in the event that the market price for No. 1 grades of Ontario winter wheat at country points fell below the price of 80 cents basis, export rail freights to Montreal. Since the price remained above the figure set under P.C. 7700, no. deliveries to the Board were made subsequently and there were no operations to be reported.

Higher Price Level for Wheat Stocks.-On Mar. 5, 1942, a resolution appeared on the order paper of the House of Commons providing for "the payment of an increased rate per bushel of wheat delivered by producers" Pending official action, the Canadian Wheat Board issued a press announcement, which was brought to the attention of those concerned prior to the opening of the market on Mar. 6, 1942. The announcement read as follows:-
"A resolution placed on the order paper for Mar. 5, 1942, indicates the Government's intention to increase the initial price of wheat. This is an official notification of our intention that all open wheat futures will be cleared on or before this date at the closing prices of Thursday, March 5th, that is May wheat futures at 791 wheat futures at $80 \frac{3}{6}$ cents. If this action is not taken until July 31st, suitable carrying charges will be allowed to holders of cash wheat for the elapsed period during the month of July. Unhedged cash wheat will be adjusted on the same basis. In the meantime holders of cash wheat as well as futures may continue to carry on with their normal business bearing in mind the above."
The result of this action was that persons holding cash wheat or wheat futures could not sell at prices higher than those ruling at the market close of Mar. 5, after allowing for carrying charges.

On Mar. 9, 1942, Order in Council P.C. 1803 was passed, giving the Canadian Wheat Board all the necessary powers to transfer all non-Board or open market stocks of Canadian wheat (Western Canada grain grades) to the new and higher price level. An important feature of the mechanism was the preventing of speculative profits accruing as a result of this decision. By the terms of the Order in Council, the Canadian Wheat Board was given the power, up to and including July 31,1942 , to buy actual wheat from persons other than producers, to control and adjust trading and contracts in Winnipeg wheat futures and to exercise any other powers necessary to give effect to the change from the lower to the higher price level.

Higher Price Level for Flaxseed Stocks.-On Mar. 5, 1942, Order in Council P.C. 1636 "froze" the stocks of flaxseed in Canada under the supervision of the Canadian Wheat Board. This step was taken because the necessary supply of vegetable oils for Canada and her Allies was seriously threatened by the spread of war in the Pacific area. A higher price was intended for 1942 production and control of existing stocks was a prerequisite to the establishment of the new policy.

Under Order in Council P.C. 1800, dated Mar. 9, 1942, (brought into effect on Mar. 19 by Order in Council P.C. 2166), the Canadian Wheat Board was given compulsory power to take possession of all commercial stocks of flaxseed in Canada and the Board became the sole agency to receive deliveries from producers. Futures or cash trading of flaxseed on any grain exchange or elsewhere in Canada was prohibited. The Board was empowered to pay fixed prices to producers established from time to time by Order in Council and to observe the ceiling of $\$ 1 \cdot 64$ for 1 C.W. Fort William in selling flaxseed for domestic use.

Maximum Prices of Grains.-The Board undertook the responsibility of acting as Administrator on behalf of the Wartime Prices and Trade Board in defining the maximum prices at which certain grains traded during the basic period Sept. 15 to Oct. 11, 1941.

## Acreage and Production

As contemplated by the 1941-42 wheat program, including the introduction of bonuses for wheat acreage reduction, the acreage sown to wheat in Canada declined from 28,726,000 acres in 1940 to 21,882,000 acres in 1941, and wheat acreage in the Prairie Provinces declined from 27,750,000 acres to $21,140,000$ acres-a reduction of about 24 p.c. Substantial increases in the area seeded to feed grains and flaxseed were reported.

Although the crop was seeded under favourable circumstances, a combination of drought and extremely high temperatures caused a rapid deterioration in the grain crops in Saskatchewan and Alberta during the latter part of June and the month of July.

Wheat production in Canada was $315,000,000$ bushels, or $225,000,000$ bushels less than in 1940. The production of all grains and flaxseed was $292,000,000$ bushels less than in the previous year.

## Marketings and Exports

During the crop year 1941-42, producers in Western Canada marketed $227,900,000$ bushels of wheat as compared with marketings of $456,000,000$ bushels during 1940-41, or about one-half of the volume of the preceding crop year. Unusually heavy deliveries in the last few weeks of the crop year materially affected the
storage position at a large number of points in the West, and had definite repercussions upon available storage space and delivery quotas in the early part of the new crop year commencing on Aug. 1, 1942.

Overseas clearances and United Statcs imports of Canadian wheat amounted to $176,081,138$ bushels. Exports of wheat flour were maintained at a high level and were the equivalent of $45,926,003$ bushels of wheat. Thus, total exports of wheat and wheat flour amounted to $225,828,434$ bushels as compared with $231,206,246$ bushels in the preceding crop year 1940-41. As in the previons crop year, the United Kingdom was the main purchaser of Canadian wheat and Canada provided a very large share of total British imports.

## Operations of the Board

Wheat.-Of total marketings of $227,900,000$ bushels in the West during the crop year 1941-42, producers delivered $100,000,000$ bushels to the Board, or about 44 p.c. of their marketings, whereas in the previous crop year producers had delivered $395,000,000$ bushels to the Wheat Board out of total marketings of $456,000,000$ bushels.

The relatively small amount of wheat delivered to the Board in 1941-42 was a reflection of the fact that the market price for wheat remained steadily above the Board's price throughout the crop year.

The position of crop accounts (wheat) as at July 31, 1942, was as follows:-
$\left.\begin{array}{ccccc}\text { Year } & \begin{array}{c}\text { Receipts from } \\ \text { Producers }\end{array} & \begin{array}{c}\text { bu. }\end{array} & \begin{array}{c}\text { Innentory1 } \\ \text { July 31, 1948 }\end{array} & \end{array} \begin{array}{c}\text { Surplus ( }+ \text { ) or Deficit ( }- \text { ) } \\ \text { as at July 31, 194, }\end{array}\right]$

[^289]Total payments to producers for farm storage amounted to $\$ 648,648$ during 1941-42, as compared with $\$ 6,147,524$ paid in 1940-41. Farm storage payments in 1941-42 reflected the relatively heavy marketings previous to Nov. 1, the higher prices for wheat marketed outside the Board, and the smaller crop.

A sale of $120,000,000$ bushels of Winnipeg wheat futures was made to the United Kingdom in November, 1941, and a further sale of $120,000,000$ bushels was completed in May, 1942.

Special Accounts.-Under Special Account (Wheat), P.C. 1803 (sce p. 785), the Board recorded a surplus of $\$ 1,360,964$ as at July 31, 1942.

Under Special Account (Flaxseed), P.C. 1800 (see p. 785), a deficit of $\$ 67,908$ was recorded as at the same date.

Delivery Quotas.-Since it was apparent early in the crop year that the marketable surplus of the 1941 crop in the West would not exceed the limit of marketings established by the Federal Government under its wheat policy for the crop year, the Board proceeded to operate its wheat delivery quota system on the basis in effect in 1940-41. On July 24, 1941, the Board announced that there would be no delivery quotas on oats, barley, rye and flaxseed and that producers could deliver these grains without restriction as to delivery point and without entering such deliveries in their 1941-42 permit books. On the same date, the Board announced
that, effective Aug. 1, 1941, the first quota on wheat deliveries would be 5 bushels per "authorized acre". It was necessary to place restrictions on the marketing of wheat during the autumn because less than $90,000,000$ bushels of space was available in country elevators on Aug. 1, 1941, and, even though the wheat crop was small, care had to be taken to see that each producer secured his fair share of the available storage space.

The general 5 bushel per authorized acre delivery quota remained in effect until Oct. 7. From this date on delivery quotas were increased rapidly at intervals, to 8,12 and 15 bushels respectively. On November 18, the Board established a number of "open delivery points" and by December 4, all delivery points in the West were placed on an open delivery basis.

Little trouble was experienced with infractions of the delivery quotas during the short period the quotas were in operation.

## Changes in Personnel

During the year, D. G. McKenzie, Chairman of the Advisory Committee, tendered his resignation on being appointed Chief Commissioner of the Board of Grain Commissioners for Canada. Mr. McKenzie was succeeded on the Committee by R. C. Brown of Pilot Mound, Manitoba, and Lew Hutchinson was elected Chairman of the Advisory Committee.

## The Crop Year, ${ }^{7}$ 1942-43

## Summary

The outstanding feature of the grain situation in Canada in 1942-43 was the record production of all grains. With limited storage capacity and transportation available, grain marketing problems were unprecedented in intensity and in scope, but as the crop year progressed evidences of basic improvement in the Canadian grain situation were clearly revealed.

Early in 1943, the grain problem in Canada entered a new rhase as improved demand became a noticeable factor. During the first three and one-half years of the War this problem in Canada was largely one of financing and storing vast quantities of grain, making the best use of facilities available for this purpose, and equitably rationing storage space among all producers. In the early months of 1943 the emphasis passed from storage difficulties to problems associated with meeting improved demand for Canadian grains with limited transportation available for the movement of grain. It was this development, along with the bountiful harvest of 1942, that provided the background for the operations of the Canadian Wheat Board during the crop year 1942-43. During the last half of the crop year prices of all grains advanced.

## The 1942-43 Grain and Oilseed Program

Wheat.-Western Division.-The fixed initial price of wheat was increased from 70 cents per bushel to 90 cents per bushel basis No. 1 Northern wheat in store Fort William/Port Arthur or Vancouver, effective Aug. 1, 1942.

For the crop year 1942-43 marketings of wheat were limited to $280,000,000$ bushels for the West, as compared with $230,000,000$ bushels for all Canada in the previous crop year.

Eastern Division.-The fixed initial price of wheat in Ontario was established at 90 cents per bushel basis export rail freights to Montreal for No. 1 grades of

Ontario winter wheat, with the proviso that this price would only become effective in the event that the market price for No. 1 grades of Ontario winter wheat at country points fell below a price of 95 cents per bushel basis export rail freights to Montreal.

Wheat Products.-The Canadian Wheat Board was charged with the administration of the drawbacks paid in respect to flour or other human foods containing wheat sold and delivered in Canada between Aug. 1, 1942, and July 31, 1943, in accordance with Order in Council P.C. 9457, dated Oct. 16, 1942. In this connection the following press release was issued on Aug. 22, 1942:-

[^290]Oats.-For the crop year 1942-43, the Canadian Wheat Board, under Order in Council P.C. 1801, was empowered to buy Winnipeg oats futures or cash oats at a price per bushel which would assure that producers in Western Canada would be continuously offered the following prices per bushel basis in store Fort William/ Port Arthur: No. 2 Canada Western Oats-45 cents per bushel; Extra No. 3 Canada Western, No. 3 Canada Western, or Extra No. 1 Feed-42 cents per bushel; or No. 1 Feed- 40 cents per bushel. The ceiling price of oats was $51 \frac{1}{2}$ cents per bushel basis in store Fort William/Port Arthur.

Barley.-For the crop year 1942-43, the Canadian Wheat Board, under Order in Council P.C. 1801, was empowered to buy Winnipeg barley futures or cash barley at a price per bushel which would assure that producers in western Canada would be continuously offered the following prices per bushel basis in store Fort William/Port Arthur: No. 1 Canada Western 2 Row or 6 Row, or No. 2 Canada Western 2 Row or 6 Row-60 cents per bushel; No. 3 Canada Western- 58 cents per bushel; or No. 1 Feed- 56 cents per bushel. The ceiling price of barley was $64 \frac{3}{4}$ cents per bushel basis in store Fort William/Port Arthur.

Oats and Barley Equalization Funds.-On Apr. 6, 1943, the Federal Government announced the establishment of equalization funds in respect to oats and barley. The Canadian Wheat Board was empowered to assess equalization fees against permits issued for the export of oats and barley; the equalization fee being based upon the difference between domestic prices of oats and barley and prices obtainable for these grains in export markets, after allowing for transportation costs, normal forwarding costs and import duties.

The equalization funds so constituted, less expenses, were to be distributed after the close of the crop year among all western producers who marketed oats and barley between Apr. 1, 1943, and July 31, 1943.

Flaxseed.-Under Order in Council P.C. 1800, the Canadian Wheat Board, as the sole purchasing agency was empowered to purchase flaxseed on the basis of $\$ 2.25$ per bushel for No. 1 Canada Western flax basis in store Fort William/ Port Arthur. Under Order in Council P.C. 7649, dated Aug. 28, 1942, the fixed price of $\$ 2.25$ per bushel was established for No. 1 Canada Western flax produced in British Columbia basis Vancouver, and a similar fixed price for No. 1 Canada Eastern flax produced in the Eastern Division basis Montreal. Total Board sales during 1942-43 amounted to $9,000,000$ bushels of which $3,800,000$ bushels were sold on the domestic market at ceiling prices and $5,200,000$ bushels were exported at an average price of $\$ 2.44$ per bushel.

Soybeans.-The Canadian Wheat Board was empowered to buy soybeans at $\$ 1.95$ per bushel for No. 2 Yellow Soybeans basis Toronto. During the year 90,900 bushels were purchased and re-sold on the domestic market at the purchase price.

## Acreage and Production

The reduction in wheat acreage which occurred between 1940 and 1941 was fully maintained in 1942. The area sown to wheat in Canada in 1942 was 21,586,500 acres as compared with $21,882,200$ acres in 1941. At the same time, expansion in feed grain acreages and flaxseed noted in 1941 was accelerated in 1942, amounting to nearly $4,000,000$ acres over the corresponding acreages for 1941.

The 1942 growing season was favourable and uniformly bountiful crops were produced throughout the Prairie Provinces. However, unfavourable fall weather, particularly in Alberta, here a considerable amount of harvesting was delayed until spring, resulted in threshing of a considerable volume of tough and damp wheat which necessitated special action on the part of the Board. Wheat production was $2 \not 11,000,000$ bushels larger than in $19+1$ and correspondingly good returns were secured from the feed grain acreage. The record production of feed grains, however, coincided with unprecedented feed grain requirements both in Canada and in the United States and formed a sound foundation for further expansion in live-stock production in 1942-43.

In the case of wheat the accumulated carryover on July 31, 1942, amounted to $424,000,000$ bushels which, added to the 1942 wheat crop of $556,000,000$ bushels, provided a total wheat supply for the crop year of $1942-43$ of $980,000,000$ bushelsthe largest stock of wheat ever available in Canada in any one crop year.

This carryover of wheat, along with small stocks of other grains, filled the greater part of storage space available in Canada on Aug. 1, 1942. On that date, after allowing for necessary working space there was available space in country elevators and in other elevators throughout Canada for about $35,000,000$ bushels.

## Marketings and Exports

Under the 1942-43 grain program, wheat deliveries were restricted to 280,000,000 bushels in the West. Owing to the late harvest, congested country elevators, transportation difficulties and the urgent need for feed grains, deliveries of wheat were relatively slow throughout the crop year and by July 31, 1943, 268,000,000 bushels had been delivered. The 15 -bushel delivery quota was extended to Aug. 15
at nearly 1,900 delivery points, and after August 15 provision was made for special permits to be issued to those producers who still were unable to deliver their 15 bushel quotas owing to lack of space in country elevators. These extensions brought deliveries for the crop year 1942-43 to about 273,000,000 bushels.

Overseas clearances and United States imports of Canadian wheat in 1942-43 amounted to $154,929,217$ bushels as compared with exports of $176,081,138$ bushels in 1941-42. Exports of flour amounted to $12,575,215$ barrels, or the equivalent of $56,588,469$ bushels of wheat. Total exports of wheat and flour for the crop year 1942-43 amounted to $214,700,902$ bushels as compared with $225,828,434$ bushels during the previous crop year. The decline in exports of wheat is accounted for by the exceptionally large wheat crop harvested in the United Kingdom in 1942; smaller wheat shipments being partially offset by larger flour exports. The United Kingdom continued to be the main purchaser of Canadian wheat.

## Operations of the Board

Wheat.-During the crop year 1942-43 deliveries to the Board amounted to $168,000,000$ bushels, or 62 p.c. of total wheat marketings. Deliveries to the Board were heavily concentrated in the August-March period and were relatively light during the last four months of the crop year when open market prices were advancing.

The position of Crop Accounts (Wheat) as at July 31, 1943, was as follows:-

| Year | Receipts from Producers | $\begin{gathered} \text { Inventory }{ }^{1} \\ \text { July } 81,1948 \end{gathered}$ | Surplus ( + ) or Deficit ( - ) as at July 31, 1943 |
| :---: | :---: | :---: | :---: |
|  | bu. | bu. | 8 |
| 1939. | 342, 400,000 | - | $-8,816,210 \cdot 36$ |
| 1940. | 395, 400, 000 | 63,900,000 | +17,900,257.86 |
| 1941. | 99,500,000 | 22,500,000 | +12,189, 831.60 |
| 1942. | 167,500,000 | 87,500,000 | $+9,782,186 \cdot 28$ |

[^291]In June, 1943, a sale of $40,000,000$ bushels of Winnipeg wheat futures was made to the United Kingdom. This was the only bulk sale to the United Kingdom during the crop year, a sale of $120,000,000$ bushels to the United Kingdom having been made in May, 1942. In December, 1942, the Belgian Government in London purchased $7,000,000$ bushels of wheat futures from the Board. During the crop year, the Royal Norwegian Government in Exile entered into negotiations for the purchase of $4,000,000$ bushels of wheat.

Oats.-Pursuant to Order in Council P.C. 1801 minimum prices for oats were made effective by the Canadian Wheat Board throughout the crop year 1942-43. Open-market prices of oats ranged higher than the guaranteed minimum prices, except for the period Nov. 5 to Dec. 15, 1942, when the Board became a purchaser of oats to protect the minimum price levels. During this period the Board purchased $26,918,645$ bushels of cash oats or oats futures which were re-sold by the Board within the crop year.

Barley.-Board operations in maintaining the specified minimum prices for barley followed the general pattern of action taken in respect to oats. The Board became the purchaser of barley on Oct. 29, 1942, and continued to purchase barley as required to maintain minimum prices until Dec. 21, 1942. During this period the Board purchased 19,709,429 bushels of cash barley or barley futures which were disposed of during the crop year. Stabilization measures by the Board in respect to oats and barley resulted in a surplus of $\$ 309,238$.

Oats and Barley Equalization Funds.-Equalization fees on oats were assessed by the Board commencing Apr. 19, and as at July 31 the equalization fund on oats amounted to $\$ 1,165,053$. This fund, less payment costs and P.F.A.A. levy, was paid out on oats deliveries between Apr. 1, 1943, and July 31, 1943, amounting to $46,555,288$ bushels; the per-bushel payment from the fund was 2.4 cents.

The comparative price situation in Canada and the United States did not warrant the assessing of equalization fees on barley until May 28, 1943. As at July 31,1943 the equalization fund on barley amounted to $\$ 481,061$. This fund, less payment costs and the P.F.A.A. levy, was paid out on barley deliveries between Apr. 1, 1943, and July 31, 1943, amounting to $31,541,219$ bushels; the per-bushel payment from the fund was 1.43 cents.

Special Accounts.-Special Account (Wheat) P.C. 1803 (see p. 785) showed a surplus of $\$ 1,990,310$ as at July 31, 1943.

Special Account (Flaxseed) P.C. 1800 (see p. 785) showed a deficit of $\$ 1,978,308$ as at the same date.

Price Ceilings.-The Board acted as Administrator of ceiling prices on whole grains for Western Canada on behalf of the Wartime Prices and Trade Board.

Delivery Quotas.-Administration of delivery quotas during 1942-43 reflected the following factors. In the first place, wheat marketings had to be restricted to $280,000,000$ bushels under the $1942-43$ grain program. Secondly, the record production of coarse grains yielded large marketable surpluses which had to be moved in the face of limited storage and transportation available. Thirdly, an urgent demand for feed supplies arose early in the crop year and quotas had to be adjusted to facilitate the transportation of these grains. The extent of the problem is indicated by the fact that, while at the beginning of the crop year space available in country elevators was about $120,000,000$ bushels, total marketings of all grains and flaxseed for the crop year amounted to over $500,000,000$ bushels.

Transportation.-The fall shipping program was designed to move sufficient feed grains to the Lakehead to meet current demand and to build up a reserve for movement eastward during the winter months. In order that available transportation might be utilized most effectively, the Board assumed control of the allocation of grain cars in the West on Oct. 15, 1942. Despite the Board's efforts to move a large volume of feed grains in the autumn months, the demand in the East was so great that a continuous shipping preference had to be maintained during the winter months and prior to the opening of navigation. In the winter months carloadings fell to lower than expected levels, with the result that delivery quotas could not be increased as quickly as desired and the movement of wheat had to be restricted in preference to coarse grains. In the spring and summer months a heavy movement of grain took place, making it possible for farmers to deliver 15 bushels of wheat per authorized acre throughout the West. However, the crop year ended with very little space available in country elevators to take care of new crop deliveries.

The Crop Year, 1943-44

## Summary

While the world supply of wheat was adequate in 1943-44, transportation and shipping placed definite limits upon the volume that could be moved into export trade from surplus areas. In order to secure an equitable distribution of
available supplies among importing countries, and in order to make the most effective use of inland transportation and ocean shipping, import demand was allocated to exporting countries through the Cereals Committee of the Combined Food Board functioning at Washington, D.C. Owing to her proximity to the United Kingdom and the United States, the two largest importing markets in 1943-44, Canada was called upon to supply grain to the limit of transportation available. As allocations of Canadian grain were made well in advance of the date of shipment, it was possible to effectively co-ordinate transportation and all other services with the object of securing the largest possible movement of Canadian grain, and its most effective distribution among importing countries. The co-ordination of transportation services and market demand for Canadian grain was supervised by the Emergency Grain Transportation Committee, established in October, 1943.

## The 1943-44 Grain Program

Wheat.-The crop year 1943-44 commenced with a fixed initial price of 90 cents per bushel for No. 1 Northern wheat in store Fort William/Port Arthur or Vancouver, as provided by the Canadian Wheat Board Act.

On Sept. 27, 1943, the Federal Government announced an important change in wheat policy. The new policy involved the following actions:
(1) The discontinuance of trading in wheat futures on the Winnipeg Grain Exchange.
(2) The acquisition by the Board, on behalf of the Dominion Government, of all stocks of unsold cash wheat in Canada on the basis of the closing prices on Sept. 27, 1943.
(3) The raising of the fixed initial price from 90 cents per bushel to $\$ 1 \cdot 25$ per bushel for No. 1 Northern wheat basis in store Fort William/Port Arthur or Vancouver.
(4) The closing out of the 1940-41, 1941-42 and 1942-43 Wheat Board Crop Accounts on the basis of closing market prices on Sept. 27, 1943.
(5) The use of Government-owned wheat (Items 2 and 4 above) to meet requirements under Mutual Aid and to provide wheat for subsidized domestic purchasers.

This program was made effective until July 31, 1945. The new wheat policy was set forth in detail, under Order in Council P.C. 7942, dated Oct. 12, 1943. As in immediately preceding years, the Federal Government reserved the right to limit wheat marketings in the West; these were placed at 14 bushels per authorized acre. This limitation was extended to 18 bushels in February, 1944, and the limitation was removed late in the crop year as a result of the increased demand for Canadian wheat.

Oats and Barley.-Under Order in Council P.C. 4450, dated June 1, 1943, the Board continued to guarantee minimum prices for oats and barley and these grains were subject to the same maximum prices. (See p. 788.)

Oats and Barley Equalization Funds.-The Oats and Barley Equalization Funds were continued in 1943-44, but in view of the large domestic demand for these grains, the Federal Government guaranteed the Oats Equalization Fund to the extent of 10 cents per bushel, and the Barley Equalization Fund to the extent of 15 cents per bushel, with these guaranteed amounts payable to producers at the time of delivery The guaranteeing of the two Equalization Funds was part of the Federal Government's program as announced on Sept. 27, 1943, and applied to all deliveries of oats and barley from Aug. 1, 1943.

Flaxseed.-The fixed price of flaxseed to producers for 1943-44 was increased from $\$ 2 \cdot 25$ to $\$ 2 \cdot 50$ per bushel basis 1 C.W. in store Fort William or Vancouver and No. 1 Canadian Eastern in store Montreal. During the crop year the Board
sales amounted to $14,700,000$ bushels, of which $4,800,000$ bushels were sold domestically at the ceiling price of $\$ 1 \cdot 64$ and $9,800,000$ bushels were exported at $\$ 3 \cdot 10$, both prices basis in store Fort William/Port Arthur.

Oilseeds.-The fixed price for soybeans for 1943-44 remained unchanged from the previous year. During the crop year the Board was empowered to buy sunflower and rapeseed from producers on the basis of 5 cents per pound and 6 cents per pound, respectively, top grades f.o.b. shipping points designated by the Board. Board purchases during the crop year were as follows: soybeans 1,637 bushels; sunflower seeds $4,554,465$ pounds and rapeseed 981,476 pounds. All these quantities were re-sold during the year at the purchase prices.

## Acreage and Production

Carada commenced the crop year 1943-44 with a carryover of $595,000,000$ bushels. On an acreage of $16,849,700,1943$ wheat production totalled $284,000,000$ bushels; thus, the carryover and new crop combined, provided $879,000,000$ bushels of wheat available in Canada for the crop year 1943-44-about 100,000,000 bushels less than was available in 1942-43.

## Exports

During the crop year exports, including wheat flour, amounted to $343,800,000$ bushels as compared with $214,700,902$ bushels in 1942-43. The increase in wheat exports is largely accounted for by United States imports of wheat for feed purposes during the latter half of the crop year. The United Kingdom continued to be the main overseas purchaser of Canadian wheat.

## Operations of the Board

Wheat.-Crown Account.-Pursuant to Order in Council P.C. 7942, all unsold stocks of wheat in Canada, including the wheat remaining in the 1940-41, 1941-42 and 1942-43 Board Accounts (299,700,000 bushels) were taken over by the Federal Government through the Canadian Wheat Board (see p. 792). These stocks became known as Crown wheat and were used for Mutual Aid purposes and to provide wheat for the domestic market. Sales amounted to $111,400,000$ bushels, leaving 188,300,000 bushels on hand on July 31, 1944. As at July 31, 1944, the Crown Wheat Account showed a deficit of $\$ 10,125,327$.

Order in Council P.C. 7942 provided for the closing out of the 1940-41, 1941-42 and 1942-43 Board Accounts. These Accounts showed a combined surplus of $\$ 61,080,047$ which was subsequently made available to producers (less payment costs and plus accumulated interest).

The position of Crop Account (Wheat) as at July 31, 1944, was as follows:-

| Year | Receipts from Producers | $\begin{gathered} \text { Inventory }{ }^{1} \\ \text { July } 31, \\ 1944 \end{gathered}$ | Surplus as at July 31, 1944 |
| :---: | :---: | :---: | :---: |
| 1943... | $\begin{gathered} \text { bu. } \\ 293,400,000 \end{gathered}$ | $\begin{gathered} \text { bu. } \\ 162,900,000 \end{gathered}$ | $\frac{8}{18,191,132}$ |

${ }^{1}$ Inventory valued at the Board's fixed initial price as at July 31, 1944.
Eastern Division.-As prices for Ontario wheat remained at ceiling levels throughout 1943-44 no deliveries were made to the Board and no operations were recorded during the crop year 1943-44.

Wheat Products.-During 1943-44, the Board paid to millers and processors of wheat a total of $\$ 19,475,181$ in drawbacks on wheat products pursuant to Order in Council P.C. 6602, Aug. 19, 1943.

Oats and Barley.-As prices for these grains remained at ceiling levels throughout the crop year, the Board was not required to take price-supporting action.

Oats and Barley Equalization Funds.-Equalization fees levied on oats exports exceeded advance equalization payments made to producers, and the Oats Equalization Fund showed a surplus of $\$ 8,806,339$ as at July 31, 1944, which was subsequently made available to those producers who received advance payments from the Oats Equalization Fund. In the case of barley, advance equalization payments made to producers exceeded the proceeds of equalization fees assessed on exports. Consequently, the Barley Equalization Fund showed a deficit of $\$ 2,063,257$ as at July 31, 1944, and there was no further payment from the Barley Equalization Fund on 1943-44 marketings.

Delivery Quotas.-In 1943-44 the delivery quota system was highly important. The crop year commenced with general congestion in country elevators. It was inevitable, therefore, that very low delivery quotas would have to be established in the initial stages of the marketing season. On Aug. 16, 1943, the Board established the first delivery quotas at 3 bushels per authorized acre for wheat, 5 bushels per seeded acre for oats and barley, 3 bushels per seeded acre in the case of rye. By the end of October about one-half of the delivery points in the West were still on a 3 -bushel quota.

The emergency shipping program in November drew heavily upon stocks in Manitoba and eastern Saskatchewan, and permitted a general adjustment in wheat delivery quotas.

Owing to the necessity of large shipments of feed grains to eastern Canada and the United States during the winter months, the general quota on oats and barley was increased to 10 bushels per seeded acre on Dec. 8, 1943.

On Mar. 23, 1944, the general quota on oats, barley and rye was increased to 15 bushels per seeded acre. On Apr. 16, 1944, the general quota on oats was increased to 20 bushels per seeded acre, and quota restrictions on the marketing of barley and rye were removed. Three days later restrictions on oats deliveries were removed entirely.

On Mar. 31, 1944, over 1,700 delivery points had wheat delivery quotas of 18 bushels per acre while at the end of April all delivery points were on that basis. In accordance with Order in Council P.C. 4130, dated June 1, 1944, open delivery quotas were established, effective on the same date.

Under delivery quotas established in 1943-44 about 570,000,000 bushels of grain passed from farms to country elevators, and in addition, country elevator space available for deliveries was increased by about 100,000,000 bushels between Aug. 1, 1943, and Aug. 1, 1944, thereby easing the country storage problem for 1944-45.

Transportation.-Early in 1943-44 it was apparent that the transportation problem consisted of two main elements:-(1) The urgency of securing a substantial increase in transportation available for the movement of grain in order to keep pace with the increased demand for Western grains, especially in view of the fact that the bulk of 1943-44 grain supplies was in country elevators or on farms; and (2) The
necessity of controlling carloadings in order that a broad demand for wheat, oats, barley and flax could be met, and that shipments of each grain to terminal markets be made in proper relationship to current demand.

The physical problem of providing adequate transportation in 1943-44 received the prompt attention of the Transport Controller and the railroads. Transportation available for the movement of grain was practically doubled in 1943-44 as compared with 1942-43. It was this shipping record on the part of the railways which provided the basis of the record commercial disappearance of grains in 1943-44 and which, at the same time, created over $100,000,000$ bushels in available country elevator space within the crop year.

During the greater part of the crop year, it was necessary for the Board to control carloadings between various grains at country points. There was an exceptional demand for all types of grain throughout the crop year, consequently, it was necessary to maintain carloadings at country points in proper relationship to the over-all demand. Within the crop year it was necessary from time to time to preference the shipment of feed grains to meet emergency demands, and at other times, most cars had to be used for the movement of wheat.

## Changes in Personnel

In December, 1944, C. Gordon Smith resigned as Assistant Chief Commissioner of the Board, D. A. Kane was appointed Assistant Chief Commissioner to succeed Mr. Smith, and C. E. Huntting was appointed to fill the vacancy on the Board.

In June, 1943, W C. McNamara, the Board's Supervisor of Transportation, was appointed the Board's representative in Washington, D.C. Large sales of Canadian grain to the United States, and the concentration of wartime activities in connection with grains in Washington, D.C., made it advisable for the Board to have a representative in that City. In addition to representing the Board, W. C. McNamara represented Canada on the Cereal Committee of the Combined Food Board, and assisted in the work of that Committee.

## The Crop Year, 1944-45

## Summary

The Board continued throughout the crop year of 1944-45 to administer a broad program relating to wheat, coarse grains and oilseeds, the major outlines of which remained substantially unchanged from the program of the preceding crop year.

Within the framework of this policy, there were significant changes in the marketing and transportation problems dealt with by the Board. In the preceding crop year there was a very heavy movement of western grains to the United States and to Eastern Canada for feed purposes. In 1944-45 wheat import requirements of the United States were greatly reduced and the movement of feed grains and low-grade wheat to Eastern Canada was somewhat smaller. The predominant movement of wheat in 1944-45 was eastward through Atlantic ports to the United Kingdom, Continental Europe and the Mediterranean area. As a consequence, a very high percentage of grain shipped from country elevators passed through Fort William and Port Arthur, and through intervening facilities to the Atlantic seaboard. Shipments to and from the Lakehead reached the highest levels in the history of the Canadian grain trade. This record and highly concentrated movement was not accomplished without recurring problems in respect to transportation and the maximum use of elevators and available port capacities.

With the liberation of progressively larger areas of Europe, the function of the Cereals Committee of the Combined Food Board in programming available export supplies of wheat to the various importing countries became increasingly important and complex. The work of this Committee contributed in substantial measure to the efficient planning of the maximum movement of Canadian grain.

The crop year of 1944-45 coincided with the final phase of the War in Europe. It is appropriate here to set forth the broad features of the Canadian wheat position during the years of the conflict, in order that developments of the crop year 1944-45 may be seen in proper relationship to the larger wartime experience. The following statement shows initial stocks, annual production, total supplies and the disposition of supplies for the ten-year period prior to the war and for the six-year wartime period:-

| Crop Year | Initial Slocks | Annual Supplies |  | Annual Disposition |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 4nnual Production | Total Supplies | Domestic Requirements | Exports | Year-end Stocks |
|  | (million bushels) |  |  |  |  |  |
| Av. 1929-30 to 1938-39. | 135 | 309 | 444 | 110 | 199 | 135 |
| 1939-40............... | 103 | 521 | 624 | 131 | 193 | 300 |
| 1940-41............... | 300 | 540 | 840 | 129 | 231 | 480 |
| 1941-42. | 480 | 315 | 795 | 145 | 226 | 424 |
| 1942-43............... | 424 | 557 | 981 | 171 | 215 | 595 |
| 1943-44............... | 595 | 284 | 879 | 179 | 344 | 356 |
| 1944-45.............. | 356 | 417 | 773 | 172 | 343 | 258 |
| Av 1939-40 to 1944-45. | 376 | 439 | 815 | 154 | 259 | 402 |

It will be noted that in the first four crop years of the War, exports of Canadian wheat (including flour) ranged from $193,000,000$ bushels to $231,000,000$ bushelsonly slightly above or below the average for the ten pre-war years. Of the four crops harvested during the same years, three yielded over $500,000,000$ bushels. Exports and rising domestic requirements fell far short of absorbing the phenomenal production of the 1939-42 period and, consequently, year-end stocks rose to a level of $595,000,000$ bushels on July 31, 1943. This reserve stock of wheat not only filled the greater part of permanent storage capacity in Canada and temporary capacity erected during the War, but nearly $200,000,000$ bushels were stored on farms.

In the final two crop years of the war period, crops fell off to an average of $350,000,000$ bushels, and at the same time the demand for Canadian wheat increased sharply. During the crop year 1943-44, the United States imported about $160,000,000$ bushels of Canadian wheat to supplement feed supplies. Although the United States demand subsided in the following crop year, it was more than offset by increased demand for wheat from overseas countries. In the two crop years ending July 31, 1945, Canada provided importing countries with $687,000,000$ bushels of wheat (including flour), or an average of $28,600,000$ bushels each month from Aug. 1, 1943 to July 31, 1945.

In spite of the heavy outward movement in the latter stages of the War and in the early post-war months, the carryover on July 31, 1945, was 258,000,000 bushels as compared with the wartime peak of $595,000,000$ bushels and the ten-year pre-war average of $135,000,000$ bushels. Thus, on July 31,1945 , there remained a substantial volume of wheat from our wartime reserve, which, along with the 1945 crop, was destined to play an important part in meeting the needs of the importing countries during the transition from war to peace. The increase in the demand for

Canadian grains during the later stages of the War is shown by the following statement giving the disappearance of commercial stocks of Canadian grains* for the crop years 1939-40 to 1944-45:

|  | Crop Year | Wheat | Commercial Disappearance |  |  |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Oats | Barley | Rye | Flax |  |
|  |  | (million bushels) |  |  |  |  |  |
| 1939-40. |  | 241 | 40 | 23 | 3 | 1 | 308 |
| 1940-41. |  | 273 | 34 | 22 | 4 | 3 | 336 |
| 1941-42. |  | 280 | 33 | 26 | 7 | 5 | 351 |
| 1942-43. |  | 270 | 92 | 63 | 4 | 9 | 438 |
| 1943-44. |  | 428 | 136 | 91 | 9 | 15 | 679 |
| 1944-45. |  | 423 | 141 | 87 | 7 | 8 | 666 |

[^292]
## The 1944-45 Grain Program

Wheat.-The wheat program announced by the Federal Government on Sept. 27, 1943, was made effective until July 31, 1945. Only two important changes were made in wheat policy in 1944-45. These changes concerned the supply of wheat for Crown Account and the supply of wheat for the domestic market.

Western Division.-In the regulations covering the operations of the Board for 1944-45 no limitation on deliveries of wheat in the West was stipulated, pending the outcome of the 1944 crop. It was subsequently decided that, in view of expanding market demand and the extent of 1944 production of grains, no over-all limitation on wheat marketings was necessary.

Eastern Division.- On Dec. 2, 1941, a ceiling of \$1 26 per bushel for Ontario winter wheat had been established and prices remained at the ceiling from that date forward. When on Sept. 27, 1943, the fixed initial price of western wheat was increased from 90 cents to $\$ 1 \cdot 25$ the Board, in accordance with Sect. 14 of The Canadian Wheat Board Act, would have felt duty bound to make a corresponding increase in the price of Ontario winter wheat. However, with a ceiling of $\$ 1.26$ per bushel basis in store Montreal, it was recognized that there was little justification for Board operation in respect to Ontario winter wheat on the basis of $\$ 1.25$ per bushel.

Under the circumstances, the Federal Government provided the following policies applicable to Ontario winter wheat during the crop year 1944-45:-
(1) The Board was exempted from carrying out its obligations under Sect. 14 of the Canadian Wheat Board Act (Order in Council P.C. 5640, July 31, 1944).
(2) The Board was charged with the responsibility of maintaining a floor price of $\$ 1.25$ per bushel for top grades of Ontario winter wheat, basis in store Montreal (Order in Council P.C. 5640, July 31, 1944).
(3) The Wartime Prices and Trade Board passed an Order restricting dealers' margins to 3 cents per bushel (Order No. 423, July 27, 1944).
(4) The Federal Government recognized that Ontario producers, marketing wheat in 1944-45, were entitled to share in export prices obtainable for flour made from Ontario winter wheat to the extent that these prices were in excess of domestic ceiling prices plus forwarding costs. Under Order in Council P.C. 6848, dated Sept. 1, 1944, the Ontario Wheat Flour Equalization Fund was established, and it became the responsibility of the Board to assess equalization fees against Ontario wheat flour sold for export. The equalization fees established by the Board were approximately equivalent to the difference between Canadian prices and export prices for Ontario wheat flour, allowing for necessary forwarding costs. The fee, in practice, was variable, depending upon going export prices. The first Ontario Wheat Flour Equalization Fund was closed on June 30, 1945.

Wheat Products.-Under Order in Council P.C. 7319, dated Sept. 19, 1944, the Canadian Wheat Board was charged with the administration of drawbacks paid in respect to flour and other human foods containing wheat, sold and delivered in Canada between Aug. 1, 1944, and July 31, 1945.

Oats and Barley.-Under Order in Council P.C. 5998, dated July 31, 1944, the Board continued to guarantee minimum prices on the same basis as in 1943-44. Maximum prices remained the same. (See p. 788.)

Oats and Barley Equalization Funds.-Under provisions of Order in Council P.C. 5998, dated July 31, 1944, the Board continued to administer the Barley Equalization Fund and the Oats Equalization Fund. As in the preceding crop year, the Federal Government guaranteed the Equalization Funds to the extent of 10 cents per bushel on oats and 15 cents per bushel on barley. Payments to the extent of the guarantee were made to producers at the time of delivery and were known as Advance Equalization Payments. Provision was also made for Advance Equalization Payments to producers in connection with farm-to-feeder or farm-to-farm sales.

Flaxseed.-Apart from an increase in price to producers, no changes were made in flaxseed policy for 1944-45. The fixed price, basis in store Fort William, Vancouver and Montreal, was increased from $\$ 2 \cdot 50$ to $\$ 2 \cdot 75$ per bushel. Total sales during the year amounted to $8,300,000$ bushels, of which $4,600,000$ bushels were for domestic account and $3,700,000$ bushels were for export. The export price was $\$ 3.10$ per bushel basis in store Fort William/Port Arthur.

Oilseeds.-Under Order in Council P.C. 4131 of June 1, 1944, the Board continued to guarantee minimum prices of sunflower seed and rapeseed on the same basis as in 1943-44. By Order in Council P.C. 8060 of Oct. 20, 1944, the Board's power to purchase rapeseed at the established prices was limited to the Western Division. In the 1944-45 crop year, Board purchases of rapeseed were $3,485,845$ pounds and of sunflower seed $4,486,272$ pounds. The carryover of sunflower seed. from the 1943 crop amounted to 824,827 pounds. All rapeseed stocks were sold during the year but, at July 31, 1945, there remained unsold 4,351,500 pounds of sunflower seed.

## Acreage and Production

The 1944 wheat acreage was $23,284,000$ acres. This acreage represented a substantial increase over the area seeded to wheat in the previous year. Wheat production totalled $417,000,000$ bushels which, added to the July 31, 1944, carryover of $356,000,000$ bushels, gave total supplies for the crop year of $773,000,000$ bushels-about 106,000,000 bushels less than was available in 1943-44.

## Wheat and Flour Exports

Overseas clearances and exports of Canadian wheat in 1944-45 amounted to $280,000,000$ bushels as compared with $283,000,000$ bushels in 1943-44. Flour exports continued at a very high level and amounted to the equivalent of $63,000,000$ bushels as compared with $61,000,000$ bushels in 1943-44. Total exports of wheat and flour for the crop year 1944-45 amounted to $343,000,000$ bushels as compared with $344,000,000$ bushels in 1943-44.

The direction of exports of Canadian wheat in 1944-45 changed materially from that of 1943-44. During 1944-45 the United Kingdom took nearly one-half of Canadian exports of wheat. United States imports of Canadian wheat dropped to $42,000,000$ bushels as compared with $160,000,000$ bushels in the previous crop year.

Other large importers of Canadian wheat in 1944-45 were France, Greece, Portugal, India, Belgium and Eire. In the main, the export movement of Canadian wheat in 1944-45 was to European destinations, reflecting significant international developments during the period under review.

## Operations of the Board

Wheat.-With due regard to the volume of wheat that was being carried in Canada during the crop year 1944-45, the Board felt that its duty was to market every possible bushel that could be sold under existing conditions. This sales policy was more than justified by the fact that, in the final year of the War in Europe, demand for Canadian wheat was urgent and failure to meet that demand would have had far-reaching repercussions.

In 1944-45 the Board had the following wheat available:-
(1) The balance of Crown wheat supplies, acquired on Sept. 27, 1943, in accordance with the Order in Council P.C. 7942.
(2) The balance of wheat delivered to the Board by producers in 1943-44.
(3) Wheat delivered to the Board by producers during the crop year 1944-45.

The Crown wheat supply was sufficient to meet requirements up to Jan. 16, 1945. These requirements included domestic needs, supplies for United Kingdom and other countries receiving mutual aid and supplies for any other overseas distribution by the Federal Government. The Crown wheat supply was replenished by Order in Council P.C. 1116 dated Feb. 20, 1945,* which directed the Board to proceed as follows:-
(1) To purchase for Crown Account sufficient wheat from the 1943 and 1944 Crop Accounts to cover Mutual Aid sales by Crown for the period Jan. 16, 1945, to Feb. 28, 1945, at Class II prices prevailing on the date of each Mutual Aid sale.
(2) To purchase for Crown Account sufficient wheat from the 1943 Crop to cover domestic sales by Crown for the period Jan. 16, 1945, to Feb. 28, 1945, at $\$ 1 \cdot 25$ per bushel, basis No. 1 Manitoba Northern in store Fort William/Port Arthur.
(3) To purchase for Crown Account 100,000,000 bushels of wheat from the 1943 and 1944 Crop Accounts at $\$ 1 \cdot 43$ per bushel for No. 1 Manitoba Northern, basis in store Fort William/Port Arthur, to cover Mutual Aid sales contracted after Feb. 28, 1945. (These purchases were made as at Mar. 1, 1945, at the prevailing Class II price of $\$ 1.46$ per bushel for No. 1 Northern on Jan. 29, 1945. The spread of 3 cents between the Class II price and the purchase price was allowed to Crown Account in lieu of ultimate carrying charges incurred between Mar. 1, 1945, and the final date of each Mutual Aid sale.)
From Aug. 1, 1944, substantial sales of wheat were made from the 1943-44 Board Account at the Board's Commercial or Class II price. Order in Council P.C. 1116 provided for the disposal of further stocks of wheat in the 1943-44 Board Account: (1) by stipulating that wheat from the 1943-44 Board Account should be used to provide domestic requirements from the date Crown wheat was exhausted until July 31, 1945; and (2) by providing for the sale of stocks of 1943-44 wheat to Crown Account for Mutual Aid purposes. As a result of this arrangement, final accounting in respect to the 1943-44 Board Account could not be completed until domestic sales to July 31, 1945, were finalized and until many adjustments arising from wartime sales were made. On wheat provided for the domestic market out of the 1943 Crop Account, producers neither gained nor lost, as the Board sold such wheat at initial cost and reimbursed the 1943 Crop on an average per bushel carrying charge rate for all domestic sales. The arrangement in respect to supplying the domestic market was within the general price control policy of the Federal Government as in effect at that time.

[^293]During 1944-45 the Board's Class II price applied to countries not receiving Mutual Aid and to the United Nations organizations operating on a cash basis. The Class II price ranged between $\$ 1.34$ to $\$ 1.38$ per bushel, basis in store Fort William for the first two months of the crop year; it ranged between $\$ 1.38$ to $\$ 1.48$ until February, 1946. In March and April a small increase to $\$ 1 \cdot 53-\$ 1 \cdot 54$ occurred and from May to the end of July $\$ 1 \cdot 55$ per bushel was the ruling price.

Eastern Division.-As prices for Canada Eastern winter wheat remained at ceiling levels during 1944-45, it was not necessary for the Board to take delivery of wheat pursuant to maintaining the floor price.

The Ontario Wheat Flour Equalization Fund for 1944-45 was closed out as at June 30,1945 , resulting in a surplus payable to producers of $\$ 198,318$ before making provision for the costs of final payment.

Crown Account.-The Crown Account showed a deficit of $\$ 25,861,867$ as at July 31, 1945, of which $\$ 10,125,327$ was funded by the Federal Government on Apr. 30, 1945.

The position of Crop Account (Wheat) as at July 31, 1945, was as follows:-

| Year | Receipts from Producers | $\begin{gathered} \text { Inventory } \\ \text { July } 31, \\ 1945 \end{gathered}$ | Surplus as at July 91 , 1945 |
| :---: | :---: | :---: | :---: |
| 1943. | $293,400,000$ | bu. | $36,436,170$ |
| 1944. | 352,400, 000 | 161,400,000 | 28,653,391 |

${ }^{1}$ Inventories valued at the Board's fixed initial price as at July 31, 1945.
Wheat Products.-Pursuant to its duty of administering drawback payments on wheat products sold and delivered for human consumption in Canada (see p. 798), the Board, out of funds provided by the Dominion Treasury, paid out $\$ 18,296,293$ to July 31, 1945, in respect to the 1944 Drawback Account.

Oats.-During the crop year 1944-45 price-supporting action involved purchases of oats futures totalling 896,000 bushels, which were re-sold during the crop year at a small profit.

During the crop year $85,800,000$ bushels of oats (including processed oats) were exported as compared with $74,700,000$ bushels for 1943-44. Of these totals, $69,700,000$ bushels in $1944-45$ and $71,900,000$ bushels in 1943-44 went to the United States. During the crop year shipments under the Freight Assistance policy amounted to $42,600,000$ bushels-a reduction of about $9,000,000$ bushels from the level of 1943-44.

Barley.-As barley prices remained at ceiling levels throughout the crop year, it was not necessary for the Board to support the price of barley.

During the crop year $39,400,000$ bushels of barley were exported as compared with $36,100,000$ bushels in 1943-44. Of these amounts, $35,800,000$ bushels in 1944-45 and $35,800,000$ bushels in 1943-44 went to the United States. As in previous years, barley exports to the United States were largely of types suitable for malting in that country. Shipments under the Freight Assistance policy were $30,500,000$ bushels, approximately $7,500,000$ bushels less than in the preceding crop year.

Oats and Barley Equalization Funds.-Increased eastern production of feed grains, relative to demand, reduced the volume of shipments under the Freight Assistance program and released greater quantities of Western oats and barley for export. The export market absorbed almost 60 p.c. of total oats deliveries during the crop year, and slightly more than 50 p.c. of barley deliveries.

Advance equalization payments made to producers exceeded the amounts collected as equalization fees levied on oats exports, and the resultant deficit in the Oats Equalization Fund was $\$ 1,421,431$. On the other hand, the proceeds of equalization fees assessed on barley exports exceeded advance equalization payments to producers by $\$ 6,044,880$. This surplus in the Barley Equalization Fund made possible a further payment of $7 \cdot 59$ cents per bushel to those producers who received advance payments from the Barley Equalization Fund.

The deficit in the Oats Equalization Fund arose from a sharp decline in the level of equalization fees, which was only partially offset by the moderate increase in the volume of exports. Since the two Funds were separate and distinct, the deficit in the Oats Equalization Fund did not affect the distribution of the surplus in the Barley Equalization Fund. The Oats Fund deficit was absorbed by the Dominion Government.

Price Ceilings.-The Board continued to act as administrator of ceiling prices on whole grains on behalf of the Wartime Prices and Trade Board.

Delivery Quotas.-It was necessary to regulate deliveries at country elevators for a considerable part of the crop year, in spite of the fact that available empty space on Aug. 1, 1944, amounted to about 100,000,000 bushels. Rye and flax were not subject to delivery restrictions. Early in September, restrictions on barley were removed, and on May 4, 1945, an open wheat quota was established at all delivery points.

At various times during the crop year 1944-45 it was considered necessary to concentrate available transportation in areas most favourably situated in respect to the Lakehead, in order to meet an extremely large and urgent demand. This policy resulted in the deferring of necessary grain shipments from areas in northern Alberta and northern Saskatchewan, and made necessary the continuance of relatively small delivery quotas on oats and wheat in these areas until early in 1945.

## The Crop Year, 1945-46

## Summary

The major task of all wheat exporting countries in 1945-46 was to provide maximum quantities of wheat and flour to assist importing countries through the first full crop year following the end of the War. In that effort Canada played a leading part and for the third successive year provided wheat exports (including flour) in excess of $340,000,000$ bushels. Into the effort of $1945-46$ went the last of Canada's wartime reserves of wheat and in the latter part of the crop year exports were determined by the volume of wheat that producers made available at country elevators.

The exceedingly urgent demand for breadstuffs during the crop year was due not only to the normal requirements of importing countries and special demands following the War, but also to the effects of a devastating drought in southern Europe and North Africa.

The full impact of this food position confronted the Cereals Committee of the Combined Food Board early in the crop year. The severity of the crisis and the threat of mass starvation on a large scale called for a major, co-ordinated effort on the part of Canada and the United States. The effectiveness of this effort is indicated by the fact that in the year ended June 30, 1946, Canada and
the United States together exported about $750,000,000$ bushels of wheat (including flour) which constituted the largest wheat exports in any twelve-month period in the history of the North American continent. In addition to these supplies of wheat, both countries supplied quantities of other grains for human consumption.

Canada commenced the new crop year with a favourable position for a large export movement of wheat during the first half of the crop year, due to the carryover of $258,000,000$ bushels of wheat on July 31, 1945. Within this carryover were substantial quantities of wheat in export position and a "bank" of wheat amounting to over $62,000,000$ bushels in country elevators. These stocks were supplemented, of course, by deliveries from the 1945 wheat crop.

Canadian wheat exports (excluding flour) were heavily concentrated during the first half of the crop year, approximately $178,000,000$ bushels, two-thirds of the total quantity for the year, being exported between Aug. 1, 1945, and Jan. 31, 1946. In this connection it is interesting to note that during the August-January period, 36 p.c. of Canadian wheat exports went to the United Kingdom, while during the February-July period, 61 p.c. of the smaller Canadian wheat exports were directed to the United Kingdom as a result of the priority granted that country.

Also significant was the wide distribution of wheat exports among wheat importing countries during the crop year. All exports were programmed through the Cereals Committee of the then-existing Combined Food Board and were related to export programs undertaken by other countries, principally the United States and Australia. In addition to wheat exports, Canada exported $62,000,000$ bushels of wheat in the form of flour, of which about $28,000,000$ bushels went to the United Kingdom and the balance was distributed among a wide range of importing countries. A very substantial volume of Canadian flour was purchased by UNRRA for distribution to countries in receipt of UNRRA assistance.

The co-ordinated distribution of exports of wheat from the chief supplying countries went a long way in meeting the most urgent import requirements. During the crop year there was a deficit in world wheat supplies which could not under any circumstances be overcome. The problem was to make the available supplies in all wheat exporting countries go as far as possible in meeting urgent requirements in both Europe and Asia. An element of flexibility was maintained in the movement of supplies from exporting countries and in this way recurring crises were minimized. The problem, one of potential hunger and starvation, was reduced to a problem of meagre rations in many countries and malnutrition on a wide scale which was partly relieved with the harvesting of improved grain crops throughout Europe in late June, July and August, 1946. It can be said that Canada, the United States and Australia over-exported wheat during the critical crop year under review. Residual problems were left in all three countries. These problems, however, must be evaluated in terms of the impression which was made upon a severe and farreaching food crisis.

Year-End Stocks.-The implementation of the foregoing export program in 1945-46, plus meeting the full requirements of Canadian mills for the production of domestic and export flour, reduced reserve stocks of wheat in Canada to the lowest point since 1938. The carryover on July 31, 1946, was $69,900,000$ bushels, of which $27,200,000$ bushels were on farms and $42,700,000$ bushels in commercial position. This compared with a carryover of $258,000,000$ bushels on July 31 in the previous crop year. Stocks of wheat in export positions were practically
exhausted by the end of the crop year, and a substantial part of remaining commercial stocks was required to meet the requirements of Canadian mills until new crop wheat became available in September. This exhaustion of wheat stocks in all positions in Canada as at July 31, 1946, and especially in wheat stocks in export positions, had an important effect upon the Canadian export position during the first four months of the ensuing crop year.

## The 1945-46 Grain Program

During the crop year 1945-46, the Canadian Wheat Board administered a grain and oilseed program which closely paralleled the program in effect in the previous crop year. The main features of the 1945-46 program were as follows:-

Wheat.-Western Division.-In accordance with Order in Council P.C. 2550, Apr. 12, 1945, the Board continued to handle all wheat marketed by producers in the Western Division. The Board's fixed initial price for $1945-46$ was $\$ 1 \cdot 25$ per bushel basis No. 1 Northern wheat in store Fort William/Port Arthur or Vancouver. Order in Council P.C. 5476, Aug. 7, 1945, established Board prices for other principal grades of wheat.

Pursuant to Order in Council P.C. 2550, Apr. 12, 1945, the Board was empowered to restrict marketings of wheat in the Western Division to 14 bushels per authorized acre. As the 1945 wheat crop was small and the demand continued on a high level, it was possible for the Dominion Government to authorize the Board to take all wheat offered by producers during the crop year.

Eastern Division.-As in 1944-45, the Canadian Wheat Board was exempted from carrying out its obligations under Sect. 14 of the Canadian Wheat Board Act (Order in Council P.C. 4645, dated July 5, 1945). Under the same Order in Council the Board was charged with the responsibility of maintaining a floor price of $\$ 1.25$ per bushel for top grades of Ontario winter wheat basis in store Montreal. The Onfario Wheat Equalization Fund was continued in 1946 in accordance with Order in Council P.C. 4645, dated July 5, 1945.

Wheat Products.-Under Order in Council P.C. 5768, dated Aug. 28, 1945, the Canadian Wheat Board was charged with the administration of drawbacks paid in respect to flour and other human foods containing wheat, sold and delivered in Canada between Aug. 1, 1945, and July 31, 1946.

Oats and Barley.-Under Order in Council P.C. 2550, the Board continued to guarantee minimum prices for oats and barley on the same basis as in 1944-45. Maximum prices remained the same.

Oats and Barley Equalization Funds.-Under provisions of Order in Council P.C. 2550, dated Apr. 12, 1945, the Board continued to administer the Barley Equalization Fund and the Oats Equalization Fund and Advance Equalization Payments.

On Sept. 25, 1945, Order in Council P.C. 6238 was passed amending Western Grain Regulations to provide for an increase in the advance equalization payment on barley to 20 cents per bushel, and prohibiting maltsters from paying a premium on the purchase of barley for malting purposes. This action was taken on account of the shortage of feed grains in Canada and the necessity of prohibiting exports of barley of all types during the crop year 1945-46. The 20-cent Advance Equalization Payment to producers applied on barley marketings from Aug. 1, 1945, to July 31, 1946.

Flaxseed.-Under Order in Council P.C. 2550, the Board continued to be the sole agency to receive commercial flaxseed from producers in Canada, the buying and selling prices remaining the same as in 1944-45 (see p. 798). Under this Order, the Board was required to fill domestic requirements before offering flaxseed for export.

Oilseeds.-Under Order in Council P.C. 859, dated Feb. 9, 1945, the Board continued to guarantee minimum prices for sunflower seed and rapeseed on the same basis as in 1944-45 (see p. 798).

## Special Measures in Regard to Wheat, 1945-46

The British Priority.-Early in 1945-46 the demand situation was such that Canada could dispose of wheat in a volume which, later in the crop year, would reduce the quantities available to the United Kingdom below her minimum requirements. Since Canada had provided practically all imported wheat for the United Kingdom since the outbreak of War in 1939, it was evident that some special arrangements would have to be made if Canada were to continue this position in 1945-46. As a result, cables and letters were exchanged between the Board and the United Kingdom authorities relative to the United Kingdom's wheat requirements for 1945-46 and Canada's ability to meet these requirements in the face of exceptional demand from other countries. The Imported Cereals Division of the Ministry of Food made available to the Board all relevant facts in regard to the United Kingdom's wheat position for $1945-46$, including monthly requirements and bulk stocks required to permit continuous operation of United Kingdom mills. As a result of this exchange of information and views, the Board in November, 1945, agreed to supply the United Kingdom with her minimum home requirements for the period from Dec. 1, 1945, to Apr. 30, 1946. This commitment was in addition to the supplies of wheat made available to the United Kingdom during the AugustNovember period, which not only met United Kingdom requirements during these months, but resulted in a satisfactory stock position in the United Kingdom as at Dec. 1, 1945. This decision on the part of the Board was concurred in by the Federal Government and became an important feature of Canadian wheat policy during the critical winter of 1945-46.

Limitation of Wheat Export Price.-On Sept. 19, 1945, the Federal Government announced that for the time being Canadian wheat was to be offered for export at a price not exceeding $\$ 1.55$ per bushel for No. 1 Northern wheat basis in store Fort William/Port Arthur or Vancouver. At the same time the Federal Government announced that "as a further means of stabilizing wheat prices during the post-war period, it is the intention that steps shall be taken to ensure that producers will not at any time up to July 31, 1950, receive less than $\$ 1 \cdot 00$ per bushel for No. 1 Manitoba Northern wheat, basis in store Fort William/Port Arthur or Vancouver, on the authorized deliveries for each crop year" The reasons for these two decisions on the part of the Federal Government and the specific instructions to the Canadian Wheat Board in respect to export prices for Canadian wheat were set forth in Order in Council P.C. 6122, dated Sept. 19, 1945.

Cessation of Mutual Aid.-At midnight Sept. 1, 1945, sales of wheat under Mutual Aid ceased in Canada. Mutual Aid funds first became available in 1943 and large quantities of wheat and flour went abroad as a direct charge against these funds. After Sept. 1, 1945, the sale of Canadian wheat and flour became subject to cash settlement or a charge against credit arrangements negotiated by various
importing countries with the Canadian Government. Pursuant to this decision, the Board's Crown Wheat Account was closed out as at the close of business on Sept. 1, 1945.

Special Conservation and Export Program.-On Mar. 18, 1946, the Prime Minister, the Rt. Hon. W L. Mackenzie King announced a special program designed, in part, to reduce the consumption of breadstuffs in Canada and to facilitate the export of wheat and wheat flour to meet an "urgent and desperate" food situation abroad. Of particular importance to the wheat situation in Canada was the announcement of the intention of the Federal Government to:-
(1) Reduce wheat available for domestic milling by 10 p.c. as compared with the corresponding months of 1945 ;
(2) Reduce the use of wheat for distilling by 50 p.c. as compared with the year previous;
(3) Encourage reduction in inventories of wheat and wheat products;
(4) Grant priorities for rail transportation of wheat for export;
(5) Provide for the release of increased quantities of oats and No. 4 Northern wheat for export;
(6) Provide special arrangements to encourage immediate delivery of wheat stored on farms.

The provisions as outlined above were carried out during the crop year; with respect to Item No..6, the Federal Government on Mar. 18, 1946, announced a special income tax arrangement whereby producers who marketed wheat during the period Apr. 1, 1946 to June 30, 1946, could, if they so desired, take cash settlement at their option in 1946, 1947 or 1948. The date of accepting settlement determined the year in which the payment was to apply for income tax purposes. A total of $8,944,453$ bushels were delivered to the Board under this arrangement.

United Kingdom Wheat Contract.-On July 25, 1946, the Hon. James A. MacKinnon, Minister of Trade and Commerce, made the following statement in the House of Commons:-

[^294]
#### Abstract

"The contract is based upon commercial considerations of mutual interest. It ensures to the United Kingdom substantial quantities of wheat during the expected period of shortage at prices below those which would be payable were there to be a free market at the present time. This is the commercial advantage which the United Kingdom secures. In the later period of the contract Canada receives the advantages of a guaranteed market, though for a diminished quantity, and of the assurance of at least the stated minimum prices. In determining the actual price in the last two years regard will be had to the extent to which the agreed price for the first two years falls below the world price for that period. Our farmers are therefore protected from crippling losses should there be a world slump in wheat prices. This is the commercial advantage which Canada secures."

## Acreage and Production

Wheat acreage in 1945 showed only a slight increase over the area sown in 1944. Wheat acreage in Canada amounted to $23,414,100$ acres as compared with $23,284,200$ acres in 1944. Small decreases were shown in the area sown to rye and flaxseed.

Total grain and flaxseed production in Canada decreased by about $300,000,000$ bushels as compared with 1944. Prairie production of all grains and flaxseed declined by $253,000,000$ bushels as compared with 1944.

Grain production in Canada and the Prairie Provinces is given in a table at p. 810, for the years 1940-46.

Total supplies of each of the major grain and oilseed crops showed substantial decreases as compared with 1944-45 due, in part, to smaller inward carryovers and, in part, to smaller production in 1945 as compared with 1944. Total supplies of wheat were $197,000,000$ bushels lower than in 1944-45. A statement at p. 812 shows total supplies of grain in Canada for the years 1940-47

Price Ceilings.-The Board continued to act as administrator of ceiling prices on whole grains on behalf of the Wartime Prices and Trade Board.

Delivery Quotas.-As a result of country elevator space available at the start of 1945-46 and the rapid movement of wheat to seaboard, it was possible to increase delivery quotas quickly. The initial wheat quota was established at 5 bushels per authorized acre. On Sept. 6, 1945, a general wheat delivery quota of 14 bushels per authorized acre was established throughout Western Canada. On Oct. 4, 1945, the Minister of Trade and Commerce announced in the House of Commons that the 14-bushel limitation on marketings was being removed for the crop year 1945-46; on the following day the Board announced an open delivery quota on wheat at all delivery points in the Western Division, effective until July 31, 1946.

In order to assist in meeting the demand for feed grains, the Board extended the open delivery quota on oats and barley in effect on July 31, 1945, to Aug. 31, 1945. On Aug. 30 the Board announced an open delivery quota on barley for the balance of 1945-46. At the same time the open delivery quota on oats was extended to Sept. 14, 1945. On Sept. 13 the Board announced that the initial 1945-46 delivery quota on oats would become effective on Sept. 17 and would be established at 5 bushels per seedea acre. At the same time it was pointed out that some restriction had to be maintained on oats in order to facilitate the rapid movement of wheat to the Lakehead and to the West Coast during the early part of the marketing year. On Dec. 27, 1945, a 10-bushel quota became effective in respect to oats and this was followed on Dec. 31 by the declaration of an open delivery quota at all but a few delivery points. Delivery quotas in respect to oats were completely open on Feb. 11, 1946. At the commencement of the crop year the Board announced that delivery quotas would not be established for 1945-46 in respect to flax and rye.

Transportation.-The facilities of the Emergency Grain Transportation Committee were used throughout the crop year 1945-46 in co-ordinating transportation in Canada with transportation problems as they were developed. Transportation available for the movement of grain, including railways and lake vessels, was adequate throughout the crop year. During the autumn of 1945 it was not only possible to provide exceedingly large stocks of wheat at seaboard but, in addition, over $90,000,000$ bushels of wheat were in eastern storage positions at the close of navigation on the Great Lakes. The westward movement of wheat from Alberta kept well ahead of arriving ocean tonnage until late in the crop year.

In the final quarter of the crop year availability of stocks of grain became a limiting factor and it was not possible to use the volume of transportation which would otherwise have been available. Taking the crop year as a whole, transportation facilities in Canada geared themselves very closely with the domestic and export requirements. Particular reference should be made to the work of the railways in Western Canada and the co-operation of the elevator companies in reducing country elevator stocks to $11,200,000$ bushels on July 31, 1946, with a substantial part of these stocks either held for mills or in unshippable quantities.

## Changes in Personnel

In September, 1945, D. A. Kane resigned as Assistant Chief Commissioner, C. E. Huntting, Commissioner, was appointed Assistant Chief Commissioner, and W. C. McNamara was appointed to the vacancy on the Board. Mr. Kane remained with the Board as Western Representative, with headquarters in Vancouver.

The Crop Year, 1946-47

## Summary

Owing to the improved crops in Europe, the food problem of $1946-47$ will be serious but less severe than in 1945-46. The gains in grain production in Europe are, in part, offset by substantial reductions in the volume of wheat available for export during the present crop year from Canada and the United States. Some time must yet elapse before many millions of people will feel secure in regard to food supplies. While world wheat production in 1946 was running very close to pre-war levels, for the second successive year it was "touch and go" for many countries during the winter months and during the critical period of March, April, May and June of 1947. There were no sizeable stocks of wheat anywhere in the world to cushion the transition between the crop years 1945-46 and 1946-47, due in part, to the fact that a great international effort was made in 1945-46 to relieve hunger. This effort left reserves in both importing and exporting countries at dangerously low levels, and crops harvested in 1946 commenced to go into consumption as soon as they became available.

## The 1946-47 Grain Program

Wheat.-On July 30, 1946, the Hon. James A. MacKinnon, Minister of Trade and Commerce, made the following statement in the House of Commons:-

[^295]ducer than I indicated in this House on Mar. 20, 1946. At that time, I announced the continuation of the initial price of $\$ 1 \cdot 25$ per bushel basis No. 1 Northern in store, Fort William/Port Arthur or Vancouver, for the 1946-47 crop year.
"The new policy is based upon an initial price of $\$ 1.35$ per bushel basis No. 1 Northern in store Fort William/Port Arthur or Vancouver, applicable to all the wheat delivered to the Canadian Wheat Board in the five-year period from and including Aug. 1, 1945, and July 31, 1950. The 1945-46 deliveries, based on an initial price of $\$ 1.25$ will be brought up to a $\$ 1.35$ basis by payment of a flat 10 cents per bushel on all grades.
"As the House has been informed, the payment of about 12 cents per bushel as participation on the 1943 crop is now under way. This participation payment will be followed by one on the 1944 crop the sale of which has progressed to a point where I am safe in saying that the participation payment will be upwards of 16 cents per bushel. After the 10 -cent payment on the 1945 crop has been made-to bring the initial payment up to $\$ 1.35$-the plan is to place the remaining surplus from that crop in a five-year pool with the succeeding four crops of 1946, 1947, 1948 and 1949. Participation certificates will be issued in the usual way, but the payment on these certificates will not be made until after the conclusion of the five-year pool at July 31 , 1950. In other words, the deliveries of all five years will be bulked in one pool, with the same initial price of $\$ 1 \cdot 35$ ruling throughout the period and the surplus resulting from the marketing of these crops will constitute the participation payments.
"In connection with deliveries there was, of course, no restriction on 1945-46 deliveries and it is the intention of the Government to instruct the Canadian Wheat Board to accept all the wheat that producers wish to deliver in 1946-47. The best information we can get indicates a continued over-all world shortage of wheat and wheat flour in the coming crop year. Deliveries in the last three years of the pool will depend upon conditions of production and of markets. It will be provided in the new orders that the deliverable quantities will be determined by the Governor in Council before each new crop year, but in any event, the deliverable quantity shall not be less than 14 bushels per authorized acre. The latter provision should safeguard wheat producers against an extreme reduction in deliverable amounts, should available markets be smaller than we expect.
"I should also mention the provisions for domestic and export prices. In the interests of general price control that benefits the wheat producers along with other Canadians, the domestic price of wheat will be continued at $\$ 1 \cdot 25$, with the Government assuming carrying costs on the amounts of wheat used domestically. The Government will continue to pay a drawback to millers covering the difference between $77{ }^{3}$ cents and $\$ 1.25$ per bushel on wheat used in Canada for human consumption. This is, of course, not a direct charge against the producer. With regard to export prices, the supplies for the United Kingdom will obviously be sold within the terms of the contract. In sales to non-contract countries, a serious effort will be made to sell at prices roughly corresponding to those of the other principal supplier-now, the United States. To this end, Order in Council P.C. 6122 of Sept. 19, 1945, has been revoked. It will be remembered that through this Order the Government directed the Canadian Wheat Board for the time being not to exceed a sales price of $\$ 1.55$ per bushel for No. 1 Northern in store Fort William/Port Arthur or Vancouver in its export sales.
"It will be apparent from what I have said and from the terms of the United Kingdom-Canada Wheat Contract that the Government considers it wise and advisable to continue the Canadian Wheat Board as the sole purchaser of western Canadian wheat from the producers The Government believes that the great majority of western producers are satisfied, for the present at least, with this method of marketing. The present powers of the Canadian Wheat Board will be extended under the National Emergency Transitional Powers Act for the duration of this statute. When it expires, the Government will direct its attention to the form and authority under which the Board's powers may be further continued.
"Other powers of the Board, such as delivery quotas, will continue to be employed as in the past. For 1946-47, however, the quotas will not be finally restrictive but employed for the purpose of fairly dividing elevator space and railway cars among all the producers.
"The representations that have been made to the Government by spokesmen for the organized producers of western Canada stress their great desire for stability, so far as it can be attained by Government action, during the post-war years. I think it can be fairly said that the policy I have outlined helps the producers materially toward that objective. There is no question that the wheat producers have made possible the success of domestic price control by immediate sacrifices in their 1945-46 and current export prices. These sacrifices have also assisted in overseas rehabilitation. The Government is convinced that the outlined policy will give fair and comparatively stable returns to the producers, so far as it is within the power of the Government."

Eastern Division.-On July 18, 1946, the Hon. James A. MacKinnon, Minister of Trade and Commerce, made the following general statement in regard to Ontario winter wheat policy for the crop year commencing July 1, 1946:-

[^296]Wheat Products.-The Board continued to administer drawbacks paid in respect to flour and other human foods containing wheat, sold and delivered in Canada between Aug. 1, 1946 and July 31, 1947

Oats and Barley.-Under Order in Council P.C. 3222, dated July 30, 1944, the Board continued to guarantee minimum prices for oats and barley on the same basis as in 1945-46. Maximum prices remained the same.

Oats and Barley Equalization Funds.-Under provisions of Order in Council P.C. 3222, dated July 30, 1946, the Board continued to administer the Barley Equalization Fund and the Oats Equalization Fund and Advance Equalization Payments. For the crop year 1946-47 the advance equalization payment on barley was reduced from 20 cents per bushel to 15 cents per bushel and malting premiums up to 5 cents per bushel were permitted. The exercise of export control to preserve grain supplies for domestic use continued as an important feature of grain policy, with the Agricultural Supplies Board making the decisions as to export releases.

Flaxseed.-For the crop year 1946-47 the Board continued to be the sole agency to receive commercial flaxseed from producers in Canada. Under Order in Council P.C. 3222, dated July 30, 1946, the Board was empowered to buy flaxsecd at $\$ 3.25$ per bushel basis No. 1 C.W. Flaxseed in store Fort William/Port Arthur or Vancouver, and the Grade No. 1 Canada Eastern Flaxseed in store Montreal. Under the same Order in Council the Board was required to sell flaxseed in the
domestic market at prices determined by the Oils and Fats Administrator of the Wartime Prices and Trade Board. The Board was further required to fill domestic requirements before offering flaxseed for export.

Oilseeds.-Under Order in Council P.C. 3222, the Board continued to guarantee minimum prices for sunflower seed and rapeseed on the same basis as in 1945-46.

## Acreage and Production

Wheat acreage in Canada increased from 23,414,100 acres in 1945 to 25,900,000 acres in 1946. This increase in wheat acreage was accompanied by a decrease of over $1,000,000$ acres seeded to oats and a decrease of about 600,000 acres seeded to barley.

Total grain and flaxseed production in Canada increased by about 123,000,000 bushels as compared with 1945 while Prairie production increased by over 120,000,000 bushels. The table below shows grain production in Canada and in the Prairie Provinces for the years 1940-46.

Total supplies of wheat showed a substantial decrease of $75,000,000$ bushels as compared with the 1945-46 figure due to the smaller inward carryover which more than offset the increase in production in 1946. A table at p. 812 shows total supplies of grain in Canada for the years 1940 to 1946.

## Historical Statistics

Grain Production.-The following statement shows grain production (in million bushels) for Canada and for the Prairie Provinces, for the crop years ended July 31,1940 to 1946 :-

|  | - Year | Wheat | Oats | Prairie Provinces |  | Flaxseed | Totals |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Barley | Rye |  |  |
|  |  | (million bushels) |  |  |  |  |  |
| 1940. |  | 514 | 229 | 83 | 12 |  | 841 |
| 1941. |  | 296 | 178 | 95 | 10 | 6 | 585 |
| 1942. |  | 529 | 500 | 241 | 23 | 15 | 1,308 |
| 1943. |  | 268 | 392 | 204 | 6 | 18 | 888 |
| 1944. |  | 411 | 371 | 178 | 7 | 9 | 976 |
| 1945. |  | 295 | 273 | 144 | 4 | 7 | 723 |
| 1946. |  | 400 | 276 | 145 | 6 | 7 | 834 |

| 1946. |  | $1 \cdot 25^{3}$ | 4 | - |
| 1947. |  | $1 \cdot 35$ | 6 | - |

[^297]Equalization Payments.-Advance equalization payments for the crop years ended July 31, 1944 to 1947, were as follows:-

| Year | Oats | Barley |
| :---: | :---: | :---: |
|  | cts. per bu. | cts. per bu. |
| 1944..... | 10 | 15 |
| 1945. | 10 | 15 |
| 1946. | 10 | 20 |
| 1947. | 10 | 15 |

The following statement shows the coarse grain distribution of surplus from equalization funds, Apr. 1, 1943 to July 31, 1943, and for the crop years ended July 31, 1944 and 1945:-

| Year | Oats | Barley |
| :---: | :---: | :---: |
|  | cts. per bu. | cts. per bu. |
| April 1 to July 31, 1943. | $2 \cdot 40$ | $1 \cdot 43$ |
| 1944. | 5.849 | - |
| 1945.. | - | 7.59 |

Flaxseed Prices.-Fixed prices for flaxseed, basis No. 1 C.W in store Fort William/Port Arthur, for the crop years ending July 31, 1943 to 1947, were as follows:-

|  | Year | Price |
| :---: | :---: | :---: |
|  |  | \$ per bu. |
| 1943. |  | $2 \cdot 25$ |
| 1944. |  | $2 \cdot 50$ |
| 1945. |  | $2 \cdot 75$ |
| 1946. |  | $2 \cdot 75$ |
| 1947. |  | $3 \cdot 25$ |

## Subsection 2.-Distribution, Storage and Inspection of Principal Field Crops

For three consecutive crop years the disposition of Canadian wheat has been featured by a heavy export movement of this grain. During the 1945-46 season total exports of wheat and wheat flour equivalent amounted to $340,107,000 \mathrm{bu}$. as against $342,945,000$ bu. in $1944-45$ and $343,755,000$ bu. in 1943-44. With breadgrain requirements remaining extremely urgent in the war-ravaged countries of the world, the bulk of total wheat and wheat flour shipments found its way into these areas. Since the peak year of 1943-44, when Canadian exports of wheat to the United States for home consumption and milling in bond totalled $159,828,000$ bu., shipments to that country have dwindled to $41,861,000 \mathrm{bu}$. in 1944-45 and 12,334,000 bu. in 1945-46.

Domestic utilization in 1945-46 totalled more than $166,000,000$ bu. as compared with over $172,000,000 \mathrm{bu}$. a year earlier. The amount consumed as animal feed was reduced by approximately $15,000,000$ bu. while consumption as human food increased by nearly $9,000,000 \mathrm{bu}$. Wheat movement from the Prairie Provinces into the Canadian feed deficit areas of Eastern Canada and British Columbia, under the Dominion Freight Assistance Policy, was only slightly larger in 1945-46 than it was in the preceding crop year. About three-quarters of the total 1945-46 freight assistance wheat shipments were destined for Ontario and Quebec.

## 3.-Production, Imports, Exports and Domestic Use of Canadian Wheat and Wheat Flour, Crop Years Ended July 31, 1941-46

(Millions of Bushels)

The domestic and export trade in Canada's five principal grain crops are shown in some detail in Table 4. Substantial reductions from levels of the previous year are noted for the exports of the coarse grains. Oats and barley shipments were down by approximately 50 p.c. and 86 p.c., respectively, while rye exports were reduced by about 34 p.c. and flaxseed by 89 p.c.

## 4.-Distribution of Canadian Grain Crops, Crop Year Ended July 31, 1946

(Millions of Bushels)

| Item | Wheat ${ }^{1}$ | Oats | Barley | Rye | Flaxseed |

${ }^{1}$ Includes wheat flour. $\quad{ }^{2}$ Total amounts for domestic use not divisible for barley, rye and flaxseed.
Licensed Grain Elevator Capacity.-At Dec. 1, 1946, total licensed grain elevator storage capacity in Canada stood at about $495,200,000 \mathrm{bu}$. as compared with approximately $566,700,000 \mathrm{bu}$. at the same date in 1945 and $596,400,000$ bu. in 1944. In 1946 as in 1945 the greatest reduction in Canadian licensed elevator capacity occurred within the ranks of the temporary and special annexes of the western division. At Dec. 1, 1946, no temporary or special annexes were licensed in the eastern division. While some reduction was apparent in the capacity of elevators and permanent annexes in both eastern and western divisions, the decline was not substantial.

## 5.-Licensed Grain Elevator Capacity, as at Dec. 1, 1946

Wheat Flour.-Since the crop year 1937-38, when wheat-flour production amounted to $12,867,728$ bbl., the output of Canadian mills has more than doubled, the $1945-46$ total amounting to $26,435,341$ bbl., an all-time record high. Domestic consumption of flour in 1945-46 displayed a substantial gain when approximately $12,837,000$ bbl. were consumed domestically as against some $10,900,000 \mathrm{bbl}$. in 1944-45. During the 1945-46 season, the mills operated at $96 \cdot 5$ p.c. of their rated capacity. Some mills exceeded their monthly rated capacity by operating more than the customary number of working days per month and were instrumental in boosting the over-all percentage of rated capacity effective for March and May to 102.4 p.c. and 100.5 p.c., respectively. Statistics of employees, power installation, value of products, etc., for flour and feed mills for 1944 are given in Table 9 of the Manufactures Chapter at page 528.

## Section 4.-Marketing of Live Stock and Live-Stock Products*

Since the outbreak of war in 1939, there has been a great increase in the demand for live stock and live-stock products in the form of meats, dairy products, poultry and eggs. These products have not only been required in greater volume to meet requirements of the United Kingdom and other United Nations, but the demand in Canada has expanded sharply as a result of greater purchasing power in the hands of the consumers. Live stock thus makes a very important contribution to farmers' income and also provides the basis for a large slaughtering and meat-packing industry in Canada.

Live-Stock Marketings, 1945.-Three new records were established in commercial live-stock marketings in Canada in 1945. Cattle marketings numbered over $2,000,000$ for the first time and calf and sheep marketings also reached new high levels. Hog marketings, however, were the lowest since 1939, and about $3,000,000$ head less than in 1944, the record year. Cattle marketed in Canada in 1945 numbered $2,024,025$, as compared with $1,528,947$ in 1944. Marketings of calves totalled 830,346 as compared with 701,039 in 1944. Marketings of hogs through commercial channels in 1945 totalled $5,867,276$ as compared with $8,863,830$ in 1944. Marketings of sheep and lambs were $1,254,672$ in 1945 as compared with $1,050,953$ in 1944.

The interprovincial and export movement of all classes of live stock, except hogs, in 1945 showed increases over the previous year. Total shipments in 1945 with figures for 1944, in parentheses, were as follows: cattle 742,245 (621,075); calves $247,919(192,906)$; hogs $1,094,086(1,887,092)$; and sheep $426,288(377,946)$.

Slaughtering and Meat Packing.-The growth of this industry has been accompanied by a concentration of the major part of the production of the industry into a comparatively small number of large establishments, thereby facilitating greater efficiency of operation and the utilization of by-products. The large increase in the number of establishments since 1930, only 76 firms having reported in that year whereas in 1931 the number was 147, is due to the inclusion of wholesale butchers operating small plants engaged in slaughtering only. The inclusion of these small establishments did not affect materially the value of production of the industry, which increased from $\$ 3,799,552$ in 1870 to $\$ 7,132,831$ in 1890 and to $\$ 22,217,984$ in 1900 . In the next decade it more than doubled, attaining a value of $\$ 48,527,076$ in 1910 , and by 1920 a value of $\$ 240,544,618$ was reported. In 1945 it was $\$ 504,849,523$ as compared with $\$ 228,500,487$ in 1940 . The principal statistics of the industry for 1944 appear in the Manufactures Chapter, Table 9 at pp. 528-533. The slaughterings reported by establishments in the industry in 1945 were: cattle $1,887,693$, calves 829,850 , lambs and sheep $1,159,962$, and hogs $6,033,003$.

Establishments that prepare meat products for export are subject to inspection under the Meat and Canned Foods Act. In practice these include all the principal packing establishments but do not include local wholesale butchers included in the slaughtering and meat-packing industry above, nor slaughtering by retail butchers and by farmers for their own use and local sale.

Meat Consumption.-The estimates of per capita meat consumption shown in Table 12 represent the consumption of the civilian population only. In order to arrive at a proper comparison of meat consumption during 1940-45 with the years before the War, figures of supply were revised to compensate for amounts of meat used for non-civilian purposes. These deductions included purchases by the Department of Munitions and Supply for the Army, Navy and Air Force, supplies for ships' stores, Red Cross parcels and other similar uses.

The Canadian population figures used to arrive at the per capita consumption estimates were also adjusted for the members of the Armed Forces serving outside of Canada and living in barracks in Canada. All estimates in Table 12 are on a carcass weight basis except canned meats which are in terms of the product.

## Section 5.-Cold Storage

Cold-Storage Warehouses.-Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6; now consolidated as c. 25, R.S.C., 1927), subsidies have been granted by the Federal Government to encourage the construction and equipment of cold-storage warehouses open to the public: the Act and regulations made thereunder is administered by the Department of Agriculture.

## 13.-Cold-Storage Warehouses in Canada, by Provinces, 1945

Note.-The figures in this table, which do not include creameries with mechanical refrigeration, were supplied by J. F. Singleton, Associate Director, Marketing Service, Dairy Products Division, Dominion Department of Agriculture.

Cold-Storage Stocks.-Since 1917 statistics of stocks on hand of food commodities in cold storage have been published but throughout the years the data have been expanded by many subdivisions of the products and by the inclusion of more foods. Monthly and annual reports issued by the Agricultural Division of the Dominion Bureau of Statistics give detailed information on cold-storage holdings.

## Section 6.-Merchandising and Service Establishments*

Two comprehensive surveys have been made of the business carried on by retail and wholesale trading establishments in Canada. The first census of this type was undertaken in 1931, in connection with the Seventh Decennial Census. This Census related to the business transacted in 1930, and covered the operations of service establishments, including hotels, in addition to wholesale and retail trading firms. The results for 1930 are contained in Volumes X and XI of the Census of 1931. A second Census of Merchandising and Service Establishments, taken in 1941 as part of the Eighth Decennial Census, related to the business transacted in the census year. The results of that Census, in so far as retail trade is concerned, are given in the 1941 Census Volume X, while the results for wholesale and service establishments are contained in Volume XI.

A summary of the main features of the retail and wholesale marketing structure of the country, as revealed by the Census, is presented in the following Subsections. This information is given in more detail at pp. 597-621 of the 1945 Year Book.

## Subsection 1.-Wholesale Merchandising

Wholesale trade, for census purposes, has been taken to include all agencies of distribution between the producer on the one hand and the retailer or industrial or other large user on the other hand. It does not include manufacturing plants but does include manufacturers' sales branches or offices operated at locations apart from plants. In addition to regular wholesalers (including exporters and importers), agents, brokers and commission merchants have been included, as well as assemblers of primary products, such as co-operative marketing associations, grain elevators, and city or country buyers of primary products. The wholesale trade census also includes the bulk tank stations operated by distributors of petroleum products.

[^301]In all, 24,758 wholesale establishments were recorded in the results of the 1941 Census and these provided employment for 117,471 persons who received $\$ 189,449,000$ in salaries, wages and commissions. In addition, there were 13,656 proprietors of unincorporated firms employed in wholesale trading. An aggregate volume of business amounting to $\$ 5,290,751,000$ was reported for these wholesale establishments, of which $\$ 4,278,342,000$ represented sales made by the reporting firms on their own account and $\$ 1,012,409,000$ represented sales made on commission for others.

Since one type of wholesaler may sell to another, there is some duplication in the aggregate sales volume of all wholesalers. Nor can the volume of wholesale trade be related to retail trade, since a considerable portion of the business of wholesalers is done with industrial or large users or with foreign buyers and thus never enters the retail field.

Wholesalers are classified on various bases such as according to amount of annual sales, number of employees, form of organization, number of marketing units, etc. The two fundamental bases for classification, however, are by type of operation and by kind of business.

Type of Operation.-Wholesale establishments have been classified primarily by type of operation, that is, according to functions performed, 31 individual types having been grouped into six major classifications. Wholesalers proper, consisting of firms performing most of the functions of wholesalers, such as buying and selling on their own account, extending credit, providing delivery service, etc., form the most important major group. This group, in addition to regular wholesale merchants, includes importers and exporters of merchandise and also voluntary group wholesalers who service a particular group of more or less closely associated retail stores. There were 9,417 establishments classified as wholesalers proper in 1941 , and these had sales of $\$ 2,358,475,000$ or $44 \cdot 6$ p.c. of the aggregate wholesale sales and employed 74,800 persons who received $\$ 117,390,000$ in salaries, wages and commissions.

The next largest group in volume of business was manufacturers' sales branches or offices maintained at locations apart from plants and whose sales amounted to $\$ 1,206,994,000$ or $22 \cdot 8$ p.c. of total wholesale sales. These 1,622 establishments provided employment for 20,782 persons with salaries, wages and commissions of $\$ 40,034,000$.

Agents and brokers, composed of manufacturers' agents, commission merchants, import and export agents, brokers, etc., doing business on a commission basis for others and, as a rule, carrying no stocks, accounted for $\$ 907,520,000$ sales or $17 \cdot 2$ p.c. of the total sales of all wholesalers. Salaries to 4,423 employees in this group of wholesalers, totalled $\$ 8,677,000$.

Establishments numbering 7,366 with a sales volume of $\$ 453,301,000$ or 8.6 p.c. of the total were classified as assemblers of primary products. This group includes firms engaged in the assembling and distributing of farm and other primary products, such as co-operative marketing associations and sales agencies, grain elevators, and city or country buyers of primary products who purchase directly from producers. This type employed 10,499 persons to whom salaries, wages and commissions of $\$ 13,356,000$ were paid.

The 3,973 petroleum bulk tank stations engaged in the distribution of petroleum products by tank car to retailers and such users as farmers, fishermen and small industrial users transacted a business of $\$ 216,292,000$, constituting $4 \cdot 1$ p.c. of the total wholesale trade, and paid $\$ 6,890,000$ to 4,968 employees.

The sixth major group is a residual class including all other types, such as film exchanges, distributing warehouses and government-owned companies. These numbered 274 establishments, which had sales of $\$ 148,168,000$ and provided employment for 1,999 persons who received $\$ 3,102,000$ in salaries and wages.

Kind of Business.-The other major basis for classification used in the wholesale census was by kind of business, according to the main commodity or commodities handled. There were about 150 individual kind-of-business classifications and these were grouped under 25 major classifications. Among wholesalers proper, the largest volume of business in 1941 was transacted by the groceries and food specialties group, with sales of $\$ 347,472,000$, followed by the food products (except groceries) group with sales of $\$ 237,935,000$. Next in importance, in point of view of sales, amounting to $\$ 207,856,000$, was the machinery group. The most important trade according to volume of sales among manufacturers' sales branches was the metals and metal work classification with 75 establishments doing a business of $\$ 177,152,000$. Important, also, in this type were the sales of dry goods and apparel, electrical goods, petroleum products and groceries and food specialties trades. The farm products (raw materials) group doing a business of $\$ 364,277,000$ formed the most important kind-of-business classification among the agents and brokers so far as volume of business is concerned, followed by the dry goods and apparel group with a sales volume of $\$ 116,914,000$ but with a greater number of establishments participating. Assemblers of primary products were concentrated in the farm products (raw materials) trade; this kind of business accounted for 6,333 establishments and had sales of $\$ 368,355,000$. The food products (except groceries) trade was the other important kind-of-business classification found in the assemblers group and this trade accounted for sales of $\$ 73,777,000$.

Provincial Distribution.-Almost two-thirds of the total wholesale trade of Canada was at the date of the Census, concentrated in the Provinces of Ontario and Quebec, the former having sales valued at $\$ 1,744,664,000$ or 33 p.c. of total sales and the latter, sales of $\$ 1,726,521,000$ or $32 \cdot 6$ p.c. of the total. Manitoba came next with $\$ 579,613,000$ or 11 p.c., while British Columbia accounted for $7 \cdot 2$ p.c.; Alberta, $6 \cdot 1$ p.c.; Saskatchewan, $5 \cdot 3$ p.c.; Nova Scotia, 2.9 p.c.; New Brunswick, 17 p.c.; and Prince Edward Island, less than 1 p.c.

The proportion of the total trade transacted in each province varied for the different major types into which the wholesale field is divided. For wholesalers proper, Quebec came first in 1941 with $36 \cdot 0$ p.c. of the total trade, followed closely by Ontario with $34 \cdot 7$ p.c. The Prairie Provinces accounted for $15 \cdot 4$ p.c., British Columbia for $8 \cdot 1$ p.c. and the Maritime Provinces for the remaining $5 \cdot 8$ p.c. Apart from a slightly greater concentration in Quebec and Ontario, the distribution of sales for manufacturers' sales branches was similar to that for wholesalers proper. On the other hand, the Prairie Provinces occupied a much more important role in the other categories. They accounted for 29.3 p.c. of the total sales of all petroleum bulk tank stations, $34 \cdot 2$ p.c. of the sales of all agents and brokers and $66 \cdot 4$ p.c. of the total business done by all assemblers of primary products.

Miscellaneous Analyses.-Wholesale data are also analysed by size of business, number of employees, form of organization, type of purchaser, etc. These analyses are summarized at pp. 606-607 of the 1946 Year Book.

## Subsection 2.-Retail Merchandise Trade

Extent of the Known Retail Trade.-The total known retail merchandise trade in Canada for 1941, as recorded in the results of the Merchandising Census, was valued at $\$ 3,667,715,600$ or an average of $\$ 319$ per person. By far the greatest proportion of this business was transacted through retail stores. The total sales volume of business transacted by retail stores in 1941 was $\$ 3,440,901,700$, but included in this figure are certain components that cannot be considered as retail merchandise sales. Some retail stores secure a minor proportion of their total revenue from repair work while others sell merchandise on a wholesale basis to a limited extent. On deducting these subsidiary amounts from the over-all turnover of $\$ 3,440,901,700$, there remains a figure of $\$ 3,354,499,100$ which represents retail merchandise sales through retail stores.

In addition to the business done by retail stores, sales of merchandise at retail are made by some other types. Hotels sell meals, alcoholic beverages, tobacco, magazines, etc. Wholesale establishments transact a small volume of retail business. Some manufacturing plants, particularly manufacturing bakeries and dairies, sell directly to the ultimate consumer. Co-operative associations and line elevator companies are engaged in the retail distribution of farmers' supplies. Retail sales are made by itinerant operators and also by persons carrying on a retail business from their homes as a minor activity in conjunction with their main occupation.

Retail business of the types mentioned above was measured in the 1941 Census and is summarized in Table 15. The two chief unmeasured elements in the total retail trade are the sales made on farmers' markets in urban centres and the sales made direct to householders by producer-distributors of dairy products.
15.-Total Recorded Retail Merchandise Trade, 1941

| Item | Amount | $\begin{gathered} \text { P.C. } \\ \text { of } \\ \text { Total } \end{gathered}$ | Item | Amount | P.C. of Total |

|  |  |  | Total Recorded Retail Merchandise Trade... | 3,667,715,600 | 100.00 |

Summary Statistics of Retail Stores.-The remainder of this Section is confined to an analysis of the operations of retail stores as considered in the broader sense to include not only stores but also gasoline filling stations, restaurants, lumber yards and all other types of outlets engaged chiefly in the sale of merchandise at retail. Including all such types, there were 137,331 retail outlets recorded in the 1941 Census. These required the services of 297,047 full-time and 95,561 part-time employees to
whom $\$ 314,438,000$ was paid in salaries and wages. In addition, there were 131,823 proprietors of unincorporated firms working on their own account. Annual sales totalled $\$ 3,440,902,000$ and year-end stocks were valued at $\$ 540,864,000$.

| Canada. | 137,331 | 131,823 | 297,047 | 95,561 | 314,438 | 3,440,902 | 540,864 |

Large-Scale Merchandising.-The development of large-scale merchandising in Canada has, on the whole, followed the same trend as shown by other countries. Large establishments, such as department stores, had shown marked development prior to 1930, but this trend did not continue between 1930 and 1941. The chainstore system of distribution is important, especially in such lines as grocery and meat and variety stores.

Although chain and department stores accounted for a considerable proportion of the retail trade in Canada, the bulk of retail business was transacted through independent outlets in 1941. The relative position of chain-store sales changed very slightly between the two census years, chain-store sales forming $18 \cdot 3$ p.c. of all retail trade in 1930 and $18 \cdot 7$ p.c. in 1941. Department stores gave way to a very small degree in favour of independent stores. Department stores transacted 12.9 p.c. and 11.0 p.c. of the retail sales in 1930 and 1941, respectively, while the percentage of the total retail trade transacted by independent stores increased from 68.8 p.c. in 1930 to 70.3 p.c. in 1941.

An analysis by kind of business revealed that some trades were predominantly independent store fields. Independently operated country general stores accounted for $96 \cdot 2$ p.c. of the sales of all such stores, while sales of independent filling stations formed 91.4 p.c. of the total for that business. Men's and women's specialty clothing stores, restaurants, tobacco stores and stands, grocery stores, and drug stores are other trades in which independent merchants far outweighed chain companies, and over 80 p.c. of the business for these was done through the independent type of retail outlet. The independent shoe store was the major type of operation in that trade in 1941, transacting 62.7 p.c. of the business, but this proportion was considerably smaller than the $77 \cdot 3$ p.c. done by independent stores in 1930, indicating an expansion in the chain shoe business during the intercensal period.

Tables showing the relative positions of independent, chain and department stores, by economic divisions, 1930 and 1941, as well as retail merchandise trade in all stores by selected kinds of business and by types of operation, 1930 and 1941, are given at pp. 609-610 of the 1945 Year Book.

Chain Stores.-For census purposes, chains are taken to mean all groups of four or more stores (except department stores) under the same ownership and management and carrying on the same kind of business. All department stores are considered as independents irrespective of the number of stores operated by any one company.

The 532 chain companies operating 8,011 stores transacted 18.7 p.c. of the total retail trade in the census year. Variety stores were operated chiefly on a chain basis, variety chain-store sales forming 86.9 p.c. of the total.

Retail Merchandise Trade in Urban Centres.-The greatest proportion of retail trade in 1941 was transacted in the urban centres, having populations of 100,000 or over. While these cities had 23 p.c. of Canada's population, their sales amounted to 40 p.c. of the retail sales transacted in the census year. At the other end of the scale, the small villages and rural areas, places of less than 1,000 population, accounted for 49 p.c. of the population and only 17 p.c. of the retail trading. Urban centres falling in the 1,000 to 30,000 grouping and representing 20 p.c. of the population transacted 29 p.c. of the total retail sales. Cities of the 30,000 to 100,000 population class, housed 8 p.c. of the persons in Canada and transacted 14 p.c. of the sales. It should be pointed out that sales are attributed to the centres where the purchases are made, rather than to the areas from which that business is drawn. Thus, it becomes apparent that many urban centres act as distributing points for surrounding areas, and that the business attributed to these cities does not necessarily reflect the consumer demand within the city.

The intercensal expansion of population, stores, and sales for all cities of over 10,000 population in 1941 is given at pp. 611-612 of the 1945 Year Book.

Commodity Distribution of Consumer Dollar.-In 1941 food products came first in point of view of dollar sales accounting for 26.8 p.c. of the total expenditure. Automotive products, including not only purchases of new and used motor-vehicles but also gasoline and oil, tires and tubes, parts and accessories, came second forming $15 \cdot 2$ p.c. of the total. Clothing and shoes came third with 14.6 p.c. followed by household effects with 8.3 p.c. Sales of alcoholic beverages amounted to 6.6 p.c.; building materials, 4.7 p.c.; receipts from the sale of meals, $4 \cdot 2$ p.c.; fuel, $3 \cdot 1$ p.c.; drugs, drug sundries and toilet goods, $2 \cdot 3$ p.c.; piece goods, notions and smallwares, 1.8 p.c.; and other merchandise, 12.4 p.c.

Miscellaneous Analyses.-Retail data are also analysed by size of business, number of employees, etc. These analyses are outlined at p. 611 of the 1946 Year Book but are given in greater detail at pp. 604-615 of the 1945 edition and in the 1941 Census Volume X.

## Subsection 3.-Retail Service Establishments

The Census of Merchandising and Service Establishments included in its scope not only firms engaged in the retail and wholesale merchandise trades but also a large number of different types of service establishments in which the annual revenue represented receipts from services performed rather than from the sale of merchandise. A considerable number of firms overlap these two functions, being engaged partially in selling goods and partially in providing services. Establishments were assigned in their entirety to either the merchandising or service section of the census on the basis of their major activity as measured in terms of annual receipts.

There were 49,271 service establishments which came within the scope of the 1941 Census with receipts of $\$ 254,678,000$ as compared with 42,223 service establishments with receipts of $\$ 249,455,900$ in 1930. Service establishments in 1941 gave employment to 62,781 full-time employees and to 21,647 persons on a parttime basis and spent $\$ 62,984,000$ in salaries and wages.

There was a marked expansion both in the number and receipts of beauty parlours between 1930 and 1941. For 1930, the results showed 2,385 beauty parlours with $\$ 6,109,300$ receipts as compared with 5,619 beauty parlours operating in 1941 and having receipts of $\$ 12,884,400$. Receipts of establishments in the photographic group increased from $\$ 5,078,600$ in 1930 to $\$ 6,901,300$ in 1941, revealing a major development in photographers' services. Results of the 1941 Census also showed an amount of $\$ 43,329,800$ spent for laundry and dry cleaning services while receipts for such services in 1930 amounted to $\$ 33,944,500$. Repair shops, including jewellery and watch repairs, automobile and bicycle repairs, blacksmith shops, and upholstery and furniture services, had receipts of $\$ 37,512,100$ in 1941.

Hotels.-Results of the census of hotels for 1941 showed 5,646 hotels in Canada with annual receipts of $\$ 147,488,156$, of which $\$ 78,695,770$ or 53 p.c. represented the sale of alcoholic beverages, $\$ 57,706,350$ or 39 p.c. was obtained from room rentals and the sale of meals while the remaining 8 p.c. represented receipts from miscellaneous sources. More detailed information on hotels is given at p. 612 of the 1946 Year Book.

## Subsection 4.-Current Merchandising and Service Statistics

A complete census of all trading establishments is a major undertaking and it is not possible to survey the entire field annually. Measurements of the more significant post-census trends and developments are effected through the medium of a series of annual, monthly and special projects. The following paragraphs review results of the most recent analyses of various aspects of Canadian merchandising.

Wholesale Trade.-Current trends in wholesale trade are recorded by monthly indexes of sales based on reports from a representative sample of wholesale merchants in nine lines of consumer goods. The trades covered in this survey are automotive equipment, drugs, clothing, footwear, dry goods, fruits and vegetables, grocery, hardware, and tobacco and confectionery. Composite sales indexes for these kinds of business (on the base 1935-39=100,) averaged $141 \cdot 9$ for 1941, $156 \cdot 2$ for $1942,168 \cdot 2$ for $1943,185 \cdot 9$ for 1944 and $205 \cdot 3$ for 1945 . Using 1941 as a base, the indexes indicate that the dollar sales volume of wholesalers in the nine lines covered by the survey was up $10 \cdot 1$ p.c. in $1942,18 \cdot 5$ p.c. in $1943,31 \cdot 0$ p.c. in 1944 and $44 \cdot 7$ p.c. in 1945 . The upward trend continued in 1946 , sales in the first ten months being 20 p.c. higher than in the corresponding period of 1945.

Retail Trade.-Total sales of retail stores in Canada for the year 1945 were estimated to be $\$ 4,591,885,000,11$ p.c. above sales in 1944 and 33 p.c. greater than sales in the census year, 1941. Sales expansion since 1941 has been most pronounced in country general stores, hardware and building materials, restaurants, jewellery stores, alcoholic beverage outlets and tobacco stores, all of which had sales in 1945 exceeding 1941 figures by more than 60 p.c. More moderate increases were experienced by most other kinds of retail establishments during the same interval, although the automotive trades constituted an exception to this trend. Dollar sales for the combined automotive trades in 1945 were 28.9 p.c. below 1941 volume, the reduction from the census year resulting chiefly from the very

limited distribution of new motor-vehicle sales in the most recent year. Of the total retail trade in 1945,19 p.c., or $\$ 877,895,900$, was handled through the 6,725 outlets operated by 426 chain companies.

Estimates of sales for the years 1930 and 1941 together with indexes of retail sales for 1931-41, by provinces and for certain kinds of business, appear at p. 614 of the 1946 Year Book. Table 17 gives the indexes for 1931-45.

## 17.-Indexes of Retail Sales in Canada, 1931-45

$(1930=100)$

| Year | Index | Year | Index |

| Totals, All Chain Stores.................. | 708,249 | 774,088 | 877,896 | +13.4 |

[^303]Farm Implement Sales.-Domestic sales of new farm implements and equipment, mainly at wholesale prices to dealers or agents, amounted to $\$ 63,781,105$ in $1945,16 \cdot 3$ p.c. higher than the $\$ 54,824,135$ recorded for 1944 . Supplementary information relating to average mark-up indicates that the total sales figure quoted for 1945 should be increased by 20 p.c. to bring it to a retail basis. Canadian farmers, therefore, spent an estimated $\$ 76,600,000$ for new machinery and equipment in 1945.

Separate figures on the sale of repair parts show a total business of $\$ 18,651,843$ in 1945 , a gain of $9 \cdot 2$ p.c. over the $\$ 17,084,138$ reported for the preceding year. Applying an average mark-up of 31.4 p.c. to the 1945 figure, a total retail value for repair parts amounting to $\$ 24,508,500$ is obtained.
20.-Regional Distribution of Farm Implement and Equipment Sales, 1944 and 1945

Note.-Values are mainly at wholesale prices.

| Region | 1944 |  | 1945 |  | P. C. <br> Increase <br> 1945 over 1944 |

Motion-Picture Statistics.-There were 1,323 theatres operating in Canada in 1945 and these had $215,573,267$ paid admissions. Box-office receipts, exclusive of amusement taxes, amounted to $\$ 55,430,711$ while Dominion and provincial amusement taxes collected at motion-picture theatres amounted to $\$ 14,055,021$. In addition, the 162 itinerant exhibitors of 16 mm . films had receipts of $\$ 353,045$, collected $\$ 80,918$ in amusement taxes, and reported admissions numbering $1,531,341$. Moreover, there were 4 establishments operating in Canada in 1945 as legitimate theatres, which had $1,137,322$ paid admissions with box-office receipts of $\$ 873,341$ plus $\$ 239,179$ amusement taxes.

[^304]New Motor-Vehicle Sales.-Preliminary results show that 114,479 new motor-vehicles having a retail value of $\$ 179,689,602$ were sold in Canada during 1946. A disproportionate share of these were commercial vehicles, whose sales reached a new all-time peak of 41,427 units in 1946 and accounted for about 36 p.c. of the total of all new vehicles sold. The rate at which passenger cars reached the retail market was far below that prevailing in the late 1930's, although the year's sales totalled 73,052 units. Distribution rose sharply from about 1,000 in January to 8,200 in June, fell somewhat below the latter figure in the next four months, but reached new high levels in the last two months of the year. There was little evidence of the characteristic seasonal pattern; factory output was the determining factor in sales, the active demand necessitating the establishment of priority measures to guide distribution throughout the greater part of 1946.

When production of passenger cars for civilian use was discontinued in mid-1942, a pool of 10,000 units was provided to meet the needs of essential users. This supply was exhausted early in 1945 and the Government authorized the manufacture of 10,000 vehicles in the latter part of the year. Strikes in the automotive industry delayed production of these and few vehicles actually reached the retail market during the latter part of 1945.

Sales of new motor-vehicles by retail dealers for the period from 1930 to 1941 and for 1946 are summarized in Table 22. Compilation of statistics on such sales was suspended for most of the war period.

## 22.-Retail Sales of New Motor-Vehicles, 1930-46

Note.-The first year for which details are available is 1932 . The total value for 1930 was secured in connection with the Census of Merchandising and Service Establishments.

${ }^{1}$ Not available. $\quad{ }^{2}$ Subject to revision.
Financing of Motor-Vehicle Sales.-Finance companies play an important role in the distribution of motor-vehicles. Some of these firms are national institutions operating branches in all parts of Canada, while others conduct sales finance operations locally in conjunction with other activities such as insurance and real estate. Their acceptance of the risks involved in finaricing sales of high-priced consumer commodities on instalment terms makes it possible for private individuals to acquire these goods with a moderate initial outlay and, at the same time, enables retail dealers to make use of capital which would otherwise be tied up in customer indebtedness.

Results of the 1941 Census revealed that motor-vehicle paper comprised 87 p.c. of all retail financing by finance companies. The remaining 13 p.c. was for financing sales of radios, household appliances and small amounts of furniture, jewellery and clothing. In 1941, there were 77 companies active in the motor-vehicle sales financing field, but this number was reduced by almost one-half during the period 1942-45. During war years financing operations were drastically curtailed and largely concentrated in the used-vehicle field.

Table 23 shows the amount of motor-vehicle financing done by finance companies for the years 1930-46.
23.-Financing of Motor-Vehicle Sales, 1930-46

## Section 7-Co-operation in Canada*

An outline of the growth of co-operative activity in Canada and of the legislation passed in connection therewith, is given at pp. 543-545 of the 1942 Year Book. Developments leading up to the appointment in November, 1944, of a Royal Commission to inquire into the application of income tax and excess profits tax to cooperative companies and the findings of that Commission are given at pp. 618-624 of the 1946 edition.

## Subsection 1.-Trends in the Field of Co-operation in 1945

For the year ended July 31, 1945, reports were received from 1;824 active cooperative business organizations engaged in marketing produce or buying supplies for their members, not including fishermen's associations or service co-operatives. Of these associations, 965 marketed farm products and 1,383 purchased supplies for their members or operated co-operative stores. The larger number of associations purchasing supplies is explained by the fact that associations organized primarily to market produce may purchase supplies as well, and also by the fact that an association may buy several of the types of merchandise used in this analysis. Duplication because of these factors amounts to 524 .

[^305]Shareholders and members numbered 739,604 and the total number of patrons including members and non-members was estimated to be 738,345 . The consolidated balance sheet shows that total assets after provision for depreciation and bad debts amounted to $\$ 172,565,590$. This is a decrease of $\$ 30,000,000$ in value of assets from the previous year and is largely accounted for by a reduction in stocks of grain. Bank borrowings which covered these inventories were reduced correspondingly with a total decrease in general liabilities of $\$ 43,200,000$. The members' equity amounted to $\$ 83,774,151$ consisting of paid-up share capital of $\$ 15,789,047$ and reserves and surplus of $\$ 67,985,104$. This was an increase in members' equity of $\$ 11,282,613$ over 1944. From 1944 to 1945 total working capital increased from $\$ 31,826,711$ to $\$ 40,163,231$. The relation of net worth to total assets increased from $35 \cdot 7$ p.c. in 1944 to $48 \cdot 2$ p.c. in 1945 indicating a strengthening of the cooperative financial structure.

Sales of farm products amounted to $\$ 500,481,627$, sales of supplies and merchandise $\$ 81,360,855$ and other revenue $\$ 3,807,584$, a total business of $\$ 585,650,066$. The increase reported in total business over the previous year amounted to $\$ 57,794,526$.

Marketing.-The value of farm products marketed increased from 1944 to 1945 by $\$ 41,000,000$. The sales value of fruits and vegetables increased by $\$ 11,000,000$, tobacco $\$ 9,000,000$, dairy products $\$ 8,000,000$, live stock $\$ 6,000,000$, and grain and seed $\$ 5,000,000$.

A useful measure of co-operative activity on a regional basis is obtained by dividing the total value of products marketed co-operatively for an area by the number of farms which it contains (as reported in the Census of 1941). Saskatchewan led all provinces with average marketings of $\$ 1,257$ per farm, British Columbia was in second place with $\$ 1,083$ per farm, Alberta $\$ 913$, Manitoba $\$ 727$, Ontario \$364, Prince Edward Island \$281, Quebec \$272, Nova Scotia \$154 and New Brunswick $\$ 112$. The average for Canada as a whole was $\$ 683$ per farm.

The marketing of grain continued at a high level throughout the crop year 1944-45. It is estimated that during the year ended July 31, 1945, deliveries of grain to the four large co-operatives in the Prairie Provinces whose business is included in this report were 46 p.c. of total deliveries in these provinces. This is the same proportion that was estimated to have been marketed co-operatively in 1943-44. Sales value of grain and seed by co-operatives which amounted to $\$ 269,000,000$ was approximately one-half of the total co-operative business in Canada during the year 1944-45.

It is estimated that marketing co-operatives handled approximately 28 p.c. of the main farm products entering commercial channels of trade in 1944-45. Of the total dairy products marketed, co-operatives handled approximately 17 p.c., live stock 17 p.c., eggs and poultry 12 p.c., wool 47 p.c., fruits and vegetables 27 p.c., honey் 21 p.c., maple products 36 p.c., tobacco 89 p.c. and grains and seeds 46 p.c.

In order to determine the status of co-operatives in relation to non-co-operative methods of moving farm products into commercial trading channels, a comparison was made between the changes in co-operative marketings and total cash income from one year to the next. In 1944-45, co-operative marketings of farm commodities increased 9 p.c. over 1943-44 while total farm cash income from the same products increased 15 p.c. This indicates a reduced proportion of the total marketed through co-operative organizations. In the live-stock products group co-operative market-
ings increased 7 p.c. while total cash income increased 15 p.c. Co-operatives in this group apparently did not keep pace with the general increase. On the other hand, fruit and vegetable co-operatives showed an increase in business of 52 p.c. in 1944-45 over the previous year while total farm cash income from these products increased 20 p.c. Co-operatives apparently increased their proportion of business in this field during the crop year 1944-45.

Merchandising.-The reported sales value of supplies and merchandise purchased by co-operatives for members and patrons amounted to $\$ 81,360,855$ in $1944-45$. This was an increase of $\$ 15,900,000$ over the previous year. Largest increases occurred in the food-product group and in sales of feed, fertilizer and spray material. In large measure these increases were attributable to the increased use of feeds, fertilizer and petroleum fuel by farmers in attaining the production objectives set for Canadian agriculture.

Fishermen's Co-operatives.-In addition to the co-operative business summarized elsewhere, there were 65 fishermen's co-operatives operating in $1944-45$ with an estimated membership of 7,633 . The total volume of business reported amounted to $\$ 5,239,934$ which is a substantial increase over that reported for the previous year.

Insurance.-Mutual fire insurance is one of the oldest forms of co-operation in Canada. For the year ended Dec. 31, 1944, 409 farmers' mutual fire insurance companies carried insurance risks amounting to more than $\$ 1,436,293,000$ by farmer members for mutual benefit. Net admitted assets were $\$ 15,973,000$ and net losses paid in 1944 amounted to $\$ 3,014,000$.

Credit Unions.-Complete statistics for credit unions are given in the Currency and Banking Chapter at pp. 1040-1043.

Co-operative Stores.-In 1945 there were 917 co-operative stores in Canada with a membership of over 165,000 . Total value of the retail sales made by these stores exceeded $\$ 55,000,000$. Of the estimated total of retail trade in Canada, co-operatives accounted for 0.8 p.c. This was an increase of 0.2 p.c. over the figures reported by the 1941 Census, but it is likely that this increase was the result of more accurate and complete coverage rather than from an increase in co-operative retail trading.

Miscellaneous and Service-Type Co-operatives.-At the end of 1944 there were 2,375 co-operative telephone systems in operation across Canada with an investment in excess of $\$ 22,000,000$ and 110,388 connected telephones. In addition to the co-operative business already mentioned, other co-operative services are provided including housing, lodging and boarding facilities, transportation, medical and hospital care and funeral services.

Perhaps two of the most important recent developments under this heading are the co-operative farms in Saskatchewan and co-operatives for the provision of rural electrification in Quebec. The co-operative farms in Saskatchewan are as yet in the development stage and it is interesting to note that many of the co-operators are young veterans of the War of 1939-45.

The Rural Electrification Board of Quebec assists rural groups to organize co-operatively to provide electricity to the farmstead. For this purpose the Board has been allotted a fund of $\$ 12,000,000$ by the Quebec Provincial Legislature.

Recent Developments.-The Canadian co-operative movement has in recent years expanded and strengthened itself by means of federations and international affiliations. One of these was the organization of Canadian Co-operative Implements Limited, which was designed to manufacture and distribute farm machinery in the three Prairie Provinces. A small factory was acquired at Winnipeg where small implements are now being manufactured. The Company has also concluded a contract with a large Eastern machinery firm to supply them with tractors and heavier farm equipment.

The various co-operative wholesales in Canada have joined into Interprovincial Co-operatives Limited to facilitate interprovincial co-operative trading in the products of the various provinces. Some of these co-operative wholesales are also members of National Co-operatives Incorporated of the United States. This is regarded as one of the first moves towards increasing international co-operative trading.

Taxation Amendments.-Amendments to the Income War Tax Act relative to co-operatives were initiated and passed by the Dominion Parliament in August, 1946. For the most part these amendments were based on the report of the Royal Commission on Co-operatives which was tabled in the House of Commons in December, 1945.

The former exemption clause 4 (p) was repealed as at the end of the 1946 crop or financial year and full exemption is granted for three years only, to co-operatives commencing business after Jan. 1, 1947 Patronage dividends are deductible by co-operatives as an expense before calculation of taxable income. The latter is made up of: (1) Any surplus arising from member and non-member business that is not paid out; (2) Surplus from non-member business that is paid out to members; (3) Dividends or interest paid on capital stock; or (4) An amount equal to 3 p.c. of the capital employed, if actually earned, which may be reduced by payment of interest on enforceable obligations. The tax will be paid on the total of (1), (2) and (3) above, or the total of (4), whichever is the greater.

## Subsection 2.-Statistics of Co-operation

Tables 24 to 27 include statistics of active co-operative business organizations engaged in marketing produce or buying supplies for their members, but do not include statistics of fishermen's co-operatives or service co-operatives.

## 24.-Summary Statistics of Co-operative Business Organizations, Years Ended July 31, 1936-45

## PART III.-COMMERCIAL FAILURES

According to Sect. 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was passed by the Dominion Parliament in 1869, and applied to the four original provinces. This Act was renewed by c. 46 of the Statutes of 1874 . In 1875 a new Insolvency Act ( 38 Vict., c. 16) applicable to the whole Dominion was passed, but was repealed in 1880 . After this there was no Dominion legislation on the subject of bankruptcy until 1919. During the interval of nearly 40 years, commercial failures were handled under provincial legislation, and the statistics relating to such failures during this period were compiled and published by two commercial agencies, R. G. Dun and Co., and the Bradstreet Co. Statistics of commercial failures dealt with under the Dominion Bankruptcy Act of 1919 have been compiled and published by the Dominion Bureau of Statistics since 1920. (See pp. 844-845.)

The three Sections of this Part, although closely related so far as subject matter is concerned, cover different aspects of the field and the statistics presented in each Section are not comparable.

Statistics of industrial and commercial failures in Canada, given in Section 1, are compiled by Dun and Bradstreet, Inc. This concern is a mercantile agency interested primarily in credit information, and it is not to be expected that their data would be compiled on the same basis as figures of the Dominion Bureau of Statistics or the Superintendent of Bankruptcy. These statistics are established on a broader basis than those of Section 2, inasmuch as they include bankruptcies in general, insolvencies under provincial companies' Acts and such proceedings as bulk sales, bailiffs' sales, landlords' seizures, etc., when loss to creditors results. On the other hand, the statistics do not include assignments of farmers (under the Farmers' Creditors Arrangement Act) or of wage-earners, so that, as a general rule, the totals run lower than those in Section 2. As pointed out, between 1875 and 1919 the agencies, now Dun and Bradstreet, Incorporated, were the only source of figures of commercial failures, and their statistics have an added value because they present an unbroken historical series, though not on a comparable basis since 1934 (see text preceding Table 1). Dun and Bradstreet, Inc., have ceased to publish statistics of assets since 1940 .

Section 2, on the other hand, is limited to bankruptcies and insolvencies made under Dominion legislation, such as the Bankruptcy Act (including the Farmers' Creditors Arrangement Act), the Winding Up Act and the Companies' Creditors Arrangement Act, but not failures, sales, or seizures carried out apart from such Dominion legislation. In the field covered, however, Section 2 is broader than Section 1, inasmuch as the Dominion Bureau of Statistics figures include failures of individuals such as wage-earners and farmers.

A word should be added as regards the value to be placed upon figures of assets and liabilities. Such values are estimates made by the debtor and, unfortunately, are not made uniformly. The human equation enters into them to a considerable degree and they must be accepted with this qualification.

Section 3 is limited to the administration of bankrupt estates by the Superintendent of Bankruptcy, under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can, therefore, be assumed that this applies in even greater degree to the extended fields covered in Sections 1 and 2.

## Section 1.-Industrial and Commercial Failures from Private Sources

A historical table giving failures for Canada and Newfoundland, by classes, for the years 1915 to 1935 is given at p. 969 of the 1936 Year Book. Early in 1936, Dun and Bradstreet, Incorporated, from whose reports these figures were taken, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises previously included in manufacturing and a new class for commercial service. Real estate companies, holding, and other financial companies and agents of various kinds, were dropped. These changes have had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities are reduced more in proportion to the number of failures since the companies eliminated usually ran high in indebtedness. The figures in Table 1, which are available back to 1934, are therefore not comparable with the earlier series and are for Canada only.

## 1.-Industrial and Commercial Failures in Canada, by Classes, 1938-45, and by Provinces, 1916

(From Dun and Bradstreet, Incorporated)
Note.-Figures for 1934-37 are given at p. 628 of the 1946 Year Book.

In 1946, Quebec and Ontario accounted for 74 p.c. and 12 p.c., respectively, of the total failures in the Dominion. As regards liabilities, Quebec accounted for 39 p.c. of the total as compared with 32 p.c. registered for Ontario.

## 2.-Industrial and Commercial Failures, by Provinces, 1944-46

(From Dun and Bradstreet, Incorporated)
Nore.-Comparable figures for 1934-43 are given in the corresponding table of previous Year Books.

| Province | Failures |  |  | Liabilities |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1944 | 1945 | 1946 | 1944 | 1945 | 1946 |
|  | No. | No. | No. | \$'000 | \$'000 | \$'000 |

| New Brunswick... | 1 | 2 | 4 | 19 | 7 | 46 |
| Quebec.......... | 61 | 64 | 96 | 1,369 | 1,367 | 1,563 |
| Ontario. | 18 | 14 | 16 | 280 | 425 | 1,278 |
| Manitoba.. | 2 | 4 | 2 | 210 | 65 | 47 |
| Saskatchewan. | 3 | 3 | 1 | 7 | 5 | ${ }_{8}^{3}$ |
| Alberta. | 3 | 2 | 3 | 57 | 350 | 806 135 |
| British Columbia | 6 | 3 | 5 | 122 | 67 | 135 |
| Totals. | 96 | 95 | 130 | 2,119 | 2,305 | 4,003 |

According to Dun and Bradstreet, Incorporated, the number of commercial failures during the war years 1939-45 showed a steady decrease year by year, and, whereas before the War the great majority of failures were in retail trading establishments, the proportion in that group also showed a steady decrease during those
years. In 1946, however, the number of failures increased by 37 p.c. over the previous year. There were more failures in each of the industrial groups though 77 p.c. of the increase was accounted for by wholesale and retail establishments.

## 3.-Industrial and Commercial Failures, by Divisions of Industry, 1944-46,

## (From Dun and Bradstreet, Incorporated)

Nors.-Comparable figures for 1934-42 are given in the corresponding table of previous Year Books.

## Section 2.-Commercial Failures as Compiled by the Dominion Bureau of Statistics

Under the Bankruptcy and Winding Up Acts (R.S.C. 1927, cc. 11 and 213), certain documents relating to estates administered under these Acts have, since July, 1920, been forwarded to the Dominion Statistician for statistical analysis. However, changes in the Acts effective in 1923 affected the comparability with 1921 and 1922, the two earliest full years for which statistics are compiled. The series, therefore, begin with 1923, except for the analysis by branches of business, in which case 1924 is the first year compiled. The statistics of this Section cover all bankruptcies and insolvencies that fall under Dominion legislation, including assignments of individuals and farmers.
4.-Commercial Failures, by Provinces, 1937-46

Note.-Figures for 1923-36 will be found at p. 570 of the 1942 Year Book.

## 7.-Commercial Failures, by Provinces and Branches of Business, 1946, with Totals for 1945

## Section 3.-Administration of Bankrupt Estates

The administration of bankrupt estates is supervised by the Superintendent of Bankruptcy (appointed in 1932) with the object of conserving so far as possible the assets of bankrupt estates for the benefit of the creditors. Figures from the first report are given at p. 1039 of the 1934-35 Year Book, and those for subsequent years are to be found in later editions.

## 8.-Assets, Liabilities, Assets Realized and Costs of Administration in Bankrupt Estates Closed, 1933-45, and by Provinces, 1946

## General Review

Canada has become one of the great trading nations of the world during the past two decades. With less than one per cent of the world's population, this country, in 1938, ranked fifth in total trade, fourth as an exporter and eighth as an importer. During the War of 1939-45, she rose to third position among trading nations, due to the heavy demand created for foodstuffs and war materials. Onethird of all goods and services produced in this Dominion during 1944 and 1945 were exported, which compares with less than one-fifth of a much smaller production in 1938. Canada retained her wartime position as a world trader in 1946, despite the elimination of munitions and other war supplies from the list of her exports.

This expansion of Canadian foreign trade is attributed to a combination of unique economic and geographical conditions. Canada is richly endowed with natural resources, the development of which involved heavy capital investment. This is profitable only when such resources can be exploited on a large scale, and the initial costs offset by mass production. Primary production and industry are interdependent. Canadian wheat can compete in markets of the world largely because of the capital invested in farm machinery and transportation facilities. These could not be utilized economically without intensive development of the wheat industry. Similar heavy capital investments in plant and equipment and in the development of hydro-electric power have made possible the expansion of Canada's pulp and paper and base-metal industries. A population of some $12,307,000$ is unable to absorb the full production of this country's primary and secondary industries. Only by exporting can efficient low-cost production of basic commodities be maintained.

Canada lacks many products required by modern industry and many consumer goods that have become an important part of the present high standard of living in this Dominion. Import statistics reveal a large number of items that are not now being produced or are made available in insufficient quantities to meet domestic demands. Coal and certain machinery, cotton and wool, petroleum products, sugar and fresh fruits, tea and coffee are imported to meet the needs of Canadian industries and householders. Payment for these commodities is effected through the sale of Canadian products in other lands.

Maintenance of a large volume of trade is of two-fold importance to Canada. Only by exporting on a large scale can she obtain the advantages of large-scale production, and her needs for the many items not produced in this country can be satisfied only if sufficient Canadian products are sold on the international market to furnish funds with which to purchase such imported commodities. Total domestic exports for 1946 amounted to $\$ 2,312,000,000$ and imports for consumption to $\$ 1,927,000,000$. In this first year after the War, Canadian trade was maintained at a high level, as the productive capacity, which had increased so greatly during the War, found foreign outlets for its produce.

The transition from war to peace was not accomplished without difficulty: Many of Canada's customers ended the War with their foreign exchange reserves diminished and their ability to carry on foreign trade on a pre-war scale impaired. At the same time, their requirements for food and capital goods had increased. Without assistance of some kind, it would have been impossible to maintain the flow of essential goods to these countries.

Canadian Government trade and financial policy has been designed to bridge the gap between foreign requirements and Canada's own great capacity to produce. The principal method used in providing foreign governments with purchasing power is the system of loans and credits to various nations, and the supply to many countries of donations of food, clothing and equipment through the medium of UNRRA. These arrangements have proved mutually advantageous. Many countries whose economies had been severely dislocated by the War were assisted in their program of rehabilitation, and Canadian supplies of food have meant much to a world threatened with starvation. From the Canadian point of view, the loans have enabled Canadian industry to continue production at maximum tempo, and have averted the dangers of unemployment in export industries.

Such export credits and donations approximate $\$ 2,000,000,000$ in the aggregate, including a contribution of $\$ 154,000,000$ to UNRRA. The total Canadian postwar loans and credits to the United Kingdom and other countries are shown below. with the amounts advanced or encumbered up to Jan. 31, 1947 :-

The advantages of this policy are not confined to the present. It is anticipated that the present wide distribution of Canadian goods will, in itself, create a demand for those goods in future years, when the countries now buying from us on credit terms will be in a position to buy with their own resources. This attempt to develop a strong continuing demand for Canadian goods in the future has been reinforced by the negotiation of trade agreements with various countries.

Since Confederation, the, bulk of Canadian trade has been with the United States and the United Kingdom. Prior to the War of 1939-45, Canadian exports to the United Kingdom were normally twice the value of her imports from that country, whereas her purchases from the United States exceeded her sales to that country. The surplus on United Kingdom account financed the deficit on United States account. Now, however, the United Kingdom is obliged to borrow from Canada in order to cover the bulk of her deficit here. Canada, in turn, has financed the deficit on United States account from reserves of foreign exchange or with United States dollars acquired elsewhere. The problem is further complicated by the large increases in both exports and imports, as compared with pre-war figures. The deficit on United States account has nearly quadrupled; from an average of $\$ 11,000,000$ monthly in the three years $1937-39$, to $\$ 43,000,000$ monthly in 1946. The export surplus to the United Kingdom for the same periods has almost doubled.

Details of the Canadian trade figures for 1946 and earlier years are summarized in tables, charts and written analyses at pp. 867-901.

The above review has dealt almost entirely with commodity trade. However, foreign trade in commodities is only a part, though a very important part, of the broader field made up of the international exchange of values comprising goods, services, securities, etc. This relationship is shown in its proper proportions in Part III pp. 901-915. As commodity exports and imports constitute the largest factor in Canada's international transactions, and the one in which the majority of Canadians are most vitally interested, this Chapter is devoted chiefly to the consideration of commodity trade.

## PART I.-THE GOVERNMENT AND FOREIGN TRADE*

## Section 1.-Foreign Trade Service and Associated Agencies Concerned with the Development of Foreign Trade

During the war years the Department of Trade and Commerce reorganized and adapted its administrative machinery to war conditions. Agencies were created to control the flow of civilian commodities to and from this country and generally adapt foreign trade functions to vital needs. At the same time, the Department was, during the latter years of war, considering plans for post-war trade expansion and the foundations were then laid for the organization of the Foreign Trade Service to assist Canadian and foreign exporters and importers in every phase of foreign trade. Built around an expanded Trade Commissioner Service, new divisions were added and old divisions reorganized to cope with every angle of foreign trade. A special section was organized to foster the country's new interest in imports.

[^310]
## Subsection 1.-Foreign Trade Service

The prosperity of Canada depends, to a large extent, on the establishment of closer commercial relations with other countries and on the development of her foreign trade. Due, in large measure, to the unprecedented demand for munitions of war and a wide range of other manufactured products, industry in the Dominion during the past few years has passed through a period of rapid expansion. Although foodstuffs and raw materials figure largely among Canada's exports, the value of semi-processed goods available for shipment to foreign markets has increased substantially. As the population of Canada is unable to absorb the present production, every effort is being made to furnish exporters with assistance in securing purchasers abroad for their products. New sources of supply, especially for raw materials and a wide range of commodities required by industry, are also sought.

Six divisions of the Foreign Trade Service and a number of associated agencies are engaged directly in the development of Canada's commercial relations with other countries, assuming responsibility for functions performed over a long term of years by the Commercial Intelligence Service. The Directors of the six divisions constitute an executive committee, of which the Deputy Minister of the Department of Trade and Commerce is chairman. The directors, managing directors and general managers of the associated agencies are also responsible to the Minister of Trade and Commerce. Divisions of the Service and their functions are described as follows:-

Trade Commissioner Service.-The Trade Commissioner Service might be defined as the sales department of the Foreign Trade Service. Consisting of a headquarters at Ottawa and 41 offices in 22 foreign and 13 British Empire countries, the organization seeks to place Canada in as many world markets as possible. The work of the Trade Commissioners in the field is co-ordinated at Ottawa by four global areas headed by area chiefs. The area officers are familiar with every aspect of foreign trade in their geographical or political areas and are responsible to the Director of the Division for the presentation of official information on all trade matters in their respective territories.

Trade Commissioners, representing Canada in the 41 offices abroad, bring together exporters and importers of Canada and other councries. They study potential markets for specific Canadian products, report on the exact kind of goods required, competitive conditions, trade regulations, tariffs, shipping and packaging regulations. Enquiries for Canadian goods are passed to Ottawa or directly to interested Canadian firms. For the Canadian importer, Trade Commissioners seek sources of raw materials and other goods wanted in Canada, and give assistance to the foreign exporter who wishes to market his products in Canada.

In countries where Canada maintains a diplomatic mission, as well as a trade office, Trade Commissioners form an integral part of the mission and assume the titles of Commercial Counsellor or Commercial Secretary. In some foreign countries they also act as Consuls or Vice-Consuls, according to their status as Foreign Service Officers. To refresh their knowledge of the Canadian industrial picture as a whole, tours of Canadian industrial centres are arranged from time to time for Trade Commissioners. Contacts with Canadian exporters and importers are made or re-established, and the Trade Commissioners are given an opportunity to pass on information regarding the trade conditions and potentialities of their territories directly to those most concerned.

Trade Commissioner Offices are located in the following countries: Argentina, Australia, (Sydney and Melbourne), Belgian Congo, Belgium, Brazil (Rio de Janeiro and São Paulo), British West Indies (Jamaica and Trinidad), Chile, China, Colombia, Cuba, Egypt, France, Greece, Guatemala, Hong Kong, India, Ireland, Italy, Malayan Union, Mexico, the Netherlands, Newfoundland, New Zealand, Norway, Peru, Portugal, South Africa (Johannesburg and Cape Town), Sweden, United Kingdom (London, Liverpool and Glasgow); the United States (Washington, New York, Chicago and Los Angeles); and Venezuela. Canadian representatives of the Department of Trade and Commerce are attached to the Canadian Military Mission in Germany and the Canadian Mission in Japan.

Commercial Relations and Foreign Tariffs Division.-The Commercial Relations and Foreign Tariffs Division collects and makes available to Government agencies and exporters, data on trade agreements and trade relationships with other countries, tariffs, import and exchange regulations, quotas and embargoes. More generally, questions related to trade agreements and commercial policies of other countries are of concern to this Division. This involves minute investigation into all aspects of commercial policy and research into tariff and financial developments, as well as the preparation of data required for preliminary study and preparation of new trade agreements, trade agreement renewals and revisions.

The Foreign Tariffs Section of this Division supplies information to Canadian exporters and other branches of the Government on tariffs, quotas, embargoes, documentation and other technical factors in the import regulations of foreign countries. New foreign trade laws and tariff regulations are perused constantly so that a record of up-to-date information is maintained and available upon request.

The Commercial Relations Section collects and records data required for prospective trade negotiations. Problems related to tariff hindrances and other trade obstructions are studied. The value of mutual concessions with trading countries is examined. The Section deals with representations made by Canadian exporters and initiates or advises regarding appropriate action. In carrying out these functions, it is often necessary for the Research Section to seek the assistance of specialists from other Government Departments in the various phases of export industry such as agriculture, forestry, mining, etc.

The Economic Section, still in the development stage, is designed to carry out studies of special subjects (e.g., non-tariff restrictions to world trade, export subsidies, quantitative controls, and import permits).

Export Division.-The Export Division of the Foreign Trade Service is the link between Canadian exporters and the Trade Commissioner Service in the promotion of export trade. The Division is comprised of 23 Commodity officers, organized into five major sections, as follows: (a) Foods-live'stock and products, fish and fish products, plants and products, and food allocations; (b) Machinery, Metals and Chemicals-iron and steel products, non-ferrous metals and non-metallic minerals, chemicals and products, machinery and industrial equipment, electrical machinery and equipment, and automotive equipment and vehicles; (c) Textiles, Leather, Rubber-textiles and apparel, leather, rubber, and products; (d) Wood and Paper-wood and products, and paper and products; (e) General Productsdurable consumer goods, and miscellaneous products. The Commodity officers serve in the dual capacity of keeping the Trade Commissioner Service abroad fully informed of supply conditions in Canada, and maintaining close liaison with

Canadian exporters, actual and prospective. In conjunction with the Trade Commissioner Service, they advise exporters as to trade enquiries, potential markets for their products, the selection of agents, and trade regulations and practices. They furnish the initial contact through the Foreign Trade Service at Ottawa with Canadian markets abroad.

The Export Division maintains a confidential Exporters' Directory, which lists Canadian export firms and details of their products. Copies of this Directory are in every Trade Commissioner's office and are used as a means of keeping foreign buyers in touch with Canadian manufacturers offering desired commodities.

It is the general aim of the Department to relax or remove wartime export controls as quickly as possible in order to facilitate export. When the Export Division came into existence in November, 1945, the Export Permit Branch was brought under its jurisdiction. Controls over more and more items are being removed, but there are commodities still in short supply, particularly foodstuffs, textiles and clothing, steel, lumber, etc., the distribution of which still demands close surveillance. While permits are required for these short-supply materials, an effort is being made constantly to ease restrictions and give Canadian shippers as much freedom in choice of markets as possible within the limited quantities available for export. Certain commodities are subject to export quotas, which are prepared by the Commodity Officers in conjunction with the Wartime Prices and Trade Board or the Department of Reconstruction and Supply.

The Export Division services the United Kingdom token shipment scheme, under which limited quantities of manufactured articles, at present regarded by the United Kingdom authorities as non-essential, are licensed for importation.

Import Division.-An Import Division of the Foreign Trade Service was established soon after the end of the War, as it was recognized that a leading exporting nation must also be an importing nation. This accorded with recognition of the primary problem in foreign trade promotion, that exchange be made available to purchase exports, and of the relationship of Canada as a customer to the export sale of Canadian goods.

The Import Division is the link between Canadian importers and the Trade Commissioner Service and corresponds to the Export Division in its particular field. The Division maintains close contact with Canadian importers, and uses facilities of the Trade Commissioner Service to reduce the difficulties experienced by Canadian importers and foreign exporters. It extends to Canadian importprs assistance that can be provided in the foreign field by the Trade Commissioner Service.

The Import Division maintains a directory of Canadian importers and foreign exporters, classified according to the field of their acrivities. This directory assists the Trade Commissioners in their respective territories, serving as a guide. It also maintains a Canadian Trade Services Directory, copies of which are supplied to Trade Commissioners. This contains condensed reference material concerning Canadian requirements on customs, invoicing, packaging, marketing of goods, available freight and forwarding facilities, steamship rates, rail uransportation and relative marketing data. The primary purpose of this service is to obtain recognition abroad for Canada as an organized market, and to provide a reference in dealing with requests for assistance received from importers and their foreign connections.

Commodity specialists in the Division assist importers by providing information concerning new sources of supply of foreign raw materials and food products, and reports on the remaining war-engendered obstacles or restrictions in foreign markets.

They also investigate import requirements in general. A manufactured goods section is maintained to assist importers of component parcs, industrial equipment and finished goods.

In conjunction with other administrative authorities, the Import Division is concerned with the fair allocation to Canada of products subject to international control and distribution. Through the Trade Commissioner Service, it undertakes negotiations with foreign governments which regulate the sale of their exportable surpluses in world markets, thereby protecting Canadian interests.

Industrial Development Division.-This Division has been established recently to co-ordinate Federal assistance in the establishment of new industries in Canada, both of domestic and foreign origin. Close liaison is maintained with a widespread network of organizations throughout Canada, including industrial development departments of the provinces, municipalities, railways, banks, power companies, chambers of commerce, boards of trade, the Canadian Manufacturers' Association and other promotional agencies, and with trade commissioners and other Canadian Government offices abroad. Numerous enquiries from foreign concerns and individuals regarding the manufacture of new products in Canada under licence or royalty, and the placing of inventions are also processed.

Programs for the training of foreign technicians in Canada are instituted and carried out by the division. Seventy-five Chinese have been trained in Canadian industry during the past year, and a similar program for Indian trainees is now in progress.

Working in collaboration with the Area Sections, of the Canadian Trade Commissioner Service, this Division plans itineraries for visiting delegations and industrial technicians, and on occasion sends an official to conduct the tour. Arrangements are also made for visiting foreign government officials, technicians, lecturers, scientists and students.

Also included in the duties of the Division are, membership in various interdepartmental committees concerned with industrial studies and development, the processing of reparation plants and equipment, the despatch of technical investigators to Germany, and the admission of German scientists to Canada for the benefit of Canadian industry. The Division also provides liaison with the War Assets Corporation in the disposal of surplus equipment, particularly for export. Every effort is made to maintain close contact with new industries in the solution of their problems and the development of plans for export.

Trade Publicity Division.-The principal function of the Trade Publicity Division is to furnish the commercial community of Canada with information concerning the assistance obtainable by exporters and importers from the Foreign Trade Service. This Division is also responsible for stimulating interest among business men and other members of the general public in commercial relations with other countries, as their prosperity depends to a large extent on the development of foreign trade. The attention of exporters and potential exporters is directed to opportunities for the disposal of their products in markets abroad, and of importers to the sources of supply for raw materials and consumer goods unobtainable in this country. Its principal educational and informative medium is "Foreign Trade", a weekly publication of the Foreign Trade Service, in which are reproduced reports of Canadian Trade Commissioners on conditions in their respective territories, articles by Head Office personnel and economists of the Dominion Bureau of Statistics, news items and charts portraying trade trends. Press releases are prepared
and distributed to newspapers at home, and material of a similar character despatched to Canadian Trade Commissioners for distribution to newspapers abroad. Pamphlets and brochures are in the course of preparation to supplement other information on foreign markets, sources of supply, documentation, regulations and trade restrictions. Assistance is rendered to correspondents of newspapers and periodicals at home and abroad in the preparation of articles pertaining to various phases of Canada's external trade. The educational work of this Division is supported with advertising at home and abroad. Although the Trade Publicity Division is part of the Foreign Trade Service, it assists associated agencies of the Department of Trade and Commerce concerned with the development of foreign trade. Other publicity media, such as films and radio broadcasting, are being explored.

## Subsection 2.-Canadian Commercial Corporation

By Order in Council P.C. 1218 of Mar. 29, 1946, the Canadian Commercial Corporation was established to succeed the Canadian Export Board in purchasing commodities for UNRRA and the governments of other countries. This Corporation was also established as an agency for the purchase of Canadian import requirements in cases where these purchases could not be made by private firms without a government intermediary.

By Order in Council P.C. 314, of Feb. 5, 1947, effective Feb. 1, 1947, the power, duty and function vested in the Minister of Reconstruction and Supply, under the Department of Reconstruction and Supply Act of 1945, and the Department of Munitions and Supply Act, to buy or otherwise acquire, manufacture or otherwise produce munitions of war or supplies and to construct or carry out projects required by the Department of National Defence, was transferred from the Minister of Reconstruction and Supply to the Minister of Trade and Commerce. Facilities of the Canadian Commercial Corporation are now utilized in arranging for the procurement of supplies for the Department of National Defence.

## Subsection 3.-Canadian Government Exhibition Commission

The Canadian Government Exhibition Commission has been reorganized to provide assistance in publicizing Canada and selling her products abroad. Under the terms of reference, the Commission is solely responsible for the construction and administration of all government exhibits in international expositions, trade fairs and displays outside of Canada, in which the Canadian Government may decide to participate. The Commission has also been charged with the responsibility of organizing the first Canadian International Trade Fair, which will be held at Toronto from May 31 to June 12, 1948. Manufacturers and producers in Canada and other countries will have an opportunity of displaying their products at this fair.

The Commission also co-operates with Canadian exporters in securing representation for goods at trade fairs and trade promotional displays. When requested, it is prepared to advise individual Canadian companies in the preparation of their exhibits.

## Subsection 4.-Wheat and Grain Division

The problems of Canada's grain trade and milling industry are handled by the Wheat and Grain Division, close liaison being maintained with the various organizations connected with the trade. The Division acts as a procurement agency in
securing supplies of cereals and certain cereal products for the Supply Missions of various countries and also for UNRRA's requirements. The Director of the Division serves as the Secretary to the Wheat Committee of the Cabinet and as the departmental liaison officer to the Canadian Wheat Board. In addition, the Director represents Canada on the International Wheat Council.

## Subsection 5.-Export Credits

For the general purpose of protecting and expanding Canadian foreign trade interests, the Export Credits Insurance Act was passed by Parliament in August, 1944. The Act is in two Parts, Part I incorporating the Export Credits Insurance Corporation, and Part II providing for loans or guarantees to governments of other countries or their agencies.

Export Credits Insurance Corporation.-Administered by a board of directors, including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada, the Export Credits Insurance Corporation insures exporters against credits losses involved in the export or an agreement for the export of goods. Policies are issued on a yearly basis, covering exporters' sales to all countries and protecting them against certain risks of loss involved in foreign trade. The main risks covered by Export Credits Insurance Policies include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation or non-renewal of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country; and additional transport or insurance charges occasioned by interruption or diversion of voyage outside Canada or continental United States.

The insurance is available under two main classifications: (1) General Commodities, (2) Capital Goods. Coverage for General Commodities can be procured by exporters under two types of Policies: (1) the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received; or (2) the Shipments Policy, obtainable at lower rates of premium, and which covers the exporter from the time of shipment until payment is received. Insurance of Capital Goods offers protection to exporters of such commodities as plant equipment, heavy machinery, etc., which are subject to extended credit of longer periods than is customary for General Commodities. Specific policies are issued for transactions involving capital goods, but the general terms and conditions are the same as those applicable to policies for general commodities.

The Corporation insures exporters under all policies up to 85 p.c. of the contract price, or gross invoice value of shipments. This co-insurance plan also operates in the distribution of recoveries obtained after payment of a loss, and these recoveries are shared by the Corporation and the exporter in the proportion of 85 p.c. and 15 p.c., respectively.

Loans to Foreign Governments.-Part II of the Export Credit Insurance Act provides for the extension of loans to foreign countries for the purpose of developing trade between Canada and those countries. The Act empowers the Governor in Council, on the recommendation of the Minister of Finance and the Minister of Trade and Commerce "if he deems it advisable for the purpose of facilitating and developing trade between Canada and any other country", to make loans to,
guarantee the obligations of, or purchase, acquire or guarantee any security issued by the government or by the agency of the government of such country. These loans, guarantees, acquisitions or purchases must be requested by the government concerned, which must undertake to indemnify the Government of Canada against the loss in connection therewith. (See also p. 849.)

## Section 2.-The Development of Tariffs

A short sketch of trade and tariffs prior to Confederation is given at pp. 480-482 of the 1940 edition of the Year Book. The 1942 Year Book, at pp. 427-428, traces the development from Confederation to the adoption of the present form of preferential tariff in 1904.

Owing to the limitations of space in the Year Book, it has been necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships at present in force, and to summarize as much as possible historical data and details of preceding tariffs, giving references where possible to those editions of the Year Book where extended treatments can be found.

## Subsection 1.-The Canadian Tariff Structure

The Canadian Tariff consists mainly of three sets of rates, viz., Preferential, Intermediate, and General. British Preferential rates consisted at first (1898) of a remission of 25 p.c. of the duties ordinarily paid but later (1900) were advanced to $33 \frac{1}{3}$ p.c. and, after 1904, took the form of a specially low rate of duty on almost all imported dutiable commodities. This is the first broad category of the tariff structure and these rates are applied to specified goods from British countries if shipped direct to Canada. On certain goods special rates may be applied under the British Preferential tariff; these special rates are lower on those goods than the ordinary British Preferential scale.

The second stage in the tariff edifice is the Intermediate rates. These rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. To certain non-British countries, a special concession under the Intermediate rates may be granted and rates lower than the Intermediate apply by agreement.

The third class of duties is the General Tariff. This is levied on all imports that are not covered by Preferential or Intermediate rates.

British Preferential rates apply to all countries within the Empire. They may, however, be modified downward in their application to specific countries when trade agreements are being revised or discussed between Canada and other Dominions. The whole tariff structure is a very complicated piece of administrative machinery. Almost every budget that is brought down in the House of Commons changes the incidence of the tariff in some particulars. It would be impossible at this place to attempt a discussion of tariff schedules. The schedules and rates in force at any particular time may be obtained from the Department of National Revenue, which is responsible for administering the Customs Tariff.

In all cases where the tariff applies, there are provisions for drawbacks of duty on imports of semi-processed goods used in the manufacture of products later exported. The purpose of these drawbacks is to give Canadian manufacturers a fair basis of competition with foreign producers of similar goods, where it is felt to be warranted. There is a second class of drawbacks known as "home consumption" drawbacks; these apply mainly to imported materials used in the production of specified classes of goods manufactured for home consumption.

Too often one-sided competition arises out of unfair practices, such as dumping or the manipulation of exchange advantages. Wide powers have been given in certain instances to supplement tariff provisions. Thus the Minister of National Revenue or, through him, the customs officials have at times been empowered to establish a "fair market value" as a basis of applying duties to be collected. The term "fair market value" is vague and open to various interpretations and has been frequently criticized, but in exceptional cases, for which they are designed, such valuations have proved effective.

The exchange situation as it affects the Tariff is a different problem. A foreign currency that has become considerably depreciated in relation to the Canadian dollar enables the country concerned to export goods to Canada under a very definite advantage and customs officials have been given power, under conditions such as these, to value imports from such countries at a "fair rate of exchange" Much, of course, depends on the manner in which the above powers are applied by the administrative officials and their understanding of the reasons for their application, and, while the powers of fixing "fair market value" and "fair rate of exchange" have been applied to meet extraordinary conditions in the past, these powers have lately been modified by clauses in trade agreements drawn up with individual countries.

The Tariff Board.-The Canadian Tariff Act was written in 1907 and, although there have been many changes and revisions, there has been no complete overhaul since that time. In 1931, a Tariff Board was established to make inquiry into and report on any matter in relation to goods that are subject to or exempt from customs or excise duties or on which the Minister of Finance desires information. The duties of this Board are more specifically described at pp. 965-966 of the 1941 Year Book. The Tariff Board has been inoperative since the beginning of the War in 1939, in view of the turn taken by wartime trade. Its officers and experts worked with various war bureaus and its earlier research is now unrelated to the wide changes that have been brought about in industry and trade as a result of the War. In the post-war formulation of Canadian trade and tariff policies, a change has been introduced by the setting up of a special Interdepartmental Committee. The Canadian Tariff Board has not been abolished, indeed the Chairman of the Board is also head of the Interdepartmental Committee, but will resume its functions along with the Committee. The Committee will hear representations from industrialists and businessmen. These arrangements should serve a useful purpose in providing valuable guidance to the Government in the formulation of trade policy.

## Subsection 2.-Tariff Relationships with Other Countries

Trade agreements entered into by Canada with the United Kingdom, Eire, Australia, New Zealand, Union of South Africa, Southern Rhodesia* and the British West Indies are dealt with at pp. 383-386 of the 1941 Year Book. Reciprocal tariff arrangements of Canada with Argentina, Brazil, Chile and Ecuador are reviewed in the 1942 Year Book at pp. 429-431. Canada's crading position as affected by commercial agreements in respect of Bolivia, Colombia, Costa Rica, Dominican Republic, Guatemala, Haiti, Panama, Paraguay, Portugal, Salvador, Spain, Sweden, Switzerland, United States, Uruguay and Venezuela, continues as outlined in the 1941 Year Book at pp. 387-393.

[^311]Reinstatement of Agreements Suspended During War.-During the War, Canadian trade agreements and similar commercial treaty arrangements with several countries were terminated automatically or suspended by application of Enemy Trade Regulations (see p. 866). Since the end of hostilities, however, trading has been resumed with a number of friendly countries that had been under enemy occupation and the Trade Agreements with them have been reinstated. An exchange of notes of July 19-24, 1945, between Canada and Czechoslovakia terminated the suspension of the Convention of Commerce of Mar. 15, 1928, between the two countries. A similar arrangement was made with the Netherlands by an exchange of notes of Feb. 1-5, 1946, reinstating the Convention of Commerce of July 11, 1924, between Canada and the Netherlands including Curaçao and Surinam but, since trade had not been resumed beıween Canada and the Netherlands East Indies, it was agreed that the Convention would not, for the present, be operative for that territory. Canada has now accorded to Belgium and Luxembourg, Denmark, France, Norway, Poland and Yugoslavia the benefits of the Trade Agreements made with them but suspended during the period of hostilities. Syria and Lebanon, formerly under French Mandate, trade relations with which were governed by the Franco-Canadian Trade Agreement, continues to accord Canada most-favoured-nation treatment. Reciprocal treatment was extended by Canada to Syria and Lebanon under an Order in Council of Nov. 19, 1946.

On Nov. 21, 1946, by Order in Council, the benefits of the Intermediate tariff were extended to products originating in and coming from Italy when conveyed without transhipment from a port in Italy or from a port of a country enjoying the benefits of the British Preferential or Intermediate tariffs into a Customs port of Canada. In return, Canadian goods imported into Italy are accorded most-favourednation treatment.

Imports into Canada from countries entitled to most-favoured-nation treatment are accorded the intermediate rates of the Canadian tariff and any lower duties provided for in the Canada-France, Canada-Poland and Canada-United States Agreements. The reciprocal advantages accorded to Canada by the other countries depend upon the tariff system.

Other Trade Agreements Concluded in 1946.-Mexico.-A Canadian Trade Mission visited Mexico, Central America and Colombia in February, 1946, and further extended Canada's friendly trade relations with Latin America by the conclusion of Trade Agreements with Mexico and Colombia.

The Trade Agreement with Mexico provides for the exchange of most-favourednation treatment between the two countries in matters concerning customs duties and subsidiary charges as well as in respect of rules and formalities connecred with importation and of laws and regulations affecting the taxation, sale, distribution or use of imported goods. Under the Agreement, imports into Canada from Mexico, previously subject to the General Tariff, are accorded the Intermediate tariff and any lower rates granted by Canada to other foreign countries. The tariff treatment accorded by Canada to other British councries is excluded from the operation of the Agreement. No immediate reduction in customs duties was made by Mexico for Canadian goods as the Mexican tariff consists of a single column of duties applicable equally to imports from all countries, and any tariff reductions made by Mexico in favour of a particular country, for example those arising out of the MexicoUnited States Agreement of 1942, were generalized and made applicable to all other countries, including Canada. The Agreement came into force provisionally
on Feb. 8, 1946, the date of its signature and, during its provisional application, may be terminated on three months' notice by either party. Thirty days after exchange of ratifications in Ottawa, the Agreement is to go into force definitely for two years. Its duration is automatically continued thereafter for one-year periods, subject to termination on six months' notice by either party.

Colombia.-The Trade Agreement with Colombia was signed on Feb. 20, 1946. This Agreement will come into effect thirty days after exchange of ratifications in Ottawa and is to remain in force for two years and thereafter until terminated on six months' notice by either party. In general, it consolidates the existing tariff treatment extended by each country to the other as provided by a Treaty of Commerce between Colombia and the United Kingdom concluded in 1866 and which governed also Canada's trade relations with Colombia. The new Agreement marks the establishment of the first direct trade convention between Colombia and Canada and it provides in general, for the exchange of most-favoured-nation treatment as described above with respect to the treaty of Mexico. The same concessions are given by Canada to Colombia as to Mexico and, in return, Canada receives the benefit of duty reductions established by the 1935 Colombia-United States Agreement.

Nicaragua.-A Trade Agreement was signed on Dec. 19, 1946, between Canada and Nicaragua, providing for the exchange of most-favoured-nation treatment in matters relating to customs duties and subsidiary charges, as well as in respect of rules and formalities affecting taxation, sale, distribution or use of imported goods.

Under the terms of this Agreement, goods imported into Canada from Nicaragua, previously subject to the General Tariff, will now be accorded the benefits of the Canadian Intermediate tariff and any lower rates granted by Canada to other foreign countries.

This Agreement does not involve at present any new reductions in the tariff of Nicaragua imposed on imports from Canada, since that tariff has only a single schedule, certain concessions formerly accorded by Nicaragua to the United States and France having been suspended. In the event that these concessions should be re-established in whole or in part, the reductions will apply also to Canada. Similarly, other concessions which may be extended to other countries will also be extended automatically to Canada. Under a provision of the United StatesNicaragua Trade Agreement, scill in force, the fee collected for legalization of consular invoices covering shipments of goods specified in the Agreement is 3 p.c. ad valorem. Canada now becomes entitled to this rate instead of the fee of 5 p.c. ad valorem previously payable. Advantages accorded now or in the future by Nicaragus to other Central American countries or by Canada to other British Empire countries are excepted from the operation of this Agreement.

Other provisions of the Agreement assure each country equitable treatment in the other with regard to the application of internal taxes, quantitative restrictions, the operation of monopolies and in according contracts for public works. Provision is made for consultation in the event of either party adopting any measure which the other party considers as tending to impair or nullify the objects of the Agreement.

The Agreement came into provisional effect at date of signature, Dec. 19, 1946, and may be terminated on three months' notice by either government. Thirty days after exchange of instruments of ratification, the Agreement is to go into force definitively for one year and thereafter until terminated on six months' notice by either party.

China.-A modus vivendi with China was concluded on Sept. 26, 1946, by an exchange of notes between the two countries, and came into force two days later. It provides for reciprocal exchange of most-favoured-nation treatment in tariff matters. This agreement is the first commercial convention concluded between Canada and China by direct negotiation. It is to continue in force for a definite period of one year and beyond that until terminated on three months' notice by either country.

Trade Agreements at Present in Force.-At the present time (Mar. 31, 1947), Canada's tariff relations with other countries are affected by trade agreements, conventions of commerce or similar arrangements made directly between Canada and the country concerned or by participation in treaties made by the United Kingdom with foreign powers, listed as follows:-

Empire Countries

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| United Kingdom..... | Trade Agreement signed Feb. 23, 1937; in force Sept. 1, 1937. (Modified by United KingdomUnited States Trade Agreement of Nov. 17 1938.) | Various concessions on both sides, increasing preference formerly granted. Also extends preferential system between Canada and the Colonial Empire. Made until Aug. 20,1940 , and thereafter until terminated on six months' notice. |
| Etre........... . .... | Trade Agreement signed Aug. 20, 1932; in force Jan. 2, 1933. | Canada concedes British Preferential Tariff in return for most-favoured-nation treatment in Eire. Made for five years and thereafter until terminated on six months' notice. |
| Australia.......... | Trade Agreement signed July 8, 1931; in force Aug. 3, 1931. | Each country accords the other reduced rates on schedules of goods, and otherwise (with a few exceptions in Australia) exchange their British Preferential Tariffs with each other. Made for one year and thereafter until terminated on six months' notice. |
| New Zealand......... | Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. | Exchange specific preferences on scheduled goods and otherwise concede British Preferential Tariffs reciprocally. Made for one year, but kept in force by short-term extensions. Since Sept. 30, 1941, in force until terminated by six months' notice. |
| Union of South Africa. | Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932. | Agreement extends list of preferences formerly exchanged in absence of formal Agreement. Made for five years and thereafter until terminated on six months' notice. |

Empire Countries-concluded

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| British West Indies. | Trade Agreement signed July 6, 1925; in force Apr. 30, 1927. | Exchange of specific margins of preferences. Made for twelve years and thereafter until terminated on one year's notice. A Canadian notice of Nov. 23, 1938, terminating the Agreement, was replaced by one of Dec. 27, 1939, continuing the Agreement subject to termination on six months' notice. |

## Non-Empire Countries

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| Argentina... .... | Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941. | Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months' notice. To come into force definitely thirty days after exchange of ratifications for two years and thereafter until terminated on six months' notice. |
| Belgium and Luxembourg and Belgian Colonies. | Convention of Commerce signed July 3, 1924; in force Oct. 22, 1924. | Exchange of most-favoured-nation treatment. Made for four years and thereafter until terminated on one year's notice. |
| Bolivia...... .. .. | Order in Council of July 20, 1935, accepted Article 15 of the United Kingdom - Bolivia Treaty of Commerce of Aug. 1, 1911. | Exchange of most-favoured-nation treatment. May be terminated on one year's notice. |
| Brazil......... | Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. | Exchange of most-favoured-nation treatment. Made for two years from Apr. 16, 1943, and thereafter for one-year periods until terminated on six months' notice. |
| Chile . .. .. | Trade Agreement signed Sept. 10, 1941; in force provisionally Oct. 15,1941 , and definitively on Oct. 29, 1943. | Exchange of most-favoured-nation treatment. Made for two years from Oct. 29, 1943, and thereafter until terminated on six months' notice. |
| China..... .. .. | Modus vivendi signed Sept. 26, 1946, in effect Sept. 28, 1946. | Exchange of most-favoured-nation treatment. Made for one year and thereafter until terminated on three months' notice. |

Non-Empire Countries-continued

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| Соцомвia...... .. | Treaty of Commerce with United Kingdom of Feb. 16, 1866, applies to Canada. | Exchange of most-favoured-nation treatment. Protocol of Aug. 20, 1912, provides means for separate termination by Dominions on one year's notice. Exchange of Notes Dec. 30, 1938, continued Treaty in force until Sept. 30, 1939, and thereafter until terminated on three months' notice. |
|  | To be replaced by Trade Agreement signed Feb. 20, 1946. | Exchange of most-favoured-nation treatment. To come into force thirty days after exchange of ratification for two years and thereafter until terminated on six months' notice. |
| Costa Rica...... | Exchange of Notes with United Kingdom of Mar. 1-2, 1933, and Canadian Order in Council of July 20, 1935. | Exchange of most-favoured-nation treatment. |
| Cazchoslovakia.. | Convention of Commerce signed Mar. 15, 1928; in force Nov. 14, 1928. | Exchange of most-favoured-nation treatment. Made for four years and thereafter until terminated on one year's notice. |
| Denmark... ..... | Treaties of Peace and Commerce with United Kingdom of Feb. 13, 1660-61 and July 11, 1670, apply to Canada. | Exchange of most-favoured-nation treatment. Declaration of May 9, 1912, provides means for separate termination by Dominions on one year's notice. |
| Dominican Republic. | Trade Agreement signed Mar. 8, 1940; in force provisionally Mar. 15, 1940, and definitively Jan. 22, 1941. | Exchange of most-favoured-nation treatment. Made for three years from Jan. 22, 1941, and thereafter until terminated on six months' notice. |
| Ecuador...... | Modus vivendi by Exchange of Notes of Aug. 26, 1941; in force Oct. 1, 1941. | Exchange of most-favoured-nation treatment. Made for an indefinite period subject to termination on three months' notice. |
| France and French Colonies. | Trade Agreement signed May 12, 1933; in force June 10, 1933. Exchange of Notes of Sept. 29, 1934 and additional Protocol of Feb. 26, 1935, extending concessions on both sides. | As regards scheduled goods, Canada's actual Intermediate Tariff or percentage reductions from Intermediate exchanged for French Minimum Tariff or percentage reductions from General Tariff, also quota arrangements. Made for one year and thereafter until terminated on three months notice. |

Non-Empire Countries-continued

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| Guatemala.... | Trade Agreement signed Sept. 28, 1937; in force Jan. 14, 1939. | Exchange of most-favoured-nation treatment. Made for three years and thereafter until terminated on six months' notice. |
| Haiti...... .. .... | Trade Agreement signed Apr. 23, 1937; in force Jan. 10, 1939. | Exchange of most-favoured-nation treatment. Made for one year and thereafter until terminated on six months' notice. |
| Italy..... .. .. | Special Arrangement by Order in Council of Nov. 21, 1946. | Canadian Intermediate Tariff accorded to Italy in exchange for most-favoured-nation treatment of Canadian goods by Italy. |
| Leranon. .. | Special Arrangement by Order in Council of Nov. 19, 1946. | Exchange of most-favoured-nation treatment. |
| Mexico. .. .. | Trade Agreement signed Feb. 8, 1946; in force provisionally same date. | Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months' notice. To come into force definitely thirty days after exchange of ratifications for two years and thereafter until terminated on six months' notice. |
| Netherlands, Surinam and Curaçao. | Convention of Commerce, signed July 11, 1924; in force Oct. 28, 1925. | Exchange of most-favoured-nation treatment. Made for four years and thereafter until terminated on one year's notice. |
| Nicaragua.... .. | Trade Agreement signed Dec. 19, 1946, in force provisionally same date. | Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months' notice. To come into force definitively thirty days after exchange of ratifications for one year and thereafter until terminated on six months' notice. |
| Norway ... ... | Convention of Commerce and Navigation with United Kingdom of Mar. 18, 1928, applies to Canada. | Exchange of most-favoured-nation treatment. Convention of May 16, 1913, provides means for separate termination by Dominions on one year's notice. |
| Panama.. .. .... | Order in Council of July 20, 1935, accepted Article 12 of the United Kingdom - Panama Treaty of Commerce of Sept. 25, 1928. | Exchange of most-favoured-nation treatment. In force until terminated on one year's notice. |
| Paraguay....... ... | Exchange of Notes of May 21, 1940; in force June 21, 1940. | Canadian Intermediate Tariff exchanged for most-favourednation treatment in Paraguay. In force until terminated on three months' notice. |

Non-Empire Countries-continued

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| Poland........ | Convention of Commerce signed July 3, 1935; in force Aug. 15, 1936. | Exchange of most-favoured-nation treatment and special reductions for limited lists of goods. Made for one year and thereafter until terminated on three months' notice. |
|  | Trade Agreements Act of June 11, | Exchange of most-favoured-na- |
| Madeira, Porto | 1928, accepted Article 21 of the | tion treatment. In force until |
| Santo, and Azores. | United Kingdom - Portugal Treaty of Commerce of Aug. 12, 1914; in force Oct. 1, 1928. | terminated on one year's notice. |
| Salvador............. | Exchange of Notes of Nov. 2, 1937; in force Nov. 17, 1937. | Exchange of most-favoured-nation treatment. Made for one year and thereafter until torminated on four months' notice. |
| Spain...... .......... | Spanish Treaty Act of June 11, 1928, sanctioned United King-dom-Spain Treaty of Commerce of Oct. 31, 1922 (revised Apr. 5, 1927); in force Aug. 1, 1928. | Exchange of most-favoured-nation treatment. In force until terminated on six months' notice. |
| SWEDEN.... ......... | United Kingdom - Sweden Convention of Commerce and Navigation of Mar. 18, 1826, applies to Canada. | Exchange of most-favoured-nation treatment. In force until terminated on one year's notice. Declaration of Nov. 27, 1911, provides means for separate termination by Dominions on one year's notice. |
| Switzerland......... | United Kingdom - Switzerland Treaty of Friendship, Commerce and Reciprocal Establishment of Sept. 6, 1855, applies to Canada. | Exchange of most-favoured-nation treatment. In force until terminated on one year's notice. Convention of Mar. 30, 1914, provides means for separate termination by Dominions on one year's notice. |
| Syria.................. | Special Arrangement by Order in Council of Nov. 19, 1946. | Exchange of most-favoured-nation treatment. |
| United States. | Trade Agreement signed Nov. 17, 1938; provisionally in force Nov. 26,1938 ; duty concessions provisionally in force Jan. 1, 1939; fully in force June 17, 1939. Supplementary Trade Agreement signed Dec. 13, 1940. | Terms include grant of reduced or fixed rates on scheduled goods by both countries and mutual exchange of mostfavoured - nation treatment. Made for three years from Nov. 26, 1938, and thereafter until terminated on six months' notice. Supplementary Trade Agreement provides for quota on foxes and fox skins entering the United States. |
| Uruguay. | Trade Agreement signed Aug. 12, 1936; in force May 15, 1940. | Exchange of most-favoured-nation treatment. Made for three years and thereafter until terminated on six months' notice. |

Non-Empire Countries-concluded

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| Vinezuela. .. | Modus vivendi signed Mar. 26, 1941; in force Apr. 9, 1941. | Exchange of most-favoured-nation treatment. Made for one year subject to renewal or termination on three months notice; renewed annually by Exchange of Notes, subject to termination on three months notice. |
| Yugoslavia. .. | Trade Agreements Act of June 11, 1928, accepted Article 30 of United Kingdom - Serb - CroatSlovene Treaty of Commerce and Navigation of May 12, 1927; in force Aug. 9, 1928. | Exchange of most-favoured-na tion treatment. In force until terminated on one year's notice. |

## Section 3.-The Easing of Controls on Enemy Trading Regulations*

Because of occupation by an enemy State, or by reason of real or apprehended hostilities, a number of countries, during the years 1939 to 1942, were brought within the scope of the provisions of the Enemy Trading Regulations (originally brought into force by Order in Council P.C. 2512 of Sept. 5, 1939, later provided for under "Revised Regulations Respecting Trading with the Enemy, 1943", Order in Council P.C. 8526 dated Nov. 13, 1942 and now included in "The Trading with the Enemy (Transitional Powers) Act"). A list of these countries or territories and the dates on which they were brought under the Regulations is given at p. 474 of the 1945 Year Book.

The Regulations prohibited trading or attempting to trade with "enemy territories"; dealing in the property of enemies for the purpose of enabling them to obtain money or crecic thereon; aiding or abetting any person, whether resident in Canada or not, to so deal in enemy property; knowingly discharging any enemy debt, promissory note or bill of exchange, or purchasing enemy currency.

Beginning late in 1943, it became possible to grant permission for the resumption of trade with certain liberated and "enemy" areas. The areas to which such permission has been granted and the dates are listed in the following statement:-

[^312]Limited trade has also been authorized for Japan and Korea from June 25, 1946. In the case of these two countries, trade must be carried on exclusively through the Canadian Commercial Corporation and is subject to the various controls still in force. Limited relief shipments by individual Canadian citizens are permitted, subject to the regulations of the Export Permit Branch and the Post Office Department.

Trade with Austria has been authorized from Sept. 27, 1946, and is subject to supplying goods to or for the benefit of the Austrian State or any individual or body of persons carrying on business therein, or to obtaining goods from the Austrian State, such individuals or bodies of persons. The term "trade" is deemed to include transactions incidental to supplying or obtaining such goods and the paying, transmitting or receiving of money, negotiable instrument or security for money in respect of such trade.

Similarly, trade with Germany has been authorized from Apr. 23, 1947, and is subject to the same conditions as for Austria.

## PART II.-ANALYSES OF FOREIGN COMMODITY TRADE*

## Section 1.-Explanations re Canadian Trade Statistics

Foreign trade statistics are derived by recording the physical movement of goods outwards or inwards across the frontiers or through ocean ports and the valuations placed upon them at the time of movement. Such statistics cannot take cognizance of the complex financial transactions involved in this physical movement of goods and which may take place prior to or subsequent to the actual shipment (although in investigating the balance of international payments, as is done in Part III of this Chapter, such financial transactions are the main consideration).

Certain problems of procedure arise in recording trade statistics and require explanation. For the correct interpretation of the statistics of foreign trade, it is necessary that the following definitions and explanations of terms used be carefully kept in mind, if the true position of trade in relation to the total of Canada's international transactions is to be understood.

Quantities and Values.-In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: Valuation.-"Imports" means imports entered for consumption. "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which, and at the time when, said merchandise was exported directly to Canada; but the value shall not be less than the actual cost of production at the time of shipment plus a reasonable advance for cost of selling and profit. (See Sects. 35 to 45 of the Customs Act.) Under these provisions and amendments thereto, some imports are given arbitrary valuations differing from those upon which actual payments for the imports are made.

[^313]For Customs entry purposes, the value of the currency of the country of export is converted to Canadian currency at exchange ratios as authorized by law and Orders in Council. (See Sect. 55 of the Customs Act and Orders in Council respecting currency valuations.)

Canadian Exports: Valuation.-"Canadian produce"' exported includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminum extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual amount received in Canadian dollars exclusive of freight, insurance, and other handling charges.

Foreign Exports: Valuation. - "Foreign produce" exported consists of foreign merchandise that had previously been imported (entered for home consumption). The value of such commodities is the actual amount received in Canadian dollars exclusive of freight, insurance, and other handling charges.

Countries to which Trade is Credited.-Imports are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence dispatched, after longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited.

Exports are credited to the country to which they are consigned, whether that country possesses a seaboard or not. The country of consignment is the country to which goods exported from Canada are intended to pass, without interruption of transit save in the course of transhipment or transfer from one means of conveyance to another.

Discrepancies in Trade Statistics between Canada and Other Countries.-Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies, among which are the following:-

1. Differences in the system of valuation used by Canada and the systems used by other countries. The differences may arise in several different ways:-
(a) Canadian exports are generally shown on an f.o.b. basis, that is, freight costs fromthe original point of consignment to the destination are excluded. Many countries value imports on a c.i.f. basis, and include the freight content. Canadian imports are valued at the fair market price at the point in the exporting country from which they are consigned. Other countries may include freight to the point of exit. A case in point is the United States valuation of coal shipped to Canada, which is always substantially higher than the corresponding Canadian import valuation.
(b) Customs evaluators may set arbitrary valuations on certain commodities for purposes of obtaining greater customs revenue or to protect the domestic market from dumping. This will naturally lead to differences between the figures of the two countries.
(c) Disturbances in currency relationships between countries may introduce an additional element of difference. The exporting country may use one rate and the importing country another.
2. The element of time lag is of considerable importance where Canadian exports are concerned, particularly with bulk goods shipped to other continents. There are always quantities of goods in movement at the beginning or end of any trading period, and these affect the comparability between the two countries for the same period of time.
3. The chief cause of difference between the recorded value of Canadian exports and reciprocal figures for the importing country, lies in the fact that exports from Canada are classified geographically according to country of consignment, which may not be the ultimate destination of the goods. Thus, it is possible that Canadian records may show an export as consigned to an intermediate country, and the country finally obtaining the goods as imports for consumption may record them either as an import from the intermediate country or from Canada. Despite these difficulties, country of consignment is the only satisfactory
method of classifying exports geographically. Frequently the exporter does not know at the time of shipment where the goods are ultimately going, and the need for haste in bringing out statistics limits the source of information to the export invoice and the customs invoice. The only definite information the shipper can show is the country to which the goods are immediately consigned. Furthermore, commodities such as wheat may change ownership and possibly destination while in transit from Canada.

The onus of reconciliation must, therefore, be placed on the importing nation. It alone has available the documentary evidence which will show the course of the goods from country of source to final destination.

An example of error arising out of classification according to consignment occurred in October and November of 1946 . Wheat valued at $\$ 17,500,000$ was shipped to the United States for eventual transhipment to the United Kingdom and elsewhere, with none of it to be consumed in the United States. At the time of forwarding no details of final destination were available, and the wheat appears in the trade returns as an export to the United States.

Imports from the United Kingdom.-Published statistics of Canadian imports entered for consumption have always included several items that may be considered of a non-commercial character. These items were never very large in pre-war years, but since 1939 their inclusion in the total value of imports, from the United Kingdom in particular, has tended to distort published data. The distinction between commercial and non-commercial imports is not always easy to establish, but three items have been segregated, as follows:-
(a) "Articles for the use of the Imperial Army, Navy and Air Force" These imports consisted almost entirely of war equipment of various kinds for experimental purposes, training and use in Canada by the United Kingdom Government. The values applied to the articles imported under this classification were nominal and no duty was paid.
(b) "Canadian goods returned" Before the War, this item amounted in value to several hundred thousand dollars annually. Late in 1945, however, the Canadian Government began the repatriation of large stocks of war equipment, the bulk of which was shipped from the United Kingdom. On entering Canada, they were classified under "Canadian goods returned" in the trade returns. They are not shown in the United Kingdom trade returns.
(c) Settlers' effects, the property of immigrants.

The chart on the following page and Statement below show the relation of these non-commercial items to the total.
I.-COMMERCIAL AND NON-COMMERCIAL IMPORTS FROM THE UNITED KINGDOM, 1939-46

| Year | Articles for Imperial Forces | Canadian Goods Returned | Settlers' Effects | $\begin{array}{\|c\|} \text { Non- } \\ \text { Commercial } \\ \text { Imports } \end{array}$ | Commercial Imports | Total Recorded Imports |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$'000,000 | \$'000,000 | \$'000,000 | \$'000,000 | \$'000,000 | \$'000,000 |
| $\begin{aligned} & 1939 . \\ & 1010 . \end{aligned}$ | 0.8 | 0.4 | $0 \cdot 6$ | 1.8 | $112 \cdot 2$ | 114.0 |
| 1941. | 23.5 81.2 | 0.3 0.1 | $0 \cdot 6$ 0.1 | 24.4 81.4 | $136 \cdot 8$ 138.0 | 161.2 219.4 |
| 1942. | 42.5 | $0 \cdot 4$ | $0 \cdot 1$ | $43 \cdot 0$ | $118 \cdot 1$ | $161 \cdot 1$ |
| 1943. | $34 \cdot 3$ | $0 \cdot 1$ | 1 | $34 \cdot 4$ | $100 \cdot 6$ | $135 \cdot 0$ |
| 1944. | $16 \cdot 2$ | $0 \cdot 3$ | $0 \cdot 1$ | $16 \cdot 6$ | $94 \cdot 0$ | $110 \cdot 6$ |
| 1945. | 21.2 | 18.8 | $0 \cdot 2$ | $40 \cdot 2$ | $100 \cdot 3$ | $140 \cdot 5$ |
| 1946. | $2 \cdot 3$ | $60 \cdot 3$ | $1 \cdot 5$ | $64 \cdot 1$ | $137 \cdot 4$ | $201 \cdot 5$ |

[^314]

During the last few months of 1946, the proportion of non-commercial imports declined considerably and will probably fall to negligible proportions in 1947. When comparing 1946 figures with those of the war years, a more correct picture is presented by the use of commercial import figures as a basis for comparison.

Treatment of Gold in Trade Statistics.-The fact that gold is a money metal gives it peculiar atuributes that distinguish it from other commodities in trade. In particular, the movement of gold in international trade is determined, almost exclusively, by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. In addition, gold is generally acceptable. It does not have to surmount tariff barriers and is normally assured a market at a relatively fixed price. It should also be noted that gold does not move in international trade in any direct or normal relation to sales and purchases. Changes in the Bank of Canada's stock of gold under earmark do not enter, therefore, into the trade statistics.

Since 1939, the statistics of movement of coin and bullion have been compiled by the Bank of Canada and the basis has been considerably changed from that previously shown in the Canada Year Book (see p. 528 of the 1940 edition). The following statement of net exports of non-monetary gold for years since 1939, on a monthly basis, is obtained from the Bank of Canada and is the only data that have since been given publicity.

Statistics showing the net exports of non-monetary gold, including changes in stocks held under earmark, which supplement the trade figures, are given below.
II.-NET EXPORTS OF NON-MONETARY GOLD, 1939-46

| Month | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |

# Section 2.-Distribution and Composition of Canadian Foreign Trade 

Subsection 1.-Canada's Place in the World Economy

#### Abstract

Norg.-The information given immediately below was prepared for the Dominion-Provincial Conference which took place in 1941, and was published in Book 1, Part 1, Chapter 7 of the "Report of the Royal Commission on Dominion-Provincial Relations". It was reprinted at pp. 404 to 408 of the 1941 Canada Year Book. It is considered that, although changes in trade patterns arising out of the War just ended may affect slightly some of the content, this review remains an excellent presentation of the relationship between the Canadian economy and international trade. A few minor adjustments have been made where the changes are sufficiently large to necessitate revision.

Canada holds a particularly important place in the world economy, or at least in that section of the world economy that has been, or remains, organized on a basis of interdependent trade and financial relations and that operates as a functional whole. Although containing less than one per cent of the world's population, Canada ranked fifth in total trade in 1938, being fourth in exports and eighth in imports. The War of 1938-45 intensified the movement of Canadian goods abroad and the reverse flow into Canada. The volume of shipments to Allied Nations was limited only by the productive capacity of Canadian agriculture and war industry. The expanding munitions industry in Canada necessitated substantial increases in the import of fuels, machinery and materials from the United States. By 1942, Canada was outranked in trade volume only by the United States and the United Kingdom. In 1944, the peak year of production, nearly one-third of the total production of goods and services was exported entirely apart from the direct war expenditure and the requirements of Canadian troops overseas.

In order to maintain the present standard of living and to support the great capital investment that has been made to equip the country for an important place in the world economy, it is vital to Canada that the advantageous international division of labour-the principle on which the existing Canadian economy and standard of living are built-be maintained. Canada is far from being a self-sufficient country, and the achievement and maintenance of a position of importance in the world depend on full utilization of specialized resources of the country, and on trading them to the best advantage in order to acquire the things that are lacking.

A brief review of Canada's resources in relation to the international economy will make clear why Canada plays such a relatively large part in that system, and is so profoundly dependent on it. Canada can and does produce large surpluses of many agricultural products (cereals, potatoes, apples, cattle, pork and dairy products), of many forest products (pine and fir lumber, and spruce, poplar and balsam pulpwood), of many mineral products (gold, silver, copper, nickel, lead and zinc), and hydro-electric power more cheaply, i.e., with the application of relatively less capital and labour, than can be done in most other countries. On the other hand, Canada either cannot produce or is at a disadvantage in producing her own requirements of such essential industrial raw materials as iron, coal, oil, rubber and tin; of tropical fruits, fibres, and other natural products; and of many iron and steel, chemical and textile manufactures based on special local resources and techniques. Every country could, of course, display a list of surplus and deficit resources, but in few would both sides of the balance sheet contain such basically important products in such volume, and in few would the extremes be so great. Thus, Canada is at once the world's largest exporter of wheat, newsprint and non-ferrous metals, and one of the world's largest importers of coal, oil and steel products. It is in this distribution and peculiar character of Canada's resources, and in her lack of resources, that can be found the explanation for many of Canada's distinctive economic and public-finance problems.

Some of the salient features of Canada's trade are that both the staple imports and exports are mainly bulky, relatively low-value commodities and the sources of supply are distant from the markets and, therefore, cheap transportation is of vital importance. Of the chief staple exports, wheat required a very large capital investment in handling and shipping facilities and, to-day, requires an increasing capital investment in facilities for mechanized production. The forest and metal products, partly because of the technical character of Canadian resources, also required a very large capital investment in plant and in associated hydro-electric power developments. If these resources were to be developed at all, they had to be developed on the largest possible scale in order to secure the economies of mass production and to contribute to the support of the heavy initial overhead. But, in order to achieve this end, very large foreign markets were necessary; Canada produces five times her own consumption of wheat (excluding seed requirements); ten times her own consumption of her chief forest product-newsprint; and twenty times her own consumption of her non-ferrous metal production. Production of these large surpluses is necessary in order to give a wider distribution of the total overhead cost of developing these industries and to keep unit prices down to competitive levels. As a result of this kind of development, Canada before the War supplied about 40 p.c. of the world export wheat market, two-thirds of the newsprint in the world export market, and 40 p.c. of the non-ferrous metals in the world export market. Canadian production of each of these products is a much smaller fraction of the total world production.

In other words, Canada, in spite of her comparative productive advantages, is forced into the position of being a marginal source of supply for many of these commodities. If a country that is producing 90 p.c. of its requirements and importing 10 p.c. is forced, or deliberately chooses, to reduce consumption, the imported 10 p.c. is likely to be the first sacrifice. Any substantial reduction in the proportion of the world market supplied by Canada is evidently bound to have profound effects on her ability to maintain competitive prices and support the huge investment made in anticipation of large-volume production. In a period of world de-
pression, of reduced purchasing power, and of increasing trade restrictions, the relative status of industries in this position suffers. There are weaknesses, not only because such a small proportion of their production is consumed locally, but also because such a large proportion of the total international market is supplied by Canadian exports. Control of the marginal supply normally gives a bargaining advantage to the seller on a rising market but reacts to his disadvantage on a falling market. The situation has been intensified by the continual narrowing of the international trading world in the 1930's, which led to more abrupt and extreme price fluctuations than would occur in a broader market. When protected domestic industries develop in former markets, or when depression restricts demand for Canadian export staples, there will be excess productive capacity, and far more than the proportionate share of such excess capacity will inevitably appear in Canada.

The import staples, however, are in a somewhat different position. Large as are Canada's imports of basic industrial raw materials (such as coal, oil and iron) in relation to Canadian consumption and even in relation to total world trade in these commodities, they are only a very small fraction of the total production and of the consumption in the domestic markets of the chief producers. A fall in the Canadian demand is important but is not likely to have the same shattering effect on prices as a fall in the foreign demand for the chief Canadian staples.

The fact that the great bulk of Canada's trade is with the United States and the United Kingdom is a natural corollary of the distribution of resources and organization of the economy in each of those countries and in Canada, and is intensified by the virtual withdrawal of most of the rest of the world from the former system of international trade. Canada's geographical position and special relations with each of these countries give her certain advantages and elements of strength, but there are also liabilities. Canada's trade with both the United States and the United Kingdom is of vastly greater importance to Canada than their trade with Canada is to them; Canadian per capita exports to the United Kingdom in 1946 were approximately $\$ 50$, and to the United States $\$ 70$, compared with their exports to Canada of $\$ 3$ and $\$ 10$ per capita. Canadian trade with the United Kingdom is 16 p.c. of total Canadian trade, while United Kingdom's trade with Canada is only 8 p.c. of her total trade. Canadian trade with the United States is 55 p.c. of total Canadian trade, while trade of United States with Canada is only 15 p.c. of total United States trade. Changes in the trading policies of either of the two large countries or automatic changes in the terms of trade in response to differential price movements inevitably affect Canada far more than they affect the United Kingdom or the United States. Because of the greater vulnerability and lack of diversification, Canada's bargaining position is, on occasion, weakened and Canada is at a disadvantage in opposing unfavourable policies or in negotiating for more favourable policies.

Quite apart from the danger of directly unfavourable policies, which may be due to factors entirely unrelated to Canada but which may incidentally deal shattering blows to Canadian trade, is the inevitable swing in the terms of trade. Canadian trade with the United Kingdom and the United States is of a complementary nature and is a classic example of the working of a basically sound international division of labour. While Canadian cereals feed Britain, British textiles clothe Canadians; while Canadian products of forest and mine, processed by hydroclectric power, feed the industries of the United States, the coal and iron products of the United States equip Canadian factories. But in any exchange of this nature there may be, and are likely to be, wide variations in the price trends of the various
classes of products. Thus, Canada may, at any time, find the prices of most of her exports declining more rapidly, or rising more slowly, than the prices of what she buys, or the reverse situation may result. In times of depression Canada finds the impact of the depression intensified by the fall in the real purchasing power of the bulk of her commodities (in the past decade, gold has been an important exception), while the United Kingdom and the United States can look forward to some important increases in the real value of their exports.
$\%$ In all other external transactions, Canada is also vitally affected by the policy of the United Kingdom and, even more, by that of the United States. United Kingdom and United States investments in Canada; Canadian investments in the United Kingdom and the United States; the integration of a large portion of Canadian industries with those of the United States; the huge seasonal tourist exchange, periodic migrations of labour and the continuous exchange of individuals; and 'the existence of international labour, business, and professional organizations, all give rise to a continual ebb and flow of funds on a very large scale and a continual process of adjustment of prices, costs and profits. The total of these 'invisible' items in the balance of payments with the United States are almost as important as total transactions on merchandise account and, in some ways, may have an even more direct effect on comparative price levels and thus eventually on purchasing power parities. Canada, in the past, has followed virtually the full swing of violent fluctuations in the United States, modified only slightly by the greater stability of the United Kingdom. A vital difference in the effect of the notoriously abrupt and extremely fluctuating North American business cycle on Canada and on the United States is the substantially higher net income of the latter. Thus, Canada is compelled to accept the full measure of fluctuation that accompanies the highest standard of living in the world-without as high a standard of living to absorb it.

Besides tending to transmit to Canada the full extent of economic fluctuations in the United States, the invisible items of foreign trade give rise to some special features that intensify the pressure on the economy in times of depression. The most important item on the income side of the balance of payments transactions, other than commodity trade, is that of tourist expenditures (see pp. 909-911), which are luxury expenditures and likely to be drastically reduced in time of depression. On the payments side, the most important item is that of interest and dividend pay-ments-a major portion of which is a fixed amount, and a large portion of which is due from Canadian Governments. In a period of falling prices, the real burden increases and if, in addition, there is a drop in the exchange value of the Canadian dollar, the real burden of the large portion payable in foreign currencies increases even more.

To summarize, Canada's position in both her trade and other financial relations with the outside world is largely that of her position in relation to the United States and the United Kingdom. As has been seen, Canada's trade with these two countries is all-important to her while their trade with Canada is of minor importance to them. Because of her possession of a few special resources, Canada should enjoy a particularly high export income and national income so long as any substantial measures of international division of labour and trade are permitted. But the provision of productive capacity to exploit these resources has involved heavy fixed charges, and Canada is forced to import on a large scale commodities in which she is deficient with the result that, while fixed costs are high and income is normally high, the income is likely to fluctuate much more sharply than the costs. Because of the character of Canadian resources and the nature of Canadian trade and other
financial relations with the United Kingdom and the United States, fluctuations in gross income and, consequently, even more in net income reach relatively huge proportions at either extreme of the business cycle.

## Subsection 2.-Review of Canadian Trade Since Confederation

Since 1867 when the provinces of Canada were federated, two countries, the United States and the United Kingdom, have played a dominant role in Canadian trade. Trade with the United Kingdom was a normal outgrowth of the mother country-colony relationship that existed prior to Confederation. The United Kingdom had supplied the original Canadian provinces with the bulk of their requirements and British goods continued to hold first place in the markets of the new Dominion for some years. Throughout the period the reverse flow of Canadian exports to the United Kingdom consisted mainly of lumber, cattle, cheese, furs and fish with the volume of trade showing a slow but gradual increase over the period 1868-90.

In the latter part of the nineteenth century radical changes began to appear in the direction and composition of Canadian trade. In 1883, the rapidly expanding republic to the south replaced the United Kingdom as the principal source of Canadian imports, and by 1896 over one-half of Canadian imports were of United States origin. Since that time United States dominance in the Canadian market has been maintained.

While the United Kingdom share of Canadian import trade was diminishing, its purchase of Canadian goods rapidly increased. Between 1886 and 1896 Canadian exports to United Kingdom nearly doubled, and in another ten years had doubled again. The increase was due largely to wheat, the production of which had become, by 1906, the major Canadian export industry. The percentage of exports flowing to the United States remained relatively constant, increasing roughly in proportion to the general increase in Canadian export trade.

The importance of these two countries in Canadian trade is indicated in Table 6 at p. 889, which provides data of imports and exports for representative years from 1886 to the present time.

Commodity Trade.-Before the War of 1914-18, Canadian export trade consisted almost entirely of lumber, fish, furs and agricultural and mineral products. The growth of the wheat industry at the beginning of this century was the greatest single dynamic during that period. Between 1896 and 1914, total Canadian exports jumped from $\$ 110,000,000$ to over $\$ 431,000,000$, with the value of 1914 wheat and flour exports in the neighbourhood of $\$ 140,000,000$.

Imports during that period showed an even greater rate of expansion. In the decade immediately preceding the War, the requirements of a growing industrial organization and the rapid settlement of the West led to large increases in the imports of iron and steel products, machinery and coal, in addition to the consumer goods requirements of an expanding and relatively prosperous economy. The rapid increase in import volume was complemented by an inflow of capital, principally from the United Kingdom.

The War of 1914-18 spurred the already rapidly growing manufacturing industries and, for the first time, iron and steel products and other types of manufactured goods began to appear in volume in the list of exports. These manufactured goods consisted principally of ammunition and similar less complex types
of war materials. Following the War, however, the proportion of manufactured goods subsided slightly and in 1920 the eight leading exports, with their aggregate value exceeding 50 p.c. of total exports were the products of primary industrywheat, meat, flour, planks and boards, newsprint, cattle, wood-pulp and fish.

In the twenty-year period between the two wars, primary products continued to dominate Canadian export trade. There was a definite trend towards an increased manufacturing content in the commodities exported, but manufacturing generally took the form of the further processing of raw materials, rather than a gradual development of a separate and integrated manufacturing industry such as has occurred in the United States. One of the best examples is the pulp and paper industry, where the chief product can be exported in three forms: pulpwood, the basic raw material; wood-pulp, an intermediate stage; and the finished product, newsprint (although wood-pulp and pulpwood may have other uses). In 1910, the relative proportions of these three stages of the product were 44, 37 and 19 , respectively. In 1920 the proportions had changed to 8, 40, and 52 and in 1930 to 7, 21 and 72. By 1939, newsprint formed 73 p.c. of the combined total.

Reference should also be made to the growth of the Canadian mining industry in the years immediately after the War of 1914-18. The fall in prices materially reduced the cost of operating gold mines and this industry expanded rapidly. By 1941 gold production exceeded $\$ 200,000,000$ in value, although it declined subsequently by nearly 50 p.c. due to the impact of the War of 1939-45. (Gold has been excluded from trade figures because of the difficulty of distinguishing between exports of new gold and exports of monetary gold used in settling international capital obligations.) The production of base metals-nickel, copper, zinc and leadshowed a similar rapid growth, and exports of these products in 1946 exceeded in total the value of gold production.

The following statement shows the relative proportions of exports in each of the stages of manufacture for representative years. The distinction between the three stages is somewhat arbitrary, and in assessing the charge it is well to keep in mind that the fully manufactured group, at least before 1939, consisted in large part of processed raw materials such as flour, canned meat and newsprint.
III.-PERCENTAGES OF RAW, PARTIALLY AND FULLY MANUFACTURED GOODS EXPORTED FROM CANADA, SIGNIFICANT YEARS, $1900-45$

| Year | Raw Materials | Partially Manufactured | Fully Manufactured | Year | Raw <br> Materials | Partially <br> Manu- <br> factured | $\begin{aligned} & \text { Fully } \\ & \text { Manu- } \end{aligned}$ <br> factured |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | p.c. | p.c. | p.c. |  | p.c. | p.c. | p.c. |
| 1900. | 41.5 | $17 \cdot 7$ | $40 \cdot 8$ | 1933.... | $42 \cdot 7$ | 14-2 | 43.1 |
| 1910. | 51.2 | $16 \cdot 1$ | $32 \cdot 7$ | 1937... | 38.2 | $22 \cdot 5$ | 39.3 $45 \cdot 6$ |
| 1914. | $63 \cdot 2$ | $10 \cdot 1$ | 26.7 | 1939. | 27.8 26.7 | $26 \cdot 6$ 16.6 | $45 \cdot 6$ 56.7 |
| 1926. | $46 \cdot 1$ 48.0 | $14 \cdot 7$ 14.5 | $39 \cdot 2$ 37.5 | 1945 | $26 \cdot 7$ | $16 \cdot 6$ |  |
| 1929. | $48 \cdot 0$ | $14 \cdot 5$ | $37 \cdot 5$ |  |  |  |  |

The structure of Canadian import trade according to the stage of production has remained surprisingly stable since the beginning of this century. Fully manufactured goods formed between 60 and 70 p.c. of total imports, with raw materials approximately 25 p.c. The type of commodities imported showed a similar stability. Coal, farm and other machinery and heavy iron and steel products, and consumer goods in partly finished or fully manufactured form such as alcoholic beverages,
raw cotton and textiles, wool and fabrics, sugar, rubber, vegetable oils, tea and coffee formed the principal items. One new factor that did exert a significant influence on the commodity structure was the development of the automobile; by 1930 automobiles and parts and crude and refined petroleum made up 11 p.c. of total imports.

During the 1919-39 period, the unsettled world economic conditions produced violent swings in Canadian foreign trade. With the great dependence of Canada upon exports as a market for surplus domestic production, and upon imports as a source of many essential commodities, it was not surprising to find the internal level of prosperity in Canada reacting to fluctuations in economic conditions in other countries. The close relationship between foreign trade and domestic prosperity was demonstrated in the great depression of the early 1930's. An early storm signal to Canada was the deficit on commodity account in 1929, the first since 1920. The deficit was caused by a decline in exports and a prosperitygenerated increase in the volume of imports. In the next four years the fall in exports was rapid, and it was not until 1932 that the lagging imports caught up. The catastrophic nature of the drop can be seen from the following figures:-

| Year | Imports | Domestic Exports | Year |  | Imports | Domestic Exports |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$'000,000 | \$'000,000 |  |  | \$'000,000 | \$'000,000 |
| 1927. | 1,087 | 1,211 | 1931.. | . | 628 | 587 |
| 1928. | 1,222 | 1,339 | 1932... |  | 452 | 490 |
| 1929. | 1,299 | 1,152 | 1933.. |  | 401 | 529 |
| 1930. | 1,008 | 864 | 1934... |  | 513 | 649 |

These figures show how rapidly the disease of world depression can be transmitted to a country greatly dependent on export trade and, in turn, spread from that country through a falling-off in the effective demand for imports.

Trade during the latter 1930's improved gradually but not until the War of 1939-45 did it approach the level of the boom years 1928 and 1929.

Price-level changes affect the picture to a degree. Prices declined from Confederation to the 1890 's, but from then on rose gradually, although the level in 1914 was lower than in 1868. Between 1914 and 1920 the price level rose by 150 p.c., suggesting that the increase in trade volume was not nearly so great as indicated by the value figures. Wartime price changes must be used with caution, however, as some of the chief components of shipments overseas were goods neither produced nor exported prior to the War. After 1920 prices declined steadily until 1928, when the level was approximately 50 p.c. higher than 1913. The depression precipitated a rapid decline until, by 1933, prices were back at the 1913 level. Prices rose again following the depression, and in 1938 stood about 25 p.c. higher than in 1913. During the War of 1939-45 price increases were held back, and by 1944 stood only about one-third above the level in 1938.

Impact of the War of 1939-45.-The War of 1939-45 provided a stimulus to Canadian exports similar to that experienced in the War of 1914-18. With Canadian farms and factories working at maximum capacity to supply the demands of Allied Nations, the value of exports by 1944 was nearly four times as great as in 1938. Imports more than doubled in the same period. Table 8 at p. 891 gives the leading imports into Canada for the years 1939, 1945 and 1946. The commodities are arranged by order of importance in 1946 and the table shows the changing significance of these major imports during the period.

The most significant difference in the impact of the two wars on trade was the condition of Canadian industrial development at the beginning of each. In 1914, the iron and steel and manufacturing industries in Canada were still in an embryonic state and the Canadian contribution to the Allied effort consisted mainly of food, forest and mineral products. By 1939, heavy industry had become well established and the transition to war production was accomplished with less difficulty. Although primary products still dominated the list of exports, military vehicles, guns, ammunition, tanks and aeroplanes formed a significant portion of the total. The following statement lists the important groups over the wartime period. The munitions group includes only those items that can be definitely earmarked as such. It excludes direct shipments to the Canadian Armed Forces overseas, although quantities of supplies exported to the United Kingdom wire later transferred to the Canadian troops under a pooling arrangement.
IV.-EXPORTS BY IMPORTANT WARTIME GROUPS, 1939-45

| Item | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$'000,000 | \$'000,000 | \$'000,000 | \$'000,000 | \$'000,000 | \$'000,000 | \$'000,000 |
| Wheat and flour. | 125.4 | 145.9 | 206.7 | $167 \cdot 6$ | $300 \cdot 7$ | 474-2 | 573.6 |
| Bacon.................... | $32 \cdot 7$ | $58 \cdot 8$ | $77 \cdot 5$ | $100 \cdot 6$ | 116.1 | 148.3 | 96.5 |

${ }^{1}$ Includes motor-vehicles and parts, military wheeled vehicles, tanks, guns, aircraft, cartridges, shells, explosives and Canadian Navy, Army and Air Force stores. ${ }_{2}$ Includes other items not specified.

One of the most interesting features of the growth in wartime exports was that it was accomplished with relatively little fall, if any, in the domestic standard of living. A large part of the costs of the War were met out of an expanding gross national product which increased from $\$ 5,495,000,000$ in 1939 to a peak of $\$ 11,771,-$ 000,000 in 1944. The wartime volume of trade also showed the potential export capacity of the country, given a system where lack of purchasing power is not a bar to the movement of goods between countries. Various devices were used to enable the continuation of necessary exports to Allied countries unable to make payment. Early in the War the surplus of exports to the United Kingdom, which at that time was receiving upwards of 35 p.c. of Canada's total exports, was financed by the accumulation of sterling and by the repatriation of British investment in Canada. In 1942, the accumulated sterling balances were converted into a loan of $\$ 700,000,000$, and balance of the Sterling Area deficiency was covered by the gift of $\$ 1,000,000,000$ to the United Kingdom to meet obligations arising out of their purchase of food and munitions in Canada. From 1943 to the end of the War, shipments to the United Kingdom and other Allied countries requiring assistance were financed by Mutual Aid, the Canadian equivalent of lend-lease.

Table 9 at p. 891 gives the leading exports into Canada for the years 1939, 1945 and 1946. The commodities are arranged by order of importance in 1946 and the table shows the changing significance of these major exports during the period.

The War had somewhat less of a dynamic effect on the volume and structure of imports than it did on exports. A rapid increase was shown in 1940 to 1942 as Canadian factories tooled up for war production. By 1942 wartime imports were valued at more than twice the 1938 level, although the peak was not reached until 1944.

Throughout the War an increasingly larger proportion of Canadian importe came from the United States. For many years the United States had been the principal source of Canadian imports, and wartime factors combined to enhance its already strong position. The industrial segment of economy in particular leaned heavily on United States goods, and imports of iron and steel machinery, heavy capital equipment, producers materials for war equipment, coal and petroleum reached unprecedented levels. With rising incomes in Canada, consumer goods imports also showed gains, and the elimination of some of the normal sources cut off by the War increased the already strong demand for these products. Table 2 shows the increased percentage of goods imported from the United States during the War. Allowance should be made for the fact that some goods from other foreign countries were routed through United States ports to avoid the dangers of the longer sea route to Canada, and were attributed to the United States in the trade figures.

## Subsection 3.-Recent Developments in Foreign Trade

By 1946, post-war trends in Canadian trade had begun to emerge. The volume of exports held up well and was, in fact, only 20 p.c. below the wartime peak in 1944. Canadian products continued high in world demand to alleviate the urgent needs of areas devastated during the War, with food products, approximately 37 p.c. of total exports, the greatest single group in importance. Exports of forest products, at 27 p.c. of the total and base metals, at 10 p.c., illustrate the continuing importance of primary products in Canadian export trade.

In spite of the almost unlimited foreign demand for Canadian goods, that demand in many instances has not been backed by effective purchasing power. The need for maintaining a high level of employment in the great export industries which form the backbone of the Canadian economy, in addition to the humanitarian reasons for supplying countries ravaged by the War, has resulted in Government action to bridge this gap between Canadian capacity to produce and foreign demand. A series of loans and credits, with the United Kingdom the principal beneficiary, have underwritten a substantial portion of the exports.

The two countries which have dominated Canadian trade since exports and imports for the Dominion were first recorded maintained that position in 1946. Thirty-eight p.c. of Canadian exports went to the United States and 26 p.c. to the United Kingdom. One-half of purchases by the United States were forest products, with one item, newsprint, making up over one-quarter of the total exports to that country. Two-thirds of United Kingdom purchases were foodstuffs, one-half of which were wheat and flour. The balance of Canadian export trade can be divided into three main groups: countries whose trade balances with Canada were financed by loans or UNRRA contributions, British Empire countries in whose market Canada has a tariff preference, and Latin American countries.

Countries whose imports from Canada were financed chiefly by loans or UNRRA donations received a wide variety of Canadian goods, although the emphasis was on food products and on vehicles and ships for the rehabilitation of destroyed transport systems. The principal countries in this group are shown below, with the main items exported to each in 1946.

| Country | Value | Item |
| :---: | :---: | :---: |
|  | \$'000,000 |  |
| France. | 74.4 | Trucks and parts, ships, wheat, canned meat, copper, nickel, zinc. |
| Belgium. | $63 \cdot 6$ | Railway locomotives and cars, wheat. |
| China. . | $42 \cdot 9$ | Trucks, wheat and flour, ships, donations, gifts. |
| Netherlands | $33 \cdot 9$ | Trucks, woollen clothing, wheat, oats. |
| Poland. | $22 \cdot 5$ | Canned meats, horses, oats, donations, fish, flour. |
| Italy. | $20 \cdot 4$ | Wheat, oats, flour, canned meats, fish, donations, automobile parts. |
| Norway... ... | $19 \cdot 3$ | Wheat, flour, nickel, ships. |

Canadian exports to the British Commonwealth, other than the United Kingdom, exceeded $\$ 307,000,000$ in 1946 . Wheat, railway locomotives and cars, automobiles and parts, and lumber predominated, although the list of exports to these countries showed wide diversification. Principal exports to leading countries are as follows:-

| Country | Value | Item |
| :---: | :---: | :---: |
|  | \$'000,000 |  |
| South Africa...... | 68.6 | Planks and boards, wheat, automobile parts, railway cars. |
| British West Indies... | 49.2 | Flour, miscellaneous food, clothing and manufactured goods. |
| India. | $49 \cdot 1$ | Wheat, locomotives and railway cars. |
| Australia. | 38.2 | Automobiles and parts, newsprint, planks and boards, cotton fabrics. |
| Newfoundland..... | 38.2 | Flour, coal, gasoline, clothing, boots and shoes. |

A very large increase in the value of exports to Latin America is indicated by the 1946 export figures. Exports to the twenty countries in this group comprised both primary and manufactured goods. The four leading countries, with principal commodities exported, are as follows:-

| Country | Value | Item |
| :---: | :---: | :---: |
|  | \$'000,000 |  |
| Brazil. . | 24.6 | Flour, newsprint, sewing machines, ships, lead. |
| Argentina. | 14.0 | Newsprint, crude rubber, planks and boards, sewing machines, agricultural machinery. |
| Venezuela. | $11 \cdot 1$ | Trucks, flour, rubber tires, newsprint. |
| Mexico. | $10 \cdot 5$ | Newsprint, machinery, leather, agricultural machinery, fountain pens. |

The volume of Canadian imports has always been closely related to the level of national income and domestic prosperity. In 1946, with aggregate national income close to the wartime peak and with the enforced restraints of wartime largely eliminated, consumer spending reached a record height. The accumulated demand was reflected in the import figures, particularly in the field of consumer
goods. The increased domestic sales of goods produced in Canada resulted in increased requirements for fuels, producers materials and capital equipment. Prosperity in the agricultural sector, in part due to the subsidizing of exports, increased the demand for imported farm machinery. The level of imports was apparently affected little by the price rise occurring throughout the year, with availability the prime consideration.

The total value of imports in 1946 approximated $\$ 1,900,000,000$, with almost three-quarters of the total coming from the United States. In spite of the increased production for export in other countries, the United States appears to have a firmer grip on the Canadian market than it did before the War. The Canadian demand for United States goods is the result of a combination of factors. From the 1920's on, the Canadian preference for United States manufactured consumer goods, or for domestic goods on the United States pattern, has been steadily growing. This growing preference is not unnatural, in view of the increasing growth of United States branch plants in Canada and the exposure of Canadians to United States radio, magazines and national advertising campaigns. The United States position has been further enhanced by the proximity of its industries to Canadian consumers, a minimum of foreign exchange problems between the two countries, and the use of the same language and similar. methods of business. The return of the Canadian dollar to parity with the United States dollar early in July, from a 10 p.c. discount position, served partially to offset the price increases and improved the relative position of United States goods on the Canadian market. The trend in the last three months of 1946 was particularly pronounced, as the value of imports from the United States in that quarter was more than four times as great as an average quarter in the five years 1935-39, and one-third larger than the average for the same period in the wartime years 1941-45. Exports to the United States have not kept pace and the commodity deficit on current account amounted, in 1946, to over $\$ 500,000,000$. It is possible, however, that the import figures for 1946 may be inflated by abnormal inventory accumulation and capital formation deferred by the War.

Apart from the United States, the sources of Canadian imports may be divided into three principal geographic groups. The first of these is the United Kingdom, commercial imports from which were valued at $\$ 141,000,000$ in 1946, an increase of 16 p.c. over 1945 and 14 p.c. over the 1935-39 average. Principal imports from the United Kingdom were woollen fabrics and yarns, cotton fabrics, tin and tableware.

The group, second in importance, comprised other countries of the Commonwealth; total imports from this source were 16 p.c. higher than in 1945 . The principal countries, with the chief items of imports from each, are listed below:-

| Country |  | Value |  | Item |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | \$'000,000 |  |  |  |
| India... | . | 27.9 |  | Jute fabrics, tea, rugs. |  |
| Australia. | ... | $19 \cdot 8$ |  | . . Wool, raisins, rabbit | skins. |
| British Guiana. |  | $12 \cdot 2$ | $\ldots$ | .Bauxite ore, sugar. |  |
| New Zealand. |  | $12 \cdot 0$ |  | Wool, sausage casings. |  |
| Jamaica. | .. | $10 \cdot 5$ |  | . . Sugar, bananas, rum. |  |

Imports from Latin America, at $\$ 125,600,000$, were the third group in importance but showed by far the greatest increase of any of the groups. The 1946 total was 45 p.c. higher than the corresponding figure for 1945 and more than five times
as great as the average for 1935-39. Principal countries, with commodities, are as follows:-

| Country | Value | Item |
| :---: | :---: | :---: |
|  | \$'000,000 |  |
| Venezuela. | 26.9 | ....Crude petroleum. |
| Honduras. | $15 \cdot 6$ | ....Bananas. |
| Mexico. | 14.6 | Raw cotton, vegetable fibres, tomatoes, |
| Argentina. | 14.4 | Vegetable oils, corn. |
| Brazil... | 14.0 | .... Coffee, raw cotton, wax. |
| Cuba..... | 13.2 | ....Sugar, fruit pulp, pineapples. |
| Colombia. ... ... | $9 \cdot 7$ | ...Coffee, crude petroleum. |

## Section 3.-Statistics of Foreign Trade

In considering the figures in the following tables, reference should be made to the explanatory notes on trade statistics at pp. 867-871. It must be emphasized that gold imports and exports are excluded from all tables. Imports from the United Kingdom from 1939 to 1946 are distorted by the inclusion of large amounts of noncommercial items in the trade returns (see p. 869). United Kingdom figures can be viewed in a proper perspective only if these non-commercial items are excluded from the recorded import statistics.

## Subsection 1.-Trade by Geographic Areas

The tables in this Subsection provide information about Canada's foreign trade in total, by continents, and by countries with special reference in Tables 4 to 6 to the division between Empire and foreign countries.

## 1.-Trade of Canada (Excluding Gold) with All Countries, 1919-46

Nort.-These figures are available on a calendar-year basis only since 1919; for figures for the fiscal years 1868-1919, see the Canada Year Book 1940, p. 526.

| Year | Imports |  |  | Exports |  |  | Balance of Trade: Excess of Exports (+), Imports (-) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Dutiable | Free | Total | Domestic Produce | Foreign Produce | Total |  |
|  | \$ | \$ | \$ | \$ | \$ | \$ | \$ |
| 1919. | 607,458,191 | 333, 555, 422 | 941, 013, 613 | 1,235, 958, 483 | 53, 833,452 | 1,289,791,935 | +348,778,322 |

[^318]6.-Trade with the British Empire and Foreign Countries, 1886-1946

[^319]Tables showing dutiable and free imports from principal British Empire and foreign countries and average ad valorem rates of duty collected on dutiable and total imports from the United Kingdom, the United States and all countries have, in previous Year Books, been presented at this point in the treatment of foreign trade. The data under these headings are not available for the year 1946 at the time of going to press but the presentation will be continued in future editions.

## Subsection 2.-Trade by Commodities

The tables in this Subsection provide detailed information about the composition of Canada's imports and exports, with commodities shown by groups and in order of importance for various years.
7.-Trade, by Main Groups, 1914, 1926, 1932, 1939, 1945 and 1946

| Group | Values of Imports (Millions of Dollars) |  |  |  |  |  | Values of Domestic Exports (Millions of Dollars) |  |  |  |  |  |

| Farm and manents.. | 68.4 | $50 \cdot 4$ | $20 \cdot 9$ | Artificial silk and |  |  |  |
| Wool and manufactures | 64-6 | $43 \cdot 7$ | $26 \cdot 2$ | products. ${ }_{\text {grain and }}$ prod- | $22 \cdot 1$ | $20 \cdot 8$ | . 5 |
| Rolling-mill products. | 53.4 | $55 \cdot 0$ | $32 \cdot 3$ | ucts............ | $20 \cdot 2$ | 12.5 | 8.9 |
| Electric apparatus.. | 47.8 | $43 \cdot 1$ | 13.8 | factures. | $20 \cdot 1$ | $15 \cdot 1$ | $16 \cdot 1$ |
| Sugar and products. | 39.9 | $32 \cdot 1$ | 23.4 | Paper | 18.8 | $13 \cdot 4$ | 8.7 |
| Books and printed matter. | $30 \cdot 7$ | 21.4 | $15 \cdot 2$ | Household and personal offices | 18.6 | $8 \cdot 4$ | 6.5 |
| Petroleum, refined. | $29 \cdot 6$ | $20 \cdot 4$ | 15.0 | Clay and products. | 17.8 | $13 \cdot 7$ | 7.9 |

9.-Principal Domestic Exports, 1939, 1945 and 1946

Nore.-Commodities are arranged in order of importance, 1946.

| Commodity | 1946 | 1945 | 1939 | Commodity | 1946 | 1945 | 1939 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$'000,000 | \$'000,000 | \$'000,000 |  | \$'000,000 | \$'000,000 | \$'000,000 |
| Newsprint paper.... | $265 \cdot 8$ | $179 \cdot 5$ | $115 \cdot 7$ | Raw furs. | $30 \cdot 9$ | 28.5 | $14 \cdot 1$ |
| Wheat............. | $250 \cdot 3$ | 475.8 | $109 \cdot 1$ | Whisky. | $29 \cdot 7$ | 23.0 | $7 \cdot 9$ |
| Wheat flour....... | 126.7 | 97.9 | 16.4 48.8 | Farm implements |  |  |  |
| Planks and boar | 125.4 114.0 | 98.9 106.1 | 48.8 31.0 | and machinery.. | 28.9 28.7 | 20.2 23.9 | 7.0 11.9 |
| Fish.... | 86.5 | 80.2 | 27.7 | Zinc. . . | $27 \cdot 8$ | 20.4 | 11.9 9.9 |
| Automobiles, trucks |  | 2 | 27. | Fresh beef and veal | 27.2 | 37.8 | 0.5 |
| and parts...... | 78.3 | $300 \cdot 6$ | $25 \cdot 5$ | Canned meats..... | $27 \cdot 1$ | 21.8 | 0.8 |
| Bacon and ham. | $66 \cdot 4$ | 96.5 | $32 \cdot 7$ | Eggs............... | $26 \cdot 8$ | $44 \cdot 1$ | $0 \cdot 3$ |
| Aluminum. . | 56.0 | $133 \cdot 6$ | $25 \cdot 7$ | Asbestos | 24.5 | $22 \cdot 2$ | $14 \cdot 4$ |
| Nickel............. | $55 \cdot 2$ | $54 \cdot 8$ | $57 \cdot 9$ | Cheese | 21.9 | $27 \cdot 9$ | $12 \cdot 2$ |
| Locomotives and railway cars. | 53.3 | 45.9 | 0.4 | Electrical appa- ratus........... | 20.9 | 61.0 | $3 \cdot 2$ |
| Copper.............. | $37 \cdot 0$ $32 \cdot 1$ | $40 \cdot 9$ 30.4 | 40.2 9.2 | Ships and vessels.. | 18.8 | $15 \cdot 6$ | 0.5 |

The following tables provide an excellent survey of the changing structure of Canadian commodity trade over a 50 -year period. Because of the abnormal conditions that governed wartime trade, these tables are not brought up later than 1939 but the data should be examined in conjunction with the brief history of Canadian trade at pp. 875-879 and the statistics of Tables 1 to 9.

## 10.-Canada's Leading Imports, Years Ended Mar. 31, 1890, 1900, 1910, 1920, 1930 and 1939

Note.-Commodities arranged in order of importance, 1939.

| No. | Commodity | 1890 | 1900 | 1910 | 1920 | 1930 | 1939 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | \$ | \$ | \$ | \$ | \$ | \$ |

[^322]11.-Canada's Leading Domestic Exports, Years Ended Mar. 31, 1890, 1900, 1910, 1920, 1930 and 1939-concluded

${ }^{1}$ None recorded.
The two detailed tables showing principal imports into Canada for consumption from the United States, the United Kingdom and all countires and principal exports of Canadian produce from Canada to the United States, the United Kingdom and all countries, respectively, that constitute a regular feature of the Year Book treatment of Foreign Trade are omitted this year because later figures than those published in the 1946 edition (1945) were not available at the time of going to press. Comparable figures for 1946 are available from the Trade Reports published by the External Trade Division of the Dominion Bureau of Statistics.

## Subsection 3.-Imports and Exports by Degree of Manufacture, Origin and Purpose

Analyses of Canada's trade, from the angle of degree of manufacture of imports and exports with leading countries, are of value to the student of economic relationships because they present, in summary, a picture with significant meaning in the complementary relationship of manufacturing and commerce between continents and countries.

The data of Table 12 have been specially tabulated to show at a glance this information for all countries of any importance that trade with Canada. Table 43, on the other hand, gives historical statistics that clearly indicate the fluctuations in imports for home consumption of important raw materials used in Canadian manufacture, irrespective of their source. In a broad way, the data reflect the development of Canadian manufactures, although the dislocations in trade caused by the War must be borne in mind in using the figures for the past six years.

## PART III.-SUMMARY OF EXTERNAL TRANSACTIONS

## Section 1.-Canadian Balance of International Payments*

Canada's special interest in a system of multilateral settlements is apparent from the structure of the Canadian balance of payments. Because of the existence before the War of free exchange markets, which provided channels of international settlement for the nations of the British Commonwealth and other overseas countries with the United States, it was possible for there to be a considerable amount of disequilibrium or "unbalance" in Canada's current accounts with the United Kingdom and the United States without any special problems of settling these balances arising. Triangular settlements such as those arising from the unbalanced state of the Canadian accounts with the United Kingdom and the United States were an integral part of the network of international commerce which had grown up over an extended period. The system of multilateral settlements made it possible to settle balances like those arising from Canada's dealings with its principal trading partners. But the War interrupted the operation of the system of multilateral settlements by creating conditions under which sterling was no longer freely convertible into United States dollars. In addition, the current accounts of the belligerent countries became distorted by wartime demands which produced greatly augmented current balances for which new methods of settlement had to be devised. In the case of Canada, the new conditions produced problems with respect to the balances of payments with both the Sterling Area and the Non-Sterling Area and the situation made exchange control necessary. Financial problems also developed arising out of the problem of the British scarcity of Canadian dollars to pay for munitions, food and other commodities which were so urgently needed for the

[^326]prosecution of the War. Other exchange and financial problems arose from the Canadian shortage of United States dollars to pay for the capital equipment; materials and components required for war production.

The nature of the problems introduced by the War necessitated the division of the Canadian balance of payments into two separate sections, one showing transactions with the Sterling Area, and the other showing transactions with the United States and other countries with convertibility exchange. Because of the absence of the free convertibility of sterling into United States dollars the disequilibrium in these two separate accounts between Canada and other countries has had to be met by various special means. The principal solutions of the wide disequilibrium in the account with the United Kingdom and the Sterling Area have been of a financial character. Arrangements were made between the two Governments for increasing the supply of Canadian dollars available to the Sterling Area and the direction of these into official channels. In the early years of the War, these methods were mainly of a capital type, involving repatriations and the accumulation of sterling, whereas later in the War when the disequilibrium widened to its peak the Billion Dollar Contribution and Mutual Aid to the United Kingdom were the chief methods of financing the British shortage of Canadian dollars. Mutual Aid expenditures on account of the Sterling Area countries to the end of 1945 amounted to approximately $\$ 2,175,000,000$. Following the end of Mutual Aid the loan of $\$ 1,250,000,000$ by the Canadian Government to the United Kingdom has been the principal means of financing the current deficit of the Sterling Area in Canada.

In the balance of payments with the United States and the United States dollar area, the initial adjustments to meet the Canadian shortage of dollars were of an administrative character. The introduction of exchange control and the control of exports of capital from Canada provided a means of conserving Canada's limited supply of United States dollars for the more essential purposes of the War. Similarly, Government restrictions were introduced in 1940 limiting Canadian expenditures in the United States for unessential travel and civilian luxury commodities. As the disequilibrium widened in Canada's current account with the United States, other measures directed towards expanding Canada's receipts of United States dollars were developed. The agreements entered into at Hyde Park in the spring of 1941 led to large United States purchases of munitions, military equipment, ships and raw materials in Canada. These expenditures developed rapidly after the United States entry into the War. Later during the War, there were exceptionally large Canadian current receipts from sales of grain to the United States and United States Government expenditures on defence in Canada. Another major source of United States cash arose from capital inflows from the United States to Canada. Throughout the War, there continued to be an appreciable liquidation of Canadian holdings of United States securities and, in 1942, there first appeared large inflows of capital for the purchase by United States investors of Canadian securities, particularly bonds and debentures. These capital inflows continued to be unusually heavy throughout the remainder of the War and contributed large amounts to the supply of United States exchange, although Canada's external foreign liabilities increased commensurably. There were also special receipts of gold and United States dollars in partial settlement of the British deficiency in Canada. By the end of 1945, Canada's official liquid reserves of gold and United States dollars amounted to $\$ 1,508,000,000$.

## Developments in 1945

While 1945 was a year of transition, the balance of payments for the year as a whole retained some of the general outlines characteristic of the later war years. The high level of economic activity had the effect of producing a record total of credits in the current account, but smaller external government expenditures on war account reduced current debits. As a result, the balance of credits on current account rose to $\$ 1,723,000,000$, the highest level for any year in Canada's history. But, as the economic background following the end of the War was much different from that at the beginning of the year, some of the important changes occurring during the year are not apparent from annual summaries of the balance of payments. Heavy international transactions in the earlier part of the year while the War was continuing were instrumental in producing large annual totals.

The increase in total current account credits in 1945 occurred in exports to overseas countries other than the United Kingdom. Exports to both the United States and the United Kingdom were less in 1945 than in 1944, which was the peak year for both countries. Notable expansions occurred in exports to other Empire countries and to foreign countries overseas. The expansion in exports on account of these foreign countries increased sharply to a new record level as the result of shipments under export credits, UNRRA and military relief.

Transactions with the Sterling Area, 1945.-The current account deficit of the Sterling Area in Canada in 1945 of $\$ 1,220,000,000$ compares with $\$ 879,000,000$ in $1944, \$ 1,216,000,000$ in 1943 and $\$ 1,269,000,000$ in 1942 . Most of the change in 1945 originated in the sharp decline in Canadian overseas expenditures in the Sterling Area as total credits were slightly lower than in 1944.

Although total exports to the United Kingdom were lower than the peak level in 1944, exports of food expanded to a new record and exports of lumber and wood products remained close to the level of the previous year. Expenditures on account of munitions, including Mutual Aid, declined sharply after the first quarter of the year following the end of the European War and exports of nonferrous metals were lower throughout the year as British stocks and other sources of supply were used. Following the end of the War, there was a considerable reduction in British expenditures on war services in Canada, declines occurring in expenditures for most purposes. The main group of Sterling Area expenditures to increase was exports to other Empire countries than the United Kingdom. There was also a significant increase in British expenditures on freight and shipping account, mainly reflecting larger earnings by the growing fleet of Canadian-owned merchant vessels.

The British supply of Canadian dollars from the more normal sources such as exports of merchandise to Canada and shipping services, and receipts of income on investments in Canada remained about the same in 1945 as in 1944. Canadian commercial imports from the United Kingdom were at about the same level in both 1945 and 1944. Imports from other Sterling Area countries were higher in 1945 than in 1944, while payments for freight and other services and interest and dividends to the United Kingdom were somewhat less in the aggregate.

The largest part of the Sterling Area current supply of Canadian dollars was provided by the payments from the Canadian Government to the United Kindgom for the expenses of the Canadian Forces overseas. These amounted to $\$ 696,000,000$ compared with $\$ 1,085,000,000$ in 1944 , the decline in expenditures accompanying the end of the War, expenditures in the first quarter of the year being about $\$ 335,000,-$ 000 and dropping down to $\$ 77,000,000$ in the fourth quarter.

Mutual Aid was again the principal means of financing the current account deficiency of the Sterling Area in 1945. The amount of Mutual Aid to Sterling Area countries was $\$ 838,000,000$. Of this, $\$ 777,000,000$ was for the United Kingdom and the remainder was distributed among Australia, India, New Zealand and the British West Indies. In addition, following the termination of Mutual Aid, there were interim advances to the United Kingdom in order to maintain the export of food amounting to about $\$ 164,000,000$, advances to India to cover the purchase of locomotives, and to Australia.

Special receipts of United States dollars from the United Kingdom contributed $\$ 33,000,000$ to the financing of the current deficit in 1945, this being part of an adjustment in connection with the United States dollar cost to Canada of Mutual Aid production for the United Kingdom. There was also some financing from Sterling Area sources arising from a decline in British official balances in Canada. There were large repayments on the $\$ 700,000,000$ loan totalling $\$ 64,000,000$ during the year. Canadian private repatriations of securities held in the Sterling Area totalled about $\$ 72,000,000$, an amount considerably higher than private repatriations in earlier years during the War.

Transactions with the United States, 1945.-In the balance of payments with the United States there was again a small surplus on current account due to the continuation of some of the abnormal sources of large receipts which had been prominent also in 1944 . The current surplus of $\$ 30,000,000$ compares with $\$ 31,000,-$ 000 in 1944, the only other year in which this unusual development has occurred. There were sharp declines in two of the abnormal sources of United States expenditures in Canada-receipts from the sale of munitions and from the sale of grain. But there were smaller expenditures by the Dominion Government in the United States in 1945 than in 1944 when large special payments to the United States Treasury amounting to $\$ 280,000,000$ on current account were made. Receipts from the sale of munitions were in the neighbourhood of $\$ 200,000,000$ in 1945 compared with considerably more than $\$ 300,000,000$ in 1944. Receipts from the sale of grain to the United States declined even more sharply, being approximately $\$ 100,000,000$ in 1945 compared with about $\$ 300,000,000$ in 1944. Exports of commodities to the United States other than munitions and grain were slightly higher in the aggregate than in 1944, and more than double the level of receipts from all exports to the United States in 1939, higher prices as well as larger volume contributing to some of the increase. United States Government expenditures on defence in Canada were much smaller than in the previous year, when they had contributed a substantial amount to current receipts. Net exports of non-monetary gold showed a further decline in 1945 amounting to only $\$ 96,000,000$.

The most outstanding gain in other receipts was from the expenditures of United States travellers in Canada. While these increased very sharply, the balance of receipts on travel account increased only moderately since there was also a sharp increase in expenditures of Canadian travellers in the United States.

Canadian payments to the United States in 1945 for merchandise were approximately the same as in 1944, although imports of merchandise from the United States underwent many changes during the year. While gross imports declined appreciably, a large part of this decline occurred in imports of goods that are not purchased by Canada. Imports of lend-lease goods on United Kingdom account and United States Government free issues of aircraft engines and equipment imported in connection with aircraft being constructed for the United States declined sharply.

As there were larger payments for imports on Government account in 1945, imports through other channels were somewhat less than in 1944. Freight and transportation costs originating mainly from the movement of imports to Canada, although continuing to decline, were still large. Payments of interest and dividends to investors in the United States declined relatively moderately in the aggregate in 1945. Total dividends paid by Canadian companies to residents of the United States were considerably lower than in 1944, mainly because of reduced distributions by Canadian subsidiaries to parent companies in the United States.

Transactions with Other Foreign Countries, 1945.-The very sharp increase that occurred in exports to other foreign countries resulted mainly from the liberation of Europe and the heavy shipments in the latter part of the year to the Continent financed by Mutual Aid, export credits, UNRRA and cash received from European Governments. Total exports on the account of other foreign countries amounted to $\$ 509,000,000$ compared with $\$ 176,000,000$ in 1944 and $\$ 134,000,000$ in 1938.

Exports to this group of countries directly financed by Federal Government expenditures totalled about $\$ 312,000,000$. Mutual Aid to China, France and Russia contributed $\$ 102,000,000$ of this, export credits $\$ 53,000,000$, interim advances to countries arranging for credits $\$ 52,000,000$, military relief $\$ 71,000,000$ and the Canadian contribution to UNRRA of $\$ 34,000,000$. There were also exports purchased by UNRRA with free funds and substantial cash purchases by European Governments. Commercial exports to other countries producing convertible exchange increased substantially in 1945. This private commercial trade was with the Latin American countries, some European countries and United States dependencies. There were appreciable gains in exports to practically every country included in this group. Imports from other foreign countries increased from approximately $\$ 89,000,000$ in 1944 to $\$ 110,000,000$ in 1945.

Capital Movements Between Canada and the United States Dollar Area, 1945.-Inflows of capital to Canada from the United States increased in 1945 even more than in the preceding three years of extraordinarily heavy inflows. Most of the inflows again took the form of sales by Canadians of outstanding Canadian and United States securities. The level in 1945 established a record for inflows of capital from sales of outstanding securities. The principal development in the security trade between Canada and the United States during the year was the very heavy United States demand for Canadian domestic bonds.

While the total of Canadian issues redeemed in 1945 was about the same size as in 1944, maturities were less and issues called for redemption were greater, many being refinanced by new issues sold in the United States. Other capital movements to Canada continued to be predominantly inwards, there being substantial inflows for direct investments, loans and advances and transfers into non-resident Canadian dollar accounts.

Capital payments being subject to restrictions imposed by exchange control continued to be, for the most part, for the redemption of securities or other debts. Although certain other exports of capital were permitted in 1945 as in 1944, the total amount of such transfers was relatively small. These transfers were mainly in connection with the extension of Canadian business activities outside of Canada. There were very large debit entries in the capital account reflecting the increase in. official reserves of gold and United States dollars of $\$ 606,000,000$.

## Developments in 1946

In 1946, the volume of current transactions and the net balance of current credits were considerably less than in 1945, reflecting reconversion from the wartime period. The net credit balance of $\$ 458,000,000$ was, nevertheless, much larger than in any other peacetime year. This balance includes $\$ 107,000,000$ of exports financed as official contributions of relief. The remainder of the current balance, $\$ 351,000,000$, was accompanied by capital transactions which acted towards reducing Canada's net debtor position during the year. But the disequilibrium in Canada's accounts with the Sterling Area and the countries receiving export credits was much greater than this as there was a large deficit in the current account with the United States. The record peacetime credit balance with overseas countries was financed chiefly by drawings by the United Kingdom of $\$ 540,000,000$ on the new loan of $\$ 1,250,000,000$, and by net export credits of $\$ 210,000,000$ to foreign countries. The unprecedented current deficit of $\$ 603,000,000$ with the United States was covered only to the extent of $\$ 237,000,000$ by current receipts of convertible exchange from the United Kingdom and other overseas countries. The remainder of the deficit was met by a reduction of $\$ 263,000,000$ in Canada's official reserves, and by capital inflows.

Transactions With the Sterling Area.-While many of the abnormal commodity movements, like shipments of munitions, naturally ceased at the end of the War, there remained unusual British demands for Canadian food and raw materials. Consequently, exports to the United Kingdom reached a peacetime record in 1946 of $\$ 626,000,000$ even though they were much less in total than at the wartime peak. But, since 1946 was a year of reconversion for the British economy, commodities available in the United Kingdom for export were limited by prevailing shortages. The result was that Canadian imports from the United Kingdom valued at $\$ 138,000,000$ in 1946 , represented a considerably smaller volume than imports before the War.

There continued to be appreciable Canadian Government expenditures in the United Kingdom during the early part of the year on account of the Canadian Forces overseas which amounted to $\$ 73,000,000$ during the year compared with $\$ 696,000,000$ in 1945 . Most important among the other current payments to the United Kingdom were interest and dividends of $\$ 54,000,000$ paid to British investors, an amount sharply reduced by wartime repatriations. While there were payments to the United Kingdom for shipping services these were much less than British expenditures on inland freight in Canada on the large volume of exports, some of which were also carried on Canadian ships. British expenditures on war services in Canada declined sharply in 1946. Prominent among other current receipts from the United Kingdom were inheritances and emigrants funds. Normal exchanges of other services between the two countries resulted in the usual moderate net payments by Canada on their account. As a result of all current exchanges of commodities and services between Canada and the United Kingdom in 1946, there was a credit balance of $\$ 495,000,000$ compared with one of $\$ 928,000,000$ in 1945. Trade between Canada and other Empire countries which also customarily results in a credit balance further increased the shortage of Canadian dollars in the whole Sterling Area. This trade is now much larger than before the War and the disequilibrium in the current account with these countries in 1946 was $\$ 167,000,000$ compared with $\$ 24,000,000$ in 1937.

The drawings of $\$ 540,000,000$ on the new loan to the United Kingdom were the principal means of financing the Sterling Area deficiency of Canadian dollars. There were also net interim advances to cover exports of $\$ 112,000,000$ which were mainly cancelled under the terms of the Agreement on the Settlement of War Claims in March when the United Kingdom paid Canada $\$ 150,000,000$ clearing away all outstanding war claims except the advances for air training of $\$ 425,000,000$ which were cancelled under the terms of the Financial Agreement. Among the other financial transactions between the two Governments were repayments by the United Kingdom on the 1942 loan aggregating $\$ 89,400,000$, leaving $\$ 471,900,000$ of that loan outstanding at the end of 1946. The principal private capital transactions were redemptions of about $\$ 76,000,000$ of Canadian securities owned in the United Kingdom, and net re-purchases of about $\$ 54,000,000$ of Canadian securities held there.

Current Transactions with the United States.-The disequilibrium in the current account with the United States in 1946 was larger than in any other year in Canadian history as post-war demands for goods and services in the United States first became effective. The current deficit of $\$ 603,000,000$ is much larger than the wartime peak of $\$ 318,000,000$ in 1941 , and $\$ 437,000,000$ in 1929 , the peak in the pre-depression period of prosperity. In the years immediately before the War, the deficit was much smaller, being $\$ 149,000,000$ in 1938 . The size of the deficit took on added significance since the normal pre-war sources of convertible exchange from trade with overseas countries have been temporarily reduced because of the general dollar shortage, and limited productivity overseas during the transitional period. The sudden re-emergence of the large deficit with the United States resulted from divergent trends in receipts and expenditures. While total current receipts of $\$ 1,575,000,000$ contracted $\$ 165,000,000$, current expenditures expanded sharply by $\$ 468,000,000$ to the record level of $\$ 2,178,000,000$. The principal decline in receipts was from the sale of munitions and grain, which declined more than other exports increased. But the sharp gain in expenditures was widely distributed, the large growth in the import total being accompanied by substantial increases in most of the other types of expenditures as well. The increases in imports were widely distributed as to commodities and a new peak was reached in the latter part of the year when there were better transportation conditions and when supplies of many commodities in the United States were increasing. Rising prices there also contributed to the growth in Canadian expenditures as well as the high level of incomes in Canada. There were also the effects of large accumulations of demands during the wartime period and the absence of overseas sources of supply which formerly were important to Canada.

The balance of payments of $\$ 66,000,000$ on freight account with the United States was higher than in 1945 but less than wartime peaks when ocean transportation costs were higher. Payments of interest and dividends to the United States of $\$ 250,000,000$ were the highest yet reached, net payments of $\$ 204,000,000$ comparing with $\$ 150,000,000$ in 1945 . Dividend payments were at a new peak principally because of abnormally large payments by Canadian subsidiaries to parent companies in the United States. Miscellaneous current payments by Canada to the United States almost doubled in 1946 while miscellaneous current receipts were slightly lower. Expenditures on travel between Canada and the United States reached new peaks in 1946 but the rise in United States expenditures in Canada to $\$ 214,000,000$ was offset by a rise of corresponding size in Canadian expenditures in the United States to $\$ 131,000,000$ with the result that estimated net receipts of
$\$ 83,000,000$ on travel account were close to net receipts in 1945 . Influencing the expenditures in both directions were high levels of income and greater freedom of transportation after the period of wartime restraints and restrictions. Receipts from newly mined gold continued to be much less than in earlier periods when production was larger.

Transactions with Other Foreign Countries.-The major part of the large export balance with other foreign countries in 1946, was financed by export credits of about $\$ 210,000,000$ and by shipments of relief and other official contributions of $\$ 102,000,000$. The remaining transactions, including inland freight and shipping revenue and income from investments, resulted in a credit balance of $\$ 87,000,000$. This credit balance provided convertible exchange for meeting part of Canada's deficit with the United States. Contributing to this source of exchange were transfers of free United States dollars by UNRRA of about $\$ 33,000,000$ Canadian, to cover expenditures in Canada, United States dollars received from borrowing governments under the terms of export credits loans, and from private trade with these countries.

Capital Movements Between Canada and the United States Dollar Area.-Gold and United States dollars received from the United Kingdom and other foreign countries, of $\$ 150,000,000$ and $\$ 87,000,000$, respectively, were the means of meeting only part of the current deficit with the United States. The remaining amount was financed by transactions on capital account. The decline in official hard currency reserves was $\$ 263,000,000$ (U.S.) leaving the Canadian holdings of gold and United States dollars at the end of 1946 close to $\$ 1,250,000,000$. Net receipts from all other capital transactions were $\$ 103,000,000$. Transactions in Canadian securities, in contrast to earlier years, lead to a net outflow of funds of $\$ 28,000,000$ as redemptions of issues matured and called were greater than sales of outstanding Canadian securities to the United States which, although heavy in the first half of the year, were small after the revaluation of the Canadian dollar. There were, however, appreciable dollar receipts arising out of sales of United States securities by Canada and other capital inflows connected with United States direct investments in Canada, and increases in United States cash balances in Canada, which exceeded outflows for such purposes as direct investments abroad by Canadian businesses and the first subscription of about $\$ 6,000,000$ in United States currency by Canada to the capital of the International Bank.

## Section 2.-The Tourist Trade of Canada*

The importance of the tourist trade as one of the invisible items in Canada's balance of international payments is shown in the tables at pp. 909-911. Being a source of foreign exchange, expenditures in Canada of travellers from other countries are comparable in their effect to exports of commodities in the balance of payments and, similarly, the expenditures of Canadian travellers in other countries are comparable to imports of goods. Currently, the tourist trade between Canada and the United States produces net credits to Canada of well over $\$ 80,000,000$ per annum and tends to offset the customary adverse balance on merchandise account with that country.

The desire to travel is deep-rooted in mankind and while its earliest incentive was the search for new lands and products for the advancement of trade, modern travel is based rather on motives of education, curiosity, pleasure and health. Technological progress coupled with better roads and new means of transport, shorter working hours and holidays with pay as well as better wages, and particularly the automobile, have all combined to change international travel from a luxury for the few to a commonplace for the many. This is especially true in the Western Hemisphere where the flow of travel between the United States and Canada is unmatched by any two countries in the world.

Canada is singularly endowed with a great wealth of attractions to offer tourists-a vast panorama of beauty from east to west and from north to south, easily accessible by road, rail, boat or aeroplane and peopled by a friendly, hospitable population.

Tourist travel in Canada has become a great and remunerative "service" industry during the past quarter-century and caters to millions of "customers" annually. Its effects and benefits are widely diffused into almost every community across the country.

It is worthy of note that, while total receipts from foreign travellers in Canada naturally exceed Canadian expenditures on travel account abroad, the Canadian is, on a per capita basis, the most persistent border-crossing national in the world and his per capita expenditures abroad are relatively higher than even the American. During 1946, Canadians are estimated to have expended over $\$ 10$ per capita on travel to the United States, while per capita expenditures of United States citizens on travel to Canada were only $\$ 1 \cdot 50$.

United States Travel Expenditures in Canada.-During the Second World War, the character of Canada's tourist trade was subject to a decided modification. Travel from overseas, which normally supplied about 10 p.c. of the tourist income, was reduced to minor proportions and Canada became more dependent on tourist travel from the United States to support the visitor industry. Canada's receipts from United States tourists took on a new importance in the nation's international accounts due to the shortage of United States dollars which arose early in the War. There was an unprecedented demand for United States exchange needed to meet essential expenditures in the United States for war purposes at a time when the Canadian supply of United States dollars was limited by the inconvertibiity of sterling.

[^331]The most convenient method of measuring the volume of travel from the United States to Canada is by means of transport and while the actual number of bona fide tourists is difficult to ascertain among the more than $21,000,000$ border crossings in a year such as 1946, it is possible to segregate the huge volume of shortterm, local, and in-transit traffic and arrive at a fairly satisfactory evaluation of the tourist trade proper.

The expenditures of travellers from the United States in Canada were over $\$ 163,000,000$ in 1945 , a recovery of some 40 p.c. from the low level of the preceding year. Preliminary estimates for 1946, covering the first year of peace, indicate that United States tourist expenditures in Canada will have reached some $\$ 214,000,000$. This remarkable recovery in dollar volume represents a new high record, and is more than double the average receipts from the same source in the war years 1940 to 1944.

A considerable part of the tourist traffic from the United States normally enters Canada by motor-car, and the non-production of new cars coupled with gasoline and tire rationing, had severely curtailed this type of traffic during the War. Traveller's vehicle permits, which are issued to United States cars usually for touring purposes, declined from $1,174,000$ in 1941 to a low of 300,000 in 1943 but recovered to 860,000 in 1945. The total for 1946 exceeded $1,492,000$-a new record.

During the war years, entries by other means of transport such as train, throughbus and aeroplane, increased considerably. The 10 p.c. premium accruing to United States currency served to encourage this movement, in addition to a somewhat lower price level in Canada and fewer shortages of certain commodities. The post-war trend indicates that the number of tourist passengers by bus and aeroplane has continued to advance while automobile traffic has increased sharply. There was a decline during 1946 in the use of rail facilities by tourists, but entries by rail are still well above pre-war levels.

The years 1945 and 1946 have given a striking demonstration of the resilience of the tourist trade and suggested the great economic possibilities of development in hotel and tourist accommodation, improved highways, national parks, and other attractions, coupled with widespread publicity at home and abroad.

Canadian Travel Expenditures in the United States.-The pattern and volume of Canadian travel in the United States during the war years was influenced by restrictive measures necessary to conserve the limited Canadian supply of United States currency for more essential wartime purposes. In July, 1940, virtually all Canadian pleasure travel involving the expenditure of United States dollars was eliminated and consequently Canadian travel in the United States declined to depression levels. After May, 1944, some modifications in the restrictions resulted in an increase of Cąnadian travel but it was not until the following May that United States funds were made available more freely in amounts sufficient for most normal travel expenditures. Thus in 1941, as a result of currency restrictions, expenditures of Canadian travellers in the United States receded to about $\$ 18,000,000$ compared with $\$ 40,000,000$ in 1940 and $\$ 67,000,000$ in 1939. Recovery was gradual and by 1944 Canadian expenditures were estimated at $\$ 57,000,000$ and, with the further easing of restrictions, rose to $\$ 81,000,000$ in 1945 . The year 1946 was one of very active movement to the United States by Canadians, despite the delayed production of new automobiles and tires. With the return of Canadian currency to parity with United States dollars early in July, 1946, the tourist movement of Canadians was probably accentuated, despite the generally higher cost of living and touring costs
in the United States. Total Canadian tourist expenditures in the United States agregated $\$ 131,000,000$ during the year, a new high in Canadian international expenditure on travel.

Canadian motor-cars remaining abroad for stays exceeding 24 hours have risen in number from fewer than 28,000 in 1943 to nearly 80,000 in 1945 and to over 167,000 in 1946. However, due principally to the non-production in Canada of passenger cars from 1942 to 1945, the pre-war volume of automobile touring in the United States by Canadians has not yet been regained. The number of Canadian travellers by bus, aeroplane and boat increased perceptibly in 1946 over the preceding year, while travellers by rail continued to represent a considerable portion of the traffic to the United States.

Travel between Canada and Overseas Countries.-Tourist travel involving ocean voyages virtually ceased under wartime conditions and expenditures of travellers from overseas countries were mainly by persons travelling on official or other business. Overseas travel account, which had shown a credit of $\$ 17,000,000$ and a debit of $\$ 22,000,000$ in a year such as 1937 , shrank to a credit of $\$ 3,000,000$ and a debit of $\$ 2,000,000$ in 1945 , but recovered to $\$ 6,600,000$ and $\$ 4,400,000$, respectively, in 1946. From 1926 to 1939, the average net debits on overseas travel account were in the neighbourhood of $\$ 8,000,000$.

There is little possibility of an immediate resurgence to pre-war levels in the volume of overseas tourist travel to Canada due to the impoverished condition of Europe and Asia, as well as the limitations imposed by many countries on the use of currencies for touring purposes and, indeed, the shortage of passenger liners. However, a gradual recovery is anticipated during 1947 in the outward flow of Canadian tourists to overseas countries, principally to Great Britain and South America, as more facilities for travel overseas become available. As a result of increased immigration to Canada from Europe, in addition to the millions of friends which members of Canada's Armed Forces and Canadian products have made in recent years, the potential of overseas travel to Canada is large and the volume should regain or surpass pre-war levels as soon as currency and other conditions are restored to normal and shipping accommodation again becomes available.

Tourist Information.-Tourist information is supplied generally by the Canadian Travel Bureau, Ottawa, while detailed information on the National Parks and historic sites may be obtained from the National Parks Bureau, Department of Mines and Resources, Ottawa. For advice regarding specific provinces or particular cities or resorts, the tourist may apply to the provincial or municipal bureau of information concerned or to the railway or bus agency whose route traverses the locality.

The following Provincial Tourist Bureaus or Branches welcome inquiries:-
Prince Edward Island-Prince Edward Island Travel Bureau, Charlottetown, P.E.I.

Nova Scotia-Nova Scotia Bureau of Information, Halifax, N.S.
New Brunswick-New Brunswick Government Bureau of Information and Tourist Travel, Fredericton, N.B.
Quebec-Quebec Tourist and Publicity Bureau, Quebec, Que.
Ontario-Ontario Department of Travel and Publicity, Toronto, Ont.
Manitoba-Manitoba Travel and Publicity Bureau, Winnipeg, Man.
Saskatchewan-Provincial Tourist Branch, Regina, Sask.
Alberta-Provincial Publicity and Travel Branch, Edmonton, Alta.
British Columbia-Government Travel Bureau, Victoria, B.C.
Northwest Territories and Yukon-Department of Mines and Resources, Ottawa, Ont.
Several provinces maintain tourist reception centres at the chief border ports to offer information and advice. Each place of importance maintains its own local tourist bureau and, in addition, the Board of Trade and information offices of bus and local transportation lines are on hand with reliable information on local matters.

For purposes of statistical analysis, commodity prices are usually divided into two principal groups, wholesale prices and retail prices. The term 'wholesale' is not used literally, and primary producers, factory and jobbers quotations, as well as actual wholesale prices, are often included in this group. Markets in which this type of price is quoted are usually well organized, and are frequently very sensitive and responsive to changing business and monetary conditions. Wholesale quotations are preferred, therefore, for sensitive index numbers of prices designed to reflect price reactions to economic factors.

Retail prices may be strongly influenced by local conditions and are less sensitive. There is ordinarily a lag of several months between this type of quotation and its wholesale counterpart. Retail prices are important from a statistical point of view, however, because they indicate changes in living costs and, along with measurements of income, show fluctuations in the economic well-being of the community.

## ACTIVITIES OF THE WARTIME PRICES AND TRADE BOARD, 1946-47 $\dagger$

The activities of the Wartime Prices and Trade Board up to the end of 1945, in controlling prices and promoting an adequate supply and orderly distribution of essential goods and services, are described in previous issues of the Canada Year Book. The present article deals with developments in 1946 and the first three months of 1947, and describes the activities and problems of the Board in the program of orderly readjustment to post-war conditions.

Changes in the controls over the distribution of goods in short supply are described in the Chapter on Domestic Trade (pp. 757-763). A more comprehensive account of the Board's activities may be found in its five Annual Reports (King's Printer, Ottawa).

Price Control.-During the war years the stabilization program had been very successful in holding in check strong inflationary forces. The threat of disorderly price advances and hence the need for price control persisted well into the transition period because of continued shortages, many of them severe and worldwide in scope, and strong pressure from high prices in other countries. The speed with which controls could be discontinued was, of course, largely dependent upon the

[^333]supply situation. While the total supply of peacetime goods increased, there was still a scarcity of many items. Canada's staple products were much in demand abroad as well as at home and imports of certain essentials such as sugar, vegetable oils, tin, and cotton fabrics, continued to be restricted by external shortages. The loss of production resulting from industrial disputes in both Canada and the United States further intensified shortages of some lines such as automobiles, durable household goods and certain building materials during a considerable period in 1946.

The authority to continue necessary price and supply controls for a period of approximately one year was embodied in the National Emergency Transitional Powers Act which came into force Jan. 1, 1946. A later amendment extended this authority until Mar. 31, 1947 when it was further extended until May 15, 1947, pending the introduction of new legislation concerning the continuation of certain emergency powers.

While price control continued to be necessary for many important goods and services, as time went on a growing number of items were released from control. The initial step in the decontrol of prices was taken in February, 1946, and others followed in the spring months. A number of subsidies were also removed or reduced during the first half of that year. Further action in these directions was delayed as a result of shortages, partly stemming from the industrial disputes in the United States and Canada, and partly as a result of the confused price situation arising from the rapid removal of price controls in the United States after the end of June, 1946. By early 1947, however, production had improved substantially and the general economic situation was such as to permit a further major step in decontrol of price ceilings. At that time, the list of goods subject to price ceilings was narrowed down largely to items of basic importance in living and production costs and subsidies had been reduced until, with few exceptions, they were confined to certain essential items of food, clothing and fuel.

The Government's approach to price control itself had been adapted to the changing conditions of the post-war period. The wartime concept of holding rigorously to the price ceiling line was replaced by a policy of orderly readjustment to the changed conditions of the post-war. Greater flexibility was essential and the impact of higher costs at home, and high prices abroad, had to be increasingly recognized in the price level. The use of subsidies on an expanding scale as an alternative to price increases would have been quite inconsistent with the objective of planned decontrol and the return to a free price structure and, accordingly, subsidies were gradually removed or reduced. A substantial number of important price adjustments occurred during the period, some of them the result of accumulated cost increases which, with the loss of war contracts, could no longer be absorbed under existing ceiling prices. Others were the result of subsidy reduction and removal and of higher prices for imported goods. Still others reflected increased labour and material costs. A number of these adjustments reflected a combination of these influences.

Financial need continued to be the main criterion for price relief though other considerations had to be given more weight than formerly. There was a somewhat larger element of "incentive" pricing mainly in the sphere of farm products and building materials in view of the urgent necessity of obtaining increased output. In the case of some commodities normally exported in large volume, consideration was given to the fact that domestic prices were much below export prices as well as, to the financial position of the producers concerned.

With the growing number of price adjustments at the manufacturing level during 1946, it became increasingly difficult to deal individually with the increases required at distributive levels. It was necessary, therefore, to establish standard methods of controlling the resultant price increases at wholesale and retail levels. The practice was usually to establish ceiling prices by setting maximum wholesale and retail markups rather than specific ceiling prices. This type of markup control was applied to a wide range of items including leather and textile goods, fabricated metal items and durable goods and, in November, 1946, was extended to certain staple food items.

The higher prices prevailing abroad were a source of many problems of price control in Canada. Some revision in the pricing policy with respect to imported goods was necessary to facilitate the re-establishment of normal trading relationships. A more flexible system of import pricing on a markup basis was inaugurated in February, 1946, and extended in scope in July, 1946. In the latter month, the Canadian dollar was restored to parity with the United States dollar which, at that time, had the effect of reducing the cost of imports by approximately 10 p.c. This relieved some of the pressure on the price ceiling exerted by higher external prices but its effects were more than offset by later price increases in the' United States and world markets.

Price Adjustments.-During 1946 and early 1947 there were a considerable number of important price adjustments. Many of these were the result of decontrol measures-the removal or reduction of subsidies and trading losses; these are described in the Section on subsidies. Apart from the subsidy changes, the chief factor in price adjustments during this period was the effect of higher labour and material costs. Thus, price increases were authorized on meals, rubber footwear, work clothing, radios, furniture, electric refrigerators, wood and coal stoves, warmair furnaces and motor-vehicles. Several price adjustments, such as those on copper, lead and zinc, and pulp and paper products, gave consideration to the wide differentials between domestic and export prices as well as to the financial position of the producers concerned. Other price increases, such as those on butter and beef, were authorized in an effort to secure needed production. Price adjustments on a number of construction products contained an element of this "incentive" pricing. A few of the important price adjustments during the period* are described below.

In January, 1947, increases were authorized on the prices of meals containing meat, fish, poultry, or eggs, served in restaurants, hotels and other public eating places. The accumulation of increases in food, labour and other costs had carried operating expenses to a point where higher prices were necessary to maintain the standard of meals.

Several adjustments in beef prices were necessary to secure an adequate supply. An acute market shortage of the higher grades of beef became apparent in the early spring of 1946. To relieve this situation by encouraging a heavier flow of cattle to market, wholesale ceilings on carcasses grading "red" or "blue" were temporarily suspended in the latter part of May, 1946. This permitted buyers to pay more for cattle but left retail beef ceilings undisturbed, and resulted in improved supplies of beef. It was impracticable, however, to maintain ceilings indefinitely at retail without a measure of control at the wholesale level. Wholesale ceiling prices were

[^334]reimposed in July, 1946, therefore, and maximum prices on the higher grades of beef were raised to establish a more satisfactory price relationship between top and lower grades of beef and also to improve distribution. In the spring of 1947, adjustments on top-quality beef were again necessary to secure adequate supplies in the months when marketings are usually light.

In April, 1946, maximum wholesale prices of pork carcasses were raised in line with the increased United Kingdom contract price and ceiling prices of all pork products were adjusted. At the same time, retail pork cuts were standardized and uniform maximum prices established, replacing the previous over-all carcass markup. Prices of pork products were again raised in January, 1947, following a further increase in the United Kingdom bacon contract price. These adjustments, for the first time, gave some recognition to past increases in costs of labour and materials in the meat-packing industry.

Higher maximum prices were authorized on copper, lead and zinc in January, 1947, thus reducing the spread between domestic and export prices. Costs of producing these metals had increased and, at the same time, much expanded domestic demand had reduced the proportion of exports so that producers were unable to take advantage of the higher prices prevailing in external markets to the same extent as they otherwise could have done. The increases authorized on copper, lead and zinc were reflected in appropriate price adjustments for users of the metals.

There were a number of price adjustments on wood products necessitated by higher costs of production and inadequate output of some lines. In April, 1946, an increase of 8 p.c. was authorized in the mill and wholesale prices of softwood and hardwood lumbers. Retail ceiling prices remained unchanged and the adjustment, therefore, placed retailers in the same position with respect to margins as they had been in prior to May, 1945, when the 8 p.c. sales tax was removed on lumber and other building materials. Other items on which price increases were authorized during the year included hardwood flooring, red cedar shingles, doors, door and window frames, and boxes and shooks.

In October, 1946, higher maximum prices were authorized on coal produced in Western Canada to enable operators to meet wage increases in the western mines.

Import Pricing.-The policy with respect to the pricing of imported goods was substantially changed during 1946. This revision was necessary because prices and costs in many countries had risen so much in wartime as to put them seriously out of line with Canadian ceilings. A strict application of basic-period ceilings might have operated to exclude goods from importation and thus interfered with the establishment of a normal flow of trade. In January, 1946, therefore, a new policy was adopted to facilitate the importation of goods from certain designated countries which had suffered particularly in the War. Under the new policy, goods from these countries were priced on the basis of laid-down costs plus a somewhat restricted markup. Goods eligible for subsidy or bulk purchased were not affected by this new procedure. A similar system was used in pricing certain individual items such as imported farm machinery and imported automobiles, even when imported from countries not included in the designated list.

Later in the year the new pricing procedure was extended to goods from all countries. The growing volume of goods becoming available from the United States and other countries made increasingly difficult the maintenance of basic-period pricing which, in addition to possible effects in restricting imports from these countries, involved a heavy burden of administrative work in setting prices for new
goods. In July, 1946, therefore, cost plus pricing was applied to goods from all countries. Schedules of standard markups were established for importers and distributors, thus eliminating the need for individual fixations. These markups were, in most cases, somewhat smaller percentage-wise than the normal markups; the principle was to establish markups which were approximately the same as the dollar and cent margins prevailing prior to the War. The new import-pricing policy did not apply to certain foods or to goods eligible for subsidy.

Subsidies.-The policy of the Government with respect to subsidies was to remove them as promptly as was consistent with an orderly readjustment of the price structure to the realities of post-war conditions. In putting this policy into effect, a number of factors had to be considered. The process had to be a gradual one since sudden or very rapid removal of all subsidies at a time when world prices were high and uncertain and when inflationary pressures remained great would have been quite inconsistent with orderly readjustment. Subsidy reduction was, therefore, considered in relation to the general developments in the Canadian price level and in relation to the particular consequences in the existing circumstances of the removal or reduction of the subsidy under review. Another very important factor, particularly in connection with the subsidies on some imported materials, was the market position of the commodity concerned. If current prices seemed unduly high, as was sometimes indicated by a lower level of future prices, there was a disposition to postpone or limit removal of subsidies until the outlook became somewhat clearer. In some cases where market conditions were obscure but the subsidized price was clearly low in relation to reasonable expectations, subsidies were reduced but not removed.

The problem of the appropriate timing of subsidy removal was complicated during 1946 by economic developments both abroad and at home-the abandonment of price control in the United States, rising world prices, and severe shortages resulting from industrial disputes. Thus, while the general trend was strongly in the direction of subsidy removal during the past year, there were a number of instances in which rates of subsidy increased and there were a few cases in which new subsidies were paid. Special subsidy arrangements with respect to steel were developed in an effort to meet the shortages resulting from industrial disputes in the steel industries of both Canada and the United States.

However, many subsidies were eliminated during 1946 and early 1947, others were substantially reduced and the whole field in which subsidies were payable was greatly restricted.

The field of import subsidies was further restricted by a revision in the procedure for establishing eligibility for subsidy. Early in 1946, the former approach to import subsidies, under which commodities were broadly considered eligible for subsidy unless specifically declared ineligible, was abandoned. In its place a positive list of items eligible for import subsidy was announced. This list was subject to a continual paring-down process throughout the year, with the result that by early 1947, the area of subsidy payments had been very substantially narrowed.

Throughout the period of price control the Board has, through the Commodity Prices Stabilization Corporation, frequently used the technique of bulk purchasing: sometimes involving the absorption of a trading loss as an alternative to a subsidy arrangement. During 1946 and early 1947, a number of bulk purchasing arrange-
ments were discontinued in line with the general principles applying to subsidy reduction. Potential trading losses on other bulk purchasing operations were reduced or eliminated by raising Canadian selling prices by appropriate amounts.

One of the major steps in subsidy removal was the discontinuation of subsidies on fluid milk, concurrently with the restoration to the provinces of jurisdiction over milk prices. The consumer milk subsidy, introduced in December, 1942, as part of the program aimed at arresting the continuing rise in the cost of living, had resulted in a reduction of 2 cents per quart in the price of milk to the consumer. Removal of the subsidy in June, 1946, was accompanied by a price increase of the same amount. In October, 1946, the remaining subsidy on fluid milk, that paid producers through the Department of Agriculture, was withdrawn. When this action was taken, milk prices were increased by the provincial Milk Boards in amounts varying between provinces and ranging from $1 \frac{1}{2}$ cents to 3 cents per quart. Many of the increases were greater than the equivalent of subsidy which represented about $1 \frac{1}{2}$ cents per quart. At the same time, the subsidy of 30 cents per hundredweight of milk entering into the manufacture of concentrated milk products, which was also paid through the Department of Agriculture, was removed, and the Board authorized correspondingly higher ceilings on evaporated milk, condensed milk and milk powder.

The important textile subsidies were sharply reduced and in some cases completely eliminated. The first step was taken in the early months of 1946 when subsidies on most imported raw wools were discontinued, those on domestic worsted yarns and fabrics cancelled and the subsidies on imported yarns and fabrics decreased by corresponding amounts. The subsidy on imported raw cotton was reduced in March, 1946, though the expected savings were offset by sharp increases in the cost of cotton. Finally, in January, 1947, all remaining wool subsidies were discontinued and in the following month the raw cotton price, above which subsidy would be paid, was again raised by a substantial amount. The higher cost resulting from these subsidy changes had to be offset by price increases which extended down to the consumer level, though the adjustments on clothing and manufactured goods were delayed somewhat to allow for disposal of subsidized inventories.

The removal of subsidies on petroleum was completed in January, 1947, with the discontinuation of payments on crude oil imported into the Prairie Provinces, concurrently with the release from price control of all petroleum products except gasoline and tractor distillate.* Crude oil imported into other parts of Canada had not been eligible for subsidy since September, 1945.

A considerable number of food items in addition to fluid milk were affected by subsidy changes. Among the more important of these were soap and shortening for which basic-period ceilings had been maintained by the payment of subsidies on the basic materials. In February, 1947, the subsidy payments on the domestic constituents of these products were practically eliminated while those on imported materials were reduced. This entailed price increases on soap, shortening, salad and cooking oils. In the case of canned fruits and vegetables, subsidies paid to growers of crops for canning and those paid to producers were discontinued and a similar dual subsidy arrangement for jams and jellies was terminated. The subsidy on imported Barbados molasses was reduced in March, 1946, and completely eliminated a year later. Certain corn products, dried beans, canned salmon, coffee and dried fruits were also affected by subsidy reduction or removal in 1946 or by reduction in trading losses in cases where the goods were bulk purchased.

[^335]At the beginning of June, 1946, subsidy payments and bulk trading losses on fertilizers were discontinued and prices restored to approximately the level of those prevailing in the basic period. However, some subsidies on fertilizer material for the Maritime Provinces continued to be paid by the Department of Agriculture. In March, 1947, the substantial subsidy paid on sisal fibre to maintain basic period prices for binder twine was discontinued.

The trading loss on antimony was eliminated in January, 1947, by raising the resale price to domestic users to the level of the purchase price which had risen substantially. In the following month similar action was taken with respect to tin.

Price Decontrol.-The area of price control was substantially restricted during 1946 and early 1947. The first step in the actual decontrol of prices was taken in February, 1946, when ceiling prices were suspended on an experimental list of items. For the most part, these items were of comparatively minor significance in family and business expenditures and, moreover, were not expected to show serious price increases.

In the following months, other items were freed from the price ceiling and there were two important suspensions in May. In that month, most types of capital equipment used in industry and distribution were released from control. The prices of capital equipment do not immediately affect prices of consumer goods. In addition, the task of maintaining price control on items of capital equipment had been very difficult because of their variety and varied specifications. Manufacturers' ceiling prices on newsprint were removed in May, subject to the understanding that Canadian prices would not be raised above the level that would maintain the historic differential between newsprint prices in the United States and Canada.

In July, 1946, concurrently with the restoration of the Canadian dollar to parity with the United States dollar, a further important step in decontrol was taken and, at the same time, the positive method of specifying those goods and services remaining under price control was adopted. A specific list of all the goods and services still subject to price ceilings was issued and the initial method of listing the items released from control was abandoned. While a large number of items were released from price control as a result of this action, maximum prices still applied to almost all articles of importance in the normal household budget, including nearly all food, clothing and fuel as well as the chief items in costs of production including industrial materials and most components and farmers' and fishermen's supplies.

Further steps in the decontrol of prices were delayed by adverse developments, including the termination of price control in the United States and the interruption of production by industrial disputes in both Canada and the United States. However, by the turn of the year, the supply situation was improving substantially as a result of rapidly increasing production. In January, 1947, therefore, many items were released from the price ceiling. The list of goods and services still subject to price control were restricted largely to items of basic importance in living and production costs. In announcing this further step in orderly decontrol, the Minster of Finance in his Statement on Price Control, Jan. 11, 1947, outlined improvement in supplies and administrative problems as reasons behind the choice of items released from price control. He also added that "For the majority of the items being de-
controlled, significant price increases are not anticipated. In some cases, price advances will occur, though in most of these instances increases could not have been avoided even if control had been maintained"

Rentals and Shelter.-The shortage of housing accommodation became more acute in 1946, in spite of the large volume of new construction during the year. In these circumstances it was necessary to maintain control of rents and associated eviction controls and throughout 1946 the regulations respecting housing accommodation remained substantially unchanged. Several important steps toward the decontrol of commercial accommodation were taken early in 1947.

Commercial Accommodation.-Throughout 1946, eviction control on commercial accommodation was administered in accordance with a code issued in November, 1945, to permit those changes in leasehold arrangements that were needed to promote greater employment and enterprise. There was only one revision during the year in the regulations respecting commercial accommodation. In August, 1946, provision was made for five-year leases for commercial accommodation (which leases had been exempted from rent control in December, 1945), to contain provision for termination before the end of the five years on notice by the tenant.

In 1947, commercial accommodation was affected by changes in both maximum rental regulations and eviction controls. In March, a measure of financial relief was extended to landlords of commercial accommodation by authorizing a 25 p.c. increase in maximum rentals provided a two-year extension of the lease was agreed upon by landlord and tenant. If the tenant, however, did not accept the proffered lease within thirty days, he might be dispossessed under provincial law and the accommodation then became free of rent control. If the two-year extension was arranged, the lease was binding for the full term upon the landlord but might be terminated by the tenant upon thirty days notice. Space let under this special two-year lease is released from rent and eviction control upon the expiration of the lease.

A further amendment released from maximum rental regulations any three-year lease made on or after Mar. 1, 1947, by a landlord and the tenant in possession. However, such a lease could not contain provision for prior termination by the landlord.

Changes made in eviction controls at this time also affected sub-tenants who previously had enjoyed the same security of tenure as those tenants who held possession under lease with a landlord. After March, 1947, a landlord was permitted to recover possession of commercial accommodation in accordance with provincial law if the lessee-tenant was no longer in possession of the accommodation.

Finally, all commercial accommodation that was untenanted on Mar. 1, 1947, or later became untenanted, was exempted from the application of rent and eviction controls. This included new buildings as well as those not previously rented.

Housing Accommodation.-There were no fundamental changes in the regulations respecting housing accommodation in 1946. Eviction controls on shared accommodation were relaxed slightly in August, 1946, by removing the restriction that prohibited notices to vacate terminating in the winter months.

In March, 1947, there were a number of other revisions in eviction controls affecting housing accommodation. Steps were taken to provide relief to those landlords who had incurred particular hardships as a result of the freezing of leases in July, 1945. The regulations in question had suspended the right of a landlord
to give notice to vacate on the grounds that the accommodation was required for himself or for members of his immediate family. Persons who had purchased housing accommodation prior to Oct. 31, 1944, were in a position to give the required six months notice to obtain possession of the accommodation before July 25, 1945. However, on the customary May-to-May periodic lease, persons who purchased houses after Oct. 31, 1944, could not have served a notice which, under the regulations would have become effective before May 1, 1946, and any such notices were frozen as a result of the action taken in July, 1945. It was felt, therefore, that some relief should be given such landlords and in March, 1947, the regulations were amended to permit landlords of housing accommodation purchased between Nov. 1, 1944, and July 25, 1945, to apply for permission to recover such accommodation. The tenant might oppose the application and the Court of Rentals Appeal in making a decision would give consideration to the relative needs of the landlord and the tenant. If the landlord's application were granted, the housing accommodation could be recovered in accordance with provincial law, subject to the provision that at least three months notice to vacate be given.

A further cbange in March, 1947, provided for the recovery, in accordance with provincial law, of farm houses or other dwelling places on property being used for agricultural purposes, if the accommodation had been let separately from the real property but was now needed for its efficient operation. During the war years, a considerable number of farms had been abandoned due to shortage of labour and the dwelling places had been let separately as housing accommodation. However, the time had come when owners of these farms were ready to put them back into operation and it was essential that they be permitted to regain possession of the attached housing accommodation.

Property occupied by sub-tenants was also affected by the revision of eviction controls. After March, 1947, a landlord was permitted to recover possession of housing accommodation if the tenant with whom he made the lease had ceased to occupy the premises as a personal residence for a period of more than five months.

Accommodation in holiday resort boarding houses and hotels was released from the application of maximum rental regulations on Mar. 1, 1947 However, rent control continued to be applicable to any seasonal accommodation, such as summer houses and tourist cabins, being used as permanent housing.

## Section 1.-Wholesale Prices of Commodities

Wholesale price index numbers in Canada cover the period dating from Confederation in 1867. An intermittent decline characterized the first 30 years of this interval, followed by a gradual advance for a period of 16 years prior to the outbreak of war in 1914; from an average of $43 \cdot 6$ in 1897, the general wholesale index $(1926=100)$ advanced without appreciable interruption to $64 \cdot 4$ in July, 1914. By the end of the War in November, 1918, this index had reached 132.8, and it continued upward to a post-war inflationary peak of $164 \cdot 3$ in May, 1920. The subsequent deflationary period lasted about two years, and between 1922 and 1929 price levels remained in comparative stability. Annual averages in this interval held between a high of $102 \cdot 6$ for 1925 and $95 \cdot 6$ for 1929. For the four years following 1929, depressionary influences were so severe that prices fell to the level of those of 1913. In February, 1933, the wholesale index touched an extreme low of 63.5 before turning upward again. Irregular recovery then continued until 1937, but the highest point reached, $87 \cdot 6$ in July, 1937, was substantially below the

1926 average. The collapse of the wheat market in 1938, along with fairly general depression in other markets, carried wholesale price levels just prior to the outbreak of war in 1939 down to about 11 points above the 1913 level. The August, 1939, index of 72.3 marked the extreme low of a two-year decline. The movement of prices prior to the outbreak of the Second World War was quite different, therefore, from that which preceded the First World War. The relatively low level of prices in August, 1939, probably influenced the sharper initial advance at the outbreak of war. However, during 1940, price levels steadied and showed no sign of a steep increase until 1941. By that time, great expansion in wartime production had made serious inroads into stocks of nearly all basic commodities and, at the end of 1941, wheat remained the only important commodity for which stocks exceeded predictable requirements. The introduction of general price control in December, 1941, followed a year in which wholesale prices had advanced 11.0 p.c. as compared with $3 \cdot 1$ p.c. in 1940 . The effectiveness of control is indicated by the fact that percentage increases in wholesale prices amounted to only $3 \cdot 7$ and $5 \cdot 7$ for the years 1942 and 1943, respectively, while the December, 1944, index remained the same as the December, 1943, figure. The December, 1945, index of 103.9 was 111 p.c. above that for December, 1941, when price control became generally effective. By that time, the gradual removal of wartime price controls had been commenced.

The general wholesale price index rose from 103.6 to $112 \cdot 0$, an increase of 8.1 p.c. in the nineteen months between V-E Day in May, 1945, and December, 1946. The rate of increase was greater toward the end of the period and further increases were expected after Jan. 15, 1947, when the Prices Board restricted price control to listed articles only, removing it on all others. In relation to farm products, the increase in prices was greater from 1939 to 1946 than for any other group of commodities. This was also the experience of the United States over the same period, but, since January, 1947, United States farm products have shown weakness in a
number of important commodities and the trend has been reversed, whereas in Canada the advance has been a controlled one and has extended gradually into 1947.

The precipitous advance in United States general wholesale prices was of great concern to Canadian price-control authorities. This advance had been anticipated in July, 1946, when the Canadian dollar was returned to par with the United States dollar, thus reducing the Canadian dollar cost of imports from the United States. But this provided a buffer of 10 p.c. only and the rise in United States prices was greater than that on a large majority of imported articles so that continuous pressure was felt, especially among individual items. Imports from the United States were at an all-time high of approximately $\$ 1,400,000,000$ for the year and to the extent that these items increased in cost, the Canadian problem of price control was made that much more difficult.

## Section 2.-Cost of Living

A consolidation of official cost-of-living indexes was made in 1940 when the index shown at p. 929, on the base 1935-39 $=100$, replaced the Dominion Bureau of Statistics preceding series on the base $1926=100$, and also the Dominion Department of Labour index on the base $1913=100$. The Bureau's present.index reflects changes in a pre-war budget covering retail prices of commodities, services and shelter costs
based upon the expenditure experience of 1,439 urban wage-earner families in the year ended Sept. 30, 1938. The record completed by these families was especially designed to provide budget data necessary for the accurate compilation of a cost-of-living index. This index reflects changes in the cost of the same level of living and no account is taken of shifting planes of living because of changes in economic circumstances, e.g., variations in income or direct taxation, or because of changing ages or variation in numbers of persons in the family. The basis of selecting families for the 1938 expenditure survey is described in the 1941 Year Book at p. 723. Further particulars of the methodology employed and a summary of the results of the Nutrition and Family Living Expenditures Investigation are given at pp. 819-821 in the 1940 Year Book. The detailed findings appear in a report entitled "Family Income and Expenditure in Canada, 1937-38"

The cost-of-living index budget does not represent a minimum standard of living; it is a budget based upon actual living expenditure records of typical wageearner families.

It is important to remember that the index measures changes in the costs of the same level of living from month to month and year to year. The significance of this is at once apparent after comparing the rise in the index during the five years ended December, 1946, with the rise in average weekly earnings of industrial workers. In that period the cost-of-living index rose less than 10 p.c. while the average weekly wage received by workers in eight leading industries advanced by more than 24 p.c. Greater earnings have been reflected in greater spending despite heavier taxes and higher savings. This is borne out by figures of retail sales in 1946 which were almost 48 p.c.* above corresponding 1941 levels.

Claims that the cost of living has risen substantially during the past five years are undoubtedly due in part to confusion between higher costs resulting from higher prices, and higher costs due to greater purchases. The cost-of-living index reflects the rise in prices, but not the increase in purchases.

The cost-of-living index budget is being kept up-to-date, although still measuring changes in the same general level of living. As basic changes in consumption have occurred, the index budget has been adjusted accordingly.

Concern regarding items in the index budget has been paralleled by efforts to make certain of the accuracy of price records used to calculate the budget cost. Close and continued scrutiny of retail price returns, which the Dominion Bureau of Statistics receives from its 2,000 price correspondents, has produced the belief that price reporting has been honest and that price returns are accurate. However, to remove all doubt on this point, cost-of-living representatives have been assigned to important distributing centres across the Dominion. It is their duty to check price returns used in compiling the cost-of-living index, and to watch particularly for evidence of quality deterioration in goods for which prices are reported. It has been the Bureau's practice for many years to consider deterioration in quality as equivalent to a rise in price.

There is a tendency to think only of food when considering the cost of living. The index showed a rise of $\mathbf{4 7 . 4}$ p.c. in food prices from August, 1939, to December, 1946. However, group indexes for rents and miscellaneous items retarded the advance in living costs. The miscellaneous group, which includes costs of health maintenance, transportation, personal care, recreation and life insurance, rose $12 \cdot 6$ p.c., and, due to rent control, the rise in rents amounted to only $9 \cdot 2$ p.c. Considered together, these two groups are more important than food.

[^336]
## VARIATIONS IN THE COST OF LIVING INDEX

If they had advanced by the same amount as food, that is by $47 \cdot 4$ p.c., the December, 1946, cost-of-living index would have been $41 \cdot 5$ p.c. above the pre-war level instead of 26.1 p.c.

Cost of Living in 1946.-The official monthly cost-of-living index advanced 7.0 points during 1946 to $127 \cdot 1$. This increase was almost as large as the 1941 advance of $7 \cdot 8$ points which preceded the establishment of general price ceilings in December of that year. Price control during the intervening period kept the over-all increase down to $5 \cdot 1$ points. The movement in 1946 reflected the reaction in retail price levels to a post-war policy of price decontrol and subsidy removal. Although food prices showed the sharpest increases, clothing and home furnishings also advanced substantially, and all group indexes contributed in some measure to the change recorded. Changes in the different budget groups during 1946 were as follows:-

| Item | December, 1945 | $\begin{gathered} \text { December, }_{1946} \end{gathered}$ | Point change |
| :---: | :---: | :---: | :---: |
| Food. | $134 \cdot 3$ | $146 \cdot 4$ | +12.1 |
| Fuel. | $107 \cdot 1$ | $109 \cdot 2$ | +2.1 |
| Rent. | 112.3 | 113.4 | +1.1 |
| Clothing. | $122 \cdot 5$ | 131.2 | +8.7 |
| Home furnishings | 119.5 | 129.4 | +9.9 |
| Miscellaneous.. | $109 \cdot 6$ | $114 \cdot 1$ | + 4.5 |
| Total Index. | $120 \cdot 1$ | 127.1 | + 7.0 |

Regional Changes in Living Costs.-In 1941, the Bureau established cost-of-living indexes for eight regional cities covering the period since August, 1939. These indexes, for the cities shown in Table 4, have been patterned after the official cost-of-living series for Canada, and include group indexes for food, fuel, rent, clothing, home furnishings and services, and miscellaneous items. The budget quantities employed for these calculations have been computed from expenditure records of wage-earner families in the year ended Sept. 30, 1938. The only differences between the city and Dominion indexes are the base period used and the frequency of the publication of data. For the city records, August, $1939=$ 100 is the base used instead of the five-year period 1935-39, and these indexes are given in Table 4 for alternate months only.

Regional movements in living costs since the outbreak of the Second World War have been closely comparable to movemonts in the Dominion index, which advanced $26 \cdot 1$ p.c. between August, 1939, and December, 1946. During this period increases in the eight city indexes ranged from 23.2 to $29 \cdot 1$ p.c.

Prices of Services.-Service costs comprise approximately 19 p.c. of the family expenditure budget used in compiling the Dominion Bureau of Statistics cost-of-living index numbers. Trends in rates for some of the more important of these services since the beginning of the base period, 1935-39, are shown in Table 5.

## Section 3.-Index Numbers of Security Prices

Security prices have long been utilized in statistical measurements related to economic phenomena. They are generally sensitive to changing business conditions, although this valuable characteristic is sometimes overshadowed by the fact that their movements may be influenced greatly by speculative interest very remotely associated with underlying economic conditions. Thus in 1928 and 1929, common-stock prices advanced far beyond levels indicated by business profits and prospects. Security-price trends have also been at variance with other business indexes during the First and Second World Wars.

Investors Price Index Numbers of Common Stocks, 1946.-Commonstock prices in 1945 recorded their sharpest rise since 1928-29. The January, 1946, investors index of 123.5 was $34 \cdot 1$ points above the January, 1945, level. After that month it wavered, and from a high of $125 \cdot 1$ in April, 1946, declined steadily until October, 1946, when it stood at $101 \cdot 8$. There followed a slight gain, with the index at 106.4 at the end of the year.

Preferred Stocks, 1946.-The movement of preferred stock prices in 1945 and the first six months of 1946 continued an almost unbroken rise, dating from the last quarter of 1942. During this period the preferred stock index rose to $161 \cdot 6$. This was the highest index ever recorded in this series, which dates back to January, 1927 However, a decline after June, 1946, brought the index down to 153.5 at the end of the year.

## Section 4.-Index Numbers of Bond Yields

The exceptional requirements of the war years of 1914-18 turned the Dominion authorities to the domestic market, a field that had hitherto served mainly the needs of the provinces and municipalities. Historical records of long-term bond yields in the domestic market prior to 1914 are obtainable, therefore, from provincial and municipal sources only. A record of Ontario issues from 1900 to date is available* and was utilized for the first long-term bond yield index constructed by the Bureau of Statistics. The relatively long period for which the record has been preserved makes this series of considerable value.

Since the War of 1914-18, however, the growing importance of Dominion financing in the domestic market has made it advisable to supplement the Ontario series with the Dominion index of long-term bond yields shown in Table 9. This series $(1935-39=100)$ has been computed from January, 1937, on the basis of yields computed from a 15 -year, 3 p.c. theoretical issue. Quotations for the theoretical yields are computed by the Bank of Canada.

PART I.-NATIONAL WEALTH AND INVESTMENTS Section 1.-National Wealth

Owing to the abnormal economic conditions that have prevailed over the past fifteen-year period, no official estimate for national wealth has been made since that of 1933 which measured economic conditions at the lowest point of the pre-war depression. It is not considered desirable to establish another basis of national wealth until conditions have become normal. A short summary of the position is given at pp. 795-796 of the 1942 Year Book.

## Section 2.-Canada's International Investment Position*

Traditionally, Canada has been one of the prominent debtor nations. Liabilities to other countries in the form of external capital invested in Canada have exceeded Canadian-owned assets abroad by very substantial amounts. The investment of external capital has played an important part in the development of Canada. British investments occupied first place in investments of external capital before the War of 1914-18 but United States investments during that War and in the interwar years expanded rapidly and, even before 1926, considerably exceeded the amount of British capital invested in Canada. A further growth in United States investments took place during the War of 1939-45 and by the end of the War they had reached a new peak while British investments in Canada were sharply reduced by repatriations of securities during the War.

[^338]Although the balance of Canadian indebtedness to other countries was materially reduced during the recent War, Canada was still a debtor nation at the end of 1945. The balance of Canadian indebtedness to other countries at that time was estimated at about $\$ 3,750,000,000$, gross liabilities to investors in other countries being close to $\$ 7,500,000,000$ and gross external assets amounting to about $\$ 3,750,000,000$ if Canada's liquid reserves in United States dollars and gold and Canadian dollar credits to other countries are added to privately owned Canadian investments abroad. This compares with a net external debt of over $\$ 5,000,000,000$ at the end of 1939 and to over $\$ 6,000,000,000$ in 1930.

There are some striking contrasts in the composition of Canada's international assets and liabilities. A major part of the assets are owned by the Canadian Government in the form of cash balances, gold, and loans to other governments. Privately owned assets abroad in the form of foreign securities and property owned by Canadian companies and individuals amounted to a minor part of the total value of all assets at the end of 1945, whereas in 1939 these assets constituted most of the total. In the case of Canadian liabilities abroad, there is no intergovernmental indebtedness, although a substantial portion is represented by non-resident holdings of bonds of the Canadian Government, as well as railway and corporation issues. In addition to the large contractual portion of Canada's external debt giving rise to regular payments of interest, there is the large non-resident equity interest in Candian businesses, a specially significant part of which takes the form of direct investments by foreign companies in Canadian branches and subsidiaries.

Important changes have taken place in the geographical pattern and currency significance of Canada's position. Total foreign investments in Canada in 1945 had an aggregate value close to the total in 1939, but a larger percentage of the 1945 total, ( 70 p.c.) represented investments held in the United States. During the same period there was a large increase in Canada's official liquid reserves in United States dollars and gold, if the latter is regarded as a foreign asset, because of its readily convertible character. When these assets are taken into account, the balance of Canadian indebtedness to the United States remained close to $\$ 3,000$,000,000 . The balance of Canadian indebtedness to the United Kingdom, on the other hand, was reduced to approximately $\$ 1,000,000,000$, if government indebtedness, later settled in the Settlement of War Claims of March, 1945, between Canada and the United Kingdom is excluded. The principal factors in the wartime reduction in net indebtedness were the repatriations of British investments in Canada and the loan of $\$ 700,000,000$ to the United Kingdom in $1942, \$ 561,000,000$ of which remained outstanding at the end of 1945 . Since 1945, the balance of indebtedness has been further reduced, mainly by United Kingdom drawings on the new loan of $\$ 1,250,000,000$ which, by the end of 1946 , totalled $\$ 540,000,000$. But, at the same date, the 1942 loan to the United Kingdom had been reduced to $\$ 471,900,000$.

The net investment position which Canada has reached with respect to all other overseas countries was further increased in 1946 by net drawings of over $\$ 200,000,000$ by foreign governments receiving export credits.

British and Foreign Investments in Canada.-At the end of 1945, the total value of British and foreign investments in Canada was estimated at $\$ 7,095,000,000$. Investments held in the United Kingdom were estimated to have had a book value of $\$ 1,766,000,000$; this figure included British-owned investments and some investments held in the United Kingdom by nominees for residents of other countries. The
value of investments held in the United States at the end of 1945 had a book value of $\$ 4,982,000,000$. While generally indicative of American ownership, this total also includes an indeterminable amount of securities held in the United States by nominees for residents of other countries. The remaining amount of external capital invested in Canada, $\$ 347,000,000$, was owned in other overseas countries. The total investments in Canada owned in these other overseas countries would include, therefore, the $\$ 347,000,000$ plus the indeterminable amounts included in the British and United States totals shown above.

By the end of 1945 , about 43 p.c. of the external capital invested in Canada was represented by holdings of bonds and debentures compared with about 56 p.c. in 1939. The proportionate decline was even greater in the case of British investments in Canada because of the official repatriations of Dominion and Canadian National Railway bonds, but the percentage of United States capital invested in bonds was also a little less than in 1939, even though the total holdings of Canadian bonds in the United States increased from an estimated $\$ 2,095,000,000$ in 1939 to $\$ 2,357,000,000$ in 1945 . The proportion of total Canadian bonds outstanding represented by the honds held in the United States was, however, much less in 1945 than in 1939 because of the extent of wartime financing by the Federal Government through sales of bonds to Canadians. At the end of 1939, Canadian bonds held in the United States represented about 21 p.c. of the total of almost $\$ 10,000-$ 000,000 of outstanding Canadian issues. By the end of 1945, the United States holdings amounted to approximately 11 p.c. of the more than $\$ 22,000,000,000$ of Canadian bonds outstanding.

Total non-resident investments in Canadian businesses, excluding the Canadian National Railways, have increased from $\$ 4,241,000,000$ to $\$ 4,790,000,000$ but, if estimated non-resident holdings of Canadian National Railway bonds are included, the gross external investment in all Canadian businesses has increased only from $\$ 4,935,000,000$ to $\$ 5,154,000,000$. This increase in the narrower field of privately owned industry and commerce is small in relation to the great expansion in capital employed by Canadian industry during the War, most of which expansion was directly financed by Canadian sources.

The direct investments of United States businesses in Canada in branches, subsidiaries and controlled companies make up an important group of United States investments in Canada. The aggregate value of these direct investments is great, the investment in close to 2,000 different concerns, amounting to $\$ 2,300,000,000$ at the end of 1945 compared with $\$ 1,881,000,000$ at the end of 1939 , or an increase of 22 p.c. during the six wartime years. While this increase stands out in comparison with the moderate decline in this group of investments that occurred during the decade before the War, it represents a relatively small increase compared to the sharp rate of expansion that occurred in the value of United States direct investments in Canada between 1926 and 1930.

More than one-half $(\$ 1,285,000,000)$ of total United States direct investments in Canada are in manufacturing. The total value of these United States-controlled companies in the manufacturing field probably represents close to one-third of the total investments in manufacturing concerns in Canada. In the broader field of Canadian business-all industrial, mining and commercial concerns including railways and utilities-the ratio of investments controlled in the United States is much less, possibly about one-fifth at the present time. However, the high percentage of United States controlled companies in the manufacturing field in Canada should not be taken as an indication that Canadian industry in general is dominated by United

States companies, for the direct investments are widely distributed throughout a great many companies and the percentage of United States-controlled companies varies considerably in different industries. In some industries, such as the manufacture of automobiles, rubber goods, electrical appliances, and the refining of petroleum, as well as in the non-ferrous metals and chemical industries, United States-controlled companies predominate. In other industries, United Statescontrolled groups are less important and there are many industries and trades in which the leading firms and the predominance of control is Canadian; these include the primary iron and steel industry and cotton textiles and merchandising. In other branches of industry, the United States-controlled portion, while representing a large part, nevertheless, shares the field generally with Canadian capital as is the case in the pulp and paper industry and mining.

Total British investments in Canada in 1945 of $\$ 1,766,000,000$, including some investments held in the United Kingdom for owners living elsewhere, can be roughly divided into portfolio investments of $\$ 1,313,000,000$, direct investments of $\$ 368,000$,000 , and miscellaneous investments of $\$ 85,000,000$. Most of the large reduction in British investments in Canada during the War occurred in portfolio holdings of securities, particularly of Canadian Government and Canadian National Railway issues. More than one-half of the portfolio investments still held in 1945 was made up of holdings of public issues of stock in Canadian companies with a book value of $\$ 745,000,000$, the major part of which was made up of railway stock. Holdings of Canadian provincial, municipal and corporation bonds had an estimated par value of $\$ 588,000,000$ in 1945 , including some relatively small amounts of bonds included in the direct investment group. A large part of the direct investments in branches and subsidiaries was concentrated in certain fields of business-insurance, textiles and certain other consumer goods industries.

Investments in Canada by countries other than the United Kingdom and the United States, which can be directly identified, are estimated at $\$ 347,000,000$ in 1945 compared with $\$ 286,000,000$ in 1939 . In addition to these totals, there are appreciable amounts of investments held in the United Kingdom and the United States which are believed to be owned elsewhere.

## 2.-Estimated British and Foreign Capital Invested in Canada, by Type of Investment, Classifled by Estimated Distribution of Ownership, as at Dec. 31, 1945 ${ }^{1}$

[^339]
${ }^{1}$ Subject to revision. $\quad{ }^{2}$ Includes some investments held in the United States and the United Kingdom for residents of other countries.

Canadian Assets Abroad.-Canada's external assets in 1945 were much larger in total and different in composition from assets owned in 1939 and earlier periods, rising from $\$ 1,865,000,000$ in 1939 to $\$ 3,715,000,000$ in 1945. The most striking change was the growth in official liquid reserves mainly of United States dollar balances and gold which had a Canadian dollar value of about $\$ 1,667,000,000$ in 1945. Gold is included in these totals because of its ready convertibility into United States dollars and its consequent comparability to other cash reserves. Another pronounced change was the increase in the total of outstanding Canadian Government credits to other countries, which totalled approximately $\$ 707,000,000$ compared with $\$ 31,000,000$ in 1939 . This total included export credits under the Export Credits Insurance Act and advances of approximately $\$ 105,000,000$; about $\$ 561,000,000$ outstanding of the 1942 loan to the United Kingdom; and earlier loans to foreign governments of approximately $\$ 41,000,000$. There was also an improvement in the value of Canadian direct investments in businesses outside of Canada which had a value of about $\$ 720,000,000$. In contrast, portfolio holdings of foreign securities owned in Canada were sharply reduced to $\$ 621,000,000$ in 1945 from $\$ 719,000,000$ in 1939 . This decline is less than the total sales of these securities by private investors during the period, as there was a considerable increase in the book value of United States stocks still held in 1945.

## 3.-Canadian Assets Abroad, 1930, 1939 and 1945

Note -Excluding investments of insurance companies.

${ }^{1}$ Subject to revision. $\quad{ }^{2}$ Not available.
${ }^{3}$ Includes holdings of gold which, at the end of 1945, had a Canadian dollar value of $\$ 388,000,000$.

The direct and portfolio investments mainly represent private investments by Canadian companies and individuals abroad. The direct and portfolio investments abroad totalled $\$ 1,341,000,000$ at the end of 1945 . The major part of this investment, $\$ 864,000,000$, represents investments in the United States, while investments in the United Kingdom amounted to $\$ 107,000,000$, in other Empire countries $\$ 88,000,000$, and in other foreign countries $\$ 282,000,000$. These figures exclude the investments abroad of Canadian insurance companies and banks and official assets such as cash balances, gold and intergovernmental credits referred to above. Also excluded are relatively small amounts of miscellaneous investments such as real estate, mortgages, etc., which are not represented by securities and which are difficult to evaluate.

## 4.-Estimated Canadian Investments Abroad, as at Dec. 31, 1945 ${ }^{1}$

Nors.-Excluding investments of insurance companies, banks, Government credits and liquid reserves. Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies were converted into Canadian dollars at current market rates.

## PART II.-NATIONAL ACCOUNTS*

In national accounts, familiar accounting principles are used to describe transactions that take place in the country as a whole. Just as it is possible to keep accounts for an individual business for any particular period of time, similar information can be assembled to summarize all economic transactions within the country. The resulting statistics are of vital importance in analysing many of the problems that confront government as well as business and labour, such as marketing and wage-rate problems. They are used also to ascertain stages of prosperity or depression, and as a guide to future economic trends.

[^340]The national accounts presented in this part include: net national income at factor cost, gross national product and expenditure at market prices and personal income. In addition, a provincial distribution is given of salaries, wages and supplementary labour income and net income of unincorporated business, agricultural and other. More detailed analyses of the national accounts are in course of preparation to include separate accounts for the different sectors of the economy, the business sector, households, governments, etc.

Net National Income at Factor Cost.-Net national income at factor cost or, more briefly, national income, measures the earnings of Canadian residents from the productive operations of a particular period, in this case a calendar year. All those actiyities that give rise to goods and services are included in the phrase "productive operations" Different individuals play different parts in these productive operations and their earnings are classified accordingly. A great number of people hire out their labour in different capacities, e.g., miners, farm labourers, clerks, teachers, managers, etc. The compensation for such services is called labour income. It includes salaries, wages, and supplements, such as board and living allowances and employer contributions to pension and social insurance funds. In addition to labour income, capital investment gives rise to the other important category of income. Some people lend money capital either through the purchase of bonds and mortgages or by depositing money in the bank; others invest their money through the purchase of stocks of corporations or the purchase of real estate. Their remuneration is called investment income; it includes interest, rents and the profits of corporations including government enterprises. Since only the earnings of residents are counted, investment income going abroad is not included while investment income received from abroad is added. A number of people invest money in their own business and run it either alone or with the help of hired labour. The compensation for their services is known as net income of unincorporated business. It is a mixture of labour income and investment income.

Generally speaking, only money incomes that arise in the course of production of goods and services going through market channels are included. If goods and services are both produced and consumed within the household (for example, the services of housewives) no corresponding income is included.

In several important instances, the procedure is broadened to include an estimate of incomes for which there is no corresponding money flow. These earnings received "in kind" include the estimated value of food and clothing issues to members of the Armed Forces; board and other allowances received in kind by employees (valued in general at cost to the employer); imputed rent of owner-occupied houses; and certain products retained by sellers for their own consumption, such as food grown and consumed on farms (valued at prices for which they would otherwise have been sold).

While some incomes other than money incomes are thus included in national income, certain money receipts are excluded. Capital profits and losses are excluded by definition. In addition, a number of cash payments within the economy are classified as "transfer payments" because they do not arise from current production of goods and services and cannot be called earnings from productive operations. These transfer payments include such things as family allowances, unemployment insurance benefits, war service gratuities, and interest on government debt which was not issued to finance existing real assets.

All components of the national income are included before deduction of income taxes. The total is equivalent to the net value of production and its movement over a period of time provides an excellent indicator of economic conditions. The national income expanded from $\$ 3,940,000,000$ in 1938 to $\$ 9,685,000,000$ in 1944 , an increase of 146 p.c. In the transition from a wartime to a peacetime economy, the aggregate dropped slightly to $\$ 9,212,000,000$ in 1946 which was still 134 p.c. above the 1938 level. This high level of peacetime economic activity is a reflection of the great advance made during the War in employment and industrial production, but it should be remembered that this expansion reflects increase in price as well as growth in real production.

The classification of the national income by distributive shares provides interesting and useful information. The four main components shown in Table 1 are salaries and wages, military pay and allowances, investment income and net income of unincorporated business, agricultural and other. Salasies and wages and military pay and allowances were responsible for 61 p.c. of the total, on the average, over the period 1938 to 1946 inclusive, while investment income accounted for 20 p.c. and net income of unincorporated business for 19 p.c. These proportions varied slightly from year to year but not sufficiently to be significant. It should be noted that the small change in the relative share of each category provides, by itself, no information as to changes in earnings per capita for various types of productive service. For example, an increase in salaries and wages might be due to an increase in the number of people employed, while a proportionate change in investment income or in net income of unincorporated business might accrue to a constant or diminishing number of people. In short, it is necessary to know the number of individuals receiving income in each category before per capita income in these categories can be determined.

Even this additional information would not enable us to determine changes in the size distribution of income from the changes in income shares. There are wide differences in the size of individual receipts within each income category. In the total of salaries, wages and supplementary labour income are included individuals who receive a salary of, say, $\$ 20,000$ and individuals receiving a wage of $\$ 1,000$. Moreover, many individuals receive more than one type of income, since an individual drawing a salary may also receive dividends from stocks or interest on bonds.

It would be useful to classify national income by regions and by industries. Sufficient information is available at present to prepare only distributions of salaries, wages and supplementary labour income and of net income of unincorporated business, agricultural and other, by provinces for the years 1938 to 1944, inclusive. Figures for 1939 to 1944 appear in Tables 3 and 4, respectively.

Gross National Product at Market Prices.-Gross national product differs from national income in that it includes depreciation allowances and indirect taxes as it is measured at market prices.

The market value of the goods and services produced annually can be divided into various costs of production, including profits. Gross national product at market prices is defined as the value of all goods and services produced in a year by the labour, capital and enterprise of Canadian residents measured through a consolidated national accounting of all costs involved in their production. These costs include labour income, investment income and net income of unincorporated business, that is, the aggregate of national income, and, in addition, net indirect taxes and depreciation allowances. Indirect taxes, such as sales taxes, excise and
real property taxes are treated as business costs and must, therefore, be included. Certain subsidies paid by governments are regarded as enabling the general public to buy goods and services at less than the prices that would otherwise prevail, or as supporting the earnings of producers. Subsidies benefiting the public in this way are consequently treated as offsets to indirect taxes collected by the government. Annual depreciation and similar business reserves are elements of business cost and are necessarily added to obtain the gross national product at market prices.

Purchases of raw materials and other goods and services by one business from another are not added, as such, in this compilation. The production of these goods and services involves costs that are already counted in the general compilation of all costs of production. From this point of view, gross national product is said to be a consolidated total.

Since the gross national product covers all productive economic activities, it provides useful information about the development of the economy as a whole. It is important by itself and in relation to national income. The tremendous expansion in production that has taken place as a result of the stimulus of wartime demand is illustrated by the increase of gross national product from $\$ 5,075,000,000$ in 1938 to $\$ 11,771,000,000$ in 1944 -an increase of 132 p.c. Preliminary estimates for 1946 indicate that the total was $\$ 11,129,000,000$, or 119 p.c. above the 1938 level. It must be noted, however, that the gross national product, like the national income, is measured in current dollars. It is, therefore, affected by price changes as well as by changes in real production. With existing information, it is not possible to judge precisely how much of the change in gross national product is due to rising prices and how much to change in real production. Some indication can, however, be obtained from the fact that from 1938 to 1946 the index of wholesale prices went up 38 p.c. while the cost of living increased 21 p.c.

Gross National Expenditure at Market Prices.-The goods and services produced in a period must be disposed of in some way: they are either sold at home or abroad, or added to inventories. Gross national expenditure is defined as the market value of all goods and services produced by the labour, capital and enterprise of Canadian residents in a year, measured through a consolidated national accounting of the sales of these goods and services, including changes in inventories. Thus it measures the same total as gross national product but in a different way.

If all enterprises were to publish accurate accounts on a uniform basis, the two statistical totals-gross national product and gross national expenditure-would, in fact, be equal. These conditions are not fulfilled in practice. National accounts must summarize transactions of enterprises that do not all keep accurate accounts on the same basis, together with transactions of households, farms and small concerns that may not keep accounts at all. For these and other reasons some discrepancy between the two sides is inevitable but, considering the over-all magnitudes involved, it is interesting to note how close a balance is achieved.

Gross national expenditure can be divided into four main components: (1) consumer expenditure; (2) government expenditure; (3) gross investment at home (business expenditure on capital account); and (4) net foreign expenditure.

Consumer expenditure (personal expenditure on consumer goods and services, Table 2, item 1) comprises expenditure of Canadian residents on consumer goods and services as ordinarily understood except that expenditure on housing is excluded and added to gross investment at home. Other consumer durables such as automobiles and refrigerators are included in consumer expenditure.

Government expenditure (Table 2, item 2) includes all expenditures on goods and services by the Federal, Provincial and Municipal Governments. The total falls into two broad groups: (1) Government expenditure on services (measured by salaries, wages and interest); and (2) Government purchases of the products of business. Expenditure for war and non-war purposes is shown separately. It is to be noted that government outlays other than for goods and services are not included here-for example, family allowances and veteran gratuities.

Gross investment at home (Table 2, item 3) is divided into: (1) expenditure on new plant and equipment, including residential and commercial construction as well as expenditure for replacement of existing plant and equipment; and (2) the net change in inventories. Investment by government enterprises, such as the Canadian National Railways and Hydro-Electric Power Commission of Ontario, is included here.

Sales to consumers, to business, to government and to foreigners contain the value of goods and services imported from abroad. In so far as imports are the product of the labour, capital and enterprise of foreigners and not of Canadian residents, they must be excluded from gross national expenditure. This is accomplished by subtracting current expenditure abroad (including investment income paid abroad). On the other hand, current receipts from abroad (including investment income received from abroad) are included in gross national expenditure. The effect of these last two adjustments is to include in gross national expenditure only, the net foreign balance on current account (Table 2, item 4 minus item 5).

Sales between businesses of raw materials and other goods are not counted as such because they are already accounted for in the market valuation of the components outlined above. For example, the market price of an automobile sold by firm A includes the value of tires bought from firm B. The value of these tires is not included again in arriving at gross national expenditure. From this point of view, the sales included in gross national expenditure are said to be consolidated.

Analysis of the distribution of national expenditure, as portrayed in Table 2, reveals the tremendous wartime expansion in the share of the country's output absorbed by government expenditure and the extent to which this expansion was based on military requirements. In 1938, government purchases amounted to 14 p.c. of national expenditure. In 1944, the proportion increased to 43 p.c. In the transition year 1946, government wartime expenditures were drastically reduced. The decline was offset in large part by the expenditures of consumers and business, while exports, bolstered by government loans, were maintained at a high level. Consumer expenditure increased because of diminution of wartime savings programs, the greater availability of goods and a substantial rise in personal income (see p. 944). Business spent large amounts for reconverting plant and equipment and for replen-
ishing depleted inventories. The problem for the future is whether effective demand will remain at a high enough level in the non-government sectors, in the form of consumer expenditure, business investment and exports, to continue to balance the decline in government expenditure. This is of primary importance in maintaining full employment.

Personal Income.-A portion of the national income is not paid out to individuals. Undistributed profits, corporate profit taxes and profits of government enterprises are included in this portion. The remainder of the national income is paid out to persons in the form of salaries and wages, net income of unincorporated business, agricultural and other, rents, dividends, and the like. When the paid-out portion of the national income is added to those personal receipts that do not represent payments for productive operations (i.e., transfer payments), the aggregate known as "personal income" is obtained.

In 1938, personal income amounted to $\$ 3,973,000,000$, while in 1945 it was $\$ 8,814,000,000$, an increase of 122 p.c. In the transitional year 1946 , the figure rose to $\$ 9,172,000,000$. The rise in 1946 was due largely to the increase in transfer payments by the Government to individuals in the form of war-service gratuities, re-establishment credits, and family_allowances.

A part of personal income is absorbed by direct taxes, part is spent on consumer goods and services while the remainder is saved. The aggregate of personal income less direct taxes is known as "disposable income" Consumer expenditure depends on a number of factors including the size of past savings, credit facilities and the price level. But it ${ }^{\boldsymbol{7}}$ depends most of all on disposable income. Accordingly, this aggregate is very useful in forecasting the size of gross national product and employment. A table giving the disposition of personal income between taxes, consumer expenditures and savings is in course of preparation.

## 1.-Net National Income at Factor Cost and Gross National Product at Market Prices, 1939-46

Note.-Figures for 1938 are given at p. 877 of the 1946 Year Book.

## PART III.-DOMINION, PROVINCIAL AND MUNICIPAL FINANCE

## Section 1.-Combined Statistics of Public Finance for All Governments*

The purpose of this Section is to present combined statistics of public finance for all governments of Canada-Dominion, Provincial and Municipal. Table. 1 presents the combined debt of all governments as at the governmental fiscal year ends nearest Dec. 31, 1945, while the combined revenues and expenditures presented in Tables 3 and 4, respectively, are for governmental fiscal years ended nearest Dec. 31, 1944.

Combined Debt.-The statistics of provincial and municipal debt appear in greater detail in Tables 33 and 40, respectively. The rapid growth of the combined debt during the war period 1942-45 as shown in Table 2, has been due to the fact that large increases in the Dominion debt have overshadowed considerable reductions in provincial and municipal debt. However, it should be noted that the Dominion was able to finance the War without recourse to the issue of foreign pay bonds, and that the large increase in bonds outstanding represents additions to internal rather than external debt.

[^344]Nork.-These figures are as at the governmental fiscal year ends nearest Dec. 31, 1945.

| Item | Dominion | Provincial | Municipal ${ }^{6}$ | Total | Deduct Inter-governmental Debt | Combined Governmental Debt |

${ }^{1}$ Municipal figures for Province of Quebec not available at time of going to press (see Table 40, pp. 994-995).

Combined Revenues and Expenditures.-Tables 3 and 4 present an overall picture of Dominion, provincial and municipal finance by combining ordinary and capital account revenues and expenditures for each level of government. Since all expenditure-ordinary or capital-is included, amounts provided for debt retirement have been excluded to avoid duplication. The revenues and expenditures
presented in these tables are on a "net" basis since the following revenues have been treated as offsets to their corresponding expenditures: shared-cost contributions of other governments, institutional revenue and certain other sales of commodities and services, and interest revenue exclusive of sinking fund earnings. Certain inter-governmental transfers such as the payments of the Dominion to the provinces for the vacation of tax fields are neither conditional grants nor payments for services and cannot, therefore, be offset against any specific expenditure. These are set out separately in Tables 3 and 4 so as to show grand totals of revenue and expenditure for each level of government as well as totals excluding inter-governmental transfers.

Discrepancies between the amounts shown in Tables 3 and 4 as inter-governmental transfers are due to variations in the fiscal year ends and accounting practices of governments.

## Section 2,-Dominion Public Finance*

A sketch of public finance, from the French regime to the outbreak of the War of 1914-18, appears at pp. 742-743 of the 1941 Year Book, while detailed sketches $r e$ tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945 is given at pp. 918-923 of the 1945 Year Book. Tax changes included in the 1945-46 and 1946-47 Budgets are given at pp. 883-884 of the 1946 edition.

The 1947-48 Budget.-The Budget for the year ended Mar. 31, 1948, was presented to Parliament on Apr. 29, 1947. $\dagger$ The financial accounts for the fiscal year 1946-47 showed revenues of $\$ 2,984,277,000$ compared with expenditures of $\$ 2,632,127,000$ leaving a surplus for the year of about $\$ 352,000,000$. After taking account of the effect of the tax changes outlined below, a surplus of $\$ 190,000,000$ was forecast for the fiscal year 1947-48.

The principal features of the tax changes made were:-

## Personal Income Tax-

A new schedule of rates effective July 1, 1947, reduced income taxes, on the average, by 29 p.c., compared with the rates in effect for the first half of 1947. Reductions ranged from 54 p.c. in the bottom brackets to 6 p.c. or 7 p.c. in the top brackets. Exemptions and allowances remained as established in the 1946-47 Budget.

[^348]
## Corporation and Excess Profits Taxes-

Corporation income tax at the rate of 30 p.c., plus a tax of 15 p.c. on excess corporation profits was continued. The excess profits tax is to be dropped, however, at the end of 1947.

A 5 p.c. withholding tax on dividends paid by wholly owned Canadian subsidiaries to their parent companies abroad was introduced.

## Subsection 1.-Balance Sheets of the Dominion

Table 5 gives the Balance Sheets of the Dominion for 1942-46. On the asset side, accounts classified as active assets are shown; these represent cash or investments that are interest-producing or have a readily realizable cash value. On the liability side, such liabilities as have been ascertained and brought into the accounts are given. No liability is shown for interest accrued but not due, nor for current obligations incurred for supplies or services but not paid for at the end of the fiscal year. Indirect liabilities under guarantees are not reflected in the Balance Sheets, but are set out in a special schedule. (See p. 978.)

The excess of liabilities over active assets, designated the net debt, is analysed in a statement appended to the Balance Sheet, and is apportioned to non-active assets, which include capital expenditures and non-productive investments, and to accumulated deficits in Consolidated Deficit Account.

## 5.-Balance Sheets of the Dominion of Canada, as at Mar. 31, 1942-46

## Subsection 2.-Revenues and Expenditures

In the year ended Mar. 31, 1946, revenues showed a slight increase over the previous fiscal year, while expenditures continued to decline. Total revenues of $\$ 3,013,185,074$ were $\$ 325,850,275$ higher than in 1945 , and $\$ 248,167,361$ higher than in 1944. Tax revenues were $\$ 47,731,739$ higher than in 1945 but $\$ 234,453,097$ lower than the record level of 1944 . Non-tax revenues increased by $\$ 278,118,536$ or $52 \cdot 2$ p.c., chiefly because of an increase of $\$ 263,696,824$ in Special Receipts.

Total expenditures declined by $\$ 109,383,418$ or $2 \cdot 1$ p.c. from 1945 . Expenditures for war and demobilization accounted for $\$ 4,002,949,197$ or $77 \cdot 9$ p.c. of the total, a decline of $\$ 415,497,118$ from 1945 . Ordinary expenditures, covering the normal operating costs of Government increased by $\$ 294,526,186$, chiefly because of the introduction of Family Allowance payments which amounted to $\$ 172,632,147$, and an increase of $\$ 90,139,681$ in interest on the public debt.

Special expenditures amounted to $\$ 17,358,402$ as compared with $\$ 7,505,786$ in 1945. This increase was due chiefly to higher payments under the Prairie Farm Assistance Act. Expenditures under the heading "Government-Owned Enterprises" amounted to $\$ 1,333,417, \$ 24,641$ less than in 1945 . The over-all deficit for the year amounted to $\$ 2,123,043,432$, or $\$ 435,233,693$ less than that for the previous fiscal year.

## 6.-Details of Revenues, Years Ended Mar. 31, 1942-46

${ }^{1}$ Includes a write-down of assets amounting to $\mathbf{\$ 6 2 , 9 3 8 , 2 3 9 .} \quad{ }^{2}$ Reserve against estimated losses on wheat marketing guarantees applicable to the fiscal year 1938-39. ${ }^{3}$ Reserve against estimated losses on wheat marketing guarantees applicable to the fiscal year $1939-40$ to the extent of $\$ 27,000,000$. ${ }^{4}$ Includes $\$ 25,000,000$ as reserve against possible losses on assets.

## 11.-Per Capita Revenues and Expenditures, Years Ended Mar. 31, 1930-46

Nore.-The years marked with an asterisk (*) are Census years; per capita figures for intercensal years are based on estimated populations, see p. 100. See Tables 6-10 for the figures of revenues and expenditures on which this table is based. Figures for the years 1868 -1912, inclusive, will be found at p. 849 of the 1938 Year Book; those for $1913-29$ at p. 932 of the 1945 edition.

| Year | Per Capita |  |  |  | Year | Per Capita |  |  |  |

## Subsection 3.-Analysis of Revenues from Taxation

Table 13 gives a picture of the proportions of total expenditures that have been met by taxation and from all sources of revenue for each of the fiscal years ended Mar. 31, since 1936. Prior to the War of 1939-45, and as Canada was pulling away from the depression of the early 1930's, the record showed a substantial improvement and in 1938, $96 \cdot 7$ p.c. of all expenditures was being met from all revenue and almost 84 p.c. from taxation revenue. Subsequently, as was to be expected, the reverse was the case. The high level of the percentage figures for 1942 was the result of the early imposition of high taxation levels and the fact that at this time war expenditures were still relatively low.
13.-Total Expenditures and the Percentages Thereof Raised by Taxation and All Revenue, Years Ended Mar. 31, 1936-46

| Year | Total Expenditures | Taxation Revenue | Total Revenue | Percentages of Total Expenditures Provided from- |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Taxation | All <br> Revenue |
|  | \$ | \$ | \$ | p.c. | p.c. |
| 1936. | 532,585,555 | 317,311, 809 | 372, 595, 996 | 59.58 | 69.96 |
| 1937. | 532, 005,432 | 386,550, 869 | 454, 153,747 | $72 \cdot 66$ | $85 \cdot 36$ |
| 1938. | 534, 408, 118 | 448,651, 061 | 516,692,749 | 83.95 | 96.68 90.80 |
| 1939. | $553,063,098$ | 435, 706, 794 | 502, 171, 354 | 78.78 68.70 | $90 \cdot 80$ 82.56 |
| 1940. | 680,793,792 | 467,684, 963 | 562, 093,459 |  | $82 \cdot 80$ 69.80 |
| 1941. | 1,249,601,446 | 778, 175, 450 | 872,169,645 | $62 \cdot 28$ $72 \cdot 19$ | $69 \cdot 80$ 78.96 |
| 1942. | 1,885, 066,056 | 1,360, 912,837 | $1,488,536,342$ $2,249,496,177$ | $72 \cdot 19$ 47 | 78.97 51.27 |
| 1943. | $4,387,124,117$ $5,322,253,505$ | 2,066, 719, <br> 2,4361 | ${ }_{2,765,017,713}^{2,249,47}$ | $47 \cdot 11$ $45 \cdot 78$ | 51.95 |
| 1944. | $5,322,253,505$ $5,245,611,924$ | $2,436,811,484$ $2,154,626,648$ | 2, $2,687,334,799$ | 41.08 | 51.23 58.67 |
| 1946. | 5,136, 228,506 | 2,202,358,387 | 3,013,185,074 | 42.88 | 58.67 |

As shown in Table 8, the revenues from customs and excise duties, the two most important sources prior to the War of 1914-18, amounted in 1946, to only 14 p.c. of the revenue derived from taxation and revenue from income tax formed 42 p.c. of the tax revenue.

The following analyses of taxation revenues are confined to excise duties, excise taxes and income tax revenue; customs receipts constitute a single item in the "Public Accounts" and cannot be further analysed here.

## Excise Duties

Excise duties proper are presented here together with a summary of the excise tariff and statistics arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of excisable goods taken out of bond.

Canadian Excise Tariff.-The following is a statement of the Canadian excise tariff, as existing at Apr. 1, 1946-

1. Spirits distilled in Canada, per proof gal... $\$ 11.00$ Canadian brandy, per proof gal\$ 9.00
Except Spirits as follows:-
(a) Used in a bonded manufactory for medicines, extracts, etc., per proof gal.
(b) Used in a bonded manufactory for perfumes, per proof gal
(c) Used in a bonded manufactory for vinegar, per proof gal.
(d) Used for chemical compositions approved by Governor in Council, per proof gal
) Sold to licensed druggists for pharmaceutical preparations, per proof gal...................................... Distilled from native fruits and used by a licensed wine manufacturer for fortification of native wines, per proof gal.
\$ 1.50
2. Spirits imported (in addition to any of the duties otherwise imposed), per proof gal.
proog gal.
3. Beer or Malt Liquor:-

Brewed in whole or part from any substance other than malt, per gal...... \&
0.45
4. Malt:-

5. Malt Syrup:-
(a) Produced in Canads, per lb......... $\$ 0.24$
(b) Imported, per lb. S 0.40
6. Tobacco, Cigars and Cigarettes:-
(a) Manufactured tobacco, per lb....... \$ 0.35
(b) Cigarettes weighing not more than 2 l lb. per M, per M
\$ 6.00
(c) Cigarettea, weighing more than $2 \frac{1}{2}$ lb. per M, per M..................... $\$ 11 \cdot 00$
(d) Cigars, per M......................... $\$ 3.00$
(e) Canadian raw leaf tobacco, when sold for consumption, per lb.
\$ 0.20

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to any bona fide public hospital for medicinal purposes only.

Revenues from Excise Duties.-In the year ended Mar. 31, 1946, tobacco, including cigarettes, supplied about 50 p.c. of the revenue from excise duties.

## 14.-Gross Excise Duties Collected, Years Ended Mar. 31, 1941-46

(As shown in the Report of the Commissioner of Excise)

[^353]Statistics of Licences and Distillation.-As a by-product of the collection of excise duties, statistics are compiled of excise licences issued and of distillation.
15.-Statistics of Licences and Distillation, Years Ended Mar. 31, 1941-46

${ }^{1}$ Break down of this figure not available.
The quantity of spirits manufactured has fluctuated greatly since 1920, varying from the low of $2,356,329$ proof gal. in that year to the high of $35,555,059$ proof gal. recorded in 1945.

Alcohol and Tobacco Taken Out of Bond.-Record amounts of spirits, malt liquor, malt, cigars and cigarettes were taken out of bond for consumption in 1946, while the amount of tobacco was higher than in 1945 but below the years 1941-44.

## 16.-Spirits, Malt Liquor, Malt and Tobacco Taken Out of Bond for Consumption, Years Ended Mar. 31, 1930-46

Note.-For years prior to 1900, see 1916-17 Year Book, p. 528; for 1901-10, see 1933 Year Book, p. 840; for 1911-21, the 1938 Year Book, p. 855; and 1922-29, the 1945 edition, p. 936.

## Excise Taxes

The statistics given in Table 17 represent gross collections by the Excise Division of the Department of National Revenue; they differ from the figures shown in Table 8 (in the column "Sales and Other Excise Taxes"), which represent net revenues received, by the amounts of the refunds shown in footnote 3 to Table 17.

## 17.-Excise War Taxes Collected, by Commodities and Provinces, Years Ended Mar. 31, 1941-46

(Accrued Revenue)
Nore.-Dashes in this table indicate that there was no tax imposed on the corresponding item in the years so indicated.

## Income Tax

The income tax revenue shown in Table 18 represents collections made by the Taxation Division of the Department of National Revenue under the authority of the Income War Tax Act (c. 97, R.S.C. 1927). The Act covers more than income tax proper, as corporation taxes are coming to be regarded in a different light to those on the income of individuals. Income tax on individuals and on corporations is treated separately in Part III of this Chapter, at pp. 998-1005.

The tax on dividends and interest (Sect. 9B of the Act) is levied at the rate of 5 p.c. on interest paid by Canadian debtors (except provinces and municipal or public bodies) in a currency which is at a premium in excess of 5 p.c. over Canadian funds and at the rate of 15 p.c. on dividends received by persons who are non-residents of Canada and on interest received from or credited by Canadian debtors to nonresidents, except in the case of Dominion or Dominion-guaranteed bonds, and also on interest received by a non-resident parent company from a Canadian subsidiary, except where an agreement had been entered into prior to Apr. 1, 1933, for the payment of such interest in a currency other than Canadian. The tax also includes fees for copyrights and rights for the use of films, phonograph records and similar devices. The tax on rents and royalties (Sect. 27) is imposed at the rate of 15 p.c. on non-residents in respect of the gross amount of all rents, royalties, etc., for the use in Canada of real or personal property, patents or for anything used or sold in Canada. The gift tax (Sect. 88) is imposed at the rate of 10 p.c. on gifts up to $\$ 5,000$ and at rates varying from 11 p.c. to 28 p.c. on gifts from $\$ 5,000$ to $\$ 1,000,000$ or over.

## Subsection 4.-Subsidies and Loans to Provinces

Subsidies.-By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Federal Government makes certain annual payments to the provinces: these are summarized as follows.

Interest on Debt Allowances.-By the terms of the union of the provinces at Confederation in 1867, the Federal Government assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except in the case of Ontario and Quebec, interest at 5 p.c. on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately $\$ 25$ per capita. On the subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Confederation indebtedness. From time to time, adjustments have been made in the basis of calculating the debt allowances of provinces; moreover, the Federal Government pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted. The aggregate annual payment by the Federal Government to the provinces in respect of interest on debt allowances is $\$ 1,609,386$.

Allowances for Governments and Legislatures.-Under the terms of the union, annual specific grants were made to the various provinces for the support of their governments and legislatures. These fixed amounts vary with the population of the provinces, according to the following scale, approved in 1907:-

Aggregate annual allowances presently paid under this head amount to $\$ 1,750,000$.
Allowances per Head of Population.-Under the British North America Act of 1867, a grant of 80 cents per head of population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per head up to a population of $2,500,000$, and at the rate of 60 cents per head for so much of the population as exceeded that number. Such allowances paid to the provinces in the year ended Mar. 31, 1946, amounted to $\$ 8,779,089$.

Special Grants.-In the case of certain of the provinces, grants have been added to the original scale of subsidies in view of special circumstances obtaining, which, for the year ended Mar. 31, 1946, amounted in the aggregate to $\$ 2,280,880$ as set forth below:-

Prince Edward Island.-A special grant of $\$ 195,000$ less a deduction of $\$ 39,120$ (net grant of $\$ 155,880$ ).

New Brunswick.-An annual grant of $\$ 150,000$ since 1875 in consideration of the repeal of lumber duties reserved to the Province by the B.N.A. Act of 1867.

Manitoba.-A special grant on the basis of population amounting at present to $\$ 562,500$ per annum.

Saskatchewan and Alberta.-An annual sum as compensation for loss of public lands revenue, based on their respective populations and amounting at present to $\$ 750,000$ for Saskatchewan and $\$ 562,500$ for Alberta.

British Columbia.-A special grant amounting at present to $\$ 100,000$ per annum.

${ }^{1}$ See text at p. 967.
${ }^{2}$ Allowances in lieu of debt.
${ }^{3}$ Does not include "Additional Special
Grants" (see text following).
Additional Special Grants.-In addition to the above, there were other special grants paid to the Maritime Provinces, Manitoba, Saskatchewan and British Columbia up to 1941 that were voted annually, aggregating, in the year ended Mar. 31, 1941, $\$ 5,475,000$ as follows:-

These additional special grants were suspended with the coming into force of the Dominion-Provincial Taxation Agreements. Rent will be paid in 1947 and later years in the case of the three Maritime Provinces under the provisions of the Maritime Additional Subsidies Act, 1942.

Dominion-Provincial Taxation Agreements.-The Dominion-Provincial Tax Rental Agreements Act, 1947, authorized the Federal Government to enter into Agreements with the Provinces by which, in return for compensation, the Provincial Governments would agree to refrain from levying certain direct taxes for a period of five years. These Agreements are successors to the Wartime Agreements which have lapsed (see pp. 900-901 of the 1946 Year Book). Seven provinces, Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta, and British Columbia had made new agreements with the Dominion up to September, 1947.

The main purposes of these Agreements are to establish a more equitable system of taxation throughout Canada by reducing duplication of direct taxation and duplication of machinery for the collection of direct taxes, to give a greater measure of stability to the revenues of the Provinces, and to enable the Federal Government, along with the Provincial Governments, to carry out national policies intended to maintain high levels of employment and production.

The Agreements continue the basic provisions of the Wartime Taxation Agreements, under which the Provinces and their municipalities withdrew their income taxes, corporation income taxes and corporation taxes in return for compensation from the Federal Government, (pp. 900-901 of the 1946 Year Book). There are, however, some additional provisions in the new Agreements which have resulted from the negotiations carried on between the governments in 1945 and 1946 at the Dominion-Provincial Conference meetings and since the Budget offer of June, 1946. The main features of this offer which have been embodied in the Agreements are outlined at pp. 883-884 of the 1946 Year Book.

The Provinces are required, under the Agreement, to refrain from levying certain direct taxes, with the exception that they are permitted to impose a corporation income tax of 5 p.c. on the income of corporations attributable to their operations in the particular Province. The revenue from this tax is to go to the individual Province with a corresponding reduction in the amount of compensation paid to that Province. The purpose of this provision is to assure as nearly as possible a uniform level of corporation income tax throughout Canada as between the agreeing and non-agreeing Provinces. Under the Agreement it is provided, however, that a deduction will be made from the payment to the Province corresponding to the amount of revenue that such a tax would have yielded even if the Province does not impose the tax. The Agreement contains a set of rules by which the income of corporations is allocated to the various Provinces in which they carry on business and further provides that this tax must be imposed under the same general provisions as are in the Income War Tax Act, and that it will be administered on behalf of the Provinces by the Dominion and at the expense of the Dominion.

Another provision concerns succession duties, a field not included in the Wartime Taxation Agreements. The Provinces are now given the alternative of withdrawing from this field or remaining in it. If they withdraw, they receive the full amount of compensation otherwise payable under the Agreement, (in the determination of which succession duties revenue was taken into account) but if they remain, their payment is reduced by the amount of revenue loss which the Dominion suffers, through the credit which is allowed against the Dominion duty for provincial duties on the same succession. All seven of the Provinces which have negotiated Agreements with the Dominion have taken the first alternative and withdrawn from the succession duties field.*

The Agreement does not prevent the imposition of royalties and rentals on natural resources by a Province since such royalties and rentals are not regarded as taxes when they are of a nature conforming with the definitions set forth in the Agreement. The imposition of taxes on income derived from logging and mining operations, as defined in the Agreement is allowed without any deduction from the payment to the Province.

[^358]The significant differences between the 1946 Budget offer and the present Agreements are as follows:-
(1) The Provinces may choose between two methods of determining the amount of their guaranteed minimum annual payments (see below).
(2) The total guaranteed minimum annual payments to the Provinces under these new methods are increased by $\$ 25,100,000$ to $\$ 206,500,000$.
(3) These new guaranteed minimum annual payments are used as the bases for calculating the annual payments which are adjusted for increases in provincial population and gross national production per capita.
(4) In the year following the termination of the Agreement, provincial taxpayers are to be allowed by the Federal Government tax credits of a maximum of 5 p.c. of the Dominion income tax, 50 p.c. of Dominion succession duties, and one-seventh of Dominion corporation income tax for taxes imposed by their Provincial Governments.
The guaranteed minimum annual payments are now computed in one of two ways. Under the first option a Province may elect as a base $\$ 12.75$ per capita of its 1942 population plus 50 p.c. of its income tax and corporation tax revenue in 1940, plus statutory subsidies payable in 1947; under the second it may choose $\$ 15$ per capita of its 1942 population plus statutory subsidies payable in 1947. A special arrangement was made for Prince Edward Island which is to receive a guaranteed minimum payment of $\$ 2,100,000$. This is slightly in excess of the amount determined by either of the two formulas. The guaranteed minimum annual payments to the Provinces under the most favourable option and the preliminary estimated 1947 payments are shown in Table 21.

The actual amount payable in any one year is calculated according to the following method. The minimum payment is adjusted for changes in provincial population and gross national product per capita, as compared with the base year 1942, for each of the three calendar years immediately preceding the fiscal year of payment. These three amounts are then averaged, and the resultant is the amount payable. If, in any of the three calendar years concerned, the amount calculated is less than the amount of the minimum payment, then the amount of the minimum payment is substituted. This method of computing the annual payments ensures that the revenues of the Province will increase as the provincial population and gross national product per capita increase, and at the same time guarantees that the Province will at no time in the period covered by the Agreement receive less than the stated minimum.

## 21.-Guaranteed Minimum Annual Payments to Provinces ${ }^{1}$ under Most Favourable Option and Preliminary Estimated 1947 Payments

| Province and Option | Guaranteed Minimum Annual Payments | Preliminary Estimated 1947 Payments |
| :---: | :---: | :---: |
|  | \$'000 | \$'000 |
| Prince Edward Island. | 2,100 | 2,300 |
| Nova Scotia (Second) | 10,870 | 12,100 |
| New Brunswick (First) | 8,773 | 9,500 14,400 |
| Manitoba (First) ....... | 13,540 | 14,400 |
| Saskatchewan (Second) | 15, 291 | 15,800 15,300 |
| Alberta (First) ......... | 14,228 18,120 | 15,300 21,400 |
| British Columbia (First). | 18,120 | 21,400 |
| Totals. | 82,922 | 90,800 |

[^359]Under an offer ancillary to the Agreement, but which applies to all Provinces, whether agreeing or not, the Dominion will pay to the Province one-half of the Dominion corporation income tax on income of corporations derived from generating and/or distributing to the public electrical energy, gas or steam, where this is the main business of the corporation.

Loans to Provinces.-All of the provincial loans recently advanced by the Dominion have been made to the western provinces under the authority of relief legislation beginning with the Unemployment and Farm Relief Act, 1931, and these have been secured by interest-bearing treasury bills of the respective provinces, the rate being 3 p.c. since July 1, 1936. The sum total of such loans outstanding as at Mar. 31, 1946, was $\$ 175,941,005$ less write-offs of $\$ 19,861,035$, making net loans outstanding $\$ 156,079,970$, divided by provinces as follows: Alberta $\$ 25,869,500$; British Columbia \$34,369,760; Manitoba \$24,759,924; Saskatchewan \$71,080,786. Details are given in Table 19, p. 830 of the 1943-44 Year Book.

## Subsection 5.-National Debt

The gross national debt of Canada on Mar. 31, 1914, was $\$ 544,391,369$, as against assets of $\$ 208,394,519$, leaving a net debt of $\$ 335,996,850$. This was a comparatively small debt; it was incurred almost altogether either for public works of general utility which, like the Intercolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets, of the nation, or was expanded as subsidies to enterprises which, like the Canadian Pacific Railway, though not government-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, it was a debt incurred for productive purposes. Also, it was mainly held outside the country, the principal of the Dominion funded debt payable in London, England, being \$302,842,485 on Mar. 31, 1914, as against only $\$ 717,453$ payable in Canada.

From 1914 to 1920, the gross debt increased by almost $\$ 1,200,000,000$ to a total of $\$ 3,042,000,000$ due' to heavy war and post-war expenditures, and while there was a slight reduction to a low point of $\$ 2,544,586,411$ at Mar. 31, 1930, additional expenditures during the depression years resulted in a gross debt of $\$ 3,710,610,593$ by Mar. 31, 1939.

From 1939 to 1946 there was an increase of $\$ 15,249,235,590$, incurred mainly for war purposes, bringing the total gross debt to $\$ 18,959,846,183$ at the end of March, 1946. After deduction of active assets held by the Government, the net debt showed an increase of $\$ 10,268,846,095$ during the war years, amounting to $\$ 13,421,405,409$ at the end of March, 1946.

The portion of the funded debt payable in foreign currencies decreased steadily and sharply during the war years, as was inevitable under conditions where almost the entire amount of Canada's war financing was carried out through domestic operations. Of the total funded debt and treasury bills outstanding as at Mar. 31, 1946 , amounting to $\$ 16,807,177,765$, less than $1 \cdot 2$ p.c. was payable outside of Canada, representing $\$ 11,843,831$ payable in London and $\$ 178,000,000$ in New York.

## 22.-Summary of the Public Debt of Canada and Interest Payments Thereon, Years Ended Mar. 31, 1914-46

Nore.-Statistics for the years 1867-99 are given at pp. 775-776 of the 1942 Year Book; those for 1900-13, at p. 944 of the 1945 edition.

| Year | Gross Debt | Active Assets | Net Debt | Net <br> Debt Per Capital ${ }^{1}$ | Increase or Decrease of Net Debt During Year | Interest Paid on Debt | Interest Received from Active Assets |  |

${ }^{1}$ Based on the official estimates of population given at p. $100 . \quad{ }^{2}$ Includes non-active assets. ${ }^{3}$ This amount represents return on investments, which includes interest on investments, profits of Bank of Canada and Central Mortgage Bank and other items.

Funded Debt Operations.-Conversions and other national debt operations carried out between 1914 and 1930 are dealt with at pp. 842-843 of the 1933 Year Book; those between 1931 and 1934 at pp. 905-907 of the 1934-35 Year Book; those of the fiscal years 1936 to 1943 in the respective Year Books for those years.

Treasury Bills.-During the past decade a market for short-term treasury bills that has proven highly satisfactory has been built up in Canada. Each issue, with two exceptions (where the bills were sold direct to the Bank of Canada), has been
offered for public tender. Lists of treasury bills sold by public tender for the fiscal years 1934-35 to 1941-42 appear in the respective Year Books beginning with the 1937 edition. Details of the treasury bills issued in 1945-46 are given at the end of Table 23. Details of the issues in continuation of the list published at p. 778 of the 1942 Year Book may be obtained on request.

## 23.-Funded Debt and Treasury Bills of Canada, as at Mar. 31, 1946

Nore.-Certain qualifications as to redemption prior to maturity govern most of these issues; they are explained fully in the "Public Accounts"

## Recapitulation

24.-Dominion of Canada Domestic Loan Flotations, 1945-46

Note.-Loan flotations from the outbrcak of War until Mar. 31, 1946, are given at pp. 906-909 of the 1946 Year Book.

[^360]

Interest-Bearing Debt.-The interest-bearing debt of the Dominion has shown a sharp increase since 1939; amounting to $\$ 17,301,000,000$ at Mar. 31, 1946, as compared with $\$ 3,658,000,000$ on the same date of 1939 . The average rate of interest on this debt continued downward during the war years, reaching the low point at Mar. 31, 1945 of 2.547 p.c. A slight increase to 2.634 p.c. was recorded in 1946. This is in contrast with the experience of the War of 1914-18, when the average interest rate on the direct debt of the nation rose from 3.368 p.c. at Mar. 31,1913 , to a high point of $5 \cdot 164$ p.c. at Mar. $31,1922$.

During the fiscal year ended Mar. 31, 1939, interest on the public debt absorbed about 26 p.c. of total government receipts. With the growth of expenditure during the war years, however, interest on the debt now absorbs a smaller portion of revenues, amounting to $15 \cdot 1$ p.c. in the year ended Mar. 31, 1946.

Guaranteed Debt.-Besides the direct debt of the Dominion, already dealt with, there are also large indirect obligations, arising mainly out of the guarantee of securities, by the Dominion, of the railway lines that now form the Canadian National Railways, and the subsequent extensions thereof. Together with these are other smaller indirect obligations, originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of its

[^361]Harbour Commissions, issued in the main for harbour improvements. Since 1932, guarantees of certain bank loans have been made under the various Relief Acts. With the commencement of business of the Bank of Canada on Mar. 11, 1935, the guarantee [authorized by Sect. 27 (6) of the Bank of Canada Act] of the deposit required to be maintained in the Bank of Canada by every chartered bank, came into force. This guarantee will require to be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities, and if the Bank suspends payment of any of its liabilities"

For full details of other guarantees also outstanding at Mar. 31, 1946, see Schedule "V" to the "Public Accounts" for 1946.

## 26.-Guaranteed Debt of the Dominion Government (Amounts Held by the Public), as at Mar. 31, 1924-46

Nots.-Dashes in this table indicate that there were no guarantees of the type shown for the corresponding years. Figures for the years 1914-23 are given at p. 837 of the 1943-44 Year Book.

| Year | Railways, Guaranteed as to Principal and Interest | Railways, Guaranteed as to Interest Only | Canadian National Steamships | Harbour Commissions | Other Guarantees | Bank of Canada | Total |

## Section 3.-Provincial Public Finance*

## Subsection 1.-Revenues and Expenditures of Provincial Governments

Tables 27, 28 and 29 present an over-all picture of Provincial Government finance by combining ordinary and capital account revenues and expenditures. These tables provide a more valid basis for comparison than those based on ordinary account alone because they eliminate inter-provincial and inter-year incomparabilities that arise through variations from province to province, and from year to year, in the type of expenditure capitalized. Since all expenditures, ordinary or capital, are included in the combined picture, amounts provided through ordinary account for debt retirement have been excluded to avoid duplication. Sinking fund earnings are not included as revenue. The tables present the "net" cost of services to the provinces after the following revenues have been offset against the corresponding expenditures: shared cost contributions of other governments, institutional revenue and certain other sales of commodities and services, and interest revenue exclusive of sinking fund earnings.

The year 1945, as in the preceding 5 years, saw provincial government revenues and expenditures reach very high levels. The combined net ordinary and capital revenues totalled $\$ 427,000,000$ as compared with the 1944 total of $\$ 374,000,000$, an increase of $\$ 53,000,000$, or $14 \cdot 2$ p.c. The combined net ordinary and capital expenditures amounted to $\$ 383,000,000$ as compared with a similar figure of $\$ 350,000,000$ in 1944 , an increase of $\$ 33,000,000$, or $9 \cdot 4$ p.c. With the exception of Prince Edward Island and New Brunswick, surpluses were recorded by all provinces for the year under review and the total over-all surplus amounted to $\$ 44,000,000$, ( $\$ 56,000,000$ in 1943 and $\$ 24,000,000$ in 1944). Included in the total expenditures were capital expenditures of more than $\$ 30,000,000$, which is an increase of about 16 p.c. on the over-all capital expenditures, in 1944, of $\$ 26,000,000$. (See Table 27.)

An examination of the details relating to both combined net ordinary and capital revenues and expenditures gives some insight into the factors contributing to their high level in 1945. Table 28 gives an outline of the revenue position. Liquor revenues increased over 1944 by $\$ 29,000,000$, or $41 \cdot 5$ p.c.; gasoline tax revenues by $\$ 11,000,000$, or $23 \cdot 3$ p.c.; while, conversely, revenue from the Federal Government decreased by $\$ 2,000,000$, or 1.8 p.c. Increases in expenditures were chiefly accounted for by the following: Highways, Bridges and Ferries- $\$ 14,000,000$, or $22 \cdot 4$ p.c.; Education $\$ 9,000,000$, or $13 \cdot 6$ p.c. and Public Welfare- $\$ 9,000,000$, or 12.5 p.c. It is interesting to note that Debt Charges, exclusive of debt retirement, decreased by almost $\$ 2,000,000$, or $3 \cdot 0$ p.c. (See Table 29.)

There was a slight change from the year 1944 in the relative importance of revenue sources. In 1945, 30 p.c. of the total net revenue was derived from Taxes, ( 30 p.c. in 1944); 25 p.c. from Other Governments, ( 29 p.c. in 1944) and 23 p.c. from Liquor Control (19 p.c. in 1944).

[^363]Provincial Governments made expenditures in just about the same ratios as in 1944. Expenditures on Public Welfare represented 22 p.c. of the total, ( 22 p.c. in 1944); Highways, Bridges and Ferries received 20 p.c. of the total expenditures, (18 p.c. in 1944); Education-19 p.c. ,(18 p.c. in 1944) and Debt Charges, exclusive of debt retirement-15 p.c., ( 17 p.c. in 1944).

It should be noted that Tables 27, 28, 29 and 30 exclude cash collected and payments and expenditures made re the Debt Reorganization Program of the Government of the Province of Alberta.

An examination of net combined ordinary and capital revenues and expenditures for all provinces on a per capita basis reveals the following points. Total net combined ordinary and capital revenues amounted to $\$ 35 \cdot 30$ per capita. Chief sources of revenue were: Taxes, $\$ 10 \cdot 60$; Other Governments, $\$ 8 \cdot 80$, and Liquor Control, $\$ 8 \cdot 20$. Total net combined ordinary and capital expenditures, per capita, were $\$ 31 \cdot 60$. At the same time, the more important expenditure functions in per capita terms were: Public Welfare, $\$ 7 \cdot 00$; Highways, Bridges and Ferries, $\$ 6 \cdot 50$; Education, $\$ 5 \cdot 90$ and Debt Charges, exclusive of debt retirement, $\$ 4 \cdot 70$.

Further statistical details are given in the report "Financial Statistics of Provincial Governments in Canada", published by the Dominion Bureau of Statistics.

## 30.-Gross Ordinary Revenues and Expenditures of the Provincial Governments for Their Respective Fiscal Years Ended in the Census Years 1871-1931 and in Each Year from 1932-45.

Note.-For provincial ordinary revenues and expenditures in all other provincial fiscal years since Confederation, see the 1932 Year Book, pp. 734-736. Figures for intervening years between 1916 and 1931 are given at p. 875 of the 1938 Year Book. For dates on which the fiscal years of the provinces end, see Table 33, p. 985.

For footnotes see end of table.
30.-Gross Ordinary Revenues and Expenditures of the Provincial Governments for Their Respective Fiscal Years Ended in the Census Years 1871-1931 and in Each Year from 1932-45-concluded.

| Year | Alberta |  | British Columbia |  | Totals for All Provinces |  |

| 1943. | 30,528,000 | 22,721,000 | 44,496,000 | 37, 158,000 | 435,771,000 | $378,790,000$ |
| 1944 | 32,560,000 | 25,002,000 | 47,295,000 | 40,619,000 | 448, 975,000 | 414, 155,000 |
| $1945{ }^{\circ}$ | 40,651,000 ${ }^{11}$ | 28,034,000 ${ }^{11}$ | 53,468,000 | 45,607,000 | 507, 921,000 | 451,074,000 |

${ }^{1}$ Includes expenditure on capital account, which is not separable. ${ }^{2}$ Nine months. ${ }^{3}$ Fourteen months. ${ }^{4}$ To facilitate interprovincial comparisons, the ordinary revenues and expenditures as shown in the various Public Accounts have been placed on a gross basis and certain adjustments made. For reconciliation with various Public Accounts see "Financial Statistics of Provincial Governments in Canada for 1940" and subsequent years. Statistics for the years shown below rule are for fiscal years ended nearest Dec. 31 of year stated. ${ }_{5}$ Fifteen months. ${ }^{6}$ Exclusive of interest paid by Hydro and other commissions. ${ }^{7}$ Five months. ${ }^{8}$ Excludes $\$ 7,136,000$ in 1941, $\$ 1,510,000$ in 1943, $\$ 16,878,000$ in 1944 and $\$ 8,000$ in 1945 implementing guarantees re Municipalities Seed Grain and Supply Act, 1937. $\quad$ Subject to revision. ${ }^{10}$ Six months. ${ }^{11}$ Excludes cash collected and payments and expenditures re Debt Reorganization Program.

## Subsection 2.-Debt of Provincial Governments

Funded Debt.-In 1945, gross funded debt represented 82 p.c. of gross direct debt-approximately the same ratio as applied in 1944 ( 83 p.c.). Gross funded debt of all Provincial Góvernments which totalled $\$ 218,870,000$ in 1916, increased steadily until 1940 when it reached a peak of $\$ 1,734,000,000$. While it has since declined each year to $\$ 1,642,000,000$ in 1945 , a reduction since 1940 of $\$ 92,000,000$; this reduction was not common to all provinces: the gross funded debt of Prince Edward Island, New Brunswick and Quebec increased between 1940 and 1945. Table 31 also indicates an over-all decrease in the average coupon rate between 1940 and 1945 of 0.3 p.c., although the average term of issue has increased slightly.

There has been a significant reduction in the amount of Provincial Government foreign pay bonds as illustrated by the fact that bonds, payable in Canada only, have increased by approximately $\$ 39,000,000$ during the period $1940-45$, although there has been a concurrent decrease of over $\$ 92,000,000$ in gross funded indebtedness. (See Table 32.)

Total Debt of Provincial Governments.-Table 33 has been assembled on a comparable basis for each province: the analysis is on the same basis as that of Dominion and municipal indebtedness shown in Tables 22 and 40 respectively.

## 31.-Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments, 1941-45

Note.-Figures are as at provincial fiscal year ends nearest Dec. 31 of the year stated. Figures for years 1916-30 are given at p. 877 of the 1938 Year Book; for the years 1931-40 at p. 787 of the 1942 edition.

${ }^{1}$ Subject to revision.

## Section 4.-Municipal Finance*

## Subsection 1.-The Organization and Growth of the Municipalities in Canada

Under the provisions of the British North America Act, the several provinces have jurisdiction and control over their respective organizations of municipal government. While the main types of municipalities are common to most provinces there is little or no similarity from the standpoint of prerequisites to incorporation, either as to area or population. In fact, some provinces have no specified requirements in this regard. There are, nevertheless, two main divisions into which incorporated municipalities may be grouped-urban and rural-each of which displays more or less distinct characteristics. The former comprises the cities, towns and villages. The official designation of the municipalities in the rural group, however, varies widely as between provinces: Townships in Ontario; Districts in British Columbia; Municipal Districts in Alberta; Counties in New Brunswick; Municipalities in Nova Scotia; Parishes and Townships in Quebec; and Rural Municipalities in Manitoba and Saskatchewan.

[^367]In 1945 there were 3,966 incorporated municipalities in Canada, as compared with 3,954 in 1944. The number of each different class or type of municipality, by provinces, for 1945 is shown in Table 35.

It should be noted that the counties in Ontario and Quebec, which are incorporated municipalities, are comprised of local towns or villages and rural municipalities situated therein, which provide the necessary funds for the services falling within the scope of county administration. There are also 'counties' in the Provinces of Nova Scotia and New Brunswick, but these are basically the same as rural municipalities in the other provinces. In Saskatchewan and Alberta, there are areas very similar to rural municipalities except that they enjoy a lesser degree of local services and are not self-governing. These are called "Improvement Districts" The Provincial Governments administer the services provided in these areas and also levy and collect the necessary taxes. A 1943 Amendment to the Ontario Municipal Act provides for the erection of Improvement Districts governed by a board of trustees appointed by the Lieutenant-Governor in Council. The Local Government Districts Act, 1944, of Manitoba, authorizes the LieutenantGovernor in Council to incorporate unorganized or disorganized territory and appoint administrators and a general supervisor.

${ }^{1}$ Includes 5 units of self-government officially known as "suburban municipalities".
On the basis of the 1941 Census, over $10,689,000$ or 93 p.c. of the population of the nine provinces was in incorporated municipalities. Table 36, showing the comparable situation for each province, gives an indication of the development of self-government from the standpoint of the local population. The 800,000 persons excluded from the population in incorporated municipalities on this basis are comprised of those on Indian Reserves and in areas that have not yet reached the stage of development where self-government is felt necessary or desirable.

## Subsection 2.-Municipal Assessed Valuations

The revenue resources of municipalities are limited generally to direct taxation, based on assessed valuations of real and other types of property. In 1944, the total taxable assessed valuations on which taxes were levied was $\$ 7,963,405,203$ of which approximately $\$ 5,193,918,239$ or $65 \cdot 2$ p.c. was real property The assessment of personal property has had its ups and downs particularly in the Prairie Provinces. The Maritime Provinces, Manitoba and Alberta are the only provinces at the present time in which municipalities assess and tax personal property. In Alberta only a few municipal authorities still retain this basis for tax revenue while in Manitoba it is used generally by all classes of municipalities, except cities. Aside from real property, the next important type of valuation for taxation purposes is business assessment, although not all provinces assess for business purposes separately and distinctly from real property valuations. A variation of methods, schedules and rates exists not only between provinces but also between municipalities within the same province. Some municipalities use the rental basis, others the value of floor space occupied and still others the capital value of the premises occupied. Most of the provinces have other miscellaneous types of assessment, the general nature of which will be noted from the footnotes to Table 37. It will also be noted that income assessment, which formerly was employed in Nova Scotia and New Brunswick only, practically disappeared in 1942. This is a result of the operation of the Dominion-Provincial Tax Agreements whereby the provinces and municipalities abandoned the income-tax field for the duration of the War and a limited period thereafter, so as to leave it open to the Federal Treasury.

It should be noted that the figures in Table 37 are not entirely comparable, on an interprovincial basis, from the standpoint of relative values of properties taxable for municipal purposes. Each province operates under its own assessment laws, which are not all similar, either in application or in effect. For instance, in British Columbia cities and municipal districts improvements cannot be taxed on a value in excess of 75 p.c. of taxable values or in excess of 50 p.c. of taxable values in villages; the values actually taxed in 1945 ranged from nil to 70 p.c. In the majority of cases, improvements were assessed for tax purposes at 50 p.c. of taxable values, but for all municipalities the total improvements actually taxed represented
approximately 46.4 p.c. of total taxable values. It should also be noted that Table 37 does not include assessed valuations in Improvement Districts for either Saskatchewan or Alberta. In Saskatchewan these amounted to $\$ 30,390,068$, $\$ 29,998,740, \$ 28,598,170, \$ 27,327,995$, and in Alberta to $\$ 69,829,495, \$ 69,222,473$, $\$ 59,607,462, \$ 62,644,030$, in $1942,1943,1944$ and 1945 , respectively. In addition there are other intra-provincial inconsistencies between municipalities which, in turn, further affect interprovincial comparisons. These may be said to be due to the lack of integrated municipal assessment systems and uniform standards for establishing values on a province-wide basis, under the direction and control of a central authority. Some provinces, however, have made considerable progress along these lines in recent years, as in the case of Saskatchewan, the results of which are referred to in the text following Table 37.

[^368]While complete figures for tax-exempt properties are not available for each province, it will be noted from the information given that these have assumed relatively high proportions. Most provinces have shown consistent increases in taxable assessed valuations which may be attributed largely to the stimulus to business and industry in general, arising from the War. Saskatchewan, however, shows a major reduction in total valuations. This is the result of a province-wide plan of re-assessment of rural municipalities by the Department of Municipal Affairs and is "the first occasion in Canada where an assessment system of such extensive proportions has ever been undertaken" *

## Subsection 3.-Municipal Taxation

Table 38 shows, by provinces, the taxes levied by municipalities in comparison with collections in 1942, 1943, 1944 and 1945, and the total taxes outstanding at the end of those years. While these figures are as nearly comparable as may be obtained from existing published reports, they nevertheless reflect some inconsistencies due particularly to interprovincial variations in the division of responsibility for tax administration between municipalities and school authorities. In some instances school taxes are not included in the municipal levies. In Prince Edward Island 2 only of the 8 incorporated municipalities have their own individual school districts and levy and collect the school taxes. In Nova Scotia prior to 1943 and in New Brunswick prior to 1944 , cities, towns and villages only levied and collected the

[^369]school taxes. Hence the figures shown for these provinces are, generally speaking, exclusive of rural school taxes particulars of which are not available from published reports. Commencing with 1943, however, under a program for establishing "larger school units" in Nova Scotia, some municipalities have been levying and collecting the school taxes for and on behalf of the rural school boards situated therein. A similar program has also been inaugurated in New Brunswick, so that more complete figures are now available as the larger school units are gradually established. Prior to 1943, the figures for Alberta were incomplete because municipal taxes did not include certain school and hospital levies, which were not collected by the municipal unit or were regarded as "trust" taxes. This deficiency was corrected in the 1943 figures and reference to this fact is made in footnote 9, of Table 38, p. 992. In Quebec, while school taxes, with few exceptions, are levied and collected by the school corporations which function independently of municipal authorities, they are, nevertheless, included in this tabulation for purposes of greater interprovincial comparability. It will therefore be apparent from the foregoing that the figures in Table 38, except in the case of Quebec, represent only the amount of tax levies, collections and arrears of the municipalities, and include school taxes only to the extent that such are also levied and collected by the municipalities for and on behalf of local school authorities. Taxes for schools outside incorporated municipal organizations are not included.

${ }^{1}$ Includes estimates in some instances as actual figures are not available. ately. $\quad{ }^{3}$ Excludes $\$ 1,243,384$ in $1942, \$ 1,266,087$ in $1943, \$ 1,328,914$ in 1944 and $\$ 1,363,007$ in 1945 compensation through Provincial Government for loss of income tax (see pp. 997 and 1005). ${ }^{4}$ Excludes cities and towns. $\quad{ }^{5}$ Cities and towns only. ${ }^{6}$ Reduction from 1943 accounted for by write-off of tax titles for city of Winnipeg. ing this table), but excludes taxes " in "Improvement Districts"
${ }^{8}$ Cities only; not repor ced separately for other municapalities. 'A large part of this increase is due to the inclusinn of school and hospital levies formerly omitted because the municipal unit did not collect them or regard them as "trust" taxes. ${ }_{10}$ See notes applying to the provinces. available.

Because of these inconsistencies and the fact also that there are considerable differences in the division of responsibility for services between the Provincial Governments and their respective municipalities, extreme caution should be exercised in using these figures as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan and Alberta, municipalities are required to levy certain taxes for and on behalf of the Provincial Government and for other special purposes for which there is no comparable situation in other provinces. The amount of such taxes included in the municipal levies in these two provinces, are as follows:-

| Item | 1942 | 1943 | 1944 | 1945 |
| :---: | :---: | :---: | :---: | :---: |
|  | \$ | \$ | \$ | \$ |

| Telephone and Hail Taxes. | 1,574,966 | 1,652,003 | 2,208,942 |  |
| Totals, Saskatchewan. | 3,360,604 | 3,370,212 | 3,859,073 | 3,987,756 |
| Alberta- |  |  |  |  |
| Social Services, Educational and Wild Lands Taxes (Provincial) | 1,045,855 | 983,286 | 1,010,475 | 1,033,456 |

There has been no marked fluctuation in the trend of municipal tax levies in Canada in the years 1942-45. While most provinces show increases, this does not necessarily mean an increased burden on the individual taxpayer in all instances, but is more the result, in part at least, of the increases reflected in assessed valuations. In Nova Scotia and New Brunswick the increases are, to a considerable extent, due to the establishment of "larger school units" previously referred to in this Section, whereby some municipalities are now levying certain taxes which formerly were levied by rural school boards. The most significant change that occurred during this period was the increase in tax collections in relation to total levies; this in turn has resulted in substantial reductions in the amount of unpaid taxes outstanding although these are still relatively high in most provinces. The situation for different classes of municipalities will, of course, vary considerably. Reference has heretofore been made to the Improvement Districts in Saskatchewan and Alberta, which although not being incorporated municipalities aré, nevertheless, maintained by the Provincial Governments more or less as self-sustaining areas on the same basis. Taxation figures for these districts are excluded from Table 38 but by reason of the special significance attached thereto in relation to municipal organization in these provinces, and the fact that such may become incorporated, or part of existing municipalities at some future date, the corresponding information with respect thereto is shown in Table 39.

[^370]
## Subsection 4.-Municipal Debt

The rapid growth experienced by municipalities in Canada coupled with increased demands and responsibilities for improvements, schools, utilities, and other services or facilities has resulted in the incurring of a heavy burden of debt. Debenture borrowings increased rapidly in the period 1900-12 and again during the 'twenties and early 'thirties. Since 1933, however, the trend has been downward.

Several important factors have contributed to this decline in municipal indebtedness, not the least important of which has been the measure of control exercised by Provincial Government departments over capital expenditures involving the incurring of debt. In addition, there was a more or less orderly retrenchment during the depression years following periods of what proved to be unwarranted expansion which, along with widespread demands to ease the tax burden on real property, has resulted in capital undertakings and works requiring debenture financing being severely curtailed. A further significant factor in this regard is that the greater part of the municipal long-term debt is represented by serial or instalment-type debentures, which require yearly repayments of principal. While the benefits of debt reduction are of course manifold, certain expenditures have been sorely needed in many communities for the rehabilitation of existing assets and for new improvements necessitated by the normal expansion and development that has taken place. These were sacrificed in the earlier years mainly in the interest of the taxpayer; subsequently, with the advent of the War in 1939, this policy of deferment was continued, if not extended, to free the financial market to the needs of the Federal Government in meeting its war financing requirements. Municipalities having been denied, either voluntarily or otherwise, improvement programs for so long, will show a natural tendency to get these under way as soon as possible in correlation with master post-war plans of the Federal and Provincial Governments. Table 40 shows figures of municipal indebtedness for 1945 and includes temporary loans and other liabilities in addition to debenture debt. Table 41 shows comparative figures for 1942, 1943 and 1944. The 1942 Year Book contains at pp. 792-793, a detailed description of the basis on which the information has been compiled. Reference should be made thereto, as well as to the footnotes to Table 40 in interpreting the information. A table at p. 791 of the 1941 Year Book shows the bonded indebtedness of municipalities from 1919 to 1938.

${ }^{1}$ At time of Ipublication, figures for Quebec were not available.

Available information indicates that the direct and indirect debt of municipalities continued, during 1945, the decline which had been evident since 1940. Retirement of direct debenture debt accounted for the major portion of the decrease during this period, although there have also been substantial reductions in unfunded liabilities. The decreases in debenture debt are due to the factors mentioned elsewhere in this Section while improved tax collections have made it possible for municipalities to avoid heavy temporary borrowings and reduce other current liabilities. It is pointed out in this respect that debenture debt figures are intended to represent only principal unmatured. Principal past due, whether in default or unpaid because of non-presentation, has been included with accounts payable and other liabilities. It is impossible to ascertain if this is a true statement of fact in all cases, however, as some reports do not indicate the exact situation. The more significant items available in this regard are given in Table 42.

## PART IV.-OUTSTANDING DEVELOPMENTS IN THE TAXATION FIELD

Prior to the War of 1914-18, the Federal Government was able to finance its expenditures through the imposition of such indirect taxes as customs and excise duties. There were minor direct taxes imposed for other purposes than revenue but these, in the fiscal year 1914, amounted to less than 1.5 p.c. of the total revenue from taxation collected by the Dominion Government. To-day the significance of direct taxation is exemplified by the fact that direct taxation collected by the Federal Government (including income taxes, excess profits tax, gasoline tax and succession duties) accounts for about 60 p.c. of total taxation.

The unprecedented financial demands of the War of 1914-18 began to be felt by 1915 and between 1915 and 1917 the Dominion entered the direct-taxation field with the imposition of taxes on banks, trust and loan companies, insurance companies and business profits. The income tax was introduced in Canada in the latter year and continued to be an important source of revenue in the period between the two wars. The outbreak of war in 1939 and the resulting rapid expansion of expenditures by the Dominion led to a very substantial increase in individual and corporation income tax rates, the tax on excess profits was revived and made much more severe and the Dominion entered the fields of succession duties and gasoline taxes (the latter are semi-direct) which had hitherto been imposed exclusively by the provinces.

The first reductions to be made in direct tax rates, which were at such high levels during the war years, were presented in the 1945-46 Budget and included: a reduction of 4 p.c. in individual income tax for 1945 and of 16 p.c. for 1946 ; reduction of the 100 p.c. rates of excess profits tax to 60 p.c. from Jan. 1, 1946; and an increase in the minimum standard profit under excess profits tax from $\$ 5,000$ to $\$ 15,000$ from Jan. 1, 1946.

The 1946-47 Budget introduced a new tax structure for individual taxpayers effective on Jan. 1, 1947. The tax rates were lowered and the exemption levels were raised to $\$ 750$ for single persons and $\$ 1,500$ for married persons. The excess profits tax on individuals in business was eliminated and corporation tax rates were revised in such a way that the minimum Federal tax was reduced from 40 p.c. to 30 p.c. and the maximum from 60 p.c. to 45 p.c. A provincial corporation tax of 5 p.c. became collectable by the Federal Government in those provinces that entered into Dominion-Provincial Tax Agreements.

The 1947-48 Budget included further tax reductions in both the individual and corporation fields. Effective July 1, 1947, the rates of individual income tax were lowered for all ranges of income; the reduction amounted to 54 p.c. in the lowest levels of income and tapered down to 6 p.c. or 7 p.c. at the highest levels. Over a wide range of the so-called middle income brackets, the reduction was, on the average, 29 p.c. In the corporate field, the excess profits tax was eliminated as of Jan. 1, 1948.

The place that direct taxation has assumed in the general taxation picture and its incidence on the purse of the ordinary taxpayer has made it advisable to give this subject separate treatment but this should not detract attention from the important place that indirect taxation, through customs, excise and sales taxes, still holds in the taxation burden that the individual taxpayer is called upon to bear. (See Table 6, p. 955.)

In order to present a clearer picture of the main elements of direct or semidirect taxation, Part IV has been divided into three Sections, dealing with income tax, gasoline taxes and succession duties, respectively.

Nore.-For the year 1939, the taxes are the total collected by the Dominion and the Province of Ontario. For this year, the Dominion taxed all income over $\$ 14,000$, whether estimated or earned, at the official rates applying to investment income. For the years 1943 and 1946, income up to $\$ 30,000$ was considered as earned and income over this limit was classified as investment income.

## Section 1.-Income Tax*

The income tax was instituted in 1917, as a part of what was known as war-tax revenue. Before the outbreak of the War of 1939-45 it had become a permanent and important part of the taxation structure, and the chief source of raising ordinary revenue. In many respects, it is an ideal form of direct taxation: in theory its incidence is admittedly fair and just, and the experience and machinery for the collection of this tax has been built up over a long period of years. The War, with its

[^372]increased burden of taxation which, in turn, has made necessary the prepayment of taxes on a "pay-as-you-go" basis, has necessitated changes in the presentation of the statistics. Previously, comparisons for individuals between income assessed and tax paid were subject to the important qualification that, while the income assessed related to the net income upon which assessments had been approved for the year designated although the income itself was earned two years previously, the figures of tax paid included arrears of taxes that were assessed in previous years and even prepayments of taxes not due in the year under review. Under the presen ${ }^{\circ}$ system, large sums of money are being collected month by month from individuals or their employers during the taxation year to which they apply. Analyses of taxes paid have not the same significance now as formerly except as indicating the trend of general collections: analyses of taxes assessed for the taxation year have now more significance. On the new basis the statistics are related to the year in which the income is earned by the taxpayer and all incomes earned in a particular year will be combined to form the taxation-year statistics for that year regardless of when the assessments are made by the Department.

## Subsection 1.-Collection Statistics

Collections on a Fiscal-Year Basis.-Collection statistics are gathered by the accounting section at the time the payments are made and, therefore, have the value of being very up-to-date. Their timeliness has been enhanced within the past few years'by the adoption of the "pay-as-you-go" system which results in collecting tax substantially during the year in which the income is earned and; on the average, about ten months prior to the actual filing of an income tax return by the taxpayer. The payments on behalf of most taxpayers, however, are made by their employers and a cheque from one employer may cover the tax payments of hundreds of employees. At this stage, therefore, it is not possible to link the moneys receivedsto the individuals who are, in the final analysis, contributing the tax. Collection statistics, as such, for this reason are not capable of being closely related! to the persons who are being taxed and any statistical tables that attempt to describe the taxpayer, such as by occupation or income class, must be based on the income tax return which is filed by the taxpayer many months after the payment' of his tax. However, collection statistics, if interpreted along with the tax rate, do servée the purpose of indicating the general trend of income upon which tax is levied well in advance of the assessment data.

The statistics given in Table 1 represent annual collections on a Government fiscal-year basis.

${ }^{1}$ Including refundable portion and therefore does not agree with Table 8, p. 958.
Collections on a Taxation-Year Basis.-Table 1 reflects the total taxes collected during a Government fiscal year without regard to which particular taxation years the revenues applied. In Table 2 the collection of the more important taxes are rearranged in order to reveal the revenues received for the account of each succeeding taxation year.

A taxation year is a period of time during which income is received and becomes subject to tax at rates laid down in the Act. In the case of an individual, the taxation year is almost always the calendar year. In the case of a corporation the taxation year is the calendar year in which the company's fiscal period ends. Under the present system of collection, a substantial portion of the taxes is collected during the year in which the income is earned, that is to say, during the taxation year, and the balance is collected almost entirely in the two following years.

The general Head Office account for a taxation year is held open for statistical purposes for a period of three years. Thereafter, any taxes collected for a "closed" year are credited to a "Combined Years Account" As of Mar. 31, 1947, general Head Office accounts were open for the taxation years 1947, 1946 and 1945 and the Combined Account was known as 1917-44. All collections in the Combined Account are, in Table 2, credited to the last year in the Combined Account which in this case is 1944. The collections received in the Combined Account are relatively small and as each taxation year eventually receives the "combined" revenues for a twelve-month period it is not believed that this procedure materially affects the comparative table and it has the advantage of permanently closing off a taxation year for general statistical purposes. It is not to be understood from the foregoing description that the account of an individual taxpayer is closed off for any taxation year until full payment is received.

Table 2 distributes the collections from individual and corporation income and excess profits tax on a taxation-year basis.

## 2.-Individual and Corporation Income and Excess Profits Tax Collections by Taxation Years, 1917-47

| Tȧxation Year | Income Tax |  | Excess Profits Tax |  | Total |

[^373]Adjusted Corporation Figures.-The Income War Tax Act and the Excess Profits Tax Act, 1940, each levy a separate tax on the same corporation profits in each year since 1940. The administration of the two Acts, the assessment of the two taxes and the collection of the two taxes is done concurrently by the Taxation Division. This has caused many corporation taxpayers to pay their taxes by means of a single cheque combining the two taxes without sufficient advice as to how the remittance is to be allocated between income tax and excess profits tax. The result of this practice has been that too much revenue has been credited to income tax and too little to excess profits tax. For those who wish to study the productivity of the two separate taxes the collection figures as remitted by the taxpayer are somewhat misleading.

Because of the variable rates implicit in the excess profits tax, no precise correction can be made but an approximate adjustment based on a large sample of cases is included in Table 3. It should be emphasized that the adjusted figures
involve no change in the total taxes collected from corporations but simply reduce the amount credited to income tax and correspondingly increase the amount credited to excess profits tax.

## 3.-Adjusted Corporation Tax Collections, Taxation Years 1940-46

| Taxation Year | $\begin{aligned} & \text { Corporation } \\ & \text { Income } \\ & \text { Tax } \end{aligned}$ | Corporation Excess Profits Tax | Total |
| :---: | :---: | :---: | :---: |
|  | \$ | 8 | $\$$ |
| 1940. | 12¢, 604,795 | 127,308, 154 | 253,912,949 |
| 1944 | 183,009,878 | 293,832,527 | 476,842,405 |
| 19485 | 225,569,544 | 441,113,776 | 666,683,320 |
| 1943. | 224, 262,250 | 513, 142,436 | 737, 404,686 |
| 1944. | 208, 350, 381 | 454, 157,011 | 662, 507,392 |
| $1945{ }^{1}$ | 210,386, 736 | 455,049, 963 | 665, 436, 699 |
| 19461 | 182,022,563 | 277,940,113 | 459,962,676 |

" The accounts for these taxation years are not yet closed and"the figures are therefore not yet complete; there will be a small change in the 1945 account and substantial additions to the 1946 account.

## Subsection 2.-Individual Income Tax Statistics

As stated on p. 1000, individual income tax statistics are henceforth to be presented on a taxation-year or calendar-year basis. Individual assessments statistics for ${ }^{\text {th }} 1942$ taxation year are summarizet in Table 4. These figures have value for research purposes and as a matter of record, but it is realized that they are already out of date from the standpoint of studying current taxation of individuals, and therefore an estimate for the 1946 taxation year is presented in Table 5.

## 4.-Total'Indifidual A'ssessments, by Income Classes, Occupational Classes and Próvinces, Taxation Year 1942

"Noas."The income used in this table is "taxable income". arrived at after deducting charitable donations büt before deduction of specific exemptions for single or married status or for dependents.

Preliminary Estimate, 1946 Taxation Year.-Income tax returns for the 1946 taxation year were not yet due or received at the time the estimates shown in Table 5 were compiled, so that the information is necessarily very tentative. It is not possible, at present, to analyse these data on a provincial or an occupational basis in order to present them on a comparable basis with the 1942 final estimate.

The flat 16 p.c. reduction of individual income tax announced in October of 1945 is fully taken into account in the preparation of this estimate. However, the recovery of Family Allowance payments to those who also received income tax reductions for dependents is separately estimated in the footnote to Table 5.

## 5.-Individual Income Tax Estimates, Taxation Year 1946

Nors.-The income used in this table is the income prior to allowable deduction for charitable donations or medical expenses.

| Income Class | Taxpayers | Total Income | Total Tax | Average Tax |

| \$25,000 to \$50,000. | 1,900 | 62,700 | 32,073 |  |
| \$50,000 to \$100,000. | 475 | 30,875 | 18,232 | 38,380 |
| \$100,000 or over. | 109 |  | 15,514 | 142,330 |
| \$25,000 or over. | 2,484 | 93,575 | 65,819 | 26,497 |
| Grand Totals. | 2,545,809 | 4,947,490 | 624,4231 | 245 |

${ }^{1}$ In addition to this amount, it is estimated that $\$ 37,163,000$ will be collected through recovery of Family Allowance payments.

## Subsection 3.-Corporation Income Tax Statistics

In the following tables, corporation statistics are presented on a taxation-year basis prior to assessment. The data has been extracted and compiled from the returns shortly after they have been filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec, which is caused by the fact that many large companies which operate across Canada file their returns in either of these two provinces.

## Section 2.-Gasoline Taxes

The provincial gasoline taxes can be termed "direct taxes" only because the consumer knows exactly the amount of tax he is paying when purchasing gasoline. These taxes have been brought together in this Section on account of the large number of Canadian motorists who are directly affected, while the non-motoring portion of the population is affected by the effect of higher gasoline taxes on delivery costs and bus transportation.

The Dominion Government, in the Third War Budget of Apr. 29, 1941, imposed a tax of 3 cents per gallon on gasoline. Proceeds from this tax are given in Table 6, p. 955. The tax was repealed as of Apr. 1, 1947.

The present provincial rates of gasoline tax, per gallon, are: Prince Edward Island, 10 cents; Nova Scotia, 10 cents; New Brunswick, 10 cents; Quebec, 8 cents; Ontario, 8 cents; Manitoba, 7 cents; Saskatchewan, 8 cents; Alberta, 7 cents; British Columbia, 7 cents; Yukon, 3 cents.

There are certain refunds and exemptions allowed by the various taxing authorities and these are set out in the Bureau's publication "The Motor Vehicle in Canada"

## 8.-Provincial Government Receipts from Gasoline Taxes, Respective Fiscal Years Ended in 1935-45 ${ }^{1}$

Note.-For statistics of gallonage on which these taxes are levied, see p. 689. For periods covered by fiscal years, see headnote to Table 9, p. 1008. Figures for $1923-34$ are given at p. 978 of the 1945 Year Book. Receipts from the gasoline tax in Yukon, which became effective June 15,1940 , amounted to $\$ 4,341$ in $1941, \$ 19,562$ in 1942, $\$ 28,981$ in 1943, $\$ 26,540$ in 1944 and $\$ 24,319$ in 1945.

${ }^{1}$ Figures below the rule are for the fiscal years ended nearest to Dec. 31 of the year stated. ${ }^{2}$ Fourteen months. ${ }^{3}$ Five months. Actual net receipts for fiscal years ended nearest Dec. 31 , 1940. Provincial gasoline tax revenues of subsequent years are guaranteed at this level by the Federal Government ( 6 Geo. VI, c. 13).

## Section 3.-Succession Duties $\dagger$

The first imposition of succession duties in Canada was in 1892, when Nova Scotia, New Brunswick, Quebec and Ontario enacted legislation of this nature. Legislation was passed in the other provinces on the following dates: Manitoba, 1893; Prince Edward Island and British Columbia, 1894; Saskatchewan and Alberta, 1905.

Succession duties have grown to be an important if fluctuating part of provincial revenues and Table 9 shows the receipts from this.source from 1921.

The outstanding development in the succession-duty field since the publication of the 1946 Year Book has been the withdrawal of seven provinces from this field as part of general agreements for the removal of duplication of direct taxation, negotiated with the Dominion. These agreements succeed the expiring Wartime Tax Agreements, and follow the general terms of the offer set out in the Budget Speech of June 27, 1946. This offer was drawn up in such terms that any province could

[^374]elect either to enter or not to enter into an agreement with the Dominion and, in respect of succession duties, provided that even a province that did enter into an agreement could, if it wished, retain its own levies. As of the end of September, 1947, seven of the nine provinces, namely, Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia, had agreed to this offer and had elected to repeal their own succession duties for the period from Apr. 1, 1947, to Mar. 31, 1952. For this period, therefore, provincial succession duties will be limited to those provinces which have not accepted the Dominion's offer before the period expires.

In anticipation of the withdrawal of several of the provinces from the field, the Federal Government had provided in the 1946 Budget that, as from Jan. 1, 1947, the rates of Dominion duty would be doubled, and that where a provincial levy was continued a credit would be allowed against one-half of the Dominion duty for duty paid to a province. The existing situation, therefore, is that in provinces that have withdrawn their duties the previous combination of Dominion and provincial rates has been supplemented by a single Dominion duty at double the previous Dominion level, which in most cases results in the continuation of a total duty approximately the same as previously levied under the two duties combined. On the other hand, in the provinces that have not withdrawn their duties, the doubled rates of Dominion duty apply but may be reduced up to one-half by a credit for the duty paid to the province.

The Dominion Succession Duty Act was enacted as c. 14 of the session of 1940-41. Certain amendments were made to the Act by c. 25 of 1942; c. 37 of 1944, c. 18 of 1945, and the doubling of rates and provision of the tax credit mentioned above by c. 46 of the Statutes of 1946.

Revenue from the Dominion duty is given in Table 9.
A common feature of both Dominion and provincial duties is the variation of rates by the degree of relationship of the beneficiary to the deceased. The four classes of beneficiaries that are established uñlder Dominion law (see p. 1008) have, for example, specific rates that change with each classification, while in Ontario there are three classes of beneficiary with different rates of duty attached to each class. It is also a common feature of both Dominion and provincial Acts for an initial rate of duty to be charged based on the total value of the estate and an additional rate based on the bequest received by each individual. Thus, in the case of the Dominion, a person who receives a bequest of $\$ 50,000$, say, out of an estate of $\$ 500,000$ is charged the rate for a $\$ 500,000$ estate plus an additional rate for $\$ 50,000$, and the total rate is then applied in calculating the tax on his bequest of $\$ 50,000$.

Double taxation of estates resulting from taxation of the same property by more than one province has been common in the past, but the withdrawal of seven of the provinces from the field will considerably reduce this problem. In the international field, dual taxation has been dealt with by way of tax conventions. Such a tax convention between the Dominion and the United States was signed on June 8, 1944. One of the terms of this convention is that shares in a corporation organized in or under the laws of the United States or any of the individual States shall be deemed to be property situated within the United States, and shares in a corporation organized in or under the laws of Canada or of the provinces or territories of Canada shall be deemed to be property situated within Canada.

An agreement respecting succession duties between Canada and the United Kingdom was also signed June 5, 1946.

Under these circumstances, the difficulties of working out succession duty tables so as to show the combined effects of Dominion and provincial duties is realized. The best that can be done is to choose typical estates in the main classes laid down in the legislation and give a picture of the combined duties applicable in such cases. This has been attempted in the following series of tables in the hope that it will be useful in presenting to the student of this subject a general picture of the incidence of succession duties in Canada under conditions existing at present.

## 9.-Dominion and Provincial Receipts from Succession Duties, Respective Fiscal Years Ended in 1921-46

Note.-The fiscal years of the provinces end on the following dates: P.E.I., Dec. 31 to 1942 and thereafter Mar. 31; N.S., Sept. 30 prior to 1935 and Nov, 30 thereafter; N.B., Oct. 31; Que., June 30 to 1940 and Mar. 31 thereafter; Ont., Oct. 31 prior to 1935 and Mar. 31 thereafter; Man. and Sask., Apr. 30; Alta. and B.C., Mar. 31.

[^375]Dominion Duty.-Beneficiaries are divided into four classes, as follows:-
(1) Widow or dependent child or dependent grandchild.
(2) Husband; parent; grandparent; child over 18 years of age, not infirm; son- or daughter-in-law.
(3) Lineal ancestor other than parent or grandparent; brother, sister or their descendant; uncle or aunt or their descendant.
(4) Others.

No duty is payable on estates not exceeding $\$ 5,000$ or on bequests up to $\$ 1,000$ to any one individual, nor is duty levied on gifts to the Dominion or provinces, on residential property of certain diplomatic or consular officials, on pensions administered by the Canadian Pensions Commission or those payable by Allied Nations for war services nor on insurance moneys or annuities if the assured or person with whom contract was made was domiciled outside of Canada at the time of death. Provision is made for increased exemptions and reduced duties in the case of those dying as a result of war service and bequests to non-profit charitable organizations in Canada are exempt up to 50 p.c. of the aggregate net value of the estate.

Widows are exempt up to $\$ 20,000$, dependent children $\$ 5,000$ each and, in cases where dependent children do not benefit, the widow's exemption is increased by $\$ 5,000$ for each child who does not benefit. In the case of dependent orphaned children, there is a further exemption of $\$ 15,000$ (in addition to $\$ 5,000$ ) divisible proportionately among such orphans according to the number of them and the value of each individual benefit. Duty is payable on the excess only when the limit is passed.

Gifts made during the lifetime are exempt if the transfer was carried out before Apr. 29, 1941, and the recipient of such gifts secured full possession at the time of the transfer and the donor (the deceased) thereafter did not retain any rights therein or secure any benefits therefrom.

If gift tax payable under the provisions of the Income War Tax Act has been paid in connection with the transfer made by a deceased person during his lifetime then no succession duty is payable in respect of such gift except to the extent that succession duty thereon is in excess of the gift tax.

Examples of the rates of duty and duty levied are given in Table 10.

## 10.-The Incidence of Succession Duties in all Provinces (except Quebec and Ontario) on Typical Estates

| Class | Aggregate Net Value | Dutiable Value | Rate | Duty |
| :---: | :---: | :---: | :---: | :---: |
| A. Widow only | \$ | \$ | p.c. | \$ |

|  | 25,000 | 25,000 | $7 \cdot 80$ | 1,950 |
|  | 50,000 | 50,000 | 14.70 | 7,350 |
|  | 100,000 | 100,000 | 20.70 | 20,700 |
|  | 300,000 500 | 300,000 | 32.70 | 98, 100 |
|  | 500,000 | 500,000 | 38.70 | 193,500 |
|  | 1,000,000 | 1,000,000 | 44.70 | 447,000 |

The Incidence of Combined Dominion and Provincial Succession Duties.-Under the new tax agreements outlined at p. 969, only the Provinces of Quebec and Ontario, which have not entered the agreement, have retained their own levies on succession duties. As mentioned above, the other seven provinces have elected to repeal their succession duties for the period from Apr. 1, 1947, to Mar. 31, 1952. As a consequence, the tables showing combined rates of Dominion and provincial duty for each province, which appeared at pp. 942-950 of the 1946 Year Book, have been dropped with the exception of those for the two abovementioned provinces. The new condition of doubled Dominion duties and a tax credit up to 50 p.c. for the provincial duty has been taken into account in Tables 11 and 12. The rates under the heading "Dominion Duty" shown in the 1946 Year Book have been doubled and under "Combined Duty" the greater of (1) the amount of the Dominion duty (doubled rates), or (2) the provincial duty plus onehalf the Dominion duty, is given.

In these two tables, the beneficiaries under all the classes show the duties collectable where the estate of given value is left to one beneficiary only, since it would be impossible to cover the many different classifications, exemptions and saving clauses to be found in the legislation of the respective provinces. In every case the estate is assumed to be wholly situated within the province and the beneficiary domiciled therein to be the sole heir. The reader is referred to the legislation and to the taxing authority shown under each provincial heading for more complete information.

Quebec.-The current legislation under which succession duties are collected is c. 18 of 1943 . As stated at p. 1008, the following text and table can give only a broad outline of such duties as applied to comparable classes of beneficiaries in other Provinces. Full details regarding other cases may be obtained from the Act quoted or from the Collector of Succession Duties, Provincial Revenue Offices, Quebec.

Under the legislation, beneficiaries are divided into three classes, as follows:-
(1) Those in direct ascending or descending line between consort, between father- or mother-in-law, and son- and daughter-in-law, between step-father or step-mother and step-son and step-daughter. There is no limitation of degree in the direct ascending or descending line between these relationships.
(2) Those in collateral line including a brother or sister, or descendant of a brother or sister of the deceased, or to a brother or sister, or son or daughter of a brother or sister, of the father or mother of the deceased.
(3) Others.

No duty is payable when the aggregate value of the property passing to persons in Class (1) does not exceed $\$ 10,000$. This sum is increased by $\$ 1,000$ for each child who has survived or has left surviving descendants. No duty is payable on bequests
up to $\$ 1,000$ to beneficiaries in Class (3) who have been in the employ of the testator for five years or more. No duty is payable on legacies for religious, charitable or educational purposes in Quebec and the same privilege is extended to legacies for similar work outside the Province, provided that the Province or State within which the work is to be carried out extends reciprocal privileges under its succession duty laws.

[^377] surtax on provincial duty.
${ }^{4}$ Plus a surtax of 20 p.c.
Plus a surtax of 25 p.c.
Ontario.-The current legislation on succession duties is c. 1 of 1939 (Second Session) as amended, and full information may be obtained on application to the Succession Duty Office, Treasury Department, Parliament Buildings, Toronto.

Beneficiaries are divided into three classes, as follows:-
(1) Widow; child; husband; parent; grandparent; grandchild; son- or daughter-in-law.
(2) Brother; sister; nephew; niece; uncle; aunt, cousin; child of nephew or niece.
(3) Others.

No duty is payable on estates not exceeding $\$ 5,000$ in aggregate value, nor on estates not exceeding $\$ 25,000$ devised to persons in Class (1), nor on those not exceeding $\$ 10,000$ devised to persons in Class (2). Where the aggregate value of an estate does not exceed $\$ 25,000$ the shares in such an estate passing to beneficiaries in Class (1) are exempt from duty. The same rule applies to shares of beneficiaries in Class (2) where the aggregate value does not exceed $\$ 10,000$. Where the aggregate value does not exceed $\$ 5,000$, the estate will be exempt from duty regardless of what class or classes of persons inherit.

Where any person in Class (3) was in the employ of the deceased for at least five years immediately prior to his death, no duty shall be payable with respect to any benefits which such person derived from the deceased where the total value of such benefits is not in excess of $\$ 1,000$. Such benefits however, while exempt, are nevertheless taken in as a factor in fixing the rates applicable to the dutiable portions of the estate.

Bequests for religious, charitable or educational purposes to any religious charitable or educational organization which carries on its work solely in Ontario are exempt from duty and are altogether ignored in the computation of duty on the portions of the estate which are not exempt. The same rule applies to the Canadian National Institute for the Blind, the Canadian Red Cross Society and other approved patriotic organizations.

## PART I.-CURRENCY AND BANKING

## Section 1.-Historical Sketch

At pp. 900-905, inclusive, of the 1938 Year Book there appears a historical sketch of currency and banking in Canada, tracing certain features of the central banking system that finally led up to the establishment of the Bank of Canada. In chronological order these were:-
(1) Central Note Issue, permanently established with the issue of Dominion notes under legislation of 1868 .
(2) The Canadian Bankers' Association, established in 1900 and designed to effect greater co-operation among the banks in the issue of notes, in credit control and in various aspects of bank activities.
(3) The Central Gold Reserves, established by the Bank Act of 1913.
(4) Rediscount Facilities, although originated as a war measure by the Finance Act of 1914, were made a permanent feature of the system by the Finance Act of 1923, which empowered the Minister of Finance to issue Dominion notes to the banks on the deposit by them of approved securities. This legislation provided the banks with a means of increasing their legal tender cash reserves at will.

## Section 2.-The Bank of Canada

## Subsection 1.-The Bank of Canada Act and Its Amendments

The Bank of Canada was incorporated in 1934 and commenced operations on Mar. 11, 1935. An account of the capital structure of the Bank and its transition from a privately owned institution to a wholly government-owned one is given at p. 800 of the 1941 Year Book.

The Bank is authorized to pay cumulative dividends of $4 \frac{1}{2}$ p.c. per annum from its profits after making such provision as the Board thinks proper for bad and doubtful debts, depreciation in assets, pension funds, and all such matters as are properly provided for by banks. The remainder of the profits will be paid into the Consolidated Revenue Fund of Canada and to the Rest Fund of the Bank in specified proportions until the Rest Fund is equal to the paid-up capital, when all the remaining profits will be paid into the Consolidated Revenue Fund.

The Bank may buy and sell securities of the Dominion and the provinces without restriction if of a maturity not exceeding two years, and in limited amounts if of longer maturity; short-term securities of the Dominion or provinces may be rediscounted. It may also buy and sell short-term securities of British Dominions, the United States or France without restriction, if maturing within six months, and such securities having a maturity exceeding six months in limited amounts. The Bank may buy and sell certain classes of commercial paper of limited currency, and, if endorsed by a chartered bank, may rediscount such commercial paper. Advances for six-month periods may be made to chartered banks, Quebec Savings Banks, the Dominion or any province against certain classes of collateral, and advances of specified duration may be made to the Dominion or any province in amounts not exceeding a fixed proportion of such government's revenue. The Bank may accept from the Federal or Provincial Governments, or from any chartered bank or any bank incorporated under the Quebec Savings Banks' Act, deposits that shall not bear interest. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may deal in foreign exchange.

The provisions regarding the note issue of the Bank of Canada are dealt with at p. 1020.

The Bank of Canada Act (c. 43, Statutes of 1934 and amendments) provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. Under the terms of the Exchange Fund Order, 1940, authorizing the transfer of the Bank's gold holdings to the Foreign Exchange Control Board, the minimum gold reserve requirement has been temporarily suspended; this suspension was continued under the Foreign Exchange Control Act, 1946. The reserve, in addition to gold, may include silver bullion; balances in pounds sterling in the Bank of England, in United States dollars in the Federal Reserve Bank of New York, and in gold currencies in central banks in goldstandard countries or in the Bank for International Settlements; treasury bills of the United Kingdom or the United States of America having a maturity not exceeding three months; and bills of exchange having a maturity not exceeding 90 days, payable in London or New York, or in a gold-standard country, less any liabilities of the Bank payable in the currency of the United Kingdom, the United States of America or a gold-standard country. In accordance with the terms of the Foreign Exchange Acquisition Order, 1940, the Bank of Canada sold foreign exchange with a Canadian dollar value of $\$ 27,734,444$ to the Foreign Exchange Control Board.

The chartered banks are required to maintain a reserve of not less than 5 p.c of their deposit liabilities, payable in Canadian dollars, in the form of deposits with and notes of the Bank of Canada.

The Bank acts as the fiscal agent of the Dominion of Canada without charge and may, by agreement, act as banker or fiscal agent of any province. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The head office of the Bank is at Ottawa, and it has an agency in each province namely, at Charlottetown, Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Calgary and Vancouver.

The Governor of the Bank is its chief executive officer and Chairman of the Board of Directors; he is assisted by a Deputy Governor and an Assistant Deputy Governor. The first appointments were made by the Government. Subsequent appointments are to be made by the Board of Directors subject to the approval of the Governor in Council.

At the first meeting of the shareholders on Jan. 23, 1935, seven directors were elected with terms as follows: one director, until the third annual general meeting (1938); two, until the fourth (1939); two, until the fifth (1940); and two, until the six annual general meeting (1941). Former directors continued in office when the Government took over the management of the Bank but directors are now appointed by the Minister of Finance with the approval of the Governor in Council for terms of three years. There are now eleven directors. In the transaction of the business of the Bank, each director has one vote.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor and one member of the Board, which must meet once a week. This Committee has the same powers as the Board but every decision is submitted to the Board of Directors at its next meeting. The Board must meet at least four times a year. The Deputy Minister of Finance is an ex-officio member of the Board of Directors and of the Executive Committee, but is without vote.

The Governor alone, or in his absence the Deputy Governor, has the power to veto any action or decision of the Board of Directors or the Executive Committee, subject to confirmation or disallowance by the Governor in Council.

## Subsection 2.-The Bank of Canada and Its Relationship to the Canadian Financial System

An article under this title is given at pp. 881-885 of the 1937 edition of the Year Book. It deals with such subjects as the functions of the Bank, its control and regulation of credit and currency, the mechanism by which such control is exercised, the expansion and contraction of credit, the mitigation of general economic fluctuations, the control of exchange operations, the advisory function of the Bank, and its duties as the Government's banker. An article on the wartime functions of a central bank appears at pp. 803-806 of the 1942 Year Book.

## Subsection 3.-Bank of Canada Operations

The expansion of Bank of Canada liabilities and assets has provided for increased Bank of Canada notes in active circulation (as the chartered bank-note issue is limited and is gradually being retired) and has enlarged the cash reserves of the chartered banks. The principal chánges in Bank of Canada assets since

April, 1938, have been the rise in investments, partly to replace the gold and foreignexchange holdings transferred to the Foreign Exchange Control Board under the terms of the Exchange Fund Order and Foreign Exchange Acquisition Order, dated Apr. 30, 1940, and the fluctuations in holdings of sterling exchange through which the Bank has temporarily financed Canadian dollar requirements of the Foreign Exchange Control Board.

${ }^{1}$ Not shown prior to 1944 . $\quad{ }^{2}$ The Exchange Fund Order, 1940, authorized the transfer of the Bank's gold holdings to the Foreign Exchange Control Board and temporarily suspended the requirement for a minimum gold reserve.

## Subsection 4.-The Industrial Development Bank

The Industrial Development Bank was incorporated by Act of Parliament during 1944, commencing its banking operations on Nov. 1, 1944. This Bank was established to perform certain functions which the preamble to the Act of incorporation describes in the following terms:-

[^378]The Industrial Development Bank is a subsidiary of the Bank of Canada. The Directors are the Directors and Assistant Deputy Governor of the Bank of Canada and the President is the Governor of the Bank of Canada. The $\$ 25,000,000$ capital stock of the Bank of which $\$ 15,000,000$ is now paid up, was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises in Canada with respect to which it is empowered to:-
(1) Lend money or guarantee loans.
(2) Enter into underwriting agreements with regard to any issue of stock, bonds or debentures.
(3) Acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.

The Bank may accept any form of collateral security against its advances, including real property.

The Industrial Development Bank is intended to supplement the activities of other lending agencies rather than to compete with them and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. The Bank is specifically prohibited from engaging in the business of deposit banking.

Authorized and outstanding loans of the Industrial Development Bank as of Mar. 31, 1947, are classified by provinces, size of loan and industries in Table 2. The monthly statement of assets and liabilities of the Bank for June 30, 1947, showed outstanding loans and investments at that date of $\$ 9,861,673$.

## Section 3.-Currency

Subsection 1.-Canadian Coinage*

The present monetary standard of Canada is gold of 900 millesimal fineness ( $23 \cdot 22$ grains of pure gold equal to one gold dollar). Under the Uniform Currency Act of 1871, gold coin has been authorized but only very limited issues were ever made. Gold coins have not been struck since 1919. The British sovereign and halfsovereign, and United States eagle, half-eagle and double eagle are legal tender. Subsidiary coin consists of $50-, 25$ - and 10 -cent silver pieces, $\dagger 800$ fine (reduced from 925 fine in 1920). Such subsidiary silver coin is legal tender to the amount of ten dollars. The 5 -cent piece is legal tender up to five dollars and the 1 -cent bronze coin up to twenty-five cents. There is no provision for the redemption of subsidiary coin. A table at p. 807 of the 1941 Year Book gives particulars of weight, fineness, etc., of current coins.

## 3. Circulation of Canadian Coin as at Dec. 31, 1937-46

Nore.-The figures are of net issues of coin. Figures for the years 1901-25 are given at p. 858 of the 1927-28 Year Book and for $1926-36$ at p. 956 of the 1946 edition. Per capita figures are based on estimates of population as given at p. 100.

| Year | Silver | Nickel | 'Tombac' | Steel | Bronze | Total | Per Capita |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | \$ | \$ | \$ | \$ | \$ | \$ |

| 1944. | 54, 972, 812 | 4,825,057 | 1,407,754 | 571,000 | 6,753,329 | 68,529,952 | $5 \cdot 72$ |
| 1945. | 58, 327,590 | 4, 823,237 | 1,407,462 | 1,521; 170 | 7,499, 263 | 73,578,722 | $6 \cdot 07$ 6.16 |
|  | 59,944,549 | 5,113,103 | 1,155,791 | 1,520,849 | 8,024,547 | 75,758,839 | $6 \cdot 16$ |

The Royal Canadian Mint.-The Ottawa Mint was established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan. 2, 1908. By 21-22 Geo. V, c. 48, it was constituted a branch of the Department of Finance, and by the Proclamation of Nov. 14, 1931, issued under Sect. 3 of that Act, it has, since Dec. 1, 1931, operated as the Royal Canadian Mint. At first the British North American Provinces, and later the Dominion of Canada, obtained their coins from the Royal Mint at London or from The Mint, Birmingham, Ltd., England. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation, of British sovereigns and of small coins struck under contract for Newfoundland and Jamaica. Previous to 1914, small quantities of gold bullion were refined, but during the War of 1914-18 the Mint came to the assistance of the British Government by establishing a refinery in which nearly twenty million ounces of South African gold were treated on account of the Bank of England. The subsequent great development of the

[^380]gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Most of the fine gold produced from the rough shipments from the mines is delivered to the Department of Finance (since Mar. 11, 1935, the Bank of Canada has acted as agent for the Government) in the form of bars of approximately 400 fine oz. each, the rest being sold in a convenient form to manufacturers. The fine silver extracted from the rough gold, when not required for coinage, is sold in New York or disposed of to local manufacturing firms.

An account of the organization and operational methods of the Royal Canadian Mint is given at pp. 888-892 of the 1940 Year Book.

## 4.-Annual Receipts of Gold Bullion at the Royal Canadian Mint, and Bullion and Coinage Issued, 1937-46

Nore.-Although not presented in exactly the same form, figures for 1901-16 are given at pp. 857-858 of the 1927-28 Year Book; for 1917-25 at p. 894 of the 1936 edition. Comparable figures to those shown below for 1926-36 are given at p. 957 of the 1946 edition.

| Year | Gold Received | Gold Bullion Issued | Silver Coin Issued | Nickel Coin Issued | Steel Coin Issued | $\begin{aligned} & \text { 'Tombac' } \\ & \text { Coin } \\ & \text { Issued } \end{aligned}$ | Bronze Coin Issued |

## Subsection 2.-Canadian Note Circulation

Dominion Notes.-Dominion notes became established in 1868 and the legislation by which the issue was expanded with the growth of the population is given at p. 952 of the 1934-35 Year Book. A summary of the main features of the former Dominion note issue is given at p. 893 of the 1940 edition.

Bank of Canada Notes.-The Bank of Canada, when it commenced operations, assumed the liability for Dominion notes outstanding, which were replaced in public circulation, and partly replaced as cash reserves, by its own legal-tender notes in denominations of $\$ 1, \$ 2, \$ 5, \$ 10, \$ 20, \$ 50, \$ 100$ and $\$ 1,000$. Deposits of chartered banks at the Bank of Canada completed the replacement of Dominion notes as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce the issue of their own bank notes gradually during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced.

There has been little change in the circulation of denominations of notes under $\$ 5$. In the denominations from $\$ 5$ to $\$ 1,000$, where Bank of Canada notes have partially replaced chartered bank notes or Dominion notes, there has been a large increase. On the other hand, the special Dominion notes in denominations from $\$ 1,000$ to $\$ 50,000$ which were used almost exclusively for inter-bank transactions or bank reserves, are no longer in use.

## 5.-Denominations of Dominion or Bank of Canada Notes in Circulation, 1926, 1929 and 1943-46

Notr.-Annual averages of month-end figures. The totals outstanding are not always multiples of the denominations of notes breause of adjustments made according to scale when parts of mutilated notes are turned in for cancellation.

[^381]Chartered Bank Notes.-The developments by which bank notes became the chief circulating medium in Canada in the period preceding the establishment of the Bank of Canada are described at pp. 900-905 of the 1938 Year Book. The main steps of this development that remained as permanent features of the system are outlined at pp. 809-810 of the 1941 Year Book.

The provisions regarding bank notes were materially changed with the establishment of the Bank of Canada under the Bank Act (c. 30) of 1944. The authority for both seasonal expansion and additional issue secured by deposit in the Central Gold Reserves was then terminated. Provision was made for a gradual reduction in bank-note circulation over a period of years as explained at p. 1020. As a result of these changes, current data on bank-note circulation are not comparable with those of earlier years. However, statistics of total notes in the hands of the general public are comparable. This public circulation includes chartered bank notes together with Dominion or Bank of Canada notes, exclusive of those held by the banks as reserves. Statistics on this basis are shown in Table 6.

## 6.-Annual Averages of Note Circulation in the Hands of the Public, 1937-46

Note.-Figures of circulating media in the hands of the general public for the years 1900-35 appear at p. 900 of the 1936 Year Book. Figures comparable to those shown below for the years 1926-36 are given at
p. 959 of the 1946 edition.

| Year | Averages of Month-End Figures |  |  | Averages of Daily <br> Figures of Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Chartered Bank Notes ${ }^{1}$ | Dominion or Bank of Canada Notes ${ }^{2}$ | Total | Amount ${ }^{3}$ | Per Capita |

[^382]
## Subsection 3.-Money Supply

The expansion in the money supply of Canada continued year by year from 1933 to 1946 , amounting in the latter year to $\$ 7,210,000,000$, nearly three and one-half times as great as thirteen years before. Most of the expansion occurred in the war period from 1939 to 1945 ; the money supply which had been $\$ 2,672,000,000$ in 1938 was $\$ 4,538,000,000$ or about 170 p.c. greater in 1946.

Relative Importance of the Main Components of the Money Supply.It is customary to regard the money supply as consisting of notes and coin in the hands of the public and the sum of bank deposits subject to cheque. The striking feature during the war period was the predominant percentage increase in bank notes which made up $13 \cdot 9$ p.c. of the money supply in 1946 as against $7 \cdot 6$ p.c. in 1938. This expansion in use of notes indicates a shift in the distribution of income and in the methods of conducting trade.

It was estimated that the amount of subsidiary coin in the hands of the public increased $114 \cdot 8$ p.c. between 1938 and 1946. As the percentage gain was less than that of the money supply as a whole, the relative importance was less in 1946 than in 1938 , dropping from 11 p.c. to 0.9 p.c.

The amount of the notes in the hands of the public is obtained by deducting the holdings of the different classes of banks from the total amount of Bank of Canada and chartered bank notes reported as in circulation. The amount of the subsidiary coin is estimated by deducting the holdings of the chartered banks and the Bank of Canada from the total amount outstanding as reported by the Mint.

The rise in bank deposits subject to cheque reflects the great expansion in economic activity since the beginning of the War. The sum of deposits was nearly 152 p.c. greater in 1946 than in 1938. Despite this increase, the relative importance
of deposits as a component of the money supply was less in 1946 than at the beginning of the period. The relative position was $85 \cdot 2$ p.c. in 1946 against $91 \cdot 3$ p.c. in 1938, the marked gain in the circulation of bank notes largely accounting for the drop.
7.-Money Supply, Month-End Averages, 1919-46

| Year | Total Notes in Hands of Public | Subsidiary Coin in Hands of Public | Sum of Deposits ${ }^{1}$ | Money Supply |
| :---: | :---: | :---: | :---: | :---: |

| 1946. | 1,004.9 | $63 \cdot 12$ | 6,142.0 | 7,210 |

[^383]
## Section 4.-Monetary Reserves

## Subsection 1.-Bank of Canada Reserves

The composition of Canadian gold reserves held by the Government is presented in the 1936 edition of the Year Book, at p. 895, for the years 1905 to 1934. Since March, 1935, the gold reserves have been held by the Bank of Canada. By authority of the Exchange Fund Act (c. 60, 1935), effective in July, 1935, they are valued at the prevailing current market price of gold. The new data are now to be found under the item "Reserves" in the "Assets" section of Table 1, p. 1017 As explained in footnote 2 of that table, under the Exchange Fund Order of Apr. 30, 1940, the gold reserves of the Bank of Canada were transferred to the Foreign Exchange Control Board and the requirement that the Bank should maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada was temporarily suspended.

## Subsection 2.-Chartered Bank Canadian Cash Reserves

Before the Establishment of the Bank of Canada.-Up to March, 1935, legal tender cash reserves in Canada were made up partly of Dominion notes; partly of gold coin and bullion, and subsidiary coin, including these forms of cash
held by the banks themselves; and as deposits in the Central Gold Reserves. In so far as these reserves were in actual gold or were in Dominion notes backed by gold, they were subject to the expanding or contracting influences of monetary gold imports or exports arising from Canada's balance of international payments, so long as Canada was on the gold standard.

Since the Establishment of the Bank of Canada.-When the Bank of Canada was established, the chartered banks turned over their reserves of gold in Canada and Dominion notes to the new bank in exchange for deposits with, and notes of, the Bank of Canada. It was provided that, henceforth, the chartered banks were to carry reserves in these forms amounting to at least 5 p.c. of their deposit liabilities in Canada. Since that time, therefore, the gold reserves against currency and bank credit have been in the custody of the central bank, except as affected by the Exchange Fund Order, 1940, as explained under Bank of Canada reserves in Subsection 1.

## 8.-Annual Averages of Cash Reserves of the Chartered Banks, 1937-46

Nore.-Figures, to nearest million, supplied by the Bank of Canada. Cash reserves prior to Mar. 11, 1935, include gold and coin and Dominion notes held by the banks in Canada and deposits in the Central Gold Reserves not earmarked; since that date, they include notes and deposits with the Bank of Canada. Figures for the years 1926-36 are given at p. 960 of the 1946 Year Book.

| Year | Annual <br> Average of <br> Daily <br> Figures | Annual <br> Average of Month-End Figures | Year | Annual <br> Average of Daily <br> Figures | Annual <br> Average of <br> Month-End <br> Figures |

| 1941.. | 313,000,000 | 308,000,000 | 1946. | 672,000,000 | 673,000,000 |

## Section 5.-Commercial Banking

## Subsection 1.-Historical

Since one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in the one historical sketch, which is given at pp. 901-905 of the 1938 Year Book. A list of the banks at Confederation appears at p. 897 of the 1940 Year Book and bank absorptions since 1867 are given at pp. 812-813 of the 1941 edition. A table at pp. 894-895 of the 1937 Year Book shows the insolvencies from Confederation; the last insolvency occurred in 1923.

A summary of the more important changes resulting from the revision of the Bank Act in 1944 is given at pp. 961-962 of the 1946 Year Book.

## Subsection 2.-Combined Statistics of Chartered Banks

In order to afford a clear view of the nature of banking transactions in Canada, bank liabilities have been classified in Table 9 in two main groups: liabilities to shareholders and liabilities to the public. Only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are
divided into four groups, "other assets" being included in the total. Of interest to students of banking practice, the relative rates of increase of capital and reserve funds may be noted, also the great increase in the proportion of liabilities to the public to total liabilities, and the gradually increasing percentage of liabilities to the public to total assets. The chart below showing the division of ownership of assets is of interest in this connection. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times. Holdings of Federal and Provincial Government and municipal securities were relatively insignificant prior to the War of 1914-18.

9.-Development of Chartered Banking Business in Canada, 1927-46

Norg.-These statistics are yearly averages computed from the twelve monthly returns in each year. Figures for the years 1867-1880 will be found at pp. 918-919 of the 1938 Year Book; for the years 1881-1915 at pp. 815-816 of the 1941 edition; and for the years 1916-26 at pp. 963-964 of the 1946 edition.

| Year | LIABILITIES |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Cheque Payments.-The great bulk of monetary transfers in Canada is made through the banks, payments in notes and coin being of relatively minor importance. It is estimated that about 80 p.c. of all business transactions are financed by cheque, and the amount of the cheques paid through the banks and charged to deposit accounts is thus a fairly accurate measurement of the volume of business transacted in a given period.

Monthly aggregate figures of the amount of cheques charged to accounts at all banking offices situated in the clearing-house centres of Canada are available from January, 1924.

The amount of cheques cashed by the banks reached a peak in 1946, reflecting the active economic conditions obtaining during the war years. A continuous advance was shown year by year from 1938, the increase in 1946 over that year amounting to 124 p.c. Transactions of this nature amounted to $\$ 46,670,000,000$ in 1929, the culmination of the previous major economic cycle, about 33 p.c. less than the $\$ 69,248,000,000$ recorded in 1946 . The advance throughout the war years was general in the five economic areas. The gain in British Columbia was especially pronounced, the value of cheques cashed in that Province advancing 177 p.c. from 1938 to 1946.

## 15.-Cheques Cashed at Individual Clearing-House Centres, 1942-46

Note.-Figures for earlier years will be found in the corresponding table in previous Year Books.

## Subsection 3.-Statistics of Individual Chartered Banks

Assets and Liabilities.-"Cash Reserves Against Deposits" as shown in Table 16 represented the years 1935 (when the Bank of Canada was established), and 1943 to 1946, the total of Bank of Canada notes in the possession of the chartered banks together with their deposits at the Bank of Canada. For 1929 (before the establishment of the Bank of Canada), they represented the totals of the banks' holdings of gold and coin in Canada, Dominion notes, and that part of their deposits in the Central Gold Reserve not required against their note issues.

## 16.-Principal and Total Assets of Individual Chartered Banks, 1929, 1935 and 1943-46

Nots.-The statistics in this table are averages computed from the twelve monthly returns in each year.

[^388]Branches of Chartered Banks.-During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same ( 36 in 1881 and 1891, and 34 in 1901), but during the present century there has been in banking, as in industry, an era of amalgamations, the number of banks having dropped to 25 in 1913 and to 10 in 1931. That this has been far from involving a curtailment of banking facilities is seen in Table 9, which shows the development of the banking business since 1927, and in Table 19, which compares the number of branch banks existing in Canada at different periods, and indicates a growth from 123 in 1868 to 4,676, inclusive of sub-agencies, at Dec. 31, 1920. As at Dec. 31, 1944, the total stood at 3,087 (exclusive of 132 branches and 3 sub-agencies in other countries) the reduction having resulted from the closing
of some unprofitable branches, and also from contractions brought about by wartime conditions. By Dec. 31, 1946, the total had increased to 3,219 (excluding 133 branches and three sub-agencies outside Canada).
19.-Branches of Chartered Banks in Canada, by Provinces, as at Dec. 31, 1868, 1902, 1905, 1920, 1926, 1930, 1940 and 1943-46

The number of branches of Canadian banks doing business outside Canada increased rapidly during the War of 1914-18 and the early post-war period, rising to a total of 206 in 1921. The number gradually declined to 131 branches in 1945, and in 1946 was 133.

## 21.-Branches of Individual Canadian Chartered Banks Outside Canada, with their Locations, as at Dec. 31, 1945 and 1946

## Section 6.-Government and Other Savings Banks

In a comparatively new country where capital is relatively scarce, it is natural that the banks that finance the business institutions should also absorb the bulk of the people's savings for use in promoting the business of the country. Thus, in Canada the great bulk of the current savings of the people has, in the past, been found in the savings or notice deposits of the Canadian chartered banks, the annual average figures of which are given in Table 9 of this Chapter; the 1946 average was $\$ 3,327,057,442$. To-day, the Government is absorbing a large proportion of current savings for the financing of demobilization and reconstruction and the current savings of the Canadian people are going to a large extent into the purchase of life insurance, the total premiums paid in the single year 1946 aggregating $\$ 283,930,461$. Nevertheless, current savings as shown by deposits in the banks are large, those in the special savings banks, although comparatively small, are none-the-less significant.

There are, at present, three distinct types of savings bank in Canada in addition to the savings departments of the chartered banks and of trust and loan companies. First, there is the Post Office Savings Bank, in which the deposits are a direct obligation of the Federal Government. Secondly, there are Provincial Government savings banking institutions in Ontario and in Alberta, where the depositor becomes a direct creditor of the province. Thirdly, there are, in the Province of Quebec, two important savings banks, the Montreal City and District Savings Bank and La Banque d'Economie de Québec, established under Dominion legislation and reporting monthly to the Department of Finance. Other agencies for the promotion of thrift are the co-operative credit unions, which encourage the regular saving of amounts too small to deposit in a bank.

Post Office Savings Bank.-The Post Office Savings Bank was established under the Post Office Act of 1867 (31 Vict., c. 10) in order to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the Dominion to every depositor for repayment of all money deposited by him together with the interest due thereon" Branches of the Federal Government Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years, the amalgamation being completed in March, 1929.

## 22.-Financial Business of the Post Office Savings_Bank, ${ }^{\boldsymbol{F}}$ as at Mar. 31, 1941-46

Nors.-Figures of total deposits for 1868-1917 will be found at pp. 833-834 of the 1926 Year Book and for 1918-40 at p. 978 of the 1946 edition.

| Item |  |  |  |  |  |  |

|  |  |  |  |  |  |  |

Provincial Government Savings Banks.-Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta. A similar institution was in operation in Manitoba from 1924 to 1932, when the depositors' accounts were taken over by the chartered banks.

Ontario.-In the session of 1921, the Legislature of Ontario authorized the establishment of the Province of Ontario Savings Office, and in March, 1922, the first branches were opened. Interest at the rate of 1 and $1 \frac{1}{2}$ p.c. per annum compounded half-yearly is paid on accounts. The deposits are repayable on demand. Total deposits on Mar. 31, 1947, were $\$ 62,027,000$, and the number of depositors at that date was approximately 100,000 . Twenty-two branches are in operation throughout the Province.

Alberta.-In Alberta, the Provincial Treasury receives savings deposits and issues demand savings certificates bearing interest at $1 \frac{1}{2}$ p.c., or term certificates for one, two, three, four or five years, in denominations of $\$ 25$ and upwards, bearing interest at 2 p.c. for one or two years, $2 \frac{1}{4}$ p.c. for three or four years and $2 \frac{1}{2}$ p.c. for five years. The total amount in savings certificates on Dec. 31, 1946, was $\$ 1,047,148$ made up of $\$ 243,658$ in demand certificates and $\$ 803,490$ in term certificates.

In addition, savings deposits are accepted at 40 Provincial Treasury Branches throughout the Province. The total of these deposits at Dec. 31, 1946, was $\$ 11,046,967$ made up of $\$ 6,981,558$ bearing interest at $1 \frac{1}{2}$ p.c. and payable on demand, and $\$ 4,065,409$ bearing interest at 2 p.c. and payable one year after deposit.

Penny Banks.-Provision was made by the Penny Bank Act (R.S.C., 1927, c. 13) for the institution of banks designed to encourage small savings by school children, although their facilities are not confined to children. The only bank established under this statute was the Penny Bank of Ontario but its operations were suspended in February, 1943, in order that the school children might concentrate on the purchase of War Savings Stamps and Certificates. The Bank is still inactive. For assets and liabilities at June 30, 1942-45, see p. 979 of the 1946 Year Book.

Other Savings Banks.-The Montreal City and District Savings Bank founded in 1846 and now operating under a charter of 1871, had on Mar. 31, 1947, a paid-up capital and reserve of $\$ 5,750,000$, savings deposits of $\$ 131,779,257$, and total liabilities of $\$ 138,687,872$. Total assets amounted to $\$ 139,245,393$, including over $\$ 118,000,000$ of Dominion, provincial and municipal securities. The Caisse d'Economie de Notre-Dame de Québec, founded in 1848 under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855, and given a Dominion charter by 34 Vict., c. 7, had on Mar. 31, 1947, savings deposits of $\$ 21,358,288$, a paid-up capital and reserve of $\$ 3,000,000$, and total assets of $\$ 26,477,814$. Under the new charter, effective Sept. 1, 1944, the name of this Bank was changed to La ${ }^{*}$ Banque d'Economie de Québec.

Table 23 shows the savings deposits in the Montreal City and District Savings Bank and La Banque d'Economie de Québec for the years ended Mar. 31, 1933-47.

## 23.-Deposits in the Montreal City and District Savings Bank and La Banque d'Economie ${ }^{1}$ de Québec, Years Ended Mar. 31, 1933-47

Note.-Figures for the years 1868-1926 appear at pp. 833-834 of the 1926 Year Book; for the years 1927-32 at p. 980 of the 1946 edition.

${ }^{1}$ Formerly the Caisse d'Economie de Notre-Dame de Québec.

Credit Unions.*-Provincial credit-union legislation, in each of the Provinces, requires all credit unions to report to Provincial Governments on their annual operations. These reports are consolidated and made available to the Economics Division of the Department of Agriculture by the various provincial inspectors. As yet, little analyses of these reports on a national basis is possible because of the variation in the types of reports prepared by the provinces.

The total number of credit unions in Canada in 1945 was 2,219, an increase of 8 p.c. over 1944. Membership increased by 23 p.c. and assets by 58 p.c. Loans to members in 1945 were lower than in 1944 but decrease is considered to be the result of the use of a more uniform basis of reporting. Figures from the Province of Quebec have in the past included a sum which might be termed investment loans made to municipalities, school commissions, churches, etc. No other provincial statistics considered such investments as loans made and, therefore, the Quebec figures have been reduced to make them comparable for 1945. It is estimated that about $\$ 65,000,000$ of total assets in 1945 should be considered as investment loans of which $\$ 59,000,000$ is held by the Caisses Populaires in Quebec.

[^390]Naturally, during the war period there was some decrease in loan demand but credit unions and their members continued their thrift programs and surplus funds were invested in Victory Bonds or in central credit unions and members financed their personal purchases of bonds through the credit union.

Co-operative credit in the Province of Quebec takes a somewhat different form from such organizations in other provinces. It dates back to 1940, when what are known as "Les Caisses Populaires", or People's Banks, were begun with the establishment of "La Caisse Populaire" at Lévis. The following principles were adopted: lending money only for approved purposes to carefully selected members in a restricted area; limited liability; issuing shares of small amount payable by instalments and withdrawable; and distribution of profits. These banks are for the most part established in agricultural districts. Loans are made to purchase agricultural implements at cash prices, to increase farm live stock, to improve farm buildings, to tide over periods of depression, to pay off debts, and for various similar purposes. The loans, though considered 'short credit', are for longer periods than are usual in ordinary commercial transactions because agricultural operations necessarily extend over longer periods than those of trade. They may be for 12,15 , or even 24 months, in order to give the farmer time to realize on his products.

In later years, other co-operatives such as the Quebec League and the Montreal Federation have carried on business but the great majority of loans in Quebec are still made by the Fédération des Caisses Populaires Desjardins.
24.-Summary Statistics of Credit Unions, by Provinces, 1945 Financial Year, with Totals for 1940-44
Note.-The credit union financial year of the provinces end on the following dates: P.E.I., N.S. and N.B., Sept. 30; Que., Ont., Man., Sask., Alta. and B.C., Dec. 31.

[^391]Canadian credit unions increased their loaning operations each year during the War. Total investments (mostly in Victory Bonds) also increased along with loans to members. This is explained, probably by the large number of Canadian credit unions serving farmers and rural areas, where credit needs for financing farm operations remained relatively constant compared to those of urban dwellers and industrial workers.

Purposes for which Loans are Made.-It is difficult from the data available to analyse the purposes for which loans are made by credit unions. Twelve unions in Alberta, however, submitted data from which a partial analysis has been made. Loans made by these unions in 1945, are classed as urban or rural and it was found that $\$ 73,274$ was lent to rural borrowers of which 29 p.c. went for payments on farm lands and buildings, 22 p.c. for farm machinery, 20 p.c. for live stock and feed and 18 p.c. for farm supplies. Of urban loans, the majority (between 37 p.c. and 38 p.c.) were made for home improvements and 31 p.c. for payments on lands and buildings. For all credit unions in the Province, loans totalling $\$ 1,549,792$ were made; for the 7,845 borrowers, the average was $\$ 197 \cdot 55$.

Federations and Services.-Nearly all credit unions in Canada are united or joined at the provincial level by federations or leagues. Basically, these groups are formed to effect savings by the co-operative purchase of supplies and in many cases to provide legal, accounting and educational services. In each province there is a central credit society which receives surplus funds of individual unions and makes them available to other unions and co-operative associations. In some Provinces, this function is performed by loan and deposit departments of the provincial leagues while others have established a special credit union for credit unions. In Quebec there are eight such "caisses regionales" to provide regional service for member "caisses" Much work has been done during the war years to strengthen these federations and leagues and from this work has grown an increase in activities which provide services other than provision of credit-union supplies. All provincial leagues, with the exception of the Quebec Federation and the Montreal Federation, are affiliated with the Credit Union National Association of the United States. Through this Association plans are available for the bonding of officials and treasurers and also for insuring loans to members and members' savings. These services are provided in Canada through a representative at Hamilton, Ont. In Quebec, bonding and burglary and other types of insurance are provided for "caisses populaires" through the "Société d'Assurance des Caisses Populaires"

Another development has been the organization and incorporation of the Cooperators' Fidelity and Guarantee Association which is designed to write honesty and faithful performance bonds for credit union treasurers and co-operative officials. The Association in now operating in Ontario.

Recent Developments.-Two important new credit-union organizations made their appearance in November, 1945; the Canadian Credit Union Federation in Winnipeg and the Fédération des Caisses Desjardins in Montreal.

The Canadian Credit Union Federation is designed to do, on a national basis what is being done by the provincial federations and leagues. It will keep statistics and records, look after bonding, act as Canadian agent for CUNA (Credit Union National Association of the United States) Mutual Insurance Society and act as a clearing house for and co-ordinate educational and promotional programs. The Federation will finance itself through assessment on the provincial leagues and will
also receive substantial assistance from CUNA. In May, 1946, this Federation was recognized by CUNA and Canada was elected to a vice-presidential seat on the executive committee. All Canadian leagues now affiliated with CUNA will now be included in the Canadian vice-presidential area rather than with contiguous United States areas as heretofore. Provision has been made for the inclusion of representatives of every provincial league and federation in the Dominion.

The Montreal Fédération des Caisses Desjardins was organized under the provisions of Sect. 49 of the Quebec Co-operative Syndicates Act. It consists of nine caisses populaires on the island of Montreal all of which formerly were members of the Fédération des Caisses Populaires Desjardins whose headquarters are at Lévis.

Legislation.-Many provincial Acts concerning credit unions were amended during the year in the light of operating experience but there were no major changes affecting policy. The most important legislative change occurred in Manitoba where a new Act respecting credit union societies was assented to on Apr. 13, 1946. This new Act repeals Part VIII of the Companies Act under which credit unions were formerly incorporated.

Taxation.-Following closely the recommendations of the MacDougall Royal Commission on Co-operatives, amendments to the Dominion Income War Tax Act which were passed in August, 1946, continued the exemption from taxation formerly accorded all credit unions and also included federations of credit unions which have as members co-operative associations, churches or schools, etc. The exemption in all cases is contingent on the society or federation deriving its revenue primarily from loans to members.

## Section 7.-Foreign Exchange

## Subsection 1.-Exchange Rates

The Canadian dollar, adopted as Canada's currency in 1857, was equivalent to $15 / 73$ of the pound sterling; in other words, the pound was equal to $\$ 4.866$ in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of the War of 1914-18. During the first eleven years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date, the dollar in the two countries was equivalent at par, and variation was only between the import and export gold points or under $\$ 2$ per $\$ 1,000$.

At the outbreak of the War of 1914-18, both the pound sterling and the Canadian dollar were removed from the gold standard, and fell to a discount in New York. However, this discount was 'pegged' or kept at a moderate percentage by sales of United States securities previously held in the United Kingdom, by borrowing in the United States and, after the United States entered the War, by arrangement with the United States Government. After the War, when the exchanges were 'unpegged' about November, 1920, the British pound went as low as $\$ 3.18$ and the Canadian dollar as low as 82 cents in New York. In the course of the next year or two, exchange returned practically to par, and the United

Kingdom resumed gold payments in April, 1925, and Canada on July 1, 1926. From then until 1928 the exchanges were within the gold points, but in 1929 the Canadian dollar again fell to a moderate discount in New York. The dislocation of exchange persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points, however, only for a few scattered intervals.

The 1942 Year Book at pp. 829-830 deals with the pre-war position of Canadian exchange from September, 1931, to the outbreak of War.

At the beginning of the War of 1939-45 sterling and Canadian funds, like those of the other initial belligerents, fell to a discount at New York. The pegged official rates remained unchanged throughout the War. On July 5, 1946, the Canadian Government devalued the United States dollar in relation to the Canadian dollar bringing it to parity with the former. A corresponding adjustment was made to sterling, the rate being established at $\$ 4 \cdot 02$ to the pound.

## Subsection 2.-The Foreign Exchange Control Board*

Wartime controls exercised by the Foreign Exchange Control Board are dealt with on pp. 833-835 of the 1941 Year Book and at pp. 830-833 of the 1942 edition. In March, 1946, the Board published a report covering the main aspects of its operations from September, 1939, to the end of 1945, a summary of which may be found at pp. 981-983 of the 1946 Year Book. In April, 1947, the Board's Report covering operations in 1946 revealed that Canada's gold and United States dollar reserves totalled $\$ 1,245,000,000$ at the end of that year, a decline of $\$ 263,000,000$ from 1945.

Relationship of the Board's Functions to the Balance of International Payments.-The basic factor affecting the Canadian exchange position is, of course, the balance of international payments. This subject is dealt with in detail in the Foreign Trade Chapter, at pp. 901-911. In 1946, the flow of Canadian import and export trade maintained the traditional pattern of a large import surplus from the United States and a large export surplus to the United Kingdom and Western Europe. The current account deficit in transactions with the United States reached an all-time high of $\$ 603,000,000$ : however, $\$ 237,000,000$ of this deficit was covered by gold and United States dollars received in transactions with other countries. Inflows of capital to Canada produced an additional $\$ 103,000,000$ leaving $\$ 263,000,000$ as the amount necessary to cover out of gold and United States dollar reserves.

Canada had a current account surplus in trade with the Sterling Area in 1946 of more than $\$ 657,000,000$ (excluding Mutual Aid); $\$ 150,000,000$ of this was financed by the sale of gold by the United Kingdom to Canada. The bulk of the balance was financed by net credits and advances by Canada to the United Kingdom.

Transactions with countries other than the United States and the Sterling Area showed a balance in Canada's favour of about $\$ 400,000,000$. Approximately $\$ 100,000,000$ of this amount represented relief and mutual aid shipments for which no payment was received; $\$ 210,000,000$ was financed by Canadian export credits; and $\$ 90,000,000$ was paid by countries concerned in United S.tates dollars.

The substantial gold and United States dollar reserves which Canada had accumulated at the end of the War provided a breathing space and enabled Canada to make imports for cash and, at the same time, substantial exports on credit to assist

[^392]in the reconstruction and recovery of those overseas countries whose economies were seriously impaired as a result of the War. It is of the utmost importance to Canada that the economies of its overseas customers should be restored in order that they may ultimately be able to resume mutually profitable trade on a cash basis.

Changes in Control during 1946.-The changes in control policies and methods in 1946 were of minor importance although of interest to considerable groups of the public. In September, 1946, the regulations were amended to provide that a resident having in his possession United States bank notes and coin to an amount not exceeding $\$ 100$ is not required to sell them to the Board. In line with this, the exemption from permit for the export of funds by resident travellers was increased from a total of $\$ 50$ to a total of $\$ 150$ of which not more than $\$ 100$ may be in United States currency.* In addition, a liberal policy has been followed in dealing with applications for change of residential status since Jùne, 1944, and during 1946 the policy was further modified. Change of status is now granted in any case where the applicant has a bona fide notification of leaving Canada permanently and has obtained permanent entry to the country to which he is destined. Since March, 1946, the United Kingdom and other Sterling Area controls have ordinarily permitted the transfer to Canada of the full amount of legacies (previously restricted to $£ 1,000$ ) and other capital payments from Sterling Area estates to Canadian beneficiaries, as well as certain other types of capital payments which could previously be made only to blocked sterling accounts.

At the session of Parliament in 1946, the Foreign Exchange Control Act was passed to come into force on Jan. 1, 1947, and to replace and supersede on that date the Foreign Exchange Control Order passed under the War Measures Act under which exchange control was carried on from its inception in September, 1939. The Act also replaces the Exchange Fund Act, 1935, under which the Special Exchange Fund Account, in the name of the Minister of Finance, was originally established.

New Foreign Exchange Control Regulations were made on Dec. 19, 1946, to come into force at the same time as the Foreign Exchange Control Act on Jan. 1, 1947. These Regulations reflect two notable changes in general foreign exchange control policy brought about as the result of new factors arising out of steps that Canada and other nations are taking with a view to re-establishing world trade on a multilateral basis.

Under the terms of the agreement made at the time the $\$ 3,750,000,000$ credit was negotiated with the United States, the United Kingdom was committed to make the current sterling receipts of other countries freely available for expenditure anywhere by July 15, 1947 Arrangements were made between Canada and the United Kingdom under which sterling became transferable on Jan. 1, 1947, between Canada and certain other countries, including the United States, in addition to countries in the Sterling Area. This meant that Canadian exporters and importers have been able, since the beginning of 1947, to trade on a sterling basis, if they wish to do so, with a number of countries in addition to those in the Sterling Area. $\dagger$ This does not mean that the whole of Canada's surplus with the United Kingdom is now

[^393]available to offset a deficiency with other parts of the world, however, since to the extent that our exports to the United Kingdom are financed by credit, they cannot give rise to any surplus of sterling convertible into other currencies. The main significance of the arrangement to Canada is the prospect it offers that, when economic recovery in the United Kingdom has proceeded to the point where the balance of payments equilibrium has been restored, the whole of Canada's surplus from trade with the United Kingdom will again be available to meet her characteristic deficit in trade with the United States as was the case before the War. Meanwhile, this convertibility of sterling again necessitates the exercise of control over sterling transactions and transfers of Canadian dollars from Canada to the Sterling Area.

The other principal change in the new Regulations arises from the extension by the Canadian Government of export credits to various European countries to assist them in overcoming their difficulties during the transitional period of reestablishing their trade. These credits were at first used largely for purchases in Canada by the foreign governments concerned. For all other exports the Canadian exporter was required to obtain payment in foreign exchange. Several of the countries, however, wished to use the credits to finance private trade and at the 1946 session of Parliament the Export Credits Insurance Act was amended to enable this to be done. In line with this, the new Foreign Exchange Control Regulations provide that exports from Canada to France, Belgium, Norway and Czechoslovakia, as well as to Sterling Area countries, may now be made for settlement either in foreign exchange as heretofore or in Canadian dollars paid from a bank account in Canada to a resident of one of those countries.

The Return to Parity of the Canadian Dollar.-In the latter part of 1946, after the return to parity of the official rate for United States dollars, the Canadian dollar was quoted at a discount in the so-called unofficial market in New York. The existence of a spread between the official rate and the rate quoted for the Canadian dollar in the unofficial market in the United States is not a new phenomenon. In June, 1940, for example, the unofficial quotation in the New York market averaged 10 p.c. lower than the official rate and for the year 1940 as a whole, it was 5 p.c. below the official rate. The most important fact about the unofficial market is that transactions in it are entirely restricted to non-residents. Any resident of Canada requiring funds for expenditure in the United States for authorized purposes is able to obtain them through the official market at the official rate. Furthermore, no residents of Canada coming into possession of United States dollars are ever authorized to convert them into Canadian dollars through the unofficial market. All foreign exchange transactions in which residents of Canada are authorized to engage, take place at official rates of exchange.

There are, however, certain types of capital payments to non-residents which, under existing arrangements, are not eligible for conversion into United States funds out of Canada's official reserves. Examples of such payments are the proceeds of permitted sales of securities by non-residents in Canada and the proceeds of maturing obligations which are payable in Canadian funds. In the light of the restricted and highly specialized nature of the unofficial market for Canadian dollars, it is clear that the rate quoted there has limited significance. All but a very small fraction of Canada's unofficial transactions take place at official exchange rates. All current account payments to non-residents may be made in foreign exchange obtained in

Canada at official rates. All Canada's current receipts from transactions with the United States dollar area (except some part of the tourist receipts) accrue in the form of foreign exchange. The significance of the unofficial market relates, therefore, mainly to capital items.

## PART II.-MISCELLANEOUS COMMERCIAL FINANGE

## Section 1.-Loan and Trust Companies*

The Canada Year Book, 1934-35, presents at p. 993 an outline of the development of loan and trust companies in Canada from 1844 to 1913.

The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. However, summary statistics for 1944 and 1945 of provincial companies have been supplied by those companies and are included in Table 1 in order to complete the statistics for loan and trust companies throughout Canada. It is estimated that more than 90 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with Dominion registered companies. The statistics of Tables 2 and 3 refer only to those companies operating under Dominion charter, except that, beginning with 1925, the statistics of loan companies and trust companies incorporated by the Province of Nova Scotia and brought by the laws of that Province under the examination of the Dominion Department of Insurance, have been included in Table 3 as well as those for trust companies in New Brunswick since 1934 and in Manitoba since 1938. In 1920, the Dominion Department of Insurance took over the administration of the legislation concerning Dominion loan and trust companies-the Department of Finance had previously exercised supervision of the activities of these companies.

As indicating the progress of the aggregate of loan company business in Canada, it may be stated that the book value of the assets of all loan companies increased from $\$ 188,637,298$ in 1922 to $\$ 213,649,794$ in 1931 , or by $13 \cdot 3$ p.c., but declined to $\$ 197,455,071$ in 1945 or by $7 \cdot 6$ p.c. since 1931 . The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from $\$ 154,202,165$ in 1928 to $\$ 278,728,016$ in 1945 or by $80 \cdot 8$ p.c. In the former year, the total of estates, trust and agency funds administered amounted to $\$ 1,077,953,643$ and in the latter year to $\$ 3,117,808,409$.

Functions of Loan Companies.-The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings-department deposits. In the war years from 1939 to 1945 the amount invested in mortgages declined by almost $\$ 27,000,000$, being practically all accounted for by an increase in the amount of bonds and stocks held. Of the loan companies operating under provincial charters, the majority conduct loan, savings and mortgage business, generally in the more prosperous farming communities.

[^394]Functions of Trust Companies.-Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits, but the lending of actual trust funds is restricted by law.

Statistics of Loan and Trust Companies.-The figures of Table 1 are of particular interest in the case of trust companies. On account of the nature of their functions, they are mainly provincial institutions, their chief duties being intimately connected with the matter of probate, which lies within the sole jurisdiction of the provinces.

## 1.-Operations of Provincial and Dominion Loan and Trust Companies as at Dec. 31, 1944 and 1945

| Item | 1944 |  |  | 1945 |  |  |

## 2.-Assets and Liabilities of Loan Companies Chartered by the Federal Government, as at Dec. 31, 1936-45

Nors.-For the years 1914-24, see p. 913 of the 1937 Year Book. Figures comparable to those shown below for the years 1925-35 are given at p. 985 of the 1946 edition. The figures appearing here include loan companies chartered by the Government of Nova Scotia, but inspected by the Dominion Department of Insurance. Figures given in this table do not include small loans companies (see Sect. 2, pp. 1051-1052).

| Year | ASSETS |  |  |  |  |  |  |

## 3:-Assets and Liabilities of Trust Companies Chartered by the Federal Government, as at Dec. 31, 1936-45

Note.-Figures for the years 1914-24 appear at pp. 914-915 of the 1937 Year Book. Figures comparable to those shown below for the years 1925-35 are given at pp. 986-987 of the 1946 edition. The figures of this table include statistics of trust companies chartered by the following Provincial Governments but brought in the stated years, under the inspection of the Dominion Department of Insurance: Nova Scotia, 1925; New Brunswick, 1934; and Manitoba, 1938.

| Year | COMPANY FUNDS-ASSETS |  |  |  |  |  |  |  |

| 1940. | 256,781,691 | 1945. | 363,332,677 |

## Section 2.-Licensed Small Loans Companies and Licensed Money-Lenders

There have been incorporated in recent years, by the Parliament of Canada, three companies that make small loans, usually not exceeding $\$ 500$ each, on the promissory notes of the borrowers and additionally secured in most cases by endorsements or chattel mortgages. While these companies, under their original charter powers, were permitted to make loans on the security of real estate, that power was withdrawn by the Small Loans Act, 1939.

On Jan. 1, 1940, the Small Loans Act, 1939 (3 Geo. VI, c. 23), passed by the Parliament of Canada, came into force, by which the above-mentioned small loans companies and money-lenders licensed thereunder making personal loans of $\$ 500$ or less, are limited to a rate of cost of loan not in excess of 2 p.c. per month on outstanding balances, and unlicensed lenders to a rate of 12 p.c. per annum, including interest and charges of every description.

## 5.-Assets and Liabilities of Small Loans Companies Chartered by the Federal Government, as at Dec. 31, 1936-45

Note.-Figures for the years 1928-32 will be found at p. 838 of the 1942 Year Book and for the years 1933-35 at p. 988 of the 1946 edition.

[^397]The Small Loans Companies chartered by the Federal Government show a substantial increase in business for 1945 as compared with the previous year. The number of loans made to the public during the year increased from 162,242 to 180,781 or by 11.4 p.c. and the amount of such loans rose from $\$ 23,684,406$ to $\$ 27,767,766$. The average loan was approximately $\$ 154$ compared with $\$ 146$ in 1944. At the end of 1945 , the loans outstanding were 117,144 to an amount of $\$ 13,354,915$ or an average of $\$ 114$ per loan.

Licensed Money-Lenders.-In addition to the above-mentioned small loans companies, 51 licensed money-lenders furnished annual statements of their business, showing, for 1945 , total assets of $\$ 13,881,870$, of which balances of small loans amounted to $\$ 7,020,509$, other balances to $\$ 4,940,924$, bonds, debentures and stocks to $\$ 563,244$, real estate to $\$ 162,033$, cash to $\$ 676,920$, and other assets to $\$ 518,240$. Liabilities amounted to $\$ 13,881,870$, of which borrowed money accounted for $\$ 8,456,788$ and paid shares and partnership capital for $\$ 3,172,049$. Loans made in 1945 numbered 84,149 , totalling $\$ 14,122,754$ and averaging almost $\$ 168$, an increase of 17.9 p.c. in number and 21.8 p.c. in the gross amount; at the end of the year there were 58,563 loans outstanding with a total of $\$ 7,020,509$ averaging $\$ 120$. About 40 p.c. of the loans made in 1945 were between $\$ 100$ and $\$ 200$. Further details of this type of business are given in the 1945 report "Small Loans Companies and Money-Lenders Licensed under The Small Loans Act, 1939", published by the Dominion Department of Insurance.

## Section 3.-Sales of Canadian Bonds*

Previous editions of the Year Book have traced the sales of Canadian bonds through the interesting period covered by the War of 1914-18 and the intervening years to the outbreak of hostilities in 1939. In 1940, the first complete year of the

[^398]War, total sales were far greater than in any previous year. There was a slight decrease in 1941 but in each of the years 1942 to 1945, sales were successively higher that in any previous year, whereas the 1946 total was $27 \cdot 8$ p.c. lower than that of 1945.

The year 1946 showed a renewal of interest in municipal and corporation sales with the figures of $\$ 140,815,491$ for municipal sales and $\$ 581,499,188$ for corporation sales constituting a record high. Thus, although the 1946 total of $\$ 5,853,991,129$ showed a decrease in total sales from the 1945 figure of $\$ 8,104,975,794$, the decrease is mostly accounted for in the decline of Dominion sales from $\$ 7,747,691,000$ in 1945 to $\$ 4,974,223,850$ in 1946 , the trend being away from Dominion financing to financing by corporations and municipalities. Municipalities and corporations have never sold their issues on more favourable terms than during 1946, the prices offered by financial institutions and investment houses constituting a barometer of strong industrial and municipal credit. In addition, the return of the Canadian dollar to par on July 5, 1946, removed the exchange deterrent to calling issues with a New York payment feature. As a result, the volume of bonds refunded to lower rates in the Canadian market during 1946 was more than twice as large as in any previous year. A ${ }^{\top}$ highlight of the year's bond issues in 1946 came in November with the sưccessful flotation of a new Dominion of Canada Savings Loan. Limited to purchases by individuals only, and to not more than $\$ 2,000$ for each individual purchase, the total sales of this issue, which was left open, amounted to $\$ 489,203,050$ at Dec. 31,1946 . The growth of sales and applications from the time of the First War Loan of Feb. 1, 1940, to the Savings Loan of Nov. 1, 1946, is as follows:-

| Date | Purchases by Individuals | $\begin{gathered} \text { Purchases } \\ \text { by } \\ \text { Corporations } \end{gathered}$ | Total Cash Sales | Applications |

# 6.-Sales of Canadian Bonds, by Class of Bond and Country of Sale, 1937-46 

## (From the Monetary Times Annual)

Note.-Figures for 1904-25, inclusive, are given at p. 921 of the 1933 Year Book and for the years 1926-36 at pp. 990-991 of the 1946 edition. Since 1936 much of the borrowing for the Canadian National Railways has been done directly by the Dominion and since the War the Federal Government has advanced money to both the Canadian National and Canadian Pacific Railway Companies for the purchase of equipment. For this reason the column heading "Railway" in previous Year Books has been omitted in this table and such small bond issues as have been made by the Canadian Pacific Railway have been included under "Corporation"

| Year | CLASS OF BOND |  |  |  |  |  |

${ }^{2}$ Includes $\$ 4,000,000$ distributed elsewhere. ${ }^{3}$ Not including bonds purchased by Canadian dealers and later sold in the United States.

## Section 4.-Operating Profits of Corporations and Net Income to Stockholders

In the 1946 Year Book at pp. 991-995, financial statistics of Canadian corporations were given for the years 1936-44. These statistics were taken from the Statistical Summary of the Bank of Canada. The study of corporation finances has been made by the Bank of Canada since 1936 but in the early years was conducted on a more restricted basis. As the study has advanced, the Bank has been able to enlarge the field by the inclusion of more and more companies and thus the results have become more representative. At the pages referred to in the 1946 Year Book the study included 686 companies-those presented below, cover 709 companies and the revisions have been carried back to the first year of the series, viz., 1936. The figures disclose how the sharply rising level of Dominion taxation has affected the business life of the country. Every effort was made by those responsible for the study to show the aggregate results on a closely comparable basis: the group of companies is wide and includes those of low as well as of high tax status.

The ordinary corporation income tax during the war years and up to Jan. 1, 1947, was 18 p.c. of net profits and there was also a minimum tax on all corporate incomes of 22 p.c. under the Excess Profits Tax Act, making an aggregate flat-rate tax of 40 p.c. Up to Jan. 1, 1946, the excess profits tax took 100 p.c. of profits in excess of $116 \frac{2}{3}$ p.c. of standard profits with 20 p.c. refundable; since Jan. 1, 1946, excess profits taxation has taken 20 p.c. (in addition to the 40 p.c. flat rate) in excess of $116 \frac{2}{3}$ p.c. of standard profits. The Budget of June 27, 1946, provided for a flat rate of 30 p.c. (to replace the 18 p.c. and 22 p.c. basic rates) and the reduction of the 20 p.c. excess profits rates to 15 p.c., as from Jan. 1, 1947

These rates are to remain in effect to Dec. 31, 1947, after which the 15 p.c. excess profits tax is to be abolished. The Provinces of Quebec and Ontario, which have not (at September, 1947) entered into new taxation agreements with the Federal Government, have imposed flat rates of 7 p.c. each, on profits of companies operating within their boundaries.

Under the new agreements with the Dominion the provinces are permitted to impose a 5 p.c. tax on the income of a corporation attributable to its operations in the province. This tax will first apply to income of the year 1947. At the time of writing (September, 1947), seven provinces had entered into an agreement with the Dominion and all had imposed the 5 p.c. corporation income tax.

The net income left to stockholders, including the refundable excess profits tax, which was $\$ 223,000,000$ in 1936 and $\$ 283,000,000$ in 1939 reached a maximum of $\$ 301,000,000$ in 1942 and in 1945 was actually only $\$ 273,000,000$. The cash dividends paid to stockholders were much less in 1944 and 1945 than they were in 1939, although undistributed profits were, in consequence, that much larger. Depreciation items, which one would naturally expect to be much heavier in view of the intensified operations and the much greater wear and tear on plant, did not show a trend unduly out of line. They did show, however, a gradual upward movement from $\$ 117,000,000$ in 1939 to $\$ 191,000,000$ in 1942 and a decrease to $\$ 147,000,000$ in 1945. Part of the increase in the earlier years of the War of 1939-45 was accounted for by the increased capital investment in plant during those years. This latter item was $\$ 98,000,000$ in 1939 and $\$ 155,000,000$ in 1941 , after which it decreased to $\$ 77,000,000$ in 1943 and was up again to $\$ 150,000,000$ in 1945.

## 7.-Financial Statistics Showing Source and Use of Funds for 709 Industrial Companies, 1936-45

(In Millions of Dollars)

Nore.-The sample includes all those companies with 1941 assets over $\$ 200,000$ for which consistent reports were available in sufficient detail for the period 1936-45. This statement, compiled by the Bank of Canada, is designed to show net cash received from all sources and paid out for all purposes: revaluations or purely bookkeeping transactions which affect items of the balance sheet, particularly plant, property and equipment, preferred and common stock outstanding and, in a few instances, funded debt, are not reflected in the statement. Figures are for the respective fiscal years ended nearest to Dec. 31 of the year stated.

[^400]It is seen in Table 8 that income and excess profits taxes, which absorbed an average of less than 18 p.c. of the net taxable profits in the pre-war years 1936 to 1938, increased this proportion to no less than $49 \cdot 4$ p.c. in 1945.

## 8.-Summary of Profit Statistics for $\mathbf{7 0 9}$ Industrial Companies, 1936-45

(In Millions of Dollars)

Nors.-Compiled by the Bank of Canada. The sample includes all those companies with 1941 assets over $\$ 200,000$ for which consistent reports were available from 1936-45. The accounts of certain companies which were available in some or all of these years were not comparable throughout the period and had to be excluded. The material is, of course, subject to all the limitations and qualifications which apply to the basic accounting statements. Figures are for the respective fiscal years ended nearest to Dec. 31 of the year stated.

| Item | 1936 | 1937 | 1938 | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 |

| Net income paid out in cash dividends. | 182 | 216 | 229 | 220 | 221 | 221 | 205 | 194 | 192 | 190 |
| Undistributed income (excluding forced savings) ${ }^{1}$ | 41 | 69 | 6 | 63 | 57 | 79 | 76 | 53 | 50 | 56 |

[^401]The net operating profits before depreciation reached a peak in 1942. Comparing 1937, as a normal year, with the peak year, the increase amounted to 77 p.c. Deducting depreciation, investment and other non-operating income, and bond interest the aggregate amount left before taxation showed a gain of $75 \cdot 9$ p.c., in the same comparison, but after income and excess profits provision the percentage of net income available to stockholders showed only a $5 \cdot 6$ p.c. increase.

The following statement brings together, for each of the years covered in Table 8, the proportion of tax to profits made and the trend of net profits. This clearly shows that wartime industry in Canada was not permitted to benefit in the way of profits from the increased value of business that resulted from the War.

| Year | Net Profil ${ }^{1}$ | Income and Excess Profits Tax Provision ${ }^{2}$ | P.C. of Taxes Paid to Profits Shown | Net Profit after Tazes |
| :---: | :---: | :---: | :---: | :---: |
|  | \$'000,000 | \$'000,000 | p.c. | \$'000,000 |

| ${ }^{2}$ Exclusive of refundable tax portion. |  |  |  |  |

Analysis by Industries.-The greatest absolute increase was shown by the pulp and paper industry where the net income increased from $\$ 1,300,000$ in 1936 to $\$ 15,800,000$ in 1945 . Other substantial increases were recorded by the machinery industry, retail trade and service, iron, steel and products, and drink. Of the relatively few industries showing decreases, the outstanding example was gold mining where net income decreased from \$38,500,000 in 1936 to $\$ 14,300,000$ in 1945.

As was to be expected, the profits when analysed by industries followed similar trends as the income by industries though in more exaggerated form. For instance, the profits of the machinery industry showed an increase of no less than $\$ 36,200,000$, pulp and paper companies $\$ 29,700,000$, drink $\$ 26,400,000$, retail trade and service $\$ 21,900,000$, and iron, steel and products $\$ 18,400,000$. The profits of gold mines decreased over the period by $\$ 25,400,000$.

## 9.-Net Income of $\mathbf{7 0 9}$ Industrial Companies, by Industries, 1936-45

(In Millions of Dollars)
Nore.-Figures are for the respective fiscal years ended nearest to Dec. 31 of the year stated.

## Section 5.-Forecast of Capital and Maintenance Expenditures of Canadian Business*

One of the most important determinants of the level of business activity is the volume of private investment. The volume of private investment, in turn, is established largely by businessmen's evaluations of current and future prospects in their respective fields of effort, such as export possibilities, levels of home consumption, and the costs, prices, taxes, etc., affecting profits. Investment intentions, therefore, reflect the judgment of business enterprise on prospects for the future.

The Department of Reconstruction and Supply has, during the reconversion years, initiated a program to obtain annual forecasts of the capital and repair and maintenance expenditures of business enterprise. These forecasts are based on surveys of investment intentions made and compiled with the assistance of the Dominion Bureau of Statistics. The 1947 forecast, summarized below, covers, in part, returns from 12,000 firms in manufacturing, logging, utilities (including transportation), construction, banking and large segments of the retail, wholesale and service industries. The remainder of the forecast is built up by estimates of outlays in the unsurveyed retail, wholesale and service industries, in agriculture and in institutional and residential building. As maintenance and repair does not augment or replace capital goods, it is excluded from further consideration until the last paragraph.

[^403]Capital Expenditures in Recent Years.-During the past, investment in capital goods expanded greatly during years of prosperity. Investment in Canada in physical durable assets (excluding direct government outlay) rose sharply during the boom of the late 1920 's and reached $\$ 1,100,000,000$ in 1929 . By 1933 , expenditures of this type had declined to $\$ 218,000,000$. They then turned upward, reaching $\$ 632,000,000$ in 1937 , followed by a moderate reduction in the next two years. In 1939, non-governmental investment in physical durable assets comprised 9 p.c. of the gross national product of $\$ 5,495,000,000$ achieved in that year.

In the years following 1939, production and national income expanded rapidly as a result of wartime conditions. There was a consequent impetus to capital-goods investment, not only in munitions and related industries, but in other fields where the war-induced increase in the national income raised production substantially above the pre-war level. However, the large-scale war requirements for basic materials kept the production of capital goods to the minimum necessary for the successful prosecution of the War. Consequently, an accumulation of needs for capital goods took place among the industries less essential for war.

In spite of this postponement of capital formation, the requirements for war production alone necessitated a large investment program, particularly during the early years of the War. Investment in physical durable assets by the non-governmental sector of the economy stood at $\$ 842,000,000$ in 1941 , and receded to only moderately lower levels for the next three years.

Capital Expenditure in the Reconversion Period.-After the end of the War, the demand for capital goods was accentuated not only by the accumulation of replacement needs, but also because of the requirements of an expanded and altered peacetime market. These extensive demands could not be filled immediately; time was required for the necessary reorganization of the nation's productive facilities. Reconversion of industry which had commenced before V-E Day was speeded up with the conclusion of the War in August, 1945. In the transition period that followed, plans were made for re-equipment, modernization and expansion of industry to meet civilian needs.

## 11.-New Investment in Durable Physical Assets (Excluding Direct Government Investments), 1945-47

| Type of Enterprise |
| :---: |

[^404]As the tempo of change to a peacetime basis picked up, the outlay of the nongovernment sector of the economy on physical durable assets increased rapidly. According to Table 2, such capital expenditure amounted in 1945 to $\$ 349,146,000$ in 1946 to $\$ 606,623,000$, and the forecast outlay for 1947 is $\$ 1,033,557,000$ for all business groups covered in the survey. Of the total expended and projected outlay on capital account for the three years of $\$ 1,989,326,000$, it is possible to allocate $\$ 1,443,000,000$ regionally, as follows: Maritimes, $\$ 65,000,000$; Quebec, $\$ 423,000,000$; Ontario, $\$ 682,000,000$; Prairie Provinces, $\$ 113,000,000$; and British Columbia $\$ 160,000,000$. Of the total expended and projected outlay of $\$ 914,000,000$ on the part of the manufacturing industries, the shares of the leading cities have been: Montreal, $\$ 134,000,000$; Toronto, $\$ 147,000,000$; Hamilton, $\$ 50,000,000$; Windsor, $\$ 30,000,000$; Winnipeg, $\$ 12,000,000$; and Vancouver, $\$ 34,000,000$.

Forecast of Capital Expenditure in 1947.-Business groups covered by the survey expected to make approximately $\$ 1,000,000,000$ of the forecasted aggregate new capital expenditure of a little over $\$ 1,700,000,000$ in 1947 (Table 1). This total (covering the surveyed group only) represents an increase of 70 p.c. over the estimated value of investment actually achieved by these groups during 1946. The most marked expansion appears likely to take place in the mining industry, where the expected outlay is several times that of the previous year. In utilities, the investment planned for 1947 is nearly twice that accomplished in 1946. A substantial increase, 73 p.c., is also indicated for the construction industry, and for a number of commercial groups covered in the survey. In spite of some decline of output and employment in manufacturing following the conclusion of the War, good business prospects for 1947 are inducing this important group of industries to plan an investment program 48 p.c. greater than that undertaken in 1946. Woods operations alone of the principal groups covered have indicated a moderate decline in the expected value of investment during the coming year.

For those private sectors not included in the survey, independent estimates have been made of what might be considered reasonable objectives for the year, taking into account the availability of materials and other relevant considerations. These estimates add $\$ 700,000,000$ to the total outlay and represent an increase of approximately 33 p.c. over the realized program for 1946.

The 70 p.c. increase in the surveyed sector of the business economy plus the estimated 33 p.c. in the unsurveyed sector give a combined increase of 53 p.c. in the aggregate demand for new physical durable assets over 1946. An investment program of this magnitude reflects not only the need for replacement, modernization and expansion of industry, but also a healthy optimism about economic development in the future on the part of business enterprise. The expansion indicated, however, is so substantial over a short period of time that the question arises as to the desirability of a sharp increase in investment activity that may be followed by a serious decline when market prospects lose their present buoyancy.

With respect to probable realization in 1947, another survey* recently conducted shows that producers of the principal basic and building materials expect, during 1947, to increase their aggregate production by amounts varying generally

hotels, garages, office buildings and recreation halls.
from 10 to 30 p.c. over the 1946 levels. It seems probable that this increased domestic output will be supplemented by larger imports of some supplies customarily obtained from abroad. A moderate increase in the supply of certain 'key' materials may permit a more than proportionate increase in aggregate investment, particularly when allowance is made for the substitution of materials that may occur in some instances. It is unlikely, however, that the available volume of supplies, though considerably improved over the previous year, will be sufficient physically to support an over-all increase of 53 p.c. in the intended volume of business investment in 1947. Scarcity of labour skills, particularly in the construction industry, may constitute a further hindrance to the realization of the investment intentions. Although some of the intentions may not be realized during 1947, it is nevertheless likely that the business investment program will involve an increased portion of the nation's productive facilities and will contribute correspondingly to the maintenance of a high level of national income and employment.

Forecast of Combined Capital and Repair and Maintenance Expendi-tures.-Since the production of new capital goods and the repair and maintenance of existing capital goods have to be supplied from the same basic productive facilities, total figures for the two provide an indication of total demand that may be placed on the capital goods industries and labour. In the surveyed sector of business enterprise, it is estimated that new investment will be 70 p.c. larger and maintenance and repair 8 p.c. larger in 1947 than in 1946, with a combined increase of 40 p.c. (Table 12). On the assumption that anticipated repair and maintenance expenditures in those groups not covered by the survey bear the same relationship to 1946 outlay as in those groups covered by the survey, the aggregate contemplated capital, repair and maintenance expenditures for all business (excluding direct government) would be about one-third above the actual outlay for 1946. In view of the anticipated small increase in repair and maintenance expenditures, it is likely that most of the anticipated increase in the supply of materials and components will go into new investment. It still appears, however, that in 1947, as in the previous year, business enterprise will find it difficult to realize fully its investment intentions.

It is forecasted that the surveyed sector of business enterprise will increase its outlay for additions to or replacement of buildings by nearly 50 p.c., and contract outlay on repair and maintenance of structures by about 13 p.c., for an anticipated total construction outlay 20 p.c. larger in 1947 than in 1946. The outlay for new machinery and equipment is expected to increase by about $85 \mathrm{p} . \mathrm{c}$. and for maintenance and repair of machinery and equipment by nearly 25 p.c., for a total increase of 55 p.c.

An introductory statement summarizing the salient features of the legislation covering insurance in general and the fields of Dominion and provincial jurisdiction appears at pp. 844-846 of the 1941 Year Book.

The 1942 Year Book, at pp. 842-846, contains a special article on the developments in fire and casualty insurance in Canada between 1931 and 1940, consequent upon the enactment of the three Insurance Acts of 1932.

## INSURANCE IN CANADA DURING THE DEPRESSION AND WAR PERIODS

## Life Insurance

This review brings up to date, in some respects, the record oi life insurance contained in the Canada Year Book, 1925; a historical review of legislation regarding the origin and growth of the business is contained in the 1933 edition.

In the decade 1916 to 1925 the net amount of life insurance business effected in Canada by Canadian, British, and foreign life companies registered under Dominion laws, and the net amount of business in force at the end of the period, were each three times the corresponding amounts effected in, and in force at the end of, the preceding decade and the amount paid to policyholders was almost exactly 10 p.c. of the amount effected.

In the first half of the decade 1926 to 1935, the amount effected was approximately 90 p.c. of the amount effected in the whole preceding decade and the amount in force at the, end of 1930 exceeded by over 55 p.c. the amount in force at the end of 1925 ; the amount paid to policyholders was approximately 10.5 p.c. of the amount effected.

In the second half of the decade 1926 to 1935, the amount effected was little more than 70 p.c. of the amount effected in the first half and the amount in force at the end of the decade was nearly 4 p.c. less than at the end of 1930 , while the payments to policyholders were over 26 p.c. of the amount effected and exceeded

[^406]the amount paid in the first half of the decade by approximately 67 p.c., the larger proportion of which increase was represented by the increased payment of cash surrender values of the policies.

These figures indicate, first, that the impact of the depression, which commenced in 1929, did not seriously disturb the life insurance field before the end of 1930; secondly, that thereafter the effect of the depression was greater than that produced by any other period of financial panic, war, or pestilence that Canada has experienced; and, thirdly, that the life insurance policies held by a depressionstricken public became in effect savings deposits payable on demand to the extent of the cash values guaranteed by the policies.

The experience of the decade 1926 to 1935 has been divided into the two periods because the first part was mainly a period of apparent prosperity and the latter a period of real depression. The decade that followed may also conveniently be divided into two parts, since the first part included the remaining years of the depression period and the latter part was almost wholly devoted to the prosecution of the War, with its attendant increase in the circulation of money and in the national income. The amount of new business effected in the first part of that decade was approximately 97 p.c. of that in the latter part of the preceding decade; the net amount in force at the middle point of the later decade was over 11 p.c. in excess of the amount in force at the end of the preceding decade, while the total payments to policyholders were approximately 94 p.c. of the amount paid in the preceding five years. A very different trend was experienced in the last half of the decade 1936 to 1945 . New business effected exceeded by approximately 39 p.c. that effected in the first half. The amount in force at the end of the period exceeded by approximately 40 p.c. the amount in force at its middle point and the payments to policyholders, notwithstanding the payment of war claims, fell below the amount paid in the first half by 6 p.c.

The experience of the Second World War duplicates, so far as the business of life insurance is concerned, that of the First World War; the stability of the life insurance institution has been more fully recognized by the public than ever before, and it will be surprising if the post-war period on which we are entered does not see a further great increase in the insurance protection of the Canadian public similar to that which characterized the period commencing with the year 1919.

The foregoing experience is indicated in tabular form by the following figures for all companies, which include as well the experience for the earlier decades commencing with the year 1875.

[^407]In the statement on p. 1065, the Canadian business of Canadian companies is included, as follows:-

| Period | Companies Registered at End of Period | Net New Business Effected | Net Amount in Force at End of Period | Premiums and Annuity Consideration Received | Total Payments to Policyholders |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | \$ | \$ | \$ | \$ |
| 1875. | 7 | 5,077,601 | 21,957, 296 | 707,256 | 152,652 |
| 1876-1885. | 10 | 92, 815,053 | 74,591,139 | 12,792,386 |  |
| 1886-1895. | 11 | 245, 869,453 | 188,326,057 | 42,034,660 | - $19,940,888$ |
| 1896-1905. | 22 | 430,551,779 | 397,946,902 | 92,930,789 | 43,402,141 |
| 1906-1915. | ${ }_{28}$ | 962,874,189 | 829,972, 809 | 206,183, 496 | 105,560, 227 |
| 1916-1925. | 28 | 2,999,840,703 | 2,672,989,676 | 592, 230, 921 | 299,539,492 |
| 1926-1930. | 28 | 2,906,522,666 | 4,319, 370, 209 | 625, 181,068 | 336,329,564 |
| 1931-1935. | 28 | 1,976,741,019 | 4,164,893,298 | 706,314,305 | 555,416,582 |
| 1936-1940. | 28 | 1,997,224,913 | 4,609,213,977 | 686,335,884 | 501,502,145 |
| 1941-1945. | 28 | 2,865, 973, 053 | 6,440,615,383 | 819,073,885 | 483,391,125 |
| Total | - | 14,483,490, 429 | - | 3,783,784,650 | 2,350,512,972 |

The growth of the total business of Canadian companies is shown in the following statement:-

| Period | Net New Business Eflected | Net Amount in Force at End of Period | Premiums and Annuity Consideration Received | Total <br> Payments to <br> Policyholders | Actuarial Reserve at End of Period | Total <br> Payments to Policyholders and Increase in Reserve |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | 8 | \$ | \$ | \$ | \$ |
| 1875. | 5,077,601 | 21,957, 296 | 707,261 | 152,652 | 2,068,936 | - |

[^408]Investments.-It is now generally conceded that the depression of the 1930's arose from a wave of speculation which swept this continent, if not, indeed, the whole world, under the guise of seizing so-called investment opportunities that presented themselves on the stock exchanges. While the position of Canadian life insurance companies generally was not impaired to the danger point, it appeared desirable to modify the investment powers of the companies by legislation. Up to 1932, the investment powers enjoyed by the companies were subject to restrictions as to the nature and dividend record of corporation stocks that might be acquired, but the amount that might be invested by any company in such stocks coming within the prescribed conditions was unlimited by statute. In 1932, at the request of the companies themselves, the total amount that might be invested by any company in common stocks was limited to 15 p.c. of the amount of its ledger assets; companies having theretofore exceeded that percentage were debarred from investing further in such stocks until, by sales, writing down or increase in ledger assets, the limiting percentage was restored.

Another important change in investment policy induced not by statute but by the judgment of the companies themselves was a decrease in the loans on mortgage and a marked increase in the holdings of government bonds. The latter tendency gradually and steadily increased throughout the fifteen-year period following the onset of the depression until, in the later war years, the full net amount available for new investment by the companies was absorbed in government issues.

The following figures for all Dominion life companies will indicate, as at the end of the years given, the changes due to both of these features of investment policy; the trend of the average rate of interest earned on ledger assets during the said years is also shown.

| As at Dec. 31- | Investments Held in- |  |  | (4) | Percentages- |  |  | Average <br> Rate of <br> Interest Earned |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (1) | (2) | (8) |  |  |  |  |  |
|  | Common Stocks | Federal Government Bonds | Mortgage Loans | Total <br> Ledger Assets | $\begin{gathered} (1) \\ o f^{(1)} \end{gathered}$ | $o f(4)$ | $\begin{gathered} (3) \\ o f(4) \end{gathered}$ |  |
|  | \$'000,000 | \$'000,000 | \$'000,000 | \$'000,000 | p.c. | p.c. | p.c. | p.c. |
| 1930. | 311 | 33 | 338 | 1,436 | 22 | 2 | 24 | 6.23 |
| 1935. | 300 | 177 | 301 | 1,808 | 17 | 10 | 17 | $4 \cdot 59$ |
| 1940. | 260 | 309 | 306 | 2,379 | 11 | 13 | 13 | $4 \cdot 24$ |
| 1945.. | 146 | 1,142 | 267 | 3,367 | 4 | 34 | 8 | 3.89 |

War Mortality.-At the outbreak of the First World War in 1914 few of the life insurance policies outstanding in Canada contained any restrictions respecting military service and most of the companies whose policies did contain such restrictions voluntarily adopted, at the outbreak of the war, a policy of waiving the same and undertaking to pay the face amount of the policies becoming claims due to war service. For new policies issued after the outbreak of the War, the course adopted by the different companies was far from uniform and was based largely on the degree of optimism or otherwise with which the executives of the companies viewed the course and duration of the War; as a rule the provision made for extra premiums for war service was far from adequate to meet the extra mortality incurred. With the increasing gravity of the war problem, the premiums and restrictions were made more onerous and in some cases among the smaller companies became almost prohibitive.

In 1919, the Department of Insurance attempted to collect the figures for the war claims incurred by all companies under Dominion and Provincial laws. The resulting figures represented the amount of settlements under the said policies and were divided into those relating to policies held by: (a) enlisted men killed in action or dying from wounds; (b) enlisted men dying from other causes; (c) other persons engaged in war service or civilians dying as a result of war operations. The figures were as follows, for the years 1914 to 1918, inclusive:-

| Item | Dominion Licensees |  | Provincial <br> Licensees |
| :---: | :---: | :---: | :---: |
|  | Canadian Policyholders | British and Foreign Policyholders of Canadian Companies |  |
|  | \$ | \$ | \$ |
| (a). | 15, 135, 811 | 1,075,345 | 1,864,369 |
| (b) | 1,548,562 | 126,844 | 198,213 |
| (c). | 471,045 | 54,905 | 35,710 |
| Totals.. | 17,155,418 | 1,257,094 | 2,098, 292 |

At the commencement of the Second World War in 1939, the companies took advantage of the experience gained twenty-five years earlier and adopted for policies thereafter issued a scale of extra premiums according to branch and geographical location of war service based on whatever data were available as to the relative hazards incurred. While, with the progress of the War, changes in the war clause and scale of premiums became necessary, the following summary indicates fairly well the main provisions of the war clause and the said scale of premiums.

The benefits payable under such policies becoming claims:-
(a) as a result of death occurring directly or indirectly from aviation training or naval or military aviation service; or
(b) as a result of such service outside of Canada and the United States or within six months after the end of such service; or
(c) as a result of travel or residence outside the said limits and death resulting directly or indirectly from the War,
would be limited to a return of the premiums paid accumulated at 3 p.c. compound interest, unless extra premiums for war service were paid on the following scale:-
I. Military Service Outside of Canada-

1. All military service other than aviation services except the Army Medical Corps
$\$ 90$ per $\$ 1,000$ per annum.
2. Army Medical Corps except nurses..... ... ... $\$ 40$ per $\$ 1,000$ per annum.
3. Nurses.......... ... ... ... .. ... .. ... $\$ 25$ per $\$ 1,000$ per annum.
II. Service Outside of Canada-

Non-combatant units such as Salvation Army, Y.M.C.A., K. of C., ete
$\$ 40$ per $\$ 1,000$ per annum.
III. Civilian Travel and Residence-

1. Within the area consisting of the Continents of North and South America, including the West Indies, the Bermudas, and Newfoundland, together with the waters lying between the same.

No extra.
2. Travel to or residence in an area outside the area described above.

Not less than $\$ 10$ per $\$ 1,000$ per annum, depending on the length of travel or residence, number of trips, etc.
IV Naval Service and Marine Service Outside of Canada-

1. Naval service, excluding submarine service

Not less than $\$ 50$ per $\$ 1,000$
per annum.
2. Mercantile Marine.. … .... excluding the section relating to travel will be included for these risks.
$\$ 25$ per $\$ 1,000$ per annum.

V Aviation Service in Canada-

1. Groundsmen such as mechanics, repair men, etc.... $\$ 10$ per $\$ 1,000$ per annum.
2. Student pilots.
$\$ 60$ per $\$ 1,000$ per annum on the understanding no refund will be made on departure from Canada within one year.
3. Experienced Pilots, viz., those with 300 or more flying hours-

While the record of war mortality experienced by the life insurance companies operating in Canada has not yet been fully compiled, it is probable that the following figures will be found to be fairly reliable; they relate to the war claims incurred on Canadian policies during the period 1939 to 1945, inclusive:-

| Year | Settled by Payment of Full Sum Assured |  | Settled by Payment of Limited Benefit Only |  | Total Claims |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Policies | Face Value | Policies | Face Value | Policies | Face Value |
|  | No. | \$ | No. | \$ | No. | \$ |
| 1939. | 50 | 100,000 | Nil | - | 50 | 100,000 |
| 1940. | 310 | 600,000 | 60 | 100,000 | 370 | 700,000 |
| 1941. | 920 | 1,600,000 | 200 | 500,000 | 1,120 | 2,100,000 |
| 1942. | 2,630 | 3,500,000 | 750 | 1,700,000 | 3,380 | 5,200,000 |
| 1943. | 3,900 | 4,300,000 | 1,570 | 3,100,000 | 5,470 | 7,400,000 |
| 1944. | 7,770 | 7,900,000 | 4,740 | 8,200,000 | 12,510 | 16, 100,000 |
| 1945. | 6,960 | 7,000,000 | 4,460 | 8,200,000 | 11,420 | 15, 200,000 |
| Totals... | 22,540 | 25,000,000 | 11,780 | 21,800,000 | 34,320 | 46,800,000 |
| Deduction under limited benefit clause...... | - | - | - | 20,300,000 | - | 20,300,000 |
| Grand Totals... | - | 25,000,000 | - | 1,500,000 | - | 26,500,000 |

The following additional data respecting the two World Wars, derived from sources believed to be accurate, are of interest:-

| Item | First World War | Second World War |
| :---: | :---: | :---: |
| Duration | 4 years, 3 months | 5 years, 11 months |
| Number of Canadians enlisted | 620,000 | 1,003,000 |
| Number of Canadians sent overseas. | 418,000 | 555,000 |
| Financial cost to Canada | \$1,700,000,000 | \$20,256, 000,000 ${ }^{1}$ |
| Canadian claims paid by insurance companies in Canada. | \$20,500,000 | \$26,500,000 |

${ }^{1}$ Sept. 10, 1939, to Mar. 31, 1947.

## Fire and Casualty Insurance

Fire Underwriting Experience.-This review of the fire and casualty business in Canada follows that appearing in the 1942 edition of the Canada Year Book which brought the record of the business up to and including the year 1940. This article will review the figures to the end of 1945 so that the story for the decade which saw the end of the depression period and all of the Second World War period will be complete.

The experience of fire insurance has, in the view of the trade, a traditional relation to the activity or otherwise of general business; that view is that a period of depression is a period of high fire loss and vice versa, and there are statistics, as well as other considerations, to support that view. If by moral hazard is meant an inclination to incendiarism, it is obvious that anyone so inclined is more likely to yield in that direction if the business carried on in his insured building is bringing him a loss instead of a normal profit but, even if the term implies no criminal intent but merely an involuntary lessening of ordinary caution, a period of inactivity or unprofitable business naturally brings a moral hazard making for high fire loss.

The notable feature of the depression of the 1930's is that it brought an unusually low fire-loss ratio in Canada and a correspondingly high rate of fire underwriting profit. The figures for the two ratios are given below, the former relating losses incurred to premiums written and the latter the fire underwriting profit to premiums written. The statement shows also the experience for the decade 1919-28.

| Year | $\begin{aligned} & \text { Fire- } \\ & \text { Loss } \\ & \text { Latio } \end{aligned}$ | Rate of Fire <br> Underwriting Profit | Year | $\begin{aligned} & \text { Fire- } \\ & \text { Losos } \\ & \text { Ratio } \end{aligned}$ | Rate of Fire Underwriting Profit |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | p.c. | p.c. |  | p.c. | p.c. |
| 1919-28. | 52.20 | 4.70 | 1938. | 40.91 | 10.07 |
| 1929. | 53.84 | 1.96 | 1929-38. | 48.42 | 6.52 |
| 1930. | 57.80 | 0.85 | 1939. | 38.40 | 12.57 |
| 1931. | 59.47 | $-2.45$ | 1940. | 36.84 | ${ }^{13} 72$ |
| 1932. | 64-10 | -5.73 | 1941. | 36.13 | 6.30 |
| 1933. | 52.09 | 5.43 | 1942. | 43.07 | 6.52 |
| 1934. | 40.92 | 15.41 | 1943. | 47.04 | 5.64 |
| 1935. | ${ }^{36} \cdot 25$ | 15.61 | 1944. | 52.56 | -6.99 |
| ${ }_{1937}^{1936}$ | 34.99 34.88 | 15.84 14.99 | 1945. | 52.43 | -6.13 |

It will be noted that the years that marked the depth of the depression, namely 1934 to 1937, saw also an unusually low loss ratio and high rate of underwriting profit and those features have persisted into the war period until, with the slackening of wartime production in industry, a marked reversal has taken place.

The explanation given by many underwriters of the departure from the expected experience indicated above is that the severity of the depression in its early years had the effect of practically eliminating the equity of owners in their buildings occupied for business purposes, so "that there was no profit incentive to arson. On the other hand, fire prevention organizations regard the change as evidence of the effectiveness of their publicity and educational programs in favour of conservation of property; perhaps a longer period of post-war conditions is necessary to permit a final judgment between these views, but at this writing the prospect for an early reduction of the fire-loss ratio is not bright.

The Rate of Fire Premium.-The large underwriting profits shown in the above statement are not due to any increase in the premium rate. There has been, throughout the fifteen years and earlier, a gradual decrease in that rate. The aggregate rate for all risks, regardless of the term of the contracts, in 1945 was 72 cents per $\$ 100$ insured, while in 1929 the corresponding rate was 82 cents, and going back to $1918, \$ 1 \cdot 06$. Such an aggregate rate, however, is affected by the relative proportions of one-year and three-year business written by the companies; an increase in the proportion of three-year business will naturally produce an increased aggregate premium rate. A fairer estimate of the change over any period is obtained by dealing separately with the shorter- and longer-term business. This has been done for the years 1939 to 1945 by dealing separately with the one-year term experience and adjusting the longer-term experience to a one-year basis. The result is a change in the rate of premium for a one-year term per $\$ 100$ insured from 49 cents in 1939 to 46 cents in 1945 or, going back to 1922, from 92 cents.

The reduction in rate indicated by the foregoing is brought about, not by government regulation of rates, but by a healthy competition among different groups of insurers, although some underwriters viewing the present trend towards higher loss ratios and underwriting losses may question the healthiness of the rivalry which has brought about the lower scale of premiums.

Casualty Insurance.-The great majority of fire insurance companies operating under Dominion registration transact one or more classes of insurance other than fire, such as automobile, personal accident and sickness, hail, guarantee, and other classes affecting the person and property. These latter classes, however, have shown a more rapid rate of growth than has the fire insurance business and in 1940, for the first time, the volume of casualty premiums exceeded the fire premiums; this tendency has increased until, in 1945, the casualty premiums amounted to over $\$ 69,000,000$, while the fire premiums amounted to just over $\$ 58,000,000$. The casualty classes that, at the present time, show the greatest rate of increase are automobile, personal accident and sickness, and personal property insurance.

Number of Operating Companies.-There has been a marked increase in the number of companies operating in the fire and casualty field until at the present time the total number of such companies registered by the Department is 320 as compared with 280 in 1929. While this increase has occurred in companies of all nationalities, Canadian, British, and foreign, the most marked change has been in the latter group and the reason for this is probably to be found largely in the restriction of charter powers of companies domiciled in the United States.

Until recently it has been the policy of the States of the United States, by which the great majority of insurance companies in that country are organized, to prohibit a company authorized to transact fire insurance, for instance, from transacting also any class of insurance relating to the person, so that such a company would be prohibited from issuing personal accident and sickness policies or liability policies indemnifying for injury to the person. The result was that while that company might issue an automobile policy covering fire, collision, theft, and property damage, it could not cover the liability feature indemnifying the insured against claims by third parties arising from personal injuries. To overcome this handicap the fire insurance companies were driven either to incorporate or acquire separate casualty companies to transact the casualty classes involving the insurance of the person. The British companies having, as a rule, omnibus powers and the special Acts incorporating Canadian companies providing only the one restriction, namely, that life insurance business if transacted by companies transacting fire or casualty business should have a complete separation of funds, assets, and accounts for the life business, there has been no tendency to multiplication of companies.

It is a matter for gratification that many of the States are at the present time inclined to revise their Acts so as to permit a combination of the principal casualty classes with fire. The State of New York, for instance, at the session of the Legislature in 1946 and 1947 has abandoned the prohibition in respect of automobile insurance referred to above.

## General

Taxation.-The life insurance business in Canada is largely exempt from taxation in Canada except to the extent that the premium income thereof is subject to a specific tax which, since the beginning of the War and up to date, has been levied solely by the Federal Government; the rate of that tax is 2 p.c. on the net premiums less dividends to policyholders and excluding the consideration for
annuities. The only other tax is the tax on profits accruing to the shareholders of Canadian companies through their shareholders' accounts under the Income War Tax Act; the amount of that tax in 1945 represented approximately 0.3 p.c. of the Canadian premium income and 0.2 p.c. of the total premium income of those companies.

The tax on fire and casualty companies' profits has enjoyed no similar exemption; the profits of those companies have been subject to income and excess profits taxes in much the same way as the profits of other industries. The only exception to this is that heretofore purely mutual companies have been entirely exempt and with the growth of that group of companies the burden of taxation on joint stock companies has been a form of discrimination of which the latter group has complained.

The Royal Commission on Co-operatives, which conducted its investigation into the question of taxation of co-operatives generally, received representations on the insurance aspect of the question and in their Report of Sept. 25, 1945, they recommended:-
"1. That the Income War Tax Act and The Excess Profits Tax Act (1940) be amended to provide for the taxation of mutual organizations carrying on the business in Canada, of fire, casualty and automobile insurance, in accordance with the recommendations which follow.
2. That dividends on, or refunds of premiums to policyholders, whether paid in cash or applied against renewal premiums, together with any unabsorbed premiums or premium deposits returned to or payable to policyholders, and any other amount credited to a policyholder or subscriber in such a way that it is exigible by him on giving such notice as may be deemed reasonable, be allowed as a deduction in computing taxable income.
3. That joint stock companies and other insurers writing fire, automobile and casualty insurance, which pay dividends or make refunds of premiums to policyholders be allowed to deduct such dividends or refunds in computing taxable income."

Following that recommendation, the Income War Tax Act was amended to remove the purely mutual fire and casualty companies from the exemption [(1946) c. 55, s. 3 , amending s. $4(\mathrm{~g})$ ] and to permit the deduction from taxable income by any such company, stock or mutual, of dividends to policyholders which during the taxation year were:-
"(a) paid to the policyholder;
(b) applied in discharge, in whole or in part, of any liability of the policyholder to pay premiums to the insurance company; or
(c) credited to the account of the policyholder on terms that he is entitled to or may obtain payment thereof within a period not exceeding thirty days after demand for payment by him, if notice of crediting upon such terms has been given to the policyholder by the insurance company."
[ibidem, s. 4(12), enacting s. 5, ss. (7)]
An exception to the foregoing is that of the company that derives from the insurance of farm property not less than 50 p.c. of its net premium income; such a company is exempt from income tax.

The proportions in which the Canadian premiums of fire and casualty companies were distributed in 1945 between the various groups classified as to corporate structure, together with the underwriting profits and income and excess profits taxes incurred, are given in the following statement:-

${ }^{1}$ Too small to be expressed.
Provincial Companies.-The foregoing figures relate in the main to the business of Dominion companies and British and foreign companies registered under the Acts of the Dominion. There is, in addition, a limited volume of business transacted by companies incorporated by the provinces of Canada which have not obtained Dominion registration. The outstanding features of the business transacted in 1940 and 1931 under the two jurisdictions were given in the review of fire and casualty insurance in the Canada Year Book, 1942, and this table is now brought up to Dec. 31, 1945, the ratios for the two earlier years being retained, as follows:-

| Class of Business | Dominion Licensees | Provincial Licensees | Ratio of Provincial Licensees to Total |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 1945 | 1940 | 1931 |
| Insurance | \$ | \$ | p.c. | p.c. | p.c. |
| Insurance in force. | 15, 054, 848,612 | 1,491,715, 144 | 9.02 | 9.48 | 12-32 |
| Net premiums written. | 58,335, 728 | 6,205,250 | $9 \cdot 61$ | $9 \cdot 57$ | 12.49 |
| Casualty Insurance- |  |  |  |  |  |
| Net premiums written.. | 69,217,942 | 3,586,093 | $4 \cdot 93$ | $4 \cdot 43$ | $6 \cdot 54$ |
| Life Insurance- |  |  |  |  |  |
| Insurance in force. | 9,751,040,835 | 213, 042,594 | $2 \cdot 14$ | 0.94 | 1.55 |
| Net premiums received... | 261, 176, 100 | 5,551,540 | $2 \cdot 08$ | $0 \cdot 97$ | $1 \cdot 28$ |

| Insurance in force......... | 246,121,776 | 133, 031,870 | 35.09 | 26.07 | 34.69 |
| Net premiums received... | 4,610,018 | 2,707,997 | 37.00 | $30 \cdot 20$ | 36.00 |

Constitutional.-The interest of insurers on this continent in this subject in recent years has been mainly directed to jurisprudence in the United States and particularly the judgment of the Supreme Court of the United States in the case United States of America v. South-Eastern Underwriters Association, 322 U.S. 533, by which the long-standing judgment of Paul v. Virginia, 8 Wall. 168, of 1869 was reversed; the latter judgment declared that issuing a policy of insurance is not a transaction of commerce and on the basis of that pronouncement, Courts there, and probably here also, have regarded the whole business of insurance as falling outside the field of trade and commerce. In one of the earliest constitutional cases, Parsons v. The Queen, the Privy Council was apparently influenced in its decision by the United States judgment and that case has dominated the thinking of that Board, as well as of Canadian Courts, in constitutional cases, particularly those relating to insurance, ever since.

The substance of the reversing decision may be judged from the following quotations from the reasons for judgment of the various members of the Court:-

[^409]"These activities having already been held to constitute interstate commerce, ... it would indeed be difficult now to hold that no activities of any insurance company can ever constitute interstate commerce so as to make it subject to such (federal) regulation;
"For constitutional purposes a fiction has been established, and long acted upon by the Court, the states, and the Congress, that insurance is not commerce.

[^410]
## Section 1.-Fire Insurance

In Canada, fire insurance began with the establishment of agencies by British fire insurance companies. These were usually situated at the seaports and operated by local merchants. The oldest existing agency of such a company commenced business at Montreal in 1804. The first Canadian company dates from 1809 and the first United States company to operate in Canada commenced business in 1821. A short account of the inception of fire insurance in Canada is given at pp. 846-847 of the 1941 Year Book.

A feature of the fire insurance business, besides the large percentage of British and foreign companies, is the continued increase in the number of companies operating on the mutual or reciprocal plan. These companies, in which all profits or losses are directly received or paid by the policyholders, are making themselves felt as competitive factors in the fire insurance business. (See p. 837 re farmers' mutuals.)

## Subsection 1.-Grand Total of Fire Insurance in Canada

Of the total amount of insurance effected in Canada during cach year, a part is sold by the companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation, but may be allowed to sell insurance in other provinces.

In the more detailed analyses of fire insurance dealt with in Table 2, the statistics cover only the operations of companies with Dominion registration, but, as shown in Table 1, such companies account for approximately 90 p.c. of the insurance in force.

## Subsection 2.-Historical and Operationa! Statistics of Dominion Fire Insurance Companies

Historical Statistics of Dominion Fire Insurance.-The report of the Superintendent of Insurance for the year ended Dec. 31, 1945, shows that at that date there were 269 fire insurance companies under Dominion registration; of these, 59 were Canadian, 73 were British, and 137 were foreign companies. In 1875 , the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada-11 Canadian, 13 British and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 78 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

The trend in the average rate payable for fire insurance has been generally downward, although the increases in fire losses experienced in the years from 1941 to 1945 have had the effect of checking that tendency. The increase in value of insurable buildings and their contents tends to increase fire insurance premiums in spite of the trend of the average rate. Another factor that has tended to increase the amount of premiums during the past few years is that, in the years before 1939, fire insurance companies were prohibited under provincial legislation from insuring mercantile or manufacturing risks for terms exceeding one year, but since that time they have been free to insure such property without a term limitation. The Gigures indicate that this privilege was not taken advantage of to any great extent until 1941.

## 2.-Fire Insurance, by Companies Operating under Dominion Registration, 1900-45

Note.-Figures for the years 1869-1899 are given at p. 973 of the 1939 Year Book, and figures for the intervening years from 1901-34 at p. 847 of the 1942 edition.

${ }^{1}$ Yukon, Northwest Territories and also certain 'floater business' that cannot be apportioned to any one province.

For some years the Department of Insurance has compiled, from information supplied by the fire insurance companies registered to transact business in Canada, tables of experience as to premiums and losses by 27 classes of risks agreed upon on the basis of direct business written including reinsurance assumed. This experience for the five years 1940-44 is given in Table 4. For 1945, the returns were received on a "direct written" basis, excluding all reinsurance ceded or assumed, and the classification was changed and reduced to 21 classes. The 1945 experience is given in Table 5.

## 5.-Percentages of Net Losses Incurred to Net Premiums Written in Canada by All Companies Operating Under Dominion Registration, by Classes of Risks, 1945

(Excluding all reinsurance ceded or assumed)

Fire Losses.-Closely allied to the subject of fire insurance is the subject of fire losses. The Dominion Fire Prevention Association publishes, under the auspices of the Dominion Department of Insurance and with the co-operation of the Association of Canadian Fire Marshals, a report of the loss of life and property caused by fire, from which the information shown in Tables 6 and 7 has been summarized. In addition to the data here shown, the report gives such information as: per capita losses by provinces and by type of building, numbers of fires reported, origins of fires, and criminal investigations arising from fires.

In 1946, the per capita loss was greatest in Prince Edward Island, being $\$ 12.94$ as against the Dominion average of $\$ 4 \cdot 01$. The uninsured losses amounted to $\$ 12,036,085$, or 24.4 p.c. of the total as compared with 24.9 p.c. in 1945 . The 55,397 fires reported in 1946 , with total property loss amounting to $\$ 49,329,863$, resulted in 408 fatalities- 166 men, 78 women and 164 children.

## 6.-Fire Losses in Canada, 1926-46

Note.-For fire losses from 1923-25, see Statistical Report of Fire Losses in Canada, 1926, published by the Dominion Department of Insurance. An estimate of losses from 1898-1922 is published in Statistical Bulletin No. 27 (1922), issued by the same Department.

## Subsection 3.-Finances of Fire Insurance Companies

Tables 8 to 10 show for recent years the assets, liabilities, income and expenditure of registered companies transacting fire insurance in Canada. The majority of fire insurance companies also transact casualty insurance dealt with in Section 3 of this Chapter. Owing to the fact that it is impossible for such companies to allocate their assets and liabilities and their general income and expenditure among the various types of business transacted, totals only are given here. Table 27, p. 1098 gives similar information for registered companies whose transactions are confined to casualty insurance.

## Section 2.-Life Insurance

The life insurance in force, in Canada, in companies registered by the Dominion in 1946 was over $\$ 10,812,000,000$, an increase of over $\$ 1,061,000,000$ over the figure for 1945. There has been not only an increase in new business, but also a greater stability in business written compared with the depression in early war years. The effect of these factors is reflected in the ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year.

| Year | Net in Force at Beginning of Year | Gain in Force for the Year | $\begin{gathered} \text { Per- } \\ \text { centage } \\ \text { Gain } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
|  | \$ | \$ |  |
| 1930.. | 6,157,000,000 | 335,000,000 | $5 \cdot 4$ |
| 1935. | 6,221,000,000 | 38,000,000 | 0.6 |
| 1939. | 6,630,000,000 | 146,000,000 | 2.2 |
| 1940. | 6,776,000,000 | 199,000,000 | 2.9 |
| 1941. | 6,975,000,000 | 374,000,000 | $5 \cdot 4$ |
| 1942. | 7,349,000,000 | 527,000,0001 | 7.2 |
| 1943. | 7,876,000,000 | 658,000,000 | 8.4 |
| 1944. | 8,534,000,000 | 605,000,000 | $7 \cdot 1$ |
| 1945. | 9,139,000,000 | 612,000,000 | 6.7 |
| 1946. | 9,751,000,000 | 1,061,000,000 | 10.9 |

${ }^{1}$ Excluding $\$ 44,000,000$ adjustment arising out of method of reporting juvenile insurance.
It is interesting to note the effect of the War of 1939.45 on mortality rates. Even including war losses, the mortality rate did not greatly change, not nearly so much as it did during the War of 1914-18. The improvement in civilian mortality in recent years appears to have substantially counterbalanced the additional mortality brought about by war service. The following figures are derived from the annual statements filed with the Dominion Department of Insurance by life insurance companies.

| Year | Rate of Mortality per 1,000 Lives Exposed to Risk | Year | Rate of Mortality per 1,000 Lives Exposed to Risk |
| :---: | :---: | :---: | :---: |
| 1913.. | $8 \cdot 61$ | 1938. | 6.42 |
| 1914. | 8.41 | 1939. | 6.44 |
| 1915. | $8 \cdot 66$ | 1940. | 6.59 |
| 1916. | $10 \cdot 45$ | 1941. | 6.77 |
| 1917. | 10.85 | 1942. | 6.85 |
| 1918. | 13.90 | 1943. | $7 \cdot 15$ |
| 1919. | 8.08 | 1944. | 8.03 |
| 1920.... | $7 \cdot 93$ | 1945..... | $7 \cdot 45$ |

## Subsection 1.-Grand Total of Life Insurance in Canada

In addition to the business transacted by life insurance companies registered by the Dominion, a considerable volume of business is also transacted by companies licensed by the provinces. Statistics of these provincial companies have been collected since 1915 by the Department of Insurance. Table 11 summarizes the volume of business transacted by Canadian, British and foreign life companies and fraternal societies, whether registered by the Dominion or licensed by the provinces.

## Subsection2.-Historical and Operational Statistics of Dominion Registered Life Insurance Companies

Historical Statistics of Life Insurance.-The net life insurance in force of all companies registered by the Dominion was only $\$ 35,680,082$ in 1869 , while in 1946 it was $\$ 10,812,294,224$. . $^{*}$ The amount per head of the estimated population of Canada has more than doubled since 1923-an evidence of the general recognition of the value of life insurance for the adequate protection of dependents against misfortune. Notable also is the fact that in this field British companies, the leaders in 1869, have fallen far behind the Canadian and the foreign companies.

${ }^{1}$ For statistics of fraternal insurance, see pp. 1089-1091. $\quad{ }^{2}$ Based on estimates of population given at p. $100 . \quad 3$ During 1937 approximately $\$ 85,000,000$, and during 1938 approximately $\$ 60,000,000$ were transferred from insurance in force in Canada. These amounts represent mainly transfers to business out of Canada of certain reinsurances previously classed as Canadian business. They also include transfers to annuities of contracts providing for combined insurance and annuity benefits or options. ${ }^{\text {S Subject }}$ to revision.

Life insurance business was transacted in Canada during 1945 by 41 active companies registered by the Dominion, including 28 Canadian, 3 British and 10 foreign companies; one of these foreign companies was registered only for the acceptance of reinsurance. In addition, there were 9 British and 5 foreign companies registered to write insurance; these had practically ceased to write new insurance. Two other foreign companies were registered in 1945 but transacted no business in Canada in that year.

The operations analysed in the following tables of this Subsection, with the exception of Table 16, cover only those companies under Dominion registration and are exclusive of fraternal organizations and provincial licensees. However, as indicated in Table 11, their operations cover about 96 p.c. of the life insurance in force in Canada.

## Subsection 3.-Finances of Life Insurance Companies

The financial statistics of the following tables cover only life insurance companies with Dominion registration and do not include fraternal organizations and provincial licensees. In the cases of British and foreign companies, the figures apply only to their assets, liabilities and operations in Canada but, in the case of Canadian companies, assets and liabilities, income received and expenditure made, arise in part from business abroad.

## 17.-Assets of Canadian Life Companies with Dominion Registration and Assets in Canada of British and Foreign Life Companies, 1941-45

#### Abstract

Notr.-One British company transacting fire insurance in Canada transacts also life insurance in Canada, and inasmuch as a separation of assets has not been made between these two classes, the assets in Canada are not included here, but are included in the assets of British companies shown in Table 8, p. 1079.

${ }^{1}$ Includes expenditure on business outside of Canada.
Subsection 4.--Life Insurance Effected through Fraternal Benefit Societies
In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 20 gives statistics of life insurance effected with fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to the whole business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examiLation, of the Institute of Actuaries, London; of the Faculty of Actuaries in Scotland; of the Actuarial Society of America; or of the American Institute of Actuaries) and, unless the actuary certifies to the solvency of each fund, a readjustment of rates or benefits must be made. The statistics in the first part of this table relate to the 16 Canadian societies reporting to the Insurance Department of the Federal Government, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain Dominion authority precedent to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, while forbidden to accept new
members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies have since obtained Dominion authority to transact business, also some foreign societies that had not previously been licensed by the provinces. Of both classes of societies, 30 transacted business in Canada during 1945, 2 of which do not grant life insurance benefits.

## Subsection 5.-Life Insurance in Force Out of Canada by Canadian Companies Registered by the Federal Government

Tables 21 and 22 give summary statistics of insurance in force as at Dec. 31, 1945, in currencies other than Canadian, classified by companies and by the currencies in which business was written. The data given here are in Canadian dollars, mainly at par rates of exchange for the countries concerned, but there are several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. More than 61 p.c. of all such business in force was written in United States currency and over 22 p.c. in sterling. From another standpoint, over 33 p.c. was written in currency of British countries outside Canada, and over 66 p.c. in currencies of foreign countries.

Canadian life companies operating under Dominion registration had in force in countries outside Canada, at Dec. 31, 1945, life insurance amounting to $\$ 3,845,863,540$, and sinking fund and capital redemption insurance amounting to $\$ 5,514,718$. As shown in Table 21, insurance in force in currencies other than Canadian amounted to $\$ 3,720,046,453$. The difference between these figures is presumably the net amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the British and foreign investments of Canadian life insurance companies as at Dec. 31, 1945, amounted to $\$ 1,309,683,152$. Since the business in force in Canada of these companies at Dec. 31, 1945, amounted to $\$ 6,441,857,306$, the total business on their books, Canadian and non-Canadian, amounted to $\$ 10,293,235,564$. Thus, over 37 p.c. of the total business in force was out of Canada.
21.-Life Insurance Effected and in Force and Liabilities by Canadian Companies
(Excluding Fraternal Societies) Operating Under Dominion Registration, in
Currencies Other than Canadian, by Companies, 1945.

Note.-Figures are given in Canadian dollars, mainly at par rates of exchange.

## Subsection 6.-Grand Total of All Life Insurance in Canada and the Business of Canadian Organizations Abroad

Table 23 summarizes the business outside of Canada of Canadian life companies and fraternal benefit societies. If to these figures is added the business in Canada of these organizations, as shown in Table 11, the total business, internal and external, of all Canadian life insurance companies and fraternal societies may be obtained. Again, adding the business in Canada of British and foreign companies and fraternal societies, a grand total is obtained of all life insurance in Canada and of the life insurance business abroad of Canadian 'organizations; this total is shown in Table 24.
23.-Business Abroad of Canadian Life Companies and Fraternal Societies, 1945

Note.-Figures for business in Canada will be found in Table 11, p. 1083.

## Section 3.-Casualty Insurance

Since 1875, the growth of casualty insurance business has been steady. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass and steam-boiler insurance-the only four classes of casualty insurance then trans-acted-was 5, 3, 1 and 1, respectively. The report for the year 1945 shows that casualty insurance in Canada now includes various forms of accident and 23 other classes of insurance transacted by Dominion companies. In 1880, 10 companies transacted casualty insurance, but in 1945 such insurance was issued by 266 companies, of which 53 were Canadian, 71 British and 142 foreign; of these, 204 companies also transacted fire insurance. In addition, 21 fraternal orders or societies carried on accident and sickness insurance as well as life insurance business and 3 fraternal orders or societies carried on accident or sickness insurance only.

Table 25, which shows the division of business in this field between Dominion and provincial licensees, indicates that, as in the cases of fire and life insurance, the bulk of the business (about 90 p.c. in this case) is transacted by companies with Dominion registration.

Since, as indicated above, most of the companies carrying on casualty insurance in Canada also transact fire insurance, their assets, liabilities, income and expenditures are included in the financial statistics of fire insurance companies given in Section 1, Subsection 3, of this Chapter. Table 27 gives similar figures for the total casualty business of Canadian companies, and for the casualty business in Canada of British and foreign companies, not transacting fire insurance, whose transactions are confined to insurance other than fire and life. In 1945, there were 10 Canadian, 4 British and 48 foreign companies whose operations were limited to the same field.

During the war years, automobile insurance showed a favourable experience with a loss ratio of around 45 p.c. This ratio was slightly lower than for the prewar years, the result of lessened traffic, but since the end of hostilities the experience tends to be less favourable and now stands around 51 p.c.

Hail insurance in 1943 and 1944 had an unfavourable experience, however in 1945 the loss ratio fell to approximately 31 p.c.

Marine insurance showed a very large increase in Canada during the war years and substantial profits resulted. The results for the years 1941 to 1945, inclusive, were as follows:-

| Year | Premiums | Losses | Underwriting Profits |
| :---: | :---: | :---: | :---: |
|  | \$ | \$ | \$ |
| 1941. | 6,011,922 | 2,781,190 | 1,694,470 |
| 1942. | 14,295,543 | 7,983,963 | 3,855,415 |
| 1943. | 10,061,059 | 4,931,286 | 3,449,873 |
| 1944. | 6,754,361 | 2,172,418 | 3,243,889 |
| 1945.. | 5,97¢, 274 | 2,995,704 | 1,704,367 |

This class of insurance will, no doubt, figure more largely in the business of companies in post-war years, than it did before 1939.

The first phase in the framing of Canada's post-war economic policy began long before the cessation of hostilities and consisted of intensive study of reconstruction problems by a variety of public bodies. (The preliminary organization of this work is outlined at pp. 737-743 of the 1943-44 Year Book.) Committees of the Senate and House of Commons, the Advisory Committee on Demobilization and Re-establishment, the Advisory Committee on Economic Policy and the Advisory Committee on Reconstruction all shared in the preliminary task of studying Canada's post-war problems and making recommendations for economic policy. The reports of the last-named Committee and its sub-committees were tabled in the House on Jan. 28, 1944. (The main report is summarized on pp. 745-747 of the 1943-44 Year Book.)

Out of this preliminary study developed the Government's White Paper on "Employment and Income" (see pp. 843-847 of the 1945 Year Book). The White Paper sets forth the aim of the Government's reconstruction policy as follows:-
> "The central task of reconstruction, in the interests of the Armed Services and civilians alike, must be to accomplish a smooth, orderly transition from the economic conditions of war to those of peace and to maintain a high and stable level of employment and income."

Canada is a Federal State, therefore, responsibilities for attaining these objectives have to be shared by the Federal and Provincial Governments. That part of the broad policy on Reconstruction requiring co-operation between the Federal and Provincial Governments was translated into specific terms in the "Proposals of the Government of Canada", presented before a Dominion-Provincial Conference on Reconstruction in August, 1945. (The constitutional aspects of this Conference are dealt with at pp. 79-81 of the 1946 Year Book.) The Dominion proposals set out in some detail, the Government's legislative and administrative program aiming at the maintenance of a high level of employment and income during the post-war transitional period and the years to follow. Subjects covered by the proposals were decontrol, rehabilitation, housing, reconversion, agriculture and fisheries, labour, public investment and social security. (Details of these proposals will be found at pp. 80-81 and 832-833 of the 1946 Year Book.) The proposals concluded with a suggested basis for agreement between Federal and Provincial Governments on administrative responsibility and the distribution of tax-collecting powers necessary to implement such a program, initially for a three-year period.

[^423]The Conference in August, 1945, discussed the proposals and then adjourned to consider the matter more fully. Meanwhile, a co-ordinating committee, consisting of the Prime Minister and the nine Provincial Premiers, met in camera in November, 1945, and in January and April, 1946. Modifications were suggested by the provinces and revisions were offered by the Dominion, but on May 3, 1946, the Conference was adjourned sine die when it became evident that no immediate agreement acceptable both to the Dominion and to all the provinces was likely to be reached.

Accordingly, in the Budget Speech of June 27, 1946, the Federal Government proposed a modified form of agreement to be concluded with any province willing to restrict its use of certain specified tax fields over a five-year period in return for an annual subsidy. In the following year, further modifications were made as a result of which tax agreements were negotiated with a number of the provinces. (For details, see pp. 968-971.) Failure to secure general agreement with the provinces put into abeyance for the time being, implementation of the Dominion's proposed plan for a comprehensive social security scheme and a co-ordinated public investment program.

Meanwhile, the Dominion had created new administrative machinery to implement its reconstruction program. In June, 1944, the Department of Reconstruction was created, and in October, 1944, a Cabinet Committee on Reconstruction was set up. In January, 1946, the Departments of Munitions and Supply and of Reconstruction were merged to become the Department of Reconstruction and Supply.

## Section 1.-The Dominion Program of Reconstruction

Since the end of hostilities in August, 1945, the Federal Government has been actively engaged in facilitating the transition of the Canadian economy from a wartime to a peacetime basis. Some of the more important aspects of this program of reconstruction are reviewed briefly, below.

Decontrol.-The process of decontrol, starting shortly after the conclusion of the War, was designed to meet gradually the changing needs of the economy and adjusted to ease some of the strong pressures of inflation noticeable in most fields. Broadly speaking, the policy with regard to prices has been to adjust ceilings where such action was necessary to increase production or make allowance for increase in cost, and to remove the ceiling entirely whenever goods were in reasonable supply. By the middle of 1947, price ceilings had been removed from most commodities, but staple products, generally, were still under control. Starting in 1946 and continuing into 1947, most subsidies paid on imported and domestic products had been dropped. A change in the price control over imported products was made in 1946 to allow the import of some foreign products needed but not available in Canada. Most allocation controls were also dropped. By mid-1947, the only important food items still subject to rationing were sugar and products with a high sugar content. The industrial use of rationed food products, together with vegetable oils and fats remained under control. Similarly, iron and steel, certain non-ferrous metals and lumber and paper products continued to be controlled and some of the wartime import and export controls were retained to assure sufficient supplies of goods in Canada. Foreign exchange control is being continued, chiefly in respect to capital transactions in modified form. Manpower and wage controls have been dropped. (See also Chapter XXIV on Prices.)

Demobilization and Rehabilitation.-Through the National Employment Service, large numbers of men and women in the Armed Forces and in war industries were placed in peacetime pursuits. Between June 1, 1945, and the end of 1946, approximately 675,000 service men were discharged and about 500,000 workers were released from employment on war contracts. In spite of the magnitude of this manpower shift, the high level of economic activity was maintained. The number of unemployed never reached more than about 270,000 out of a total working force of close to $4,800,000$. Extensive provisions were made to assist ex-service personnel to rehabilitate themselves by means of financial assistance and training. (This program is outlined in detail in Chapter XXX on Veterans Affairs.)

Assistance to Private Investment.-The settlement of outstanding war contracts proceeded rapidly after V-J Day. Surplus war plants and equipment were made available for the reconversion and expansion of industry by the War Assets Corporation working under the Department of Reconstruction and Supply. Reduction in excess profits and income taxes stimulated the incentive of private industry to expand production. Special depreciation allowances for tax purposes were granted between November, 1944, and Mar. 31, 1947, for projects completed prior to Mar. 31, 1949. Over this period of approximately two and one-half years, approvals for special depreciation had reached a total in excess of $\$ 1,300,000,000$. Low interest rates and special credit facilities for industrial expansion, not provided by the commercial banks, were made available through the establishment of the Government-sponsored Industrial Development Bank, a subsidiary of the Bank of Canada, in 1944 (see pp. 1017-1018). Allocation and price controls were retained over many types of producers goods and construction materials for a period after the War so as to ensure a more orderly distribution of supplies to industries. When it became evident in 1946 that the supply of basic and building materials was lagging behind the demand for them, various measures were taken to boost their production.

Sample surveys conducted by the Department of Reconstruction and Supply indicate that well over four-fifths of the reconversion of plant and equipment had been completed by the end of 1946 and that all but a small part would be completed by the middle of 1947. The modernization and expansion of plant and equipment was well under way by the end of 1946. Reporting firms stated that 20 p.c. of them had completed their programs at that time and that 70 p.c. expected to have completed their programs by the end of 1947. Two significant features brought out by the survey were: firstly, that a large proportion of the industrial firms interviewed were revising their plans upwards; and, secondly, that the emphasis of investment was on the acquisition of new plant and equipment rather than on the replacement of plant and equipment. Both the reconversion and the modernization and expansion programs were delayed throughout 1946 by shortages of material and labour.

Public Investment. - The Federal Government accepted the principle of timing public investment as part of its economic policy of high employment and income in April, 1945, and proceeded to implement such a policy (a) by establishing, through Orders in Council P.C. 7993 (Oct. 13, 1944) and P.C. 4942 (July 12, 1945), administrative machinery to handle its own public investment policy, and (b) by proposing to the Dominion-Provincial Conference on Reconstruction (Aug. 6, 1945) methods of co-operation to synchronize Dominion and provincial (and
municipal) investment programs. Pending agreement with the provinces, the Federal Government proceeded with the development of screening and timing procedures for the management of its own capital expenditure program.

The present Federal procedure, as established by Order in Council P.C. 7993, 1944, provides that "proposals by departments and agencies of the Government to make capital expenditures on reconstruction projects and proposals involving financial assistance by the Minister of Reconstruction shall be submitted" to the Cabinet Committee on Reconstruction. Order in Council P.C. 4942 set up the necessary procedure whereby the Department of Reconstruction and Supply would assist the Cabinet Committee on Reconstruction and the Treasury Board in the policy of timing the Federal investment program in accordance with employment and income conditions. This policy, applied in the fiscal years 1946-47 and 1947-48, has meant the deferment of all unessential Federal construction. Supplementing this policy of curtailing public irvestment in the transition period, when investment by private business was at very high levels-expected to exceed in 1947, any previous accomplishments-was the attempt to build up a 'shelf' of fully-planned projects which could be implemented if and when employment conditions warranted. Lest this over-all policy of strict curtailment of construction be so rigid as to affect the efficiency of administration and desired expansion where essential, provision was made for certain emergencies through Vote 606 , including a sum of $\$ 10,000,000$ in the Estimates of the Department of Reconstruction and Supply. This provision has three purposes: (1) to provide moneys for the initiation of public construction projects in any area where acute unemployment developed during the reconversion period; (2) to finance certain essential public projects of a development nature if circumstances prevented their financing in the normal way; and (3) to provide additional funds for the planning of public construction projects through the employment of additional staff for the carrying. out of necessary research surveys and investigations, and the advance acquisition of sites permitted in special circumstances by Cabinet approval.

Export Trade.-The Federal Government actively supports international efforts to encourage world trade. It participated in the creation of the International Monetary Fund and the International Bank for Reconstruction and Development. Dominion representatives have attended a number of international conferences called to explore methods of removing barriers to a high level of world trade. The most important of these conferences to date has been the International Trade Organization meeting at Geneva, Switzerland, in the spring of 1947. The Government is pursuing a vigorous policy of developing Canada's export trade, and to this end the Department of Trade and Commerce has been greatly expanded. Extensive foreign credits were made available to impoverished countries in 1946, under the Export Credits Insurance Act, 1944, and United Kingdom loan agreement. As a result, Canada's export trade in 1946 reached its highest peacetime level and, if no unfavourable developments occur in the latter part of 1947, the year's exports should exceed in volume those of 1946. Canadian exporters can insure against credit losses on exports or agreements to export general commodities or capital goods through the Export Credits Insurance Corporation, which was set up under the Export Credits Insurance Act, 1944, and reports to the Minister of Trade and Commerce ( $8 \mathrm{Geo} . \mathrm{VI}$, c. 39). In order to ensure a reasonable supply of certain types of goods in Canada it has been necessary to retain export controls over a variety of products that Canada normally exports. (See also Chapter XXIII on Foreign Trade.)

Agriculture.-The granting of foreign credits has enabled large shipments of foodstuffs to be made to European nations, thereby sustaining agricultural employment and income. Negotiations are carried on with the United Kingdom, periodically, to renew and extend agreements covering the quantities and prices of various commodities to be sold to that country during the next year or two. To implement these agreements the Canadian Government has used its wartime agricultural boards. When the National Emergency Transitional Powers Act expired on May 15, 1947, the authority for their continued existence was provided for under the Agricultural Products Act, 1947. To ensure the fulfilment of commitments to the United Kingdom, a number of agricultural products are subject to export permit control. To this end, also, the Canadian Wheat Board Act was amended in 1947 to require all cereal grains grown in the Prairie Provinces and any other areas that might be designated to be delivered to the Wheat Board. Another amendment forbids anyone, except by permit, to buy and sell wheat in interprovincial or export trade until Aug. 1, 1950. To protect farmers against the fall of farm prices in the transition period, the Agricultural Prices Support Act was passed in 1944. The Act was invoked in 1946 to support the price of potatoes. The Prairie Farm Rehabilitation program has been giving particular attention to the establishment of large irrigation projects in the Prairie Provinces, so as to stabilize further the agricultural economy of that region. Canada has supported the basic principles of the International Food and Agriculture Organization; was an active participant in establishing this Organization at Quebec and has taken a leading part in the deliberations at conferences held at Copenhagen, Denmark, and Washington, U.S.A. (See also Chapter XII on Agriculture.)

Labour.-By the middle of 1946, most controls over the free movement of labour had ended, and in November, 1946, wage controls were dropped. The last control over labour, except under P.C. 1003, 1944, ended with the expiry of the National Emergency Transitional Powers Act on May 15, 1947 Collective bargaining and industrial disputes affecting the war effort under Federal jurisdiction in the later stages of the War and suspended the operation of the Industrial Disputes Investigation Act. In the summer of 1947, collective bargaining and labour relations within provincial jurisdiction were returned to the provinces. At the same time, the Federal Government introduced a Bill in Parliament to replace the Industrial Disputes Investigation Act and P.C. 1003, 1944. The Bill was laid over to 1948 for action. If passed then it will be known as the Industrial Relations and Disputes Investigation Act, and will cover about 250,000 workers under Federal jurisdiction, i.e., employed on railways, canals, telegraphic and telephonic communications extending beyond a province, inland and ocean navigation and shipping, air transportation, radio broadcasting and works outside of exclusive provincial jurisdiction or declared to be for the advantage of Canada or of two or more provinces. Provision is made also for any province to place any industry within its jurisdiction under the operation of the Act. The proposed legislation incorporates most of the provisions of P.C. 1003, 1944, but these have been materially revised in the light of wartime experience and the altered circumstances of peacetime conditions. One of the objectives behind the legislation is that it may serve as a model for
similar legislation by Provincial Governments. Before the Bill was introduced in Parliament, several provinces had passed legislation incorporating many of the provisions of P.C. 1003, 1944.

The Federal and Provincial Governments have co-operated in providing industrial and other forms of vocational training for war veterans and young people and for the retraining of workers released from war employment. The National Employment Service has also undertaken to place executive and professional personnel. In 1946, the provisions of the Unemployment Insurance Act were extended to cover merchant seamen. Working conditions have continued to improve during the post-war period. The volume of unemployment has been relatively low, wages have continued to rise, and the hours of labour have been shortened from their wartime level. (See also Chapter XX on Labour.)

Consumers.-The high level of employment and income prevailing during the war years declined only moderately in the first post-war year and levelled out far above the pre-war level. As a comparable increase in prices had not occurred between the pre-war and post-war years, the general standard of living of the people was substantially higher than before the War. In general, the supply of consumer goods held its own or increased in the first year after the War in spite of supply bottlenecks and industrial unrest. As the year ended, the supply situation in regard to consumer goods started to improve noticeably. As a protection for consumers, articles in very short supply were kept under rationing following the War and price controls were also retained where it appeared desirable in situations of possible rapid and disturbing rise in prices. The price level has continued to rise since the end of the War and was accelerated to some extent in the early part of 1947 when large numbers of price ceilings and subsidies were dropped. Wartime restriction on instalment buying was relaxed in 1946.

Housing.-Throughout the post-war period, the Federal Government has sponsored a large-scale residential building program to meet the critical housing needs of Canadian citizens. Financial assistance is provided under the National Housing Act, 1944; the Veterans' Land Act, 1942; the Canadian Farm Loan Act, 1927; the Farm Improvement Loans Act, 1944; and the Emergency Shelter Provisions. The principal agency for the handling of this assistance is the Central Mortgage and Housing Corporation. This building program is dealt with in detail in Chapter XIX on Construction.

Because of the shortage of many types of building materials, the Federal Government has found it advisable to provide assistance and guidance in the production of these materials and in the use of new methods and materials for certain types of housing (see p. 303-304). Provision was made early in 1947 whereby rental projects acquired or brought under construction between Mar. 31, 1947, and Dec. 31, 1949, if approved by the Central Mortgage and Housing Corporation, would be permitted double depreciation for income tax purposes and the opportunity to amortize their loans from the Housing Corporation over a period of 30 years. (See also p. 584-587.)

In view of an anticipated shortage of qualified building-trades workmen, the Federal Government entered into a ten-year agreement with the provinces in 1944, whereby it provided a sum of approximately $\$ 1,000,000$ to assist the provinces in expanding training facilities. At the end of $1945,3,800$ persons were receiving training in the building trades, at the end of 1946 the number had increased to 7,500 , and at Mar. 31, 1947, it was 8,150 . A large proportion of these trainees are veterans.

Social Security.-The full implementation of the Government's program of social security, involving such things as national health insurance and extension of old age pensions and unemployment insurance must be carried out in collaboration with the provinces. At present, it is being held in abeyance until the situation in respect to Dominion-Provincial tax agreements, which are now being concluded with several provinces, is further clarified. The payment of Family Allowances was inaugurated in July, 1945. About $1,600,000$ families were receiving around $\$ 21,700,000$ per month in allowances for $3,650,000$ children in mid-1947. The average allowance per child was nearly $\$ 6$ per month, which represented an average supplement to the income of families with children of a little over $\$ 13.50$ per month. Unemployment insurance protection was extended to inland and ocean seamen in 1946. Provision was also made for a wider interpretation of "dependent" for unemployment insurance purposes and to permit supplementary earnings to be increased from $\$ 1$ to $\$ 1 \cdot 50$ per day.

In June, 1947, legislation was introduced in Parliament under which the Federal Government would assume three-quarters of the cost of old age and blind pensions up to $\$ 30$ per month, an increase in the basic pension rate of $\$ 5$ per month. The aggregate permissible income from pensions and other sources was increased from $\$ 425$ to $\$ 600$ per annum. This latter provision allows many persons not previously qualified to apply for pension.

## Section 2.-The Department of Reconstruction and Supply

The Department of Reconstruction and Supply, created by statute proclaimed on Dec. 24, 1945 (9-10 Geo. VI, c. 16), was the result of a merger of the Department of Munitions and Supply, established in April, 1940, and the Department of Reconstruction, provided for by legislation passed in June, 1944. Both Departments had been headed by the same Minister, and the amalgamation was designed to integrate the Government's effort to facilitate the transition from war to peace. The functions of this new Department were twofold: firstly, to liquidate the Government's commitments arising out of, and following the conclusion of, the War; and, secondly, to assist in the formulation of plans designed to maintain a high level of employment and income in Canada in the transition period and the years to follow. The functions of and the work done by the Department up to mid-1946 were reviewed in the 1946 Year Book, on pp. 835-842. The sections that follow review, therefore, the developments from mid-1946 to mid-1947

## Subsection 1.-Liquidation of the War Program

Controls and Priorities.-In the year under review the power, motorvehicles, coal and rubber controls administered by the Department of Reconstruction and Supply were lifted. As of July 1, 1947, the Department continued to administer controls over iron and steel, lumber, pulpwood and wood fuel. These controls were retained for the time being to assist in the best possible allocation of resources still in short supply to both home and foreign markets. Certain functions of the Coal Controller of a non-control nature were taken over by the Dominion Fuel Board, reconstituted by P.C. 5236 of December, 1946, and to be absorbed by the Dominion Coal Board when established by Parliamentary enactment (see p. 1113). Control over radio-active substances, formerly administered by the Department, was turned over to the newly created Atomic Energy Control Board, by P.C. 1098
of April, 1947. The Board reports to Parliament through the Chairman of the Committee of the Privy Council on Industrial and Scientific Research-the Minister of Reconstruction and Supply (see pp. 302-303).

Shortages of certain materials that had existed during the War came even more to the foreground as the economy turned from wartime to peacetime pursuits. This was particularly true in the field of building materials urgently required to alleviate the present housing shortage and to meet the needs for physical reconversion, modernization and expansion of Canadian industry. To assist in this task, the Priorities Division of the Department of Reconstruction and Supply, together with other controllers, assisted in the allocation of basic materials, e.g., steel and lumber, required for the production of building materials, and, in turn, the flow of building materials was directed into domestic and foreign channels on the basis of urgent need. A system of building-material priorities for essential building had been established on a moderate scale in August, 1945, and extended during 1946 and 1947. At present, priority ratings are assigned for practically all building materials and cover all stages from the producer to the consumer. Building programs receiving priority assistance include: housing built by or for veterans, emergency shelter, Wartime Housing Limited, Integrated Housing developments built under the National Housing Act, 1944, prefabricated houses, military hospitals, military health and occupational centres. In the period Aug. 23, 1945, to Apr. 30, 1947, priorities were approved for 43,563 housing units, contributing notably to the speed-up of the housing program for veterans.

Efforts to increase the output of building materials took a number of forms, including, besides allocation of raw materials in short supply, methods and aids in channelling scarce materials to producers; price increases; price incentives on "loss-line" materials in short supply and incentive bonuses to makers of sanitary ware and soil pipe to encourage production over an established base. Where it was necessary to increase production facilities, assistance was extended to producers in obtaining equipment and accommodation. Double depreciation provisions and the services of the Industrial Development Bank were available to finance these expansions. As a result of all this activity, output of building materials was expected to be between 10 and 35 p.c. higher in 1947 than in 1946 for most items.

Renegotiation and Settlement of War Contracts.-Responsibility for the review and renegotiation of prices and other terms of war contracts rested with the office of the Financial Adviser. Settlement of completed or terminated contracts was conducted by the Contract Settlement Board which was established in the Department of Munitions and Supply several months before the cessation of hostilities (for details see p. 837 of the 1946 Year Book). In the second post-war year some of the more complex contracts, involving a great deal of detailed accounting work, were examined and by mid-1947 satisfactory settlements had been reached in most cases. Contract review proceedings have resulted in recoveries by the Government in excess of $\$ 460,000,000$ at Mar. 31, 1947.

Centralized Purchasing.-To assure efficiency and speed in procuring urgently needed war supplies, two purchasing branches were established in the Department of Munitions and Supply, one for the procurement of general stores and the other for munitions. In January, 1945, they were amalgamated into one unit. In the first post-war year this Branch was concerned principally with the liquidation of war contracts and more recently has been transferred to the Canadian

Commercial Corporation, a Crown Company established by P.C. 1218 in March, 1946 (see p. 855). This Company, now reporting to Parliament through the Minister of Trade and Commerce, is acting as a Government purchasing agency for both export and import purposes where centralized purchasing appeared to be in the national interest, as, for example, purchases of relief supplies for UNRRA, or purchases of goods in Canada for foreign governments using Canadian credits. With the transfer of the Purchasing Branch of the Department of Reconstruction and Supply to the Canadian Commercial Corporation, the Corporation statutory powers were enlarged to permit it to procure and manufacture munitions and supplies and to construct or carry out projects for the Department of National Defence.

Disposal of War Surpluses.-The Surplus Crown Assets Act, 1944 (8 Geo VI, c. 21), replacing Order in Council P.C. 9108, 1943, provided for the liquidation and disposal of the Government-created war industrial structure and surplus materials. Recommendations for policy respecting disposal of surplus assets were entrusted to the Crown Assets Allocation Committee, the membership of which included representatives of Government Departments, householders, labour and agriculture. Administration of the program of disposal was the responsibility of War Assets Corporation, a Crown Company reporting to the Minister of Reconstruction and Supply. (For description of the functions of the Corporation see pp. 840-842 of the 1946 Year Book.) By mid-1947, substantial progress had been made. A large part of surplus stores and commodities have been sold, bringing an amount of over $\$ 300,000,000$ to the Dominion Treasury as of Mar. 31, 1947 An additional $\$ 40,000,000$ had been realized from the sale of real estate, buildings and buildings complete with equipment. On the basis of floor space, 47 p.c. of Crown plant ( $15,000,000 \mathrm{sq}$. ft.) had been turned over to private industry, and the remainder ( $17,000,000 \mathrm{sq}$. ft.) was still in the hands of the Government. The disposition of Crown plant at mid-1947 was, on the basis of floor space, as follows: 32 p.c. had been wholly or partly sold (of which a little better than one-quarter was sold to wartime operators); 12 p.c. had been leased; 3 p.c. had been subdivided for multiple tenancy by small businesses; 27 p.c. is being retained by the Government; 11 p.c. is now being used by War Assets Corporation for storage, some part of which will probably be retained permanently by the Government; 4 p.c. is up for sale or other disposal; and 11 p.c. has been or is being dismantled. A small part of the Government-retained plant administered by Canadian Arsenals Limited has been sublet on a multiple-tenancy basis to private firms.

Crown Companies in Liquidation.- Of the 30 Crown companies operating under the Department of Munitions and Supply at the conclusion of the War, the following 15 companies had terminated their activities in the first post-war year: Aero Motors Ltd., Aero Timber Products Ltd., Atlas Plant Extension Ltd., Citadel Merchandising Co. Ltd., Cutting Tools and Gauges Ltd., Defence Communications Ltd., Machinery Service Ltd., Northwest Purchasing Ltd., Quebec Shipyards Ltd., Small Arms Ltd., Trafalgar Shipbuilding Co. Ltd., Veneer Log Supply Ltd., Victory Aircraft Ltd., Wartime Metals Corporation, and Wartime Oils Ltd. During the War, three companies had surrendered their charters and their functions were amalgamated with those of other Crown Companies. The second post-war year saw the wind-up of the activities of an additional eight Companies, including: Allied War Supplies Corporation, Federal Aircraft Ltd., Turbo Research Ltd., National Railway Munitions Ltd., Research Enterprises Ltd., Melbourne Mer-
chandising Ltd., War Supplies Ltd., and Wartime Shipbuilding Ltd. All of the foregoing wartime Companies had been concerned with particular phases of the Government's industrial and economic war effort and their task was completed with the conclusion of the War. One exception is the Park Steamships Ltd., a Crown Company assisting War Assets Corporation as a disposal agent for cargo ships declared surplus. Of the Government's wartime fleet of upwards of 150 cargo vessels administered by the Company, most ships had, by mid-1947, been sold for peacetime ocean trade. It is expected that this Company will complete its assignment with the transfer of the ships remaining in public ownership to the Canadian Maritime Commission, whose establishment was proposed in June, 1947. There remained then only a few Crown Companies which appeared to have significant peacetime functions. These were reorganized and continue to operate (see Subsection 2).

## Subsection 2.-Continuing Functions for Industrial and Economic Development

The Government's commitment for "a high and stable level of employment and income" has had administrative implications which, towards the end of the second post-war year, became more clearly defined. Three main functions evolved: (1) the need for an objective appraisal, both in quantitative and qualitative terms, of the economic problem involved in making the most effective use of Canada's resources, both human and natural; (2) the need for devising administrative units within the Government to cope effectively with economic problems not falling within the responsibility of existing Departments, either by developing such units within the Department of Reconstruction and Supply or assisting other Departments to establish new branches where such a procedure appeared desirable in the interest of efficiency of administration; and (3) the need for integrating the Government's effort to assist in the maintenance of a high level of employment and income, particularly as this effort concerned the physical and industrial aspects of the problems faced. A number of branches within the Department of Reconstruction and Supply and several Crown Companies reporting through the Minister of Reconstruction and Supply to Parliament, formed the institutional fabric charged with the task of effectively rounding out the Government's administrative machinery. At the same time, the organization was kept sufficiently flexible to allow for organizational and departmental changes that may become desirable as a result of developments in the post-transition period.

## Departmental Branches

Economic Research Branch.-This Branch, which grew out of the research secretariat of the Advisory Committee on Reconstruction and the Advisory Committee on Economic Policy, was established in the Department of Reconstruction in November, 1944, and with the amalgamation of the Departments of Munitions and Supply and Reconstruction in December, 1945, expanded into an economic intelligence unit designed to appraise and keep under observation the state of the Canadian economy. The work involves economic forecasts of the level of employment and income, exports and imports, investment and consumer expenditures, the potential development of supply bottlenecks of materials and labour, the progress of reconversion, modernization and expansion of industry, managementlabour relations, changes in the cost-price and supply-demand relations, productivity, inventory holdings and savings habits of the Canadian people. Information on
these subjects, partly statistical and partly qualitative in nature, obtained from numerous sources within and outside the Federal Government, are then assembled into national forecasts of employment and income for the current year. This over-all appraisal of the future of economic affairs in Canada is supplemented by special reviews of the outlook for the development of major economic regions and of the more important industries. These reviews are designed to survey and appraise the best available factual information on economic developments in Canada and provide a basis on which economic policy of governments and business can be formulated in advance of actual happenings. Accordingly, a number of findings of the Branch have been made available to the public in the following reports: Capital, Repair and Maintenance Expenditures of Business Enterprises in Canada, Forecast, 1946; Forecast of 1947 Investment by Canadian Business;* Production of Basic and Building Materials in Canada, Outlook, 1947; Reconversion, Modernization and Expansion, Progress and Programs in Selected Canadian Manufacturing Industries, 1945-47; Location and Effects of Wartime Industrial Expansion in Canada, 1939-44; Manpower and Material Requirements for a Housing Program in Canada; Research and Scientific Activity, Canadian Federal Expenditures, 1938-46.

Public Projects Branch.-This Branch is responsible for administering the Federal Government's public investment policy (see p. 1101). In implementing the Federal Government's short-term policy of confining Federal construction activity to essential projects, the Public Projects Branch examined all construction projects proposed for inclusion in the Federal Estimates for the years 1946-47 and 1947-48 with regard to their urgency and requirements for scarce materials and labour. After consultation with the departments concerned, the Public Projects Branch reported to the Cabinet Committee on Reconstruction, on construction items submitted for inclusion in the Estimates and indicated which undertakings, in the opinion of the Branch, were likely to compete with the investment program of private firms and individuals (including housing, industrial and commercial construction), or would jeopardize the carrying out of some of the Federal construction projects carrying a high priority (including housing and hospital construction). To make the administration of the short-term public investment policy as flexible as possible, the Public Projects Branch also administered Vote 606 (see p. 1102). After examination, funds were approved for development and survey projects, including power development in the Northwest Territories, investigations and surveys for river development in the Prairie Provinces, and construction of wharf facilities and acquisition of sites in Nova Scotia and Ontario.

As part of the Federal Government's long-term public investment policy, the Public Projects Branch is concerned with the assembly of a 'shelf' of postponable but fully planned public projects. The sponsoring Departments submit full information on such projects, together with detailed plans and specifications concerning material, labour and other requirements. After review by the Public Projects Branch and approval by the Cabinet Committee on Reconstruction, the projects are placed on the official shelf.

Resources Development Branch.-This Branch was concerned with aiding the Public Projects Branch in its review of public projects affecting the development of natural resources. The Branch also assisted in the formulation of policies for the development of mining areas, particularly by the provision of expanded facilities

[^424]for air transportation. Because of the close relationship of this task with the responsibilities of the Public Projects Branch, the functions of the Resources Development Branch were absorbed by the Public Projects Branch at the end of the fiscal year 1946-47.

One important activity of the Resources Development Branch remained unaffected by this merger. The Forest Insects Control Board, formerly reporting through the Co-ordinator of Resources Development, now reports directly to the head of the Department (see p. 399). This Board was, in the second post-war year, mainly concerned with the further integration and expansion of Dominion, provincial and industrial efforts to fight insect diseases by comprehensive investigations of the cause and effects of the diseases, methods of controlling them, involving both laboratory and field work, guidance in forestry management and inspection, and provision of incentives for the training of forestry students willing to specialize in the field of forest entomology.

Research and Development Branch.-The functions of this Branch developed along three lines: (1) a Technical Information Service designed to make available to industry the results of Government and other research (see p. 839 of the 1946 Year Book); (2) to encourage research work not undertaken by any existing Government Department or agency, mainly in the field of building research; and (3) to appraise the significance of research expenditures on the part of governments (Federal and Provincial), universities and industry.

To disseminate research information to industry, this Branch established regional offices in the major industrial areas of Canada to maintain direct contact with private firms. These offices act as a clearing house by bringing research results achieved by Government to industry and by informing the Government of industry's technical problems that could be investigated to advantage by the Government. Preparatory work done in the field of building research will be continued by the newly-formed building research division established by the National Research Council at the beginning of 1947. The results of the survey of Federal Government expenditures on research and scientific activity covering the period 1938-46, undertaken jointly with the Economic Research Branch, were published in February, 1947 Similar surveys covering work done by provinces and universities and a sample of industry are currently under way. Because of the close relationship of the work of the Research and Development Branch with that of the National Research Council, the latter expanded its activities to take over the functions of this Branch as of Apr. 1, 1947.

Labour Problems.-The Department has continued to participate in bringing labour problems, as they affect labour-management relations in industries of importance, to a smooth transition from war to peace also in employment problems of particular regions and localities. Employment conditions and the outlook for economic development were reviewed for such areas as experienced a significant amount of unemployment in the reconversion period. This work assisted in the formulation of an employment policy designed to meet the specific needs of these areas.

Air Development.-The Air Development Branch had been concerned with a special survey to determine the extent of economic inter-community travel between the important centres in Canada (see p. 938, 1946 Year Book). At the beginning of January, 1947, the functions of this Branch were transferred to the newly formed Bureau of Transport Economics reporting to the Board of Transport

Commissioners for Canada. This Branch is concerned with all aspects of the transportation problem in terms of development and collection of statistical data, economic analyses and advice on transportation problems (see p. 658).

The Special Depreciation Committee.-This Committee was concerned with the approval of applications for Special Depreciation designed to encourage the reconversion, modernization and expansion of Canadian industry (see p. 839 of the 1946 Year Book). Approvals by the Committee in the second post-war year as compared with the preceding period were substantially higher. From November, 1944, to mid-1946, the Committee approved Special Depreciation to the extent of some $\$ 400,000,000$, while in the succeeding year an amount of more than $\$ 900,000,000$ was approved, giving a total of more than $\$ 1,300,000,000$ for the period under which these provisions were in operation. Special Depreciation was a measure designed to meet particular transition needs. Approvals were limited to applications received prior to March, 1947, for projects to be completed before Mar. 31, 1949. By Order in Council P.C. 2487, dated June 24, 1947, an exception was made with regard to ships acquired from War Assets Corporation or built in Canadian shipyards in the period from Apr. 1, 1947, to Dec. 31, 1949. A ship, or that part of a ship, built in this period, is eligible for Special Depreciation.

## Crown Companies and Independent Agencies

Canadian Maritime Commission.-Canada's merchant marine and shipbuilding industry have grown from modest proportions to the point where the country has the world's fourth largest merchant fleet and a large shipbuilding and repair potential. For the purpose of consolidating public administration of and encouraging these activities, Parliamentary authority was granted in the summer of 1947 for the establishment of a Canadian Maritime Commission under the Minister of Transport (Bill 336). The Commission, composed of three members, is to recommend policies and measures for the operation, maintenance, manning and development of a merchant marine and a shipbuilding and ship repair industry, to perform duties for the Minister of Transport under the Canada Shipping Act, 1934, and to administer steamship subventions.

Polymer Corporation.-In 1943, when Canadian supplies of natural rubber were cut off by Japan, a $\$ 51,000,000$-plant was erected at Sarnia, Ont., as a Crown Company-Polymer Corporation-to produce synthetic rubber. The plant now has a capacity of 48,000 tons of synthetic rubber per year. In addition, a wide variety of by-products are being produced, including hydro-carbon gases, ethylene, butane, isobutylene, butylene, propane, and styrene. These have provided a basis for the establishment of a number of supplementary industries in the Sarnia area.

The organization of the Polymer Corporation is that of a co-ordinating company charged with the financial and administrative control of a number of independent companies. These are: (1) Dow Chemical Co., manufacturing basic ingredients; (2) St. Claire Processing, an Imperial Oil subsidiary, charged with obtaining and preparing petroleum fractions needed to make synthetic rubber; it also makes butyl rubber; and (3) Canadian Synthetic Rubber Co., which produces buna rubber. The last-named Company is controlled jointly by Goodyear, Dominion Rubber, Goodrich and Firestone. All these companies act independently and the finished product is sold by Polymer.

The National Research Council has been instrumental in improving and developing synthetic rubber. At the same time, the Corporation has large research facilities of its own. Canadian universities also participate in research activity.

Price trends for synthetic rubber produced by Polymer illustrate the increased efficiency of production, but do not reflect the very substantial improvements in quality that have been made. For example, there have been seven price reductions for Buna $S$ which stood at 39.96 cents per pound in 1943, and is now $16 \frac{1}{2}$ cents per pound at Sarnia, Ont. This compares with natural rubber which in mid-1947 stood at $17 \frac{1}{4}$ cents per pound at New York, U.S.A.

Eldorado Mining and Refining (1944) Limited.-This Crown Company is engaged in the mining and refining of pitchblende in Canada. The mine is located at Great Bear Lake, N.W.T., and is one of the chief sources of uranium and radium salts in the world. The refinery is at Port Hope, Ont. Prior to the outbreak of war, the mining and refining of pitchblende in Canada was under private control. However, to insure the proper distribution and use of this strategic mineral for wartime and peacetime purposes, Eldorado Mining and Refining (1944) Limited was incorporated as a Company wholly owned by the Crown and took over all private operations in this field.

Canadian Arsenals Limited.-This Company, reporting to Parliament through the Minister of Reconstruction and Supply, represents the industrial branch of the Armed Forces. It was established as a result of recommendations made by a joint committee, membership of which included representatives of industry and Government, appointed during the latter years of the War to examine the problem of continuing defence production in Canada. The Company co-ordinates its operations with those of the various divisions of the Canadian Department of National Defence and maintains liaison with defence branches of other governments. Its specific duties are to develop and provide improved weapons, to keep industry informed on the latest developments with regard to military equipment and to advise the Armed Forces on the country's industrial armament capacity. The Company also retains certain plants under its direct control. The latter group of plants, all wholly owned by the Government, are engaged exclusively in the production of guns and small arms, ammunition, explosives and other military supplies. Most of the plants were constructed and equipped by the Canadian Government after September, 1939, and since the end of the War have supplied the Canadian Armed Forces with modern military equipment.

Central Mortgage and Housing Corporation.-The main functions of this Corporation, formed on Jan. 1, 1946, were to administer the National Housing Act, 1944, the Emergency Shelter Order and the Home Conversion Plan. The Corporation provided for housing and mortgage research, for double depreciation for rental housing and for the reclamation of building materials from the demolition of outlying surplus buildings. In the course of 1946, the Corporation became responsible for the co-ordination of all Federal housing policy. This was accomplished by co-ordinating the activities of the Corporation with Wartime Housing Limited (see p. 1113) and maintaining close working relations with the Department of Veterans Affairs in respect to housing operations under the Veterans' Land Act. The Corporation also maintained close liaison with the branch of the Department of Reconstruction and Supply responsible for priorities and the expediting of an increase in the supply of building materials. To insure efficiency, the Corporation has decentralized its field operations into regional and branch offices. (For a discussion of the extent of operations, see p. 582.)

Wartime Housing Limited.-Up to the conclusion of the War, Wartime Housing Limited had been responsible for the provision of temporary housing for war workers in those parts of Canada where rapid expansion of war industries created acute housing shortages. With the ending of the War, the Company turned to providing homes at low rentals to veterans and their families. In order to insure integration of the effort of this Company with that of the Central Mortgage and Housing Corporation, joint policy formulation and management was arranged as of Jan. 1, 1947. Wartime Housing Limited restricted its activities to the construction of new units. The directors and officers of Wartime Housing Limited have become officials of the Corporation which administers all completed Wartime Housing units. Thus, the amalgamation of the housing activities of the Federal Government into a single organization has been substantially accomplished. (For a discussion of the operations of Wartime Housing Limited, see p. 582.)

Dominion Coal Board.-As a result of the recommendations of the Royal Commission on Coal, the Federal Government has revised its coal policy and has framed legislation providing for the establishment of the Dominion Coal Board. It is proposed to have the new Board absorb the functions of the Dominion Fuel Board, as well as to keep the production and marketing of coal in Canada under continuous review. The Board will advise the Government on a flexible coal policy designed to meet the varying needs of the major economic regions of the country. Until the Dominion Coal Board is established by Act of Parliament, the Dominion Fuel Board as presently constituted, continues to operate under the Minister of Reconstruction and Supply (see p. 441).

## Section 3.-Provincial Programs of Reconstruction

The provinces have planned, individually, reconstruction measures for the postwar period. Schemes have been formulated for stimulating post-war employment and utilizing natural resources. In addition, steps are being taken within the provincial field to supplement the Dominion program for the rehabilitation of veterans. All provinces are co-operating in the Canadian vocational training program. Outlines of the respective provincial programs followed in 1946 are given below.

Prince Edward Island.-A Department of Reconstruction was established in 1944 to promote and co-ordinate plans for provincial development and postwar employment. An agricultural survey of the Province, begun in that year, was completed in 1945.

A Provincial Advisory Reconstruction Committee was appointed to assist the Government in formulating policies for the economic betterment of the Province and to organize, in advance of the end of hostilities, work projects that would create employment and employment opportunities. Nine technical committees were appointed under the direction of the Advisory Committee with special studies being made on education, tourism and transportation, rural electrification, housing, finance and revenue, fishing, agriculture, public health and welfare, and forestry. The Committee's report was received by the Government in July, 1945.

The 1945 Legislature enacted measures relating to town planning, the supplying of electric power, and the purchase by the Province of surplus war assets from the Federal Government. Several amendments to that legislation were passed in 1946.

A Provincial Planning Board was set up in October, 1946. A survey of the area adjacent to the city of Charlottetown, comprising a ground-level survey, sanitary survey and an economic survey, was authorized. This work is expected to be completed early in March, 1947.

Town Planning Boards were established in the municipalities of Charlottetown, Summerside, and Kensington, P.E.I. A report on "Taxation in Prince Edward Island", by Dr. J. E. Lattimer was completed early in 1946.

Nova Scotia.-Reconstruction in Nova Scotia, in 1946, followed, generally, the policies previously determined. In agriculture, the Cold Storage Assistance Act resulted in the construction of one large plant for apples; several others are under organization. Intensive and extended investigations were made into the mineral resources of the Province. In forestry, policies to maximize returns on a sustained yield basis were extended, and the new Small Tree Conservation Act provides for management to maintain forest cover. A Division of Inland Fisheries was established and the Fishermen's Loan Board extended loans to modernize boats and equipment. Tourism was promoted by advertising in the United States and by loans to improve tourist facilities. The manufacturing industry was assisted by the preparation of a Directory and the granting of capital loans for modernization and expansion.

The Provincial Labour Department assisted in the vocational training of veterans, and has a Code of Labour Laws under preparation. The establishment of rural and high schools was provided for, and the development of a course in chemical engineering at the Nova Scotia Technical College was announced. In public health, free institutional treatment for tuberculosis was instituted, plans for an intensified field and case-finding program were extended and hospitals, generally, were under expansion. A study of the division of functions between municipal and provincial authorities was prepared and assistance in community planning was extended to local bodies. Shortages hampered the highway program, but substantial mileages were graded preliminary to paving. The Nova Scotia Power Commission continued to extend its rural power lines and the construction of a new generating station was approved. The Research Foundation is in an advanced state of organization and a program of research is under preparation.

New Brunswick.-In addition to the maintenance of contacts with the Department of Veterans Affairs, the Employment Service of Canada and all Federal Government agencies working on rehabilitation, the Provincial Department of Reconstruction has expanded into three divisions, all working primarily to assure opportunity and employment for returned personnel.
(1) Industrial Division.-This Division offers technical assistance to industry at every level and participates with industry in the construction of buildings, the procurement of equipment, technique of manufacture, searching for and catering to markets, etc.
(2) Fisheries Division.-This Division sponsors the modernization of fishing equipment, boats, engines, etc., and the improvement of quality in fresh and canned fish. It also encourages increased production and packing in selected areas where natural resources are abundant and labour is sufficiently available.
(3) Handicrafts Division.-A creditable establishment is now in operation at Fredericton, completely equipped and staffed to teach the creation and manufacture of a full range of handicrafts in wood, leather, metals, ceramics, etc.

Throughout the Province, opportunity is also provided for such training in schools, institutions, homes, etc.

The Fishermen's Loan Board of New Brunswick reports satisfactory progress in their program of financial assistance to fishermen in the purchase of boats, engines, etc.

The Resources Development Board, created early in 1944, co-operates with Provincial Government Departments in all matters relating to the development of resources. The Board has been instrumental in bringing into active focus the possibilities inherent in provincial undeveloped resources-water power, mineral, forest, tourism and also acts in a technical advisory capacity. The facilities of the Board are also available to industry and individuals. Development assistance has been provided to new industries as well as expanding fields for existing operations.

The Board maintains close liaison with the National Research Council and other Federal laboratories.

Quebec.-Various Departments of the Provincial Government have prepared plans relating to reconstruction in the post-war period. Many of these plans are based on a provincial inventory of natural resources.

Department of Lands and Forests.-This Department is undertaking considerable forest development and full advantage will be taken of modernized methods of forestry control and exploitation. The industry is encouraged to extend to the public the benefits of the newest methods for the scientific and economic use of wood.

Department of Trade and Commerce.-The policy of this Department is to foster trade in domestic as well as in foreign markets. The Department works in close co-operation with Canadian Trade Commissioners in foreign countries and maintains an office at New York city to assist Quebec producers in selling their merchandise. The British West Indies territory is also covered by a provincial representative once or twice a year.

To provide reliable information for new industries desiring to locate in the Province, a detailed survey of all cities and larger towns has been undertaken and will be ready for publication during 1947.

Department of Social Welfare and of Youth.-This Department, realizing that the Province of Quebec is now on the crest of a wave of industrial development, will undertake to increase the capacity of its technical, arts and crafts, and other specialized schools, in order to provide skilled labour and technicians for new and for existing industries, many of which are expanding considerably.

Juvenile delinquency will also receive the immediate attention of this Department, in an endeavour to find and apply the proper solutions to the various problems resulting therefrom.

Department of Roads.-A program of new road construction, at a cost of $\$ 30,000,000$ to be spread over a four-year period, has been approved by the Legislature.

The Department of Labour.-In accordance with Help to Apprenticeship Act, this Department has co-operated in the organization of many apprenticeship centres, which are under the direction of local Commissions or Boards composed of representatives of employers and workers in the industries or occupations concerned. The following apprenticeship centres were in operation as at Apr. 1, 1947:

1. Apprenticeship Commission for Construction and Engineering Trades in Montreal, 2255 East, Laurier Avenue, Montreal, Que.
2. Apprenticeship Commission of the Shoe Industry, 1895 La Salle Ave., Montreal, Que.
3. Apprenticeship Commission for Printing Trades, New Birks Bldg., Room 562, Montreal, Que.
4. Apprenticeship Commission for Watchmaking, 1686 St. Hubert St., Montreal, Que.
5. Apprenticeship Commission for Barbers and Hairdressers in Montreal, 351 East, St. Catherine St., Montreal, Que.
6. Apprenticeship Commission for Building Trades in Sherbrooke, 29 Gordon St., Sherbrooke, Que.
7. Apprenticeship Commission for Building Trades in Chicoutimi, 187 Racine St., Chicoutimi, Que.
8. Apprenticeship Commission for Building Trades in Hull, 187 Main St., Hull, Que.
9. Apprenticeship Commission for Building Trades in Joliette, 728 St. Viateur St., Joliette, Que.
10. Apprenticeship Commission for Building Trades in Matane, Matane, Que.

Ontario.-Each provincial Department has its post-war plans. Many of these involve substantial items of construction. The Departments of Public Works and Highways have long-term programs at advanced stages of planning. Hospitals, reformatories and other public institutions are part of the public works program. The Department of Lands and Forests has a comprehensive scheme for forest protection and management and fire control. The tree nurseries of this Department are being greatly extended to fill the heavy demand for reforestation. The Department of Travel and Publicity was established in April, 1946, for the purpose of developing the tourist industry.

The Department of Planning and Development, established in March, 1944, is a key agency of post-war reconstruction. The work of this Department falls into three branches:-
(1) Conservation.-Surveys have been carried out in a number of watersheds in southern Ontario. They have now been completed in the valleys of the Upper Thames, Etobicoke, Humber and Ganaraska, and are well advanced in the South Nation. Under the Conservation Authorities Act, 1946, municipalities in an area may establish an authority with power to acquire land and carry out conservation schemes. Several of these have already been formed.
(2) Town and Community Planning.-The Planning Act, 1946, gives the Department certain powers in the guidance and promotion of community planning and the final approval of plans, including plans of subdivision. The Department assists by giving general consulting advice to municipalities with respect to problems of their growth and development.
(3) Trade and Industry.-Originally, this Branch was mainly complementary to the Trade and Industry activities of Ontario House, at London, England. Its functions have become much broadened as the result of widely increasing contacts throughout the Province, the United States and other countries. The Branch assists in the development and placing of new industries and provides a constant service of up-to-date information of value to industrial and trading firms.

Manitoba.-A number of agencies co-operate in formulating post-war plans for the Province:-

Sub-Committee of the Cabinet.-Under the chairmanship of the Premier, the Sub-Committee receives and considers reports on the various aspects of reconstruction, rehabilitation and industrial development.

Post-War Reconstruction Committee.-The Post-War Reconstruction activities of this Committee were concluded in October, 1946. However, a continuing Committee of Deputy Ministers was set up with the same membership, for the purpose of providing a body which could review and study matters of an interdepartmental nature.

Advisory Committee on Co-ordination of Post-War Planning.-This Committee, representing various economic groups from urban and rural Manitoba, was set up by Order in Council on Apr. 18, 1944, to consider submissions and undertake research. Its aim was the integration of the provincial reconstruction program. Interim reports were submitted to the Premier on Dec. 15, 1944, and Feb. 4, 1945, and the final report on Jan. 21, 1946.

Special Select Committee of the Legislature.-At the 1944 Session, and reempowered at the 1945 Session, a Special Select Committee of all the Members of the Legislative Assembly was constituted for the purpose of reviewing, criticizing, and formulating proposals and plans and advising and assisting the Government in the formulation of its post-war program.

Joint University Studies.-In 1941, at the request of the Governor of Minnesota, U.S.A., and the Premier of Manitoba, the University of Minnesota and the University of Manitoba, together, investigated the effects of alternative peace settlements upon the economies of the Canadian Prairie Provinces and the central northwest region of the United States. Two reports have been published.

Manitoba Electrification Enquiry Commission.-Manitoba Power Commission has acted on the Report and has laid out a ten-year expansion program. During the summer of 1946 the first stages of this program were put into effect.

Reports published under the sponsorship of one or more of the above Committees include: Wood Lots and Shelter Belts; Soil Classification and Land Use; Utilization of Plant and Animal Products; Marketing of Fruits and Vegetables; Small Town and Community Planning; Community Centres; and Report of Advisory Committee.

Saskatchewan.-The Department of Reconstruction and Rehabilitation was officially organized on Nov. 2, 1944. This Department has two divisions-Reconstruction and Rehabilitation. The Division of Reconstruction has the function of initiating projects contemplated by the Government of Saskatchewan looking toward the permanent development of the Province and to the raising of the standard of living of the people.

This Department has initiated a program of spray painting for rural buildings. In addition, two bulletins have been published covering farm-home improvement: A Guide to Farm Home Planning and Modernization and Modernizing Farm Homes. These have had wide distribution.

Two Crown Corporations have been organized under the Department: the Saskatchewan Reconstruction Corporation, which deals with the acquisition and disposal of surplus war assets for the various departments of the Provincial Govern-
ment, and the Saskatchewan Reconstruction Housing Corporation which is, at present, dealing with the problem of emergency housing. As a result of the activities of this particular corporation, 569 living units have been undertaken, most of which are completed and occupied. These units were used almost entirely for returned veterans.

A machine shop and repair depot has been organized as part of the Saskatchewan Reconstruction Corporation, which is used for the repair of Government vehicles as well as machine shop work in connection with the various activities of the Provincial Government.

Alberta.-The Alberta Post-War Reconstruction Committee, set up on Mar. 30, 1943, conducted investigations into the provincial economy and its post-war problems through sub-committees on agriculture, education, finance, industry, natural resources, public works and social welfare. Also assisting were the Research Council of Alberta and the Post-War Survey Management Committee.

Implementation of the Post-War Reconstruction Committee's recommendations is the responsibility of the new Department of Economic Affairs, or of other appropriate Departments of Government. The Department of Economic Affairs, established at the 1945 Session of the Legislature, was empowered to initiate and sponsor projects designed to aid in rehabilitation and reconstruction.

In a brief to the Dominion House of Commons Committee on Reconstruction and Re-establishment, the Premier of Alberta outlined a potential $\$ 250,000,000$ program that feasibly could be undertaken to provide social services, roads, bridges, housing and irrigation projects.

Among recommendations of the Post-War Reconstruction Committee so far acted upon are those pertaining to normal-school training as a branch of university work leading to a degree; appointment of a Veterans Welfare and Advisory Commission; appointment of the Alberta Power Commission and the Industrial Development Board; enactment of new apprenticeship laws; and the establishment of a new Department of Public Welfare. Also established is the Veterans Land Settlement Scheme, which provides veterans with half-section farms on nominal crop-rental terms prior to the granting of clear title. Veterans qualifying are given cash grants by the Federal Government under the Veterans' Land Act.

At the 1946 Session of the Legislature, provision was made for the Department of Economic Affairs to establish branches concerned with housing and cultural welfare.

In 1943, the Post-War Reconstruction Fund Act appropriated $\$ 1,000,000$ for future projects. In subsequent years, this amount was raised to $\$ 5,000,000$, and in 1946 a start was made on a program of road and highway development, utilizing these moneys. The post-war program now under way is a broad one and includes industrial expansion, educational benefits, a province-wide health and hospitalization scheme, extension of cultural and recreational activities, housing assistance in towns, cities and on farms, and a general up-grading of life and living in the Province.

British Columbia.-The organizations set up by the Government of British Columbia in the field of reconstruction include: (1) The Bureau of Reconstruction under a Committee of the Executive Council; (2) The Interdepartmental Advisory Committee on Industrial Development; and (3) The British Columbia Industrial and Scientific Research Council.

Bureau of Reconstruction.-The purpose of this Bureau (formerly the Bureau of Post-War Rehabilitation and Construction) is to co-ordinate all Provincial services in post-war activities, and to collaborate with Dominion Departments, other provinces, municipalities and private enterprise, with the view to formulating plans to create and maintain productive employment and to develop the human and material resources of the Province.

Through the medium of Governmental Advisory Committees appointed in seven of the ten Regions into which the Province is divided, Industrial Committees have been established to study conditions and recommend the extension to or the placing of new industries throughout the Province.

A Regional Planning Division of the Bureau co-ordinates information from Government Departments and from the ten Regions of the Province with the object of developing the economy of each Region. Advice is given to small incorporated municipalities on their community problems, and zoning by-laws and master plans are submitted.

Interdepartmental Advisory Committee on Industrial Development.-This Committee functions as a clearing house for administrative problems in the field of industrial development in which the interests of the various Departments are concerned. It works with the Bureau of Reconstruction in an advisory capacity. A Sub-Committee on Reconversion of Industry has been appointed which has sponsored special surveys in various industries to study the problems of reconversion; sub-committees on industry inquiries have also been set up in several regional areas of the Province.

British Columbia Industrial and Scientific Research Council.-The Council acts as a clearing house to: (1) co-ordinate the work of research units and avoid duplication; (2) initiate and generate new research work; (3) relate research work to other problems of industrial rehabilitation in the post-war period; (4) apply the results of research to the creation of new industries and trade-expansion programs. Research problems studied by the Council are undertaken on the recommendation of one of five Technical Advisory Committees, namely: agriculture, forestry, fisheries, mining and metallurgy, and power and irrigation. An Industries Advisory Committee has been formed to ensure industrial application for the research projects of the Technical Advisory Committees, to provide assistance for existing secondary industries, and to aid in the establishment of new industries in the Province.

The Government of British Columbia has planned an expenditure of $\$ 28,250,000$ in public works, not all of which will be spent in the fiscal year 1947-48. A sum of $\$ 15,000,000$ will be appropriated from revenue surpluses to be laid out on a threeyear plan for new highway construction. An expenditure of some $\$ 18,250,000$ is planned for 1947 as follows: $\$ 6,000,000$ for maintenance of roads, bridges and ferries; $\$ 2,250,000$ for hard-surfacing roads; $\$ 5,000,000$ (one-third of the three-year plan) for new highway construction; and $\$ 5,000,000$ for new bridges.

These projects will be over and above the capital developments now in progress, notably, the Hope-Princeton and Pine Pass Highways, which will absorb some $\$ 10,000,000$.

# CHAPTER XXIX.-NATIONAL DEFENCE* 

## CONSPECTUS

The 1946 edition of the Year Book at pp. 1077-1078, traces the growth and development of the Canadian Armed Forces from their origin to the end of the War of 1939-45. In the period since the three Services, Navy, Army and Air Force, were at their peak strength, there has been a rapid reduction in personnel. Repatriation and demobilization of Canadian Forces has been completed much more rapidly than was ever anticipated.

The reduction in the personnel of the Armed Forces is given in the following summary:-

| Strength and Date | Navy | Army | Air Force | Totals |
| :---: | :---: | :---: | :---: | :---: |
| Strength at peak | 92,880 | 481, 500 | 215,200 | 789,580 |
| Strength as of Dec. 31, 1946. | 8,481 | 21,473 | 12,846 | 42,800 |

The Department of National Defence was recently consolidated under a single Minister, and the work of the Navy, Army and Air Force is to be co-ordinated at all possible levels. The object is to achieve the greatest possible economy and efficiency in the Services, so that Canada will have Armed Forces which will meet the defence needs of the country and maintain the high standards of the Forces set in the War.

The Department now has one Minister and one Deputy Minister instead of three; also two associate Deputy Ministers whose responsibilities are based on functional rather than Service requirements. Headquarters of the three Services are being moved to a single site at Ottawa.

The international situation, the proposals made at the recent session of the United Nations, and the rapid changes in types of weapons, are among the considerations which make it undesirable at this time to settle finally the composition or character of the future Armed Forces of Canada. The year 1947 is regarded as a period during which the defence forces will be established on a sound administrative basis, capable of being adapted or developed to meet all possible changing circumstances. The defence organization will be kept on a flexible basis to fit in with any plan of general security or general disarmament as called for by the United Nations and the defence needs of Canada.

The Reserve Forces are an important element in the new organization. Many ex-servicemen joined the Reserves and Auxiliaries and will make their training and experience available to the younger recruits.

## Section 1.-The Royal Canadian Navy

The Royal Canadian Navy has undergone two sweeping changes of organization within the past seven years. The outbreak of the Second World War found the Navy equipped with six River Class Destroyers, averaging 1,500 tons, and five small minesweepers. Personnel consisted of 131 officers and 1,643 men of the permanent

[^425]service (R.C.N.) and 219 officers and 1,803 men of the combined Royal Canadian Naval Reserve and Royal Canadian Naval Volunteer Reserve, and the Fishermen's Reserve.

During the War, this force was expanded and became a very substantial naval force, with submarine-hunting corvettes, frigates, and escort minesweepers predominating in the 378 warships in commission by 1945.

There were few naval operational areas that were not, sooner or later, the scene of R.C.N. activity. Its greatest undertaking was, of course, the war-long Battle of the Atlantic, in which merchant ships carrying 181,643,180 tons of supplies from North America to the United Kingdom received Canadian escort protection. As the invasion of Europe approached, Canadian warships took over the entire close escort of North Atlantic convoys and provided many of the hunting groups. The actual invasion saw 109 R.C.N. ships and 10,000 officers and men engaged.

The 17 enemy submarines definitely destroyed by the R.C.N. and the 11 in whose destruction it shared, were hunted down in as widely separated waters as the Caribbean and the Mediterranean Seas. Canadian warships became familiar with the waters of North Russia and the Aleutian Islands, with the South Pacific and the China Sea. In addition to serving in their own vessels, 1,634 Canadian officers and 4,149 men were lent to the Royal Navy and outstanding contributions were made in Naval Aviation and in Light Coastal Forces.

The second radical change has come with the return of peace. While it has brought a great reduction of the wartime force, the new fleet is many times more powerful than any peacetime navy Canada has previously possessed. Designed as a balanced two-ocean organization it is for the first time in R.C.N. history, built around big ships and makes allowance for the increasing importance of air power.

The Main Fleet.-The largest unit of the new force is a "light fleet" aircraftcarrier of 18,000 tons. Two 8,000-ton cruisers, seven large Tribal class destroyers, and four lighter destroyers, make up the balance of the fleet. The now obsolete corvette has vanished from the picture; six frigates and nine Algerine type minesweepers are retained in reserve and for training purposes.

The following are the ships:-

Light Fleet Aircraft CarrierH.M.C.S. Magnificent

Six-Inch CruisersH.M.C.S. Ontario H.M.C.S. Uganda

Tribal Class DestroyersH.M.C.S. Micmac H.M.C.S. Huron H.M.C.S. Haida
H.M.C.S. Iroquois

Tribal Class Destroyers-concl.<br>H.M.C.S. Cayuga<br>H.M.C.S. Nootka<br>H.M.C.S. Athabaskan<br>"V" Class DestroyersH.M.C.S. Sioux H.M.C.S. Algonquin<br>Crescent Class Destroyers-<br>H.M.C.S. Crescent<br>H.M.C.S. Crusader

The aircraft carrier is of the Colossus class, with a speed of 25 knots. It carries 30 'planes and a ship's company of more than 1,000 . Air Personnel of the Royal Canadian Navy is rounded out with men lent from the Royal Navy in which a number of Canadian aviators received their original training and served throughout the Second World War.

78375-71

The cruisers, 550 feet long, mount nine six-inch guns, and heavy anti-aircraft armament. They carry crews of nearly 800 and have a speed of more than 30 knots. H.M.C.S. Uganda was the one large Canadian ship of the present fleet to go into action during the Second World War. H.M.C.S. Ontario was completed just in time to reach Japanese waters as hostilities ended.

The Tribals, fleet destroyers, are of about 2,000 tons and are the most heavilyarmed vessels of their type. Three of them, British-built, saw much action in the closing years of the War. They are H.M.C.S. Iroquois, H.M.C.S. Huron, and H.M.C.S. Haida. The remaining four are notable as being the products of Canadian shipbuilders, and the first turbine warships ever built in the Dominion.
H.M.C.S. Crescent and H.M.C.S. Crusader are somewhat smaller destroyers than the Tribals and are thoroughly modern. They are on loan from the Royal Navy.
H.M.C.S. Algonquin and H.M.C.S. Sioux are Canadian "V" class fleet destroyers. They displace 1,700 tons and, while comparatively new ships, both have battle records to their credit.

The frigates and Algerine minesweepers, war-developed as anti-submarine vessels, displace 1,445 and 1,000 tons, respectively.

Inclusion of bigger ships in the R.C.N. has provided sea-going training facilities for which it was necessary previously to send Canadians to the Royal Navy. Surplus wartime equipment has also made it possible to supply naval divisions with modern training gear on a generous scale.

To man these ships the personnel of the Royal Canadian Navy has been authorized at 10,000 . However, a limitation of 7,500 has been set for 1947. During the interim period (until Sept. 30, 1947), this complement will contain not only permanent service R.C.N. men, who sign a five-year agreement, but will also draw on reservists who have extended their wartime enlistment until that date.

Officers of the Royal Canadian Navy come from three sources: (1) Graduates from H.M.C.S. Royal Roads, the R.C.N.-R.C.A.F. College at Esquimalt, B.C.; (2) direct entry of certain specialists from the universities; (3) promotions from the ranks.

Royal Canadian Navy (Reserve).-The several Reserve organizations have been incorporated in a single organization known as the Royal Canadian Navy (Reserve). Divisions of the R.C.N. (R) are established in 20 centres across Canada.

Training, operational and repair bases will be retained at Halifax, N.S., and Esquimalt, B.C., both of which were greatly enlarged and modernized during the war years. Stress will be laid on a Navy trained under sea-going conditions.

The ships of the reserve fleet are:-

Frigates-
H.M.C.S. St. Stephen
H.M.C.S. Beaconhill
H.M.C.S. New Waterford
H.M.C.S. La Hulloise
H.M.C.S. Antigonish
H.M.C.S. Swansea

Algerine Class Minesweepers-
H.M.C.S. Fort Frances
H.M.C.S. Kapuskasing
H.M.C.S. New Liskeard
H.M.C.S. Oshawa
H.M.C.S. Portage
H.M.C.S. Rockcliffe

Algerine Class Minesweepers-concl.
H.M.C.S. Sault Ste. Marie
H.M.C.S. Wallaceburg
H.M.C.S. Winnipeg

Wooden Minesweepers-
H.M.C.S. Revelstoke
H.M.C.S. Llewellyn
H.M.C.S. Lloyd George

Motor Launches-
H.M.C.M.L. 121
H.M.C.M.L. 116
H.M.C.M.L. 124
H.M.C.M.L. 106

There are two types of enlistment in the Royal Canadian Navy (Reserve). Officers may be either Active or Retired. The first mentioned do periodic training. Retired officers may volunteer for training if they wish but it is not compulsory. Both classes are liable to mobilization in a time of emergency, though the latter are restricted to appointments within the limits of their age and physical ability.

Men are divided into Active and Emergency groups and are governed by the same conditions as apply to officers. They sign on for five-year periods. Authorized R.C.N. (R) Active complement is 18,000 . There is no complement for Retired officers and Emergency men.

Naval Divisions are commanded by R.C.N. (R) Active officers, under whom are R.C.N. staff officers and instructors. The Staff Officers are instructional specialists. Naval Divisions are not only the local training centres for Reservists but are recruiting offices for the R.C.N. The various Divisions and the Centres at which they are established are:
H.M.C.S. Scotian, Halifax, N.S.
h.M.C.S. Queen Charlotte, Charlottetown, P.E.I.
h.M.C.S. Carleton, Ottawa, Ont.
H.m.C.S. Cataraqui, Kingston, Ont.
H.M.C.S. Brunswicker, Saint John, N.B.
H.M.C.S. Montcalm, Quebec, Que.
h.M.C.s. Donnacona, Montreal, Que.
H.M.C.S. York, Toronto, Ont.
h.M.C.S. Star, Hamilton, Ont.
h.M.C.S. Hunter, Windsor, Ont.

H.M.C.S. Prevost, London, Ont.<br>H.M.C.S. Griffon, Port Arthur, Ont.<br>H.M.C.S. Chippawa, Winnipeg, Man.<br>H.M.C.S. Queen, Regina, Sask.<br>H.M.C.S. Unicorn, Saskatoon, Sask.<br>H.M.C.S. Tecumsen, Calgary, Alta.<br>H.M.C.S. Nonsuch, Edmonton, Alta.<br>H.M.C.S. Discovery, Vancouver, B.C.<br>H.m.C.S. Malahat, Victoria, B.C.<br>H.M.C.S. Chatham, Prince Rupert, B.C.

Administrative and operational Headquarters for the Royal Canadian Navy is at Naval Service Headquarters, Ottawa, Ont.

University Naval Tráining Divisions.-Divisions for naval training are now established in 19 universities across Canada providing a program of four years' duration, designed to produce officers for the Royal Canadian Navy and the Royal Canadian Navy (Reserve) Active and Retired lists. These universities are: British Columbia, Alberta, Saskatchewan, Manitoba, Assumption College, Western Ontario, Ontario Agricultural College, McMaster, Toronto, Queens, Ottawa, St. Patrick's College, McGill, Montreal, Laval, New Brunswick, Saint Francis Xavier, Dalhousie, and Nova Scotia Technical College.

Training consists of instruction during the year in the nearest Naval Division and on the campus, followed by specialist instruction in H.M.C. ships and coastal establishments during the vacation months.

The program envisages an annual enrolment of some 500 students with a maximum complement of 1,800 . There are, approximately, 900 undergraduates training this year.

The Royal Canadian Sea Cadets.-The R.C.S.C. consists of 91 authorized Corps, sponsored by the Navy League of Canada, and trained and supervised by the Naval Service. The authorized strength is 10,000 cadets between the ages of 14 and 18 years.

## Section 2.-The Canadian Army

Command.-The present system of Command of the Canadian Army in Canada provides for five military Commands with subordinate Areas as follows:-

Western Command-with Headquarters at Edmonton, Alta. British Columbia Area-with Headquarters at Vancouver.
Prairie Command-with Headquarters at Winnipeg, Man. Saskatchewan Area-with Headquarters at Regina.
Central Command-with Headquarters at Oakville, Ont.
Western Ontario Area-with Headquarters at London.
Eastern Ontario Area-with Headquarters at Kingston.
Quebec Command-with Headquarters at Montreal.
Eastern Quebec Area-with Headquarters at Quebec.
Eastern Command-with Headquarters at Halifax, N.S.
New Brunswick Area-with Headquarters at Fredericton.
The five Commands are charged with complete military responsibility, under Army Headquarters, for all matters affecting their Commands and the command and administration of all troops within their Command.

Organization.-There is but one Canadian Army which includes all the ground Forces of Canada. Service is on a voluntary basis.

The organization of the Army provides for six component parts as follows:-
The Active Force. -The Active Force is organized on the basis of an establishment of 25,000 all ranks, plus personnel employed on the Northwest Territories and Yukon Radio System and Northwest Highway System. The Active Force is available for General Service and comprises a Field Force, Coast and Anti-Aircraft Defence Units, Headquarters, Command and Area Staffs; training, intercommunication, administration, research and development staffs, units and establishments, officers and men permanently employed but not borne on any regimental establishment.

The conditions for enlistment in the Active Force provide for men who were on Active Service in the Army during the Second World War, if they meet the physical requirements, have an education of Grade VIII, or the equivalent, and are between 18 and 40 years of age. Young men are preferred. Men who were not on Active Service during the War may enlist if they meet the physical requirements, have an education of Grade X, or the equivalent, and are between 18 and 25 years of age. Men qualified in some particular trade may be accepted up to the age of 35 years.

The Reserve Force.-The Reserve Force provides the basis for the organization of a field force in the event of emergency with an establishment provision of, approximately, 180,000 all ranks employed on a part-time basis and subject to annual military training.

The Supplementary Reserve.-The Supplementary Reserve will contain units and lists of individuals required in the event of mobilization to complete the organization of the Army. Such personnel will not be subject to, yet not precluded from, annual military training.

The Canadian Officers Training Corps.-The C.O.T.C. is the fourth element of the Canadian Army and responsible for training officer candidates during peace and war, the personnel are subject to the same obligations in respect of military service as apply to other parts of the Army.

The Cadet Services of Canada.-The Cadet Service consists of commissioned officers of the Canadian Army, serving on a basis comparable to officers of the Reserve Force, who are provided for the purpose of administering and training the authorized Cadet Corps of the Royal Canadian Army Cadets across Canada.

The Reserve Militia. - The Reserve Militia provides for units for home security duties, which could not be performed by the Reserve Force.

Additional to but not an integral part of the Canadian Army as educational and training establishments are: (a) officially authorized Cadet Corps; (b) officially authorized rifle associations and clubs; (c) such training centres as may be authorized from time to time by the Minister; (d) Royal Military College.

Statistics of the Canadian Army.-The Canadian Army appointments, enlistments and enrolments by provinces from 1939-45 are given in Table 1. The number of discharges from the wartime Active Service Force from May 1, 1945 to Dec. 31, 1946, were 407,212 General Service, 54,467 under the National Resources Mobilization Act, 14,532 Canadian Women's Army Corps making a total of 476,211 of which 284,800 were discharged in 1946.
1.-Canadian Army Appointments, Enlistments and Enrolments, by Provinces, 1939-45

| Totals | 608,434 | 100,573 | 21,618 | 730,625 |

${ }^{1}$ Includes 57,483 transfers from N.R.M.A. to General Service.
Repatriation and Demobilization.-Canadian Army repatriation of troops and wives of servicemen from September, 1939, to December, 1946, numbered 323,520 from the United Kingdom, 333 from Australia and 923 from the Caribbean. Total dependents of Army troops brought to Canada from the United Kingdom and North Western Europe during this period were 32,902 women and 16,760 children.

Prisoners of War returned to Canada numbered 5,934 , of these 4,516 were liberated from Europe, the remainder from the Far East.

The following data on war casualties have been extracted from the Canadian Army Medical Statistics compiled during the First and Second World Wars.

## Section 3.-The Royal Canadian Air Force

At the outbreak of War in September, 1939, the Royal Canadian Air Force consisted of two components, Regular and Auxiliary, with a total strength of 4,606 officers and men. During the war years three new components, Special Reserve, Women's Division and Air Cadets, were organized, and the Force expanded fiftyfold to a peak strength of 215,200 officers and other ranks in January, 1944. Of these, more than 15,150 were members of the Women's Division. Forty-eight squadrons took part in operations overseas and, in addition, many thousands of R.C.A.F. personnel were attached to Royal Air Force units scattered all over the world. Another 40 squadrons were retained in Canada for home defence and anti-submarine operations. The R.C.A.F. also undertook the operation of the British Commonwealth Air Training Plan, whereby 131,553 trained aircrew were provided for the Air Forces of the United Kingdom, Canada, Australia and New Zealand (see Canada Year Book, 1946, pp. 1090-1099).

Since the conclusion of hostilities the Force has been rapidly demobilized. The last operational units overseas were disbanded in June, 1946, and the last members of the Women's Division were released at the end of that year. On Dec. 31, 1946, the total strength of the R.C.A.F. was 12,846 officers and other ranks, of whom 173 were still overseas. In addition, there were 5,981 civilian employees in Canada and 16 at Overseas Headquarters. Included in these figures are some personnel whose services are being retained only for the "interim period", to facilitate the transition from wartime to peacetime conditions. The interim period will terminate on Sept. 30, 1947, when the permanent establishment of the Force will come into effect.

The peacetime Royal Canadian Air Force will be organized in three components, Regular, Auxiliary and Reserve. The Regular Force will have an authorized strength of 16,100 officers and men, but it is not proposed, at present, to recruit this Force to its maximum authorized establishment.

The R.C.A.F. offers enlistment to skilled or unskilled men. Ex-members of the R.C.A.F. who were on Active Service may enlist in their former trade if they meet the physical requirements, and are within the age-group of 25 years, plus the number of years Active Service. Similarly the age limit is extended to veterans who require complete trade training and who possess the educational qualifications required of civilians with no previous service. Civilians who were not on Active Service may enlist if they meet the physical requirements, are unmarried, and are between 18 and 25 years of age. Skilled trades require men with a minimum educational standard of junior matriculation or equivalent. Semi-skilled trades require men with a minimum of Grade I education or equivalent. There are a few unskilled trades in which men are accepted with Grade VIII standing. Skilled civilian tradesmen who require no further training may be accepted up to the age of 30 years.

Operational units of the Regular Force will include a mobile tactical wing, comprising No. 416 Tactical Bomber Squadron, No. 417 Fighter Reconnaissance Squadron, No. 444 Air Observation Post Squadron and a Transport Flight; an interceptor wing of Nos. 410 and 415 Fighter Squadrons; No. 405 Bomber Reconnaissance Squadron; Nos. 426 and 435 Transport Squadrons; and Nos. 413 and 414 Photographic Survey Squadrons.

Fifteen squadrons are projected for the Auxiliary Force which will have an authorized establishment of 4,500 officers and men. Only ten of these squadrons will be activated during 1947. All the auxiliary squadrons will bear numbers and names made famous by R.C.A.F. units overseas during the War, and will be situated, in so far as possible, at those cities the names of which were used by the wartime squadrons. The units now in existence, or to be formed in 1947, are as follows:-

| No. 401 Rily | , |
| :---: | :---: |
| No. 401-Ram... .. ... | Fighter Squadron, at Montreal, Que. |
| No. 402-Winnipeg Bears | Fighter Squadron, at Winnipeg, Man. |
| No. 406-Lynx. | Tactical Bomber Squadron, at Saskatoon, Sask |
| No. 411-Roaring.. | .Fighter Squadron, at Toronto, Ont. |
| No. 418-City of Edmonton. | Tactical Bomber Squadron, at Edmon |
| No. 420-Snowy Owl. . | Fighter Squadron, at London, Ont. |
| No. 424-Tiger | Fighter Squadron, at Hamilton, Ont. |
| No. 438-Wildc | Fighter Squadron, at Montreal, Que. |
|  |  |

The Reserve, for which a strength of 10,000 has been approved, is to provide a pool of partially trained personnel who can be mobilized, if necessity should arise, and trained quickly to operational standards. Its members will be drawn initially from ex-personnel of the Force who served during the War.

The Royal Canadian Air Cadets, as they were redesignated in 1946, will continue, as in the past, to prepare young men for entry into the Regular or Auxiliary Forces or into civil aviation.

The Royal Canadian Air Force is administered from Air Force Headquarters at Ottawa, Ont.

There are two geographical Air Commands. Central Air Command, with its Headquarters at Trenton, Ont., has under it No. 10 Group Headquarters, Halifax, N.S. North West Air Command (Headquarters, Edmonton, Alta.) has two groups under it; No. 11 (Winnipeg, Man.) and No. 12 (Vancouver, B.C.). In addition to the Air Commands, Maintenance Command (Ottawa, Ont.) directs and coordinates supply, equipment, aeronautical and construction engineering and aeronautical inspection services throughout the Air Force, and No. 9 Transport Group
(Rockcliffe, Ont.) co-ordinates and directs Military Air Transport. Air Attaches are maintained at Washington, D.C., Prague, Czechoslovakia, and Paris, France. In addition, the R.C.A.F. will be represented by the Senior Canadian Air Force Liaison Officers in London, England and Washington, D.C.

The R.C.A.F. Staff College at Armour Heights, Ont., trains officers for command and staff positions. At the School of Aviation Medicine, Toronto, Ont., there are facilities for consultant and specialist officers, laboratories for nutritional research, a human centrifuge, a cold low-pressure chamber, a tropical room, a statistical section, and well-equipped laboratories for the study of all branches of aviation medicine.
4.-Royal Canadian Air Force Appointments and Enlistments, by Province or Country of Permanent Residence, Sept. 10, 1939 to Dec. 31, 1946

## Section 4.-The Defence Research Board

The mobilization of the scientific and industrial resources of the nation which was required in the Second World War demonstrated the need for co-ordination under one head of research and development pertaining to national defence.

Recognizing this need initially in the appointment in 1946 of a Director General of Defence Research, the Government later approved the establishment of the Defence Research Board. The Board consists of 12 members, one of whom is appointed Director General of Defence Research, and designated as Chairman and chief executive officer of the Board. There are five other ex-officio members, the Chief of the Naval Staff, the Chief of the General Staff, the Chief of the Air Staff, the Deputy Minister of National Defence and the President of the National Research Council. The remaining six members are appointed by the Governor in Council, and will be persons with scientific and technical qualifications drawn from the universities and industry.

The primary function of the Board is the co-ordination of the research and development activities of the Navy, Army and Air Force and to provide a link between the Armed Services and the civilian scientific community in Canada. A secondary but important function is to collaborate with the National Research Council in the application for the peaceful economic and industrial benefit of Canada of the many technical achievements of wartime and future developments in defence science.

There has been developed, under the Defence Research Board, an advisory committee structure designed to co-ordinate for the Board the defence aspects of research activities in the various fields of pure and applied science where developments of vital interest to defence will occur. Serving as members of these committees are representatives of the Armed Services, other Government Departments and agencies, and scientists expert in the fields under reference.

The Board will, in addition, initiate and conduct research into problems of direct and immediate interest to the Armed Services or to the defence of Canada as a whole. This work will be undertaken at research establishments operated by the Board or by other agencies.

The organization of the Board includes a central co-ordinating scientific and administrative staff and the following research establishments which were initiated during the War: (1) Canadian Armament Research and Development Establishment, Valcartier, Que.; (2) The Experimental Station, Suffield, Alta.; (3) The Chemical Warfare Laboratories, and the Radio Propagation Laboratory, Ottawa, Ont.

It is not the intention that the operations of the Board should duplicate those of existing research organizations. Legislation enacted by Parliament in 1947, directed the Board to co-ordinate its work with that of the National Research Council and other organizations and corporations engaged in scientific research and development, and authorized the Board to establish scholarships in connection with and make grants-in-aid for research and investigations for national defence.

## Section 5.-H.M.C.S. 'Royal Roads', R.G.N.-R.G.A.F College

As a result of the re-organization of H.M.C.S. Royal Roads, announced by the Minister of National Defence on Apr. 2, 1947, the former Royal Canadian Naval College now provides training for Naval and Air Force officers. The College will be known as H.M.C.S. Royal Roads, R.C.N.-R.C.A.F. College, and will
be administered by a Board of Governors under the chairmanship of the Minister of National Defence. It will continue to be commanded by a naval officer. Lectures will be given by R.C.N. and R.C.A.F. officers and by civilian professors and instructors.

The Naval Service Act of 1910, which authorized the establishment of the Royal Canadian Navy, provided for the creation of a college for training naval officers. Halifax, N.S., was selected as the most suitable site, and the old naval hospital in the dockyard was chosen as being an adequate building for the Royal Naval College of Canada. It was recognized, however, that as soon as possible a more suitable building would have to be constructed. This naval hospital building had accommodation for 45 cadets. The College was opened in January, 1911, the naval staff being lent by the Admiralty while the civilian instructors were obtained in Canada. In October, 1910, the King's permission was obtained to add the prefix "Royal" to the title of the College, a privilege which that institution received before the Royal Canadian Navy itself.

After the explosion in Halifax harbour on Dec. 6, 1917, the College building remained standing with its walls and roof intact, yet its condition was such that the staff and cadets had to be sent to Kingston, Ont., for the ensuing term. In September, 1918, the College was transferred to Esquimalt, B.C., where it remained until 1922. The move to Esquimalt had never been regarded as permanent but before a final location had been determined severe naval financial retrenchment removed the problem. The estimates for the entire Service in 1922 were $\$ 1,500,000$. The College closed and for the next twenty years Canada's permanent naval officers received their training in the Royal Navy. The Admirals and other senior officers of to-day's R.C.N., however, had been trained before the R.N.C.C. was dissolved.

The present institution was established as the Royal Canadian Naval College at Royal Roads, B.C., in 1942. The change in name also represented a certain change in character. Although influenced by the fine traditions of the Royal Navy, it has a more distinctly Canadian character than was the case with the original College. It is located ten miles from Victoria, B.C., on the former Dunsmuir estate. Surrounded by 600 acres containing some of the finest gardens in that beautiful area, the castle-like residence forms the administration centre of an establishment made up of both converted and newly constructed buildings. The College takes its name from the anchorage immediately offshore in the Straits of Juan de Fuca, "Royal Roads" having long appeared on early charts and records. A natural lagoon, separated from the Straits by a mile-long spit, provides year-round facilities for boatwork.

While the primary function of the College is to train men capable of assuming leadership in Canadian Naval and Air Force affairs, such a career is not obligatory to candidates. Graduates who do not wish to accept regular commissions will return to civil life but are under obligation to accept commissions in the R.C.N. (Reserve), the R.C.A.F. (Auxiliary) or the R.C.A.F. (Reserve). In the event of war, all graduates are liable for service if they are considered suitable in all respects.

In peacetime, a naval graduate returning to civil life following the two-year course can, if he wishes to qualify for a Master's or Mate's (Foreign Going) certificate in the Merchant Navy, be credited with one year's service at sea. Should he wish to continue his studies at a university, admission to second year Applied Science and first or second year Arts may be gained. The extent of the university recognition of a graduate's standing depends on the quality of his passing-out certificate and
the requirements of the institution concerned. A cadet must choose at the beginning of his second term whether he wishes to enter the Navy or Air Force, or civilian life on graduation.

Those proceeding into the Engineering Branch of the Naval Service complete their advanced studies at the Naval Engineering College at Devonport, England. Electrical Branch graduates continue their course at appropriate universities. The Executive Branch of the Navy, comprising approximately 80 p.c. of the officer material required, and the Supply and Secretariat Branch, complete their training at sea and in the various naval establishments. Training cruises and, on occasion, familiarization flights in aircraft are included in a cadet's training.

Selected graduates who are following Air Force studies will be appointed to permanent commissions in the R.C.A.F. (Regular) and will receive further training in aircrew or other specialist R.C.A.F. categories. An opportunity exists for an honour graduate to attend university to qualify for a degree in Engineering which will fit him for employment in the Aero Engineering and Signals Branches.

Candidates for entry into the College must be unmarried British subjects, normally resident in Canada, and must have attained the age of $16 \frac{1}{2}$ years but not the age of $19 \frac{1}{2}$ years on July 1st of the year of entry. Candidates from French classical colleges may be enrolled up to $20 \frac{1}{2}$ years. Minimum educational standard is Senior Matriculation and candidates must write two qualifying examination papers prior to entry. All applicants must be medically fit in accordance with R.C.N. and R.C.A.F. (Regular) standards. Several scholarships are available.

Note.-During the Second World War the rehabilitation of members of the Armed Forces was, in many respects, definitely tied-in with schemes for bridging the expected transition period. The rehabilitation of ex-service personnel and their general interests have since become functions of the new Department of Veterans Affairs.

The basis of the administration of the Department of Veterans Affairs, established in October, 1944 was dealt with in the 1946 edition of the Year Book at pp. 1053-54, and this Chapter brings the Administration up to date.

## Section 1.-The Department of Veterans Affairs

Since the inception of the Department of Veterans Affairs the load on the Department and the staff engaged to cope with it reached their peaks in 1946. Approximately one million men and women served in the Armed Forces of Canada and the demobilization of this large force was almost entirely completed during 1946. Assisted by the comprehensive rehabilitation program it has been estimated that 95 p.c. of these veterans have found peacetime occupations, or are completing training for their chosen careers.

The majority of the veterans of the Second World War are proving to be sober, conscientious citizens, intelligently working out their own rehabilitation and assuming increasingly responsible positions in all walks of life. The results obtained by veterans attending universities, ranking as they did, so considerably above the usual average of under-graduates, demonstrate that veterans themselves recognize the opportunities offered them by the legislation covered in this Chapter, and that they are striving to make the most of these opportunities, even under difficult conditions.

Approximately one-half of the entire staff of the Department has been engaged in providing adequate medical treatment and care for the thousands of eligible veterans requiring it. This medical service has been provided through approximately 45 institutions of the Department throughout Canada, other similar institutions under contract to the Department and through the general practitioners of Canada, the assistance of every one of the latter having been made available to the Department to provide adequately the necessary skill and services.

The remainder of the staff, which reached a peak of 20,117 at the end of December, 1946, dealt with the various other Branches such as: the Veterans' Land Act Administration; the Rehabilitation Branch; the Canadian Pension Commission; the War Veterans Allowance Board; General Administration; etc.

[^427]The Department has 17 District Offices and two sub-District Offices in Canada, and also maintains a District Office in London, England, for the United Kingdom. The Administration of the Veterans' Land Act has District Offices and Regional Offices, the latter being strategically located in order to be most readily accessible to the majority of veterans taking advantage of the opportunities offered by that piece of legislation.

The policy of sending travelling rehabilitation units into the more isolated parts of the country was adopted by some Districts. This practice proved very satisfactory and greatly assisted the rehabilitation of many veterans who, otherwise, would have been unable to take advantage of their rights and privileges or, if they did, would have incurred excessive expense to both themselves and the Department.

Although demobilization has been rapid (see p. 1052 of the 1946 Year Book), Canada's veterans have made the transition from Service to civilian life quickly, quietly and with a minimum of criticism from both themselves and the general public-ample proof that Canada planned, enacted, and carried out a most effective rehabilitation program, extensive in scope and generous in provision.

## Section 2.-Discharge Gratuities and Re-establishment Credits

Gratuities granted under the War Service Grants Act (outlined at pp. 1054-1055 of the 1946 Year Book), to which almost every Canadian ex-service man and woman was entitled, were nearly all paid by the end of the 1946-47 fiscal year. By that date, virtually all active service personnel had been discharged or, having volunteered for the Interim or Permanent Forces, had ceased to earn gratuity by virtue of the Order in Council setting the cut-off date for such personnel at Mar. 31, 1946.

Table 1 shows the number of applications passed for payment and the amounts paid during each fiscal year. It should be noted, however, that gratuities were paid by monthly instalments and, therefore, the amounts shown in any one fiscal year do not apply completely to the applications approved during the same period.

1. Applications for Gratuities and Amounts Paid under the War Service Grants Act, Years Ended Mar. 31, 1915-47

| Totals. | 104,253 | 46,019,013 | 584,204 | 306,638,793 | 231,162 | 100,709,887 | 919,719 | 453,367,693 |

[^428]Re-Establishment Credits.-With very few changes the legislation governing the use of re-establishment credit remains the same as outlined at pp. 1055-56 of the 1946 Year Book. Such changes as have occurred include recognition of the widow of a veteran, if he dies after discharge but before using his credit, as eligible for any remaining credit or, if there is no widow, the veteran's mother if she was wholly dependent upon the veteran immediately prior to his death.

Another change occurs in the Section permitting the use of re-establishment credit in the acquisition of a home under the National Housing Act, in that, credit may now be used to defray up to two-thirds of the difference between the total cost of the home and the amount of the loan, instead of the difference between the lending value and the loan as formerly. Re-establishment credit uses have been extended also to include the acquisition of a unit of living accommodation in a housing project receiving financial assistance under the National Housing Act.

There has been relatively little change from the previous year (see p. 1056 of the 1946 Year Book) in the percentages of credits used for the various purposes. The acquisition of homes has shown a general downward trend with the exception of the Section permitting reduction or discharge of indebtedness which has had a very limited effect on the picture as a whole. The purchase of furniture continues to be the popular purpose, increasing to the point where it accounts for over 54 p.c. of the credit used and approximately 70 p.c. of the applications received. In respect to the other purposes, the trends have been static, varying less than 1 p.c. from the previous year.

At the end of the fiscal year 1946-47 more than $\$ 120,000,000$ of re-establishment credit had been authorized for veterans, nearly 80 p.c. of which had been spent on tangible assets connected with a home indicating that this has been a very real form of assistance to veterans faced with an extremely acute housing problem.
2.-Re-establishment Credits Paid, by Purpose for which required, Years Ended Mar. 31, 1945-47

| Grand Totals. | 1,121,923 | 27,146,912 | 96,597,576 | $100 \cdot 0$ |

When the use of re-establishment credit outside Canada (see p. 1055 of the 1946 Year Book) for the purchase of veterans insurance was authorized, steps were taken to advise, so far as possible, all ex-service personnel residing outside Canada of the new regulation.

By Mar. 31, 1947, re-establishment credit amounting to $\$ 637,098$ had been applied to the purchase of 1,291 veterans insurance policies, with 234 applications pending. The total value of the policies in force was $\$ 4,837,500$. (See Section 6 , p. 1154.)

Approximately 80 p.c. of the policies sold outside Canada have been to veterans residing in the United States, 8 p.c. to residents of the United Kindgom, 6 p.c. to Newfoundland and the remaining 6 p.c. to other countries. Ex-service women and widows of veterans accounted for 64 of the policies sold to which they have applied \$17,403 re-establishment credit.

Veterans may purchase veterans insurance at any time within three years after discharge or the date of the coming into force of the Act which was February, 1945.

## Section 3.-Post-Discharge Treatment

## Subsection 1.-General Policy

The general policy with regard to post-discharge treatment is based on two fundamental principles designed to provide the best possible professional medical and surgical care for veteran patients. The first principle is close co-operation with the universities, so that Veterans' Hospitals may be used as teaching hospitals for either undergraduate or post-graduate teaching. The second principle is that consultant staffs at the Departmental hospitals should, so far as possible, be employed on either a part-time or a temporary basis, thus permitting these specialists to be also engaged in their work as teachers in the universities or as consultants in the districts. These outside contacts on the part of the staff assure the veteran patients the latest and soundest methods of diagnosis and treatment.

In districts where no Departmental hospital exists veterans with service-related disabilities and other veterans, in case of need, may receive medical service through doctors of their own choice.

## Subsection 2.-Treatment Facilities

As was anticipated, the veteran patient load showed a gradual and steady increase throughout 1946. With the peak load over by late spring, an adjustment of accommodation was required to provide for the long-term needs of the Treatment Services, these were met by the closing up of a large proportion of the Service hospitals taken over to meet the peak, and the abandonment of obsolescent facilities that formed part of the Department's regular hospital accommodation.

Of the 17 Service hospitals, representing over 5,000 beds, taken over by the Department, the following, with a total of approximately 3,500 beds were slated for abandonment during 1947: Sydney (Naval), Lachine (R.C.A.F.), Ottawa (Army), Malton Convalescent (Army), Crumlin Convalescent (Army), Portage la Prairie Conditioning Centre (Army), Brandon (Army), Gordon Head Conditioning Centre (Army), Sussex (Army), Hamilton (Army). The closing date in each instance will be adjusted to meet the actual patient load.

Coincident with the closing of these Service hospitals, new construction.will come into use. The permanent building program, which is given in detail at pp. 1057-1058 of the 1946 Year Book, has been seriously handicapped by the prevailing shortage of material and labour. Since that list was published, additional replacements have been recommended as follows: at Calgary, 100 beds, plus facilities; at Winnipeg, 200 replacement beds, plus facilities; at London, 200 replacement beds,
plus facilities; and at Quebec, 200 beds in a new hospital. These will all be of modern, fire-proof construction and will include accommodation for internes, in order to meet the change in Departmental policy of employing internes largely to replace the fulltime medical officers in the Treatment Services. Much of the replacement program will not concern beds, but rather ancillary services essential for adequate investigation, diagnosis and treatment. Service to bed patients represents a relatively small proportion of the treatment service to veterans of both wars, evidenced by the fact that in the year ended Mar. 31, 1946, total admissions to hospital numbered 92,015, while clinical treatments numbered 738,558 .

## Subsection 3.-Prostheses and Surgical Appliances

The Prosthetic Services Branch of the Department of Veterans Affairs, established in August, 1916, has as its first responsibility the provision of prostheses and orthopædic appliances to veterans and other persons entitled to such supply under Order in Council P.C. 4465 as amended. In the latter case, the Departments concerned include National Defence and Mines and Resources, together with the Canadian National Railways and Provincial Workmen's Compensation Boards.

The organization consists of a main manufacturing and fitting centre at Toronto and eleven district centres established in the major Canadian cities, equipped with facilities for measuring, fitting, adjusting and maintaining artificial limbs, orthopædic boots, splints, braces, artificial eyes and other appliances. Minor orthopædic appliances such as trusses, glasses, hearing aids, elastic hosiery, etc., are supplied through purchase from private manufacturers.

Issues in the fiscal years since 1940 were as follows:-

| Year Ended Mar. S1- |  | Total <br> Production <br> Jobs | Purchased and <br> Stock Articles <br> Issued |  |
| :---: | :---: | :---: | :---: | :---: |

The total number of patients receiving issues in the fiscal year 1946-47 exceeded 78,000.

The Branch carries out considerable research on prostheses in co-operation with the National Research Council and keeps abreast of developments in other countries. The Branch is the Departmental liaison with the Canadian National Institute for the Blind, who extend blind training and after-care service to blinded veterans, the National Institute for the Deaf and the Hard of Hearing on matters relating to veterans with loss of hearing, and the War Amputations of Canada on veteran amputation cases.

## Subsection 4.-Dental Services

A briel history of dental services from organization in 1919 to Mar. 31, 1946, is contained in the 1946 edition of the Year Book, at pp. 1059-1060.

Decentralization of the services was completed in October, 1946, with the opening of the last of the district dental offices, at North Bay, Ont. There are now 44 dental clinics in operation in 16 districts. The setting-up and manning of these
offices has been the means of overcoming what seemed an almost unsurmountable task. The large back-log of applications for post-discharge dental treatment prevailing at the close of the fiscal year 1945-46 had, with few exceptions, disappeared by early autumn, 1946.

Up to Mar. 31, 1947, approximately 650,000 applicants had been declared eligible and treatment authorized; of these about 11 p.c. had been completed. Treatments supplied and the number of patients whose treatments were completed, by years from 1940 to 1946 are as follows:-

|  | Year Ended Mar. 31- | Treatments | Patients Completely Treated |
| :---: | :---: | :---: | :---: |
|  |  | No. | No. |
| 1940. |  | 121,604 | 9,587 |
| 1941. |  | 99,590 | .8,020 |
| 1942. |  | 73,113 | 7,380 |
| 1943. |  | 102,554 | 10,817 |
| 1944. |  | 66,562 | 11,841 |
| 1945. |  | 249,170 | 23, 672 |
| 1946.. |  | 509,703 | 56,416 |

## Section 4.-Pensions and Allowances

## Subsection 1.-The Pension System

Background of Canadian Pensions Legislation.-The Pension Act of 1919 established a Board consisting of three members vested with exclusive power and authority to adjudicate upon pension claims and to award pensions for disability or death related to military service in the War of 1914-18. The Canadian pensions legislation as it developed following the First World War is outlined at pp. 759-760 of the 1943-44 Year Book. The machinery which then took form has been adapted and applied to present circumstances.

Following the outbreak of the Second World War, the provisions of the Pension Act, with certain modifications, were tentatively made applicable to members of the Forces serving in that war, and, in 1941, Parliament appointed a select committee to consider the provisions of the Pension Act, including ex-service men's problems generally, and to make suitable recommendations in regard thereto. After consideration of the Committee's report, which was framed to meet present-day conditions and based on experience gathered in the administration of the Pension Act since the First World War, Parliament decided to make the provisions of that statute, with appropriate amendments, applicable to claims arising out of the Second World War.

Summary and Procedure in Regard to Application.-The provisions of the Pension Act, as originally enacted in 1919, although wide and generous in their scope as compared with pension legislation in other countries, have been considerably broadened and extended by various amendments enacted from time to time during the past twenty-eight years. Amendments to the statute since 1919 have:-
(1) substantially increased the actual amounts of pension payable;
(2) widened the grounds on which pension might be awarded;
(3) authorized certain additional benefits, such as clothing allowances for pensioners compelled to wear artificial appliances, allowances for parents, and special provisions for disability due to tuberculosis;
(4) introduced the principles of personal appearance and public hearings for applicants;
(5) with respect to the War of 1939-45 provided that service anywhere outside of Canada should be regarded as service in a theatre of actual war.

The procedure at present to be followed in dealing with applications for pension, arising out of the First World War is laid down in Sect. 52 of the Act. Briefly, it consists of three stages for applicants whose claims are not initially granted. On first application, the evidence presented is considered at what is known as a first hearing. If the Commission's decision is adverse to the applicant, he is entitled to a second hearing, provided he applies within 90 days of the first hearing. When presenting his claim for second hearing, he is required to include all disabilities which he claims to be due to his military service. Prior to second hearing, the applicant is furnished with a complete and detailed summary of all evidence, available in the departmental records pertaining to his case. He is given every opportunity to review this evidence to include any additional evidence he can secure and is allowed six months from the date of mailing the summary of evidence in which to prepare his claim. When notified by the applicant or his representative that the claim is ready for hearing, the Pensions Commission then gives a decision on second hearing. If this decision is adverse to the applicant, he then has the right to appear before an Appeal Board of the Commission sitting in his district and to call witnesses if he so desires. The judgment of the Appeal Board is final and the application cannot be considered again, except by special permission of an Appeal Board when it is shown, to the satisfaction of such a Board, that an error has been made by reason of evidence not having been presenced or otherwise.

This procedure has proved eminently satisfactory for claims arising out of the First World War. Not only is the applicant made fully aware of the reasons which preclude entitlement to a pension, but he is given adequate expert assistance by the Veterans' Bureau or by the service bureaus of ex-service men's organizations in the preparation of his claim. It has resulted in bringing to a finality many claims in which applicants have realized that the evidence of continuity with service of the condition causing disability or death was insufficient.

The procedure affecting cases arising out of the Second World War was revised, however, and, effective Dec. 27, 1944, all-time limits for preparation and presentation of applications in such cases were suspended by Order in Council, the main provisions of which were subsequently incorporated in amendments to the Pension Act passed during the 1946 session of Parliament. When a claim has not been wholly granted, the applicant is advised of his right, under the new legislation, to renew his application without the imposition of any time limits and, when he is ready, he may inform the Commission of his intentions relating to the further prosecution of his claim, either by renewed application or by appeal. The procedure followed is very much in line with that followed in cases of the First World War, other than that there is no time limit imposed and an applicant may by-pass the "renewal hearing" and take his case before an Appeal Board sitting in his District.

In 1945-46, a thorough revision of all legislation passed since the commencement of the War, affecting veterans of the Second World War, was carried out by a select committee of the House of Commons which was appointed to:-
(1) Consider all legislation passed since the commencement of the War with the German Reich relating to the pensions, treatment, and re-establishment of former members of His Majesty's Armed Forces and other persons who have otherwise engaged in pursuits closely related to war;
(2) Prepare and bring in one or more Bills to clarify, amend or supplement the above legislation.

This Committee completed its deliberations in July, 1946, and comprehensive legislation based on its recommendations was incorporated in amendments to the Pension Act, enacted by 10 Geo. VI, c. 62, assented to Aug. 31, 1946.

The most important legislative change resulting from the Committee's recommendations was the restoration of the so-called "Insurance Principle" for members of the Forces who, in the Second World War, did not serve in a theatre of actual war. The operation of this principle which applies to the First World War and, in effect, provides pension coverage for disabilities incurred during service, whether due to service or not, was modified in 1940 so as to apply only to cases in which the member of the Forces had served outside Canada. Following the restoration of the insurance principle, a review of all cases affected by this change was duly carried out by the Canadian Pension Commission, action being taken to institute awards where indicated. Other changes provided for the extension of the benefits of the Canadian Pension Act to persons domiciled in Canada at the commencement of the Second World War, who served in the British Commonwealth of Nations, or Forces of the Allied Nations, and broadened the scope of the statute in its application to Canadians who served in Forces, other than those of Canada, in the First World War.

The Canadian Pension Commission is also responsible for the administration of a statute known as the Civilian War Pensions and Allowance Act, under which pension consideration may be given to claims of merchant seamen, salt-water fishermen, Auxiliary Services personnel, civil defence workers, Corps of (Civilian) Canadian Fire Fighters, Federal Government employees, special constable guards (R.C.M.P.), and certain other civilian groups who rendered essential war services but whose personnel were not actually members of the Forces.

## 3.-Pensions in Force as at Mar. 31, 1941-47

Note.-Figures for the years 1918-40 are given at p. 871 of the 1945 Year Book.

| Year Ended Mar. 31- | To Dependents |  | For Disability |  | Totals |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Pensions | Liability | Pensions | Liability | Pensions | Liability |
| First World War- | No. | \$ | No. | \$ | No. | 5 |
| 1941. | 17,941 | 10,539, 876 | 79,204 | 29,058, 304 | 97,145 | 39,598, 180 |
| 1942. | 17,730 | 10,484, 192 | 77,971 | 28, 194, 967 | 95,701 | 38,679,159 |

| 1947. | 17,600 | 12,027,726 | 70,633 | 20,676,689 | 88,233 | 32,704,415 |

Payment of Pecuniary Grants for Gallantry Awards.-Certain gallantry awards, such as the Victoria Cross, Military Cross, Distinguished Flying Cross, Distinguished Conduct Medal, Conspicuous Gallantry Medal and Distinguished Flying Medal, carry with them pecuniary grants, which were formerly paid by the United Kingdom Government. To these were added during the Second World War, the Distinguished Service Medal and the Military Medal which formerly were not accompanied by pecuniary benefits. By Order in Council P.C. 4736, dated June 17,

1943, the Canadian Government, through the Canadian Pension Commission, assumed the payment out of Canadian funds for all awards arising out of the Second World War and the United Kingdom was reimbursed for such awards already paid. As at May 31, 1947, there were 2,255 such awards in payment.

Veterans' Bureau.-The Veterans' Bureau was established in 1930 as a Branch of the Department that is now the Department of Veterans Affairs. Its function is to assist the applicant for war disability pension and present his claim to the Canadian Pension Commission. The relationship of the Veterans' Bureau and the Canadian Pension Commission is practically the same as exists between the members of the Bar and the Judiciary. Bureau Advocates require a comprehensive knowledge of pension law and procedure, and long experience in medico-legal matters as they relate to war disability claim. The Second World War, by its nature, exposed many groups of citizens, other than members of the military forces, to the danger of war disability. These groups such as merchant seamen, fire fighters, Auxiliary Service personnel, air-raid precaution workers and others have been given disability pension rights by statute and Bureau Advocates serve them in addition to ex-members of the military forces.

The policy of the Canadian Pension Commission is to make a pension ruling without application in respect to all members of the military forces who are discharged with a disabling condition. In the large majority of pension claims, therefore, the Veterans' Bureau first appears in a case on a claim by the applicant that the Pension Commission decision is wrong. The move against a Commission decision may take several forms. The applicant may apply for a renewal hearing with additional evidence. He may make several such applications. He may ask for an Appeal Board hearing with or without having had renewal hearings and with or without any additional evidence. With very limited exception, the Appeal Board ruling is a final disposition of the claim. The Appeal Board hearing is held in the applicant's district. It is a hearing before three members of the Pension Commission who have not previously dealt with the claim, and the applicant is there given an opportunity to appear personally with his representative who may be an Advocate from the Veterans' Bureau, or any other person whom he may nominate. He may call witnesses to support his claim and his Advocate has the right to examine and cross-examine witnesses and present argument to the Board. The services of the Veterans' Bureau are free to the applicant. The claimant is represented by a Bureau Advocate in practically 100 p.c. of all claims coming before Appeal Boards. The Pension Act provides that the Veterans' Bureau shall, in each case, prepare a complete summary of all relevant evidence on the departmental file.

Departmental reports covering the period from Sept. 1, 1939, to Mar. 31, 1946, show that 4,879 applications for Appeal Board hearing have been filed in connection with First World War claims. Of these, 915 have been granted and 3,642 refused. A number were withdrawn or have not yet reached decision. During the same period, 5,771 applications were filed by Second World War applicants and of these, 1,055 were granted and 3,137 refused. The Veterans' Bureau had approximately 7,000 pension claims under preparation, in varying stages of activity, as at Mar. 31, 1947.

In addition to assisting the applicant on entitlement claims, the Bureau Advocate is charged with the duty of advising and assisting ex-service personnel or other persons entitled to claim for pension on any phase of pension law or procedure which may have a bearing on the pension claim. There are a great variety of problems which some under the Advocates' attention in this category dealing with assessment
of amount of disability following an entitlement award, the degree of aggravation where the Pension Commission have ruled a disease or disability condition as preenlistment, the period of time prior to date of award which should be covered by retroactive pension, change in basis of entitlement, additional pension for dependents and many others.

Since its inception in 1930, the Veterans' Bureau has always served in a general way as "soldier's friend", and Advocates in all offices across Canada are daily called on to advise and assist in matters quite apart from war disability pensions.

## Subsection 2.-War Veterans' Allowances

The War Veterans' Allowance Act was introduced in 1930 to make provision for the maintenance of veterans of the Canadian Expeditionary Force; veterans of His Majesty's Forces or the Forces of His Majesty's Allies who were domiciled in Canada at the time of enlistment for the First World War, provided they were incapable of maintaining themselves on attaining the age of 60 or at any age, if permanently unemployable.

The War Veterans' Allowance Act, 1946, was enacted in August, 1946 to replace the entire legislation. It enables the Board to grant allowances to the following:-
(1) A veteran of the North West Field Force.
(2) A veteran of the South African War.
(3) A veteran of the First World War, 1914-18.
(4) A veteran of the Second World War, 1939-45.
(5) A member of the South African Military Nursing services, domiciled and resident in Canada prior to becoming a member and who has served any place outside Canada.
(6) A person domiciled and resident in Canada certified by the Under Secretary of State for External Affairs as having been enrolled by the United Kingdom authorities for special duty in war areas during the Second World War.
(7) Duly selected and approved supervisors of -
(a) Canadian Legion War Services Inc.
(b) The National Council of the Young Men's Christian Association of Canada.
(c) Knights of Columbus Canadian Army Huts, or
(d) Salvation Army Canadian War Services who served outside the Western Hemisphere.
(8) Dual Service Veterans:
(a) Former members of the Canadian Expeditionary Force who served during the First World War and also served in the C.A.S.F. in the Second World War.
(b) Former members of His Majesty's Forces who were domiciled in Canada at time of enlistment in said Forces in the First World War and who also served in the Canadian Forces during the Second World War.
(9) Widows and orphaned children of the above veterans.

The War Veterans' Allowance Act now provides for three classes of veterans:-
(1) The veteran who has attained the age of 60 years.
(2) The veteran of any age who, because of physical or mental disabilities, is permanently unemployable.
(3) The veteran, regardless of age, who is, in the opinion of the Board, incapable of maintaining himself and unlikely to become capable due to a combination of reasons or handicaps, physical, mental or economic.

Classes (1) and (2) must have served in a "theatre of actual war", or be in receipt of pension or have received a final payment by agreement in commutation of pension. Widows and orphans of veterans are admitted to the benefits of the Act providing the veteran himself was eligible during his lifetime.

While the amount of any allowance payable is discretionary with the Board, the maximum permissive income from all sources (including War Veterans' Allowances) for a single veteran is $\$ 490$ per annum and $\$ 980$ for a married veteran or widower with dependent children. The basic allowance under the Act is $\$ 30 \cdot 41$ and $\$ 60 \cdot 83$ per month to single and married veterans, respectively, but the maximum permissive income from all sources remains as outlined above.

Provision has been made for (veterans' care) treatment for recipients of War Veterans' Allowances other than widows. Also, provision has been made for the continuation of an allowance on behalf of a child until the age of 21 vears, for educational purposes. Applicants must have been domiciled in Canada for the three months immediately preceding date of commencement of allowance, and allowances are not payable outside the Dominion of Canada.. Old Age Pensior and War Veterans' Allowance or Widows' Allowance cannot be paid concurrently.

The basic allowances for widows are:-
(1) $\$ 365$ per annum to a widow without dependent children.
(2) $\$ 730$ per annum to a widow with dependent children.

The basic allowances for orphans are:-
(1) $\$ 365$ per annum for one orphaned child.
(2) $\$ 648$ per annum for two orphaned children.
(3) $\$ 730$ per annum for more than two orphaned children.

The following exemptions from income are allowed:-
(1) Single recipient: income from any source not exceeding $\$ 125$ per annum.
(2) Married recipient: income from any source not exceeding $\$ 250$ per annum.

In addition, the following exemptions are provided for all groups of recipients where applicable:-
(1) Casual earnings not exceeding $\$ 125$ in any year.
(2) Unearned income not exceeding $\$ 25$ per annum.
(3) Provincial or municipal relief or Mothers' Allowance paid on behalf of dependent children.
(4) Any gratuity paid or credit grant under the War Service Grants Act, 1944.
(5) Any sum payable under Sec. 26 of the Pension Act.
(6) Any additional allowance paid under the Pension Act on account of any children.
(7) Any pension or grant received by reason of a military decoration.
(8) Any allowance payable under the Family Allowances Act, 1944.
( 9 ) Property in which the recipient resides is not taken into account providing its capital value does not exceed $\$ 4,000$.
Since the enactment of the Legislation to Mar. 31, 1946, a total of 43,327 awards have been made by the War Veterans' Allowance Board. Of these, 15,015 were discontinued because of death and other reasons, leaving 28,312 recipients representing an annual liability of $\$ 12,010,349$.

## Section 5.-Rehabilitation of Veterans

The functions of the Administrative Division of the Rehabilitation Branch of the Department of Veterans Affairs are given at pp. 1065-1067 of the 1946 Year Book. In brief this Division is responsible for:-
(1) Administration of out-of-work allowances.
(2) Administration of allowances for veterans awaiting returns from private enterprisebusiness or farming-engaged in on their own account.
(3) Administration of allowances available to veterans who are temporarily incapacitated.
(4) Administration of the Unemployment Insurance contributions, payable for the period of service (or from June 30, 1941) on the completion of fifteen weeks in insurable employment after discharge.

## Subsection 1.-Discharges, Employment and Allowances

Discharges and Employment.-By Feb. 28, 1947, the work of demobilization was to all intents and purposes completed. Only 4,000 to 5,000 individuals were left in the Armed Forces who were then to be returned to civil life. Cumulative discharges from September, 1939, to February, 1947, were as follows:-

Total discharges as at the end of February, 1947, numbered 981,813.*
Although the numbers of veterans who have taken advantage of the Vocational Training, Educational Training, and Veterans' Land Act provisions seem large, the majority have returned to civil employment. Their return to civil life was greatly aided by the work of the National Employment Service of the Department of Labour, which, through a policy of veterans preference, had made 744,773 placements from September, 1943, to February, 1947, on behalf of veterans; 639,548 of these placements were made on behalf of veterans of the Second World War. This figure does not represent the number of veterans placed as two or more placements are often made in an attempt to settle a veteran after discharge. In addition to those normal placement operations, between August, 1945, and January, 1947, some 171,000 veterans had been, through the facilities of the National Employment Service, reinstated in their pre-war jobs under the Re-Instatement in Civil Employment Act.

Unemployment among veterans of the Second World War has not, on the whole, been serious at any time so far. The peak of unemployment was reached during the first quarter of 1946, when it followed the seasonal trend. Table 4 shows the number of veterans registered with the National Employment Service as unemployed.

* Based on National Defence Headquarters information.
4.-Veterans Registered with the National Employment Service as Unemployed, by Months and Sex, January, 1946, to February, 1947

| Year and Month | Veterans of the First World War |  | Veterans of the Second World War |  | Veterans with Dual Service |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Men | Women | Men | Women | Men | Women |
| 1946 | No. | No. | No. | No. | No. | No. |
| January.. | 9,561 | 6 | 47,855 | 892 | 1,547 | Nil |
| February. | 10,265 | 5 | 59,219 | 1,051 | 1,765 |  |
| March. | 10,509 | 4 | 69,428 | 1,215 | 1,873 | " |
| April... | 9,440 | 5 | 68,876 | 1,198 | 1,688 | " |
| May... | 8,089 | 6 | 61,650 | 1,131 | 1,494 | " |
| June. | 6,931 | 4 | 41,658 | 1,165 | 1,409 | 1 |
| July... | 6,412 | 6 | 45,665 | 1,159 | 1,493 | Nil |
| August.... | 5,927 | 4 | 41,098 | 1,121 | 1,376 |  |
| September. | 5,740 | 3 | 37,792 | 1,226 | 1,386 | " |
| October. | 5,519 | 2 | 36,621 | 1,136 | 1,576 | " |
| November. | 5,835 | 2 | 39,519 | 957 | 1,778 | " |
| December. | 6,160 | 2 | 44,967 | 808 | 1,921 | " |
| 1947 |  |  |  |  |  |  |
| January. | 6,887 | 2 | 51,481 | 1,114 | 2,165 | " |
| February........... | 7,129 | 2 | 50,569 | 1,124 | 2,422 | 1 |

In February, 1946, the unemployed Second World War and dual-service veterans formed 8.6 p.c. of the number discharged to that time, while in March, 1947, the numbers unemployed formed $5 \cdot 2$ p.c. of those discharged.

Out-of-Work Allowances.-This Allowance has been the means of assisting up to Mar. 31, 1947, some 145,869 veterans towards becoming re-established in civil life. As would be expected, the majority of these veterans made use of the Allowance during the calendar year of 1946 when they were being discharged from the Armed Forces in such large numbers. The record of the number of veterans assisted in this manner is as follows:-

## 5.-Veterans Receiving Out-of-Work Allowances, by Sex, Years ended Mar. 31, 1943-47

|  | Years Ended Mar. 31- | Men | Women | Total |
| :---: | :---: | :---: | :---: | :---: |
|  |  | No. | No. | No. |
| $1943{ }^{1}$ |  | 2,045 | $\mathrm{Nil}_{123}$ | 2,045 |
| 1945. |  | 3,145 | ${ }^{123}$ | 3.228 |
| 1946. |  | 39,176 | 436 | 39,612 |
| $1947{ }^{2}$. |  | 98,055 | 1,983 | 100,038 |
| Totals |  | 143,244 | 2,625 | 145,869 |

${ }^{1}$ November, 1941, to Mar. 31, 1943.
${ }^{2}$ Apr. 1, 1946, to Feb. 28, 1947.
The number of veterans receiving the Allowance at any given time is gradually decreasing compared with the number of veterans unemployed. From March to June, 1946, the number was from 60 to 70 p.c. of those registered as unemployed; for January and February of 1947, it was 41 p.c. There are three main reasons why this situation exists: (1) the individual may not receive the Allowance for the first nine days of unemployment; (2) the individual may not receive the Allowance for the period covered by the Rehabilitation Grant (becoming less important as the number of discharges decreases); (3) the limited period of entitlement (becoming increasingly important as the number discharged 18 months or more increases).

Experience has shown that, although it has been necessary to carry some individuals on the Allowance for a period in excess of 40 weeks (the maximum allowable is 52 weeks) the majority of veterans receiving this type of assistance require it for a period of less than 10 weeks.

## 6.-Veterans in Receipt of Out-of-Work and Awaiting Returns Allowances, Classified by Sex, by Months, January, 1946, to March, 1947

| Year and Month | Out of Work |  |  | Awaiting Returns |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| March.... | 24,058 | 297 | 24,355 | 12,162 | 60 | 12,222 |

Awaiting Returns Allowance.-This allowance has been instrumental in assisting, up to Feb. 28, 1947, about 42,250 veterans who, in order to become settled in civilian life, have attempted to take up an occupation on their own account. The occupational distribution of these veterans is quite interesting and is shown in Table 7; the district centre is the location of the Department of Veterans Affairs district office and the figures quoted cover the areas administered by these offices.

| Victoria, B.C.. | 86 | 26 | 72 | 1 | 853 | 1,038 |
| Totals. | 17,859 | 6,517 | 883 | 106 | 16,885 | 42,250 |

The value of the legislation authorizing this Allowance is best shown by the number of veterans utilizing the Allowance and by the results so far produced. Of the number of veterans who, up to Feb. 28, 1947, had discontinued the use of the Allowance about 83 p.c. had been satisfactorily established, and had drawn the allowance for an average of 24 weeks.

Because of the large number of veterans settling in agriculture, the payment of this Allowance has shown a decided seasonal variation, reaching a peak in August, 1946, when approximately 25,000 veterans received the Allowance during the month, and settling down to approximately 12,000 veterans receiving the Allowance in February, 1947. A considerable number of those who received the Allowance during the summer, while engaged on their own account, became employed in wage-earning occupations during the winter and will, it is believed, return to their farms in the spring.

Temporary Incapacity Allowances.-The number of veterans who have received assistance under this provision has been relatively small compared with the numbers utilizing the other allowances. To Feb. 28, 1947, some 3,916 veterans had received this Allowance. The number in receipt of the allowance at any given time has been quite small and has rarely exceeded 120 since the end of the War.

Unemployment Insurance Contributions.-During the calendar year 1946, there was a great increase in the numbers of veterans on whose behalf contribution to the Unemployment Insurance Fund was paid; this follows the settling down of veterans in insurable occupations. From November, 1941, to March, 1947, contributions were paid on behalf of 136,163 veterans as follows:-

|  | Year Ended Mar. 31- | No. |
| :---: | :---: | :---: |
| 19421. |  |  |
| 1943. |  | 334 |

## Subsection 2.-Vocational Training

The vocational training program, authorized under the Veterans' Rehabilitation Act, is dealt with in the Labour Chapter at pp. 632-634, and the university training program for veterans in the Education Chapter at pp. 288-290.

## Subsection 3.-The Veterans' Land Act

The Veterans' Land Act is designed to assist the veteran who is eligible by reason of required active service, and qualified for the particular undertaking, in becoming established on the land in full-time farming, part-time farming (small holding), or commercial fishing. Its financial benefits enable the veteran to start off with a substantial equity, which past experience has demonstrated is essential to sound land settlement credit operations. The Director of the Act may:-
(a) Contract with any veteran duly certified as qualified, for the sale of land and the provision of permanent improvements, live stock and farm equipment or fishing gear up to a total cost of $\$ 6,000$.
(b) Contract with such veteran occupying suitable farm land und 3 r private agreement of sale, or lease of reasonably long duration, for the sale of land, permanent improvements, building materials, live stock and farm equipment, up to a total of $\$ 5,800$.
(c) Loan on the security of a first mortgage on a farm already owned by the veteran up to $\$ 4,400$ for the consolidation of debts and improvement of farm-including the purchase of live stock and farm machinery.
(d) Grant to such veteran up to $\$ 2,320$ to assist in his establishment on provincial Crown land; or in the case of an Indian veteran on Indian Reserve land.
Space does not permit mention of the various financial terms other than that each settlement except item (c) carries with it a grant of up to $\$ 2,320$, conditional on satisfactory fulfilment of settlement contract for 10 years. The loan portion of a contract may be amortized over a period of up to 25 years with interest at $3 \frac{1}{2}$ p.c. Item (c) is wholly repayable, but it does not extinguish right to re-establishment credit as is the case in (a), (b) and (d).

The Act is more fully dealt with at pp. 1072-1073 of the 1946 Year Book, though two important changes were made during 1946:-
(1) Subsection 3 was added to Section 9 of the Act to enable the Director to assist in the re-establishment of the veteran occupying a suitable farm under lease or purchase agreement. This was referred to in (b) above. Up to $\$ 3,000$ of the total assistance available may be expended for live stock and farm equipment, but on such expenditure the veteran must make a down payment of 20 p.c. of the cost to the Director; plus 10 p.c. of such cost for land, improvements thereon, and building materials.
(2) Regulation 22A was enacted by Order in Council dated Sept. 12, 1946, and amended on Nov. 28 following. By this regulation the minimum area of a part-time farm (small holding) was fixed at two acres when the cost of land and a suitable supply of water is in excess of the rate of $\$ 500$ per acre; and three acres when such cost is at the rate of $\$ 500$ per acre or less. Exceptions were provided for to enable settlement on smaller sized plots of land of a veteran in receipt of a disability pension of 50 p.c. or more; in commercial fishing establishments; and where commitments were made respecting specific properties prior to the effective date of the regulation, Sept. 12, 1946.
The calendar year 1946 witnessed rather heavy settlement operations under the Veterans' Land Act, a total of 37,015 (net) veterans being qualified, and financial assistance being approved for 19,138 (net); 2,599 houses were constructed ready for occupancy during the year, 2,375 of which were built under multiple-unit contracts on departmental subdivisions, and 224 under individual contracts for specific veterans. Agreements have been reached with all provinces, other than Nova Scotia and Prince Edward Island, for settlement of veterans on provincial lands.
10.-Summary of Operations under the Veterans' Land Act, 1942, as at Dec. 31, 1946

## Subsection 4.-Casualty Rehabilitation

The successful rehabilitation of seriously disabled veterans is one of the major responsibilities of the Department of Veterans Affairs. The objective of rehabilitation for the seriously disabled is their restoration to the optimum physical, mental, social, economic and vocational adjustment and usefulness of which they are. capable.

Rehabilitation of casualties commences with medical treatment, and the process is not complete until the disabled veteran secures his place in a suitable job. Among the significant services are: medical treatment including physical rehabilitation; the provision and fitting of artificial devices such as limbs, braces and hearing aids; financial protection during the adjuștment period; vocational guidance and general counselling; educational or vocational training; land settlement; assistance towards securing suitable employment; and medical and vocational after care. Specialists' services, such as those of psychologists and social workers are obtained as required.

All Divisions and Branches of the Department of Veterans Affairs, the details of whose operations are described elsewhere in this and other chapters (see Index) include the Canadian Vocational Training program and the National Employment Service of the Department of Labour which contribute in varying degree to the integrated process of rehabilitation.

Recognizing the individual needs of each disabled veteran, and that rehabilitation services must be applied to each case in a manner most likely to meet these needs it became apparent that individual and continuous attention is an essential element in their rehabilitation. For this reason, early in the fiscal year 1945-46, a Casualty Rehabilitation Section wis created as a part of the Rehabilitation Branch. In the fiscal year of 1946-47 its services have expanded in quantity and quality. Qualified Casualty Rehabilitation Officers provide disabled veterans with vocational guidance and general counselling, assisting them in their employment placements, and maintain a service of vocational after-care, or post-employment adjustment. The Casualty Rehabilitation Officer's service to the disabled veteran commences soon after his admission to hospital, and continuous contact and service is maintained in each case until re-establishment ensues.

A staff of Casualty Rehabilitation Officers is attached to each Departmental District. Their duties include the making of contacts with employers and citizens as well as governmental and community agencies.

The Casualty Rehabilitation Section has maintained a continuous campaign directed towards public and employer relations. During the year, officers of the Section made addresses, showed educational films and displayed exhibits to 571 organizations such as Service Clubs, Foremen's Clubs, Personnel Managers' Associations and others. Informative booklets were prepared and distributed and press and radio publicity was sponsored.

The Department maintains close and valuable relations with Associations serving the disabled, such as the Canadian National Institute for the Blind, the War Amputations of Canada, the National Society for the Deaf and Hard of Hearing, and the Canadian Paraplegic Association.

The Casualty Rehabilitation Section registers for service only those veterans with serious disabilities. There were 27,531 such veterans registered with the Section on Mar. 31, 1947. Their primary disabilities were as shown in the following statement:

## DISTRIBUTION OF DISABLED VETERANS ACCORDING TO PRIMARY DISABILITY AND REHALILLITATION STATUS

| Primary Disability | No. | Rehabilitation Status | No. |
| :---: | :---: | :---: | :---: |
| Disabilities of the Muscular, Skeletal, and |  | Employed | 11,665 |
| Peripheral Nervous Systems............ | 9,649 | In hospital. | 5,440 |
| Amputations. | 1,895 | Under service but not ready for employ- |  |
| Hearing Disabilities. | 369 | ment. | 4,795 |
| Seeing Disabilities.................... | 969 | Training. | 872 |
| Pulmonary Tuberculosis and other Respiratory Disabilities. | 7,511 | Ready for employment but still unemployed. | 1,886 |
| Cardio Vascular Disabilities............. | 1,902 | Registered but not under service. | 2,612 |
| Organic Neurological Disabilities other than the Peripheral Nervous Systems... | 845 | Service contact lost.............. | 261 |
| Psychiatric Disabilities................... | 641 |  |  |
| Miscellaneous Disabilities. | 3,750 |  |  |
| Total. | 27,531 | Total. | 27,531 |

A study of two of the main disability groups, that is amputees and paraplegics shows that at Mar. 31, 1947, there were 1,322 amputees employed and performing successfully a complete range of jobs from farmer to fisherman, lawyer to log scaler, tailor to tinsman, doctor to dock worker, accountant to artist. There were 62 in training, 114 in hospital, 199 under service but not yet ready for work, 131 ready for employment but still unemployed, and 67 on which contact had been lost. At Jan. 31, 1947, of the 488 paraplegics or near paraplegic-veterans whose legs are wholly or partially paralyzed- 187 were employed, 160 were in hospital, 27 were in training, 72 were under service but were still unable to find suitable employment, and contact had been lost with 42.

Paraplegia is one of the most serious of all disabilities. Until relatively recently, paraplegics were considered to be permanent invalids, doomed to a bedfast existence. It must be emphasized that there is a great deal of work ahead in the rehabilitation of the disabled, and that much has yet to be learned. Nevertheless, the strides which have been made in the rehabilitation of paraplegics, through the combined efforts of medical, vocational and social sciences, and the attitude of the disabled themselves, and of the community, provides a most hopeful and encouraging pattern for the future welfare of all the disabled.

## Subsection 5.-Rehabilitation of Women

By December, 1946, all of the nearly 50,000 women members of the Canadian Armed Forces had been demobilized, with the exception of a few Nursing Sisters and Dietitians. During the First World War, only the Nursing Service was open to women, but the Second World War saw women serving in the Army, Navy and Air Force in almost every capacity.

As a natural sequence to the established ratio of one woman to every twenty men in the Armed Forces, vacancies were designated on the Staff of the Rehabilitation Branch of the Department of Veterans Affairs for women executives and counsellors. In December, 1944, a woman was appointed as Executive Assistant to the Director General of Rehabilitation to render general administrative assistance and advise on the rehabilitation of women. In July, 1945, a Superintendent of Women's Rehabilitation was appointed, whose duties included supervision of Field Staff and a direct responsibility to the Director General on matters of policy. Between April, 1945, and December, 1946, 21 counsellors and 19 interviewers were appointed.

Training for ex-service women under the auspices of the Department of Veterans Affairs is on the same basis and at the same rates as for the male veterans. Up to the end of 1946, a total of 10,097 women veterans had availed themselves of opportunities for training, 20 p.c. of the total number of ex-service women. Of that number, 8,013 women had entered into some phase of vocational training, and 2,084 had chosen university courses or matriculation courses leading to university. Followup on these cases by district staffs indicates that little difficulty has been encountered to date with respect to employment on completion of vocational training. In most instances, through a three-way liaison, Department of Veterans Affairs-Canadian Vocational Training-National Employment Service, employment for individuals is arranged as the classes draw to a conclusion. Many have taken training-on-thejob in such diversified occupations as florist, fur finisher and cutter, photographer, etc. Altogether, women have trained for approximately 100 occupations.

At the end of December, 1946, 21,288 applications for re-establishment credit to the amount of approximately $\$ 2,100,000$ had been approved for ex-service women. As at the same date, 61 had qualified under the Veterans' Land Act, most of them established on small holdings, but a few owning and operating farms under the fulltime farming arrangement.

Pensioners among the women up to December, 1946, numbered 489. They receive the same pension rates as the men and the same consideration in the matter of training and employment. Liaison between the Women's Section of the Department of Veterans Affairs and the Casualty Rehabilitation Section has resulted in hospital visiting for the purpose of counselling toward employment or training upon discharge from the hospital, or arranging for correspondence courses during hospitalization.

During their service careers, many women formed new concepts of the opportunities for employment available in civilian life. For the first time, in many cases, these women could choose a career. With the co-operation of the National Employment Service, veterans who wish it are assisted in obtaining employment in keeping with their experience and academic background. It is sometimes necessary for the counsellor to re-counsel the woman more than once before she is successfully established in permanent employment. Each time an application for Out-of-Work Allowances is received, personal follow-up is carried out in the hope that the applicant
can be trained for, or re-counselled into suitable alternative employment. At the end of 1946, recorded placements of women veterans through National Employment Service numbered approximately 12,000 .

Citizens Committees and Women's Clubs and organizations have been invaluable in helping the ex-service woman become integrated back into community life. Full co-operation with .Department of Veterans Affairs has been given, particularly in the matter of finding accommodation for the women who have moved to other centres to take training or employment. Clubs in many communities have given their support in personally contacting the veteran on her return home, and have been instrumental in helping her face real or potential problems.

## Subsection 6.-Rehabilitation of Older Veterans

Early in 1946, the Department of Veterans Affairs added to its establishment a special adviser to the Deputy Minister, concerning veterans of both World Wars. The responsibilities of this official included developing and conducting a program of planned rehabilitation assistance to approximately 50,000 veterans of the First World War who also served in the Second World War, and the ever increasing number of veterans of the First World War who had acquired age but not security. Many of these latter had made a contribution in war industry but were handicapped on account of their age and other factors.

The main problem facing these older veterans was employment; the average of their educational standard was low and they were too old to take advantage of the training provisions under the Canadian Rehabilitation Program. Many of them were able to perform only work not requiring great skill or undue physical endeavour. The first step was to carefully screen and classify their abilities and characteristics with a view to finding the right kind of gainful employment for each one. The National Employment Service assisted in this.

The Department recognized that the Corps of Commissionaires was a readymade, volunteer, non-profit organization already devoted, on a limited scale, to employment of uniformed older veterans, and obtained the co-operation of this organization to expand and provide employment for as many additional veterans as possible. During 1946, the Government led the way by authorizing Departments to contract with the Corps of Commissionaires for the provision of guards, messengers, etc., not within the provisions of the Civil Service Commission. Crown Companies followed this lead with successful results and considerable progress was made with private businesses towards the same end.

In addition, the National Employment Service, assisted by officials of the Department of Veterans Affairs and Citizens' Rehabilitation Committees, developed a steady pressure on employers to accept older veterans for jobs they could do. The considerable success, achieved in this endeavour is indicated by the fact that at Mar. 31,1946 , there were 12,392 older veterans registered as unemployed. Subsequently an additional 5,000 were discharged from the Armed Services and registered with the National Employment Service. At the end of December, 1946, only 8,081 of the total 17,392 registered remained unplaced, showing a reduction of 9,391 during the nine months.

Many of these older veterans are eligible for assistance under the War Veterans' Allowance Act, or post-discharge unemployment benefits, but the establishment of this Branch of the Department was predicated on the belief that it is desirable, both from the standpoint of the nation and the individual, to employ these men in positions for which they are suited rather than to support them on allowances.

## Subsection 7.-Assistance in Social Problems

The Social Service Division of the Department of Veterans Affairs was organized in order to assist the Department with social problems. Its purpose is to co-ordinate the social service activities of the Department and to work in close co-operation with local social agencies, community chests and councils, municipal, provincial and federal social service departments, as well as with schools of social work, in order to provide the best possible social service to veterans. A basic assumption is that the Department must not establish any service for veterans which is already available to the veteran as a member of the community in which he lives. The Department will direct its efforts toward making available to the veteran services that already exist and helping him to use them intelligently. Where such services are not already in existence, the Division will encourage their development to serve the whole community rather than the veteran alone. It is boped, in this way, to enable the veteran to think of himself as a civilian and as a member of the community in which he lives rather than someone set apart from the rest of the community because of his war service.

The Division has social workers in ten Districts and plans to have a service operating in most of the other Districts almost immediately. One of the tasks of the social workers is to get the full weight of the community social agencies behind the D..V A. Rehalilitation program. Another is to assist in the co-ordination of investigations and to make more use of existing community services for this purpose, and a third task is to develop a medical social work program in departmental hospitals and clinics.

In most Districts the program is in its first stage of development. It is planned to develop the program on a professional basis by using trained social workers in all social work positions.

## Section 6.-Veterans Insurance

The Veterans Insurance Act which came into force on Feb. 20, 1945 provides that a veteran who was engaged in service during the Second World War, or the widow or widower of a veteran, or a pensioner under the Pension Act in receipt of a pension relating to the War, may contract with the Government of Canada for life insurance. Eligibility was extended by Order in Council P.C. 467 of Feb. 7, 1947, to members of the Permanent Force and Interim Force. The period of eligibility ends three years after the coming into force of the Act or three years after discharge from Service, whichever is later. For the Permanent Force and Interim Force, generally, it will end on Mar. 31, 1949.

The amount of insurance may be any multiple of $\$ 500$ up to a maximum of $\$ 10,000$. The plans of insurance available are 10 Payment Life, 15 Payment Life, 20 Payment Life, and Life with premiums payable until age 65 or age 85 . The policies are non-participating.

Premiums on veterans insurance may be paid monthly, quarterly, semi-annually or annually. They may be paid in cash or from Re-establishment Credit or by deduction from any pension granted under the Pension Act. The policy contracts include a provision that, in the event of total and permanent disability occurring before age 60 , premiums falling due during the disability are waived. No extra premiums are charged for residence, travel or occupational hazards.

After the end of the second policy year a liberal cash value is available. It may be used alternatively to provide Reduced Paid-up Insurance or Extended Term Insurance. A veteran's insurance policy is not assignable, nor is a loan value granted.

The maximum amount of insurance money that will be paid in a lump sum in cash at death is $\$ 1,000$. The balance must be paid to the beneficiary as an annuity certain or as a life annuity with or without a guaranteed period.
12. - Summary Statistics of Veterans Insurance, Years Ended Mar. 31, 1946 and 1947

| Year Ended Mar 31- | Insurance Issued during Year |  | Insurance in Force at End of Year |  | Death Claims Approved during Year |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | \$ | No. | \$ | No. | \$ |
| 1946. | 4,013 | 11,971,500 | 3,914 | 11,708,500 | 1 | 500 |
| 1947.. | 6,442 | 18,783,000 | 10,077 | 29,658,000 | 17 | 55,500 |

## CHAPTER XXXI.-MISCELLANEOUS ADMINISTRATION

## CONSPECTUS

| Section 1. Purlic Lands. . . .... ... Page 1156 | TMENT Of THE | Page |

| Section 2. Department of Purlic Works 1162 | Subsection 2. Citizenship. | 1166 |
|  | Section 5. The Crvil Service of Can | 1172 |
| Section 3. The Indians and Eskimos of <br> Canada.. ... ........ .......... 1162 | Section 6. Supervision of Race-Track Betting. |  |

Note.-Certain phases of Federal Government activity, such as the operations of the International Joint Commission and certain scientific activities of the Department of Mines and Resources were dealt with in this Chapter of the 1930 edition of the Year Book (pp. 1014-17). These branches of the Miscellaneous Administration have not undergone wide change and, therefore, the material has not been republished since that time.

## Section 1.-Public Lands

In Table 1, summarizing the land area of Canada, items 3,4 and 5 are obtained from Federal Government sources and items 1, 2 and 7 from Provincial Government sources. In the majority of cases the area of provincial lands (item 6), as calculated by balancing the figures, agrees with the area as estimated by the Provincial Departments concerned. Thus, any differences reported from year to year in the area of lands alienated or in process of alienation are compensated for by the adjustment of lands still remaining under the Crown in the right of the provinces concerned.

## 1.-Classification of Lands in Canada, by Tenure (circa) 1947

Note.-The land area of Canada classified by surface resources is shown at pp. 32-33.

| Tenure | P.E.I. | N.S. | N.B. | Que. | Ont. |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | sq. miles | sq. miles | sq. miles | sq. miles | sq. miles |
| 1. Alienated, patented, granted, etc...... | 2,174 | 16,7111 | 16,266 | 37,500 | 40,286 |
| 2. In process of alienation............... | Nil | Nil | 400 | 6,000 | 62 |
| 3. Dominion lands other than National Parks and Indian Reserves. |  | 13 | 38 | 30 | 161 |
| 4. Dominion National Parks............. | 7 | 391 | 2 | $26^{3}$ | 12 |

1.-Classification of Lands in Canada, by Tenure, (circa) 1947-concluded

| Tenure | Man. | Sask. | Alta. | B.C. | Yukon and N.W.T. | Canada |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | sq. miles | sq. miles | sq. miles | sq. miles | sq. miles | sq. miles |
| 1. Alienated, patented, granted, etc... | 44,088 | 103,705 | 74,744 | 17,569 | 52 | 353,0954 |
| 2. In process of alienation............ | 117 | 770 | 3,273 | 1,305 | 10 | 11,937 |
| 3. Dominion lands other than National Parks and Indian Reserves. | 3 | 47 | 103 | 161 | 1,455,088 ${ }^{5}$ | 1,455,644 ${ }^{4}$ |
| 4. Dominion National Parks.. | 1,148 | 1,869 | 20,937 ${ }^{6}$ | 1,671 | 3,625 7 | 29,686 ${ }^{3}$ |
| 5. Indian Reserves.............. | 755 | 1,865 | 2,194 | 1,300 | 9 | 8,540 |
| 6. Provincial lands, including leased lands and forest reserves, but not Provincial Parks. | 173,612 | 128,036 | 147,546 | 320,377 | Nil | 1,571,092 |
| 7. Provincial Parks.. | Nil | 1,683 |  | 16,896 | " | 32,109 |
| Totals, Land Area | 219,723 | 237,975 | 248,800 | 359,279 | 1,458,784 | 3,462,103 |

${ }^{1}$ Includes lands in process of alienation.
${ }^{2}$ Less than one square mile.
${ }^{3}$ Includes the Gatineau Park ( 25 miles) and the Quebec Battlefields Park ( 0.36 miles) which are under Dominion jurisdiction but which are not technically "National Parks". "See footnotes to constituent items. 5 Includes 952,849 square miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, as game sanctuaries in which hunting and trapping is forbidden, and as reserves for reindeer grazing, but which are not regarded as national parks.
${ }^{6}$ Includes Wood Buffalo Park (which, although reserved by the Dominion, is not administered as a national park) and the Tar Sands Reserve ( 2,068 acres).
${ }^{7}$ Includes that portion of the Wood Buffalo Park in N.W.T.

## Subsection 1.-Dominion Public Lands*

The public lands under the administration of the Federal Government comprise: lands in the Northwest Territories, including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay; lands in Yukon Territory; National Parks and historic sites (see pp. 33-38); forest experiment stations; experimental farms; Indian reserves (see p. 1163); Ordnance and Admiralty lands; and, in general, all lands held by the several Departments of the Federal Government for various purposes connected with Dominion administration, including the Tar Sands Reservation comprising four areas, amounting in all to 2,068 acres, in the Fort McMurray District of Alberta. The lands and other natural resources lying within the boundaries of the Provinces of Manitoba, Saskatchewan, Alberta and British Columbia formerly administered by the Federal Government, were transferred in 1930 to the administration of the Provinces concerned.

The great bulk of the land areas under Dominion administration are those of Yukon and the Northwest Territories, amounting to about $1,458,784$ square miles or 42 p.c. of the land surface of Canada. In general, the southern border of both Yukon and the Northwest Territories is $60^{\circ} \mathrm{N}$. latitude. In Europe, the cities of Oslo, Stockholm and Leningrad are near this line; about three-fourths of Norway, two-thirds of Sweden, Finland and a large portion of Russia are north of it. This northern part of the national domain is under the administration of the Lands, Parks and Forests Branch of the Department of Mines and Resources. The Royal Canadian Mounted Police maintain law and order throughout Yukon and the Northwest Territories.

The Northwest Territories.-Developments in the mining industry, particularly in the Yellowknife district, accounted for much of the activity in the Northwest Territories in 1946. Although the wave of prospecting and staking that reached a peak in 1945 showed a decline, systematic examination of ground already

[^430]staked was continued, and the development of promising properties planned. Actual gold production in the Territories increased, facilities for transportation were improved, and plans were made for the improvement of municipal and other services in Yellowknife Settlement and vicinity.

An important development was the re-opening of the mill serving the ConRycon gold mines of Consolidated Mining and Smelting Company of Canada Limited, where gold production had been suspended since September, 1943. Milling was resumed in August, 1946, and total production to the end of the year was $9,480 \mathrm{oz}$. This figure, added to the $14,780 \mathrm{oz}$. produced by Negus Gold Mines Limited, brought the production total for 1946 to $24,260 \mathrm{oz}$., or approximately, three times as much gold as was produced in 1945. Resumption of gold production at the Thompson-Lundmark mine has been forecast for 1947 Milling was suspended at this property in September, 1943, but rehabilitation of the property, including work on the mill, has been under way for some time, in preparation for a resumption of operations.

One of the promising properties under development is that of Giant Yellowknife Gold Mines Limited, situated approximately three miles north of Yellowknife Settlement. Two shafts, approximately one mile apart, have been sunk to a depth of 500 ft ., and lateral development is being carried on from both shafts, ore being stock-piled. Gold production at this property is anticipated by 1948. Shaft sinking operations are also proceeding at the properties of Discovery Yellowknife Gold Mines Limited; Sunset Yellowknife Gold Mines Limited; and Diversified Mining Interests (Canada) Limited. Development is also being carried on at the property of Philmore Yellowknife Gold Mines Limited, on Outpost Island, Great Slave Lake, prior to a resumption of gold production.

Exploration and staking have been extended for a distance of more than 200 miles beyond Yellowknife Settlement. During 1946, important discoveries were reported from the MacKay-Courageous Lake area, about 150 miles northeast of Yellowknife, and in the Regan Lake area, near the headwaters of Back River, more than 100 miles northeast of Courageous Lake. Diamond drilling, trenching, and other work is being carried on in other areas, including those adjacent to the Yellowknife River, Gordon Lake, Indin Lake, Ghost Lake, and Russell-Slemon Lakes. During 1946, mineral claims totalling 4,799 were recorded in the Yellowknife Mining District, and during the first three months of 1947 an additional 376 claims were registered.

Progress was made in the development of a new hydro-electric power project on the Snare River, approximately 90 miles north of Yellowknife Settlement, which has been undertaken by the Federal Government through the Dominion Water and Power Bureau to meet the power requirements of the Yellowknife Mining District. By January, 1947, the main power tunnel, 140 ft . in length, and a secondary tunnel had been excavated, one cofferdam constructed, and excavations leading to the main tunnel and to the site of the power-house completed. Erection of the power-house sub-structure is planned during 1947, and it is hoped to have the superstructure and power installations made during the summer of 1948 so that power may be available by autumn of that year. The new plant will supplement power furnished at present by a development on the Yellowknife River, near Prosperous Lake.

To meet the needs of a greatly increased population, additions to the townsite of Yellowknife were surveyed in 1945 and 1946. Provision has been made in the newly developed areas for water and sewer services, and these installations are planned for 1947. During 1946 a large number of buildings were constructed in the settlement and vicinity, including a new Government Administration building, a modern 40 -room hotel, and more than 80 new dwellings. Among the buildings planned for erection in 1947 are a 40-bed hospital and a new combined public and high school.

The development of a modern airport at Long Lake, four miles from Yellowknife Settlement, is expected to result in improved air transport services. Surfacing of the two main landing strips is planned for 1947, and when completed the airport will be capable of accommodating large transport and passenger aircraft the year round. The extensive use of aircraft to service mining properties under examination and development has resulted in investigation of sites for landing strips at suitable places in the Yellowknife mining field.

Another important project undertaken to improve transportation to and from the Mackenzie District is the construction of an all-weather highway from railhead at Grimshaw, Alta., to Hay River Settlement on Great Slave Lake. The cost of this project is being shared by the Federal Government and the Provincial Government of Alberta. Work on the highway was commenced in 1946 and, at the end of the year, approximately 194 miles of clearing and 85 miles of grading had been completed. The work schedule calls for completion of the highway by 1947. The new road will assist in the movement of mining equipment and supplies from railhead to Great Slave Lake, over which freight can be transported to Yellowknife and other places in summer by barge and in winter by truck or tractor train when conditions are favourable.

The production of pitchblende concentrates was continued at the mine of Eldorado Mining and Refining (1944) Limited, at LaBine Point, Great Bear Lake. This property is one of the world's principal sources of radium and uranium, and has been operated by a Crown Company since January, 1944. During the year landing strips for wheel-equipped aircraft were constructed by the Company at Sawmill Bay, Great Bear Lake, southwest of the mine, and near St. Charles Rapids on Great Bear River to facilitate the transportation of supplies to, and concentrates from, the mine.

Production of petroleum products was continued by Imperial Oil Limited, at Norman Wells, in the lower Mackenzie Basin. During 1946, approximately $182,000 \mathrm{bbl}$. of crude petroleum were produced. The greater part of this production was processed at the Norman Wells refinery, and oil products, including gasoline and fuel oil, were shipped for consumption at the Eldorado mine and in the Yellowknife area.

Geological surveys were continued in the Territories during the year. Detailed investigations relating to radio-active minerals were carried on in the Camsell River area and along the east shore of Great Bear Lake. Reconnaissance surveys were also undertaken in the Yellowknife area in the vicinity of the Negus-Giant gold belt, and in the MacKay Lake and Indin Lake areas. Inspection of oil operations in the Norman field was continued, and an examination was made of exploratory drilling operations in the Hay River area.

The fur trade continued to be an important factor in the economy of the Territories. During the year ended June 30, 1945, a total catch of 258,931 pelts having a value of $\$ 1,743,710$ was reported. The trapping of fine furs is the chief occupation of most of the native population and hunting and trapping in the Territories is restricted mainly to natives and to half-breeds living the life of natives.

A recent development has been the establishment of a service to protect forests and wild life in the Mackenzie district, with headquarters at Fort Smith. During, 1946, progress was made in the development of this service, including the establishment of districts assigned to wardens for regular patrols. Orders were placed for fire-fighting equipment, including forest patrol boats, and delivery of some equipment was made during the year. Forests provide valuable cover for game and fur-bearing animals, and it is hoped that field investigations under way will determine the action required to restore to normal the wild life in the Mackenzie District.

The 1946 Eastern Arctic Patrol of medical centres, police detachments, radio stations, trading posts, and missions in the Canadian Eastern Arctic was carried out on R.M.S. Nascopie from Montreal, Que. Natives were examined at all ports of call by medical officers accompanying the patrol. These examinations included chest X-ray of approximately 1,500 Eskimos. Mail was distributed and accepted and supplies were delivered. Building material for the erection of a scientific station at Baker Lake in the Keewatin District was transported from Southampton Island to Churchill, from which point it was delivered by schooner to its destination. The erection of the station is planned for 1947.

Yukon Territory.-Increased activity in both placer and quartz areas featured mining operations in Yukon Territory during 1946. Gold production from placer workings showed a substantial increase over that for 1945. Prospecting was extended over a wide area and the development of a new quartz mining field was commenced in the vicinity of Victoria Creek, near Carmacks.

The total production of gold in the Territory for 1946 was 47,023 fine oz. valued at $\$ 1,728,095$, as compared with a total of 31,721 fine oz. valued at $\$ 1,221,258$ in 1945. The greater part of this production came from placer mining operations in the Dawson District. The total value of mineral production in Yukon Territory to the end of 1946 has been estimated at $\$ 242,799,469$, of which gold accounted for $\$ 213,876,939$ and silver $\$ 21,003,071$.

The principal producers in the placer mining field were Yukon Consolidated Gold Corporation Limited, which operated six dredges in the Klondike area, and Clear Creek Placers Limited, which operated one dredge on Clear Creek, a tributary of the Stewart River. In addition, considerable gold was obtained from placer operations conducted on Shorty Creek in the Dezadeash Lake area, and on Burwash Creek, near Kluane Lake. Some gold was produced in the Mayo Mining District. Prospecting was also carried out in other areas, and at the close of 1946 a total length of 583 miles on various creeks and rivers was held under prospecting grants.

Quartz mining activity in the Territory was featured by a renewed interest in the Mayo Mining District. The Keno Hill Mining Company Limited, which, in 1945, acquired claims formerly owned by the Treadwell Yukon Corporation Limited, undertook considerable development work prior to commencing milling operations in 1947 Claims were opened up on Galena Hill, where a flotation mill at the Elsa mine is being rehabilitated. Operations also were undertaken on Keno Hill by the Yukon Northwest Exploration Limited.

In the Whitehorse Mining District, Northwest Exploration Company Limited, continued work on properties acquired in 1945, in the vicinity of Victoria Creek, where a sufficiently large body of ore was blocked out to warrant the formation of a new company to be known as Brown-McDade Mines Limited. A small landing field was developed during the year to facilitate the transportation of supplies, and plans were made for the erection of a mill. Drilling operations were continued by Hudson Bay Exploration and Development Company Limited, on a group of claims at the head of Log Jam Creek, a tributary of Swift River. This area is accessible from the Alaska Highway.

On Apr. 1, 1946, maintenance of the Alaska Highway passed from United States authority to the Northwest Highway System (Canadian Army). Owing to the limited accommodation available along the route, travel on the highway is restricted to maintenance personnel, prospectors, organized hunting parties, and others having business in the region or in Alaska. Control of traffic is supefvised by the Royal Canadian Mounted Police.

Progress was made in the development of the experimental substation opened in 1945, by the Dominion Department of Agriculture on the Alaska Highway, approximately 100 miles west of Whitehorse. Field tests were conducted in 1946 on land prepared the previous year. Although the season was extremely dry, satisfactory results were obtained from grain crops. Garden crop trials were undertaken and also proved encouraging. A greenhouse erected during the year facilitated the production of tomatoes and cucumbers.

The fur trade continued to be a source of revenue for inhabitants of Yukon Territory, particularly the native population, and during the year ended June 30, 1945, a total catch of 87,292 pelts, valued at $\$ 669,217$, was obtained.

## Subsection 2.-Provincial Public Lands

In the Maritime Provinces and in Quebec, Ontario and British Columbia (except the Railway Belt and the Peace River Block), the public lands have been administered by the Provincial Governments since Confederation. Since the transfer by the Federal Government of the natural resources of the Prairie Provinces and of sections of British Columbia, public lands in all provinces have been under provincial administration. In Prince Edward Island, all of the land is alienated and there are no provincial public lands.

In certain of the provinces extensive areas have been set aside from provincial lands as parks and reserves. These provincial areas are dealt with in Chapter I, pp. 39-41.

Information regarding provincial public lands may be obtained from the following officials of the respective provinces: Minister of Lands and Forests, Halifax, N.S.; Deputy Minister of Lands and Mines, Fredericton, N.B.; Deputy Minister of Lands and Forests, Quebec, Que.; Deputy Minister of Lands and Forests, Toronto, Ont.; Director of Lands, Department of Mines and Natural Resources, Winnipeg, Man.; Director of Lands, Department of Natural Resources, Regina, Sask.; Director of Lands, Department of Lands and Mines, Edmonton, Alta.; Deputy Minister of Lands, Victoria, B.C.

78374-74

## Section 2.-Department of Public Works*

Since Confederation and before, the constructing department of the Federal Government has been known as the Department of Public Works. In 1879 the railways and canals were placed under the control of a new department, the building and maintenance of penitentiaries were transferred to the Department of Justice, the maintenance and construction of lighthouses to the Marine and Fisheries Department, and the smaller drill halls and armouries to the Department of National Defence. The work of the Department of Public Works is now divided into three principal branches, viz., the Engineering Branch, the Architect's Branch, and the Telegraph Branch.

Engineering.-The Engineering Branch conducts the construction and repair of wharves, piers, breakwaters, dams, weirs, bank and beach protection works; the improvement of harbours and rivers by dredging; the construction, operation, and mairtenance of dredging plant and the construction, operation, and maintenance of graving or dry docks. The construction and maintenance of interprovincial bridges and approaches thereto, also the construction, operation, and maintenance of bridges with movable spans on certain highways; hydrographical and topographical surveys which are required for the preparation of plans, reports, and estimates; test borings for the purpose of ascertaining the nature of foundations; the testing of cements and materials of construction; the licensing of international and interprovincial ferries, and the control of works constructed in or over navigable waters by authority of the Navigable Waters Protection Act (R.S.C., 1927, c. 140).

Architecture.-The Architect's Branch constructs and maintains Government buildings, post offices, customs houses, examining warehouses, quarantine stations, immigration and experimental farm buildings, military hospitals, and telegraph offices. It also constructs armouries and drill halls and leases office accommodation as required for the various Departments.

Telegraphs.-The Telegraph Branch has control of the construction, operation, and maintenance of all Government-owned telegraph lines and cables. These lines are located in the provinces of Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan, Alberta, British Columbia, and Yukon (see also p. 726).

Graving Docks.-The Department constructed five dry docks and is responsible for subsidies under the Dry Dock Subsidies Act, 1910 (9-10 Edw. VII, c. 17). A description of these docks is given in the Transportation Chapter, p. 693.
*Revised by J. M. Somerville, Secretary, Department of Public Works, Ottawa.

## Section 4.-Department of the Secretary of State*

The Department of the Secretary of State was constituted in its present form in 1873, through the merging of the previously existing offices of the Secretaries of State for Canada and for the provinces. The Secretary of State is the official mouthpiece of the Government, as well as the medium of communication between the Federal and Provincial Governments, all correspondence between the Governments being conducted by him with the Lieutenant-Governors. He is also the custodian of the Great Seal of Canada and the Privy Seal as well as being the channel by which the general public may approach the Crown.

The Secretary of State is also the Registrar General, registering all proclamations, commissions, licences, warrants, writs and other instruments issued under the Great Seal and the Privy Seal. He is further charged with the administration of the Boards of Trade Act, the Companies Act, the Canada Temperance Act, the Copyright Act, the Naturalization Act, the Patent Act, the Trade Unions Act, the Ticket of Leave Act, the Unfair Competition Act (1932), the Bankruptcy Act, and with the collection and tabling of parliamentary returns. Other Acts and

[^432]Regulations administered by the Secretary of State as a result of the declaration of war are: the Patents, Designs, Copyright and Trade Marks Emergency Order (1939), and the Revised Regulations Respecting Trading with the Enemy (1943). The Secretary of State deals with the organization and administration of the Office of the Custodian of Enemy Property (see the Foreign Trade Chapter of this volume, pp. 492-493). Statistics regarding patents and copyrights appear in Chapter XXII at pp. 765-767.

Charters of Incorporation.-Statistics of companies incorporated under the Companies Act are given in Table 5.

## 5.-Numbers and Capitalizations of Companies Incorporated Under the Dominion Companies Act and Amending Acts, Fiscal Years 1936-46

Nore.- Statistics for the years 1900-25 will be found at p. 1061 of the 1938 Year Book and for 1926-35 at p. 934 of the 1942 edition. Capitalization includes consideration of the amounts of capital received on the issue of shares without nominal or par value.

During the fiscal year 1946, Supplementary Letters Patent numbering 118 were granted for variation of corporate powers, changes of name, confirmation of compromises or arrangements with shareholders and for various other purposes. In addition to the companies with share capital, 49 corporations without share capital were granted Letters Patent under the provisions of Part II of The Companies Act, 1934.

## Subsection 1.-Naturalization

Prior to Jan. 1, 1915, naturalization in Canada was only local in effect and such certificates were granted under the Naturalization Act, R.S.C., 1906, c. 77. Figures of naturalization under that Act are given at p. 594 of the 1919 Year Book. Although the "Imperial" Naturalization Act came into force on Jan. 1, 1915, the "local" Naturalization Act remained in effect until Dec. 31, 1917.

The "Imperial" Naturalization Act which came into force on Jan. 1, 1915, was known under the title of the Naturalization Act, 1914, until July 7, 1919, when it was repealed and the Naturalization Act, 1919, came into force. On July 1, 1920, the Naturalization Act, 1919, was repealed, and the Naturalization Act, 1914, was revived and amended under the title of the Naturalization Acts, 1914 and 1920. By an amendment passed by Parliament in 1923, the restriction was removed by which persons of enemy alien birth were ineligible to receive certificates of naturalization for a period of ten years after the termination of the War. All these Acts were consolidated in R.S.C., 1927, c. 138 . Under this consolidation, any alien could apply for naturalization, but according to Sect. 4, Part II of the Act, the grant-
ing of the certificates of naturalization to the applicant was left entirely to the discretion of the Minister who could, without assigning any reason, give or withhold the certificate as he thought most conducive to the public good.

As and from Jan. 15, 1932, female British subjects, marrying aliens, retained British nationality unless they, by marriage, acquired their husbands' nationalities. The wives of aliens no longer became British subjects automatically through their husbands' naturalization; but were required to apply for a certificate to the Secretary of State (see p. 1169).

By an Order in Council under the War Measures Act, R.S.C., 1927, c. 206, dated July 9, 1942 (P.C. 5842) as amended by Order in Council dated Sept. 23, 1942 (P.C. 8499), effective Jan. 1, 1943, all aliens who were required to apply for naturalization by filing their applications through the Courts were required first to file declarations of intention. They were not qualified to file applications for naturalization under Sect. 4 of the Naturalization Act until one year after the date of filing the declarations of intention.

By the terms of Para. 1 of the Regulations laid down in Order in Council P.C. 5842 of July 9, 1942, as amended by P.C. 4309 of June 5, 1944, the Secretary of State was authorized to grant a certificate of naturalization to any alien serving outside Canada with the Naval, Military or Air Forces of Canada, and to any alien who had enlisted for general service with the Naval, Military or Air Forces of Canada, and who had served on Active Service in any of the said Forces for a period of not less than eighteen months, and was still serving on Active Service in any of the said Forces, provided the applicant had satisfied the Secretary of State, by the filing of such documents and evidence as may have been prescribed by the Secretary of State and the Minister of National Defence, that he was a fit and proper person to be naturalized in Canada as a British subject. No fee was payable on such certificates of naturalization.

Table 6 shows the number of naturalization certificates issued to single persons or heads of families under these Acts during the calendar years from 1943 to 1946. The total numbers of persons naturalized during the same years, including (except as stated above) the wives and minor children of those to whom naturalization certificates were issued, are shown in Table 7.

Persons naturalized under the Naturalization Act are entitled to all the political and other rights, powers and privileges, and are subject to all the obligations, duties and liabilities of a natural-born British subject, and from the date of naturalization have the same status as a natural-born British subject.

Table 8 gives an analysis of the non-British and non-French naturalized and alien population of Canada for the two censuses, 1931 and 1941.

## Subsection 2.-Citizenship

On Jan. 1, 1947, there came into force the Canadian Citizenship Act. By this legislation all previous Naturalization Acts in force in Canada were repealed; this included the Canadian Nationals Act, c. 21, R.S.C. 1927. The purpose of the Act is to give a clear and simple definition of Canadian citizenship and to provide
an underlying community of status for all the people of Canada that will help to bind them together as Canadians. Heretofore, the only definition of Canadian citizenship was to be found in the Immigration Act, and that was a limited one, for it defined citizenship only for purposes of immigration. Now, for the first time in Canada's history, there is a clear definition of Canadian citizenship in the sense of being nationals of Canada.

Natural-born Canadian Citizens.-The Canadian Citizenship Act, 1947, defines clearly the status of natural born-Canadians before and after the coming into force of the Act. It covers those persons born in, and outside Canada. Provision is also made for the citizenship of a Canadian-born person born abroad, out of wedlock. Such a person is a Canadian citizen if his mother was born in Canada, or on a Canadian ship, and had not become an alien. Heretofore, a person in that category had no claim to Canadian citizenship. A person born abroad of a Canadian parent before the commencement of the Canadian Citizenship Act, 1947, is not de med to have the status of a Canadian citizen, unless he has been lawiully admitted to Canada for permanent residence, or is a minor. A person born abroad of a Canadian parent after the new Act came into force is a Canadian citizen, but there is a proviso that his birth must be registered at a Canadian consulate, or with the Secretary of State of Canada, within two years after its occurrence, or within such extended period as may be authorized in special cases by the Minister, if his parents wish him to retain Canadian citizenship. In addition, a Canadian born outside Canada, either before or after the commencement of this Act, ceases to be a Canadian citizen unless within one year after he reaches the age of 21, he files a declaration of retention of Canadian citizenship, and, if he is also a citizen of a country other than Canada (dual nationality), he divests himself of such nationality by declaration of alienage, or otherwise. In special cases, the Minister may extend the time during which any such person may assert his Canadian citizenship and divest himself of the other nationality or citizenship. One of the important features of the new Act, with respect to which the procedure is set out in the Regulations, is that which permits a natural-born Canadian citizen to apply for a certificate of Canadian citizenship. Many Canadians travel abroad these days, and many of them reside abroad for a number of years. They, in particular, may wish to have certificates identifying them as Canadian citizens. But any Canadian, whether he intends to travel or stay at home, may apply to the Secretary of State of Canada for a certificate of Canadian citizenship and obtain one upon the payment of a fee of $\$ 1$. This is something quite new, and a distinct departure from the former procedure. Under previous Acts, there was no provision for the issue of certificates to Canadian citizens or British subjects, as their birth certificates were deemed to be sufficient evidence of their status.

British Subjects and Canadian Citizens.-British subjects, as distinct from Canadian citizens, have their status defined under the new Act. It should be explained that, under previous Acts, persons born or naturalized within the British Commonwealth of Nations were officially designated as British subjects. Officially, a Canadian could not describe himself as a Canadian citizen; the term was 'British
subject' This was one of the principal reasons why the Act was passed, viz., to permit a Canadian to call himself a Canadian. The authority for this procedure is found in Sect. 3 of the new Act, which reads:
"Section 3. Where a person is required to state or declare his national status, any person who is a Canadian citizen under this Act shall state or declare himself to be a Canadian citizen and his statement or declaration to that effect shall be a good and sufficient compliance with such requirement."
Although the designation, British subject, will be dropped in future, insofar as it applies to Canadians, this does not mean that a Canadian loses the status of a British subject. Sect. 26 of the new Act reads that a Canadian citizen is a British subject, and Sect. 28 reads that a person who has acquired the status of a British subject by birth or naturalization under the laws of any country of the British Commonwealth, other than Canada, to which he was subject at the time of his birth or naturalization, shall be recognized in Canada as a British subject.

It should be emphasized that the rights of non-Canadian British subjects have not been changed or infringed upon by the new Act. They will continue to have the right to vote, to obtain old age pensions, and the right of permanent entry after five years' residence in Canada. But they are not Canadian citizens until they have established a residence of five years in Canada. Those who have that residence at the commencement of the Act are Canadian citizens, and those who attain it after that date must apply for certificates of citizenship before being granted the status of Canadian citizens.

However, any British subject, whether or not he is a Canadian citizen, may apply for a certificate of citizenship. The British subject who is not a Canadian citizen may apply for a certificate direct to the Secretary of State of Canada, or, alternatively, he may apply to the court of the district in which he resides. If the Secretary of State is in any doubt as to the qualifications of the person who applies direct to him, he may refer the case to the court for consideration.

Canadian Citizens Other Than Natural-born.-Under Sect. 9, of the Act, naturalized persons, and British subjects, who had Canadian domicile before the commencement of this Act, are Canadian citizens and may obtain a Canadian Citizenship Certificate upon payment of $\$ 1$. Sect. 9 also defines the status as Canadian citizens of women and children, other than natural-born, and the manner in which they would have acquired Canadian citizenship.

Status and Procedure of Non-Canadians to Canadian Citizenship.-In Sect. 10 (1) of the Act will be found the proyisions which apply to the granting of citizenship to a person who is not a Canadian citizen. Although the word 'alien' is not used in the sub-section, nevertheless its principal purpose is to define the circumstances under which an alien may apply for and be granted a certificate of citizenship. The application is made to a court, and whereas the alien must apply to the court, the British subject has the option of applying to the court or direct to the Secretary of State. Furthermore, the alien must commence his application by filing a Declaration of Intention, which the British subject is not required to do.

The applicant for a certificate of citizenship may file his application at any time after his admission to Canada, and after he has attained the age of 18 years, in the form of a Declaration of Intention in the office of the clerk of the court of the district in which he resides. He must then wait not less than one year before filing with the
court his application for a decision that he is qualified for citizenship. In any case, when he files his final application, he must satisfy the court that he has had a residence of one year in Canada immediately prior to the date of filing the application, and a further period of four years in Canada during the six years immediately preceding the date of the application, making a total residence of five years. In the case of an applicant who has served outside of Canada in the Armed Forces of Canada during time of war, or where the applicant is the wife of and resides in Canada with a Canadian citizen, a residence of only one year immediately preceding the date of the application is required.

In addition to the requirements of residence the applicant must satisfy the judge that he has been lawfully admitted to Canada for permanent residence; that he is of good character; that he has an adequate knowledge of English or French (knowledge of tanguage is not necessary if he has resided continuously in Canada for more than 20 years-the 20 year clause is new); that he has an adequate knowledge of the responsibilities of Canadian citizenship, and that he intends, if his application is granted, either to reside permanently in Canada or to enter or continue in the public service of Canada or of a province thereof.

When the judge has given his decision, the papers and the decision are forwarded to the Secretary of State of Canada. He may grant the certificate of citizenship or, if he is in doubt whether the certificate should be granted, refer the application to the court for a rehearing. When a certificate is granted, it is forwarded to the clerk of the court, who then notifies the applicant to appear in court for the purpose of taking the oath of allegiance and declaration of renunciation of foreign allegiance, and receiving his certificate of citizenship.

Status of Married Women.-One of the important changes in the new Act is the citizenship emancipation of married women. Hitherto, an alien woman marrying a British subject became a British subject. Contrariwise, the woman of British nationality who married an alien, and acquired his nationality upon marriage, ceased to be a British subject. In fact, prior to 1932, a woman of British nationality who married an alien lost British nationality regardless of whether or not she acquired her husband's nationality. Under the new law, all this is changed. A Canadian woman does not lose Canadian citizenship upon marriage to an alien, and an alien woman who marries a Canadian does not, by reason of the marriage, become a Canadian citizen. In the former case, if she has acquired her husband's nationality, the married woman may divest herself of Canadian citizenship by filing with the Secretary of State of Canada a declaration of alienage and she shall thereupon cease to be a Canadian citizen. In the latter case, an alien woman must apply to the court for a certificate of citizenship. The only concession is that a residence of only one year in Canada is required.

In the past, married women were classed with minors, lunatics, and idiots as persons under disability. They could not become naturalized or control their national status as independent persons, except in very special circumstances. These disabilities have been removed, and under the new Act married women have equal status with men.

Status of Minors, Foundlings, Posthumous Births, etc.-Under Sect. 19 (3) of the Act, a certificate of citizenship may be granted to a minor child of a person to whom a certificate of citizenship is, or has been, granted under the Act, on the application of that person if the person is the responsible parent of the child, if the child was born before the date of the grant of the certificate and has been law-
fully admitted to Canada for permanent residence. Under Sect. 11 (b), the Secretary of State, may, in his discretion, grant a certificate to a minor in any special case whether or not the conditions of the Act have been complied with. For the first time, a Canadian Act on nationality or citizenship defines the status of a deserted infant. Under previous Acts there was no mention of the status of a child left on somebody's doorstep. Under the new Act, it is provided that every foundling, who is or was first found as a deserted infant in Canada, shall, until the contrary is proved, be deemed to have been born in Canada. Another new provision in the Act, which did not appear in previous Acts, is the case of a child born after the death of his father. For purposes of definition of natural-born Canadian citizen, the child shall be deemed to have been born immediately before the death of the father. Under Sect 11 (a) of the Act, a certificate may be granted for the purpose of removing any doubts as to whether the person to whom it is granted is a Canadian citizen, and it is specifically provided that the granting of the certificate shall not be deemed to establish that the person to whom it is granted was not previously a Canadian citizen.

Citizenship of Persons Naturalized Locally Prior to 1914.-Persons who were naturalized locally in Canada prior to the passing of the Naturalization Act of 1914, were permitted, under the various Imperial Acts which were in force from 1914 to 1946, to exchange their local naturalization for Imperial certificates. This provision has been carried forward in the Canadian Citizenship Act, so that these persons, and particularly their children who were naturalized with them but who have no certificates to identify them as citizens, may apply for and obtain certificates of Canadian citizenship upon payment of a fee of $\$ 1$.

Protection of Status Prior to the Canadian Citizenship Act.-Section 46 of the Act provides that notwithstanding the repeal of the Naturalization Act and the Canadian Nationals Act, the Canadian Citizenship Act is not to be construed or interpreted as depriving any person who is a Canadian national, a British subject or an alien as defined in the said Acts, or in any other law in force in Canada, of the national status he possesses at the time of the coming into force of this Act.

Loss of Canadıan Citizenship.-A Canadian citizen who, when outside of Canada and not under a disability, by any voluntary and formal act, other than marriage, acquires the nationality or citizenship of a country, other than Canada, shall cease to be a Canadian citizen. This is the usual way in which Canadian citizenship is lost. There are other causes, such as service in the Armed Forces of a country when it is at war with Canada; a minor child who acquires a foreign citizenship with his responsible parent; or a woman who acquires her alien husband's nationality and files a declaration of alienage. The minor child who loses Canadian citizenship through his parent, may, within one year of attaining his twenty-first year, file a declaration of retention of Canadian citizenship, and he shall, thereupon, again become a Canadian citizen.

A Canadian citizen, other than natural-born or one who has served in the Armed Forces of Canada in time of war, ceases to be a Canadian citizen after a residence of at least six consecutive years outside Canada, except in specific cases wherein the principle of maintenance of some connection with Canada is proved. There is authority, however, to extend the period of residence outside Canada for more than six years, by registration with a consulate and the issue of a certificate of extension.

Revocation of Citizenship.-The revocation procedure which obtained under the Naturalization Act has been carried forward into the new Act. This provides for the establishment of a revocation Commission to inquire into and report upon the proposed revocation of certificates of citizenship. Revocation can take place only by Order of the Governor in Council, upon recommendation of the Secretary of State. Revocation proceedings may be instituted on the grounds of residence outside of Canada for not less than six years; trading with the enemy during time of war; false representation or fraud, or the concealment of material circumstances at the time of naturalization; disaffection or disloyalty to His Majesty, whilst out of Canada or, if in Canada, the naturalized citizen has been convicted of treason or sedition by a competent court.

Where a person ceases to be a Canadian citizen or a British subject under the circumstances outlined in the preceding paragraph, the citizenship of the spouse and minor children of that person shall not be affected unless, in the case of a wife, she became a British subject (legislation prior to this Act), by reason only of her marriage to the said person, or the said person is the responsible parent of a child. In such case it may be directed that the wife and children shall cease to be Canadian citizens or British subjects, as the case may be. The wife of a person who has ceased to be a Canadian citizen or a British subject may, within six months of the date of revocation of her husband's certificate, make a declaration renouncing her Canadian citizenship and thereupon any minor children of her husband and herself shall cease to be Canadian citizens or British subjects, as the case may be.

Where a person ceases to be a Canadian citizen or a British subject, he shall be regarded as having the nationality or citizenship which he had before he became a Canadian citizen or a British subject.

The Oath of Allegiance.-In conformity with the new conception of Canadian citizenship as defined in the Act, the form of oath of allegiance has been changed. Under the Naturalization Act it read as follows:
"I (AB) swear by Almighty God that I will be faithful and bear true allegiance to His Majesty King George the Sixth, his Heirs and Successors, according to law. So help me God."

Under the new Act, the oath has been altered to read:
"I (AB) swear that I will be faithful and bear true allegiance to His Majesty King George the Sixth, his Heirs and Successors, according to law, and that I will faithfully observe the laws of Canada and fulfil my duties as a Canadian citizen. So help me God."

Canadian Citizenship Ceremonies.-One of the significant innovations in the new Act is the ceremonies attendant upon the presentation of certificates of citizenship at special sittings of the courts. Machinery has been set up by which the courts across the country will be given every assistance possible in the arrangement of ceremonies in connection with the presentation of certificates of citizenship.

It is planned, also, to provide the newcomer to Canada with special facilities for training and education in the fundamentals of citizenship and a manual on Canadian citizenship will be issued to the alien when he files his Declaration of Intention.

## Section 5.-The Civil Service of Canada

In the largest sense, the Federal Civil Service comprises all servants of the Crown, other than holders of political or judicial office, who are employed in a civil capacity and whose remuneration is paid wholly and directly from moneys voted by Parliament. Collectively, they form the staffs of the various Departments, Commissions, Boards, Bureaus, and other agencies of the Federal Government. Nearly every category of occupation is represented in the Civil Service, and personnel are further differentiated in terms of the several authorities under which they derive their appointments. Some few are appointed by either or both Houses of Parliament directly, a considerable number by departments and other agencies in accordance with the provisions of certain statutes, generally with executive approval of the Governor in Council, and the remainder-by far the majority-are selected and appointed by the Civil Service Commission.

As the central personnel agency of the Civil Service, the CivilService Commission is the custodian of the merit principle in respect to both initial appointments and promotions. The steps by which the Commission, in its present form, came to be constituted is the record of Civil Service reform in Canada which began a year after Confederation and culminated in the passing of the Civil Service Act of 1918. Successive Royal Commissions deliberated on the problem of creating an effective and efficient working force and from their findings and recommendations emerged the concept of a quasi-judicial body, with a large measure of autonomy and having jurisdiction over nearly the whole of the public service. In the past 28 years more than $1,000,000$ applicants for Civil Service posts have been examined by the Commission.

Provision was made in the Civil Service Act for the classifying of positions in the public service. A system of position-classification accordingly was instituted in 1919 and all positions with like duties and responsibilities were classified alike and remunerated equally. Through the years the original classification has been extensively revised, many new classes added and others discontinued as the organizational structure and administrative program and techniques of Government Departments have evolved. The determination of rates of compensation for each class is a continuing responsibility of the Commission and salary and wage surveys are conducted constantly. Position-classification is the mainspring in the Commission's primary function of recruitment involving, as it does, the fixing of standards of qualification for each class of position.

The instrument of recruitment is the open competitive examination. Examinations are held periodically as the personnel requirements of the public service dictate. Positions located throughout the country are treated in this respect in the same manner as positions at Ottawa, but applicants for local positions must be bona fide residents of the locality in each case, whereas anyone is entitled to apply for Ottawa positions. Competitive examinations are announced through posters displayed on the public notice boards of post offices, offices of the National Employment Service, public libraries and elsewhere.

The relative capacities of applicants are measured by objective tests designed and administered by the Commission. The nature of the test varies with the class of position and it may be of the written or oral type, or a combination of the two. For certain classes of positions ratings are based entirely on the education and experience of applicants as given on their application forms.

The names of persons successful in Civil Service examinations, arranged in order of rank, are recorded on "eligible lists" These lists are formally announced by publication in the Canada Gazette and each candidate-successful or unsuccessful -is advised individually of his standing. As required, appointments are made from eligible lists, which remain valid for one year.

Promotions among the personnel of Departments are similarly made through competitive examinations which are held as vacancies occur. It is a prime object of the Civil Service Act to create a career service and the system of positionclassification is particularly suitable to the advancement of employees by promotion. Promotions, however, are limited by law to the ranks of the permanent Civil Service, which, at present, is a small proportion of the total. The preponderance of temporary staff is a legacy of the war period when few permanent appointments were made. This condition is gradually being changed as wartime units are liquidated and the structure of post-war administration emerges.

The War was a period of unprecedented activity for the Civil Service Commission. Up to that time the number of new appointments each year was less than 6,000 . During the six years of war one-quarter of a million appointments were made. Staff turnover was a persistent problem and accounted for about 70 p.c. of that number. Salaries and appointments were controlled during the War by a special set of regulations authorized by various Orders in Council, chiefly P.C. 1/1569 and 32/1905 of Apr. 19, and May 10, 1940.

With the termination of hostilities the public service moved into the rehabilitation and reconstruction phase of its work. Large staffs were required to be recruited for departments administering treatment and benefits for veterans, reconstruction programs and new social legislation. Competitive examinations qualifying for regular and continuous employment had been suspended during the War in the interest of members of the Armed Services who were precluded from applying. An examination program had, therefore, to be instituted for scores of classes of positions.

The statutory veterans' preference which had existed for veterans of the War of 1914-18 was extended to the new veterans and it has proved to be a major factor in occupational rehabilitation. During the year 1946 alone, 26,000 veterans were appointed to Civil Service posts across the country.

Since the close of the War, salary controls have been progressively relaxed, and the Commission has recommended upward revisions in salary for certain general classes and for particular positions the duties of which had substantially increased during the preceding six years.

Systematic in-service training of departmental staffs is a comparatively recent development seeking to increase the general efficiency of the Service. The Commission has promoted the adoption of broadly based training programs and, during the war period, in collaboration with the Canadian Vocational Training Division of the Department of Labour, conducted a series of courses. The results have proved eminently satisfactory and training is being extended month by month into new fields of work.

Civil Service Statistics.*-Since April, 1924, a monthly return of personnel and salaries has been made by each Department of the Government to the Dominion Bureau of Statistics, according to a plan that ensures comparability between Departments and continuity in point of time. The institution of this system was preceded by an investigation covering all years following 1912.

[^434]From 1914 to 1920, the number of employees increased very rapidly, as a result of the extension of the functions of government and of the imposition of new taxes which necessitated additional officials as collectors. New services, such as the Department of Pensions and National Health and the Soldier Settlement Board were also created during this period. In January, 1920, 47,133 persons were employed; this number was the highest reached prior to January, 1940, when employees numbered 49,739.

Between March, 1939, and March, 1946, there was an increase of 74,451 in the total number of permanent and temporary employees. The bulk of this wartime increase was accounted for as follows: Department of National Defence, 23.9 p.c.; new wartime Departments and Boards (Reconstruction and Supply, National Film Board, Canadian Information Service, Wartime Prices and Trade Board) 111 p.c.; Unemployment Insurance Commission, 11.4 p.c. and 15.9 p.c. in Veterans Affairs and Soldier Settlement and Veterans' Land Act Departments combined.

Despite the large wartime increase in the total Civil Service employment, the number of permanent employees was less in March, 1946, than in March, 1939. The number of temporary employees, however, increased steadily during the war years. Consequently, in March, 1946, temporary employees represented $74 \cdot 2$ p.c. of the total as compared with $30 \cdot 3$ p.c. of the total in March, 1939, and $34 \cdot 5$ p.c. of the total in March, 1925, the first year for which these statistics were published.

The following sequence of tables is condensed from a recently published historical series covering the years 1925 to 1946. Table 9 gives the total numbers and percentages of permanent and temporary Civil Service employees in the month of March over the period. Tabie 10 gives comparable information regarding salaries and wages paid during each of the fiscal years of the period. Tables 11 and 12 give parallel data to those shown in Tables 9 and 10 but limited to the permanent and temporary employees employed at departmental headquarters. Tables 13 and 14 give index numbers of permanent and temporary employees and of wages paid to them for the same years of the series. Table 15 gives detailed information of employees and expenditures by Departments and Branches for the months of March 1945 and 1946.

## 9.-Numbers and Percentages of Permanent and Temporary Civil Service Employees, Months of March, 1937-46

Note.-Figures for the years 1925-36 will be found at p. 1141 of the 1946 Year Book.

| Month of March- | Permanent |  | Temporary |  | Total |

## Section 6.-Supervision of Race-Track Betting

The supervision of race-track betting, under the pari-mutuel system, has been under the jurisdiction of the Minister of Agriculture since it first operated during the racing season of 1921. The actual supervision is carried out by officers of the Royal Canadian Mounted Police. During the war years the statistics under this heading were dropped from the Year Book. Those last published were for the years 1930-39 and were given at p. 965 of the 1941 edition. The following table links in with the 1941 Year Book and brings the data on a comparable basis up to the year 1945.
17.-Race-Track Betting in Canada, Years Ended Mar. 31, 1939-45, and by Provinces, 1945
Note.-Figures for 1924-38 are given at p. 1076 of the 1940 Year Book.

# CHAPTER XXXII.-SOURCES OF OFFIGIAL STATISTIGAL AND OTHER INFORMATION RELATIVE TO CANADA 

CONSPEGTUS

## Section 1.-Sources of Dominion General Information

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the decennial and quinquennial censuses are planned and statistical information of all kinds-Dominion and Provincial-is centralized. In regard to information that is not mainly statistical the individual Departments concerned with the particular subject, as indicated in the Directory, Section 2 of this Chapter, should be approached. Certain Government bodies and National Agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are the Information Division of the Department of External Affairs (formerly known as the Canadian Information Service), the Canadian Broadcasting Corporation, and the National Film Board. The Departments of Agriculture and Mines and Resources, while not thus classed, are interested in the dissemination of information to a greater extent than most other Government Departments, and several other Departments have Publicity Branches or Public Relations Divisions.

All Government Departments, with few exceptions, issue their own lists of reports and publications. They must, according to statute, publish Annual Reports each year which are tabled in the House of Commons by their respective Ministers. However, for the purpose of this Section, the descriptions given below are limited to the four special publicity services specified in the first paragraph above. Section 2, on the other hand, has been prepared with the purpose of presenting to the reader a Directory of all sources of information, Dominion and Provincial. This, it is hoped, will direct the reader who is not in touch with governmental organization to the proper channels from which he can draw material relating to any particular subject.

The Dominion Bureau of Statistics.-The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43).* The Act was a consolidation of all previous statistical legislation and was based on the report of a Commission on Statistics, appointed in 1912, which recommended (1) a series of specific reforms and enlargements in Canadian

[^436]statistics, and (2) a policy of statistical co-ordination for the Dominion, under central direction. In 1915, following the recommendations in this Report, the office of Dominion Statistician was created but it was not until 1918 that the recommendations of the Commission were embodied in legislation.

## The chief aims of the Bureau of Statistics are:-

(1) To furnish factual data for administration and government.
(2) To assist in developing Canada as a well-informed nation by standing ready to help business men and individuals to plan their enterprises and their lives.

It is in regard to the second of these aims that this review is concerned.
Inquiries.-Literally, hundreds of individual requests for specific information are received in the Bureau each day, routed through the main Divisions and answered as expeditiously as possible. Since the field of effort covers, from the statistical side, all phases of the national economy, there is scarcely a subject upon which the Bureau is not able to give some information. This will be emphasized from a glance at the Directory following. Nevertheless, it is only in regard to statistical questions that inquiries should be directed to this Bureau.

Publications.-The Dominion Bureau of Statistics is the largest publishing department of the Federal Government: the subjects of its reports cover all phases of the national economy. Items in the vote of the Bureau, passed by Parliament each year, provide limited funds for the printing and processing of reports and bulletins. Reports printed from type are set up by the King's Printer, but the Bureau itself operates its own offset printing presses and all processed reports and bulletins are completely printed as well as published by the Bureau of Statistics.

The present policy with regard to the distribution of publications is based on sales to the public at actual cost of paper and presswork only; compilation, editing and other overhead costs are not included. The object is to extend the service to the public as widely as possible and so spread the compilation and overhead, which are the big items in total costs. A special subscription rate of $\$ 30$ per year entitles the subscriber to receive a copy of each publication as issued, with the exception of news bulletins. Other special rates are set for series of publications in related groups such as:-

1. Administration
2. Agricultural Production
3. Economic and Business
Conditions
4. Education
5. Finance
6. Industrial Production
7. Labour and Prices, Unemployment and Earnings
8. Population
9. Trade, Domestic (including Merchandising) and Foreign

10 Transportation, Communications and Public Utilities
11. Vital Statistics, Criminal Statistics, and Welfare Institutions
12. General

Applications for reports should be sent to the Bureau of Statistics; they should indicate the individual publication or series of reports in which the applicant is interested and include the necessary remittance in the form of a cheque or moneyorder made payable to the Receiver General of Canada, Ottawa.

Information Division, Department of External Affairs.-The Information Division was established in its present form early in 1947 by the integration of the former Canadian Information Service into the Department. The Canadian Information Service in turn developed from the Wartime Information Service which was set up in the early years of the War of 1939-45.

The former C.I.S. functions of collecting information in many forms and supplying Canadian representatives abroad with up-to-date data about Canadian events, background material on happenings in Canada, etc., are continued by this Division. An Inquiry Service is operated which answers general questions about Canada received from abroad, and particular questions about matters of departmental concern received from within Canada. Reference materials, photographs, posters, and other graphic materials for distribution outside Canada are prepared, and books on Canada are procured for use in reference libraries abroad. Facilities are arranged for journalists visiting Canada and for Canadian speakers abroad, and cultural relations projects are encouraged. In addition to routine duties of arranging departmental press conferences, preparing press releases and obtaining information for the Department's use, the Information Division is frequently responsible for Canadian press relations at international conferences, both in Canada and elsewhere. In general, the activities of the agencies engaged in disseminating Canadian information abroad are co-ordinated by this Division.

This Division works through information officers in Canadian missions at New York, London, Washington, Paris, and Canberra, and through Canadian representatives in diplomatic and trade missions in other centres.

Canadian Broadcasting Corporation.-Since radio broadcasting was made possible by progress in the field of wireless telegraphy following the War of 1914-18, this medium has become a rival means of giving information to the public along with newspapers, films and other means of communication. This is true in all countries whether, as in the United States, the systems are privately owned or whether, as in Canada and the United Kingdom, they are organized on_ a national basis.

The Canadian Broadcasting Corporation, since its establishment in 1936, has indeed become one of the most effective channels through which information, official and unofficial, is broadcast to the Canadian people. Because of the widely distributed population, especially of the sparsely peopled areas of the northwest and the far north, radio is relatively more important to Canada than to any other people. Without it the country could not be so effectively linked as it is, for to-day the posts of the far north can receive their news and enjoy the entertainments that the radio provides equally with their fellow citizens living in Halifax, N.S., Montreal, Que., or Vancouver, B.C.

News broadcasts and programs occupy a considerable proportion of national and regional network time. They include news, drama, informative talks, children's programs, religious programs, public services broadcasts, sports, women's activities, etc.

An important development that the War has brought about has been the world coverage of news broadcasts from international centres that are picked up by the CBC short-wave receiving stations and rebroadcast to Canadian listeners. Thus it is that CBC is taking its rightful place among the official sources of information available to Canadians.

Through the International Shortwave Service operated by the CBC, programs are broadcast daily in ten languages: English, French, Czech, Dutch, Danish, Norwegian, Swedish, German, Spanish and Portuguese. The transmitters are located at Sackville, N.B., and the programs are beamed to Europe, the West Indies, Central and South America. By this service, information on life in Canada and on economic conditions is broadcast abroad as part of the general information plan in promoting a better understanding of Canada in other countries.

National Film Board.-The Canadian Government, through the National Film Board, produces films, filmstrips, photographs, photo displays, posters, wallhangers, booklets and other graphic material for distribution in Canada and abroad.

The Board produces one or more monthly theatrical releases in English and French for distribution to theatres throughout Canada. An extensive non-theatrical distribution is maintained through the medium of rural circuits operating in every province, and through film libraries in all major urban centres. To service the field, regional offices are maintained in every province.

Newsreel stories dealing with many aspects of Canadian life are also produced by the Board for inclusion in the newsreels which are distributed throughout the world by the principal newsreel companies in New York, U.S.A., and London, England. The National Film Board's technicians keep abreast of recent developments in colour production, stereoscopic films and television. Many Canadian films are featured on television programs in the United States and the United Kingdom.

In addition to films and other graphic materials produced in the English and French languages, the Board has produced or secured the production of Canadian films in French for distribution in France and her colonies; in Spanish for Spain and Latin America; in Portuguese for Brazil, Portugal, Portuguese West Africa and Portuguese Guinea; in Danish for Scandinavia, Greenland and Iceland; in Dutch for the Netherlands, the Netherlands East Indies and the Netherlands West Indies; in German for Switzerland, Austria and the British and American occupied zones of Germany; in Russian and Ukrainian for the U.S.S.R.; in Turkish for Turkey, and in Arabic for Egypt, Tripolitania, Cyrenaica, Lebanon, Syria and Iraq.

The Distribution Division in Ottawa directs the flow of all N.F.B. films through National Film Board offices in London, England; New York, Chicago and Washington in the United States; Sydney, Australia and Mexico City, Mexico; through Canadian Embassies, Legations, Trade Commissions, and Information Offices in other countries; and through professional theatrical and non-theatrical distributors within all these territories.

The Board maintains a photographic library of more than 80,000 negatives covering many aspects of Canada, its landscape, resources, industries, agriculture, and the national life and character of the Canadian people. Its photographs are distributed to Government Departments, tourist bureaus, newspapers, magazines and publishing houses within. Canada and to Trade Commissioners and other representatives abroad who may request them.

## Section 2.-Directory of Sources of Official Information for All Departments (Dominion and Provincial)

In previous editions of the Canada Year Book, this Chapter on Sources of Official Information has been taken up, for the main part, by detailed lists of publications issued by the Dominion Government Departments and the Provincial Government Departments. Such lists as these were of value to readers since the Year Book was the only place where publications of this kind were brought together. The rapid increase in the number of printed reports, bulletins and maps that has characterized all publicity efforts in recent years has made it increasingly difficult to spare the space in the Year Book to carry such detailed listings.

Moreover, since the Year Book lists have been prepared and published on a Departmental basis, they have been less and less convenient to the reader as the lists have increased in length. For instance, several Departments issue reports that can be classified under the broad heading of Agriculture-among these are the Department of Agriculture, the Dominion Bureau of Statistics and the National Research Council, not to mention the Northwest Territories and Yukon Administration which administers all the resources of those areas.

Without a subject cross-index, it is very difficult for the reader, unless he works carefully through the individual lists (which requires much time and labour), to know just where to go for information he desires under a certain subject heading, Again, the space that can be spared for individual lists does not admit of setting out the material in casily readable form. The size of type as set up in past editions was much too small for convenient reading and revisions could be made only once a year at best although, as a rule, such lists are subject to very frequent change.

The King's Printer, Ottawa, now publishes an Official List of all Government publications printed from type. This list, which may be obtained free of charge, is revised at regular intervals and is classified on a subject basis, as well as being adequately cross-referenced. Moreover, most Federal and Provincial Departments that put out near-print publications (either in mimeographed or rotaprinted form) issue lists of these free to the public and very often such lists include the printed publications published by the same Departments, and available through the King's Printer. Such individual lists are far more up to date and are listed and classified for more convenient reference than space in the Year Book will allow.

Apart from the question of publications, however, there is a growing volume of inquiries received from the public relative to all manner of subjects. This also makes it desirable to devise some means of guiding the public to the source of information on specific matters. Very few people are acquainted with internal government organization and it is not surprising that inquiries have very often to be routed and rerouted several times before they get to their intended destination.

For these reasons, it is now felt that this Chapter of the Year Book can best fill its function by serving as a Directory by means of which the reader is led to the basic sources of information in a particular field. With this in view, the following subject analysis of Federal and Provincial sources of information has been prepared.

To make best use of this Directory, it is necessary that the reader understand broadly the differences in function between Federal and Provincial Departments and their separate fields of work. For instance, the inquirer who seeks information on forestry may direct his correspondence to either the Dominion Forest Service
or the Dominion Bureau of Statistics on the one hand, or to one or all of the Provincial Departments administering the forest resources of the Provinces on the other.

Certain fields of effort, such as Trade and Commerce, Customs and Excise, Currency and Banking, Navigation, Transportation, Radio, Census of Population, National Defence, etc., are, constitutionally, Federal matters and in such fields the respective Departments at Ottawa are the proper sources with which to communicate. The written constitution of Canada (the British North America Act) has allocated the administration of the important and basic fields of lands and natural resources to the Provinces. The Provinces are also supreme in education, roads and highways, health and hospitals, although there is a considerable area of overlap, since the Federal Departments, especially the Dominion Bureau of Statistics, co-ordinate the picture for Canada as a whole in these fields.

As a general guide to the public, it may be pointed out that for questions that relate to the actual development and administration of resources in the provinces, inquiries should be forwarded to the particular Provinces concerned. The Federal Government, while not administering provincial resources, co-operates closely with the Provinces and is in a position to furnish over-all material for Canada, especially production data, on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular Provinces. In agriculture, for instance, data on the breeding of live stock and the improvement of strains, on agricultural marketing and crop yields are cases in point-in forestry, questions of forest research, forest fire protection and reforestation offer good examples. Where inquiries are directed to Federal sources, they should, as a general rule, be sent to the individual Departments listed in the Directory for information not of a statistical nature but, whatever the subject, where the information required is clearly statistical, they should be addressed to the Dominion Bureau of Statistics.

Bearing these points in mind, the interested reader will be able to apply the information given in the Directory to best advantage.

In the Directory, symbols are set against individual sources of information to give special information such as availability of detailed lists of publications, the costs of such lists (in cases where a charge is made), or information of other kinds. All Departments of Government whether Federal or Provincial stand ready and prepared to furnish, by letter or otherwise, information in their respective fields, free of charge, although where special compilations are called for, a nominal fee is sometimes made.

The address for all Federal Departments is Ottawa, Ontario. Inquiries forwarded to Provincial Government Departments should be addressed to the provincial capitals concerned. These are:-

## DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

A Most publications of Federal Departments printed from type are purchasable from the King's Printer who publishes a current list. Photographs, films and displays may be purchased from the National Film Board at prices obtainable on application. Most Provincial Government printed publications may be obtained from the King's Printers of the provinces. For addresses of Provincial Governments see text immediately preceding this Directory.Near-printed and mimeographed reports free or purchasable from this Department or Branch, particulars on application.
Directory of Departmental Organizations and Activities available from the Federal or Provincial Department on request.
List of Publications available free of charge on request from Federal or Provincial Departments concerned. (In the case of the Labour Department a list of publications is given in the Labour Gazette.)

## APPENDIX I Foreign Trade of Canada, 1946-47

Chapter XXIII of this volume includes foreign trade figures for the calendar year 1946. However, at the time of going to press, it is possible to give monthly figures up to the cnd of August 1947; these are shown in the following table together with monthly data for 1946 which are given for purposes of comparison.

It will be noted that domestic exports have shown a decided increase in each of the first seven months of 1947 as compared with the same months of 1946. Imports over the total period given have also shown an increase in each month over the previous year.

## 1.-Trade of Canada (Excluding Gold), by Months, January, 1946-June, 1947

Note.-Figures for the calendar years 1940, 1941, 1942 and 1943 are given at p. 1059 of the 1943-44 Year Book and 1944 figures at p. 1163 of the 1945 Year Book.

## APPENDIX II

## Survey of Production, 1944-45

The enterprises engaged in the production of commodities showed, in 1945, a decline in all industries except forestry, fisheries, construction, and custom and repair in gross value from the previous year. The total net value of output of primary production was 8.8 p.c. less than in 1944 and 9.5 p.c. less in the secondary activities. Table 2 shows the value of production for 1944-45 by provinces.

## 1.-Gross and Net Values of Production, by Industries, 1944 and 1945 .

Note.-Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and process supplies consumed in the production process.

| Industry | 1944 |  | 1945 |  | Per-centageChangein NetValue,1945 from1944 | Percentage of Net Value to Total Net Production 1945 |

## APPENDIX III

## CHRONOLOGY

## In continuance of the Chronology at pp. 46-55 of this volume.

1947. Jan. 1, In the King's New Year's Honours List, James G. Gardiner and Ian A. Mackenzie made members of Imperial Privy Council. Canadian Citizenship Act came into force. Jan. 13, The Privy Council, London, England, expressed the view that no barriers remain in the way of making the Supreme Court at Ottawa the final Court of Canada. Jan. 14, Canada elected to the Economic and Social Council of the United Nations. Jan. 30, The Third Session of Canada's Twentieth Parliament opened. MontrealCartier seat (occupied by Fred Rose) immediately declared vacant. Byelection held Mar. 31 with the Liberal Party winning seat. Feb. 12, Prime Minister W. L. Mackenzie King presented to the House of Commons a statement of principles for peacetime defence co-operation between Canada and the United States. Feb. 28-Mar. 29, The Economic and Social Council of United Nations met at New York, U.S.A., with a Canadian representative present. Mar. 26, First report of the Atomic Energy Commission of the United Nations tabled in House of Commons. Apr. 4, International Civil Aviation Organization (I.C.A.O.) replaces P.I.C.A.O. at Washington convention Apr. 8, L. Dana Wilgress, Canadian Minister to Switzerland, appointed head of Canadian delegation to the International Trade Organization meeting at Geneva on Apr. 10. May 6-27, The First General Assembly of I.C.A.O. met at Montreal, Que., with delegates present from thirty-nine nations. May 16, Canada represented by Justice I. C. Rand on United Nations FactFinding Commission on Palestine, under the chairmanship of L. B. Pearson June 3-15. India offered plan by Great Britain for Dominion status, with Hindu and Moslem territories becoming Dominions of Hindustan and Pakistan, respectively. Transfer of British authority to be completed by June, 1948. Moslems accepted plan on June 9, Hindus on June 15. June 10 Prime Minister W. L. Mackenzie King completed twenty years service as Prime Minister of Canada. This record was exceeded in the Commonwealth only by that of Sir Robert Walpole 1721 - 1742. June 10-12, President Truman, of the United States, accompanied by Mrs. Truman and their daughter, paid an official visit to Ottawa. President Truman addressed a joint session of the House of Commons and Senate on June 11. Juna 18-22, Marian Congress, attended by Roman Catholic potentates from many countries
and dedicated to world peace through prayer, met at Ottawa. June 25, Canada and Newfoundland begin discussions regarding Newfoundland's entry into Confederation as tenth province. June 27, Viscount Bennett, former Prime Minister of Canada and Peer of the United Kingdom, died at his home in Surrey, England. Burial at Dorking, June 30. Memorial service Westminster Abbey followed on July 4, and in Chalmers Church at Ottawa on July 9. July 9, Engagement of Princess Elizabeth to Lieutenant Philip Mountbatten announced in House of Commons by Prime Minister King. July 16, Canadianbuilt destroyer, Micmac, in collision with a freighter outside Halifax harbour. July 17, The Dominion-Provincial Tax Rental Agreement Act, 1947, was passed to authorize the Government of Canada to enter into Agreements with the Governments of the Provinces. July 18, A Royal Commission gave the King's assent to the Indian Independence Bill which grants full independence to India after nearly 200 years of British rule. July 19, Hon. Paul Martin, Minister of National Health and Welfare, headed the Canadian delegation to the fifth session of the United Nations Economic and Social Council held at Lake Success, N.Y. July 22, Arctic supply ship, Nascopie, on her annual trip to northern government posts, foundered on the rocks off Cape Dorset, southwest Baffin Island. July 31, Rt. Hon. C. D. Howe, Minister of Reconstruction and Supply, represented Canada at the Imperial Privy Council meeting at Buckingham Palace to give formal consent to the marriage of Princess Elizabeth and Lieut. Philip Mountbatten. Aug. 7, Prime Minister Mackenzie King celebrated his 28th anniversary as leader of the Liberal party. Aug. 10, Hon. H. T. G. Bridges, Minister of Fisheries in the Dominion Cabinet died suddenly at Ottawa. British economic crisis brought to a focus by Prime Minister Attlee's international radio address. British imports from North America threatened. Aug. 11, Senator Gerald Gratton McGeer died suddenly at Vancouver, B.C. Aug. 12, John Alexander Douglas McCurdy, Baddeck, N.S., appointed LieutenantGovernor of the Province of Nova Scotia. Aug. 15, The new Dominions of India and Pakistan took over their new responsibilities, the former Viscount Mountbatten as Governor General of India and Mahommed Ali Jinnah as Governor General of Pakistan.

[^0]:    - Prepared under the direct on of F, H. Peters, Surveyor General and Chief, Hydrographic Service, Department of Mines and Resources, Ottawa

[^1]:    ${ }^{1}$ Figures are subject to revision. census.
    ${ }^{3}$ Exclusive of the Territories
    2 These are intercensal estimates and will be adjusted after the next 1941-45. $\quad 5$ These figures are not completely comparable owing to changes in classification in 1926 and 1938.

[^2]:    ${ }^{1}$ Figures are subject to revision.
    ${ }^{2}$ In thousands.
    ${ }^{3}$ The statistics of manufactures in 1871, 1881 and 1891 include all establishments irrespective of the number of employees. From 1901, statistics are for establishments with five hands or over. The figures shown for census years prior to 1921 are for the preceding year. From 1922, statistics are exclusive of construction hand trades, repair and custom work. Figures for 1931-45 include non-ferrous metal smelting not included in earlier years. ${ }_{4}$ Since 1924 the net value of production is compute by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products.

[^3]:    ${ }^{5}$ Census figures for calendar years, 1930 and 1940 respectively. censuses only and the 1931 and 1941 figures are given. establishments. $\quad{ }^{8}$ Fiscal years prior to 1921. ports of merchandise for home consumption.

[^4]:    ${ }^{2}$ Fiscal years 1921 and prior years; calendar years 1931-46. ${ }^{6}$ Fiscal years.

[^5]:    ${ }^{1}$ Figures are subject to revision. includes sea-going and inland international Railway Commission was not included.
    Saskatchewan.

[^6]:    ${ }^{7}$ Active assets only. $\quad{ }^{8}$ Fiscal year ended nearest Dec. 31 of the year stated. $\quad{ }^{9}$ As at June 30 from 1871 to 1901. Monthly averages from 1911 to $1946 .{ }_{11}$ Included in Post Office Savings Banks. ${ }^{10}$ Including amounts deposited elsewhere than in Canada
    from 1901 .

[^7]:    ${ }^{1}$ Figures are subject to revision.
    ${ }^{2} 1922$ figures; first year provincial figures made available by the Department of Insurance. ${ }^{3}$ Prior to 1920 when the Dominion Department of Insurance took over the administration of the legislation concerning loan companies, the figures are not comparable. They are shown, however, at pp. xl and xli of the 1938 Year Book.
    ${ }^{4}$ Compiled from data supplied voluntarily to the Superintendent of Insurance by provincial companies, but estimated to cover about 90 p.c. of all provincial business. The figures include all the large and most of the small provincial companies.

[^8]:    ${ }_{7}$ Not including fraternal insurance.
    ${ }^{4}$ Figures are for 1924, the first year for which bank debits are available.
    ${ }^{7}$ Includes Newfoundland. ${ }^{8}$ Year ended Sept. 30 .
    ${ }^{\text {the }} 1886$ figures; first year available.
    ${ }^{10}$ Census
    figures, applying to calendar year 1930. 11 Wartime military hospitals not included.

[^9]:    * Revised by F. H. Peters, Surveyor General and Chief, Hydrographic and Map Service, Department of Mines and Resources, Ottawa.

[^10]:    - Prepared by F. C. G. Smith, Hydrographic Engineer, under the direction of F. H. Peters, Surveyor General and Chief, Hydrographic and Map Service, Department of Mines and Resources, Ottawa.

[^11]:    ${ }^{1}$ Elevation not available.

[^12]:    ${ }^{1}$ Elevation not available.

[^13]:    * By F. J. Alcock, Ph.D., Geologist, Department of Mines and Resources, Ottawa.

[^14]:    * Prepared under the direction of C. S. Beals, Ph.D., D.Sc., Acting Dominion Astronomer, Dominion Observatory, Department of Mines and Resources, by Ernest A. Hodgson, Ph. D., Chief, Division of Seismology.

[^15]:    For footnotes, see end of table, p. 33.

[^16]:    ${ }^{1}$ These totals embrace present agricultural land of all possible classes and land that has agricultural possibilities in any sense. $\quad 2$ Very small or negligible. ${ }^{3}$ Total agricultural land plus forested land minus forested agricultural land. 4 Includes open muskeg, rock, road allowances, urban land, etc. ${ }^{\text {s }}$ The figures given are strictly estimates but are the best available until definite data are obtainable. ${ }^{6}$ Includes 4 sq. miles of occupied land in Yukon and the Northwest Territories. ${ }^{7}$ An estimate from provincial sources places the total area of land suitable for tillage at 6,626 sq. miles.

[^17]:    * Prepared under the direction of R. A. Gibson, I.S.O., Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.
    $\dagger$ Excludes the Gatineau Park ( 25 square miles) and Quebec Battlefields Park ( 0.36 square miles) which are under Federal jurisdiction but, technically, are not National Parks.

[^18]:    ${ }^{1}$ Administered by the Bureau of Northwest Territories and Yukon Affairs of the Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

[^19]:    ${ }^{1}$ Including portion of Wood Buffalo Park.

[^20]:    * Prepared by John L. O'Connor, under the direction of C. S. Beals, Ph.D., D.Sc., Acting Dominion Astronomer, Dominion Observatory, Department of Mines and Resources.

[^21]:    Note.-The Ministries, dates of elections and lengths of sessions of Dominion Parliaments are given in Tables 2 and 5, respectively, of Chapter III. Changes in Provincial Legislatures and Ministries from Confederation to 1923 are given at pp. 75-84 of the 1924 Year Book, from 1924 to 1937 at pp. 110-118 of the 1938 Year Book and from 1934-46 in Table 13, pp. 76-84. References regarding these matters have, therefore, been dropied from the Chronology below.
    1497. June 24, Eastern coast of North America discovered by John Cabot.
    1498. Cabot discovered Hudson Strait.
    1501. Gaspar Corte Real visited Newfoundland and Labrador.
    1524. Verrazano explored the coast of Nova Scotia.
    1534. July 24, Jacques Cartier, on his first voyage, erected a cross at Gaspe, claiming the land for the King of France.
    1535. Cartier's second voyage. He ascended the St. Lawrence to Stadacona (Quebec) (Sept. 14), and Hochelaga (Montreal) (Oct. 2).
    1541. Cartier's third voyage. He planted wheat, cabbages, turnips, and lettuces near Cap Rouge River.
    1542-43. De Roberval and his party wintered at Cap Rouge, and were rescued by Cartier on his fourth voyage.
    1557. Sept. 1, Death of Cartier at St. Malo, France.
    1592. Straits of Juan de Fuca discovered by de Fuca.
    1603. June 22, Champlain's first landing in Canada, at Quebec.
    1604. De Monts settled colony on island in the St. Croix River.
    1605. Founding of Port Royal (Annapolis, N.S.).
    1608. Champlain's second visit. July 3, Founding of Quebec.
    1609. July, Champlain discovered Lake Champlain.
    1610-11. Hudson explored Hudson Bay and James Bay.
    1611. Brâlé ascended the Ottawa River.
    1612. Oct. 15, Champlain made LieutenantGeneral of New France.
    1613. June, Champlain ascended the Ottawa.
    1615. Champlain explored Lakes Nipissing, Huron, and Ontario (discovered by Brûlé and Le Caron).
    1616. First schools opened at Tadoussac and on the site of the city of Three Rivers.
    1617. Arrival at Quebec of the first colonist, Louis Hébert and his family.

[^22]:    * See pp. 40-60 of the 1942 Year Book for text of the original B.N.A. Act and notes regarding amend ments and modifications thereto.

[^23]:    * In 1934 the Constitution of Newfoundland was temporarily suspended by petition of the Legislature and administration has since been conducted by a Governor acting on the advice of six Commissioners appointed by the Crown-three from Newfoundland and three from the United Kingdom. The Government of the United Kingdom assumed general responsibility for the finances of the Island during the period of reconstruction.

[^24]:    *In addition to a sessional indemnity of $\$ 4,000$, a Bill introduced in the House of Commons during 1945 makes provision for an allowance of $\$ 2,000$ per annum to be paid at the end of each calendar year: this allowance is deemed to be taxable income.

[^25]:    *The sessional indemnity of a member of the House of Commons is $\$ 4,000$. The remuneration of a Cabinet Minister is $\$ 10,000$ a year (and of the Prime Minister $\$ 15,000$ a year) in addition to the sessional indemnity. A Cabinet Minister is also entitled to a motor-car allowance of $\$ 2,000$. The Leader of the Opposition in the House of Commons receives an annual allowance of $\$ 10,000$ in addition to the sessional indemnity. The Speaker of the House of Commons receives, in addition to his sessional indemnity of $\$ 4,000$, a salary and motor-car allowance amounting to $\$ 7,000$, and is also entitled to an allowance of $\$ 3,000$ in lieu of residence. Members of the House receive $\$ 2,000$ per annum as an expense allowance, payable at the end of each calendar year. The allowance is not subject to income tax except in the case of Ministers of the Crown and the Leader of the Opposition.

[^26]:    "(1) The number of members of the House of Commons shall be Two hundred and fifty-five and the representation of the provinces therein shall forthwith upon the coming into force of this section and thereafter on the completion of each decennial census be readjusted by such authority, in such manner, and from such time as the Parliament of Canada from time to time provides, subject and according to the following Rules:
    (a) Subject as hereinafter provided, there shall be assigned to each of the provinces a number of members computed by dividing the total population of the provinces by Two hundred and fifty-four and by dividing the population of each province by the quotient so obtained, disregarding, except as hereinafter in this section provided, the remainder if any, after the said process of division.
    (b) If the total number of members assigned to all the provinces pursuant to Rule One is less than Two hundred and fifty-four, additional members shall be assigned to the provinces (one to a province) having remainders in the computation under Rule One commencing with the province having the largest remainder and continuing with the other provinces in the order of the magnitude of their respective remainders until the total number of members assigned is Two hundred and fifty-four.
    (c) Notwithstanding anything in this section, if upon completion of a computation under Rules One and Two, the number of members to be assigned to a province is less than the number of senators representing the said province, Rules One and Two shall cease to apply in respect of the said province, and there shall be assigned to the said province a number of members equal to the said number of senators.

[^27]:    ${ }^{1}$ Successful candidate.
    ${ }^{2}$ Mr. McDonald died May 2, 1946, and Mr. Real Caoutte (Union des
    Electeurs) was elected Sept. 16, 1946.

[^28]:    ${ }^{1}$ Successful candidate. elected Dec. 23, 1946.

[^29]:    ${ }^{2}$ Mr. Cardin died Oct. 20, 1946, and Mr. Gerard Cournoyer (Lib.) was ${ }^{3}$ Seat declared vacant, Jan. 30, 1947.

[^30]:    ${ }^{1}$ Successful candidate.
    ${ }^{2}$ Dr. MacDiarmid having accepted an office of emolument under the Crown, his seat became vacant July 30, 1945, and Rt. Hon. W. L. MacKenzie King (Lib.) was elected Aug. 6, 1945.

[^31]:    ${ }^{1}$ Successful candidate.
    ${ }^{2}$ Dr. Herbert A. Bruce resigned Apr. 1, 1946, and Mr. Harold Timmins (P.C.) was elected Oct. 21, 1946.

[^32]:    ${ }^{1}$ Successful candidate. elected Oct. 21, 1946.

[^33]:    ${ }^{1}$ Successful candidate.

[^34]:    *Revised by Jules Castonguay, Chief Electoral Officer, Ottawa.

[^35]:    ${ }^{1}$ Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1945, 24,540 voters on the list cast 38,812 votes. ${ }^{2}$ Each voter in the double-member constituency of Halifax, N.S., had two votes; in 1945, 85,262 voters on the list cast 105,618 votes. ${ }^{3}$ Each voter in the double-member constituency of St. John-Albert, N.B., had two votes; in 1930, 37,067 voters on the list cast 50,121 votes. $\quad 4$ Not including one electoral district in which the return was by acclamation. ${ }^{6}$ Each voter in the double-member constituency of Ottawa, Ont., had two votes; in 1930, 61,535 voters on the list cast 97,369 votes. ${ }^{6}$ Not including two electoral districts in which the returns were by acclamation.

[^36]:    ${ }^{1}$ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V. c. 40). ${ }^{2}$ Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V. c. 45), and diminished in consequence of the Award of the Judicial Committee of the British Privy Council (Mar. 1, 1927), whereby some 112,400 square miles of territory, formerly considered as part of Quebec, were assigned to Newfoundland. ${ }^{3}$ Extended by Extension of Boundaries of Manitoba Act, 1881, and Manitoba Boundaries Extension Act, 1912 (2 Geo. V c. 32). ${ }^{4}$ Too small to be enumerated. ${ }_{5}$ Alberta and Saskatchewan now cover approximately the area formerly comprised in the districts of Assiniboia, Athabaska, Alberta and Saskatchewan, established May 17, 1882, by minute of Canadian P.C., concurred in by Dominion Parliament and Order in Council of Oct. 2, $1895 . \quad{ }^{6}$ By Order in Council, June 23, 1870, Rupert's Land, acquired under the Rupert's Land Acts of 1867 and 1868, and the undefined Northern Territories were admitted into the Confederation. The original Northwest Territories, mentioned in the Manitoba Act, 1870, were established by the Northwest Territories Act, 1880 ( 43 Vict., c. 25), the District of Keewatin having been previously defined by an Act of the Dominion Parliament (39 Vict., c. 21). The provisional Districts of Yukon, Mackenzie, Franklin and Ungava were defined in an Order in Council of Oct. 2, 1895, their boundaries being changed by Order in Council of Dec. 18, 1897. By Order in Council of July 24, 1905, the area of Keewatin, not included in the Northwest Territories, was annexed to the latter from Sept. 1, 1905. By the Extension of Boundaries Act, 1912, Ungava was made a part of the Province of Quebec, and the remaining area of the Northwest Territories south of $60^{\circ} \mathrm{N}$. latitude was divided between Manitoba and Ontario.

[^39]:    * Further discussion of these proposals is given in Chapter XXVIII on Post-War Reconstruction.

[^40]:    United Kingdom.-The High Commissioner for Canada in the United Kingdom: Mr. N. A. Robertson, appointed Sept. 17, 1946. Address: Canada House, Trafalgar Square, London, S.W 1.

    Previous High Commissioners:-
    Sir Alexander Galt, 1880-83
    Sir Charles Tupper, 1884-87, 1888-96
    Lord Strathcona and Mount Royal, 1896-1914
    Sir George Perley, 1917-22 (Acting High Commissioner, 1914-17)
    The Hon. P. C. Larkin, 1922-30
    The Hon. G. Howard Ferguson, 1930-35
    The Rt. Hon. Charles Vincent Massey, 1935-46.

[^41]:    * Revised by the Department of External Affairs, Ottawa, as at Mar. 15, 1947. An annual review of the organization and activities of Canadian Government representation abroad is contained in the Report of the Department of External Affairs, which may be obtained from the King's Printer, Price 10 cents.

[^42]:    - This Chapter has been checked by O. A. Lemieux, Director, Census (Demography), Dominion Bureau of Statistics.

[^43]:    ${ }^{1}$ Corrected as a result of the Boundaries Extension Acts, 1912. ${ }^{2}$ Revised in accordance with the or Canada includes 485 members of the Fort Smith (Navy who were recos Cdeparation of Fort Smith (368) to the Northwest Territories.
    ${ }^{4}$ The decreases shown in the population of the Northwest Territories since 1891 are due to the separation therefrom of vast areas to form Alberta, Saskat-

[^44]:    ${ }^{1}$ Revised in accordance with the Labrador Award of the Privy Council, Mar. 1, 1927. The total for Canada includes 485 members of the Royal Canadian Navy who were recorded separately in 1921. ${ }^{2}$ The decreases shown in the population of the Northwest Territories since 1891 are due to the separation therefrom of vast areas to form Alberta, Saskatchewan and Yukon and to extend the boundaries of Quebec, Ontario and Manitoba.

[^45]:    ${ }^{1}$ These estimates are subject to adjustment as later data are made available.

[^46]:    * In Saskatchewan the original legislation of 1908 provided that a community of 50 persons on an area not greater than 640 acres might be incorporated. Several amendments have since been made and, as the Act now stands, 100 people resident on an area not greater than 240 acres may be incorporated. The Ontario law, on the other hand, requires that a village before it can be incorporated must have a population of 750 on an area not exceeding 500 acres.

[^47]:    ${ }^{1}$ The populations of Ontario, Quebec, Manitoba and the Northwest Territories were adjusted for 1911 according to the provisions of the Boundaries Extension Acts, $1912 . \quad{ }_{2}$ Revised in accordance with the Labrador Award of the Privy Council, Mar. 1, 1927. The total for Canada includes 485 members of the Royal Canadian Navy who were recorded separately in 1921.

[^48]:    ${ }^{1}$ Includes Districts of Abitibi and Mistassini.

[^49]:    ${ }^{1}$ Not including Burma.

[^50]:    ${ }^{1}$ Includes the four original provinces of Canada only. cludes Bulgarian. ${ }^{6}$ Includes Finnish and Polish. into Danish, Icelandic, Norwegian and Swedish.
    ${ }^{9}$ Includes 35,416 half-breeds.

[^51]:    ${ }^{1}$ The figures for 1931 and 1941 entered opposite "Congregationalist" and "Presbyterian" represent the number not included in the "United Church"
    ${ }^{2}$ Included in "United Church"
    ported as Methodist before 1931. 4 Greek Orthodox and Greek Catholic combined under the term "Greek Church" in 1921. In the Censuses of 1931 and 1941, Greek Catholics are included with Roman Jatholics. $\quad{ }^{5}$ Mennonites were included with Baptists in 1871 and 1881; in 1891 they were included with "other denominations". ${ }^{6}$ Included with "other" ${ }^{7}$ Includes 186,654 Greek Catholics n 1931 and 185,657 in 1941 . ${ }^{8}$ Includes 109,475 population in Manitoba, British Columbia and the Northvest Territories who were largely Indian and hence likely pagan.

[^52]:    ${ }^{1}$ Includes "birthplace not stated".
    ${ }^{2}$ Includes "born at sea"
    ${ }^{2}$ Includes Poland.
    ${ }^{4}$ Includes Austria, Czechoslovakia, Hungary, Yugoslavia, Poland, Galicia and Roumania. ${ }^{5}$ Includes six provinces only.

[^53]:    ${ }^{1}$ Includes also Bukovinian, Galician and Ruthenian.

[^54]:    * For 1931 Census figures, see p. 136 of the 1936 Year Book The figure of $1,984,286$ given there represents number of buildings containing dwellings and not the number of dwellings.
    $\dagger$ Figures in this Section are exclusive of Yukon and the Northwest Territories.

[^55]:    ${ }^{1}$ Buildings used for habitation only.

[^56]:    *Revised under the direction of A. L. Jolliffe, Director of Immigration, Department of Mines and Resources, Ottawa.

[^57]:    ${ }^{1}$ Reported as "Swiss" origin but are evidently one of the constituent races such as German, French, Italian, etc.

[^58]:    Note.-Figures for the years 1930-34 will be found at p. 186 of the 1946 Year Book; those for fiscal years ended Mar. 31, 1907-34 will be found at pp. 219-220 of the 1934-45 edition.

[^59]:    ${ }^{1}$ Estimated.

[^60]:    *This Chapter has been revised by J. T. Marshall, Director, Vital Statistics Division, Dominion Bureau of Statistics.

[^61]:    ${ }^{1}$ Exclusive of the Territories,

[^62]:    ${ }^{2}$ Exclusive of the Territories.

[^63]:    ${ }^{1}$ Includes Devon.

[^64]:    ${ }^{1}$ Exclusive of the Territories.

[^65]:    ${ }^{1}$ Two quadruplet confinements occurred in 1937, one in 1944 and two in 1945.
    ${ }^{2}$ Less than onetenth of one per cent.

[^66]:    ${ }^{1}$ Less than one-tenth of one per cent.

[^67]:    ${ }^{1}$ Less than one-tenth of one per cent.
    ${ }^{2}$ The number of cases in this age group is too small to justify the calculation of a rate.

    Birthplace of Parents.-Table 19 shows the numbers and percentages of children whose parents were born in Canada or in different countries abroad. The proportion of children born to British-born and to foreign-born parents is decreasing. This is the result of the smaller immigration of recent years.

[^68]:    ${ }^{1}$ This figure gives the number of children whose fathers and mothers are of the same origin. The difference between this figure and the total number of births represents the number of children whose parents are of different origins.
    ${ }^{2}$ This is the percentage of children whose fathers and mothers are of the same origin.
    ${ }^{3}$ Less than one-tenth of one per cent.

[^69]:    ${ }^{1}$ Includes Devon.

[^70]:    ${ }^{1}$ The numbers given in this column refer to the International List of Causes of Death, as revised in 1938 by the International Commission on the Classification of Diseases and Causes of Death. This classification, in its detailed, intermediate or abridged form, is accepted by almost all civilized countries.

[^71]:    ${ }^{1}$ Within the boundaries of the Treaty of Trianon.

[^72]:    1.Includes Devon.

[^73]:    ${ }^{1}$ Includes measles, scarlet fever, whooping cough, diphtheria, influenza, erysipelas, acute poliomyelitis and polioencephalitis, cerebrospinal meningitis, tuberculosis and syphilis.

[^74]:    ${ }^{1}$ The number of cases in this age group is too small to justify the calculation of a rate.

[^75]:    ${ }^{1}$ Includes Devon.

[^76]:    ${ }^{1}$ Less than one-tenth of one per cent.

[^77]:    ${ }^{1}$ Not reportable in the Province of New Brunswick. stated. ${ }^{3}$ Including 137 cases where type was not stated.
    ${ }^{2}$ Including 34 cases where type was not ${ }^{4}$ Reporting not compulsory in the where type was not stated.
    ${ }^{5}$ Type not segregated.
    ${ }^{6}$ Including 23 cases

[^78]:    Alberta.-The Department of Public Health administers all public-health matters in the Province and includes the following Divisions: Communicable Diseases; Sanitary Engineering and Sanitation; Public Health Education; Public Health Entomology; Laboratory; Tuberculosis Control; Public Health Nursing; Municipal Hospitals; Hospital Inspection; Social Hygiene; Vital Statistics; Mental Hygiene; Dental Hygiene; Entomology; and Cancer.

    The following institutions are administered by the Department: Central Alberta Sanatorium; the Provincial Mental Hospital, Ponoka; the Provincial Training School, Red Deer; the Provincial Auxiliary Hospital, Claresholm; the Provincial Auxiliary Hospital, Raymond; the Provincial Mental Institute, Edmonton.

    Free clinics for venereal disease are maintained at the following centres: Edmonton, Calgary, Medicine Hat, Lethbridge, Peace River, High Prairie, McLennan, and in the two provincial gaols. Arsenicals, penicillin and sulpha drugs are provided free of charge to all private physicians treating venereal disease. Educational work on social hygiene is carried on by means of lectures, moving pictures, bulletins and radio talks.

    Free treatment for infectious types of tuberculosis is provided for any person who has resided in the Province for at least one year immediately preceding admission for treatment in the sanatorium. In addition to this service, two mobile X-ray clinics are in operation; the personnel is supplied and the clinics are maintained by the Provincial Department of Public Health while the equipment is furnished by the Alberta Tuberculosis Association.

[^79]:    ${ }^{*}$ Revised under the direction of J. T. Marshall, Director, Vital Statistics Division, Dominion Bureau of Statistics, by J. C. Brady, Chief, Institutions Statistics.

[^80]:    ${ }^{1}$ Excluding incurable, mental and tuberculosis institutions. Newfoundland.
    ${ }^{3}$ Not included in totals.

[^81]:    * A complete list of all hospitals in Canada, giving name, location, type and bed accommodation for 1945, is published by the Dominion Bureau of Statistics, Ottawa, Price 25 cents.

[^82]:    ${ }^{1}$ The following general hospitals did not report: Quebec, 3; Ontario, 1; Saskatchewan, 1; Alberta, 3; Yukon and the Northwest Territories, 5. ${ }^{2}$ These institutions are classified in detail in Table 1. ${ }^{3}$ Two Red Cross hospitals in Nova Scotia did not report. ${ }^{4}$ Not available. ${ }^{5}$ One contagiousdiseases hospital in Alberta did not report.

[^83]:    ${ }^{1}$ Includes other personnel.

[^84]:    * Including the St. John Ambulance Association and the St. John Ambulance Brigade.

[^85]:    * Except as otherwise indicated, the material in this Chapter has been revised under the direction of Dr. G. F. Davidson, Deputy Minister of Welfare, Department of National Health and Welfare, Ottawa.

[^86]:    *Revised by the Director of Public Relations, Department of National Defence, Ottawa.
    $\dagger$ Revised by the Government Annuities Branch, Department of Labour, Ottawa.

[^87]:    *Revised by the Provincial authorities responsible for the administration of the various welfare services.

[^88]:    ${ }^{1}$ In calculating percentages as of Mar. 31, the population figure used was that of the preceding June, as given at p. 140. $\quad{ }^{2} \$ 8,286$ for fiscal year 1943-44 charged to fiscal year 1944-45.
    ${ }^{3}$ Previous to 1947 no pensions were paid in Yukon or the Northwest Territories; in 1947, one pension of $\$ 25$ monthly was paid in the Northwest Territories, for which the Dominion Government's contribution was $\$ 250$.

[^89]:    * Prepared under the direction of J. T. Marshall, Director, Vital Statistics Division, Dominion Bureau of Statistics, by J. C. Brady, Chicf, Institutions Statistics.

[^90]:    * Except as otherwise indicated, this Chapter has been revised under the direction of J. T. Marshall, Director, Vital Statistics Division, Dominion Bureau of Statistics, by Miss R. Harvey, Chief, Judicial Statistics Branch. The 70th "Annual Report of Statistics of Criminal and Other Offences" for the year ended Sept. 30, 1945, is obtainable from the Dominion Bureau of Statistics, Price 50 cents.

[^91]:    ${ }^{1}$ Offences against females include the following crimes: abortion, assault against females, assault against wife, indecent assault, carnal knowledge, incest, procuration, rape, attempted rape, seduction and wife desertion.

[^92]:    ${ }^{1}$ Includes one in the Northwest Territories. No convictions were reported for the Northwest Territories for other years.

[^93]:    * See footnote to p. 253, also Report of the Royal Commission to Investigate the Penal System Canada, c. XV. p. 175.

[^124]:    ${ }^{1}$ Eliminates duplication between the agriculture and forestry totals.
    ${ }^{2}$ Eliminates duplication under "Manufactures"; this item includes sawmills, pulp and paper mills, etc., which are also included

[^125]:    ${ }^{1}$ Includes duplication between agriculture and forestry, as well as duplication under manufactures (see p. 318).

[^126]:    * Including persons on Active Service normally employed in agriculture.
    $\dagger$ Prepared under the direction of G. S. H. Barton, C.M.G., B.S.A., D.Sc.A., Deputy Minister of Agriculture, Ottawa.

[^127]:    *This article is concerned mainly with the agricultural aspects of the work of FAO. For details of the first Conference, see pp. 206-211 of the 1946 Year Book.

[^128]:    * Except as otherwise indicated, this material was prepared under the direction of G. S. H. Barton, C.M.G., B.S.A., D.Sc. A., Deputy Minister of Agriculture, Ottawa.
    $\dagger$ In addition to the credit supplied by the Canadian Farm Loan Board, and in order to meet the demand for long-term loans on easier terms of repayment and on a higher ratio in relation to farm value than that available from the Canadian Farm Loan Board and to facilitate refinancing indebtedness, the Province of Quebec has established its own farm credit scheme by the creation, in the autumn of 1936, of the Quebec Farm Credit Bureau, which commenced operations in March, 1937.
    $\ddagger$ Revised by W. A. Reeve, Acting Secretary, Canadian Farm Loan Board, Ottawa.

[^129]:    *Prepared by D. M. McRae, Supervisor, Farm Improvement Loans, Department of Finance, Ottawa

[^130]:    * Revised in the Agricultural Branch, Dominion Bureau of Statistics. This Branch collects and publishes both primary and secondary statistics of agriculture, including statistics of the production and distribution of agricultural commodities. The primary statistics relate mainly to the reporting of crop conditions, crop and live-stock estimates, values of farm lands, wages of farm labour and monthly and annual prices received by farmers for their products. The secondary statistics relate to the marketing of grain and live stock, dairying, milling, and sugar industries and cold-storage holdings.

[^131]:    ${ }^{1}$ Subject to revision.

[^132]:    ${ }^{1}$ Revised since the publication of the 1946 Year Book.

[^133]:    ${ }^{1}$ No production previous to 1941.

[^134]:    ${ }^{1}$ Subject to revision.

[^135]:    ${ }^{1}$ Includes eggs sold off farms, farm-home consumed and used for hatching purposes on farms. ${ }^{2}$ Re-
    vised since the publication of the 1946 Year Book.

[^136]:    ${ }^{1}$ Excludes eggs used for hatching.
    ${ }^{2}$ Based on estimates of population given at p. 100. ${ }^{3}$ Revised since the publication of the 1946 Year Book.
    ${ }^{4}$ Includes stocks of unclassified poultry and poultry in transit not shown in the various classifications.

[^137]:    ${ }^{1}$ Includes malted milk and cream powder in 1942-46, and condensed coffee in 1942, items which do not appear separately in this table.
    ${ }^{2}$ Includes milk by-products not separately listed, including condensed buttermilk, powdered buttermilk, sugar of milk, and casein in 1942-46, and sub-standard products in 1944-46. ${ }^{3}$ Includes ice cream in terms of milk; on a per capita basis the 1946 disappearance amounted to 1.28 gal . of the product and 18.34 lb . expressed as milk.

[^138]:    ${ }^{1}$ Including turbine tow. previous processing year.
    ${ }^{2}$ Includes estimated production from 8,040 acres carried over from
    ${ }^{3}$ Subject to revision.

[^139]:    ${ }_{1}^{1}$ Average to Mar. 31, 1942; the Wheat Board thereafter became the sole buyer and seller of flaxseed. Ceiling price $\$ 1.64$ per bu. 2 Fixed price to growers.
    10 cents retroactive increase announced July 30, 1946.

[^140]:    ${ }^{1}$ Prices quoted are per bu., except for potatoes and turnips, etc., which are per cwt., and the last five items, which are per ton. $\quad{ }^{2}$ Subject to revision. Year Book.

[^141]:    * Prepared by W. J. Jacobson, Prairie Farm Rehabilitation Office, Regina, Sask., under the direction of E. S. Archibald, Director, Central Experimental Farm, Department of Agriculture, Ottawa.

[^142]:    ${ }^{1}$ Part of Canada Land and Irrigation Company.
    ${ }^{2}$ Part of Alberta Railway and Irrigation Project.
    ${ }^{3}$ Not completed.

[^143]:    * Sections of this Chapter that deal with forestry and forest administration have been prepared by the Dominion Forest Service, Department of Mines and Resources. Sections dealing with forest utilization and forest industries have been revised under the direction of W. H. Losee, Director, Census and Merchandising Division, Dominion Bureau of Statistics, by L. J. Pouliot, Chief, Forest Products Statistics.

[^144]:    ${ }^{1}$ Cubic volumes do not include wood in stumps and unusable tops. estimates of the relatively small quantities of hardwoods in British Columbia.
    ${ }^{2}$ There are no available of stands in the Northwest Territories and Yukon.

[^145]:    Silvicultural Control.-The practice of silvicultural methods in the control of insects is beset with serious difficulties.

[^146]:    *See Table 4, p. 402.

[^147]:    * See Chapter XVIII and the Index for further particulars regarding the pulp and paper and paperconverting industries.

[^148]:    * For reasons given in Section 1, Part II of Chapter XXIII, gold is excluded from Canadian trade statistics.

[^163]:    ${ }^{1}$ Beginning with 1931 , exchange equalization on gold production is included. ${ }^{2}$ Subject to revision.

    Current Production.-The depression beginning in 1930 had a profound effect upon the production of minerals in Canada. The decline in general commodity prices and the increased price of gold provided a two-fold stimulus to production and, as in the 1920's, output of gold was increased. This rise in the price of gold since 1931 ( $\$ 20 \cdot 67$ per fine ounce in 1931 to $\$ 38 \cdot 50$, Canadian funds, in 1945) resulted in the mines being able to produce from ore that was hitherto unprofitable,

[^164]:    ${ }_{1}$ Value in Canadian funds. $\quad{ }^{2}$ Not available. ${ }_{6}^{3}$ Not available for publication. ${ }^{4} \mathrm{In}-$ cluding brucite. ${ }^{5}$ Includes some talc. ${ }^{6}$ Sulphur content of pyrites shipped and estimated sulphur contained in the sulphuric acid made from smelter gases. quantities used in the manufacture of chemicals.

[^165]:    ${ }^{1}$ Beginning with 1936, low-grade natural silica sand used as non-ferrous smelter flux is included,
    ${ }^{2} 1928=100$, previous years not being comparable. ${ }^{3}$ Excluding clay products.

[^166]:    ${ }^{1}$ Value in Canadian funds.

[^167]:    ${ }^{1}$ Includes some talc.

[^168]:    ${ }^{1}$ Includes freight and smelter charges and cost of ores treated for 1937 and subsequent years. ${ }^{2}$ Not available.

[^169]:    ${ }^{1}$ Includes freight and smelter charges and cost of ores treated. $\quad{ }^{2}$ Not available.

[^170]:    ${ }^{1}$ Includes $779,307 \mathrm{lb}$. valued at $\$ 73,855$ produced in Nova Scotia in 1936: $180,609 \mathrm{lb}$. at $\$ 23,620$ in 1937 : $75,567 \mathrm{lb}$. valued at $\$ 7,535$ producer in N.W.T. in $1938: 1,269,179 \mathrm{lb}$. valued at $\$ 128,086$ produced in Nova Scotia and $42,382 \mathrm{lb}$. valued at $\$ 4,277$ produced in N.W.T. in $1939 ; 32,727 \mathrm{lb}$. valued at $\$ 3,301$ produced in N.W.T. in 1941; 74,963 lb . valued at $\$ 7,561$ in 1942 ; and $11,902 \mathrm{lb}$. valued at $\$ 1,428$ in 1944 . revision.

[^171]:    ${ }^{1}$ Includes production of the Northwest Territories amounting to 1 oz . fine in 1936: 6,800 oz. fine in 1938; $51,914 \mathrm{oz}$. fine in 1939; $55,159 \mathrm{oz}$. fine in $1940: 77,354 \mathrm{oz}$. fine in 1941; $99,394 \mathrm{oz}$. fine in 1942; $59,032 \mathrm{oz}$. fine in $1943 ; 20,775 \mathrm{oz}$. fine in $1944 ; 8,655 \mathrm{oz}$. fine in 1945; and $19,738 \mathrm{oz}$. fine in 1946.
    ${ }_{2}$ Subject to revision.

[^172]:    ${ }^{1}$ Includes value of production of the Northwest Territories amounting to $\$ 35$ in $1936 ; \mathbf{\$ 2 3 9}, 190$ in 1938; $\$ 1,876,224$ in $1939 ; \$ 2,123,621$ in $1940 ; \$ 2,977,359$ in $1941 ; \$ 3,826,669$ in $1942 ; \$ 2,272,732$ in $1943 ; \$ 799,838$ in 1944 ; $\$ 335,218$ in 1945 ; and $\$ 725,372$ in 1946 . ${ }^{2}$ Subject to revision.

[^173]:    ${ }^{1}$ Subject to revision.

[^174]:    ${ }^{1}$ Subject to revision.

[^175]:    ${ }^{1}$ World totais for the years since 1941 have not been published.
    to 1934 ; at $\$ 35$ per oz. fine for 1934 and later years.

[^176]:    ${ }^{1}$ If coal is agglomerating it is classified in the Low Volatile Bituminous group.
    ${ }^{2}$ Moist B.t.u. refers to coal containing its natural bed-moisture, but not including visible water on the surface of the coal. ${ }^{3}$ There may be coking and non-coking varieties in each group of bituminous coal. ${ }^{4}$ Coals having ${ }^{69}$ p.c. or more Fixed Carbon on a dry mineral-matter-free basis shall be classified according to Fixed Carbon regardless of B.t.u.
    ${ }^{5}$ There are three varieties of coal in the High Volatile C Bituminous group, i.e., (1) agglomerating and non-weathering, (2) agglomerating and weathering, and (3) non-agglomerating and non-weathering.

[^177]:    ${ }^{1}$ The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees and coal used in making coke, etc., less the tonnage of coal exported. ${ }^{2}$ Includes small tonnages from countries other than the United Kingdom and the United States. Deductions have been made from this column to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores. ${ }^{3}$ Figures based on estimates of population given at p. 100.

[^178]:    ${ }^{1}$ Totals for Canada include small amounts produced in Saskatchewan and the Northwest Territories. ${ }^{2}$ Subject to revision.

[^179]:    ${ }^{1}$ These figures are compiled on a somewhat different basis from the figures of the Alberta Government given on p. 473. ${ }^{2}$ Includes 331 bbl. at $\$ 256$ produced in Saskatchewan in 1940; 14,374 bbl. at $\$ 15,362$ in 1945 ; and 146,000 bbl. at $\$ 160,000$ in 1946. ${ }^{3}$ Subiect to revision.

[^180]:    *Statements taken from "1946 Alberta Oil Review" by J. L. Irwin, Supervisor of Publications, Government of Alberta.

[^181]:    * Preliminary data supplied by J. L. Irwin, Supervisor of Publications, Government of Alberta.

[^182]:    Note.-Figures for the years 1896-1910, inclusive, will be found at p. 424 of the 1911 Year Book; for the years 1911-28 at p. 354 of the 1939 edition; and for 1929-35 at p. 353 of the 1946 edition.

[^183]:    ${ }^{1}$ Subject to revision.

[^184]:    ${ }^{1}$ Subject to revision.

[^185]:    1 'Production' as used here means quantity and value of sales.
    350 lb . or $3 \frac{1}{2} \mathrm{cwt}$.

[^186]:    ${ }^{1}$ Totals include minor items not specified.

[^187]:    * In this Chapter of the Year Book all information respecting power generation and utilization in Canada is co-ordinated; some sections, however, cannot be regarded as complete owing to the insufficienoy of available data. Section 1 has been revised under the direction of J. M. Wardle, Director, Surveys and Engineering Branch, Department of Mines and Resources, by V. Meek, Controller, Dominion Water and Power Bureau, and Sections 2, 3 and 4 (except as otherwise stated) by G. S. Wrong, Chief, Transportation and Public Utilities Division, Dominion Bureau of Statistics.

[^188]:    ${ }^{1}$ Includes Yukon and the Northwest Territories. Turbine horse-power installed in Yukon for the decades

[^189]:    *The information included under the provincial headings of this Subsection has been revised by the various provincial commissions or authorities concerned.

[^190]:    ${ }^{1}$ Minimum head.
    ${ }^{2}$ Distribution system only.
    ${ }^{3}$ Rated in kilowatts.
    78375-32 $\frac{1}{2}$

[^191]:    * Legislation passed concerning rural power is as follows: the Power Commission Act (R.S.0. 1937, c. 62); the Rural Hydro-Electric Distribution Act (R.S.O. 1937, c. 64); the Rural Power District Loans. Act (R.S.O. 1937, c. 65); and the Rural Power District Service Charge Act (R.S.O. 1937, c. 66).

[^192]:    ${ }^{1}$ Included in "capital invested".

[^193]:    Note.-Includes fuel used for heating purposes, but not that used as raw material. Totals for 1922-33 are given at p. 300 of the 1941 Year Book. Figures by provinces and industrial groups for each year since 1936 are given in the corresponding table in previous Year Books beginning with the 1939 edition.

[^194]:    ${ }^{1}$ Includes gasoline and kerosene.
    ${ }^{2}$ Includes fuel used in smelters for metallurgical purposes.
    ${ }^{2}$ Not including fuel used in metallurgical operations, salt, cement, lime and clay products.

[^195]:    ${ }^{1}$ Includes gasoline and kerosene.

[^196]:    ${ }^{*}$ Revised under the direction of W. H. Losee, Director, Census of Industry and Merchandising Division, Dominion Bureau of Statistics, by A. Cohen, Chief, General Manufactures Section.

[^197]:    ${ }^{1}$ In accordance with a resolution passed by the Conference of British Commonwealth Statisticians, 1935, the net value of production is now computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products. The figures for 1924 and later years have been revised in accordance with this resolution. The revision could not be carried farther back as statistics for cost of electricity are not available for years prior to 1924.

    2 A change in the method of computing the number of wage-earners in the years 1925 to 1930 , inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years. 3 Not collected.

[^198]:    ${ }^{2}$ See footnote 2, Table 1.

[^199]:    ${ }^{3}$ Information not collected.

[^200]:    ${ }^{1}$ See footnote 1, Table 1. ${ }^{2}$ See footnote 2, Table 1. ${ }^{3}$ Information not collected.

[^201]:    ${ }^{1}$ Imports and exports of manufactured and partly manufactured goods for the years 1928 to 1938 are for the fiscal years ended Mar. 31 of the following years, while for 1939 to 1945 they are for the calendar year. Net imports are total imports less foreign products re-exported.

[^202]:    $\begin{array}{lcc}\text { I. Vegetable products } & \text { IV. Wood and paper products } & \text { VII. Non-metallic mineral products } \\ \text { II. Animal products } & \text { V. Iron and its products } & \text { VIII. Chemicals and allied products } \\ \text { III. Textiles and textile products } & \text { VI. Non-ferrous metal products } & \text { IX. Miscellaneous industries }\end{array}$

[^203]:    * Prepared under the direction of W. H. Losee, Director, Census of Industry and Merchandising Division, Dominion Bureau of Statistics, by H. McLeod, Chief, Mining, Metallurgical and Chemical Section.

    78375-34

[^204]:    * The figures shown in Table 22, p. 834 are not comparable with the above since the latter are total retail sales for the automotive group of industries which covers a much wider field than the sale of passenger and commercial cars.

[^205]:    ${ }^{1}$ Not collected.

[^206]:    ${ }^{1}$ On a broader classification basis, the primary textile industry, which includes the production of cottons, woollens, silk, hosiery and knitted goods, and the dyeing and finishing of textiles, ranks second in number of employees, third in salaries and wages paid and fifth in gross value of production.

[^207]:    ${ }^{1}$ For 1938 and 1939, the hours worked do not include overtime, while for 1941 to 1944 overtime is included:

[^208]:    ${ }^{1}$ Including overtime. ${ }^{2}$ Exclusive of "dairy factories" and "fish-curing and -packing" plants.

[^209]:    ${ }^{1}$ Estimated on the basis of hours worked by female wage-earners in 1938 and 1939 as compared with those worked by male wage-earners in those years.

    2 Not available.

[^210]:    ${ }^{1}$ Exclusive of "butter and cheese" and "fish-curing and -packing" plants.

[^211]:    ${ }^{1}$ Exclusive of "butter and cheese" and "fish-curing and -packing" plants.

[^212]:    ${ }^{1}$ Exclusive of "butter and cheese" and "fish-curing and -packing" plants.

[^213]:    ${ }^{1}$ Includes central electric stations and dyeing, cleaning and laundry establishments. ${ }^{2}$ Exclusive of Yukon and the Northwest Territories.

[^214]:    ${ }^{1}$ Includes textiles, non-metallic mineral and chemical products.

[^215]:    ${ }^{1}$ Includes non-ferrous metal products.

[^216]:    For footnote, see end of table, p. 569.

[^217]:    ${ }^{1}$ Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island-slaughtering and meat packing, planing mills, sheet metal products, fertilizers, cotton and jute bags; in Nova Scotia-cotton yarn and cloth, aircraft, miscellaneous iron and steel products, wire, coke and gas, and petroleum; in New Brunswick-sugar refineries, railway rolling-stock, cotton yarn and cloth, silk and artificial silk goods and veneer and plywoods.

[^218]:    ${ }^{1}$ Other leading industries, individual statistics for which cannot be given because there are fewer than three establishments in each industry are: Manitoba-bridge and structural steel, non-ferrous metal smelting and refining, and pulp and paper: Saskatchewan-non-ferrous metal smelting and refining, miscellaneous iron and steel products, aircraft, and bags, cotton and jute: Alberta-cement, glass products, miscellaneous iron and steel products, primary iron and steel, wood preservation, malt and malt products, sugar refineries, acids, alkalies and salts, and cheese, processed.

[^219]:    ${ }^{1}$ Includes other leading industries, statistics of which cannot be published because there are fewer than three establishments in each industry. Such industries are: distilleries, sugar refineries, bridge and structural steel and non-ferrous metal smelting and refining.

[^220]:    ${ }^{1}$ Net value is derived from gross value by deducting the cost of materials, fuel and electricity.

[^221]:    ${ }^{1}$ Net value is derived from gross value by deducting the cost of materials, fuel and electricity.

[^222]:    ${ }^{1}$ Net value is derived from gross value by deducting the cost of materials, fuel and electricity.

[^223]:    ${ }^{1}$ Net value is derived from gross value by deducting the cost of materials, fuel and electricity.

[^224]:    ${ }^{*}$ Revised under the direction of C. M. Isbister, Chief Economist, Central Research and Development Division, Dominion Bureau of Statistics, by C. H. McDonald, Chief, Housing Statistics.

[^225]:    * Revised under the direction of W. H. Losee, Director, Census of Industry and Merchandising Division, Dominion Bureau of Statistics, by F. J. Tanner, Chief, Construction Statistics Section.

[^226]:    * Except as otherwise indicated, the material in this Chapter has been prepared or revised under the direction of A. MacNamara, C.M.G., Deputy Minister of Labour, Ottawa.

[^227]:    * Since this material was prepared this legislation has been disallowed by the Judicial Committee of the Imperial Privy Council to which body appeal was carried.

[^228]:    * Revised under the direction of H. F. Greenway, Director, Labour and Prices Division, Dominion Bureau of Statistics, by Miss M. E. K. Roughsedge, Chief, Employment Statistics Division.

[^229]:    ${ }^{1}$ These totals are for eight industries only; finance, the ninth industry, is not divisible by provinces and the totals are given separately in the classification by industry.
    ${ }^{2}$ Includes iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments, and clav, glass and stone products. The non-durable group includes the remaining manufacturing industries, with the exception of electric light and power.

[^230]:    For footnote, see_end of table, $[\mathrm{p} .614$.

[^231]:    ${ }^{1}$ Except agriculture (see p. 608).

[^232]:    * Statistics of Unemployment Insurance are compiled and published by the Unemployment Insurance Statistics Section of the Dominion Bureau of Statistics from material supplied by the Unemployment Insurance Commission.

[^233]:    * Full information on the Canadian Vocational Training Program is given in the "Canadian Vocational Training Annual Report for $1945-46^{\prime \prime}$ issued as a supplement to the Labour Gazette, June, 1946.
    $\dagger$ For university training under the Veterans' Rehabilitation Act, see Chapter X on Education and Research, pp. 288-290.

[^234]:    * Prepared in the Department of Veterans Affairs.

[^235]:    * Fuller information is given in an annual pamphlet issued by the Department of Labour.

[^236]:    ${ }^{1}$ None reported.
    ${ }^{2}$ Less than one-tenth of one per cent.
    ${ }^{3}$ Includes non-ferrous metal smelting. $\quad 4$ Includes water service. ${ }^{5}$ This total is not the sum of the figures given above as one strike involved workers in both logging and manufacturing and miscellaneous wood products.

[^237]:    ${ }^{1}$ Females only. $\quad{ }^{2}$ Females; 35 cents for men. $\quad{ }^{3}$ Females; $\$ 20$ for men 19 years of age orover. ${ }^{4}$ Except in theatres and amusement places where they apply to a 48 -hour week only and in offices to 48 hours or the usual number if less. ${ }^{5} 48$ hours for factories, except in specified cases, and: for offices; 54 hours for shops, beauty parlours, theatres and for women in laundries; 60 hours for hotels. ${ }^{6}$ In hotels, beauty parlours, theatres and amusement places rates apply to 40 hours or more; in shops to 39 hours or more; and for offices to 36 hours or more. ${ }_{7}$ Per hour. ${ }_{8} 8$ Both men and women. ${ }_{9} 9$ Females; this rate applies to three-quarters of the workers, lower rates to others.
    ${ }^{10}$ Kitchen
    help, 35 cents; cooks, 40 cents.

[^238]:    *For more detailed information see "Wage Rates and Hours of Labour in Canada.", published by the Department of Labour as a supplement to the Labour Gazette..

[^239]:    *This material has been compiled in co-operation with the Board of Transport Commissioners, the Air Transport Board and the Department of Transport.

[^240]:    * Revised by the Department of Transport.
    $\dagger$ Revised and checked by G. S. Wrong; Director, Transportation and Public U'tilities Division, Dominion Bureau of Statistics. More detailed information is given in the annual reports of the Division. Certain of the financial statistics are compiled in co-operation with the Department of Transport.

[^241]:    ${ }^{1}$ Includes employees and wages for "outside operations" amounting to from 3 p.c. to 6 p.c. of total employees and 2 p.c. to 5 p.c. of total salaries and wages. $\quad 2$ Includes approximately $\$ 10,000,000$ wages earned in 1943.

[^242]:    ${ }^{1}$ Working capital, the remainder of the account being eliminated (see p. 591 of the 1942 Year Book). ${ }^{2}$ Includes Dominion Government Proprietor's Equity beginning at $\$ 676,327,701$ and capital stock held by the public amounting to $\$ 4,584,100$ on Jan. 1, 1937, and $\$ 777,326,528$ and $\$ 4,643,040$, respectively, on Dec. 31 , 1945. Acquisition of small railways with stock outstanding caused a net increase in stock of the system in the hands of the public.
    ${ }^{3}$ Exclusive of $\$ 14,529,707$ for Hudson Bay Railway on Mar. 31, 1919.

[^243]:    * Except as otherwise indicated, the material in this Part has been revised by G. S. Wrong, Director, Transportation and Public Utilities Division, Dominion Bureau of Statistics.

[^244]:    $\dagger$ The information in this Section has been revised from material provided by the officials in charge of the administration of motor-vehicle and traffic Acts and Regulations in the individual provinces.

[^245]:    * Dawson Creek, about 30 miles to the southwest, is the railhead from which supplies are trucked in to Fort St. John. The existing road between Dawson Creek and Fort St. John has been improved and to all intents and purposes forms part of the main highway.

[^246]:    Nore.-Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-35 are given at p. 668 of the 1937 Year Book.

[^247]:    ${ }^{1}$ Totals include registrations in Yukon, 78375-44

[^248]:    ${ }^{1}$ Includes payment! of $\$ 10,251,891$ Federal Government guarantee of Provincial gasoline tax revenue.

[^249]:    * Statistics of traffic carried are given at p. 686, under Section 4, Road Traffic. For statistics by provinces see the annual report, "Motor Carriers, Freight-Passenger" obtainable from the Dominion Statistician, Ottawa. Price 10 cents.

[^250]:    ${ }^{1}$ Not segregated.

[^251]:    *Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services, by the Department of Transport and the National Harbours Board; graving docks and part of the financial statistics, by the Department of Public Works; shipping subsidies by the Director of Steamship Subsidies, Department of Trade and Commerce; Panama Canal, by the Governor of the Panama Canal Zone; other canal traffic and statistics of shipping, by the Transportation and Public Utilities Division, Dominion Bureau of Statistics.

[^252]:    ${ }^{1}$ These are works not covered elsewhere in these tables, and shown in the "Public Accounts" as

[^253]:    ${ }^{1}$ Exclusive of harbours under the National Harbours Board as shown in Table 16.

[^254]:    ${ }^{1}$ Exclusive of a refund of $\$ 770.04$, made to the Norwegian Shipping and Trade Mission in connection with salvage service rendered to the S.S. Benca.

[^255]:    ${ }^{1}$ Sea-going and inland international.

[^256]:    ${ }^{1}$ Sea-going and inland international.

[^257]:    ${ }^{2}$ Includes other small ports not shown separately.

[^258]:    ${ }^{*}$ Descriptive and administrative information has been prepared from material supplied under the direction of A. D. McLean, O.B.E., Controller of Civil Aviation, Department of Transport, and W. S. Thompson, C.B.E., Director of Public Relations, Canadian National Railways, Department of Transport: statistics have been compiled by G. S. Wrong, Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics.

[^259]:    For footnotes, see end of table, p. 721.

[^260]:    ${ }^{1}$ Exclusive of passengers carried between foreign stations.
    crews. $\quad{ }^{3}$ Revised since the publication of the 1946 Year Book. ${ }_{4}{ }^{2}$ Exclusive of freight carried between foreign stations. $\quad$ Compiled on a different basis from those of the Post Office shown at p. 745 . $\quad 6$ For Canadian carriers only.
    ${ }^{7}$ Not available.

[^261]:    * Revised by G. S. Wrong, Director, Transportation and Public Utilities Division, Dominion Bureau of Statistics. This Division issues annual reports dealing with telegraph and telephone statistics.

[^262]:    ${ }^{1}$ Includes telephones on rural exchange lines and urban exchange lines that have more than four parties.

[^263]:    ${ }^{1}$ Includes salaries and wages chargeable to capital account.
    2 Excludes rural lines in Saskate chewan.

[^264]:    ${ }^{1}$ Per capita figures are based on official estimates of population given at p. 100.

[^265]:    * Sections 1 and 2 of this Part have been revised by the Department of Transport.

[^266]:    ${ }^{1}$ All licences for privately owned experimental stations and for all amateur experimental stations were suspended at the outbreak of war in September, $1939 . ~ 6,2{ }^{2}$ Include

[^267]:    ${ }^{1}$ Sect. 14 of the Canadian Broadcasting Act, 1936, provides that, "The Minister of Finance shall deposit from time to time in the Bank of Canada or in a chartered bank to be designated by him to the credit of the Corporation:- (a) the moneys received from licence fees in respect of private recsiving licences and private station , broadcasting licences, after deducting from the gross receipts the cost of collection and administration". During the fiscal year 1945-46, $84,005,103$ (exclusive of commissions) was collected from the issuance of Radio Receiving and Broadcasting Licences as compared with $\$ 4,000,801$ during 1944-45; $\$ 4,018,063$ during 1943-44; and $\$ 3,925,028$ during 1942-43.

[^268]:    Note.-The figures in this table are approximations only; see text above. Comparable figures for 1933-39 will be found at p. 722 of the 1940 Year Book.

[^269]:    * Prepared under the direction of Dr. Augustin Frigon, C.M.G., General Manager, Canadian Broadcasting Corporation.
    78375-47

[^270]:    ${ }^{1}$ Exclusive of commissions and 'allowances to postmasters and some other smaller items. The gross revenue in the fiscal year 1938 was $\$ 42,998,349$; in $1939, \$ 42,896,178$; in $1940, \$ 44,208,369$; in $1941, \$ 48,143,410$; in $1942, \$ 55,477,159$; in $1943, \$ 59,175,138$; in $1944, \$ 73,004,339$; in $1945, \$ 79,533,903$; and in $1946, \$ 83,763,007$.

[^271]:    Note.-For figures for 1868-1900, see the 1911 Year Book, p. 289; for 1901-31, the 1932 edition, p. 622; and for 1932-36, p. 666 of the 1942 edition.

[^272]:    * Including a very few semi- and tri-weekly newspapers.

[^273]:    ${ }^{1}$ Not all given.

[^274]:    ${ }^{1}$ Not given in all cases.

[^275]:    ${ }^{3}$ Circulation not available.

[^276]:    ${ }^{1}$ Includes political, labour and others.

[^277]:    10 *Prepared in the Research Division, Wartime Prices and Trade Board, Ottawa. This article deals with developments in the year 1946 and the first two months of 1947. The development of distribution montrols and administration of rationing are described in the Year Books 1943-44 (pp. 521-526), 1945 (pp. 364-571) and 1946 (pp. 574-578).

[^278]:    * Import control was imposed at the request of the Department of Agriculture.
    $\dagger$ Import control was imposed at the request of the Wheat Board.
    $\ddagger$ A number of important controls were discontinued after this article had been prepared. Meat rationing was discontinued on Mar. 27, 1947. Early in April a number of supply and distribution controls respecting dairy products were withdrawn-those prohibiting the sale of whipping cream, limiting the monthly sales of cream distributors and controlling the disposition of cheddar cheese. Butter rationing was terminated on June 9 , and at the same time controls restricting the distribution of evaporated milk in certain areas were withdrawn.

[^279]:    *The spread between export and domestic prices of these metals was reduced when higher ceiling prices were authorized in January, 1947.

[^280]:    *Revised by F. A. McGregor, C.B.E., Commissioner, Combines Investigation Act, Department of Justice, Ottawa.

[^281]:    * The material relating to patents and copyrights has been revised by J. T. Mitchell, Commissioner of Patents, and that relating to trade marks by J. P. McCaffrey, Registrar of Trade Marks, Ottawa.

[^282]:    * Revised by the Director of Weights and Measures, Department of Trade and Commerce, Ottawa. † With the exception of the figures on gas sold in Canada, this material has been revised by J. L. Stiver, Director, Electricity and Gas Inspection Service, Department of Trade and Commerce, Ottawa.

[^283]:    * See p. 563 of the 1942 Year Book.
    $\dagger$ This material has been summarized from the "Report of the Royal Commission on Coal, 1946" For detailed treatment of this subject, see Chapter 13 of that Report, pp. 565-577.

[^284]:    *Abridged from the report "The Control and Sale of Alcoholic Beverages_in Canada", Dominion Bureau of Statistics, Price 50 cents.

[^285]:    ${ }^{1}$ The large quantities of non-potable alcohol produced and exported for war uses in the years 1943-46 necessitated a change in the method of estimating the consumption of beverage spirits. The exports in bond and the domestic exports do not now enter into the calculations. Details of the change are given in the Bureau of Statistics report "The Control and Sale of Alcoholic Beverages in Canada"

[^286]:    * Revised by G. S. Wrong, Director, Transportation and Public Utilities Division, Dominion Buresu of Statistics.

[^287]:    For footnotes, see end of table, p. 778.

[^288]:    * Prepared by C. B. Davidson, T. W. Grindley, W. G. Malaher and C. V. Parker of the staff of the Canadian Wheat Board, Winnipeg.

[^289]:    ${ }^{\text {I }}$ Inventories valued at market price on July 31, 1942, basis in store Fort William/Port Arthur or Vancouver.

[^290]:    The Wartime Prices and Trade Board announced late yesterday that arrangements have been made whereby Canadian flour mills will be provided with western wheat at a price appropriate to flour ceiling prices.

    The announcement said millers will continue to buy their wheat requirements in the open market at the higher price levels now prevailing, and will be eligible for a drawback representing the difference between the average price estimated to have been paid and the appropriate price on wheat ground for domestic use. The drawback will not be paid on flour exported from Canada.

    Price ceilings on flour are the highest flour prices prevailing during the basic period, September 15 to October 11, 1941. The price of wheat appropriate to these flour ceilings has been determined tentatively by the Wartime Prices and Trade Board as $773 / 8$ cents per bushel for No. 1 Northern in store Fort William, subject to adjustment after investigation of milling costs by the Board.

    The drawback will be paid for flour delivered on and after August 1, 1942, pursuant to sales contracts made on and after that date. Unfilled contracts as at July 31 will not be eligible for drawback.

    The cost of the drawback is being absorbed by the Treasury, and it will be administered for the Treasury by the Canadian Wheat Board, as an arrangement separate from their other undertakings. Details as to procedure in applying for the drawback will be announced shortly by the Canadian Wheat Board.

[^291]:    ${ }^{1}$ Inventories valued at market prices on July 31, 1943, basis in store Fort William/Port Arthur or Vancouver.

[^292]:    * Including grain shipped to Eastern Canada and British Columbia under the Freight Assistance Policy, but not including all other grain for farm use.

[^293]:    | $*$ |
    | :--- | $\mathbf{E f f e c t i v e}$ date amended to read "close of business, Feb. 28, 1945" by Order in Council P.C. 4647, July 5, 1945 .

[^294]:    "Agreement has been reached between the Government of the United Kingdom and the Government of Canada for the purchase by the former of Canadian wheat over the four years beginning Aug. 1, 1946.
    "The Agreement provides that the United Kingdom will purchase and the Canadian Government will supply the following quantities each year: 1946-47$160,000,000$ bushels, $1947-48-160,000,000$ bushels, $1948-49-140,000,000$ bushels, 1949-50-140,000,000 bushels. The contract provides that in the event of the United Kingdom requiring from Canada any additional quantities of wheat that the Canadian Government is prepared to make available, such additional quantities which the Canadian Government offers and the United Kingdom accepts shall in all respects be subject to the provisions of the Agreement. Part of the quantity of wheat specified in the contract will be supplied in the form of flour to the following amounts:-1946-47-500,000 tons firm with an additional quantity up to 140,000 tons dependent upon the out-turn of the crop; 1947-48-400,000 tons firm with an additional quantity up to 140,000 tons dependent upon the out-turn of the crop; 1948-49a minimum of 300,000 tons, the actual tonnage to be negotiated by July 1, 1947; 1949-50-a minimum of 300,000 tons, the actual tonnage to be negotiated by July 1, 1948. The price which the United Kingdom Government undertakes to pay for the wheat supplied is as follows, basis No. 1 Manitoba Northern, in store Fort William/ Port Arthur, Vancouver or Churchill: 1946-47-a fixed price of $\$ 1.55$ per bushel; 1947-48-a fixed price of $\$ 1 \cdot 55$ per bushel; 1948-49-a minimum price of $\$ 1 \cdot 25$ per bushel, the actual price to be negotiated by Dec. 31, 1947; 1949-50-a minimum price of \$1 per bushel, the actual price to be negotiated by Dec. 31, 1948. The contract provides that its terms and conditions shall be subject to any modification or amendment which may be necessary to bring it into conformity with any international agreements or arrangements later concluded to which both Governments are parties. Nothing in the Agreement will affect decisions which may be taken on the basis of recommendations of the I.E.F.C.

[^295]:    "As the House has been advised, the Government's attention has been directed for some time to the question of wheat policy for Western Canada. The United Kingdom-Canada wheat contract signed on July 24 and announced to the House on July 25 is an important element in the new policy for western wheat producers that I now wish to describe. The contract establishes a market for a considerable proportion of the next four western wheat crops, with underlying price guarantees. This factor, along with the continued shortage of foodstuffs and the high prices of competing wheats, makes it possible to deal more generously with the wheat pro-

[^296]:    "During the crop year 1945-46, Ontario winter wheat was sold at a ceiling price of $\$ 1.26$ per bushel for No. 1 Canadian Eastern Winter Wheat, basis delivered at Montreal. There was an appropriate flour ceiling. Producers were also given the proceeds of an Ontario Wheat Equalization Fund, arising from collection of an equalization fee on the exports of Ontario winter wheat flour. To place a 'floor' under these prices, the Canadian Wheat Board was empowered to buy No. 1 Canada Eastern Winter Wheat at $\$ 1.25$ per bushel, basis delivered at Montreal. No purchases by the Board were necessary, because commercial interests bought the wheat at the ceiling price.
    "It had originally been intended to raise the ceiling on Ontario wheat to $\$ 1.35$ per bushel for the crop year beginning July 1, 1946, and to permit a corresponding increase in the domestic price of winter wheat flour and the products theroof, but in view of recent developments in price control policy this step is not being taken. Instead producers will receive at time of delivery an additional 9 cents per bushel which will be paid by the Canadian Wheat Board on behalf of the Government.
    "In addition, the Wheat Board will pay to producers at time of delivery an amount of 5 cents per bushel in lieu of any payment from the Equalization Fund that will be operated as before with the Government absorbing any profit or loss therein. By this payment at time of delivery, the difficulties and expense of making a subsequent small payment will be avoided. It is felt that this system will be more satisfactory to the producers. The net effect will therefore be that producers of Ontario wheat will receive, in addition to the price paid by the purchaser under the existing price ceiling, an amount of 14 cents, 9 cents of which represents the equivalent of an increased price and 5 cents of which represents a fixed and final payment out of the Ontario Wheat Flour Equalization Fund. The Canadian Wheat Board will continue to maintain a floor at $\$ 1 \cdot 25$.
    "I should perhaps add, for the sake of clarity. that no adjustment is being made in the price ceiling on Ontario wheat or products made therefrom."

[^297]:    I Effective only if closing price dropped below 90 cents per bushel for No. 1 Northern in store Fort William. $\quad 2$ Changed from 90 cents to $\$ 1 \cdot 25$ on Sept. 27, 1943. 3 Additional 10 cents per bushel paid in 1946-47. Information not available.

[^298]:    ${ }^{*}$ Revised in the Agricultural Division, Dominion Bureau of Statistics. [^308]:    ${ }^{1}$ In addition to the payments by the trustee, secured creditors valued their security or realized on it themselves without the intervention of the trustee to an amount of approximately $\$ 2,596,068$ in 1942 , $\$ 1,799,722$ in $1943, \$ 1,201,289$ in $1944, \$ 1,811,803$ in 1945 and $\$ 684,039$ in 1946.
    ${ }^{2}$ Exclusive of city shown separately.

    The Farmers' Creditors Arrangement Act came into effect Sept. 1, 1934. This Act was amended in 1935 and 1938 and was repealed and replaced by the Farmers' Creditors Arrangement Act, 1943. Assignments are made only in those cases in which the farmers are hopelessly insolvent and, in many cases, the assignments follow the rejection of proposals submitted to the creditors. Receiving orders are made only in cases in which the farmers have failed to fulfil the terms of their proposals as accepted by the creditors and approved by the court. Table 9 shows only statistics of estates closed by assignments or receiving orders and does not indicate the proposals that have been approved and are being carried out under the Farmers' Creditors Arrangement Act.

[^309]:    ${ }^{1}$ In addition, land and chattels under mortgage or lien, of an estimated value of $\$ 41,258$ in $1942, \$ 18,853$ in $1943, \$ 26,044$ in 1944, $\$ 1,700$ in 1945 and $\$ 13,483$ in 1946, were transferred to secured creditors. 2Does not include three estates in Saskatchewan and one in Alberta closed during the year but which would, if extended, alter the figures and affect the totals in such a way as to result in an unbalanced picture contrary to the actual state of affairs. These four cases had been held open or re-opened with a view to realizing on judgments obtained pursuant to conditional orders of discharge granted to the farmers but in none was anything recovered from this source and the only ad ditional expense involved was an item of $\$ 1$ paid by the Federal Government.

[^310]:    *Sections 1 and 2 of this Part, together with the General Review at pp. 848-850, have been prepared in the several Branches concerned and collated by B. C. Butler, Director, Trade Publicity Division, Department of Trade and Commerce, Ottawa.

    ${ }^{3}$ Plus

[^378]:    "To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises."

[^379]:    ${ }^{1}$ Includes Yukon and the Northwest Territories.

[^380]:    * Revised by the Royal Canadian Mint, Ottawa.
    $\dagger$ The Currency Act of 1910 made provision for a silver dollar and a 5-cent silver coin. The former was not coined until 1935, when a limited issue was made as a jubilee coin. The 5 -cent silver coin was coined freely until 1921. It still has limited legal tender but has been replaced in the coinage by the nickel 5 -cent piece. In 1942 a new 5 -cent piece was coined from 'tombac', a copper-zinc alloy, in order to conserve nickel for war purposes, and this coin was replaced in 1944 by a 5 -cent coin composed of mild steel with a chromium
    finish.

[^381]:    ${ }^{1}$ Three-month average; not shown prior to October, 1944. The grand total is, however, a twelve-month average.

[^382]:    ${ }_{1}$ Gross note circulation of chartered banks less notes of other chartered banks. ${ }^{2}$ Total issue less notes held by chartered banks and notes deposited in the Central Gold Reserves up to March, 1935. ${ }^{3}$ Figures, to nearest million, supplied by the Bank of Canada. ${ }^{4}$ Figures based on estimates of population as given at p. 100 .
    ${ }^{5}$ Gross note circulation only; notes of other chartered banks not available

[^383]:    ${ }^{1}$ These figures do not agree with those in Table 9 as the latter include Federal Government and other deposits in the Bank of Canada.

[^384]:    ${ }^{1}$ Not shown separately since August, 1944.

[^385]:    ${ }^{1}$ Figures supplied by the Bank of Canada.

[^386]:    ${ }^{1}$ Represents certified cheques, interest accrued on interest-bearing accounts, items in transit, etc.

[^387]:    ${ }^{1}$ Absorbed by the Imperial Bank of Canada, May 1, 1931.
    ${ }^{2}$ Four-month averages; bank com menced business in September, 1929. The grand totals for 1929 are, however, twelve-month averages for all banks.

[^388]:    ${ }^{1}$ Not reported. $\quad{ }^{2}$ Includes extra distribution of 15 cents a share. $\quad{ }^{3}$ Ten months only, due to change in Bank's fiscal year end. ${ }^{4}$ Increased.

[^389]:    ${ }^{1}$ Includes sub-agencies for receiving deposits for the banks employing them.

[^390]:    * Prepared by J. E. O'Meara, M.A., Economics Division, Department of Agriculture, Ottawa.

[^391]:    ${ }^{1}$ A-Fédération des Caisses Populaires Desjardins (see text above). $\mathrm{B}-$ Quebec League. $\mathrm{C}-$ Montreal Federation. ${ }_{2}$ Assets, shares and deposits of caisses regionales not included. ${ }^{3}$ Estimated loans to members only, not including investment loans. \& Includes approximately $\$ 52,250,000$ investment loans since 1926 . ${ }^{5}$ Does not include investment loans. ${ }^{6}$ Includes $\$ 20,006,340$ investment loans by Caisses Populaires in 1944.

[^392]:    *Revised by R. H. Tarr, Secretary, Foreign Exchange Control Board, Ottawa.

[^393]:    * In May, 1947, the amount of United States banknotes and coin which a resident may hold was reduced to $\$ 10$ and the exemption from permit for the export of funds by resident travellers was similarly lowered to $\$ 25$ of which not more than $\$ 10$ may be in United States currency.
    $\dagger$ In August, 1947, the United Kingdom found it necessary to cancel the general arrangements which had been made for the transferability of sterling between non-sterling countries because of the drain which such arrangements were causing on her United States dollar resources. The consequence is that since that date Canadian exporters and importers are again limited generally to trading on a United States dollar basis with countries outside the Sterling Area.

[^394]:    ${ }^{*}$ Revised under the direction of G. D. Finlayson, C.M.G., Superintendent of Insurance, Departmen t of Insurance, Ottawa.

[^395]:    ${ }^{1}$ Book value of real estate for companies' use and other real estate. $\quad{ }^{2}$ Includes other assets. 'Includes other liabilities to shareholders. $\quad$ 4ncludes other liabilities to the public.

[^396]:    ${ }^{1}$ Book value of real estate for companies' use and other real estate.

[^397]:    ${ }^{1}$ First year Small Loans Act in operation.
    ${ }^{2}$ Not including balances other than small loans.
    ${ }^{3}$ Includes $\$ 200,000$ bonds, debentures and stock. ${ }^{4}$ Includes $\$ 250,000$ bonds. ${ }^{5}$ Includes 8250,000
    bonds and $\$ 1,534,756$ balances of loans made in amounts greater than $\$ 500 . \quad{ }^{6}$ Includes taxes.
    ${ }^{7} \mathrm{No}$ unearned income; since from 1940 small loans have been on an earned basis. $\quad{ }^{8}$ Includes business other than small loans.

[^398]:    * Revised from information supplied by E. C. Gould, Statistician, the Monetary Times.

[^399]:    ${ }^{1}$ Department of Finance figure. individual. ${ }^{3}$ As at Aug. 31, 1947.
    ${ }^{2}$ Total subscriptions were limited to $\$ 2,000$ for any one ${ }^{4}$ Approximately.

[^400]:    ${ }^{1}$ Includes depletion and deferred development.
    ${ }^{2}$ Includes amortization of bond discount.
    ${ }^{3}$ After adjustment relating to tax accruals and other transactions of previous years.

[^401]:    ${ }^{1}$ For purposes of comparability any special capital charges made against income account in company reports have been added back as well as "contingent" and "general" reserves. Special inventory reserves (amounting to $0.5,0 \cdot 5,0 \cdot 3,1 \cdot 7,5 \cdot 4,10 \cdot 7,6 \cdot 2,3 \cdot 5,4 \cdot 3$ and $-1 \cdot 8$ in the years 1936-45, respectively), whether shown by the company in operating expenses or as an adjustment to earned surplus, have been deducted in arriving at net operating profit.
    ${ }_{2}$ Includes deferred development and depletion provision amounting to $7 \cdot 8,10 \cdot 6,10 \cdot 2,9 \cdot 6,10 \cdot 3,10 \cdot 3,9 \cdot 9,8 \cdot 4,8 \cdot 6$ and $8 \cdot 4$ in the years $1936-45$, respectively.

[^402]:    ${ }^{1}$ Includes the refundable portion of the excess profits tax, amounting to $19 \cdot 9,33 \cdot 7,28 \cdot 3$ and $27 \cdot 2$ i I the years 1942-45, respectively.

[^403]:    *Summarized from the report "Forecast of 1947 Investment by Canadian Business" published by the Department of Reconstruction and Supply.

[^404]:    ${ }^{1}$ Includes construction companies, banks, warehousing, wholesale establishments, chain retail stores (including chain restaurants, chain service stations, etc.), department stores, laundry and dry cleaning establishments and theatres.
    ${ }_{2}$ Includes independent stores, hotels, garages, office buildings, recreation halls and all other commercial establishments not covered above. construction by Wartime Housing Limited.

[^405]:    * "Production of Basic and Building Materials in Canada: Outlook, 1947" published by the Economic Research Branch, Department of Reconstruction and Supply.

[^406]:    ${ }^{*}$ Material in this Chapter has been prepared or revised under the direction of G. D. Finlayson, C.M.G., Superintendent of Insurance, Ottawa.

[^407]:    ${ }^{1}$ Figures in parentheses indicate the number of companies included in the total which were inactive in the sense that no new business was transacted.

    78375-68

[^408]:    ${ }^{1}$ There are included in these figures reserves approximating $\$ 7,500,000$ in $1906-15, \$ 80,000,000$ in $1916-25$, $\$ 1,400,000$ in $1936-40$ and $\$ 830,000$ in 1941-45 on business taken over by reinsurance for which there is no corresponding addition to premiums received.

[^409]:    "The reasons given in support of the generalization that 'the business of insurance is not commerce' and can never be conducted so as to constitute 'Commerce among the States' are inconsistent with many decisions of this Court which have upheld federal statutes regulating interstate commerce under the Commerce Clause.

[^410]:    "Any enactment by Congress either of partial or of comprehensive regulations of the insurance business would come to us with the most forceful presumption of constitutional validity. The fiction that insurance is not commerce could not be sustained against such a presumption,

[^411]:    ${ }^{1}$ Net premiums written. $\quad{ }^{2}$ Net losses incurred. $\quad{ }^{3}$ For 1939 and later years companies were free to insure mercantile and manufacturing property without a term limitation; see text preceding table. "This figure is not comparable with those for previous years since it indicates "Gross direct written", disregarding all reinsurance, assumed or ceded.

[^412]:    ${ }^{1}$ In addition, losses to the extent of $\$ 9,867,000$ in 1945 and $\$ 1,443,641$ in 1946 occurred in National Defence and other Crown properties.

[^413]:    ${ }^{1}$ This amount was given as the total loss, no uninsured losses being reported for Saskatchewan in 1938.

[^414]:    ${ }^{1}$ Included with "interest" ${ }^{2}$ Includes $\$ 100,000$ donation to Government, $\$ 100,000$ preference stock redeemed and $\$ 187,790$ repaid to shareholders. ${ }^{3}$ Includes $\$ 100,090$ preference stock redeemed. 4 Includes $\$ 100,000$ unallocatable expense. 5 Includes $\$ 25,000$ repayment of premium on capital.

[^415]:    *This total does not include fraternal insurance.

[^416]:    Note.-Figures for the years 1869-99 are given at p. 958 of the 1938 Year Book, and figures for the intervening years from $1901-29$ at p .855 of the 1942 edition.

[^417]:    ${ }^{1}$ Death claims, matured endowments and disability claims.

[^418]:    ${ }^{1}$ A detailed classification of assets showing investments of Canadian companies and giving the percentage of the total in each group and sub-group for 1943, 1944 and 1945 will be found at p. xxiv of the Report of the Superintendent of Insurance, Vol. II, for the year ended Dec. 31, 1945.
    ${ }^{2}$ Book values. The totals carried into the balance sheets, including some market (or authorized) values of these assets, were: $\$ 2,582,676,124$ in $1941 ; \$ 2,729,419,685$ in $1942 ; \$ 2,921,471,387$ in 1943 ; $\$ 3,140,001,113$ in 1944 ; and $\$ 3,449,751,993$
    in 1945 .
    None reported. ${ }^{2}$ None reported.

[^419]:    ${ }^{1}$ Includes income on business outside of Canada.

[^420]:    ${ }^{1}$ Whole business. $\quad{ }^{2}$ Book values. The totals carried into the balance sheets, including some market values of these assets were: $\$ 83,563,328$ in $1941, \$ 85,137,561$ in $1942, \$ 89,820,188$ in $1943, \$ 92,222,115$. in 1944 , and $\$ 95,044,252$ in 1945.

[^421]:    ${ }^{1}$ None reported.

[^422]:    ${ }^{1}$ Transacted by a company not holding a certificate of registry to transact fire insurance, and by some
    companies registered to transact fire insurance but which showed figures for this class separately from their
    fire insurance.

[^423]:    * Prepared by the Economic Research Branch, Department of Reconstruction and Supply.

[^424]:    * See pp. 1059-1063.

[^425]:    * Revised under the direction of W. Gordon Mills, Deputy Minister, Department of National Defence, Ottawa.

[^426]:    ${ }^{1}$ Wounded, injured and ill, includes only those seriously or dangerously wounded, injured or ill and does not include those who have died of wounds, injuries or illness, nor wounded, injured or ill prisoners of war and internees. $\quad 2$ Does not include personnel killed or died while prisoners of war.

[^427]:    * Material for this Chapter has been contributed by the various Branches of the Department of Veterans Affairs through E. B. Reid, Director of Public Relations of Veterans Affairs.

[^428]:    ${ }^{1}$ January, February and March only.

[^429]:    ${ }^{1}$ Total cannot be entirely broken down.

[^430]:    * Prepared under the direction of R. A. Gibson, I.S.O., Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

[^431]:    Includes income received from timber and mining dues, from annuities earned as interest on Indian trust funds, and from money received from land rentals.

[^432]:    * Revised by E. H. Coleman, C.M.G., K.C., LL.D., Under Secretary of State, Department of the Secretary of State.

[^433]:    ${ }^{1}$ Includes also Syrian, Armenian, Greek, Bulgarian, Palestinian and Mesopotamian Turks.

[^434]:    * Revised in the Public Finance Division, Dominion Bureau of Statistics.

[^435]:    ${ }^{1}$ Includes living allowances. ${ }^{2}$ Provisional International Civil Aviation Organization.
    ${ }^{2}$ Living allowances only; no number included as salary paid by another Department.
    ${ }^{4}$ Salaries of A.D.C.'s are included, but not their number.

[^436]:    * Consolidated as the Statistics Act (c. 190, R.S.C., 1927).

[^437]:    - Extracts from the Canada Gazette.

[^438]:    * Extracts fromThe_Canada_Gazette.

[^439]:    * Extracts from the Canada`Gazette.

[^440]:    ${ }^{1}$ June 9, $1947 . \quad 2$ Oct. 13, 1947.

[^441]:    ${ }^{1}$ Eliminates duplication between the agriculture and forestry totals. ${ }^{2}$ Eliminates duplication under "Manufactures"; this item includes sawmills, pulp and paper mills, etc., which are also included under other headings above.
