The Commission operates a public utility system which supplies electric light and power requirements to Greater Montreal and surrounding districts, embracing a population of nearly $1,500,000$. From the Cedars plant, electric energy is supplied to the Aluminum Company of America at Massena, N.Y., and through Beauharnois Light, Heat and Power Company power is sold to the Hydro-Electric Power Commission of Ontario. Sales involved are in the neighbourhood of rates of $100,000 \mathrm{~h} . \mathrm{p}$. to Massena, N.Y., and $250,000 \mathrm{~h} . \mathrm{p}$. to Ontario.

[^181]17.-Growth of the Quebec Power Systems, 1942-51

Norz.-Figures for the years 1935-41 will be found at p. 572 of the 1950 Year Book.

| Year | Municipalities Served | Customers Served | Power Distributed |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Total | Primary |

In addition to the ownership and operation of these generating and distributing systems, the Quebec Hydro-Electric Commission administers the $64,000 \mathrm{~h} . \mathrm{p}$. Upper Ottawa River plant at Rapid VII and also the Dozois Reservoir. Average primary power statistics for this Northern Quebec System (Cadillac-Noranda district) are as follows: 1946, 15,750 h.p.; 1947, 18,140 h.p.; 1948, 21,270 h.p.; $1949,34,790$ h.p.; $1950,35,500 \mathrm{~h} . \mathrm{p}$.; and $1951,30,550 \mathrm{~h} . \mathrm{p}$.

Ontario.-The Hydro-Electric Power Commission of Ontario is a corporate body administering a province-wide co-operative enterprise to produce and distribute electric power. The members of the Commission, a Chairman and two Vice-Chairmen, are appointed by the Lieutenant-Governor in Council to hold office during pleasure. One Commissioner must be a member, and two may be members, of the Executive Council of the Province of Ontario.

The Commission was created in 1906 by an enactment of the Ontario Legislature, after consideration of recommendations made by advisory commissions which had been appointed in response to public demand that the water powers of Ontario should be conserved and. developed for the benefit of all the people of the Province.

The Commission operates under the authority of the Power Commission Act (S.O. 7 Ed. VII, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified by numerous amending Acts (R.S.O. 1950, c. 281). It is a separate entity, a self-sustaining public concern endowed by the Power Commission Act with broad powers to produce, buy and distribute electricity, and to perform certain regulatory functions with respect to the activities of the electrical utility commissions of the member municipalities. The enterprise represented by the Commission is generally known and referred to as the Ontario Hydro.

The Year Book 1940 contains a general article on the Ontario Hydro, to which reference has been made in succeeding editions. It deals with the early history of The Hydro-Electric Power Commission of Ontario from its founding in 1906 and sketches the later development of the Commission both in organization and resources which followed the lines so well established by the first Chairman, Sir Adam Beck.

The undertaking initially proposes to purchase a block of $100,000 \mathrm{~h} . \mathrm{p}$. from the Ontario Power Company Limited at Niagara Falls and to distribute this to thirteen municipalities which had signed the original contracts with the Commission to take power at cost. In 1909 the task of constructing a transmission system to distribute power to the member municipalities was begun, and, by the end of the following year, power was being supplied to several of them. Similarly,
and at about the same time, the Commission built a short transmission line and a substation to serve Port Arthur with power purchased from the Kaministiquia Power Company. These two pioneer systems eventually grew into the Southern Ontario and Thunder Bay Systems, respectively.

In 1911 the Severn System was established and, in the years following, other systems were established to serve groups of municipalities in various sections of the Province. By 1919 the number of systems had reached eleven, where it remained until 1924 when the Severn and two other systems were consolidated to form the Georgian Bay System. In 1929-30 a further consolidation of four systems created the Eastern Ontario System. During the 1930's the Commission undertook to operate, in trust for the Provincial Government, what have been known as the Northern Ontario Properties. These were a group of systems which mainly served mining and pulp and paper industries but which were not interconnected. In 1944 the Southern Ontario System came into being through the consolidation of the former Niagara, Georgian Bay and Eastern Ontario Systems.

In 1914 the Commission purchased its first generating station, Big Chute on the Severn River. Later in the same year, the first Commission-built generating station at Wasdells Falls, also on the Severn River, was placed in service. The program of purchase and construction of generating stations thus launched reached its climax between 1917 and 1925 in the construction of the great Queenston-Chippawa development, recently renamed Sir Adam Beck-Niagara Generating Station No. 1, which first delivered power early in 1922. Yet, commencing four years later, the Commission found it necessary to negotiate for the extensive purchase of power from large Quebec suppliers in order to satisfy Ontario's steadily growing demand.

During the three decades between 1921 and 1951 the population of Ontario, as measured at decennial censuses, increased by 17 p.c., $10 \cdot 4$ p.c. and 21.4 p.e. Measured against these very satisfactory rates of increase, the growth of Ontario Hydro has been phenomenal. In 1921 the capital investment of the Commission and its member municipalities was about $\$ 151,000,000$. By 1931 , it had more than doubled; by 1941 , it exceeded $\$ 481,000,000$; and by 1951 , midway in the current program of expansion, it exceeded $\$ 1,200,000,000$. In 1931, the Commission generated and purchased $4,600,000,000 \mathrm{kwh}$. of electric energy. Corresponding totals for 1941 and 1951 were $10,700,000,000 \mathrm{kwh}$. and $18,800,000,000 \mathrm{kwh}$. The dependable peak capacity of the generating stations owned or operated by the Commission rose from $314,400 \mathrm{kw}$. in 1921, to $820,500 \mathrm{kw}$. in 1931, to $1,054,800 \mathrm{kw}$. in 1941, and to $2,237,550 \mathrm{kw}$. in 1951.

June 1, 1951, was the thirtieth anniversary of the coming into force of the Rural Hydro-Electric Distribution Act. Since 1921 the Commission has vigorously pressed its rural electrification program, assisted by Provincial Government grants in aid of construction of rural distribution facilities. In 1931 the Commission served 54,280 rural customers, in 1941 it served 131,254 and at the close of 1951 it served 318,606. The introduction in 1944 of a uniform rate plan for rural service throughout the Province was a significant event in the latter decade. The number of farms served during 1951 was 85 p.c. of the total number of Ontario farms as calculated on 1951 Census returns. In 1951 the Commission spent $\$ 20,300,000$ on its rural program, of which the Provincial Government's share was $\$ 10,000,000$.

The rapid growth in power demand that has marked the past decade has taxed the power resources of the Commission to the full. It has been matched by remarkable achievements in the construction of new, and the extension of existing
generating stations. Among recent notable hydro-electric developments have been three major generating stations on the Ottawa River-Des Joachims, Chenaux, and Otto Holden-Pine Portage serving Thunder Bay, and George W. Rayner Generating Station in Ontario's northeastern mining area. The construction of two major fuel-electric generating stations at Toronto and Windsor, named for Richard L. Hearn and J. Clark Keith, respectively, marks a departure from the Commission's virtually complete reliance on hydraulic resources. A summary of the Commission's power development program appears in Table 20.

At present the major capital undertaking, made possible by the Niagara Treaty of 1950, is the construction of the Sir Adam Beck-Niagara Generating Station No. 2 near Queenston on the Niagara River. Plans call for an ultimate installation of $900,000 \mathrm{kw}$. in 12 units. The first stage, seven units, is expected to be completed in 1955. The best answer to the need for power beyond that year is the St. Lawrence power project.

In 1949 the Commission embarked on a complex program of standardizing at 60 cycles the frequency of the Southern Ontario System. Approximately 33 p.c. of the area comprising the so-called " 25 -cycle island" had been standardized by 1951. A comprehensive article on this subject appears in the Year Book 1951, pp. 540-548.

The basic principle governing the financial operations of the Commission is that electrical service is provided to the municipalities, and by the municipalities to the customers, at cost. Cost includes not only all operating and maintenance charges interest on capital investment, and reserves for depreciation, for contingencies and obsolescence, and for stabilization of rates, but also a reserve for a sinking fund to retire the Commission's capital debt.

From its inception, the undertaking has been entirely self-supporting with the exception that the Provincial Government, through grants-in-aid, provides for 50 p.c. of the capital cost of the rural distribution lines. This is done in pursuance of the Province's long-established policy of assisting agriculture. The Province also guarantees the payment of principal and interest of all bonds issued by the Commission and held by the public.

With a few exceptions all townships and 150 of the smaller villages are now served as an amalgamated rural division of Hydro service with a uniform rate structure. Thus, no matter where rural service is supplied in Ontario by Hydro, all rural customers pay the same amount for the same class of service with the same consumption of electricity.

The undertaking as a whole involves two distinct phases of operations. The first phase of operations is the provision of the power supply-either by generation or purchase-and its transformation, transmission and delivery in wholesale quantities to individual municipal utilities, to large industrial customers and to rural power districts. This phase of the operations is performed by The HydroElectric Power Commission of Ontario. The second phase of operations is the retail distribution of electric energy to customers within the limits of the areas served by the various municipal utilities and throughout the rural areas of the

Province. For the consolidated rural power districts, the Commission not only provides the power wholesale but also, on behalf of the respective townships, attends to all physical and financial operations connected with the retail distribution of energy to the customers within the rural operating areas into which the consolidated rural power districts are divided for administrative purposes.

In cities, towns, many villages, and certain thickly populated areas of townships, retail distribution of electric energy provided by the Commission is, in general, conducted by municipal commissions under the general supervision of The HydroElectric Power Commission of Ontario, as provided for in the Power Commission Act and the Public Utilities Act.

The total assets of the Commission at Dec. 31, 1951, amounted to \$1,036,029,755. This is the sum of the assets of the Commission in the Southern Ontario and Thunder Bay Systems and the Northern Ontario Properties after deducting accumulated depreciation of $\$ 116,945,857$. Rural assets under administration at the end of the year amounted to $\$ 127,227,145$, of which $\$ 63,015,165$, provided by the Province of Ontario in the form of grants-in-aid, is excluded from the total assets figure given above. The municipal electrical commissions had assets amounting to $\$ 329,051,074$, of which $\$ 118,269,171$ represented an equity in the Commission's systems.

The following tables give statistics of resources generated and purchased, development program, distribution and service of the Commission. In 1950 the Commission changed its fiscal year (formerly ended Oct. 31) to coincide with the calendar year. Thus, data shown for the year 1950 cover the 14 months ended Dec. 31, 1950, while those for the year 1951 were for the 12 months of that year. All year-end statistics for 1950 and 1951 relate to the months of December for the respective years while those for years previous to 1950 are for the month of October of the given year. Demands for primary power usually reach their seasonal maxima in December.

## 19.-Resources Generated and Purchased-Aul Systems, as at December 1950 and 1951

[^183]Manitoba.-The Manitoba Power Commission was established in 1919 for the purpose of distributing electric energy, both wholesale and retail, throughout the Province, with the exception of the Greater Winnipeg area. The utility currently operates under authority of an Act respecting the Manitoba Power Commission (R.S.M. 1940, c. 166) and amendments.

The Commission's supply of electric energy for distribution is purchased from the Winnipeg Electric Company at various points, chiefly at or near the City of Winnipeg. Arrangements for the Commission's purchase of power are contained in the Seven Sisters Agreement of 1928 between the Province of Manitoba and the Winnipeg Electric Company. The Commission has gradually acquired practically all of the municipally owned and privately owned generating plants operating within its jurisdiction and has spread a network of transmission lines across the Province. All energy distributed is now generated by hydro power.

The Commission's program, started in the 1930's and designed to bring hydroelectric power at uniform service rates to all urban centres of 20,000 or over population, is now virtually complete and currently serves 419 such centres. In 1942, the Manitoba Electrification Enquiry Commission was appointed by the Provincial Government to study the feasibility of widespread farm electrification in the Province. It was concluded that, with the Manitoba Power Commission's network of transmission lines as a source of supply and with the economy in design of farm lines that had been worked out, it would be practicable to bring the benefits of hydro-electric power to over 90 p.c. of the farms in the Province, provided the farmers themselves were prepared to assist in certain organizational and operational matters. A test program undertaken in 1945 proved successful and thereafter the Commission conducted annual programs of farm electrification. Shortages of materials restricted the size of these programs until 1948 when the set goal of 5,000 farm connections was reached. The program has since continued on an areacoverage basis and the Commission now serves over 27,000 farms and has plans for further coverage.

Saskatchewan.-The Saskatchewan Power Corporation, established Feb. 1, 1949, and operating under the provisions of the Power Corporation Act 1950 (Statutes of Sask. 1950, c. 10), as amended, succeeds the Saskatchewan Power Commission which operated from Feb. 11, 1929, to Jan. 31, 1949. During the years 1929-49, the Commission purchased a number of generating plants and constructed and purchased transmission lines and also distribution systems in certain urban centres.

In 1945 it purchased the assets of Prairie Power Company Limited and in 1947 purchased the assets of Canadian Utilities Limited in Saskatchewan. It absorbed into its system the assets in Saskatchewan of Dominion Electric Power Limited, which for a time had been operated by the Commission as a wholly owned subsidiary.

The main functions of the Saskatchewan Power Corporation are the generation, transmission, distribution, sale and supply of electric energy and steam. It is also authorized to produce or purchase, and to transmit, distribute, sell and supply natural or manufactured gas, but as yet has not exercised its powers in relation to gas.

Particulars of the operations of the Saskatchewan Power Commission from 1929 to 1948 and of the operations of the Saskatchewan Power Corporation during 1949 are given in the 1951 Year Book and earlier editions.

At the end of 1951, the Corporation owned and operated 8,757 miles of transmission line and distribution systems at 537 urban centres. It also owned and operated steam-generating plants at Estevan, North Battleford, Prince Albert and Saskatoon with a total installed capacity of $76,950 \mathrm{kw}$., and diesel-generating plants at Assiniboia, Biggar, Canora, Davidson, Hudson Bay, Humboldt, Kindersley, Leader, Maple Creek, Meadow Lake, Melfort, Melville, Moosomin, Nipawin, Shaunavon, Shellbrook, Swift Current, Tisdale, Unity, Watrous, Wynyard and Yorkton, with a total installed capacity of 30,053 h.p. During 1950 and 1951, the Corporation purchased blocks of power from the City of Regina and the National Light and Power Company Limited, Moose Jaw. During the same years the Corporation sold electric energy in bulk to the Cities of North Battleford, Saskatoon and Swift Current, and to the Town of Battleford. The number of customers served by these municipalities was 21,223 at the end of 1951. All the other urban centres on the Corporation's system were supplied on a retail basis, the number of customers so served by the Corporation being 72,700. At the end of 1951, the Corporation purchased the distribution system owned by the City of North Battleford and now supplies that city and its inhabitants on a retail basis.

In 1950 and 1951 the Corporation installed additional capacity in its steam and diesel plants, and constructed a large mileage of transmission lines. The main additions to plant capacity were the installation of a $15,000-\mathrm{kw}$. turbo-generator in the Estevan plant, and a $1,200-\mathrm{h} . \mathrm{p}$. gas-diesel unit in the Unity plant. The $69,000-$ volt lines constructed were: Prince Albert-Beatty-Melfort-Tisdale; Beatty-Watrous; Tisdale-Nipawin; and one line of 33,000 volts (Saskatoon-Perdue-Biggar-Rosetown) was built. The principal 24,000 -volt lines constructed were: Montmartre-Kipling; Melville-Kelliher; Trossachs-Ogema-Bengough-Viceroy; Tisdale-Weeks; PlatoKyle; Willow Bunch-Rockglen-Coronach; and Dodsland-Herschel.

The Power Corporation has continued its program of rural electrification under the provisions of the Rural Electrification Act 1949 as amended. The number of rural customers supplied by the Corporation was 2,608 at the end of 1949, 4,600 at the end of 1950 , and 7,600 at the end of 1951.

The Cities of Regina and Weyburn, as well as certain towns and villages, own and operate their own municipal plants and distribution systems. In Moose Jaw and in a number of small towns and villages, local plants and distribution systems are owned and operated by private companies or individuals.

# 24.-Growth of the Saskatchewan Power Corporation (formerly Commission), 1942-51 

Nors.-Figures for the years 1929-1933 will be found at p. 499 of the 1947 Year Book; and for the years. 1934-1941, at p. 578 of the 1950 edition.

Control and regulatory powers regarding franchises for the supply of electric energy and the rates to be charged therefor are conferred upon the Local Government Board by Part III of the Public Utilities Companies Act (R.S.S. 1940, c. 118). Control and regulatory powers regarding the construction, extension and operation of generating plants, distribution systems and transmission lines are conferred upon the Saskatchewan Power Commission by the Power Commission Act 1950 (Statutes of Sask. 1950, c. 9).

Alberta.-Public ownership of power-generating and distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately owned systems is the Board of Public Utility Commissioners, which has jurisdiction over the distribution and sale of electricity. The Board has power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates.

There are three private utility services in the Province: Calgary Power Limited, Canadian Utilities Limited, and Nortbland Utilities Limited. A synopsis of these services is given below.

Calgary Power Limited.-This Company has eight hydro-generating plants on the Bow River and its tributaries, west of Calgary. These plants are: Horseshoe Falls; Kananaskis Falls; Ghost River; Cascade; Barrier; Spray; Rundle and Three Sisters. At Dec. 31, 1951, the Company's total plant capacity was 206,550 horsepower. Barrier plant, completed in 1947, was the Company's first plant to be operated by remote control. Recently, Cascade, Three Sisters, Spray and Rundle plants were linked to a central control room at Kananaskis. The remaining plants will be remote-controlled as soon as the installations can be made. The Company has reservoirs at Lake Minnewanka (180,000 acre-feet), Interlakes (Kananaskis Lakes) ( 90,000 acre-feet), Spray Lakes ( 200,000 acre-feet), and forebay storage of 74,000 acre-feet at Ghost.

Power from these plants, together with that received under interchange agreements with the Cities of Lethbridge and Edmonton, is fed into a transmission network which supplies the entire electrical requirements of the Cities of Calgary and Red Deer and 235 smaller urban centres in central and southern Alberta. At Dec. 31, 1951, over 1,000 oil wells were being supplied with electric pumping service-
not to mention all the other loads directly related to the oil industry, such as gathering stations, refineries, pipe-line pumping, and the many large industrial plants recently located near Edmonton.

Calgary Power Limited transmission system, comprising over 4,100 miles of lines of all voltages, extends from Westlock in the north to Milk River in the south and from Macklin (Saskatchewan), Chauvin, Brooks and Taber in the east to Nordegg, Banff and Crowsnest Pass in the west. An eastern extension will soon be completed to link a new $30,000 \mathrm{kw}$. power plant at Medicine Hat with the system. The Cities of Calgary and Red Deer and the Towns of Ponoka, Macleod and Cardston are supplied on a wholesale basis and own their own distribution systems. All other points on the system are supplied on a retail basis. The Company has 3,529 miles of main transmission lines and 600 miles of distribution lines.

An extensive farm electrification program is in progress in Alberta and at Dec. 31, 1951, the Company was serving approximately 10,500 farms over 7,500 miles of the farmer-owned Rural Electrification Co-operative Association rural transmission lines. The program calls for the addition of from 2,500 to 3,000 farms each year for the next several years. Calgary Power does all the engineering, construction and operation of these co-operatives through a non-profit subsidiary-
Farm Electric Services Limited-energy being supplied to the farm co-operative consumers at cost. Expenditures during the next five years for additional plant capacity, transmission lines and distribution systems will amount to an estimated $\$ 50,000,000$.

Canadian Utilities Limited.-Towns and villages northeast of Drumheller are supplied from a $13,500 \mathrm{kw}$. steam plant in that city by Canadian Utilities Limited, while towns and villages north and east of Vegreville are served from a new gas-fired $7,500 \mathrm{kw}$. steam plant at Vermilion. There are tie lines with the Calgary Power Limited system at Vermilion, Vegreville and Drumheller. This utility also serves the areas around Grande Prairie from a $2,300 \mathrm{~h} . \mathrm{p}$. diesel-engine plant located at that centre. The Company serves over 22,700 customers, in approximately 180 towns, villages and hamlets, including 48 Rural Electrification Associations in the Province, through a network of approximately 1,700 miles of transmission lines, and 1,375 miles of Rural Association lines.

In 1949, the Company embarked on a program of extending its lines to farmers on a co-operative basis. The system is constructed and operated at cost for the farmer.

Northland Utilities Limited.-This Company, with headquarters at Edmonton, supplies electric energy to 4,750 consumers in 25 northern communities. Dieselgenerating plants are located at Jasper, Mayerthorpe, Athabaska, High Prairie, McLennan, Peace River, Lac La Biche, Manning, Fairview, Wildwood, and Hay River, N.W.T. Low-voltage transmission lines extending from these generating stations supply electricity to 200 farms and 14 villages. In addition, in 1948 the Company constructed a 665 kva. hydro plant on the Astoria River in Jasper National Park for the Department of Mines and Resources.

The Northland Utilities Limited also serves 1,000 consumers at Dawson Creek, B.C., with natural gas.

British"Columbia.-The British Columbia Power Commission was appointed Apr. 17, 1945, under the provisions of the Electric Power Act, "an Act to provide for improving the availability and supply of electric power". Actual operations,
however, were commenced in August 1945 with the acquisition of electrical properties in several parts of the Province. The following statement shows the growth in the number of customers to April 1952:-

| Year Ended <br> Mar. 31- | Services Acquired | Services Installed |  | Cumulative Services to End of Period |
| :---: | :---: | :---: | :---: | :---: |
|  | No. | No. | No. | No. |
| 1946 (from August 1945) | 13,270 | 832 | 14,102 | 14,102 |
| 1947. | 7,151 | 1,786 | 8,937 | 23,039 |
| 1948. | 1,000 | 3,431 | 4,431 | 27,470 |
| 1949. | 831 | 3,318 | 4,149 | 31,619 |
| 1950. | 4,686 | 3,321 | 8,007 | 39,626 |
| 1951. | 473 | 4,075 | 4,548 | 44,174 |
| $1952 . . . . . . .$. | $\begin{array}{r}103 \\ -325 \\ \hline\end{array}$ | 2,600 -640 | ${ }^{2,703}$-965 $\}$ | 45,912 |
| Nold June 195. |  |  | -905) |  |
| Totals.. | 27,189 | 18,723 | 45,912 | 45,912 |

This growth has been accompanied by a corresponding increase in generating capacity which, at Mar. 31, 1946, totalled $8,285 \mathrm{kw}$. By March 1952 this capacity had been increased to $123,845 \mathrm{kw}$. The number of power districts rose in that period from 12 to 25 and there was also a large increase in the line mileage in operation.

In 1946 the Commission established a promotional rate structure designed to "permit and encourage the maximum use of power" as required by the Act. This rate structure has been extended as fast as increased plant capacity and distribution systems were installed to take care of the growth in load anticipated through its introduction. By February 1952, promotional rates had been adopted in all 25 operating power districts.

The Commission's main development on Vancouver Island-the John Hart plant-is being enlarged for the third time. This plant, now comprising four turbines of $28,000 \mathrm{~h} . \mathrm{p}$. each, the equivalent electrical rating being $20,000 \mathrm{kw}$., is being augmented by the addition of the final group of two units of the same size. By the spring of 1953 , this plant will have a capacity of $168,000 \mathrm{~h} . \mathrm{p}$. or $120,000 \mathrm{kw}$.

The John Hart development now serves, through Commission transmission and distribution systems, territory on Vancouver Island between Duncan and Campbell River, including the Comox Valley, Alberni, Lake Cowichan and Nanaimo. The B.C. Electric Railway Company Limited takes delivery of power at Nanaimo and transmits a large block for distribution in Victoria and environs, so that the John Hart development serves all main portions of Vancouver Island. The plant has brought two major industrial loads to the area with a third (at Duncan Bay) scheduled to commence operation in the summer of 1952.

On the mainland another major power project, the Whatshan Development on the west side of Lower Arrow Lake, has been completed. It is designed for an ultimate $66,000 \mathrm{~h} . \mathrm{p}$. capacity and the first two turbines of $16,500 \mathrm{~h} . \mathrm{p}$., generating $11,250 \mathrm{kw}$. each, began operation in May 1951. Power from this plant is transmitted 75 miles at 138,000 volts to Vernon in the Okanagan Valley. Through an interconnection with Kamloops in the north and the West Kootenay Power and Light Company Limited lines to the south, a large area in the interior of the Province can be served by this project.

A third hydro-electric power development has been undertaken by the Commission. This is the Clowhom Falls plant, consisting initially of two $1,500 \mathrm{kw}$. generating units which began operation in May 1952. This construction will serve the Sechelt Peninsula, northwest of Vancouver.

Despite these large undertakings in the more populated areas of southwestern British Columbia, it is in the scattered and isolated communities of the Province that the people may have benefited most by the formation of the Commission. In less than seven years the diesel capacity of generating stations has increased from 880 to $12,295 \mathrm{kw}$., chiefly in these more remote and thinly populated areas.

| Purchased power....... | 2,817,547 | 0.7 |
| Totals. | 378,753,308 | $100 \cdot 0$ |

The Northwest Territories and Yukon Territory.-The Northwest Territories Power Commission was created by an Act of Parliament in 1948 to bring electric power to $\dot{p}$ oints in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1949, the Act was extended to include Yukon Territory.

The Northwest Territories Power Commission has authority to construct and operate power plants as required in a territory having an area of over $1,500,000 \mathrm{sq}$. miles. The Commission is continually investigating power needs in this large area and stridying reports on hydro-electric power sites that are available.

The Commission has in operation a hydro-electric power development on the Snare River some 94 miles northwest of Yellowknife, N.W.T. Power has been supplied from this plant since the autumn of 1948 to the mines in the Yellowknife area and, in the summer of 1949, a transmission line connection was completed to augment the supply of power to the Town of Yellowknife.

A diesel-generating station and distribution system was put into operation at Fort Smith, N.W.T., in October 1950. This project supplies the various government establishments at Fort Smith, e.g., the Departments of Resources and Development, Transport, National Defence (R.C.C.S.), Health and Welfare, and Public Works as well as the Royal Canadian Mounted Police and private commercial consumers and residents of the settlement.

In 1951, construction was commenced on a Commission-owned hydro-electric development on the Mayo River, approximately six miles north of Mayo Landing, Yukon Territory. It is expected that this plant will be delivering power to the Keno Hill and Galena Hill mining areas and to the settlement of Mayo Landing in the autumn of 1952.

The Commission conducts investigations throughout the Northwest Territories and the Yukon Territory wherever requests are made for power installations or where the Commission considers investigations should be made.

The total capital investment of the Commission as at Dec. 31, 1951, was approximately $\$ 6,000,000$.

## Section 3.-Total Development of Electric Power from All Available Sources

In Section 1 of this Chapter total water-power resources are given with the proportion that, so far, has been developed. Table 3 of that Section analyses the hydraulic turbine installation by the proportions in central electric stations, in pulp and paper mills, and in other industries. This is useful material, but it does not take into account electric power developed in central electric stations or in other industries from sources other than hydraulic.

Section 2 covers the central electric station industry including stations under the public ownership of provincial and municipal governments and those under private ownership. Neither of these Sections, however, gives a complete presentation of the total electric power developed in Canada. All the hydraulic energy developed is not converted to electric power: there are a number of water wheels and water turbines used for direct drive that are not geared to electric generators. On the other hand, certain central electric stations in the Atlantic Provinces, Ontario and the Prairie Provinces generate electricity from steam or internal combustion engines. It is the purpose of this Section to show the total electric power generated from all available sources. Most of the power comes, of course, from central electric stations, the figures having been given in Table 4 of Section 2, p. 546. The total kilowatt hours of electric power generated by central electric stations is divided into that generated from water power and that generated from thermal engines of all kinds

As shown in Table 26 total electric power generated by central electric stations in 1950 was $48,493,718,000 \mathrm{kwh}$. For a complete presentation, the power generated by manufacturing industries for their own use and the power generated by the
primary mining industry for use in its own operations must be added. There are a few other sources of electric energy included, such as electric railways which produced $12,764,200 \mathrm{kwh}$. in 1950. This production has been taken into the annual total shown in Table 26. There are numerous small lighting and power plants on farms, rural homes, summer resorts, stores, etc., where electricity from central electric stations is not available and for these no data are available. The following table gives available data separately and as a combined total. Of the total electric power generated in Canada in 1950, $88 \cdot 1$ p.c. is shown to have been developed in central electric stations and, of this, $3 \cdot 9$ p.c. was generated by thermal engines (see Table 4, Sect. 2), the remainder having been produced hydraulically. Of the 11.9 p.c. generated by industry for its own use, 11.4 p.c. was developed by the manufacturing industries and 0.5 p.c. by the mining industry.

## 26.-Total Power Generated by Central Electric Stations, Manufacturing and Mining Industries, 1941-50

Note.-Figures for the years 1927-40 will be found at p. 516 of the 1948-49 edition of the Year Book.

| Year | Central Electric Stations |  | Manufacturing Industries |  | Mining <br> Industries |  | Total ${ }^{1}$ |

## CHAPTER XIV.-THE FISHERIES

## CONSPECTUS

|  | Page | Section 2. Fishery Statistics. | $\begin{array}{r} \text { PAGE } \\ 585 \end{array}$ |
| :---: | :---: | :---: | :---: |
| Section 1. Governments and the |  |  |  |
| Fisheries.................... | 571 571 | Subsection 1. Primary Production..... | 585 |
| Subsection 2. The Provincial Governments. | 576 | Subsection 2. The Fish-Processing Industry. | 590 |

Note.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

The immense fishery resources of Canada are derived from the prolific seafishing waters of the North Pacific and North Atlantic, and from numerous lakes and rivers of the inland provinces. Canada ranks high in fishery production and leads the world in monetary returns from the export of fishery products. (See Chapter XXI for fisheries exports.)

Fishing is Canada's oldest industry and although its relative importance in the nation's economy has diminished through the years, the industry has shown considerable expansion and is still of paramount consequence in the coastal provinces and in the inland areas adjacent to waters where commercial fishing is pursued. Of particular importance is the fishing industry of Newfoundland where, from the standpoint of number of people directly employed in the catching and processing of fish and those indirectly affected, it ranks first among the industries. In Prince Edward Island and in Nova Scotia, fish-curing and packing is the leading manufacturing industry and in New Brunswick and British Columbia it ranks third.

An account of the Canadian Fishing Grounds is given in the 1951 Year Book, pp. 472-475.

## Section 1.-Governments and the Fisheries

## Subsection 1.-The Federal Government*

The British North America Act gave the Federal Government full legislative responsibility for the regulation of the coastal and the inland fisheries of Canada. Under the Act, laws are made for the protection, conservation and development of the fisheries throughout the country. The provinces, however, have property rights in the non-tidal fisheries and have been delegated certain administrative responsibilities in varying degree. Consequently, while all the regulations governing fishing are made by the Federal Government, the work of administering the fisheries (enforcing the different laws and regulations, inspecting fish products, issuing licences, etc.) is done in some cases by federal officers and in others by provincial officers, according to arrangements made with the different provinces and without duplication of staff.

[^185]Specifically, all tidal or sea fisheries, except those of Quebec, are administered by the Federal Department of Fisheries while the fresh-water or non-tidal fisheries, with some exceptions, are administered by the Provincial Departments. The exceptions are the Yukon and Northwest Territories, Nova Scotia, New Brunswick, Prince Edward Island and Newfoundland where the fresh-water fisheries are federally administered.

The work required in the conservation, development and general regulation of the nation's coastal and fresh-water fisheries is performed by three agencies under the Minister of Fisheries:-
(1) The Department of Fisheries proper, with headquarters at Ottawa and area offices under Chief Supervisors at Vancouver, Winnipeg, Halifax and St. John's.
(2) The Fisheries Research Board of Canada, with headquarters at Ottawa and seven stations across Canada.
(3) The Fisheries Prices Support Board, with headquarters at Ottawa.

The Department of Fisheries.-The chief responsibilities of the Department of Fisheries throughout Canada are, in brief, to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the optimum utilization of the resource; and to develop a proper public understanding of the resource and the industry.

The larger part of the Department's working force is stationed in the field in the four above-mentioned areas, and is comprised mainly of a protection staff and an inspection staff. The Protection Officers, including those on the Department's 64 patrol and protection vessels, are concerned with the enforcement of the conservation regulations under the Fisheries Act and other Acts designed to ensure a continuing maximum yield of fish. The Inspection Officers are responsible for the inspection of fish products and processing plants under the Fish Inspection Act and relevant sections of the Meat and Canned Foods Act.

The conservation program of the Department is carried out by the Conservation and Development Service. Protection officers not only enforce regulations pertaining to restricted areas, close seasons, limitations in location and types of gear, but they inspect spawning streams and keep them clear of obstructions. Engineers of this Service construct fishways to enable fish to by-pass dams. Hatcheries are maintained to restock waters where the fisheries are federally administered.

To ensure a high standard of quality, inspection of fish and fish products is carried out by the Inspection and Consumer Service. Fish inspection laboratories are maintained on the Atlantic and the Pacific Coasts. The Service also has a staff of home economists who operate a test kitchen at Ottawa and carry out demonstrations and lectures on methods of preparing and cooking fish and fish products.

Through the mediums of printed material, films, radio and exhibitions, the Information and Educational Service keeps the public informed on the various aspects of the industry and the work of the fisheries service with the object of developing a better understanding of the resource and those engaged in its exploitation. The Service works closely with the Conservation and Development Service in matters concerning conservation of fisheries, and with the Inspection and Consumer Service toward encouraging increased consumption of Canadian fish products in both North American and export markets.

The Markets and Economics Service, which has a staff of economists and market analysts, is responsible for bringing together a fund of factual information, through surveys and other means, on the primary fisheries and on the processing, transportation and distribution of fishery products. Such facts and their interpretation form the basis for development and other programs of the Department. In the marketing field continual study and interpretation is carried out on market trends in the foreign and the domestic fields. In co-operation with the Department of Trade and Commerce and its Trade Commissioner Service, work is being done on the development and extension of export markets for Canadian fish.

In addition to providing these regular services, the Department assists the commercial fishing industry in several special ways. For the purpose of promoting efficient primary fishing operations and improving the marketing of fishery products, assistance is provided for the construction of draggers and long-liners and for baitfreezing and storage facilities on the Atlantic Coast. Restrictions against trawlers have been eased to permit the licensing of new trawlers built in Canada or the United Kingdom. For each new trawler built in Canada, the owner is eligible for a licence to operate a used trawler imported from either the United Kingdom or the United States and registered in Canada after payment of duty. A bona fide applicant wanting only one trawler can import a used one from the United Kingdom without having to lay down a new keel in Canada.

The Department also provides assistance in the education of fishermen by making payments to educational institutions that have agreed to carry out adult educational work among fishermen.

The Fisheries Research Board.-Under the Fisheries Research Board of Canada Act, 1937 (c. 37), the Board has charge of all federal fishery research stations in Canada. It consists of 15 members appointed for five-year terms by the Minister of Fisheries. Nine of the members are scientists from universities or other institutions engaged in research work bearing on fishery problems; four members represent the fishing industry; and two members are from the Department of Fisheries.

The general types of work of the Board are biological and technological and are carried out at seven stations: the Biological Station at St. Andrews, N.B., with its substation at Ellerslie, P.E.I.; the Pacific Biological Station, Nanaimo, B.C.; the Central Fisheries Research Station, Winnipeg, Man.; the Newfoundland Fisheries Research Station, St. John's, N'f'ld.; the Atlantic Fisheries Experimental Station, Halifax, N.S.; the Pacific Fisheries Experimental Station, Vancouver, B.C.; and the Gaspe Fisheries Experimental Station at Grande Rivière, Que.

Scientific investigations are an important part of the development of the commercial fishing industry and provide the basis for conservation measures put into effect by the Department. Almost all the principal stocks of commercial fish are under observation by the Board's biologists. Many species, such as Pacific salmon, Atlantic salmon, Atlantic groundfish, lobster, herring, albacore, whitefish, whales, oysters and clams, are being studied intensively. The studies provide knowledge of the life history, growth rate, reproduction, distribution, enemies, diseases, etc., of the fishes, shellifish and sea mammals. Special investigations are undertaken as problems arise. A few years ago the Board conducted a survey of the fisheries resources of the Northwest Territories and, at present, it is exploring the fisheries resources of Canada's Eastern Arctic.

Fundamentally, the object of the Board's technological investigations is to eliminate waste in the fishing industry. To attain this objective it is necessary to utilize not only all fishery products that come out of the waters but to put those products to the best possible use in the light of current knowledge. The Board's knowledge is continually expanding through basic and applied research and this is helping to bring about a wider distribution of fishery products, a higher level of quality in the products marketed, a better understanding of the use of fish in general nutrition and of fish by-products for food, medicinal and industrial purposes.

The Fisheries Prices Support Board.-Under the Fisheries Prices Support Act passed in 1944, this Board was set up in July 1947 to recommend, to the Government, price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of an Acting Chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry, representative of the various fishproducing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices nor has it any jurisdiction over operations in the fishing industry or the fish trade.

Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum aggregate amount of $\$ 25,000,000$ but only on recommendation of the Federal Treasury Board and authorization of the Governor in Council. The most recent prices support action by the Board resulted from marketing problems in respect of Newfoundland salted codfish.

The Board maintains a small staff at Headquarters for those administrative and research activities essential to operation. The work of the staff is closely integrated with that of the Department's Markets and Economics Service and, where possible, all services required by the Board are carried out by Departmental personnel. The Board has carried out field surveys on market conditions and possibilities, and on factors affecting the income of fishermen in the various producing areas. It keeps the financial position of fishermen under continuous review and makes recommendations to the Government on the basis of the facts as it finds them. Special investigations are made when serious problems arise in particular areas.

International Fisheries Conservation.-Because fisheries regulation is sometimes needed on the high seas in international waters, international treaties have had to be made. Canada's obligations under a number of international fishery treaties with the United States and other countries are administered by the Department of Fisheries.

Canada and the United States for years have led the world in joint fisheries conservation development. Major examples of this joint effort are the International Fisheries Commission, concerned with the preservation of the halibut stocks of the North Pacific and the Bering Sea, and the International Pacific Salmon Fisheries Commission, concerned with the conservation and development of the sockeye
salmon of the Fraser River. Investigations carried out under the Commissions' auspices, subsequent regulation and limitation of catches and, in the case of salmon, the construction of fishways, appear to have been successful in arresting and reversing an earlier trend towards depletion of these fisheries. Another case of restoring a depleted marine resource by international agreement and action is that of the fur seals of the Pribilof Islands in the Bering Sea. Under the Provisional Fur Seal Agreement, Canada receives 20 p.c. of the fur-seal skins taken annually by the United States Government from the Pribilofs. Only surplus animals are killed and the herd, once reduced almost to extinction by uncontrolled slaughter, is now believed to consist of more than $3,000,000$ seals.

In 1949, the Government of Canada became a signatory, along with ten other countries, to the International Northwest Atlantic Fisheries Convention which came into force in 1950. The work of the Commission established under this Convention concerns the scientific investigations of the fishery resources of the northwest Atlantic. The Commission has no regulatory powers but will make recommendations to the respective governments regarding measures that may be necessary for maintaining the stocks of fish that support the international fisheries in the Convention area. The first meeting of the Commission was held at Washington, D.C., in April 1951. At that time the Treaty had been ratified by Canada, Denmark, Iceland, the United Kingdom and the United States. Other signatories to the Treaty are France, Italy, Norway, Portugal and Spain. Temporary headquarters of the Commission is at the Fisheries Research Board Biological Station, St. Andrews, N.B.

A step towards international action in regulating the high seas fisheries of the northern Pacific Ocean was achieved in December 1951, when Canada, the United States and Japan conferred at Tokyo and reached an agreement on fisheries problems. A draft convention was drawn up and referred to the three Governments for acceptance but it has not as yet (November 1952) received final ratification. The Convention aims at providing the maximum sustained yield of the fishery resources of the northern Pacific non-territorial waters with each of the parties assuming obligations to encourage conservation measures. It provides also for the establishment of a commission representing the three parties. The commission will study the northern Pacific fisheries, determine the application of the treaty principles and will promote and co-ordinate the scientific studies necessary for ascertaining conservation programs.

Under existing principles of international law, all nations have an equal right to exploit the fishery resources of the high seas. Problems have arisen when attempts have been made to conserve certain resources and the Convention is the first attempt to meet these problems. By joint agreement, Canada, the United States and Japan are prepared to waive some of these international rights and, under certain conditions, to abstain from fishing stocks that are under conservation by one or more of the other parties. Halibut, salmon and herring off the British Columbia coast meet the conditions of the Convention and Japan has agreed to abstain from fishing these resources.

Canada is a member of the International Whaling Commission and was represented at the third annual'meeting of the Commission in 1951 at Capetown, Union of South Africa. Canada is obligated to collect additional biological data. Whaling operations are carried out off Newfoundland and the British Columbia coast.

## Subsection 2.-The Provincial Governments*

An outline of the work undertaken by each of the Provincial Governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.-The union of Newfoundland with Canada on Mar. 31, 1949, brought about a transfer of some responsibilities in fisheries administration. The Newfoundland Fisheries Board remained the agency of government in the supervision of salt-codfish marketing, but fish and plant inspection, operation of bait depots, etc., became the concern of the Federal Department of Fisheries. The Board, formerly responsible to the Government of Newfoundland through the Commissioner for Natural Resources, became responsible to the Minister of Fisheries for Canada.

The Provincial Government is concerned mainly with improvement and development in fishing and production methods and has conducted experiments in long-lining and deep-water trawling, in the construction of multi-purpose fishing craft and in the exploration of potential fishing grounds. Steps are being taken to secure more efficient use of fisheries salt. Loans have been made available to processors for the establishment or development of fishing fleets and processing plants, and to fishermen for the construction and purchase of modern vessels capable of greater variety of fishing operations and larger production.

In 1951, the Governments of Canada and Newfoundland established the Newfoundland Fisheries Development Committee, consisting of representatives of fishermen, processors and exporters, and of both Governments. The objective of this Committee is to establish the role of each sector of the industry and each government, jointly or severally, in the organization and development of the fisheries. Action has been taken by both Governments in certain matters considered as necessary preliminaries to an over-all program, such as an economic and sociological survey of fishing settlements, and the encouragement of the use of community, rather than individual stages and rooms by shore fishermen.

The inland waters of Newfoundland, which provide excellent sport fishing, are not commercially exploited to any significant degree. The lakes and ponds remain under the authority of the Natural Resources Branch of the provincial Department of Mines and Resources, but the rivers and streams-the resort of migratory fish such as salmon and sea trout-passed under federal jurisdiction as a consequence of the union. Matters of conservation and guardianship are, therefore, mainly or wholly the concern of the Federal Department of Fisheries, although to the extent to which they affect the ponds and lakes they are subject to provincial or joint action.

Prince Edward Island.-The major responsibility for aid to the fisheries of this Province is undertaken by the Federal Government. Prince Edward Island, however, has established a Department of Industry and Natural Resources which administers the commercial and game fisheries.

Consultations were held in 1950 with marine architects and fishing ports were visited along the Atlantic seaboard with a view to obtaining the best information on boats and gear most adaptable to the Province's coastal waters. These

[^186]studies resulted in the adoption of the $60-\mathrm{ft}$. Island Dragger. During the search for information on boats, much was learned of the possibility of adapting the drag-net principle to smaller boats and experiments were conducted to ascertain power requirements and general feasibility. The major part of the revenue of the commercial fishermen of the Province is provided by lobster, smelt and oyster catches.

The streams of the Province are, as a whole, mostly spring fed and fairly constant in flow, thus providing excellent spawning grounds and nurseries for game fish, of which speckled trout are by far the most important. With such favourable conditions for reproduction the problem is to increase the production of trout of a size attractive to anglers. Comprehensive biological investigations are being carried on by the Fisheries Research Board to attain this objective by determining the most efficient procedure in stocking, managing and cropping. The Province provides the sites for these investigations and the Conservation and Development Branch of the Federal Department of Fisheries builds the necessary dams and supplies the fish required for experimental purposes.

The angling pressure in this Province is continuing to increase but many of the fertile and highly productive ponds have disappeared. During 1951, the Department, with a view to readjusting this situation, has repaired dams and restored many ponds and thus opened to the public, subject to the prevailing fishery regulations, many angling areas.

Nova Scotia.-The basic responsibility for the administration of tidal and inland fisheries in Nova Scotia is undertaken by the Federal Government. The Province, however, supplements the activities of this authority through its Department of Trade and Industry. In practice a system of co-operative effort has been worked out between the two authorities with each free to carry out individual responsibilities and specific programs. Provincial activities fall into three sections: development, administration and research.

Development.-Development activities include engineering services, financial assistance to the fisheries industry generally, and educational services to the fishermen.

Engineering services are related to the design, construction and equipment of boats, vessels and fish-processing plants. A marine engineer is employed for these services and for the extension of consultant services to all persons interested in the industry. Financial assistance is extended, by way of loans, for the construction and modernization of fish-processing plants and to fishermen for the acquisition of boats and engines. Where the requirements of large new plants have exceeded the capacity of local authorities, the Department's assistance has included provision of utilities such as water lines and rail sidings and the operation of a bait freezer at Cheticamp.

Educational services extended to fishermen comprise instruction in basic navigation, rules of the road, and care and maintenance of marine engines by means of short courses at selected outports and a permanent school maintained at Lunenburg. This educational program is assisted by grants from Canadian Vocational Training, Federal Department of Labour, under the provisions of the Vocational Training Co-Ordination Act.

Administration.-The Nova Scotia Fisheries Act serves to supplement federal jurisdiction and is administered jointly by the Department of Trade and Industry and the Federal Department of Fisheries. The Act requires fish plants and
fish buyers to obtain annual licences issued by the Department of Trade and Industry only on the recommendation of inspectors of the Federal Department of Fisheries and the certification of the Department of National Health and Welfare as to compliance with standards of construction, operation and sanitation contained in federal regulations.

Information obtained from the licensing activities and other statistics supplied by the Federal Department of Fisheries enables the Department of Trade and Industry to handle commercial and other inquiries in respect of the fisheries industry and to issue informational publications, such as the Nova Scotia Fisheries Year Book and directories of fish-packers and processors.

Research.-Provincial fisheries research activities have been confined largely to the inland fisheries for trout and salmon. The Department of Trade and Industry has carried out a four-year program of water control on the LaHave River in the interests of salmon preservation and development; has undertaken experiments in fertilization of lakes and in partial poisoning of lakes to reduce the numbers of coarse fish in competition with trout for the available food supply; and has conducted some special studies of trout populations and salmon migrations.

New Brunswick.-The commercial fisheries of New Brunswick are under the jurisdiction of the Federal Department of Fisheries. Since 1945, a Fisheries Division has been in operation under the Provincial Department of Industry and Reconstruction, now the Department of Industry and Development. In 1946, a Fishermen's Loan Board was established to provide financial assistance to bona fide fishermen for the purchase of new boats and engines. Since its formation this Board has loaned over $\$ 1,150,000$ of which over $\$ 700,000$ has been recovered to date. It has modernized the deep-sea fishing fleet by the introduction of a most effective small dragger 25 units of which are operating in the area of the Gulf of St. Lawrence.

Quebec.-The Minister of Game and Fisheries administers both the sea and inland fisheries of Quebec. The Department is composed of two divisions; the Division of Maritime Fisheries and the Division of Fish and Game, the latter being charged with the administration of the inland fisheries.

Sea Fisheries.-Quebec is the only province administering its own sea fisheries. For the benefit of producers and fishermen, it provides a system of cold-storage plants for the freezing and preservation of fish. Since the crection of the first plant in 1932, the network has grown to 50 plants with a daily freezing capacity of 250 tons of fish and a storage capacity of $16,000,000 \mathrm{lb}$. These cold-storage plants also perform a valuable service to fishermen by providing them with frozen bait. In addition, the Department owns and maintains 115 snow houses where fish may be chilled before being sent to storage or filleting plants; 40 culling sheds; and three artificial drying plants where $6,000,000 \mathrm{lb}$. of fish may be processed annually.

The Department maintains a staff of inspectors, fish wardens, technicians and technologists for the administration of fishery legislation and the application of new techniques to the expansion of the industry. The central administration is located at Quebec City, with an office at Gaspe for the administration of coldstorage plants. Statistics are compiled by the Department.of Trade and Commerce in co-operation with the inspectors of the Maritime Fisheries Division.

Fish inspection is carried out under federal and provincial legislation by provincial inspectors, who are vested with additional powers for export purposes by the Federal Government.

Educational work among the fishermen and producers is also conducted by the Department in order to teach the latest methods of fish preparation and obtain high quality products. The new Fisheries Training School at Grande Rivière gives to fishermen of all ages the opportunity of taking free theoretical and practical courses in fishery, while the Superior School of Fisheries at Ste. Anne-de-la-Pocatière trains technologists in a four-year course. The encouragement given to the co-operative associations of fishermen through the Social Economic Service of this same institution constitutes another phase of the work.

Another form of assistance is the maritime credit system whereby fishermen are enabled to obtain loans from credit unions for the purchase of boats and gear. The Department adheres to the federal-provincial agreement on the building of draggers (small trawlers) and long-liners and assumes the building costs on a fiveyear capital refunding plan.

The fish trade is being promoted by advertising campaigns in newspapers and magazines, cooking demonstrations, educational films and free distribution of fish recipes and publicity leaflets, as well as at fairs and exhibits.

Hydrographical research in the Gulf of St. Lawrence and the location of new fishing grounds as well as experiments of all kinds on sea-fish biology are being conducted by the Marine Biological Station at Grande Rivière and the two substations of the North Shore and Magdalen Islands. This research has brought into use new types of modern fishing vessels recommended to fishermen.

Inland Fisheries.-The Division of Fish and Game exercises jurisdiction over the inland waters. Protection of the fish and game is in the hands of 300 full-time wardens. Residents are required to purchase a licence for sport-fishing and hunting and the proceeds are applied to the improvement of fishing and hunting conditions. Commercial, non-resident, tourist and club sport-fishing licences are also issued.

Five hatcheries are maintained at strategic points throughout the Province: St. Faustin, Lachine, Baldwin's Mills, Tadoussac and Gaspe. These establishments distributed nearly $9,000,000$ fry, fingerlings and older fish, during the year ended Mar. 31, 1950, the species being speckled trout, Atlantic salmon and grey trout.

The Department administers four parks or reserves in which excellent fishing can be found. The Gaspe and Laurentides Parks are renowned for their trout fishing. The Chibougamau Reserve and the La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips, in search of pickerel, pike and grey or speckled trout. Four salmon streams, all under the jurisdiction of the Fish and Game Division, are open to anglers: the Romaine River, the St. Jean River, the Petite Cascapédia River and the Matane River.

The Department co-operates with sportsmen through a joint committee composed of departmental officials and the directors of the larger fish and game associations. The Committee studies the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the Province.

The Biological Bureau of the University of Montreal and the big piscicultural laboratory at Quebec City, with its two stations for practical work, located in the Mont Tremblant and Laurentides Parks, study problems connected with marine life.

Ontario.-Prior to 1946, the fishery resources of Ontario were administered by the Ontario Department of Game and Fisheries. That Department has since been incorporated into the Ontario Department of Lands and Forests as the Division of Fish and Wildlife and, in dealing with fishery matters, operates under the authority of the Fisheries Act (Canada), the Special Fishery Regulations for the Province of Ontario, the Ontario Game and Fisheries Act and the Regulations connected therewith.

Commercial Fishing. -The commercial fishing industry in Ontario provides employment to about 4,000 persons directly and to many more indirectly, and produces an annual harvest of between $25,000,000 \mathrm{lb}$. and $35,000,000 \mathrm{lb}$. of fish. The landed value revenue to licensed fishermen for the production of fish was $\$ 7,034,000$ for the year ended Mar. 31, 1951.

The industry, although widely scattered throughout the Province, is centred chiefly on the Great Lakes, particularly Lake Erie which is noted for its whitefish, herring and blue pickerel. Lake Superior continues to be the leading producer of lake trout. Other principal species of fish taken commercially in Ontario are: lake trout, yellow pickerel, herring or ciscoes, sturgeon, pike, catfish (including bullheads), carp and suckers.

Many of the smaller inland lakes are commercially fished, especially those in the northwestern portion of Ontario and careful management of these lakes is essential to ensure continued production.

Fishing boats vary from small craft to $60-\mathrm{ft}$. tugs, and types of gear used also vary from the most common gill net, pound and trap nets, seines and baited hooks to small hand-operated seines and dip nets.

Recent Developments.-Modern fishing methods and equipment have rapidly entered the fisheries industry in Ontario in the past few years. Diesel-driven steelhull tugs have replaced the steam-driven wooden tug. New aids to fishing methods have been developed, such as depth-sounding devices, radar, ship-to-shore and ship-to-ship communications, and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods also are in use, as are new types of fishing gear. Nylon gill net is replacing cotton and linen nets and a very efficient and economical trapnet is gradually replacing the pound-net in Lake Erie and other waters.

With the use of these up-to-date fishing methods and equipment in Ontario's fresh-water fishing industry, the administration and management, through excellent co-operation and understanding of the complex problems involved by both the Government and the fishermen, through their local associations and the Ontario Federation of Commercial Fishermen, are working out the best practices in the interest of all concerned and of the industry as a whole.

Angling.-In Ontario, with its estimated water area of 49,300 sq. miles, angling constitutes one of the most widely distributed recreations. There are 144 different kinds of fish in the Province, including such species as lake and speckled trout, yellow pickerel, black bass, pike and maskinonge.

Sport fishing may be considered one of the chief factors concerned with the increase and development of the tourist trade and, while it is difficult to measure the value of this resource, a revenue of $\$ 1,450,180$ for the year ended Mar. 31, 1950, was obtained from the sale of angling licences, mainly to non-residents as residents require a licence for Provincial Parks only.

In order to maintain Ontario's reputation for excellent game-fishing, the management of this renewable resource is a prime factor, and a well-trained field staff of conservation officers and biologists is located in the 22 forestry districts of the Province.

Fisheries Research.-In 1947, the South Bay Experiment, under an Advisory Committee composed of representatives of the Fisheries Research Board of Canada, the Ontario Government, the Ontario Federation of Commercial Fishermèn, the Ontario Federation of Anglers and Hunters and the Northern Ontario Outfitters Association, was begun on Manitoulin Island in Lake Huron to determine the benefits to the yield of the more valuable fish by exerting equal fishing pressure on the less valuable or worthless fish.

The increase in the sea lamprey and the drastic drop in production of lake trout in recent years in Lake Huron (including Georgian Bay and North Channel) are believed by many authorities to be directly related and have led to considerable joint research by the Ontario Government and by Federal and State Governments in the United States. Co-operation is maintained in the exchange of biological findings and, where practicable and feasible, the results are applied in an attempt to control this menace.

Other fields of fishery research include those carried out at the Ontario Fisheries Research Laboratory in Algonquin Park and at the Southern Research Station at Maple which was established in 1948 by the Provincial Government in co-operation with the University of Toronto.

Established fish-management principles are applied by biologists in the various forestry districts. Their program includes such projects as biological surveys and investigations, bass harvesting, coarse fish removal, sea lamprey control, creel census studies, fish tagging and other related subjects.

Provincial Hatcheries.-In order to supplement natural restocking, Ontario has 28 hatcheries and rearing stations. Excellent results have been produced in the culture and distribution of the various species of both commercial and game fish. The distribution for the year ended Mar. 31, 1950, numbered 583,368,799, comprising whitefish, herring, pickerel, trout (including lake, speckled, brown and Kamloops), maskinonge, bass and ouananiche.

Two of the finest trout-rearing stations on the Continent are found in Ontario at Dorian, near Port Arthur and at Hill Lake, near Englehart.

Manitoba.-The commercial fisheries of Manitoba, where there are 26,789 sq. miles of lakes and rivers, yield an annual harvest of fish in excess of $30,000,000 \mathrm{lb}$. This huge catch is worth approximately $\$ 5,000,000$ annually and the greater part is shared by the commercial fishermen who number over 7,000 . About 90 p.c. of the Manitoba fishery production is exported to the United States, assisting materially the national balance of trade. In recent years the main efforts of the industry have been directed toward improvement in quality. Adequate cold storage facilities are available in the large centres; freighting boats are equipped with mechanical refrigeration, packing sheds are provided with cooling rooms and fishermen are allowed an unlimited amount of crushed ice so that the catch may be placed in ice as soon as removed from the nets. During the winter fishing seasons the fish is rushed to railhead by modern rapid transportation, including aeroplane, bombardier-snowmobile and tractor trains. The filleting industry has expanded
significantly and much of the catch is now prepared ready to cook and attractively packed in cartons. Lakes producing whitefish are surveyed annually to ascertain the quality of fish therein. Catch limits on most of the commercially fished lakes are set and rigidly enforced but an experiment is now in progress in a commercially fished lake to improve quality by intensive fishing. In two of the larger summer fishing operations, individual catch limits were set and have been found satisfactory.

The Province of Manitoba operates four fish hatcheries and two spawn-taking camps on commercially fished lakes. In the Provincial Park areas one sportfish hatchery is in operation and one egg-collecting camp. From these hatcheries $81,550,000$ whitefish eyed eggs and fry were planted on natural spawning grounds in Lake St. Martin and Lake Winnipeg. In Lake Manitoba and Lake Winnipegosis $107,300,000$ pickerel eyed eggs and fry were distributed. In $1951,616,660$ trout fingerlings from the Whiteshell Trout Hatchery were liberated in sport-fishing waters of the Whiteshell Provincial Park and in the Duck Mountain area and lakes north of The Pas. A program of introducing adult fish into lakes is being carried out. Emphasis is also being placed on the poisoning of lakes and restocking with rainbow trout.

Sport fishing in Manitoba is increasing in importance, judging by the annual demand for non-resident angling licences in summer, and for resident and nonresident angling licences in winter.

Saskatchewan.-The administration of fisheries in the Province of Saskatchewan comes under the Fisheries Branch of the Provincial Department of Natural Resources with its head office at Prince Albert. Most of the fisheries resources are concentrated in the northern half of the Province, where the lakes have always been a source of food to the fur trader, trapper, prospector and the Cree and Chipewyan Indians who inhabit the area, and also provide food and supplementary income to the settler and homesteader on the agricultural fringe.

The Province of Saskatchewan has $13,725 \mathrm{sq}$. miles of water and the principal species of fish include lake trout, whitefish, pickerel, northern pike, sturgeon, cisco, Arctic grayling, goldeye, mullet, perch and burbot.

There are approximately 110 commercially fished lakes in the Province. In the year ended Mar. 31, 1951, the total commercial production of fish of all species amounted to $8,731,292 \mathrm{lb}$. with a railhead value of $\$ 1,360,114$. Since 1945 the growth of the filleting industry has been of particular significance and 15 filleting plants have been established. Annual production of fillets is now over $1,000,000 \mathrm{lb}$. Total sales of fish in the Province in $1950-51$ were $1,986,776 \mathrm{lb}$., which represents a considerable increase over the past number of years. The fishery resources are also important to domestic fishermen and to mink ranchers in the Province. In 1950-51, 65 fur-farm fishing licences were issued and a total of $25,774 \mathrm{mink}$ were fed under these licences; 637 domestic licences and 1,463 free licences to Indians were also issued.

There has been marked development recently in sport fishing. For the fiscal year 1950-51 there were 33,336 resident and 5,366 non-resident angling licences sold, compared with 6,000 resident and 1,500 non-resident licences sold in 1945. The recreational value of sport fishing in the Province has a great potential.

The main endeavour in the fish cultural activities in the Province in recent years has been to extend the range of the Arctic grayling species from the Far North into the Churchill River area, and the introduction of Eastern brook
trout and certain warm water species into areas where preliminary study seems to indicate that the environment was suitable. To a large extent the indiscriminate planting of fish has been discontinued. A fish hatchery is operated at Fort Qu'Appelle for the hatching-out of pickerel, rainbow, brown and lake trout, and two experimental ponds have been built. The purpose of these ponds is to study, under controlled conditions, the introduction of warm-water species from the United States. An experimental hatchery has been established at Lac la Ronge, where Arctic grayling and lake trout eggs have been hatched. An Arctic grayling spawncamp has also been established in the Fond-du-Lac River, near Black Lake and a pickerel spawn-camp is located on the Montreal River, near Lac la Ronge.

The management of the provincial water areas has been placed on a scientific basis. In 1947 a large-scale biological program was undertaken and more than 100 water areas have since been studied. The main emphasis has been on the study of productivity of the various water areas as well as the inter-relationship of the species and life histories. In so far as known facts will permit, the management of the various lakes has been placed on a sustained-yield basis. Experiments are in progress on the introduction of non-native species into suitable water areas. Where sport-fishing pressure has increased, such as on Lac la Ronge, Last Mountain Lake and Amisk Lake, a creel census has been established and the annual harvest is recorded. A Fisheries Laboratory was established in 1949 at the University of Saskatchewan and a permanent biologist was added to the staff. Approximately 12 graduate and undergraduate biological students of the University are employed each summer on biological surveys.

Progress has also been made on technological research. At Prince Albert a pilot plant was established where experimental smoking and canning is conducted. As a result of this research work, the sales of smoked fish in the Province has increased very considerably. A Research Committee was established at the University of Saskatchewan to study certain aspects of the canning of inland fish, particularly the problem of the muddy flavour which appears to be present in the summer-caught fish from Last Mountain and Primrose Lakes.

The Fisheries Branch has conducted a program of education designed to acquaint people of the Province with the importance of scientific research and the necessity of certain regulations governing the administration of fisheries. Under the scientific program, three 16 mm . colour and sound films have been made on sport fishing during the past three years.

Alberta.-Commercial and game fishing are administered by the Fisheries Branch of the Department of Lands and Forests.

Regulations under the Fishery Act (Alberta) designed for improvement in the packing, handling, processing, storage and quality of commercial fish have been well received and supported by the Alberta industry. In line with a policy for producing good-quality fish, lakes in which whitefish are infected with the pike tapeworm and do not meet the quality standard have been closed to commercial fishing.

Biological surveys of many lakes and streams over the past ten years have provided an opportunity to observe the result of past management policies. It was found that the classical tenets of trout-stream management, including close seasons, legal minimum, feeder stream closure, and hatchery plants, were inadequate or incorrect. A new management plan featuring the 'fallowing' of smaller tributary
streams, abolition of the legal size minimum, except in the case of lake trout, and a continuous open season on large streams and rivers, is being conducted. In addition, there is no close-season angling for pike, pickerel and perch. Trout rearing stations and a provincial trout hatchery support trout stream populations whenever required in cases of natural disaster, severe winter kill, introduction of new species or areas that have no spawning grounds.

A long-term experiment to test the effectiveness of the Canyon Creek whitefish hatchery was begun in 1941 by planting "eyed" eggs in a series of lakes in alternate years. The evidence gathered from a series of five lakes, 12 to 462 sq. miles in area indicated that the hatchery-supported year classes were no stronger than those not supported. Observations on the efficiency of natural reproduction indicated that about 10 p.c. of the eggs survive to become fry, which is sufficient to produce about one hundred times the number of adult fish a lake can support. Thus, although eyed eggs introduced by the hatchery also survived and produced fry, as evidenced by the successful re-stocking of several lakes formerly without whitefish, natural reproduction was found to be sufficient and can provide more than additional stock from the hatchery and thus, would not change the ultimate result. The whitefish hatchery was, therefore, closed.

British Columbia.-The Provincial Department of Fisheries was organized in 1901-02 and shortly became very active in fish-cultural work, building and operating fish hatcheries and instituting scientific research into various fishery problems.

Broadly speaking, the administrative and regulative jurisdiction over the fisheries in British Columbia rests with the Federal authority. When British Columbia entered Confederation in 1871, the Government of Canada undertook to protect, conserve and promote the fisheries of the Province, and one of the important functions of the Provincial Department of Fisheries is to observe these aspects and to keep the Provincial Government informed through the appropriate Minister.

The ownership of the fisheries in the non-tidal waters is vested in the Crown, in the right of the Province, as are the shell-fisheries, such as oyster-fishing and clam-fishing in the tidal waters. The authority to administer and regulate these fisheries is vested in the Province, although the regulations covering them are made under federal Order in Council on the advice and recommendation of the Province.

The Provincial Department of Fisheries is charged with the administration of the Fisheries Act and with such other duties as may be assigned to it by the Lieutenant-Governor in Council. The Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish-processing plants under a system of licensing. Provision is also made in the Provincial Fisheries Act for the settlement by arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations in conformity with regulations made under the Act. The collection and publication of certain statistics and other pertinent data relative to the industry are also the responsibility of the Provincial Department of Fisheries.

Net-fishing in the non-tidal waters of the Province, including commercial fishing, is regulated and administered by the Provincial Department of Fisheries, while authority for regulation of the game fisheries in the non-tidal waters is vested
in the Game Commission, a branch of the Provincial Government administration. The Game Commission operates a number of trout hatcheries and egg-taking stations for re-stocking purposes.

The harvesting of marine plants of commercial importance in British Columbia, including the kelps, has recently been placed under the Provincial Department of Fisheries for regulation and control. Some research has already been done on a few of the more important species and more will be undertaken as required.

The Provincial Department of Fisheries has established a marine laboratory at Ladysmith, on Vancouver Island, for the purpose of conducting biological research into those species over which the Province has control, principally oysters, clams, and other forms of shell-fish as well as marine plants. This research is conducted with the object of encouraging the industry to produce better products more economically and of enabling the Department to regulate the various species so that maximum exploitation may be obtained on a sustained yield basis. The Department co-operates closely with the research work done by the Fisheries Research Board of Canada, particularly on the Pacific Coast.

## Section 2.-Fishery Statistics*

## Subsection 1.-Primary Production

The commercial fisheries of Canada (exclusive of the Province of Newfoundland) yielded $\$ 151,982,000$ in marketed value in 1950, an increase of nearly 16 p.c. over the 1949 figure of $\$ 131,138,000$. Although the total quantity of fish landed in 1950 reached a new peak of $1,491,222,000 \mathrm{lb} ., 4$ p.c. higher than the previous record of $1,431,660,000 \mathrm{lb}$. in 1948, the increase in marketed value was due mainly to higher average selling prices for many species and the development of those products that command higher prices, particularly in foreign markets.

The data for Newfoundland are excluded from the following tables as no attempt was made to collect the comparable information. Steps were taken in 1952 to collect the principal statistics from all the important fish-processing firms in that Province and these data will be included in the tables for 1951.

98452-38

The three leading provinces, by marketed value of fisheries products, accounted for 82 p.c. of the total for Canada in 1950; British Columbia's share was 45 p.c., a substantial increase over previous years, followed by Nova Scotia with 25 p.c. and New Brunswick with 12 p.c.

| ${ }^{1}$ Newfoundland figures not available. | ${ }^{2}$ Nor | Wwest Ter | es only. |  |  |

In 1950, salmon retained the position it has held for more than fifty years as the leading fish, on the basis of marketed value; cod maintained the second place while lobsters took over third position from herring. Notable advances in order of value were shown by halibut, clams, blue pickerel and plaice, while grayfish dropped completely out of contention in 1950.

Table 4 shows the quantities landed (primary products only) in thousands of pounds, and values marketed (primary and secondary products) in thousands of dollars, of the main species of the commercial fisheries. Minor items, and secondary products not specifically derived from one particular kind of fish, are grouped in the item "Other"

## 4.-Quantities Landed and Values of All Marketed Products of the Chief Commercial Fisheries, 1946-50

Nors.-The quantity landed excludes the weight of livers, but the value of liver products is included in the value for the species concerned.

${ }^{1}$ Newfoundland figures not available.

The value of the equipment used in primary operations of the commercial fisheries in 1950 increased by $\$ 10,700,000$ over the 1949 figure. A rise in the total estimated value of craft of all types, especially vessels, accounted for a good proportion of the increase. Of the total investment in the agencies of primary production, 86 p.c. was employed by the sea fisheries.

## Subsection 2.-The Fish-Processing Industry

The products of the fish-processing industry were valued at $\$ 118,968,000$ in 1950, an increase of $\$ 7,049,000$ over the 1949 figure. A total of 597 firms were in operation in Canada (not including Newfoundland); most of these establishments were engaged in at least two or more of the different phases of processing which include canning, curing, freezing, reduction and selling of fresh fish.

## Section 1.-The Fur Industry

## Subsection 1.-Fur Trapping

The fur industry was at one time the most vigorous and remunerative industry in Canada and it still contributes many millions of dollars annually to the national income. Until the end of the 19th century practically all Canadian furs were wild-caught and although fur-farming has developed rapidly during the present century, trapping continues to provide much more than 50 p.c. of the income from raw furs produced in Canada.

Wild fur-bearers are still taken in moderate numbers, even in settled areas of this country, but the populations of such animals have, in general, been so reduced by the advance of settlement that the principal trapping areas now lie in the Northwest Territories and the northern parts of the provinces. Many wild animals, including some important fur-bearers, are subject to marked fluctuations in numbers from year to year, and these fluctuations are often greatest and most nearly regular in northern regions. The number of pelts of certain wild species taken annually is notably affected by these fluctuations.

Another and perhaps more important factor governing the 'take' of wild animal furs is the fluctuation in demand and in price consequent on changes in fashion. Thus, the vogue of recent years for short-haired furs, resulting from the desire of women to present as slender a silhouette as possible while wearing a fur coat, has caused a decrease in demand for fox and other long-haired pelts and a corresponding decrease in the number of such pelts taken by trappers. In areas, such as parts of the Northwest Territories, where these furs were formerly a staple source of income, this change in style has resulted in serious hardship but it is obvious that the problems thus created cannot be solved by wildlife-management practices.

Conservation and management of fur-bearers are, however, receiving increasing attention from federal and provincial authorities. Scientific studies of many species are being made to determine the principal factors controlling their numbers, the optimum annual harvest that should be taken, and the best methods of increasing this harvest. Among the controlling factors being studied are food, shelter, weather, diseases, parasites, and predators.

In certain fur-producing districts, provincial and territorial authorities have instituted a registration system in accordance with which trap-lines or trapping areas are assigned to individuals on a constant basis. This system puts the responsibility on the registered trapper for the conservation of fur-bearers in his own area and has, in general, proved highly successful.

Forest fires frequently wipe out wild-fur production for some time over large areas. Provincial forest services combat this menace by well-organized fire-fighting systems, including the use of aircraft and parachute-dropped fire-fighters and equipment, and by public education. Beaver dams also help to level off the effects of floods and drought, natural catastrophes that seriously affect fur-bearers and other wildlife. Beavers are, in fact, so useful as assistants to wildlife-management services that numbers of them are often transplanted, by air or otherwise, from areas where they are too numerous to areas where their activities will improve habitat for themselves and for other species.

The most important aspects of management of the fur-trapping industry are: constant practical scientific research, maintenance of suitable habitat and its improvement where possible, sound and balanced regulation of the harvest of furbearers, provision of competent and adequate field staffs, and true education of trappers with respect to the principles of wildlife management. By these means many areas depleted of fur-bearers have once again become productive. Such means will become increasingly important in maintaining Canada's position as a major producer of raw furs.

## Subsection 2.-Fur Farming

Although early developments in raising fur-bearing animals on farms took place first in Prince Edward Island around 1887 and in Quebec in 1898, fur farming to-day is carried on in all the provinces of Canada. Foxes were the first fur bearers to be raised in captivity on a commercial scale but mink, chinchilla, raccoon, marten, fisher, fitch, nutria and many others are now being reared. Mink are the most numerous, followed by the various types of foxes and these two far outnumber all other kinds of fur-bearing animals.

There was a slow and steady increase in the number of fur-farms until 1920, when 587 were reported, with a period of more rapid growth from 1920 to 1938 when the number had reached 10,435 . After the outbreak of hostilities in 1939 and the loss of the London and European markets, prices declined and many fur farms went out of production. Though prices rose considerably after the War, operating costs also increased and the number of fur farms, particularly those conducted in conjunction with other farming operations, continued to decrease. By 1950 only 3,492 reported but, despite this decrease in number, volume of production has gradually increased over the period.

While the earliest and most intensive fur-farming operations were concerned with fox-raising in the Maritime Provinces and Quebec, the sharp decline in the popularity of fox furs and the steady rise in mink resulted in Ontario and Western Canada taking predominant positions in the raising of fur animals. A distribution of the 317,000 animals on fur farms at Dec. 31, 1950, showed 11 p.c. in British Columbia, 47 p.c. in the Prairie Provinces, 25 p.c. in Ontario, 11 p.c. in Quebec and 6 p.c. in the Maritime Provinces.

Furs have for centuries been used for clothing and adornment and, with the demands of fashion, the development of new colour phases in fox and mink has been an important incentive to the fur-farming industry. There have always been mink mutations in the wild state but these unusual animals stood little chance of survival and such pelts were exceedingly rare. Only by breeding under protection could these strange animals be increased in number and variety. Starting with wild-caught mink, breeders have, by cross-breeding, produced mink furs in a
multitude of colours and patterns. By selective breeding the original reddishbrown mink has become a beautifully furred animal with a thick coat of soft velvety texture and rich blue-black colour, set off by a background of blue or slateshaded under-fur.

Among the earliest mutations to appear was an attractive bluish-gray mink which became known as "Platinum" mink. Mink mutations began to appear in ever-increasing numbers on farms from coast to coast and later, as breeders again cross-bred these new mutations, a still greater profusion of colour combinations appeared. An excellent example of this cross-breeding of mutations is the "Sapphire" mink, a cross of the steel-blue "Aleutian" with the blue-gray "Platinum" Other unusual colour patterns are the "Royal Pastel", a beautiful brown mink with a bluish cast, and an exquisite snow-white mink.

It has long been known that the mink produces an extremely versatile fur and the industry is now setting great emphasis on this quality, thus gaining for mink a place among the high-quality furs of the world.

## Section 2.-Statistics of Fur Production*

Total Fur Production Statistics.-Early records of raw-fur production are confined to the decennial censuses, when account was taken of the numbers and values of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of raw-fur production, basing its statistics on information supplied by the licensed fur traders. This survey was continued for some years. More recently, annual statements based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are now used in the preparation of the statistics issued annually by the Bureau. Figures for Prince Edward Island are based on returns supplied to the Dominion Bureau of Statistics by fur traders in that Province.

${ }^{1}$ Approximste.
Ontario leads the provinces in value of fur production, accounting for 26 p.c. of the total in the 1950-51 season. The numbers of pelts taken in both Alberta and Manitoba were higher than in Ontario, but in these provinces muskrat and squirrel, which are lower-priced furs, made up the major portion of the total. In Ontario the more valuable mink, beaver and fox pelts brought the total value to a higher level.

| Totals | 7,377,491 | 23,184,033 | ... | 7,479,272 | 31,134,400 | ... |

Fur Farm Statistics.-In 1950 the number of fur farms continued the decrease occurring each year since 1946, dropping from 4,049 in 1949 to 3,492 in 1950. The value of fur animals on farms at Dec. 31, 1950, was slightly higher than at the end of 1949 and the revenue from operations was also higher amounting to $\$ 11,800,000$ compared with $\$ 9,500,000$.

The number of farms reporting foxes in 1950 decreased since 1949 by 26 p.c. to 985 , while the number of animals on these farms was lower by 21 p.c., totalling 23,811 valued at $\$ 641,828$. Mink farms showed a smaller decline from 2,798 in 1949 to 2,557 in 1950, but the number of animals on the farms reached a record total of 286,152 valued at $\$ 8,400,000$ in 1950 , which was 22,479 more in number and $\$ 1,900,000$ higher in value than in 1949. Fox pelts produced decreased by 38 p.c., while mink pelts increased by 1 p.c.

## Section 3.-Marketing of Furs

The first Canadian fur auction sale was held in 1920 at Montreal, Que., and although that city has always been the leading Canadian fur mart, auction sales are now held at Vancouver, B.C., Edmonton, Alta., Regina, Sask., and Winnipeg, Man. The Saskatchewan Government maintains a Fur Marketing Service at Regina to assist the producers in that Province.

Grading.-The grading of furs was introduced in 1939 by the Federal Department of Agriculture to secure uniformity so that furs may be purchased by grade without the necessity of buyers from other countries personally examining the
pelts. Grading offers many advantages to the producer as well as to the trade in general. It educates the rancher as to the proper value of his pelts and creates an incentive to improve the quality of the product; it furnishes guidance in the planning of future matings, aids in raising the standard of quality of the entire crop of pelts and helps in advancing the level of prices for high-quality pelts.

Exports and Imports.-Prior to World War II, Canada marketed fur pelts mainly in the United Kingdom but, since that market was practically dormant during the war years, the fur trade was carried on mainly with the United States. A definite revival of trade with the United Kingdom was shown between 1946 and 1948 but decreases of 39 p.c. and 18 p.c., respectively, in exports of furs to that market were shown in 1949 and 1950.

The Canadian fur trade, both export and import, is chiefly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada making up a comparatively small proportion of the total. Exports consist largely, of course, of furs which Canada produces in greatest abundance, mink being the most valuable followed by beaver, muskrat and fox. On the other hand, furs such as Persian lamb, certain types of muskrat, rabbit, squirrel, sheep and lamb, which are not produced to any extent in Canada, make up the major portion of the imports.

Total exports and imports of all furs to and from the United States, the United Kingdom and all countries are given for the years 1947-49 in Part I, Section 4, of the Foreign Trade Chapter XXI, Tables 13 and 14.

## Section 4.-The Fur-Processing Industry*

The rather general term 'fur processing' includes the fur-dressing and -dyeing industry and the fur-goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis, while the latter is a manufacturing industry that actually makes up fur goods such as coats, scarves and gloves.

Fur-dressing and -dyeing industry statistics were first recorded in 1917, when 12 establishments with 512 employees reported receipts of $\$ 1,071,805$. Eight establishments in 1924 reported a revenue of $\$ 1,120,895$, expenditures on dyes, chemicals and other materials used of $\$ 162,013$ and on salaries and wages to 539 employees of $\$ 561,233$. Of the $3,473,909$ skins treated in that year, muskrat pelts made up 47 p.c., rabbit 19 p.c. and squirrel 10 p.c. By 1950 the number of skins treated had increased to $13,639,110$, muskrat accounting for 34 p.c., rabbit for 29 p.c. and squirrel for 13 p.c. Other types of skins treated fluctuated very widely over the past quarter-century, the numbers being affected not only by climatic conditions under which trapping is carried on but also by the development of fur farming and, above all, by the vagaries of fashion. Principal statistics of the fur-dressing industry for the years 1948, 1949 and 1950 are given in Table 8.

## 8.-Principal Statistics of the Fur-Dressing Industry, 1948-50

| Item | 1948 | 1949 | 1950 |
| :---: | :---: | :---: | :---: |
| Establishments.................................... . . . | 21 | 21 | 22 |
| Employees on Salaries- |  |  |  |
|  | 123 37 | 109 42 | 120 44 |
| Employees on Wages - |  |  |  |
|  | 1,124 318 | 1,224 | 1,187 282 |
| Salaries paid......................................... | 596,035 | 628,890 | 653,615 |
| Wages paid........................................... \$ | 2,523,432 | 2,858,743 | 2,766,881 |
| Cost of materials used (dyes, chemicals, etc.).......... \$ | 1,135,650 | 1,215,541 | 1,294,259 |
| Pelts treated....................................... . . . | 14, 137,455 | 13,933,261 | 13,639,110 |
| Amount received for treatment of furs............... \$ | 6,126,532 | 6,691,418 | 6,514,772 |

Statistics for the fur-goods industry, on a comparable basis, are available from 1921, when 219 establishments reported a gross value of production of $\$ 13,639,609$, with employees numbering 2,621 who received $\$ 3,013,706$ in salaries and wages. Cost of materials used in the manufacturing process totalled $\$ 8,118,833$. Principal statistics for the industry for the years 1948, 1949 and 1950 are given in Table 9.

[^190]
## 9.-Principal Statistics of the Fur-Goods Industry, 1948-50

| Item |  |  |
| :--- | :--- | ---: | ---: | ---: |

Changes in living habits and standards that have taken place in the past quarter-century are reflected in the type of goods produced by the fur-goods industry. For example, in 1921 there were 31,604 ladies' fur coats and jackets produced whereas, in 1948, there were 225,711 ladies' fur coats made; the number dropped to 207,816 in 1949, and to 191,915 in 1950. The manufacture of men's fur coats, however, showed a decided reversal in the market as there were 4,655 men's fur coats and 1,037 men's fur-lined coats manufactured in 1921 but a total of only 329 such coats in 1950. In 1921 horse-drawn sleighs were still reasonably plentiful and 4,461 fur robes were produced but, by 1950 , production had dropped to virtually none.

Note.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter deals with manufacturing industries in Canada in two Parts. Part I gives general analyses including: the historical development of manufacturing; detailed treatment of current production under various groupings and individual industries; and principal factors in manufacturing production such as capital, employment, salaries and wages, and size of establishment. Part II deals with the provincial and local distribution of manufacturing production.

It is impossible to give absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, as far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

Canada now ranks among the important manufacturing countries of the world and holds a dominant position in the export of many manufactured products. The forward movement in development has been the result of three great influences: firstly the opening of the west at the beginning of the present century which greatly increased the demand for manufactured goods of all kinds, especially construction materials; secondly, World War I which left a permanent imprint upon the variety and efficiency of Canadian plants; and thirdly, World War II with its insatiable demands for food and manufactured products of all kinds. More especially during
the second world war the situation created as a result of Canada's strategic position as a source of food and armaments had far-reaching effects on the magnitude and diversification of Canadian manufacturing production, with the result that Canada, with greatly increased skills and plant capacity, has now entered a new era in manufacturing development.

Outstanding economic factors of 1950 , such as the record gross national product of $\$ 18,029,000,000$, the level of capital investment at $\$ 3,791,000,000$ and foreign trade at $\$ 6,000,000,000$, are the immediate manifestations of trends over the past decade. With a labour force less than 14 p.c. larger than in 1939, the Canadian economy has shown remarkable growth. Production of durable goods has expanded the most, especially automobiles, trucks and electrical apparatus. Electric power output has doubled and aluminum has advanced five times. Steel production is up two and one-half times. Mineral production has doubled. Canada's pulp and paper industry has continued its premier position with Canadian newsprint production leading the world.

The discovery of oil at Leduc, Alta., in February 1947, altered Canada's industrial destiny. Output of oil had been dwindling; more than 90 p.c. of the oil used in Canada was being imported and causing a heavy drain on holdings of United States currency. In the three years following the Leduc strike, Canada's oil reserves jumped from $35,000,000 \mathrm{bbl}$. to $1,500,000,000 \mathrm{bbl}$. and potential output rose to approximately $145,000 \mathrm{bbl}$. daily, or 40 p.c. of Canadian consumption. Developments in the oil industry of Alberta have been closely paralleled by developments in natural gas. Expansion in this industry, too, has been nothing short of spectacular. In the past five years, household, commercial and industrial sales of natural gas increased by about 55 p.c. Natural gas is the cheapest source of energy for many purposes and, when available in large quantities and at relatively low price, plays an important role in manufacturing production.

Another new source of industrial wealth lies in the huge iron deposits on the Quebec-Labrador boundary, 320 miles north of the St. Lawrence River. More than $400,000,000$ tons of ore have already been proven and plans call for production by 1955 at an annual rate of $10,000,000$ tons.

Oil, gas and iron will transform the base of Canadian industry and widen the horizon for manufactured goods. The gross value of manufactured products in Canada reached $\$ 12,480,000,000$ in 1949 and was approximately $\$ 13,817,526,000$ in 1950. About one-half of the 1950 total was accounted for by 15 leading industries based on the utilization of forest and food resources, iron and steel, and fuel and power. Development in these industries has been outstanding, but this advance must not be allowed to detract from the solid, steady growth of Canadian manufacturing as a whole. In the years 1946 to 1950, 1,031 entirely new companies began operations in manufacturing. These firms employed 41,000 people, paid salaries and wages of $\$ 70,000,000$ and had a gross value of production of $\$ 350,000,000$. Thus, nearly 4 p.c. of the jobs in manufacturing currently available to Canadians are the direct result of operations of new companies.

Two major changes were adopted in the compilation of manufacturing statistics starting with 1949. Figures for that year contained statistics for the Province of Newfoundland and a change was made in the system of classifying industries. Under the Standard Classification adopted, the industries are divided into 17 major groups instead of the nine groups under the component material classification.

For most purposes a classification of_manufacturing industries based on chief component materials has, in the past, proved very useful. Such classification was wholly applicable when the industry of the country was concerned with the early stages in the processing of primary materials, i.e., when final products were mainly such items as pig iron, lumber and processed fish. As manufacturing industries developed, however, turning out more and more goods for consumption, the combination of ingredients in such output became more and more complex. The modern automotive, aircraft, shipbuilding and electrical-apparatus industries are examples in which a wide variety of materials must be assembled for the completion of the final product.

In establishing the Standard Industrial Classification, the concept of "purpose" has been combined with that of "chief component material" in the framework of the classification of manufacturing industries. For the classification of consumer-goods industries the concept of "purpose" seems most applicable both in terms of common usage in referring to industries and in providing the type of data most often required. Hence, such major groups as food and beverages, clothing, transportation equipment, and electrical apparatus and supplies have been established.

## PART I.-GENERAL ANALYSES OF MANUFACTURING Section 1.-Growth of Manufacturing

This Section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials and values of products. Other useful comparisons are made in Table 4 and figures of consumption are given in Table 5.

## 1.-Summary Statistics of Manufactures, 1917-50

Note.-Statistics of manufacturing from 1870 have been published, but between that year and 1917 figures are not on a comparable basis to the series given below. Statistics for significant years will be found in the 1943-44 Year Book, p. 363. Statistics of the non-ferrous metal smelting industries were included in manufactures in 1925 f $q$ r the first time.

| Year | Estab-lishments | Capital | Employees | Salaries and Wages | $\begin{gathered} \text { Cost } \\ \text { of } \\ \text { Materials } \end{gathered}$ | Net Value of Products ${ }^{1}$ | Gross <br> Value of Products |

The figures in Table 4 show the trends of development in Canadian manufacturing industries since 1917. Interesting comparisons may be made of power employed, values added by the manufacturing process per employee, average salaries and wages paid, etc.

${ }^{1}$ The method of computing the number of wage-earners in 1925-30, inclusive, increased the number someiwhat over that which otherwise would have been given. There was, therefore, a proportionate reduction n the averages for 1925-30 per employee and wage-earner. In 1931 the method in force prior to 1925 was re-adopted.
${ }^{2}$ Net values of products; see footnote 1, Table 1.
${ }^{3}$ Not collected.
Value and Volume of Manufacturing Production.-In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at $114 \cdot 3$ in 1917, 155.9 in 1920, $97 \cdot 3$ in 1922, $95 \cdot 6$ in 1929, $67 \cdot 1$ in 1933, $84 \cdot 6$ in 1937, $75 \cdot 4$ in 1939, $129 \cdot 1$ in 1947, $157 \cdot 0$ in 1949 and $166 \cdot 1$ in 1950. Index numbers of the prices of fully or chiefly manufactured goods on the same base were: $113 \cdot 5$ in 1917, 156.5 in 1920, $100 \cdot 4$ in 1922, $93 \cdot 0$ in 1929, $70 \cdot 2$ in 1933, $80 \cdot 5$ in 1937, $75 \cdot 3$ in 1939, $117 \cdot 4$ in 1947, $142 \cdot 3$ in 1949 and $148 \cdot 9$ in 1950.

Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

Indexes of the volume of manufacturing production, according to component material and purpose classifications, are given for 1929-46 in the 1951 Year Book, p. 585 . The indexes for 1940 to 1946 are in process of revision and when this is completed indexes will be compiled for the later years.

Consumption of Manufactured Products.-The value of all manufactured products made available for consumption in 1949 was $\$ 12,506,121,614$, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of exports. More accurate statistics could be presented were it possible to exclude the duplications involved when the products of one manufacturing establishment become the material worked upon in another. Iron, vegetable, wood and paper, textiles and animal products were, in that order, the leading groups in the value of finished products made available for consumption in 1949. Animal, wood and paper and nonferrous metal products were also manufactured in greater quantities than required for home consumption, providing export balances in these groups. Canada in the past imported large quantities of iron and steel, textiles, chemicals and non-metallic mineral products despite large home production, but the expansion of the iron and steel, chemical and non-ferrous metal industries will enable Canada to meet more requirements for home consumption and to export greater quantities in the future.

## 5.-Consumption of Manufactured Products, Significant Years, 1929-49, and by Industrial Groups, 1919

| Year and Industrial Group | Value of Products Manufactured | Manufactured and Partly Manufactured Goods ${ }^{1}$ |  | Value of Manufactured Products Available for Consumption |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Value of Net <br> Imports | Value of Domestic Exports |  |

## Section 2.-Production by Industrial Groups and Individual Industries

As mentioned in the introduction to this Chapter, two major changes were adopted in the compilation of manufacturing statistics for 1949. In addition to containing statistics for Newfoundland for the first time, the system of classification was also changed. By the Standard Classification the industries are grouped under the 17 major headings listed in Table 6, instead of the nine groups listed in Table 3 which were formerly used as the main basis of classification. Summary statistics for the main groups on the new basis are given for 1945-50 in Table 7, while statistics for individual industries are presented in detail in Table 8. Table 10 gives the industries on the basis of the origin of the materials used.

## Subsection 1.-Manufactures Classified on the Standard Classification Basis

Table 6 shows the changes in the nature of manufacturing production since the end of World War II with regard to numbers employed, salaries and wages paid, and gross value of products. The values of both wages and products are naturally more affected by price changes than the numbers of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output. Thus, variation in number of employees would normally be less pronounced than that in money values. The number of employees in 1944 increased by 86 p.c. over 1939, salaries and wages paid were 175 p.c. higher and the gross value of production 161 p.c. higher.

Significant changes in the nature of manufacturing production have taken place since 1945. As was to be expected, industries engaged in war production have operated at a substantially lower level and industries producing consumer goods have increased their production. From the point of view of employment, the chemical and allied products group, with a reduction of 33 p.c., experienced the greatest decline in volume of production between 1945 and 1949. Transportation equipment, which includes aircraft and shipbuilding, was second with a decline of 32 p.c., followed by tobacco and tobacco products with 12 p.c., rubber goods 12 p.c. and iron and steel products 3 p.c. The non-metallic mineral group reported the greatest gain in employment with an increase of 39 p.c., followed by printing, publishing and allied trades 31 p.c., wood products 29 p.c., electrical apparatus and supplies 27 p.c., products of petroleum and coal 26 p.c., paper products 21 p.c., textiles (except clothing) 19 p.c., clothing (textile and fur) 18 p.c., food and beverages 8 p.c., leather products 2 p.c. and non-ferrous metal products 1 p.c. For manufacturing as a whole there was an increase of 4 p.c. in the number of employees with an increase of 39 p.c. in the amount of salaries and wages paid. Although there was an increase of 50 p.c. in the gross value of production, the increase in the physical volume was not marked. This was due to the rise in the wholesale prices of fully and partly manufactured products.

## 6.-Percentage Variations in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups, 1949 Compared with 1945 and with 1948

| Industrial Group | $\begin{gathered} 1949 \\ \text { Compared } \\ 1945 \end{gathered} \text { with }$ |  |  | $\begin{gathered} 1949 \\ \text { Compared with } \\ 1948 \end{gathered}$ |  |  |

## Subsection 2.-Manufactures Classified by Origin of Materials

The distinction made between farm materials of Canadian and of foreign origin is based on whether materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to non-ferrous metals so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods. A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumer goods, exceeds that of the mineral group. The industries of the mineral group in 1949 employed the largest number of persons and paid out by far the highest amount in salaries and wages. The average salary and wage was $\$ 2,527$ for the mineral group and $\$ 1,946$ for the farm origin group.

## 10.-Principal Statistics of Manufacturing Industries, classified according to Origin of Material Used, by Main Groups, 1939, 1944, 1918 and 1949

| Year and Origin <br> of Materials Used | Estab-lishments | Employees | Salaries and Wages | Cost of Materials | Net Value of Products | Gross Value of Products |

## Subsection 3.-Manufactures Classified by Type of Ownership

Figures showing the classification of manufacturing establishments by type of ownership are available from 1946, though the figures for that year are not strictly comparable with those for succeeding years due to the later inclusion of the fish curing and packing industry.

Of the 35,792 establishments operating in 1949, 1,332 in the periodical publishing industry were not classifiable. Thus, the percentages for 1949 presented in Tables 11 and 12 are based on a total of 34,460 establishments.

As is to be expected, the smaller establishments, regardless of type of products manufactured, are carried on under individual ownership. In that category industries conducted on a small scale contain a large number of establishments, the percentage decreasing as the scale of operation increases, as the following statement shows:-

| Group | Average Number of Employees per Establishment | Percentage of Individual Ownership Establishments to the Total |
| :---: | :---: | :---: |
| Leather products. | $4 \cdot 7$ | $32 \cdot 5$ |
| Wood products... | 10.9 | $63 \cdot 1$ |
| Food and beverages. | $19 \cdot 8$ | $49 \cdot 9$ |
| Printing, publishing and allied trad | 22.5 | $49 \cdot 0$ |
| Non-metallic mineral products. | $27 \cdot 6$ | $34 \cdot 7$ 31.4 |
| Miscellaneous manufacturing indust | $29 \cdot 6$ | $31 \cdot 4$ |
| Clothing (textile and fur).......... | 38.5 | $29 \cdot 0$ |
| Chemicals and chemical products. | 39.9 | $18 \cdot 4$ |
| Iron and steel products..... | $69 \cdot 7$ $84 \cdot 0$ | $\stackrel{27 \cdot 4}{ }$ |
| Non-ferrous metal products | 84.0 91.8 | 27.3 |
| Paper products........... | 145.9 | $9 \cdot 0$ |
| Tobacco and tobacco products. | $148 \cdot 4$ | $38 \cdot 9$ |
| Electrical apparatus and supplies | 153.2 | $13 \cdot 4$ |
| Transportation equipment...... | $175 \cdot 8$ | $34 \cdot 4$ |
| Products of petroleum and coal | $189 \cdot 0$ $334 \cdot 3$ | $8 \cdot 1$ |
| Rubber products........... | 334-3 | $8 \cdot 1$ |
| Ald Groups. | 32.7 | $\underline{46 \cdot 0}$ |

11.- Percentage Distribution of Establishments in Manufacturing Industries, classified by Type of Ownership, by Provinces and Industrial Groups, 1949, with totals for 1946-49.

| Province and Industrial Group | Individual Ownership | Partnerships | Incorporated Companies | Co-operatives | Total |

| Miscellaneous manufacturing industries... | $31 \cdot 3$ | 16.6 | $52 \cdot 1$ | - | $100 \cdot 0$ |

${ }^{1}$ Four main categories of ownership only; the non-classifiable group is not included.
On the basis of employment provided, incorporated companies are by a very wide margin the most important factor in the employment field. Establishments operating under individual ownership are not as important from the point of view of employment provided as their large numbers would seem to indicate.

## 12.-Percentage Distribution of Employment in the Manufacturing Industries, classified by Type of Ownership, by Provinces and Industrial Groups, 1949, with Totals for 1946-49.

| Province or Group | Individual Ownership | Partnerships | Incorporated Companies | Co-operatives | Total |

${ }^{1}$ Excluding Newfoundland.

## Subsection 4.-Leading Manufacturing Industries

The rank of the ten leading industries in 1949, from the standpoint of gross value of production, is compared with their respective ranks in significant years since 1922 in the following statement:-

| Industry | Rank in- |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1982 | 1989 | 1939 | 1939 | 1944 | 1948 | 1949 |
| Pulp and paper. | 2 | 1 | 1 | 2 | 5 | 1 | 1 |
| Slaughtering and meat packing. | 3 | 2 | 3 | 3 | 1 | 2 | 2 |
| Non-ferrous metal smelting and refining....... | 1 | 9 | 2 | 1 | 2 | 3 | 3 |
| Motor-vehicles. | 6 | 4 | 11 | 5 | 7 | 6 | 4 |
| Petroleum products. | 9 | 10 | 6 | 6 | 14 | 7 | 5 |
| Sawmills.. | 4 | 5 | 14 | 8 | 11 | 5 | 6 |
| Butter and cheese. | 5 | 6 | 5 | 4 | 10 | 8 | 7 |
| Primary iron and steel. | 20 | 16 | 31 | 11 | 13 | 10 | 8 |
| Railway rolling-stock. | 24 | 7 | 23 | 16 | 16 | 11 | 9 |
| Flour mills. | 1 | 3 | 4 | 7 | 12 | 9 | 10 |

${ }^{1}$ Did not rank among the forty leading industries in 1922.
The depression of the 1930's resulted in a rearrangement in the ranking of many industries which in some cases proved to be temporary. Also, during World War II the industries engaged in producing war equipment, such as shipbuilding, aircraft, automobiles, and miscellaneous chemical products, advanced to higher positions but when the war ended industries engaged in the production of consumer goods again advanced their positions. Pulp and paper, after a lapse of a number of years, resumed its premier place in 1948. With one exception, the
industries in the lead in 1948 remained in the first ten places in 1949, although the order was changed slightly. The electrical apparatus and supplies industry, which for many years ranked among the first ten, dropped out of this class in 1949. This was not due to a change in its importance as a producer of manufactured goods, but to a change in its composition introduced by the Standard Classification which groups this industry, formerly classified as one, into five subdivisions: batteries; heavy electrical machinery; radios and radio parts; refrigerators, vacuum cleaners and appliances; and miscellaneous electrical products.

## 14.-Principal Statistics of the Forty Leading Industries, ranked according to Gross Value of Products, 1949

|  | Industry | Estab-lishments | Employees | Salaries and Wages | Cost of Materials | Net <br> Value of Products | Gross Value of Products |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | No. | No. | \$ | 8 | \$ | \$ |

## Section 3.-Principal Factors in Manufacturing Production

## Subsection 1.-Salaries and Wages in Manufacturing Industries

Statistics of earnings and hours of work of wage-earners and salaried employees in manufacturing will be found in Chapter XVIII on Labour.

In 1949, the 35,792 manufacturing establishments employed 221,551 salaried employees and 949,656 wage-earners, a total of $1,171,207$ persons. Out of every 1,000 persons employed in these industries, 189 were classed as salary-earners and 811 as wage-earners; the former earned 24 p.c. and the latter 76 p.c. of the total amount paid
out as remuneration for services. It is interesting to note the reduction in the disparity between average annual salaries and wages that has taken place in recent years. Whereas in 1939 average annual wages were only 56 p.c. of average annual salaries, in 1943 the percentage rose to 76 , declined to 69 in 1947 and rose again to 73 in 1949.

## 16.-Total and Average Annual Salaries and Wages Paid in Manufacturing Industries, Significant Years, 1917-49

[^199] seasonal industries.

Ontario has a larger proportion of females among its salaried employees than any of the other provinces. This situation prevails in Quebec with regard to wageearners owing, no doubt, to the textile industries of the Province. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that, of all female wage-earners engaged in the manufacturing industries of Canada in 1949, $44 \cdot 6$ p.c. were found in the textile group, including furs.

The average salary in 1949 amounted to $\$ 2,836$ which was $\$ 1,090$ or 62 p.c. higher than in 1939. Salaried employees in Ontario with $\$ 2,990$ were the highest paid, those in Quebec second with $\$ 2,812$, followed by British Columbia with $\$ 2,758$ and Manitoba with $\$ 2,729$. The location of head offices of many large corporations at Montreal, Toronto, Winnipeg and Vancouver tends to raise the average salaries in the provinces in which these cities are located.

The average wage in 1949 amounted to $\$ 2,067$ which was $\$ 1,092$ or 112 p.c. higher than in 1939. The manufacturing industries of Newfoundland paid the highest average wage of $\$ 2,392$, displacing British Columbia which formerly occupied the premier position. British Columbia followed with $\$ 2,282$, Ontario with $\$ 2,187$, Saskatchewan with $\$ 2,042$ and Alberta with $\$ 2,025$. The high figures shown for the Yukon and Northwest Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative. Statistics of the distribution of employees by provinces and industrial groups, together with average annual earnings, are given in Table 17.

## 17.-Total and Average Annual Salaries and Wages Paid in Manufacturing Industries, by Provinces and Industrial Groups, 1949

| Province andIndustrial Group | Annual Salaries |  |  |  | Annual Wages |  |  |  |

Average Annual Earnings in the Forty Leading Industries.-In 1949 there were 20 industries in which the average salary was $\$ 3,000$ or over, compared with 16 industries in this range in 1948. The rapidly changing pattern of remuneration in manufacturing is shown by the fact that in 1945 the highest average salary paid was $\$ 2,935$ reported by the brewing industry. The highest average salary in 1949 was $\$ 3,977$ received by office and supervisory employees in the pulp and paper industry. In the remaining 20 leading industries, 13 had average salaries of between $\$ 2,500$ and $\$ 3,000$ and seven were below $\$ 2,500$. The sawmill and butter and cheese industries, with $\$ 1,283$ and $\$ 1,800$, respectively, paid the lowest salaries in the forty leading industries.

The increase in average wages since 1945 paralleled that of salaries. There were 23 industries averaging over $\$ 2,000$ in 1949 compared with only four in 1945. In 1945 the highest average annual wage was $\$ 2,365$ paid by the motor-vehicle industry while in 1949 the highest was $\$ 2,851$ paid by the pulp and paper industry. The highest wages are usually paid by industries in which the proportion of skilled workers is high and the proportion of female workers low. There were seven industries in 1949 with average wages of $\$ 2,500$ or over and 16 in which the average ranged between $\$ 2,000$ and $\$ 2,500$. In the other 17 industries of the forty leading
industry group average wages were below $\$ 2,000$. This latter group includes industries made up of a large number of small establishments in which the proportion of female workers is high, such as men's factory clothing, women's factory clothing, hosiery and knitted goods, leather boots and shoes, fruit and vegetable preparations, and fish curing and packing.

## 18.-Annual Salaries and Wages Paid in the Forty Leading Industries, 1949, with Comparative Figures of Annual Average Salaries and Wages Paid in 1948

Nore.-Industries ranked according to the aggregate salaries and wages paid.

${ }^{1}$ A verage salaries and wages paid in the forty leading industries in 1948; the list of leading industries in that year was not the same as the list for 1949.

Average Earnings of Wage-Earners.-In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has a very definite regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in the latter industries naturally command relatively higher wages than those in industries where employees are routine workers.

The ranking of provinces and industries as regards annual earnings is, in many cases, different to that of weekly or hourly earnings since the factors of numbers of weeks worked per year and number of hours worked per week enter into the picture.

The figures for the years 1940 to 1945 given in Table 19 are based on an analysis of a pay-list covering one week in the month of highest employment. For this reason the figures do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all the firms. For a particular industry, however, the month of highest employment is more significant as in such case it coincides for a great number of firms engaged in the same industry. The figures for 1946 to 1949 are based on returns received from establishments employing 15 persons or over; figures for 1946 and 1947 refer to the last week in November, whereas those for later years refer to the last week in October.

Average weekly earnings of male wage-earners for manufacturing as a whole amounted to $\$ 47 \cdot 33$ in 1949, an increase of $\$ 25 \cdot 10$ or 113 p.c. as compared with 1939. Average hourly earnings advanced from $46 \cdot 2$ cents in 1939 to $\$ 1 \cdot 07$ in 1949, an increase of 132 p.c. Annual average earnings at $\$ 2,291$ were 113 p.c. higher.

Female wage-earners received an average of $\$ 27 \cdot 18$ per week in 1949, an increase of $\$ 14 \cdot 40$ or 113 p.c. over 1939 . Hourly earnings at $68 \cdot 3$ cents were 141 p.c. higher, and annual average earnings at $\$ 1,315$ were 112 p.c. higher.

## 19.-Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners Employed in Manufacturing Industries, 1940-49

Average Earnings of Salaried Employees.-Beginning with 1946, the survey of weekly earnings and hours worked by wage-earners was expanded to include salaried employees. The survey covers establishments employing 15 persons or over and refers to the last week in November for 1946 and 1947 and for the last week in October for 1948 and 1949. Earnings and hours worked are reported for male and female wage and salary earners in 13 groups of hours, ranging from 30 or less to 65 or more. The earnings reported for the week constitute the gross amount paid before deductions for income tax, unemployment insurance, etc. Weekly and hourly earnings as well as hours worked are thus obtained directly from the tabulated results of the reports. Annual earnings are calculated on the basis of weekly earnings correlated with the results of the annual Census of Industry.

Real Earnings of Employees.-When the index number representing the average yearly earnings is divided by the index number of the cost of living, on the same base, a measure of 'real' wages is obtained. Index numbers for 1940 to 1949 are given in Table 25.

## 25.-Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and

 Real Wages of Wage-Earners in Manufacturing Industries, 1910-19Notz.-Figures for 1931-39 are given at p. 560 of the 1947 Year Book.

| Year | Wages Paid | Average WageEarners | Average Yearly Earnings | Index Numbers ( $1935-39=100$ ) |  |  |

Percentages of Salaries and Wages to Net Value of Products.-Table 26 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent, taxes, repairs and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, the percentage of salaries to value added was above normal owing to decreased industrial activity. It should be borne in mind, however, that salaried employees increased 216 p.c. during the period 1924-49 while wage-earners increased 127 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be adjusted more rapidly to the activity of the industry and wage levels likewise may be adjusted more readily to the price levels of the products. Of the increase in the net value of production since 1939, 49 p.c. was passed along in increased salaries and wages.
26.-Percentages of Salaries and Wages Paid to the Total Net Values of Manufacturing Production, 1940-49

| Year | Value Added <br> by Processes of Manufacture ${ }^{1}$ | Salaries Paid | Wages Paid | Percentages- |  |  |

## Subsection 2.-Capital, Repair and Maintenance Expenditure

Prior to 1944 the following information on capital investment was collected: (1) fixed capital-land, buildings, fixtures, machinery, tools and other equipment; and (2) working capital-inventory value of raw materials, stocks in process, fuel and miscellaneous supplies on hand; inventory value of finished products; cash, bills and accounts receivable, prepaid expenses, etc. This information was replaced in 1944 by the collection of expenditure statistics on fixed capital, repairs and maintenance. Although it is now impossible to calculate the total investment in the fixed and current assets in manufacturing, it is still possible to calculate the investment in fixed assets. Total investment in fixed assets can be obtained with an approximate degree of accuracy by starting with the total investment in 1943, which amounted to $\$ 6,317,000,000$, and adding the expenditures to date and then
deducting on a straight-line basis the normal rates of depreciation allowed by the Income Tax Department. Comparative figures of the investment in fixed assets since 1939 are as follows:-

|  | Year | Amount | $\begin{gathered} \text { Average } \\ \text { per } \\ \text { Employee } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
|  |  | \$ | \$ |
| 1939. |  | 2,168,900,000 | 3,296 |
| 1943. |  | 3,002,900,000 | 2,420 |
| 1948. |  | 4,573,300,000 | 3,956 |
| 1949. |  | 4,921,500,000 | 4,202 |

Between 1939 and 1943 there was a decrease of $\$ 876$ in the value of fixed assets per employee, due to a decline in the replacement of and additions to buildings and equipment during the war years and also to an increase in the number of shifts worked and a resulting increase in number of employees. After the War, investment in fixed assets increased rapidly. Old plants were modernized and new plants were built to take care of expanded home markets resulting from higher purchasing power and increased population. The net result in this development was an increase of $\$ 906$ in the value of buildings and equipment per employee between 1939 and 1949.

Of the total capital expenditure by manufacturers in 1949 amounting to $\$ 535,800,000,17 \cdot 2$ p.c. was reported by the paper products group of industries, 16.5 p.c. by the food group, 11.1 p.c. by iron and steel, 8.0 p.c. by chemicals, 6.9 p.c. by the textile industries (except clothing), $6 \cdot 1$ p.c. by non-ferrous metal products, $5 \cdot 7$ p.c. by wood products, $5 \cdot 6$ p.c. by products of petroleum and coal, $4 \cdot 6$ p.c. by transportation equipment, $4 \cdot 2$ p.c. by printing, publishing and allied trades, and $4 \cdot 1$ p.c. by non-metallic mineral products.

## Subsection 3.-Size of Manufacturing Establishments

The size of the manufacturing establishment is generally measured either by the value of product or by the number of employees, but each of these methods has its limitations. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high appear to operate on a larger scale. The latter takes no account of the differences in capital equipment at different times or in various industries and, obviously, the increased use of machinery may lead to an increase in production concurrently with a decrease in number of employees.

Size as Measured by Gross Value of Products.-In 1929, the 719 establishments producing over $\$ 1,000,000$ each had an aggregate value of products of $\$ 2,516,064,954$, or 62 p.c. of the total for all manufacturing establishments. In 1931 the number of plants in that category was 482, their output being valued at $\$ 1,451,658,954$, or 53 p.c. of the total. However, by 1944 , war demands resulted in manufacturing establishments, with a production of $\$ 1,000,000$, increasing to 1,376 plants with an output of about 75 p.c. of the total value of manufactures. In 1946, with the decline in production of the huge war plants, the manufactures of establishments, with a production of $\$ 1,000,000$ or over, declined to 67 p.c. of the total manufactures although the number of plants increased to 1,442 . In 1947 the number of plants increased to 1,716 and production to the total was 72 p.c. As a result of increased prices and expansion in the physical volume of production in the years 1947, 1948 and 1949 , establishments, with a production of $\$ 1,000,000$, or over, increased to 1,926 and their contribution to the total output rose to 74 p.c.
28.-Manufacturing Establishments and Total and Average Production, classified by Value of Products Groups, 1929, 1939, 1944 and 1949

${ }^{1}$ Includes central electric stations and dyeing, cleaning and laundry establishments.
${ }^{2}$ Exclusive of the Yukon and Northwest Territories.

Size as Measured by Number of Employees.-In 1929, establishments employing 501 persons or over accounted for 27 p.c. of the total number of employees engaged in manufacturing. The tendency then in evidence of increasing concentration of production into larger units was checked by the depression, the proportion decreasing in 1933 to 21 p.c. (central electric stations included) but rising again to 26 p.c. in 1939. The same also held true for establishments employing 101 persons or over. In 1929 they employed 62 p.c. of the total, in 1933, 56 p.c., and in 1939, 62 p.c.

The effect of World War II on the concentration of industries into large units is illustrated by the increase in the number of establishments employing 500 hands or over. In 1939 such establishments numbered 172 and employed 26 p.c. of the employees engaged in manufacturing; by 1944 the number had increased to 383 and the percentage of total employees to 47. In a further subdivision of this group in 1944 it was found that 226 establishments employed between 500 and 999 persons, 56 between 1,000 and 1,499 , and 101 employed over 1,500 . There were 12 plants employing over 7,000 persons, the largest having an employment of slightly over 13,000.

As a result of the resumption of peacetime production, the larger establishments declined in size so that by 1949 only 62 establishments employed over 1,500 persons. The largest plant employed over 13,000 persons, one other employed over 8,000 and six employed between 6,000 and 8,000 persons.

${ }^{1}$ Includes central electric stations and dyeing, cleaning and laundry establishments.
${ }^{2}$ Exclusive of the Yukon and Northwest Territories.
that are not located at a plant.
Size of Establishment in Leading Industries. - Table 31 summarizes the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of motor-vehicles, non-ferrous metal smelting and refining, railway rolling-stock, cotton yarn and cloth, rubber goods, pulp and paper, primary iron and steel and agricultural implements and machinery. On the other
hand, the degree of concentration is low in such industries as fruit and vegetable preparations, bread and other bakery products, sawmills, furniture, butter and cheese, women's factory clothing, stock and poultry feeds and miscellaneous foods.
31.-Percentage Importance of Establishments, each Employing 200 or more Persons in the Leading Industries, 1949

## PART II.-PROVINCIAL AND LOGAL DISTRIBUTION OF MANUFAGTURING PRODUCTION

## Section 1.-Provincial Distribution of Manufacturing Production

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1949 amounted to $\$ 9,892,301,957$ or 79 p.c. of the gross value of manufactured products.

Table 1 shows the outstanding predominance of these two Provinces in each industrial group. In 1949, Quebec led in the manufacture of tobacco and tobacco products, textiles (except clothing), clothing (textile and fur), and paper products. In each of the other groups, Ontario had the greater production. In the production of wood products, British Columbia with 34 p.c. held the dominant position, outranking both Ontario and Quebec which accounted for 28 and 23 p.c., respectively, of total production. In each of the other industrial groups Ontario and Quebec led by a wide margin.

$\qquad$
$\qquad$ 4 Includes electrical apparatus and supplies, figures for which are confidential and cannot be published separately.
$\qquad$ Includes non-ferrous metal products and pro and coal, figures for which are confidential and cannot be published separately. 8 Includes rubber products, figures for which are confidential and cannot be published separately. ${ }^{7}$ Includes leather products and non-ferrous metal products, figures for which are confidential and cannot be published separately $\quad{ }_{s}$ Includes printing, publishing and allied trades; non-ferrous metal products; products of petroleum and coal; and miscellaneous industries, figures for which are confidential and cannot be published separately.

The degree of concentration of manufacturing production in large units is illustrated in Table 2. In 1949, Newfoundland had, 42 p.c. of all persons engaged in manufacturing employed in establishments having 500 or more employees, as compared with 34 p.c. for Canada as a whole. Prior to the entry of Newfoundland into Confederation, Ontario had the greatest concentration in the largest units; in 1949 it ranked second with $37 \cdot 3$ p.c. of its employees in the largest units. Quebec ranked third with $36 \cdot 7$ p.c. followed by Nova Scotia with 31 p.c., New Brunswick 29 p.c., British Columbia 23 p.c., Manitoba 20 p.c. and Alberta 12 p.c. There were no plants in either Prince Edward Island or Saskatchewan employing 500 or more persons.

## Subsection 1.-The Manufactures of the Atlantic Provinces

Manufacturing production in Newfoundland is dominated by the forest and fisheries resources. Pulp and paper is the leading industry followed by sawmilling, these two industries together accounting for 71 p.c. of the total production of the Province in 1949. No information is available regarding the processing of fish products and the position of that industry in 1949 in the economy of the Province cannot be evaluated.

In Prince Edward Island the predominant fishery and agricultural resources make fish curing, and packing, and butter and cheese the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the
leading manufactures of fish curing and packing, primary iron and steel, sawmills, shipbuilding and repairs, pulp and paper, and butter and cheese. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries, while fish and agricultural products add to the varied output.

## Subsection 2.-The Manufactures of Quebec

Quebec contributes about 30 p.c. of the total value of manufactured products of Canada. Quebec's forests, water powers, minerals and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going vessels to reach its main centres of population, are among the assets that have tended to develop manufacturing industries. In addition, Quebec has a stable and industrious population, an important factor in industries such as textiles, clothing, leather boots and shoes, etc., in which large labour forces are required. The production of pulp and paper occupies the premier position, accounting for about 10 p.c. of the gross value of Quebec manufactures and for about 45 p.c. of the Canadian total for this industry. Other large industries in which Quebec predominates are: tobacco, cigars and cigarettes with 92 p.c. of the Canadian total; synthetic textiles and silk 72 p.c.; cotton yarn and cloth 66 p.c.; women's factory clothing 65 p.c.; aircraft and parts 64 p.c.; leather boots and shoes 60 p.c.; men's factory clothing 57 p.c.; miscellaneous electrical apparatus 51 p.c.; railway rollingstock 49 p.c.; and pulp and paper 45 p.c.

Quebec also predominates in a large number of the smaller industries. For instance, the candle industry of Quebec contributed 95 p.c. of the Canadian total; men's clothing contractors 89 p.c.; women's clothing contractors 82 p.c.; cotton thread 81 p.c.; lasts, trees and shoe findings 78 p.c.; children's clothing 76 p.c.; dyeing and finishing of textiles 75 p.c.; oiled and waterproofed clothing 74 p.c.; oilcloth, linoleum and other coated fabrics 73 p.c.; narrow fabrics 73 p.c.; leather boot and shoe findings 72 p.c.; embroidery, pleating and hemstitching 71 p.c.; miscellaneous clothing 69 p.c.; asbestos products 67 p.c.; artificial flowers and feathers 67 p.c.; processed cheese 67 p.c.; fur dressing and dyeing 66 p.c.; and fabric gloves and mittens 66 p.c.

${ }^{2}$ Sugar refining is also a leading industry, but statistics cannot be published because there are fewer than three establishments.

## Subsection 3.-The Manufactures of Ontario

The gross value of the manufactured products of Ontario in 1949 represented about 49 p.c. of the total for all Canada. This premier position in manufacturing has been maintained fairly uniformly by Ontario, as the following percentages show: 1926, 52 p.c.; 1918,53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. Despite the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario has maintained a manufacturing production roughly equal to that of the remainder of Canada.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible; the wide range of natural resources of forests, minerals, water power,
and agriculture; large population and excellent water and rail transportation facilities to other parts of the country-all have encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment within the Province of branch factories of such United States industries as automobile manufacturing.

Ontario also has the greatest diversification of manufacturing production of any province. Certain industries, such as the manufacture of motor-vehicles, motor-vehicle parts, agricultural implements, heavy electrical machinery, starch and glucose, machine tools, bicycles and parts, miscellaneous non-ferrous metal products and carpets, mats and rugs, are carried on almost exclusively in Ontario. Of the 40 leading industries in 1949, a substantial number were dominated by Ontario's share of the total production. These industries, with the percentage which the Ontario production of each bears to the 1949 total for Canada, are: motor-vehicle parts 98; motor-vehicles 97 ; agricultural implements 96 ; heavy electrical machinery 95 ; rubber goods 81 ; primary iron and steel 74 ; iron castings 69 ; miscellaneous paper products 63 ; coke and gas products 62 ; sheet metal products 60 ; industrial machinery 59 ; brass and copper products 58 ; printing and bookbinding 58; confectionery 57; paper boxes and bags 56 ; miscellaneous foods 53 ; furniture 52 ; and flour mills 50 .

In the case of the smaller industries, too, Ontario dominates the field. In 27 such industries in 1949 Ontario contributed more than 75 p.c. of the Canadian total. These are: machine tools 100 ; starch and glucose 98 ; bicycles and parts 96 ; miscellaneous non-ferrous metal products 96 ; carpets, mats and rugs 95; tobacco processing and packing 93 ; typewriter supplies 92 ; soaps, washing compounds and cleaning preparations 90 ; wine 87 ; breakfast foods 87 ; inks 87 ; artificial abrasives 86 ; leather tanning 86 ; scientific and professional equipment 86 ; automobile accessories, fabric 84; animal oils and fats 84; batteries 83 ; refrigerators, vacuum cleaners and appliances 82 ; woollen yarn 81 ; cordage, rope and twine 81 ; feed mills 79 ; toys and games 79; boilers and plate work 76; household, office and store machinery 76 ; sporting goods 76 ; jewellery and silverware 75 ; and miscellaneous cotton goods 75.

## Subsection 4.-The Manufactures of the Prairie Provinces

The leading industries of the Prairie Provinces are those based on agricultural resources-grain-growing, cattle-raising and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The greatly increased production of crude petroleum in Alberta as well as the widespread use of motor-vehicles and power machinery on farms in the three provinces has given rise to the establishment and rapid development of petroleum refining. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other Provinces. Its natural resources of accessible water power, forests and, more recently, minerals, have created considerable diversification of industrial production.

Considering the Prairie Provinces as an economic unit, slaughtering and meat packing had the largest gross value of production in 1949, amounting to $\$ 221,889,019$, followed by flour mills with $\$ 94,885,289$, petroleum products $\$ 90,502,929$, butter and cheese $\$ 84,669,894$ and railway rolling-stock $\$ 43,935,978$. These five industries accounted for about 50 p.c. of the total production of the Prairie Provinces. Other leading industries, in order of gross value of production, were: bread and other bakery
products, breweries, printing and publishing, planing mills, sawmills, men's factory clothing, prepared stock and poultry feeds, women's factory clothing, malt and malt products, miscellaneous foods, sugar refining, furniture, printing and bookbinding, pulp and paper, etc.
6.-Statistics of the Leading Industries of the Prairie Provinces, 1949

## Subsection 5.-The Manufactures of British Columbia

British Columbia, with a gross value of production of $\$ 959,008,088$ in 1949, was again the third most important manufacturing province in Canada. About 22 p.c. of that amount was contributed by the sawmilling industry, followed by pulp and paper, fish processing and meat packing. Shipbuilding, which occupied first place during the war years, was in fifteenth place in 1949; at the height of its productive effort in 1943 it employed 31,238 persons who were paid $\$ 64,939,484$ in salaries and wages, while the value of production reached the unprecedented figure of $\$ 155,536,396$. The shipbuilding industry was still in 1949 the seventh largest employer of labour in the Province and paid out the fourth highest amount in salaries and wages.

Emphasizing the importance of the forests in the industrial life of the Province, the sawmilling industry ranked first with a gross value of production of $\$ 209,607,511$ and the pulp and paper industry second with $\$ 69,925,185$. Third in importance
was fish curing and packing, based principally on the estuarial salmon fisheries. British Columbia accounted for 49 p.c. of the total production of this industry in Canada. Other important industries include: slaughtering and meat packing, petroleum products, fertilizers, planing mills, veneers and plywoods, miscellaneous food products, fruit and vegetable preparations, butter and cheese, etc.

[^203]
## Section 2.-Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of the labour forces. In the west the cities are more largely distributing centres, though manufactures are increasing rapidly there also.

Table 8 indicates the extent to which the manufacturing industries of Canada are concentrated in urban centres and shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over $\$ 1,000,000$ each. In the more highly industrialized Provinces of Ontario and Quebec such cities and towns in 1949 accounted for $93 \cdot 8$ p.c. and $91 \cdot 7$ p.c., respectively, of the total manufactures for those Provinces, while in the Atlantic Provinces and British Columbia, where sawmilling, fish packing, and dairying are leading industries, the proportions were 68.9 p.c. and 58.6 p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

## 8.-Urban Centres, each with a Gross Manufacturing Production of over $\$ 1,000,000$, Number of Establishments and Production in these centres as a Percentage of the Provincial Total, by Provinces, 1949.

Note.-Statistics published in this table are in some cases higher than the figures published in Table 11, since the table below includes statistics of towns with less than three establishments and production of over $\$ 1,000,000$ each. It was not possible to publish this information in Table $\mathbf{1 1}$ without disclosing the operations of individual establishments.

| Province or Territory | Urban Centres with a Gross Production of over $\$ 1,000,000$ each | Establishments <br> Reporting in Urban Centres Producing over <br> $\$ 1,000,000$ each | Total <br> Production <br> in Urban Centres Producing over <br> $\$ 1,000,000$ each | Total Production in each Province | Production in Urban Centres as a Percentage of Total <br> Production in each Province |

Note.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The purpose of this Chapter is to co-ordinate available official statistics on the construction industry and to give, as far as possible, a complete summary of construction from year to year. The official statistics of the annual Census of Construction (given in Subsection 1 of Section 1) cover all new construction, maintenance and repair work completed during a given year by contractors, builders, public bodies, industrial plants, etc. This information is supplemented by data from an outside source (Subsection 2) on construction contracts awarded, which are in the nature of a forecast of the amount of construction work contemplated in a given year. Usually some time elapses after contracts are awarded before work actually is begun and, in the case of contracts for large-scale undertakings, the work is seldom finished within one year.

## Section 1.-Statistics of the Construction Industry

## Subsection 1.-Annual Census of Construction*

In conducting the Census of Construction for 1949 and 1950, sampling techniques were employed for the first time. A study of the characteristics of the components of the industry revealed a predominance of firms whose annual production was very small in relation to the total value of work performed by the industry as a whole in the same year. Therefore, it was decided that a less detailed report form could be completed by the majority of these small firms and a sample group chosen to which the regular form would be mailed. On the basis of this sample, estimates could be calculated for data not called for on the short form but necessary for the presentation of construction statistics.

The regular form requested the respondent to give, in addition to details of the type and value of work performed, information on such operating expenses as salaries and wages paid, monthly employment of wage-earners and cost of materials. The short form asked only for a classification of work by type and value. Estimates for salaries and wages and other details of operations were made for the short-form group, based on the answers to the regular-form questions. Thus, the value of work figures presented are not estimates but are tabulations of actual reports, since all known construction operators were canvassed for that information. Also, it

[^204]should be emphasized that, in the case of operation details, the sample was selected from a segment of the industry whose total annual production was small in relation to the total value of work performed by the industry.

The definition of 'construction' as used in the Census of Construction has been approved and authorized by the Canadian Construction Association. It embraces all new buildings and works, together with alterations, additions, conversions, maintenance and repairs effected to those existing. It also includes works relating to engineering and marine projects as well as to structures of all types; improvements, maintenance, etc., of steam and electric railway companies; and the actual installation of machinery excluding, of course, cost of the machinery to be installed.

The value of construction work performed during 1950 showed an increase of 23 p.c. over 1949. Building construction advanced in 1950 by 26 p.c. owing largely to an increase of 43 p.c. in residential building, the most important group in that classification, while engineering construction increased by 17 p.c. over 1949.

Each year since 1945 the cost of materials has amounted to around 50 p.c. of the total value of work performed. The percentages in 1949 and 1950 were 52 and 53 p.c., respectively.

In the following tables and chart, the figures for 1949 and 1950 include construction work undertaken by the labour forces of railway and telephone companies which previously were given separately. Figures for Newfoundland are also included for these two years.
1.-Value of Construction Work Performed, classified by Provinces, by Disposition and by Types of Construction, 1946-50

| Province, Disposition and Type | 1946 | 1947 | 1948 | 19491 | $1950{ }^{1}$ |

[^205]4.-Principal Statistics of the Construction Industry, classifled by Provinces and by Disposition, 1949 and 1950

[^206]The following chart shows the movement of employees in the construction industry. The trend that began in 1945 continued through to 1951. A larger number of persons employed caused the 'average monthly' line to move steadily upwards, although in 1950 and 1951 the movement was less pronounced than in the previous years. At the same time, there are indications of a wider deployment between 'high month' and 'low month'. The former trend serves to point out that, in 1951, the industry was still in a position to absorb more units of labour. The latter trend indicates that the seasonal pattern of employment, since 1945, was becoming more pronounced.

## Subsection 2.-Contracts Awarded and Building Permits Issued

In this Section statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the Census of Construction. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done. Obviously, these statistics and those of Subsection 1 cannot be expected to agree, since much work contracted for towards the end of any one year is often not commenced until the next and may extend into more than one year especially on large contracts.

Contracts Awarded.-According to figures published by MacLean Building Reports Limited, the value of contracts awarded in 1951 was more than double the value in 1949. The increase in 1951 over 1950 amounted to 50 p.e., which was more than accounted for by business, industrial and engineering contracts. The value of contracts awarded for residential building declined by 19 p.c. All provinces, except Quebec and New Brunswick, shared in the general increase, but the most important advances were made by British Columbia and Ontario, value of contracts in the former Province increasing from $\$ 81,000,000$ to $\$ 382,000,000$, and in the latter from $\$ 597,000,000$ to $\$ 1,017,000,000$.

Building Permits. - Statistics of building permits were first collected in 1910, when the series covered 35 urban centres; in 1920 they were extended to cover 58 municipalities, including unincorporated suburban areas, which were becoming increasingly important as residential areas for persons working within the municipal boundaries of urban centres. In 1940 the series was again extended to cover 204 municipalities. In 1948 the coverage was expanded further to include 507 municipalities, however, until plans are advanced, it is felt desirable to maintain comparability with earlier issues of the Year Book by retaining the '204' list.

The estimated value of proposed construction as indicated by building permits issued in 1951 amounted to $\$ 681,161,938,15$ p.c. less than the 1950 value of \$801,765,092.

## 7.--Estimated Value of Proposed Construction as Indicated by Building Permits Issued in 204 Municipalities, ${ }^{1} 1950$ and 1951

Nore.-Statistics for these series covering years previous to 1950 will be found in the corresponding tables of earlier editions of the Year Book. For the 35 cities marked (e) the record goes back to 1910; the 23 places marked ( O ) were added in 1920.

[^209]The indexes given in Table 8 show, as far as possible, the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied. Pre-war experience, as indicated by a special study made for 15 cities, shows that the proportions of cost of materials to cost of labour in all construction averaged two-thirds for the former to one-third for the latter. The increase in the cost of recent building operations has probably been much more than is indicated by the increase in the indexes of wholesale prices and wages shown and the proportions of these items to total costs have, no doubt, undergone some variation owing to changes in types and methods of construction and to the greater use of machinery.

Four of the largest cities-Montreal, Toronto, Winnipeg and Vancouveraccounted for $\$ 161,152,394$ or 24 p.c. of the value of building permits issued in 1951. In 1950 the same cities showed a value of $\$ 219,758,407$ or 27 p.c. of the total, and in 1929 the value for these cities was $\$ 126,387,555$.
8.-Values of Building Permits Issued in 204 Municipalities and Index Numbers of the Building Construction Industries, 1942-51

## Section 2.-Housing Construction

## Subsection 1.-Government Aid to House Building*

Federal Government Assistance, 1951.-Publicly assisted house building in Canada operates under two distinct types of arrangement. In one type, Government financial assistance in the form of mortgage loans is extended to prospective homeowners and builders through the National Housing Act, 1944, the Veterans' Land Act, 1942, the Farm Improvement Loans Act, 1944, and the Canadian Farm Loan Act, 1927. In the other, the Federal Government carries on direct house-building activities of veterans' rental units, armed service married quarters and, in conjunction with the provincial governments, joint housing projects for rental. During the seven-year period 1945-51, completions under these government-sponsored plans accounted for about one-third of total new permanent dwellings.

The Central Mortgage and Housing Corporation is the Federal Government agency responsible for most of the publicly assisted housing activities. It was incorporated by an Act passed in December 1945 to administer the National Housing Act, 1944, and earlier housing Acts, to provide facilities for the rediscounting of mortgages for lending institutions and to co-ordinate government activities in the housing field. In 1948, the functions of Wartime Housing Limited were transferred to its administration. In November 1950, the charter of Wartime Housing Limited was revived to form Defence Construction Limited and entrusted with carrying out construction of defence projects requisitioned by the Department of National Defence. Central Mortgage and Housing Corporation provides management and supervisory services to Defence Construction Limited.

The National Housing Act, 1944.-The National Housing Act, 1944, constitutes the principal legislation of the Federal Government in the field of housing. During 1951 three major changes were introduced in housing measures under this Act. The first change occurred in February 1951 when the one-sixth loan, which was in

[^211]addition to the basic joint loan provided for home-ownership building, was discontinued. At the same time, direct assistance by the Central Mortgage and Housing Corporation on rental insurance projects was also suspended and, in addition, the amount of rentals guaranteed on projects financed by lending institutions, formerly calculated on the basis of an 85 p.c. mortgage, was to be calculated on the basis of an 80 p.c. mortgage. These changes were introduced to permit an accelerated flow of construction resources into the expanding defence and defence-supporting construction program, and to keep the housing program within the limits of prospective total resources.

A further change occurred in June 1951 when the rate of interest payable by a borrower on joint loans was increased from $4 \frac{1}{2}$ p.c. to 5 p.c. per annum calculated semi-annually. Increases of $\frac{1}{2}$ to 1 p.c. in the interest rate were also effected with respect to rental insurance loans, primary producer housing loans and limiteddividend corporation housing loans. These changes came as a result of the increase, early in the year, in conventional mortgage interest rates and other long-term interest rates.

The third change occurred in October 1951, when down-payment requirements under the Act were reduced to 20 p.c. for prospective home-owners and for builders of dwellings for sale, provided that there was an agreed sale or contract price. Special provisions were also made for loans on dwellings for defence workers on the basis of a down-payment of 10 p.c. With respect to rental housing, the regulations provide that, failing financing from lending institutions, Central Mortgage and Housing Corporation will again consider applications for direct loans under the Rental Insurance Plan on an 80 p.c. basis. Also, for approved rental insurance projects for defence workers, direct loans of 85 p.c. of the estimated project cost and guarantees on the basis of such loan may be approved. In such cases the maximum return of rentals to the owner was extended from three to five years.

The Central Mortgage and Housing Corporation joins with approved private lending institutions in making loans to prospective home-owners or builders of dwellings for sale or for rental. The Corporation advances 25 p.c. of the loan and the lending institution 75 p.c. These joint loans are amortized over a period of not more than 30 years and, in the case of loans to prospective home-owner defence workers, for a period not exceeding 25 years.

The Central Mortgage and Housing Corporation may make direct loans for house building in areas beyond the normal operations of lending institutions on a basis similar to that for joint loans. Special provisions are effective in the case of prospective home-owner defence workers or builders of dwellings for sale to defence workers. Direct loans may also be made for low- and medium-rental units to limiteddividend companies and companies engaged in the primary industries of logging, lumbering, fishing and mining. Up to the end of 1951, 19 limited-dividend companies had been formed under the sponsorship of business companies or local groups supplemented in some cases by municipal grants or contributions from service clubs. Many of the units constructed through these companies are occupied by widows and old-age pensioners. In addition, when private lending institution funds are not available for suitable rental insurance projects, such projects may be financed by direct loans.

The Rental Insurance Plan, instituted in 1948, is designed to encourage the construction of rental housing accommodation. Owners of projects built under the Plan are guaranteed a return of rentals sufficient to pay taxes, operating expenses,
debt service and a minimum return of 2 p.c. on equity of the owner. From 1948 to December 1951, projects have been approved involving 14,600 units with an estimated cost of $\$ 106,000,000$.

Under the land-assembly provisions of the Act, which provide for the development of raw land into serviced lots for residential purposes and the sale at prices considerably below the market price for comparable lots, lending institutions are guaranteed the recovery of their investment together with an annual return of 2 p.c. Land-assembly projects have also been undertaken directly by the Corporation.

The construction of veterans' rental housing units, first carried out by Wartime Housing Limited and from 1948 by Central Mortgage and Housing, was nearing completion by the end of 1951. These rental units were constructed under federalmunicipal agreements. The administration of the construction of armed service married quarters, also in the hands of the Corporation since 1948, continued during 1951, but on a reduced scale compared with 1949 and 1950.

Sect. 35 of the National Housing Act, 1944, provides that, following agreements between a provincial government and the Government of Canada, Central Mortgage and Housing Corporation may undertake, jointly with the province, the development of a housing or land-assembly project. Projects are financed to the extent of 75 p.c. of expenditure by the Government of Canada and 25 p.c. by the province. By December 1951, all provinces except Alberta and Prince Edward Island had passed complementary legislation. Under the legislation, three main types of housing agreement have evolved: (1) the construction of houses for rental on an economic or sub-economic basis; (2) a combined rental-housing and land-assembly project in which serviced land not used for the rental-housing project is made available for sale to builders and prospective home-owners; and (3) the assembly and servicing of residential lots for sale to builders and prospective home-owners.

During 1951, seven rental-housing agreements were approved for a total of 1,225 dwellings including the construction of 935 rental units at Windsor, St. Thomas, Fort William and Hamilton, Ont., 50 units at Prince Rupert, B.C., 88 units at Saint John, N.B., and 152 units at St. John's, N'f'ld. In 1950, one rentalhousing project consisting of 140 units was initiated at St. John's, N'f'ld.

Four combined land-assembly and rental-housing agreements were entered into between Central Mortgage and Housing Corporation and the Province of Ontario during 1951. Projects at Brockville, Guelph, Kitchener and Trenton consist of 225 rental units and an additional 1,855 serviced residential lots for sale to builders and prospective home-owners.

Land-assembly agreements were approved with respect to projects for the acquisition and installation of services on 1,211 lots at Atikokon, Ont., Trail, B.C., and St. John's and Cornerbrook, N'f'ld. In 1950, land-assembly projects were negotiated for the servicing of 2,082 residential lots at Windsor, St. Thomas, London and Ottawa in Ontario.

At the end of 1951, negotiations were under way on rental projects at Lindsay, Sarnia and Prescott in Ontario involving 115 units, and for 100 dwellings at St. John's, N'f'ld.

Combined land-assembly and rental projects were also under consideration at the end of 1951 for 138 dwellings and 374 supplementary residential lots at North Bay, Sault Ste. Marie and Stratford in Ontario.

The Canadian Farm Loan Act, 1927.-Under this legislation federal long-term loan assistance for housing as well as for other farm purposes is provided. (See the 1950 Year Book, pp. 403-405.)

The Farm Improvement Loans Act, 1944.-This Act provides for guarantees in respect of intermediate and short-term loans made by approved lending agencies to farmers for housing and other purposes. (See the 1950 Year Book, pp. 405-406.)

The Veterans' Land Act, 1942.-This Act is administered by the Department of Veterans Affairs and provides a form of loan and grant assistance to veterans for housing and other purposes (see pp. 287-288.)

Statistics of Federal Assistance in the Housing Program, 1935-51.—The extent of Federal Government assistance to house-building in Canada is shown in Table 9. The year 1935 marked the passage of the Dominion Housing Act, 1935, and the entry of the Federal Government into the housing field on a continuing basis. This Act was succeeded by the National Housing Acts of 1938 and 1944. These three Acts account for most of the federal loan assistance to house-building. (See the 1950 Year Book, pp. 650-652.)

${ }^{1}$ Exclusive of a small number of dwellings built by Federal Government Departments as part of their normal operations.

Provincial Government Assistance.-As stated previously (see p. 672), all provinces except Alberta and Prince Edward Island had, by December 1951, passed complementary legislation respecting Sect. 35 of the National Housing Act, which provides for joint federal-provincial housing and land-assembly projects. In addition, separate legislation with respect to housing has been enacted in the Provinces of Quebec and Ontario.

Quebec.-An "Act to grant to municipalities special powers to remedy the housing shortage" (S.Q., 12 Geo. VI, c. 7) empowers municipal corporations under certain conditions to cede land at $\$ 1$ per unit to co-operative building societies or individuals and to reduce the valuation of any new dwelling for taxation purposes to 50 p.c. of its real value for a period of 30 years. The date fixed for the expiry of these powers was extended to Feb. 1, 1954, by Bill No. 16, dated Jan. 30, 1951.

An "Act instituting an enquiry into the housing problem" (S.Q., 12 Geo. VI, c. 8) authorized the appointment of a commission of from three to five members for this purpose and set aside $\$ 100,000$ for the carrying out of the enquiry. Bill No. 17, dated Jan. 30, 1951, provided a supplementary credit of $\$ 25,000$ for the completion of the enquiry.

The Charter of the City of Quebec (S.Q., 9 Geo. VI, c. 71) was amended by Bill No. 107, dated Feb. 28, 1951. Under the amendment, the City is authorized to borrow a maximum of $\$ 500,000$ for the purpose of making a loan on second mortgage to any person, association, corporation or limited-dividend company wishing to build residential dwellings under the National Housing Act, 1944. The dwellings may be of single or double type. Apartment houses or row houses containing up to ten dwellings are also eligible for second-mortgage loans under certain conditions. No loan shall exceed $\$ 1,000$ per dwelling.

An "Act to improve housing conditions" (S.Q., 12 Geo. VI, c. 6) was amended by Bill No. 5, assented to Nov. 15, 1951. Under the amendment, the Government is empowered to pay a subsidy on interest charges in excess of 3 p.c. on loans approved for the building of new dwellings of one or two units. The interest charged by the lender must not exceed 6 p.c. on loans up to $\$ 7,000$ in the case of a single-family dwelling and $\$ 12,000$ in the case of a two-unit dwelling. Before the amendment, the Government was authorized to pay an interest subsidy in excess of 2 p.c. on loans on which the interest rate did not exceed 5 p.c. per annum. The maximum amount of loan was $\$ 6,000$ in the case of a single-family dwelling and $\$ 10,000$ in the case of a two-unit dwelling. The amendment also provides for an addition of $\$ 10,000,000$ to the $\$ 20,000,000$ voted since 1948 for the purpose of paying the interest subsidy.

Ontario.-During April 1952, the Ontario Legislature approved five Bills designed to promote the building of new houses in urban and rural farm and nonfarm areas throughout the Province.

The Housing Development Amendment Act, 1952, empowers the Province and a municipality to enter into joint housing projects, and empowers a municipality to contribute to the cost of a housing project or to issue debentures for the purpose of a housing project without reference to its municipal board or the assent of its electors. For industries locating in rural areas and in small communities, the Province and municipality may participate with the Central Mortgage and Housing Corporation in the development of joint housing projects, part of the cost of which will be borne by the Corporation. Under certain conditions, the Province may
expropriate land in municipalities for the purpose of housing projects. The Act came into force Apr. 10, 1952, and amended the Housing Development Act (R.S.O. 1950, c. 174).

Under the Planning Amendment Act, 1952, municipalities with an approved official plan may designate an area within the municipality as a redevelopment area and, upon the passage of a by-law, may acquire land within that area and clear and prepare it for residential, commercial, industrial or other designated purpose. The Act came into force May 1, 1952, and amended the Planning Act (R.S.O. 1950, c. 227).

The Rural Housing Assistance Act, 1952, authorizes the establishment of a Crown Company-the Rural Housing Finance Corporation-which is empowered to lend and invest mortgage money in order to provide financial assistance in the building of new houses in rural villages and other rural areas. The Corporation may lend money independently or in co-operation with the Central Mortgage and Housing Corporation or with any approved lending institution. The Act came into force on Apr. 10, 1952.

The Junior Farmer Establishment Act, 1952, provides for the establishment of a corporation for the purpose of making loans to assist young qualified farmers in the establishment, development and operation of their farms. The Corporation may make loans for the erection and improvement of farm houses. A loan may be secured as first-mortgage on farm property and shall not exceed $\$ 15,000$, repayable in 25 years. The Act came into force on Apr. 10, 1952.

The Elderly Persons Housing Aid Act, 1952, authorizes the Province to make grants to any municipality to assist in the construction and equipment of low-rental housing units for elderly persons. The amount of any grant will be based on the lower of $\$ 500$ for each dwelling or of 50 p.c. of the capital cost of the project to the municipality. The Act came into force on Apr. 10, 1952.

## Subsection 2.-Construction of Dwelling Units

In 1951, the volume of house-building declined for the first time in the post-war years to a level below the rate prevailing in the period 1948 to 1950. Completions of dwellings in 1951 declined 8 p.c. from 91,800 units in 1950 to 84,800 in 1951. New dwellings started in 1951, after running ahead of 1950 for the first four months of the year, began to decline in May and dropped progressively for the remainder of the year. In 1951, 72,100 new dwellings (including conversions) were started, a decrease of 24 p.c. from the 95,300 started in 1950 . During 1951 approximately 80 p.c. of completed dwellings were built in urban centres and about 74 p.c. of all completions were single houses. It is estimated that about 25 p.c. were built for rental and the remainder were for owner-occupancy.

Regionally, starts and completions during 1951 decreased from 1950 by 26 and 2 p.c., respectively, in Quebec and by about 54 and 39 p.c., respectively, in the Maritimes. Ontario showed a decrease of 18 p.c. in starts and a gain of 1 p.c. in completions. The Prairie Provinces and British Columbia had a decrease of

31 p.c. and 24 p.c., respectively, in starts and 19 p.c. and 22 p.c. in completions. Newfoundland had a decrease of 47 p.c. in starts and 45 p.c. in completions.

Tables 12, 13 and 14 summarize the results of surveys conducted by the Dominion Bureau of Statistics and the Central Mortgage and Housing Corporation.

## Section 1.-The Government in Relation to Labour

## Subsection 1.-Federal Labour Legislation

The Federal Department of Labour was established in 1900 by the Conciliation Act which provided machinery to aid in preventing and settling labour disputes, and required the Department to collect, compile and publish statistical and other relevant information. The Department assumed, too, the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds.

At present, in addition to the statutory duty of disseminating information concerning labour and industrial matters, the Minister of Labour is responsible for the administration of certain statutes: Conciliation and Labour Act, 1906; Government Annuities Act, 1908; Fair Wages and Hours of Labour Act, 1935; Unemployment Insurance Act, 1940; Vocational Training Co-ordination Act, 1942; Reinstatement in Civil Employment Act, 1946; Merchant Seamen Compensation Act, 1946; Government Employees Compensation Act, 1947; and Industrial Relations and Disputes Investigation Act, 1948.

Fair Wages Policy.-Wages and hours of work on contracts for the manufacture of equipment and supplies for the Federal Government and for construction were governed for some years by a Resolution of the House of Commons (1900) which was later incorporated in an Order in Council and amended from time to time. Contracts for construction are now regulated under the Fair Wages and Hours of Labour Act, 1935, and by an Order in Council of June 7, 1922, as amended Apr. 9, 1924, and May 2, 1949, and consolidated in November 1949. Hours on such

[^214]work are limited to eight per day and 44 per week except in an emergency or in special cases where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district concerned or, if there are no current rates, fair and reasonable ones determined by the Minister of Labour.

Wages and hours for work on contracts for equipment and supplies are regulated by the Order in Council of 1922 as amended on Dec. 31, 1934, and May 2, 1949. The hours on such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable, but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed.

The Industrial Relations and Disputes Investigation Act.-This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations, P.C. 1003, in effect since March 1944, and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively, that trade unions may be certified as bargaining agents for groups of employees, and that trade unions and employers are required upon notice to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such a provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity. The conditions precedent to strike and lockout action are provided in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards and industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, the Canada Labour Relations Board has received 319 applications for certification since Sept. 1, 1948, 173 being granted, 81 rejected, 49 withdrawn and 16 pending as of Sept. 30, 1952.

Of the 139 industrial disputes dealt with under the conciliation provisions of the Act, 90 were settled by conciliation officers and conciliation boards, 19 were not settled, 6 lapsed and 24 were pending as of Mar. 31, 1952.

## Subsection 2.-Provincial Labour Legislation

Labour legislation in Canada is, for the most part, a matter for the provincial legislatures since it usually governs, in some respects, the contract of service between employer and employee or the contract between members of a trade union which forms the basis of the union, or it regulates conditions in local work-places. The right to contract is a civil right and the British North America Act, which distributes legislative powers between the Parliament of Canada and the provincial legislatures, grants to the provinces power to enact laws in relation to "civil rights" and, with certain exceptions, "local works and undertakings"

In each province, except Prince Edward Island, a Department of Labour (in Alberta, the Department of Industries and Labour) is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines.

Factory legislation in eight provinces and shops legislation in several provinces prohibit child labour, regulate the hours of women and young persons, and provide for safety and health. Other labour statutes in most provinces include minimumwage legislation and maximum-hours laws, legislation to ensure freedom of association, to promote collective bargaining and to provide for the settlement of industrial disputes, and laws to provide for apprenticeship and the licensing of certain classes of workmen. The Industrial Standards Acts in Saskatchewan, Ontario, New Brunswick and Nova Scotia, the Alberta Labour Act and the Fair Wage Act in Manitoba enable the wages and hours of work agreed upon at a conference of representatives of employers and employed in designated trades to be made legal throughout the trade concerned. The Quebec Collective Agreement Act permits collective agreements between employers and trade unions to be made binding on all in the industry. Workmen's compensation laws in all provinces are administered by independent boards.

Provincial labour legislation enacted in 1951 is outlined in the following paragraphs.

Newfoundland.-The Workmen's Compensation Act, 1950, was brought into force on Apr. 1, 1951. Amendments made to the Act at the 1951 session fixed the benefits payable. In case of death of a workman, his widow is entitled to a lump sum of $\$ 100$ and $\$ 50$ a month until re-marriage or death, together with $\$ 10$ a month for each of her dependent children under 16, but the total monthly compensation payable to the workman's dependants, exclusive of burial expenses, may not exceed $66 \frac{2}{3}$ p.c.
of his average earnings. In non-fatal cases, a workman who is permanently and totally disabled is entitled to a pension for life equal to $66 \frac{2}{3}$ p.c. of his average earnings, and if he suffers a permanent partial disability, a payment of $66 \frac{2}{3}$ p.c. of the difference in his earnings before and after the accident. The maximum amount of yearly earnings to be taken into account is $\$ 3,000$. The waiting period under the Act is six days. Another amendment removes the fishing industry from the Act, except for the processing, canning and packing of fish and fish products on shore by persons other than the crews of fishing vessels. Masters and crews of fishing vessels are covered by the former individual liability Act.

The Labour Relations Act, 1950, was amended to repeal the provisions which required a trade union to comply with the Trade Union Act in order to be granted certification and the right to bargain with an employer under the Act.

A new Regulation of Mines Act, 1951, was passed, replacing an earlier statute, making detailed provision for mine safety. The minimum age for boys employed underground is raised from 13 to 18 years.

The Apprenticeship Act, 1951, provides for a provincial system of apprenticeship training. Under the Act, a person of at least 16 years of age may enter into a contract of apprenticeship with an employer in a skilled trade, under which he agrees to complete a minimum of 4,000 hours of employment in the trade and related courses of technical instruction. Under the direction of the Minister of Labour, a Director of Apprenticeship inspects and supervises apprenticeship training and a tripartite Provincial Apprenticeship Board has authority to register all apprentices, approve and certify apprenticeship contracts, and generaily regulate the training and certification of apprentices.

The Vocational Education Act, 1951, provides for the establishment of vocational schools.

The School Attendance Act, 1942, was amended to raise the school-leaving age from 14 to 15 years.

Prince Edward Island.-The Workmen's Compensation Act, 1949, was amended to increase the amount payable for the funeral expenses of a deceased workman from $\$ 100$ to $\$ 150$, the monthly allowance for a widow from $\$ 40$ to $\$ 50$ and that for each child under 16 years of age from $\$ 10$ to $\$ 12 \cdot 50$. A further amendment provides that the total monthly compensation payable to dependants in death cases may not exceed 75 p.c. of average earnings, instead of the previous $66 \frac{2}{3}$ p.c. The minimum payment to a disabled worker is increased from $\$ 12 \cdot 50$ to $\$ 15$ per week and the waiting period is reduced from seven to four days; three diseases are added to the schedule of industrial diseases; and several new classes of workers are brought under the Act.

Nova Scotia.-The Employment of Children Act, 1951, prohibits the employment of children under 14 years of age in specified industries, limits their working hours in other occupations to eight in a day, or to three in a day while school is in session unless an employment certificate is obtained, and forbids night work between 10 p.m. and 6 a.m. for children under 14 years. Inspectors appointed by the Minister of Labour may inspect premises and make any inquiry necessary for the enforcement of the Act.

The Women's Minimum Wage Act, 1951, replaces a 1920 Statute and applies to all women employees throughout the Province, except farm workers and domestic servants. Wider powers are given to the Minimum Wage Board, more specific provision is made for inspection, and higher penalties are prescribed for violation of the Act.

The Workmen's Compensation Act was amended to raise the monthly benefit payable for each child under 16 years of age in the care of a parent from $\$ 12 \cdot 50$ to $\$ 15$ and the payment for an orphan child from $\$ 22 \cdot 50$ to $\$ 25$.

The Coal Mines Regulation Act and the Metalliferous Mines and Quarries Regulation Act were revised and many safety provisions added. The minimum age for employment underground in metal mines is raised from 16 to 18 years.

New Brunswick.-Amendments to the Workmen's Compensation Act increase from $\$ 2,500$ to $\$ 3,000$ the maximum annual earnings on which compensation is computed, and raises the sum payable for burial expenses from $\$ 150$ to $\$ 200$.

The Labour Relation Act, 1949, was amended to permit a municipality to bring any group of its employees under the Act. Another amendment prohibits any attempt to influence the manner in which an employee votes in a representation vote or any other vote conducted by the Labour Relations Board.

Quebec.-The Labour Relations Act was amended to permit the term of collective agreements to be one, two or three years. Previously, one year was the maximum term.

Amendments to the Labour Relations Act and to the Trade Disputes Act provide that decisions of the Quebec Labour Relations Board or of councils of arbitration will not be subject to revision by the courts.

Ontario.-The Fair Employment Practices Act, 1951, the first legislation of its kind in Canada, forbids employers to refuse to employ, to discharge or to discriminate against any person because of race, creed, colour, nationality, ancestry or place of origin, and forbids trade unions to discriminate against any person for any of these reasons. Expressions of discrimination in application forms or advertisements or written or oral inquiries in connection with employment are prohibited. Employers of fewer than five persons, and religious, philanthropic, educational, fraternal or social non-profit organizations and domestic servants in private homes are not covered by the Act. Written complaints of discrimination must be filed by the persons affected. Charges are dealt with first by conciliation procedure and then, if necessary, by prosecution when fines up to $\$ 50$ may be imposed for an individual and $\$ 100$ for a corporation, union, or employment agency. The Act is administered by the Fair Employment Practices Branch of the Department of Labour.

The Female Employees Fair Remuneration Act, 1951, prohibits an employer from discriminating between male and female employees by paying a female employee at a lower rate than a male employee doing the same work in the same establishment. The machinery for dealing with charges of discrimination is the same as that established under the Fair Employment Practices Act. Offenders against the Act are liable to fines up to $\$ 100$. The Act, the first equal pay Act to be passed in Canada, became effective on Jan. 1, 1952.

The Workmen's Compensation Act was amended to increase the maximum annual earnings on which compensation is based from $\$ 3,000$ to $\$ 4,000$. The lump sum payable to the widow of a deceased workman is raised from $\$ 100$ to $\$ 200$, and the amount allowed for funeral expenses from $\$ 125$ to $\$ 200$. The waiting period is reduced from seven to five days.

A new Boilers and Pressure Vessels Act consolidates and revises the former Steam Boilers Act that governed the inspection of boilers during construction and repair, and the section of the Factory, Shop and Office Building Act providing for the inspection of boilers in factories, shops, restaurants and other buildings.

Whitoba.-The Hours and Conditions of Work Act, 1949, was amended to include provisions concerning work on public holidays, notice of termination of employment and a weekly day of rest. Overtime payment at the rate of time and one-half or compensatory time off must be given for any work done on seven specified public holidays in all industries and occupations except farming. Termination of employment without notice is prohibited where the period of employment is not fixed. Both employers and employees must give notice of intention to terminate employment. Where wages are paid once a month or oftener, the period of notice must correspond to the employee's pay period. The One Day's Rest in Seven Act was repealed, and the provision for a weekly rest-day in specified industries is now included in the Hours and Conditions of Work Act.

The Remembrance Day Act, 1951, makes Nov. 11 a public holiday on which work may be done only in specified essential services and industries or with a special permit from the Minister of Labour.

Amendments to the Workmen's Compensation Act shorten the waiting period from 14 to seven days, increase from $\$ 2,500$ to $\$ 3,000$ the maximum annual earnings on which compensation may be computed, raise the minimum weekly payment in cases of temporary total disability from $\$ 12 \cdot 50$ to $\$ 15$, and bring the members of municipal volunteer fire brigades under the Act.

The Vacations with Pay Act, 1947, was amended to require an annual vacation with pay of two weeks to be given after three consecutive years of employment.

Saskatchewan.-The Workmen's Compensation Act was amended to make learners eligible for compensation, to raise the monthly benefits from $\$ 50$ to $\$ 60$ for a widow and from $\$ 15$ to $\$ 20$ for each child under 16 years, and to increase the minimum monthly payment to the dependants of a deceased workman from $\$ 50$ to $\$ 60$ where the widow or invalid widower is the sole dependant, from $\$ 65$ to $\$ 80$ for a widow and one child, and from $\$ 75$ to $\$ 90$ for a widow and two or more children.

The Hours of Work Act was amended to make its application the same as that of the Minimum Wage Act. This amendment was declared in effect on Mar. 1, 1952.

An amendment to the Minimum Wage Act, which applies to all occupations except farming and domestic service in the cities, towns and villages and to mining, logging, lumbering and factory operations in any part of the Province, authorizes the Minimum Wage Board to fix minimum rates of pay for employees who work and for those who do not work on eight specified public holidays.

The Trade Union Act was changed to remove the provision which permitted the Labour Relations Board to require an employer to disestablish a company-dominated organization. The Act now gives the Board power to determine whether a labour organization is company-dominated and makes it an unfair labour practice for an employer to bargain with such an organization.

The Boiler and Pressure Vessel Act, 1948, was amended to provide for shop inspection of boilers and pressure vessels while under construction and annual inspection of such vessels.

The Apprenticeship and Tradesmen's Qualification Act was amended to make provision for the appointment of advisory and examining boards for designated trades. The schedule of designated trades was replaced.

The Wages Recovery Act, 1951, permits an employee to lay a complaint against his employer for non-payment of wages before a justice of the peace or police magistrate who, after summoning the employer to appear before him, may order the employer to pay the wages found to be due, up to a limit of $\$ 200$. The new Act repeals and replaces the Masters and Servants Act.

Alberta.-The Industrial Wages Security Act, which applies to the mining and lumbering industries, was amended to permit employers in cases authorized by the Minister of Industries and Labour to furnish security for the payment of wages in instalments. Employers in box factories and woodworking plants are exempted from the requirement to deposit security for wages with the Department before beginning operations each year.

The administration of the Factories Act, the Welding Act and the Electrical Protection Act was transferred from the Department of Public Works to the Department of Industries and Labour.

British Columbia.-The Public Works Fair Wages and Conditions of Employment Act, 1951, centralizes the fair wage policy for public works contracts under the jurisdiction of the Minister of Labour. The Act requires that all persons employed in the execution of a contract with the Provincial Government for any public work or on works subsidized by the Province must be paid "fair wages", that is, wages generally accepted as current in the district for that class of work and must work not longer than eight hours a day and 44 hours a week, except where arrangements are made as provided for by the Hours of Work Act in cases of emergency or otherwise. If a contractor fails to pay the proper wages, an employee may make a claim direct to the Minister supervising the carrying out of the contract, and the claim may be paid from the moneys in the hands of the Crown for securing the performance of the contract.

The Factories Act was revised and the schedule that listed the types of factories to which the Act applied was repealed. A broader definition of "factory" is inserted in the Act to ensure that all types of factories are covered as well as shipyards, laundries and elevators. New sections are added governing ventilation in factories where harmful gases or dusts are present. Six types of factories are declared exempt from the requirement to obtain a permit from the inspector for work on the public holidays specified in the Act.

Amendments to the Apprenticeship Act provide for the inspection of establishments where apprentices are employed and make apprenticeship open to adults over 21 years as well as to minors of over 15 years of age.

By a new amendment, the Annual Holidays Act does not apply where an annual holiday with pay has been granted under a collective agreement signed by a certified bargaining agent and the holiday provision has been approved by the Minister of Labour.

An Act was passed authorizing a committee of the Legislature to inquire into the Industrial Conciliation and Arbitration Act and its administration.

Regulation of Wages and Hours of Labour.-The regulation of wages and hours of persons in private employment in Canada is within provincial jurisdiction, and all the provinces, except Prince Edward Island, have legislation on the subject.

In Nova Scotia, the minimum wage law applies only to women, while in Ontario, though the Act applies to both sexes, the Orders apply only to women. In Manitoba, Alberta and New Brunswick, there are separate Orders for men and women and also in British Columbia but in the latter Province certain Orders cover both sexes. In Quebec and Saskatchewan, Orders apply to both sexes. The Newfoundland Minimum Wage Act, 1950, applies to both male and female workers and is similar to the Acts in the other provinces. In Quebec, under the Collective Agreement Act, hours and wages and also apprenticeship, vacations with pay and family allowances provisions established by a collective agreement voluntarily entered into by employers and unions or groups of employees may be made legally binding, by Order in Council, on all employers and employees in the industry in the district covered by the agreement, if the parties are sufficiently representative of the industry. At Mar. 31, 1950, 99 agreements had been generalized to apply either throughout the Province or to a certain district. These agreements covered 192,228 workers and 20,711 employers. The agreements in force throughout the Province applied to the following industries: building materials, the manufacture of women's cloaks and suits, dresses, millinery, men's and boys' clothing, men's and boys' hats and caps, fine gloves and work gloves, shoes, furniture, paints, corrugated and uncorrugated paper boxes, tanning, lithographing, and elevator construction. Other agreements concern industries in particular cities or parts of the Province including all building trades and printing trades in the large urban centres and many rural districts. From Mar. 31, 1950, to the end of 1951, four new agreements were extended for the first time, and five were repealed affecting municipal employees, barbers and hairdressers, and clock and watch repairmen in certain areas. New agreements extended for the first time and applicable throughout the Province apply to the manufacture of men's and boys' shirts and the manufacture of ladies' handbags, etc.

The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario and Saskatchewan and the Alberta Labour Act provide that wages and hours agreed upon at a conference of representatives of employers and employees called by the Minister of Labour or his representative may be made legally binding by Order in Council on the industry in the area concerned. The Nova Scotia Act applies only to construction work at Halifax, Dartmouth and Sydney.

In Nova Scotia ten schedules for individual building trades were in force during 1951, all of which were renewals of previous schedules. In New Brunswick, three schedules were in force at Mar. 31, 1951, two of which were renewals. Since that date, two new sehedules have been made binding.

In Ontario there were 134 schedules in force at Mar. 31, 1950. Throughout the Province, schedules were in effect for brewery workers, cloakmakers, the men's and boys' clothing industry, men's and boys' hats and caps and the hard furniture industry. In the construction industry, one schedule covered several building trades in one city, and 55 schedules, each for a single trade in a single locality, covered one or more trades in 28 localities. In other industries also, schedules were in effect only for certain zones; for bakers in one zone, for soft furniture manufacturing in one, for coal hoisting in one, for the coal industry in one, for taxi-drivers in one, for the retail gasoline service in four and for barbers in 64 zones. From Mar. 31, 1950, to the end of 1951, 29 new schedules were made binding, six of which were made for the first time.

In Saskatchewan, 16 schedules were in effect at Dec. 31, 1950. These included one for barbers covering the whole Province; others covered bakers and salesmen, carpenters, electrical workers, painters, shoe repairers and beauty culture operators in one or more areas. During 1951 two schedules were renewed.

In Alberta, 22 schedules were in effect at the end of 1951. These included, in one or more areas, bakers and bakery salesmen, certain individual building trades, dairy employees, garage and service station employees, radio service employees, laundry and dry-cleaning employees and barbers. In 1950 and 1951, five new schedules were made binding, including one for the first time.

Part II of the Manitoba Fair Wage Act provides similar machinery for fixing wages and hours in any business, trade or undertaking, except agriculture. Orders in Council, under this legislation, have been passed fixing wages and hours in the baking industry and the barbering and hairdressing trades.

Five provinces, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, have statutes that either place absolute limits on working hours or require time and one-half the regular rate to be paid if work is continued after specified limits. There is, in addition, an Act of limited application in Quebec. In the provinces that have no special hours-of-work legislation, the only statutory regulation of hours, apart from that described above under Industrial Standards Acts and the Quebec Collective Agreement Act, is that imposed by factories Acts, mines Acts and, in Newfoundland, an Act governing shops. In New Brunswick and Quebec, the limits imposed by the factories Acts apply only to women and boys under 18 years. Several Minimum Wage Acts give authority for the regulation of hours as well as wages.

Minimum Wage Regulations. -Table 1 shows the minimum rates in effect in June 1952 for several classes of establishments in the principal cities. In New Brunswick and British Columbia, the rates for all workers, and in Manitoba the rates for men, apply throughout the Province. In other provinces, rates vary according to zone. The rates given apply to the hours specified or to the normal work-week of the establishment, if less, except at Montreal and Winnipeg.

## 1.-Minimum Weekly Rates for Experienced Workers in Certain Cities, June 1952

| Item and Type of Establishment | Halifax ${ }^{1}$ | Saint <br> John ${ }^{2}$ | Montreal | Toronto ${ }^{1}$ | Winnipeg ${ }^{3}$ | Regina ${ }^{4}$ | Edmonton ${ }^{5}$ | Van- couver |

|  | 16.80 | 35 | 46 | 16.80 | $19 \cdot 50$ | 24 | 24 | 18 |

[^215]Regulations of Hours and Annual Holidays.-In Ontario, there is a maximum eight-hour day and 48 -hour week for the workers to whom the statute applies. In Alberta, the maximum daily and weekly hours in the cities of Calgary, Edmonton, Lethbridge and Medicine Hat are eight and 44; in the remainder of the Province they are eight and 48. In British Columbia, hours are limited to eight in a day and 44 in a week. In these three provinces, the Acts apply to most workers, except farm labourers and domestic servants. In Saskatchewan, an Act of 1947 requires time and one-half to be paid for work after eight hours daily and 44 hours weekly. The Act applies to all workplaces in centres over 300 in population and to any area where mining, logging, lumbering or factory operations are carried on. A Manitoba Act of 1949 requires time and one-half to be paid for work done after eight hours in a day and after 48 hours in a week for men workers and 44 for women. The Act covers most industrial workers in the Province. In all provinces that have Acts regulating hours, longer hours may be worked in an emergency or by permission of the administrative authority.

Six provinces have provided for annual holidays with pay for workers in most industries. In five of these provinces-Quebec, Ontario, Manitoba, Alberta and British Columbia-workers are entitled to a week's holiday with pay after a year of employment. Two weeks holiday is given in Saskatchewan after a year of employment, in Alberta after two years of employment, and in Manitoba after three years of employment. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and in Saskatchewan to one day for each month. Coal miners in Alberta are entitled to one days holiday with pay for every 20 days worked in a month but not more than two weeks holiday in a year.

Excluded from the holiday provisions are farm workers in all provinces and domestic servants in all but Manitoba and Saskatchewan. The Manitoba Act also excludes independent contractors, and railway and express companies under federal jurisdiction. In addition, Quebec exempts forest operations, public corporations, janitors and watchmen, and certain part-time workers; Ontario, professional workers, salesmen, funeral directing and embalming; Manitoba and Saskatchewan, ranching and market gardening; and British Columbia, professional workers and horticulture.

## Section 2.-Occupations of the Gainfully Occupied Population

Detailed statistics on the occupations of the people of Canada in 1941 will be found in Vol. VII, Census of Canada, 1941. Summary statistics appear in the 1943-44 and 1945 Year Books. Figures on the gainfully occupied population of Newfoundland are given in Vol. I of the Census of Newfoundland, 1945 and are summarized in the 1951 Year Book, pp. 655-656. Information from the 1951 Census on this subject was not available at the time of preparation of this Chapter.

## Section 3.-Employment and Unemployment

## Subsection 1.-The Labour Force*

During World War II it became increasingly apparent that up-to-date information on the size and characteristics of the labour supply was a necessity. Also, the possibility of disturbed economic conditions in the post-war period emphasized the need for a current and periodic analysis of the state of employment in Canada. To meet this need, a labour force survey on a sample basis was conducted in the

[^216]autumn of 1945, and quarterly surveys have been carried out since that time. A multi-stage area sampling was used involving the selection of progressively smaller sample areas and ultimately of households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion.

The estimates of the labour force are restricted to the civilian labour force, since net strength of the Armed Forces is obtainable directly from official sources. Inmates of institutions and Indians living on reservations are also excluded because they are not in the competitive labour market. Because of inaccessibility and high cost of enumeration, certain remote areas of the country have been excluded from the sample.

The present sample includes about 30,000 households in over 100 different areas in Canada. These areas include the 28 cities having a population of 30,000 or over, in addition to some of the smaller cities and various rural areas. Once a year, at the mid-summer survey, the sample in the metropolitan areas of cities of 30,000 or over is doubled in order to improve the estimates of interprovincial migration obtained from the sample.

The labour force surveys provide a classification of persons 14 years of age or over on the basis of their activity during a specified week, which is, in each case, the week that precedes the beginning of the survey. Information on the part of the population not in the labour force is also collected. These non-workers are
classified as keeping house, going to school, retired or voluntarily idle, too old or permanently unable to work. A residual category consisting of persons who work without pay for charitable organizations or who, for any other reason, cannot be classified in another group is also shown.

The information gathered on the labour force is divided into two groups: (1) persons with jobs and (2) persons without jobs and seeking work. The estimates of persons with jobs are classified by region, sex, age, hours worked, occupation, industry and occupational status. Special estimates are given for women employed in domestic service and employed women by marital status. Included in the estimate of persons with jobs are those who worked during the survey week, as well as those temporarily absent from their jobs because of illness, vacation, bad weather, labour disputes or temporary layoffs. The estimates of persons without jobs and seeking work are classified by region, sex, age and number of months looking for work.

The estimates obtained from the labour force surveys are all subject to sampling error, which tends to increase as the size of the estimate decreases. Accordingly, the reliability of the smaller estimates is less than that of the larger estimates. Estimates of less than 10,000 persons should not be used without careful reservation.

Data in Table 2 for June 1, 1946 to 1951, are compiled from the results of quarterly labour force surveys conducted in late May or early June of those years. The information for years prior to 1946 is taken from estimates based upon 1931 and 1941 Census data rearranged according to the definitional system used in the labour force surveys, the revised census benchmarks being linked with the June 1946 survey on the basis of monthly and annual employment and unemployment data.
2.-Estimates of the Civilian Labour Force and its Main Components, June 1, 1931-51

| Year | Civilian PopuIation ${ }^{1}$ (14 years of age or over) | Civilian Labour Force (14 years of age or over) |  |  |  |  |  |  | Persons not in the Labour Force (14 years of age or over) |

[^217]Main Characteristics of the Canadian Labour Force, 1931-51.*-The civilian population 14 years of age or over (exclusive of persons in institutions) increased in the period June 1931 to June 1951 by about 2,439,000 persons or at the rate of about 122,000 persons a year. The strength of the Armed Forces rose very considerably from 5,000 in 1931 and 9,000 in mid-1939 to 779,000 at June 1944 but declined to 75,000 by June 1951. Consequently, the civilian non-institutional population, which increased very little from June 1939 to June 1940 actually declined in size until, in mid-1943, it contained almost 240,000 fewer persons than in 1939. During 1944 there was a small increase in the civilian population $(59,000)$ as the rate of increase of the Armed Forces levelled off. In 1945, 1946 and 1947 the civilian population increased markedly as a consequence of the rapid demobilization of the Forces.

In contrast, the civilian labour force maintained its strength notwithstanding large withdrawals to the Forces during the war years (June 1942 labour force being 102,000 greater than at June 1941, and that of June 1945 being 66,000 greater) mainly by recruiting replacements from among those who would normally be outside the labour force. The group classed as "not in the labour force" usually represents a fairly constant percentage of the population, but during the war years this category reached a low point in 1943 ( 162,000 persons fewer than in 1939), increased by 74,000 between mid-1943 and mid-1944 and then moved sharply upward with the decline in wartime employment (the increase was: June 1944 to June 1945, 160,000; and June 1945 to June 1946, 382,000).

The number of civilian jobs increased considerably during the War as compared with pre-war experience (despite a decline in agricultural employment) reaching a wartime peak of $4,447,000$ in June 1943 ( 422,000 greater than June 1939). After registering a decline to $4,411,000$ during the readjustment period represented by June 1945, the number of jobs continued to increase in post-war years to the all-time high, for that month, of $5,069,000$ in June 1951.

## Subsection 2.-Employment and Unemployment Statistics of the Census

Detailed statistics of earnings, employment and unemployment of the people of Canada as at June 1, 1941, are given in Vol VI, Census of Canada, 1941. Figures from the 1951 Census were not available at the time of preparation of this Chapter.

## Subsection 3.-Employment and Payrolls as Reported by Employers, $1951 \dagger$

For many years the Dominion Bureau of Statistics has made monthly surveys of employment in the major non-agricultural industries, exclusive of education, health, domestic and personal service, government administration, etc. The broad industrial divisions covered by the surveys are forestry (chiefly logging), mining, manufacturing, construction, transportation, storage and communications, public

[^218]utilities, trade, finance, insurance and real estate, and certain services (chiefly hotels, restaurants, laundries and dry-cleaning plants). Early in 1941, the monthly inquiries were extended to cover the current earnings of those in recorded employment. Subsequently, a record of weekly payrolls and average wages and salaries was built up for 1939, 1940 and 1941. Since late in 1944, monthly data have also been collected on man-hours and hourly earnings. Inquiries into the sex distribution of the persons on the payrolls of reporting establishments were undertaken on a monthly basis commencing Feb. 1, 1946, replacing the annual and semi-annual surveys of immediately preceding years. Following the entry of Newfoundland into Confederation, the collection of employment and payrolls data was undertaken in that Province. It has not yet been possible, however, to secure the data necessary to include the Newfoundland figures in the Canada indexes, but separate information concerning that Province has been published since 1949.

For practical reasons associated with costs of collection in time and money, the current inquiries* are limited to firms and branches ordinarily employing 15 or more persons. The restriction results in the inclusion of industrial samples of varying size in the monthly survey, the variation depending upon the organization of the industry in large or in small units; from the equally important geographical aspect, however, much greater uniformity exists in the provincial coverage of total employees and, in all cases, the coverage is large. It is estimated that the more than 23,000 firms co-operating in 1951 employed approximately 83 p.c. of the total wage-earners and salaried employees in the industries surveyed.

From 1951, the monthly records of employment, payrolls and man-hours have been grouped according to the Canadian Standard Industrial Classification, and the earlier employment and payroll indexes have been recalculated on 1939 averages as 100 p.c. The tables in this Subsection incorporate classification changes, and all indexes refer to $1939=100$.

The employment and payrolls indexes published monthly reflect general economic conditions in the country as a whole and also in specific areas, since workers are taken on staff or released by firms in response to demand for their products. The acceptance by Canada of a share in the responsibility for western defence created a demand for strategic materials; the outbreak of hostilities in Korea in 1950 accelerated a program already in progress and that gained momentum during 1951. The volume of employment in the period under review responded to the impact of defence spending and sustained consumer demand in many lines. Although area and industry movements varied in some instances, the general indexes of employment, payrolls and average earnings rose to unprecedented heights. A favourable factor during 1951 was a decline of about 35 p.c. in the working time lost as a result of industrial disputes as compared with 1950.

Employment.-During 1951, the index of employment for the composite of nine industries $(1939=100)$ reached a new maximum, averaging $180 \cdot 2$. The Dec. 1 figure of $186 \cdot 6$ was the highest on record. These indexes showed gains of

[^219]more than 7 p.c. over the average for $1950(168 \cdot 0)$ and about 4 p.c. over the peak figure in that year (Dec. 1, 179-2). The month-to-month movements in the two years 1950-51 were similar, the index dropping slightly from Jan. 1 to Mar. 1, and rising steadily throughout the remainder of the year.

The 1951 index of employment in manufacturing, averaging $190 \cdot 0$, was at a post-war peak, 7 p.c. above the 1950 figure and 8 p.c. above that for 1949 . At its wartime maximum in 1943, the index of factory employment was $196 \cdot 1$ declining to $194 \cdot 6$ in the following year; by 1946 it dropped to $160 \cdot 0$. Since then, the general movement has been upward except for an insignificant recession in 1949. Factories turning out durable manufactured goods in the year under review showed an average increase of 11.8 p.c. over 1950, and the gain in employment in non-durable goods was $2 \cdot 9$ p.c. Widespread improvement was indicated within the former category, most classes showing increased staffs. An exception was the heating and cooking apparatus group, in which the index of employment fell by 1.8 p.c. in 1951. There was particularly marked expansion as compared with 1950 in aircraft and parts, shipbuilding and repairing and aluminum products. In the non-durable goods division, the movements were not so uniform. Reduced employment was indicated in tobacco, soft drinks, leather products, woollen and fur goods, and some other classes. Firms in other branches of the non-durable goods group generally showed moderate improvement over 1950.

Employment in construction reached a new high level in 1951, the index rising by $7 \cdot 6$ p.c. The gain took place in the buildings and structures group, which showed an increase of 10.8 p.c. Within that category, the improvement was largely in industrial construction, due to a considerable extent to defence requirements. The trend in the other non-manufacturing industries for which data are available was also generally favourable in 1951, when new all-time peaks were recorded in many groups.

Employment indexes for the major industries are given in Table 3 and for the provinces in Table 4 by months for 1950 and 1951, with annual averages from 1941. Provincially, the greatest increases in industrial employment in 1951 as compared with a year earlier were recorded in Quebec, Alberta and Ontario, amounting to $8 \cdot 7$ p.c., $7 \cdot 5$ p.c., and $7 \cdot 5$ p.c., respectively. In the period since 1939 , a particularly marked rise in employment was shown in Alberta; the 1951 index for that Province was $202 \cdot 6$ compared with $191 \cdot 0$ for Ontario, where improvement was next in magnitude. Development of the oil fields contributed materially to the favourable position of Alberta.

Table 5 gives index numbers of employment in eight cities of Canada. In most of these, a continuation of the upward movement shown in earlier years was noted in both 1950 and 1951. In Quebec and Vancouver, however, the indexes had dropped slightly in 1950 from the year before, but recovered in 1951; in the former, a post-war peak was reached in the year under review, while the Vancouver index was exceeded only by that in 1948. A new all-time high level of employment was recorded in $1951^{7}$ at Toronto, where the index averaged $195 \cdot 3,6 \cdot 4$ p.c. above that of 1950 , the previous" maximum.

Table 6 gives the percentages of women reported by the larger establishments in specified industries at Oct. 1 in the period 1944 to 1951 . On the whole, the proportions have declined since 1944, when employment for women reached an all-time high; this was also the case in most industrial divisions for which statistics are available. In the finance, insurance and real estate group, the ratio of women has risen steadily in the three years 1949-51, but in 1951 it was still considerably below the wartime level.

## 3.-Annual Average Index Numbers of Employment, by Industrial Groups, 1941-51, and Monthly Indexes, 1950 and 1951

(Exclusive of Newfoundland and the Territories)
Note.-These indexes are calculated as at the first day of each month, on the base $1939=100$.

[^220]Earnings.-High levels of activity recorded in practically all areas and industries in 1951 were accompanied by substantially greater expenditures in wages and salaries, reflecting not only expanding employment generally, but also widespread and important increases in rates of pay. At $381 \cdot 3$, the index of aggregate weekly payrolls was 18.5 p.c. above the 1950 figure, previously the maximum. Provincially, the greatest percentage gains in the year were those of over 20 p.c. in Quebec, 19 p.c. in Ontario and 17 p.c. in British Columbia. Industrially, there was a particularly marked rise in payrolls in logging, in which the reported disbursements rose by 59 p.c.
in 1951 over 1950. In manufacturing, there was an advance of $18 \cdot 7$ p.c., in durable manufactured goods 24 p.c., and in non-durable manufactured goods, in which employment generally showed a relatively small gain in the 12 months, the increase was over 13 p.c.

The index of average weekly wages and salaries reached an all-time high in 1951 at $211 \cdot 6$. There were widely distributed gains in the per capita figures owing largely, in most industries and areas to upward adjustments in wage and salary rates. In some instances, industrial and occupational changes in the distribution of employees also contributed.
7.-Annual Index Numbers of Employment, Payrolls and Average Earnings in Industrial Establishments, with Average Weekly Wages and Salaries, 1950 and 1951

${ }^{1}$ The durable goods group includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies and non-metallic mineral products; the nondurable goods group includes the remaining manufacturing industries. ${ }^{2}$ Mainly hotels, restaurants,
laundries and dry-cleaning establishments.
${ }^{3}$ Exclusive of Newfoundland and the Territories.

Since 1944 a monthly series of statistics on man-hours, hourly earnings and weekly wages in industries where employers keep count of hours actually worked has been prepared by the Dominion Bureau of Statistics. In manufacturing, the proportion of total workers included in the monthly surveys on these subjects is high, at approximately 80 p.c. of all wage-earners in Canada. Table 8, p. 700 summarizes the recent data.

The average hours of work per week in 1951 in most of the industries listed were lower than in 1950 or 1949 , owing mainly to continuing reductions in the standard working week and, to a lesser extent, to changes in the levels of business activity.

Mining and construction were the exceptions, showing a slight rise in the three years. Industrial changes in the distribution of the reported wage-earners and their hours within the mining division were largely responsible for the higher averages as compared with 1949, when industrial disputes caused a substantial loss in working time.

In all industries and areas for which statistics are given in Table 8, there have been successive increases in recent years in the averages of hourly earnings and weekly wages. The levels of average earnings in manufacturing generally in the different areas, and their changes from year to year, are affected by the industrial distributions of the reported wage-earners, and by local variations in business activity.

> 8.-Average Hours and Earnings in Specified Industries and Areas, 1949-51

| Industry and Area | Average Hours Worked |  |  | Average Hourly Earnings |  |  | Average Weekly Wages |  |  |

# Section 4.-Earnings, Hours of Work and Wage Rates 

## Subsection 1.-Earnings and Hours of Work of Male and Female Employees in Manufacturing Establishments*

Annual surveys of earnings and hours of work of male and female wage-earners and salaried employees in manufacturing establishments employing 15 or more persons have been conducted by the Dominion Bureau of Statistics since 1946. The surveys relate to the last week of November in 1946 and 1947 and to the last

[^222]week of October in subsequent years. In 1950, data were included for most of the large plants in Newfoundland. The distribution of male and female wage-earners by hours worked in the survey week was obtained in 1946-49; the 1950 survey showed the distribution of wage-earners and salaried employees of each sex by amounts earned in the week.

The data for 1949 (Tables 9 and 10) relate to all employees on the payrolls of the larger manufacturing establishments in the reported week, except homeworkers, travelling salesmen, watchmen and charwomen; the 1950 figures include all categories but homeworkers. Proprietors and firm members, pensioners, personnel in separately organized sales offices, and employees absent without pay throughout the survey week are excluded. The reported earnings comprise gross earnings, before deduction for taxes, unemployment insurance, etc., including time, piecework and commission earnings, regularly paid bonuses, overtime pay and payments to persons absent with pay in the survey week. The hours include part-time, full-time and overtime hours worked, and any hours of paid absence in that week.

Tables 9 and 10 show the average hours worked and the average earnings of wage-earners and salaried employees of both sexes, by provinces and industries. The trend in earnings has been consistently upward in the period covered, largely as a result of pay increases and rising cost-of-living bonuses. Other factors influencing pay levels include the type and size of the manufacturing operation, the proportion of women employed, occupational differences, variations in activity resulting from seasonal, market and other conditions, the proportions of short-time, part-time and casual workers, the amounts of overtime work done, and the extent of absenteeism and labour turnover in the week surveyed. There are also variations associated with the location of the plant in areas where general pay levels tend to be above or below average. Provincial variations are closely related to the industrial distribution of the workers in the different areas. Salary levels are also affected by the type and size of establishment, the varying requirements for highly paid executive and professional personnel, the prevalence of head offices, the organization of distributive operations, etc.

Table 11 shows the proportions of women among wage-earners and salaried employees and the relation of their earnings to those of men. Women's wages and salaries are generally lower than men's earnings, not only because of pay differentials and occupational differences, but also because their hours of work are frequently shorter, part-time work and absenteeism are more common than among men, and they tend, on the average, to be younger and less experienced workers.

The distribution of wage-earners by sex and hours worked in the last week in October 1949 is shown in summary form in Table 12. Provincial variations are related to the industrial distribution of workers, to variations in the normal work week, and to seasonal and other differences in amount of part-time, short-time and overtime work. Table 13, giving the distribution of wage-earners and salaried employees by amounts earned in the last week of October 1950, supplies information on the components of the general averages of earnings, indicating the extent to which unusually high or low earnings were factors in the general figures.

## 9.-Average Hours and Earnings of Male and Female Wage-Earners for the Last Week of October, 1949 and 1950

(As reported by manufacturers usually employing 15 persons or over)

## Subsection 2.-Wage Rates and Hours for Various Classes of Labour*

Statistics of rates of wages and hours of labour have been collected for many years by the Federal Department of Labour and are published monthly in the Labour Gazette and in annual reports supplementary to the Labour Gazette. The first report was issued in 1921 but the records begin, in many cases, with the year 1901. The index numbers show the general movement of wage rates for the main industrial groups as well as for individual industries, but these cannot be used to compare wage rates in one industry with those in another. The statistics are average straighttime wage rates or average straight-time piece-work earnings and do not include overtime or other premium payments.

Tables 14 and 15 show the index numbers of wage rates by main industrial groups and by industries. From 1930 to 1933 the trend in wage rates was downward but increases have been general each year since that time. During the period 1939-50, the rise in the general average index number amounted to $115 \cdot 9$ p.c.

Wages of Farm Labour.-Compared with the corresponding dates in previous years, farm wage rates showed some levelling-off and decline in Eastern Canada and British Columbia in August 1949. This was in contrast to the general upward climb in evidence during the period 1940 to May 1949. With a few exceptions, this levelling-off and decline was continued in those areas and extended to the Prairie Provinces during January 1950. A reversal of this trend became evident for some of the wage rates in May and August 1950 and a general recovery was under way by January 1951 in all provinces. For the remainder of the year the rates climbed steadily to reach the highest level since the survey was started in 1940. The information is provided by volunteer farm correspondents located throughout Canada.

## Section 5.-Unemployment Insurance

The Unemployment Insurance Act, which came into operation on July 1, 1941, applies to all employed persons with the following exceptions: workers in specified industries or occupations such as agriculture, fishing, Armed Forces, permanent public service of the Federal Government, provincial governments and municipal authorities, private domestic service, private-duty nursing; certain director-officers of corporations; workers on other than hourly, daily or piece rates if earning more than $\$ 4,800$ per year and (except by consent of the Unemployment Insurance Commission) employees in a hospital or charitable institution not carried on for gain. All employees paid by the hour, day or on piece rate (including a mileage rate) are insured regardless of amount of earnings, together with all employees who receive $\$ 4,800$ or less per annum under weekly, monthly or yearly rates.

Unemployment Insurance Fund.-Employers and employees contribute to the Fund, the total paid by each group being equal. The Federal Government contributes an amount equal normally to one-fifth of the combined employeremployee contributions, reimburses the fund for certain types of supplementary benefit payments and assumes the cost of administration. From July 1, 1941, to Mar. 31, 1951, employers and employees contributed $\$ 773,530,581$ to the Fund and the Federal Government added $\$ 156,502,957$. Interest and profit on sale of securities amounted to $\$ 77,620,644$ and fines of $\$ 76,196$ made a total revenue of $\$ 1,007,730,378$.

Benefits first became payable on Jan. 27, 1942, and from that date to Mar. 31, 1951 , total benefit payments amounted to $\$ 343,150,001$, leaving a balance of $\$ 664,580,377$ in the Fund. Reserves of the Fund are invested in Government of Canada bonds and, as at Mar. 31, 1951, the par value of bonds held amounted to $\$ 652,847,500$.

| \$48.00 or more.. | 54 | 54 | 108 | 16.20 | 21.00 |

[^229]No benefit is payable during the first eight days of unemployment in a benefit year. After that time, the duration of benefit is related to the employment and contribution history of the employee, the number of days' benefit being equal to onefifth the number of contribution days during the previous five years, less one-third the number of benefit days in the previous three years. Insurance benefit is paid as a right on fulfilment of the following statutory conditions:-

The payment of not less than 30 weekly (or 180 daily) contributions within two years, while in insured employment; and the payment of at least 60 daily contributions within the immediately preceding 12 months, or 45 daily contributions within the immediately preceding 6 months. (These periods of two years, 12 months and 6 months may be extended under certain circumstances.)
Disqualifications for benefit include: loss of work due to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or an institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be made if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.

Supplementary benefits at a slightly lower rate are payable to certain classes whose benefits have been exhausted or who are not entitled to ordinary benefit during the period Jan. 1 to Mar. 31 in each year.

Statistics of Unemployment Insurance.*-Benefits under the Unemployment Insurance Act first became payable late in January 1942, but no applications for benefit were received until early in February. Except for unusual periods such as the months following the cessation of hostilities in Europe in the spring of.1945,

[^230]monthly totals of claims received have shown a definite seasonal variation, rising in the late autumn and winter and falling again in the spring. Monthly averages of initial and renewal claims filed have been as follows: 1942, 2,244; 1943, 3,055 ; 1944, 7,575 ; $1945,24,699$; 1946, 40,722 ; 1947, 36,$904 ; 1948,54,091 ; 1949,77,821$; and 1950, 88,165.

Since September 1943, a record has also been maintained of the number of claimants on the live unemployment register on the last working day in each month. This provides a measure of recorded unemployment among insured persons on one day of each month. Monthly averages of ordinary claimants on the live register at the end of the month have been: 1944, 10,454; 1945, 41,139; 1946, 96,760; 1947, 68,$254 ; 1948,88,909 ; 1949,135,624$; and 1950, 165,304.

Monthly statistics on the operation of the Unemployment Insurance Act also provide data on the number of days that claimants on the live unemployment register at the end of each month have been continuously on the register, the number of claimants considered entitled and not entitled to benefit, chief reasons for nonentitlement, number of days benefit paid and amount of benefit paid.

In addition to the monthly material on the operation of the Act, annual tabulations of the persons employed in insurable employment are prepared from returns covering the book exchange at Apr. 1, and annual data are published on benefit years established and benefit years terminated.

The number of persons insured under the Unemployment Insurance Act, shown in Table 21, was assumed to be those working in insurable employment as at Apr. 1, as indicated at that time from returns on those receiving insurance books and contribution cards.

Table 22 presents information on the persons who established benefit years and those benefit years that terminated during the calendar year 1949. A benefit year is established under the Unemployment Insurance Act when an insured person, upon becoming unemployed, submits a claim and proves that at least 180 daily contributions have been made on his behalf during the preceding two years. Because of other provisions of the Act or because he may regain employment before he actually receives benefit, the setting up of a benefit year does not necessarily result in the receipt of benefit payments. When a benefit year is established it means merely that the claimant's right to receive benefit at a certain rate at any time during the succeeding twelve months is determined. Thus, of the 410,820 benefit years which terminated during 1949, 62,289 were paid no benefit.

The benefit year remains in existence either until the authorized benefit rights are exhausted or until 12 months have passed since the date of its establishment, whichever occurs first.

The amount of benefit paid on benefit years terminated, as presented in Table 22, is secured by multiplying each daily rate of benefit by the number of days paid at that rate on the ledger cards representing benefit years upon which benefit was drawn.

Table 24 classifies benefit years terminated by daily rate of benefit authorized. The daily rate of benefit is determined by the amount of the daily average contribution paid on behalf of the claimant during the most recent 180 contribution days and by whether or not he has a dependant within the meaning of the Act.

## 21.-Persons Insured under the Unemployment Insurance Act, by Industrial Groups and Sex, 1949 and 1950

Nore.-These figures include only those who exchanged an unemployment insurance book or were issued a book for the first time in April. They, therefore, represent an estimate of the number employed in insurable employment as at Apr. 1.

Employment Service.-The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act, 1940. The public employment offices, which had functioned under a joint federalprovincial arrangement for more than two decades, were taken over on Aug. 1, 1941, and added to by the Commission in all provinces, except Quebec. The Commission also established offices in Quebec and the provincial government thereupon reduced the number of its own offices.

## 28.-Applications for Employment, Positions Offered and Placements Effected by Employment Offices, 1941-50, and by Provinces, 1949 and 1950

Note.-Figures by provinces from 1920 to 1948 are given in the corresponding table of previous Year Books, commencing with the 1926 edition. Totals for $1920-37$ are given in the 1938 edition, p. 766; for 1938 in the 1939 edition, p. 802; and for 1939 and 1940 in the 1951 edition, p. 686.

## Section 6.-Vocational Training*

The Federal Department of Labour, in co-operation with the provincial governments has, since 1949, carried on the following types of training: (1) youth training; (2) assistance to students; (3) apprenticeship; (4) training of unemployed workers; (5) assistance to the provinces for vocational schools; (6) training of military personnel; and (7) training of discharged members of the Forces.

The Vocational Training Advisory Council, appointed under the authority of the Vocational Training Co-ordination Act, 1942, continued to advise the Minister of Labour on the general aspects of training plans. Two meetings were held during the year. The Council is representative of employers, organized labour, vocational education and of veterans' and women's organizations.

${ }^{1}$ Claims paid include commitments from previous years.
Youth Training.-This phase of the training program consists for the most part of various general and specialized courses for rural young people in agriculture, home crafts and handicrafts, and other related subjects.

[^231]Assistance to Students.-Under the Youth Training Division of the Vocational Training Agreement with each province, assistance may be provided for nurses-in-training at hospitals and for university students in courses leading to a degree, who have good academic standing but who, without financial assistance, cannot continue training. At the discretion of the provincial authorities, assistance may be given in the form of a grant or loan, or a combination of the two.

The value of Federal Government assistance for such purposes may be assessed from the following approximate amounts paid to the provinces during the year ended Mar. 31, 1951:-

| Province | Amount | Province | Amount |
| :---: | :---: | :---: | :---: |
|  | \$ |  | \$ |
| Newfoundland.. | 6,375 | Ontario.. | 60,000 |
| Prince Edward Islan | 4,750 | Manitoba. | 5,419 |
| Nova Scotia. | 9,728 | Saskatchewan. | 19,938 |
| New Brunswick. | 13,856 | Alberta.. | 14,356 |
| Quebec.. | 74,000 | British Columbia | 25,363 |

During the year 1950-51, Federal Government expenditure for such assistance amounted to $\$ 137,000$ in the form of grants and $\$ 97,000$ in the form of loans. Financial help was given to 429 nurses-in-training and 2,162 students at universities. Included in the total number of university students were 502 taking courses in medicine, 72 in dentistry, 358 in engineering, 59 in agriculture and 704 in arts and science. Total federal payments in the past 12 years, amounting to $\$ 2,083,820$, have assisted 23,291 students.

Apprenticeship Training.-Apprenticeship agreements are in effect with all provinces except Newfoundland, Prince Edward Island and Quebec. Of the trades designated under the provincial Acts, emphasis is being given to the building and construction trades. In some provinces, certain categories of apprentices are given full-time training of a practical as well as a technical nature for a period of one to three months each year. For other categories, part-time training is given either in afternoon or evening classes for about seven months of the year. Provision is made with employers for adequate supervision of apprentices working on the job by the appointment of instructor-supervisors who instruct full-time classes for six to eight months and supervise for the remaining part of the year. Use is also made of trade advisory committees. Costs are shared equally by the province concerned and the Federal Government. The total number of apprentices registered was 10,850 in the seven provinces having agreements with the Federal Government on Mar. 31, 1951.

Training of Unemployed Persons.-The Canadian Vocational Training and Co-ordination Act provided for the training of unemployed persons in receipt of unemployment insurance benefits. An amendment passed in 1948 extended the provisions to include those not in receipt of unemployment insurance benefits. The schedule covering the training of unemployed persons was accepted by all provinces, but training has not been carried out in Newfoundland, Prince Edward Island, Quebec or Ontario, the need for it not having arisen. Approved costs are shared equally by the province concerned and the Federal Government, the province recommending to the Federal Minister of Labour the scale of training allowances that should be paid.

In the year ended Mar. 31, 1951, approximately 150,801 days' training was given to 1,505 individuals, nearly all of whom were in Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta. At the end of that year, 752 were under training. The largest enrolment was in classes for nurses' aides. No training under this schedule was given for the designated apprentice trades.

Assistance for Vocational Schools.-A ten-year agreement for vocational school assistance signed in 1945 by nine provinces continued in operation and, in 1950, an agreement was made with Newfoundland. The following payments are made by the Federal Government:-
(1) An annual grant of $\$ 10,000$ to each province;
(2) an annual allotment of $\$ 1,965,800$ distributed among the ten provinces in accordance with the number of young persons in each province in the age-group 15-19 years;
(3) a special allotment of $\$ 10,292,250$ to be used for capital expenditure for building and equipment and to be distributed among the provinces on the same basis as the annual allotment. Allotments provided for Newfoundland amount to $\$ 65,800$ for annual operation and $\$ 292,250$ for capital expenditure.

All federal allotments, except the annual grant under item (1), must be matched by an expenditure of equal amount by the provincial government concerned.

The assistance given by this agreement has resulted in marked expansion of vocational training across the country. Federal approval has been given to 120 vocational building projects, consisting of new schools or vocational additions to existing schools. Of these, 94 were completed by Mar. 31, 1951, and 10 were under construction. Provision has been made for young people in rural areas of facilities for training in homemaking and related subjects, vocational agriculture and farm mechanics. Table 30 gives the amount of the federal annual and capital allotment to each province, together with the amount of claims paid during the year ended Mar. 31, 1951. Since the beginning of the agreement, total federal payments under the annual allotment have amounted to approximately $\$ 10,482,500$ and capital payments for buildings and equipment to about $\$ 7,232,500$.

## 30.-Federal Government Assistance to Provinces for Vocational Schools, Year Ended Mar. 31, 1951

| Province | Annual Allotment |  | Capital Allotment (Building and Equipment) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Allotment | Claims | Allotment | $\begin{aligned} & \text { Claims } \\ & \text { Paid } \end{aligned}$ |
|  | \$ | \$ | $\delta$ | \$ |
| Newfoundland........ | 65,800 | 65,708 | 292,250 |  |
| Prince Edward Island. | 25,700 | 35,110 | 82,000 | 9,890 |
| Nova Scotia..... | 106,400 | 105,447 | 504,300 433,000 | 154.323 17.897 |
| New Brunswick Quebec......... | 92,700 609,400 | 92,700 544,346 | 433,000 $3,139,400$ | 169,713 |
| Ontario. | 589,000 | 589,000 | 3,031,500 | 369,675 |
| Manitoba | 135,300 | 204,508 | 656.000 | 89,061 |
| Saskatchewan. | 173,900 | 173.564 | 858.200 | 201,432 |
| Alberta....... | 143,800 | 143,800 | 700,200 | 136,530 |
| British Columbia. | 123,800 | 128,708 | 595,400 | 6,342 |
| Totals. | 2,065,800 | 2,082,891 | 10,292,250 | 1,154,863 |

Training of Military Personnel.-Provision is made for the training of service tradesmen in such categories as might be requested by the Department of National Defence, and for whom the provincial governments have the necessary training facilities. Training during $1950-51$ was on a comparatively small scale, with an enrolment of 439 trainees in the Provinces of New Brunswick, Quebec, Ontario, Manitoba and Saskatchewan. The greater part of the training was given to driver-mechanics, motor-vehicle mechanics and electrical mechanics for the Army. The cost of this type of training is paid solely by the Federal Government.

Training of Discharged Members of the Forces.-As might be expected, each year now shows a marked decrease in the numbers of veterans receiving training. New enrolments in 1950-51 were composed of pensioners or individuals whose training was previously delayed. Only 256 veterans received training during the year, of whom 17 were still under training on Mar. 31, 1951. Since the beginning of such rehabilitation training, the total enrolment has amounted to 134,978 trainees. Costs were borne solely by the Federal Government and amounted to $\$ 25,814,000$.

# Section 7.-Industrial Accidents and Workmen's Compensation 

## Subsection 1.-Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the Federal Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other government authorities, departmental correspondents and from press reports.
31.-Fatal Industrial Accidents, by Industries, 1948-51

Causes of Fatal Accidents.-Preliminary figures indicate that, during 1951, 513 fatal accidents to gainfully employed persons were caused by moving trains, vehicles, etc. Falling objects resulted in 203 fatalities and falls of persons in 164. Fatalities resulting from causes in other classifications were: dangerous substances, 157; striking against or being struck by objects, 40 ; handling of objects, 22 ; hoisting apparatus, 25; working machines, 20; prime movers, 15; animals, 12; and tools, 2.

Included in the category "other causes" were 230 fatalities, of these, 153 were due to industrial disease, strain, etc. The number of accidents fatal and non-fatal, dealt with by the provincial Workmen's Compensation Boards, are shown in Subsection 2.

## Subsection 2.-Workmen's Compensation*

In all provinces legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease, except where the workman is disabled for less than a stated number of days. The Acts of all provinces provide for a compulsory system of collective liability on the part of employers. To ensure payment of compensation, each provincial Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate, determined by the Workmen's Compensation Board, in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation as determined by the Board, and pay a proportion of the expenses of administration. A federal Act provides for compensation for accidents to Federal Government employees according to the conditions laid down by the Act of the province in which the accident occurs. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act, 1946.

Free medical aid is given, in all provinces, to workmen during disability. Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus, and silicosis is compensated under certain conditions. Other diseases compensated vary according to the industries of the provinces.

Scope of the Workmen's Compensation Acts.-The Acts vary in scope but, in general, they cover construction, mining, manufacturing, lumbering, fishing, transportation and communications and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta and British Columbia.

Benefits.-Under each Act, a fixed period must elapse between the date of the accident and the date when compensation begins but, in all cases, medical aid is given from the date of the accident. This waiting period varies from one to seven days and in all provinces compensation is paid for the waiting period if disability continues beyond it, except that in Saskatchewan and Alberta, where the waiting period is only one day, compensation is payable from and including the day after the accident. Compensation in fatal cases is paid as follows:-

Burial expenses: $\$ 250$ in British Columbia, $\$ 200$ in Newfoundland, Nova Scotia, New Brunswick, Ontario and Alberta, $\$ 175$ in Quebec and Saskatchewan, and $\$ 150$ in Prince Edward Island and Manitoba. In some provinces costs of transporting the body are also allowed.

To a widow or invalid widower (or to a foster mother as long as the children are under the age limit): a monthly payment of $\$ 75$ in British Columbia, $\$ 60$ in Saskatchewan, $\$ 50$ in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Manitoba and Alberta, and of $\$ 45$ in Quebec. In addition, a lump sum of $\$ 200$ is paid in Ontario and of $\$ 100$ in all other provinces.

[^232]For each child in the care of a parent or foster mother receiving compensation: a monthly payment of $\$ 25$ in Saskatchewan and Alberta, $\$ 20$ in British Columbia, $\$ 15$ in Nova Scotia, $\$ 12 \cdot 50$ in Prince Edward Island, $\$ 12$ in Newfoundland, New Brunswick, Ontario and Manitoba, and $\$ 10$ in Quebec.

For each orphan child: $\$ 30$ a month in Saskatchewan and British Columbia, $\$ 25$ in Prince Edward Island, Nova Scotia, New Brunswick and Alberta, $\$ 20$ in Newfoundland, Ontario and Manitoba, and $\$ 15$ in Quebec, with a maximum of $\$ 100$ per month to any one family in Prince Edward Island and Nova Scotia. In Alberta, a further amount, not exceeding $\$ 10$ a month, may be given at the discretion of the Board.

Except in the case of invalids, payments to children are not continued beyond the age of 16 years in seven provinces. In Quebec, the age limit is 18 years and in New Brunswick and British Columbia compensation is paid to the age of 18 years, if the child is regularly attending school. In Newfoundland, Prince Edward Island, Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta, the Board has discretion to pay compensation to the age of 18 years if it is considered desirable to continue a child's education. In New Brunswick, Ontario, Manitoba and British Columbia, payments to invalid children are continued until recovery, while the other provinces make payments only for the length of time the Board considers that the workman would have contributed to their support.

Where the only dependants are persons other than consort or children, all the Acts provide that compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly sum to be paid to all such dependants is limited to $\$ 100$ in Ontario, $\$ 85$ in Alberta, $\$ 75$ in British Columbia, $\$ 60$ in Manitoba and $\$ 45$ in Prince Edward Island and Nova Scotia. In British Columbia, if there are parents as well as a widow or invalid widower or orphan children, the maximum payable to a parent or parents is $\$ 75$ a month. In all provinces, compensation to dependants, other than consort or children, is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Alberta and British Columbia, each Act places a maximum on the total amount of benefits payable to all dependants in case of death of the workman. In Newfoundland, Nova Scotia, New Brunswick and Manitoba, the maximum is two-thirds of the workman's earnings, in Quebec 70 p.c. and in Prince Edward Island 75 p.c. In Ontario and Saskatchewan, the average earnings are the maximum amount payable.

The minimum payable to a consort and one child in Quebec is $\$ 55$ per month, or $\$ 65$ if there is more than one child; in Manitoba, the minimum is $\$ 12.50$ per week, or if there is more than one child, $\$ 15$ per week; in Saskatchewan, it is $\$ 85$ a month, and if there are more children, $\$ 100$. In Newfoundland and Ontario, the minimum payable to a widow and five or more children is $\$ 100$ per month.

The rate for total disablement in Newfoundland, Nova Scotia, New Brunswick and Manitoba is a periodical payment for duration of disability equal to $66 \frac{2}{3}$ p.c. of average earnings; in Quebec and British Columbia, the rate is 70 p.c. of earnings; and in Prince Edward Island, Ontario, Saskatchewan and Alberta, 75 p.c. Except in New Brunswick, the Acts fix minimum sums to be paid for a permanent total disability. The weekly minima are $\$ 15$ in Prince Edward Island, Quebec, Manitoba and British Columbia, $\$ 20$ in Saskatchewan and $\$ 25$ in Alberta. In Newfoundland, the minimum is $\$ 65$ per month, in Nova Scotia it is $\$ 85$ per month, and in Ontario $\$ 100$ per month. If, however, average earnings are less than these minima, the amount of the earnings is paid in all provinces except Nova Scotia and Saskatchewan.

For partial disablement, compensation in most provinces is a percentage of the difference in earnings before and after the accident, the percentage rate being the same as in total disablement. In New Brunswick and Alberta, the amount is determined by the Board according to the diminution of earning capacity, except in cases of temporary partial disablement in New Brunswick where compensation is two-thirds of the difference in earnings before and after the accident. In all provinces except British Columbia, if the impairment of earning capacity is 10 p.c. or less, a lump sum may be given.

The average earnings on which compensation is based are limited to $\$ 4,000$ a year in Ontario and Saskatchewan (in the latter case from Jan. 1, 1953), $\$ 3,600$ in British Columbia, $\$ 3,000$ in Newfoundland, Nova Scotia, New Brunswick, Quebec, Manitoba and Alberta, and $\$ 2,500$ in Prince Edward Island. If the workman's earnings at the time of the accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. Compensation paid workmen under 21 years of age may be raised later, if it appears that their earning power would have increased had the injury not occurred. Workmen's compensation statistics by provinces are not on a comparable basis and are presented in Tables 32-40.

The Workmen's Compensation Board of Newfoundland commenced operations Apr. 1, 1951. Prior thereto, the number of cases reported since Confederation by the Registrar of the Supreme Court, under the Workmen's Compensation Act, 1948, are: Apr. 1-Dec. 31, 1949, 35; 1950, 41; Jan. 1-Mar. 31, 1951; 37. Industrial accidents reported to the Workmen's Compensation Board of Newfoundland, Apr. 1-Dec. 31, 1951, totalled 5,563.

## Section 8.-Workers Affected by Collective Agreements

Statistics on the number of workers affected by collective agreements in Canada are compiled by the Department of Labour. Table 41 gives figures for the principal industrial groups. The second column shows the number of workers affected by agreements extended under the Quebec Collective Agreement Act (see Sect. 1, ss. 2, p. 687). Any duplication of the numbers of workers covered by agreements under this Act and by other agreements is eliminated in the third column. Of the total number of workers affected by agreements, 89 p.c. are represented by international or national unions. A more detailed table and studies of agreements in certain industries are available from the Department of Labour, Ottawa, Ont.

## Section 9.-Organized Labour in Canada*

At the beginning of 1951 there were 1,028,521 labour union members in Canada, an increase of $2 \cdot 3$ p.c. over the figure for the previous year. The majority of the unions in Canada are affiliated with a central labour congress and their membership is listed in Table 44. In addition, each of the three largest congresses are discussed below.

Trades and Labour Congress of Canada.-The Trades and Labour Congress of Canada is the oldest of the central labour organizations in Canada. After the disbanding of the Canadian Labour Union, which had drawn together local unions in Ontario from 1873 to 1877, inclusive, there was no central organization until 1883, when the Trades and Labour Council of Toronto called a conference of local unions and plans were made to establish a national organization which was formally set up in 1886.

Affiliated with the Trades and Labour Congress at the present time are 'international' trade unions, almost all of which are also affiliated with the American Federation of Labour, a number of Canadian or 'national' unions and a number of directly chartered labour unions.

Canadian Congress of Labour.-This Congress was organized in September of 1940, when the All-Canadian Congress of Labour, formed in 1927, amended its constitution to permit the affiliation with the Congress of the Canadian branches of those international unions which, in the United States, are affiliated with the Congress of Industrial Organization. The Canadian Congress includes among its members a number of unions to which it has granted charters.

Canadian and Catholic Confederation of Labour.-National Catholic Unions in Canada date from 1901. In 1921 these local Catholic Syndicates, grouped as far as possible into federations according to industry, formed a central organization, the Canadian and Catholic Confederation of Labour.

## Section 10.-Strikes and Lockouts*

Statistics of strikes and lockouts in Canada have been collected by the Federal Department of Labour since its establishment in 1900.

The outstanding features of 1951 as compared with 1950 were an increase of more than 60 p.c. in the number of work stoppages and a decrease of about 35 p.c. in the time loss. The number of strikes and lockouts in 1951 was the highest since 1943 and strike idleness the lowest since 1948. The number of workers involved in 1951 stoppages was higher than average but was 46 p.c. below the 1950 total which was inflated by the large number of workers involved in the railway strike.

The latest figures available show that, in 1950, collective agreements in effect covered $1,282,005$ workers. A large majority of these contracts were renewed in 1951 by peaceful negotiations. In 1951, disputes over renewals of existing contracts caused only 70 stoppages, involving 32,111 workers, or $2 \cdot 5$ p.c. of the total of all workers covered by agreements.

Wages and related questions have been the predominant issues in strikes and lockouts during the last six years. Steadily rising consumer prices during this period have made the financing of the family budget a matter of real concern to the Canadian worker. Despite a sharp increase in the cost-of-living index in 1951, there was a substantial decline in the percentage of time lost in disputes over wage increases. In 1951, this issue caused 48 p.c. of the stoppages, involved 48 p.c. of the workers and caused 70 p.c. of the total time loss, as compared with an average for $1946-50$ of 59 p.c. of the stoppages, 73 p.c. of the workers, and 90 p.c. of the total strike idleness. In 1951, other causes affecting working conditions caused 19 p.c. of the stoppages; union questions, other than for increased wages, 18 p.c.; and discharge of workers, suspension, refusal to reinstate and employment of particular persons, other than in connection with union questions, 15 p.c. of the total. There were two small sympathy strikes in 1951, three in 1950, one in 1949 and none in 1948. Pension and welfare plans have not been important issues at any time.

[^237]Strike idleness in the manufacturing group of industries was greater than in all other industries combined, causing 74 p.c. of the total time lost in 1951. In 1950, the greatest loss was in transportation, the railway strike accounting for more than $1,000,000$ days. In 1951, time lost in transportation disputes was negligible. Mining accounted for 16 p.c. of the total time loss in 1951 but stoppages in coal mining caused less than 5 p.c. of the total for the group; in the construction industry, stoppages caused less than 8 p.c. of the total idleness.

Direct negotiations between workers and employers brought about settlement of 113 of the 259 stoppages in 1951, in some cases with provincial conciliators acting in an advisory capacity at some stage of the negotiations or in drafting contracts. Provincial conciliation effected settlement in 42 cases, federal conciliation in one, and civic mediation in one; 15 were referred to labour boards and commissioners; six were settled by arbitration; and 70 by return of workers and replacement, the latter being a factor in 21 cases.
45.-Summary Statistics of Strikes and Lockouts, 1912-51

| Year | Strikes <br> Beginning during the Year | Strikes and Lockouts in Existence in all Industries during the Year |  |  |  |  |  |  |

## Section 11.-Canada and the International Labour Organization

The Department of Labour is the officially designated liaison agency between the Canadian Government and the International Labour Organization. The ILO was established in 1919, in association with the League of Nations under the Treaties of Peace, with the object of improving labour and social conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization at its 29th Session held at Montreal, Que., Oct. 2, 1946, and by the United Nations General Assembly on Dec. 14, 1946, the Organization became a specialized agency of the United Nations, although retaining its autonomy.

An association of 65 nations, financed by their governments and controlled by representatives of those governments and of their organized employers and workers, the Organization comprises: (1) the General Conference of representatives of the Member States; (2) the International Labour Office; and (3) the Governing Body. The Organization's structure and field of activity has been extended considerably since 1945 by the establishment of eight tripartite committees to deal with problems of major world industries.

The Conference in normal times meets at least once a year, and is composed of four delegates from each Member State, two representing the government, one representing the employers, and one representing the workers; these are accompanied by technical advisers. Decisions of the Conference are in the form of Conventions or Recommendations. The former, when given legislative effect and ratified by Member States, are legally binding on them. The enforcement of Conventions within such countries is a matter for annual consideration by the Conference. The ILO constitution requires, however, that every Convention must be brought before the competent authority or authorities for legislative or other action. In Canada, the competent authorities in respect of the subject matter of most of the Conventions and Recommendations are the provincial legislatures. Amendments to the constitution adopted by the Conference in 1946 included new provisions concerning the obligations imposed on federal countries with respect to the manner of dealing with Conventions and Recommendations. These changes in procedure are expected to facilitate the adoption of Conventions and Recommendations by the constituent States or provinces of federal countries.

The International Labour Office acts as the permanent secretariat of the Organization and as an information centre and publishing house with respect to all questions on industry and labour. The ILO maintains a Canadian branch office at 95 Rideau Street, Ottawa.

The Governing Body of the ILO consists of 32 members- 16 government representatives, eight employer representatives and eight worker representatives. Of the government seats, the eight States of chief industrial importance (of which Canada is one) each holds a permanent place, while the other eight government representatives are elected triennially by the Conference; the worker and employer members also are elected every three years at the Conference by their groups. In addition, there are eight government, eight worker, and eight employer deputymembers elected for three-year terms. The Governing Body meets three or four times a year, and has general supervision of the work of the Office and the various
committees and commissions of the Organization, in addition to framing the budget and drafting the agendas of the annual conferences. Canada's representative on the Governing Body is Federal Deputy Minister of Labour, Arthur MacNamara.

There have been 34 sessions of the International Labour Conference, at which 100 Conventions and 92 Recommendations have been adopted covering a wide range of subjects, such as freedom of association, hours of work, weekly rest, holidays with pay, minimum wages, night work of women and young persons, industrial health and safety, workmen's compensation, conditions of work for seamen and dockers, unemployment and health insurance, colonial labour, protection of migrant workers, and many other aspects of industrial and social problems. Up to 1952, the ratifications of the Conventions by Member States total about 1,250, and the Recommendations have served as valuable guides to national programs of industrial and social advancement.

During 1951, in addition to the 34th Annual Conference, the following ILO meetings were held: four sessions of the Governing Body; sessions of the Building, Civil Engineering and Public Works Industrial Committee, the Coal Mines Industrial Committee, and the Inland Transport Industrial Committee; meetings of the Committee of Experts on Indigenous Labour, the Committee on Application of Conventions and Recommendations, the Committee of Experts on Payment by Results, and the Joint Maritime Commission; a Regional Conference of Member States in the Near and Middle East; and a Preliminary Migration Conference. During the first half of 1952, the following meetings were scheduled: two sessions of the Governing Body; sessions of the Metal Trades Industrial Committee and the Iron and Steel Industrial Committee; meetings of the Advisory Committee on Salaried Employees and Professional Workers and the Committee of Experts on the Application of Conventions and Recommendations; an Inter-American Social Security Conference; a Regional Conference of Member States in the Americas; and the 35th Annual General Conference. Canada is represented at nearly all of these and full accounts will be found in the Labour Gazette.

Canada has ratified 18 of the ILO Conventions, 12 of which concern maritime and dock labour; one of these, Convention No. 58 on Minimum Age for Employment at Sea, was ratified in September 1951. The Department of Labour, as the official liaison agency with the International Labour Organization, is responsible for forwarding to the Office annual reports on ratified Conventions as well as periodical reports on many other industrial and social problems. The Department also keeps provincial governments, employer and worker organizations, and the general public informed of ILO activities.

Note.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

Canada, nearly 4,000 miles in length from east to west, with the main topographic barriers running in a north-south direction and a relatively small population of $14,009,029$ ( 1951 Census) unevenly distributed along the southern strip of this vast area, presents unusual difficulties from the standpoint of transportation and communication. Different parts of the country are shut off from each other by the Cabot Strait, the Strait of Belle Isle, by areas of rough, rocky forest terrain such as the region lying between New Brunswick and Quebec, the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces, and the barriers interposed by the mountains of British Columbia. To such a country, with a population so dispersed and producing for export as well as for consumption in distant areas of the country itself, cheap transportation and efficient communication systems are necessities of existence.

The value of each of the principal agencies of transportation is appraised in Parts II, III, IV and V of this Chapter and the development of communication facilities in Parts VI, VII, VIII and IX. Government control over all such transportation and communication agencies is covered in Part I.

## PART I.-GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION

## Section 1.-Government Control Over Agencies of Transportation*

Carriers by rail, road, water and air are, or should be, inter-related parts of an integral whole where each agency has its place in the efficient provision of necessary transportation. The Federal Department of Transport was organized on Nov. 2, 1936, under authority of the Statutes of 1936, c. 34, to unify in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology. Road and highway development is mainly under provincial or municipal control or supervision (see Part III).

The business of transportation and communications is, generally speaking, a 'natural monopoly', i.e., a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. For this reason there has been a strong tendency toward consolidation and amalgamation over the past halfcentury. In recent years, the outstanding example of consolidation in Canada is the concentration of control of the railways under the Canadian Pacific Railway Company and the Canadian National Railway System.

Since such control has a tendency to bring with it elements of monopoly and possible overcharge, it was deemed advisable to set up authorities to control the rates to be charged and other conditions under which services to the public are to be rendered by common carriers. This control, so far as the railways under charter or within the jurisdiction of the Federal Government are concerned, is regulated by the Board of Transport Commissioners. From time to time the regulatory authority has been extended to some degree to other utilities (see under "Air Transport Board", pp. 740-741).

Besides the Board of Transport Commissioners there exist, in several of the provinces, bodies that undertake the supervision and control of local public utilities operating under the jurisdiction of the provinces, and the regulation of their rates for service. Among these are the Ontario Department of Municipal Affairs (formerly the Railway and Municipal Board of Ontario, established in 1906), the Quebec Commission of Public Utilities established in 1909, the Nova Scotia Board of Commissioners of Public Utilities and the Public Utilities Commission of Manitoba. In the three most westerly provinces these same duties are performed by provincial Departments of Railways.

The Board of Transport Commissioners for Canada.-An explanation of the situation that led to the introduction in Canada of railway regulation by commission, as well as other information relating to the organization of the Board of Transport Commissioners' procedure, judgments, etc., is given in the 1940 Year Book, pp. 633-635.

The powers of the Board with regard to transport by rail cover matters relating to the location, construction and operation of railways, the most important having to do with rate regulation. Passenger tariffs are divided into standard tariffs and

[^239]special tariffs; freight tariffs into class rates, commodity rate, competitive rate and special estimates tariffs. Standard tariffs contain maximum rates and require the Board's approval. Tariffs, other than standard tariffs, go into effect when they are filed and notice of issue has been given in accordance with the Railway Act and the Board's Regulations.

The Board has jurisdiction over the railways in Newfoundland, which became a part of the Canadian National Railway System following the entry of Newfoundland into Confederation, Mar. 31, 1949.

By an amendment to the Railway Act, the regulation of telephone, telegraph and express rates in Canada was given to the Board, but with narrower powers than those given it in dealing with railways.

Under the Transport Act, 1938, and proclamations of the Governor General in Council made thereunder, the Board has power to issue licences to ships engaged in the transportation of passengers or goods on the Great Lakes, the Mackenzie River and the Yukon River. The Board is required to perform the functions vested in it under the Transport Act and the Railway Act with the object of co-ordinating and harmonizing the operations of all carriers engaged in transport by railways and ships. The Board may require every applicant for a licence under the Transport Act to establish public convenience and necessity to its satisfaction and to take into consideration the financial responsibility of a licensee or applicant. The Board may, in the licence, state the ports between which the ships named therein may carry goods or passengers and the schedule of services to be maintained; every standard tariff and every amendment and supplement thereto requires the approval of the Board before it becomes effective.

In 1949 legislation was enacted giving the Board of Transport Commissioners jurisdiction over interprovincial and international pipelines.

The Air Transport Board.-The Air Transport Board was established in September 1944 by amendment to the Aeronautics Act. The Board is responsible for the economic regulation of commercial air services in Canada and is also required to advise the Minister in the exercise of his duties and powers in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad and to foreign air services operating into Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. As provided by the Act, the Board issues Regulations, approved by the Governor in Council, dealing with the classification of air carriers and commercial air services, applications for licences to operate commercial air services, accounts, records and reports, ownership, transfers, consolidation, mergers and leases of commercial air services, traffic tolls and tariffs, and other related matters. Detailed regulatory instructions are issued by the Board in the form of General Orders, published in the Canada Gazette, relating to all air services or groups of air services; Board Orders relating to individual air services and Rules and Circulars for general guidance and information are also issued.

The Board participates in the development, formation and operation of international policy and international agreements relating to civil aviation and takes an active part in the proceedings and work of the International Civil Aviation Organization, a member of its staff being the representative of Canada on the Council.

The Board consists of three members, including the Chairman, and the staff comprises a Secretary's Branch, which includes an Administration Division; a Legal Branch, administered by an Executive Director who is Legal Adviser to the Board on all matters of domestic and international air law, and includes an Examiner who conducts public hearings by order of the Board, a Departmental Solicitor and a Licensing Division; and a Traffic Branch, which supervises all matters relating to tariffs and schedules.

Financial and operating statistics are collected under authority of the Board's Regulations by the Bureau of Transportation Economics, which serves the Board of Transport Commissioners for Canada as well as the Air Transport Board.

Report of the Royal Commission on Transportation.-The Royal Commission on Transportation was established by Order in Council dated Dec. 29, 1948, to review and report on the economic, geographic and other disadvantages of certain sections of Canada in relation to transportation services, equalization of freight rates, particular freight-rate problems, railway accounting and statistics, recapitalization of the Canadian National Railways, national transportation policy and other matters affecting Canadian economic policy in respect to transportation.

The Report of the Commission, presented to Parliament in 1951, included the following recommendations: the adoption of a program of freight-rate equalization between all regions in Canada, including uniformity of class and commodity mileage rates and a uniform carload mixing rule; a general revision of the freight classification; that the Crowsnest Pass rates remain under the immediate control of Parliament and that Parliament continue to have the responsibility for fixing these rates; an amendment to the Railway Act to provide that when transcontinental competitive rates are published the tariffs shall contain a provision that rates to or from intermediate territory shall not be more than one-third greater than the transcontinental competitive rates; payment by the Government of Canada of the cost of maintaining the 'link' sections in the so-called Lake Superior territory of the transcontinental railway system between Eastern and Western Canada, estimated at $\$ 7,000,000$ annually; the retention of the right of appeal to the Governor in Council from decisions of the Board of Transport Commissioners for Canada; an amendment to the Railway Act to provide for a uniform classification and system of accounts and reports by the Canadian National and Canadian Pacific Railway Companies as prescribed by the Board of Transport Commissioners; that no major changes be made in the Maritime Freight Rates Act or in the Canadian NationalCanadian Pacific Act; simplification of the capital structure of the Canadian National Railways, with interest on Canadian Government loans to be payable only when earned, and provision to allow a reserve to be accumulated out of earnings in each year; and the creation of a single Board to co-ordinate and regulate the various agencies of transportation that are under the jurisdiction of the Parliament of Canada, bringing together the Board of Transport Commissioners, the Air Transport Board and the Canadian Maritime Commission.

## Section 2.-Government Control Over Agencies of Communication*

The development and control of radio-communication in Canada from the beginning of the century is outlined in the 1945 Year Book, pp. 644-647.

The present phase of national radio broadcasting in Canada was entered upon in 1936 when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission (see p. 842). The Act gave the Corporation wide powers in the operation of the system and gave to the Minister of Transport the technical control of all broadcasting stations and the authority to make regulations for the control of any equipment liable to cause interference with radio reception.

With the exception of those matters covered by the Canadian Broadcasting Act of 1936, radio-communications are now regulated under the Radio Act, 1938, and Regulations. In addition, all radio-communication matters are administered in accordance with the provisions of the International Telecommunication Convention and Radio Regulations annexed thereto, as well as such Regional Agreements as the Inter-American Telecommunications Convention and Inter-American Agreement, and the North American Regional Broadcasting Agreement.

By Order in Council P.C. 2526, dated June 8, 1948, responsibility for telegraph and telephone services formerly operated by the Federal Department of Public Works was transferred to the Minister of Transport. The general object of these services is to furnish wire communications for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest.

A Crown Company, Canadian Overseas Telecommunications Corporation was created by Act of Parliament (Dec. 10, 1949) to acquire for public operation all external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement, signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth.

Landline telegraph and telephone tariffs and tolls, charged by companies incorporated by the Federal Government, are regulated by the Board of Transport Commissioners under the provisions of the Railway Act.

Tariffs and tolls charged to the public by'individuals or companies, for radio telephone or telegraph communications within Canada, are likewise regulated by the Board of Transport Commissioners, under the provisions of the Railway Act, and the Regulations made under the Radio Act, 1938.

## PART II.-RAILWAYS $\dagger$

The treatment of rail transportation is divided into three Sections dealing, respectively, with steam railways, electric railways and express companies.

## Section 1.-Steam Railways

The steam railway is the most important transportation agency from the standpoint of investment and of traffic handled and the statistical field is more completely covered for this form of transportation than for any other.

[^240]A brief historical sketch of the development of steam railways in Canada is given in the 1940 Year Book, pp. 635-638, and a special article dealing with the wartime role of the railways appears in the 1945 Year Book, pp. 648-651.

## Subsection 1.-Mileage and Equipment

Construction was begun in 1835 on the first steam railway in Canada-the short link of 16 miles between Laprairie and St. Johns, Que.-but only 66 miles of railway were in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building from 1900 to 1917, the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

## 1.-Steam-Railway Mileage, 1900-51

Note.-Corresponding figures of total mileage of single track for the years 1835 to 1899 and for the intervening years 1901-1909 are given in the 1941 Year Book, p. 546.

| Total Mileage (Single Track) |  |  |  |  |  | Mileage, by Provinces |  |  |  |  |

${ }^{1}$ As at June 30 for this and previous years.
${ }^{2}$ As at Dec. 31 for this and later years.
Construction of the Newfoundland Railway was begun in 1881 but it was not until 1896, after many difficulties, that the transprovincial line was completed from St. John's to Port aux Basques. The railroad is of narrow gauge track- $3^{\prime} 6^{\prime \prime}$ compared with the standard gauge of $4^{\prime} 8_{\frac{1}{2}}^{\prime \prime}$ in use in the other provinces. Its operations also include coastal steamer service and a dry dock. The Canadian National Railways took over the operation of the Newfoundland railway facilities on Apr. 1, 1949, thus adding about 4,200 personnel to its payroll.

There has been a tendency for railway mileages to decline slightly during the past decade because of the abandonment of unprofitable lines. Of the 42,956 miles of single track operated in 1951, over 50 p.c. were Canadian National Railway lines.

Rolling-Stock.-The figures in Table $\mathbf{2}$ may be supplemented by the statement that, between 1920 and 1951, the average capacity of box cars increased from $34 \cdot 779$ tons to $44 \cdot 166$ tons, of flat cars from $33 \cdot 459$ to $43 \cdot 269$ tons, of coal cars from $43 \cdot 404$ tons to 59.579 tons, and of all freight cars from $35 \cdot 141$ tons to $45 \cdot 961$ tons. The average tractive power of the locomotive increased from $31,112 \mathrm{lb}$. in 1920 to $42,488 \mathrm{lb}$. in 1951. The steady growth in dieselization is illustrated by the advance from 29 units at the end of 1946 to 574 units for 1951.
2.-Rolling-Stock of Steam Railways, as at Dec. 31, 1946-51

[^241]
## Subsection 2.-Finances

The tables in this Subsection deal with capital liability, capital investment, earnings, operating expenses, employees and their earnings, and Government aid to steam railways. The financial statistics of the Government-owned railways are given in Subsection 4. Further statistics of revenue are included in Table 9, and are shown in relation to traffic. Statistics of individual railways, covering single-track mileage, capital, earnings and operating expenses, may be found in the annual report, Statistics of Steam Railways of Canada, published by the Dominion Bureau of Statistics.

Capital Liability.-After 1922 an increase in the capital liability of the steam railways of Canada took place owing to the inclusion of all Government loans to railways and investment in road and equipment of Government railways as
part of the capital liability of the railways. The reduction after 1937 was brought about by the Canadian National Capital Revision Act (c. 22, 1937), explained at p. 644 of the 1939 Year Book.

## 3.-Capital Liability ${ }^{1}$ of Steam Railways, 1932-51

Note.-Figures for the years 1876 to 1925, inclusive, are given in the 1927-28 Year Book, p. 649, those for 1926-31 in the 1947 edition, p. 662.

[^242]Capital Investment.-The increase of $\$ 95,885,622$ in capital liability during 1951 from 1950, as shown in Table 3, compares with an increase in investments in road and equipment of $\$ 156,254,921$ as shown in Table 4 and reflects improvements made during the year. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property to other Government Departments, etc., as well as by higher gains in earnings during the war years.

[^243]Earnings and Expenses.-The operating ratio, or ratio of expenditure to revenue, of Canadian railways increased from about 70 p.c. to over 90 p.c. between 1917 and 1920, and remained high thereafter, owing largely to declining revenue without corresponding reductions in expenses during the depression period. The period from 1938 to 1943 showed a sharp decline in this ratio, caused primarily by increased freight traffic occasioned by World War II and a subsequent acceleration in gross earnings. A steadily rising trend since 1943 has been attributed to higher costs for materials and labour, although a decided reversal was shown for 1950 despite the nine day strike in late August. Expenses for 1951 show a considerable increase over the previous year accounted for by the wage increases received as a result of the strike settlement.

## 5.-Earnings and Operating Expenses of Steam Railways, 1942-51

Note.-Gross earnings and operating expenses for the years 1875 to 1914 are given in the 1916-17 Year Book, p. 434; those for 1915-25 in the 1941 Year Book, p. 550 ; for $1926-38$ in the 1942 Year Book, p. 585 ; and for 1940-41 in the 1951 Year Book, p. 722.

${ }^{1}$ Includes Newfoundland railways from Apr. 1.
Employment and Salaries and Wages.-The number of railway employees increased in 1951 by 58 p.c. over 1939 while salaries and wages increased by about 212 p.c. Maintenance of equipment employees, on hourly rates, worked about 2 p.c. more hours and were paid 101 p.c. more wages per hour; average hours worked by transportation employees were slightly less than the 1939 average and their pay was increased by about 94 p.c. These figures reflect the increases received in the strike settlement in August 1950, and the conversion to the five-day week in 1951.

## 7.-Steam Railway Employees and Salaries and Wages, 1942-51

Note.-Figures for the years 1912-39 are given in the 1941 Year Book, p. 551; and for 1940-41 in the 1951 Year Book, p. 723.

[^244]Government Aid to Railways.-In order that the private railways of Canada might be constructed in advance of settlement, as colonization roads, or through sparsely settled districts where little traffic was available, it was necessary for Federal and Provincial Governments and even for municipalities to extend some form of assistance. The form of aid was, generally, a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way.

As the country developed, the objections to the land-grant method became more apparent and aid was given more frequently in the form of a cash subsidy per mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government. No new land grants or cash subsidies have been advanced by either the Federal or Provincial Governments since 1939. The situation, as it existed at Dec. 31, 1940, is set out in the 1942 Year Book, pp. 587-588.

During the era of railway expansion before 1918, Provincial Governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure, through funds raised by the issue of new bonds with Federal Government guarantee. Bonds guaranteed by the Governments of Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have been eliminated in this manner in recent years.

## Subsection 3.-Traffic

Passenger and Freight Traffic.-Table 9 shows the passenger and freight statistics for all steam railways for the years 1942-51. A separate analysis is given at pp. 754-756 of the operations and traffic of the Canadian National Railways, since this System is controlled by the Federal Government.

## 9.-Statistics of Passenger and Freight Services and Revenue Receipts, 1942-51

Note.-Figures for 1910-41 are given in the corresponding tables of previous Year Books.

## 9.-Statistics of Passenger and Freight Services and Revenue Receipts, 1942-51concluded

[^246]Commodities Hauled.-Revenue freight carried by the railways in 1951 showed an increase of $12 \cdot 2$ p.c. over 1950 and exceeded the previous peak volume reached in 1944. The average haul increased from 385 miles in 1950 to 399 miles in 1951 with a corresponding increase in ton miles. The principal commodities showing increase over 1951 were wheat, coke, ores and concentrates, sand and gravel and stone. Lumber, timber and pulpwood moved in heavier volume while most items in the manufactured and miscellaneous group registered improvement. During the war years the intransit movement of war supplies, motor-vehicles, and gasoline and petroleum products between United States points over Canadian lines was particularly heavy and, with wheat, was responsible for the 1944 record.

## 10.-Commodities hauled as Freight on Steam Railways, 1947-51

Note.-In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

| 1951. | 5 | 221 | 84 | 7,651 | 301 | 723 | 390 | 8,595 |

${ }^{1}$ Includes trespassers walking along tracks, stealing rides, etc., and persons crossing tracks at level crossings. ${ }^{2}$ Includes Newfoundland from Apr. 1.

Accidents tabulated include all those in which railway trains were involved and accidents on railway property. The classification of accidents used in the Dominion Bureau of Statistics vital statistics treats collisions between motor-vehicles and trains as motor-vehicle accidents; provincial statistics also class them as motorvehicle accidents and, consequently, adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor-vehicle.
12.-Persons Killed or Injured, by Specifled Causes, on Steam Railways, 1949-51

${ }^{1}$ Includes Newioundland from Apr. 1.

## Subsection 4.-The Canadian National Railway System

A description of the origin and growth of Government-owned railways in Canada is given in the 1926 Year Book, pp. 601-603, in an article recording their consolidation under the Canadian National Railways in 1923. The Hudson Bay Railway is a direct liability of the Federal Government and has been operated by the Canadian National Railways for the Government since Apr. 1, 1935, but is not included in the data for Canadian National Railways; to Mar. 31, 1950, the total capital expenditure on this account was $\$ 33,439,357$, exclusive of the expenditure of $\$ 6,240,096$ on the terminal at Port Nelson, Man., and a loss of $\$ 4,980,185$ on operation. The operating deficit for the fiscal year 1949-50 was $\$ 197,193$.

On Apr. 1, 1949, the Canadian National Railways took over the operation of the Newfoundland Railway embracing its 705 miles of line, 14 coastal steamers and a dry dock at St. John's; communications services of the Newfoundland Government Posts and Telegraphs were also transferred for operation to the Canadian National Railways. (The Newfoundland Hotel was consigned towards the end of the year.)

Effective Jan. 1, 1950, the Canadian National Railways took over the operation of the Témiscouata Railway which was purchased by the Government in 1949, thus adding about 69 miles of line.

The Quebec Railway, Light and Power Company (Montmorency Division), having $25 \cdot 7$ miles of single track was purchased and incorporated as part of the System, Nov. 1, 1951.

The major portion of Federal Government investment in railways consists of construction costs of the Intercolonial System, the National Transcontinental Railway and the Hudson Bay Railway, and the purchase price of small railways in the Eastern Provinces.

In view of the interest in the publicly owned railway System, the following salient statistics are presented showing the assets, debt, operating accounts, mileage and traffic for the Canadian National Railway System. More detail is available from the D.B.S. report Canadian National Railways, 1923-51.
13.-Assets of the Canadian National Railway System, as at Dec. 31, 1922 and 1951

| Account | Dec. 31, 1922 | Dec. 31, 1951 | Increase or Decrease |

13.-Assets of the Canadian National Railway System, as at Dec. 31, 1922 and 1951concluded

| Account |  |  |
| :--- | ---: | ---: | ---: |

${ }^{1}$ Includes demand loans and deposits.
${ }^{2}$ Includes 1951 deficit of $\$ 15,031,996$ receivable from Federal Government. $\quad{ }_{3}$ Increase in current liabilities $\$ \mathbf{1 2 , 2 0 4 , 1 6 7 .}$

Capital Structure and Debt.-The share capital on Dec. 31, 1922, consisted of $\$ 165,627,739$ stock of the Grand Trunk Railway held by the Federal Government and $\$ 100,000,600$ of the Canadian Northern Railway stock also held by the Federal Government. Also outstanding was $\$ 4,591,975$ stock of constituent lines held by the public. Table 14 shows the capital liabilities of the Canadian National Railways, other than shareholders' capital. The amounts shown under "Active Assets" represent, largely, temporary loans and explain the large increases during the war years.

## 14.-Debt of the Canadian National Railway System, as at Dec. 31, 1942-51

Nore.-Figures for the years 1922-39 are given at p. 591 of the 1942 Year Book; for 1940-41 see p. 730 of the 1951 edition.

| 1951....... | 518,396,607 | - | 96,800,428 | 840,801,793 | 16,771,981 | 2,253,685,348 |

[^247]Operating Finances.-Gross revenue, operating expenditure and net revenue include only those from steam railway and commercial telegraph operations, but the deficits are for the entire System, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Under the Canadian National Railways Capital Revision Act (c. 22, 1937), interest on Federal Government loans, amounting to $\$ 530,832,598$, and Government claims for interest, amounting to $\$ 43,949,039$, were cancelled as liabilities of the Railway and these have been eliminated from Table 15 as fixed charges. Loans of $\$ 270,037,438$ for capital and $\$ 373,823,120$ for deficits were cancelled.

## 15.-Gross Revenue, Operating Expenditure, Net Revenue, Fixed Charges and Deficits of the Canadian National Railway System, ${ }^{1}$ 1942-51

Nors.-Appropriations, etc., for the Hudson Bay Railway are not included with these data; although the Railway was returned to the Government while under construction, it is not now a part of the Canadian National Railways. Figures for 1911-25 are given in the 1936 Year Book, p. 660; for 1926-39 in the 1942 Year Book, p. 590; and for $1940-41$ in the 1951 edition, p. 731.

${ }^{1}$ Includes Canadian Government Railways.
Mileage and Traffic.-At Dec. 31, 1951, steam-railway track mileage of the Canadian National Railways (including lines in the United States and Newfoundland but exclusive of the Northern Alberta Railways and Toronto Terminals Railway, which are controlled jointly by the Canadian National and the Canadian Pacific Railways) was $24,273.4$ miles. Including the Thousand Islands Railway, 4.51 miles, controlled but operated separately, the total steam-railway mileage was $24,277 \cdot 9$. The grand total, including $72 \cdot 9$ miles of electric lines, was $24,350 \cdot 8$ miles.

## Section 2.-Electric Railways*

Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. Before many years their safety and convenience resulted in the discarding of the older systems. The first electric railway line in Canada, and probably the first in North America, ran between Windsor and Walkerville and was established early in June 1886 (it is recorded that it was in active operation before June 11).

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life. In some cities of Eastern Canada, electric street-railways are still operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the electric railways are owned and operated by the municipalities. The number of electric railways in operation declines each year as motor-buses replace electric trams.

Statistics presented in this Section cover the urban and interurban operations of the electric railway systems.

Equipment.-The single overhead-trolley system is used by all electric street railways. Montreal, Toronto, Winnipeg, Vancouver, Ottawa and several other municipalities have begun to use trackless trolley-buses, 909 of which were in service

[^250]in 1950. Of the 22 systems, 10 operated electric cars, motor-buses and trolleybuses; four operated trolley-buses and motor-buses; three electric cars only; four electric cars and motor-buses and one system operated trolley-buses only. There were 1,927 motor-buses in service during 1950.
18.-Equipment of Electric Railways, 1948-50

| Equipment | 1948 | 1949 r | 1950 | Equipment | 1948 | 1949 r | 1950 |

| Totals, Passenger Vehicles. | 5,604 | 5,514 | 5,571 | Totals, Other Vehicles. | 723 | 658 | 608 |

Finances.-When electric railways have ceased to operate because of either a decline in traffic or the substitution of motor-buses, their statistics have been excluded from Table 19. Consequently, fluctuations in revenue, etc., have been affected by variations in traffic and by changes in the mode of local transportation. Despite these changing conditions, the gross revenue of electric railways continued to increase from the low point reached in 1933, and very marked increases were shown from 1940 to 1945. The ratio of expenses to receipts rose from a low of less than 63 p.c. in 1942 to 97 p.c. in 1950.

## 19.-Financial Statistics of Electric Railways, 1941-50

Nore.-Figures for 1901-40 are given in the corresponding table of previous Year Books beginning with the 1926 edition.

| Year | Capital Liability |  |  | InvestmentinRoad andEquip-ment | Gross Earnings | Operating Expenses | Ratio of Expenses to $\mathrm{Re}-$ ceipts | Employees | Salaries and Wages |

${ }^{1}$ Mainly reduction of $\$ 1,602,500$ stock Hamilton Street Railway.
Traffic.-The passenger mileage travelled by electric cars in 1950 amounted to $88,170,069$, by trackless trolley-buses $26,863,939$ and by motor-buses $58,251,467$. The number of passengers carried by electric railways in the years since 1939 showed an especially sharp rise over previous years owing to improved conditions and the
curtailment of passenger-automobile traffic during the War. The 1,344,916,773 passengers carried in 1946 was by far the greatest traffic ever handled by these systems; the number in 1950 was the lowest since 1943.
20.-Statistics of Electric Railway Operations, 1941-50

Note.-Figures for 1901-40 are given in the corresponding tables of previous Year Books beginning with the 1933 edition.

The Toronto Underground Electric Railway.-Canada's first underground electric railway, at Toronto, Ont., was one of the planned major developments upon which work was commenced during 1949. The subway or underground railway will run north-south following the line of Yonge St. to Queen St. The opening is scheduled for the late autumn of 1953. The estimated cost of the Yonge and Queen Sts. subways is placed at over $\$ 55,000,000$. The total distance covered by the rapid transit lines will be about $9 \cdot 1$ miles, in the most congested areas of the city. The subway will descend from 6 ft . to a maximum of 20 ft . below the street surface. Considerable new equipment is on order and it is proposed to operate trains up to 5 two-car units in length. The ultimate capacity of the System is estimated at 40,000 passengers per hour in both directions. Excavations on the Yonge Street project alone involves the removal of about $1,390,000$ cubic yards of material.

## Section 3.-Express Companies

Express service is an expedited freight service on passenger trains, but express companies do not own the means of performing these services; railway facilities are used by virtue of contracts with the railway companies. Express companies in Canada have thus always had close relations with the railways.

Goods are sent by express for quick transit, so that express rates do not generally compete with freight rates. The Dominion Express Company, in pursuance of its contract with the Canadian Pacific Railway, gave, in its first tariff, a rate of two and one-half times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue and the rates paid by the shipper are subject to the approval of the Board of Transport Commissioners. All express companies are organized under powers conferred by Acts of the Federal Government and their business consists in the expeditious shipment of valuable live stock and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels, and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper.

Express Company Operations.-Four express organizations operate in Canada-three Canadian and one American. The Canadian Pacific Express Company, formerly the Dominion Express Company, is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National and Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency, Incorporated, operates over the Canadian sections of United States railways and over the route from Skagway, Alaska, to points in Yukon Territory. No statistics are available on the volume of traffic carried by express. Much of the traffic consists of parcels and small lots that would make statistical classification and measurement very difficult. However, there is also an important movement in car lots of live stock, fresh fish, fruit, vegetables and other perishable commodities.

## 22.-Mileages Operated, Revenue and Expenditure of Express Companies, 1942-51

Note.-Figures for 1911-41 are given in the corresponding tables of previous Year Books beginning with the 1927-28 edition.

[^251]
## PART III.-ROAD TRANSPORTATION*

Recent development of highways in Canada has been almost exclusively for the purpose of providing roadbed for motor-vehicle traffic so that highways and motor-vehicles are treated here as related features of transportation. Following an introductiory section, which summarizes provincial regulations regarding motorvehicles and motor traffic, the entire subject of road transportation is dealt with under the headings of roads and highways and motor-vehicles.

## Section 1.-Provincial Motor-Vehicle and Traffic Regulations $\dagger$

Nors.-It is obviously impossible to include here the great mass of detailed regulations in force in each province and Territory; only the more important general information is given. The sources of information for detailed regulations for specific provinces and the Territories are given at pp. 762-765.

General.-The licensing of motor-vehicles and the regulation of motor-vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations that are common to all provinces and to the Territories are summarized under the following headings:-

Operator's Licences.-The operator of a motor-vehicle must be over a specified age (usually 16 years) and must carry a licence, obtainable in most provinces only after prescribed qualification tests and renewable annually. Special licences are required for chauffeurs and, in some cases, for those granted licences who have not reached the specified age.

Motor-Vehicle Regulations.-In general, all motor-vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back, in the case of trailers). A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days) in any year to visiting private vehicles registered in another province or a State that grants reciprocal treatment. Further regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes, and provide that equipment include non-glare headlights, a proper rear light, a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

Traffic Regulations.-In all provinces and the Territories, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. Speed limits, usually of 50 miles per hour, are in effect; slower speeds are always required in cities, towns and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motor-vehicles must not pass a tram that has stopped to take on or discharge passengers, except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

[^252]Penalties.-Penalties ascend in scale from small fines for minor infractions of any of the regulations to a suspension of the operator's driving permit, impounding of the car, or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting to operate a motor-vehicle while intoxicated.

There is such a wide variation in the different provinces and territories regarding the basis of licences and fees, the regulation of public commercial vehicles, details of traffic rules, speed, and the use of motor-vehicles, that it is impossible even to outline them satisfactorily in the space available here.

Safety Responsibility Legislation.-All the provinces and territories of Canada, with the exception of Newfoundland and Yukon Territory, have enacted legislation under this heading which is sometimes referred to as Safety Responsibility Legislation and at other times as Financial Responsibility Legislation. The following paragraphs give the latest amendments to this legislation and the authorities responsible for the administration of motor-vehicles.

Newfoundland.-Administration.-Motor Vehicle Division, Department of Public Works, St. John's. Legislation.-The Highway Traffic Act, 1941, as amended.

Prince Edward Island.-Provision was made in the Highway Traffic Act, 1936, for cancellation of the licence of any person unable to satisfy judgment against him arising out of a motor-vehicle accident. The licence is to be reissued only when proof of financial responsibility is made to the Provincial Secretary. In 1946, "Unsatisfied Judgment Fund" legislation was passed whereby the injured party in an automobile accident may receive compensation from this Fund where the person at fault was unable to satisfy the judgment against him. The revised statutes of Prince Edward Island were proclaimed in 1951.

Administration.-The Provincial Secretary, Charlottetown. Legislation.-The Highway Traffic Act (1950, c. 14).

Nova Scotia.-Administration.-Motor Vehicle Branch, Department of Highways and Public Works, Halifax. Legislation.-The Motor Vehicle Act (1932, c. 6) and amendments, and the Motor Carrier Act (R.S.N.S. 1923, c. 78) as amended.

New Brunswick.-Administration.-Motor Vehicle Division, Department of Public Works, Fredericton. Legislation.-The Motor Vebicle Act (R.S.N.B. 1951, c. 73) as amended.

Quebec.-In 1949, the Quebec Government passed an amendment to the Motor Vehicle Act, which provides for the suspension, for at least three months, of the driver's licence and registration certificate of any person proved guilty of driving while under the influence of liquor or narcotics, or of driving in a dangerous manner or neglecting to stop after an accident or failing to give aid to persons injured in such accident, or of driving a motor-vehicle without being provided with a licence and found guilty of an accident while doing so or while his licence is suspended. In case of a suit for damages resulting from fault, carelessness or neglect, the driver's licence and registration certificate, or either, may be suspended until judgment has been satisfied. In such case, recovery of licence or certificate may
require the furnishing of a guarantee, in the form of insurance, deposit or otherwise, of sufficient financial responsibility to afford reasonable protection to the public against any future accident.

Administration.-Motor Vehicle Bureau, Provincial Revenue Offices, Treasury Department, Quebec. Legislation.-The Motor Vehicle Act (R.S.Q. 1941, c. 142) as amended.

Ontario.-Safety Responsibility Legislation, or Financial Responsibility Legislation as it is sometimes referred to, came into force in Ontario in September 1930.

At the 1947 session of the Ontario Legislature, the Highway Traffic Act was amended to provide for the automatic suspension of the driver's licence and motorvehicle permit of: (1) every person convicted of any offence under the Act if any personal injury or property damage occurs in connection therewith; (2) every person convicted of any offence under the Act if the penalty imposed includes suspension of driver's licence or owner's permit; (3) every person convicted of a criminal offence involving the use of a motor-vehicle.

The suspensions remain effective until proof of financial responsibility is filed. The object of this law is to encourage safe driving by imposing this additional penalty on persons convicted of offences arising out of motor-vehicle accidents. Provision is also made for the forfeiture to the Crown of a motor-vehicle operated while the permit for its operation is under suspension. These amendments became effective July 1, 1947.

The Act was also amended to require the payment of all judgments arising out of motor-vehicle accidents either for personal injuries or property damage up to a maximum of $\$ 5,000$ for one person or $\$ 10,000$ for two persons and $\$ 1,000$ for property damage arising out of one accident. If judgments are not satisfied by the judgment debtors, provision is made for their payment out of an Unsatisfied Judgment Fund. The judgment debtor is then prohibited from holding a driver's licence or having a motor-vehicle registered in his name until the judgment debtor repays, in full, to the Fund the amount paid out, together with interest at 4 p.c. from the date of such payment, and also files proof of ability to satisfy a judgment for $\$ 11,000$ which may arise out of any future accidents. This part of the Act applies only to judgments arising out of accidents in Ontario since July 1, 1947.

Administration.-Motor Vehicles Branch, Department of Highways, Toronto. Legislation.-The Highway Traffic Act (R.S.O. 1937, c. 288) as amended, the Public Vehicle Act, 1949, and the Public Commercial Vehicle Act, 1949.

Manitoba.-In 1945, the Financial Responsibility Law of Manitoba was repealed and replaced with"new Safety Responsibility Legislation.

Features under this legislation include the immediate and automatic impounding of any motor-vehicle after an accident if the operator is unable to produce proof of financial responsibility at the time Impoundment continues until the owner or driver settles any claims for damages or bodily injury sustained, or deposits with the Provincial Treasurer security sufficient to cover any judgment which may be recovered and until the owner of the vehicle has filed proof of financial responsibility for the future.

Driving privileges of financially irresponsible motorists are indefinitely suspended pending settlement of damage claims or deposit of security and the filing of proof of financial responsibility.

A trust fund called the Unsatisfied Judgment Fund provides for payment of judgments for bodily injuries and deaths in cases where the judgment debtor does not pay. This Fund also provides for the victims of hit-and-run motorists.

Administration.-Provincial Treasurer, Winnipeg. Legislation.-The Highway Traffic Act (R.S.M. 1940, c. 93) as amended.

Saskatchewan.-Financial Responsibility Legislation in this Province was placed on the Statutes in 1933 and provides that, where a judgment is rendered in any court in Canada for damages on account of death or injury to any person or on account of property damage in excess of $\$ 50$, occasioned by a motor-vehicle, and the person fails to satisfy the judgment within 30 days from the date upon which it becomes final, the Board shall suspend the operator's or chauffeur's licence issued to the person against whom the judgment is rendered and the registration of every motor-vehicle registered in his name. Judgment must be satisfied before licences are reinstated and the person so liable must give proof of financial responsibility for future motor-vehicle accidents in the amount of $\$ 11,000$ for a period of three years.

The Automobile Accident Insurance Act was passed by the Legislature and placed on the Statutes during 1946 and provides collision insurance, personal injury insurance, and public liability and property damage insurance in the amounts as set forth in the said Act. Saskatchewan citizens are provided with insurance against death or personal injury resulting directly from motor-vehicle accidents. Every person is automatically provided with public liability and property damage insurance to the extent of the amount paid for personal injuries or property damage which is payable by the insurance office.

Administration.-Treasury Department, Highway Traffic Board, Revenue Building, Regina. Legislation.-The Vehicles Act (R.S.S. 1951, c. 85).

Alberta.-In 1947, the Alberta Legislature passed the Automobile Accident Indemnity Act (later the title was amended to the Motor Vehicle Accident Indemnity Act), the main provisions of which are: the suspension of the licences of all drivers directly or indirectly involved in an accident which results in bodily injury, or in property damage exceeding $\$ 75$ in value (changed from $\$ 25$ in 1949), if proof of financial responsibility on the part of the driver is not forthcoming; and an Unsatisfied Judgment Fund is set up on the basis of a fee of $\$ 1$ per year, collected for each licensed motor-vehicle in addition to the regular registration fee. Action may be taken against the Superintendent of the Fund where a judgment for an amount exceeding $\$ 100$ has been obtained following a motor-vehicle accident, if the assets of the judgment debtor are insufficient to meet the award of the court, or in cases where the driver or owner of the motor-vehicle causing the accident is unknown. Minor amendments were made to this legislation in 1948 and 1949.

Administration.-Motor Vehicle Branch, Department of the Provincial Secretary, Edmonton, and the Highway Traffic Board, Department of Public Works, Edmonton. Legislation.-The Vehicles and Highway Traffic Act (R.S.A. 1942, c. 275) as amended, the Motor Vehicle Accident Indemnity Act (1947, c. 11) and amendments, the Public Service Vehicles Act (R.S.A. 1942, c. 276), and Rules and Regulations. The Vehicles and Highway Traffic Act and the Motor Vehicle Accident Indemnity Act are administered by the Motor Vehicle Branch, Department of the Provincial Secretary, and the Public Service Vehicles Act by the Highway Traffic Board, Department of Public Works.

British Columbia.-Financial Responsibility Legislation, which has been in effect in this Province since 1932, provides for the suspension of the driver and motor-vehicle licences on failure to pay judgments, for contravention of certain convictions in connection with speed and for offences under Section 285 of the Criminal Code, etc. These suspensions remain in effect until the party concerned files proof of financial responsibility, which he is required to keep in full force and effect for a period of at least three years at which time he may be released under certain circumstances. In 1947, new legislation was enacted that added to the Financial Responsibility Legislation already in effect, providing for the impounding of motor-vehicles that were involved in motor-vehicle accidents, and for which, at the time, a motor-vehicle liability insurance card or a financial responsibility card could not be produced, and the suspension of licences until proof of financial responsibility is given and other security or satisfaction of claims is given for damages or injuries caused.

Administration and Legislation.-Enforcement of the Motor Vehicle Act, the Highway Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the Municipal Police, Victoria, while the Highway Act is administered by the Minister of Public Works, the Motor Carrier Act by the Public Utilities Commission, and the Motor Vehicle Act by the Superintendent of Motor Vehicles.

Yukon Territory.-Administration.-Commissioner of the Yukon Territory, Dawson, Yukon Territory. Information regarding regulations may also be obtained from the Northern Administration and Lands Branch, Department of Resources and Development, Ottawa. Legislation.-The Motor Vehicle Ordinance, (1947, c. 2) as amended.

Northwest Territories.-Administration.-Commissioner of the Northwest Territories. Address communications to the Director, Northern Administration and Lands Branch, Department of Resources and Development, Ottawa. Legislation.-The Motor Vehicles Ordinance, assented to Nov. 30, 1950, as amended.

## Section 2.-Roads and Highways

The steadily increasing use of motor-vehicles for pleasure and commercial travel has created an insistent demand for more and better highways and for the development of scenic routes as tourist attractions.

The figures of Table 1 include the mileages of all roads under provincial jurisdiction, those in the National Parks, local roads in the Atlantic Provinces and Ontario and estimates of local roads in the four western provinces. There are great stretches of country in Newfoundland, the northern portions of Quebec, Ontario, the Prairie Provinces and British Columbia with very few people and very few roads, but the more extensively populated portions are well supplied. The Northwest Highway System (the Alaska Highway), built for military purposes during 1942 and extending 1,600 miles from Fort St. John, B.C., to Fairbanks, Alaska, serves civilian as well as military traffic. It opens up a vast area of hitherto virgin territory and affords a means of all-weather land communication from Alaska through Canada to the United States.

Statistics of urban streets have been collected since 1935 from cities and principal towns; the small municipalities omitted would increase the totals very little. For 1950, the total number of miles of street reported was 14,462 , composed of 3,899
miles of bituminous pavements, 858 miles of portland cement concrete; 2,607 miles of bituminous surfaces, 3,436 miles of gravel and crushed stone and 122 miles of other surfaces; making a total of 10,922 miles of surfaced streets and 3,540 miles of earth roads. These figures for urban streets or roads are not included in Table 1.

## 1.-Mileage of each Type of Road, by Provinces, as at Mar. 31, 1951

Nots.-The figures for Canada are the sums of the mileages so reported. Urban streets are not included in the figures.

[^253]Finances of Road Transportation.-The cost of road transportation to the people of Canada may be summarized under the following headings: expenditure on roads and highways; expenditure of individuals and corporations on owned motor-vehicles; expenditure for freight and passenger services rendered by public motor-carriers such as taxi, bus and motor-transport companies; and expenditures on garages, service stations, etc. Since expenditure on roads and highways is made almost entirely by government bodies, fairly complete statistics are available regarding them but, owing to the tremendous number of individuals and organizations that would have to be canvassed and the difficulties involved, complete statistics are not available under the other headings. Sales of gasoline are given at p. 772 and revenue of motor-carriers at p. 773.

Expenditure on Roads and Highways.-Roads in Canada, except in the Territories, the Indian Reservations and the National Parks, are under the jurisdiction of either provincial or municipal authorities.

Provincial and municipal expenditure was sharply curtailed during the war years 1939-45 and a considerable backlog of essential repair, improvement and expansion work was accumulated. In 1946, approximately $\$ 144,469,000$ was expended on construction, maintenance and general expenditure for roads and
bridges and from 1947 to 1950 outlays steadily increased and amounted to $\$ 232,514,000, \$ 265,802,000, \$ 270,170,000$ and $\$ 277,914,000$, respectively. Unit costs per mile of new construction increased over pre-war levels and had a restrictive effect on the planned extension of first-class roads. However, the improvement and completion of the Trans-Canada Highway, as a main artery of interprovincial travel, is well under way as a joint responsibility of federal and provincial authorities.

## 2.-Construction, Maintenance and General Expenditure on Rural Roads, Bridges and Ferries, by Provinces, 1947-50

Note.-Expenditure is for the respective provincial fiscal years. Figures for each year since 1931 are given in the corresponding tables of previous Year Books beginning with the 1937 edition.

| Item, Province or Territory | 1947 | 1948 | 1949 | 1950 |

[^254]The Trans-Canada Highway System.-An outline of the legislation, specifications and construction of the joint federal-provincial project, the Trans-Canada Highway, with a map showing the proposed route in the eight provinces participating at that date is given in the Year Book 1951, pp. 631-634.

The estimated mileage in 1952 for the eight original provinces entering the agreement with the Federal Government in 1950 and for Nova Scotia since May 15, 1952, are: Newfoundland, 610 miles; Prince Edward Island, 74; Nova Scotia, 310; New Brunswick, 388; Ontario, 1,412; Manitoba, 305; Saskatchewan, 414; Alberta, 292; British Columbia, 692; and the National Parks 83; making a total of 4,580 miles.

Contractual commitments for the eight participating provinces with respect to new construction work on the Highway during the period Dec. 9, 1949, to Mar. 31, 1952 , amounted to $\$ 29,985,954$. The amounts paid during this same period in respect of prior and new construction were $\$ 3,146,031$ and $\$ 16,850,494$, respectively. The on-site labour expended on the Highway during this same period amounted to $1,210,577$ man-days of eight hours each.

The Highway through the National Parks will be constructed entirely with Federal Government funds and the amount of $\$ 500,000$ has been placed in the estimates for this purpose and construction work commenced during 1952. The 1952 program comprised of the building of a bridge over the Bow River near Lake Louise railway-station and the grading of approximately eight miles of roadway on the Banff-East Gate section in Alberta.

## Section 3.-Motor-Vehicles

Registration.-Automobiles were registered in Canada for the first time in 1904 and Ontario was the only province to issue licences in that year. New Brunswick began registering cars in 1905; Quebec, Saskatchewan and Alberta in 1906; British Columbia in 1907; Manitoba in 1908; Nova Scotia in 1909; Prince Edward Island in 1913; and Yukon Territory in 1914.

In 1905, only 565 motor-vehicles were registered in Canada but by 1915 the number had risen to 95,284 and by the end of the next decade to 724,048 . With the exception of 1931-33, an annual increase was in evidence until 1941 when $1,572,784$ motor-vehicles were registered. The number of commercial vehicles continued to increase during the war years but a considerable decline was shown in passenger cars owing to restrictions on manufacture and the rationing of tires and gasoline. However, post-war recovery was rapid, registrations reaching a peak in 1951 when the total of $2,872,420$ registrations included $2,097,594$ passenger cars and taxis, 722,463 trucks and miscellaneous vehicles, 9,174 buses and 43,189 motorcycles.

## 3.-Motor-Vehicles Registered, by Provinces, 1942-51

Note.-Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-35 are given in the 1937 Year Book, p. 668; and those for 1936-40 in the 1948-49 edition, p. 707.

${ }^{1}$ Does not include Armed Forces vehicles.
Provincial Government Revenue from Motor-Vehicles.-The taxation of motor-vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government income. In every province licences or permits, duly issued by the provincial authorities, are required for motor-vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. A sales tax on gasoline is also levied by each province and to Mar. 31, 1947, there was also a federal tax of 3 cents per gallon but this was withdrawn on that date and most provincial sales taxes were increased to absorb the federal rate. The rates per gallon in effect in 1952 are: for Newfoundland 14 cents; the Provinces of Prince Edward Island, New Brunswick and Quebec 13 cents; Nova Scotia 15 cents since June 1951; Ontario 11 cents; Manitoba 9 cents; Saskatchewan, Alberta and British Columbia 10 cents; and the Yukon and Northwest Territories 6 cents. The more important sources from which provincial revenue from motor-vehicles is derived are shown in Table 6. Federal Government revenue from import duties, excise and sales taxes are given in Chapter XXIII.

## 6.-Provincial Revenue from the Registration and Operation of Motor-Vehicles, 1949 and 1950

Note.-Figures are for the respective provincial fiscal years, all of which end Mar. 31 with the exception of Nova Scotia (Nov. 30) and New Brunswick (Oct. 31).

[^257]Gasoline Consumption.-All provinces require retail sales of gasoline to be reported and a tax is imposed on all gasoline consumed by motor-vehicles using the highways and streets (see p. 770 for rates), and also on that used for an increasing number of other purposes. Most of the taxable gasoline is consumed by motorvehicles and indicates, in a general way, the increase or decrease in their use. Net sales are the differences between the total or gross sales reported and the quantities on which the tax is refunded in whole or in part, or on which the tax is not imposed at the time of sale.

Sales during the war years 1939-45 were, of course, materially affected by rationing, and large increases have followed the removal of restrictions and have resulted in a wide advance of registrations.

[^258]Motor-Carriers.*-The lack of statistical information regarding commercial traffic on the highways led to the institution, in 1941, of a census of motor-carriers. The carriers are divided into two classes: passenger and freight. Each of these is subdivided into (a) carriers with annual revenue of $\$ 20,000$ or over; (b) carriers with revenue of $\$ 8,000$ to $\$ 20,000$; and (c) carriers with revenue under $\$ 8,000$. Bus companies handling urban traffic, exclusively, are compiled as a class. Many street-railway systems operate motor-buses, but the statistics of such systems are not included here; they are included in electric-railway statistics. Licensed carriers doing highway construction work, building air-fields, etc., are excluded from the compilations. Taxi operators and urban delivery trucks are also excluded, except where their operations include interurban business. Carriers operating as both passenger and freight carriers are classed as passenger or freight according to the preponderance of the revenue. The passenger revenue of trucking companies and the freight revenue of bus companies are small percentages of their respective total revenue.

Table 9 shows the freight and passengers carried by motor-carriers in 1948 and 1949. Traffic data were not available for the majority of the small operators. Many truck operators failed to report tons of freight carried and others reported only estimates; consequently, these data are not complete. A difficulty in compiling weights is that much traffic is carried on a load or package basis and not on a weight basis. Records of passengers appear to be fairly complete, possibly because tickets are sold and accounted for, and the unit is not so complex as for freight carried.

Motor-Vehicle Accidents.-Motorists are required by law to report accidents but complete statistics of these accidents are not available for all provinces. The Health and Welfare Division of the D.B.S. compiles statistics on all deaths from motor-vehicle accidents and these are shown in Table 10. A direct comparison of such statistics between the provinces is of little value owing to differences in size, population, motor-vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor-vehicles has also been tabulated. These data still give no weight to differences in use of motor-vehicles, differences in climate, road conditions, tourist cars, etc., all of which are factors in accidents, but it is apparent that safety education is required in all provinces.

Table 11 shows the number of persons killed or injured in automobile accidents as reported by the motor-vehicle branches of the Provincial Governments. It is possible that the latter reported some persons as injured who subsequently died from injuries and these would be included in the fatalities of the vital statistics shown in Table 10; also accidents that occurred late in December and resulted in deaths would be charged to December, by the provincial authorities but to January of the next year in the vital statistics data. Consequently, the figures of fatalities of Tables 10 and 11 are not in complete agreement.

## 10.-Deaths Resulting from Motor-Vehicle Accidents, by Provinces, 1941-50

Note.-This table was compiled in the Health and Welfare Division, Dominion Bureau of Statistics. Figures for 1926-35 will be found in the 1941 Year Book, p. 578, and those for 1936-40 in the 1948-49 edition, p. 712 .

11.-Motor-Vehicle Accidents, by Provinces, 1950

Note.-Figures are as reported by provincial motor-vehicle authorities for the calendar year.

[^261]
## PART IV.-WATERWAYS*

The Canada Shipping Act.-Legislation regarding all phases of shipping is consolidated under the Canada Shipping Act (1934, c. 44). The Act is a sequel to the passage of the Statute of Westminster in 1931, under which the Parliament of Canada accepted full responsibility for the regulation of Canadian shipping. The Canada Shipping Act is a comprehensive piece of legislation embracing features of international agreements as well as of British and previous Canadian legislation. A brief summary of the Act is given in the 1938 Year Book, pp. 680-682.

## Section 1.-Shipping Facilities and Traffic

The developments and equipment to facilitate water traffic are classified under the headings of shipping, harbours, canals and aids to navigation. Subsection 5 gives information regarding pilotage service, steamship inspection, and personnel shipped and discharged.

Under the Terms of Union of Newfoundland with Canada the extensive marine services and facilities of that Province were incorporated with those provided by the Federal Department of Transport. A separate Marine Agency to take over the Province of Newfoundland was created with headquarters at St. John's. All existing lighthouses, buoys and other aids to navigation were taken over. Certain public harbours in Newfoundland, such as the Harbour of St. John's, which before union were under the management and control of harbour commissions, continue under such management and control, but these harbour commissions, together with other public harbours, wharves and breakwaters, now are under the jurisdiction of the Federal Department of Transport.

Newfoundland's records of shipping have been incorporated in the Register of Shipping of Canada and steamship inspection and nautical inspection services provided by the Department of Transport are made available in Newfoundland. Merchant seamen with service in the War of 1939-45 who were eligible for a Special Bonus or a War Service Bonus were provided with similar rehabilitation benefits as those who served in the Canadian Merchant Navy.

Ferry services operated by the Newfoundland Railway prior to union are now under the administration of the Canadian National Railways.

## Subsection 1.-Shipping

All waterways including canals and inland lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that the commerce of Canada is not dependent entirely upon Canadian shipping. However, a large part of the inland and coastal traffic is carried in ships of Canadian registry.

Canadian Registry.-Under Part 1 of the Canada Shipping Act, every ship included under the definition of 'British Ship' given in Sect. 6 of the Act and controlled as to management and use in Canada must be registered in Canada, unless registered elsewhere in the Commonwealth. An exception is made in the case of ships not exceeding 10 tons register and engaged solely in coastal or inland

[^262]navigation. A ship which should be registered, and which is not registered in any part of the Commonwealth, is not entitled to the privileges accorded to British ships. Ships exempt from registry are required to be licensed, and as at Dec. 31, 1951, there were 78,792 licensed ships in Canada as compared with 72,558 in 1950. Vessels about to be built or during construction may be recorded by a Registrar of Ships under the provisions of the Act.
1.-Vessels on the Canadian Shipping Registry, by Provinces, as at Dec. 31, 1949-51

Nore.-Figures for 1935-48 are given in the corresponding tables of previous Year Books beginning with the 1941 edition.

${ }^{1}$ Includes inland navigation.
Shipping Traffic.-A brief description of the early development of Canadian shipping is given at pp. 597-598 of the 1941 edition of the Year Book. Complete statistics, comparable with those given for the railways, showing all the freight carried by water, are not yet available. However, there is a record of the number and tonnage of ships calling at all ports at which there are customs collectors and of cargoes of vessels trading between Canadian and foreign ports. Each vessel departing from port makes a statistical report which is forwarded to the Dominion Bureau of Statistics and compilations of shipping statistics are made from these reports. Coastwise cargo is being reported commencing Jan. 1, 1952.

Reports are not made for vessels of less than 10 registered net tons and the tonnage of tugs is the gross ton and not the net ton used for cargo vessels. Fishing vessels are not required by customs regulations to report when operating from certain ports; consequently, the data are not on the same basis as data for cargo vessels.

## 2.-Vessels Entered at Canadian Ports, ${ }^{1}$ 1941-50

Norg.-Figures for the years ended Mar. 31, 1929-35 are given in the 1941 Year Book, p. 597 and for 1936-40 in the 1948-49 edition, p. 733.

${ }^{1}$ Sea-going and inland international.
${ }^{2}$ Includes other small ports not shown separately.
Vessels in coasting service and vessels fishing in Canadian waters are not required by customs regulations to report any details of cargoes loaded or unloaded so that cargo data are available only for vessels in foreign service. The cargoes are not cargoes on board but are cargoes unloaded and loaded at the respective ports.

## Subsection 2.-Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil, grain, etc. Facilities may include cold-storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil-storage tanks and, in the chief harbours, dry-dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Seven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours that are under the direct supervision of the Department of Transport.

These harbours are administered under rules and regulations approved by the Governor General in Council. Harbour masters have been appointed by the Minister of Transport for 131 of these harbours, their remuneration being made from fees levied on vessels under the terms of the Canada Shipping Act.

At most ports, in addition to the harbour facilities operated by the National Harbours Board or other operating commission, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil, sugar industries, etc. At a number of ports there are also dry docks that are dealt with separately, see p. 785.

## 6.-Facilities of the Six Principal Harbours, as at Dec. 31, 1951

Note. - The facilities include those under the control of other agencies as well as those of the National Harbours Board at these ports.

National Harbours Board.-A description of the origin and functions of the National Harbours Board is given at pp. 679-681 of the 1940 Year Book. The Board is responsible for the administration and operation of the following properties (representing a capital investment of approximately $\$ 236,000,000$ ): port facilities such as wharves and piers, transit sheds, grain elevators, cold-storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal. Operating revenue and expenditure for these properties are given in Table 28, pp. 801-802.

Harbour Traffic.-The freight movement through a large port takes a number of different forms. The overseas movement, i.e., the freight loaded on or unloaded from sea-going vessels, frequently constitutes a surprisingly small part of the total. Usually, the volume coming in and going out by coasting vessels is larger. Then there is the in-transit movement in vessels that pass through the harbour without loading or unloading. Finally, there is the movement from one point to another within the harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled in all the ports and harbours of Canada, as many of them are small and without the staff necessary to obtain a detailed record of freight handled. The National Harbours Board reports annually the water-borne cargo loaded and unloaded at the eight ports under its control. Six of these are among the principal ports of Canada and the cargo handled in each is shown in Table 7. The figures include freight carried by coasting and inland international, as well as by sea-going shipping; they include all cargo loaded or
unloaded whether by facilities under the Board or at private docks and terminals in these ports. Cross-harbour movements, ballast (non-revenue), bunkers, ships' stores, mail and passengers' baggage are excluded.

Dry Docks.-The Department of Public Works of the Federal Government has constructed five dry docks. The dock at Kingston, Ont., is at present under lease to the Kingston Shipbuilding Company. There are two dry docks at Esquimalt, B.C., and at Lauzon, Que. The old Esquimalt dry dock was temporarily transferred to the Department of National Defence on Nov. 1, 1934, and, when commercially required, it will be returned to the control of the Department of Public Works. Each of the larger dry docks at Lauzon, Que., and Esquimalt, B.C., can be divided for use of small vessels; the Lauzon dock cost approximately $\$ 4,500,000$ and the Esquimalt dock approximately $\$ 7,000,000$.

The dimensions of the dry docks owned by the Federal Government and the dimensions and cost of those subsidized under the Dry Dock Subsidies Act (9-10 Edw. VII, c. 17) are given at p. 720 of the 1948-49 Year Book. Subsidy payments have now been completed on the Duke of Connaught dock at Montreal, Que.

## Subsection 3.-Canals

The canals and canalized waters of Canada, under the jurisdiction of the Department of Transport, comprise a series of waterways providing navigation for 1,875 miles inland from salt water. The canals may be divided into two classes: (1) the main or primary canals on the St. Lawrence River and the Great Lakes, including the Lachine, Soulanges, Cornwall and Williamsburg Canals on the St. Lawrence River, the Welland Ship Canal between Lakes Ontario and Erie, and the Sault Ste. Marie Canal between Lakes Huron and Superior; and (2) subsidiary or secondary canals including the St. Peters Canal between Bras d'Or Lake and the Atlantic Ocean, Cape Breton, the St. Ours and Chambly Canals on the Richelieu River, the St. Anne, Carillon and Grenville Canals on the Ottawa River, the Rideau Canal between the Ottawa River and Lake Ontario, and the Trent and Murray Canals between Lake Ontario and Georgian Bay.

The importance of this transportation system as a highway of commerce is evidenced by the fact that, during 1951, 29,325,034 tons of freight passed through, surpassing the peak reached in 1950 when freight traffic amounted to $27,439,076$ tons and comparing with $24,636,462$ tons in 1938 . In $1951,25,548$ vessels passed through the canals compared with 24,420 in 1950.

In addition to freight and passenger vessels there are thousands of pleasure craft locked through the canals. The number of passengers on vessels locking at Sault Ste. Marie was 88,153 in 1951 as compared with 56,765 in 1950.

Revenue from canals during the year ended Mar. 31, 1952, amounted to $\$ 1,502,232$, of which $\$ 1,231,774$ were derived from rentals for hydraulic and land privileges and wharfage. In the previous fiscal year the total revenue was $\$ 1,335,286$, with rentals and wharfage $\$ 1,152,449$.

The names of the various canals along these routes, their locations and lengths, together with the numbers and dimensions of the locks thereon and other information may be found in the bulletin, Canals of Canada, published by the Department of Transport.

Under the jurisdiction of the Federal Department of Public Works are the St. Andrews Lock (length, width and draught, respectively, 215,45 and 17 ft .) at Selkirk on the Red River, Man., and the lock at Poupore, Que. There are also a few small isolated locks, each controlled under the authority of the province in which it is situated.

## 8.-Lengths of Channels and Lock Dimensions under the control of the Department of Transport, as at Dec. 31, 1951

| Name | Location | $\left\|\begin{array}{c} \text { Length } \\ \text { of } \\ \text { ohannel } \end{array}\right\|$ | Locks |  |  |  |

| Murray <br> St. Peters. | St. Peters Bay to Bras d'Or Lakes, Cape Breton, N.S. | 0.50 | 1 | 300 | 48 | $18^{8}$ |

${ }^{1}$ Navigable depths are occasionally less at times of extremely low water. $\quad{ }^{2}$ Minimum depth between locks 23 ft . ${ }^{3}$ Notice must be given by vessels of more than 6 ft .10 in . draught. $\quad 4$ Marine railways in this section limit navigation to vessels 50 ft . long, 13.5 ft . beam, 4 ft . draught-weight not over 15 tons.
${ }^{5}$ Minimum depth of canal with Lake Ontario at elevation 244 ft . above sea level is 9.5 ft . The depth of canal prism is 17 ft .

Canal Traffic.-The canals of Canada are open to the vessels and traffic of all nations upon equal terms and thus United States traffic constitutes an important part of the total carried through certain canals, especially the Welland Ship Canal. This is shown in Tables 9 and 11. More complete details of the traffic through canals may be found in the D.B.S. annual report, Canal Statistics.

## 9.-Traffic through Canadian Canals, by Nationality of Vessel and Origin of Freight, Navigation Seasons, 1942-51

Notr.-Figures include duplications where cargoes use two or more canals. Figures from 1886 are available in the corresponding tables of previous Year Books beginning with the 1902 edition.

| $\begin{aligned} & \text { Navi- } \\ & \text { gation } \\ & \text { Sea- } \\ & \text { son } \end{aligned}$ | Nationality of Vessel |  |  |  | Origin of Freight Carried |  |  |  |  |

${ }^{1}$ Figures for the United States include small percentages of traffic from other foreign countries.

The figures in Tables 10 and 11 include duplications where the same freight passes through two or more canals, but in Table 12 duplications in the traffic passing through the St. Lawrence and Welland Ship Canals and the Canadian lock at Sault Ste. Marie have been eliminated wherever possible.

Grain trans-shipped at Georgian Bay, Lake Erie, or other ports above Montreal, is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne, Ont., or other trans-shipping port.

${ }^{1}$ Through both Canadian and United States locks at Sault Ste. Marie.
Traffic through the Sault Ste. Marie canals, Canadian and United States, has been approximately twice as heavy as the traffic through the Panama Canal during the latest ten years for which records are available, and in 1940 it was almost three times as heavy. Canal traffic has varied from $20,484,000$ tons in 1932, which was less than the Panama traffic, to $120,200,814$ tons in 1942. The dominant traffic, from a tonnage aspect, is iron ore and during the past 50 years this has fluctuated from $4,901,000$ tons in 1892, an average of $50,000,000$ tons in the 1920 's, a low of $3,607,000$ tons in 1932 to a peak of $94,326,578$ tons in 1942. Although wheat has ranged as low as only 7 p.c. of the iron-ore tonnage, its value has been greater, generally, than that of the iron-ore traffic, and has been the most valuable single, commodity passed through the canals; in 1928 the value of wheat passed through the canals was 40 p.c. of the value of all traffic. Other grains have been about one-quarter to one-fifth of the wheat tonnage and a smaller ratio of the value.

Soft coal has, generally, been second in tonnage to iron ore increasing from $8,676,297$ tons during the 1949 season to $13,301,048$ tons in 1950 ; in 1951, however, there was a decline to $10,684,734$ tons.

The Panama Canal.-The Panama Canal, which was opened to commercial traffic on Aug. 15, 1914, has been a waterway of great importance to the ports of British Columbia, from which vessels leave direct for British and European ports throughout the year. As an alternative route to that of the transcontinental railway lines, such a passage by water is of vital importance in the solution of the larger transportation problems of the Continent. During World War I (1914-18), the great expectations based upon the opening of the Canal were not realized, owing to the scarcity of shipping. However, with the post-war decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe took place and, while the proportion carried in vessels of Canadian registry was comparatively small, the cargo tonnage, nevertheless, assumed considerable proportions. During World War II (1939-45), the volume of Canadian traffic through the Canal was greatly reduced.

## 13.-Traffic to and from the East and West Coasts of Canada, via the Panama Canal, Years Ended June 30, 1942-51

Norg-Figures for the years 1921-28 are given in the 1938 Year Book, p. 707, and those for 1929-41 in the 1948-49 edition, p. 738 .

## Subsection 4.-Aids to Navigation

Included under this heading are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the inland rivers and lakes, and at the entrances to harbours-a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described under marine services at p. 792. As a further aid to safe navigation, there are chains of radio signal and direction-finding stations which are described under radiotelegraphy at pp. 839-840. Lists of aids to navigation, with the exception of very minor ones, are published by the Department of Transport.

## 15.-Marine Danger Signals maintained in Canada, Years Ended Mar. 31, 1946-52

Nore.-In addition to the aids to navigation listed, approximately 9,006 unlighted buoys, balises, dolphins and beacons are maintained. A table showing marine danger-signals maintained during the years ended Mar. 31, 1929-40, is given in the 1941 Year Book, p. 581. Figures for 1942 will be found in the 1948-49 edition, p. 716, and for 1943-45 in the 1950 edition, p. 766.

${ }^{1}$ Includes one submarine bell.

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. The largest task of this nature has been the St. Lawrence River Ship Channel. An extensive floating plant is in service to maintain and improve the deep-water channel from Montreal, Que., to the sea for ocean-going shipping. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Ice-breaking operations are carried on at the beginning and at the end of winter to prolong the season of navigation in important waters that freeze over-particularly in connection with sea-going shipping from Montreal-and to prevent flood conditions during the spring ice break-up.

## 16．－Seasons of Open Navigation on the St．Lawrence Ship Channel，1933－52

## Subsection 5．－Marine Services of the Federal Government

The services covered in this Subsection are those dealing with steamship inspection，pilotage service，sea－faring personnel，and the operations of the Canadian Government Merchant Marine Limited，and the Canadian National（West Indies） Steamships Limited．

Steamship Inspection．－The Steamship Inspection Service，provided for under Part VII of the Canada Shipping Act，1934，consists of a headquarters staff at Ottawa and staffs of inspectors at the principal ocean and inland ports．The Board of Steamship Inspection decides on questions arising out of the administration of the Act．The Service is responsible for the administration and carrying out of the provisions of the Act respecting the periodic inspection of power－driven ships and the issue of inspection certificates；the assignment of load lines；the conditions under which dangerous goods may be carried in ships；the protection against accident of workers employed in loading or unloading ships；and also for the administration and carrying out of the provisions relating to the certification and employment of marine engineers．

Pilotage.-Pilotage service functions under the provisions set forth in Part VI of the Canada Shipping Act, 1934. Qualified pilots may offer their services to the stranger in local and confined waters. At the same time, pilotage might also be considered as a method of insurance.

There are 42 pilotage districts in Canada, nine of which are under the Minister of Transport as pilotage authority (see Table 18). The other districts function under local pilotage authorities appointed by the Governor in Council under the provisions of the Canada Shipping Act, 1934.

In addition, there are 21 districts in the Province of Newfoundland under local pilotage authorities, but as Part VI, Pilotage, of the Canada Shipping Act, 1934, is not yet applicable to this province, these districts are not yet under the jurisdiction of the Minister of Transport.

Table 18 shows, by districts, the number and aggregate tonnage of ships using pilots during the years ended Mar. 31, 1950 and 1951. Corresponding statistics are not available for the St. Lawrence-Kingston-Ottawa district.

18.-Pilotage Service by Districts, Years Ended Mar. 31, 1950 and 1951

${ }^{1}$ Includes 1,641 seamen shipped and 1,288 seamen discharged in Newfoundland during the period Apr. 1 to Dec. 31, $1949 . \quad$ Includes Newíoundland.

Canadian Government Merchant Marine Limited.-The circumstances under which the Canadian Government became possessed of, and responsible for, the operations of a merchant marine are explained at p. 776 of the 1934-35 Year Book. A table showing the operating results from 1919 to 1936 is given at p. 689 of the 1937 Year Book.

The original fleet of the Canadian Government Merchant Marine Limited consisted of 66 vessels with a total deadweight tonnage of 391,212 . The original cost of the fleet was $\$ 79,661,921$ and the capital loss thereon was $\$ 74,239,356$, the total capital recovery of $\$ 5,422,565$ being as follows: (1) the sale of 56 vessels for $\$ 2,378,018$; (2) the proceeds of insurance on four vessels lost, amounting to $\$ 2,111,475$; and (3) the sale of six vessels for $\$ 933,072$ to the Canadian National (West Indies) Steamships Limited.

The charter of the Canadian Government Merchant Marine Limited and its subsidiary companies, although inactive since 1936 , was not surrendered and in 1940, the Company was reconstituted and is operating, on behalf of the Canadian Government, certain ships seized in prize and either requisitioned for use by the Canadian Government or condemned by the Court. Settlement with the owners of requisitioned ships for charter hire has not been completed.

Canadian National (West Indies) Steamships Limited.-In conformity with the Canada-West Indies Trade Agreement of 1926 (16-17 Geo. V, c. 16) the Federal Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships Limited.

At the end of 1949, the Canadian National Steamships owned and operated 10 vessels in service between Canada and the British West Indies.
20. - Financial Statistics of Canadian National (West Indies) Steamships Limited, 1942-51
Nore.-Figures for the years 1929-38 are given in the 1942 Year Book, p. 620, and for 1939-41 in the 1950 edition, p. 777.

## Subsection 6.-The St. Lawrence Seaway Project

The proposal to enlarge the navigational facilities and develop the power resources of the International Section of the St. Lawrence River has been agitating public opinion in Canada and the United States for over one-hundred years. The proposal was formalized in the St. Lawrence Deep Waterway Treaty of 1932 and the Great Lakes-St. Lawrence Agreement of 1941. The former was killed in the Senate
of the United States. As late as June 18, 1952, the United States Senate returned a resolution to approve the 1941 Agreement to its foreign relations committee for further study.

Further delay by Congress of the United States to implement the 1941 Agreement has resulted in action being taken by Canada with a view to the construction of an all-Canadian navigational project. This would be undertaken in conjunction with a proposed joint Canadian-United States project to develop the power resources of the International Section of the St. Lawrence River.

Towards the end of the 1951 session of the Parliament of Canada, an Act was passed enabling the setting up of a St. Lawrence Seaway Authority to undertake the construction work of an all-Canadian navigational project and its operation on completion. Provision was made for this Authority to be the agency responsible for the Canadian share of construction and operation of the Seaway project should the United States join with Canada in this undertaking.

On June 30, 1952, separate submissions by Canada and the United States were filed with the International Joint Commission seeking approval of the necessary woris to develop the power resources of the International Section of the St. Lawrence River. In its submission, Canada undertook to carry out the construction of navigational works on the Canadian side of the River. At the same time, an exchange of notes between Canada and the United States on this subject took place at Washington, D.C.

Preliminary work in connection with the all-Canadian navigational project commenced in January 1952, with test drilling where the main canal would be located on the Canadian shore of the St. Lawrence River. Plans for the work involved in the construction of the all-Canadian project are well advanced by Department of Transport engineers, who were also responsible for the preparation of plans under the 1941 Agreement.

## Section 2.-Financial Statistics of Waterways

The principal statistics available of the cost of water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. In so far as capital expenditure for the permanent improvement of waterways is concerned, that of the Federal Government covers the major part. There has been some expenditure by municipalities on local harbour facilities, and private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian Government Merchant Marine Limited and the Canadian National (West Indies) Steamships Limited, has come almost entirely from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies that cover only a portion of the field. There are no statistics showing the revenue of ship operators from passenger and freight traffic.

Capital Expenditure.-The only figures available of federal capital expenditure on Canadian waterways are those compiled from the Public Accounts and the annual reports of the Departments of Transport, Public Works and Finance. However, such expenditure cannot be regarded as any indication of the present worth of the undertakings represented. The cost of building canals and other waterways and
permanent works to facilitate water transportation in Canada are represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment af earlier works which have been superseded, as for instance, in the first Welland Canals. To this extent such figures are an overstatement of the present value of the works in use. There is a further limitation that should be noted in regard to such figures: they do not include the costs of maintenance and improvements or the operation of these works, such charges having been made to the Consolidated Deficit Account as annual expenditure and not to capital account. Table 21, which shows capital expenditure on canals, marine service and miscellaneous water-transport facilities to have reached the grand total of $\$ 411,291,685$, must be interpreted with the above qualifications in mind. In Table 22, the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1950, and 1951, and are in addition to the capital expenditure of Table 21. Figures in Table 22 reflect the capital situation in regard to the national harbours of Canada far better than do those of Table 21 in the case of waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they also have been subject to deductions for depreciation and the scrapping or abandonment of plant and hence more nearly approach the present value of the properties under the administration of the National Harbours Board.

Table 23 on p. 798 shows the amounts advanced by the Federal Government to the National Harbours Board for capital expenditure from 1949 to 1951.

## 21.-Capital Expenditure of the Federal Government on Canals, Marine Services and Miscellaneous Water-Transport Facilities, as at Mar. 31, 1950 and 1951

Note.-Compiled from annual reports of the Department of Transport.

[^266]
## 21.-Capital Expenditure of the Federal Government on Canals, Marine Services and Miscellaneous Water-Transport Facilities, as at Mar. 31, 1950 and 1951-concluded

${ }^{1}$ These are works not covered elsewhere in these tables and are shown in the Public Accounts as Schedule K to the Balance Sheet.

## 22.-Capital Values of Fixed Assets administered by the National Harbours Board, as at Dec. 31, 1950 and 1951

Note.-Compiled from the annual reports of the National Harbours Board.

Waterway Expenditure and Revenue on Consolidated Fund Account.Expenditure under this heading (Tables 24 to 26) is mainly for the operation and maintenance of various facilities for water transport, but unfortunately the line between operation and maintenance expenditure is not as finely drawn as is desirable.

In addition to the recurrent expenditure shown here, to facilitate water transportation, the Federal Government expends annually a considerable amount to cover deficits of the Canadian National (West Indies) Steamships Limited and of the National Harbours Board, for mail subsidies and steamship subventions as shown in Table 29. Operating expenditure and revenue of facilities administered by the National Harbours Board are shown separately in Table 28. The National Harbours Board operates as a statutory corporation. The improvement in the financial results since control was unified under the Board is indicated by the increase of consolidated operating income from $\$ 2,452,000$ in 1935 to $\$ 7,377,493$ in 1951. Revenue in connection with waterways of the Department of Transport and the Department of Public Works is shown in Table 27.

${ }^{1}$ Reverted to former owners in 1951.
Canadian Maritime Commission.-By authority of an Act (11 Geo. VI, c. 52) passed in the 1947 session of Parliament, the Canadian Maritime Commission was constituted for the purpose of examining into, keeping records of, and advising the Minister of Transport on matters pertaining to Canadian shipping and shipbuilding services.

In addition to these duties, the Act also empowers the Commission to:-
(1) exercise and perform on behalf of the Minister such powers, duties and functions of the Minister under the Canada Shipping Act, 1934, as the Minister may require;
(2) administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament; and
(3) exercise or perform any other powers, duties or functions conferred on or required to be performed by the Commission by or pursuant to any other Act or order of the Governor in Council.

Since the Canadian Maritime Commission was created, it has assumed all responsibilities for the administration of steamship subventions which had formerly been under the jurisdiction of the Department of Trade and Commerce.

The Park Steamship Company.-Since World War II the Park Steamship Company has acted as an agent for Crown Assets Disposal Corporation in the sale and delivery to purchasers of Government war-built ships. This work is virtually completed but the Park Company remains available to carry out any appropriate duties. The Company has no staff of its own, any necessary work being done by the staff of the Canadian Maritime Commission.

Shipping Subsidies.-The figures given in Table 29 represent the amounts paid in connection with contracts made under statutory authority by the Canadian Maritime Commission for ocean, coastal and inland water-shipping services.
29.-Steamship Subventions, Years Ended Mar. 31, 1950-52

# PART V.-CIVIL AIR TRANSPORTATION* 

## Section 1.-Administration and Development

Historical Developments.-Canada's aviation history dates back to 1909 when the Silver Dart piloted by Jack McCurdy (Hon. J. A. D. McCurdy, former Lieutenant-Governor of Nova Scotia) flew at Baddeck, N.S. This was the first aeroplane flight by a British subject in the British Empire.

There was little aviation development in this country until World War I. Following the War, many of Canada's wartime aviators assisted in developing air transportation services into inaccessible areas, air forestry patrols and inter-city air services. During this period, the flying clubs movement received Government assistance in the training of pilots and engineers required by Canada's civil aviation industry.

World War II was a period of intensive construction of airports and aerodromes to meet the requirements for training of airmen under the British Commonwealth Air Training Plan. At the end of the War, many Service-trained Canadian airmen turned to commercial flying and were absorbed in existing operating companies or helped to develop other flying services. Transatlantic air services, which were inaugurated by the Department of Transport during the War, were turned over to Trans-Canada Air Lines which came into being by Act of Parliament in 1937 to provide for the development of a government-controlled transcontinental air service for operation as regular scheduled operations. Canadian Pacific Air Lines was created by the amalgamation of small commercial operators for the servicing of Canada's northland. In 1949 the Canadian Pacific Air Lines was designated to provide transpacific services on behalf of Canada and began its scheduled operations from Vancouver to Australia and New Zealand in July of that year and to Japan, China and Hong Kong in September.

The Control of Civil Aviation.-The control of civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the quthority of the Aeronautics Act, 1919, and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation, comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Controller of Civil Aviation under the supervision of the Director of Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain statutory functions with respect to the regulations of commercial air services. Part III of the Act deals with matters of government internal administration in connection with the Act.

Recent Developments in Ground and other Facilities.-Airports and aerodromes coming under the jursidiction of the Department of Transport have been improved and enlarged to meet the requirements of larger and heavier aircraft. Instrument Landing Systems (ILS) designed to facilitate safe landings under low visibility conditions have been installed in 17 airports. Twelve of Canada's civil airports are regular ports of call for international commercial air services.

[^268]Expansion of the weather forecasting services of the Meteorological Division of the Department of Transport has been made possible by the establishment of additional weather-observing stations in Arctic and sub-Arctic regions. Canada has undertaken to maintain for meteorological purposes, a weather-observing station, manned by three weather ships in the Pacific Ocean, 300 miles off Vancouver Island. This weather station was established in December 1950 as a result of Canada's undertaking with International Civil Aviation Organization.

Royal Canadian Flying Clubs.-At the end of 1951, there were 36 member clubs of the Royal Canadian Flying Clubs Association with a total membership of 4,000 . In 1950 there were 34 member clubs. During the year 1951, with 1950 figures in brackets, instructional hours flown totalled $51,190(25,659)$ and the number of aircraft utilized for instructional purposes was 140 (127). The number of students instructed and graduated as private pilots was 709 (601). In 1951 there were 116 who graduated as commercial pilots.

Air Industries and Transport Association.-Commercial flying schools that are members of the Air Industries and Transport Association numbered 44 at the end of 1951 as compared with 57 in 1950. During the year 1951, with 1950 figures in brackets, the number of students instructed and graduated as private pilots was 516 (597) and the number graduated as commercial pilots 134 (not separately listed in 1950). The number of instructional hours flown was 33,063 $(33, S 54)$.

International Air Agreements.-In recent years, Canada has been a signatory to agreements concerning civil aviation with Australia and New Zealand; Belgium, Germany, Ireland, Iceland, Netherlands, Portugal, Sweden and the United Kingdom; and with the United_States.

## Section 2.-Air Services

Air Transport Services.-These services are grouped into two broad classesScheduled Services and Non-Scheduled Services.

Scheduled Services provide regular point-to-point service on scheduled advertised routes and Non-Scheduled Services include:-
(1) Specific Point Services from a designated base to specific points on the basis of unit rates that may be undertaken as the traffic warrants and that are not on a time schedule;
(2) Chartered Services operated on the basis of the private chartering of an entire aircraft for a specific trip;
(3) Contract Air Services which operate on one or more specific contracts. These do not operate on a time schedule nor need the contractor take the entire space of the aircraft;
(4) Specialty Air Services concerned with large-scale forestry and utility surveys according to some specific agreement.

Trans-Canada Air Lines.-During the years 1950 and 1951, with two exceptions, emphasis was placed on increasing service on existing routes rather than geographic expansion of operations. On Apr. 1, 1950, a service between Montreal and New York was inaugurated; this service ties in with the TorontoNew York service, and four flights daily are operated on these routes.

The volume of passenger traffic on North American service in 1951 was the greatest in the Company's fifteen-year history; the number of passengers carried exceeded the previous peak year, 1950, by 9,945 , and the total revenue-mileage flown increased by 11 p.c. A fourth daily trans-continental flight began on Apr. 1, 1951, and additional operations were provided on the majority of the other routes, including the trans-border services. Approximately 500 more airline seats were made available daily than at the height of the 1950 travel season and 10 p.c. more scheduled flying took place.

At Dec. 31, 1951, Trans-Canada Air Lines was providing service for passenger, mail and commodity traffic over nationwide routes, totalling 9,126 miles.

Trans-Canada Air Lines (Atlantic) Limited.-On Apr. 2, 1950, the Company began the first direct air service between Canada and the Southern United States, when Tampa, Florida, was included as a traffic stop on the route to the Bahamas and Jamaica.

On Apr. 1, 1951, a service was inaugurated between Montreal and Paris. This was the first direct link between Canada and Continental Europe to be provided by a scheduled Canadian carrier.

North Atlantic flight frequency rose to a daily round-trip by mid-summer of 1951 and continuing traffic was so heavy that this schedule was maintained throughout the remainder of the year. With record passenger traffic moving on both the North Atlantic and southern routes, the overseas services more than kept pace with the domestic operations in growth of business. In 1951, 22 p.c. more persons were transported on North Atlantic flights than in 1950, while the Bermuda and Caribbean passenger traffic increased by 41 p.c.

Overseas routes, touching at England, Scotland, Ireland, France, Bermuda, the Bahamas, Jamaica, Barbados, and Trinidad, totalled 8,688 miles at Dec 31, 1951.

Canadian Pacific Air Lines Limited.-This Company operates scheduled domestic services with a total of 9,525 route miles, and overseas services from Vancouver to Australia, New Zealand and the Orient, totalling 15,295 route miles.

The 15 scheduled domestic services operated by the Company supply regular transport between the larger cities and the far northern terminals and intermediate points. Additional licences have been obtained to permit the extension of operations to the Kitimat aluminum project in British Columbia, and to the uranium exploration centre at Goldfields in northern Saskatchewan.

The overseas services comprise a fortnightly service from Vancouver to Australia and New Zealand via San Francisco, Honolulu, Canton Islands and Fiji, and a weekly service to Tokyo and Hong Kong via the Great Circle. At the close of the year 1951, the South Pacific service was extended to include Auckland, New Zealand.

In August 1950, Canadian Pacific Air Lines Limited began transporting United Nations military personnel to the Korean war theatre, starting with twice weekly flights. In December this was increased to four weekly flights, one of which carries on from Tokyo to Hong Kong as the Company's regular weekly scheduled flight.

In 1951, gross revenue increased by 52 p.c. over the previous year. Operations in Canada and over the Pacific showed improvement; gross revenue from operations in Canada increased chiefly as a result of greater traffic volume, while revenue from Pacific operations was greater because the more frequent service to Tokyo was in effect for a full twelve months.

Following are traffic statistics for the years 1950 and 1951:

| Item |  |  | Domestic |  | North Pacific |  | South Pacific |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 1950 | 1951 | 1950 | 1951 | 1950 | 1951 |
| Revenue | miles. | No. | 4,594,893 | 5,299,871 | 932,932 | 2,211,242 | 444,342 | 423,068 |
| " | passengers. | No. | 145,055 | 172,646 | 3,181 | 10,183 | 1,571 | 1,586 |
|  | goods. | lb. | 6,041,214 | 2,045, 734 | 56,330 | 52,321 | 1,534 | 8,090 |
| Mail. |  | lb. | 5,639, 744 | 1,909,112 | 12,755 | 23,902 | 1,124 | 1,660 |

Independent Air Lines.-In addition to Trans-Canada Air Lines and Canadian Pacific Air Lines, there are four other domestic air lines licensed to operate scheduled services in Canada. These are:-

Central Northern Airways Limited, Winnipeg, Man.
Maritime Central Airways Limited, Charlottetown, P.E.I.
Queen Charlotte Airlines Limited, Vancouver, B.C.
Rimouski Air Lines Limited, Mont Joli, Que.
The number of operating certificates in effect are: 44 scheduled; 312 nonscheduled, other than flying training; and 96 flying training.

Non-scheduled services are operated by the majority of the independent air lines. These services provide effective means of access to sections of Canada that are inaccessible by other modes of transportation, and act as feeders to the scheduled air lines. They also provide specialty services such as recreational flying, aerial photography and survey, aerial pest control, and aerial advertising.

Commonwealth and Foreign Scheduled Services.-In 1951, there were 14 operating certificates issued to Commonwealth and foreign scheduled services flying into Canada:-

Air France (Compagnie Nationale Air France). - Operating between points in Metropolitan France and Montreal, Que., Canada, direct or via Shannon, Ireland; Keflavik, Iceland, or The Azores and Gander, Canada; and New York, U.S.A.
American Airlines Inc.-Operating between Toronto, Ont., Canada, and New York, N.Y., U.S.A./Newark, N.J., U.S.A., direct or via Buffalo, N.Y., U.S.A.

British Commonwealth Pacific Airlines Limited.-The Canadian portion of the route operating between San Francisco, U.S.A., and Vancouver, Canada of the TransPacific Service between Sydney, N.S.W., Australia, and/or Auckland, New Zealand, and Vancouver, Canada.
British Overseas Airways Corporation.-Operating between London, England, and Montreal, Canada, and between London, England, and New York, U.S.A., both routes via Prestwick, Scotland, or Shannon, Ireland, and Gander, Canada.
Colonial Airlines Inc.-(a) Operating between the terminals Ottawa and Montreal, Canada, and New York, U.S.A., via Burlington or Massena, U.S.A., and (b) between the terminals Montreal and Ottawa, Canada and Washington, U.S.A. via Massena, U.S.A.
K.L.M. Royal Dutch Airlines.-The Canadian portion of the route between the terminals Amsterdam, the Netherlands, and Montreal, Canada; and the Canadian portion of the route between the terminals Montreal, Canada, and Willemstad, Curaçao, North West Indies.
Northeast Airlines Inc.-Operating between Montreal, Canada, and Boston, U.S.A.
Northwest Airlines Inc.-Operating between Winnipeg, Canada, and Fargo, N.D., U.S.A.; and between Minneapolis/St. Paul, U.S.A. and Edmonton, Canada; Anchorage, Alaska, and beyond.
Pan American World Airways, Inc.-Operating between Seattle, U.S.A., and Fairbanks, Alaska, via Juneau, Alaska, and Whitehorse, Y.T., with a refuelling stop at Port Hardy, B.C., and/or Comox, B.C.i and between New York, N.Y., Philadelphia, Penn., Boston, Mass., all in the U.S.A., and Gander, N'f'ld., Canada; Shannon, Ireland; London, England.
Sabena (The Société Anonyme Belge D'Exploitation de la Navigation A Árienne) -Operating between Brussels, Belgium, and New York, U.S.A., via Shannon, Ireland, and Gander, N'f'ld.
Scandinavian Airlines System.-Operating between Stockholm, Sweden; Oslo, Norway; Copenhagen, Denmark; Prestwick, Scotland; Gander, N'f'Id.; and New York, U.S.A

#### Abstract

T.W.A. (Trans-World Airlines Inc.).-Operating between New York, Washington, Philadelphia, Boston, U.S.A.; Gander, Canada; The Azores; Shannon, Ireland; London, England; Paris, France; and beyond.

United Air Lines Inc.-Operating between Vancouver, B.C., and Seattle via Bellingham, U.S.A.

Western Air Lines Inc.-Operating between Great Falls and Cut Bank, U.S.A., and Lethbridge and Edmonton, Canada; via Calgary and Penhold, Canada.

## Section 3.-Civil Aviation Statistics

Aircraft.-The Canadian aircraft industry on Mar. 31, 1952, consisted of the following companies making the civilian type of aircraft named:-

Canadair Limited, Montreal, Que., manufacturers of the North Star, Canadair Four and the converted Canadair Dakota;

Canadian Car and Foundry Company Limited, Montreal, Que., manufacturers of the Norseman:

DeHavilland Aircraft of Canada Limited, Toronto, Ont., manufacturers of the Beaver, Chipmunk and Otter;

Fairy Aviation Company of Canada Limited, Eastern Passage, N.S., conversion of trainer aircraft;

MacDonald Bros. Aircraft Limited, Winnipeg, Man., overhaul and conversion work;
Northwest Industries Limited, Edmonton, Alta., overhaul and conversion work;
A. V. Roe Canada Limited, Toronto, Ont., engaged in the design and construction of a jet-powered transport for inter-city operations, the AVRO Jetliner;

British Aeroplane Engines Limited, Vancouver, B.C., overhaul work;
Canadian Pratt and Whitney Aircraft Company Limited, Longueuil, Que., overhaul and maintenance work;

Canadian Wright Limited, Montreal, Que., overhaul and testing.
The principal statistics of the aircraft industry are shown for the latest available year (1949) in Chapter XVI, Manufactures.

Ground Facilities.-Early ground facilities for civil aviation consisted chiefly of municipal or flying-club airports adjacent to the larger urban centres and of numerous terminals from which commercial flying services operated, mainly into the northern mining regions. These airports formed the nucleus which, with many additions and improvements, became the chain of airports constituting the TransCanada airways operated by the Department of Transport. To-day, Canada is well supplied with airports and aerodromes scattered throughout the country. The Department of Transport retained a certain number of the airports that had been constructed for war purposes and others were made available to municipalities for local use. The airports, airfields and anchorages in Canada are as classified in Table 3; and a statement is given showing the number of airports and airfields by provinces equipped with control facilities and certain other facilities.

98452-52

## 3.-Airports, Airfields and Anchorages, by Provinces, as at Mar. 31, 1951

Note.-Department of Transport figures: unlicensed airfields and anchorages not included.

Air Traffic Control.-The function of Air Traffic Control is to expedite and maintain an orderly flow of air traffic, and to prevent collision between aircraft operating within controlled airspace and between aircraft and obstructions on the movement area of controlled airports. The following services are provided: (1) Airport Control, (2) Area Control, (3) Flight Information, and (4) Alerting for Search and Rescue.
(1) Airport Control is designed particularly to provide air traffic control service in the vicinity of major civil airports where the volume and type of aircraft operations, together with weather conditions and other factors, indicate its need in the interest of safety.
Continued increase in air traffic, both civil and military, made it necessary to expand this service by the establishment of additional control towers. Aircraft operations for 1949,1950 and 1951 totalled 711,560, 784,690 and 968,436 , respectivelyan increase of 256,867 or approximately 36 p.c. in a three-year period. Control towers are located at Patricia Bay and Vancouver, B.C.; Lethbridge, Calgary
and Edmonton, Alta.; Saskatoon and Regina, Sask.; Winnipeg, Man.; Windsor, London, Toronto, Ottawa, and North Bay, Ont.; Montreal, Cartierville and Quebec, Que.; Moncton, N.B.; Sydney, N.S.; and Gander, N'f'ld.
(2) Area Control is designed particularly to provide air traffic control service to aircraft operating within controlled airspace during weather conditions that prevent a pilot from seeing other aircraft or obstructions and necessitates his reliance on instructions to conduct the flight. This service is provided by area control centres at Vancouver, B.C.; Edmonton, Alta.; Winnipeg, Man.; Toronto, Ont.; Montreal, Que.; Moncton, N.B.; and Gander, N'f'ld.
(3) Flight Information is designed to provide advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, and other related data of assistance to the pilot in planning or conducting a flight.
(4) The Alerting for Search and Rescue service is designed to ensure that the appropriate organizations are notified of aircraft in need of search and rescue aid, and otherwise to assist such organizations as required. Area control centres are responsible for notifying these organizations promptly of non-arrival at destination of any aircraft for which a flight plan or flight notification has been received.

Summary of Operation Statistics.-The statistics given in Table 4 show the remarkable increase in recent years in passenger freight and mail traffic.

## 4.-Summary Statistics of Civil Aviation, 1946-51

Nots.-Figures from 1921 are given in the corresponding table of previous Year Books beginning with the 1924 edition.

Table 5 shows civil aviation figures for 1949-51 by type of service. For a definition of scheduled and non-scheduled carriers, see p. 805. Statistics for international carriers include traffic over Canadian territory for both Canadian and foreign operators; a small traffic across Canadian territory and between foreign stations is also included. Statistics for Canadian carriers operating international routes are included both as "International" and "Canadian" but duplications are excluded from the totals.

## THE INTERNATIONAL CIVIL AVIATION ORGANIZATION AND CANADA'S PARTICIPATION THEREIN*

The International Civil Aviation Organization (ICAO) is a specialized agency of the United Nations established "in order that international civil aviation may be developed in a safe and orderly manner and that international air transport services may be established on the basis of equality of opportunity and operated soundly and economically". The foundations of ICAO were laid at a Conference held at Chicago in December 1944 and Canada's delegates to that Conference, the Right Honourable C. D. Howe, Mr. H. J. Symington and Mr. J. A. Wilson, together with their advisers, played a most important part in assisting the Conference to arrive at the decisions which resulted in the preparation of the Convention on International Civil Aviation.

In order to understand the development and growth of ICAO, it is necessary to know something of what preceded it. While earlier attempts were made, particularly in Europe, to devise methods of international co-operation in respect of aviation, it was not until after the end of World War I that anything of great significance was achieved. The matter was considered very fully at the Versailles Peace Conference and, as a result, the International Convention for Air Navigation was signed at Paris in October 1919. The International Commission for Air Navigation (ICAN) which was established pursuant to that Convention filled, to a somewhat limited extent between the Wars, the place now occupied by ICAO. That Convention dealt mainly with the technical aspect of international flight and was designed to foster technical co-operation in the air. The membership of ICAN consisted mainly of European States and its scope was largely technical in character. Canada was a member of ICAN and was represented at many of its meetings but, owing to geographical position and the fact that the United States was not a member and Canadian civil aviation at that time was almost entirely domestic, the international consequences of Canada's participation were quite limited in character.

As a result of the great technical advances during World War II and the vast development of air transportation for military purposes, air transportation became a most important factor in world transportation. A number of Governments recognized, while the War was still in progress, that adequate provision for "order in the air" on a world-wide basis was absolutely essential. The United States took the lead and invited about 52 allied and neutral States to participate in a Conference which convened at Chicago in November 1944. Canada was keenly interested in planning for the future in the field of aviation and on Apr. 2, 1943, the Right Honourable W. L. Mackenzie King said in the House of Commons: "The Canadian Government strongly favours a policy of international collaboration in air transport and is prepared to support in international negotiations whatever international air-transport policy can be demonstrated as being best calculated to serve not only the immediate national interests of Canada but also our overriding interest in the establishment of an international order which will prevent the outbreak of another war". This statement is still the basis of Canadian international aviation policy. Before the United States convened the Chicago Conference, preparations were being made for Canada's participation in it and the Canadian draft convention on civil aviation, which was the earliest available complete plan, was

[^271]tabled in the House of Commons on Mar. 17, 1944. This draft, later approved with some modifications by Parliament, was further revised at a Commonwealth Air Conference held at Montreal, Que., and also in discussions with United States authorities.

The final Act of the Chicago Conference contained the text of the following Agreements: the Interim Agreement on International Civil Aviation; the Convention on International Civil Aviation; the International Air Services Transit Agreement;* and the International Air Transport Agreement. $\dagger$

It also contained 12 technical draft Annexes. The above instruments were opened for signature on Dec. 7, 1944.

Canada became a party to the Interim Agreement, the Convention and the Transit Agreement. For a number of reasons, very few States became parties to the Air Transport Agreement. The Interim Agreement came into force following its acceptance by 26 States on June 6, 1945, and the Provisional International Civil Aviation Organization (PICAO) was accordingly established. Pursuant to a decision taken at Chicago, Headquarters of PICAO was set up at Montreal, and the first meeting was held on Aug. 15, 1945. Upon the ratification of the Convention on International Civil Aviation by 26 States on Apr. 4, 1947, ICAO superseded the Provisional Organization. In accordance with the terms of the Convention, a decision was taken at the final meeting of the Assembly of PICAO that the permanent seat of the Organization would be at Montreal and the Government of Canada thereupon provided the Organization with suitable headquarters premises. Pursuant to arrangements made with Canadian National Railways, a modern ten-story office building, known as the International Aviation Building, was erected at the corner of Dorchester and University Streets, Montreal, and the Organization moved into this building in August 1949.

The Structure of ICAO.-The International Civil Aviation Organization is composed of an Assembly, a Council and certain other subsidiary bodies, and is staffed with an international secretariat. The Assembly meets annually and is composed of 57 Member States each of which is entitled to one vote. Except in respect of certain specific functions, which are allocated to the Council by the Convention, the Assembly is the supreme authority. The Council is a permanent body composed of 21 Member States elected by the Assembly every three years. Canada was a member of the PICAO Council and has continued to be a member of the Council of ICAO. All Council Member States maintain offices and resident representatives at Headquarters, where the Council is in session for the greater part of the year. The Council is responsible to the Assembly and is the executive body of ICAO. Under the Convention, it has a number of mandatory functions and a wide range of permissive functions which, together, cover the whole field of international civil aviation. In addition, it has the responsibility of deciding disagreements between Member States in regard to the interpretation or application of the Convention and has certain powers for making findings and recommendations in the case of disputes under the Air Services Transit Agreement and the Air Transport Agreement.

[^272]Pursuant to the Convention, the Air Navigation Commission is composed of 12 members appointed by the Council from among persons nominated by the contracting States, having suitable qualifications and experience in the science and practice of aeronautics. The Commission considers and makes recommendations to the Council on all the technical aspects of international air navigation and, in particular, makes recommendations for the adoption and modification of Standards and Recommended Practices that are adopted as Annexes to the Convention. The Air Transport Committee, also established pursuant to the Convention, is composed of 12 members similarly appointed. This Committee considers and makes recommendations to the Council on matters in the economic field of international aviation. The Joint Support Committee is a Committee of Council that deals with matters in the field of joint international financing of air navigation facilities and services required for the benefit of international air navigation. The Finance Committee, a Committee of Council established pursuant to a resolution of the Assembly, performs the normal functions laid down in the financial regulations and is responsible for taking appropriate action to ensure that the moneys voted by the Assembly are properly spent and that the most efficient and economical method of carrying out the approved program is observed. The Legal Committee of ICAO was created pursuant to a resolution of the Assembly under which all contracting States are entitled to participate in the work of the Committee. A Canadian nominee is a member of the Air Navigation Commission and Canada's Representative on Council is a member of all the other Committees.

The Secretariat of ICAO is composed of about 425 members. Approximately 150 senior employees have been recruited on an international basis from 29 of the Member States of ICAO in accordance with the established policy of securing the widest possible geographical representation in the Secretariat consistent with the maintenance of high standards of efficiency. Most of the remainder of the staff are recruited locally.

For the purpose of organizing the work of ICAO, particularly in the technical field, the world has been divided into eight regions: North Atlantic, Caribbean, European-Mediterranean, Middle East, South East Asia, South American-South Atlantic, South Pacific-North Pacific and African-Indian. Also, for the purpose of assisting in the maintenance of liaison, particularly in regard to technical matters, between the Headquarters of the Organization and the Governments of the Member States, there are five Field Offices located at Cairo, Lima, Melbourne, Montreal and Paris. These offices are responsible for co-ordinating the work in the field of aviation of the various States in the respective areas and for assisting in arranging for the implementation of the recommendations of regional meetings.

Work in the Technical Field.-The most important activities of ICAO and the major part of the work accomplished lie in the technical field. Using the draft technical annexes to the Convention as a basis, the Organization has developed standards and recommended practices covering practically all the important technical aspects of international air navigation. The Air Navigation Commission which, in PICAO and during the first two years of ICAO, operated as a Committee of unlimited membership, played a most important part in this work. Normally, the first step in developing standards is to invite all the contracting States to send representatives to a 'Division' meeting at which, on the basis of an agenda and documentation prepared by the Secretariat and the Commission, the technical experts contribute, from their knowledge and experience
of the subject, to the development of standards and practices designed to meet the needs and the best interests of all the Member States. The recommendations contained in the final report of the Division are studied by the Air Navigation Commission, with the assistance of the expert Secretariat, and then despatched together with any comments of the Commission, to all the Member States for their consideration. At this stage, all the Member States, whether or not they were represented at the meeting of the Division, are invited to submit their comments on the proposals developed in the Division. All comments received are examined and the recommendations of the Division once again reviewed. The Air Navigation Commission then presents to the Council its report and recommendations on the work of the Division. To the extent that these recommendations involve the adoption of or amendment to standards or recommended practices, a two-thirds vote ( 14 members) of the Council is required for their adoption. Standards and recommended practices, or amendments thereto, adopted by the Council, are then transmitted to all the States and unless, within 90 days or such longer period as the Council may prescribe, a majority of the Member States have notified to the Council their disagreement, the recommendations become effective under the Convention. After an additional period specified by the Council, during which the Member States are required to take the necessary steps to implement them through their own national laws or regulations, the recommendations come into force for all the Member States of the Organization. The only basis on which a State may be relieved of compliance with a standard established pursuant to the Convention is in cases where that State finds it impracticable to comply in all respects with any such international standard and to bring its own regulations or practices into full accord therewith or where a State finds it necessary to adopt regulations or standards differing in any particular respect from those established by the international standard. In such cases, the States concerned must immediately notify the Organization which, in turn, notifies all the other States of this "deviation". There can be no deviation over the high seas from Rules of the Air established by ICAO. Canada has participated very fully in the work of the Divisions and this participation has been greatly facilitated by the fact that practically all Division meetings are held at Montreal.

The following Technical Standards and Recommended Practices have been adopted as Annexes to the Convention:-
(1) Personnel Licensing.
(2) Rules of the Air.
(3) Meteorological Codes.
(4) Aeronautical Charts.
(5) Dimensional Units to be used in Air Ground Communications.
(6) Operation of Aircraft.
(7) Aircraft Nationality and Registration Marks.
(8) Airworthiness of Aircraft.
(9) Facilitation of International Air Transport.
(10) Aeronautical Telecommunications.
(11) Air Traffic Services.
(12) Search and Rescue.
(13) Aircraft Accident Inquiry.
(14) Aerodromes, Air Routes and Ground Aids.

Regional Activities.-Many problems related to international air navigation are regional in character and ICAO periodically convenes meetings because it is necessary from time to time to review the situation within the several Air Navigation Regions. Invitations are issued to all of the States located in the Region and to those States whose aircraft regularly fly into or through the Region. Each Regional Meeting considers the over-all provision of and requirements for air navigation facilities and services in the Region, and specific recommendations are
made in any case where an existing deficiency or inadequacy is considered likely to affect seriously the safety and regularity of international air navigation. Reports of Regional Meetings come before the Council together with the recommendations of the Air Navigation Commission thereon and, where appropriate, Council adopts the recommendations and transmits them to the States concerned for consideration and action. In cases where the State or States directly responsible for the implementation of a recommendation find it impracticable to do so, the Council may, under Chapter XV of the Convention, initiate the necessary action leading towards the joint financing of the project.

ICAO has now compiled, through the joint efforts of the Field Offices, the Headquarters Secretariat and the Air Navigation Commission, a complete tabulation on a world-wide basis of all air navigation facilities and services necessary or desirable for the safety, regularity or efficiency of international air navigation. This list includes existing facilities and services as well as the deficiencies.

Joint Financing of Air Navigation Facilities and Services.-Under the Convention, every Member State is required, so far as it may find practicable, "to provide in its territory, airports, radio services, meteorological services and other air navigation facilities to facilitate international air navigation in accordance with the Standards and Practices recommended or established from time to time pursuant to this Convention". In some cases, because of lack of necessary funds or a limited interest in aviation, States do not find it practicable to provide certain facilities and services that are considered to be necessary in the interest of international air navigation. The Convention, under Chapter XV, places upon the Council the responsibility for initiating the necessary action to remedy the deficiencies in such cases which includes consultation with the State directly concerned and with other States affected and, in these cases, prescribes certain rules relating to the financing of air navigation facilities and services. Pursuant to these provisions, arrangements have been entered into by which the States whose aircraft fly the North Atlantic meet a substantial part of the cost of air navigation facilities and services furnished by the Governments of Iceland and Denmark in Iceland, Greenland and the Faroe Islands, respectively. These arrangements were concluded at Special Conferences at which Denmark and Iceland, together with the other States concerned, were represented. Contributions under these schemes are based on the actual proportion of use of the facilities in question by the aircraft of the States concerned. Canada is a party to both agreements and the Canadian contribution amounts to about 7 p.c. of the total cost. Under the North Atlantic Ocean Stations Agreement, the same States provide, either by cash contributions or contribution of ships, a network of 10 Ocean Weather Stations permanently located in the North Atlantic, the maintenance of which requires 25 vessels. Canada's responsibility under this Agreement is one ship. The principal function of these Weather Stations is to furnish meteorological information which contributes to the safe and economical operation of North Atlantic air services. They also provide aids to air navigation and are equipped to serve as search and rescue units in cases of emergency.

Work in the Economic Field.-While the economic aspects of international air transport constitute a relatively small proportion of the activities of ICAO, they are of very considerable importance.

For a number of reasons it is easier to secure international agreement in technical matters than in the economic field and this difficulty has frequently impeded the work of ICAO. At the Chicago Conference, there was a generally expressed desire to make provision for the extension on a uniform basis of the rights to fly internationally. Because of the difficulties involved, two separate agreements were provided-the International Air Services Transit Agreement and the International Air Transport Agreement. Forty-one States accepted the Transit Agreement but only 17 States (of which five have since denounced) accepted the Transport Agreement. During the life of PICAO and thereafter in ICAO, studies and discussions were undertaken with a view to the development of a multilateral agreement on commercial rights in international transport. However, discussions in two Assemblies and in a Special Commission, convened at Geneva in November 1947, failed to produce an effective solution. It is generally agreed that the present system of bilateral exchange of routes and rights is not satisfactory but, although the matter has been given a great deal of further study, no complete solution has yet been found. Canada has consistently supported the multilateral principle.

An important achievement of ICAO has been in the development of standards and recommended practices in the field of facilitation of international air transport. In the early stages of international civil aviation, the main advantages of air travel, which are speed and the ability of aircraft to cross natural barriers, were considerably impaired by the great variety of national laws and regulations relating to customs, immigration, health and agricultural quarantine in connection with border clearances. This problem was vigorously attacked by ICAO and, at a Facilitation Division Meeting held at Geneva in May 1948, a comprehensive set of draft standards and recommended practices was prepared to deal with this problem, and these were later adopted by the Council as Annex 9 to the Convention. These standards and recommended practices were accepted by the Member States, including Canada, with relatively few deviations, and, as a consequence, there has been a great simplification and unification of border crossing procedures throughout the world. At the Second Session of the Facilitation Division held early in 1952, a number of proposals were made for additional and improved standards; these should be ready for adoption by the Council before the end of 1952.

Progress has been made with a number of other matters of considerable importance to airlines and to the general public who use them. These include Council recommendations to the Member States directed towards the elimination of double income and property taxation on airlines, certain taxes on fuel and oil and double and other burdensome insurance requirements. The statistical program of ICAO is of great importance to the Member States and invaluable to much of the work of the Council.

Work in the Legal Field.-The Comité International Technique d'Experts Juridiques Aériens (CITEJA), which was created pursuant to a recommendation adopted at the First International Conference on Private Air Law held at Paris in 1925, made considerable progress in the development of a code of private international air law through the preparation of draft international conventions for final adoption at periodic international conferences. The Chicago Conference recommended that Member States give consideration to the desirability of bringing about the resumption, at the earliest possible date, of the work of the CITEJA and of co-ordinating the activities of CITEJA with those of PICAO and, in due course, ICAO.

The first post-war session of CITEJA was held at Paris in January 1946 and, at this session, Canada participated for the first time in the work of this Organization. The CITEJA continued to operate during the period of the Provisional Organization and, at the first session of the ICAO Assembly in 1947, arrangements were made for the establishment of the Legal Committee of ICAO and for the new Committee to take over the functions formerly exercised by CITEJA. Since that time the Legal Committee has carried on that work. A new Convention has been adopted on the International Recognition of Rights in Aircraft, the purpose of which is to safeguard, while aircraft are in foreign Contracting States, rights of property, possession or security in or over the aircraft, validly acquired by third parties, in accordance with the laws of the State in which the aircraft is registered as to nationality. A revision of the Rome Convention, which deals with damage caused by foreign aircraft to third parties on the surface, has been completed by the Legal Committee and will be considered by a Special Conference at Rome in September 1952. A revision of the Warsaw Convention, which governs the international carriage of goods and passengers by air, is also in an advanced stage and many other projects are under study in the private air-law field. Canada has participated throughout in all the meetings of the Legal Committee.

Co-operation with Other International Organizations.-As a specialized agency of the United Nations, ICAO has a formal agreement with the United Nations for the purpose of ensuring the fullest co-ordination and co-operation between the two Organizations and, for the same purpose, ICAO has working arrangements with a number of the other specialized agencies including the World Meteorological Organization, the World Health Organization, the Universal Postal Union and the International Telecommunications Union. These arrangements have proved to be of great value in avoiding duplication of effort and possible conflicts where there are overlapping interests.

United Nations Expanded Program for Technical Assistance.-Under the United Nations expanded program for technical assistance, technical assistance missions have been organized by ICAO and dispatched to a number of underdeveloped countries. Technical advisers have been provided to meet special needs and a comprehensive fellowship scheme was established under which nationals of countries needing assistance are given training in countries that are more advanced in aviation and have the necessary facilities. Canada has co-operated fully with ICAO in furnishing qualified personnel as members of missions and for specialized work and has also undertaken to provide fellowship training in certain fields of aviation.

Canada's Contribution to ICAO.-As already stated, Canada has participated fully in all phases of the work of ICAO and Canadian representatives have from the beginning made substantial and valuable contributions to the work of the Organization in the Assembly, in Council, in the Committees and in Divisional and Regional Meetings. In turn, Canada has received very substantial benefits as a result of the work of the Organization. The opportunities afforded the participants in ICAO meetings, by way of the exchange of views with technical, economic and legal experts from all parts of the world, are of considerable value both in broadening understanding of world-wide problems in all fields of civil aviation and in the understanding of national problems and characteristics of the other participants.

The Government of Canada has contributed to ICAO by granting privileges and immunities of a diplomatic character to the Organization itself, to the internationally recruited staff and to the representatives of the Member States permanently located at the Headquarters or attending meetings. Negotiations are under way between ICAO and the Government of the Province of Quebec and also with the authorities of the City of Montreal for similar privileges. When the arrangement was made for the establishment of the Headquarters premises at Montreal, it was agreed that rental charges would not include any profit element. Pursuant to this arrangement, Canada has contributed approximately $\$ 70,000$ annually towards rent. At the request of the Council of ICAO for further financial assistance in alleviating to some extent the high cost of maintaining the Organization at Montreal, the Government of Canada has offered, subject to approval by Parliament, further to subsidize the rent of ICAO in an amount which, together with the present contribution, will make a total contribution of approximately $\$ 200,000$ per annum. On the basis of this offer, rent of ICAO will compare very favourably with that of other specialized agencies located in Europe.

Canada's contribution towards the operating expenses of ICAO represents approximately 5 p.c. of the total annual budget which is about $\$ 3,000,000$.

## PART VI.-WIRE COMMUNICATIONS*

## Section 1.-Telegraphs

The early history of telegraphic communication in Canada is given in the 1934-35 Year Book, p. 778.

Federal Government Telegraph and Telephone Service. $\dagger$-The function of the Telegraph and Telephone Section of the Department of Transport is to furnish wire communications for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest. These services include: telegraph and telephone services to scattered settlements along the coast of Cape Breton Island; cable services to Campobello, Grand Manan and other islands in the Bay of Fundy, to Prince Edward Island and to a number of small islands in the Gulf of St. Lawrence; cable connections with Pelee and Manitoulin Islands in Ontario as well as telephone lines on the latter; some lines to northern outlying districts in Saskatchewan; telegraph lines from Edmonton to the Athabaska and Peace River country in Alberta in addition to an extensive telephone system in the latter area; telegraph and telephone communications around the coast of Vancouver Island, B.C., and adjacent islands; service to fishing, lumber and mining centres in the interior; and an overland telegraph and telephone line serving communities from Asheroft, B.C., to Dawson, Yukon Territory.

As at Mar. 31, 1951, the Telegraph and Telephone Service comprised 7,608 miles of pole line, 23,095 miles of wire, $224 \cdot 5$ nautical miles of submarine cable, 49 radio stations and 405 offices. The number of messages handled during the year was $1,340,454$, producing a gross revenue of $\$ 674,464$ and a net revenue of $\$ 610,601$.

[^273]Telegraph Systems.-The Canadian telegraph systems are composed of lines owned by the Federal Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world, and are operated under great climatic and geographical difficulties.

## 1.-Summary Statistics of Canadian Telegraphs, 1942-51

Note.-Figures for 1920-41 will be found in the corresponding table of previous Year Books beginning with the 1938 edition.

| Year | Gross Revenue | Operating Expenses | Net Operating Revenue | Pole- Line Mileage | Wire Mileage | Employees ${ }^{1}$ | Offices | Messages, Land ${ }^{2}$ | Cablegrams and Marconigrams ${ }^{3}$ | Money Transferred |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ Excludes commission operators. $\quad{ }^{2}$ Includes messages to and from vessels on the Great Lakes and the St. Lawrence River and messages to and from stations. $\quad{ }^{3}$ Excludes messages relayed and includes paid wireless messages to and from ships in the Gulf of St. Lawrence and on the Atlantic Ocean.

Submarine Cables.-Four cable companies operate submarine cables landing in Canada: Cable and Wireless Limited; the Commercial Cable Company; the Western Union Telegraph Company; and the French Telegraph Cable Company. These companies operate to stations in the United Kingdom, the United States, Bermuda, Australia, New Zealand and St. Pierre and Miquelon Islands. The number of cables operating between connected stations and the length of cables are given in the following table.

## Section 2.-Telephones

A brief historical account of the early development of telephones in Canada is given in the 1934-35 Year Book, p. 781.

Telephone Systems.-The 2,912 telephone systems existing in 1950 included the three large provincial systems in Manitoba, Saskatchewan and Alberta, and smaller governmental systems in Ontario, Quebec and New Brunswick, together with the system operated by the Federal Department of Public Works and the National Parks of Canada, Department of Resources and Development. Also included were 24 municipal systems, the largest being operated by the cities of Edmonton, Fort William and Port Arthur. Of the 2,245 co-operative telephone companies, 1,008 were in Saskatchewan, 795 were in Alberta and 215 in Nova Scotia. The largest among the 456 stock companies operating telephone systems in 1950 were the Bell Telephone Company and the British Columbia Telephone Company. Over 64 p.c. of the total telephone investment in Canada belongs to the Bell Telephone Company, and their telephones in Quebec and Ontario constitute 59 p.c. of the total number for Canada.

Telephone Equipment.-During the period 1941-50, there was an increase of $1,354,946$ in the number of telephones in use, representing an advance of 55 p.c. in telephones per 100 population.

Of the $2,917.092$ telephones in Canada in $1950,1,811,194$ or 62 p.c. were operated from automatic switchboards and the remainder from manual switchboards. Automatic switchboards have completely displaced manual switchboards in the principal cities of the Prairie Provinces and are displacing them in the other provinces as equipment becomes available.

## 3.-Mileages of Pole Line and Wire, and Telephones in Use, 1941-50

Note.- Figures for 1911-40 will be found in the corresponding tables of previous Year Books beginning with the 1938 edition.

| Year | Systems | Pole-Line Mileage | Mileage of Wire | Telephones in Use |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Business | Residential | Rural ${ }^{1}$ | Public Pay | Total | Per 100 <br> Population |
|  | No. | miles | miles | No. | No. | No. | No. | No. | No. |

| 1944. | 3,174 | 220,161 | 6,108,070 | 504,791 | 928,061 | 286,521 | 32,550 | 1,751,923 | $14 \cdot 6$ |
| 1945. | 3,151 | 222,435 | 6,333,761 | 531,697 | 983,074 | 300.757 | 33,266 | 1,848,794 | $15 \cdot 3$ |
| 1946. | 3,114 | 228,983 | 6,770,137 | 585,982 | 1,079,769 | 326,405 | 33,962 | 2,026,118 | 16.5 |
| 1947. | 3,056 | 232,054 | 7,285,681 | 645,154 | 1,194,840 | 354,779 | 35,824 | 2,230,597 | 17.7 |
| 1948. | 2,992 | 235,379 | 7,913,068 | 701,869 | 1,328,373 | 383,227 | 38,399 | 2,451,868 | $19 \cdot 0$ |
| 1949. | 2,971 | 242,147 | 8,725,760 | 762,294 | 1,481,876 | 414,061 | 41,381 | 2,699,612 | 19.9 |
| 1950. | 2,912 | 245,443 | 9,488,467 | 813,352 | 1,611,759 | 447,691 | 44,290 | 2,917,092 | $21 \cdot 1$ |

${ }^{1}$ Includes telephones on rural exchange lines and urban exchange lines that have more than four parties.
The density of telephones in the different provinces is influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.
4.-Telephones in Use, by Provinces, 1949 and 1950

Telephone Finances and Calls Serviced.-The steady increases in capitalization, revenue and expenditure, salaries and wages and number of employees of telephone companies over the ten years 1941-50, are shown in Table 5.

## 5.-Financial Statistics of Telephones, 1941-50

Note.-Figures for 1911-40 will be found in the corresponding tables of previous Year Books, beginning with the 1938 edition.

| Year | Capitalization |  | Cost of Property and <br> Equipment | Gross <br> Revenue | Operating Expenses | Net Operating Revenue | Salaries and Wages ${ }^{1,2}$ | Employees ${ }^{2}$ |

[^274][^275]Telephone Calls.-Table 7 is based on estimates made by systems operating almost 90 p.c. of all telephones in Canada. Actual count of calls on days of normal business was made and, after adjustment for incompleted calls, holidays, Sundays, etc., the average was multiplied by 365 . The long-distance calls, in practically all cases, were the long-distance calls actually completed.

## 7.-Local and Long-Distance Calls and Averages per Telephone and per Capita, 1941-50

Note.-Figures from 1928 will be found in the corresponding tables of previous Year Books, beginning with the 1939 edition.

| Year | Local Calls | LongDistance Calls | Total Calls | Total Calls per Capital | Averages per Telephone |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1950. | 4,894,719,000 | 117,892,000 | 5,012,611,000 | 366 | 1,678 | $40 \cdot 4$ | 1,718 |

${ }^{1}$ Per capita figures are based on official estimates of population given at p. 143.

## PART VII.-RADIO-COMMUNIGATIONS

In the 1945 Year Book at pp. 644-646, an outline is given of the development of administrative control over radio-communication in Canada. See also p. 742 of this volume.

## Section 1.-Administration*

The administration and regulation of radio-communication in Canada is carried out by the Telecommunications Division of the Department of Transport. The radio activities of the Division may be summarized as follows: (1) the administration of national and international radio laws and regulations and of regional agreements, involving the issuance of radio licences, inspection of radio stations, certification of radio equipment, examination of operators, allocation and monitoring of frequencies, compilation and settling of international accounts for radio messages, investigation and suppression of inductive interference to radio reception; and (2) construction, maintenance and operation of radio-communication stations and of radio aids to marine and air navigation.

National and international radio laws and regulations include the Canadian Broadcasting Act, 1936, the Radio Act, 1938, and Regulations made thereunder; the International Telecommunication Convention and Radio Regulations annexed thereto; the Inter-American Radiocommunications Convention; the Inter-American Arrangement Concerning Radiocommunications; the North American Regional Broadcasting Agreement; those articles of the International Civil Aviation Convention applicable to aeronautical radio requirements; the Canada Shipping Act, 1934,

[^276]and Radio Regulations for Ship Stations issued thereunder, and that part of the International Convention for the Safety of Life at Sea applicable to radio requirements for ships.

Licensing and Operation.-In all branches of radio, basic control is exercised over the right to establish a station, assignment of frequencies, operator standards, operating procedure, and general regulations concerning the manner in which radio stations are used.

Under the Broadcasting Act, 1936, applications for licences to establish broadcasting stations, or for modification of existing stations, are referred to the Canadian Broadcasting Corporation for its recommendations to the Minister of Transport before being dealt with by the Department of Transport. The Canadian Broadcasting Corporation also controls the linking up of stations that form networks and, in addition, the character of programs being broadcast. With these exceptions, the control of broadcasting stations is carried out by the Telecommunications Division of the Department of Transport.

The standard broadcast band is crowded with stations that are capable of interfering with one another over the entire North American region, particularly at night. A plan for the accommodation of the largest number of stations with the least interference was evolved as a result of extensive studies conducted by Cuba, the Dominican Republic, Haiti, the Bahama Islands, Mexico, the United States and Canada and was embodied in the North American Regional Broadcasting Agreement.

Before a new standard broadcasting station can be licensed or before modifications can be made in an existing station, engineering briefs covering the selection or change of frequency, amount of power and design of the directional antenna system must be approved by the Department of Transport and notification sent to the signatory countries of the North American Regional Broadcasting Agreement. After the establishment or change is completed, proof of performance must be submitted to establish that the actual installation is in accordance with the approved plan.

The allocation of high frequencies and their efficient utilization requires reasonably accurate information on the transmission properties of the ionosphere which vary with the season, the sunspot cycle and other factors. This information is obtained from hourly measurements of the ionosphere made at some 70 points throughout the world and analyzed by the United States Bureau of Standards at Washington, D.C. The Canadian measurement stations are located at St. John's, N'f'ld.; Resolute Bay, Cornwallis Island and Baker Lake, N.W.T.; Fort Chimo, Que.; Churchill, Portage la Prairie and The Pas, Man.; Ottawa, Ont.; and Prince Rupert, B.C.; data from these stations are correlated by the Defence Research Board. Five frequency monitoring stations are maintained at suitable points across Canada to check operating frequencies of all classes of radio stations to ensure that they do not depart from the assigned frequency' by an amount greater than permitted by the international conventions.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for use in case of distress. Approval is given for each make and model of equipment that comes up to the required standard and,
in addition, the ship station as a whole is inspected before the licence is issued and periodically thereafter. Foreign ships are subject to inspection before sailing from Canadian ports to ensure that they conform with the requirements of the Safety of Life at Sea Convention.

Analogous inspections of aircraft radio stations are carried out. Standards are provided specifying in detail the requirements to be met to ensure an airworthy installation. A certificate of airworthiness is granted to manufacturers for each type or model of aircraft radio equipment that has been demonstrated to meet the requirements. Only type-certificated equipment is accepted for use on scheduled airlines, though other equipment, if inspected, is acceptable for other aircraft.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile stations, and the Radio Act, 1938, provides that all operators, both commercial and amateur, must pass examinations to prove their ability to operate the respective classes of stations on which they are engaged. Competent operators are required on all classes of stations in order that the technical requirements prescribed under international agreement be closely adhered to and are particularly essential in the case of ships and aircraft stations in the interests of safety of life.

Investigation and Suppression of Inductive Interference.-Under the Broadcasting Act the use of electrical equipment which will produce harmful interference to broadcast reception is not permitted. The Radio Division of the Department of Transport maintains 50 cars equipped for measuring and locating sources of interference to broadcast reception. In addition to locating the sources of interference, advice is given as to how it can be suppressed or eliminated. These cars operate from the permanent Radio Inspection Offices located in 25 cities throughout Canada.
1.-Investigations of Inductive Interference, Years Ended Mar. 31, 1948-51

| Sources having no economic cure | 248 | 95 | 85 | 99 |

Industrial, scientific and medical apparatus is brought under strict control, in accordance with Regulations for Controlling Radio Interference and under the authority of Section 23 of the Canadian Broadcasting Act, 1936. Regulations require that radiation from such apparatus, that is liable to cause interference to radiocommunications, must be suppressed, either by shielding or by replacing the apparatus with a non-interfering type. The Department of Transport conducts type-tests on diathermy and industrial heating apparatus submitted by manu-
facturers, and the types that fulfil the requirements of the Department are listed as non-interfering. The radiation from all such sources on communication frequencies must not exceed the tolerances specified by the Canadian Standards Association.

Radio Revenue.-Regulations concerning the rendering and settlement of international accounts are contained in the International Telecommunication Convention and Regulations. Sources of revenue include commercial ship and land stations and interstation messages handled by Departmental ships and land stations, radiotelegrams exchanged by foreign ships through Canadian coast stations, private commercial traffic via Departmental airway radio stations, and radio services rendered to aircraft of private airline companies by such stations. The volume of messages and words handled during the year ended Mar. 31, 1951, and the revenue therefrom, together with revenue from licence fees, examination fees, fines and forfeitures, rentals, etc., are given in Table 2.
2.-Messages Handled (including retransmissions), and Revenue collected by the Department of Transport, Year Ended Mar. 31, 1951

[^278]
## Section 2.-Total Radio Stations and Radio Services

The total number of radio stations in operation in Canada and on ships and aircraft registered therein are shown by classes in Table 4. Of these stations, 447 were operated by the Department of Transport. The Department of National Defence, in addition to stations established for military purposes, operated 11 permanent stations and two summer stations, situated along the Mackenzie River and in Yukon Territory, on behalf of the Department of Resources and Development. The Department of Resources and Development operated 78 stations to provide communication and time-signal service for survey parties and for the protection and administration of National Parks. The Department of Public Works operated one station, the Department of Agriculture five stations, the Department of National Health and Welfare five stations, the Department of National Revenue one station, and the National Research Council 23 stations, 17 of which were experimental.

Stations operated by the Canadian Broadcasting Corporation numbered 71 and those by private owners, 173.
4.-Radio Stations in Operation, by Class, as at Mar. 31, 1951

4.-Radio Stations in Operation, by Class, as at Mar. 31, 1951—concluded

${ }^{1}$ Station location (" $Z$ ") markers are installed at 91 radio range stations. ${ }^{2}$ Two stations at Port Harrison, Que., and Coppermine, N.W.T., also periorm restricted coast station service during the season of navigation, but since they are primarily weather-reporting stations they are shown under this heading only. ${ }_{3}$ Includes 19 repeater stations.

The above classes are numerous and complicated by the fact that many of them perform closely related functions. Descriptions of the services provided by different types of government-operated stations are given in the 1951 Year Book, pp. 804-808. The principal services provided by stations not operated by the Federal Government are as follows:-

Public Commercial Licensed Services.-The Canadian Marconi Company is licensed to operate a public commercial station with transmitting equipment at Drummondville, Que., and receiving equipment at Yamachiche, Que., for the purpose of communicating with a similar station located at St. John's, N'f'ld., thus providing a direct radiotelephone circuit between Newfoundland and the mainland.

Commercial Trans-Oceanic Radiotelegraph and Radiotelephone Service.-As at June 7, 1950, the Canadian Overseas Telecommunication Corporation took over the operation of the long-distance beam radiotelegraph service formerly operated by the Canadian Marconi Company between Montreal (Drummondville) and Great Britain, Australia, Bermuda and Jamaica, and the radiotelephone service between Montreal and Great Britain.

Commercial Point-to-Point Radiotelephone Services.-The North-West Telephone Company operates a radiotelephone service between points in British Columbia not hitherto served by telephone communications. Under licences granted by the Department of Transport, the Company has established 15 permanent public commercial radiotelephone stations in that Province. These stations are authorized to provide communication to 261 private commercial radiotelephone stations located at isolated points in that Province. This Company is also licensed to establish limited coast stations at Lulu Island, Power River, Vancouver, Nanaimo, Victoria, Agassiz, Althorp Point, Alert Bay and Prince Rupert, B.C., to provide a ship-toshore service. These stations, used in conjunction with the ordinary telephone exchange, provide a duplex-radiotelephone service to 261 isolated points and certain ships at sea.

The North-West Telephone Company is also licensed to provide emergency radiotelephone communication at any point in British Columbia and to carry out tests with a view to extending the existing radiotelephone service throughout the Province.

To provide trans-river communication in the lower St. Lawrence area, the following companies: La Compagnie de Téléphone de Charlevoix et Saguenay, La Compagnie de Téléphone de Kamouraska, the Quebec Telephone Corporation, Gulf St. Lawrence Telephone Company, and the Quebec North-Shore Paper Company operate stations at La Malbaie, Tadoussac, Rivière-du-Loup, Rimouski, Matane, Montmagny, St. Antoine de l'Ile aux Grues, Forestville, Trinity Bay and Baie Comeau, Que.

The wireline facilities between Saint John, N.B., and Digby, N.S., between Charlottetown, P.E.I., and New Glasgow, N.S., and between Red Head, N.B., and Mount Hanley, N.S., are supplemented by radiotelephone links. The stations at Saint John and Red Head are operated by The New Brunswick Telephone Company, and the station at Charlottetown is operated by The Island Telephone Company. Terminals at Digby, New Glasgow and Mount Hanley are operated by the Maritime Telegraph and Telephone Company.

The Bell Telephone Company of Canada operates radiotelephone facilities between Leamington and Pelee Island, Ont.

The Manitoba Telephone System operates radiotelephone links involving stations at the following points: Riverton, Manigotagan, Hecla Island, Gimli, Norway House, Bissett, Great Falls, The Pas, Snow Lake and Winnipeg, Man. In addition, the System operates stations at Gimli and Norway House, Man., to provide terminal service with ships on Lake Winnipeg.

Canadian Pacific Air Lines Limited operates a public commercial radiotelephone service consisting of public commercial radiotelephone stations located at Sioux Lookout and Pickle Lake, which are used in conjunction with the ordinary telephone exchanges to provide telephonic communication to privately owned stations located at isolated points in the Sioux Lookout and Pickle Lake areas of Ontario.

Norwesto Communications Limited operates a public commercial radiotelephone service consisting of stations located at Kenora, Red Lake, Ball Lake, Sioux Narrows, Dryden, Sioux Lookout, Minaki, Redditt and Laclu, Ont., which are used in conjunction with the ordinary telephone exchanges to provide telephonic communication to privately owned stations at isolated points throughout the northwestern part of Ontario.

Provincial Government Services.-Provincial authorities use radio services in many Departments. Table 5 shows the number of stations operated by the Provincial Governments.
5.-Radiocommunication Stations Operated by Provincial Governments,
as at Mar. 31, 1951

Other Radiocommunication Services.-Radiotelegraphy and radiotelephony are used throughout Canada to provide a means of maintaining contact with isolated points beyond the reach of the regular telegraph and telephone facilities.

Radiocommunication systems consisting of fixed and mobile stations are operated by over 200 municipal departments across Canada. The departments include police, fire, engineering, hydro and other public utilities. The use of radio for taxi dispatching purposes continued to grow throughout 1951 and the operation was authorized of approximately 550 base stations and 4,545 mobile stations. Public utilities, power companies, and provincial power commissions use radio to provide emergency telegraph and telephone communications between their power plants and distribution centres and 707 licences for such stations were issued during 1951, including 191 receiving stations in patrol cars.

During 1951, approximately 308 radio stations were operated by oil and mining exploration companies in connection with their business.

Commercial air-line operators, including those performing charter services only, were licensed for 814 ground communication stations, 26 beacon stations and 355 aircraft stations (including 37 receiving stations installed in aircraft). In addition to the commercial air carriers, numerous individuals and other business organizations, such as manufacturing and mining companies, oil companies, etc., were also licensed to operate radio equipped aircraft and associated ground stations in connection with the performance of their normal business. These airline operators, individuals and business organizations operated a total of 930 ground stations and 1,053 aircraft stations.

Radio Aids to Navigation.-Marine Radio Stations.-Detailed information covering all marine radio aids to navigation is contained in the annual publication, Radio Aids to Marine Navigation. Copies of this publication and of supplementary Notices to Mariners issued in connection therewith may be obtained upon request from the Department of Transport, Ottawa.

Coast Radio Stations.-The primary purpose of the coast radio station organization is to provide radiocommunication facilities whereby any ship within 500 miles of Canada's coast may establish communication with shore. Twenty-one stations on the East Coast and Hudson Bay and Strait, seven stations on the Great Lakes and nine stations on the West Coast broadcast information daily to navigators at advertised hours. In addition, urgent information, such as hurricane warnings, is broadcast immediately upon receipt.

The Vancouver Coast Station (VAI) maintains long range radiocommunication with ships of any nationality at sea, while the Halifax (CFH) and Vancouver (CKN) Coast Stations participate in the British Commonwealth scheme for providing similar radiocommunication services with ships. Station CFH is operated jointly by the Department of Transport and the Royal Canadian Navy.

Coast Radio Direction Finding Service.-There are 14 coast radio direction finding stations in operation-eight on the East Coast, five on Hudson Bay and Strait, and one on the West Coast. These direction finding stations continue to enjoy an enviable reputation for efficiency and accuracy. During the year ended Mar. 31, 1951, 19,769 bearings were given without charge to ships and aircraft.

Radiobeacon Service.-Radiobeacons are established for the purpose of enabling any ship or aircraft equipped with a direction finder to determine its bearing or direction in relation to the radiobeacon station. There are 52 radiobeacons in operation-26 on the East Coast, 17 on the Great Lakes, and 9 on the Pacific Coast.

Generally speaking, in clear weather each station, at advertised hours, transmits its characteristic for three periods of one minute separated by silent intervals of two minutes. In foggy weather all stations operate continuously, maintaining a uniform time cycle of 3 minutes, each station transmitting in its proper sequence for one minute separated by silent intervals of 2 minutes.

At Flat Point, N.S., Partridge Island, N.B., Red Islet, Que., Caribou Island, Gros Cap Lightship, Hope Island, Main Duck, Southeast Shoal, Cove Island, Burlington Bay, Michipicoten Harbour, Long Point, Port Weller, Ont., Amphitrite Point and Point Atkinson, B.C., the radiobeacon signals are synchronized with the emissions of the fog alarms for distance finding at those point during foggy weather.

In addition to the above radiobeacon facilities, ships equipped with direction finding apparatus may, upon request, obtain signals for the purpose of taking bearings from any of the coast stations. During the year ended Mar. 31, 1951, 161 such requests for signals were handled.

Loran Stations.-Loran (long range aid to navigation) is a system of position finding based on the difference in the time arrival of pulse type radio signals transmitted from a pair of stations. This time difference is measured on a Loran receiver and is used in conjunction with specially prepared charts or tables to establish a line of position. The intersection of two or more lines of position determined from two or more pairs of stations provides the required position.

Medical Advice to Ships at Sea.-Ships at sea may obtain medical advice through any of the Department of Transport's coast stations. Messages from ships in this connection are forwarded to the nearest medical officer of the Department of National Health and Welfare and the reply is transmitted to the ship.

Assistance Rendered by Radio to Vessels in Emergency.-Government radio stations rendered assistance to 113 ships and aircraft reported in danger or distress, during the fiscal year ended Mar. 31, 1951.

Aids to Air Navigation.-Radio aids to air navigation are provided from coast to coast and from the United States border to the Arctic along the airways used by the many Canadian airlines, United States airlines flying over Canadian territory, and many Canadian and United States military aircraft. To construct and maintain these many facilities, trained engineers and technicians are located at 6 district offices: Moncton, N.B.; Montreal, Que.; Toronto, Ont.; Winnipeg, Man.; Edmonton, Alta.; and Vancouver, B.C. The large communication stations at Gander, N'f'ld., are under the administration of the Moncton office.

Radio Ranges.-The principal radio aid to air navigation provided by the Department of Transport is the radio range. These stations, located approximately every 100 miles along airways, provide specific track guidance to pilots by means of audible signals. The signals may also be used for the purpose of obtaining direction finding bearings from the aircraft. In addition, radiotelephone communications are provided between the ground and aircraft by means of which pilots may obtain weather and other information concerning the safety of flight. There are now 93 stations in operation. Two stations at Frobisher, N.W.T., and Cape Harrison, N'f'ld., were taken over from the United States military authorities, during 1951.

Radio Beacons.-These stations provide radio signals with which pilots may use their direction finding equipment in order to obtain relative directional bearings to assist in the navigation of their aircraft. Eight of these stations are now in
operation, new ones having been established at Cambridge Bay, N.W.T.; Moose Jaw and Prince Albert, Sask.; Turner Valley, Alta.; and Cape St. James, B.C. (the latter being operated by the Marine Radio Aids Section). The radiobeacon at Sandspit, B.C., has been placed in continuous operation and the one at Whitehorse, Yukon Territory, decommissioned.

Fan Markers.-These facilities, operating on very high frequencies, provide a pilot with an indication of when he is directly overhead. Normally, they are placed on an airway to inform the pilot when he may safely lose altitude after passing high terrain or to indicate accurately distance from an airport. Eleven of these stations are now in operation, one new station having been commissioned at Campbell Cross, Ont.

Station Location Markers.-These facilities are similar to fan markers except that the signal radiated is such that aircraft may receive the same indication irrespective of the direction of flight. They are installed at the same location as a radio range to enable a pilot to determine when he is exactly over the station, thus obtaining definite indication of position. Station location markers are installed at all radio range sites except at Killaloe, Ont., and Mecatina, Que.

Direction Finding Stations.-A direction finding station for determining the bearing of aircraft from the station was taken over from United States military authorities at Cape Harrison, N'f'ld. This station is capable of obtaining bearings on aircraft transmitting on high and very high radio frequencies.

Instrument Landing Systems.-Instrument Landing Systems provide radio signals which, when received by special radio equipment aboard aircraft, permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter providing slope guidance to the approach end of the runway, two marker transmitters providing distance indication from the runway at approximately four and one-half miles and $3,500 \mathrm{ft}$., respectively, and a low power radiobeacon (compass locator) to assist in holding procedures and lining up on the localizer course. The localizer and marker transmitters operate on very high frequencies, the glide path on ultra high frequencies, and the compass locators on low and medium frequencies. Twenty-one instrument landing systems are now in operation, new installations having been made at Edmonton, Alta.; London, Ont.; Moncton, N.B.; and Dartmouth and Sydney, N.S. Construction work is continuing on installations at Windsor, Ont., and Torbay and Gander, N'f'ld.

Aeronautical Communication Stations.-In order to assist in providing the required communication between aircraft and the ground, radio stations operating for the most part on high frequencies are located at strategic points across the country and into the Arctic. These stations provide communication to both domestic and international air carriers. There are now 31 of these stations in operation. The communications stations at Gander and Goose Bay, N'f'ld., Moncton, N.B., Montreal, Que., and Vancouver, B.C., form a major contribution on the part of Canada to international aviation. The services provided by these stations may be divided broadly into three classes: (1) communication facilities for meteorological services; (2) communication facilities for the air traffic control services; and (3) facilities for the benefit of the airline operating agencies to provide communication with their aircraft and between their dispatch offices.

Since (3) is provided solely for the convenience of the airline operating agencies, a system of charges was introduced during 1950-51 to recover from the airlines the cost of providing this portion of the service. The charge at present is $\$ 13$ per aircraft per oceanic crossing, and the yield for a year is estimated at $\$ 132,000$. The charges will be adjusted from time to time depending upon any change in the cost of provision for the service.

Very High Frequency Communications.-Owing to the overcrowded conditions of the high frequency portion of the radio spectrum and to the fact that communication in the very high frequency portion of the spectrum is relatively free from atmospheric interference, progress is being made in providing air-ground communications on the latter frequencies. Very high frequency air-ground communication facilities are now provided at 52 radio range stations and in 18 airport control towers. Very high frequency equipment has been provided also in all control towers and in a large number of airport vehicles to facilitate direction of traffic on the airport surface.

Improvements in Radio Aids to Air Navigation.-An investigation is under way on a new type of Radio Aid to Air Navigation known as the VHF Omnidirectional Range. This type of facility, unlike the existing type of Radio Range, does not limit the aircraft using the station to one of four distinct courses. Instead, it is of a type which enables the pilot in the aircraft to select at will his desired course. These stations operate in the very high frequency band between the portion reserved for the ILS localizers and that portion used for very high frequency Aeronautical Communications. The complete program involves testing two different models of this type of facility at Uplands, Ont., a site near the Ottawa airport. The first, now in operation, uses a fixed antenna array, whereas the second will have a rotating antenna system. Proof of performance tests are being made on each type of station.

## Section 3.-The Canadian Broadcasting Corporation*

The history and development of the Canadian Broadcasting Corporation is given in the 1947 Year Book, pp. 737-740.

The Canadian Broadcasting Corporation operates under authority of the Canadian Broadcasting Act, 1936, and is headed by a Board of ten Governors, chosen to give representation to the principal geographic divisions of Canada, and a full-time Chairman. The Board determines and supervises policy, but day-to-day operations and executive direction are the responsibility of the General Manager. The organization of the CBC consists of the following Divisions: Executive, Personnel and Administration, Finance, Engineering, Program, Press and Information, Commercial, Broadcast Regulations and Station Relations.

Under the Canadian Broadcasting Act, 1936, the CBC is responsible for regulations controlling the establishment and operation of networks, the character of all programs broadcast over its own and privately owned stations, and the proportion of time that may be devoted to advertising in broadcast programs. The CBC neither exercises, nor authorizes any private station to exercise on its behalf, censorship of any broadcast program. The responsibility of seeing that the regulations are observed rests with the individual station management.

Frequency Modulation.-The development of frequency modulation is given in the 1948-49 Year Book, p. 773. On Apr. 1, 1952, there were five CBC and 30 privately owned frequency modulation stations in operation.

[^279]Television.-In April 1949, the Government of Canada adopted an interim plan for the development of television that, in accordance with the Canadian Broadcasting Act, 1936, entrusted the general direction of television broadcasting in Canada to the CBC Board of Governors who will arrange for television operations by the Corporation. In a further statement of policy on Dec. 8, 1952, the Government announced its readiness to consider applications for licences for private commercial television from Canadian stations in areas where these will not be duplicating CBC television facilities, on the basis that there should be as wide a coverage of Canada as possible without duplication. The Government also proposed provision of a loan to the CBC for the purpose of building stations at Vancouver, Winnipeg, Ottawa and Halifax.

During 1949-50, TV channels were assigned to the Canadian Broadcasting Corporation for proposed television operations at Toronto, Ont., and Montreal, Que. Frequency Channels 2 and 5 were allocated to Montreal where the Corporation expects eventually to operate two outlets, one French and one English. The first to be used will be Channel 2 operating from 54 to $60 \mathrm{Mc} / \mathrm{s}$. Channel 5 will operate from 76 to $82 \mathrm{Mc} / \mathrm{s}$. Channel 9 , to be used at Toronto, will operate from 186 to $192 \mathrm{Mc} / \mathrm{s}$.

In addition to these frequencies, the CBC will use microwave frequencies in still higher bands to enable it to establish direct links from studio to transmitter and from mobile units to studio or transmitter or to both. Some of these will be in the $2,000 \mathrm{Mc} / \mathrm{s}$ band and others in the $7,000 \mathrm{Mc} / \mathrm{s}$ band.

The Toronto studios and transmitter building, topped by a 500 -foot tower and antenna, were built on CBC property at 354 Jarvis Street, Toronto. At Montreal, a high antenna tower was erected on the top of Mount Royal and a transmitter building is located at the base of the tower. Programs are carried from television studios, at the rear of the Radio Canada Building, to the transmitter by microwave link. Each building houses a 5 kw . transmitter. Television studio equipment and two mobile television units for Toronto and for Montreal, ordered from England, have been installed.

The Directors of Television, Technical Directors, Program Directors, and other key personnel have been appointed, and additional personnel have joined the television staff since the inception of the CBC's TV training course in the autumn of 1951. This course included lectures on theory and practical work which embraced all phases of television production. At the conclusion of the training scheme, the staff had an opportunity to continue closed-circuit rehearsals for a few months prior to the inauguration in September 1952 of a regular CBC television service at Toronto and Montreal.

Broadcasting Facilities.-Under Sect. 24 of the Canadian Broadcasting Act, the CBC is required to review all applications for licences for new stations, applications for increases in power, and changes in frequency or location. Two considerations are involved: (1) non-interference with the present and proposed facilities of the CBC, and (2) that high-power transmission facilities, on both longand short-wave bands, are reserved for use by the CBC. Within these limitations, it is the policy of the Board to serve community interests by giving every practical encouragement and assistance to local stations.

The CBC operates three networks: the Trans-Canada and Dominion networks, serving English-language audiences from the Atlantic to the Pacific, and the French network, serving French-language listeners in Quebec. The Trans-Canada network is made up of 24 basic stations: 11 CBC-owned and 13 privately owned. There are 15 affiliated stations, four of which are CBC-owned Newfoundland stations. The Dominion network consists of 31 basic stations of which 30 are privately owned. Seven affiliated privately owned stations receive Dominion network service. The French network has three basic CBC-owned stations, and 12 privately owned stations.

In 1952 the CBC had 19 stations, 8 of which had 50,000 -watt transmitters. During 1950, CBC increased the power of CBM Montreal from 5,000 to 50,000 watts, and of CBR Vancouver from 5,000 to 10,000 watts; and a new 10,000 -watt station CBE was established at Windsor, Ont. On Jan. 25, 1952, CBR's frequency was changed from 1,130 to 690 and its call letters to CBU. In order to present programs at suitable times and to give expression to varying interests in the six regions, CBC maintains regional offices and production facilities at St. John's, N'f'ld.; Halifax, N.S.; Chicoutimi, Quebec City and Montreal, Que.; Ottawa and Toronto, Ont.; Winnipeg, Man.; Edmonton, Alta.; and Vancouver, B.C.

## 6.-Broadcasting Stations of CBC Networks, as at Apr. 1, 1952

Note.-The stations marked with an asterisk (*) are CBC-owned.

${ }^{2} 1,000$ watts during daytime; 250 watts at night.

CBC International Service (Shortwave).-The International Service, inaugurated on Feb. 25, 1945, is operated by the Canadian Broadcasting Corporation on behalf of the Canadian Government. Its aim is to tell the people of other countries about Canadian life and thought, and to help unify the western world in defence of freedom.

The International Service, now in its eighth year of operation, has grown to meet the requirements of Canada's expanding interest and influence abroad. The two 50,000 -watt transmitters at Sackville, N.B., are linked by approximately 600 miles of land lines with studio and program headquarters in the Radio Canada Building, Montreal, Que., from which programs are broadcast daily in English, French, German, Czech, Slovak, Dutch, Swedish, Norwegian, Danish, Italian, Spanish, Portuguese, Russian and Finnish. With technical facilities transmitting a signal unequalled by any other from the North American continent, the International Service has succeeded in reaching increasingly large audiences in Europe, Central and South America, the Caribbean and the South Pacific area.

Almost 200,000 letters have been received from listeners in all parts of the world attesting to the strength of the International Service signal and to a wide interest in Canada and Canadian programs. Many listeners request specific information on a variety of topics ranging from trade conditions to social and educational matters. These inquiries are answered by the language sections or are referred to the Government Departments directly concerned. Reception reports are also verified.

In addition to broadcasting Canadian programs approximately 14 hours daily, the International Service has developed a liaison with broadcasting organizations in other countries so that an increasing number of programs are relayed over national
networks, thus reaching an even wider audience. An important function of the Service is the coverage of United Nations activities by means of reports and interviews by the CBC correspondent at UN headquarters and foreign-language correspondents. The International Service also places its transmitters at the disposal of the United Nations Radio Division for the broadcasting of its official reports and commentaries to Europe and to the South Pacific.

Monthly illustrated program booklets designed for audiences in Europe and in Latin America are sent to listeners, upon request, by the International Service. These booklets contain broadcast schedules, program details in various languages, and frequency information.

Domestic Program Service.-During the year ended Mar. 31, 1952, 73,494 programs representing 23,933 hours of broadcasting were presented over the CBC Trans-Canada, Dominion and French networks. Of the total broadcasting hours, $76 \cdot 3$ p.c. were devoted to non-commercial and public-service programs, and the remainder to commercial presentations. Of the total broadcasting hours in 1951-52, $67 \cdot 1$ p.c. was scheduled on the Trans-Canada network; the Dominion network released more than $10 \cdot 1$ p.c. and the remainder was released on the French network.

The CBC originated and produced 81.7 p.c. of its network broadcasts. Of the remainder, 2.4 p.c. came from private stations and 15.9 p.c. were exchange programs from the United States and the British Broadcasting Corporation. Various categories of light music made up the greatest number of broadcast hours, followed in order by drama, news, talks, semi-classical music, variety, agriculture programs, educational broadcasts, religious periods, and programs devoted to the interests of women, sports enthusiasts and children. Table 7 shows the proportion of time devoted to sustaining programs as compared with commercial programs and analyses those made up of music as compared with the spoken word.

A program highlight ${ }^{\top}$ during 1951 was provided ${ }^{\top}$ by the visit to Canada of Their Royal Highnesses Princess Elizabeth and the Duke of Edinburgh. Throughout the three weeks of the Royal Tour the CBC networks carried eye-witness accounts of events from 27 cities and towns across Canada. Nearly_ 300 program and tech-nical-staff members, using more than three tons of equipment, travelled thousands of miles in those weeks to bring word pictures of the Royal Couple and the places they visited. A climax of the tour followed Princess Elizabeth's farewell address from Newfoundland when choirs organized by the CBC at Vancouver, Winnipeg, Toronto, Montreal, Halifax and St. John's, linked by more than 10,000 miles of national network lines, joined in singing Auld Lang Syne.

In May 1951, North America's most modern radio centre, the CBC's Radio Canada Building at Montreal, Que., was opened officially. From the building's 26 studios the CBC broadcasts more than 6,000 hours of programs a year to listeners in Canada, and speaks to the world in 14 languages through the facilities of the International Service. In its first year of service the Radio Canada Building played host to more than 60,000 visitors from Canada, the United States and many other parts of the world.

## 7.-Classification of CBC Programs, Year Ended Mar. 31, 1951

Note.-Dashes in this table indicate that no programs were reported under these particular items.

| Class of Program | Sustaining |  |  | Commercial |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Programs | Time | P.C. Hours | Programs | Time | P.C. of Total Hours |

Finances of the CBC.-For the year ended Mar. 31, 1952, the Corporation showed an operating surplus of $\$ 3,322,555$ after providing for depreciation and obsolescence and preliminary expenses in connection with the development of television amounting to $\$ 369,225$.

This surplus was made possible through the statutory grant amounting to $\$ 6,250,000$ which will continue for an additional four years, as provided by Parliament.

Licence fees increased by $\$ 269,326$ owing principally to the issue of an additional 101,509 receiving licences.

Additions to the Sound Broadcasting Service facilities amounted to $\$ 588,120$. These include the purchase of the Pigott Building, corner Young and Portage Avenues, Winnipeg; outlays for studios at St. John's, N'f'ld., and Toronto, Ont., and for the new transmitter at Vancouver, B.C.

Capital outlays of $\$ 1,879,693$ were made for television production centres and transmitters at Montreal, Que., and Toronto, Ont.

A short term loan of $\$ 650,000$, negotiated in 1950-51 to finance the Corporation's deficit, was repaid in $1951-52$. In addition, a second loan amounting to $\$ 1,500,000$ for the development of the Television Service was negotiated during the year.

All International Service capital and operating expenditure are recoverable from the Government of Canada. This expenditure is not considered chargeable to the Canadian Broadcasting Corporation because the statutory grant and the licence fees collected are used only to serve listeners in Canada.

## Section 4.-Privately Owned Radio Broadcasting Stations*

Development.-Privately owned (non-government) broadcasting stations began operations in the early 1920 's, about 12 years before any other broadcasting service was available, and since then have offered regular broadcasting service to communities in every part of Canada. In 1951, these stations numbered 135 with a total wattage of 378,600 daytime and 349,850 night-time. Operating mainly in conjunction with AM stations are 31 FM stations, with a combined power of 50,647 watts. There are, in addition, eight short-wave stations with a combined power of 6,685 watts.

The privately owned stations serve, primarily, the localities in which they are situated, the community served varying with circumstances. Many such stations are located in very small urban centres where they serve not only the local population but also a larger population scattered throughout the surrounding rural areas. Others may serve a metropolitan area and cities adjacent to it, in addition to the rural audiences and smaller centres lying between or beyond the urban areas.

These privately owned stations have a combined capital investment estimated at about $\$ 26,938,282$, employ more than 3,700 persons and disburse in salaries and wages an estimated $\$ 8,500,000$ annually. Revenue is obtained entirely from commercial advertising and they receive no part of the licence fee charged against

[^280]operators of receiving sets. The privately owned stations are required to pay transmitter licence fees to the Canadian Broadcasting Corporation; these totalled approximately $\$ 159,300$ for the fiscal year ended Mar. 31, 1951.

Interest in broadcasting at political, commercial and legal levels has increased recently as it has become more generally recognized that broadcasting is a new device for publicity and has grown to be a basic means of mass communication in North America. As a result, many representations have been made and are continuing to be made with increasing frequency and vigour to have broadcasting in Canada operate within the general framework of established law as is now the case with all other forms of publication. A complete and interesting review of this development may be found in the Minutes of the 1951 Special Committee on Radio Broadcasting, Minute Book No. 5 dated Nov. 28, 1951.

According to figures submitted by the Department of Transport to the Massey Commission in April 1950, the privately owned stations showed a net profit of 9 p.c. in 1948, figured as a percentage of capital, as against 7 p.c. in 1947 and 8 p.c. in 1946. The 1948 profit, as a percentage of operating revenue, was 10 p.c., as against 8 p.c. in 1947 and 10 p.c. in 1946. These figures are based on reports required by the Department of Transport from 109 stations in 1948, 108 stations in 1947, and 88 stations in 1946. Thus, the average net profit per station was $\$ 12,516$ in 1948, $\$ 8,597$ in 1947, and $\$ 11,228$ in 1946. Between 1947 and 1948 the privately owned stations increased their average gross revenue per station by 17 p.c. and the CBC increased its comparable revenue by 20 p.c. The average private station gross return in 1948 was $\$ 130,909$ and the CBC average per station gross return for the same year, from commercial revenue only, was $\$ 147,808$. Of the 109 stations reporting in 1948, 79 showed an aggregate surplus and 30 an aggregate loss. While no official compilations have been made available since that time, unofficial estimates indicate that the 1951 and 1952 position is approximately the same. In 1952, an order of the Copyright Appeal Board increased the copyright fees payable by the privately owned broadcasting stations from $\$ 152,000$ a year to approximately $\$ 350,000$ a year.

Administration.-The independent stations operate under the Canadian Broadcasting Act, which is administered by the Canadian Broadcasting Corporation, and under regulations made by the CBC, in addition to the Radio Act and specifications laid down by the Department of Transport. Annual statements of "Proof of Performance", showing that public service obligations have been fulfilled, together with financial statements, must be filed with the licensing authority. Advance copies of programs scheduled must also be filed weekly with the CBC and a program log within seven days following operations. Advertising content of program is limited to 10 p.c. of program time. Sources from which broadcasting stations obtain news must be approved in advance in writing by the Canadian Broadcasting Corporation.

Broadcasting Facilities.-Licences of the privately owned stations are granted by the Federal Government upon recommendation of the Board of Governors of the Canadian Broadcasting Corporation and are valid (unless cancelled or revoked) for a period of three years. Sale or ownership transfer of any station must be approved by the Federal Government.

The independent stations are limited to 5,000 watts. In 1948, three privately owned stations (CKAC Montreal, CFRB Toronto and CKLW Windsor) were authorized to operate on 50,000 watts and the latter two were so operating in 1952.

The majority continue to serve on 1,000 to 5.000 watts on the shared channels, the CBC stations occupying the clear channels allocated to Canada and operating mainly on 50,000 watts.

Network Operations.-Network operation in Canada (the process of having two or more stations broadcasting the same program at the same time) is at present restricted to the CBC by its own regulations. The CBC also has sole right, except in the case of four stations, to bring commercial and other network programs in from the United States. Some privately owned stations do, however, serve as outlets, either basic or supplementary, for CBC network programs. All stations must carry CBC or other programs when required by the CBC to do so. Food, drug and medicine continuity used on Canadian broadcasting stations must be approved in advance of broadcast by the Department of National Health and Welfare.

Television.-Government policy concerning citizen applications for television licences was undergoing revision as this Chapter went to press.

## PART VIII.-THE POST OFFICE

The Canada Post Office Department was created at the time of Confederation in 1867, by the Canada Post Office Act to superintend and manage the postal service of Canada under the direction of a Postmaster General. For almost a century prior to Confederation, postal services in the Canadian provinces had been controlled by the British Postmaster General and administered by his deputies. Under the French régime a courier service had been organized as early as 1703 between Quebec, Three Rivers and Montreal, while in 1734 a post road was constructed over the same route and post houses, complete with post horses and vehicles, were established for the use of travellers.

Functions.-The basic task of the Canadian Postal Service is the handling and transmission of postal matter-letters, parcels, newspapers, magazines, etc.and in discharging this duty it maintains a wide variety of services-post offices and air, railway, land and water transportation facilities.

This basic task involves many associated functions which include the sale of postage stamps and other articles of postage; the furnishing of information to the public respecting postage rates and other postal matters; the registration of letters and other articles of mail; the insuring of parcels; the acceptance of C.O.D. articles for mail and dispatch; the sorting, making up and dispatching of ordinary and registered mail to other offices; the sorting and delivery of incoming mail of all kinds; the transaction of money-order and Post Office Savings Bank business.

All functions of the Postal Service, as far as the public is concerned, are centred in the post offices, of which 12,305 were in operation at Mar. 31, 1952, as against 12,390 at the same date in 1951. Postage paid in 1951-52 by means of postage stamps amounted to $\$ 65,093,099$ ( $\$ 57,178,573$ in 1951). Post office money orders are issued for any amount up to and including $\$ 100$ at more than 7,000 post offices, for payment in Canada or in almost every country in the world. Orders payable in Canada only for amounts under $\$ 16$ are issued at more than 4,000 additional post offices. Post Office Savings Banks are in operation in all parts of the country and on Mar. 31, 1952, had total deposits of $\$ 38,031,232$, an increase of $\$ 369,312$ over the $\$ 37,661,920$ deposited in 1951.

Post offices are established for the transaction of all kinds of postal business at places where the population warrants. The post office is a complete entity in rural districts and smaller urban centres. In the larger towns and cities there is a main post office and, if size of population calls for extra services, postal stations and subpost offices are operated. Letter-carrier delivery is given in 126 cities and towns by about 5,000 uniformed letter carriers.

Postal stations are maintained on the same lines as the main post offices and perform full postal business, including general-delivery service and a post-office lock-box delivery as well as letter-carrier delivery service, accommodating the surrounding district.

Because of its widespread facilities, it has been found expedient for the Post Office to assist other Government Departments in the performance of certain tasks which include the sale of unemployment insurance stamps, the collection of Government annuity payments, the sale of radio licences, the distribution of income tax forms, Civil Service application forms and the display of Government posters.

Organization.-The Canada Post Office is divided into two parts: the Operating Service and the Headquarters at Ottawa. The Operating Service is organized into five regions each under a Regional Director, who is the field representative of the Deputy Postmaster General. There are four Headquarters Branches, viz., Administration, Operations, Communications and Financial, each under a Director.

Operating and secretarial features in the operating field affecting the post offices and local mail services in urban centres are taken care of by the local Postmaster. District office functions relating to services in the district, and all inspections and investigations, are under District Post Office Inspectors situated at strategic centres across the country.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island, and from Pelee Island, Ont. (the most southerly point of Canada), to settlements and missions far within the Arctic.

Canada's air-mail system provides several flights daily from east to west and constitutes a great air artery from St. John's, N'f'ld., to Victoria, B.C., intersected by branch lines and connecting lines radiating to every quarter and linking up with the United States air-mail system. Since July 1, 1948, all first-class domestic mail up to and including one ounce in weight has been carried by air between one Canadian point and another, whenever delivery can thus be expedited. Air-stage service provides the sole means of communication with the outside for many areas in the hinterland. There were approximately 24,000 miles of air-mail and air-stage routes in Canada in 1952 as compared with 22,000 miles in 1951.

The principal means of mail transportation is the railway-mail service, which operates along about 40,000 miles of track and, in 1952, covere over $47,000,000$ of track mileage (exceeding $57,000,000$ in 1951). The railway mail service employed a staff of 1,343 mail clerks in 1952 ( 1,381 in 1951). This staff prepares the mails for prompt delivery and dispatch while en route in the railway mail cars. Like its air-mail service, Canada's railway mail service is one of the most extensive in the world.

The rural mail delivery organization provides direct postal facilities to residents in the rural sections of the country: approximately 5,200 rural mail routes were in operation in 1952, involving about 120,750 route miles and serving 397,084 rural mail boxes ( 384,906 in 1951). Rural mail routes are generally circular in pattern
and average about 23 miles in length. A development during 1950-51 was a system of rural mail inspections carried out by Supervisory Postmasters. About 4,700 side services were in operation in 1952, as compared to 4,500 in 1951, to transport mail between post offices, railway stations, steamer wharves and air ports, while 3,050 stage services operated to convey mail to and from post offices not located on railway lines. In 1952 there were approximately 500 city mail services, as against 700 in 1951, transporting mails to and from post offices, postal stations and sub-post offices, collecting mails from street letter-boxes and delivering parcel post. In all, about 13,450 land mail service couriers are employed and travel in the neighbourhood of $50,000,000$ miles annually. Land mail services are performed under a contract system, the contracts being awarded to the person submitting the lowest tender and competent to provide all the requisite equipment.

In 1952, the Canadian postal service delivered an estimated $3,000,000,000$ items of mail-a decrease from the $3,012,000,000$ items delivered in the previous year. The service makes use of such mechanical handling devices as conveyers, chutes, sorting machines, stamp cancelling machines, etc., in its larger offices.

The increase in postal business is one of the impressive features of Canada's economic development during the last 10 years. From $\$ 55,477,159$ in 1942, gross revenue has increased year by year to $\$ 122,266,675$ by Mar. 31,1952 -an all-time high.

## Section 1.-Post Office Statistics

Tables 1, 2 and 3 give the numbers of post offices in operation together with revenue and expenditure for the past few years.
1.-Post Offices in Operation, by Provinces, as at Mar. 31, 1949-52

| Province or Territory | 1949 | 1950 | 1951 | 1952 |

| Totals, Yukon Territory | 71,112 | 80,442 | P.C. of all Postal Revenue | 91.8 | 92.9 |

[^282]Postage.-The gross revenue receipts shown in Table 2 are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during each of the latest five fiscal years was: $\$ 56,303,157$ in $1947-48$, $\$ 56,317,570$ in 1948-49, $\$ 57,249,306$ in 1949-50, $\$ 57,178,573$ in 1950-51 and $\$ 65,093,099$ in 1951-52. Receipts from postage meter or postage register impressions and postage paid in cash by other means were as follows: $\$ 28,959,194$ in 1947-48, $\$ 33,315,148$ in 1948-49, $\$ 36,292,710$ in 1949-50, $\$ 39,979,297$ in 1950-51 and $\$ 48,945,565$ in 1951-52.

## Section 2.-Auxiliary Postal Services

Auxiliary postal services include the issuing of money orders and the operation of the Post Office Savings Bank.

Table 4 shows the amount of money-order business conducted by the Postal Service in recent years. The analysis of such business by provinces, published in former editions of the Year Book, has been discontinued; because of a change in the type of money orders and in the method of recording them, the statistics cannot be presented on a basis comparable with earlier years.

A table showing the financial business of the Post Office Savings Bank will be found in the Chapter on Currency and Banking, p. 1116.

## 4.-Operations of the Money-Order System, Years Ended Mar. 31, 1943-52

Norg.-Figures for 1868-1942 will be found in the corresponding table of previous Year Books, beginning with the 1911 edition.

| Year | MoneyOrder <br> Offices in <br> Canada | MoneyOrders Issued in <br> Canada | Value of Orders Issued in Canada | Value Payable in- |  | Value of Orders Issued in Other Countries, Payable in Canada |

## PART IX.-THE PRESS

The tables of this Part are based on data obtained from Canadian Advertising. One serious difficulty has been encountered in connection with the compilation of circulation figures. In the case of daily newspapers, reliable circulation figures are relatively easy to obtain since, in their own ${ }^{*}$ best interest, such papers qualify for and subscribe to the Audit Bureau of Circulation requirements. In such cases, A.B.C. 'net paid' figures were used. However, it is difficult to obtain reliable circulation figures for many weekly newspapers that do not subscribe to the Audit Bureau. In these cases, total circulation (paid and free) was taken where such figures were supported by sworn statements or some other reliable record.

In compiling magazine circulation, total net paid figures, as reported by publishers to the Audit Bureau (including bulk sales), were used. In the relatively few cases where such figures were not available, minimum publishers' claims or sworn statements were accepted.

Daily Newspapers.-Daily newspapers are published in Canada in three main language groups: English, French and foreign. French daily newspapers have, as would be expected, a wide circulation in the Province of Quebec and some of the largest of these papers have been established in the Province for over 60 years. Eleven of the 13 French-language newspapers published in 1951, reported from that Province, the other two being in the Provinces of Ontario and New Brunswick.

Many of the daily newspapers extend their influence over the rural areas surrounding the cities where they are published. In this respect they supplement the weekly newspapers which feature essentially local news and serve the smaller cities, towns and rural areas only.

The larger metropolitan dailies, especially those of Montreal, Que., and Toronto, Ont., have built up considerable circulation in areas outside their own cities. This is especially true since rapid freight transport by highway and latterly by air has become more common. For instance, Montreal and Toronto morning papers (printed late the previous evening) can now be transported to Ottawa and delivered along the morning routes in competition with the local morning papers. Since these large metropolitan dailies can command exclusive feature services that the dailies of the smaller cities cannot afford, it often places them in an advantageous position in competition with the local dailies.

Weekly Newspapers.*-Weekly newspapers circulate within relatively restricted areas around their publication centres. These cater to a limited local interest but, within the areas they serve, they exercise an important influence. Canada is well served by foreign-language weekly newspapers. In 1951, they had a stated circulation of 215,354 copies, among which Ukrainian papers had a circulation of 67,179 copies, Yiddish 28,465, German 30,620, and Polish 23,656 copies.

Other Publications and Periodicals.-Table 6 gives the number of publications, other than newspapers, published in Canada. Monthly and weekly magazines and periodicals enjoy the largest circulation while those dealing with home, social and welfare, agricultural and rural topics, and religious, trade, industry and related subjects are the most popular types.

* Including a very few semi- and tri-weekly newspapers.

## 1.-Estimated Numbers and Circulations ${ }^{1}$ of reporting Daily and Weekly ${ }^{2}$ English-Language Newspapers, by Provinces, 1949-51

Nots.-Figures for the years 1938-46 are given at p. 788 of the 1948-49 Year Book and for 1947-48 at p. 824 of the 1951 edition.

## PART I.-THE MOVEMENT AND MARKETING OF COMMODITIES

The different directions that economic development has taken across Canada and the diverse resources of various parts of the country have led to a vast exchange of products. The task of providing goods and services where they are required for consumption or use by the widely scattered population of $14,009,429$ (June 1, 1951, Census) accounts for a greater expenditure of economic effort than that required for the prosecution of the country's large volume of foreign trade, high though Canada ranks in this field among the countries of the world.

Domestic trade is broad and complicated: it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense it embraces various professional and personal services including those directed to the amusement of the people, such as theatres, sports, etc. However, not all phases of this broad field are covered here though, wherever possible, cross references are given to related material occurring in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The Index will be found useful in this respect.

## Section 1.-Grain Trade*

## Subsection 1.-Marketing Problems and Policies, 1949-50 to 1951-52

Wheat.-Requirements and Supplies.-World demand for wheat and wheat products has, for the most part, remained firm during the period under review although foreign exchange difficulties and political problems have become increasingly important factors in the international movement of grain and flour.

On the supply side, Canada harvested a near-average crop ( $371,400,000 \mathrm{bu}$.) of good quality wheat in 1949 followed by an above-average crop ( $461,700,000$ bu.) in 1950 and a near-record outturn ( $552,700,000 \mathrm{bu}$.) in 1951. The season was late, however, in the latter two years. In 1950, a substantial proportion of the crop was frosted, with some acreage remaining unthreshed over winter. In 1951, autumn rains prevented completion of harvest and an estimated $150,000,000$ bu. remained for spring threshing. While it was possible to recover most of the over-wintered grain of both crops, the impact of these two abnormal harvests created serious handling problems.

Large quantities of low-grade wheat from the 1950 harvest had to be disposed of and the lateness of the season delayed movement of grain to forward positions. Similar conditions prevailed in 1951-52 with the addition of a tremendous drying problem arising out of the unprecedented volume of tough and damp grain threshed in the autumn of 1951. However, with the excellent co-operation of all agencies concerned, it was possible to save nearly all of these out-of-condition stocks. During the winter months buyers accepted large quantities of tough wheat and all available drying equipment, including facilities at Duluth and Buffalo, U.S.A., was utilized. By a stroke of fortune, the spring of 1952 was early and warm and spring-threshed grain turned out very dry This made possible the use of the 'natural' drying process whereby dry grain is mixed with tough and damp stocks to bring the moisture content of the whole to a straight grade level.

Despite all the difficulties surrounding the handling of the 1951 crop, exports of wheat as grain for the 1951-52 crop year, at $304,700,000$ bu., were exceeded only once before in the country's history when $354,400,000$ bu. were exported in 1928-29. Combined exports of wheat and wheat flour in terms of wheat during 1951-52 amounted to $356,600,000$ bu., an increase of $115,600,000$ bu. over 1950-51. However, the merchandising problems associated with handling unusually large quantities of out-of-condition grain from two successive late crops held export movements to a much lower level than would have been the case had these crops been threshed in good condition at the normal time of year. In consequence, some build-up in carryover occurred, wheat stocks at July 31, 1951, amounting to $189,200,000$ bu. compared to $112,200,000$ bu. a year earlier. Estimated total supplies of Canadian wheat for the crop year 1951-52 (carryover at July 31, 1951, plus 1951 crop) amounted to $741,900,000$ bu. The carryover at July 31, 1952, showed a further increase although stocks were well below the levels existing at the close of the crop years 1940-41 to 1943-44, when carryover stocks ranged from $357,000,000$ bu. to $595,000,000$ bu.

[^285]
## 1.-Production, Imports, Exports and Domestic Use of Wheat and Wheat Flour, Crop Years Ended July 31, 1945-52

(Millions of bushels)

| Item | 1945-46 | 1947-48 | 1948-49 | 1949-50 | 1950-51 | 1951-52 |

${ }^{1}$ Less than 50,000 bu.
Price and Marketing Arrangements.-Since Aug. 1, 1949, the greater part of Canada's export wheat has moved under the terms of the International Wheat Agreement.* Under this Agreement, provision was made for the recognition of prior sales agreements between signatory countries and most of the wheat which Canada supplied to the United Kingdom in 1949-50, the final year of the CanadaUnited Kingdom Wheat Agreement, was recorded by the International Wheat Council. These sales, however, were subject to the 1949-50 price provisions of the Canada-United Kingdom Wheat Agreement. During 1949-50, the domestic price and the price under the Canada-United Kingdom Wheat Agreement were $\$ 2.00$ plus 6 cents per bu. carrying charges ( 5 cents until Sept. 30), basis No. 1 Northern in store Fort William-Port Arthur or Vancouver. The price to countries under the provisions of the International Wheat Agreement was $\$ 1.80$ per bu. (maximum level) from the beginning of the crop year (Aug. 1, 1949) until the devaluation of the Canadian dollar on Sept. 19, 1949. After devaluation the price was increased to $\$ 1.98$ per bu. where it remained until the close of the crop year. A carrying charge of 5 cents per bu. applied from the beginning of the crop year until Dec. 13, when it was dropped. Class II prices (applicable to wheat for sale to countries outside the I.W.A.) fluctuated from a low of $\$ 2.04$ per bu. on Aug. 16 to a high of $\$ 2 \cdot 41$ on Oct. 6, and when the crop year closed on July 31, 1950, it stood at $\$ 2 \cdot 06$. Canada's quota for $1949-50$ under I.W.A. was $205,100,000$ bu. of wheat and flour in terms of wheat and, according to the annual report of the International Wheat Council, Canadian sales were $185,400,000 \mathrm{bu}$. Total Canadian exports of wheat and flour in terms of wheat for the crop year were $225,100,000 \mathrm{bu}$.

The five-year pool under which producers had been marketing their wheat terminated on July 31, 1950, and since then one-year pools have been in effect. Under the five-year pool, the initial payment on Apr. 1, 1949, reached a level of $\$ 1.75$ per bu. for No. 1 Northern, basis in store Fort William-Port Arthur or Vancouver. On Mar. 2, 1951, a final payment of approximately 8.3 cents per bu. was announced to cover all wheat delivered to the Wheat Board (about 1,428,000,000 bu.) during the five-year-pool period, thus bringing the total price to farmers to $\$ 1 \cdot 833$ per bu., basis No. 1 Northern in store Fort William-Port Arthur or Vancouver.

* A general outline of the Agreement is given in the 1950 Year Book, pp. 839-840.

Canada's guaranteed quantity under I.W.A. for $1950-51$ was $221,600,000$ bu. and, according to the Canadian Wheat Board, sales of wheat (including flour) under the Agreement amounted to $194,700,000 \mathrm{bu}$. Total exports for the crop year were $241,000,000 \mathrm{bu}$. From Aug. 1, 1950, until Oct. 2, 1950, I.W.A. sales were made at the maximum of $\$ 1.98$ per bu., basis No. 1 Northern in store Fort William-Port Arthur or Vancouver. With the decontrol of the Canadian dollar on that date, fluctation in value of the Canadian dollar became a factor in the pricing of wheat, the maximum price of I.W.A. wheat varying with the movement of the dollar. All Canada's sales under I.W.A. during 1950-51 were made at the maximum level. Canadian wheat sold outside the Agreement continued to move under the Class II price which, on Aug. 1, 1950, was $\$ 2.06$ per bu., basis in store Fort William-Port Arthur or Vancouver. In the last few days of August and through early September the price dropped to the I.W.A. level of $\$ 1 \cdot 98$. From Sept. 20 to early January it held at some cents above the I.W.A. price and then began to move upward. At July 31, 1951, the Class II price stood at $\$ 2 \cdot 36 \frac{1}{8}$ per bu. as against $\$ 1 \cdot 90 \frac{1}{8}$ for I.W.A. wheat. Sales of wheat for domestic use during 1950-51 were made at the I.W.A. price until June 15, when a carrying charge of 6 cents per bushel was added on all domestic sales.

At the outset of the 1950-51 crop year western farmers received an initial payment of $\$ 1.40$ per bu. for No. 1 Northern, basis in store Fort William-Port Arthur or Vancouver, with the final price to be received by producers for each grade depending upon the average prices at which the Canadian Wheat Board sold such grade of wheat in the 1950-51 pool. Effective Feb. 1, 1951, the initial payment was increased to $\$ 1 \cdot 60$ per bu., with adjustment payments of 20 cents per bu. being paid on all wheat delivered between Aug. 1, 1950, and Jan. 31, 1951. On Nov. 19, 1951, it was announced that net surplus in the $1950-51$ wheat pool was $\$ 104,900,000$, amounting to an average final payment of $28 \cdot 65$ cents per bu. on the $366,200,000 \mathrm{bu}$. of wheat delivered to the Board in 1950-51. The final payment for No. 1 Northern wheat was 25.498 cents per bu. making the total return to producers for No. 1 Northern, basis in store Fort William-Port Arthur or Vancouver, $\$ 1 \cdot 85498$ per bu.

Canada's quota under I.W.A. for 1951-52 was revised on May 1, 1952, to a level of $238,500,000$ bu., all of which was sold. Altogether, Canada sold wheat and/or flour to all but five of the 42 importing countries participating in the multilateral pact. Sales under I.W.A. continued at the maximum price level plus 6 cents per bu., carrying charges added to all sales registered against 1951-52 Agreement quotas. With the rise in value of the Canadian dollar relative to the United States dollar, the I.W.A. price declined accordingly. The average price of Canadian I.W.A. wheat for July 1952 was $\$ 1 \cdot 74 \frac{1}{2}$ per bu. plus 6 cents carrying charges, basis No. 1 Northern in store Fort William-Port Arthur or Vancouver. Class II prices also eased off from levels reached earlier in the crop year, the July average standing at $\$ 2 \cdot 11 \frac{1}{4}$, basis No. 1 Northern in store Fort William-Port Arthur or Vancouver. Domestic prices remained at the I.W.A. level.

The initial price to producers (effective Aug. 1, 1951) was set at $\$ 1.40$ per bu., basis No. 1 Northern in store Fort William-Port Arthur or Vancouver. Effective Feb. 1, 1952, the initial price was increased to $\$ 1.60$ per bu. with adjustment payments of 20 cents per bu. to be paid on all wheat delivered by producers between Aug. 1, 1951, and Jan. 31, 1952.

Other Grains.-Supply and Disposition.-Data on the supplies and disposition of the major Canadian grain crops for the crop years 1949-50 and 1950-51 are set out in Table 2. Despite increased exports of oats and barley in 1950-51 the carryover
of these grains at July 31, 1951, was at a high level. Exports of barley in 1951-52 set a record of $69,900,000 \mathrm{bu}$. and oats exports, at $69,600,000 \mathrm{bu}$., were the third largest on record. However, the 1951 crops were large and despite heavy disappearance, further increases in crop-year-end carryovers occurred.

Carryovers of rye and of flaxseed were at a low ebb at July 31, 1951. The 1951 crops of these grains, however, were larger than in 1950 and exports for the 1951-52 crop year were not heavy. As a result, carryover stocks of rye and of flaxseed at July 31, 1952, were more than double those at the beginning of the crop year.

## 2.-Distribution of Canadian Grain Crops, Crop Years Ended July 31, 1950 and 1951

(Millions of bushels)

[^286]Initial payments to producers were made for oats on the basis of 65 cents per bu. for No. 2 C.W. in store Fort William-Port Arthur, with price differentials established for other grades. At the time of delivery, producers received the initial payment, less freight and other handling charges to the Lakehead. After the close of the crop year, surpluses accumulated by the Board on the sale of oats during 1949-50 were distributed among producers. The payments averaged about 19.5 cents per bushel for the principal grades.

Marketing arrangements for barley during 1949-50 were similar to those for oats. Initial payments were made on the basis of 93 cents per bu. for No. 3 C.W. 6-row in store Fort William-Port Arthur. Final payments, after the close of the pool, averaged about 57 cents per bu. on malting grades and from $44 \cdot 5$ to 47 cents per bu. for feed barley.

In 1950-51 the Canadian Wheat Board continued the compulsory pooling arrangement and the initial payments for the basic grades were unchanged from 1949-50. Later in the season the initial payments were increased by 10 cents and 20 cents for oats and barley, respectively. After the close of the 1950-51 oats pool a final payment was made averaging 9.411 cents per bu. The final payment for No. 2 C.W. oats was 9.71 cents per bu., making the total return to producers for this grade 84.71 cents per bu., basis in store Lakehead. The final payment on the barley pool averaged 18.1 cents per bu. and for No. 3 C.W. 6 -row it was 20.882 cents per bu., making the total return to producers on this grade $\$ 1.33882$ per bu., basis in store Lakehead.

In 1951-52 the basic initial payment for oats was again set at 65 cents per bu. for No. 2 C.W. in store Lakehead. The basic initial price for barley was increased to 96 cents per bu for No. 3 C.W. 6-row in store Lakehead. Effective Mar. 1, 1952, initial payment on all grades of Western barley was increased by 20 cents per bu. and adjustment payments were made on all barley delivered to the Board between Aug. 1, 1951, and Feb. 29, 1952. Final payments on the $133,135,187$ bu. of oats, delivered to the Board during the 1951-52 crop year, averaged $18 \cdot 587$ cents per bu. The final payment on No. 2 C.W. oats was 18.614 cents per bu., making total payments for this grade $83 \cdot 614$ cents per bu. Final payments on the $130,634,822$ bu. of barley, delivered to the Board during the 1951-52 crop year, averaged $14 \cdot 729$ cents per bushel. On No. 3 C.W. 6-row barley, final payment was $13 \cdot 2$ cents per bu., making total payments for this grade $\$ 1 \cdot 292$ per bu. With the exception of the voluntary flaxseed pool operated by the Board in 1949-50, no special marketing plans were in effect for rye and flaxseed and all dealings in these grains were handled by private trade.

## Subsection 2.-Miscellaneous Grain Trade Statistics

Grain Handled at Eastern Elevators.-The amount of grain handled by eastern elevators during the ten crop years ended July 31, 1942-51, is shown in Table 3.
3.-Canadian Grain Handled at Eastern Elevators, Crop Years Ended July 31, 1942-51

Note.-Figures for the crop years ended 1922-29 are given at p. 626 of the 1931 Year Book; for 1930-36 at p. 512 of the 1943-44 edition; and for 1937-41 at p. 816 of the 1947 edition.

| Item and Crop Year | Wheat | Oats | Barley | Rye | Flaxseed | Total Grain |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Receipt | bu. | bu. | bu. | bu. | bu. | bu. |
| 1942. | 282,400,393 | 5,468,716 | 7,240, 814 | 785,929 | 1,912,528, | 297.808. 380 |

| 1950. | 251,853,362 | 33,140,216 | 18,139,086 | 1,553,094 | 11,743,926 | 316, 429,684 |
| 1951. | 223,500,208 | 28,746,032 | 31,225,701 | 6,216,681 | 8,580,204 | 298,268, 226 |

Grain Inspections.-Total inspections of Canadian grain in crop years 1949-50 and 1950-51 amounted to approximately $457,000,000 \mathrm{bu}$. and $491,000,000 \mathrm{bu}$., respectively. Increased $1950-51$ inspections of oats and barley in the Western Division and of winter wheat in the Eastern Division account largely for the differences between the two years.

## 4.-Quantities of Grain Inspected, Crop Years Ended July 31, 1950 and 1951

| Grain | 1950 |  |  | 1951 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Western Division | Eastern Division | Total | Western Division | Eastern Division | Total |

| Buckwheat | 9.029 | 81,312 | 90,341 | 25,556 |  |  |
| Corn. | 331,700 | 6,446,944 | 6.778, 644 | 62,622 | 5,002,963 | $5,065,585$ 486,889 |
| Mixed grain | 842,086 | - $\begin{array}{r}1.500 \\ 2,146.624\end{array}$ | 843,586 $2,146,624$ | 486,889 | $2, \overline{944}, 752$ | 486,889 $2,944,752$ |
| Soybeans. Beans..... | - | $2,146,624$ 562,885 | $2,146,624$ 562,885 | 二 | $\begin{array}{r} 2,944,752 \\ 220.782 \end{array}$ | 2,920,782 |
| Totals, Grain | 440,652,288 | 15,896,683 | 456,548,971 | 471,323,570 | 19,628,850 | 490,952,420 |

Lake Shipments of Grain.-Total shipments of grain from the Lakehead in the 1950-51 crop year were somewhat below the 1949-50 level. Approximately 21 p.c. of the 1950-51 shipments were routed to United States ports as compared with 16 p.c. in 1949-50.

## 5.-Lake Shipments of Grain from Fort Wiliam and Port Arthur, Crop Years Ended July 31, 1950 and 1951

Wheat Flour.-Canadian wheat flour production, which reached a peak of $28,600,000 \mathrm{bbl}$. in the crop year 1946-47, steadied in 1949-50 when mills reported an output of $20,300,000 \mathrm{bbl}$. or only $100,000 \mathrm{bbl}$. below that of the previous year. Exports of wheat flour (based on adjusted customs returns) for 1949-50 amounted to $10,200,000 \mathrm{bbl}$., equivalent to $50 \cdot 2$ p.c. of the same year's production. The percentage of milling capacity utilized for the crop year 1949-50 averaged 67.8 p.c. compared with $67 \cdot 3$ p.c. for the previous crop year.

Canadian flour mills reporting for 1950-51 registered a flour production of $23,600,000 \mathrm{bbl}$., an increase of about $3,400,000 \mathrm{bbl}$. over the output for 1949-50. Exports for $1950-51$ amounted to $12,400,000 \mathrm{bbl}$., equivalent to $52 \cdot 6$ p.c. of the year's production. The percentage of milling capacity utilized for the crop year 1950-51 averaged $79 \cdot 8$ p.c., 12 p.c. above that of the previous crop year.

## Section 2.-Live-Stock Marketings*

Marketings of cattle through public stockyards, packing plants and direct for export in 1951 totalled $1,601,156$ head, a decrease of 13.8 p.c. from the previous year and a continuation of the downward trend evident since 1948. The decline was most pronounced in the Prairie Provinces. Quality of the output was higher than in 1950, as evidenced by the fact that choice and good heavy steers represented 9.4 p.c. of the total cattle in 1951 as compared with $6 \cdot 3$ p.c. in 1950 . Reflecting the increase in heavy steers, the average carcass weight of all cattle slaughtered under inspection in 1951 was 23.5 lb . higher than in the previous year. Marketings of calves in 1951 declined 23 p.c. from the 1950 total. Hog marketings in 1951 were $4,897,116$, an increase of 2.5 p.c. over 1950 . An increase in the average weight of hogs marketed in 1951 lowered the percentage grading A and B1 for Canada to 73.0 lb . from $75 \cdot 5 \mathrm{lb}$. in 1950. Sheep and lamb sales numbered 486,442 head, a decrease of 24 p.c. from the previous year and the lowest number recorded since 1926.

## Section 3.-Warehousing and Cold Storage*

Warehousing ranks high among the means by which the utilities of 'place', 'time' and 'possession' are added to the products of industry. Its importance has been emphasized in modern times because of the introduction of cold-storage methods to the conservation of perishable foods.

[^288]The great difficulty in presenting warehousing statistics lies in the fact that it is not an easy matter to define clearly what are to be regarded as stocks in storage. In these days of complicated business relationships and especially since the rise of the department store and chain store as characteristic institutions in the retail merchandising field, it often happens that warehousing is carried on in close relationship with merchandising. However, if the strict economic definition of warehousing is adopted then this term should be restricted to those facilities that add the utility of 'time' to the 'form' utilities that are the product of the extraction and manufacturing industries. Since the warehouses established in close connection with retail trade are more often than not convenient places for the temporary storage of goods in process of transfer from the manufacturer or wholesaler to the consumer, then they are not, in the strict economic sense, services which add the utility of 'time' to commodities already worked up into 'form'. At least, since some clear line must be drawn and because separate statistics of this branch of storage are not available, it is considered practicable to interpret warehousing in this way.

The statistics of warehousing are shown together under one general heading in this Section. Subsection 1 presents statistics of the licensed storage of grain. Subsection 2 deals with cold-storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale; it includes also figures of stocks of food on hand. Subsection 3 deals with the storage of petroleum and its products and Subsection 4 with public warehouses and customs warehouses. The facilities that specialize in the storage of tobacco and alcoholic liquors are analysed in Subsection 5. These bonded warehouses, as they are called, are under the strict surveillance of Federal Government excise officers who supervise_all_movements_into_and_from such places of storage.

## Subsection 1.-Licensed Grain Storage

At Dec. 1, 1951, total licensed grain storage capacity in Canada stood at $526,000,000 \mathrm{bu}$. , an increase of $20,000,000 \mathrm{bu}$. from the level of Dec. 1, 1950. Licensed grain storage capacity reached a peak of $603,000,000$ bu. at Dec. 1, 1943, but, following the disposal of heavy war-time stocks, declined to $482,000,000 \mathrm{bu}$. at Dec. 1, 1947. Since then licensed capacity has increased each year.

In recent years strong export and domestic demand has prevented the accumulation of unduly large stocks of grain. Heavy crops, however, were harvested in 1950 and 1951, and with adverse harvesting weather in both seasons the normal flow of grain to foreign and domestic points of consumption was impeded. The proportion of licensed grain storage capacity occupied accordingly moved upward. At July 31, 1950, 22 p.c. of licensed capacity was utilized. A year later the proportion had risen to 39 p.c. and, at Mar. 27, 1952, more than 52 p.c. of licensed capacity was in use.

## 8.-Licensed Grain Storage Capacity and Grain in Store, 1950-51 and 1951-52

Note.-These figures, being exclusive of stocks in transit or in eastern mills, are lower than those shown in Table 18, p. 419.

## Subsection 2.-Cold Storage and Storage of Foods

Cold Storage Warehouses.-Under the Cold Storage Act (R.S.C. 1927, c. 25), as amended June 18, 1952, subsidies have been granted by the Federal Government to encourage the construction and equipment of cold storage warehouses open to the public. The Act and Regulations made thereunder are administered by the Department of Agriculture.

There are five classifications of cold storage warehouses in Canada: (1) public warehouses which store foods and food products and of which the entire space is open to the public; (2) semi-public, or those which store foods and food products and which, while retaining part of the space for the products of the owner, allot the remainder to the public; (3) private or those which store foods and food products and allot no space to the public. Included in this classification is the refrigerated space in connection with abattoirs, creameries, dairies, cheese factories and wholesale and retail distributing warehouses; (4) locker plant, where the total space is occupied by lockers for rental to the public and which may, in addition, cut,
process, chill and freeze foods and food products for storage in lockers; and (5) bait depots, having space used solely or principally for freezing and storing bait for use of fishermen.

No hard and fast rule can be laid down for distinguishing between public and private warehouses. In general, those owned and operated by firms trading in the goods stored in the warehouse are designated 'private', though most of these places rent space to the public when it is not required for their own purposes.

11.-Stocks of Food Commodities on Hand in Cold-Storage and Other Warehouses and in Dairy Factories, as at Jan. 1, 1951-concluded

Cold Storage of Fish.-Stocks of frozen fish were at practically the same level in 1951 as in 1950. Normally, stocks decrease gradually during the first months of the year and reach a low point about May 1; during subsequent months they increase and reach a peak at the beginning of November. Since the great bulk of the frozen-fish production takes place during the summer and early autumn months, stocks piled up in that period form the main supply of frozen products until the heavy production period of the next summer. Stock figures at the beginning of each month in 1950 and 1951 (including Newfoundland) were as follows:-

| Month | 1950 | 1951 | Month | 1950 | 1951 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | ('000,000 lb.) |  |  | ('000,000 lb.) |  |
| Jan. 1. | 41.5 | 46.5 | Aug. 1. | $49 \cdot 3$ | $43 \cdot 2$ |
| Feb. 1 | 34.1 | $39 \cdot 0$ | Sept. 1. | $55 \cdot 8$ | 49.3 |
| Mar. 1 | $27 \cdot 6$ | 31.5 | Oct. 1. | $58 \cdot 2$ | 51.0 |
| Apr. 1. | $20 \cdot 0$ 18.7 | 25.3 | Nov. 1. | 61.4 | 57.8 |
| May 1. | 18.7 33.0 | $25 \cdot 2$ $35 \cdot 7$ | Dec. 1. | 55.0 | 50.6 |
| July 1. | $41 \cdot 6$ | $38 \cdot 0$ | Average. | $41 \cdot 3$ | 41.1 |

Although total figures showed little change in 1951 compared with 1950, a few individual items registered variation. Monthly stocks of halibut were significantly higher in 1951. The halibut fishing season began with a carryover from the preceding season and hence production diminished on the East Coast; however, landings in British Columbia were high enough to maintain the heavy inventories throughout the remainder of the year. A low herring catch on the Atlantic Coast resulted in low stocks. Also, the high demand for cod fillets, frozen fresh, left stocks of that product at a low level even though production was slightly higher than in 1950.

Average monthly holdings of the main fish products in 1950 and 1951 (including Newfoundland) were as follows:-
Group and Main Products $\quad \frac{1950}{\prime 000,000} \frac{1951}{\mathrm{lb} .}$

| Frozen Fresh Sea Fish- |  |  |
| :---: | :---: | :---: |

| Grand Totals. | 41-3 | 41.1 |

${ }^{1}$ Totals include other items not listed.
Cold Storage of Dairy Products.-Cold-storage facilities are a necessary adjunct in the manufacture of dairy products since most of them are perishable to a varying degree.

All creameries have facilities for the storing of butter, the size and type of storage depending on the size of the creamery. If the butter produced at small country plants is not printed for immediate sale, the butter solids are disposed of or are transported to larger creameries where better refrigeration is available or to private or public cold storages in the larger urban centres.

In the case of cheese, temperature control is important in the curing process as well as in the prevention of deterioration. Most cheese factories are equipped with mechanical refrigeration and are required to have storage capacity for $\mathbf{1 7}$ days' produce during the period of maximum manufacture. The cheese is then transferred to central warehouses.

Milk, as soon as it is bottled, is placed in storage and held until delivery. Dry whole milk and other dried milk products containing fat are usually stored in cool air chambers to prevent rancidity.

Cold Storage of Other Foods.-The marketing of the Canadian apple crop has undergone quite drastic changes in recent years. In pre-war years, and to some extent during the War, it was customary to export a substantial proportion of the crop early in the season to the United Kingdom and the European Continent. This
limited the necessity of long-term cold storage to that portion retained for domestic distribution and other export. The curtailment in export outlets during the postwar years has necessitated greater long-term cold-storage capacity in order to extend the marketing period for a much larger proportion of the crop. The degree to which cold-storage facilities have increased is illustrated by a comparison of the holdings on Dec. 1, the beginning of the storage season. During the years 1943-47, the Dec. 1 stocks averaged 53 p.c. in cold storage and 47 p.c. in common storage. The average for the two years 1950 and 1951 was 83 p.c. in cold and only 17 p.c. in common storage. Additional space under construction will maintain or increase the proportion of cold storage in future years.

Potatoes are generally held at production points and shipped out as needed throughout the season. While warehouse storage is quite common in parts of Prince Edward Island, Nova Scotia and New Brunswick, where commercial production is centred, most of the crop is stored in frost-proof cellars and pits.

## Subsection 3.-Storage of Petroleum and Petroleum Products

Bulk storage plants for petroleum and petroleum products are established at convenient distributing centres and usually on a water-front so that full advantage can be taken of the lower cost of water-borne traffic. From these centres the goods are transferred by boat, rail or truck to smaller distributing depots or directly to retail outlets. The principal refining and distributing centres are located at or near Halifax, Quebec, Montreal, Ottawa, Toronto, Sarnia, Fort William, Regina, Calgary, Turner Valley, Edmonton and Vancouver.

## 12.-Inventories of Petroleum and Petroleum Products in Storage at Jan. 1, 1948-52

## Subsection 4.-General Warehousing

Public Warehouses.-The Dominion Bureau of Statistics, in 1944, began an annual census of the principal public warehouses in Canada. Warehousing carried on by co-operatives, packing houses and other firms operating storage facilities in connection with their own businesses are not included. Also, some companies deriving more revenue from a moving, cartage or carrier business than from warehousing are not included but are covered in the D.B.S. report, Motor Carriers, Freight-Passenger. In order to show the trend in the industry, Table 13 has been prepared from data supplied by 141 firms that reported for both 1949 and 1950. Complete details are given in the D.B.S. report, Warehousing, 1950.
13.-Summary Statistics of 141 Public Warehousing Firms Reporting in 1949 and 1950

| Item | 1949 | 1950 | Item | 1949 | 1950 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Total revenue.......... \$ | 19.311,847 | 20,015,944 | Wages, regular........ \$ | 5,699,109 | 5,969,210 |

Net occupiable space reported in 1950 by 164 firms comprised $34,748,232 \mathrm{cu} . \mathrm{ft}$. for merchandise, $19,333,375 \mathrm{cu} . \mathrm{ft}$. for household goods and $23,852,576 \mathrm{cu} . \mathrm{ft}$. of cold-storage space. Merchandise space increased $3,600,000 \mathrm{cu}$. ft., household goods space $1,500,000 \mathrm{cu}$. ft., and cold storage space $1,500,000 \mathrm{cu}$. ft. over the total for 155 companies reporting in 1949.

Customs Warehouses.-Warehouses for the storage of imported goods are known as customs warehouses. These are divided into nine classes, as follows: (1) those occupied by the Federal Government, some of which are used for examination and appraisal of imported goods while others, known as Queen's Warehouses, are used for the storage of unclaimed, abandoned, seized or forfeited goods; (2) warehouses, consisting of an entire building or part thereof, properly separated from the rest of the building by a partition, which are used exclusively for the storage of imported goods consigned to the proprietor of the building; (3) buildings or parts of buildings properly partitioned off, used for the storage of imported goods consigned to the proprietor or others, or for the storage of unclaimed or seized goods; (4) sufferance warehouses operated by the owners of vessels for the storage of in-bond goods transported by water or air;* (5) yards, sheds and buildings intended for the storage of imported coal and coke; (6) farms, yards, sheds, etc., which an importer of horses or sheep intends to use for the feeding and pasturing of imported animals other than pure-bred mares; (7) warehouses for the storage of

[^291]animals, including horses for racing, and articles for exhibition or competition for prizes; (8) warehouses for clover seed imported for the purpose of being recleaned and prepared for a foreign market; and (9) yards, sheds, etc., which importers intend to use for the storage of goods too heavy or too bulky to be admitted to an established customs warehouse.

## Subsection 5.-Bonded Warehousing and Storage of Wines

Bonded Warehousing.-The Excise Duty Branch of the Department of National Revenue considers any premises licensed under the Excise Act to be a warehouse, whether for storage of raw materials to produce finished tobacco or cigar products or for spirits or malt used for brewing. Practically the total production of spirits is placed in bonded warehouses while only a small part of the output of beer is retained in storage. Wine, unlike spirits and beer, is not secured under bond. All imports of alcoholic beverages must go through bonded warehouses before being released to Provincial Liquor Commissions or Boards, or other agencies authorized by the Commissions or Boards to take alcoholic beverages out of bond. Similarly, tobacco, cigars and cigarettes which are not stamped and duty paid are secured in bond. In addition to these warehouses, there are those in which no manufacturing or production is carried on, but which are being used solely for the storage of goods upon which duty has not been paid. Goods are stored in these warehouses usually for the purpose of rapid distribution and for delivery as ships' stores.

Spirits, Tobacco and Malt in Bond.-Table 14 shows the quantities of distilled liquor, tobacco, cigars and cigarettes in bond in recent years. The yearly inventory of breweries showed a decrease of total gallonage of beer in stock from $21,661,000$ in 1950 to $20,756,358$ in 1951.
14.-Distilled Liquor, Tobacco, Cigars and Cigarettes in Bond, Quarterly, 1948-52

[^292]In Table 15 the quantities of spirits, malt and tobacco products that have been released from bond for consumption are shown for the years 1943-52. These figures, supplied by the Department of National Revenue, are the most reliable data for the consumption of these bonded products.

## 15.-Spirits, Malt Liquor, Malt and Tobacco taken out of Bond for Consumption Years Ended Mar. 31, 1943-52

Nore.-Figures for the years prior to 1900 are given in the 1916-17 Year Book, p. 528; for 1901-10 in the 1933 Year Book, p. 840; for 1911-21 in the 1938 Year Book, p. 855; for 1922-29 in the 1945 edition, p. 936; and for 1930-42 in the 1947 edition, p. 964.

${ }^{1}$ Includes snuff.
Storage of Wines.-The wine industry is confined to a few localities such as the Niagara Peninsula in Ontario and the Okanagan Valley in British Columbia. Firms manufacturing native wines are not bonded, as far as the Federal Government is concerned, nor is wine in storage for maturing placed in bond. The only goods warehoused in bond in connection with wineries are their sugar supplies and supplies of grape spirit distilled by the distilleries and held by the wineries for fortifying their wines. Native wine produced and placed in storage for maturing and blending for the years 1946-50 was reported as follows:-

|  | Year | Ontario | Other Provinces | Total |
| :---: | :---: | :---: | :---: | :---: |
| 1946.. | $\ldots . . . . . . \mathrm{gal} .$ | $\begin{aligned} & 5,056,564 \\ & 3,180,465 \end{aligned}$ | $\begin{aligned} & 476,917 \\ & 369,498 \end{aligned}$ | $\begin{aligned} & \mathbf{5}, 533,481 \\ & 3,549,963 \end{aligned}$ |

## Section 4.-Merchandising and Service Establishments*

A complete coverage of the multiplicity of establishments making up Canada's distributive system is attempted only in the Censuses. Some studies were made in the late 1920's, but results were incomplete and the Censuses of 1931, 1941 and 1951 represent the only complete analyses of the merchandising and services fields. Vol. X of the Census reports for each year contains information on retail establishments, and comprehensive material on the extent of the wholesale and services trades appears in Vol. XI of the reports. Summary census statistics are presented at pp. 596-621 of the 1945 Year Book and at pp. 527-536 of the 1943-44 edition.

[^293]Census results have been supplemented by statistical measurements, based mainly on sample surveys, of certain features of the distributive trades in other than census years. In an effort to meet the increasing needs of business, industry and government for information on the Canadian market, its nature and characteristics, considerable expansion and refinement of the statistical services has been carried out and plans are in progress to meet the requirements for information in greater geographical detail. Results of the Census of 1951 will be known in 1953 following a mail survey undertaken in 1952.

## Subsection 1.-Wholesale Trade Statistics

Sales Indexes.-Indexes of wholesale trade sales date from 1935. Data are prepared from reports supplied by a sample of firms in nine principal trades. The reporting panel is confined to wholesalers proper, i.e., those establishments that perform the complete functions of wholesalers and jobbers, buying merchandise in large quantities on their own account and selling principally to retailers in broken lots. The individual kinds of wholesale business for which results are compiled are those that handle the more common types of consumer merchandise.

Wholesale sales in Canada for the nine trades surveyed were 10 p.c. higher in 1951 than in 1950 and 239 p.c. above the average annual sales for the same trades in the base period 1935-39. The average index of sales for 1951 stood at 338.6 compared with $307 \cdot 3$ in 1950 and $142 \cdot 0$ for 1941 . These indexes represent increases in dollar volume of sales and are not adjusted for price changes.

All provinces recorded increased sales in 1951 over 1950, with British Columbia and Ontario showing gains in excess of 10 p.c. Wholesalers' sales of automotive equipment showed the largest increase over 1950 with a gain of 19 p.c.; wholesalers' sales of footwear advanced 16 p.c. and of hardware 13 p.c. _ Other trades registered increased sales ranging down to 1 p.c.

## 16.-Annual Indexes of Wholesale Trade Sales by Economic Areas and by Kinds of Business, 1944-51

(1935-39 $=100$. Exclusive of Newioundland)

MONTHLY INDEXES OF WHOLESALE SALES SELECTED TRADES

## Subsection 2.-Retail Trade Statistics

From Canadian fields and farms, forests, mines, stockyards, factories and mills, from foreign lands through Canadian Atlantic and Pacific seaports, goods travel through innumerable channels to converge finally on the retail outlets before being dispersed again, but this time in small parcels made up to individual tastes for the consumer trade. Thus, the retailer occupies an important place between producer and consumer and, in a real sense, is the keystone of the distribution arch, for it is through retail outlets that every necessary operation of production for consumption is brought to its intended conclusion.

Retail Sales.-The volume of retail sales in Canada reached a peak in 1951 with total trade estimated at $\$ 10,445,061,000,10 \cdot 3$ p.c. higher than that attained in 1950 when sales totalled $\$ 9,467,400,000$. Corrections have not been made for changes in prices of consumer goods and dollar sales are, therefore, not indicative of changes in actual quantities of merchandise sold.

In 1951, motor-vehicle trade, with an aggregate volume of $\$ 1,811,846,000$, spearheaded the upward sales movement in recording a gain of $16 \cdot 6$ p.c. over 1950. Sales for grocery and combination grocery and meat stores amounted to $\$ 1,877,672,000$ and gained $15 \cdot 0$ p.c. over 1950 . Department stores ranked third with a total of $\$ 901,717,000$ and a gain of $3 \cdot 3$ p.c. over the previous year. The majority of the remaining trades showed increased sales in 1951 over 1950 with country general stores, variety stores and garages and filling stations in excess of 10 p.c. Estimated sales were lower in 1951 for furniture, appliance and radio, and jewellery stores.

All provinces recorded increased sales volumes in 1951, Saskatchewan showing the greatest gain at $12 \cdot 3$ p.c. above 1950 .

## RETAIL SALES IN CANADA

Retail Chain Stores.-Chain-store sales in 1950 amounted to $\$ 1,559,693,100$, a gain of 10 p.c. compared with the 1949 total of $\$ 1,420,080,800$. Other advances in the operation of retail chain stores in 1950 in relation to 1949 were: salaries and wages 12 p.c.; accounts outstanding 30 p.c.; store stocks 29 p.c.; and warehouse stocks 28 p.c. Sales of 7,155 chain-store units in 1950 made up $16 \cdot 5$ p.c. of all retail sales in Canada.

${ }^{1}$ Includes other kinds of business not shown separately. $\quad{ }^{2}$ Department stores excluded.
Department Stores.-This series is interesting not only because department stores account for nearly 9 p.c. of total retail trade, but because the diversity of merchandise handled gives some indication of the direction of consumer purchasing. Department store sales in 1951 reached an all-time high of $\$ 901,717,000$, an increase of $3 \cdot 3$ p.c. compared with the 1950 total of $\$ 872,380,000$. Alberta and Saskatchewan recorded the largest increases over 1950 with gains of $7 \cdot 6$ p.c. and 6.8 p.c., respectively. Year-end inventory holdings (Dec. 31, 1951) of department stores amounted to $\$ 182,570,000,2 \cdot 9$ p.c. above the level of those held on the same date of 1950 , when stocks totalled $\$ 177,387,000$.
20.-Department Store Sales and Stocks, by Type of Department, 1950 and 1951

| Type of Department | Sales |  |  | Stocks at Dec. 31 |  |  |

Operating Results of Retail Stores.-The operating results series is conducted on a biennial basis-retail chain stores and wholesale trade were covered for 1947 and 1949, and independent retail stores were last surveyed on 1950 operations. The latest available data on retail chain stores (1949) appear in the 1951 Year Book, pp. 848-849, and are not repeated here.

Retail Independent Stores.-Studies concerning the operating ratios of independent retail merchants have been carried on over an extended period. Such statistics have been gathered to assist merchants in assessing the efficiency of various phases of their operations, to provide estimates of the contribution made to national income by unincorporated retail stores and to assist the prospective entrant into any of the retail trades in estimating his opportunities and prospects of success. Since the publication of recent detailed studies, their value has become evident as a basis for marketing research and as essential elements in the understanding of the structure of retail distribution.

Attention has been focussed on the relationships between net sales, gross trading profit or margin, operating expenses and net profit. Expenses have been examined in some detail to include salaries and wages paid to employees; advertising; store supplies; losses on bad debts; tax and insurance costs; rentals; heat, light and power used; repair and maintenance expense; depreciation; and other items.

Table 21 reviews some of the operating features of various trades based on 1950 averages.

## 21.-Operating Ratios in Retail Trade, by Kinds of Business, 1950

Nore.-All figures except stock turnover are percentages of net sales.

[^294]Retail Consumer Credit.-Studies on retail consumer credit, an outgrowth of special inquiries conducted by the Wartime Prices and Trade Board during the period of wartime controls, have been continued by the Dominion Bureau of Statistics since 1945. Only those trades in which the extension of credit plays an important part were brought within the scope of these surveys.

Prior to 1951, the changes in credit sales and accounts outstanding were presented in index form. In 1951, the series was revised to show estimated dollar value back to 1948. Results of consumer spending are shown here in dollar form from 1948 to the latest available quarterly period.

Table 22 shows dollar estimates of cash, instalment and charge sales by quarterly periods from 1948 to the end of 1951, and percentage composition of sales and receivables. The movement in sales and accounts receivable of retail consumer credit are shown in Table 23.
22.-Quarterly Dollar Estimates and Percentage Composition of Retail Consumer Credit for All Trades, 1948-51

## Subsection 3.-Statistics of Service Establishments

Theatres.-Receipts from the exhibition of motion pictures in Canada, in 1950, amounted to $\$ 86,713,357$ with an additional $\$ 11,841,704$ collected in amusement taxes. These figures include all types of operation-regular theatres, drive-in theatres, community enterprises and itinerant operators. The total number of paid admissions was $242,396,679$.

Drive-in theatres increased in number from 30 in 1949 with receipts (excluding amusement tax) of $\$ 1,392,760$ to 62 in 1950 with receipts of $\$ 2,290,679$. Itinerant exhibitors gave performances in 906 towns and villages in 1950 from which the receipts (excluding taxes) were $\$ 463,605$ and the number of paid admissions was 1,571,697.

Table 24 shows receipts, by provinces, of regular theatres and community enterprises. These two types are combined here for continuity of the statistics shown in earlier editions of the Year Book. Significant statistics concerning the four types of motion picture entertainment are also summarized in Table 25.

## 24.-Motion Picture Theatres and Receipts, by Provinces, 1941 and 1947-50

Nore.-Itinerant operators and legitimate theatre operators are not included in these figures. Receipts are exclusive of amusement taxes.

Power Laundries, Cleaning and Dyeing Plants.-There were 323 power laundries and 919 cleaning and dyeing plants operating in Canada in 1950. These two industries provided services to the value of $\$ 86,836,564$ during the year accounted for as follows: cleaning $\$ 46,884,466$, laundry $\$ 30,567,192$, dyeing $\$ 1,471,789$, linen rentals $\$ 4,299,832$ and other services $\$ 3,613,285$.

${ }^{1}$ Includes salaried employees and wage-earners. In addition, in power laundries there were 81 male and 12 female proprietors who received salaries of $\$ 214,602$ and 149 male and 15 female proprietors who received no regular salary in 1950 . In the dry cleaning and dyeing plants, there were 248 male and 25 female proprietors who received salaries of $\$ 668,550$ and 714 male and 56 female proprietors who received no regular salary in 1950. Territories.

Hotels.-The first survey of hotels since the 1941 Census was made for 1949. This was repeated for 1950 and will also form part of the results of the 1951 Census of Distribution. The 1949 data on hotels have been revised to exclude publichouses, originally included with Ontario hotels. In some instances, businesses were included as hotels in 1949 due to improper description, i.e., a large tourist home described as a lodge or seasonal resort. The decrease in number of hotels in 1950 may be attributable in some provinces to certain refinement of classification.

Of the 5,169 hotels in Canada in 1950, 4,204 operated on a full-year basis and 965 as seasonal hotels. Gross revenue of full-year hotels amounted to $\$ 304,287,000$ and of seasonal hotels $\$ 18,103,000$.

The total receipts of hotels in 1950 were derived from the following sources: $\$ 162,815,000$ from sales of beer, wine and liquor; $\$ 75,842,000$ from room rentals; $\$ 58,586,000$ from meal sales; $\$ 22,490,000$ from sales of merchandise and from other sources; and $\$ 2,657,000$ from leased concessions. Expenditure amounted to $\$ 297,104,000$, including $\$ 73,950,000$ paid in salaries and wages.

${ }^{1}$ Includes the Yukon and Northwest Territories.

## Subsection 4.-Miscellaneous Merchandising Statistics

Farm Implement Sales.-Manufacturers' and importers' sales of farm implements and equipment amounted to $\$ 218,187,120$ in 1950 , as compared with $\$ 217,089,685$ in 1949. These values are mainly at wholesale prices. It is estimated that, in terms of retail prices, Canadian farmers spent approximately $\$ 263,000,000$ on implements and equipment in 1950. These figures do not include expenditure for trucks, machine parts, binder twine or other farm supplies. Sales of repair parts totalled $\$ 29,862,034$ in 1950 , at wholesale prices, or an estimated $\$ 39,000,000$ at the retail level.

## 28.-Farm Implement and Equipment Sales, by Provinces, 1949 and 1950

Note.-Values are mainly at wholesale prices.

Sales of New Motor-Vehicles.-The sales of new motor-vehicles dropped from a record high of 429,695 units in 1950 to 385,648 units in 1951. The decrease was accounted for by passenger-car sales, the number of trucks and buses sold in 1951 being higher than in any previous year.
30.-Retail Sales of New Motor-Vehicles, 1937-51

Finance Company Operations.-In 1950, 109 finance companies were active in the financing of consumer, commercial and industrial goods in Canada. Total financing amounted to $\$ 429,000,000$ in 1950,51 p.c. greater than the 1949 total of $\$ 285,000,000$. Consumer goods continued to account for an increasingly high
proportion of total financing. The 71 p.c. which this cagetory of goods formed of the total in 1950, while higher than in the three previous years, was still below the 1941 proportion of 77 p.c.

${ }^{1}$ Includes Newfoundland in 1949 and 1950.
Balances outstanding on retail instalment paper have mounted sharply in recent years and the total at the end of 1950 was $\$ 293,000,000,59$ p.c. above the year-end total of $\$ 184,000,000$ in 1949 . On consumer goods, outstanding balances totalled $\$ 202,000,000$ at the end of 1950 compared with $\$ 116,000,000$ at Dec. 31, 1949.

Table 32 gives a record of the financing of motor-vehicles for the ten years ended 1951. The figures do not agree exactly with those in Table 31 because they were obtained as a product of supplementary monthly surveys and are subject to reporting inconsistencies.

## Section 5.-Co-Operative Organizations*

Each year since 1932 co-operative organizations in Canada have reported voluntarily to the Department of Agriculture on their business operations. Reports received from such organizations for the crop year ended July 31, 1951, numbered 2,348 and included returns from co-operatives of all types. The number reporting in 1951 was 147 less than in 1950 but these were mainly small organizations and it is estimated that the returns received account for over 70 p.c. of all co-operatives and over 90 p.c. of the total volume of business. Membership reported in 1951 was $1,195,034$ and volume of business totalled $\$ 988,459,832$. Both these figures are less than those reported for 1950. The drop in volume of business for 1951 is attributable mainly to the large quantity of low grade wheat marketed by the western grain co-operatives as a result of the early frosts which damaged the 1950-51 crop.

Volume of business reported by the fishermen's and service co-operatives increased in 1951 over 1950 although the number of associations and total membership in these two groups decreased slightly.

Developments, 1949-50 and 1950-51.-Beginning in September 1951, the University of Saskatchewan offered full credit courses in the management and administration of co-operatives in the degree course of the School of Commerce. For the same scholastic year the University of Ottawa offered a degree course in co-operation leading to the degrees of B.A. (Co-op) and B. Comm. (Co-op).

During 1950, the Province of Saskatchewan made a major revision in its co-operative legislation and in Ontario all medical services co-operatives were placed under the jurisdiction of the Provincial Superintendent of Insurance.

[^298]In the Province of Newfoundland a provincial co-operative union was organized with the assistance and encouragement of the local government and later this union became affiliated with the Co-operative Union of Canada.

Marketing.-The total value of farm products marketed by co-operatives in Canada amounted to $\$ 769,264,824$ for the crop-year ended July 31, 1951. This figure is less by $\$ 34,300,000$ than the total reported for the same period in 1950 . Decreases were noted in sales of dairy products, fruits and vegetables, grain and seed, eggs and poultry and tobacco. The largest decrease was, of course, in grains and seeds for the reason noted on p. 899. The decrease was offset to a considerable extent by a substantial increase in the sales volume of co-operatives handling live stock.

It is estimated that about 34 p.c. of all farm products marketed commercially in Canada, in 1951, was handled by co-operatives. For the previous year (1950) the estimated proportion was slightly over 35 p.c. For the various commodities concerned the percentages for 1951 are as follows, with similar figures for 1950 shown in parentheses: dairy products $25.8(27.9)$; live stock $21.4(18 \cdot 7)$; poultry and eggs $12 \cdot 2$ ( $15 \cdot 3$ ); grain and seeds $56 \cdot 9(60 \cdot 6)$; fruits and vegetables $27 \cdot 1$ (35.8); tobacco $95 \cdot 6(94 \cdot 4)$.

Merchandising.-Although Canadian co-operatives are prominent in the field of marketing agricultural products they also supply farmers and consumers with production supplies and consumer goods. This phase of co-operative activity has become more important in the last decade but has not yet assumed an important position in the over-all statistics of wholesale and retail business. No authoritative estimate exists of the proportion of wholesale and retail business handled by cooperatives but it is estimated at about 2 p.c.

Total sales value of merchandise and supplies handled by co-operatives in Canada, in 1951, amounted to $\$ 209,985,815$, representing an increase of almost $\$ 4,000,000$ over the total reported in 1950 . The main increases were reported in sales of food products, petroleum products, feed, fertilizer and spray material. Minor decreases were noted in sales of machinery and equipment and in sales of clothing and home furnishings.

Wholesaling.-During 1950-51, 11 co-operative wholesales reported on their business and operations. These wholesales, with total assets amounting to $\$ 25,000,000$, supplied and serviced 1,766 co-operative associations.

On behalf of their members, the wholesales in 1951, marketed almost $\$ 80,000,000$ of farm products and, in addition, sold to their members $\$ 61,000,000$ in farm supplies and consumer goods. Total volume of business for 1951 amounted to $\$ 141,478,212$, an increase of $\$ 13,000,000$ over the total reported for 1950 . Feed and fertilizer sales by co-operative wholesales in Canada in 1951 amounted to $\$ 27,600,000$ and accounted for about 40 p.c. of the total supplies handled.

All the wholesales in Canada are federated into Interprovincial Co-operatives Limited. This organization buys on behalf of the member wholesales and provides a medium for co-ordination and service. Interprovincial Co-operatives Limited also distributed flour from the co-operative flour-mill at Saskatoon, Sask., and, in addition, owns and operates a bag factory at Montreal, Que. In 1951, a coffee roasting and blending plant was opened by this organization at Vancouver, B.C., and "co-op" brand coffee is now being supplied to co-operative wholesales and local associations in Western Canada.

Retailing.-Sales of food products in 843 co-operative retail stores amounted to $\$ 54,425,000$ during $1950-51$; clothing and home furnishings amounting to $\$ 7,726,000$ were handled by 543 outlets; and feed and fertilizer sales of over $\$ 18,576,000$ through 397 stores. Saskatchewan had the largest number of retail outlets, followed by Alberta and Quebec.

${ }^{1}$ Includes other revenue.
Service Co-operatives.-Co-operatives are organized throughout Canada to provide members with distinct services such as seed-cleaning, transportation lodging, rural electrification, etc. Most of these types of co-operatives are fairly new and many are operated as special departments of the larger and older marketing and purchasing associations. The most important co-operatives in recent years are those being organized in Quebec and Alberta to provide electric power to rural families. Housing co-operatives are especially prominent in Nova Scotia and Quebec. Transportation co-operatives exist mainly in British Columbia.

In 1951, reports were received from 324 service co-operatives throughout Canada. Membership in these associations totalled 216,779 and the total revenue from services rendered amounted to $\$ 9,281,279$.

Fishermen's Co-operatives.-Fishermen on the Atlantic and the Pacific Coasts are organized co-operatively for the marketing of fish and fish products and for the purchasing of fishermen's supplies and consumer goods. In recent years, co-operative organizations and associations of fishermen on the Great Lakes and on the inland lakes of Manitoba and Saskatchewan have been reported and are making good progress.

In 1951, 96 fishermen's co-operatives reported a total membership of $\mathbf{1 5 , 4 1 2}$ and a total volume of business amounting to $\$ 18,809,860$ : over one-half of this volume was reported by co-operatives in British Columbia.

Insurance.-Farmers' mutual fire-insurance companies are the oldest form of co-operative endeavour among farmess in Canada. During 1950, there were 404 such companies in operation. The net amount of insurance at risk was almost $\$ 2,500,000,000$ and the net losses paid in 1950 amounted to $\$ 6, \$ 00,000$.

Many other companies in Canada are now operating, on a co-operative basis, in the fields of life insurance, casualty insurance, marine insurance and bonding for credit union treasurers and co-operative managers. The most recent addition to the list is the Co-operative Fire and Casualty Insurance Company which obtained a charter from the Federal Government in 1951 and commenced business in 1952.

## Section 6.-Interprovincial Freight Movements*

Statistics on interprovincial trade are difficult to collect because there are no barriers to this trade. The only comprehensive statistics available are the loadings and unloadings of freight carried by the railways. Railway traffic is segregated into 76 classes of freight and the differences between loadings and unloadings are the imports and exports by rail for the respective provinces. Freight can, however, be imported by rail and exported by water, as is the case with western grain moved to the Ontario ports of Fort William and Port Arthur. Consequently, the statistics of Table 37 must not be taken as a measure of total interprovincial trade: these figures indicate interprovincial movement of railway freight which is one aspect only of that trade.

[^302]
## PART II.-GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

During the post-war period, the elaborate system of government control of trade that the war effort made necessary was gradually relaxed (see the 1948-49 Year Book, pp. 837-841) until, by the beginning of 1949 , only those measures to protect domestic requirements and prevent the forcing upward of prices in the Canadian market remained; since then even these have practically disappeared.

## Section 1.-Controls Affecting the Handling and Marketing of Grain

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners, which since 1912 has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act, 1935. The former is a quasi-judicial and administrative body which, through the powers vested in it in matters of interprovincial transportation and patents and copyrights, gives the Federal Government complete power to control the handling of grain; it has no power or duties in respect of grain prices. The Canadian Wheat Board, which began to function in the autumn of 1935, was a natural outgrowth of government stabilization measures that were taken during the depression years of the 1930's in regard to the marketing of grain crops. During this period the Government acquired a considerable quantity of wheat and, in the 1935 session of Parliament, legislation was passed to serve the double purpose of disposing of the holdings so acquired and, at the same time, arranging for the marketing of new crops.

An account of the organization and functions of the Board of Grain Commissioners appears at pp. 481-482 of the 1941 Year Book. An article on the operations of the Canadian Wheat Board is included in the 1939 Year Book, pp. 569-580, and concluded in the 1947 edition.

## Section 2.-Combinations in Restraint of Trade*

Federal legislative measures for aiding and regulating trade include specific prohibitions of operation against the public interest by monopolies and similar commercial combinations. Monopolistic trade arrangements tending to eliminate competition in price, supply or quality of goods, and thereby to restrain trade unduly, are illegal under the Combines Investigation Act and Sect. 498 of the Criminal Code. These laws are designed to promote reasonable competitive opportunities for the expansion of production, distribution and employment.

The first federal legislation in this field was enacted in 1889 and is still effective in amended form as Sect. 498 of the Criminal Code. Legislation providing for investigation of trusts or combines was first enacted in 1897 as part of the Customs Tariff Act. In 1910 a separate Combines Investigation Act was passed and further legislation was enacted in 1919 and 1923.

The Combines Investigation Act.-The Combines Investigation Act (R.S.C. 1927, c. 26), enacted in 1923 and amended in 1935, 1937, 1946, 1949, 1950, 1951 and 1952, provides for the investigation of trade combinations, monopolies, trusts or mergers alleged to have operated to the detriment of the public through limiting production, fixing or enhancing prices, limiting competition or otherwise restraining trade. Organizations of this nature are defined by the Act as 'combines', and participation in the formation or operation of a combine is an indictable offence. In line with recommendations contained in a final report by the Committee to Study Combines Legislation, certain amendments effective Nov. 1, 1952, revised the administrative organization by separating into two parts the functions formerly exercised by the Commissioner of the Combines Investigation Act with an agency for investigation and research and a board of three members to appraise the evidence obtained in investigations and report thereon. The former Commissioner of the Combines Investigation Commission became the new Director of Investigation and Research, with authority to initiate investigations respecting practices alleged to be offences under the Combines Investigation Act or under Sect. 498 or 498A of the Criminal Code which concern offences related to those covered by the Combines Investigation Act. The board is known as the Restrictive Trade Practices Commission and the following persons have been appointed as members: C. Rhodes Smith, Q.C., Chairman, formerly Attorney-General of Manitoba; Guy Favreau, a member of the Quebec Bar; and A. S. Whiteley, an economist who served as Deputy Commissioner under the Combines Investigation Act. Other amendments removed limitations on possible fines and permitted the Courts to prohibit continuation or repetition of an offence. Amendments made to the Combines Investigation Act in 1951 adopted recommendations contained in the interim report of the Committee to Study Combines Legislation by prohibiting the practice of resale price maintenance.

The report to the Minister of Justice of an investigation into the manufacture, distribution and sale of matches in Canada, submitted in December 1949, alleged that a combine by way of merger, trust or monopoly existed in the wooden match industry in Canada. Four formal charges were preferred under the Combines Investigation Act. The trial of the first charge concluded at Montreal in May 1951 with the five corporation defendants being convicted and fined a total of $\$ 85,000$

[^303]and costs. The fine included imposition of the maximum penalty of $\$ 25,000$ each against the Eddy Match Company Limited and Valcourt Company Limited, with Commonwealth Match Company Limited being fined $\$ 15,000$ and two other defendants controlled by the Eddy Match Company Limited being fined $\$ 10,000$ each. The costs and expenses were ordered to be paid by the five defendants on a similarly apportioned basis. An appeal against judgment and sentence is pending and will probably come before the courts in January 1953. Trial of the remaining three charges is awaiting disposal of the appeal.

In a report of a special commissioner made in November 1948, a combine was alleged to exist in the bread-baking industry in the Provinces of Saskatchewan, Alberta and British Columbia. Prosecution was instituted in Alberta on the direction of the Minister of Justice against McGavin Bakeries Limited, two McGavin Limited companies, Canadian Bakeries Limited, Weston's Bread and Cake (Canada) Limited, and Edmonton City Baking Limited. On Oct. 2, 1951, all six bakery corporations charged were found guilty, as charged under Sect. 498 of the Criminal Code, with total penalties of $\$ 30,000$ and costs being imposed. An appeal has been filed against the judgment. Costs of the Crown have, in part, been assessed by the Taxing Officer, but it is expected that an application will be made to the trial judge for directions in respect of items not yet taxed.

A report was submitted to the Minister of Justice on May 21, 1952, alleging the existence of combines in six divisions of the rubber industry. The report named the Rubber Association of Canada and nineteen rubber companies as being members of one or more of the alleged combines. Decision to prosecute was announced by the Minister on Nov. 7, 1952.

On July 7, 1952, a report was submitted to the Minister advising that, at the time of commencement of inquiry, a combine existed on the part of certain members of a bakery workers' union to prevent or lessen competition in the distribution and sale of bread in the Winnipeg area. On Aug. 29, 1952, in view of the particular facts of the case and the additional circumstance that no useful purpose would be served by commencing a prosecution against the members of the local union, the Minister stated that it was not the intention of the Department of Justice to commence proceedings against the parties named in the report.

Another report, comprising the results of an investigation into the fine paper industry was submitted to the Minister of Justice on Oct. 23, 1952. The latter report named seven manufacturers and 37 fine paper merchants as having been parties or privy to or knowingly assisted in the operation of a combine or combines within the meaning of the Combines Investigation Act. On Nov. 6, 1952, the report was made public by the Minister, who stated that as soon as he had examined it carefully and received the opinion of counsel he would make a further announcement as to whether proceedings would be instituted against parties to the alleged combine.

During 1951 and 1952 a variety of matters was disposed of on preliminary inquiry while in a number of other cases investigations were proceeding. Numerous consultations and interviews were held with individuals and representatives of business groups interested in discussing the possible application of the Act to conditions encountered or to arrangements being considered. During 1952, the Commission has represented Canada at meetings of the Ad Hoc Committee on

Restrictive Business Practices, established under resolution of the United Nations Economic and Social Council to formulate proposals for an international convention to be considered by the Economic and Social Council.

## Section 3.-Trade Standards*

The Standards Division of the Department of Trade and Commerce consolidates, under one Director, the administration of the Electricity Inspection Act, the Gas Inspection Act, the Electricity and Fluid Exportation Act, the Precious Metals Marking Act, and the Weights and Measures Act.

Commodity Standards.-On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising.

In brief, the use of the National Standard is voluntary, and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. In addition, where manufacturers label descriptively any commodity or container, it must be labelled accurately to avoid public deception. One such regulation of interest applies to the labelling of fur garments, and has established itself as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (c. 26), commodities composed of gold, silver or platinum may be marked with a quality mark which describes accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada, or for which application for registration has been made, must also be applied. Gold-plated, silver-plated or platinum-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Division is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale and in checking the marks applied.

Weights and Measures.-The Weights and Measures Act prescribes the legal standards of weight and measure for use in Canada. Responsibilities under the Act require control of the type of all weighing and measuring devices used for commercial purposes, their periodic verification and surveillance directed towards the elimination of sales by short-weight or short-measure.

The number of inspections made in the year ended Mar. 31, 1951, was 481,088 , compared with 485,452 in 1949-50. The more important inspections comprised the following: weighing machines, including scales of all kinds, 231,431; measuring machines for liquids, 68,328 ; other weights, 128,454 ; other measures, 52,875 . Total expenditure was $\$ 576,041$ in 1950-51, compared with $\$ 512,539$ in $1949-50$ and total revenue $\$ 499,455$ compared with $\$ 472,282$.

Electricity and Gas Inspection.-Responsibilities of the Standards Division under the Electricity Inspection Act and the Gas Inspection Act comprise the control of the types of electricity meters and gas meters used throughout Canada, and the testing and stamping of every meter used for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 23 districts for administration of the two Acts, and staff numbers 156. During the year ended Mar. 31, 1952, 910,068 electricity and gas meters were tested as compared with 920,162 in the preceding year. Revenue derived from the testing amounted to $\$ 657,548$ and expenditure to $\$ 549,048$.

[^304]1.-Electricity and Gas Meters in Use, Years Ended Mar. 31, 1943-52

${ }^{1}$ Includes Newfoundland.
The Electricity and Fluid Exportation Act came into force in 1907. Under its provisions no electric energy or fluid, whether liquid or gaseous, may be exported from Canada without a licence. Total exports of electric energy during the year ended Mar. 31, 1952, amounted to $2,478,022,630 \mathrm{kwh}$. There was also a small export of natural gas and crude oil.

## Section 4.-Patents, Copyrights and Trade Marks*

Letters patent are issued subject to the provisions of the Patent Act, 1935 (25-26 Geo. V, c. 32) as amended by 11 Geo. VI, c. 23. Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.
2.-Patents Applied for, Granted, etc., Years Ended Mar. 31, 1946-51

| Item | 1946 | 1947 | 1948 | 1949 | 1950 | 1951 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Applications for patents........... No. | 14,778 | 16,922 | 16,585 | 12,751 | 13,172 | 14,324 |

| Fees received, net................. \& | 421,539 | 452,193 | 631,929 | 625,451 | 636,772 | 661,069 |

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 12,542 in 1923 and has remained between 6,500 and 8,600 for the last ten years. Of the 8,461 patents granted in 1950-51, 6,289 or 74 p.c. were to inventors resident in the United States, 627 to Canadian residents, 929 to residents of the United Kingdom and other Commonwealth countries. Residents of France obtained 131, of Switzerland 109, of Holland 131, and of other countries 245.

[^305]Printed copies of patents issued from Jan. 1, 1949, to date are available at a nominal fee. The Canadian Patent Office Record ives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1872 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Hungary and Mexico.

Copyrights, Industrial Designs and Timber Marks.-Registration of copyright is governed by R.S.C. 1927, c. 32, and applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Copyright Act of 1921 (consolidated in R.S.C. 1927, c. 32) sets out, in Sect. 4, the qualifications for a copyright and, in Sect. 5, its duration: "Copyrights shall subsist in Canada . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol. . . or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death".

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States of America, as well as in Canada.

Protection of industrial designs and of timber marks is afforded under the Trade Mark and Design Act (R.S.C. 1927, c. 201) and amendments, and the Timber Marking Act (R.S.C. 1927, c. 198) and amendments. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office and information regarding them is published in the Canadian Patent Office Record.

## 3.-Copyrights, Industrial Designs and Timber Marks Registered, Years Ended Mar. 31, 1946-51

Trade Marks and Shop Cards.-The Trade Marks Office, a Branch of the Department of the Secretary of State, is charged with the administration of the Unfair Competition Act, 1932, which repealed all previous Acts governing trade marks, and the Shop Cards Registration Act, which came into force on Sept. 1, 1938. Applications for registration of trade marks and shop cards should be addressed to the Registrar, Trade Marks Office, Ottawa.

A register of Trade Marks is kept, in which, subject to the provisions of the Act, any person may cause to be recorded any trade mark he has adopted and notification of any assignments, transmissions, disclaimers and judgments relating
to such trade mark. In order that the public may be kept informed in the matter of trade-mark registration, a list of registered trade marks appears in the Canadian Patent Office Record which is issued weekly.

The Shop Cards Registration Act is designed to afford a measure of protection to organizations, such as trade unions, that were able formerly to register their particular designations as Union Labels under the Trade Mark and Design Act. Registrations under the Act may be renewed every 15 years.

## 4.-Trade Marks and Shop Cards Registered, Years Ended Mar. 31, 1946-51

## Section 5.-Subventions and Bounties on Coal*

Subventions have been regulated during past years by Orders in Council authorizing the payment of certain rates of assistance, in respect of the various movements of coal specified therein, from moneys voted annually by Parliament for that purpose. It has not been considered practicable to fix subvention aid by statute owing to the frequent changes in the competitive situation.

## 5.-Expenditure for Subventions, by Provinces, 1946-51

| Province | 1946 | 1947 | 1948 | 1949 | 1950 | 1951 |

The Coke Bounty Act, 1930 (20-21 Geo. V, c. 6), implemented one of the recommendations of the Royal Commission on Maritime Claims and was approved by Parliament on May 30, 1930. The bounty is paid on Canadian coal converted to coke and used in the manufacture of Canadian iron and steel and places the coal on a basis of equality with imported coal.

[^306]Bounties paid under this authority for the five years 1947-51 were as follows:-

## Section 6.-Control and Sale of Alcoholic Beverages*

The provincial liquor control Acts have been constituted to establish provincial monopolies of the retail sale of alcoholic beverages, with the practical elimination therefrom of private profit. Partial exception is made in the retail sale of beer by brewers, or others which certain provinces permit, while reserving regulative rights and taxing such sales heavily. The provincial monopoly extends to the retail sale and not to the manufacture of alcoholic beverages. The original liquor control Acts have been modified from time to time as deemed advisable.

The distilled liquor industry produces not only beverage spirits but also industrial alcohol such as (1) unmatured, denatured by distillers, used in anti-freeze and numerous other items, and (2) unmatured, non-denatured, used in chemical compounds, pharmaceutical preparations and vinegar. Production of industrial alcohol (denatured and non-denatured) totalled $6,474,056 \mathrm{pf}$. gal. in 1950, a decrease of $1,061,042 \mathrm{pf}$. gal. from 1949. Beverage spirits produced in 1950 and placed in bond for maturing totalled $15,147,458 \mathrm{pf}$. gal. as compared with $14,251,996 \mathrm{pf}$. gal. the previous year. Sales in 1950 of denatured alcohol for anti freeze, solvents, cleaning fluids, perfume manufacturing, etc., amounted to $3,835,517$ standard gal. as compared with sales of $3,538,803$ standard gal. in 1949. Sales of $3,548,958$ pf. gal. of non-denatured alcohol in 1950 were $1,070,503$ pf. gal. higher than in 1949. Beverage spirits sold (domestic and export sales) amounted to 18,209,143 pf. gal. in 1950 and $15,371,626 \mathrm{pf}$. gal. in 1949.

Materials used show important changes. Wheat was the major item during World War II but in 1950, owing to restrictions resulting from world food problems, consumption declined to only $1,432750 \mathrm{lb}$. from a peak of $402,535,232 \mathrm{lb}$. in 1944. Corn replaced wheat, increasing from $15,833,741 \mathrm{lb}$. in 1944 and $45,191,740 \mathrm{lb}$. in 1945 to $184,910,915 \mathrm{lb}$. in 1950. Wheat flour (alcomeal), introduced during the War and consumed to the extent of $77,268,410 \mathrm{lb}$. in 1944, ceased to be of importance in the later years.

Net Revenue from Liquor Control.-The provincial figures of net revenue shown in Table 6 include not only the net profit made by Liquor Control Boards or Commissions but also additional amounts of revenue received from permits, licences, etc., sometimes paid direct to the Provincial Governments.

The Federal Government, for the year ended Mar. 31, 1950, also collected in excise duties, customs duties, excise taxes, licence fees, etc., $\$ 80,749,812$ on spirits, $\$ 59,754,546$ on malt and malt products and $\$ 2,713,057$ on wines. $\dagger$ Corresponding collections for the year ended Mar. 31, 1951, were $\$ 92,217,597$ on spirits, $\$ 68,234,475$ on malt and malt products and $\$ 2,921,321$ on wines.

[^307]
## 6.-Net Revenue Received by the Provincial Governments from Liquor Control, by Provinces, Provincial Fiscal Years, 1942-51

Nore.-These figures are for provincial fiscal years ended on the following dates: N'f'ld. and P.E.I., Mar. 31; N.S., Nov. 30, 1942-50, Mar. 31, 1951; N.B., Oct. 31, 1942-50, Mar. 31, 1951; Que., Mar. 31; Ont., Mar. 31; Man., Apr. 30, 1942-46, Mar. 31, 194i-51; Sask., Apr. 30, 1942-46, Mar. 31, 1947-51; Alta., Mar. 31; and B.C., Mar. 31.

Apparent Consumption of Alcoholic Beverages.-Accurate measurement of the consumption of alcoholic beverages by Canadians is practically impossible since no separate record is kept of sales to non-residents of Canada. Temporary additions to the resident population through tourist travel are, at certain seasons, extremely large. In 1951, for example, about $25,000,000$ visitors crossed the International Boundary into Canada. Sales of alcoholic beverages to certain of these visitors undoubtedly reached considerable proportions.

In Tables 7, 8 and 9 an attempt is made to indicate the apparent consumption in Canada of spirits, beer and wine, respectively, on the basis of the quantities produced imported, exported, etc. It should be noted, however, that these figures take no account of increases or decreases in the quantities held in stock by the Liquor Control Boards or by licensees. For instance, the Boards may, in certain years, buy heavily to replenish stocks or create reserves; such purchases would unduly weight the consumption figures for those years.

Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown in Table 7 as entered for consumption are released from warehouses, duty paid, presumably for consumption for beverage purposes in Canada. Only a small part of the output of beer is placed in warehouses. The available supply, as shown in Table 8, is, therefore, made up of production, changes in warehouse stock and imports. The apparent consumption of native wines as shown in Table 9 is obtainable by dividing the rates of excise tax into the total tax collections.

## 7.-Apparent Consumption of Beverage Spirits, Years Ended Mar. 31, 1943-51

Nore.-Figures for the years 1924-40 are given at p. 532 of the 1941 Year Book and for 1941-42 at p. 891 of the 1950 edition. After 1942, a change was made in the method of computing apparent consumption of beverage spirits.

| Year | Entered for Consumption | Add Imports | Deduct Re-Exports of Imported Spirits | Apparent Consumption |
| :---: | :---: | :---: | :---: | :---: |
|  | pf. gal. | pf. gal. | pf. gal. | pf. gal. |
| 1943. | 3,445,872 | 1,284,116 | 69 | 4,729,919 |

## PART III.-BANKRUPTCIES AND COMMERCIAL FAILURES

The three Sections of this Part, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures and the statistics presented in each Section are not comparable.

Section 1 is limited to the administration of bankrupt estates by the Superintendent of Bankruptcy, under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can, therefore, be assumed that this applies in even greater degree to the more extended fields covered in Sections 2 and 3.

Section 2, on the other hand, is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) but not failures, sales, or seizures carried out apart from such federal legislation. The Dominion Bureau of Statistics figures include failures of individuals such as wageearners. For recent years, separate data are shown for insolvencies by wage-earners as distinct from industrial and commercial mortalities. The figures of assets and liabilities are estimates made by the debtor and, unfortunately, are not made uniformly. The human element enters into them to a considerable degree and they should, therefore, be accepted with reservations.

The statistics given in Section 3 are compiled by Dun and Bradstreet, Incorporated. This mercantile agency is interested primarily in credit information and their statistics include bankruptcies in general, insolvencies under provincial companies' Acts and such proceedings as bulk sales, bailiffs' sales, landlord's seizures, etc., when loss to creditors results. On the other hand, the statistics do not include assignments of individuals, so that, as a rule, the totals run lower than those in Section 2. Since between the years 1875 and 1919 the agencies, now Dun and Bradstreet, Incorporated, were the only source of figures of commercial failures, their statistics have an added value because they present a historical series back to 1915 though the basis of classification was changed after 1933 (see text preceding Table 8).

## Section 1.-Administration of Bankrupt Estates*

According to Sect. 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was passed by the Federal Parliament in 1869, and applied to the four original provinces. This Act was renewed by the Statutes of 1874 , c. 46 . In 1875, a new Insolvency Act (38 Vict., c. 16) applicable to the whole of Canada was passed, but was repealed in 1880. After this there was no federal legislation on the subject of bankruptey until the Bankruptcy Act; 1919, except that under the Winding-Up Act insolvency was one of the grounds upon which a company could be wound up. In addition to regulating bankruptcy proceedings, the Bankruptcy Act, 1919, contained a provision which enabled an insolvent person, prior to bankruptey, to make a proposal to his creditors. This provision was abrogated in 1923 but was subsequently restored, in part, by the Companies' Creditors Arrangement Act, 1933, which, however, restricted its operations to incorporated companies. Somewhat similar legislation was made available to farmers under the Farmers' Creditors Arrangement Act, 1934, subsequently

[^308]superseded by the Farmers' Creditors Arrangement Act, 1943. Federal insolvency legislation now comprises the Bankruptcy Act, 1949, the Farmers' Creditors Arrangement Act, 1943, the Companies' Creditors Arrangement Act and, to some extent, the Winding-Up Act. The two Arrangement Acts referred to above are designed to avert failure and the statistics in this Section and in Section 2, therefore, do not include proposals or arrangements under these Acts. When such proposals or arrangements are rejected by the creditors or fail in their purpose the proceedings may then come under the Bankruptcy Act, the bankruptcy provisions of the Farmers' Creditors Arrangement Act and, in certain circumstances, the Winding-Up Act. There are no provisions in the Companies' Creditors Arrangement Act for the liquidation or winding-up of insolvent companies.

The Bankruptcy Act, 1949, under which the Bankruptey Act, 1919, and amendments thereto was repealed, restores to all insolvent persons the right to make a proposal prior to bankruptcy. The summary administration provisions of the Act, while new to Canadians, are to be found in English and Australian bankruptcy legislation and somewhat similar provisions are contained in the United States Bankruptcy Act. The purpose of summary administration is to enable insolvent persons, other than corporations, having limited assets to obtain the benefits of the Act. A new principle has also been established in regard to the discharge of bankrupts and the Act provides that "the making of a receiving order against, or an assignment by, any person except a corporation operates as an application for discharge" unless a waiver is filed in court and served upon the trustee within the prescribed delays.

The administration of bankrupt estates is supervised by the Superintendent of Bankruptcy, first appointed in 1932, with the object of conserving as far as possible the assets of bankrupt estates for the benefit of the creditors.
1.-Assets, Liabilities, Assets Realized and Cost of Administration in Bankrupt Estates Closed, 1941-50, and by Provinces, 1950
Note.-Figures for 1933-40 are given in the 1947 Year Book, p. 846.

[^309]Table 1 continues and completes the series of statistics collected on estates closed under the Bankruptcy Act, 1919, and shown in the corresponding tables of previous Year Books. The figures given in Table 2 are those of estates closed under the new Bankruptcy Act, 1949. It will be noted that the Cities of Montreal and Toronto are no longer shown separately, figures for these centres being incorporated with the respective provinces.

## 2.-Assets, Liabilities, Assets Realized and Cost of Administration under the Bankruptcy Act 1949, for the year 1951

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Under General Provisions of the Act

Proposals Under Sect. 27 of the Act

[^310]Summary statistics of estates closed under the Farmers' Creditors Arrangement Act are available in previous editions of the Year Book beginning with the 1947 edition. From the time the Act first came into effect on Sept. 1, 1934, to the end of 1949 there were 885 assignments and 39 receiving orders, or a total of 924 estates closed. No assignments or receiving orders were reported under the Act in either 1950 or 1951.

## Section 2.-Returns under the Bankruptcy and Winding-Up Acts as Compiled by the Dominion Bureau of Statistics

As previously stated, the figures in this Section cover only the bankruptcies and insolvencies under federal legislation-the Bankruptcy Act and the Winding-Up Act-and include assignments of individuals such as wage-earners.

Under the Bankruptcy and Winding-Up Acts (R.S.C. 1927, cc. 11 and 213), certain documents relating to estates administered under these Acts have, since July 1920, been forwarded to the Dominion Statistician for statistical analysis. A statistical series began with 1923, except for the analysis by branches of business, which began in 1924. However, changes in the administration of bankruptcies introduced by the Bankruptcy Act of 1949 (see p. 915) affected the comparability of the series. In that Act, provision was made for proposals from insolvent persons and, since July 1950, agreements made under this method are not included with the statistics of bankruptcies. In Table 3 the number of proposals are shown so as to give a general impression of the trend.

## 3.-Bankruptcies and Insolvencies under Federal Legislation, by Provinces, 1942-51

## Section 3．－Industrial and Commercial Failures from Private Sources

A table on commercial failures for Canada，by classes，for the years 1915 to 1935 （and for Newfoundland for the years 1915－32），is given in the 1936 Year Book，p．969．In 1936，Dun and Bradstreet，Incorporated，from whose reports these figures were taken，adopted a new method of classification．The principal changes consisted of setting up a new group of construction enterprises，previously included in manufacturing，and a new class for commercial service．Real estate companies， holding，and other financial companies，and agents of various kinds were omitted． These changes had the effect of confining the failure records more to industrial and commercial lines of activity，and liabilities were reduced more in proportion to the number of failures，since the companies eliminated usually ran high in indebtedness． This series extends back to 1934 ．
8.-Industrial and Commercial Failures, by Classes, 1941-51, and by Provinces, 1951 (Source: Dun and Bradstreet, Incorporated)
Nots.-Figures for 1934-40 are given in the 1946 Year Book, p. 628.

${ }^{1}$ Includes Newfoundland-for last nine months only in 1949.
In 1951, Quebec accounted for 65 p.c. of the total failures and 58 p.c. of the liabilities; Ontario had 18 p.c. of the failures and 23 p.c. of the liabilities.

According to Dun and Bradstreet, Incorporated, commercial failures during World War II decreased steadily year by year. During those years, failures in the retail trade group, in which the majority of failures took place before the War, also decreased considerably. After the end of the War, however, the total number of failures increased again each year and failures in the retail trade group in 1951 accounted for almost one-half of the total.

## 9.-Industrial and Commercial Failures, by Divisions of Industry, 1949-51

(Source: Dun and Bradstreet, Incorporated)
Nots.-Comparable figures back to 1934 are given in the corresponding tables of previous Year Books. Figures for Newfoundland are included from Mar. 31, 1949.

## CHAPTER XXI.-FOREIGN TRADE

Note.-The interprelation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

The subject of foreign trade covers more than the treatment of imports and exports of commodities, important though this is. In its broader sense, foreign trade is made up of the total international exchanges of goods, services, securities and other financial exchanges, all of which are presented in their proper relationship in this Chapter. Following Part I, which is a review of Canada's trade during 1950 and 1951, Part II gives detailed statistics of external commodity trade. Part JII summarizes external transactions from the standpoint of the balance of international payments. Part IV outlines the various ways in which the Federal Government promotes and encourages trade relationships, and reviews the Canadian tariff structure.

## PART I.-REVIEW OF FOREIGN TRADE

World trade remained at a high level in 1950 and 1951. In 1950 its value (expressed in United States dollars) was slightly greater than in 1949, and the value of trade in 1951 showed a further increase of about 36 p.c. Higher prices for the goods of most countries made an important contribution to the latter value gain, but the volume of world trade also expanded.

International trade prices, which had stabilized in 1949, were affected by new inflationary pressures after the outbreak of the Korean war. Military needs and precautionary buying increased the demand for many important industrial materials such as wool, tin, manganese, rubber and wood-pulp, and the increased raw material prices, in turn, affected the costs and prices of manufactured goods. The prices of raw materials generally reached their peak in the first half of 1951 and declined thereafter, contributing to the stabilization of other prices and to some declines.

Despite a relatively small population, Canada is one of the world's major trading nations. Statistics published by the International Monetary Fund and adjusted for international differences in valuation methods show that from 1946 to 1950 Canada's trade was surpassed only by that of the United States and the

United Kingdom, and in 1951 only by that of those countries and of France. The Federal Republic of Germany ranked fifth in world trade in 1950 and 1951. As economic recovery in Europe has progressed the shares of France and Germany in world trade, especially in export trade, have increased steadily, as have those of other western European countries. Canada's per capita trade is much greater than that of the other leaders in world trade, although it is lower than that of Hong Kong and New Zealand.

${ }^{1}$ Excluding the Union of Soviet Socialist Republics, China, and other communist countries not publishing trade statistics.

Canada's trade in 1951 was at its highest post-war level, being 27 p.c. above the previous record value of 1950 and 8 p.c. above the previous record volume of 1947. A sharp increase in United States demand for Canadian materials was the principal factor sustaining exports in 1950 despite declining overseas sales, and in 1951 exports to the United States maintained their 1950 level. Most of the increase in exports in 1951 was in sales to overseas countries. Commonwealth and European purchases of Canadian goods were reduced after 1949 owing to exchange difficulties but, with needs intensified in 1951 by shortages and by the international situation, Canadian foods and materials again went overseas in greater volume.

Imports in 1950 and 1951 were affected particularly by the high level of investment activity as well as defence needs in Canada. A great part of the mining and industrial machinery, structural steel, electrical apparatus and transport equipment needed for Canada's economic expansion must be imported, as must many materials and components for defence production. The high level of exports and of consumption in Canada also increased the need for imported materials and consumer goods. While the United States continued to supply the greater part of Canada's imports, the share in this trade of European countries and of Commonwealth countries, other than the United Kingdom, was higher than in earlier post-war years.

The international environment in which Canada trades has improved considerably in the post-war period. Reconstruction of the wartime damage in European and other countries has increased production in those countries and with greater production their exports have grown and, with exports, their capacity to pay for their imports. The exchange rate readjustments of September 1949 also contributed significantly to the improvement of trading conditions by bringing prices in various countries into more realistic relationships. The rapid rise in raw material prices after the Korean outbreak of hostilities temporarily eased the balance-ofpayments difficulties of many countries in Asia, Oceania and South America. Incomes and inflationary pressures in these countries were also increased by the price rise and, when prices fell, severe payments problems developed for some countries in the latter half of 1951. Subsequent to a conference at London in January 1952, many Sterling Area countries announced new import restrictions, and some other countries have also intensified their trade controls. Nevertheless, barriers to the international exchange of goods were generally less at the beginning of 1952 than in most earlier post-war years, and the problems arising from inconvertible currencies were eased by greater imports of the dollar countries and by the operations of the European Payments Union.

Post-war Canadian Trade Policy.-Throughout the post-war period the Canadian Government has worked for the reduction and removal of the network of barriers to foreign trade which developed during and immediately after the War. To this end, Canada extended assistance to overseas countries which facilitated their post-war reconstruction. Canada has also participated in multilateral and bilateral negotiations on tariff matters and trade practices and has taken unilateral action to reduce and remove Canadian trade controls.

Loans to overseas countries were particularly large in 1946 and 1947. Under the Export Credits Insurance Act, 1944, the Government provided loans to foreign governments for the purchase of needed Canadian goods and, under the United Kingdom Financial Agreement Act, 1946, a credit of $\$ 1,250,000,000$ was extended to the United Kingdom for the purchase of Canadian goods in the reconstruction period. Net drawings on these credits totalled $\$ 105,000,000$ in $1945, \$ 750,000,000$ in $1946, \$ 563,000,000$ in 1947, and $\$ 126,000,000$ in 1948. In 1949 , net credits used were $\$ 107,000,000$, and in 1950 only $\$ 27,000,000$. At the same time as Canada was providing large exports on credit, it was necessary to pay currently for current imports. This contributed to a sharp decline in Canada's exchange reserves, which necessitated the temporary imposition of emergency exchange conservation controls in November 1947 and prevented further commitments to overseas loans.

Repayment of Canada's post-war loans began in 1947 with the receipt of $\$ 2,100,000$ from Belgium, and most of the countries to which loans were made are now making regular repayments. The repayment of these loans implies a willingness on Canada's part to accept the imported goods in which alone real payment can be made. Table 2 shows the post-war loans authorized by the Canadian Government, net drawings on these loans, and repayments of principal received to the end of 1951 (all credits not drawn have now lapsed).
2.-Post-war Loans and Advances to Other Countries by the Canadian Government, and Repayments, 1947-51
(Millions of dollars)

[^311]The principal tariff negotiations in which Canada has participated have been those of the parties to the General Agreement on Tariffs and Trade. The first series of negotiations was held at Geneva in 1947; there, 23 countries (including Canada) agreed to the mutual exchange of most-favoured-nation tariff treatment, and to make certain specific reductions in their tariffs. Subsequent meetings at Annecy, in 1949, and Torquay, in 1950-51, saw the number of contracting parties increase to 34, and further significant reductions were negotiated in Canadian and foreign tariffs. Tariff concessions negotiated under the General Agreement remain in force until Jan. 1, 1954, and may be further extended past that date. Canada has also conducted negotiations with some non-members of the General Agreement on Tariffs and Trade. Besides the 34 countries included in the General Agreement, Canada exchanges most-favoured-nation treatment with 24 other countries, and preferential treatment with most Commonwealth countries and Ireland.

Canada has also reduced non-tariff trade barriers in force in this country. As capital inflows and a closer balance of trade with dollar and with non-dollar countries contributed to an increase in Canada's exchange reserves, the emergency exchange conservation controls were gradually relaxed until the last were abolished at the end of 1950. The exchange value of the Canadian dollar was unpegged in October 1950 to reduce speculation on possible changes in this value and, after a year of relatively moderate fluctuations in the exchange rate, foreign exchange control was abolished in Canada in December 1951. The only significant direct controls now imposed on Canadian trade exist for reasons of military security, rather than economic protection. Besides these official measures, the Canadian Government has encouraged the efforts of such private organizations as the DollarSterling Trade Board to promote foreign trade.

Efforts have also been made to secure the reduction of non-tariff barriers to Canadian trade imposed by other countries. Some of these, such as many of the Sterling Area's restrictive measures, are necessitated by balance-of-payments problems that have resulted from the disturbed post-war economic situation. Others, such as United States quantitative restrictions on dairy-products imports, are purely protective in nature. While a measure of liberalization in the trade controls of the British West Indies was negotiated in 1950 and extended in 1951, and while the United Kingdom token import plan has kept some Canadian goods before the British public, nevertheless, much less progress has been made in persuading other countries to reduce non-tariff trade barriers than in the case of tariffs. The widespread use of direct import controls in the post-war world is, of course, owing to circumstances over which the Canadian Government has no control.

The Structure of Canadian Trade.-Foreign trade is based primarily on international differences in resources and on specialization. The influence of resources on trade is obvious, particularly in the case of natural products. Neither temperate nor tropical countries can raise all the wide range of agricultural products necessary for modern industry and required by consumers' tastes. Cotton and oranges must come from countries with warm climates while wheat and apples grow best in more temperate regions. Softwoods grow plentifully in northern climates, and most of the world's lumber, wood-pulp and paper is produced from softwoods, while tropical woods are chiefly prized for their hard texture and for the finish they will take. Mineral deposits as well as climatic differences are important. Few countries produce the whole range of minerals they require and, where mines are lacking, imports provide an alternative supply.

National specialization is also an important determinant of trade. Densely populated countries and countries with a large accumulation of capital tend to specialize in manufacturing industries, especially if they are deficient in important natural resources. Sparsely populated countries usually specialize in agriculture and in extractive industries if their resources permit, and within these categories further specialization by product is normal-on the Canadian prairies the emphasis is on wheat, although much wheat land could be used for stock-raising. In the field of manufactures the differences between the type of automobile produced in the United States and that produced in the United Kingdom are well known. In some cases manufacture is essential if resources are to be exploited-Canada's exports of aluminum are essentially exports of hydro-electric power, since it was power resources and not the domestic production of ore (bauxite, which is imported) that led to the establishment of this industry. Were it not for the production of aluminum much of this power would go unused.

In the manufactures field, particularly, many commodities are imported which could be (or are to some extent) produced in Canada. There are two simple reasons for this. Firstly, the Canadian home market is not sufficient to provide the full economies of large-scale production for some industries; therefore, many manufacturing industries can operate economically only if an export market is available. For some no export markets are readily available. Secondly, other industries in

Canada may provide more profitable employment for capital and labour. To export it is necessary to import-Canadian resources devoted to the production for export of newsprint, wheat, wood-pulp, lumber and base metals require that machinery, steel, fuels and textiles be imported if they are to receive payment. The high Canadian standard of living is based on the exchange of efficiently produced surpluses for goods which cannot be produced as efficiently or at all in Canada.

The statistics of leading exports and imports in Tables 11 to 14, pp. 943-961, reveal that the greater part of Canada's exports are raw or processed natural products, while in imports manufactured goods are more important. Farm implements, other machinery, automobiles and railway equipment are the chief manufactured exports, but these are much less important than shipments of such primary commodities as newsprint, wheat, wood-pulp, lumber, wheat flour and base metals. Many raw materials, such as petroleum, coal, cotton, wool and rubber, must also be imported to compensate for lack of sufficient conveniently located Canadian supplies or for the inability to produce these commodities in Canada. A great part of Canada's imports, however, are partly or fully manufactured goods, such as machinery, farm implements (especially tractors), iron and steel, textiles and electrical apparatus. Canada thus exchanges surplus resources for the surplus labour of other countries.

The importance of international trade to Canadian prosperity is emphasized by comparing it with population and national income. In 1951, Canada's exports were equal to $\$ 283$ for every man, woman and child in the country, and imports per capita reached $\$ 292$. Total trade per capita was $\$ 575$, a figure exceeded only in the case of Hong Kong and New Zealand, and far above the United Kingdom's $\$ 386$ and the United States' \$187. Of all the goods and services produced in Canada in 1951 no less than 18.7 p.c. was absorbed by merchandise exports, and of the goods and services available for current utilization (after allowance for maintenance of capital and other depreciation charges) $20 \cdot 3$ p.c. were exported as merchandise. The continued high level of merchandise trade in the post-war period has been an important determinant of Canada's prosperity.

Distribution of Canadian Trade.-One of the most prominent differences from pre-war in Canada's post-war pattern of trade has been the sharp increase in the proportion conducted with the United States. In the period 1946-50, 48 p.c. of Canada's exports went to this one market and 71 p.c. of the imports were drawn from this one source. In the inter-war period, 38 p.c. of exports went to the United States, and 65 p.c. of imports came from that country. The proportion of trade conducted with the United Kingdom has shown an equally marked decrease. In the inter-war period, 36 p.c. of Canada's exports went to the United Kingdom, as opposed to 23 p.c. in 1946-50, and 17 p.c. of imports were drawn from this source, as opposed to 10 p.c. in 1946-50.

One important reason for this change was World War II. Production in the United Kingdom was concentrated on military needs during the War even more so than in the United States and, in addition, the productive facilities of the United Kingdom suffered heavily from enemy attacks. At the end of the War, the United

Kingdom was faced with a major reconstruction task before she could again export in proportion to her import needs. The same was true of many other overseas countries, especially those of Europe. As a result, Canada was forced to obtain more imports from the United States, the main great producer to come through the war materially undamaged. Similarly, the United States was the one great market unhampered in its purchasing by exchange shortages or the need to pro-rate its imports. The greatest expansion in Canadian exports therefore, was in goods that could be sold readily in the United States.

Table 3 shows the distribution of Canada's peacetime trade by five-year periods from 1919-20 to 1950, and gives comparative figures for 1951. The inter-war data relate to fiscal years, the post-war data to calendar years. In 1946-50 both the United States and Latin America provided a greater share of Canada's imports than in the inter-war periods shown, and the proportions drawn from the United Kingdom and from Europe were less than in any of the inter-war periods shown. Imports from the Commonwealth were a smaller proportion of the total than in 1934-35 to 1938-39, when preferential tariffs were of more importance, but their share was larger than in the other inter-war periods shown. By 1951, greater production elsewhere had reduced the proportion of imports drawn from the United States and increased that from Europe and "Others". However, the import pattern was still markedly different from that prevailing before World War II.

The changes in exports are equally marked. Exports to the United Kingdom and to other European countries were greater in the immediate post-war years than in 1951 owing to emergency post-war needs for foodstuffs and materials by those countries while their own productive facilities were being restored. Even in this period, however, their share of Canada's exports was lower than in most of the inter-war period (although Europe's share in exports decreased sharply during the period of high protection immediately preceding the War). Exchange difficulties restricted the Commonwealth's share in exports in 1951, although these were less important in the immediate post-war reconstruction period. As with imports, only the United States and Latin America have consistently accounted for a larger proportion of Canada's exports in the post-war years than in the inter-war period.

Before the War, Canada's trade was normally in marked bilateral imbalance. Most major currencies were then convertible and surpluses earned in trade with overseas countries could freely be used to meet deficits on trade with the United States. In the post-war period inconvertibility of currencies has restricted the opportunity for such transfers, and it has been necessary to achieve a better bilateral balance in trade. The shares of Canada's principal trading partners in exports and imports are still far from equal, but the discrepancy between the export and import shares is much less than in the inter-war period.

## 3.-Percentage Distribution of Imports and Domestic Exports, by Principal Countries and Trading Areas, 1919-39 and 1946-51

Nore.-Trading areas adjusted for territorial changes. Thus the "Commonwealth" excludes Egypt, Iraq, Burma and Palestine in all years to maintain comparability. Newfoundland is also excluded from the table.

| Period ${ }^{1}$ | United States | United Kingdom | Other Commonwealth and Ireland | Europe | Latin America | Others |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Imports- | p.c. | p.c. | p.c. | p.c. | p.c. | p.c. |
| 1919-20 to 1923-24.. | 69.8 | $15 \cdot 8$ | $4 \cdot 3$ | $4 \cdot 2$ | $4 \cdot 1$ | 1.6 |
| 1924-25 to 1928-29.. | $66 \cdot 1$ | 16.7 | $5 \cdot 0$ | $7 \cdot 1$ | $3 \cdot 1$ | 1.7 |
| 1929-30 to 1933-34.. | $63 \cdot 1$ | $17 \cdot 8$ | $6 \cdot 2$ | $8 \cdot 1$ | $2 \cdot 7$ | 1.9 |
| 1934-35 to 1938-39.. | $59 \cdot 6$ | $19 \cdot 3$ | 9.8 | $6 \cdot 2$ | $2 \cdot 9$ | 1.8 |
| 1946-1950. | 71.2 | $10 \cdot 3$ | 7-0 | $2 \cdot 7$ | $7 \cdot 0$ | 1.5 |
| 1951..... | 68.9 | $10 \cdot 3$ | $7 \cdot 5$ | $4 \cdot 3$ | 6.7 | $2 \cdot 3$ |
| Domestic Exports- |  |  |  |  |  |  |
| 1919-20 to 1923-24.. | $40 \cdot 4$ | 36.0 | 5-6 | 12.2 | 1.9 | $2 \cdot 7$ |
| 1924-25 to 1928-29.. | 36.7 | $35 \cdot 7$ | 6.5 | $12 \cdot 4$ | $3 \cdot 0$ | $4 \cdot 9$ |
|  | $39 \cdot 3$ 34.8 | 31.2 41.2 | $7 \cdot 6$ $9 \cdot 6$ | 12.2 7.5 | $2 \cdot 8$ 2.1 | 5.8 3.9 |
| 1946-1950.......... | 48.7 | 22.5 | 9.8 9.8 | 9.8 | $4 \cdot 3$ | 3.8 3.8 |
| 1951.. | 58.7 | 16.1 | 6.7 | 8.9 | $5 \cdot 3$ | $4 \cdot 3$ |

## PART II.-FOREIGN TRADE STATISTICS*

## Section 1.-Explanations re Canadian Trade Statistics

Certain problems of procedure arise in recording trade statistics and require explanation. For the correct interpretation of the statistics of foreign trade, it is necessary that the following definitions and explanations of terms used be kept in mind:-

Quantities and Values.-In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

[^312]Imports: Valuation.-"Imports" means imports entered for consumption. "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which said merchandise was exported. (See Sects. 35 to 45 and 55 of the Customs Act.)

Canadian Exports: Valuation.-"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminum extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual amount received in Canadian dollars exclusive of freight, insurance and other handling charges.

Foreign Exports: Valuation.-"Foreign produce" exported consists of foreign merchandise that has previously been imported (entered for home consumption). The value of such commodities is the actual amount received in Canadian dollars exclusive of freight, insurance, and other handling charges.

Countries to which Trade is Credited.-Imports are classified as received from the countries whence they were consigned to Canada. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence dispatched, after longer or shorter interval, to Canada. In such cases the second country would be the country of consignment to which the goods would be credited.

Exports are credited to the country to which they are consigned.
Discrepancies in Trade Statistics between Canada and Other Countries.-Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies, among which are the following:-

1. Differences in the system of valuation used by Canada and the systems used by other countries.
2. The element of time lag is of considerable importance where Canadian exports are concerned, particularly with bulk goods shipped to other continents. There are always quantities of goods in movement at the beginning or end of any trading period and these affect the comparability between the two countries for the same period of time.
3. Canada's system of geographical classification, according to country of consignment, which may not be the ultimate destination of the goods.

Imports from the United Kingdom.-Published statistics of Canadian imports entered for consumption have always included several items that may be considered of a non-commercial character. These items are never very large in normal times but during the war years their inclusion in the total value of imports, from the United Kingdom in particular, tended to distort published data. The distinction between commercial and non-commercial imports is not always easy to establish, but three items have been segregated, as follows:-
(a) "Articles for the use of the Imperial Army, Navy and Air Force". These imports consisted almost entirely of war equipment of various kinds for experimental purposes, training and use in Canada by the United Kingdom Government. The values applied to the articles imported under this classification were nominal and no duty was paid.
(b) "Canadian goods returned". Before the War, this item amounted in value to several hundred thousand dollars annually. Late in 1945, however, the Government of Canada began the repatriation of large stocks of war equipment, the bulk of which was shipped from the United Kingdom. On entering Canada, they were classified in the trade returns as "Canadian goods returned" but are not shown in the United Kingdom trade returns.
(c) Settlers' effects, the property of immigrants.

The statement below shows the relation of these non-commercial items to the total:-

## I.-COMMERCIAL AND NON-COMMERCIAL IMPORTS FROM THE UNITED KINGDOM, 1939-51

(Millions of dollars)

| Year | Articles for Imperial Forces | Canadian Goods Returned | Settlers' Effects | Total NonCommercial Imports | Commercial Imports | Total Recorded Imports |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1939. | 0.8 | 0.4 | 0.6 | 1.8 | 112-2 | $114 \cdot 0$ |
| 1940. | 23.5 | $0 \cdot 3$ | $0 \cdot 6$ | $24 \cdot 4$ | 136.8 | $161 \cdot 2$ |
| 1941. | 81.2 | $0 \cdot 1$ | $0 \cdot 1$ | 81.4 | $138 \cdot 0$ | $219 \cdot 4$ |
| 1942. | 42.5 | 0.4 | $0 \cdot 1$ | $43 \cdot 0$ | $118 \cdot 1$ | 161 -1 |
| 1943. | 34-3 | $0 \cdot 1$ | 1 | $34 \cdot 4$ | $100 \cdot 6$ | $135 \cdot 0$ |
| 1944. | 16.2 | 0.3 | $0 \cdot 1$ | $16 \cdot 6$ | $94 \cdot 0$ | $110 \cdot 6$ |
| 1945. | 21.2 | 18.8 | $0 \cdot 2$ | $40 \cdot 2$ | $100 \cdot 3$ | 140.5 |
| 1946. | $2 \cdot 3$ | $60 \cdot 1$ | 1.4 | 63.8 | $137 \cdot 6$ | $201 \cdot 4$ |
| 1947. | 1.5 | 0.8 | $3 \cdot 4$ | $5 \cdot 7$ | 183.7 | 189.4 |
| 1948. | 0.7 | 0.8 | $4 \cdot 9$ | 6.4 | $293 \cdot 1$ | 299.5 |
| 1949. | $1 \cdot 6$ | 0.5 | $3 \cdot 0$ | $5 \cdot 1$ | 302-3 | $307 \cdot 4$ |
| 1950.. | 0.9 | 0.4 | 1.8 | $3 \cdot 1$ | $401 \cdot 1$ | 404.2 |
| 1951. | 1.9 | 0.2 | $3 \cdot 3$ | $5 \cdot 4$ | $415 \cdot 6$ | $421 \cdot 0$ |

${ }^{1}$ Less than $\$ 50,000$.
Treatment of Gold in Trade Statistics.-The fact that gold is a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, the movement of gold in international trade is determined, almost exclusively, by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. In addition, gold is generally acceptable. It does not have to surmount tariff barriers and, normally, is assured a market at a relatively fixed price. It should also be noted that gold does not move in international trade in any direct or normal relation to sales and purchases. Changes in the Bank of Canada's stock of gold under earmark do not enter, therefore, into the trade statistics.

Statistics showing the net exports of non-monetary gold, including changes in stocks held under earmark, which supplement the trade figures, are given in the following statement:-
II.-NET EXPORTS OF NON-MONETARY GOLD, 1944-51
(Millions of dollars)

| Month | 1944 | 1945 | 1946 | 1947 | 1948 | 1949 | 1950 | 1951 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| January. | $9 \cdot 4$ | 8.7 | $9 \cdot 3$ | $9 \cdot 0$ | $9 \cdot 6$ | $9 \cdot 7$ | 15.8 | $17 \cdot 3$ |
| February... | $8 \cdot 1$ | $8 \cdot 4$ | $9 \cdot 5$ | 6.9 | 8.9 | $9 \cdot 6$ | 11.7 | 11.7 |
| March. | 12.9 | 10.2 | 10.0 | 6.8 | 8.7 | $12 \cdot 1$ | 13.5 | 8.4 |
| April....... | $9 \cdot 3$ | 6.8 | $7 \cdot 2$ | 6.4 | $9 \cdot 5$ | $9 \cdot 8$ | 11.4 | 16.2 |
| May. | 9.4 | $10 \cdot 2$ | $10 \cdot 0$ | 8.2 | $8 \cdot 8$ | 12.4 | 15.8 | 13.0 |
| June. | 10.9 | $4 \cdot 7$ | $7 \cdot 7$ | $8 \cdot 6$ | $9 \cdot 6$ | $9 \cdot 8$ | 15.0 | 13.8 |
| July.... | $6 \cdot 6$ | $8 \cdot 0$ | $6 \cdot 6$ | $10 \cdot 1$ | 10.8 | 9.4 | 14.8 | 13.4 |
| August. | $10 \cdot 0$ | $8 \cdot 5$ | $7 \cdot 5$ | $7 \cdot 5$ | 9.7 | 13.8 | $13.8{ }^{\circ}$ | 11.0 |
| September. | 8.7 | 6.8 | 6.8 | 8.4 | 11.9 | 11.2 | 10.8 | 10.8 |
| October. | $8 \cdot 4$ | $7 \cdot 7$ | $8 \cdot 5$ | $9 \cdot 2$ | $9 \cdot 6$ | $13 \cdot 2$ | 16.4 | 8.2 |
| November. | $10 \cdot 1$ | $9 \cdot 8$ | $6 \cdot 0$ | $7 \cdot 2$ | $9 \cdot 1$ | $15 \cdot 4$ | 12.3 | 7.7 |
| December. | $5 \cdot 9$ | $6 \cdot 2$ | 6.7 | 11.0 | 12.8 | - 12.5 | 11.3 | 18.3 |
| Totals | 109.7 | 96.0 | $95 \cdot 8$ | $99 \cdot 3$ | 119.0 | 138.9 | $162 \cdot 6$ | 149.8 |

## Section 2.-Total Foreign Trade

In considering the figures in Sections 2 to 6, reference should be made to the explanatory notes on trade in Section 1. It must be emphasized that gold imports and exports are excluded from all tables. Imports from the United Kingdom from 1940 to 1946 are distorted by the inclusion of large amounts of non-commercial items in the trade returns (see pp. 930-931). United Kingdom figures can be viewed in proper perspective only if these non-commercial items are excluded from the recorded import statistics.

## 1.-Value of Total Foreign Trade of Canada (Excluding Gold), 1934-51

Note.-These figures are available on a calendar-year basis only since 1919; figures for the fiscal years 1868-1933 are given in the 1940 edition of the Year Book, p. 526.

| Year | Imports |  |  | Exports |  |  | Balance of Trade: <br> Excess of Exports ( + ) Imports ( - ) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Dutiable | Free | Total | Domestic Produce | Foreign <br> Produce | Total |  |
|  | \$ | \$ | \$ | \$ | \$ | \$ | \$ |

## Section 3.-Trade by Geographic Areas

The tables in this Section provide information about Canada's total foreign trade by continents and by countries with special reference in Tables 4 to 8 to the division between Commonwealth and foreign countries.
2.-Trade of Canada, by Continents, 1939, 1950 and 1951

3.-Trade of Canada, by Leading Countries, 1939, 1950 and 1951

Note.-Countries arranged in order of importance, in 1951.

| Rank |  |  | Country | 1939 | 1950 | 1951 |

## Section 5.-Imports and Exports by Degree of Manufacture, by Origin and by Purpose

Analyses of Canada's trade, from the angle of degree of manufacture of imports and exports with leading countries, are of value to the student of economic relationships because they present, in summary form, details with significant meaning in the complementary relationship of manufacturing and commerce between continents and countries.

The data of Tables 15 and 16 have been specially tabulated to show this information for all countries of any importance that trade with Canada. Table 17, on the other hand, gives historical statistics that indicate clearly the fluctuations in imports for home consumption of important raw materials used in Canadian manufacture, irrespective of their source. In a broad way, the data reflect the development of Canadian manufactures, although the industrial expansion for the purposes of war must be borne in mind in using the figures for the past decade.

## 18.-Imports according to Origin, by Groups and Degree of Manufacture, 1950 and 1951-concluded

${ }^{1}$ In this classification the expression "Canadian Farm Products" refers to all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

## 19.-Exports according to Origin, by Groups and Degree of Manufacture, 1950 and 1951

For footnote, see end of table, p. 970.

## Section 6.-Comparison of Value, Price and Volume of Foreign Trade

Since the end of World War II the value of Canada's exports and imports has increased steadily. At the same time, the level of prices at which exports are sold and imports purchased has risen consistently. Changes in the value of exports and imports are the joint product of changes in the volume of goods traded and the prices at which transactions are conducted. To obtain a clear picture of the fluctuations in Canada's merchandise trade it is desirable to isolate the contributions made to these fluctuations by the price and volume factors.

Special indexes of export and import prices have been developed to give this information. These indexes are based chiefly on average prices calculated from the trade statistics (supplemented in some cases by wholesale and other price
information) and combined according to the relative importance of the commodities in the trade of 1948. By dividing these price indexes into the trade values the effects of price change can be removed from the values; or, by dividing the price index into an index of values, an index is obtained showing changes in the volume of trade from year to year. Table 22 gives the declared value of trade (adjusted for pricing purposes), the index of values based on 1948, the price index used to deflate the value index, and the resulting volume index.

The grouping of commodities used in this calculation differs slightly from that of the trade statistics, changes being necessary to simplify the pricing problem. The chief difference is that the two trade statistics groups 'agricultural and vegetable products' and 'animals and animal products' have been combined as 'agricultural and animal products'. Rubber and rubber products have been transferred from this group to the 'miscellaneous' group, and a few other transfers have been made designed to improve the component material classification. The totals differ, from those usually published, by the exclusion of certain imports that are for the use of the United Kingdom Government and the governments of NATO countries.

Movements in price value and volume have not always been the same. Export prices have increased steadily in the post-war period, but the volume of exports declined in 1949 and 1950, and did not pass the 1948 peak until 1951. From 1947 to 1951 the value of exports rose 41 p.c., but volume increased by 5 p.c. Imports have expanded steadily in value, but the 1947 volume was not surpassed until 1951. From 1947 to 1951 import value gain was 59 p.c., and volume increase only 11 p.c. The tables do not give comparisons with a pre-war year, but in 1948 (the interim base of the indexes given) the comparison with 1938 was approximately as follows:-

## PART III.-EXTERNAL TRANSACTIONS*

## Section 1.-Canadian Balance of International Payments

Both the current and capital account of the balance of payments have shown wide fluctuations in recent years. Current account deficits appeared in 1950 and 1951 for the first time since 1933 . These deficits, amounting to $\$ 329,000,000$ in 1950 and $\$ 524,000,000$ in 1951 , contrasted sharply with surpluses in the previous four post-war years and were influenced by the growth in the volume of imports in response to high levels of economic activity in Canada. The largest net contributors to the current deficit in both years were, however, payments of interest and dividends and miscellaneous current transactions. Another significant factor was the steady decline since 1948 of the surplus of tourist and travel expenditure until, in 1951, a deficit appeared on this account.

Although the deficits were substantial, they were less than 10 p.c. of total current credits in 1950 and in 1951. By contrast, the deficit of $\$ 337,000,000$ in 1930, which is comparable to that of 1950 , was 26 p.c. of total current credits in that year. Furthermore, the deficits on current account were concentrated most heavily in the fourth quarter of 1950 and the first half of 1951. The deficit was much smaller in the third quarter of 1951, while in the fourth quarter a surplus appeared with heavier export volume overseas and declining import prices and volume.

[^323]One important feature of Canada's current account in the post-war period was the lack of balance in transactions with the United States and with overseas countries. This condition of heavy current account deficits with the United States and large surpluses in overseas transactions was sharply modified in 1950. Revival of United States demand after the business readjustments of 1949, and the defence activity in that country after the outbreak of the Korean conflict, combined with a curtailment in dollar expenditure by overseas countries led to a marked shift in Canadian exports from overseas countries to the United States which, along with a rise in Canadian imports from overseas, resulted in a large decrease from $\$ 776,000,000$ in 1949 to $\$ 74,000,000$ in 1950 in the surplus with overseas countries. The deficit with the United States, which was $\$ 589,000,000$ in 1949 , fell to $\$ 403,000,000$ in 1950. In 1951, however, the more usual current account pattern reappeared; the current account surplus with overseas countries rose to $\$ 431,000,000$, while the deficit of $\$ 955,000,000$ with the United States was higher than in any year except 1947.

Capital Movements.-Despite the deficits on current account, the official reserves of gold and United States dollars rose in 1950 and in 1951. These increases were owing to heavy net capital inflows, amounting to $\$ 1,023,000,000$ and $\$ 563,000,000$ in 1950 and 1951, respectively, most of which were from the United States. In 1950 the reserves rose by $\$ 694,000,000$. The larger deficit and smaller capital inflow in 1951 led to a smaller increase in reserves of $\$ 39,000,000$.

The large inward movement of capital in 1950 was heavily concentrated in August and September, just before the announcement of the withdrawal of a fixed exchange rate by the Government at the beginning of October. Much of the movement in these months into Canadian dollar assets was owing to widespread speculation in the United States on the future value of Canadian currency. The largest and most characteristic inflow in the period of heaviest movements was United States demand for Canadian securities, particularly outstanding Government of Canada domestic issues. The large increase in non-resident balances in Canada and changes in short-term capital movements associated with the financing of trade, were also, in part, connected with the speculative inflow. On the other hand, some of the capital inflow was a continuation of the post-war interest, especially by United States investors, in building up long-term investments in Canada. New issues of Canadian securities in the United States amounted to $\$ 210,000,000$, and covered a large part of redemptions in 1950 . The direct investment inflow from the United States and other countries was $\$ 221,000,000$.

In contrast to 1950, the most characteristic capital inflows in 1951 were longterm movements connected with the financing of Canadian development. New issues of Canadian securities sold to non-residents amounted to $\$ 411,000,000$. About three-quarters of these sales were provincial and municipal bond issues, payable in United States dollars. Net new issues after retirements were $\$ 227,000,000$, in contrast to net redemptions of $\$ 73,000,000$ in 1950 . Inflows for direct investment in branches and subsidiaries of foreign concerns were higher in 1951 than in 1950. The development of industrial plants, which was the major element in the growth of direct investments in Canada in the earlier post-war years, continued to be important, but in 1950 and 1951 the movement of funds was accelerated particularly by the large scale development of petroleum and other mineral resources.

Despite these large capital inflows, non-resident financing of total capital investment in 1950 and 1951 was much smaller than in earlier periods of high investment activity. There are difficult statistical and conceptual problems in such a
comparison. The contribution by non-residents and foreign controlled companies to all types of investment in Canada, less Canadian contributions to investment abroad, was about one-seventh in these two years. If only foreign participation in Canadian investment is considered the proportion was still less than one-fifth. In contrast, Canada was a net exporter of capital for a long period before 1950.

Transactions with the Sterling Area.-A striking feature of current transactions in recent years has been the substantial changes in the credit balance with the Sterling Area. In 1950, the disequilibrium in Canada's current account with this group almost disappeared, the current surplus amounting to only $\$ 5,000,000$ compared with a credit balance of $\$ 574,000,000$ in 1949 , and a post-war record surplus of $\$ 874,000,000$ in 1947 . In 1951, however, the credit balance was again substantial, rising to $\$ 191,000,000$. The current account surplus with the United Kingdom accounted for the largest absolute changes, declining from $\$ 439,000,000$ in 1949 to $\$ 28,000,000$ in 1950 and rising to $\$ 220,000,000$ in 1951. For the rest of the Sterling Area the current account surplus of $\$ 135,000,000$ in 1949 changed to deficits of $\$ 23,000,000$ and $\$ 29,000,000$ in 1950 and 1951 , respectively.

The most important factor leading to the virtual disappearance of the surplus in 1950 was the large decrease in exports, about a half of which resulted from lower wheat shipments to the United Kingdom, although forest products and non-ferrous metals also fell significantly. In the case of other Sterling Area countries, lower exports of Canadian manufactured goods were particularly notable. The devaluations of 1949 and import restrictions on purchases in the dollar area were two of the factors at work here. While exports fell, Canadian imports from the Sterling Area rose, owing primarily to larger imports of metal products from the United Kingdom, and particularly the impressive increase in the volume of imports of British automobiles. A large increase in imports from other Sterling Area countries also occurred in 1950, owing partly to conspicuous increases in sterling prices of some commodities purchased by Canada from these countries. The balance of receipts from non-merchandise transactions with the Sterling Area declined. Lower receipts of inheritances and of immigrant funds, and lower freight and shipping receipts because of a decrease in exports, were the main factors in this connection.

One of the principal means of financing the large current account surpluses with the Sterling Area in earlier post-war years was the drawings on the 1946 loan to the United Kingdom. These drawings were reduced to $\$ 50,000,000$ in 1950 . The United Kingdom made a repayment of some $\$ 42,000,000$ on the loan of $\$ 700,000,000$ extended in 1942 , and a repayment of $\$ 9,100,000$ on the wartime loan from the Government of Newfoundland. With respect to private capital movements, there were repurchases by Canadians of Canadian securities amounting to some $\$ 35,000,000$, and redemptions of $\$ 18,000,000$. In 1950, there occurred also a significant outflow from Canada of capital connected mainly with changing positions of short-term commercial indebtedness.

In 1951, repayment by the United Kingdom consisted of the first instalment of $\$ 14,000,000$ on the post-war loan of 1946 and $\$ 33,800,000$ on the war loan of 1942. The amount outstanding on the post-war loan was reduced to $\$ 1,171,000,000$, while the war loan of $\$ 700,000,000$ was reduced to approximately $\$ 222,700,000$. Redemptions of Canadian securities, owned mainly in the United Kingdom, were $\$ 24,000,000$, and repurchases $\$ 16,000,000$. There were, however, some new issues for refinancing purposes. In contrast to 1950 , multilateral settlements of $\$ 174,000,000$ once more became important, as they were in 1946 to 1949 when large current surpluses existed in Canada's transactions with the Sterling Area.

Capital inflows for direct investment by British businesses in Canadian branches and subsidiaries amounted to $\$ 19,000,000$ and $\$ 28,000,000$ in 1950 and 1951 , respectively. These balance of payments transfers exclude reinvested earnings. In 1950, the value of all British direct investments in Canada increased by about $\$ 40,000,000$ to a total value of $\$ 447,000,000$.

Transactions with the United States.-In 1950, the current deficit with the United States was considerably reduced, declining from $\$ 589,000,000$ in 1949 to $\$ 403,000,000$ in 1950 . The chief reason was a rise of exports to the United States, which reached an unprecedented 65 p.c. of all Canadian exports. Part of the tremendous rise in exports of $\$ 525,000,000$ was offset by an increase in imports of $\$ 194,000,000$, and by substantially larger net payments to the United States on all other current items that rose by $\$ 145,000,000$.

About $\$ 300,000,000$ of the increase in the value of exports in 1950 was concentrated in the forest-products group, particularly in lumber exports. Non-ferrous metals, and animals and products also showed important increases. The volume of imports was up sharply in the closing months of 1950, spurred by high levels of Canadian prosperity and development and a general desire to secure commodities while they were still available. With respect to invisible items, non-monetary gold available for export rose over 1949. Net receipts on tourist account declined, however, and net payments for other accounts increased. Income payments to the United States reached a new peak of $\$ 410,000,000$, an increase of $\$ 85,000,000$ over 1949, almost all of which occurred in dividend payments.

In 1951, the current account deficit with the United States more than doubled, rising to $\$ 955,000,000$. The largest single change responsible for this deterioration was the rise in imports of $\$ 755,000,000$, or 36 p.c. The increase in value of exports was $\$ 280,000,000$, and that in the import balance was $\$ 475,000,000$. This was about ten times the size of the adjusted import balance in 1950 but still much less than the import balance of $\$ 890,000,000$ in 1947.

The increase in imports was widespread and closely related to high levels of defence activity, investment and consumption. A significant part of the increase seems to have been related to the inventory rise which was heavy when imports were at a peak. Almost a half of the increase resulted from greater imports of iron and products, although large increases occurred in textiles and non-ferrous metals and products. Most fuel imports fell slightly, while crude petroleum decreased a third. While the rise in imports was due primarily to volume, the increase in exports was, generally, a reflection of higher export prices.

The largest change in invisibles in 1951 was a sharp drop in net receipts on travel account from $\$ 67,000,000$ to $\$ 9,000,000$, being the third consecutive decrease on this account. A large rise in the travel expenditure of Canadians in the United States was the principal reason for this reduction in the balance of receipts and represented an increase in volume and in average expenditure. The number of visitors from the United States increased but average expenditure fell. The deficit with the United States on account of interest and dividends was reduced by $\$ 39,000,000$ to $\$ 321,000,000$, which was still much higher than in the years preceding 1950. The deficits on freight and shipping account and on all other current transactions rose in 1951, as they had in the previous year.

Most of the capital movements which featured Canada's accounts in 1950 and 1951 were those arising from the predominant movement of capital from the United States to Canada (see p. 977). The net inflow of capital from the United

States of $\$ 560,000,000$ in 1951 compared with $\$ 960,000,000$ in 1950 and only $\$ 47,000,000$ in 1949. Relatively more of the net inflow of capital in 1951 was in types of movement which usually represent long-term investment in Canada, such as direct investments and new issues of securities floated in the United States. Large declines occurred in inflows for the acquisition of outstanding domestic securities and short-term movements. Because of these capital inflows, and also because of such items as reinvested earnings which are not included in the balance of payments, the value of United States investment in Canada increased in 1950 by $\$ 670,000,000$, and a provisional estimate for 1951 indicates another increase of comparable size.

Transactions with Other Countries.-The current account surplus with non-sterling area OEEC* countries, mainly in Western Europe, fell by $\$ 78,000,000$ to $\$ 109,000,000$ in 1950 , but increased sharply to $\$ 220,000,000$ in 1951 . The same trend was apparent in transactions with the remaining countries in this group-a surplus of $\$ 15,000,000$ in 1949 becoming a deficit of $\$ 40,000,000$ in 1950 and a surplus of $\$ 20,000,000$ in 1951.

A large part of the rise in exports in 1951 was in food and raw materials to the OEEC countries. About one-third of Canadian exports to Europe in 1951 consisted of wheat and flour. Imports from the European Continent showed a striking increase in rolling-mill products. An outstanding development in trade in 1951 was the rise in exports to Japan, which were three times the 1950 value. Trade with Latin America increased in both 1950 and 1951.

Capital transactions with other overseas countries in 1951 included receipt of $\$ 20,000,000$ principal on Canadian export credits. Net sales of outstanding Canadian securities were $\$ 34,000,000$ compared with $\$ 1,000,000$ in 1950 and were made mainly to Switzerland. In 1951 there was an outflow from Canada of $\$ 16,000,000$, principally in connection with Canadian enterprises in Latin America. In the same year, $\$ 9,000,000$ was received from those countries for direct investment in Canada.

## 6.-Capital Transactions between Canada and the United States ${ }^{1}$, 1919-51 <br> (Millions of Canadian Dollars)

## Section 2.-Travel Between Canada and Other Countries

Travel expenditure constitutes an important item in Canada's commercial and financial transactions with other countries. A substantial credit balance has customarily arisen from travel between Canada and the United States and a small debit balance from travel with other countries. The credit balance with the United States has played an important part in assisting Canada to meet its current obligations in that country and during the past 25 years it has totalled almost $\$ 2,000,000,000$, a large part of which has been applied against a debit balance in commodity trade with the United States. During the same period, Canada's debit balance arising out of travel with countries, other than the United States, amounted to little more than $\$ 150,000,000$; thus the overall favourable balance with all countries during the past 25 years was over $\$ 1,750,000,000$.

In past years, Canada's annual credit balance from international travel has ranged from a minimum of $\$ 45,000,000$ in 1933 to a maximum of $\$ 145,000,000$ in 1948. The high level of the balance in 1948 was owing largely to reduced debits brought about by the emergency exchange conservation measures and withdrawal of these restrictions in subsequent years left Canadian travel freer to expand. In each year since 1948 Canadians have gone to other countries in ever increasing numbers until, in 1951, their expenditure was more than double the 1948 level. During the same period, expenditure in Canada by visitors from other countries has remained fairly stable. Thus, the overall credit balance was reduced from $\$ 145,000,000$ in 1948 to $\$ 92,000,000$ in 1949 and $\$ 49,000,000$ in 1950 , and was replaced in 1951 by a small debit balance of $\$ 6,000,000$. Travel with the United States alone, in 1951, resulted in a credit balance of $\$ 12,000,000$, whereas from 1950 to 1926 the annual credit balance with the United States was never less than $\$ 50,000,000$.

Although there was only a small difference in 1951 between incoming and outgoing expenditure on travel, the number of visits to Canada by non-residents was 34 p.c. greater than the number of visits by Canadians to other countries. Hence, the average visit by a Canadian to a foreign country takes more money out of the country than is brought in by the average visit of a non-reisdent to Canada. In 1951, the average expenditure rate per traveller for visits lasting longer than 48 hours was $\$ 85^{*}$ for Canadians visiting the United States against $\$ 53^{*}$ for U.S.A. residents visiting Canada. Even on short visits of 48 hours or less the average Canadian traveller spent more than the average U.S.A. visitor but the difference was less pronounced. If the population of the two countries is taken into consideration, total Canadian travel expenditure in the United States in 1951 amounted to almost $\$ 17.50$ per capita whereas United States expenditure in Canada was only about $\$ 1.70$ per capita.

United States Travel Expenditure in Canada.-The number of visits to Canada in 1951 by residents of the United States, including repeat visits, was $24,900,000$. This was more than the volume of traffic in each of the two preceding years and was exceeded only by the record volume of $25,100,000$ in 1948. Despite the increase in the number of visits, travel expenditure in Canada by residents of the United States was slightly lower in 1951 than in the previous year. The decrease was only 1 p.c.-from $\$ 260,000,000$ in 1950 to $\$ 258,000,000$ in 1951. Travel receipts from the United States have been at a consistently high level throughout

[^327]the four years 1948 to 1951, changes from year to year being of a minor nature. Receipts in each of these years have surpassed those of any other year on record by a margin of $\$ 17,000,000$ or more. A large part of this gain, of course, was owing to higher prices. United States travel expenditure adjusted for changes in price levels as reflected in the Canadian cost-of-living index reached a peak in 1947 and declined moderately in each succeeding year.

The decline in spending by United States visitors in 1951, accompanied by a gain in the number of visits, indicates lower average spending per visit, which may be due to shorter visits or lighter spending per day or a combination of the two. With regard to non-automobile traffic there appears to have been little change in the length of visit but average expenditure per day was 6 p.c. lower than in 1950. There has been a tendency for motorists to make shorter visits during recent years. If special groups such as summer residents and commuters are excepted there has been a decline of 16 p.c. between 1947 and 1951 in the average length of stay of motorists entering the country on customs permits. Much of this decline has occurred in Ontario where each year in-transit traffic accounts for a substantial part of the total number of entries. During recent years in-transit motorists have formed a steadily increasing proportion of the total number of entries into that Province.

Canadian Travel Expenditure in the United States.-Canadian travellers spent $\$ 246,000,000$ in the United States in 1951 -more than three and a half times the amount spent before 1939. Most of the increase of $\$ 53,000,000$ in 1951 over 1950 can be attributed to motorists travelling to the United States in greater numbers and staying for longer visits than in the previous year. Their expenditure of $\$ 94,000,000$ showed a gain of $\$ 27,000,000$. Canadian shopping in the United States was an important item in the spending of motorists-purchases declared under the $\$ 100$ customs exemption, at $\$ 47,000,000$ in 1951 , being 43 p.c. higher than in 1950.

Non-automobile travellers to the United States were 4 p.c. more numerous in 1951 than in 1950 and their expenditure rose by 21 p.c. The greatest contribution was made by train traffic which increased by $\$ 11,000,000$. Substantial gains were also made by air and bus traffic and a smaller increase by boat traffic.

Travel Between Canada and Overseas Countries.-The volume of travel between Canada and overseas countries is, normally, less than 1 p.c. of that between Canada and the United States. Overseas travellers, however, stay for longer visits and transportation costs are higher, hence their expenditure is more significant than the number of travellers might suggest. The sum of debits and credits in Canada's overseas travel in 1951 amounted to $\$ 50,000,000$, or 10 p.c. of travel expenditure between Canada and the United States. In contrast to travel with the United States which has produced an annual credit balance for 25 years or more, travel with overseas countries results generally in a debit balance. In 1951, the balance stood at $\$ 18,000,000$-unchanged from 1950 which was the highest on record.

The number of visitors arriving directly from overseas countries in 1951 was 18,200 . These were supplemented by an estimated 16,000 arriving from overseas countries via the United States. Expenditure of both groups, at $\$ 16,000,000$, was 7 p.c. higher than the 1950 total of $\$ 15,000,000$. Canadian travel expenditure in overseas countries in 1951, totalled $\$ 34,000,000$. The number of Canadian residents returning via Canadian ports was 44,200 , an increase of 1 p.c. over the
corresponding figure in 1950. Canadian travellers visiting overseas countries via the United States are estimated at 11,000 , resulting in a total of 55,200 travellers via Canadian and United States ports.

## 7.-Expenditure of Foreign Travellers in Canada and Canadian Travellers Abroad, 1950 and 1951

Tourist Information.-Tourist information generally is supplied by the Canadian Government Travel Bureau, Ottawa, while detailed information on the National Parks and Historic Sites may be obtained from the Department of Resources and Development, Ottawa. For advice regarding specific provinces or particular cities or resorts, the tourist may apply to the provincial or municipal bureau of information concerned. (See under 'Tourist Trade', Directory of Sources of Official Information, Chapter XXVIII.)

## PART IV.-THE GOVERNMENT AND FOREIGN TRADE

## Section 1.-Foreign Trade Service and Associated Agencies Concerned with the Development of Foreign Trade*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, owing largely to the fact that the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated, however, that two-way trade should be encouraged in order that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities that are not indigenous to this country have to be imported from abroad. Some of these are required for Canadian industrial processes and others may be classed as consumer goods necessary for the maintenance of a high standard of living.

Although many private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls, imposed by many countries for a variety of reasons, together with post-war foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers, can solve without assistance from government representatives.

The Department of Trade and Commerce and associated agencies are at the disposal of exporters and importers engaged directly in the development of Canada's commercial relations with other countries. Services obtainable from the various branches, divisions and agencies are described as follows:-

Canadian Trade Commissioner Service.-The Canadian Trade Commissioner Service is one of the important instruments in the continuous effort to increase Canadian international trade, to give world-wide distribution to Canadian products and to locate the best sources of supply for imports. With headquarters at Ottawa, the Service maintains in 40 countries 49 offices, staffed with trained Canadian trade officials and commodity specialists. The work of the Trade Commissioners in the field is co-ordinated at Ottawa by four Area Trade Officers. These officers are familiar with every aspect of foreign trade in their geographical or political areas and are responsible to the Director of the Service for the collection, preparation and presentation of information on all trade matters in their respective territories.

Trade Commissioners bring together exporters and importers of Canada and other countries. They study potential markets for specific Canadian products and report on the exact kind of goods in demand, competitive conditions, trade and

[^328]exchange regulations, tariffs, shipping and packaging requirements, labelling, etc. Inquiries for Canadian goods are passed to the Department at Ottawa or directly to interested Canadian firms. For the Canadian importer, Trade Commissioners seek sources of supply of a wide variety of goods and, where necessary, furnish information on the Canadian market to the foreign exporter. The preparation of economic and other reports for departmental use is an important activity for the Trade Commissioner while much attention is given to the dissemination of information on the Canadian International Trade Fair, securing exhibitors and encouraging the visits of foreign buyers. Assistance is also given to Canadian exhibitors at overseas trade fairs and a constant liaison is maintained with foreign government trade departments.

In countries where Canada maintains a diplomatic mission as well as a trade office, Trade Commissioners form an integral part of the mission and assume the title of Commercial Counsellor or Commercial Secretary. In some foreign countries they act as Consuls General, Consuls or Vice-Consuls, according to their status as Foreign Service Officers.

In order to provide Canadian manufacturers, exporters and importers with up-to-date information concerning their territories more effectively than is possible by correspondence, tours of Canadian industrial centres are arranged for Trade Commissioners from time to time. Such direct contacts enable specific problems to be discussed and, at the same time, serve to bring into focus for the Trade Commissioner the Canadian industrial picture as a whole. He thus returns to his post with a knowledge of current Canadian conditions and in a better position to assist in the development and extension of Canadian trade opportunities.

Following is a list of Foreign Trade Service representatives abroad, as at Nov. 15, 1952:-

## FOREIGN TRADE SERVICE REPRESENTATIVES ABROAD

Argentina.-C. S. Bissett, Commercial Secretary, Canadian Embassy, Bartolomé Mitré 478, Buenos Aires. Territory includes Paraguay and Uruguay.

Australia.-C. M. Croft, Commercial Counsellor for Canada, City Mutūal Life Bldg., 60 Hunter Street, Sydney, N.S.W. R. W. Blake, Commercial Secretary for Canada and Agricultural Secretary, 83 William Street, Melbourne.
Belgian Congo.-W. Gibson-Smith, Canadian Government Trade Commissioner, Forescom Building, Leopoldville. Territory includes Angola and French Equatorial Africa.
Belgium.-T. J. Monty, Commercial Secretary, Canadian Embassy, 35 rue de la Science, Brussels. Territory includes Luxembourg.

Brazil.-C. R. Gallow, Commercial Secretary, Canadian Embassy, Edificio Metropole, Ave. Presidente Wilson 165, Rio de Janeiro. C. J. Van Tighem, Consul of Canada and Trade Commissioner, Canadian Consulate, Edificio Alois, Rua 7 de Abril 252, São Paulo.

Ceylon.-Paul Sykes, Canadian Government Trade Commissioner, Galle Face Hotel, Colombo.

Chice.-M. R. M. Dale, Commercial Secretary, Canadian Embassy, Bank of London and South America Building, Santiago.
Colombis.-W. J. Millyard, Commercial Secretary, Canadian Embassy, Calle 19, No. 6-39, Bogota. Territory includes Ecuador.
Cuba.-A. W. Evans, Commercial Secretary, Canadian Embassy, Calle Infanta 16, Havana.

## FOREIGN TRADE SERVICE REPRESENTATIVES ABROAD-continued

Dominican Republic.-R. E. Gravel, Canadian Government Trade Commissioner. Edificio Copello 410, Calle el Conde, Ciudad Trujillo. Territory includes Haiti and Puerto Rico.

Egypr.-Acting Canadian Government Trade Commissioner, Osiris Building, Sharia Walda, Kasr-el-Doubara, Cairo. Territory includes Aden, Anglo-Egyptian Sudan, Cyprus, Ethiopia, Hashemite Kingdom of the Jordan and Saudi Arabia.
France.-R. G. C. Smith, Commercial Counsellor for Canada, 3 rue Scribe, Paris. Territory includes Algeria, French Morocco, French West Africa and Tunisia.
Germany.-B. A. Macdonald, Commercial Counsellor, Canadian Embassy, 22 Zitelmannstrasse, Bonn.
Greece.-H. W. Richardson, Commercial Secretary, Canadian Embassy, 31 Vassillissis Sophias Ave., Athens. Territory includes Israel and Turkey.
Guatrmala. - J. C. Depocas, Canadian Government Trade Commissioner, 28, 5 a Avenida Sud, Guatemala City. Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.
Hong Kong.-T. R. G. Fletcher, Canadian Government Trade Commissioner, Hong Kong and Shanghai Banking Corporation Building, Hong Kong. Territory includes Indo-China, Macao and Taiwan.

India.-Richard Grew, Commercial Counsellor, Office of the High Commissioner for Canada, 4 Aurangzeb Road, New Delhi.
B. I. Rankin, Commercial Secretary for Canada, Gresham Assurance House, Mint Road, Bombay. Territory includes Burma.
Ireland.-T. Grant Major, Commercial Secretary for Canada, 66 Upper O'Connell Street, Dublin.
Italy.-S. G. MacDonald, Commercial Secretary, Canadian Embassy, Via Saverio Mercadante 15, Rome. Territory includes Libya, Malta and Yugoslavia.
Jamaica.-M. B. Palmer, Canadian Government Trade Commissioner, Canadian Bank of Commerce Chambers, Kingston. Territory includes Bahamas and British Honduras.
Japan.-J. C. Britton, Commercial Secretary, Canadian Embassy, Tokyo. Territory includes Korea.
Lebanon.-G. F. G. Hughes, Canadian Government Trade Commissioner. Territory includes Iraq and Syria.
Mexico.-M. T. Stewart, Commercial Secretary, Canadian Embassy, Edificio Internacional, Paseo de la Reforma, Mexico, D.F.
The Netherlands.-J. A. Langley, Commercial Counsellor, Canadian Embassy, Sophialaan 1-A, The Hague.
New Zealand.-L. S. Glass, Commercial Counsellor, Office of the High Commissioner for Canada, Government Life Insurance Building, Wellington. Territory includes Fiji and Western Samoa.
Norway.-J. L. Mutter, Commercial Secretary, Canadian Legation, Fridtjof Nansens Plass 5, Oslo. Territory includes Denmark and Greenland.
Pakistan.-A. P. Bissonnet, Commercial Secretary, Office of the High Commissioner for Canada, Hotel Metropole, Victoria Road, Karachi. Territory includes Afghanistan and Iran.
Peru.-H. J. Horne, Acting Commercial Secretary, Canadian Embassy, Edificio Boza, Carabaya 831, Plaza San Martin, Lima. Territory includes Bolivia.
Philippines.-F. H. Palmer, Consul General of Canada and Trade Commissioner, Tuason Building, 8-12 Escolta, Binondo, Manila.
Portugal.-L. M. Cosgrave, Commercial Counsellor, Canadian Legation, Avenida de Praia da Vitoria $48-1^{\circ} \mathrm{D}$, Lisbon. Territory includes The Azores and Madeira.

## FOREIGN TRADE* SERVICE REPRESENTATIVES ABROAD-continued

Singapore.-D. S. Armstrong, Canadian Government Trade Commissioner, Room D-5, Union Building, Singapore. Territory includes Brunei, Federation of Malaya, Indonesia, North Borneo, Sarawak and Thailand.

South Arrica.-C. B. Birkett, Canadian Government Trade Cominissioner, Mutual Building, Harrison Street, Johannesburg. Territory includes Southern Rhodesia, Northern Rhodesia. Nyasaland, Portuguese Fast Africa, Kenya, Tanganyika, Uganda and Zanzibar.
K. F. Noble, Canadian Government Trade Commissioner, Grand Parade Centre Building, Adderley Street, Cape Town. Territory includes South-West Africa, Mauritius and Madagascar.

Sparn.-E. H. Maguire, Canadian Government Trade Commissioner, 70 Avenida Jose Antonio, Madrid. Territory includes Balearic Islands, Canary Islands, Gibraltar, Rio de Oro, Spanish Morocco and Tangier.

Sweden.-F. W. Fraser, Commercial Secretary, Canadian Legation, Strandvagen, 7-C, Stockholm. Territory includes Finland.

Switzerland.-Yves Lamontagne, Commercial Counsellor, Canadian Legation, Thunstrasse 95, Berne. Territory includes Austria, Czechoslovakia and Hungary.

Trinidad.-P. V. McLane, Canadian Government Trade Commissioner, Colonial Building 72 South Quay, Port-of-Spain. Territory includes Barbados, Windward and Leeward Islands, British Guiana, Dutch Guiana, French Guiana and French West Indies.

United Kingdom.-R. P. Bower, Commercial Counsellor, Office of the High Com missioner for Canada, Canada House, Trafalgar Square, London, S.W.1.
R. Campbell Smith, Commercial Secretary, Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1. Territory includes Iceland and British West Africa (Gambia, Gold Coast, Nigeria and Sierra Leone).
M. J. Vechsler, Canadian Government Trade Commissioner, Martins Ban's Building, Water Street, Liverpool.
T. Grant Major, Canadian Government Trade Commissioner, 36 Victoria Square, Belfast. Territory includes Northern Ireland.
United States.-J. H. English, Commercial Counsellor, Canadian Embassy, 1746 Massachusetts Ave., N.W., Washington, D.C. A. E. Bryan, Deputy Consul General of Canada and Trade Commissioner, Canadian Consulate General, 620 Fifth Avenue, New York City.
G. S. Patterson, Consul General of Canada, Canadian Consulate General, 532 Little Building, 80 Boylston Street, Boston 16.
D. S. Cole, Consul General of Canada, Canadian Consulate General, Chicago Daily News Building, 400 West Madison Street, Chicago.
B. C. Butler, Consul of Canada and Trade Commissioner, Canadian Consulate, 1035 Penobscot Building, Detroit 26.
V E. Duclos, Canadian Government Trade Commissioner, 510 West Sisth Street, Los Angeles.
G. A. Newman, Consul of Canada and Trade Commissioner, Canadian Consulate, 201 International Trade Mart, New Orleans.
Acting Consul General of Canada, Canadian Consulate General, 3rd Floor, Kohl Building, 400 Montgomery Street, San Francisco.

Venezuels.-J. A. Stiles, Consul of Canada and Trade Commissioner, Canadian Consulate General, Edificio Pan American, Puente Urapal, Caracas. Territory includes Netherlands Antilles.

## Agricultural Representatives

Argentina.-W. B. McCullough, Agricultural Secretary, Canadian Embassy, Bartolomé Mitré 478, Buenos Aires. Territory includes Paraguay and Uruguay.
Australia.-R. W. Blake, Agricultural Secretary for Canada, 83 William Street, Melbourne.
Grrmany.-Wm. Van Vliet, Agricultural Secretary, Canadian Embassy, 22 Zitelmannstrasse, Bonn.
Italy.-Dr. C. F. Wilson, Agricultural Counsellor, Canadian Embassy, Via Saverio Mercadante 15, Rome.

## FOREIGN TRADE SERVICE REPRESENTATIVES*ABROAD-concluded

## Agricultural Representatives-concluded

The Netherlands.-C. J. Small, Acting Agricultural Secretary, Canadian Embassy, Sophialaan 1-A, The Hague. Territory includes Belgium, Denmark and Luxembourg. United Kingdom.-D. A. B. Marshall, Commercial Secretary (Agricultural), Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1.
Untted States.-Dr. W. C. Hopper, Agricultural Counsellor, Canadian Embassy, 1746 Massachusetts Avenue, N.W., Washington, D.C.
Venezuela.-D. B. Laughton, Vice-Consul of Canada and Acting Agricultural Trade Commissioner, Canadian Consulate General, Edificio Pan American, Puente Urapal, Caracas. Territory includes Colombia.

## Fisheries Representatives

Italy.-M. S. Strong, Commercial Secretary (Fisheries), Canadian Embassy, Via Saverio Mercadante 15, Rome.

Jamaica.-E. M. Gosse, Canadian Trade Commissioner (Fisheries), Canadian Bank of Commerce Chambers, Kingston.

United States.-M. B. Bursey, Consul of Canada and Trade Commissioner (Fisheries), Canadian Consulate General, 620 Fifth Avenue, New York City.

## Timber Representative

United Kingdom.-R. D. Roe, Commercial Secretary (Timber), Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1.

Commodities Branch.-Commodity trade promotion is the responsibility of the Commodities Branch. The Export and Import Divisions co-ordinate the work of the commodity specialists in the following sections: Automotive, Agricultural and Construction Equipment; Chemicals, Oils and Minerals; Imported Foods; Machinery and Metals; Textiles, Leather and Rubber; Wood and wood products, including newsprint; and a wide range of general products. The commodity officers specializing in these fields maintain contact with industry by personal visits and exchange of correspondence and with conditions abroad by communication with Canadian Government Trade Commissioners. The Export Division directs the attention of Trade Commissioners to supply conditions in Canada and, in turn, relays market news received from Trade Commissioners to Canadian manufacturers and exporters. Close attention is paid to opportunities for developing sales abroad of Canadian products and exporters are informed about regulations governing foreign trade. The Import Division obtains information on foreign supply conditions and directs the attention of Trade Commissioners to requirements in the Canadian market. This Division is concerned particularly with locating advantageous sources of supply of materials for manufactures and in promoting Canadian interests in international commodity markets.

Directories are maintained which include lists of Canadian manufacturers and other exporters, together with details of the products they are in a position to sell abroad and also lists of Canadian importing houses and details of their foreign connections and their interests in the import field. These directories are confidential and are supplied only to Canadian Government Trade Commissioners.

The function of the Transportation and Communications Division of the Branch is to facilitate, where necessary, the movement of merchandise from its point of origin to its ultimate destination. Active liaison is maintained with railways, steamship operators and agents, marine insurance companies, forwarding firms and
brokerage houses. New moves by foreign governments which affect the movement of Canadian goods, changes in rates and regulations established by private steamship companies and the pattern of Canada's foreign trade as related to its carrying services are all kept under constant review. The Division maintains a Canadian Trade Services Directory which contains information concerning Canadian customs requirements, invoicing, packaging, merchandising, forwarding facilities, steamship services, rail transportation and marketing data. This information enables the Trade Commissioners to obtain for Canada recognition as an organized market and to facilitate the establishment of closer working arrangements between Canadian firms and their foreign connections.

The Export and Import Permit Division is responsible for the administration of controls on the movement of scarce commodities and strategic materials subject to regulation under the powers of the Export and Import Permits Act. Control is exercised over the export of arms and munitions, implements of war, atomic energy materials and other strategic items. In collaboration with foreign governments, this Division also operates an import certificate and delivery verification procedure, instituted as an insurance against critically important shipments being diverted to undesirable destinations. The number and types of commodities under control change materially from time to time, reflecting the constant effort to remove restrictions as soon as the necessity for them disappears.

Agriculture and Fisheries Branch.-The section of the Commodities Branch engaged in trade promotional work on agricultural commodities, other than wheat and coarse grains, was established as a separate Branch in 1950. The Fisheries Section of the Commodities Branch and the Wheat and Grain Division were amalgamated with the new Agricultural Commodities Branch early in 1952, thus completing the centralization of the food and agricultural activities of the Department within the Agriculture and Fisheries Branch.

The primary function of the Agriculture and Fisheries Branch is to promote Canadian exports and imports of agricultural and fisheries products by assisting Canadian exporters in finding markets for their products abroad and in helping to locate sources of supply for products which Canadian importers wish to obtain from other countries. Canadian firms are given advice with respect to market conditions in other countries, competition to be met from other suppliers, import and exchange restrictions and related matters. In turn, Trade Commissioners are kept informed of production and price trends in Canada, products available for export and sources of supply.

In fish producing or importing countries, Trade Commissioners report to the Branch regularly on matters relating to fish. In addition, the four Fisheries Trade Commissioners located in important markets report on developments in those markets. This information is analysed and passed on to the industry and to provincial and federal government officials. Similarly, nine Agricultural Trade Commissioners located in important markets for Canadian agricultural products, or in countries which produce and export commodities competitive with Canada, report to the Branch on related economic conditions and agricultural developments in those countries. The information so received is analysed and made available to those interested. Reports by Trade Commissioners, in countries other than those covered by the Agricultural Trade Commissioners, are received from time to time and are handled in a like manner. Much of the material relating to agriculture and fisheries received from abroad is published in Foreign Trade.

Matters relating to Canada's grain trade are handled by the Wheat and Grain Division of the Branch. This Division assists foreign governments and other buyers in purchasing Canadian wheat, flour and other cereals, and serves as liaison between the Department of Trade and Commerce and the Canadian Wheat Board.

International Trade Relations Branch.-The International Trade Relations Branch is concerned with negotiations and consultations with other governments on matters affecting Canadian foreign trade policy and with the preparation of studies on international trade developments and the interpretation of the effect of these developments on the Canadian economy as a whole as well as on the domestic and foreign trade of Canada. This Branch compiles information on tariffs and customs regulations, foreign exchange and trade documentation of other countries for the use of Canadian exporters and other branches of the Government. A main function of the Branch is to analyse the foreign trade situation and the effects of changing foreign tariffs and customs practices in preparation for meetings of the General Agreement on Tariffs and Trade. The Branch co-operates with academic institutions and individuals engaged in commercial research.

Economics Division.-The Economics Division maintains a continuous review of business conditions in Canada. To do this, it is necessary to analyse foreign trade trends and to appraise their effect on economic development in Canada. Other aspects of the general economic situation considered include investment, consumption, production, prices, incomes and employment, as well as conditions in industries and localities.

The Industrial Development Division.-This Division co-ordinates the assistance offered by the Federal Government in the establishment of new industries in Canada. Acting in this capacity, the Division provides information on a multiplicity of matters pertaining to industry establishment and assists in solving the variety of particular problems that Canadian and foreign businessmen encounter.

The Division also aids those established firms that wish to expand into new lines of production. Inquiries from foreign firms and individuals regarding the manufacture of products in Canada under licence or royalty are screened and brought to the attention of Canadian manufacturers interested in producing additional items.

The Division acts in an advisory capacity to the Immigration Branch of the Department of Citizenship and Immigration regarding the admission of individuals, other than those from Commonwealth countries and the United States, who wish to establish new industries in Canada.

The Division works in close co-operation with a widespread network of organizations throughout Canada, including industrial development departments of the provinces, municipalities, railways, banks, power companies, chambers of commerce, boards of trade, and the Canadian Manufacturers' Association.

Information Branch.-The principal function of the Information Branch is to furnish the commercial community of Canada with information concerning the assistance that exporters and importers may obtain from the Department of Trade and Commerce. The Branch is responsible also for stimulating a better appreciation by the general public of the importance of trade to the welfare of Canada. The attention of exporters and potential exporters is directed to opportunities for the disposal of their products in markets abroad, and of importers to the sources of supply for raw materials and consumer goods unobtainable in Canada. Its
principal educational and informative medium is Foreign Trade, the weekly publication of the Foreign Trade Service, in which are reproduced reports of Canadian Trade Commissioners on conditions in their respective territories, articles by Head Office personnel and economists of the Dominion Bureau of Statistics, news items and charts portraying trade trends. Press releases are prepared and distributed to newspapers at home, and material of a similar character dispatched to Canadian Trade Commissioners for distribution to newspapers abroad. Pamphlets and brochures are prepared to supplement other information on foreign markets, sources of supply, documentation, regulations and trade restrictions. Assistance is rendered to correspondents of newspapers and periodicals at home and abroad in the preparation of articles pertaining to various phases of Canada's foreign trade. The educational and promotional work of this Branch is supported by advertising at home and abroad, through the daily press, periodicals and trade papers, as well as films and radio. Although the Information Branch is part of the Foreign Trade Service, its functions were expanded to include assistance to the associated agencies of the Department of Trade and Commerce concerned with the development of foreign trade. For example, it handles publicity connected with the projects undertaken by the Canadian Government Exhibition Commission in this and other countries.

Canadian Government Exhibition Commission.-The Canadian Government Exhibition Commission by graphic media of all kinds publicizes Canada and helps to sell Canadian products abroad. Under the terms of reference, the Commission is solely responsible for the construction and administration of all Federal Government exhibits in international expositions, trade fairs and displays outside Canada in which the Government of Canada may decide to participate, and of all international expositions and trade fairs held in Canada and sponsored by the Government of Canada. The Commission's first fulfilment of the latter half of this responsibility was the development of the Canadian International Trade Fair, held annually at Toronto since 1948. Manufacturers and producers in Canada and other countries have an opportunity of displaying their products at this Fair.

The Commission also co-operates with Canadian exporters in securing representation for goods at trade fairs and trade promotional displays and, on request, is prepared to advise individual Canadian companies in the preparation of their exhibits. Moreover, it distributes at its various presentations large quantities of materials produced by other Canadian Government Departments and agencies.

Export Credits Insurance Corporation.-The Export Credits Insurance Corporation was established under the provisions of the Export Credits Insurance Act, 1944, and as amended in August 1946 and May 1948. The Corporation, which is administered by a board of directors, including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada, insures exporters against losses arising from credit and political risks involved in the export or an agreement for the export of goods. Policies are generally issued on a yearly basis, covering exporters' sales to all countries. The main risks covered by Export Credits Insurance Policies include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country.

The insurance is available under two main classifications-general commodities and capital goods. Coverage for general commodities can be procured by exporters under two types of policies: (1) the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received; or (2) the Shipments Policy, obtainable at lower rates of premium and which covers the exporter from the time of shipment until payment is received.

Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit for longer periods is often necessary. Specific policies are issued for transactions involving capital goods, but the general terms and conditions are the same as those applicable to policies for general commodities.

The Corporation insures exporters on a co-insurance basis up to a maximum of 85 p.c. of the gross invoice value of shipments. This co-insurance basis also operates in the distribution of recoveries obtained after payment of a loss, and these recoveries are shared by the Corporation and exporter in the proportions of 85 and 15 p.c., respectively.

The Corporation, from its inception to Dec. 31, 1951, issued policies having a total value of $\$ 315,704,750$. Claims paid to exporters, during the same period, covering losses sustained by them under the terms and conditions of their policies, amounted to $\$ 705,894$. A large majority of these claims resulted from exchange transfer difficulties, with relatively few arising from insolvencies. Recoveries made amounted to $\$ 508,529$. Excess of income over expenditure to Dec. 31, 1951, was $\$ 1,985,083$, which was added to its underwriting reserve in accordance with the practice followed by the Corporation since it began operations.

International Economic and Technical Co-operation Division.-This Division is responsible for the supervision of all Canadian commitments under the Colombo Plan for the Economic Development of South and South-East Asia. This includes the capital development program of tangible assistance, as well as the technical training and guidance provided through the Technical Co-operation Service. It is closely associated with the Technical Assistance Administration and other specialized agencies of the United Nations concerned with the betterment of conditions in the underdeveloped areas of the world.

## Section 2.-The Development of Tariffs

A short sketch of trade and tariffs prior to Confederation is given at pp. 480-482 of the 1940 edition of the Year Book. The 1942 Year Book, at pp. 427-428, traces the development from Confederation to the adoption in 1904 of the present form of preferential tariff.

Owing to the limitations of space in the Year Book, it has been necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs, giving references to those editions of the Year Book where extended treatments can be found.

## Subsection 1.-The Canadian Tariff Structure

The Canadian Tariff consists mainly of three sets of tariff rates-British Preferential, Most-Favoured-Nation, and General. British Preferential rates consisted at first (1898) of a remission of 25 p.c. of the duties ordinarily paid but later (1900) were advanced to $33 \frac{1}{3}$ p.c. and, after 1904 , took the form of a specially
low rate of duty on almost all imported dutiable commodities. This is the first broad category of the tariff structure and these rates are applied to specified goods from Commonwealth countries if shipped direct to Canada. On certain goods special rates may be applied under the British Preferential Tariff; these special rates are lower on those goods than the ordinary British Preferential scale.

The second scale is the Most-Favoured-Nation Tariff. These rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. To certain non-Commonwealth countries, a special concession under the Most-Favoured-Nation rates may be granted and rates lower than those of the Most-Favoured-Nation tariff may apply by agreement.

The third class of duties is the General Tariff, which is levied on all imports that do not qualify for Preferential or Most-Favoured-Nation tariff treatment.

British Preferential rates apply to all countries within the Commonwealth. They may, however, be modified downward in their application to specific countries when trade agreements are being revised or discussed between Canada and other Commonwealth countries. The whole tariff structure is very complicated. Almost every Budget brought down in the House of Commons changes the incidence of the tariff in some particulars, so that it would be impossible to attempt here a discussion of tariff schedules. The schedules and rates in force at any particular time may be obtained from the Department of National Revenue, Ottawa, which is responsible for administering the Canadian Tariff.

In all cases where the tariff applies, there are provisions for drawbacks of duty on imported materials used in the manufacture of products later exported. The purpose of these drawbacks is to give Canadian manufacturers a fair basis of competition with foreign producers of similar goods, where it is felt to be warranted. A second class of drawbacks known as 'home consumption' drawbacks apply mainly to imported materials and parts used in the production of specified classes of goods manufactured for home consumption.

Too often one-sided competition arises out of unfair practices, such as dumping or the manipulation of exchange advantages. Wide powers have been given, in certain instances, to supplement tariff provisions. Thus, the Minister of National Revenue or, through him, the customs officials have been empowered at times to establish a 'fair market value' as a basis of applying duties to be collected. The term 'fair market value' is vague and open to various interpretations and has been frequently criticized but, in exceptional cases of imports from General Tariff countries, arbitrary valuations have proved effective.

The exchange situation as it affects the Tariff is a different problem. A foreign currency that has become considerably depreciated in relation to the Canadian dollar enables the country concerned to export goods to Canada under a very definite advantage and customs officials have been given power, under.conditions such as these, to value imports from such countries at a 'fair rate of exchange'. Much, of course, depends on the manner in which the above powers are applied by the administrative officials and their understanding of the reasons for their application and, while the powers of fixing 'fair market value' and 'fair rate of exchange' have been applied to meet extraordinary conditions in the past, these powers have now been modified by clauses in trade agreements drawn up with individual countries.

The Tariff Board.-The Tariff Board, constituted by the Tariff Board Act, 1931, consists of three members, one of whom is chairman and another vice-chairman. The duties and powers of the Board derive from three Statutes of Canada: the Tariff Board Act, the Customs Act, and the Excise Tax Act.

Under the Tariff Board Act the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada or produced in Canada, are subject to or exempt from duties of customs or excise and on which the Minister of Finance desires information. The investigation into any such matter may include inquiry as to the effect that an increase or decrease of the existing rate of duty upon a given commodity might have upon industry or trade, and the extent to which the consumer is protected from exploitation. It is also the duty of the Board to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report. Usually the references take one of two forms: authority for review of sections of the Customs Tariff relating to an entire industry, or for investigation in respect of specified commodities. Under a provision of the Act, reports are tabled in Parliament.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board is authorized to act as a tribunal to hear appeals from rulings of the Department of National Revenue in respect of matters of administration including those of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive, with provision for appeal on questions of law to the Exchequer Court of Canada. Tariff references and appeals receive public hearings at which interested parties submit oral statements and written briefs relating to matters under consideration.

## Subsection 2.-Tariff Relationships with Other Countries

General Agreement on Tariffs and Trade.*-The General Agreement on Tariffs and Trade is by far the most important trade agreement in which Canada is participating at the present time. Fundamentally, it is a multilateral agreement which applies equally to all the 34 contracting parties.

The Agreement consists of three parts corresponding to the several distinctive aspects of trade negotiations:-

Part I (Articles 1 and 2) deals with tariff rates. The general provisions regarding the application of rates of duty negotiated under the Agreement are set forth and the schedules of negotiated duties are also included.

Part II (Articles 3 to 23) covers all non-tariff matters which have a direct bearing on international trade: The principles set forth in this Part constitute an international code of regulations for conducting foreign trade.

Part III (Articles 24 to 34) deals with matters concerning the administration and the relationship of the Agreement to the Charter for an International Trade Organization.

Part I defines the meaning and application of the principle of most-favourednation treatment, which is the key provision of the Agreement. Briefly, it requires that each contracting party will accord the same advantages and privileges with respect to international trade to all other contracting parties. An exception is made to permit existing preferences to be maintained, but these cannot be increased. In connection with Part I, there are schedules listing the products on which each country has agreed to bind or reduce its tariff. As a rule, tariff negotiations are

[^329]initiated by the principal supplier and, in every case, the rate of duty finally agreed upon becomes the rate which would apply to a similar product sold by any country which is a contracting party to the Agreement.

Under this new system of multilateral tariff negotiations, three conferences have taken place - at Geneva, Switzerland, in 1947, at Annecy, France, in 1949 and at Torquay, England, in 1950-51. The tariff concessions Canada granted and received at the Geneva Conference are described in the 1948-49 edition of the Year Book, pp. 875-877, and those negotiated at Annecy are discussed in the 1950 edition of the Year Book, pp. 968-970.

The rates in the Geneva and Annecy Schedules were bound against increase for a definite period to January 1951. After that time, countries were entitled to modify their schedules by negotiation or consultation with other contracting parties.

The Torquay Conference followed the same pattern as the previous negotiations, and the most recent agreements are really an extension of the agreements drawn up in the previous years. Under the most-favoured-nation principle, all tariff concessions agreed to at Torquay are available to Canada, whether or not these concessions were negotiated directly with Canada. Similarly, Canada extends its own tariff concessions to each of the other participating countries.

The results of the Torquay negotiations were important in a number of ways. Arrangements were made to extend the Geneva and Annecy concessions for a further firm period of three years. The General Agreement also was expanded to include the following four new members: Austria, the German Federal Republic, Peru and Turkey (see footnote 1 at pp. 1003 and 1004). Finally, new tariff negotiations took place between present members to cover a broader range of commodities and, in many cases, to provide for further reductions on products previously negotiated. The new tariff concessions, together with the Geneva and Annecy concessions, are to remain in force until Jan. 1, 1954.

As part of the undertaking to extend the previous agreements for a further firm period of three years, countries had a right under the General Agreement to make modifications or withdrawals of previous tariff concessions and, in a few cases, concessions were withdrawn from Canada. In such instances, compensation was made by way of tariff concessions on other products so that the over-all value to Canada of the previous agreements was not impaired. The original tariff concessions exchanged among the United States, the United Kingdom, Canada and a number of other important countries were, however, maintained in their entirety.

Part II of the Agreement sets forth in considerable detail the rules and regulations designed to reduce and eventually eliminate discriminatory practices in international trade. Traditionally, the tariff was the chief instrument for regulating the volume of imports which each country was willing to accept. To-day, however, the most effective and widely adopted method of regulating the flow of imports is through the application of more drastic measures, such as quantitative restrictions, exchange controls, state barter deals and bilateral agreements. The contracting parties agree to apply the provisions of Part II "to the fullest extent not inconsistent with existing legislation", and it is on this basis that the terms of Part II of the Agreement are observed to-day. The most significant clauses include those dealing with taxes on imported goods, various forms of quantitative restrictions, special considerations for countries in balance-of-payment difficulties, and special considerations for countries undertaking defined programs of economic development or reconstruction. (See the 1948 edition of the Year Book, p. 874, and the 1950 edition, p. 967.)

Part III of the Agreement deals with the mechanics of administration. Representatives of the contracting parties are required to meet at frequent intervals, usually about every six months, to carry out the provisions of the Agreement which require joint action and generally to facilitate the operation of the Agreement. These meetings are referred to as "sessions" of the contracting parties and seven sessions (including the three conferences at which tariff negotiations were also conducted) have taken place to Nov. 30, 1952.

Other Tariff Relations.-The General Agreement on Tariffs and Trade is a blanket agreement applicable to all contracting parties on the same basis. However, there are also other tariff arrangements in effect to-day which were negotiated prior to the provisional adoption of the General Agreement. In many cases, these earlier trade arrangements are allowed to stand. The contracting parties are also permitted to negotiate new trade agreements, subject to the qualifications of the General Agreement, but they cannot increase any margins of preference or extend new preferences.

Canada has a number of reciprocal tariff arrangements with members of the Commonwealth and other countries. They are grouped as follows:-
(1) application to Canada of some old commercial treaties of the United Kingdom;
(2) participation in commercial treaties of the United Kingdom by Canadian Acts of Parliament or Orders in Council;
(3) Canadian Conventions of Commerce or Trade Agreements; and
(4) exchanges of notes respecting tariff matters.

Canada extended preferential rates for the first time to the United Kingdom in 1898, and after World War I most-favoured-nation agreements were made with countries outside the Empire. By the late 1930's, Canada had trade agreements with 32 countries but some of these lapsed during World War II and have not been replaced.

New commercial agreements were made during the War with several South American countries that had expanded their trade with Canada and, since the end of the War, most-favoured-nation agreements have been made with Turkey, Greece, Italy, China, Nicaragua, the Federal Republic of Germany, and Austria.

Many of Canada's reciprocal trade treaties are simply exchanges of most-favoured-nation treatment and do not include schedules of tariff concessions. However, some important agreements, such as the Canada-United States trade treaties of 1935 and 1938, do include lists of negotiated tariff rates. Practically all the items bound in these earlier agreements are now covered by the General Agreement.

The benefit received by Canadian exports under most-favoured-nation treatment in any country depends upon the tariff and treaty system in force. Some countries possess a single-column tariff and extend whatever concessions they make to all countries without discrimination. Other countries have minimum, intermediate and maximum tariff rates and their most-favoured-nation rates are either the minimum or intermediate schedules. Sometimes, most-favoured-nation treatment is subject to certain reservations concerning preferential rates granted by one state to another on special historical, political or geographical grounds.

Various modifications in tariff rates have been made under special trade arrangements, but the British Preferential rates, which are applicable to numerous types of goods from many parts of the Commonwealth, are always the most favourable. In return for this special treatment, Canadian goods enjoy similar tariff advantages in many Commonwealth countries.

Tariff Arrangements in Force as of Nov. 30, 1952.-In the following list, contracting countries under the General Agreement on Tariffs and Trade (G.A.T.T.) are indicated. In the case of a number of countries belonging to G.A.T.T., other trade arrangements with Canada remain in force and the terms of these are given in the statement.

## Tariff and Trade Arrangements with Commonwealth Countries, as at Nov. 30, 1952

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| United Kingdom..... | Trade Agreement signed Feb. 23, 1937; in force Sept. 1, 1937. Modified by an Exchange of Letters Nov. 16, 1938, resulting from United Kingdom - United States Trade Agreement of Nov. 17, 1938. Further modified by General Agreement on Tariffs and Trade and Exchange of Notes Oct. 30, 1947. <br> G.A.T.T. effective Jan. 1, 1948. | Various concessions by both countries, including exchange of lowest tariff rates (some minor reservations by Canada) and binding against increase of scheduled preferential duties. Extends also to Colonial Empire. |
| Australia............. | Trade Agreement signed July 8, 1931, in force Aug. 3, 1931. <br> G.A.T.T. effective Jan. 1, 1948. | Each country accords the other reduced rates on schedules of goods, and otherwise (with a few exceptions in Australia) exchanges its British Preferential Tariffs with the other. Made for one year and thereafter until terminated on six months notice. |
| New Zealand......... | Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. <br> G.A.T.T. effective July $26,1948$. | Exchange specific preferences on scheduled goods and otherwise concede British Preferential Tariffis reciprocally. Made for one year, but kept in force by short-term extensions. Since Sept. 30, 1941, in force until terminated on six months notice. |
| Union of South Africa | Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932. <br> G.A.T.T. effective June 14, 1948. | Agreement extends list of preferences formerly exchanged in absence of formal Agreement. Made for five years and thereafter until terminated on six months notice. |
| Southern Rhodesia.. | Trade Agreement of Aug. 20, 1932, terminated on Jan. 2, 1938, on notice from Southern Rhodesia. Provisions have, nevertheless, continued in force. <br> G.A.T.T. effective May 19, 1948. | Canada accords British Preferential Treatment and Southern Rhodesia tariff preferences granted to other Commonwealth Countries. |

Tariff and Trade Arrangements with Commonwealth Countries, as at Nov. 30, 1952
-concluded

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| India. | Canada since 1897 accords India British Preferential treatment but without contractual obligation. <br> G.A.T.T. effective July 8, 1948. |  |
| Pakistan. | Canada since 1897 accords Pakis$\tan$ British Preferential treatment but without contractual obligation. <br> G.A.T.T. effective July $30,1948$. |  |
| Ceylon. | Ceylon participates in Trade Agreement of 1937 between United Kingdom and Canada. G.A.T.T. effective July 29, 1948. | Canada and Ceylon exchange Preferential tariff treatment. |
| British West Indies, Bermuda, British Guiana and British Honduras | Trade Agreement signed July 6, 1925; in force Apr. 30, 1927. Covers the following ColoniesBahamas, Barbados, Bermuda, British Guiana, British Honduras, Jamaica, Leeward Islands, Trinidad and Tobago, Windward Islands. <br> Note.-The B.W.I. with the exception of Jamaica are parties to the G.A.T.T. | Exchange of specific margins of preferences. Made for 12 years and thereafter until terminated on one years notice. A Canadian notice of Nov. 23, 1938, terminating the Agreement, was replaced by one of Dec. 27, 1939, continuing the Agreement subject to termination on six months notice. |
| Irgland.............. | Trade Agreement signed Aug. 20, 1932; in force Jan. 2, 1933. | Canada concedes British Preferential Tariff in return for most - favoured - nation treatment (including any preferential rates in force) in Eire. Made for five years and thereafter until terminated on six months notice. |

Tariff and Trade Arrangements with Non-Commonwealth Countries, as at Nov. 30, 1952

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| Argentina.. | Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941. | Exchange of most - favoured nation treatment. Provisional application may be terminated on three months notice. To come into force definitively 30 days after exchange of ratification for two years and thereafter until terminated on six months notice. |
| Austria. | G.A.T.T. effective Oct. 19, 1951. |  |
| Benelux (Belgium, Luxempourg and The Netherlands) | Convention of Commerce with Belgium (including Luxembourg and Belgian colonies) entered into effect Oct. 22, 1924 | Exchange of most - favoured nation treatment in tariff matters. Made for four years and thereafter until terminated on one years notice. |

# Tariff and Trade Arrangements with Non-Commonwealth Countries, as at 

 Nov. 30. 1952-continued

Tariff and Trade Arrangements with Non-Commonwealth Countries, as at Nov. 30, 1952-continued

| Country | Treaty or Convention | Terms |
| :---: | :---: | :---: |
| Denmark, including Greenland | Treaties of Peace and Commerce with United Kingdom of Feb. 13,1660 , and July 11,1670 , apply to Canada. <br> G.A.T.T. effective May $28,1950$. | Exchange of most - favoured nation treatment. Declaration of May 9,1912 , provides means for separate termination by Canada on one years notice. |
| Dominican Republic | Trade Agreement signed Mar. 8, 1940; in force provisionally Mar. 15, 1940, and definitively Jan. 22, 1941. | Exchange of most-favoured nation treatment. Dominican Republic accords scheduled rates on dried fish and free entry for seed potatoes. Made for three years from Jan. 22, 1941, and thereafter until terminated on six months notice. |
|  | G.A.T.T. effective May 19, 1950. |  |
| Ecuador. | Modus vivendi signed Nov. 10, 1950, in force Dec. 1, 1950. | Exchange of most - favoured nation treatment. Made for one year to continue thereafter subject to termination on three months notice. |
| El Salvador......... | Exchange of Notes of Nov. 2, 1937; in force Nov. 17, 1937. | Exchange of most-favoured nation treatment. Made for one year and thereafter unti! terminated on four months notice. |
| Finland............... | Exchange of Notes of Nov. 13-17, 1948, effective Nov. 17, 1948. | Exchange of most - favoured nation treatment. Effective until a Trade Agreement concluded or, alternatively, for a period of one year and thereafter until terminated on three months notice. |
|  | G.A.T.T. effective May 25, 1950. |  |
| France and French Overseas Territories | Trade Agreement signed May 12, 1933; in force June 10, 1933. Exchange of Notes of Sept. 29, 1934, and additional protocol of Feb. 26, 1935. G.A.T.T. effective Jan. 1, 1948. | Exchange of most - favoured nation treatment including scheduled concessions. |
| Federal Republic of Western Germany | G.A.T.T. effective Oct. 1, 1951. |  |
| Greece. | Modus vivendi by Exchange of Notes of July 24-28, 1947; effective Aug. 28, 1947. <br> G.A.T.T. effective Mar. 1, 1950. | Exchange of most - favoured nation treatment. Made for a period of one year and thereafter until terminated on three months notice. |
| Greenland. | (Sec Denmark.) |  |
| Guatemala........... | Trade Agreement signed Sept. 28, 1937; in force Jan. 14, 1939. | Exchange of most - favoured nation treatment. Made for three years and thereafter until terminated on six months notice. |

By Exchange of Notes, Liechtenstein is included under terms of this Agreement, effective Aug. 21, 1947. | Exchange of most - favoured nation treatment. Convention of Mar. 30, 1914, provides means for separate termination by Canada on one years notice. |
| Syria. | Special Arrangement by Order in Council of Nov. 19, 1946. <br> Withdrew from G.A.T.T. Aug. 6, 1951. | Exchange of most - favoured nation treatment. |

${ }^{1}$ The Philipines participated in the Torquay negotiations but has not as yet (November 1952) become a Contracting Party to the General Agreement on Tariffs and Trade.

# Tariff and Trade Arrangements with Non-Commonwealth Countries, as at <br> Nov. 30, 1952-concluded 

${ }^{1}$ This country participated in the Torquay negotiations but has not yet (November 1952) become a Contracting Party to the General Agreement on Tariffs and Trade.

## CHAPTER XXII.-PRICES*

## CONSPECTUS

Note.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

An article summarized from the Report of the Royal Commission on Prices is given in the 1950 Year Book, pp. 978-982.

## Section 1.-Wholesale Prices

Wholesale prices are not restricted in this Chapter to the normal meaning of that word, but may include price quotations ranging from those paid by primary producers for basic raw materials to prices paid by retailers for finished articles. Within this broad group, numerous sub-classifications are available, such as component material, degree of manufacture and special purpose series. Wholesale prices are frequently very sensitive to changing conditions and are often used to gauge the economic effect of events, as well as to forecast retail price change. An example of this is the price increase which followed the outbreak of hostilities in Korea in 1950.

A new series of wholesale price index numbers, related to the base period 1935-39, was introduced in January 1951. Background material concerning the construction of this index is available in D.B.S. Reference Paper No. 24, Wholesale Price Indexes, 1913-1950.

Wholesale price index numbers in Canada cover the period dating from Confederation in 1867. An intermittent decline characterized the first 30 years of this interval but, from an average of $56 \cdot 8$ in 1897, the general wholesale index (1935-39 $=$ 100) advanced without appreciable interruption to 83.9 in July 1914. By 1918, this index had reached $173 \cdot 1$ and continued upward to a post-war inflationary peak of $214 \cdot 2$ in May 1920. The subsequent deflationary period lasted about two years, and between 1922 and 1929 price levels remained comparatively stable. Annual averages in this interval held between a high of $133 \cdot 8$ for 1925 and $124 \cdot 6$ for 1929 . For the four years following 1929, depressionary influences were so severe that prices fell almost to the level of those of 1913. In February 1933, the wholesale index touched an extreme low of 82.8 before turning upward again. Irregular recovery then continued until 1937, but the highest point reached, $110 \cdot 6$ in July 1937, was substantially below the 1926 average. The collapse of the wheat market in 1938, together with a fairly general depression in other markets, carried wholesale price levels just prior to the outbreak of war in 1939 down to about 15 p.c. above the 1913 level. The August 1939 index of $95 \cdot 6$ marked the extreme low of a two-year

[^331]decline. The movement of prices prior to the outbreak of World War I was very different from that which preceded World War II. The relatively low level of prices in August 1939 probably influenced the sharper initial advance at the outbreak of war. However, during 1940, price levels steadied and showed no sign of a steep increase until 1941. By that time, great expansion in wartime production bad made serious inroads into stocks of nearly all basic commodities and, at the end of 1941, wheat remained the only important commodity for which stocks exceeded predictable requirements. The introduction of general price control in December 1941 ended a year in which wholesale prices had advanced 10 p.c. as compared with about 3 p.c. in 1940. The effectiveness of price control is indicated by the fact that percentage increases in wholesale prices amounted to only $3 \cdot 1$ and $5 \cdot 2$ during the years 1942 and 1943, respectively, while the December 1944 index was slightly below the December 1943 figure. The December 1945 index of 132.9 was 10 p.c. above that for December 1941, when price control became generally effective.

The precipitous advance in United States general wholesale prices that began during the latter half of 1946 was of great concern to Canadian price-control authorities. The advance had been anticipated in July 1946, when the Canadian dollar was returned to par with the United States dollar, thus reducing the Canadian dollar cost of imports from the United States. This provided a buffer of 10 p.c. only and the rise in United States prices was greater than that on a large majority of imported articles so that continuous pressure was felt, especially among individual items. The Canadian general wholesale price index rose from 132.3 to 142.5 , an increase of over 8 p.c. between May 1945 and December 1946.

The Canadian price rise accelerated in 1947 as internal controls continued to be relaxed. The monthly general wholesale index advanced without interruption from $142 \cdot 5$ at December 1946 to $179 \cdot 9$ at December 1947, an increase of 26 p.c. The rise carried through into 1948, although at a decreasing rate, and by December the index had reached a level of $202 \cdot 0$. Wholesale price levels, during 1949, were generally stable.

Wholesale prices rose slightly during the first five months of 1950 to reach an index level of $204 \cdot 7$ by May. In June, a sharp gain to $209 \cdot 2$ occurred, due mainly to rapidly advancing prices for live stock, lumber, iron and steel products and nonferrous metals. An important factor stimulating further advance was the outbreak of war in Korea. The effect on basic commodities originating in or near that area was particularly sharp and by the end of the year the index had risen to $225 \cdot 2$.

In 1951 the index reached new peak levels, culminating in an all-time high of 243.7 in July. This trend was reversed in the second half of the year when the index declined steadily, reflecting marked recessions in animal products and textile products. The December 1951 index at $237 \cdot 7$, however, was still $5 \cdot 6$ p.c. above December 1950.

The downward movement continued throughout the first 10 months of 1952, the total index standing at $221 \cdot 0$ for October. Declines were recorded by most of the main commodity groups, although an upward trend was still apparent in iron and steel products and non-metallic mineral products.

## 1.-Annual Index Numbers of Wholesale Price Groups, 1942-51, and Monthly Index Numbers, January 1950-October 1952

$(1935-39=100)$

${ }^{1}$ Arithmetically converted from base $1926=100$.
${ }^{2}$ The wheat prices used are those currently effective for Manitoba Nos. 1, 2 and 3 Northern at Fort William. Participation payments are included and the series revised whenever such figures are announced. Between August 1945 and July 1950 the price included in the index for No. 1 Manitoba Northern was $\$ 1.83$ per bu. For the crop year ended July 31, 1951, the price included was $\$ 1.85$ per bu. The initial payment for the crop year beginning Aug. 1, 1951, was $\$ 1 \cdot 40$ per bu., increased to $\$ 1.60$ effective Feb. 1, 1952, retroactive to Aug. 1, 1951. Commencing Aug. 1, 1949, western oats and barley were brought under control of the Canadian Wheat Board. Prices used for Canadian farm products since that time have been initial payments to farmers. Participation payments are included whenever they are announced. Final payments for the crop year ended July 31, 1951, were announced Sept. 26, 1951, for western oats and barley. Increases in initial payments for barley for the crop year 1951-52 became effective Mar. 1, 1952, retroactive to Aug. 1, 1951.

Residential Building Materials.-In March 1949, a series of index numbers of residential building material prices (basis: $1935-39=100$ ) was established to meet the need for a more precise measurement of material components of residential
construction. A description of the index together with a record back to 1926 is given in D.B.S. bulletin, Price Index Numbers of Residential Building Materials, 1926 to 1948.

In 1951, residential building material prices continued the advance recorded in 1950, closing the year at $288 \cdot 8,9 \cdot 7$ p.c. above the December 1950 level. Electrical equipment, plumbing and heating equipment and lumber showed the most substantial increases for the year. These groups, however, reversed direction in the final month of 1951 inaugurating a decline which continued well into 1952. On the other hand, prices for cement, sand, gravel, and brick and tile reached new peak levels during the first ten months of 1952.

## 2.-Wholesale Price Index Numbers of Residential Building Materials, 1942-51, and Monthly Indexes, January 1950-October 1952

$(1935-39=100)$

| Year and Month | Composite Index | Principal Components |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Cement, Sand and Gravel | Brick, Tile and Stone | Lumber and Lumber Products | Lath, Plaster and Insulation | Roofing Material | Paint and Glass | Plumbing and Heating Equipment | Electrical Equipment and <br> Fixtures | Other Materials |
| 1942 | $130 \cdot 9$ | $100 \cdot 8$ | 109.0 | $153 \cdot 2$ | $104 \cdot 8$ | 123.4 | 146.9 | $120 \cdot 0$ | $110 \cdot 3$ | $117 \cdot 6$ |

World Wholesale Price Indexes.-Price changes within different countries have varied widely since the years before World War II. Comparisons between Canadian wholesale price changes and those that have occurred in other countries are provided in Table 3.

## 3.-Index Numbers of Wholesale Prices in Canada and other Countries, 1949, and December, 1950 and 1951

Note.-Base: $1948=100$ except for France, where $1949=100$.

## Section 2.-The Consumer Price Index

A new measurement of retail prices entitled, "The Consumer Price Index", was introduced by the Dominion Bureau of Statistics in October 1952. This index has been constructed to replace the Cost-of-Living Index and marks the most thorough and comprehensive index of retail prices ever constructed in Canada. The new index was introduced in a Bureau publication entitled The Consumer Price Index, January 1949-August 1952, which contains detailed information on such aspects of the new index as purpose, family coverage, base period, and provides details of the items included as well as their relative importance. It also gives the formula used in calculating the index, outlines methods of price collection and explains the special features of the new index.

The purpose of the Consumer Price Index is essentially the same as that of the Cost-of-Living Index; that is, to measure changes in retail prices of goods and services bought by a representative cross-section of the Canadian urban population. The families covered by the new index, however, are somewhat different from those represented in the Cost-of-Living Index and consist of those families who, during the survey year ended Aug. 31, 1948, lived in 27 Canadian cities of 30,000 population or over, ranged in size from two adults to two adults with four children and had annual incomes ranging from $\$ 1,650$ to $\$ 4,050$.

To measure the influence of price change upon the cost of goods and services purchased by such families, the Consumer Price Index contains 225 items, nearly 40 p.c. more than the Cost-of-Living Index. This expanded list of items reflects changes in consumption habits of Canadian families that occurred over the decade

1938-1948, as well as the broader sampling that has been possible in the new index. The index content is purely factual in its nature, and no attempt has been made to distinguish between 'luxuries' and 'necessities'.

Pre-war levels of prices now constitute an unsatisfactory reference level and the base period of the index is the year 1949, as compared to the average of the years 1935-39 in the case of the Cost-of-Living Index. Of the post-war years, 1949 was selected as the base period because price levels then were relatively stable, and because of the unsatisfactory nature of other post-war years. The fact that 1949 is a satisfactory reference level for other index number measurements such as those related to industrial production, agriculture, imports and exports, was also of considerable importance.

With the change to 1949 , the Consumer Price Index measures the percentage change in retail prices between that year and, for example, October 1952, rather than between October 1952 and 1935-39 as in the case of the Cost-of-Living Index. Since prices were substantially higher in 1949 than in 1935-39, indexes that take this higher price level as their reference base are considerably lower in absolute numbers. Thus, the Cost-of-Living Index for October 1952 was $185 \cdot 0$ while the comparable Consumer Price Index for the same date was $116 \cdot 0$. However, when both indexes are placed on the same base period, it will be seen that the two indexes have moved closely together over the period during which it is possible to compare them. The Consumer Price Index has been calculated forward from January 1949 and the accompanying chart compares monthly movements since that date with the movements of the Cost-of-Living Index.

It is notable that the 1948 survey of family expenditure indicated that the major economic changes during the decade 1938-1948 did not influence the percentage distribution of family expenditure as greatly as might have been expected. The following statement provides a comparison of the base period group weights of the two indexes.

| Budget Group | Consumer Price Index | Cost-of Living Index |
| :---: | :---: | :---: |
| Foods.. | ${ }^{\text {p.e. }} 32$ | ${ }_{31}{ }^{\text {p.e. }}$ |
| Clothing | 11 | 12 |
| Shelter . . $\ldots$....... | 15 | 19 |
| Household operation.... | 17 | ${ }_{15}^{15}$ |
| Fuel and light..........vices. | - | ${ }_{9}^{6}$ |
| Other commodities and services... | 25 |  |
| Miscellaneous. | -- | 23 |
| Totals | 100 | 100 |

The Consumer Price Index and Prices of Staple Foods.-The Consumer Price Index rose steadily throughout 1951 from $107 \cdot 7$ as at January of that year to a post-war peak of $118 \cdot 2$ for January 1952. During this period, all groups of the Consumer Price Index advanced, with foods showing the sharpest increase from $109 \cdot 0$ to $122 \cdot 4$. In 1952, the index declined steadily until May, and remained fairly stable between that date and October 1952.

Table 5 provides single commodity price relatives on the base $1949=100$ for a number of important foods entering into the food component of the Consumer Price Index. It also provides a record of average prices based on the actual average level of prices prevailing in October 1952, and calculated for the other months on the basis of the price relatives.

## 5.-Urban Average and Relative Retail Prices of Staple Foods, 1942-51, and by Months, January 1951-October 1952

Regional Changes in Living Costs.-Cost-of-Living Indexes for nine regional cities are shown in Table 6. The index for St. John's, N'f'ld., was prepared subsequent to the date Newfoundland joined Confederation, and is calculated on the base June $1951=100$, whereas indexes for the other cities are on the base August $1939=100$. The city indexes are patterned after the Cost-of-Living Index and will not be compiled on the same basis as the Consumer Price Index until some time in 1953.

The city indexes are not designed to show whether it costs more or less to live in one city than in another and should not be used for that purpose. Their function is to show the extent of price change within each city.

## 6.-Index Numbers of Living Costs in Nine Cities, 1942-51, and by Months, January 1951-October 1952

[^332]World Retail Price Indexes.-In order to place changes in Canadian retail prices in perspective with those occuring in other countries, Table 7 provides retail price indexes for selected countries and dates. It will be noted that increases in retail prices have been world-wide. These indexes also measure price change only and should not be used to compare living costs from country to country.

## 7.-Index Numbers of Retail Prices In Canada and other Countries, 1949 and December 1950 and 1951

Norg.-Base: $1948=100$ except for France and The Netherlands, where $1949=100$.

## Section 3.-Index Numbers of Security Prices

Security prices have long been utilized in statistical measurements related to economic phenomena and are, generally, sensitive to changing business conditions, although this valuable characteristic is sometimes overshadowed by the fact that their movements may be influenced greatly by speculative interest very remotely associated with underlying economic conditions. Thus, in 1928 and 1929, commonstock prices advanced far beyond levels indicated by business profits and prospects. Security-price trends also have been at variance with other business indexes during World Wars I and II.

Common Stocks.-Common stock prices advanced substantially during 1951 despite two major intermediate declines. From a level of $146 \cdot 3$ for December 1950, the composite index for 105 industrial, utility and bank stocks moved up to $166 \cdot 5$ by February 1951. A drop to $160 \cdot 7$ in June ensued, followed by another sharp rise to a 22 -year monthly peak of $183 \cdot 3$ by October. The final level for the year of $177 \cdot 3$ in December was an increase of $21 \cdot 2$ p.c. over the same month of 1950 . In January 1952, the composite index opened on a firm note at 181.7 but subsequent weakness developed, coinciding with lower commodity prices, to reduce the index to $163 \cdot 6$ by October.

## 8.-Investors Index Numbers of Common Stocks, by Months, 1951, and from January to October 1952

$(1935-39=100)$

| Year and Month | Types of Stocks |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Preferred Stocks.-Preferred stock movements paralleled industrial and utility common stocks during 1951, though the range of fluctuation was smaller. Following an increase from $160 \cdot 2$ in December 1950 to $169 \cdot 3$ in February 1951, prices declined slowly to $162 \cdot 2$ by June, followed by an advance to $166 \cdot 4$ in September. The final figure for the year was $159 \cdot 5$ for December. Continued weakness in 1952 lowered the index a further $2 \cdot 3$ points to $157 \cdot 2$ by May but by October it had advanced to $161 \cdot 2$.
9.-Index Numbers of Preferred Stocks, by Months, 1942-52
$(1935-39=100)$
Nore.-Figures for 1927-41 are given in the 1948-49 Year Book, p. 958.

Mining Stocks.-Mining stock price movements were broadly similar to those of industrials and utilities, the composite index for 30 representative golds and base metals advancing from $88 \cdot 2$ in December 1950 to $104 \cdot 7$ in February 1951, declining to $90 \cdot 6$ in June and recovering to $107 \cdot 5$ in October. The December 1951 figure of $103 \cdot 4$ registered a net gain over the year of $17 \cdot 2$ p.c. In the first four months of 1952, mining stock prices moved within a narrow range, the April index standing at $102 \cdot 8$. The August index rose to a peak of 110.2 but declined to 99.1 by October. Among group changes the gold series index advanced from 59.8 for December 1950 to $73 \cdot 2$ by December 1952. In the same interval the base metals index moved from $146 \cdot 0$ to $172 \cdot 5$ although the latter figure was considerably below the August 1952 peak of $184 \cdot 9$.

## Section 4.-Index Numbers of Bond Yields

The exceptional financial requirements of the war years 1914-18 turned the federal authorities to the domestic market, a field that had hitherto served mainly the needs of. the provinces and municipalities. Historical records of long-term bond yields in the domestic market prior to 1914 are obtainable, therefore, from provincial and municipal sources only.

The growing importance of Federal Government financing in the domestic market since World War I made it advisable to publish the Government's index of long-term bond yields shown in Table 11. This series $(1935-39=100)$ has been
computed from January 1937 on the basis of yields computed from a 15 -year, 3 p.c. theoretical issue. Quotations for the theoretical yields are computed by the Bank of Canada.

Evidence of underlying strength for government obligations continued to be felt during 1950 as indicated by the narrow limits within which Government of Canada long-term bond yields moved during the year. From the index of 90.3 for December 1949 the yield rose to $91 \cdot 0$ in July 1950. The slightly easier price tone for Government obligations which commenced in the second half of 1950 accelerated in 1951. This was reflected by a change in the long-term bond yield index from $96 \cdot 7$ for December 1950 to $112 \cdot 0$ by December 1951. Further advances in yields in 1952 to an index level of $116 \cdot 2$ by December were noted.

## Section 1.-Combined Statistics of Public Finance for all Governments

Combined statistics of public finance of all governments in Canada-federal, provincial and municipal-are presented in this Section. Additional information is provided for each level of government in Sections 2, 3 and 4.

Combined Revenue and Expenditure.-Tables 1 and 3 show details of the federal, provincial and municipal net combined revenue by sources and net combined current and capital expenditure by services. This net basis has been prepared by deducting from revenue, and the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, certain other sales of commodities and services, and interest premium, discount and exchange revenue, exclusive of sinking fund earnings. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

Inter-governmental transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and, therefore, cannot be offset against any specific expenditure. These are set out separately in Tables 1 and 3 in order to prevent duplication and to provide additive totals. Owing to accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-governmental transfers in Tables 1 and 3.

## 1.-Combined Revenue of All Governments, 1948 and 1949

${ }^{1}$ Includes Newfoundland.
Combined Debt.-It should be noted that the increased direct and indirect debt reflected in 1949 is partially attributable to the inclusion for the first time of debt of the provincial and municipal governments of Newfoundland amounting to slightly less than $\$ 13,300,000$. Debt of each level of government can be ascertained for 1948 and 1949 by reference to Table 6.

## 5.-Combined Debt of All Governments, 1946-49

## Section 2.-Federal Public Finance*

A sketch of public finance, from the French régime to the outbreak of World War I appears at pp. 742-743 of the 1941 Year Book, while detailed sketches re tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945 is given at pp. 918-923 of the 1945 Year Book. Budgets for the fiscal years 1945-46 to 1950-51 will be found in preceding Year Books commencing with the 1946 edition. The more important post-war changes are given in the following summary.

Post-War Federal Finance.-As soon as victory was gained in Europe in May 1945, attention was focused on the problems of changing from a wartime economy to production for civilian needs while continuing the war against Japan. To encourage and facilitate the rapid resumption of production for home and export markets and to avoid uncertainty and delay in the expansion of essential civilian production an Order in Council was passed to become effective on May 14, 1945, rescinding or reducing a number of taxes that had been imposed during the War to discourage production and purchasing. By this Order, the sales tax and the war exchange tax were removed on most building materials, the war exchange tax was rescinded on machinery and apparatus used in the manufacture or production of goods, and also the 25 p.c. excise tax on electrical or gas fixtures and appliances. The wartime tax on automobiles which ranged from 25 p.c. on the first $\$ 900$ to 80 p.c. on the value in excess of $\$ 1,200$ was reduced to a flat 10 p.c. and the 25 p.c. excise tax on cameras, radios and phonographs was reduced to 10 p.c.

The Budget for the year 1945-46, presented to Parliament in October 1945, was, to a considerable extent, a war budget because war and demobilization expenses continued for some time at a very high level. The forecast of expenditure for $1945-46$ was $\$ 4,650,000,000$, about $\$ 670,000,000$ below the wartime peak. The forecast of revenue, before tax changes, was $\$ 2,500,000,000$ leaving a deficit of $\$ 2,150,000,000$. Despite this expected deficit a number of important tax changes were announced to reduce costs, restore incentives, promote efficiency and encourage investment in the expansion of industry. These tax changes included the repeal of the war exchange tax and the exemption from the sales tax of machinery and apparatus used directly in the manufacture or production of goods. The tax levied on business proprietors and partnerships, under the Excess Profits Tax Act, was reduced and the minimum standard profits for all business was increased for purposes of computing the excess profits tax. As an interim step towards the ultimate abolition of this tax, the 20 p.c. refundable portion of the excess profits tax was abolished and the rate of tax on excess profits of corporations was reduced from 100 p.c. to 60 p.c. These changes in the excess profits tax became effective from Jan. 1, 1946. The individual income tax was also abated by 16 p.c. commencing on Oct. 1, 1945 and resulted in a reduction of 4 p.c. in the tax liability for 1945.

Experience proved that the forecasts of revenue and expenditure for 1945-46 were too low and the deficit of $\$ 2,123,000,000$ was slighly less than had been anticipated and was financed by the Ninth Victory Loan, launched towards the end of 1945. This deficit brought the net debt of Canada to the all-time peak of $\$ 13,421,000,000$ and marked the end of wartime budgeting.

[^337]The Budget for 1946-47, presented to Parliament in June 1946, proposed further tax reductions. Personal income tax structure was revised completely with lower rates and higher exemptions of $\$ 750$ for single status and $\$ 1,500$ for married status becoming effective from Jan. 1, 1947. From this date also the excess profits tax was removed from partnerships and sole proprietors and the rate on corporations was reduced to 15 p.c. on profits in excess of $116 \frac{2}{3}$ p.c. of standard profits. The flat rate of 22 p.c. on profits levied under the Excess Profits Tax Act was repealed and the corporation income tax rate was changed from 18 p.c. to 30 p.c. resulting in a 10 p.c. reduction in the combined over-all flat rate on corporations, in keeping with the Federal Government's obligation under the wartime tax agreements with the provinces.

During the fiscal year 1946-47, all wartime tax agreements between the Federal Government and the provinces expired. Under these agreements the provinces, in return for compensation, suspended their taxes on corporations and on personal income tax. It was apparent that without new agreements several provinces would be faced with difficult budget problems and a chaotic tax situation was likely to arise. When complete agreement could not be reached on a comprehensive plan put forward by the Federal Government for renewal and extension of these agreements a further offer was made in the Budget of June 1946, which the individual provinces could choose to accept or reject. As a result of this offer the DominionProvincial Tax Rental Agreements were completed in 1947 with all provinces except Ontario and Quebec, and with Newfoundland in 1949, when it became a province. These Agreements are dealt with in detail in the 1951 Year Book at pp. 1005-1008. As a corollary to that part of the offer which dealt with succession duties it was necessary for the Federal Government to double its rates of succession duties commencing Jan. 1, 1947, and to allow a credit up to one-half the federal duty for duties paid to a province.

Although a deficit had been forecast for 1946-47 very buoyant revenue resulted in a surplus of nearly $\$ 374,000,000$ for the year, reflecting the rapid and highly successful transition from a wartime to a peacetime economy.

The Budget for 1947-48, presented to Parliament in April 1947, continued the program of gradual tax reduction. A new and lower schedule of rates on personal incomes was introduced to become effective on July 1, 1947, the excess profits tax was discontinued after Dec. 31, 1947, and the excise tax of 3 cents per gallon on gasoline was repealed from Apr. 1, 1947.

During 1947, the drain on Canada's reserve of United States dollars increased very rapidly as a result of the large capital expansion program and the high level of purchasing power in Canada and the inability to convert earnings in sterling into United States dollars. As a result, restrictions were placed on certain imports from the United States and, effective from Nov. 18, 1947, a number of new or increased excise taxes were imposed on goods manufactured in or imported into Canada. These taxes were levied on automobiles, cameras, radios and phonographs, electrical appliances, refrigerators, firearms, outboard motors and motorcycles but the excise tax on sugar and the sales tax on electricity and gas used in dwellings were repealed.

The accounts for 1947-48 finally showed a surplus for the year and the net debt was reduced by the amount of $\$ 676,000,000$.

Because of continuing inflationary pressures and the desirability of budgeting for supluses while times were good, the Budget of 1948-49, presented to Parliament in May 1948, proposed no general tax reduction. The Income Tax Act was amended
to allow an additional exemption of $\$ 500$ to taxpayers over 65 years of age and the sales tax was amended to exempt substantially food items not previously exempt. In addition, excise taxes on admission to places of amusement and on expenditure in other places of entertainment as well as the tax on pari-mutuel bets were repealed. The Succession Duty Act, as amended effective from Jan. 1, 1948, exempted from duty all estates under $\$ 50,000$. Changes were made also in the customs tariff in accordance with the General Agreement on Tariffs and Trade concluded at Geneva in 1947.

Canada's exchange difficulties improved sufficiently to permit the withdrawal on July 31, 1948, of all the special excise taxes levied the previous November.

The final accounts for the year 1948-49 showed expenditure of $\$ 2,176,000,000$, the lowest in the post-war period under review. Revenue for the year amounted to $\$ 2,771,000,000$, resulting in a surplus of $\$ 595,000,000$.

The Budget for 1949-50, presented to Parliament in March 1949, brought further important tax reductions. Effective from Jan. 1, 1949, the exemptions for personal income tax were raised to $\$ 1,000$ for single status and $\$ 2,000$ for married status and the schedule of rates was reduced for all levels of taxable income. The flat rate of 30 p.c. on corporations was changed to 10 p.c. on profits up to $\$ 10,000$ and 33 p.c. on profits in excess of $\$ 10,000$. As a step towards removing the double taxation of corporate earnings a provision was introduced permitting individuals to deduct from their income tax an amount equal to 10 p.c. of their net dividend income from Canadian taxpaying corporations. The excise taxes on soft drinks, candy and chewing gum, transportation tickets and long-distance telephone calls, telegrams and cables were repealed. The excise taxes on a group of items including toilet articles, luggage, smokers' supplies and matches, were reduced to 10 p.c. The 25 p.c. retail purchase tax on jewellery, clocks, watches, plated-ware and similar items was changed to a 10 p.c. excise tax on the manufacturer's price.

As Parliament was dissolved before the tax changes proposed in the Budget became law these measures were introduced again to Parliament in October 1949, approximately in the same form. In addition, the sales tax was removed from fucloil used for heating or lighting in homes or in industry, effective from Oct. 20, 1949.

Increased costs of social security and national defence and the entry of Newfoundland into Confederation resulted in the fiscal year 1949-50 showing a reversal in the trend of lower expenditure for each year following the end of the War. Expenditure for the year amounted to $\$ 2,449,000,000$, an increase of $\$ 273,000,000$ over the previous year. Revenue amounted to $\$ 2,580,000,000$, giving a surplus of $\$ 131,000,000$ for the fiscal year 1949-50.

The Budget for 1950-51, presented to Parliament in March 1950, forecast almost equal expenditure and revenue of $\$ 2,410,000,000$ and $\$ 2,430,000,000$, respectively, for the fiscal year. As a result, only minor tax changes were proposed, including a provision, under the Income Tax Act, for closely held companies to pay a 15 p.c. tax on their undistributed income. Changes were made also under the Excise Tax Act by adding ice cream and drinks prepared from fresh milk to the items
exempt from the sales tax. Exempted also from the sales tax were purchases by certain institutions caring for orphans or the incapacitated and the 5 p.c. excise tax on toilet soap was repealed.

The Budget presented in March 1950, ended one phase of post-war financing. Special post-war demobilization and transitional expenditure was nearly completed but the Government was faced with heavy fixed charges for interest on the public debt, national defence and social security. The Minister of Finance pointed out that the prospects were for Budgets to continue to call for expenditure of about $\$ 2,400,000,000$ for some years to come. On the other hand, taxes had been reduced substantially from the wartime level and foreseeable revenue for future years appeared little more than adequate to cover expenditure. All this was changed, however, by the outbreak of war in Korea in June 1950.

In September 1950, new budgetary proposals were presented by the Minister of Finance to meet the rapid step-up in defence expenditure and the sharp increase in economic activity and inflationary pressures which followed the commencement of war in Korea. To maintain a pay-as-you-go policy, a number of tax increases were introduced to cover the increased defence expenditure. The corporation income tax was increased from 10 p.c. to 15 p.c. on the first $\$ 10,000$ of profits and from 33 p.c. to 38 p.c. on profits over $\$ 10,000$. Taxes on alcoholic beverages were increased by raising the tax on spirits from $\$ 11$ to $\$ 12$ per gallon and the tax on malt from 16 to 21 cents per $1 b$. Under the excise taxes all items formerly subject to a tax at the rate of 10 p.c. became taxable at 15 p.c. and a new tax of 30 p.c. was imposed on soft drinks, candy and chewing gum.

These new taxes, together with increased revenue as a result of rising prices and increased economic activity, were expected to bring revenue for 1950-51 to a level barely sufficient to cover expenditure. However, the effect of inflationary pressures was greater than expected with the result that revenue amounting to $\$ 3,113,000,000$ exceeded expenditure of $\$ 2,901,000,000$, giving a budgetary surplus of $\$ 212,000,000$ for $1950-51$.

The Budget for 1951-52*, presented to Parliament in April 1951, indicated that sources would have to be found to produce $\$ 375,000,000$ additional revenue and a defence surtax of 20 p.c. for this purpose was imposed on incomes of individuals and corporations. Because it could only be applied to deductions from salary and wages starting on July 1, 1951, the surtax on personal income was levied at 10 p.c. of total income in 1951. For corporations the surtax applied to profits in excess of $\$ 10,000$ only, raising the rate of tax on these profits to $45 \cdot 6$ p.c. Further revenue was derived from the corporation income tax as a result of a provision designed to combat inflationary pressures which deferred, for four years, capital cost allowances on certain capital assets acquired after Apr. 10, 1951. The tax on cigarettes was increased by $\$ 1.50$ per 1,000 ; on manufactured tobacco it was increased by 48 cents per lb., although part of this increase was offset by the repeal of the tax on cigarette papers and tubes. All items formerly subject to an excise tax of 15 p.c. became

[^338]taxable at 25 p.c. and a new 15 p.c. tax was levied on refrigerators, stoves and washing machines. The 30 p.c. excise tax on candy, confectionery and chewing gum, proved by experience to be too severe, was reduced to 15 p.c. A very important change was made by increasing the sales tax rate from 8 p.c. to 10 p.c.

The Old Age Security Act passed in November 1951, provided for pensions to persons 70 years of age or over; and it became necessary to levy taxes to provide a fund from which these pensions would be paid. Under authority of the Old Age Security Act, a tax of 1 p.c. with a maximum of $\$ 30$ was levied on personal incomes for 1952 to become 2 p.c. with a maximum of $\$ 60$ thereafter. A tax of 2 p.c. was levied on the income of corporations commencing Jan. 1, 1952. The sales tax, levied under the Excise Tax Act, was reduced from 10 p.c. to 8 p.c. commencing Jan. 1, 1952, but a 2 p.c. sales tax was levied as an old age security tax from the same date.

At the end of 1951-52 the accounts showed that the tax structure had produced total revenue of $\$ 3,981,000,000$ ( $\$ 4,007,000,000$ including the revenue from old age security taxes). Expenditure for the year amounted to $\$ 3,733,000,000$, giving a budgetary surplus of $\$ 248,000,000$.

The Budget for 1952-53, presented to Parliament in April 1952, consolidated and adjusted some of the temporary tax increases introduced in the previous year. The 20 p.c. defence surtax on personal income was repealed but a new schedule of rates was introduced effective from July 1, 1952, which incorporated over twothirds of the weight of the surtax. The rate of tax on corporation income was changed to incorporate the 20 p.c. defence surtax as well as the 5 p.c. corporation income tax formerly levied by provinces which had entered into tax rental agreements. As a result of these changes the rates of tax on 1952 incomes of corporations (not including the 2 p.c. old age security tax) became 20 p.c. on the first $\$ 10,000$ plus 50 p.c. on the excess over $\$ 10,000$ with a credit against the tax of an amount equal to 5 p.c. of the profits earned in provinces which continue to levy a corporation income tax. The tax on cigarettes was reduced by $\$ 1.50$ per 1,000 to return this tax to its previous level, and minor adjustments were made in the other tobacco taxes. The tax on goods bearing an excise tax of 25 p.c. under the Excise Tax Act was reduced to 15 p.c., the tax of 30 p.c. on soft drinks was reduced to 15 p.c., and the 15 p.c. tax on stoves, refrigerators and washing machines was repealed.

## Subsection 1.-Balance Sheets of the Federal Government

Table 7 shows the balance sheets of the Federal Government for 1949-52 but these figures are not on a basis comparable to those in earlier Year Books. On the asset side, accounts classified as active assets are shown; these represent cash or investments that are interest-producing or have a readily realizable cash value. On the liability side, such liabilities are given as have been ascertained and brought into the accounts. No liability is shown for interest accrued but not due, nor for current obligations incurred for supplies or services but not paid for at the end of the fiscal year. Indirect liabilities under guarantees are not reflected in the balance sheets, but are set out in a special schedule. (See p. 1063.)

The excess of liabilities over active assets, designated the net debt, is analysed in a statement appended to the Balance Sheet and is apportioned to non-active assets, which include capital expenditure and non-productive investment, and to accumulated deficits in the Consolidated Deficit Account.

## 7.-Balance Sheet of the Federal Government as at Mar. 31, 1949-52

## Subsection 2.-Revenue and Expenditure

In the fiscal year ended Mar. 31, 1952, Federal Government revenue amounted to $\$ 3,981,000,000$ compared with $\$ 3,113,000,000$ in the previous year, an increase of $\$ 868,000,000$. Expenditure amounted to $\$ 3,733,000,000$ compared with $\$ 2,901,000,000$ in the previous year, an increase of $\$ 832,000,000$. The surplus of revenue over expenditure for the fiscal year was $\$ 248,000,000$.

Tax revenue was $\$ 872,000,000$ greater and non-tax revenue $\$ 49,000,000$ greater than in the previous fiscal year but special receipts and other credits showed a decrease of $\$ 51,000,000$.

Expenditure on national defence in 1951-52 increased by $\$ 633,000,000$ over the previous year and amounted to 38 p.c. of total expenditure for the year. Added to the increase in expenditure in 1951-52 were two items not found in previous years; these were an adjustment amounting to $\$ 88,000,000$ required to place interest on the public debt on an accrual basis and a transfer of almost $\$ 50,000,000$ to cover the deficit in the old age security fund.

## 10.-Principal Items of Revenue, Years Ended Mar. 31, 1946-52

Note.-Figures for the years 1931-45, inclusive, are given at pp. 981-85 of the 1951 Year Book.

[^342]11.-Per Capita Revenue and Expenditure, Years Ended Mar. 31, 1941-52

Nots.-The years marked with an asterisk (*) are Census years; per capita figures are based on estimated populations (see p. 143) as at June 1 of the immediately preceding year in each case. See Tables 8 and $\rho$ for the figures of revenue and expenditure on which this table is based. Figures for the years 1868 1912, inclusive, will be found at p. 849 of the 1938 Year Book; those for 1913-30 at p. 932 of the 1945 edition; and those for 1931-40 at p. 987 of the 1951 edition.

## Subsection 3.-Analysis of Revenue from Taxation

Table 13 gives total expenditure that has been met by taxation and from all sources of revenue for each of the fiscal years ended Mar. 31, since 1946. During the war years expenditure far exceeded revenue but, in 1947, taxation met over 92 p.c. of expenditure, and revenue from all sources exceeded expenditure. For 1948 and 1949 revenue from taxation alone exceeded total expenditure by a substantial amount owing to the maintenance of high taxation levels and a greatly increased national income. In 1950, total expenditure was $\$ 131,524,953$ below total revenue, 95 p.c. of which was provided by taxation. In 1951 and 1952, 96 p.c. and 98 p.c. respectively, of total expenditure was met by taxation.

## 13.-Relationship of Total Expenditure to Taxation Revenue and to Total Revenue, Years Ended Mar. 31, 1946-52

Note.-Figures for the years 1940-45, inclusive, will be found at p. 989 of the 1951 Year Book.

| Year | Total Expenditure | Taxation Revenue | Total Revenue | Percentages of Total Expenditure Provided from- |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Taxation | All <br> Revenue |
|  | \$ | $\delta$ | $\delta$ | p.c. | p.c. |
| 1946. | 5,136,228,506 | 2,202,358,387 | 3,013,185,074 | 42.88 | 58.67 |
| 1947. | 2,634, 227,412 | 2,427,661,313 | 3,007,876,313 | $92 \cdot 16$ | 114.181 |
| 1948. | 2,195,626,454 | 2,452,075,395 | 2,871,746,110 | $111.68{ }^{1}$ | $130 \cdot 791$ |
| 1949. | 2,175,892,334 | 2,436, 142,276 | 2,771,395,075 | $111.96{ }^{1}$ | 127.371 |
| 1950. | 2,448,615,662 | 2,323,117, 079 | 2,580, 140,615 | 94.87 | $105 \cdot 37{ }^{1}$ |
| 1951.. | $2,901,241,698$ $3,732,875,250$ | 2,785, 349,899 | 3,112,535,948 | 96.01 | 107.28 |
| 1982.. | 3,732,875,250 | 3,657,775,082 | 3,980,908,652 | 97-99 | $106 \cdot 64$ |

${ }^{1}$ See text above for explanation.
The revenue from customs and excise duties, the two most important sources prior to World War I amounted, in 1952, to 15 p.c. of the revenue derived from taxation while revenue from ineome tax formed 59 p.c. of the tax revenue.

The following analysis of taxation revenue is confined to excise duties, excise taxes, income tax revenue and succession duties; customs receipts constitute a single item in the Public Accounts and cannot be further analysed here.

## Excise Duties and Taxes

Excise duties proper are presented below with a summary of the excise tariff and statistics arising as a by-product of administration such as, the quantities of grain and other products used in distillation and the quantities of excisable goods taken out of bond.

Canadian Excise Tariff.-The following is a statement of the Canadian excise tariff, as at Apr. 8, 1952:-

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to any bona fide public hospital, for medicinal purposes only.

Revenue from Excise Duties.-In the year ended Mar. 31, 1952, tobacco, including cigarettes, supplied about 45 p.c. of the revenue from excise duties.
14.-Gross Excise Duties collected, Years Ended Mar. 31, 1947~52

| Item | 1947 | 1948 | 1949 | 1950 | 1951 | 1952 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | S | 5 | 8 | \$ | \$ | \$ |
| Spirits. | 45,060,831 r | 39,391,092 r | 40,634,697x | 46,547,587 | 60,126.300 | 45,944,724 |
| Validation fee | 947,710 | 770,880 | 825,371 | 790,587 | 1,108,252 | 1,223,933 |
| Beer or malt liquor | 2,511,311 | 3,819,875 | 3,740,065 | 3,678,316 | 2,745, 851 | 3,812,065 |
| Malt syrup | -91,700 | 53, 67, 878 | 551,825 | $56,018,292$ | 65, 409, 427 | 73,748,003 |
| Tobacco (incl. cigarettes)... | 100,867,668 | 101,900,638 | 106,033,181 | 115,778,732 | 114, 282,662 | 100,547,951 |
| Cigars....................... | 294,844 | 215,479 | 207,823 | 203,043 | 203,945 | 162,968 |
| Licences | 39,690 | 37,468 | 39,115 | 38,241 | 38,009 | 36,092 |
| Totals ${ }^{1}$ | 199,022,570 r | 199,828,603 - | 207,385,132 | 223,054,798 | 243,914,446 | 225,475,736 |

${ }^{1}$ These totals do not agree with net excise duties as shown in Table 8 owing to refunds and drawbacks and in the case of spirits, a transfer tax which is included here.

Statistics of Licences and Distillation.-Secondary to the collection of excise duties, statistics are compiled of excise licences issued and of distillation.
15.-Statistics of Licences and Distillation, Years Ended Mar. 31, 1947-52

| Item | 1947 | 1948 | 1949 | 1950 | 1951 | 1952 |

The quantity of spirits manufactured bas fluctuated greatly since 1920, varying from the low of $2,356,329$ proof gal. in that year to the high of $35,555,059$ proof gal. recorded in 1945.

Alcohol and Tobacco Taken Out of Bond.-For the amounts of spirits, malt liquor, malt and cigarettes taken out of bond for consumption in 1951 see Table 15, p. 884.

## Excise Taxes

The statistics given in Table 16 represent gross excise tax collections by the Excise Division of the Department of National Revenue; these differ from the figures shown in Table 10 (in the column "Sales and Other Excise Taxes"), which represent net revenue received, by the amounts of the refunds shown in footnote 1 to Table 16.

${ }^{1}$ Includes refunds and drawbacks of $\$ 29,845,228$ in $1947 ; \$ 10,683,238$ in $1948 ; \$ 12,871,403$ in $1949 ; \$ 11,784,520$ in 1950; $\$ 10,506,408$ in 1951; and $\$ 13,723,039$ in 1952 . ${ }^{2}$ Includes 2 p.c. Old Age Security sales tax of $\$ 24,297,979$ credited to the Old Age Security Fund.

## Income Tax*

The income tax was instituted in 1917 as a part of war-tax revenue. Before the outbreak of World War II, it had become a permanent and important part of the taxation structure and the chief source of raising ordinary revenue. In many respects, it is an ideal form of direct taxation and the experience and machinery for the collection of this tax has been built up over a long period of years.

Income tax rates were increased to help finance World War II, and a compulsory savings feature was adopted with respect to individuals and to corporations. A refundable portion of approximately $\$ 295,000,000$ was collected from individuals under the personal income tax, and approximately $\$ 220,000,000$ from individuals

[^343]and corporations under the excess profits tax. Repayment of the refundable portion of personal income tax was completed in 1949 and the refundable portion of excess profits tax was repaid by March 1952.

Since the end of the War, the weight of individual income tax was reduced each year up to and including 1949 and higher exemption allowances were given. However, the expansion of personal incomes and the growth of the labour force offset to a considerable extent the effect of the reduction in rates. Following the outbreak of war in Korea in 1950, rising defence costs increased the rates of personal income tax. A defence surtax of 20 p.c. was introduced in 1951-52 but this applied at the rate of 10 p.c. to 1951 incomes. The Budget of 1952-53 announced a new schedule of rates that incorporated the greater part of the 20 p.c. defence surtax.

Taxes on corporation incomes were reduced following the end of World War II. Excess profits tax rates were also reduced and finally ceased to apply after Jan. 1, 1948. Concurrently with the ending of the excess profits tax, corporation income tax rates were raised from 18 p.c. to 30 p.c.

To help small businesses the tax rate on the first $\$ 10,000$ of profits was reduced to 10 p.c. in 1949 but, at the same time, the rate on profits in excess of $\$ 10,000$ was increased to 33 p.c. In 1950-51 it became necessary to increase sharply the rates of tax on corporation profits and, following the Budget of 1952-53, the rates became 20 p.c. on the first $\$ 10,000$ of profits, plus 50 p.c. on the excess over $\$ 10,000$, with a credit against the tax equal to 5 p.c. of the profits earned in provinces which continued to levy a corporation income tax.

Details of income tax changes in the Budgets of 1945-46, 1946-47, 1947-48 and 1948-49 are given at pp. 1008-1009 of the 1948-49 Year Book. Details of the tax changes in the 1949-50 Budget are given at p. 1002 of the 1950 Year Book. The change made in income tax rates in the 1950-51 Budget concerned corporation taxes only and is given at p. 979 of the 1951 Year Book. Changes made in the 1951-52 and 1952-53 Budgets are given at pp. 1029-1030.

The tax on dividends and interest and on rents and royalties is levied at the rate of 15 p.c. on payments going to non-residents of Canada. The payments subject to tax include income from an estate or trust, alimony payments, rents from real property, and rents, royalties or similar payments for the use in Canada of property, trade names or inventions. There is no non-resident tax on interest from Government of Canada bonds or bonds guaranteed by the Government of Canada or where the interest is payable in other than Canadian currency. Where the payments are for interest from bonds of, or guaranteed by, a province of Canada or are dividends paid by a wholly owned subsidiary to its parent company outside Canada the rate of tax is only 5 p.c.

The gift tax is imposed at the rate of 10 p.c. on gifts of up to $\$ 5,000$ and at rates varying from 11 p.c. to 28 p.c. on gifts from $\$ 5,000$ to $\$ 1,000,000$ or over.

Income tax revenue in Table 17 is as shown in the Public Accounts and represents collections made by the Taxation Division of the Department of National Revenue under the authority of the Income War Tax Act (R.S.C. 1927, c. 97) as amended and the Income Tax Act (11-12 Geo. VI, c. 52).*

[^345]Collection by the Department of National Revenue on a Fiscal-Year Basis.-Collection statistics are gathered at the time the payments are made and, therefore, have the value of being very up-to-date. Their timeliness has been enhanced within the past few years by the adoption of the "pay-as-you-go" system which results in collecting most of the tax during the year in which the income is earned and, on the average, about ten months prior to the actual filing of an income-tax return by the taxpayer. The payments on behalf of most taxpayers, however, are made by their employers and a cheque from one employer may cover the tax payments of hundreds of employees. At this stage, therefore, it is not possible to link the moneys received to the individuals who are, in the final analysis, contributing the tax. Collection statistics, for this reason, are not capable of being closely related to the persons who are being taxed and any statistical tables that attempt to describe the taxpayer by occupation or income class must be based on the income-tax return which is filed by the taxpayer many months after the payment of his tax. However, collection statistics, if interpreted along with the tax rate, do serve the purpose of indicating the general trend of income upon which tax is levied well in advance of the assessment data.

The statistics given in Table 18 represent collections on the Federal Government's fiscal-year ended Mar. 31 basis, under the three Acts administered by the Taxation Division, Department of National Revenue.

## 18.-Tares Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31; 1946-52

Norz.-Figures for 1917-34 will be found in the 1947 Year Book, at pp. 999-1000 and for 1935-45 in the 1951 edition, p. 994.

Corporation Income-Tax Statistics.-In the following tables, corporation statistics are presented on a taxation-year basis prior to assessment. The data have been extracted and compiled from the returns shortly after they have been filed and
are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec, caused by the fact that many large companies which operate across Canada file their returns in one or other of these two Provinces.

[^346]
## Succession Duties

The first imposition of succession duties in Canada was in 1892, when Nova Scotia, New Brunswick, Quebec and Ontario enacted legislation of this nature. Legislation was passed in the other provinces in the following years: Manitoba, 1893; Prince Edward Island and British Columbia, 1894; Saskatchewan and Alberta, 1905. The Federal Government first imposed succession duties in 1941.

Table 23 shows the receipts of the various Governments from this source from 1947.

In 1947, seven provinces-Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia - withdrew from the succession duty field. This action was consequent upon the acceptance of an offer made on June 27, by the Federal Minister of Finance in the 1946 Budget Speech, to "rent" from the provinces certain tax fields for a five-year period in return for compensation. By the terms of this offer a province had the option of "renting" its succession duty field to the Federal Government or of continuing to cultivate it and having its compensation appropriately reduced. To keep the succession duty burden approximately equal in all provinces a complementary measure was implemented by the Government whereby, the rates of federal succession duty were doubled and a credit of up to one-half the federal duty was allowed against it for succession duty paid to a province.

The seven provinces mentioned above entered into tax-rental agreements and also elected to "rent out" the succession duty field for the period Apr. 1, 1947 to Mar. 31, 1952. Accordingly, in these provinces, the previous combination of federal and provinciai succession duties was replaced by a single federal succession duty at double the previous federal level which, in most cases, resulted in a combined duty approximately the same as previously levied under the separate federal and provincial duties. On the other hand, the Provinces of Quebec and Ontario did not enter into the agreements but the doubled rates of federal duty were applied and were capable of being reduced up to one-half by a credit for the duty paid to the Province.

The Yukon Territory in 1948, and the Province of Newfoundland in 1949, entered into a similar tax-rental agreement and elected to rent out succession duty fields for the periods Apr. 1, 1948 to Mar. 31, 1952, and Apr. 1, 1949 to Mar. 31, 1952, respectively.

In 1952, the tax rental agreements expired but new five-year agreements were negotiated with the same eight provinces which again elected not to cultivate their succession duty fields. The Province of Ontario also entered into an agreement but elected to continue to cultivate the succession duty field. Consequently, in all the provinces of Canada the situation in regard to succession duty is likely to be the same as that described above until Mar. 31, 1957.

The Dominion Succession Duty Act was enacted as $4-5$ Geo. VI, c. 14. Certain amendments were made to the Act by 5-6 Geo. VI, c. 25; 7-8 Geo. VI, e. 37; 8-9 Geo. VI, c. 18; and the doubling of rates and provision of the tax credit mentioned
above by 10 Geo. VI, c. 46. Two important amendments were made to the Act in 1948. The former provision by which bequests to non-profit charitable organizations in Canada were exempt only up to 50 p.c. of the aggregate net value of the estate was changed to remove this limit entirely. A second change exempted from duty all successions derived from an estate of an aggregate net value not exceeding $\$ 50,000$; formerly this exemption had applied only up to an aggregate net value of $\$ 5,000$. While estates in excess of $\$ 50,000$ remain dutiable in full, it was provided at the same time that in no case would the duty reduce the value of the estate below $\$ 50,000$. In 1952 , several amendments of a technical nature were made in order to clarify certain positions and remove anomalies.

A common feature of both federal and provincial duties is the variation of rates by the degree of relationship of the beneficiary to the deceased. The four classes of beneficiaries established under federal law (see p. 1048) have, for example, specific rates that change with each classification, while in Ontario there are three classes of beneficiaries with different rates of duty attached to each class. A common feature of both federal and provincial Acts is an initial rate of duty to be charged, based on the total value of the estate, and an additional rate based on the bequest received by each individual. Thus, in the case of the Federal Government, a person who receives a bequest of $\$ 50,000$, out of an estate of $\$ 500,000$ is charged the rate for a $\$ 500,000$ estate plus an additional rate for $\$ 50,000$, and the total rate is then applied in calculating the tax on his bequest.

Double taxation of estates resulting from taxation of the same property by more than one province has been common in the past, but the withdrawal of eight of the provinces from the field and the credit provision mentioned above have reduced this problem considerably. In the international field, dual taxation has been dealt with by way of tax conventions. A tax convention between Canada and the United States was signed on June 8, 1944. One of the terms of this convention is that shares in a corporation organized in or under the laws of the United States or any of the individual States shall be deemed to be property situated within the United States, and shares in a corporation organized in or under the laws of Canada, or of the provinces or territories of Canada, shall be deemed to be property situated within Canada.

An agreement respecting succession duties was signed June 5, 1946, between Canada and the United Kingdom.

In these circumstances, the difficulties of working out succession duty tables so as to show the combined effects of federal and provincial duties is easily realized. The best that can be done here is to choose typical estates in the main classes laid down in the legislation and give examples of the combined duties applicable in such cases. This has been attempted in the following series of tables in the hope that it will be useful in presenting to the student of this subject a general knowledge of the incidence of succession duties in Canada under conditions existing at present.

## 23.-Federal and Provincial Net Revenue from Succession Duties, Fiscal Years Ended Mar. 31, 1947-52

Note.-The fiscal year of Nova Scotia ended Nov. 30, and that of New Brunswick Oct. 31, up to and including 1949.

| Province |  |
| :--- | ---: | ---: | :---: | :---: | :---: | :---: | :---: |

[^347]Federal Duty.-Beneficiaries are divided into four classes, as follows:-
(1) Widow or dependent child or dependent grandchild.
(2) Husband; parent; grandparent; child over 18 years of age, not infirm; son- or daughter-in-law.
(3) Lineal ancestor other than parent or grandparent; brother, sister or their descendant; uncle or aunt or their descendant.
(4) Others.

No duty is payable on estates not exceeding $\$ 50,000$, or on bequests of up to $\$ 1,000$ to any one individual, nor is duty levied on gifts to the Federal Government or provinces, on residential property of certain diplomatic or consular officials, on pensions administered by the Canadian Pensions Commission or those payable by Allied Nations for war services, nor on insurance moneys or annuities if the person with whom the contract was made was domiciled outside Canada at the time of death. Provision is made for increased exemptions and reduced duties in the case of those dying as a result of war service. Bequests to non-profit charitable organizations in Canada are exempt.

Widows are exempt up to $\$ 20,000$, dependent children to $\$ 5,000$ each and, in cases where dependent children do not benefit, the widow's exemption is increased by $\$ 5,000$ for each child who does not benefit. In the case of dependent orphaned children, there is a further exemption of $\$ 15,000$ (in addition to $\$ 5,000$ ) divisible proportionately among such orphans according to their number and the value of each individual benefit. Duty is payable on the excess only when the limit-is passed, i.e., these exemptions are deductible exemptions.

Gifts made during the lifetime of the deceased are exempt if the transfer was carried out more than three years prior to his death and the recipient of such gifts secured full possession at the time of the transfer and the donor (the deceased), thereafter, did not retain any rights therein or secure any benefits therefrom.

If gift tax payable under the provisions of the Income Tax Act has been paid in connection with the transfer made by a deceased person during his lifetime then no succession duty is payable in respect of such gift except to the extent that succession duty thereon is in excess of the gift tax.

Examples of the rates of duty and duty levied are given in Table 24.
24.-The Incidence of Succession Duties in all Provinces (except Quebec and Ontario) on Typical Estates

| Class | Aggregate <br> Net Value | Dutiable Value | Rate | Dety |

The Incidence of Combined Federal and Provincial Succession Duties.As described at pp. 1046-47, only the Provinces of Quebec and Ontario have retained their own succession duties. As already mentioned, seven provinces elected to "rent" their succession duties for the periods from Apr. 1, 1947, to Mar. 31, 1952, and from Apr. 1, 1952 to Mar. 31, 1957, and one (Newfoundland) for the periods Apr. 1, 1949, to Mar. 31, 1952, and from Apr. 1, 1952 to Mar. 31, 1957. As a consequence, the tables showing combined rates of federal and provincial duty for each province, which appeared at pp. 942-950 of the 1946 Year Book, have been deleted with the exception of those for the two above-mentioned provinces. The new condition of
doubled federal duties and a tax credit of up to 50 p.e. for the provincial duty has been taken into account in Tables 25 and 26. The rates under the heading "Dominion Duty" shown in the 1946 Year Book have been doubled and under "Combined Duty" the greater of (1) the amount of the federal duty (doubled rates), or (2) the provincial duty plus one-half the federal duty, is given.

In these two tables, the beneficiaries under all the classes show the duties collectable where the estate of given value is left to one beneficiary only, since it would be impossible to cover the many different classifications, exemptions and saving clauses to be found in the legislation of the respective provinces. In every case, the estate is assumed to be wholly situated within the province and the beneficiary domiciled therein to be the sole heir. The reader is referred to the legislation and to the taxing authority shown under each provincial heading for more complete information.

Quebec.-The current legislation under which succession duties are collected is R.S.Q. 1941, c. 80 , as revised by 7 Geo. VI, c. 18 . As stated at p. 1047, the following text and table can give only a broad outline of such duties as applied to comparable classes of beneficiaries in other provinces. Full details regarding other cases may be obtained from the Act or from the Collector of Succession Duties, Provincial Revenue Offices, Quebec, Que.

Under the legislation, beneficiaries are divided into three classes, as follows:-
(1) Those in direct ascending or descending line between consort, between father- or mother -in-law and son- or daughter-in-law, between stepfather or step-mother and step-son or step-daughter. There is no limitation of degree in the direct ascending or descending line between these relationships.
(2) Those in collateral line including a brother or sister, or descendant of a brother or sister of the deceased, or to a brother or sister, or son or daughter of a brother or sister, of the father or mother of the deceased.
(3) Others.

No duty is payable when the aggregate value of the property passing to persons in Class (1) does not exceed $\$ 10,000$. In an estate, the aggregate value of which does not exceed $\$ 50,000$, this sum is increased by $\$ 1,500$ for each child, in the first degree, under 25 years of age, domiciled in the Province, left by and surviving the deceased ( $15-16$ Geo. VI, c. 14). No duty is payable on bequests of up to $\$ 1.000$ to beneficiaries in Class (3) who have been in the employ of the testator for five years or more. In estates that devolved prior to Feb. 22, 1949, no duty is payable on legacies for religious, charitable or educational purposes in Quebec and the same privilege is extended to legacies for similar work outside that Province, provided that the province or State within which the work is to be carried out extends reciprocal privileges under its succession duty laws. Since February 1949, all legacies, gifts and subscriptions for religious, charitable and educational purposes are tax-free, regardless of the country, province or State where the institutions benefiting therefrom are located.

[^348]Ontario.-The current legislation on succession duties is R.S.O. 1950, c. 378, as amended. Full information may be obtained on application to the Succession Duty Office, Treasury Department, Parliament Buildings, Toronto, Ont.

Beneficiaries are divided into three classes, as follows:-
(1) Widow; child; husband; parent; grandparent; grandchild; son- or daughter-in-law.
(2) Brother; sister; nephew; niece; uncle; aunt; cousin; child of nephew or niece.
(3) Others.

No duty is payable on estates not exceeding $\$ 5,000$ in aggregate value, nor on estates not exceeding $\$ 50,000$ devised to persons in Class (1), nor on those not exceeding $\$ 10,000$ devised to persons in Class (2).

Where any person in Class (3) was in the employ of the deceased for at least five years immediately prior to his death, no duty is payable with respect to any benefits which such person derived from the deceased where the total value of such benefits is not in excess of $\$ 1,000$. Such benefits, while exempt are, nevertheless, taken as a factor in fixing the rates applicable to the dutiable portions of the estate.

Bequests for religious or educational purposes to any religious or educational organization which carries on its work solely in Canada，and bequests for charitable purposes to any charitable organization which carries on its work solely in Ontario， are exempt from duty and are ignored altogether in the computation of duty on the portions of the estate that are not exempt．The same rule applies to bequests to the Canadian National Institute for the Blind，the Canadian Red Cross Society and other approved patriotic organizations．

${ }^{1}$ The rates of federal duty shown are those actually applied but a credit may be made to the taxpayer up to one－half of this amount on account of duty paid to the provinces，see p． $1046 .{ }_{2}$ Includes surtax on provincial duty．${ }^{3}$ Includes a surtax of 15 p．c．${ }^{4}$ Includes a surtax of 20 p．c．${ }^{5}$ In－ cludes a surtax of 25 p．c．

## Subsection 4．－Subsidies and Taxation Agreements with the Provinces

Subsidies．－By the provisions of the British North America Act and sub－ sequent arrangements entered into from time to time，the Federal Government makes certain annual payments to the provinces：these are summarized as follows：－－

Interest on Debt Allowances．－By the terms of the union of the provinces at Confederation in 1867，the Federal Government assumed all the outstanding debts and liabilities of the provinces and undertook to pay，except in the case of Ontario and Quebec，interest at 5 p．c．per annum on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately $\$ 25$ per capita．On the subsequent entry of additional provinces
into Confederation, similar arrangements were effected regarding the assumption of their pre-Confederation indebtedness. From time to time, adjustments have been made in the basis of calculating the debt allowances of provinces; moreover, the Federal Government pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted. The aggregate annual payment by the Federal Government to the provinces in respect of interest on debt allowances is $\$ 1,609,386$.

Allowances for Governments and Legislatures.-Under the terms of the union, annual specific grants were made to the various provinces toward the support of their governments and legislatures. These amounts vary with the population of the provinces, according to the following scale approved in 1907:-

| Where population is- |  | \$ |
| :---: | :---: | :---: |
| Under 150,000 |  | 100,000 |
| 150,000, but does no | exceed 200,000 | 150,000 |
| 200,000, " | " 400,000 | 180,000 |
| 400,000, | 800,000 | 190,000 |
| $800,000,{ }^{\text {a }}$ | " 1,500,000 | 220,000 |
| Over 1,500,000. |  | 240,000 |

Aggregate annual allowances presently paid under this head amount to $\$ 1,990,000$, including the $\$ 180,000$ which became payable to Newfoundland upon union with Canada in 1949.

Allowances per Capita of Population.-Under the British North America Act of 1867, a grant of 80 cents per capita of population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per capita up to a population of $2,500,000$, and at the rate of 60 cents per capita for so much of the population as exceeded that number. These allowances were last adjusted in 1951 following the Census. The allowances paid to the provinces in the year ended Mar. 31, 1952, amounted to $\$ 10,580,361$.

The Act to approve the terms of union of Newfoundland with Canada in 1949 provided for an annual subsidy equal to 80 cents per capita of the population of the Province (being taken at 325,000 until the first decennial Census after the date of union), subject to increase to conform with the scale of grants authorized by the British North America Act, 1907.

SpecialGrants.-In the case of certain of the provinces, grants have been added to the original scale of subsidies in view of special circumstances obtaining which, for the year ended Mar. 31, 1952, amounted, in the aggregate, to $\$ 2,468,380$ as follows:-

Prince Edward Island.-A special grant of $\$ 195,000$ less a deduction of $\$ 39,120$ (net grant of $\$ 155,880$ ).
New Brunswick.-An annual grant of $\$ 150,000$ since 1875 in consideration of the repeal of lumber duties reserved to the Province by the B.N.A. Act of 1867.
Manitoba.-A special grant on the basis of population amounting at present to $\$ 562,500$ per annum.
Saskatchewan and Alberta.-An annual sum as compensation for loss of public lands revenue, based on their respective populations and amounting at present to $\$ 750,000$ for Saskatchewan and $\$ 750,000$ for Alberta.
British Columbia.-A special grant amounting at present to $\$ 100,000$ per annum.
27.-Subsidy Allowances to Provincial Governments, Years Ended Mar. 31, 1946-52

[^349]Additional Special Grants.-Additional special grants were voted annually to the Maritime Provinces, Manitoba, Saskatchewan and British Columbia until 1941.

These additional special grants were suspended with the coming into force of the Wartime Tax Agreements, 1942. The grants were paid in 1947 and later years to the three Maritime Provinces under the provisions of the Maritime Additional Subsidies Act, 1942. The terms of union with Newfoundland, 1949, provide for an additional annual subsidy of $\$ 1,100,000$ in recognition of the special problems of that province by reason of geography and its sparse and scattered population.

Tax Rental Agreements.-The Tax Rental Agreements, 1947.-The Wartime Tax Agreements 1942 (see Year Book 1946, pp. 900-901) lapsed in the period from Oct. 30, 1946, to Mar. 31, 1947, and were succeeded by the Tax Rental Agreements, 1947. These, in turn, were succeeded by the Tax Rental Agreements, 1952. By the 1947 and 1952 Agreements, a province agrees to refrain from levying certain direct taxes, for a period of five years, in return for compensation from the

Federal Government. The main purposes of these Agreements are to establish a more equitable system of taxation throughout Canada by reducing duplication of direct taxation and duplication of machinery for the collection of direct taxes, to give a greater measure of stability to the revenue of the Provinces and to enable the Federal Government, together with the Provincial Governments, to carry out national policies intended to maintain high levels of employment and production.

The 1947 Tax Rental Agreements were entered into by the Federal Government pursuant to the Dominion-Provincial Tax Rental Agreements Act, 1947. Seven Provinces-Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia-entered into these Agreements for the full five year period, the Yukon Territory for four years, and the new Province of Newfoundland for three years. The Agreements contained the basic provisions of the Wartime Tax Agreements whereby the provinces and their municipalities withdrew their income taxes, corporation income taxes and special taxes on corporations for the war period, in return for compensation from the Federal Government. The Agreements contained significant changes and additions which had been worked out at the meetings of the Dominion-Provincial Conference on Reconstruction in 1945 and 1946, and in the negotiations which followed the June 1946 Budget offer of the Federal Minister of Finance. The main features of this offer, which were embodied in the Agreements, are outlined in the Year Book 1946, pp. 883-884.

Under the 1947 Agreements, a province and its municipalities were required to refrain from levying personal income taxes, corporation income taxes and special taxes on corporations for the period Jan. 1, 1947, to Dec. 31, 1951. (Shorter periods were required of the Yukon Territory and Newfoundland.) However, a province was encouraged to levy a corporation income tax of 5 p.c. in order to keep the level of income taxes on corporations in all provinces-whether or not they had entered into Agreements-approximately uniform, and such a tax was levied by all the provinces and the Yukon Territory. The tax was imposed on the income of a corporation attributable to its operations in the province, and the Agreements provided a set of rules according to which an appropriate allocation could be made of a corporation's income to the province. As provided in the Agreements, the tax was imposed under the same general provisions as those of the Income War Tax Act and The Income Tax Act, and was administered by the Federal Government without cost to the provinces. The revenue from the tax was paid over to each province but a corresponding reduction was made in the amount of compensation otherwise payable under the Agreements.

The 1947 Agreements were concerned also with another tax field-that of succession duties; for details see pp. 1046-1047.

The Agreements expressly permitted the imposition by a province of roya!ties and rentals on natural resources when such royalties and rentals were of a nature conforming with the definitions set forth in the Agreements. Provincial taxation of income derived from logging and mining operations, as defined in the Agreements,
was also permitted. Furthermore, the Federal Government was obligated by the Agreements to allow such royalties, rentals and taxes to be deducted in the computation of income for federal income tax purposes for the term of the Agreements.

The basis of compensation in the 1947 Agreements differed considerably from that of the Wartime Tax Agreements, 1942, and also from that in the 1946 Budget offer. The provinces were given a choice of two alternative bases. The components of the first option were $\$ 12.75$ per capita of provincial population in 1942, plus 50 p.c. of the province's 1940 revenue from personal and corporate income taxes and corporation taxes, plus the statutory subsidies payable in 1947. The components of the second option were $\$ 15.00$ per capita of provincial population in 1942, plus the statutory subsidies payable in 1947. A special arrangement was made for Prince Edward Island which was offered a flat amount of $\$ 2,100,000$-a sum slightly in excess of the amount determined by either of the two formulas.

An important difference in this basis of compensation from that used in the Wartime Tax Agreements, 1942, was that the amounts determined under these options constituted only floor payments or guaranteed minimum payments. These were subject to upward adjustment for increases in gross national product per capita and provincial population between the base year of 1942 and the average of the three calendar years preceding the year of payment. If, in any of the three years concerned, the amount calculated was less than the amount of the minimum payment, then the amount of the minimum payment was substituted. The use of these upward :idjustment factors was designed to insulate the Provinces against the effects of rising costs, while the use of the three year average was intended to inject a stabilizing element into the payments and, with the guaranteed minimum, to offer protection against the effects of a depression.

The guaranteed minimum annual payments to the provinces under the most favourable option and the adjusted annual payments for the period of the Agreements are shown in Table 29.

An interesting feature of the Agreements was the provision that, in the year following their termination, provincial taxpayers were to be allowed, by the Federal Government, tax credits of a maximum of 5 p.c. of the federal income tax, 50 p.c. of federal succession duties, and one-seventh of federal corporation income tax for similar taxes and duties paid to provincial governments. The main purpose of this provision was to enable the provinces to re-enter these tax fields with greater ease, if they so desired, after the termination of the Agreements

Under an offer, ancillary to the Agreements, but one which applied to all provinces, whether agreeing or not, the Federal Government pays to each province one-half of the federal corporation income tax collected on income of corporations derived, in the province, from generating and/or distributing to the public, electric energy, gas or steam, where this is the main business of the corporation. This arrangement originally had effect for the five taxation years ending Dec. 31, 1951, but has now been extended under the Tax Rental Agreements Act, 1952, to the five taxation years ending Dec. 31, 1956.

[^350]The Tax Rental Agreements, 1952.-In December 1950, a Federal-Provincial Conference was held primarily to discuss fiscal and social security matters. At the Conference the Federal Government made an offer for new tax rental agreements which was modified subsequently in minor respects only. This new offer, apart from the amount of the guaranteed minimum payments, contained substantially the same provisions as the 1947 Agreements. The provinces were again to repeal or suspend the same taxes for periods of five years, and were to be compensated in much the same manner although on a larger scale.

One important difference in the 1952 Agreements was that the provincial 5 p.c. corporation income tax levy was abolished; its purpose was fulfilled by an amendment to the federal Income Tax Act by which 5 p.c. was added to the federal rate and a credit of 5 p.c. given on corporation income earned within a non-agreeing province. Another significant difference was that the 1952 Agreements contained additional protection for the provinces in the event of their re-entering the tax fields (temporarily given up) after the end of the five year periods. The credits for personal income and succession duty were unchanged, but the corporation incometax credit was raised to 7 p.c., and all agreements were guaranteed for five years.

On the compensation side there were several differences. The new guaranteed minimum payments were determined by increasing the guaranteed minimum payments of the 1947 Agreements by the ratio of change in provincial population and in per capita gross national product between 1942 and 1948, the total increase being almost 50 p.c. In addition, a new option was provided which was designed to provide a more up-to-date evaluation of the rental value of the tax fields being rented.

Under this option the guaranteed minimum payment was made up in the following way:-
(1) The yield of a personal income tax at 5 p.c. of 1948 federal rates applied to 1948 incomes in the province.
(2) The yield of a tax of $8 \frac{1}{2}$ p.c. on corporation profits earned in the province in 1948. (The rate of $8 \frac{1}{2}$ p.c. was taken as a fair measure of the corporation tax potential, since it took account of the special taxes on corporations levied traditionally by provinces as well as taxes on corporate profits.)
(3) The average revenue received by the province from succession duties. (For the agreeing provinces this was the average of the revenue received during the last two years before their succession duties were suspended, and for Ontario and Quebec, the average of the three fiscal years 1946-47, 1947-48 and 1948-49.)
(4) Statutory subsidies payable to the province for 1948. This option was more favourable to only one Province-Ontario.
Under any one of the three options proposed these guaranteed minimum payments were subject to upward adjustment for changes in gross national product per capita and in provincial population from 1948. However, instead of using as adjustment factors the average of these ratios for the three years preceding the year of payment, there was a choice of the single year, or of the average of the two years preceding the year of payment. Another change was that the 'gross national product', used as an adjustment factor, was changed from the 'gross national product at market prices' to the 'gross national product at factor cost' in order to eliminate the effect of changes in indirect taxes.

All provinces, with the exception of Quebec, as well as the Yukon and Northwest Territories have signed Agreements. Ontario chose to retain its succession duties and will receive reduced compensation on this account.

The guaranteed minimum annual payments under the 1952 Agreements, and the estimated payments for the fiscal year 1952-53, are shown in Table 30.

## Subsection 5.-National Debt

The gross national debt of Canada at Mar. 31, 1914, was $\$ 544,391,369$ as against assets of $\$ 208,394,519$, leaving a comparatively small net debt of $\$ 335,996,850$ incurred almost completely for public works of general utility which, like the intercolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets, of the nation; the debt was also expanded by the subsidizing of enterprises like the Canadian Pacific Railway, which, though not govern-ment-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, the debt was incurred for productive purposes and was held mainly outside the country, the principal of the Federal Government funded debt payable at London, England, being $\$ 302,842,485$ on Mar. 31, 1914, as against only $\$ 717,453$ payable in Canada.

From 1914 to 1920, the gross debt increased by almost $\$ 2,500,000,000$ to a total of $\$ 3,042,000,000$ due to heavy war and post-war expenditure and, while there was a slight reduction to a low point of $\$ 2,544,586,411$ at Mar. 31, 1930, additional expenditure during the depression years resulted in a gross debt of $\$ 3,710,610,593$ by Mar. 31, 1939.

From 1939 to 1946 there was an increase of $\$ 15,249,235,590$, incurred mainly for war purposes, bringing the total gross debt to $\$ 18,959,846,183$ at the end of March 1946. After deduction of active assets held by the Government, the net debt showed an increase of $\$ 10,268,846,135$ during this period, amounting to $\$ 13,421,405,449$ at the end of March 1946. At the end of March 1952, total gross debt had been reduced to $\$ 17,257,668,676$ and net debt to $\$ 11,185,281,546$.

The portion of the funded debt, payable in foreign currencies, decreased sharply during the war years, as was inevitable under conditions where almost the entire amount of the country's war financing was carried out through domestic operations. Of the total funded debt and treasury bills outstanding as at Mar. 31, 1952, amounting to $\$ 14,695,410,451,2 \cdot 70$ p.c. only was payable outside Canada: $\$ 53,119,649$ being payable at London and $\$ 343,432,500$ at New York.

## 31.-Summary of the Public Debt and Interest Payments thereon, Years Ended Mar. 31, 1941-5?

Nors.-Statistics for the years 1867-99 are given at pp. 775-776 of the 1942 Year Book; those for 1900-13 at p. 944 of the 1945 edition; those for 1914-35 at p. 972 of the 1947 edition; and those for 1936-40 at p. 1,009 of the 1951 edition.

[^352]Interest-Bearing Debt.--The interest-bearing debt of Canada has shown a sharp increase since 1939 , amounting to $\$ 16,201,876,542$ at Mar. 31, 1952. compared with $\$ 3,658,414,748$ at the same date in 1939 . The average rate of interest on this debt continued downward during the war years, reaching the low point of $2 \cdot 547$ p.c. at Mar. 31, 1945. Slight increases in 1946, 1947 and 1948 were recorded, and the rate stood at $2 \cdot 710$ p.c. at Mar. 31,1948 , but decreased slightly to 2.677 at Mar. 31, 1950, and increased to $2 \cdot 783$ at Mar. 31, 1950. This is in contrast with the experience of World War I, when the average interest rate on the direct debt of the nation rose from $3 \cdot 368$ p.c. at Mar. 31, 1913, to a high point of $5 \cdot 164$ p.c. at Mar. 31, 1922.

During the fiscal year ended Mar. 31, 1939, interest on the public debt absorbed about 26 p.c. of total Government receipts. Interest on the debt in later years has absorbed a smaller portion of revenue, amounting to less than 11 p.c. in the year ended Mar. 31, 1952, that is if the amount necessary to place interest on public debt on the accrual basis is excluded.

## 32.-Interest-Bearing Debt, Annual Interest Charges thereon and Average Rates of Interest, as at Mar. 31, 1946-52

Nors.-Statistics for the years 1913-35 चre given at p. 977 of the 1977 Year Book; and for 1936-45 at p. 1010 of the 1951 edition.

[^353]Funded Debt Operations.-Conversions and other national debt operations carried out between 1914 and 1930 are dealt with in the Year Book 1933, pp. 842-843, those between 1931 and 1934 in the Year Book 1934-35, pp. 905-907; those of the fiscal years 1935 to 1949 in subsequent editions.

T'reasury Bills.-Since 1934 a market for short-term treasury bills has proved highly satisfactory. Each issue, with two exceptions (where the bills were sold direct to the Bank of Canada), has been offered for public tender. Lists of treasury bills sold by public tender for the fiscal years ended 1934-46 appear in the respective

Year Books beginning with the 1937 edition. Details of the issues in continuation of the list published in the Year Book 1942 at p. 778 may be obtained on request from the Department of Finance, Ottawa, Ont.

Guaranteed Debt.-Besides the direct debt of the Federal Government, already dealt with, there are large indirect obligations arising mainly out of the guarantee of securities, by the Federal Government, of the railway lines that now form the Canadian National Railways and the subsequent extensions thereof. Together with these are other small indirect obligations originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of the Harbour Commissions issued mainly for harbour improvements. Since 1932, guarantees of certain bank loans have been made under the various Relief Acts. With the commencement of business by the Bank of Canada on Mar. 11, 1935, the guarantee [authorized by Sect. 27 (6) of the Bank of Canada Act] of the deposit required to be maintained in the Bank of Canada by every chartered bank came into force. This guarantee must be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities, and if the Bank suspends payment of any of its liabilities".

For full details of other guarantees also outstanding at Mar. 31, 1952, see Schedule "V" to the Public Accounts for 1952.

## 35.-Guaranteed Debt of the Federal Government (Amounts Held by the Public), as at Mar. 31, 1946-52

Nore.-Figures for the years 1914-23 are given at p. 837 of the 1943-44 Year Book; those for 1924-35 at p. 978 of the 1947 edition and those for 1936-45 at p. 1013 of the 1951 edition.

${ }^{1}$ Excludes indeterminate amounts and amounts not yet determined.

## Section 3.-Provincial Public Finance*

Commencing with 1946, the statistics appearing in this Section have been prepared on a basis not strictly comparable with those given for previous years. Certain of the former major classifications have been eliminated or redistributed; in the case of tables dealing with debt, the totals are comparable with previous years but the classification has been revised.

In order to prepare comparable statistics it is essential that data be presented, to the greatest possible extent, in terms of uniform categories. In many instances, activities relating to a specific function are excluded by some provincial governments from their ordinary account, whereas similar activities are included by other provinces. The special or administrative funds of this nature so excluded are, therefore, added to provincial ordinary account to arrive at 'general' revenue and expenditure. For this reason it is obvious that total revenue and total expenditure presented herein will differ considerably from totals shown in provincial public accounts.

Fiscal periods dealt with are as nearly coincident as is possible in view of the variations in provincial fiscal year-ends. For example, figures shown for 1949 are for the following fiscal year-ends: Nova Scotia, Nov. 30, 1949; New Brunswick, Oct. 31, 1949; and all other provinces, Mar. 31, 1950.

[^355]
## Subsection 1.-Revenue and Expenditure of Provincial Governments

The figures of revenue and expenditure presented in this Subsection do not agree with those shown in Tables 1 and 3, pp. 1021 and 1023, because of differences in the methods used to compute 'net' figures.

Tables 36, 37 and 38 present a general summary of provincial government finance by combining ordinary and capital account revenue and expenditure on a net basis. These tables provide a more valid comparison between provinces and between years than those based on ordinary account alone because certain types of expenditure may be made through ordinary account in one year and through capital account in another. 'Net General Revenue' is arrived at by deducting from 'Gross General Revenue' as shown in Table 39: (a) all institutional revenue; (b) interest, premium, discount and exchange; and (c) grants-in-aid and shared-cost contributions received from other governments. This revenue is also deducted from the pertinent functions of expenditure to arrive at 'Net General Expenditure'. While the surplus position is the same in the gross and net presentation, the former emphasizes the gross administrative burden of services and the latter shows the net cost of these services. 'Net Capital Expenditure' is arrived at by deducting all capital revenue from 'Gross Capital Expenditure'.

The classification of revenue by source and of expenditure by function was revised considerably in 1946; details of these changes may be found in the Year Book 1951, p. 1,014 . In 1948 there were certain additional changes; motor-fuel and fuel-oil sales taxes were combined into one total and general retail sales taxes, which have grown in significance, were taken out of 'Sales Taxes-Other Commodities and Services' and shown as a separate item. In 1949, education expenditure previously classified as 'Employment Training Programs', is no longer shown separately but is included in 'Schools Operated by Local Authorities' or 'Universities, Colleges and Other Schools'.

Newfoundland is included in provincial financial statistics for the first time in 1949. Liquor Control revenue appears under five headings: 'Taxes-Alcoholic Beverages', 'Privileges, Licences and Permits-Liquor Control and Regulation', 'Fines and Penalties', 'Contributions from Government Enterprises - Liquor Profits', and 'Other Revenue'; the latter includes confiscations under liquor control.

## Section 4.-Municipal Finance*

## Subsection 1.-Municipal Assessed Valuations

The revenue resources of municipalities are limited generally to direct taxation based on assessed valuations of real and other types of property. In the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Manitoba and Alberta, municipalities assess and tax personal property. In Alberta municipal districts, the valuations of personal property assessed have risen sharply with the growth of the oil industry. In Manitoba, the personal property tax is used generally by all classes of municipalities except cities. Aside from property, the most important type of valuation for taxation purposes is business assessment, although not all provinces assess for business purposes separately and distinctly from real property valuations. A variation of methods, schedules and rates exists not only between provinces but also between municipalities within the same province. Some municipalities use the rental basis, others the value of floor space occupied and still others the capital value of the premises occupied. Four of the provinces have other miscellaneous types of assessment, the general nature of which will be noted from the footnotes to Table 44.

It should be noted that the figures in Table 44 are not entirely comparable, on an interprovincial basis, from the standpoint of relative values of properties taxable for municipal purposes. Each province operates under its own assessment laws, which are not all similar either in application or in effect. For instance, in British Columbia cities and municipal districts improvements cannot be taxed on a value in excess of 75 p.c. of taxable values or, in most of the villages, in excess of 50 p.c. of taxable values; the values actually taxed in 1950 ranged from nil to 75 p.c. In the majority of cases, improvements were assessed for tax purposes at 50 p.c. of taxable values, but for all municipalities the total improvements actually taxed represented approximately 51 p.c. of total taxable values. It should also be noted that Table 45 does not include assessed valuations in Improvement Districts for either Saskatchewan or Alberta. In Saskatchewan these amounted to $\$ 26,874,190$ in 1946, $\$ 26,892,080$ in 1947 , $\$ 28,777,035$ in 1948 , $\$ 31,412,435$ in 1949 and $\$ 26,535,545$ in 1950; in Alberta the figures for the same years were $\$ 62,753,779, \$ 68,645,962$, $\$ 65,713,818, \$ 68,244,456$ and $\$ 53,557,822$, respectively. In addition, there are other intra-provincial inconsistencies between municipalities which, in turn, further affect interprovincial comparisons. These may be said to be owing to the lack of integrated municipal assessment systems and uniform standards for establishing values on a province-wide basis, under the direction and control of a central authority. Some provinces, however, have made considerable progress along these lines in recent years.

[^361]While complete figures for tax-exempt properties are not available for each province, the information given shows that these properties have assumed relatively high proportions. Most provinces have shown consistent increases in taxable assessed valuations that may be attributed largely to the stimulus to business and industry in general arising from the War and the buoyancy of the economy in succeeding years.

## Subsection 2.-Municipal Taxation

Table 45 shows, by provinces, the taxes levied by municipalities in the years 1946-50 inclusive, and the total taxes outstanding at the end of those years. Although these figures are as nearly comparable as existing published reports permit, nevertheless, they still reflect some inconsistencies owing particularly to intraprovincial variations in the division of responsibility for tax administration between municipalities and school authorities. In some instances, school taxes are not included in the municipal levies.

## 45.-Municipal Taxation, by Provinces, 1946-50

#### Abstract

Notz. - These figures include school taxes only to the extent that such are levied and collected by the municipalities on behalf of local school authorities. Taxes are not included for schools outside incorporated municipal organizations.

[^362]Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, extreme caution should be exercised in using the figures in Table 45 as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan and Alberta, municipalities are required to levy certain taxes for and on behalf of the provincial government and for other special purposes for which there is no comparable situation in other provinces. The amounts of such taxes included in the municipal levies in these two provinces, are as follows:-

| Province and Tax 1946 | 1947 | 19/8 | 19.49 | 1950 |
| :---: | :---: | :---: | :---: | :---: |
| \$ | \$ | 8 | \$ | \$ |
| Saskatchewan - <br> Public revenue taxes (provincial) ., 1,661,667 | 1,636,076 | 1,662,404 | 1,689,059 | 1,756, 869 |
| Public revenue taxes (taprovi........ 2, 106,250 | 2,293,634 | 2,067,203 | 1,770,416 | 1,936,645 |
| Totals, Saskatchewan........3,767,917 | 3,929,710 | 3,729,607 | 3,459,475 | 3,693,514 |
| Alberta- <br> Educational and wild lands taxes (provincial) ..................... 1,009,951 ${ }^{1}$ |  |  |  |  |
|  | 9,965 | 11,864 | 9,101 | 16,561 |

[^363]There has been a slow steady rise in the trend of municipal tax levies in recent years. While most provinces show increases, this does not necessarily mean an increased burden on the individual taxpayer in all instances, but is the result, in part at least, of increased assessed valuations. In Nova Scotia and New Brunswick the increases are, to a considerable extent, owing to the establishment of larger school units, so that certain municipalities are now levying taxes formerly levied by rural school boards. During the years 1946-50, tax collections continued high in relation to total levies, resulting in substantial reductions in the amount of taxes outstanding, although these are still relatively high in most provinces. The situation varies considerably for different classes of municipalities.

Reference has been made heretofore to the Improvement Districts in Saskatchewan and Alberta which, although not incorporated municipalities, are maintained more or less as self-sustaining areas on such a basis by the provincial governments. Taxation figures for these Districts are excluded from Table 45, but by reason of the special significance attached to them in relation to municipal organization in these provinces, and the fact that they may become incorporated, or part of existing municipalities at some future date, the corresponding information with regard to them is shown in Table 46.

## Subsection 3.-Municipal Debt

The rapid growth experienced by municipalities in Canada, coupled with increased demands and responsibilities for improvements, schools, utilities and other services or facilities, has resulted in the incurring of a heavy burden of debt. Debenture borrowings increased rapidly in the period 1900-12 and again during the 1920's and early 1930's. From 1933 to 1946 the trend was downward but since 1947 it has shown a considerable increase.

Several important factors contributed to the 1933-46 decline, not the least important of which was the measure of control exercised by provincial governments over capital expenditure involving the incurring of debt. In addition, there was a more or less orderly retrenchment during the depression years following periods of what proved to be unwarranted expansion which, along with widespread demands to ease the tax burden on real property, resulted in the severe curtailment of capital undertakings and works requiring debenture financing. Also, the greater part of the municipal long-term debt was represented by serial or instalment-type debentures, that require yearly repayments of principal. During the 1930's, the rehabilitation of existing assets and new works and improvements necessitated by normal expansion and development were sacrificed mainly in the interests of the taxpayers. After the outbreak of war in 1939 the policy of deferment was continued, or even extended, to free the financial market to the needs of the Federal Government in meeting war financing requirements. Since the end of the War, however, municipalities, denied improvement programs for so long, have been getting these under way, resulting in increased amounts of debenture debt. Table 47 shows figures of municipal indebtedness for 1949 and 1950 and includes temporary loans and other liabilities in addition to debenture debt.

## 47.-Debt of Municipal and School Corporations for their Fiscal Years Ended in 1949 and 1950

Note.-Figures for Quebec are not available. Figures shown are compiled from published reports of Provincial Departments of Municipal Affairs, auditors reports and financial statements of municipalities, and information secured from other official sources.

[^364]of that decline. The decreases in debenture debt were due to the factors mentioned on p. 1076, while improved tax collections made it possible for municipalities to avoid heavy temporary borrowings and reduce other current liabilities. However, debenture debt figures are intended to represent only principal unmatured. In general, principal past due, whether in default or unpaid because of non-presentation, is included with accounts payable and other liabilities.
48.-Debenture Principal and Interest Due, by Provinces, 1946 and 1948-50

Note.-Figures for Quebec are not available.

Nore.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

## Section 1.-National Accounts*

The national accounts, in summarizing the nation's economic transactions, make possible the study of interrelationships in the economic system as a whole. They are particularly important to governments concerned with problems of full employment, taxation and prices, and to businessmen concerned with programs of investment and marketing.

The main body of the national accounts provides a summary of production and consumption in terms of prices established in the market. Thus, it is necessary to keep in mind that the value of the nation's production may change because of price changes as well as changes in the volume of output. When the resources of the economy are fully employed the volume of goods and services produced can increase but slowly from one year to the next in response to population growth and additions to the country's real wealth, or as a result of more efficient utilization of existing resources. Consequently, a rapid rise in the value of output under conditions of full employment is explained mainly by price increases. However, when there are unemployed resources in the country, a substantial increase in the value of production of goods and services may occur from one year to the next if these resources are brought into use, even though prices remain stable.

Data are now available showing volume changes as well as price changes in gross national expenditure. Gross national expenditure is shown in constant dollars (i.e., in terms of average prices prevailing in the period 1935-39) in Table 3. Since the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. For all other tables the data are expressed in current dollars, and year-to-year changes in these tables must be considered in relation to price changes over the period.

The tables presented here cover the more important aspects of the national income analysis. Tables 1 and 2 show the main aggregates of national income, gross national product, gross national expenditure, and their components; Table 3 shows gross national expenditure in constant dollars and other tables are included

[^365]to show the source and disposition of personal income, government revenue and expenditure, and personal expenditure on consumer goods and services. Further information on national accounts can be obtained by reference to D.B.S. bulletins on National Accounts.*

National Income.-Net national income at factor cost or, more briefly, national income, is the income currently earned by persons in productive pursuits, whether their services are rendered to business, to governments or directly to the consuming public. It includes the earnings of residents of Canada from the current year's production of goods and services, that is, the sum of salaries and wages, supplementary labour income (employer contributions to unemployment insurance, pension funds, Workmen's Compensation funds and income in kind, etc.), profits, interest, net rent and net income of agriculture and other unincorporated business.

Gross National Product.-Gross national product is the market value of all final goods and services produced in the year. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus depreciation allowances and similar business costs.

Gross National Expenditure.-Gross national expenditure measures the same aggregate as gross national product, namely, the total production of final goods and services at market prices. However, gross national product is measured in terms of costs, whereas gross national expenditure is obtained by adding together all sales and adjusting them for imports and changes in inventories. Four broad types of sales can be distinguished: sales to persons, to governments, to business on capital account (gross domestic investment including changes in inventories), and to non-residents (exports). The total of these sales includes imports of goods and services but as the purpose is to measure only domestic production available for Canadian residents, imports of goods and services, including net payments of interest and dividends to non-residents, are deducted.

Personal Income.-Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. Thus, it includes (in addition to salaries and wages, net income of unincorporated business, interest and dividends and net rental income of persons) transfer payments from governments, such as family allowances, unemployment insurance benefits and war service gratuities. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Historical Perspective.-Between 1926 and 1951-slightly less than a generation-gross national product increased four fold in value. A substantial part of this apparent growth was the result of rising prices; however, it will be seen from Table 3 that the growth in physical production was, nevertheless, 136 p.c. The population of Canada in this period increased by 48 p.c. so that the per capita growth in physical product was close to 60 p.c., an indication of the growth in living standards and prosperity that occurred during this period. This increase is the

[^366]more remarkable in the light of the disastrous set-back suffered during the depression years and the more recent decline in the average hours worked weekly in industry. In 1933, at the depth of the depression, per capita real production registered a decline of one-third as compared with the relatively prosperous year of 1929.

The historical series reveal many other interesting features of the economy, including, among others: the relative stability of the portion of total income going to labour in the form of wages and salaries as opposed to the instability of farm and investment incomes (Table 4); the increasing significance of government spending in the economy as opposed to the declining importance of exports (Table 3); the relative changes in the proportion of government revenue represented by direct and indirect taxes (Table 6); and changing consumer preferences as revealed by the composition of personal expenditure (Table 8).

Current Perspective.-Gross National Product and National Income.-Gross national product in 1951 was estimated at $\$ 21,200,000,000$, a 17 p.c. increase over the 1950 total of $\$ 18,100,000,000$. A substantial part of this increase was due to the general increase in prices at which the total output of goods and services is valued. After having made allowance for these price changes, however, there remained an increase in total real output of over 5 p.c. Further comment is made below on the manner in which this increase in real output was absorbed by major groups such as consumers, governments and businesses (for investment purposes). It should be noted that the figure of 5 p.c. is based on recently developed statistical procedures and that, while it is believed sufficiently accurate for the analytical conclusions based upon it, it must be regarded as a preliminary statistic. The increase in total output was accompanied by a gain of almost 3 p.c. in the employed labour force. There was a continuation of the shift from agricultural to nonagricultural pursuits, so that the increase in the employed non-agricultural labour force was in excess of the over-all increase.

National income in 1951 was estimated at $\$ 17,200,000,000$, an increase of 18 p.c. over the preceding year. Wages, salaries and supplementary labour income, the largest component of national income, amounted to $\$ 9,600,000,000$ in 1951 , a gain of 17 p.c. over 1950, while investment income, which consists of corporation profits, interest and net rental income received by persons, government investment income and a number of other items, showed an average increase of 18 p.c. over 1950 . In the unincorporated business sector, there was a very large increase of 38 p.c. in accrued net income of farm operators from farm production. Approximately 25 p.c. of the total increase in volume output of gross national product is accounted for by agriculture. A large part of the increase in net income was due to a nearrecord wheat crop. It should be noted that adverse weather conditions resulted in a large amount of grain being left in the fields, and this addition to farm inventories was included with the figure of farm net income. On the other hand, net income of non-farm unincorporated business, which includes unincorporated retailers, unincorporated manufacturing establishments, professionals and unincorporated service establishments, increased by only 5 p.c.

Gross National Expenditure.-Gross national expenditure indicates the manner in which the nation's output is absorbed. In 1951, 50 p.c. of the increase in total volume output was utilized by the Government sector, largely as a result of the growing defence program. The remainder was accounted for almost entirely by a continued high level of investment in durable physical assets. There was no increase in the real amount taken by consumers. A small increase occurred in the physical volume absorbed by inventory accumulation but this was partly offset by the change in the negative amount represented by the net foreign deficit.

The volume of personal expenditure failed to increase in 1951. since the over-all value increase of 10 p.c. was almost exactly matched by the price rise. Expenditure on durable goods declined significantly in physical terms, although in value terms 1951 expenditure was about equal to that of the previous year. Expenditure on goods and services by federal, provincial and municipal governments rose by $\$ 797,000,000$, or approximately 34 p.c., from $\$ 2,323,000,000$ in 1950 to $\$ 3,120,000,000$ in 1951. Most of this increase was accounted for by the rise in federal defence spending from $\$ 493,000,000$ in 1950 to $\$ 1,160,000,000$ in 1951 , a gain of 135 p.c. The major components of gross domestic investment showed divergent movements in 1951. Investment in new housing decreased by about 3 p.c. in value and by about 16 p.c. in volume and average cost was estimated to be about 15 p.c. higher than in the previous year. Investment in new non-residential construction increased by about 18 p.c. in value, however, the increase in volume was only 6 p.c. Investment in new machinery and equipment showed a very large increase, amounting to 18 p.c. in physical volume, the result of heavy spending in basic industries and utilities. The large inventory accumulation of $\$ 1,700,000,000$ in 1951 consisted of farm inventory increases of $\$ 400,000,000$ and increases in business inventories, totalling $\$ 1,300,000,000$.

For the second year in succession, net foreign investment was negative. The over-all deficit, represented by the difference between 'exports of goods and services' and 'imports of goods and services' in Table 2, was even larger than that experienced in 1950. Despite the deficit, the Canadian dollar strengthened its position on the international market and exchange reserves remained at a high level.

[^367]Personal Income, Personal Saving and Spending.-Personal income in 1951 amounted to $\$ 15,818,000,000$, an increase of over 17 p.c. as compared with 1950 . The increase approximated that shown by important components such as wages and salaries, interest and dividends and net rental income of persons and the large increase in net income of farm operators also included in this figure. Direct personal tax collections rose sharply from $\$ 735,000,000$ in 1950 to $\$ 1,016,000,000$ in 1951 , a gain of $\$ 281,000,000$, or 38 p.c. This increase is almost wholly accounted for at the federal level owing to higher levels of personal income and to the defence surcharge imposed in the Budget of April 1951. Personal expenditure amounted to $\$ 13,100,000,000,10$ p.c. above 1950 . The composition of personal expenditure is shown in Table 8 at p. 1086.

Subtracting personal taxes and personal expenditure from personal income, personal saving of $\$ 1,740,000,000$ is obtained for 1951 . This represents the amount saved during the year, not the total accumulated savings of persons, which would be very much greater. Savings include not only liquid savings in the form of cash and government bonds but also net repayment of debt, increase in homeowner's equity and the reinvested earnings of farms and small businesses.

## Section 2.-Canada's International Investment Position*

A large balance of Canadian indebtedness to other countries has always been characteristic of Canada's international investment position. Much of the development of Canada has been financed by investments of capital from other countries, particularly in earlier decades. This balance of indebtedness has been reduced from the levels immediately before World War II which, in turn, were lower than the earlier peak period around 1930. Net indebtedness to other countries in 1950 was about $\$ 4,100,000,000$ compared with more than $\$ 6,000,000,000$ in 1930 . The 1950 figure was higher than that for 1949 at $\$ 3,730,000,000$, and there was also an increase in 1951.

British and Foreign Investments in Canada.-The relative importance of British and United States capital invested in Canada has changed greatly in recent decades. British capital constituted the largest part of the external capital invested in Canada before World War I but United States investments underwent a rapid development during and after that War. By 1926, the first year for which official estimates are available, United States investments in Canada had a value of $\$ 3,196,000,000$ compared with British investments of $\$ 2,636,000,000$. During the 1930's, reductions occurred in the amount of external capital invested in Canada.

Further growth in United States investments in Canada took place during World War II and, by the end of the War, these investments had reached a new peak, whereas British investments in Canada were sharply reduced by repatriations of securities. As a result of these divergent trends in British and United States investments, total non-resident investments in Canada increased only moderatcly during World War II.

[^370]In the post-war years there was a substantial increase in the value of United States capital invested in Canada. The largest increases occurred in the years following 1948, particularly in 1950 and 1951 when there were substantial net inflows of United States capital. The increase in the value of United States investments in Canada in the six years 1946 to 1951 amounted to about $\$ 2,250,000,000$. The growth in direct investments in Canadian branches, subsidiaries and controlled companies accounted for approximately $\$ 1,600,000,000$ of this increase and increased holdings of government and municipal bonds for about $\$ 450,000,000$. The accelerated rate in the later post-war years was due to the development of petroleum production and other resources. Throughout the period, reinvested earnings accounted for more than one-half the increased investment. Portfolio holdings of government and other securities increased each year, except for 1947. There were particularly large increases in holdings of Government of Canada issues in 1950 through a demand for outstanding domestic issues, and in 1951 in holdings of provincial and municipal bond sales in the United States. Direct investments in companies in Canada controlled in the United States made up the largest part of United States investments. In 1950 , such investments were valued at $\$ 3,442,000,000$ in 2,568 concerns. By the end of 1951 the value of this group of investments had risen to $\$ 3,900,000,000$ out of total investments of United States capital in Canada of approximately $\$ 7,235,000,000$.

At the end of 1951 , British investments of $\$ 1,772,000,000$ were only slightly higher in value than at the end of World War II. A considerable increase in these investments occurred in 1950 and 1951 in the direct investment group, and the totals since 1949 also increased significantly by the inclusion of British investments in Newfoundland. The principal change in the post-war period in investments of other countries in Canada occurred in 1951, when a substantial increase took place, mainly through larger portfolio holdings of Canadian stocks.

Canadian capital has been the principal source of financing for Canadian development in the past 20 years or more. Investment, which was subnormal during the 1930 's, showed notable expansion in certain fields during World War II and rose to peak levels in the post-war years. Even in 1950 and 1951, when capital inflows were very substantial, the proportion of investment financed by non-resident capital was minor. In those years the net contribution by non-residents and foreign controlled companies to the savings used for all types of investment in Canada was only about one-seventh of the total.

Thus, the ratio of investments of external capital, in relation to total investments of capital in Canada, has been declining for some years. It is difficult to express this relationship in terms of any simple ratio, however, because of the variety of types of investment which must be compared. Important changes have taken place also in the relative positions of different types of investment. Non-resident holdings of Canadian bonds constitute a much smaller proportion of the outstanding funded debt of Canadian governments and corporations than before World War II. The external holdings of Canadian bonds represented only about 15 p.c. of the total Canadian funded debt at the end of 1951 compared with about one-third of the bonds outstanding in 1939. The most conspicuous feature in this change in ownership has been the great increase in Canadian holdings. As a result of wartime financing, Canadian holdings of Canadian bonds rose from about $\$ 6,500,000,000$ in 1939 to $\$ 19,200,000,000$ in 1951. Non-resident holdings did not change much in total between these two years and a decline in British holdings, through wartime repatriation, was offset by a rise in United States holdings in the past few years.

Non-resident ownership of Canadian industry, mines, railways and public utilities was estimated in 1950 to be about 32 p.c. of the total capital invested, a percentage less than the corresponding ratio at the beginning of World War II. The ratio of non-resident ownership in Canadian manufacturing companies in 1949 was estimated at about 44 p.c. The percentages for the different groups of the manufacturing industry varied considerably but was greatest in the non-ferrous metal industry, being close to 75 p.c., as compared with about 25 p.c. in the textile industry; in the chemical industry it was more than 50 p.c. and in the vegetable products, animal products, wood and paper products, iron and its products and the non-metallic minerals groups the ratio was between 33 p.c. and 50 p.c. Furthermore, in some subdivisions of these industries, non-resident ownership and control were predominant even though only the minor parts of the groups, when taken as a whole, were owned abroad. Other important industrial subdivisions were mainly Canadian owned and controlled, such as the primary iron and steel and the cotton textile industries.

Non-resident ownership of railways was large, being 43 p.c. in 1949. The mining and smelting field was also developed to an important extent by external capital, the ratio of non-resident ownership being 42 p.c. Some major units in this field were non-resident controlled.

In financial institutions, non-resident ownership was substantial but nonresident control was largely limited to branches of foreign insurance companies; Canadian banks, trust companies and most Canadian insurance companies were mainly Canadian controlled.

External capital has occupied a very important role in the development of the petroleum industry, United States investment in all branches of the industry amounting to about 50 p.e. of the total at the end of 1951 , as is shown in the following statement:-

Estimated Book Value of Investment in Canada in All Petroleum Compantes (exploration, development, refining, transportation and merchandising) Classified by Country of Control and Country of Ownership (Millions of dollars)

From 1946 to 1951, capital inflow from the United States for petroleum investment amounted to about $\$ 532,000,000$, or over 33 p.c. of the net capital movement from that country to Canada. The book value of United States ownership in the
industry, which reflects profits and losses and accounting adjustments in addition to capital movements, rose from $\$ 115,000,000$ to $\$ 636,000,000$, or from 39 p.c. to 52 p.c. of the aggregate book value of the industry in Canada. United States investment in United States controlled companies in Canada was valued at $\$ 556,000,000$ or 45 p.c. of the industry at the end of 1951.

## 10.-Estimated British and Foreign Capital Invested in Canada, by Types of Investment, Classified by Estimated Distribution of Ownership, as at D.s. 31, 1950

Notr.-Common and preference stocks are at book values as shown in the balance sheets of the issuing companies; bonds and debentures are valued at par; and liabilities in foreign currencies are converted into Cana tian dollars at the par of exchange.

${ }^{1}$ Includes some investments held in the United Kingdom and the United States for residents of other countries.

Canadian Assets Abroad.-Canada's external assets have changed greatly in size and composition in recent years. The total value, including holdings of gold and liquid reserves in foreign currencies, rose from $\$ 1,876,000,000$ in 1939 to $\$ 5,454,000,000$ at the end of 1950 . The principal factor in this increase was the extension by the Federal Government of loans and export credits to the United Kingdom and other countries. At the end of 1950, Canadian Government credits outstanding totalled $\$ 1,990,000,000$. Included in this total was about $\$ 256,000,000$ outstanding on the 1942 loan to the United Kingdom, $\$ 1,185,000,000$ drawn on the 1946 loan to the United Kingdom and $\$ 535,000,000$ of post-war export credits and advances. In addition, at the end of 1950, official liquid reserves, including gold and official United States dollar balances, aggregated about $\$ 1,876,000,000$ and these reserves were higher at that date than in any earlier year. In addition, Canada had subscribed in 1946 and 1947 to the capital of the International Bank and the International Monetary Fund and by the end of 1951 such subscriptions amounted to $\$ 70,900,000$ and $\$ 322,500,000$, respectively. A small part of the subscription to the Bank was in the form of convertible exchange and $\$ 75,000,000$ of the subscription to the Fund was in gold. The remainder of both subscriptions was made in the form of demand notes of the Federal Government or in Canadian funds.

Besides the officially owned assets referred to above, there were the privately owned investments in the form of foreign securities and property owned by Canadian companies and individuals. In 1939, these privately owned assets constituted most of the total value of Canadian assets abroad, whereas, since the end of World War II they amounted to only a minor part of the total, chiefly because of the sharp rise in officially owned assets. Total privately owned portfolio investments abroad declined in value since 1939 because of the liquidations of Canadian holdings of United States securities. Portfolio holdings of foreign securities owned in Canada were reduced from $\$ 719,000,000$ at the end of 1939 to $\$ 598,000,000$ at the end of 1950. This decline was less than the total sales of these securities by private investors during the period, as there was a considerable increase in the book value of holdings of United States stocks. Appreciable gains occurred in Canadian direct investments in businesses outside Canada which had a value of $\$ 990,000,000$ at the end of 1950 compared with $\$ 671,000,000$ at the end of 1939. By the end of 1951, the value of this group of investments had risen to well over $\$ 1,100,000,000$.
> 11.-Canadian Assets Abroad, 1939, 1946 and 1948-50

Note.-Excludes investments of insurance companies.

| Totals. | 990 | 448 | 150 | 598 | 1,588 |

The privately owned Canadian investments abroad are chiefly in the United States, the total value of investments in that country at the end of 1950 being $\$ 1,149,000,000$. Investments in other foreign countries in 1950, chiefly in Latin America, were $\$ 238,000,000$, while investments in the United Kingdom were $\$ 101,000,000$, and in other Commonwealth countries $\$ 100,000,000$. These figures exclude the investments abroad of Canadian insurance companies and banks, as well as the official assets referred to in Table 12, and certain small amounts of miscellaneous investments that were difficult to evaluate.

## Section 3.-Corporation Profits and Income to Shareholders

Estimates of corporation profits presented in this Section cover all Canadian corporations. The figures for the years 1944 to 1950 are based on the reports, Taxation Statistics, published by the Taxation Division, Department of National Revenue, Ottawa. Prior to 1944 , corporation financial statistics were made the subject of a comprehensive study in the Department of National Revenue.

Profits of Canadian corporations are shown in Table 13 for selected years 1926-51. From a high of $\$ 530,000,000$ in 1929, they dropped to $\$ 17,000,000$ in 1932 but, with the exception of a decline in 1938, rose steadily from 1932 to 1942, the wartime peak. From 1944 to 1948 corporation profits showed a continuous increase and after a slight decline in 1949 they rose to $\$ 2,850,000,000$ in 1951.

During the period 1926 to 1939, tax liabilities were much more stable than profits, ranging from a low of $\$ 32,000,000$ in 1932 to a high of $\$ 115,000,000$ in 1939. After the outbreak of war, tax rates rose sharply, largely owing to the imposition of the excess profits tax, and ranged from 40 p.c. to 50 p.c. of profits during the war period. In 1948, tax liabilities were 35 p.c. of profits, but increases in the next three years brought the tax rate up to over 50 p.c. in 1950, a percentage about the same as the wartime high. Since profits in 1951 were well above the level of any previous year, liabilities in 1951 of $\$ 1,444,000,000$ were $\$ 423,000,000$ more than in 1950 and $\$ 713,000,000$ over those of 1949.

Dividends paid out by corporations (excluding dividends paid to other corporations) follow a more even course than profits or taxes. Thus, in 1932, when corporation profits after taxes were $-\$ 15,000,000$, dividends paid amounted to $\$ 157,000,000$; while in 1951 profits after taxes were $\$ 1,406,000,000$ and dividends paid were $\$ 696,000,000$.

Undistributed corporation profits reached a peak in 1948 of $\$ 788,000,000$ and were lower in the three following years as a result of higher taxes and larger dividend payments. The low point of the series was reached in 1932 when corporations paid out in taxes and dividends $\$ 172,000,000$ more than they earned in profits.

Analysis by Industries.-Detailed data on profits by industries are available only for the years since 1944. Corporation profits as shown in Table 14 do not agree with those in the national accounts since the national accounts figures include depletion charges and charitable donations. Adjustments are made for renegotiation of war contracts and for conversion to a calendar-year basis in Table 14 and it should be noted that federal income taxes only are deducted from profits in arriving at profits after taxes. Provincial taxes were not significant in amount in the years 1944 to 1946 but, beginning with 1947, they were levied at the rate of 7 p.c. of profits in Ontario and Quebec and at 5 p.c. in the other provinces. Profits of Newfoundland corporations are included for 1950 only.

Between 1949 and 1950, profits of all corporations before taxes increased $28 \cdot 7$ p.c. Of the 34 sub-groups listed in the table, only five showed decreases. The most significant increases were in the other metal mining, pulp and paper, wood and wood products, petroleum products, rubber, machinery, chemicals, paints and drugs, automobiles, transportation communication and storage, wholesale trade and other financial institutions groups. The most significant declines were in transportation equipment except automobiles, and the chartered banks and insurance companie groups.

The structure of profits after taxes is very similar to that before taxes, since the rate increased only slightly between 1949 and 1950.

## Section 4.-Federal Incorporation of Companies

Statistics of companies incorporated under the Companies Act are given in Table 15.
15.-Numbers and Capitalizations of Companies Incorporated under the Dominion Companies Act and Amendments, Years Ended Mar. 31, 1942-51
Note.-Statistics for the years 1900-25 will be found at p. 1061 of the 1938 Year Book and for 192f-41 at p. 934 of the 1942 edition. Capitalization includes consideration of the amounts of capital received on the issue of shares without nominal or par value.

| Year | New Companies |  | Old Companies with- |  |  |  | Gross Increase in Capitalization | Net Increase in Capitalization |

## PART I.-GURRENCY AND BANKING

A historical sketch of currency and banking in Canada, tracing certain features of the central banking system that finally led up to the establishment of the Bank of Canada appears at pp. 900-905 of the 1938 Year Book. In chronological order these were:-
(1) Central Note Issue, permanently established with the issue of Dominion notes under legislation of 1868 .
(2) The Canadian Bankers' Association, established in 1900 and designed to effect greater co-operation among the banks in the issue of notes, in credit control and in various aspects of bank activities.
(3) The Central Gold Reserves, established by the Bank Act of 1913.
(4) Rediscount Facilities, originated as a war measure by the Finance Act of 1914, and made a permanent feature of the system by the Finance Act of 1923. This Act empowers the Minister of Finance to issue Dominion notes to the banks on deposit by them of approved securities, thus providing the banks with a means of increasing their legal tender cash reserves at will.

## Section 1.-The Bank of Canada

The Bank of Canada Act and Its Amendments.-The Bank of Canada was incorporated in 1934 and commenced operations on Mar. 11, 1935. An account of the capital structure of the Bank and its transition from a privately owned institution to one wholly government owned is given at p. 800 of the 1941 Year Book.

The Bank is authorized to pay cumulative dividends of $4 \frac{1}{2}$ p.c. per annum from its profits after making such provision as the Board thinks proper for bad and doubtful debts, depreciation in assets, pension funds, and all such matters as are properly provided for by banks. The Act provided that the remainder of the
profits were to be paid, in specified proportions, into the Rest Fund of the Bank (so long as it remained less than twice the paid-up capital) and the Consolidated Revenue Fund. Since 1944, when the transfer brought the Rest Fund up to slightly more than twice the paid-up capital, the whole of the remaining profits have been paid into the Consolidated Revenue Fund.

The Bank may buy and sell securities of the Government of Canada and Provincial Governments without restriction if of a maturity not exceeding two years, and in limited amounts if of longer maturity; short-term securities of the Government of Canada and Provincial Governments may be rediscounted. The Bank may buy and sell short-term securities of Commonwealth countries, the United States or France without restriction if maturing within six months, and such securities having a maturity exceeding six months in limited amounts. The Bank may buy and sell certain classes of commercial paper of limited currency and, if endorsed by a chartered bank, may rediscount such commercial paper. Advances for sixmonth periods may be made to chartered banks, Quebec Savings Banks, the Government of Canada or any Provincial Government against certain classes of collateral, and advances of specified duration may be made to the Government of Canada or any Provincial Government in amounts not exceeding a fixed proportion of such Government's revenue. The Bank may accept deposits that do not bear interest from the Government of Canada or Provincial Governments, or from any chartered bank or any bank inrorporated under the Quebec Savings Banks' Act. The Bank may buy and sell gold. silver, nickel and bronze coin, and gold and silver bullion, and may also deal in foreign exchange.

The provisions regarding the note issue of the Bank of Canada are dealt with at p. 1100 .

The Bank of Canada Act ( $24-25$ Geo. V, c. 43 , as amended) provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. Under the terms of the Exchange Fund Order, 1940, authorizing the transfer of the Bank's gold holdings to the Foreign Exchange Control Board, the minimum gold ressrve requirement wav temporarily suspended: this suspension was continued under the Foreign Exchange Control Act, 19:6, and suhsequently to July 4, 1952, under the Currency, Mint and Exchange Act (1 Eliz. II c 40. s 25). The reserve in addition to gold, may include silver bulliou; baianew in pounds sterling in the Bank of Enyland, in United States dollars in the F.deral Reserve Bank of New York and in gold rurrencies in ecentral hanks in gold-xtandard countries or in the Bank for Luternational Sertlements, traasury bills of the United Kingdom or the United States of Amerra having a maturity not exceeding three months; and bills of exchange having a maturity not exceeding 90 days. payable at London or Now York, or in a gold-standard country. less any liabilities of the Bank payable in the currency of the United Kingdom, the United States of America or a gold-standard country. In accordance with the terms of the Foreign Exchange Arquisition Order, 19+0, the Bank of Camada transferred forcign exchange with a Canadian dollar value of $\$ 27,734,444$ to the Foreign Exchunge Control Board.

The chartered banks are required to maintain a reserve of not less than 5 p.c. of their deposit liabilities, payable in Canadian dollars, in the form of deposits with, and notes of, the Bank of Canada.

The Bank acts as the fiscal agent of Canada without charge and may, by agreement, act as banker or fiscal agent of any province. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

Head office of the Bank is at Ottawa and it has an agency in each province, in the cities of St. John's, Charlottetown, Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Calgary and Vancouver.

The Governor of the Bank is its chief executive officer and Chairman of the Board of Directors; he is assisted by a Deputy Governor and an Assistant Deputy Governor. The first appointments were made by the Government and subsequent appointments are to be made by the Board of Directors subject to the approval of the Governor in Council.

At the first meeting of the shareholders on Jan. 23, 1935, seven directors were elected with terms as follows: one director, until the third annual general meeting (1938); two, until the fourth (1939); two, until the fifth (1940); and two, until the sixth annual general meeting (1941). Former directors continued in office when the Government took over the management of the Bank but directors are now appointed by the Minister of Finance, with the approval of the Governor in Council, for terms of three years. In 1951 there were twelve directors. In the transaction of the business of the Bank, each director has one vote.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor and one member of the Board. Meeting once a week, this Committee has the same powers as the Board but every decision is submitted to the Board of Directors at its next meeting. The Board must meet at least four times a year. The Deputy Minister of Finance is an ex officio member of the Board of Directors and of the Executive Committee, but is without vote.

The Governor of the Bank or, in his absence, the Deputy Governor, has the power to veto any action or decision of the Board of Directors or the Executive Committee, subject to confirmation or disallowance by the Governor in Council.

The Bank of Canada and Its Relationship to the Canadian Financial System.-An article under this title is given in the 1937 Year Book, pp. 881-885. It deals with such subjects as the functions of the Bank, its control and regulation of credit and currency, the mechanism by which such control is exercised, the expansion and contraction of credit, the mitigation of general economic fluctuations, the control of exchange operations, the advisory function of the Bank and its duties as the Government's banker.

Bank of Canada Operations.-The expansion of Bank of Canada liabilities and assets in recent years has provided for increased Bank of Canada notes in active circulation (the chartered-bank note issue has been gradually retired) and has enlarged the cash reserves of the chartered banks.

${ }^{1}$ The Exchange Fund Order, 1940, authorized the transfer of the Bank's gold holdings to the Foreign Exchange Control Board and temporarily suspended the requirement for a minimum gold reserve.

The Industrial Development Bank.-The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations' commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:-
"To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises."
The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors and Assistant Deputy Governor of the Bank of Canada. The $\$ 25,000,000$ capital stock of the Bank (completely paid up) was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of honds and debentures provided that its
total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises in Canada with respect to which it is empowered to:-
(1) lend money or guarantee loans;
(2) enter into underwriting agreements with regard to any issue of stock, bonds or debentures;
(3) acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.
The Bank may accept any form of collateral security against its advances, including real property.

The Industrial Development Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. The Bank is specifically prohibited from engaging in the business of deposit banking.

Authorized and outstanding loans of the Industrial Development Bank as at Mar. 31, 1952, are classified by provinces, size of loans and industries in Table 2. Outstanding loans and investments at Dec. 31, 1951, amounted to $\$ 30,741,256$.
2.-Authorized and Outstanding Loans and Investments of the Industrial Development Bank, by Provinces, and Industry, as at Mar. 31, 1952

Nort.-Figures for the year ended Mar. 31, 1951, which have not appeared in the Canada Year Book, may be obtained from the Bank of Canada, Ottawa.

## Section 2.-Currency <br> Subsection 1.-Notes and Coinage

Note Circulation.-The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described at pp. 900-905 of the 1938 Year Book. The main steps of this development that remained as permanent features of the system are outlined at pp. 809-810 of the 1941 Year Book.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of $\$ 1, \$ 2, \$ 5, \$ 10, \$ 20, \$ 50$ and $\$ 100$. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of $\$ 1,000$ to $\$ 50,000$ denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an am sunt not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or reissue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada, as then remained outstanding, was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

The classification of Bank of Canada notes in circulation, by denomination, shown in Table 3 for 1950 and 1951 is not strictly comparable with the classification for earlier years. Dominion notes have been excluded from the denomination classification and their total only is shown. Also, an item has been added showing the outstanding chartered bank notes issued originally for circulation in Canada. The statistics of total notes in the hands of the general public are comparable with earlier years.

## 3.-Classification of Bank of Canada Notes, by Denomination, and Other Notes in Circulation, 1950 and 1951

Nore.-Annual averages of month-end figures. The totals outstanding are not always multiples of the denominations of notes because of adjustments made according to scale when parts of mutilated notes are turned in for cancellation.

[^373]
## 4.-Annual Averages of Note Circulation in the Hands of the Public, 1942-51

Norm.-Newfoundland has long used Canadian bank notes so that when that Province united with Canada in 1949, no adjustment was necessary in the circulation figures, but the effect of including the population of Newfoundland from 1949 was to reduce the per capita note circulation by an estimated $\$ 1$. Figures comparable to those shown below for the years 1926-41 are given at p. 959 of the 1946 Year Book.

| Year | Annual Averages of Month-End Figures |  |  | Annual Averages of Daily Figures |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Bank of Canada Notes ${ }^{1}$ | Chartered Bank Notes ${ }^{2}$ | Total | Amount ${ }^{3}$ | Per Capita ${ }^{4}$ |
|  | \$ | \$ | \$ | \$ | \$ |
| 1942. | 472,011,416 | $69,502,871^{5}$ | 541,514,287 | 523,000,000 | 44.88 |
| 1943. | $660,998.231$ | 49,082, $172{ }^{5}$ | 710,080.403 | 688,000,000 | 58.33 |
| 1944. | 821,330,660 | 37,056,187 | $858,386,847$ | 835,000,000 | 69.90 |
| 1945. | 940.911 .000 | 28,636,174 | 969,547, 174 | 951,000,000 | 78.78 |
| 1946....... | 981,727,494 | 23,172,717 | 1,004,900,211 | 992,000,000 | 80.70 |
| 1947. | 1,009,112,506 | 19,675,994 | 1,028,788,500 | 1,013,000,000 | $80 \cdot 71$ |
| 1948. | 1,055,587,720 | 17, 109,071 | 1,072,696,791 | 1,053,000,000 | 82.12 |
| 1949. | 1,086,744,068 | 14,731,992 | 1,101,476,060 | 1,087,000.000 | $80 \cdot 84$ |
| 1950. | 1,100,898,470 | 6 | 1,101,322,513 | $1,085,000,000$ | $79 \cdot 13$ |
| 1951. | 1.151.201.531 | 6 | 1.151,481.161 | 1,132.000.000 | 80.81 |

${ }^{1}$ Total issue less notes held by chartered banks.
${ }^{2}$ Gross note circulation only; notes held by other chartered banks are not available. Includes, prior to 1950, a relatively small amount issued for circulation outside Canada. ${ }^{3}$ Figures, to nearest million, supplied by the Bank of Canada. 4 Figures based on estimstes of population as given at p. 143; see headnote to this table. ${ }_{5}$ Gross note circulation less notes held by other chartered banks. ${ }^{6}$ In January 1950 the chartered banks' liability for such of their notes, issued for circulation in Canada, as then remained outstanding was transferred to the Bank of Canada.

Coinage.*-The present monetary standard of Canada is gold of 900 millesimal fineness ( $23 \cdot 22$ grains of pure gold equal to one gold dollar). Under the Uniform Currency Act of 1871, gold coin was authorized but only very limited issues were ever made. Gold coins have not been struck since 1919. The British sovereign and half-sovereign, and United States eagle, half-eagle and double eagle are legal tender. Subsidiary coin consists of $\$ 1$ and 50 -, 25 - and 10 -cent silver pieces, $\dagger$ 5 -cent nickel and 1 -cent bronze pieces. Subsidiary silver coin is legal tender to the amount of ten dollars. The 5 -cent piece is legal tender up to five dollars and the 1 -cent bronze coin up to 25 cents. There is no provision for the redemption of subsidiary coin. A table at p. 807 of the 1941 Year Book gives particulars of weight, fineness, etc., of current coins.

[^374]
## 5.-Circulation of Canadian Coin, as at Dec. 31, 1942-51

Note.-The figures shown are of net issues of coin. Figures for the years 1901-25 are given at p. 858 of the 1927-28 Year Book and for 1926-41 at p. 956 of the 1946 edition.

| Year | Silver | Nickel | Tombac | Steel | Bronze | Total | Per Capita ${ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ | \$ | $\delta$ | \$ | \$ | \$ | \$ |

| 1948. | 63,829,640 | 6,117.555 | 730.064 | 1,520,210 | 9.088 .221 | 81,285,690 | $6 \cdot 34$ |
| 1949 | 67,874,750 | 6,753,780 | 661.333 | 1,519,743 | 9,407.325 | 86.216.931 | 6.41 |
| 1950 | 73.473,724 | 7.393.138 | 621.440 | 1,519.419 | 10,012.143 | 93,019,864 | 6.78 |
| 1951 | 78.638,143 | 7.815.103 | 599.655 | 1.701.849 | 10.794.169 | 99,548,919 | $7 \cdot 11$ |

${ }^{1}$ Per capita figures are based on estimates of population as given at p. 143.

The Royal Canadian Mint.-The Mint at Ottawa was established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan. 2, 1908. By $21-22$ Geo. V, c. 48, it was constituted a branch of the Department of Finance and, by the Proclamation of Nov. 14, 1931, issued under Sect. 3 of that Act, it has, since Dec. 1, 1931, operated as the Royal Canadian Mint. The British North American provinces, and later the Dominion of Canada, obtained their coins from the Royal Mint at London or from The Mint, Birmingham, Limited, England. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation and of British sovereigns and small coins struck under contract for Newfoundland and Jamaica. Before 1914, small quantities of gold bullion were refined, but during World War I the Mint came to the assistance of the British Government by establishing a refinery in which nearly $20,000,000 \mathrm{oz} \mathrm{t}$. of South African gold were treated on account of the Bank of England. The subsequent development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Most of the fine gold produced from the rough shipments from the mines is delivered to the Department of Finance (since Mar. 11, 1935, the Bank of Canada has acted as agent for the Government) in the form of bars of approximately 400 oz t . each, the rest being sold in convenient form to manufacturers. The fine silver extracted from the rough gold, when not required for coinage, is sold at New York or to local manufacturing firms.

## 6.-Annual Receipts of Gold Bullion at the Royal Canadian Mint, and Bullion and Coinage Issued, 1942-51

Notz.-Figures for 1926-41 are given at p. 957 of the 1946 Year Book.

## Subsection 2.-General Public Holdings of Certain Liquid Assets

The Bank of Canada has developed recently a new presentation of statistics concerning the volume of money. This presentation shows not only currency and active bank deposits (formerly referred to as "money supply"), but also inactive chartered bank deposits and Government of Canada securities which, although not used to make payments, are forms in which the public holds its liquid funds. It is believed that the new series provides a better approach to the problem of measuring changes in the volume of money under present-day conditions. The Bank of Canada series has been carried back to 1938 only, whereas the former series of the Dominion Bureau of Statistics was available from 1919 (see 1947 Year Book, pp. 1022-1023).

## 7.-General Public Holdings of Certain Liquid Assets, as at Dec. 31, 1938-51

(Millions of dollars)

| As at Dec. 31- | Currency and Active Bank Deposits | Chartered Bank Notice Deposits ${ }^{1}$ | Government of Canada Securities ${ }^{2}$ | Total |
| :---: | :---: | :---: | :---: | :---: |
| 1938. | 1,131 | 1,472 | 3,228 | 5,831 |
| 1939. | 1,370 | 1,544 | 3,279 | 6,193 |
| 1940. | 1,563 | 1,438 | 3,670 | 6,671 |
| 1941 | 1,901 | 1,433 | 4,162 | 7,496 |
| 1942. | 2,349 | 1,436 | 5,344 | 9,129 |
| 1943. | 2,726 | 1,654 | 7,184 | 11,564 |
| 1944. | 3,153 | 2,060 | 9,131 | 14,344 |
| 1945. | 3,514 | 2,391 | 11,310 | 17,215 |
| 1946. | 3,996 | 2,856 | 11,175 | 18,027 |
| 1947. | 3,944 | 3,143 | 10,763 | 17,850 |
| 1948. | 4,335 | 3,408 | 10,249 | 17,992 |
| 1949. | 4,422 | 3,751 | 9,902 | 18,075 |
| 1950. | 4,851 | 3,861 | 10,066 | 18,778 |
| 1951. | 4,843 | 3,894 | 9,388 | 18,125 |

${ }^{1}$ Estimated aggregate minimum quarterly balances in chartered bank personal savings deposits in Canada plus non-personal notice deposits in Canada.
${ }^{2}$ Holdings of all investors, other than the Bank of Canada, chartered banks and Government of Canada accounts. Includes direct and guaranteed securities (including refundable taxes) at par. Direct debt includes both matured and unmatured issues outatanding, exclusive of sinking fund holdings; guaranteed debt is included on the basis of total unmatured issues outstanding; Newfoundland debt assumed by the Government of Canada has been included since June 1949. Foreign pay securities have been valued at official mid-rates of exchange to Sept. 30, 1950, and at market rates thereafter.

In measuring currency and active bank deposits, it is necessary to decide which categories of bank deposits should be classed as active and which, by their nature, should be regarded more appropriately as part of the public's other liquid asset holdings. Generally, it has been satisfactory to classify bank deposits as active if cheques may be drawn against them. In other countries this criterion has seemed to work fairly well because cheques may not be drawn against savings deposits. In Canada, however, cheques are, in practice, drawn freely against savings deposits and this poses an awkward problem. To omit all savings deposits of chartered banks would ignore the obvious fact that, for many people, a savings account is an active chequing account which is very similar to a current deposit. On the other hand it is known from available information that, of the total amount on deposit in savings accounts in Canada, much the larger part is, in practice, inactive. Chartered banks pay interest on the minimum quarterly balances in personal savings accounts, i.e., on the sum that has been left undisturbed for the quarterly period; from the amount of interest that is actually paid on this basis as compared with the nominal rate of interest, it is apparent that the aggregate minimum quarterly balances in personal savings accounts are about five-sixths of the total of such deposits at the present time.

It is felt, therefore, that a more realistic account of monetary developments in Canada-and one more comparable with the usual presentation of similar statistics in other countries-is obtained by omitting the minimum quarterly balances in personal savings deposits and non-personal notice deposits from active money statistics. It has seemed preferable to exclude these deposits on the basis that they are inactive in practice rather than to include them on the grounds that they are potentially active because cheques may be issued against them.

The published returns of Canadian chartered banks include among assets "Cheques on Other Banks" which represents the amount of cheques that have been credited to the deposit account of the payee but not yet cleared against the deposit
account of the drawer. To the extent of such items in 'float' there is, therefore, duplication in the figures of bank deposits. In Table 8, "Cheques on Other Banks" has been deducted from the figure of chartered bank deposits in order to eliminate this duplication.

Government deposits are given different treatment in different countries as far as volume-of-money statistics are concerned. In most cases the commonly used figure of bank deposits excludes Government deposits and, on the whole, it appears preferable to exclude Government of Canada deposits from the Canadian active money figures.
8.-Summary Statistics of Currency and Active Bank Deposits, as at Dec. 31, 1938-51
(Millions of dollars)

| As at <br> Dec. 31- | Currency Outside Banks ${ }^{1}$ |  |  | Active Bank Deposits |  |  | Total <br> Currency and <br> Active Bank <br> Deposits |

| 1950. | 1,136 | 78 | 1,214 | 3,430 | 207 | 3,637 | 4,851 |
| 1951. | 1,191 | 84 | 1,275 | 3,502 | 66 | 3,568 | 4,843 |

${ }^{1}$ Note circulation excluding notes held by chartered banks together with total coin issued by the Mint, less coin held by the banks. ${ }^{2}$ Demand and notice deposits, deposits of Provincial Governments, United Kingdom and foreign banks; less 'float' deposits, that is, cheques on banks as shown in month-end returns.
${ }^{3}$ Excludes Government of Canada, chartered bank and foreign deposits.

## Section 3.-Commercial Banking

Since one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in the one historical sketch, which is given at pp. 900-905 of the 1938 Year Book. A list of the banks at Confederation appears at p. 897 of the 1940 Year Book and bank absorptions since 1867 are given at pp. $812-813$ of the 1941 edition. A table at pp. 894-895 of the 1937 Year Book shows the insolvencies from Confederation; the last insolvency occurred in 1923. A summary of the more important changes resulting from the revision of the Bank Act in 1944 is given at pp. 961-962 of the 1946 Year Book.

## Subsection 1.-Chartered Banks

Combined Statistics of Chartered Banks.-In order to afford a clear account of the nature of banking transactions in Canada, bank liabilities have been classified in Table 9 in two main groups: liabilities to shareholders and liabilities to the public. Only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are divided into four groups, 'other assets' being included in the total. Of interest to students of banking practice, the relative rates
of increase of capital and reserve funds may be noted, also the great increase in the proportion of liabilities to the public to total liabilities and the gradually increasing percentage of liabilities to the public to total assets. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times (see p. 1103).

## 9.-Assets and Liabilities of the Chartered Banks, 1937-51

Nors.-These statistics are yearly averages computed from the twelve monthly returns in each year. Figures for the years 1867-1880 will be found in the 1938 Year Book, pp. 918-919; for 1881-1915 in the 1941 edition, pp. 815-816; for 1916-26 in the 1946 edition, pp. 963-964; and for 1927-36 in the 1947 edition, pp. 10251026.

| Year | ASSETS |  |  |  |  |  | Public Liabilities to Total Assets |

| Grand Totals, Liabilities.......... . . . . . . | 8,642,715,001 | 8,997,423,804 | 9,367,120,434 |

${ }^{1}$ After January 1950, the chartered banks' liability for such notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada; these figures cover notes in circulation outside Canada which were not taken over by the Bank of Canada.
${ }^{2}$ Deposits in currencies other than Canadian, expressed in Canadian dollars at current rate of exchange.
${ }^{3}$ Totals do not correspond with those in Table 9 because of the inclusion here of inter-bank deposits.

## 12.-Significant Ratio Comparisons of Assets and Liabilities of Chartered Banks, 1942-51

Note.-Yearly averages of month-end figures, except where otherwise specified. Figures for the years 1926-41 will be found in the 1946 Year Book, p. 966.

Cheque Payments.-The monthly record of amounts of cheques charged to accounts at all banking offices situated in the clearing-house centres of Canada is available from 1924. Previous to that, statistics of "bank clearings" were obtained which included only dealings between two separate banks and took no account of cheque payments completed within one bank. No figures are currently available of the cheque transactions taking place outside of clearing-house centres, so that the coverage is still incomplete.

According to the trend indicated by cheques cashed, three major economic cycles have occurred since World War I. The first cycle reached its peak in 1920 with the low point of the succeeding depression in 1922. The high point was next achieved in 1929, owing partly to economic conditions involving heavy stock speculation. The low point was reached in 1932 and, with the exception of a minor set-back in 1938, an upward trend has continued to the present time.

The amount of cheques cashed in the clearing-house centres of Canada advanced year by year from 1938 to a maximum of $\$ 112,184,633,057$ in 1951 and this advance paralleled the upward movement in the payment of salaries and wages and the greater distribution of consumer goods through wholesale and retail outlets. The increase, amounting to 263 p.c. since 1938, was general in the five economic areas, British Columbia showing the greatest gain at 413 p.c. The Atlantic Provinces came second, followed by the Prairie Provinces, Ontario and Quebec. However, of the $881,000,000,000$ increase, Ontario and Quebec contributed $\$ 56,000,000,000$, or more than 69 p.c.

All clearing-house centres showed an advance in 1951 over 1950, although the magnitude of these gains varied. With the exception of Ottawa, a new maximum was established in each centre. Payments at Toronto, the leading centre, rose $6 \cdot 6$ p.c., those at Montreal nearly 12 p.c., Winnipeg 16 p.c. and Vancouver 19 p.c.
15.-Cheques Cashed at Individual Clearing-House Centres, 1947-51

Note.-Figures for earlier years will be found in the corresponding tables of previous Year Books.

[^378]Branches of Chartered Banks．－During the period from 1881 to 1901，the number of chartered banks doing business in Canada under the Bank Act remained almost the same（ 36 in 1881 and 1891，and 34 in 1901），but during the present century there has been in banking，as in industry，an era of amalgamations and the number of banks declined to 25 in 1913 and to 10 in 1931．That this has been far from involving a curtailment of banking facilities is seen in Table $\mathbf{9}$ ，which shows the development of the banking business since 1937，and in Table 19，which compares the number of branch banks existing in Canada at different periods and indicates a growth from 123 in 1868 to 4，676，inclusive of sub－agencies，at Dec．31， 1920．As at Dec．31，1943，the total stood at 3,084 （exclusive of 139 branches and 3 sub－agencies in other countries），the reduction resulting from the closing of some unprofitable branches and from contractions brought about by wartime conditions． By Dec．31，1951，the total had increased to 3，776（exclusive of 104 branches outside Canada）．

## Subsection 2.-Government and Other Savings Banks

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies. Firstly, there is the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; secondly, there are Provincial Government savings banking institutions in Ontario and in Alberta, where the depositor becomes a direct creditor of the province; and thirdly, there are, in the Province of Quebec, two important savings banks, the Montreal City and District Savings Bank and La Banque d'Économie de Québec, established under federal legislation and reporting monthly to the Department of Finance. Other agencies for the promotion of thrift, through encouraging regular savings, are the co-operative credit unions.

Post Office Savings Bank.-The Post Office Savings Bank was established under the Post Office Act of 1867 (31 Vict., c. 10) in order to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon" Branches of the Government of Canada's Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years and the amalgamation was completed in March 1929.

## 22.-Financial Business of the Post Office Savings Bank, as at Mar. 31, 1947-52

Note.-Figures for earlier years will be found in the corresponding table of previous Year Books. Totals back to 1867 are given in the 1926 and 1946 editions, at pp . 833-834 and 978 , respectively.

Provincial Government Savings Banks.-Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta.

Ontario.-The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 session and the first branches were opened in March 1922. Interest at the rate of 1 and $1_{2}^{\frac{1}{2}}$ p.c. per annum compounded half-yearly is paid on accounts. The deposits are repayable on demand. Total deposits at Mar. 31, 1952, were $\$ 59,404,866$ and the number of depositors at that date was approximately 100,000 . Twenty-two branches are in operation throughout the Province.

Alberta.-In Alberta, the Provincial Treasury receives savings deposits and issues demand certificates bearing interest at $1 \frac{1}{2}$ p.c. or term certificates for one, two, three, four or five years, in denominations of $\$ 25$ and upwards, bearing interest at 2 p.c. for one or two years, $2 \frac{1}{4}$ p.c. for three or four years and $2 \frac{1}{2}$ p.c. for five years. The total amount in savings certificates at Mar. 31, 1952, was $\$ 391,780$ made up of $\$ 144,980$ in demand certificates and $\$ 246,800$ in term certificates.

In addition, savings deposits are accepted at 45 Provincial Treasury Branches throughout the Province. The total of these deposits at Mar. 31, 1952, was $\$ 17,699,700$ made up of $\$ 13,030,674$, payable on demand, and bearing interest at $\frac{1}{2}$ of 1 p.c. to $1 \frac{1}{2}$ p.c. and $\$ 4,669,026$ payable one year after deposit and bearing interest at 1 p.c. to 2 p.c.

Other Savings Banks.-The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871, had at Mar. 31, 1952, a paid-up capital and reserve of $\$ 6,000,000$, savings deposits of $\$ 174,788,173$, and total liabilities of $\$ 182,559,880$. Total assets amounted to $\$ 182,728,628$, including over $\$ 150,000,000$ of federal, provincial and municipal securities. La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Economie de Notre-Dame
de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by 34 Vict., c. 7 , had at Mar. 31, 1952, savings deposits of $\$ 25,554,212$ and a paid-up capital and reserve of $\$ 3,000,000$. Liabilities amounted to $\$ 28,781,853$ and total assets to $\$ 29,223,496$.

Table 23 shows the savings deposits in the Montreal City and District Savings Bank and La Banque d'Economie de Québec for the years ended Mar. 31, 1938-52.

## 23.-Deposits in the Montreal City and District Savings Bank and La Banque d'Economie de Québec, Years Ended Mar. 31, 1938-52

Nots.-Figures for the years 1868-1926 appear at pp. 833-834 of the 1926 Year Book; for the years 1927-37 at p. 980 of the 1946 edition.

| Year | Deposits | Year | Deposits | Year | Deposits |

Credit Unions.*-At the end of 1950 there were 2,965 credit unions chartered in the ten provinces of Canada. Total membership of $1,036,175$ was reported, an increase of 95,748 over 1949. Assets in 1950 amounted to $\$ 311,532,000$ compared with $\$ 282,242,000$ in 1949 . Total savings in share and deposit accounts in 1950 increased over 1949 by $\$ 25,000,000$.

Credit unions exist to provide people with a convenient place to deposit savings and also as a source of short-term credit for "provident and productive purposes" During 1950, Canadian credit unions loaned over $\$ 108,500,000$ to their members.

The credit unions are chartered by provincial legislation and supervision and inspection is done by the provincial department concerned. Each province has a credit union league or federation of credit unions which is responsible for the promotion and protection of the credit union movement. As a result of varying and different policies and agencies, development has differed from province to province; Quebec, where the movement was founded on the North American Continent in 1900, is the leading province in the number of credit unions, membership and total assets and Ontario is second in credit union development.

Over 50 p.c. of the credit unions in Canada are found in rural areas and in rural towns and villages. The exceptions to this rule are in Ontario where the development is mostly in industrial areas among wage-earners in plants, factories and offices and in British Columbia where the development is also more pronounced in the industrial cities and towns.

Central Credit Unions.-In every province there exists one or more central credit unions which take as deposits the surplus funds of individual credit unions and make these funds available to other credit unions in need of funds to meet

[^379]loan demands from their members. In addition, these central credit unions can and do invest some of these funds in bonds of municipalities and other governments or in bonds and debentures of commercial co-operatives.

During 1950 there were 23 such central credit unions. Eleven of these were in Quebec, four in Ontario and one in each of the other provinces. Total assets reported in 1950 amounted to $\$ 34,800,000$, of which $\$ 27,000,000$ was held by the 11 centrals in Quebec.

## Section 4.-Monetary Reserves

Bank of Canada Reserves.-The composition of Canadian gold reserves held by the Government is presented in the 1936 Year Book, at p. 895, for the years 1905 to 1934. Since March 1935 the gold reserves have been held by the Bank of Canada, by authority of the Exehange Fund Act (c. 60, 1935), effective
in July 1935. The reserves are valued at the current market price of gold and are shown under the item "Reserves" in the "Assets" section of Table 1, p. 1098. As explained in the footnote to that table, under the Exchange Fund Order of Apr. 30, 1940, the gold reserves of the Bank of Canada were transferred to the Exchange Fund Account but the requirement that the Bank should maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada was suspended.

Chartered Bank Cash Reserves.-Until March 1935, legal tender cash reserves in Canada were made up partly of Dominion notes, partly of gold coin and bullion, and subsidiary coin, including these forms of cash held by the banks and as deposits in the Central Gold Reserves. In so far as these reserves were in actual gold or were in Dominion notes backed by gold, they were subject, so long as Canada was on the gold standard, to the expanding or contracting influences of monetary gold imports or exports arising from Canada's balance of international payments.

When the Bank of Canada was established, the chartered banks turned over their reserves of gold in Canada and Dominion notes to the new bank in exchange for deposits with, and notes of, the Bank of Canada and it was provided that, henceforth, the chartered banks were to carry reserves in these forms amounting to at least 5 p.c. of their deposit liabilities in Canada. Since that time, therefore, the gold reserves against currency and bank credit have been in the custody of the central bank, except as affected by the Exchange Fund Order, 1940, as explained under "Bank of Canada" in Section 1, p. 1095.

## 26.-Annual Averages of Cash Reserves of the Chartered Banks, 1942-51

Note.-Figures, to nearest million, supplied by the Bank of Canada. Cash reserves include notes and deposits with the Bank of Canada. Figures for the years 1926-41 are given at p. 960 of the 1946 Year Book.

## Section 5.-Foreign Exchange

Exchange Rates.-The Canadian dollar, adopted as Canada's currency in 1857, was equivalent to $15 / 73$ of the pound sterling; in other words, the pound was equal to $\$ 4 \cdot 866$ in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of World War I. During the first 11 years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date, the dollar in the two countries was equivalent at par, and variation was only between the import and export gold points or under $\$ \mathbf{2}$ per \$1,000.

At the outbreak of World War I, the United Kingdom and Canada suspended the gold standard, and their currencies fell to a discount at New York. However, this discount was 'pegged', or kept at a moderate percentage, by sales of United States securities previously held in the United Kingdom, by borrowing in the United Sigtrs ind, after the United States entered the War, by arrangement with the United States Government. After the War, when the exchanges were 'unpegged', the British pound went as low as $\$ 3 \cdot 18$ and the Canadian dollar as low as 82 cents at New York. In the course of the next year or two, exchange returned practically to par, and the United Kingdom resumed gold payments in April 1925 as did Canada on July 1, 1926. Until 1928 the exchanges were within the gold points, but in 1929 the Canadian dollar again fell to a moderate discount at New York. The dislocation of exchange persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points, however, only for a few scattered intervals. Immediately on the outbreak of World War II in September 1939, the United Kingdom and other sterling countries introduced foreign exchange control, involving fixed buying and selling rates which were $\$ 4.02 \frac{1}{2}$ and $\$ 4.03 \frac{1}{2}$, respectively, in terms of the U.S. dollar. Meanwhile, the Canadian dollar declined gradually until Sept. 16, 1939, when the Government established the Foreign Exchange Control Board. Fixed buying and selling rates were provided for United States funds and sterling at the outset, being $\$ 1 \cdot 10$ and $\$ 1 \cdot 11$ and $\$ 4 \cdot 43$ and $\$ 4 \cdot 47$, respectively. The former rates fixed the value of the Canadian dollar at 90.09 cents to 90.91 cents in terms of the U.S. dollar: this was approximately the market rate to which the Canadian dollar had fallen just prior to exchange control and, in terms of devaluation, represented a level midway between the U.S. dollar and sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to $\$ 1 \cdot 10 \frac{1}{2}$ and $\$ 4 \cdot 45$, respectively, the Foreign Exchange Control Board's official rates remained unaltered until July 5, 1946. At this time, the rate on the U.S. dollar was restored to par with buying and selling rates for U.S. dollars at $\$ 1 \cdot 00$ and $\$ 1 \cdot 00 \frac{1}{2}$ and sterling, $\$ 4 \cdot 02$ and $\$ 4 \cdot 04$. These rates continued in effect until Sept. 19, 1949, when, following a $30 \cdot 5$ p.c. reduction by the United Kingdom in the value of sterling to $\$ 2.80$ U.S. (which action was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of $\$ 1 \cdot 10$ ard $\$ 1 \cdot 10 \frac{1}{2}$ for United States funds; sterling was quoted at new rates of $\$ 3.07 \frac{1}{4}$ and $\$ 3.08 \frac{3}{4}$, based on the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates, that had been in effect at varying levels since 1939 , would be cancelled effective Oct. 2 and that rates of exchange would be determined by conditions of supply and demand for foreign currencies, i.e., by market trading within the framework of exchange control. Subsequently, the U.S. dollar fell to a level between $\$ 1.04$ and $\$ 1.05$ in terms of Canadian funds in early December 1950. After strengthening in the second quarter of 1951, it declined to between $\$ 1.01$ and $\$ 1.04$ in December 1951.

The foregoing review is exclusive of the free market for Canadian dollars in New York which existed until the suspension of fixed rates. The Foreign Exchange Control Board permitted transfers, between non-residents, of Canadian dollars that were not convertible into foreigh exchange at official rates; these consisted of non-resident owned bank balances, augmented by receipts from maturing capital obligations to non-residents in Canadian funds and certain restricted payments
by residents and could be used mainly for travel and capital investment in Canada. The volume of such trading in Canadian funds was very small in relation to turnover in the official market; it was almost entirely outside the orbit of dealings between residents and non-residents and quotations were frequently erratic owing to the narrow market, varying from virtual parity with official rates to as much as 15 p.c. under these. After the designation of official rates of exchange was withdrawn, the so-called unofficial rates for Canadian dollars at New York disappeared.

Changes in Exchange Control Policies and Methods, 1950 and 1951.*On Dee. 14, 1951, the Foreign Exchange Control Regulations were revoked by the Governor in Council and new Regulations were passed which exempted all persons and transactions from the various declaration and permit requirements of the Foreign Exchange Control Act, thus terminating exchange control in Canada.

This action followed a period in which there had been a progressive relaxation of Canadian exchange restrictions. Travel restrictions were abolished in October 1950 and the last of the import restrictions imposed for exchange reasons were done away with at the beginning of 1951. During 1951, there were a number of relaxations in administrative procedures followed by the Foreign Exchange Control Board and in February the Foreign Exchange Control Regulations were amended to increase from $\$ 50$ to $\$ 100$ the amount of United States currency which a resident of Canada might retain in his possession, and the exemption from permit for the export of currency by resident travellers was changed from $\$ 50$ in United States currency and a total of $\$ 100$ in both United States and Canadian currency to a combined total of $\$ 100$ in either currency. Furthermore, the Regulations were amended to increase from $\$ 50$ to $\$ 100$ the general exemption from completion of a permit form for applications for United States dollars in forms other than currency. At the same time, the authority of banks and other agents to sell United States dollars for benevolent remittances was increased from $\$ 50$ to $\$ 100$ per applicant per month.

Commencing in October 1951, a resident of Canada moving to a United States dollar area country was permitted to transfer up to $\$ 25,000$ at the time of departure and, upon investing any remainder of his cash assets in Canadian securities, was treated immediately as a non-resident for exchange control purposes. Accordingly, thereafter he could obtain the transfer of any Canadian income or was free to export and sell his Canadian securities outside Canada. Previously, the maximum amount, of funds that could be transferred was $\$ 25,000$ a year for three years and only at the end of that period was an emigrant regarded as a non-resident with respect to any balance of his assets in Canada.

After October 1951, favourable consideration was given to applications by Canadian mining and oil interests to obtain United States dollars to make direct investments abroad in mining and oil properties. Until that time such applications ordinarily had not been approved.

## PART II.-MISCELLANEOUS COMMERCIAL FINANCE <br> Section 1.-Loan and Trust Companies*

The 1934-35 Year Book presents at p. 993 an outline of the development of loan and trust companies in Canada from 1844 to 1913.

The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. However, summary statistics of provincial companies have been supplied by those companies since 1922 and summary figures for the years 1948 to 1951 are included in Table 1 in order to complete the statistics for loan and trust companies throughout Canada. It is estimated that more than 95 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with the federal licensed companies.

The statistics of Tables 2 and 3 refer both to those companies incorporated by the Government of Canada and by the provinces. Included in the statistics of federal companies, beginning with 1925, are data of Loan and Trust Companies incorporated by the Province of Nova Scotia and brought by the laws of that province under the examination of the Federal Department of Insurance, as well as data for Trust Companies in New Brunswick since 1934 and in Manitoba since 1938. In 1920, the Department of Insurance took over from the Department of Finance the administration of the legislation concerning federal loan and trust companies.

The progress of the aggregate of loan company business in Canada is indicated by the increase in the book value of the assets of all loan companies from $\$ 188,637,298$ in 1922 to $\$ 292,095,485$ in 1951. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same

[^381]sense as company and guaranteed funds) increased from $\$ 154,202,165$ in 1928 to $\$ 454,824,789$ in 1951 . In the former year, the total of estates, trust and agency funds administered amounted to $\$ 1,077,953,643$ and in 1951 to $\$ 3,826,542,326$.

Functions of Loan Companies.-The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings-department deposits. The extent of investments in mortgages by loan companies, federal and provincial, may be gauged by the following figures. Total assets of these companies for the years 1950 and 1951 amounted to $\$ 280,237,893$ and $\$ 292,095,485$, respectively, which amounts include mortgage loans of $\$ 169,943,616$ and $\$ 186,508,636$, respectively, with resulting percentages of mortgages to total assets of approximately 60 p.c. and 64 p.c., respectively.

Functions of Trust Companies.-Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment, but the investing and lending of such deposits and of actual trust funds are restricted by law.

Statistics of Loan and Trust Companies.-A summary of operations of provincial and federal loan and trust companies is given in Table 1. As a result of the nature of the operations of the latter companies, which are intimately connected with the matter of probate, the larger trust companies usually choose to operate under provincial charters, and the provincial figures represent much larger amounts than those of the federal companies.

The figures for federal loan companies include companies chartered by the Government of Nova Scotia which, by arrangement, come under inspection by the Federal Department of Insurance. The data for federal trust companies, likewise, cover companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba for the same reason.

## Section 2.-Licensed Small Loans Companies and Licensed Money-Lenders

Incorporated by the Parliament of Canada, are four companies that make small loans, usually not exceeding $\$ 500$ each, on the promissory notes of the borrowers and secured additionally in most cases by endorsements or chattel mortgages. While these companies, under their original charter powers, were permitted to make loans on the security of real estate, that power was withdrawn by the Small Loans Act, 1939 (3 Geo. VI, c. 23).

Under legislation that came into force on Jan. 1, 1940, small loans companies and money-lenders licensed thereunder, making personal loans of $\$ 500$ or less, are limited to a rate of cost of loan not in excess of 2 p.c. per month on outstanding balances, and unlicensed lenders to a rate of 12 p.c. per annum, including interest and charges of every description.

## 5.-Assets and Liabilities of Small Loans Companies Chartered by the Federal Government, as at Dec. 31, 1945-50

Nore.-Figures for the years 1928-32 will be found at p. 838 of the 1942 Year Book; those for the years 1933-38 at p. 988 of the 1946 edition; and those for 1939-44 at p. 1062 of the 1951 edition.

[^385]The small loans companies chartered by the Federal Government showed a substantial increase in business for 1950 as compared with the previous year. The number of loans made to the public during the year increased from 434,710 to 521,701 or by 20 p.c. and the amount of such loans rose from $\$ 86,303,395$ to $\$ 105,746,067$. The average loan was approximately $\$ 203$ in 1950 compared with $\$ 199$ in 1949. At the end of 1950 , loans outstanding numbered 339,020 for an amount of $\$ 51,864,421$ or an average of $\$ 153$ per loan.

Licensed Money-Lenders.*-In addition to the above-mentioned small loans companies, 56 licensed money-lenders furnished annual statements of their business showing, for 1950 , total assets of $\$ 27,321,717$ of which balances of small loans amounted to $\$ 6,742,511$, other balances to $\$ 19,091,024$, bonds, debentures and stocks to $\$ 221,718$, real estate to $\$ 67,895$, cash to $\$ 607,019$ and other assets to $\$ 591,550$. Liabilities amounted to $\$ 27,321,718$, of which borrowed money accounted for $\$ 19,007,830$ and paid shares and partnership capital for $\$ 3,570,081$. Loans made during the year numbered 64,971 for an amount of $\$ 13,549,304$, an average of $\$ 209$. At the end of the year there were 46,328 loans outstanding with a total value of $\$ 6,742,511$. Of the loans made, 60 p.c. were between $\$ 100$ and $\$ 300$ and 12 p.c. were between $\$ 400$ and $\$ 500$.

## Section 3.-Sales of Canadian Bonds $\dagger$

Previous editions of the Year Book have traced the sales of Canadian bonds through the periods of two world wars and, in the post-war years, to the conclusion of financing in 1949. In the 1950 edition, at pp. 1088-1094, a detailed account was published of "The Underwriting and Distribution of Investments and their Influence on the Capital Market in Canada". The present edition brings the tables for sales of and applications for Government of Canada bonds, and sales of Canadian bonds, by class of bond and country of sale, to the end of 1951, with particular reference to significant developments on Canadian bond markets in that year.

For 1951, public bond financing totalled $\$ 1,617,768,837$ compared with $\$ 3,153,440,453$ for 1950 . The 1951 aggregate includes sales of Canada Savings Loan Series 6, to Mar. 31, 1952, only. whereas figures for previous issues include totals for the entire savings loans flotations to the closing dates in the subsequent years (see Table 5). When complete figures are available for the Canada Savings Loan of 1951, however, the total aggregate financing in that year will still be much less than the total for 1950.

Not only did a marked decline take place in the dollar totals of bond sales in 1951 but important changes also occurred in the price levels of Canadian Government, municipal and corporation securities. Early in March, Government antiinflationary credit policies led to a sharp decline and, with a lower market price, bond yields began to climb. At the year-end, long-term bonds of the Government of Canada sold at a yield of approximately $3 \cdot 40$ p.c., representing an increase of more than two-fifths of 1 p.c. during the year. In addition, new bond issues of governments and corporations were offering a significantly higher interest return while other classes of bonds experienced changes, ranging as high as 1 p.c. in the case of municipals.

[^386]While the total of Canadian bond sales declined in 1951, the amount sold in the United States continued to increase. Development of the United States market has shown a marked upward trend since 1947 when the Canadian bond market was absorbing virtually all of the new bond financing. For example, the total of Canadian issues sold in the United States was $\$ 88,311,000$ in 1947, $\$ 150,000,000$ in 1948, $\$ 140,000,000$ in 1949, $\$ 172,700,000$ in 1950 and $\$ 384,023,000$ in 1951. Of the 1951 total, $\$ 253,015,000$ was for provincial issues, $\$ 73,508,000$ was for municipals and $\$ 57,500,000$ represented corporation borrowing.

Most of the Government of Canada financing during 1951, as in previous years, was not in the nature of direct offerings to the general public. For this reason, the totals for treasury bills, deposit certificates and other financing for a term of less than one year, have been excluded from the totals of bond sales. One notable exception to this trend in federal financing was Canada Savings Loan Series 6 bonds. In respect to the payroll division of this flotation, it is noteworthy that the number of individual subscriptions was well represented.

In 1951, provincial and guaranteed flotations totalled $\$ 369,532,000$, a decrease of $\$ 4,292,500$ from the $\$ 373,824,500$ total for the previous year. With the exception of the Province of Alberta, all provinces entered the market in 1951, as follows:-

| Month | Province | Amount | Month | Province | Amount |
| :---: | :---: | :---: | :---: | :---: | :---: |
| January | Saskatchewan | \$3,000,000 | September | Ontario | \$ 50,000,000 |
| January. | Saskatchewan | 3,000,000 | September. | New Brunswick | 3,427,000 |
| February | New Brunswick | 13,360,000 | October | Manitoba | 9,600,000 |
| February | . Saskatchewan. | 1,875,000 | October | . Nova Scoti | 15,000,000 |
| March.. | Quebec. | 50,000,000 | October | Manitoba | 7,500,000 |
| May. | Saskatchewan | 4,150,000 | December. | Ontario. | 50,000,000 |
| May. | Ontario. | 50,000,000 | December. | New Brunswick | 10,000,000 |
| June. | New Brunswick | 5,000,000 | December. | . Saskatchewan. | 5,000,000 |
| June. | Manitoba. | 10,400,000 | December. | . Prince Edward Island. | 2,500,000 |
| July. | Nova Scotia. | 7,000,000 |  |  |  |
| August. | British Columbia | 35,000,000 | Totals. |  | \$335,812,000 |

The remainder of the $\$ 369,532,000$ in provincial and guaranteed financing for 1951 was for municipal issues that were provincially guaranteed and for provincial hydro developments. Of the former classification, a total of $\$ 645,000$ was borrowed by five municipalities in Newfoundland during the month of November, all these issues being guaranteed by the Province of Newfoundland. The municipalities concerned were the towns of Fortune $(\$ 115,000)$, Grand Banks $(\$ 200,000)$, Harbour Grace ( $\$ 50,000$ ), and Lewisporte ( $\$ 120,000$ ), and the rural district of Springdale Southbrook ( $\$ 160,000$ ).

An over-all reduction in bond sales in 1951 was caused principally by decreased borrowings by the Government of Canada which had large refunding operations in the previous year. For example, municipal financing totalled $\$ 196,438,916$ for 1951, exclusive of a total of $\$ 37,967,921$ for parochial and miscellaneous purposes (chiefly for schools and hospitals). These totals compared with $\$ 150,369,281$ and $\$ 30,466,369$, respectively, for 1950 . The largest single amount borrowed by any one municipality during 1951 was represented by a flotation of the City of Toronto, through three serial issues in May, totalling $\$ 20,000,000$ and sold in the United States. There were also substantial borrowings in the New York market by other principal Canadian cities, including Ottawa, Hamilton, Edmonton, Quebec and Vancouver.

Corporation financing during 1951 totalled $\$ 451,630,000$, an increase of $\$ 20,449,697$ from the $\$ 431,180,303$ total of 1950 , reflecting the continued high value of new capital investment in plant and equipment which has characterized the Canadian economy in the post-war years. Many of the corporation issues were widely distributed and quickly taken up by investors. One of the most interesting features in the corporation classification of bond sales was an issue of the Trans Mountain Oil Pipe Line which sold $\$ 30,000,000$ in Canada and $\$ 35,000,000$ in the United States. Purpose of the issue was to provide a part of the capital necessary for the construction of an oil pipe line from Alberta to the Pacific Coast.

The largest issue in 1951 of any concern engaged in the transportation industry was the $\$ 30,000,000,3 \frac{1}{2}$ p.c., 15 -year, convertible debentures of the Canadian Pacific Railway. Since the Canadian National Railways made an arrangement to have funds provided by the Government of Canada, it was not, as in previous years, a large borrower in the open market. Equipment trust certificates, however, were sold by the Canadian National Railways and the Superior Rolling Stock Company. These issues totalled $\$ 13,500,000$ and $\$ 1,200,000$, respectively.

The Monetary Times records indicate that 26 provincial and guaranteed issues, 564 municipal issues (including parochial and miscellaneous) and 79 corporation issues were placed during 1951. Thus, the average of provincial and guaranteed issues was $\$ 14,212,769$, the average of municipal issues (including parochial and miscellaneous) was $\$ 415,615$ and the average of corporation issues was $\$ 5,716,836$. The average total of all issues sold, during 1951, was $\$ 6,781,740$ (excluding Government of Canada flotations, since complete figures were not available, at time of writing, for the Sixth Savings Loan).

Note.-The interpretation of the symbols used in the tables throughout the Year Book will be found facing $p .1$ of this volume.

Insurance, for the purpose of statistical analysis, is usually classified as fire, life and casualty. Most companies operate under Federal Government (Dominion) registration although some have provincial licences only. Many fraternal orders and societies, too, are engaged in this kind of business. An extended treatment of the salient features of the legislation covering insurance in general and the fields of federal and provincial jurisdiction will be found in the 1941 Year Book at pp. 844-846. In the 1942 Year Book, at pp. 842-846, a Special Article is given on the developments in fire and casualty insurance in Canada between 1931 and 1940, consequent upon the enactment of the three Insurance Acts of 1932, while another article on insurance as it affects the balance of international payments appears at pp. 870-871 of the same edition. The 1947 Year Book, at pp. 1064-1074, includes the Special Article, "Insurance in Canada during the Depression and War Periods".

## Section 1.-Fire Insurance

In Canada, fire insurance began with the establishment of agencies by British fire insurance companies. These were situated usually at the seaports and operated by local merchants. The oldest existing agency of such a company commenced business at Montreal in 1804. The first Canadian company dates from 1809 and the first United States company to operate in Canada commenced business in 1821. A short account of the inception of fire insurance in Canada is given at pp. 846-847 of the 1941 Year Book.

[^388]

The report of the Superintendent of Insurance for the year ended Dec. 31, 1951, shows that, at that date, there were 277 fire insurance companies under Federal registration; of these, 68 were Canadian, 83 were British and 126 were foreign companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada-11 Canadian, 13 British and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 75 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

## Subsection 1.-Total Registered Fire Insurance in Canada

Of the total amount of insurance effected in Canada during each year, a part is sold by the companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation but may be allowed to sell insurance in other provinces.

Fire insurance, as shown in Table 1, accounts for approximately 91 p.c. of the insurance in force. In the more detailed analyses of fire insurance given in Table 2, the statistics cover only the operations of companies with Federal Government registration.

## Subsection 2.-Operational Statistics of Registered Fire Insurance Companies

The trend in the average rate payable for fire insurance has been generally downward, although the increases in fire losses in recent years have had the effect of checking that tendency. The increase in value of insurable buildings and their contents tends to increase fire insurance premiums despite the trend of the average rate.

## 2.-Fire Insurance, by Companies Operating under Federal Government Registration, Decennially 1880-1940 and 1941-51

Note.-Figures for the years 1869-99 are given at p. 973 of the 1939 Year Book, and figures for 1901-39 at p. 847 of the 1942 edition.

[^390]Classification of Fire Risks.-For some years the Department of Insurance has compiled, from information supplied by the fire insurance companies registered to transact business in Canada, tables of experience as to premiums and claims by 27 classes of risks agreed upon on the basis of net premiums written, less registered or licensed reinsurance. This experience for the years 1940-44 is given at p. 1077 of the 1947 Year Book. The returns from 1945 were received on a 'direct written' basis, excluding all reinsurance ceded or assumed, and the classification was changed and reduced to 21 classes. The 1949-51 experience is given in Table 4.

## 4.-Percentages of Claims Incurred to Premiums Written in Canada, by All Companies Operating under Federal Government Registration, by Classes of Risks, 1949-51

(Excluding all reinsurance ceded or assumed)

## Subsection 3.-Finances of Fire Insurance Companies

Tables 5 to 7 show the assets, liabilities, income and expenditure of registered companies transacting fire insurance in Canada from 1947-51. The majority of fire insurance companies also transact casualty insurance dealt with in Section 3 of this Chapter. Totals only are given here because it is impossible for such companies to allocate their assets and liabilities and their general income and expenditure among the various types of business transacted. Table 28, p. 1157, gives similar information for registered companies whose transactions are confined to casualty insurance.

## Subsection 4.-Fire Losses

Fire Losses.-The information in Tables 8 to 11 which deals with the loss of property and life caused by fire has been summarized from the Statistical Bulletin of the Association of Canadian Fire Marshals and the Dominion Fire Prevention Association, prepared by the Dominion Fire Commissioner.

## 8.-Fire Losses in Canada, 1940-51

Nore.-Figures for 1926-39 are given at p. 1078 of the 1947 Year Book. Earlier figures from 1898 may be obtained from the Department of Insurance.

| Year | Fires Reported | Property Loss | $\begin{gathered} \text { Loss } \\ \text { per } \\ \text { Capita } \end{gathered}$ | $\begin{array}{\|c} \text { Deaths } \\ \text { by } \\ \text { Fire } \end{array}$ | Year | Fires Reported | Property Loss ${ }^{1}$ |  | $\begin{gathered} \text { Deaths } \\ \text { by } \\ \text { Fire } \end{gathered}$ |

${ }^{1}$ Available for the first time in 1950. ${ }^{2}$ See footnote to Table 8, p. 1139. ${ }^{3}$ Newfoundland excluded.

The property losses for 1951 by provinces given in Table 9 are the total fire losses insured and uninsured. The percentages of the provincial total uninsured were as follows: Prince Edward Island, 35; Nova Scotia, 61; New Brunswick, 32; Quebec, 20; Ontario, 22; Manitoba, 17; Saskatchewan, 16; Alberta, 7; British Columbia, 40; and the Yukon and Northwest Territories, 16. Uninsured losses formed 25 p.e. of total losses for Canada.

${ }^{1}$ Newfoundland excluded.

## Section 2.-Life Insurance

Life insurance in force in Canada, in companies registered by the Federal Government, was over $\$ 17,235,000,000$ at the end of 1951 , an increase of about $\$ 1490,000,000$ during the year. There was not only an increase in new business, but also a greater stability in business written compared with earlier years. The effect of these factors is reflected in the ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year.

| Year | Net in Force at Beginning of Year | Gain in Force for the Year | Percentage Gain |
| :---: | :---: | :---: | :---: |
|  | \$ | \$ |  |
| 1930. | 6,157,000,000 | 335,000,000 | $5 \cdot 4$ |
| 1935. | $6,221.000,000$ | 38,000,000 | $0 \cdot 6$ |
| 1939. | $6,630,000,000$ | $146,000,000$ | $2 \cdot 2$ |
| 1940. | 6,776,000,000 | 199,000,000 | $2 \cdot 9$ |
| 1941. | 6,975,000,000 | 374,000,000 | $5 \cdot 4$ |
| 1942. | 7,349,000,000 | 527,000,000 | $7 \cdot 2$ |

${ }^{1}$ Excludes $\$ 44,000,000$ adjustment arising out of method of reporting juvenile insurance.

## Subsection 1.-Total Registered Life Insurance in Force in Canada

In addition to the business transacted by life insurance companies registered by the Federal Government, a considerable volume of business is also transacted by companies licensed by the provinces. Statistics of these provincially licensed companies have been collected by the Department of Insurance, since 1915. Table 12 summarizes the volume of business transacted by Canadian, British and foreign life insurance companies and fraternal societies, whether registered by the Federal Government or licensed by the provinces.

12.-Life Insurance Transacted in Canada, 1951p

Norg.-Figures for the years 1949 and 1950 may be obtained from the Department of Insurance, Ottawa.

## Subsection 2.-Operational Statistics of Registered Life Insurance Companies

The net life insurance in force, in all companies with Federal registration, was only $\$ 35,680,082$ in 1869 while in 1951 it was $\$ 17,235,376,811$.* The amount per capita of the estimated population of Canada has more than doubled since 1940evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. Notable also is the fact that in this field British companies, the leaders in 1869, have fallen far behind Canadian and foreign companies.

## 13.-Life Insurance in Force and Effected in Canada by Companies operating under Federal Government Registration (Fraternal Insurance Excluded), ${ }^{1889-1951}$

Nore.-Figures for the years 1869-99 are given at p. 958 of the 1938 Year Book, and for the years 1901-39 at p. 855 of the 1942 edition.

[^393]${ }^{2}$ Based on estimates of population given

Life insurance business was transacted in Canada, during 1951, by 58 active companies with Federal registration, including 31 Canadian, 5 British and 22 foreign companies; one of these foreign companies was registered for the acceptance of reinsurance only. In addition to these active companies, there were 7 British and 3 foreign companies writing little or no new insurance, their business being confined largely to the policies already on their books, and one foreign company which was registered in 1951 but which, during that year, wrote no business in Canada.

The operations analysed in the tables of this Subsection, with the exception of Table 17, cover only those companies with Federal registration and are exclusive of fraternal organizations and provincial licensees. However, as indicated in Table 12, these companies' operations cover over 94 p.c. of the life insurance in force in Canada.

17.-Insurance Death Rates in Canada, 1949 and 1950

## Subsection 3.-Finances of Life Insurance Companies

The financial statistics of Tables 18, 19 and 20 cover only life insurance companies with Federal registration and do not include fraternal organizations and provincial licensees. In the case of British and of foreign companies, the figures apply to their assets, liabilities and operations in Canada only but, in the case of Canadian companies, assets and liabilities, income and expenditure, arise, in part, from business abroad.

## Subsection 4.-Life Insurance Effected through Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 21 gives statistics of life insurance effected through fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The statistics of Table 21, at p. 1149, relate to the 16 Canadian societies reporting to the Department of Insurance of the Federal Government, of which only one does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, while forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not previously been licensed by the provinces have since obtained federal authority to transact business. Of both classes of societies, 31 transacted business in Canada during 1951; two of the societies do not grant life insurance benefits.

## Subsection 5.-Life Insurance in Force Outside Canada by Registered Canadian Companies

Tables 22 and 23 give summary statistics of insurance in force as at Dec. 31, 1950, in currencies other than Canadian, classified by companies and by the currencies in which business was written. The data given here are in Canadian dollars, mainly at par rates of exchange for the countries concerned, but there are several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. More than 65 p.c. of all such business in force was written in United States currency and over 20 p.c. in sterling. From another standpoint, over 29 p.c. was written in currency of British countries outside Canada, and over 70 p.c. in currencies of foreign countries.

Canadian life companies, operating under Federal Government registration, had at Dec. 31, 1950, in countries outside Canada, life insurance in force amounting to $\$ 5,159,986,460$. As shown in Table 22, insurance in force in currencies other than Canadian amounted to $\$ 5,099,952,335$. The difference between these figures is, presumably, the net amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the British and foreign investments of Canadian life insurance companies as at Dec. 31, 1950, amounted to $\$ 1674,502,865$. Since the business in force in Canada of these companies at Dec. 31, 1950, amounted to $\$ 10,756,249,942$, the total business on their books, Canadian and non-Canadian, amounted to $\$ 15,916,236,402$. Thus, over 32 p.c. of the total business in force was outside Canada.

## 22.-Life Insurance Effected and in Force and Liabilities of Canadian Companies (excluding Fraternal Societies) operating under Federal Government Registration, in Currencies other than Canadian, by Companies, 1950.

## Subsection 6.-Total Registered Life Insurance in Canada and Business of Canadian Organizations Abroad

Table 24 summarizes the business outside Canada of Canadian life companies and fraternal benefit societies. If to these figures is added the business in Canada of these organizations, as shown in Table 12, p. 1142, total business, internal and external, of all Canadian life insurance companies and fraternal societies may be obtained. Again, adding the business in Canada of British and foreign companies and fraternal societies, a grand total is obtained of all life insurance in Canada and of the life insurance business abroad of Canadian organizations; this total is shown in Table 25.

## 24.-Business of Registered Canadian Life Companies and Fraternal Societies Abroad, 1951p

Norz.-Figures for business in Canada will be found in Table 12, p. 1142. Figures for the years 1949 and 1950 may be obtained from the Department of Insurance, Ottawa.

## Section 3.-Casualty Insurance

The growth of casualty insurance business has been steady since 1875. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass and steam-boiler insurance-the only four classes of casualty insurance then transacted-was 5, 3, 1 and 1, respectively. The report for the year 1951 shows that casualty insurance in Canada now includes various forms of accident and 25 other classes of insurance transacted by companies with Federal Government registration. In 1880, 10 companies transacted casualty insurance but, in 1951, such insurance was issued by 292 companies, of which 70 were Canadian, 78 British and 144 foreign; of these, 206 companies also transacted fire insurance. In addition, 19 fraternal orders or societies carried on accident and sickness insurance as well as life insurance business and 3 fraternal orders or societies carried on accident or sickness insurance only.

Table 27 shows the division of business in this field between Federal Government registrations and provincial licensees and indicates that, as in the cases of fire and life insurance, the bulk of the business (about 90 p.c. in this case) is transacted by companies with Federal Government registration.

Since, as indicated above, most of the companies carrying on casualty insurance in Canada also transact fire insurance, their assets, liabilities, income and expenditure are included in the financial statistics of fire insurance companies given in Section 1, Subsection 3, of this Chapter. Table 28, p. 1157, gives similar figures for total casualty business of Canadian companies, and the casualty business in Canada of British and foreign companies, whose transactions are confined to insurance other than fire and life. In 1951, there were 17 Canadian, 6 British and 63 foreign companies whose operations were limited to the same field.

During the war years, automobile insurance showed a favourable experience with a loss ratio of around 45 p.c. This ratio was slightly lower than for the prewar years, the result of lessened traffic, but since the end of hostilities the experience tends to be less favourable and in 1951 stood at about 62 p.c.

Hail insurance in 1950 showed a loss ratio of 20 p.c. and in 1951 this had increased to 41 p.c.

Marine insurance showed a very large increase in Canada during the war years and substantial profits resulted. The results for the years 1941 to 1951, inclusive, were as follows:-

|  | Year | Premiums | Claims <br> Incarred | Underwriting Profits |
| :---: | :---: | :---: | :---: | :---: |
|  |  | \$ | \$ | \$ |
| 1941. |  | 6,011,922 | 2,781,190 | 1,694,470 |
| 1942. |  | 14,295,543 | 7,983,963 | 3,855,415 |
| 1943. |  | 10,061,059 | 4,931,286 | 3,449,873 |
| 1944. |  | 6,754,361 | 2,172,418 | 3,243,889 |
| 1945. |  | 5,978,274 | 2,995,704 | 1,704.367 |
| 1946. |  | 5,655.392 | 2,232,701 | 2,084,412 |
| 1947. |  | 7,932,404 | 4,529,161 | 1,031,313 |
| 1948. |  | 7,986,658 | 3,468,045 | 2,466,397 |
| 1949. |  | 7,715,671 | 4,327,555 | 1,342,088 |
| 1950. |  | 7,592,558 | 3,098,086 | 2,394.336 |
| 1951 P |  | 8,906,665 | 4,673,897 | 1,722,949 |

This class of insurance will, no doubt, continue to figure more largely in the business of companies in post-war years than it did before 1939.

## Section 4.-Government Insurance

In addition to the insurance provided by private insurance companies, various types of government insurance schemes have been adopted in recent years by the Federal and Provincial Governments. This Section deals briefly with the principal schemes now in effect.

Only those schemes dealing with the types of insurance covered in the previous Sections of this Chapter, viz., fire, life and casualty, are dealt with here. Information on unemployment insurance, health insurance, export credits insurance, etc., will be found in the Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Veterans Insurance.*-The Veterans Insurance Act ( $7 \mathrm{Geo} . \mathrm{VI}$, c. 49 ), which came into force on Feb. 20, 1945, provides that the following persons may contract with the Government of Canada for life insurance, usually without medical examination, during the periods of eligibility shown:-

## Eligibility arising out of Service in World War II:

(a) Veterans, and others deemed by Statute to be veterans.
(b) Members of the regular Forces who served during the War and were not discharged; Merchant Seamen if eligible to receive a Special Bonus or War Service Bonus; widows of veterans or widowers who did not have Veterans Insurance.

Eligibility arising out of Service in the Special Force since July 5, 1950:
(c) Persons who served on the strength of the Special Force in a Theatre of Operations and who have been discharged; persons who were awarded pensions under the Pension Act as a result of Service in the Special Force.
(d) Widows of persons who were on Service in a Theatre of Operations and who died during Special Force Service.

## Applications must be approved by:

Dec. 31, 1954 or 10 years after discharge, whichever is later.

Dec. 31, 1954.

3 years after discharge.

Dec. 31, 1954.

[^400]The amount of insurance may be any multiple of $\$ 500$ up to a maximum of $\$ 10,000$. The plans of insurance available are 10 -payment life, 15 -payment life, 20 -payment life, and life with premiums payable until age 65 or age 85 . The policies are non-participating.

Premiums on veterans insurance may be paid monthly, quarterly, semiannually or annually. They may be paid in cash or from re-establishment credit or by deduction from any pension granted under the Pension Act. The policy contracts include a waiver-of-premium disability provision. No extra premiums are charged for residence, travel or occupational hazards.

At the end of the second policy year a liberal cash value is available. It may be used alternatively to provide reduced paid-up insurance or extended term insurance. A veteran's insurance policy is not assignable, nor is a loan value granted.

The maximum amount of insurance money that will be paid in a lump sum at death is $\$ 2,000$; the balance must be paid to the beneficiary as an annuity certain or as a life annuity with or without a guaranteed period.
29.-Summary Statistics of Veterans Insurance, Years Ended Mar. 31, 1948-52

| Year Ended Mar. 31- | Insurance Issued During Year |  | Insurance in Force at End of Year |  | Death Claims Approved During Year |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | \$ | No. | \$ | No. | \$ |
| 1948. | 8,825 | 24,599,000 | 18,433 | 52,594,612 | 38 | 100,500 |
| 1949. | 4,615 | 14,074,500 | 22,293 | 63,836,743 | 91 | 245,500 |
| 1950. | 2,316 | 7,448,500 | 23,722 | 68,016,514 | 111 | 340,080 |
| 1951. | 3,247 | 10,718,000 | 25,917 | 75,020,885 | 130 | 400,5c0 |
| 1952. | 2,302 | 8,322,500 | 26,985 | 79,115,734 | 158 | 346,500 |

Provincial Insurance Schemes.-The Province of Saskatchewan conducts fire, fidelity and surety insurance but not life insurance. This is effected under the terms of the Saskatchewan Government Insurance Act, 1944.

In the Province of Alberta, life insurance is provided through the Life Insurance Company of Alberta, a Crown Company that is not an emanation from the Provincial Government. Similarly, another Crown Company, the Alberta General Insurance Company, provides all other kinds of insurance except life, accident and sickness. The Alberta Hail Board provides farmers with insurance for their crops against damage by hail. Information regarding the operations of these Companies may be obtained from:-
(a) The Superintendent of Insurance, Insurance Branch,
Department of the Provincial Secretary for Saskatchewan, Regina, Saskatchewan.
(b) The Superintendent of Insurance, Department of the Provincial Secretary for Alberta, Edmonton, Alberta.

## PART I.-THE ARMED SERVICES AND DEFENCE RESEARCH*

## Section 1.-The Department of National Defence

The Minister of National Defence exercises control over and management of the Canadian Armed Forces, the Defence Research Board and other matters relating to National Defence. Under his direction the Services are commanded by their respective Chiefs of Staff and the Defence Research Board by its Chairman. A Chairman of the Chiefs of Staff Committee, appointed in 1951, is responsible for the co-ordination of the training and operation of the Canadian Forces.

The civilian administrative organization, headed by the Deputy Minister, is constituted on a functional basis. The Deputy Minister maintains a continuing review and control over the financial aspects of operational policy, logistics and personnel and administration.

To achieve a common approach to problems, a number of committees within the Department meet at regular intervals to consider and advise on joint issues:-
(1) Defence Council--Composed of the Minister of National Defence (Chairman), the Parliamentary Assistants to the Minister, the Deputy Minister, the three Chiefs of Staff and the Chairman of the Defence Research Board, the purpose of the Defence Council is to advise the Minister on administrative matters.
(2) Chiefs of Staff Committee.-This Committee is composed of the Chairman of Chiefs of Staff, the three Chiefs of Staff of the Services, and the Chairman of the Defence Research Board; its meetings are attended also by the Deputy Minister, the Secretary to the Cabinet and the Under Secretary

[^401]of State for External Affairs, and its purpose is to maintain a continuous review of all operational problems. A number of sub-committees consider various aspects of operational problems and report to the parent committee.
(3) Personnel Members Committee.-Composed of the Chief of Naval Personnel, Adjutant-General, Air Member for Personnel, Assistant Deputy Minister (Personnel and Administration), Assistant Deputy Minister (Finance), and a representative of the Chairman of the Defence Research Board, the purpose of this Committee is to examine personnel problems of the three Services with the general aim of achieving uniform personnel policies. Various aspects of personnel problems are considered by subcommittees which report to the parent committee.
(4) Principal Supply Officers Committee.-This Committee is composed of the Chief of Naval Technical Services, the Quartermaster General, the Air Member for Technical Services, Assistant Deputy Minister (Requirements) and a representative of the Chairman of the Defence Research Board and its purpose is to consider all logistical problems. Various aspects of logistical problems are considered by sub-committees which report to the parent committee.
(5) Defence Supply Panels.-Twelve panels, composed of a representative from each of the Services, representatives of the Deputy Minister, of Inspection Services and of the Department of Defence Production, maintain a continuous review of procurement problems and consider various aspects of the procurement of equipment such as ammunition, armament, aircraft, etc., for national defence by the Department of Defence Production.

Liaison Abroad.-The Chairman of Chiefs of Staff, the Canadian Military Representative in the North Atlantic Treaty Organization, is responsible for coordinating all military NATO matters and acts as military adviser to Canadian NATO delegations. For purposes of liaison and the furtherance of international co-operation on defence, Canada also maintains: (1) Canadian Joint Staff (Washington) representing the three Services; (2) Canadian Joint Staff (London) representing the three Services; and (3) Service Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence, composed of representatives from both countries.

Total Strength and Rates of Pay and Allowances.-The strengths of the active forces of the three Services have been increased to keep pace with defence objectives and commitments. At May 31, 1952, the total active force strength was 97,834 composed of: navy, 13,927 ; army, 49,983 ; and air force, 33,924 . The strength of the reserve elements of the three Services was 57,452.

The entire pay structure for comparable ranks in the different Services is on a uniform basis. Monthly rates of pay and allowances are given in the following table.

## 1.-Monthly Rates of Pay and Allowances for Members of the Active Forces, as at Dec. 1, 1951

| $\begin{gathered} \text { Royal } \\ \text { Canadian } \\ \text { Navy } \\ \hline \end{gathered}$ | The Canadian Army | Royal Canadian Air Force | $\begin{aligned} & \text { Basic } \\ & \text { Pay } \end{aligned}$ | Subsistence Allowance | Total | $\begin{aligned} & \text { Marriage } \\ & \text { Allow- } \\ & \text { ance } \end{aligned}$ | Separated Family <br> Allowance (with children) |

## Subsection 1.-The Royal Canadian Navy

Organization.-Naval Headquarters at Ottawa conducts the planning and policy for administration and training of the active and reserve forces of the Royal Canadian Navy. Subject to this authority the flag officers on each coast exercise control in their respective Commands. Ships of the Royal Canadian Navy are based at the Atlantic and Pacific stations. Subsidiary units are the 21 Naval Divisions in cities across the country which serve as shore training establishments for the naval reserve.

Twenty-three major war vessels were in commission at the end of March 1952. The largest of these was a light fleet aircraft carrier of 18,000 tons. Others were two six-inch gun cruisers, five large tribal-class destroyers, three light destroyers, four frigates, four Algerine minesweepers and a newly constructed trawler-type gate vessel. In addition, 54 major war vessels were in reserve, including two escort maintenance vessels, 16 frigates and 18 Bangor minesweepers.

During 1951-52, for the first time during peace, women were enlisted in the R.C.N. Of these, 369 were enrolled in the R.C.N. (R), of whom 107 were employed in communication tasks on continuous naval duty.

During this period, considerable progress was made by the NATO navies in moulding the organization for the defence of the North Atlantic Ocean under a Supreme Allied Naval Commander; Canadian naval officers, appointed to his staff, work side by side with naval officers of other NATO countries.

Operations at Sea, 1951-52.-Three Canadian destroyers were in continuous service in Korean waters, during this period, thus involving a total of five destroyers to meet the requirements of rotation.

After flying training in the Halifax area in May and June 1951, the carrier Magnificent and the tribal-class destroyer Micmac departed from Halifax in August for a training cruise in the Mediterranean. Exercises were carried out with units of the British Mediterranean Fleet based at Malta and later, with units of the British and French fleets, off the south of France. On return to Halifax in October, Magnificent ferried 40 of the R.C.A.F. F-86 aircraft from Norfolk, Va., U.S.A., to Glasgow, Scotland.

The frigates La Hulloise and Swansea and the destroyer Crescent on the East Coast, and the destroyer Crusader with the frigates Beacon Hill and Antigonish on the West Eoast took part between May and September 1951 in a series of cruises for training the University Naval Training Division cadets. Visits to the United Kingdom, Pearl Harbour and west coast United States ports were made in the course of these cruises.

In October 1951, Their Royal Highnesses Princess Elizabeth and the Duke of Edinburgh embarked in Crusader for passage from Vancouver to Victoria. Subsequently, Their Royal Highnesses were conveyed from Nanaimo to Vancouver. Later in the month, the cruiser Ontario, escorted by Micmac, conveyed the Royal Party from Charlottetown to Sydney and thence to St. John's, N'f'ld. The two ships escorted S.S. Empress of Scotland, in which Their Royal Highnesses were homeward-bound, from Conception Bay to eastward of Newfoundland before returning to their home ports.

After an informal visit to Washington, D.C., in December 1951, Swansea proceeded on a training cruise to Nassau, Bermuda, and New London, U.S.A. Swansea was the first R.C.N. ship to visit Washington, D.C.

In January 1952, Beacon Hill and Antigonish sailed from Esquimalt, B.C., for a training cruise to South America, returning to Esquimalt in February.

During the year, the Algerine-class minesweepers Wallaceburg and Portage carried out extensive anti-submarine exercises with H.M. submarines Thule and Alcide and with the United States Navy at New London, Conn., and Norfolk, Va.

The cruiser Quebec was recommissioned at Esquimalt, B.C., in January 1952 and after an extensive refit she sailed from Esquimalt in March for Halifax, N.S., where she is employed principally as a training cruiser for new entries.

Training Ashore.-Two major shore establishments, Stadacona at Halifax and Naden at Esquimalt, are maintained by the Royal Canadian Navy to serve as drafting depots, training schools and centres, and to provide the accommodation facilities required by the fleets based on both coasts. In each of these establishments are schools and training centres which afford instruction for both officers
and men, R.C.N. and R.C.N. (R), in communications, gunnery, torpedo, antisubmarine, navigation direction, electrics and electronics, marine engineering, seamanship, naval ordnance, supply and secretariat duties, diving, damage control and fire-fighting.

A third major shore establishment is the R.C.N. Air Station Shearwater, at Dartmouth, N.S., which provides storage, shore accommodation and training facilities for naval aviation.
H.M.C.S. Cornwallis at Cornwallis, N.S., is devoted exclusively to training and its organization and program are geared accordingly. The course for new entries extends over 19 weeks. During this period a new entry receives basic instruction in naval subjects, studies mathematics and English, and participates in an extensive program of physical training, sports and recreation.

In February 1952, the first draft of French-speaking recruits arrived at the Basic Training School, H.M.C.S. Montcalm, at Quebec, Que., for initial training prior to commencing courses in H.M.C.S. Cornwallis. All regular-force recruits whose mother tongue is French will undergo preliminary training at this school in professional naval subjects including seamanship, boatwork, organization, parade training, supply duties, torpedo anti-submarine engineering, communications and naval history. Instruction is given at first in French and in English, with emphasis on the use of English naval terminology. The program is designed to enable new entries from the Basic Training School to join up with classes in H.M.C.S. Cornwallis at an appropriate stage in their training.

Officers of the Royal Canadian Navy come from four main sources: (1) Canadian Services colleges; (2) the universities; (3) commissioning from the ranks of the active force; and (4) short-service appointments.

Ship Construction, Refit and Modernization.-During 1951-52, one arctic patrol vessel, one anti-submarine escort vessel, three minesweepers and three gate vessels were launched as part of an extensive R.C.N. program of new construction. Work is well under way on other destroyer escorts and minesweepers. In addition, the destroyer Algonquin is being converted for duty as a destroyer escort and the tribal-class destroyers Iroquois and Haida completed trials following rearmament and modernization. Work is progressing on other miscellaneous and harbour craft. Provision was made for the acquisition of certain frigates and Bangor class minesweepers held in strategic reserve for refitting and modernization. After completion, most of these ships will be maintained in reserve at Sydney, N.S., where the base is being reopened for this project. The system of preservation adopted by the U.S. Navy (dynamic dehumidification) will be used.

Royal Canadian Navy (Reserve).-Naval Reserve Divisions are established in the following centres:

| Halifax, N.S., H.M.C.S. Scotian | London, Ont., H.M.C.S. Prevost |
| :--- | :--- |
| Charlottetown, P.E.I., H.M.C.S. | Port Arthur, Ont., H.M.C.S. Griffin |
| Queen Charlotte. | Winnipeg, Man., H.M.C.S. Chippawa |
| Saint John, N.B., H.M.C.S. Brunswicker | Regina, Sask., H.M.C.S. Queen |
| Quebec, Que., H.M.C.S. Montcalm | Saskatoon, Sask., H.M.C.S. Unicorn |
| Montreal, Que., H.M.C.S. Donnacona | Calgary, Alta., H.M.C.S. Tecumseh |
| Ottawa, Ont., H.M.C.S. Carleton | Edmonton, Alta., H.M.C.S. Nonsuch |
| Toronto, Ont., H.M.C.S. York | Vancouver, B.C., H.M.C.S. Discovery |
| Kingston, Ont., H.M.C.S. Cataraqui | Victoria, B.C., H.M.C.S. Malahat |
| Hamilton, Ont., H.M.C.S. Star | Prince Rupert, B.C., H.M.C.S. Chatham |
| Windsor, Ont., H.M.C.S. Hunter | St. John's, N'''ld., H.M.C.S. Cabot |

Each division, commanded by an R.C.N. (R) officer, is responsible for specialized training in one of the various phases of naval activity-gunnery, harbour defence, aviation, communications, etc.-and Royal Canadian Navy officers and men act as instructors.

During 1951, six Fairmile motor-launches were operated by the divisions on the Great Lakes. The coastal divisions operated one motor-launch, one Algerine minesweeper, one Bangor minesweeper and two $105-\mathrm{ft}$. wooden minesweepers. These vessels were used extensively in the training of R.C.N. (R) officers and men.

Apart from annual training, officers and men of the R.C.N. (R) may perform voluntary service and special naval duty as required by Naval Headquarters. In the latter case they take the place of Permanent Force officers and men where vacancies exist in complement.

University Naval Training Divisions.-The university naval training program is designed to give instruction to students in attendance at universities across Canada with the object of providing well-trained junior officers for the Royal Canadian Navy and the Royal Canadian Navy (Reserve). Twenty-six U.N.T. Divisions drawing on the students of 41 universities and colleges have been established for this purpose. The total complement of cadets in 1951-52 was 1,278, the number of applicants considerably exceeding the existing vacancies in complement in nearly every instance. During 1951-52 the period of training was reduced by one year to permit cadets at the end of their third completed year to be given the rank of acting sub-lieutenant R.C.N. (R). Under the altered system, 39 U.N.T.D. officers entered the Royal Canadian Navy and 209 obtained commissions in the R.C.N. (Reserve). Assistance to university students who are accepted for the R.C.N. in their final year was continued.

Training is taken at naval divisions and at universities during the academic year. Summer vacation training is taken both in the schools at the coasts and in H.M.C. ships.

The Royal Canadian Sea Cadets.-The Royal Canadian Sea Cadets consists of 82 authorized corps sponsored by the Navy League of Canada and trained and supervised by the Royal Canadian Navy. Enrolment in 1951-52 was approximately 5,900 cadets between the ages of 14 and 18 years. Sea cadets are a valuable source of recruiting for the R.C.N. and the R.C.N. (R). In 1951, approximately 25 p.c. of those eligible to enlist in the forces joined the R.C.N. and 15 p.c. joined the R.C.N. (R).

## Subsection 2.-The Canadian Army

Organization.-Army Headquarters at Ottawa, organized as the General Staff Branch, the Adjutant-General Branch and the Quartermaster-General Branch, conducts the planning and policy for the administration and training of the active and reserve forces of the Canadian Army. Public relations, cadet services, military intelligence, chaplain services, provost and associated activities are directed through Commands by Army Headquarters.

The five Commands contain seven areas located as follows:-

| Commands | Headquarters | Areas and Headquarters |
| :---: | :---: | :---: |
| Western Command........ | Edmonton, Alta.... | (i) British Columbia Area, Vancouver, B.C. |
| Prairie Command........ | Winnipeg, Man...... | (ii) Saskatchewan Area, Regina, Sask. |
| Central Command........ | Oakville, Ont. | (iii) Western Ontario Area, London, Ont. <br> (iv) Eastern Ontario Area, Kingston, Ont. |
| Quebec Command........ | Montreal, Que...... | (v) Eastern Quebec Area, Quebec, Que. |
| Eastern Command........ | Halifax, N.S....... | (vi) New Brunswick Area, Fredericton, N.B. |
|  |  | (vii) Newfoundland Area, St. John's, N'f'ld. |

The components of the Canadian Army are the active force, the reserve force, the supplementary reserve, the Canadian Officers' Training Corps (C.O.T.C.), the cadet services and the reserve militia. Additional to but not an integral part of the Canadian Army are the Services Colleges (see pp. 1172-1174), officially authorized cadet corps, rifle associations and clubs.

Operations, 1951-52.-The Princess Patricia Regiment, part of the 25th Army Brigade Group in service with the United Nations in Korea, shared in the United Nations advance into North Korea in April 1951 and played a major role in stemming the communist counter-offensive. In July, the 25th Canadian Infantry Brigade Group was incorporated into the First (Commonwealth) Division United Nations Forces, along with troops of the United Kingdom, Australia, New Zealand and India. Canadian units contributing to the administration and maintenance of the Division included sections for the Divisional headquarters, the Commonwealth hospital, the Divisional ordnance organization and line-of-communication and base troops. The Brigade saw continuous service from September 1951 to January 1952 before withdrawing for refitting and training.

To fulfil obligations assumed under the North Atlantic Treaty, a new formation, known as the 27th Canadian Infantry Brigade Group, was recruited through the agency of Reserve Force units. Fifteen companies were formed into three battalions of the Active Force-the 1st Canadian Rifle Battalion, 1st Canadian Highland Battalion and 1st Canadian Infantry Battalion, while the other companies were variously located at training camps. Supporting services were also raised and armoured support was provided by the Royal Canadian Dragoons. During the first month of recruiting, 146 officers and 6,525 other ranks were enrolled.

The Brigade's main party sailed from Quebec on Nov. 5, 1951, followed by smaller sections throughout November and December. The main party arrived at Rotterdam, The Netherlands, on Nov. 21. The Brigade, as of August 1952, was located near Hanover, Germany, under command of Brigadier Walsh, C.B.E., D.S.O., C.D.

The Army component of the Mobile Striking Force contains the portion of the Canadian Army active force that has been given the task, in conjunction with the R.C.A.F. component, of dealing with surprise enemy airborne assaults on Canada
in the event of war. This force is composed of three infantry battalions with their supporting arms and services. Parachute, northern operational and Arctic training is conducted each year. It is intended that, ultimately, all operational troops of the Mobile Striking Force will be parachute-trained and will be capable of living and fighting under severe climatic conditions. During the winter of 1951-52, battalions of the Mobile Striking Force were rotated with battle-experienced units from Korea. A proportion of parachute-trained personnel from each battalion has been retained in Canada until personnel returning from Korea have completed their parachute training.

Training.-Actual training of active and reserve force personnel is under the General Officers Commanding the five Commands as directed by the appropriate branch of Army Headquarters.

The military training policy for the year 1951-52 was, firstly, to improve the standard of individual and collective training, instructional ability and general efficiency of both active and reserve units; secondly, to bring active force units to the highest standard of operational training; and thirdly, to allow limited collective training in reserve force units where standard of individual training was sufficiently advanced. A further training commitment developed when it was decided to recruit a brigade for service in Europe.

The corps training of officers and men and the basic training of 21,279 recruits was carried out both within units and at various corps schools. In addition, approximately 9,225 personnel attended other courses at schools of instruction.

Basic and advanced training for recruits, as well as refresher courses for all ranks, is conducted in Army Corps Schools organized on a permanent peacetime basis and located as follows:-

Royal Canadian Armoured Corps School, Camp Borden, Ont.
Royal Canadian School of Artillery, Camp Shilo, Man.
Royal Canadian School of Artillery (Anti-Aircraft), Picton, Ont.
Royal Canadian School of Artillery (Coast and Anti-Aircraft), Esquimalt, B.C.
Royal Canadian School of Military Engineering, Chilliwack, B.C.
Royal Canadian School of Signals, Barriefield, Ont.
Royal Canadian School of Infantry, Camp Borden, Ont.
Royal Canadian Army Service Corps School, Camp Borden, Ont.
Royal Canadian Army Medical Corps School, Camp Borden, Ont.
Royal Canadian Army Dental Corps School, Ottawa, Ont.
Royal Canadian Ordnance Corps School, Montreal, Que.
Royal Canadian Electrical and Mechanical Engineers Schools, Barriefield, Ont.
Canadian Provost Corps School, Camp Borden, Ont.
Equipment.-For industrial and strategic reasons, the Canadian Army is adopting, with some exceptions, American-type armament and vehicles. As far as possible these new equipments will be produced in Canada. The importance of standardization has been increased by the adoption of North American equipment and an important contribution to standardization has been the influencing by Canada of selected developments in other countries. Interest has been displayed by the United States and the United Kingdom in such Canadian products as light-weight wireless sets, flame and anti-tank weapons and northland vehicles.

The Reserve Force.-The Reserve Force provides the basis for the organization of a field force in the event of emergency. It is employed on a part-time basis and is subject to annual military training.

Training in 1951-52 was devoted to improving individual skill in handling weapons, fieldcraft, technical ability and physical fitness as well as improving the qualities of leadership, professional ability and instructional techniques of officers and N.C.O's. Where the standard of individual training was sufficiently high, collective training of units and sub-units was carried out at the discretion of officers commanding the Commands.

A training period of 45 days at local headquarters was authorized for all ranks of the Reserve Force with an additional 15 days training at annual camps for 16,000 all ranks. During the year ended Mar. 31, 1952, a total of 3,687 officers and 9,103 other ranks attended summer and winter camps.

The Canadian Officers' Training Corps.-The Canadian Officers' Training Corps comprises in its membership the reserve force command contingents and the university contingents.

Command contingents provide the means whereby potential reserve force officers who are unable to attend the Canadian Services Colleges or to join a university contingent of the Canadian Officers' Training Corps can qualify for a commission in the Reserve Force. Candidates are enrolled as officer cadets and may choose methods of training varying from a complete 26 -week course at a corps school to a three-year course consisting of training at local headquarters and at summer camps. Approximately 1,661 officer candidates were enrolled in this training as at Mar. 31, 1952.

In 1951, 1,920 officer cadets (students at universities or service colleges) reported for summer training. Of these 1,824 passed their courses; 400 qualified as lieutenants and 416 as second-lieutenants in the Reserve Force. Approximately 100 officer cadets were commissioned in the Active Force during the period under review.

The Cadet Services of Canada.-The Royal Canadian Army Cadets are formed into 500 cadet corps with an enrolment of 55,000 . This organization affords youths of 14 to 18 years of age an opportunity to learn of the Canadian Army and, by following the three-year program, to receive fundamental training as soldiers and junior leaders. The training program was revised in 1951. Summer camp training consists of seven-week courses conducted at Aldershot, N.S., Valcartier, Que., Ipperwash, Ont., Dundurn, Sask., and Vernon, B.C. These courses teach such military trades as driver mechanics, radio-telephone operators, medical assistants and basic-training instructors. The National Cadet Camp at Banff National Park, Alta., is conducted in August as an award for outstanding proficiency in cadet work for 150 carefully selected master and first-class army cadets.

## Subsection 3.-The Royal Canadian Air Force

Organization.-Air Force Headquarters at Ottawa conducts the planning and policy for administration and training of the Active and Reserve Forces of the Royal Canadian Air Force. The organization of the R.C.A.F. is divided into three categories; personnel, logistics, and plans and operations. This functional division is reflected in the Air Force Headquarters organization.

During the year ended Mar. 31, 1952, reorganization of the R.C.A.F. was completed on a functional basis. The Air Defence Group at St. Hubert was raised to Command status and 12 Group Vancouver, was renamed 12 Air Defence Group
and placed under control of Air Defence Command. North West Air Command was replaced by Tactical Air Group, with headquarters at Edmonton. No. 14 Training Group, with headquarters at Winnipeg, was formed and placed under the control of Training Command Headquarters, Trenton, Ont. Air Transport Command headquarters was moved from Rockcliffe, Ont., to Lachine, Que.

Higher formations of the R.C.A.F. with their headquarters are as follows:-

| Formation | Headquarters |
| :---: | :---: |
| Air Materiel Command. | Ottawa and Rockcliffe, Ont. |
| Air Defence Command. | St. Hubert, Que. |
| Air Transport Command | Lachine, Que. |
| Training Command. | Trenton, Ont. |
| Maritime Group. | Halifax, N.S. |
| Tactical Air Group. | Edmonton, Alta. |
| 12 Air Defence Group. | Vancouver, B.C. |
| 14 Training Group. | Winnipeg, Man. |

At Air Force Headquarters, the planning staff and the operational and training staffs were amalgamated into one division, under the Vice Chief of the Air Staff.

The expansion of the Air Defence and NATO Forces continued and Air Transport Command commitments increased because of a requirement for additional flights to support forces overseas. The contribution to the Korean airlift was maintained. A transport operational training unit was formed at Lachine, Que., to undertake training for transport crews.

Operations, 1951-52.-Air Defence.-During the year 1951-52, Air Defence Group became Air Defence Command and continued to expand in facilities, aircraft and personnel. Three additional regular fighter squadrons were formed and equipped with F-86E (Sabre) aircraft: No. 439 at Uplands, Ont., No. 413 at Bagotville, Que., and No. 430 at North Bay, Ont. Regular squadrons using Mustang and Vampire aircraft were re-equipped with the F-86E. No. 421 Squadron which proceeded to the United Kingdom in January 1951 returned to Canada in December 1952 and re-formed at St. Hubert. Nos. 410 and 441 Fighter Squadrons were transferred from St. Hubert to R.C.A.F. Station, North Luffenham, England, to become the first two squadrons of No. 1 R.C.A.F. Fighter Wing Overseas.

Maritime.-There was a gradual build-up of facilities, equipment and personnel with the Maritime Group during the year. The newly formed No. 404 (Maritime Reconnaissance) Squadron and No. 405 (Maritime Reconnaissance) Squadron sent crews to the United Kingdom for advanced training in anti-submarine warfare at the Joint Anti-Submarine School. The joint R.C.N.-R.C.A.F. Maritime Warfare School at Halifax and No. 2 (Maritime) Operational Training Unit at Greenwood, N.S., continued their respective training programs throughout the year.

Air Transport.-The squadrons of Air Transport Command continued to provide logistical support, when required, for units of the defence forces and provided similar services for other government departments when no commercial air facilities were available. Two squadrons were employed in Canada solely on air-transport work. A third transport squadron, No. 426, continued transport operations on the transpacific airlift from bases at Tacoma, U.S.A., and Dorval, Que. By Mar. 31, 1952, the squadron had completed over 350 flights across the Pacific to Tokyo and return, carrying more than $4,000,000 \mathrm{lb}$. of freight and mail and over 8,500 passengers. The squadron has flown almost $4,000,000$ miles on the Korean airlift.

Other.-Air photography and survey work continued the large mapping operation that has been undertaken. Station photographic sections were established at newly opened units to provide service for the maintenance of air cameras and for the processing of films used in air-to-air and air-to-ground aircrew training exercises.

The Operational Research Section continued studies of a number of problems such as the relationship of ground environment to fighter characteristics.

Twenty R.C.A.F. forecast offices provide meteorological services in conjunction with the Department of Transport.

Training.-Aircrew training courses were organized for potential aircrew of the R.C.A.F. regular, reserve university and Canadian Services Colleges flight cadets and the R.C.N., and for cadets from countries in the North Atlantic Treaty Organization. During the fiscal year 1951-52, 916 personnel were trained as aircrew.

Facilities for pilots were increased by the formation of flying training schools at Claresholm and Calgary, Alta., in addition to those at Centralia, Ont., and Gimli, Man., and by the advanced flying schools opened at Saskatoon, Sask., and MacDonald, Man. At Calgary, a pilot refresher training school was set up for veteran pilots who have re-enlisted. Navigation training facilities were increased by the formation of an air navigation school at Winnipeg, Man., and the opening of a central navigation school at Summerside, P.E.I. The Air Radio Officers' School was established at the R.C.A.F. Station, Clinton, Ont., to carry out basic training for potential radio officers in the R.C.A.F.

Formal trade courses for newly commissioned non-flying list officers were conducted at R.C.A.F. schools in aeronautical engineering, armament, supply and telecommunications. Courses were provided to qualify officers in flying control.
R.C.A.F. trade specifications have been revised to an approved tri-service standard on the basis of job analysis data previously obtained. The majority of R.C.A.F. trades have been converted to the new trades structure as represented by these specifications, and approximately 85 p.c. of personnel reclassified and coded accordingly. Trade training has been changed, as required, in accordance with the new trade specifications. During the fiscal year 1951-52, 5,365 groundcrew were given basic training and 785 were given other courses. To accommodate expanding training loads, relocation and re-opening of several training schools was effected. Primary training of officers on guided missiles continued at Clinton, Ont., and advanced training is being undertaken in the United States by selected officers. Guided-missile training in the armament trade of the R.C.A.F. is being investigated for early commencement.

Equipment.-Planes needed for the increased training program, for transport and for operational duties are being obtained by reconditioning, and by procurement of aircraft manufactured in or outside Canada. More than 300 aircraft were reconditioned during the fiscal year 1951-52. The CF-100, the Sabre F-86E and the Harvard trainer were manufactured in Canada. Substantial orders for various aircraft were placed in the United States and the United Kingdom.

The development program on the Rolls Royce Avon-powered CF-100 was intensified during the year. The first Orenda-powered CF-100 was delivered by A. V. Roe Canada Limited, to the R.C.A.F. in November 1951, and all subsequent aircraft will be delivered with Orenda engines installed.

Production of the F-86E at Canadair Limited is proceeding on schedule. The prototype Orenda-powered F-86E made its initial flight in the summer of 1952. Canadair is engineering the design changes required to enable the T33-A aircraft to take the Rolls Royce Nene engine and will produce this aircraft in quantity for training purposes.

The Orenda turbo-jet engine, designed and produced by A. V. Roe Canada Limited, completed over 9,000 hours of running on the test bed and over 300 hours in the Lancaster, the F-86E and the CF-100. The most important achievement during the year was the successful completion of the 150 -hour type test with a production engine.
R.C.A.F. Reserve.-In accordance with the new Queen's Regulations (Air), the sub-components of the R.C.A.F. reserves were redesignated as follows: (1) the auxiliary; (2) the primary reserve; and (3) the supplementary reserve.

During the fiscal year 1951-52, the control of auxiliary units in Ontario was transferred from Training Command to Air Defence Command. This was effected because the majority of the units involved were of an Air Defence nature, i.e., squadrons and aircraft control and warning units. At the same time, Training Command was made responsible for the activities of all reserve university squadrons.

Reserve training activities were considerably expanded and summer aircrew training continued for flight cadets of the Canadian Services Colleges and selected university students. The basic training syllabi were condensed to enable the student to reach "wings" standard at the end of his second summer of training and thus to gain practical experience in his third summer through employment in his aircrew trade; altogether, 1,088 flight cadets received flying training during 1951-52.

Formal summer training and on-the-job training continued for selected university students in non-flying list categories. This included basic officer and executive training for all first-year Air Force cadets at Royal Military College, Kingston, Ont., followed by formal training for cadets in certain technical trades. The number of reserve personnel who received either ground or other training was 9,250.

Training of grounderew personnel of the auxiliary units received added emphasis. New trade specifications were prepared for the majority of reserve trades and training programs were revised to ensure that tradesmen would be capable of doing the work required of them in the operation of auxiliary units. Experience gained in the operation of a technical training unit established at Vancouver in October 1950 resulted in the formation of additional units at Montreal, Hamilton, Toronto, Winnipeg and Edmonton. The purpose of these technical training units is to train personnel of the auxiliary formations in the locality to Group 1 tradesmen standards and to assist in trade advancement training programs.

Reserve University Squadrons.-In the summer of 1951, 783 flight cadets were undergoing training under the University Reserve Training Plan, 84 as aircrew trainees and 699 as non-flying list. On Mar. 31, 1952, a total of 995 were training under this Plan.

Royal Canadian Air Cadets.-Closely associated with the R.C.A.F. are the Royal Canadian Air Cadets, whose establishment was raised during 1950 from 15,000 to 22,500 . More than 223 air cadets squadrons are located across Canada
with an enrolment of more than 17,000 cadets, administered by the Air Cadet League of Canada, a voluntary civil organization. The value of cadet training continues to be confirmed by the number of Air Cadets enlisting in the R.C.A.F. regular and reserve forces. During 1951-52, 694 ex -Air Cadets joined the R.C.A.F. regular squadrons and 193 signed on with the reserve.

## Subsection 4.-The Defence Research Board

The National Defence Act was amended on Apr. 1, 1947, to provide for the establishment of a Defence Research Board. The Board consists of six ex officio and six appointed members serving under a full-time chairman. The ex officio members are the Chairman of the Board, the Chiefs of Staff of the three Armed Services, the President of the National Research Council and the Deputy Minister of National Defence. The remaining six members, appointed by the Governor General in Council, are members with scientific and technical qualifications and are drawn from the universities and industry. The organization consists of a headquarters staff, advisory committees and field research stations.

In planning this organization, the Government considered the vital need for continuity in research and planned the Defence Research Board as a fully integrated and permanent part of the defences of the country. To assist co-ordination at the highest level, the Chairman of the Board has the status of a Chief of Staff and is a member of the Chiefs of Staff Committee and of the Defence Council.

The Defence Research Board is an essential part of the defence of Canada and, as such, has been described as a fourth Service. Its fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. This task is the main function of the Headquarters Staff and its work is strengthened by the expert counsel of comprehensive advisory committees.

It is the policy of the Board to select and concentrate its efforts upon those problems that are of particular importance to Canada or for which Canada has unique resources or facilities. Existing research facilities (for instance, the National Research Council) are used wherever possible to meet the needs of the Armed Forces. The Board has built up new facilities only in those fields that have little or no civilian interest. From the policy of specialization it follows that close collaboration must be maintained with Canada's larger partners. Specialization is made possible only through the willingness of the United Kingdom and the United States to exchange the results of their broader programs for the less numerous but nonetheless valuable benefits of Canadian research.

An important and logical field of specialization for Canada is Arctic research. This interest in Arctic problems is reflected in nearly all the Board's activities. An outstanding example is a program of ionospheric research carried on jointly with the Department of Transport. The north magnetic pole is located on the northern edge of Canada's mainland and the auroral belt, in which ionospheric disturbances make radio communication difficult, is centred around the north magnetic pole and, therefore, extends well down into the inhabited areas of Canada. This means that Canada has unique radio communications problems that are not duplicated elsewhere in the world, except in northern Siberia, and which are of vital importance not only to defence but to civil aviation and communications. It is, therefore, appropriate that Canada should put special effort into this field of research
and that the research should be supported by civil and military parts of the Government. The Board's Radio Physics Laboratory has designed and supplied the special equipment and has trained the operators for a chain of Department of Transport ionospheric observatories which are scattered across the auroral belt. The results of the observations from these stations are analysed at the Radio Physics Laboratory and are used not only to issue current forecasts of the most effective radio transmission frequencies but also in more fundamental research to improve communications in the north. The results are passed to the Central Radio Propagation Laboratory at Washington, U.S.A., where they are used in the compilation of world-wide frequency prediction tables. The whole program is an example of logical specialization and of effective interdepartmental and international co-operation.

New laboratory buildings will be utilized shortly at the Naval Research Establishment at Halifax, N.S.; the Canadian Armament Research and Development Establishment near Ottawa and the Defence Research Kingston Laboratory at Kingston, Ont. Construction has started on new laboratories in Ontario for the Defence Research Medical Laboratory at Toronto and the Defence Research Chemical Laboratories near Ottawa.

Pursuing its established policy, the Defence Scientific Service continues to make available to the scientific community at large those results of its work that have other than a purely military importance.

Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

## Section 2.-Services Colleges and Staff Training

Canadian Services Colleges.-The Royal Military College of Canada was founded in 1876 at Kingston, Ont. Royal Roads was established in 1941 near Victoria, B.C., as a school for naval officers. In September 1948, both colleges were constituted as the Canadian Services Colleges to provide a joint educational and training program that would produce officers for the three Armed Services of Canada.

The course at the colleges is of four years' duration, the first two years of which may be taken at either Royal Roads or the Royal Military College. The third and fourth years are taken at the Royal Military College only. Cadets who complete the first two years at Royal Roads proceed to the Royal Military College for the last two years of the general or engineering courses. Fees for the first year total $\$ 580$; each succeeding year costs $\$ 330$.

Graduates are qualified without further academic training for entrance to any of the three Services, active or reserve, as acting sub-lieutenant in the Navy, lieutenant in the Army or flying officer in the Air Force. Technical course graduates may be sent by the Services for further training to degree standard at specified universities.

A candidate for admission to the colleges must be a British subject between 16 and 21 years of age, have junior matriculation as the minimum education and be physically fit. Qualifying examinations in English or French are required,
followed by a personal interview with the regional board. The final selection of cadets competing in open competitions or on provincial quotas is made by a board appointed by the Minister of National Defence.

Fifteen scholarships of $\$ 500$ each are made available each year by the Federal Government on a purely academic basis according to the following provincial quotas: Atlantic Provinces, three; Quebec, four; Ontario, four; Manitoba, one; Saskatchewan, one; Alberta and the Northwest Territories, one; British Columbia and Yukon Territory, one. Up to 15 cadetships, five to each Service, with a value of $\$ 580$ each, are provided by the Federal Government to sons of ex-Service and Service personnel. In addition, the following associations award annual scholarships: the Navy League of Canada, the Canadian Infantry Association, the Naval Officers' Association of British Columbia, the Air Cadet League of Canada, the R.C.A.F. Benevolent Fund, the Imperial Order of the Daughters of the Empire, the Ontario Canteen Fund and the Royal Canadian Artillery Memorial Fund. Bursaries are awarded by the Leonard Foundation, the R.C.A. Officers' Regimental Fund Committee and Dominion-Provincial Student Aid.

At Mar. 31, 1952, the Royal Military College had 90 cadets in first year, 68 in second, 118 in third and 72 in fourth. Royal Roads had 78 cadets in first and 68 in second year.

Advanced Training Colleges.-The Canadian Army and the Royal Canadian Air Force operate the undermentioned staff colleges for giving Staff and Command training while the National Defence College provides facilities for advanced study of defence problems.

The National Defence College, Kingston, Ont., is a senior Canadian defence college with a primary objective of co-ordinating defence measures with external and economic policies. First opened on Jan. 5, 1948, senior officers and civil servants from the Armed Forces and government departments attend; also a few representatives from industry are invited to participate in the course of about eleven months' duration.

The curriculum is based on a series of problems dealing with the political, economic and military aspects of Canadian defence. An extensive lecture course is provided, with lecturers chosen from leaders in various fields in Canada, the United States and the United Kingdom. In addition, educational tours and visits to parts of Canada, the United States, Europe and the Middle East are made to give students a more vital knowledge of conditions and influences in their own and other countries.

The Canadian Army Staff College, Kingston, Ont., is a military staff college operating on a permanent basis to train officers for positions of staff and command. The course covers a period of ten months. A joint instructional staff includes faculty members from the three Services, the United States and the British armies. The student body comprises members from the three Services and from five different nations. Aside from purely military subjects, the curriculum provides for intensive study of current world affairs and lectures by prominent guest speakers in this field. Graduates are qualified for Grade II Staff appointments or commands in the Service.

The Royal Canadian Air Force Staff College, Toronto, Ont., is a permanent air force staff college, the training program of which is designed to give officers of Squadron Leader to Group Captain rank the necessary background and knowledge to fit them for Staff and Command positions. The Directing Staff includes officers from the Royal Canadian Air Force, the Canadian Army and the Royal Air Force, while the student body consists of officers from the Royal Canadian Navy, the Canadian Army, the Royal Air Force, the United States Air Force, as well as the Royal Canadian Air Force. Besides the normal organizational and administrative subjects, the curriculum includes an advanced study of the three aspects of air power: air strategy and its relation to ground and sea forces; current world affairs and their effect on the Canadian strategic position; and the industrial potential of the country. Subjects are presented and discussed under the guidance of the Directing Staff or guest speakers, many of whom are prominent in Canadian and United States diplomatic, university and industrial life.

## PART II.-DEFENGE PRODUCTION*

Department of Defence Production.-The expansion of the military effort since the United Nations took action in Korea has called for the production of large quantities of weapons and equipment and for a considerable amount of construction. The Department of Defence Production was set up on Apr. 1, 1951, to handle defence procurement, previously carried out by the Minister of Trade and Commerce acting through the Canadian Commercial Corporation. This new Department also undertook responsibility for the control and allocation of essential materials and for the development of Canada's strategic resources.

The Department has three main Branches, two of which are concerned with procurement. (1) The Production Branch deals with commodities the production of which requires special facilities. Such items include aircraft, ships, electronic equipment and military vehicles. (2) The General Purchasing Branch procures commodities either of standard commercial types or of specifications not greatly different from commercial ones, for instance, clothing, food, fuels and barrack stores. (3) The Materials Branch is concerned with ensuring that essential materials are available for direct defence purposes and for the development of strategic resources. This involves the administration of certain controls over the use of essential materials produced in Canada, the arrangement of administrative procedures for the import of materials under restrictions in their country of origin and a general responsibility for matters related to the development of strategic resources.

Defence Orders Placed.-Table 1 shows defence orders, excluding those for stockpiling, by programs, from Apr. 1, 1949, to Mar. 31, 1952. The increase since the outbreak of hostilities in Korea during the summer of 1950 is apparent. Orders placed in the year ended Mar. 31, 1951, were over three times as great as those of the previous year, and orders in 1951-52 were almost eight times the pre-Korean level. The peak period for orders was from July to September 1951.

The aircraft program is the largest and, although the balance of the programs will alter as time goes on, it is likely to remain the largest item because of the importance of airpower to Canada.

[^402]1.-Canadian Government Defence Orders, by Programs, Years Ended Mar. 31, 1950-52

Note.-Figures exclude stockpiling but include capital assistance.

| Program | 1949-50 | 1950-51 | 1951-52 | 1951-52, by Quarters |  |  |  |

| Domestic district office orders............... | , | 4 | 68,294 | 14,783 | 20,287 | 16,789 | 16,435 |
| Totals. | 242,914 | 764,765 | 1,901,408 | 466,677 | 603,600 | 391,682 | 439,449 |

${ }^{1}$ Food and other subsistence; protective and lifesaving equipment; medical and dental equipment and supplies; photographic equipment and supplies; laboratory, scientific and other instruments; conveying, elevating and material handling equipment; construction, mining and excavating equipment; production equipment; administrative equipment and miscellaneous. ${ }^{2}$ Equipment, including engines and electronic devices, purchased from the United States Government for incorporation in Canadian-built aircraft. ${ }^{3}$ Purchased in the United States to replace United Kingdom-type weapons and equipment sent to Europe under Mutual Aid.

Table 2 shows defence procurement orders according to the countries in which they were placed. Large government orders were placed in the United States, as the expanded defence program got under way, being especially large during the first two quarters of the fiscal year 1951-52. In the second half of that year, orders to the United States declined rapidly. The proportion of orders placed in the United States rose with the expansion of the defence effort and then tapered off during the fiscal year 1951-52 from over a third in the first quarter to less than a twenty-fifth in the last.

Following a decision to standardize on United States rather than British types of army weapons, plants had to be tooled up to meet new specifications and, while this was being done, heavy initial orders were placed in the United States for equipment of types to be produced later in Canada. The decision to produce, in Canada, existing types of United States aircraft also meant placing heavy orders in that country for components, particularly engines and electronic equipment.

When Canadian production is in full swing, some items such as tanks may still be imported, since Canada's requirements are not large enough to justify laying down a plant for every kind of equipment. The general policy regarding defence production in Canada and the United States is based on the "Statement of Principles for Economic Co-operation", signed by the Canadian and United States Governments on Oct. 1, 1950. This indicates, among other things, that "our two Governments shall co-operate in all respects practicable and to the extent of their respective executive powers, to the end that the economic efforts of the two countries be coordinated for the common defence and that the production and resources of both countries be used for the best combined results"

In accordance with this principle, Canada will continue to import a number of items from the United States, but the situation is not one-sided. The United States Government is buying certain aircraft from Canadian firms that are thereby able to operate with the benefits of large-scale production. The planes concerned are the F-86E jet fighter, the Harvard trainer, the Beaver, and the T36-A trainer transport. Guns, too, are being produced in Canada for the United States, both the 3 -inch 50 -calibre naval gun and the 120 mm . gun. The United States Government has placed orders in Canada for explosives, for 90 mm . shell cases, and for certain types of small arms ammunition as well as for mobile radar equipment.

## 2.-Distribution of Canadian Government Defence Orders, by Countries in which Placed, Years Ended Mar. 31, 1950-52

Nots.-This table includes orders for end items, and capital assistance contracts placed with prime defence contractors.

| Country | 1949-50 | 1950-51 | 1951-52 | 1951-52, by Quarters |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Apr.-June \|July-Sept.|Oct.- Dec.| Jan.-Mar. |  |  |  |
|  | Values |  |  |  |  |  |  |
|  | \$'000 | \$'000 | \$'000 | \$'000 | \$'000 | \$ 000 | \$'000 |
| Canada.. | 222,423 | 657.449 | 1,446,386 | 287,024 | 435,701 | 308.579 | 415,082 |
| United States. | 15,229 | 99,090 | 415,780 | 177,671 | 163,423 | 58,773 | 15,913 |
| United Kingdom. | 5,205 | 8,143 | 39,228 | 1,977 | 4,476 | 24,327 | 8,448 |
| Other countries. | 57 | 83 | 14 | 5 | - | 3 | 6 |
| Totals.......... | 242,914 | 764,765 | 1,901,408 | 466,677 | 603,600 | 391,682 | 439,449 |
|  | Percentages |  |  |  |  |  |  |
|  | p.c. | p.c. | p.c. | p.c. | p.c. | p.c. | p.c. |
| Canada. | 91.5 | 86.0 | 76.0 | $61 \cdot 5$ | 72-2 | 78.8 | 94.5 |
| United States. | $6 \cdot 3$ | 12.9 | 21.9 | $38 \cdot 1$ | $27 \cdot 1$ | 15.0 | $3 \cdot 6$ |
| United Kingdom ${ }^{1}$. | $2 \cdot 2$ | $1 \cdot 1$ | $2 \cdot 1$ | 0.4 | 0.7 | 6.2 | 1.9 |
| Totals | $100 \cdot 0$ | $100 \cdot 0$ | $100 \cdot 0$ | 100.0 | $100 \cdot 0$ | $100 \cdot 0$ | 100.0 |

${ }^{1}$ Includes orders to other countries, that were never over one-fortieth of one percent of total orders.
Production Programs, 1951-52.-A new stage in the development of the Canadian aircraft industry was reached in the autumn of 1951 with the delivery to the Royal Canadian Air Force of the first pre-production model of the CF-100 all-weather jet fighter. This is the first all-Canadian jet aircraft for both the airframe and the Orenda engines which power it are produced in Canada. Arrangements for full-scale production are under way and deliveries, under the main production contract, will begin in 1952. The F-86E Sabre, of United States design, is also under production. A number of the aircraft are going to the United Kingdom and to the United States.

The Harvard primary trainer aircraft, also of United States design, began to come off the Canadian production line during the autumn of 1951. Engines were at first imported from the United States but will be produced in a new plant near

Montreal which will also supply spare engines for the large number of Harvards now flying in many parts of the world. The Beaver aircraft is being manufactured to meet large United States orders as well as domestic civilian requirements. This is a Canadian-designed plane for general-purpose use in rugged territory. Full-scale production began during 1952 of the T33-A Shooting Star jet trainer. A number of these were received from the United States during 1951 to meet immediate needs. Preparations are being made also for the production of the T36-A trainer transport.

The Orenda engine, entirely of Canadian design, was the first jet engine to be built in Canada. The Rolls Royce Nene engine, which will power the T33-A, will eventually be assembled in Canada.

A number of aircraft stored since World War II were reconditioned and equipped to serve new purposes. Some bombers were converted for use by the Maritime squadrons of the R.C.A.F. and other aircraft were converted for training purposes.

New plants have been set up to manufacture engines and other components. One plant is designed for the manufacture of fuel systems for Orenda engines, and others for the production of magnesium castings and of compressor and turbine blades for jet engines. In the instrument field, a plant is being built to meet Canada's requirements of artificial horizons, now being obtained from the United Kingdom. Arrangements have been made with a Swedish firm to set up a subsidiary plant in this country for the production of engine and instrument bearings. Two United States firms are also establishing plants in Canada for the manufacture of aircraft instruments.

Electronic devices are very important in defence, their main uses being in the field of communication by radio, in the interception of aircraft and ships by radar, in fire control and in the exploding of missiles near their target. Many of Canada's requirements are at present being met from the United States but the Canadian electronics industry is switching from civil to military production. Several plants have been established to produce items new to Canada's economy, including subminiature tubes and components, and crystals.

A large quantity of radar and communications equipment for the northern screen of the air defence of this continent is being produced in Canada, together with a large number of anti-aircraft radars and other types of radar for use by the Armed Services. One type of early-warning radar used by anti-aircraft artillery, the No. 4 Mk. VI, will be used extensively in Western Europe as well as in the air defence of Canada. Orders have also been received from the United States for this equipment. Proximity fuses are being produced in Canada for the first time.

A new type of pack radio for use by the infantry was developed in Canada during 1951. It has a range of one mile and is believed to be the best of its type in existence. This equipment will be used extensively by the Canadian Army and by other North Atlantic Treaty countries.

Canadian shipyards are working on orders for 14 escort vessels, 14 minesweepers, 5 gate vessels and an ice breaker, as well as a number of harbour craft. In addition to the new ships, a "Mothball Fleet" of 21 minesweepers and frigates is being converted and refitted. The escort vessels, designed in Canada, except for the propulsion machinery, are the most modern of their kind, equipped with all the latest devices and weapons; the first was launched in November 1951. The minesweepers are being built of aluminum, with the hulls sheathed in wood to reduce their magnetism and the shipyards have developed techniques of handling aluminum
for this purpose. Three of the minesweepers were launched during the fiscal year 1951-52 and the ice breaker, a patrol vessel for northern waters, was launched in December 1951.

The construction of these vessels calls for work elsewhere than in the ship-yards-the manufacture of boilers, turbines, auxiliary engines, deck gear and other components. Most of the contracts for such items have been let in Canada.

Under the weapons program, the major production activity has been in connection with 3 -inch 50 -calibre naval guns and mountings. Arrangements have also been made for producing the 155 mm . and 105 mm . howitzer and carriage, the 155 mm . gun, and the 105 mm . recoilless rifle. Other equipment includes the 60 mm . and 81 mm . mortars and the $3 \cdot 5$-inch rocket launcher. Contracts placed for small arms were limited, partly because of the failure to obtain agreement on the standardization of small arms and weapons. Orders were placed for 0.50 -inch Browning machine guns for the R.C.A.F. Appreciable quantities of anti-aircraft guns, medium field guns, small arms and instrument stores, held in storage by the Department of National Defence, have been overhauled, modified and reconditioned during 1951-52.

Ammunition requirements altered with the change-over to United States types of equipment. In Canada, it was decided to produce ammunition for the 90 mm ., the 105 mm . and the 155 mm . artillery equipments for the Army. Naval requirements to be met from domestic sources include 3 -inch 50 -calibre and 40 mm . Bofors rounds, depth charges and other types of anti-submarine projectiles. The Air Force requirements include rockets and small arms ammunition. Explosives for the ammunition are being produced in two plants, one of which manufactures picrite and the other a number of explosives including RDX/TNT and rifle powder. Phosphorus and hexachlorethane are also being made in Canada to government specifications, the latter mainly for export to the United States.

Automobile manufacturers are producing $\frac{1}{4}$-ton, $\frac{3}{3}$-ton and $2 \frac{1}{2}$-ton military trucks to joint Canadian-United States specifications. Because of the large capacity of these plants, the output of trucks can be expanded quickly to meet any foreseeable demands from the Armed Services. Other types of military vehicles are being produced in smaller quantities and a number of civilian types of vehicles have been purchased for military use. It has been decided not to establish tank-manufacturing facilities in Canada; Centurion tanks are being purchased from the United Kingdom.

The construction program has involved heavy outlays for barracks and other types of accommodation, buildings for the radar screen, air-strips and other works. These were made necessary by the long-term problems of defence and by increases in the size of the Forces. Orders were placed, during the fiscal year 1951-52, for the construction of 3,400 prefabricated buildings, including 650 Arctic-type huts.

The textile industries have received heavy orders for clothing and for other requirements such as, blankets, mattresses and canvas beds. Most of the clothing and accoutrements not made from broad woven fabrics were ordered in the first half of the fiscal year, but garments such as uniforms and greatcoats made of broad woven fabrics could not be ordered so soon. The cloth was ordered first and, as it became available, contracts were let, mainly during the second half of the fiscal
year, to the cut, make and trim trades largely to meet possible mobilization requirements. As mobilization stores build up, orders are placed at a lower rate. Footwear of both leather and rubber, and other leather goods such as gloves and belts, were ordered for current use and for mobilization stores.

Other requirements of the Armed Forces have also been met, including food, fuel and lubricants, chemicals, medical supplies, photographic stores, laboratory scientific and other instruments, barrack-room stores, furniture and furnishings, and office equipment.

In some cases, defence production has involved the setting up of facilities which will have small residual talue after the emergency is over. Under these circumstances, contractors cannot be expected to make capital outlays that may not be fully charged against contracts before the defence work stops. Thus, the Government has authority to provide the contractor with capital assistance in the form either of machinery and equipment or of new buildings or extensions. Everything so provided remains the property of the Crown; buildings are constructed on land owned by the Crown. Some Crown-owned machine tools used during World War II have been rehabilitated and issued to contractors in connection with the present defence drive.

Controls and Priorities.-In the initial stages of the increased defence production it was necessary to direct the use of certain essential materials produced in Canada and elsewhere. The Defence Production Act, Sect. 30, provides that "The Governor in Council may, from time to time, designate as an essential material any material or substance, the control of the supply and use of which is in his opinion essential to ensure the availability of adequate defence supplies or for the construction or operation of defence projects". Orders in Council have designated as essential a number of chemicals and chemical compounds, wood-pulp and newsprint, certain forms of non-ferrous metals and non-metallic minerals, and certain forms of iron and steel.* After a material has been declared essential, the Minister of Defence Production may regulate its production, supply, distribution and use. In the case of non-ferrous metals, control is by an order approval system whereby purchase orders placed by manufacturers are screened in the Department of Defence Production. An order approval system was established for primary and wrought aluminum, primary copper and certain copper products, primary nickel and certain nickel products, cadmium, lead and zinc. Sulphur is controlled under a similar system.* The order approval system for cadmium, lead and zinc was cancelled in May 1952.

In the case of steel, supplies were diverted as necessary to defence and defencesupporting purposes by the direction of individual requirements at the mill, warehousing or fabricating levels. In addition, the use of structural steel for a wide variety of less essential purposes such as, places of amusement, liquor stores, hotels, banks and service establishments was placed on a permit basis in February 1951. A Ministerial Order of January 1952 prevented the accumulation of excessive inventories of steel and ensured that steel would be used for the purpose for which it was acquired.

In addition to the above controls on specific materials, the Minister of Defence Production has general powers for establishing a priority system for any type of essential supplies, under Order in Council P.C. 2399 of May 16, 1951. It has not

[^403]been necessary to exercise these powers formally to any great degree, and priorities in Canada have been largely dealt with by informal consultation between the Government and representatives of industry.

Since Canadian firms are dependent on the United States for a considerable proportion of their requirements of materials and semi-finished and finished goods, the system of controls in that country has an important effect in Canada. Under the United States Controlled Materials Plan, which governs steel, copper and aluminum, quarterly estimates of Canada's future requirements are made by the Department of Defence Production and are considered in Washington, D.C., along with claims from all segments of the United States economy. An allocation is then made to Canada and distribution to Canadian industry is carried out through the Department. With respect to the general United States Priorities System covering machinery, components and items other than steel, copper and aluminum, the Department screens applications from Canadian firms and assists them in obtaining their approved requirements on a basis generally comparable to that accorded to United States concerns.

When United States procurement agencies or firms have defence requirements in Canada, the Canadian contractor makes application for priority treatment on behalf of the United States customer. By agreement, the Department gives such United States orders treatment comparable to that given to orders for the Canadian defence program.

Strategic Resources.-The industrial effort involved in the defence program is making heavy demands on raw materials which Canada produces, not only for its own defence effort, but also for that of friendly countries. In the case of nickel, in fact, Canada produces about four-fifths of the world supply. Table 3 gives statistics for the leading strategic minerals. The high proportion of output exported is apparent.

## 3.-Canadian Production, Exports and Imports of Principal Non-Ferrous Metals, 1951

(Thousands of short tons)

| Metal | Domestic Production | Exports to- |  |  | Imports | Domestic Supply |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | United States | United Kingdom | Elsewhere |  |  |
| Aluminum, primary | 445 | 105 | 191 | 58 | - | 91 |
| Copper, refined.... | 246 | 29 | 52 | 21 | 2 | 146 |
| Lead, refined ${ }^{1}$. | 162 | 60 | 35 | 11 | 1 | ${ }_{6}^{57} 6$ |
| Nickel, refined. | 79 | ${ }_{84}^{70 \cdot 6}$ | $5^{1 \cdot 6}$ | ${ }_{7} 0$ | - | $74{ }^{6 \cdot 6}$ |
| Zinc, refined...... | 220 | 84 | 55 | 7 | - |  |

[^404]Canadian output of strategic materials, on the whole, increased rapidly in 1951, thus strengthening the base of the defence effort. Table 4 compares the output of a number of strategic commodities in 1951 with that of the previous year. Of special interest are the increases in petroleum and natural gas owing to the development of the western oil fields.

## 4.-Production of Selected Strategic Commoditles, 1950 and 1951

| Material | Unit | Actual Output |  | P.C. <br> Increase or Decrease 1950-51 |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 1950 | 1951 |  |
| Iron ore. | '000 short tons | 3,617 | 4,736 | 30.9 |
| Pig iron. | " | 2,317 | 2,553 | $10 \cdot 2$ |
| Steel ingots. | " | 3,300 | 3,446 | $4 \cdot 4$ |
| Petroleum, crude. | '0c0 bbl. per day | 80 | 132 | $65 \cdot 0$ |
| Natural gas.. | '000 M cu. ft. | 67,822 | 78,485 | 15.7 |
| Aluminum, primary. | '000 short tons | 395 | 445 | 12.7 |
| Copper, all forms.. | " | 262 | 270 | 3-1 |
| Lead, all forms ${ }^{1}$.. | " | 170 | 160 | -5.9 |
| Nickel, all forms.. | " | 123 | 138 | 12.2 |
| Zinc, all forms. . | " | 311 | 334 | $7 \cdot 4$ |
| Ilmenite... | " | 100 | 397 | 297.0 |
| Magnesium....... | " | 1.8 | $3 \cdot 5$ | 94.4 |
| Cobalt, mine production.. | short tons | 313 | 435 | 39.0 |
| Tungsten, W. content. | " | 1 | 14 | - |
| Wood-pulp........... | '000 short tons | 8,473 | 8,989 | 6.1 |

${ }^{1}$ From domestic sources, excluding lead smelted from imported ore.
Capital expenditure has been made on a large and increasing scale in order to expand Canada's strategic potential. Table 5 gives investments for 1950 and 1951 and intentions for 1952. For primary iron and steel, investment in 1952 is expected to be about seven times as great as it was in 1950, and for iron-ore mining about four times as great. Investment in the chemical products industry will probably be nearly four times as great in 1952 as in 1950, and in the non-ferrous metals industries over twice as great. The increases in investment in the fields of hydroelectric power and of petroleum and natural gas, though proportionately less, are important in dollar terms because of the heavy investment in those industries. Altogether, about 4 p.c. of the gross national product for 1952 will be devoted to investment in the industries mentioned.

## 5.-Investment in Development, New Buildings and Machinery in Selected Industries, 1950-52 ${ }^{1}$

(Millions of dollars)

| Industry | 1950 | 1951 D | $\begin{gathered} 1952 \\ \text { (Intentions) } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Non-ferrous metal smelting, refining and processing (including aluminum) | 22.4 | $39 \cdot 0$ |  |
| Iron-ore mining........................................... | $5 \cdot 7$ | $15 \cdot 5$ | ${ }_{23} \cdot 1$ |
| Primary iron and steel . ....... | 14.6 | $56 \cdot 1$ | 103.2 |
| Petroleum and Natural GasExploration and development | 64.4 | $85 \cdot 8$ | 92.9 |
| Transmission and refining. | $78 \cdot 6$ | 44.0 | $85 \cdot 6$ |
| Chemical products.......... | 26.3 | 53.2 | 99.7 |
| Hydro-electric power | $340 \cdot 3$ | 451.1 | $471 \cdot 9$ |
| Totals. | $552 \cdot 3$ | $744 \cdot 7$ | 927-7 |

[^405]
## PART III.-CIVIL DEFENCE*

The accelerating threat of aggression that began shortly after the completion of demobilization following World War II and made necessary the reorganization of military strength, also made apparent the need for the development of a plan of civil defence as part of Canada's program of defence against direct attack. Thus, in October 1948, the Minister of National Defence appointed a Co-ordinator of Civil Defence whose task it was to prepare such a plan. To assist in the co-ordination of the planning, an interdepartmental committee-the Federal Civil Defence Planning Committee-was established, as well as a Federal-Provincial Advisory Committee composed of the federal minister responsible for civil defence as chairman and each provincial minister responsible for civil defence as a member. In February 1951, the administration of civil defence was transferred from the Department of National Defence to the Department of National Health and Welfare.

The Canadian plan was developed after study of similar organizations in the United Kingdom, Western Europe and the United States. It was agreed that civil defence organization should be incorporated within the framework of civil government at each level-federal, provincial and local-each with its own sphere of responsibility. The country is divided into a number of target areas, around each of which is a mutual aid area for immediate support. The territory outside these areas is organized on a mobile support and reception area basis. The channel of communication is from the federal authority to provincial authority and thence to local authority.

The Federal Office of Civil Defence consists of the Civil Defence Co-ordinator and the following services: operations and training, administration and supply, health planning, welfare planning, communications and transportation. A number of other departments are involved in planning, such as the Royal Canadian Mounted Police, the Department of Agriculture, Department of Transport and the Defence Research Board.

In co-operation with the Royal Canadian Air Force, an attack-warning system has been established in all target areas and sirens have been provided by the Federal Government. In co-operation with the Departments of National Defence and Veterans Affairs, a program of stockpiling medical supplies and equipment is in progress across Canada.

The Federal Civil Defence Technical Training School has been operating continuously since January 1951, conducting staff courses for organizers, instructors courses (general and rescue), welfare courses and radiological monitoring courses while courses on damage control and tactical operations are being added. In addition, the Federal Government has sponsored a number of specialist courses for medical personnel. During the autumn of 1951, a special medical team traversed Canada conducting training for nurses in Atomic Biological and Chemical warfare. Also, an agreement is in effect with the St. John Ambulance Association to undertake a large-scale program of first-aid training of civil defence workers for which the Federal Government pays a per capita grant.

Federal assistance to the provinces by way of meeting the costs of administration and purchasing operational requirements consists of a grant amounting to eight cents per capita (based on 1951 Census figures) plus an additional six cents

[^406]per capita in the main target areas. These federal grants must be equalled by provincial contributions. Also, the Federal Government has offered to bear a portion of the cost of standardizing fire-hose couplings. By mid-1952, Ontario and Alberta had accepted the offer and were proceeding with a standardization program. Large quantities of training equipment have been provided by the Federal Government to the provinces in order to foster their training programs. Draft agreements have also been circulated to all provinces whereby the Federal Government will share, with the provinces on an equal basis, in paying workmen's compensation, where necessary, to a civil defence worker.

During the year ended Mar. 31, 1952, 14 civil defence manuals were published by the Federal Government to assist in organizing, training and general education, in addition to which a considerable amount of guiding literature was issued to assist provincial and local governments.

Each province has developed its own civil defence organization, patterned on that of the Federal Government. Certain provinces have conducted civil defence training courses similar to those of the Federal Government with the object of training local instructors and key personnel.

Civil defence organization at local level consists of the following services: police, fire, health, ambulance, welfare, rescue, engineer, public utilities, communication, transportation and information. Many of the main centres of population have made considerable advances in organization and training. An estimated 50,000 civil defence workers were reported on strength as at Mar. 31, 1952.

During 1951 an agreement was made between Canada and the United States whereby each country pledged itself to go to the assistance of the other in event of attack. A number of working groups have been formed to carry out specific tasks in the development of ways and means of carrying out this agreement. The provinces of Canada, too, have discussed with adjoining states of the United States the working out of their mutual problems. In this regard also, close liaison has been kept with the United Kingdom and other NATO countries.

## PART I.-SOURCES OF OFFICIAL INFORMATION

## Section 1.-Federal Government Information Services*

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the decennial and quinquennial censuses are planned and statistical information of all kinds-federal and prov-incial-is centralized. In regard to information that is not mainly statistical, the individual Departments concerned with the particular subject should be contacted as indicated in the Directory at pp. 1190-1211. Certain Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad; for information on Canada and Canadian affairs, the Information Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation; and the National Film Board. The Departments of Agriculture, Resources and Development and Mines and Technical Surveys, while not thus classed, are interested in the dissemination of information to a greater extent than most other Government Departments, and several other Departments have Publicity Branches or Public Relations Divisions.

Government Departments, with few exceptions, issue their own lists of reports and publications. Departments are required by statute to publish annual reports which are tabled each year in the House of Commons by their respective Ministers. However, for the purpose of this Section, only the services of the six information agencies mentioned above are described.

Section 2 has been prepared with the purpose of presenting to the reader a directory of all sources of information, federal and provincial, and thereby directing the reader to the proper channels from which he can draw material relating to any particular subject.

[^407]The Dominion Bureau of Statistics.-The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43). In 1948, this statute, which had been consolidated as the Statistics Act (R.S.C. 1927, c. 190), was repealed and replaced by the Statistics Act (11-12 Geo. VI, c. 45).

The chief aims of the Dominion Bureau of Statistics are: (1) to furnish statistical data, bearing on Canada, for government and administration, whether municipal, provincial, national or international; and (2) to assist in meeting the needs of non-governmental users of statistics, arising from a growing awareness of the value of statistics to business efficiency and social security.

Inquiries.-Hundreds of individual requests for information are received in the Bureau each day, routed through the appropriate divisions and answered as expeditiously as possible. Since the field of effort, from the statistical side, deals with all phases of the national economy, there is scarcely a subject upon which the Bureau is not able to give some information. Nevertheless, only inquiries of a statistical nature should be directed to the Dominion Bureau of Statistics.

Publications.-The Dominion Bureau of Statistics is the principal publication agency of the Federal Government; the subjects of its reports cover all aspects of the national economy.

The policy with regard to the distribution of publications is to extend the service to the public as widely as possible at a minimum cost. A special subscription rate of $\$ 30$ per annum entitles the subscriber to receive as issued a copy of each Report, including the daily News Bulletin. Statistical information not of general interest is published as Reference Papers or Memoranda and additional subscription rates of $\$ 5$ and $\$ 15$ respectively, are charged for all issues of these two categories. A discount of 25 p.c. is allowed on the excess over $\$ 5$ of single purchases totalling between $\$ 5$ and $\$ 20$ : on single purchases of between $\$ 20$ and $\$ 50$ the discount is 50 p.c. of the excess over $\$ 20$.

A complete list of Bureau publications is available from the Dominion Statistician. Orders for reports should be sent to the Dominion Bureau of Statistics, Ottawa, giving the correct title or titles of the publication or series of reports in which the applicant is interested and should include the necessary remittance in the form of a cheque or money-order made payable to the Receiver General of Canada.

Information Division, Department of External Affairs.-The Information Division has two functions: to promote within Canada interest in and knowledge of international affairs, and to make Canada and Canadian policies better known and understood abroad.

To perform the first function, the Division produces and distributes various documents on external affairs-statements of government policy and reports on related developments abroad and on the work of the Department generally. The Division also answers inquiries from Canadian sources on these subjects (except for
inquiries from the press which are handled by the Department's Press Office) as well as requests for information about Canada made by Diplomatic Missions at Ottawa, by Canadian posts abroad, and by individuals and organizations in other countries.

Most of the information work abroad is done, however, by officials at Canadian posts. The Information Division assists by formulating and advising on information policy abroad, in an effort to ensure that this policy is related to the general objectives of Canadian foreign policy, and by producing and procuring material to keep Missions informed of developments within Canada. Journalists, and others who visit Canada to write of Canadian affairs, are given assistance from time to time by the Division; its responsibilties also include the co-ordination of the Government's activities in the field of cultural relations.

Information Branch, Department of Trade and Commerce.-Information, pertaining specifically to trade, is obtainable from this Branch, which maintains close liaison with all other Branches and Divisions of the Department and with a number of Crown companies. It is responsible for the production of Foreign Trade and Commerce Extérieur, the weekly publications of the Foreign Trade Service, and for the preparation of brochures, some of which are required for distribution at trade fairs in other countries;"information is also made available to Canadian Trade Commissioners fordistribution within their respective territories. The Branch is closely identified with the Canadian International Trade Fair, although promotional literature is distributed directly from the headquarters of that organization at Toronto, Ont.

Information Services Division, Department of National Health and Welfare.-The responsibility of this Division, in co-operation with other divisions of the Department of National Health and Welfare and provincial authorities, is the production and distribution of educational material on health, welfare, social security and civil defence, for use throughout the country. This information, issued in the English and French languages, includes books, pamphlets, periodicals, posters, exhibits, displays, radio dramatizations, press and magazine features and releases, as well as films and film-strips prepared in co-operation with the National Film Board. Books, pamphlets, posters and displays are distributed in Canada through provincial authorities. The most important periodicals published by the Division are Canada's Health and Welfare (monthly), Canadian Nutrition Notes (monthly), Industrial Health Bulletin (monthly), Industrial Health Review (semiannually) and Nutrition Bulletin (annually).

Canadian Broadcasting Corporation.-Radio broadcasting is an important medium of information to the public along with newspapers, films and other means of communication. Radio broadcasting in Canada is a combination of a publicly owned national system and privately owned local community stations, many of which are affiliated with the Canadian Broadcasting Corporation's networks.

Since its establishment in 1936, the Canadian Broadcasting Corporation has become one of the most effective channels through which information, official and unofficial, is broadcast to the people of Canada. Radio is relatively more important
in Canada than in most other countries, because of the widely distributed population and the number of sparsely peopled areas, and the CBC has gradually bridged the gaps with high-powered transmitters designed to serve rural as well as urban areas. The CBC has also pioneered in the development of low-powered repeater stations attached to the network lines, that serve areas unable, because of topographical conditions, to receive an adequate signal from any existing station.

News broadcasts and information programs occupy a considerable proportion of national and regional network time and include news, drama, informative talks, children's programs, school broadcasts, public-service broadcasts, sports, women's activities, etc. Listeners have a very wide range of radio fare, since the CBC not only produces its own programs in the various production centres across Canada, but brings in selected programs from the networks in the United States, the British Broadcasting Corporation, and other national radio systems. The CBC maintains a bureau at London, England, and at United Nations Headquarters, New York, and is credited with having done more to inform listeners of the United Nations' activities than any other broadcasting system.

Through the International Shortwave Service, operated by the CBC on behalf of the Federal Government, programs are broadcast in fifteen languages: English, French, Czech, German, Dutch, Norwegian, Danish, Swedish, Finnish, Italian, Russian, Portuguese, Spanish, Slovak and Ukrainian. The CBC International Service broadcasts information abroad on life and economic conditions in Canada as part of the general information plan for promoting a better understanding of Canada in other countries. Since the CBC shortwave transmitters at Sackville, N.B., have the strongest signal reaching Europe from this side of the Atlantic, the transmitters are made available to United Nations radio, for regular transmissions, free of charge.

The National Film Board.-The National Film Board is dedicated to the visual interpretation of Canada in motion pictures, film-strips and stills, both for Canadians and for the better understanding of Canada abroad. (For detaifs of subjects, see pp. 348-350.) Since its establishment in 1939, the Board has produced some 2,700 films in English, French and foreign-language versions and more than 500 film-strips. It has built up a library of some 100,000 still pictures, adding about 7,000 prints annually. As a service to Government Departments and other official bodies, the Board maintains a film preview library of approximately 3,900 NFB and other prints, and 520 film-strips. The Board also acts as official photographer for the Government, recording and preserving occasions of historic interest, such as Royal Journey, the Board's first full-length colour feature, which was distributed to theatres the world over.

The Board's activities are carried on by four branches-Production, Technical Operations, Distribution and Administration-their titles indicating the nature of their operations. Current production rate is about 200 film projects annually and approximately the same number of film-strips,_ including language versions.

Maintenance of high technical quality of films is assisted by operations and research of the Technical Operations Branch, responsible recently for developing a dual sound track which permits two language versions on one film.

In Canada, non-theatrical 16 mm . and 35 mm . theatrical prints are distributed, the former through regional offices in each province to interested groups, including about 7,900 voluntary film-using organizations, while the latter are placed in theatres through commercial distributors on a contract basis.

Distribution of non-theatrical films is assisted by 330 film libraries and 340 film councils. Provincial educational and other agencies promote the use and distribution of films for educational and informational purposes. This work is organized, stimulated and correlated by the Board through a staff of 62 field men whose combined efforts brought NFB films to an audience of over $11,000,000$ persons in 149,922 screenings in 1952. The Distribution Branch services posts of the Departments of External Affairs and Trade and Commerce in 45 countries in addition to NFB offices at London, New York and Chicago.

Newsreel and television distributions are growing rapidly, the latter currently comprising about 2,500 bookings annually. The Board works in co-operation with the Canadian Government Travel Bureau, distributing films through 66 outlets in the United States.

## Section 2.-Directory of Sources of Official Information (Federal and Provincial)

To make the best use of the Directory of Sources of Government Official Information, it is necessary that the reader understands the broad differences in function between federal and provincial departments and their separate fields of work.

Certain fields of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, census of population, national defence, etc., are constitutionally federal affairs and, in such fields, the respective Departments at Ottawa are the proper sources with which to communicate. Other fields of effort, such as the administration of lands and natural resources, education, roads and highways, and health and hospitals, are the responsibility of the provinces under the British North America Act, but certain Federal Departments are also concerned with specific aspects of these subjects and, as is the case of the Dominion Bureau of Statistics, in the co-ordinating and presentation of the material for Canada as a whole.

As a general guide to the public, it may be pointed out that questions relating to the actual development and administration of resources should be forwarded to the particular provinces concerned. The Federal Government, while not administering the resources within provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data, on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on
a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of live stock and the improvement of strains, on agricultural marketing and crop yields are cases in point; in forestry, questions of forest research, forest fire protection and reforestation offer good examples. Where inquiries are directed to federal sources, they should, as a general rule, be sent to the individual departments listed in the Directory for information not of a statistical nature; in the case of statistical information inquiries should be addressed to the Dominion Bureau of Statistics, Ottawa.
'Bearing these points in mind, the reader will be able to apply the information given in the Directory to best advantage.

The Queen's Printer and Controller of Stationery, Ottawa, charged, under the Public Printing and Stationery Act, with responsibility for the sale and free distribution of government publications, issues a Monthly Catalogue of all Federal Government publications, regular selected titles, bulletins and library check lists. The Monthly Catalogue, including the price list, is consolidated annually, classified on a departmental basis adequately indexed and cross-referenced, and is obtainable on application at $\$ 3.00$ a year. The Supervisor of Government Publications, Ottawa, also publishes subject catalogues and special bulletins advertising new government publications. The titles of some publications produced for free distribution only, and obtainable from the issuing federal departments, are listed in the Monthly Catalogue published by the Queen's Printer. Lists of publications are often available, too, from the individual Departments.

Most provincial government printed publications may be obtained from the Queen's Printer of the Province concerned. Inquiries should be addressed to the provincial capital cities:-

| Newfoundland. | .St. John's | Ontario | Toronto |
| :---: | :---: | :---: | :---: |
| Prince Edward | . Charlottetown | Manitoba | Winnipeg |
| Nova Scotia | .Halifax | Saskatchewan. | Regina |
| New Brunswick | .Fredericton | Alberta | Edmonton |
| Quebec... | .Quebec | British Columbia | Victoria |

Inquiries about the Yukon and Northwest Territories should be addressed to Ottawa, Ont.

## PART II.-SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

As it is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions, the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1952-53 Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population," which are automatically revived when later Census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk (*) are available in reprint form from the Dominion Statistician at the price quoted.

## PART IV.-FEDERAL LEGISLATION, 1951 AND 1952

This classified list of federal legislation has been compiled from the Statutes. Naturally, in summarizing material of this kind it is not always easy to convey the full implication of the legislation. The reader who is interested in any specific Act is, therefore, referred to the Statutes of Canada at the given volume and chapter.

# Legislation of the Fourth Session of the Twenty-first Parliament, Jan. 30, 1951, to Oct. 9, 1951 

| Subject, Chapter and Date of Assent | Synopsis |
| :---: | :---: |
| 15 George VI. |  |
| $\begin{aligned} & \text { Agricuiture- } \\ & 3 \text { Mar. } 21 \end{aligned}$ | An Act to Amend the Canadian Wheat Board Act, 1985. This amendment redefines the "pool period" and adds a proviso regarding the adjustment of accounts on the transfer of wheat from one pool period to another. |
| 6 Mar. 21 | An Act to A mend the Farm Improvement Loans Act, 1944, revises Sects. 4 and 5 of the Act relating to the limitations of amounts of liability to banks in respect of improvement loans. |
| 39 June 30 | The Canada Dairy Products Act establishes national standards for dairy products and regulates interprovincial and international trade in dairy products. |
| 58 June 30 | An Act to Amend the Prairie Farm Rehabilitation Act. By this amendment, no project may be undertaken involving an expenditure of over $\$ 10,000$ in a year without the consent of the Governor in Council. | subject, Chapter and Date of Assent | Synopsis |
| :---: | :---: |
| Finance--concl. 24 June 18 | An Act to Amend the Dominion Succession Duty Act makes a number of changes to correct inaccuracies and anomalies that have shown up as a result of the experience of recent years. |
| 26 June 18 | An Act to Amend the Excise Act, 1994. The amendments include changes in the definitions of spirits and tobacco and are concerned mainly with penalties under the Act. |
| 27 June 18 | An Act to Amend the Excise Act. This Act implements excise and sales tax changes contained in the Budget. |
| 29 June 18 | An Act to Amend the Income Tax Act implements the Budget proposals regarding changes in the income tax. |
| 30 June 18. | An Act to Amend the Industrial Development Bank Act gives authority to the Bank financially to assist commercial air services operating in Canada in the same manner as other industrial enterprises, and increases from $\$ 25,000,000$ to $\$ 50,000,000$ the limitation of aggregate financial assistance that can be extended to borrowers in individual amounts exceeding $\$ 200,000$. |
| 32 June 18 | An Act to Amend the Tariff Board Act provides for salary increases for members of the Board. |
| 40 July 4 | The Currency, Mint and Exchange Fund Act. This Act brings up to date the provisions of the previous Currency Act as well as the legislative provisions relating to the Royal Canadian Mint. The Foreign Exchange Control Act is repealed and in its stead the general provisions of the Exchange Fund Act 1935 are brought back into force. |
| 49 July 4 | The Tax Rental Agreements Act, 1958 authorizes the Federal Government to enter into taxation agreements with the provinces for the five-year period ending Mar. 31, 1957. Under the agreements, the provinces give the Federal Government almost exclusive use of the personal income, corporation and inheritance tax fields. In return the provinces receive payments based on population and value of gross national production. |
| 55 July 4 | The Appropriation Act, No. 4, 195\%, grants certain sums of money to be paid out of the Consolidated Revenue Fund for defraying stated expenses of the public service for 1952-53. |
| ${ }_{42}^{\text {Immigration- }}$ July 4 | The Immigration Act revises completely the legislation regarding the entry of immigrants into Canada. Previous legislation is repealed. |
| ${ }_{11}^{\text {Justice- May }} 29$ | An Act to Amend the Prisons and Reformatories Act provides for the issuing of licences of leave to women and girls confined to the Interprovincial Home for Young Women at Coverdale, N.B., in cases where good conduct has been demonstrated. |
| 12 May 29 | An Act to Amend the Supreme Court Act advances the date of opening of the first session of the Supreme Court in each year. |
| 22 June 18 | An Act to Amend the Criminal Code (Race Meetings) changes from a graduated scale to a fixed scale the percentages that may be retained by racing associations from the money wagered on each race. |
| 39 July 4 | An Act to Amend the Combines Investigation Act and the Criminal Code. In cases where corporations are found guilty of an offence under Sect. 498 or 498 A of the Criminal Code or of an offence under Sect. 32 of the Combines Investigation Act, provision is made for the imposition of a penalty not only on the Corporation but also on any officer or director who acquiesces or assents in the offence. |
| ${ }_{51}^{\text {Labour- July }} 4$ | An Act to Amend the Unemployment Insurance Act, 1940, among other amendments, raises unemployment insurance benefits without increasing contributions and reduces the waiting period by three days. |
| $\begin{aligned} & \text { Mines and } \\ & \text { Resources- } \\ & 25 \text { June } \end{aligned}$ | An Act to Amend the Emergency Gold Mining Assistance Act extends the provisions of the Act to the years 1952 and 1953. |
| 41 July 4 | An Act to Amend the Eastern Rocky Mountain Forest Conservation Act. This amendment extends for one year to Apr. 1, 1955. the capital expenditure period under the Act and increases the yearly allotment from $\$ 300,000$ to $\$ 450,000$. The Government of Alberta agrees to assume full maintenance costs but the capital expenditure remains the responsibility of the Government of Canada. |

# Legislation of the Sixth Session of the Twenty-first Parliament, Feb. 28, 1952, to Nov. 20, 1952-continued 

| Subject. <br> Chapter and Date of Assent |  |  | Synopsis |
| :---: | :---: | :---: | :---: |
| $\begin{array}{lll}\text { Defence }^{\text {National }} \\ 6 & & \\ \text { May } & 29\end{array}$ |  |  |  |
|  |  |  | The Canadian Forces Act, 1958. Amendments under this Act to the National Defence Act, the Civil Service Superannuation Act, the Defence Services Pension Act and the Senate and House of Commons Act are largely technical in nature. |
| 33 | July | 4 | An Act to Amend the Army Benevolent Fund Act, 1947, increases the rate of interest to be credited to the Fund from $2 \frac{1}{2}$ p.c. to $3 \frac{1}{2}$ p.c. per annum |
| 38 | July | 4 | An Act to Amend the Civilian War Pensions and Allowances Act amends Schedules I and II of the Act to provide increases comparable to those made in the basic scale of pensions under the Pension Act. |
| 47 | July | 4 | An Act to Amend the Pension Act adjusts the allowance for excessive wear and tear of a pensioner's clothing on account of amputation or use of appliances and makes more adequate provision for dependants of a deceased member of the forces. |
| 52 | July | 4 | An Act to Amend the Veterans Benefit Act, 1951, extends until the last day of the first session of Parliament, 1953, the date of expiration of the Act. |
| 53 | July | 4 | An Act to Amend the Veterans Insurance Act permits the payment to an estate of the face value of the insurance policy in cases where the proceeds of the policy pass to the estate of the insured. |
| 54 | July | 4 | The War Veterans Allowance Act, 1952, revises completely the legislation contained in the War Veterans' Allowance Act, 1946, and includes certain new provisions for increased allowance, for raising the amount of permissible income and for assisting employable veterans. |
| Trade and Commerce7 May 29 |  |  |  |
|  |  |  | An Act to Amend the Export and Import Permits Act increases from $\$ 500$ to $\$ 5,000$ the maximum penalty for infractions of the Act and extends from six to twelve months the time allowed for the launching of prosecutions. |
| 21 | June | 18 | An Act to Amend the Cold Storage Act gives authority to increase from 30 p.c. to $33 \frac{1}{\frac{1}{3}}$ p.e. the subsidy on warehouse projects approved by government engineers and authorizes the payment of the subsidies as soon as the buildings are completed and approved. |

Brooke Claxton, Minister of National Defence, was Canada's delegate. Dec. 15, George S. Currie Report on Investigation of the Army Works Services tabled in the House of Commons. Dec. 16, Admiral Earl Mountbatten appointed NATO Commander-in-Chief in the Mediterranean. Dec. 22, Prime Minister St. Laurent announced an Act providing for the construction of a National Library.

## APPENDIX I

## Redistribution of the Federal Parliamentary Constituencies, 1952

Results of the Census of 1951 necessitated a readjustment in the representation of the House of Commons pursuant to the provisions of the British North America Acts, 1867 to 1951 and a Bill (No. 8) was introduced by the Prime Minister on Mar. 10, 1952, entitled: "The Representation Act, 1952". This Bill was withdrawn on June 25, 1952.

Between these two dates the Committee on Redistribution recommended to the House the presentation of two Bills: (1) a Bill to amend the British North America Act to provide for new rules with regard to redistribution; and (2), a new Representation Bill which would be in accordance with those rules.

The British North America Act, 1952 (Bill 331) was introduced in the House on June 10, 1952, and received Royal assent on June 18, 1952. The Minister of Citizenship and Immigration, the Hon. Walter E. Harris, stated on its second reading: "The opportunity to amend the B.N.A. Act and our constitution by an act of this Parliament arose in 1949 by the passing of an address requesting the insertion in the B.N.A. Act of a clause which would permit the amendment of the constitution by an act of this Parliament".

The new Act (I Eliz. II, c. 15) repeals Sect. 51 of the British North America Act and substitutes therefor as follows:-
"Section 51.-(1) Subject as hereinafter provided, the number of members of the House of Commons shall be two hundred and sixty-three and the representation of the provinces therein shall forthwith upon the coming into force of this section and thereafter on the completion of each decennial census be readjusted by such authority, in such manner, and from such time as the Parliament of Canada from time to time provides, subject and according to the following rules:

1. There shall be assigned to each of the provinces a number of members computed by dividing the total population of the provinces by two hundred and sixty-one and by dividing the population of each province by the quotient so obtained, disregarding, except as hereinafter in this section provided, the remainder, if any, after the said process of division.
2. If the total number of members assigned to all the provinces pursuant to rule one is less than two hundred and sixty-one, additional members shall be assigned to the provinces (one to a province) having remainders in the computation under rule one commencing with the province having the largest remainder and continuing with the other provinces in the order of the magnitude of their respective remainders until the total number of members assigned is two hundred and sixty-one.
3. Notwithstanding anything in this section, if upon completion of a computation under rules one and two, the number of members to be assigned to a province is less than the number of senators representing the said province, rules one and two shall cease to apply in respect of the said province, and there shall be assigned to the said province a number of members equal to the said number of senators.
4. In the event that rules one and two cease to apply in respect of a province then, for the purpose of computing the number of members to be assigned to the provinces in respect of which rules one and two continue to apply, the total population of the provinces shall be reduced by the number of the population of the province in respect of which rules one and two have ceased to apply and the number two hundred and sisty-one shall by reduced by the number of members assigned to such province pursuant to rule three.
5. On any such readjustment the number of members for any province shall not be reduced by more than fifteen per cent below the representation to which such province was entitled under rules one to four of this subsection at the last preceding readjustment of the representation of that province, and there shall be no reduction in the representation of any province as a result of which that province would have a smaller number of members than any other province that according to the results of the then last decennial census did not have a larger population; but for the purposes of any subsequent readjustment of representation under this section any increase in the number of members of the House of Commons resulting from the application of this rule shall not be included in the divisor mentioned in rules one to four of this subsection.
6. Such readjustment shall not take effect until the termination of the then existing Parliament.
(2) The Yukon Territory as constituted by chapter forty-one of the statutes of Canada, 1901, shall be entitled to one member, and such other part of Canada not comprised within a province as may from time to time be defined by the Parliament of Canada shall be entitled to one member."

On June 27, 1952, the Hon. Walter E. Harris introduced Bill 393, an Act to readjust the Representation in the House of Commons. Royal assent was given on July 4 to the Representation Act, 1952 (I Eliz. II., c. 48). As a result of this legislation the total membership of the House of Commons was increased to 265 members, to be effective at the following General Election. The representation of the various provinces will be, according to Sect. 2 of the Act as follows:-

Sect. 2. Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members

## APPENDIX II

## Provincial Governments

## 1.-Members of the Twenty-Second Ministry of New Brunswick, as at Dec. 1, 1952

(Party standing at latest General Election, Sept. 22, 1952: 36 Conservatives, 16 Liberals.)

[^0]:    * Prepared by the Director of the Economic Division, Department of Trade and Commerce, Ottawa.

[^1]:    ${ }^{1}$ These are intercensal estimates adjusted after the 1951 Census. ${ }^{2}$ Exclusive of the Territories.
    ${ }^{3}$ Exclusive of Newfoundland. 6 Year ended Mar. 31 . ${ }^{6}$ By place of occurrence prior to 1041; by place of rethenee 1041-50. ©For reporting hospitals only; private and federal hospitals excluded. 7 Figares

[^2]:    ${ }^{1}$ All types of educational institutions. changes in classification, (see D.B.S. Survey of Production, 1958-1950). ${ }^{5}$ Exclusive of Newfoundland. ${ }^{6}$ Figures for the decennial census years 1871-1 Exclusive of the Territories. years; those for 1871 are for the four original provinces only. ${ }^{7}$ Cwt. ${ }_{-1}{ }_{8}$ Includes other field crops e.g., rye and flaxseed, not included above.
    ${ }^{9}$ On farms only.
    ${ }^{10}$ Figures for the decennial census years

[^3]:    1831-1921 are for the next preceding years. In the Censuses of 1881 and 1891 values only were given of factory butter and cheese; quantities have been calculated by reckoning cheese at 10 cents per lb . and butter at 25 cents per lb . ${ }^{11}$ Data shown for 1949-51 represent cheddar and other cheese made from whole milk; prior to 1942 the figures included other cheese for Quebec only. ${ }^{2}$ Fiscal years prior to 1931 .

[^4]:    ${ }^{1} 1876 . \quad 21875 . \quad{ }^{3}$ Duplication eliminated. $\quad{ }^{4}$ Fiscal years. ${ }^{6}$ Fiscal year prior to 1941. ${ }^{6}$ In foreign service, which includes sea-going and inland international after $1936 .{ }_{8}{ }^{7}$ Prior to 1941, Temiskaming and Northern Ontario Railway Commission excluded. ${ }^{8}$ As at June 30.

[^5]:    ${ }^{9}$ Excludes rural lines in Saskatchewan.
    ${ }^{11}$ Estimated on intercensal survey.

[^6]:    ${ }^{1}$ Census figures for calendar years 1930 and 1940, respectively.
    ${ }^{2}$ Includes Newfoundland.
    ${ }^{3}$ Fiscal years prior to 1921 . Copper, fine, contained in ore, matte, regulus, etc.

[^7]:    ${ }^{1}$ Active assets only. $\quad{ }^{2}$ Fiscal year ended nearest Dec. 31 of the year stated. ${ }^{3}$ Not comparable with later years. As at June 30 from 1871 to 1901. Monthly averages from 1911 to 1951.
    ${ }^{5}$ Includes

[^8]:    * Revised by the Geographical Branch, Department of Mines and Technical Surveys, Ottawa.
    $\dagger$ Taken from the United Nations Statistical Year Book, 1949-50.

[^9]:    ${ }^{1}$ Total includes 463 sq. miles in U.S.A.

[^10]:    ${ }^{1}$ Areas are approximate and are exclusive of those portions of the basins of all rivers that lie in United States territory.

[^11]:    ${ }^{2}$ This peak is on the interprovincial boundary between Alberta and British Columbia. $\quad{ }^{2}$ This peak is on the interprovincial boundary between British Columbia and Alaska. ${ }^{3}$ All the listed peaks

[^12]:    
    

[^13]:    ${ }^{1}$ Excludes the coast of Labrador.
    ${ }^{2}$ Does not add to total for Canada due to fractions of sq. miles. ${ }^{3}$ Includes the Gatineau Park ( 50 sq. miles) and the Quebec Battlefields Park ( 0.36 sq . miles) which are under federal jurisdiction but which are not technically National Parks. ${ }^{4}$ Less than 1 sq. mile. 5 Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, as game sanctuaries in which hunting and trapping is otherwise forbidden, and as reserves for reindeer grazing, but which are not regarded as National Parks. cludes Wood Buffalo Park ( 13,675 sq. miles) which, although reserved by the Federal Government, is not administered as a National Park. ${ }_{7}$ That portion of Wood Buffalo Park in N.W.T. ${ }^{\text {E }}$ Includes 1,392 sq. miles of unsurveyed lands-Provincial Park areas.

[^14]:    ${ }^{1}$ Not including area of Gatineau Park, 50 sq. miles in extent (see p. 33). Lac La Ronge unsurveyed lands, 1,392 sq. miles in extent.

[^15]:    ${ }^{1}$ Excludes 16 small parks which are mainly of local interest (see pp. 26-27 of the 1950 Year Book)

[^16]:    ${ }^{1}$ Excludes 31 parks which are mainly of local interest (see pp. 27-30 of the 1950 Year Book).

[^17]:    * Revised by the Federal District Commission, Ottawa.
    $\dagger$ See p. 83 for history, organization and activities of the Commission.

[^18]:    * Revised by the Canadian Wildlife Service, Department of Resources and Development.

[^19]:    * Prepared under the direction of Major-General R. A. Young, Deputy Minister, Department of Resources and Development, by Victor E. F. Solman, Ph.D., Chief Biologist, Canadian Wildlife Service.

[^20]:    * Extracts from the Angler's Guides for the Mountain, Prairie, and Eastern National Parks.

[^21]:    * See the collection of constitutional documents entitled British North America Act and Amendments, 1867-1948 (King's Printer, 1948, Ottawa) for some of these laws. A recent and important addition is 13 Geo. VI, c. 37, which gives the Supreme Court of Canada the exclusive ultimate appellate civil and criminal jurisdiction in Canada and abolishes appeals to the Privy Council in London, England.
    $\dagger$ See the collection of cases before the Juridical Committee of the Privy Council in three volumes: Cameron, The Canadian Constitution (Butterworth, 1915, Winnipeg); Cameron, The Canadian Constitution, Vol. II (Carswell, 1930, Toronto); and Plaxton, Canadian Constitutional Decisions (King's Printer, 1939,
    Ottawa).
    $\ddagger$ See pamphlet entitled Letters Patent constituting the Office of Governor General in Canada, effective October 1, 1947, with Appendices (King's Printer, 1947, Ottawa).

[^22]:    *For the power of the Federal Parliament to amend the constitution of Canada, see 'The British North America (No. 2) Act, 1949', printed in VoI. II of the Statutes of Canada for 1949.

[^23]:    * Brought up to Mar. 31. 1952; Federal Government appointments made between that date and the closing off of the volume for press appear in the Annual Register at the end of this publication.

[^24]:    ${ }^{1}$ As in the case of Privy Councillors of the United Kingdom, members of Her Majesty's Privy Council for Canada take rank inter se according to the dates of their being sworn in.

    2 Ranks as a member of the Cabinet.
    ${ }^{3}$ Ranks as the Prime Minister of Canada.

[^25]:    ${ }^{1}$ Successful candidate. ${ }^{2}$ Population figures based on the 1945 Census of Newfoundland
    ${ }^{2}$ Each elector could vote for two candidates. $\quad$ Died Sept. 30, 1950, see Table 10 for byelection.

[^26]:    ${ }^{1}$ Successful candidate. $\quad{ }^{2}$ Election declared void Feb. 23, 1950, see Table 10 for by-election. p. 59. ${ }^{3}$ Each elector could vote for two candidates. ${ }^{4}$ Appointed to the Senate, May 2, 1950, see Table 10 for by-election. ${ }^{5}$ Resigned Mar. 5 , 1952. appointed Judge to the Supreme Court of ${ }_{7}$ New Brunswick. Seat vacant at Mar. 31, $1952 . \quad{ }^{6}$ Died Aug. 29, 1949, see Table 10 for by-election. ${ }^{7}$ Died Jan. 3, 1952. Seat vacant at Mar. 31, $1952 .{ }^{8}$ Died Jan. 27, 1952. Seat vacant at Mar. 31, 1952. 9 Appointed Clerk of the House of Commons Aug. 16, 1949, see Table 10 for by-election. ${ }^{10}$ Resigned June 23, 1950, to become Leader of the Quebec Provincial Liberal Party, see Table 10 for by-election. ${ }^{11}$ Appointed to Superior Court at Quebec, Aug. 24, 1949, see Table 10 for by-election.

[^27]:    ${ }^{1}$ Successful candidate.
    ${ }^{2}$ Died July 25, 1950, see Table 10 for by-election.
    ${ }^{3}$ Died Mar. 15 ,
    1950, see Table 10 for byelection. Appointed to Superior Court at Montreal, Aug. 24, 1949, see Table 10 for by election. Seat vacant at Mar. 31, $1952 . \quad{ }^{8}$ Resigned Aug. 23, 1950, appointed Lieutenant-Governor of Quebec, see Table 10 for by-election.

[^28]:    ${ }^{1}$ Successful candidate.
    ${ }^{2}$ Appointed to the Supreme Court of Ontario, Jan. 18, 1950, see Table 10 for by-election. ${ }^{3}$ Resigned Oct. 9, 1951, to become Leader of the Ontario Provincial Liberal Party. Seat vacant at Mar. 31, 1952.

[^29]:    ${ }^{1}$ Successful candidate.
    Seat vacant at Mar. 31, 1952.
    ${ }^{2}$ Resigned Jan. 24, 1952. Appointed Lieutenant-Governor of Ontario. ${ }^{4}{ }^{3}$ Died Mar. 19, 1951, see Table 10 for by-election. Aug. 1, 1950, see Table 10 for by-election. ${ }^{2}$ Died' Feb. 6, 1950, see Table 10 for by-election.
    ${ }^{6}$ Died Aug. 21, 1949, see Table 10 for by-election.
    ${ }^{7}$ Died Nov. 24, 1950, see Table 10 for by-election.
    ${ }^{3}$ Resigned Apr. 30, 1951, see Table 10 for by-election.

[^30]:    ${ }^{1}$ Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1949, 25,505 voters on the list cast 41.627 votes
    ${ }^{2}$ Each voter in the double-member constituency of Halifax, N.S., had two votes; in 1949, 90,803 voters on the list cast 114, 201 votes.
    ${ }^{3}$ Yukon-Mackenzie River Constituency includes part of Northwest Territories.

[^31]:    ${ }^{1}$ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).
    ${ }^{2}$ Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45), and diminished Mar. 1, 1927, in consequence of the Award of the Judicial Committee of the British Privy Council, whereby approximately $112,000 \mathrm{sq}$. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.
    ${ }^{2}$ Extended by the Extension Boundaries Act of Manitoba, 1881, and the Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).
    ${ }_{4}$ Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional Districts of Assiniboia, Athabaska, Alberta and Saskatchewan, established May 17, 1882, by minute of Canadian Privy Council, concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.
    ${ }^{6}$ Established as a provisional District in the Northwest Territories in 1895 and proclaimed the Yukon Judicial District on Aug. 16, 1897; was separated from the Northwest Territories and constituted the Yukon Territory in June 1898.

    - Rupert's Land, acquired under the Rupert's Land Acts 1867-68, and the undefined Northwestern Territory were transferred by the Imperial Government to be admitted into union with Canada as the North West Territories by Order in Council June 23, 1870 (effective July 15, 1870). The Northwest Territories were defined by the Northwest Territories Amendment Act, 1905, as that part of Rupert's Land and Northwestern Territory except such portions thereof as form Manitoba, Saskatchewan, Alberta, the District of Keewatin and Yukon Territory. In 1912, part of Rupert's Land (the District of Ungava) was annexed to Quebec and the remainder, south and west of James and Hudson Bays as far north as the 60th parallel, to Ontario and Manitoba.
    ${ }^{7}$ Established as provincial Districts in 1895.
    ${ }^{8}$ The District of Keewatin, created in 1876, was withdrawn from the Government of the Northwest Territories until July 24, 1905, when it was enlarged by those portions of the Districts of Saskatchewan and Athabaska not included in the Province of Saskatchewan and placed under the jurisdiction of the reorganized Northwest Territories.

[^32]:    *A 1951 amendment to the Yukon-Act ( 15 Geo. VI c. 23) proclaimed in August 1952, provides for five elective members on the Council.

[^33]:    * Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^34]:    - Municipalities are summarized by type of organization on p. 80.

[^35]:    * Commissions constituted under Part I of the Federal Inquiries Act.

[^36]:    * Compiled from information supplied by the respective Departments. See Chap. XXVII,'Part IV, for current legislation.

[^37]:    1 The Minister of the Department of Resources and Development administers the National Film Act, 1950, c. 44, but the Board is not a unit of that Department.
    ${ }_{2}$ Not included in Revised Statutes of 1927 .

[^38]:    ${ }^{1}$ Administered by the Minister of Resources and Development through the Central Mortgage and Housing Corporation. ${ }_{2}$ The Secretary of State administers the Civil Service Commission Act, R.S.C. 1927, c. 22, with amendments, but the Commission is not a unit of that Department.

[^39]:    ${ }^{1}$ The Canadian Broadcasting Act, 1936, c. 24, as amended, is administered by the Minister of Transport but the CBC is not a unit of that Department. ${ }^{2}$ The Pension Act and the Civilian War Pensions and Act by the War Veterans' Allowance Board.

[^40]:    *Text revised by M. M. Maclean, Secretary of the Civil Service Commission of Canada, and statistics prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^41]:    ${ }^{1}$ Includes living allowances. $\quad{ }^{2}$ Salaries of aides-de-camp are included but not their number.
    ${ }^{2}$ No salaries reported due to adjustments for year. $\quad{ }^{2}$ Does not add due to adjustments of $\$ 2,158$.

[^42]:    ${ }^{1}$ Statistics do not include the numbers of revenue postmasters earning less than $\$ 3,000$. It should also be noted that Post Office expenditures are balanced by receipts from the public. ${ }^{2}$ Total only for 1950 as branches are not comparable with 1951 . ${ }^{8}$ Salaries for this office are paid out of their administration funds and not out of parliamentary funds.

[^43]:    * Prepared in the Department of External Affairs by F. H. Soward.

[^44]:    * It should be noted that Sir Robert and his Canadian colleagues were also members of the British Empire delegation, thus giving Canada double representation at the Conference. It was largely through that delegation that Canada's influence was exercised at Paris.

[^45]:    ${ }^{1}$ Revised as at July 31, 1952.
    ${ }^{2}$ For High Commissioners and Chargé d'Affaires ad interim, this date is the date of assumption of duties.

    98452-8

[^46]:    - Prepared with the co-operation of the Department of External Affairs, Ottawa.

[^47]:    - Article 1 further makes clear that the Treaty does not conflict with the United Nations Charter but rather supplements it.

[^48]:    *Obtainable from the Queen's Printer, Ottawa.

[^49]:    * This Chapter has been revised in the Census (Demography) Division, Dominion Bureau of Statistics.

[^50]:    ${ }^{1}$ Based on estimates. $\quad{ }^{2}$ Calculated on the basis of $2,003,319 \mathrm{sq}$. miles which excludes the land area of Newfoundland. $\quad{ }^{2}$ Includes Newfoundland. ${ }^{4}$ Total includes 485 members of the Royal Canadian Navy recorded separately in 1921 . $\quad$ Calculated on the basis of $3,462,103$ sq. miles which excludes the land area of Newfoundland.

[^51]:    ${ }^{1}$ Newfoundland not included.

[^52]:    ${ }^{1}$ Census taken by the Newfoundland Government in 1945; 1941 figures not available.

[^53]:    ${ }^{1}$ Includes 485 members of the Royal Canadian Navy who were recorded separately in 1921. ${ }^{2}$ Total does not include Newfoundland. ${ }^{2}$ Figures for N

[^54]:    ${ }^{1}$ Exclusive of the Yukon and Northwest Territories. subject to adjustment as later data are made available.

[^55]:    ${ }^{1}$ Includes Republic of Ireland in 1931 and 1911. cludes Denmark, Iceland, Norway and Sweden.
    ${ }^{2}$ Includes Lithuania and Ukraine. ${ }^{\mathbf{3}}$ In-
    ${ }^{4}$ Includes Austria, Czechoslovakia, Hungary, Yugoslavia, Poland and Roumania. "Includes "birthplace not stated".

[^56]:    * Prepared under the direction of Laval Fortier, Deputy Minister, Department of Citizenship and Immigration. This material brings up to date the more detailed review given in the 1951 Year Book, pp. 1125-1133.

[^57]:    ${ }^{1}$ Includes areas under water and waste land.

[^58]:    ${ }^{1}$ Civilian population only. $\quad{ }^{2}$ Excludes Fezzan which is under French military occupation. ${ }^{3}$ Includes the Princely States of Hyderabad and Kashmir-Jammu. 4 Includes Christmas Island and Cocos-Keeling Islands. 8 Excluding full-blooded aborigines, estimated at 47,000 in 1944. - Including Phoenix Island group.
    ${ }^{7}$ Estimated population 130 in 1950.

[^59]:    ${ }^{*}$ Revised in the Immigration Branch under the direction of Laval Fortier, Deputy Minister, Department of Citizenship and Immigration.

[^60]:    ${ }^{1}$ Figures do not include U.S.A. citizens who have entered Canada on permits and have applied for permission to remain in the country. Total U.S.A. immigrants arriving in Canada given in Table 2, p. 166, include this class.

    ## ${ }^{2}$ Estimated.

    ${ }^{3}$ Including Newfoundland.

[^61]:    * Prepared in the Canadian Citizenship Branch under the direction of Laval Fortier, Deputy Minister, Department of Citizenship and Immigration.

[^62]:    * Persons in the above category were automatically restored to British nationality by the British Nationality Act. 1948.
    $\dagger$ The forergn countries, under the laws of which a woman does not acquire the citizenship of such countries on marriage, are: Argentina, Brazil, Chile, Colombia, Ecuador, Guatemala, Morocco, Palestine, Panama, Paraguay and Uruguay.

[^63]:    *Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

[^64]:    ${ }^{1}$ Figures for Newfoundland are not included in this total except for the years 1949 and 1950.

[^65]:    ${ }^{1}$ Under one year of age. ${ }^{2}$ Figures for Newfoundland are not included in this total except for the years 1949 and 1950.

[^66]:    ${ }^{1}$ As at the 1941 Census. of the period.
    ${ }^{2} 1945$ Census of Newfoundland.
    ${ }^{2}$ Not available for one year

[^67]:    ${ }^{1}$ These figures or percentages are of the children whose fathers and mothers were born in the same country. The difference between this figure and the total number of births represents the number of children whose parents were born in different countries.

[^68]:    ${ }^{1}$ 1949. ${ }^{2}$ Excluding infants born alive who died before registration of birth. ${ }^{3}$ Registra-
    tion area only.

[^69]:    ${ }^{1}$ Exclusive of theTerritories.

[^70]:    ${ }^{1}$ Figures for Newfoundland are not included in these totals except for the years 1949 and 1950.

[^71]:    ${ }^{1}$ Exclusive of the Territories．

[^72]:    ${ }^{1}$ Exclusive of the Territories.

[^73]:    ${ }^{1}$ Exclusive of Newfoundland.

[^74]:    ${ }^{1}$ Exclusive of the Territories.
    ${ }^{2}$ By a new rule adopted in August 1948, a Decree Nisi became absolute at the end of three months. As a result, a number of divorces did not become effective until the following year.

[^75]:    ${ }^{1}$ Not reportable in New Brunswick. ${ }^{2}$ Including 1 case where type was not stated. ${ }^{\mathbf{3}}$ Reporting not compulsory in New Brunswick and Manitoba.

    4 Including 35 cases where type was not ${ }^{5}$ Type not segregated.

[^76]:    * Contributed by Dr. G. F. Davidson, Deputy Minister of Welfare, Department of National Health and Welfare.

[^77]:    *The Department of National Health and Welfare Act (8 Geo. VI, c. 22, Sect. 5) states, in part: "The duties, powers and functions of the Minister shall extend to and include all matters relating to the promotion or preservation of the health, social security and social welfare of the people of Canads over which the Parliament of Canada has jurisdiction".

[^78]:    - Sections 1 and 2 of this Part were prepared by the Research Division, Department of National Health and Wellare, Ottawa.

[^79]:    * Except where otherwise indicated, this Section has been revised in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics.

[^80]:    ${ }^{1}$ Excluding incurable (chronic diseases), mental and tuberculosis institutions. $\quad{ }^{2}$ Excluding units in general hospitals. ${ }^{3}$ Three units of Provincial Infirmary. ${ }^{4}$ Includes three private institu-tions-one in Ontario, one in Quebec and one in British Columbia (not otherwise listed in this table). ${ }^{6}$ Excluding tuberculosis units.

[^81]:    ${ }^{1}$ Excluding units in general hospitals.
    one in Quebee and one in British Columbia
    ${ }^{3}$ One hospital in each of the Provinces of Ontario, Manitoba and Saskatchewan did not report.

[^82]:    ${ }^{1}$ Includes beds, cribs and bassinets. and incurable units.
    ${ }^{2}$ Includes newborn.
    ${ }^{3}$ Exclusive of tuberculosis

[^83]:    ${ }^{1}$ Includes newborn. $\quad 2$ Includes probationers.

[^84]:    ${ }^{1}$ Perquisites, out-patient expenditures and non-operating expenditures deducted. ${ }^{2}$ Includes all

[^85]:    * Revised in the Department of Veterans Affairs, Ottawa.

[^86]:    ${ }^{1}$ Exclusive of newborn．
    ${ }^{2}$ Exclusive of bassinets．
    ${ }^{8}$ In addition to staff of Hotel Dieu Hospital．Exclusive of one hospital in Ontario，one in Manitoba and one in Saskatchewan which did not report． ${ }^{5}$ Tubercular patients only．

[^87]:    * Except as otherwise indicated, this Part was prepared in the Research Division, Department of National Health and Weliare, Ottawa.

[^88]:    * Prepared in the Indian Affairs Branch, Department of Citizenship and Immigration, Ottawa.

[^90]:    - Revised in the Government Annuities Branch, Department of Labour, Ottawa.

[^91]:    Population of June 1951.
    ${ }^{2}$ In January, February and March 1952 there were no assistance payments in the Northwest Territories.

[^92]:    ${ }^{1}$ For the month of March of the fiscal year indicated.
    ${ }^{2}$ Based on population estimate for preceding year. ${ }^{3}$ Nine months ended Dec. 31; the figures are based on the number of pensioners in December, the average pension in December, and the population estimate for June 1950.

[^93]:    ${ }^{1}$ Population as at June 1, $1951 . \quad{ }^{2}$ Pensions granted under the Old Age Pensions Act and continued under authority of Sect. 13 (2) of the Blind Persons Act.

[^94]:    ${ }^{1}$ For the month of March of the fiscal year indicated.
    ${ }^{2}$ Based on population estimate for preceding June
    ${ }^{2}$ Nine months ended Dec. 31; the figures refer to the average pension in December, the number of pensioners in December, the population estimate for June 1950 and the federal contribution during the nine months ended Dec. 31, 1951.
    'A monthly pension of $\$ 40$ was paid to the one blind pensioner in the Northwest Territories.

[^95]:    ${ }^{1}$ No agreement. $\quad{ }^{2}$ At time of printing (July 1952), renewal was in process.

[^96]:    - Contributed by the various Branches of the Department of Veterans Affairs through G. G. Yates, Chief of Information.

[^97]:    * Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.
    $\dagger$ Revised by F. P. Varcoe, Deputy Minister, Department of Justice, Ottawa.

[^98]:    ${ }^{1}$ Estimates of population 16 years of age or over are not available for the Yukon and Northwest Territories.

[^99]:    ${ }^{1}$ Offences against females include: abortion, assault against females or wife, indecent assault, carnal knowledge, incest, procuration, rape, attempted rape and seduction.

    Table 3 shows that, in 1950, $64 \cdot 1$ p.c. of the persons convicted of indictable offences had not gone beyond elementary school grades in education, $40 \cdot 6$ p.c. were 24 years of age or younger, $11 \cdot 8$ p.c. were 45 years of age or over, and $75 \cdot 7$ p.c. lived in urban centres. Of these offenders, 93.8 p.c. were males; 88.9 p.c. were born in Canada; $55 \cdot 5$ p.c. were unmarried; 26.0 p.c. were recorded as labourers; and $7 \cdot 1$ p.c. had no employment.

[^100]:    ${ }^{1}$ Includes dismissals, disagreement of jury, stay of proceeding, no bill and detained because of insanity.

[^101]:    ${ }^{1}$ Offences against females include: abortion, assault against females, assault against wife, indecent as-

[^102]:    "The number of cases dealt with in a more or less formal manner has again shown a decrease. The probable reasons are as follows:
    (a) Commitments to the care and custody of the Director of Child Welfare of children from homes in which they could not receive even the semblance of proper guidance and their removal by him have prevented other children in the neighbourhood from being led along a course of behaviour unacceptable to society;
    (b) more guidance has been given by the Juvenile Court to children and their guardians as soon as its attention is focused on their behaviour in one way or another;
    (c) the Probation Officers of the Court have followed up and given friendly advice when the need was made apparent to them;
    (d) the efforts of the Domestic Workers of the Division of Child Welfare over recent years are beginning to show effects . . . . During the year the Worker dealt with the cases of 17 girls, achieving considerable success without actual court action.
    (e) the growth of improved community services, such as clubs, camps, brigades, etc.

[^103]:    "Probation continued to be the most common disposition of the court and in many cases where complaints were dismissed or disposed of by suspended sentence the court recommended that a friendly interest be shown in the child's activities for a certain period.
    " . About 74 p.c. of juveniles appearing in court were from one to six grades below the normal [school] grade for their respective ages."

[^104]:    *Revised by Commissioner L. H. Nicholson, M.B.E., of the Royal Canadian Mounted Police.

[^105]:    * Revised by Geo. A. Shea, O.B.E., Secretary-Treasurer, Chief Constables' Association of Canada.

[^106]:    ${ }^{1} 1945$ population.

[^123]:    * An account of the Canadian Arts Council and a list of its constituent bodies appears in the 1951 Year Book, p. 308.
    $\dagger$ Formed in 1947 with the object of improving the services of museums as educational institutions by promoting co-operation among themselves, by exchange with other countries and by the training and securing of expert staffs.
    $\ddagger$ Prepared under the direction of W. Arthur Irwin, Government Film Commissioner, National Film Board. The non-educational services of the National Film Board are outlined in Chapter XXVIII. See also Chapter II, p. 85.

[^124]:    *Prepared by Donald Manson, General Manager, Canadian Broadcasting Corporation.

[^125]:    "It has been suggested that television may eventually supersede radio; if this should happen, most of what we have said of radio programs will apply to television. Again, television may develop and come to concentrate on its more immediately popular capacities such as variety shows, and sports and news actualities, leaving more serious programs to radio and films. For such television programs it will be essential to ensure the maintenance of good taste and a suitable and adequate use of Canadian material and Canadian talent . . . . The element of control necessary and now exercised by governments and by producers in radio and in the cinema will be far more important and far more difficult to achieve in the persuasive and subtle medium of television. We think it important also that, as with radio, the Board of Governors of the CBC endeavour at once to import the best programs from, abroad, while developing so far as possible Canadian talent in Canadian programs."

[^126]:    ${ }^{\bullet}$ Prepared under the direction of E. W. R. Steacie, O.B.E., M.Sc., Ph.D., D.S.C., F.R.S.C., F.R.S., President, National Research Council.

[^140]:    ${ }^{1}$ Includes payments made under the Prairie Farm Assistance Act; other Government subsidies have been included in cash income from individual commodities.

[^141]:    ${ }^{1}$ Includes trucks and automobiles.
    ${ }^{2}$ Includes poultry and animals on fur farms.

[^142]:    ${ }^{1}$ Includes lactose.

[^143]:    ${ }^{1}$ Includes malted milk, cream powder and substandard products of a variable fat content, items that do not appear separately in this table.

    2 Includes milk by-products items not separately listed i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein and powdered whey in 1948-49. ${ }^{3}$ Includes ice cream and cottage cheese in terms of milk.

[^144]:    ${ }^{1}$ Exclusive of Newfoundland.

[^145]:    ${ }^{1}$ Average cash closing price, Winnipeg Grain Exchange to Sept. 27, 1943. Thereafter, initial payments plus additional payments to producers. ${ }^{2}$ Based on cash closing prices, Winnipeg Grain Exchange. From Aug. 1, 1944, to Oct. 22, 1947, prices of oats and barley remained at or near the government-imposed ceiling prices. From Oct. 23, 1947, to July 31, 1949, open market trading again prevailed. Equalization payments to producers are included for the crop years $1943-44$ to $1947-48$, inclusive. $\quad{ }^{3}$ Average cash closing price, Winnipeg Grain Exchange, except where otherwise noted. 4During March the Canadian Wheat Board assumed control of Canadian flaxseed stocks and the price was held at $\$ 1.64$ for remainder of crop year. ${ }^{5}$ Fixed price to growers.

    6 $\$ 5$ fixed price to growers plus 50 cents participation payment. $\quad 7$ Winnipeg Grain Exchange renewed trading in flaxseed cash and futures on Aug. 16, 1948. The Canadian Wheat Board was authorized to buy all flaxseed offered to it during the $1948-49 \mathrm{crop}$ year on the basis of $\$ 4$ per bushel for No. 1 C.W. in store Fort William-Port Arthur.

[^146]:    ${ }^{1}$ No sales reported.

[^147]:    ${ }^{1}$ Fluctuations in apparent per capita flour consumption are partly due to the fact that complete data on flour inventories in all positions are not available.
    ${ }^{2}$ Includes amounts dumped or fed to live stock for which no data are available.
    ${ }^{-}$Includes cream expressed as milk.
    ${ }^{2}$ Includes soybean flour.
    ${ }^{4}$ Exclusive of Newioundland.

    Consumption cf Meats.-Production of meats from slaughter, total supply, distribution and per capita consumption of meats and lard are shown in Table 47. All estimates are on a carcass-weight basis except canned meats which are in terms of product.

[^148]:    ${ }^{1}$ Edible meat excluding offal. $\quad{ }^{2}$ Basis cold dressed carcass weight. ${ }^{3}$ Includes edible offal of beef and veal. ${ }^{4}$ Quantity small; included with beef. ${ }^{5}$ Edible meat excluding fats and offal. 'The positive changes represent deductions from the available supply during a given year and therefore are subtracted; similarly, negative changes represent an increase in disappearance. 7 Includes rendered pork fat.

[^149]:    ${ }^{1}$ Estimated totals include allowances for any missing data for countries shown and for other producing countries not shown.

[^150]:    ${ }^{1}$ Estimated totals include allowances for any missing data for countries shown and for other producing countries not shown.

[^151]:    * Sections of this Chapter that deal with forestry and forest administration have been revised in the Forest Economics Section, Forestry Branch, Department of Resources and Development. Sections dealing with forest utilization and forest industries, except as otherwise noted, have been revised in the Forestry Section, Industry and Merchandising Division, Dominion Bureau of Statistics.
    $\dagger$ A more detailed discussion of forest regions is given in the Department of Resources and Development, Forestry Branch, Bulletin No. 89, A Forest Classification for Canada, by W. E. D. Halliday. Also see Chapter I for accounts of variations in Canadian physiography, climate, etc.

[^152]:    * Obtainable from the Queen's Printer, Ottawa, price $\$ 1.50$.

[^153]:    ${ }^{1}$ Newioundland not included. $\quad{ }^{2}$ Includes Newioundland and federal lands within provincial boundaries. ${ }^{3}$ Wood values are based on prevailing stumpage rates only; damage to soil, site quality, streamflow regulation, wildlife, recreational and similar values, is not included. ${ }^{\text {E Estimated charge }}$ for new equipment, improvements, maintenance, salaries, etc.

[^154]:    * Prepared by the Forest Economics Section, under the direction of Dr. D. A. Macdonald, Director, Forestry Branch, Department of Resources and Development, in co-operation with the Canadian Pulp and Paper Association.

[^155]:    ${ }^{1}$ Given in terms of rough or unpeeled wood.

[^156]:    ${ }^{1}$ Includes production in British Columbia, Manitoba, New Brunswick and Nova Scotia. ${ }^{2}$ In cludes Newfoundland.

    Manufacturing Processes.-Pulpwood logs come to the mills either by floating down a convenient stream, by truck, by railway, or by water transport. On arrival the bark is removed in barking drums. Slightly different wood-handling methods are employed by the Pacific coast mills.

[^157]:    ${ }^{1}$ Includes Newfoundland.

[^158]:    ${ }^{1}$ Includes Newfoundland.

[^159]:    * Except where otherwise noted, this Chapter has been revised in the Mining, Metallurgical and Chemical Section, Industry and Merchandising Division, Dominion Bureau of Statistics.
    $\dagger$ Prepared under the direction of Marc Boyer, Deputy Minister, Department of Mines and Technical Surveys, Ottawa, by G. H. Murray, Chief, Editorial and Information Division, and Mrs. M. J. Giroux of the Editorial staff.

[^160]:    - For developments in the Quebec-Labrador iron-ore field see p. 487.

    98452-32 $\frac{1}{2}$

[^161]:    * Revised under the direction of.Marc Boyer. Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

[^162]:    * Information supplied by the Departments of Mines or Mines Branches of the various provinces.

[^163]:    - Revised under the direction of Marc Boyer, Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.
    $\dagger$ Compiled from material supplied by the Provincial Governments.

[^164]:    ${ }^{1}$ Beginning with 1931, exchange equalization on gold production is included.
    ${ }^{2}$ Includes value of Newfoundland production from 1949.

[^165]:    ${ }^{1}$ Includes Newfoundland.

    - Includes calcium.
    ${ }^{2}$ Included with magnesium.
    ${ }^{3}$ Not released for publication.
    sulphuric acid made from smelter gases.

[^166]:    ${ }^{1}$ Includes 37 tons valued at $\$ 7,561$ produced in N.W.T. in 1942; and 6 tons valued at $\$ 1,428$ in 1944.

[^167]:    ${ }^{1}$ Includes also palladium, rhodium, ruthenium and osmium.
    ${ }^{2}$ The 1945 figures include an accumulated revision for previous years.

[^168]:    * Prepared by Dr. G. S. Hume, Director-General of Scientific Services, Department of Mines and Technical Surveys.

[^169]:    ${ }^{1}$ The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees and coal used in making coke, etc., less the tonnage of coal exported. ${ }^{2}$ Includes small tonnages from countries other than the United Kingdom and the United States. Deductions have been made from this column to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores. ${ }^{3}$ Figures based on estimates of population given at p. 143.

[^170]:    ' 'Production' as used here means quantity and value of sales. 350 lb.

[^171]:    ${ }^{1}$ Totals include minor items not specified.

[^172]:    ${ }^{1}$ Includes freight and smelter charges and cost of ores treated. less cost of process supplies, fuel, electricity, freight and smelter charges. both Saskatchewan and Alberta, is counted as one in the total.
    ${ }^{3}$ A plant, reported by

[^173]:    ${ }^{2}$ Gross value of shipments less
    ${ }^{3}$ Includes natural abrasives.

[^174]:    - Revised under the direction of Major-General H. A. Young, Deputy Minister, Department of Resources and Development, by Norman Marr, Chief, Water Resources Division.
    $\dagger$ More detailed information on the water-power resources of other countries is given in the Year Book 1951, pp. 531-533.

[^175]:    * In addition to water-power development, the construction of fuel-electric plants included: Nova Scotia Power Commission enlargement at Cantleys Point by $10,000 \mathrm{kw}$., with a further addition of $10,000 \mathrm{kw}$. under construction; Nova Scotia Light and Power Company Limited, $26,000 \mathrm{kw}$. at Halifax, and a second unit on order; Seaboard Power Corporation Limited, 18.750 kw . at Glace Bay, N.S., and a similar unit on order; New Brunswick Electric Power Commission, $6,250 \mathrm{kw}$. at Grand Lake, and a similar unit under order, New; Maritime Electric Company at Charlottetown, P.E.I., $7,500 \mathrm{kw}$.; Newfoundland Light and Power Company, a 3,580-h.p. diesel-electric unit on Bell Island.

[^176]:    *To supplement its power output from hydro-electric plants, the Hydro-Electric Power Commission of Ontario is constructing steam-electric plants at Windsor and Toronto with capacities of $264,000 \mathrm{kw}$. and $400,000 \mathrm{kw}$., respectively. At Windsor, the first unit of $66,000 \mathrm{kw}$. was brought into operation in November 1951, the second and third will follow in 1952 and the plant will be completed in 1953. At Toronto one 25cycle $88.000-\mathrm{kw}$. unit and one 60 -cycle $100,000-\mathrm{kw}$. unit were completed in 1951 and similar units were scheduled for operation by early 1953; ultimately the 25 -cycle units will be converted to 60 -cycle operation at $100,000-\mathrm{kw}$. capacity.
    $\dagger$ The Saskatchewan Power Corporation completed the installation of a new steam turbo-generator of $15,000 \mathrm{kw}$. in its Estevan plant and was enlarging its Prince Albert plant by $10,000 \mathrm{kw}$. and its Saskatoon plant by $25,000 \mathrm{kw}$., for operation in 1952 . The City of Winnipeg is building an auxiliary steam plant with one unit of $15,000 \mathrm{kw}$. to be installed in 1952 and an additional $25,000 \mathrm{kw}$. in 1953.

[^177]:    - Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^178]:    ${ }^{1}$ Excluding duplications. $\quad{ }^{2}$ Not including auxiliary-plant equipment.
    ${ }^{3}$ Not collected
    after $1943 . \quad 4$ Includes Newfoundland.

[^179]:    ${ }^{1}$ Included with British Columbia.

[^180]:    *The information included under the provincial headings of this Subsection has been revised by the various provincial commissions or authorities concerned.

[^181]:    *The Commission also purchases $160,000 \mathrm{~h}$.p. from the Shawinigan Water and Power Company.

[^182]:    ${ }^{1}$ Dependable peak capacity-the amount of power subject to periodic change as equipment and water conditions vary, which the source is expected to be able to supply at the time of the system's peak demand. For tha Commission-owned or -operated generating stations, it is presumed that all units are available and that the supply of water is normal. Contractual stipulations govern the capacities of sources of purchised power.

[^183]:    ${ }^{1}$ Due to the change in the Commission's fiscal year to coincide with the calendar year, figures shown here for 1950 cover the 14 months ended Dec. 31, 1950.

[^184]:    ${ }^{1}$ Includes power generated by electric railways for their own use.

[^185]:    - Revised in the Department of Fisheries, Ottawa.

[^186]:    *Prepared by the respective provincial departments responsible for fisheries administration.

[^187]:    ' Figures for Newfoundland not available.

[^188]:    * Revised in the Agriculture Division, Dominion Bureau of Statistics.

[^189]:    ${ }^{1}$ Not including hatters' furs.

[^190]:    * Prepared in the Animal Products Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

[^191]:    ${ }^{1}$ For 1924 and subsequent years the net value of production is computed by subtracting the cost of fuel and electricity and the cost of materials from the gross value. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available. ${ }^{2}$ A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted.
    ${ }^{2}$ Not collected.
    4 Includes Newfoundland.

[^192]:    ${ }^{1}$ See footnote 1, Table 1.
    Yukon Territory.
    ${ }^{2}$ Not collected. $\quad{ }^{3}$ See footnote 2, Table 1.

    - Includes

[^193]:    ${ }^{1}$ Figures for the years 1929 and 1933 are for the fiscal years ended Mar. 31 of the following years; for 1939-49 they are for the calendar year. Net imports are total imports less foreign products re-exported. ${ }^{2}$ Consumption figures for the major groups of the Standard Industrial Classification cannot be calculated as statistics of imports and exports are still compiled on the component material classification basis.

[^194]:    ${ }^{1}$ Exclusive of fish processing in Newfoundland.

[^195]:    ${ }^{1}$ Includes "Publishing (only) of Periodicals".

[^196]:    ${ }^{1}$ Exclusive of fish processing in Newfoundland.

[^197]:    ${ }^{1}$ Exclusive of fish processing in Newfoundland.

[^198]:    ${ }^{1}$ Exclusive of Newfoundland.

[^199]:    ${ }^{1}$ The averages of wage-earners and earnings for the years 1933 to 1947 are strictly comparable with those for the years up to 1924 but not with those for the intervening years. The figures for the latest years -as for the earliest-represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts to about 3 or 4 p.c. in the total figures and affects chiefly the

[^200]:    ${ }^{1}$ Includes allowance for capital items charged to operating expense of $\$ 18,000,000$ in 1944 and $\$ 23,900,000$ in 1945.

[^201]:    ${ }^{1}$ Includes: biscuits; and tobacco, cigars and cigarettes. ${ }^{2}$ Includes: bags, cotton and jute; fertilizers; slaughtering and meat packing. ${ }^{2}$ Not comparable with previous years. ${ }^{2}$ Includes: cotton yarn and cloth; wire and wire goods; coke and gas; petroleum products; and breweries. ${ }^{5} \mathrm{In}$ cludes: breweries; sugar refineries; cotton yarn and cloth; synthetic textiles and silk; railway rolling-stock; shipbuilding and repairs; brooms, brushes and mops; brass and copper products; and gypsum products.

[^202]:    ${ }^{1}$ Not comparable with previous years. ${ }^{2}$ Publication of these figures authorized by the two
    ${ }^{3}$ Includes bridge-building and structural steel, non-ferrous metal smelting and refining, biscuits, and sugar refineries. 4 Other leading industries for which figures cannot be given because there are fewer than three establishments are: non-ferrous metal smelting and refining, and vegetable oil mills. 5 Includes malt and malt products; sugar refineries; cheese, processed; condensed milk; boxes and bags, paper; bridge-building and structural steel; cement; glass and glass products; fertilizers; and vegetable oils.

[^203]:    ${ }^{1}$ Other leading industries for which statistics cannot be given because there are fewer than three establishments in each industry are: non-ferrous metal smelting and refining, and sugar refining.

[^204]:    * Revised in the Construction Section, Industry and Merchandising Division, Dominion Bureau of Statistics. More detailed information is available in the D.B.S. annual report, The Construction Industry in Canada.

[^205]:    ${ }^{1}$ Includea sub-contract work indicated in the lower part of the table. ${ }^{2}$ Includes work performed by railways, telephone, telegraph and other utility companies utilizing their own employees.

[^206]:    ${ }^{1}$ Includes work performed by railway, telephone, telegraph and other utility companies utilizing their own employees.
    a 10. pc. basis.

[^207]:    ${ }^{1}$ Nine months.

[^208]:    ${ }^{1}$ Exclusive of the municipslities of Newfoundland.

[^209]:    ${ }^{1}$ Exclusive of the municipalities of Newfoundland.

[^210]:    ${ }^{1}$ Compiled by the Department of Labour. ${ }^{2}$ As reported by employers.

[^211]:    *Prepared in the Economic Research Department, Central Mortgage and Housing Corporation.

[^212]:    ${ }^{1}$ Exclusive of a small number of dwellings built by Federal Government Departments as part of their normal operations. $\quad{ }^{2}$ Includes Newfoundland since 1949.

    Details by provinces of loans approved under the National Housing Act, 1944, for the years 1945-51 are shown in Table 10. A total of 84,800 dwellings were completed in Canada in 1951. About 3,500 were built directly by the Federal Government; 29,300 were built with the aid of federal loans, including joint loans under the National Housing Act, 1944; and 1,500 were built with guarantee assistance by the Federal Government.

[^213]:    ${ }^{1}$ Exclusive of the Yukon and Northwest Territories.

[^214]:    * Except as otherwise noted, this Chapter has been revised under the direction of A. MacNamara, C.M.G., Deputy Minister, Department of Labour, Ottawa.

[^215]:    ${ }^{1}$ Females only. $\quad{ }^{2}$ Females; 55 cents for men in canning or processing of fish, vegetables or fruit. ${ }^{3}$ Females; 50 cents for men applying to 48 -hour week. ${ }^{4}$ Rates apply to 36 hours or more. ${ }^{5}$ Females; $\$ 26$ for men over 21 years. ${ }^{6}$ In hotels, beauty parlours, theatres and amusement piaces, rates apply to 40 hours or more; in shops to 39 hours or more; and in offices to 36 hours or more. ${ }^{7}$ Rates apply to 48 hours in factories and offices, except in specified cases; 54 hours in laundries, shops, beauty parlours and theatres; 60 hours in hotels. ${ }^{8}$ Hourly rates. Head waiters and kitchen help, 46 cents; cooks, 53 cents.

[^216]:    - Revised in the Special Surveys Division, Dominion Bureau of Statistics.

[^217]:    ${ }^{1}$ Exclusive of persons in institutions, remote areas and Indian reserves. ${ }^{2}$ Employers, 'own-account' and unpaid family workers. $\quad{ }^{2}$ Revised data from 1946 to 1951 . ${ }^{\text {cludes Manitoba. }}$ Includes Newfoundland. ${ }^{5}$ Ex-

[^218]:    * Newfoundland data have been subtracted from 1950 and 1951 totals: thus all statements made in this analysis are on the basis of the nine other provinces.
    $\dagger$ Revised in the Employment Section, Labour and Prices Division, Dominion Bureau of Statistics.

[^219]:    -The methods used in preparing the current statistics of employment and payrolls and man-hours and hourly earnings are explained in the D.B.S. monthly bulletins on these subjects.

[^220]:    ${ }^{1}$ In 1939 the proportion of female employees in all manufacturing establishments reporting to the annual Census of Industry was 22 p.c.
    ${ }^{2}$ The durable goods group includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and nonmetallic mineral products; the non-durable goods group consists of the remaining manufacturing industries. ${ }^{2}$ Mainly hotels, restaurants, laundries and dry-cleaning establishments.

[^221]:    ${ }^{1}$ The durable goods group includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products; the nondurable goods group includes the remaining manufacturing industries.

[^222]:    *Revised in the Employment Section, Labour and Prices Division, Dominion Bureau of Statistics. More complete information is published in D.B.S. bulletins, Earnings and Hours in Manufacturing.

[^223]:    ${ }^{1}$ Exclusive of Newfoundland, Prince Edward Island and the Territories.

[^224]:    ${ }^{1}$ Exclusive of Newfoundland, Prince Edward Island and the Territories.

[^225]:    * For more detailed information, see Department of Labour publication, Wage Rates and Hours of Labour in Canada.

[^226]:    ${ }^{1}$ Exclusive of Newfoundland. ${ }^{2}$ Insufficient data.

[^227]:    ${ }^{1}$ Exclusive of Newfoundland．${ }^{2}$ Insufficient data．${ }^{3}$ Data shown apply to pulp and paper as a whole．

[^228]:    ${ }^{1}$ Not published separately; figures given are averages for the three Maritime Provinces.

[^229]:    ${ }^{1}$ The daily rates of contribution in respect of each class is one-sixth of the weekly rates. ${ }^{2}$ Unemployment insurance stamps combine both employer and employee contributions. ${ }^{2}$ Rates calculated on the average daily contribution for the last 180 days in the two years preceding claim. The daily rate of benefit is one-sixth of the weekly benefit rate.

[^230]:    * Statistics of unemployment insurance are compiled and published by the Unemployment Insurance Section, Labour and Prices Division, Dominion Bureau of Statistics, from material supplied by the Unemployment Insurance Commission. A more detailed analysis of these data, by province and sex, is available in D.B.S. publication, Annual Report on Benefit Years Established and Terminated Under the Unemployment Insurance Act.

[^231]:    *More detailed information is given in the Department of Labour publication, Canadian Vocationa Training Annual Report, 1950-51.

[^232]:    * More detailed information is given in the Department of Labour publication, Workmen's Compensation in Canada, A Comparison of Provincial Laws.

[^233]:    ${ }^{1}$ Comprises employers individually liable.

[^234]:    ${ }^{1}$ Duplications in columns 1 and 2 are eliminated from these totals.

[^235]:    * Information concerning unions is published in the Department of Labour annual publication, Labour Organization in Canada.

[^236]:    ${ }^{1}$ Figures for 1949 and previous years, are as at Dec. 31; figures for 1951 are as at Jan. 1.

[^237]:    - A complete review of strikes and lockouts during 1950 and 1951 will be found in supplements to the Labour Gazette for April 1951 and April 1952.

[^238]:    ${ }^{1}$ None reported. $\quad{ }^{2}$ Includes non-ferrous metal smelting. $\quad{ }^{2}$ Includes erection of all large bridges. $\quad$ Includes water service.

[^239]:    *This material has been compiled in co-operation with the Board of Transport Commissioners, the Air Transport Board and the Department of Transport.

[^240]:    * Revised under the direction of G. C. Browne, Controller, Telecommunications Division, Department of Transport. Ottawa.
    $\dagger$ Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. More detailed information is given in the annual reports of the Division. Certain of the financial statistics are compiled in co-operation with the Department of Transport.

[^241]:    ${ }^{1}$ Includes 46 steam and 3 diesel locomotives, 98 passenger cars and 1,004 freight cars in service in Newfoundland District. in Canadian service.
    ${ }^{2}$ Included with coal burning. ${ }^{3}$ Includes Pullman Company cars

[^242]:    ${ }^{1}$ Does not include Canadian railway capital owned by Canadian railways. ${ }^{2}$ Assumption of approximtately $\$ 40,000,000$ railways debt in Newfoundland is not included.

[^243]:    ${ }^{1}$ Includes expenditure for Newfoundland railways from Apr. 1 to Dec. 31.
    ${ }^{2}$ Details of this item are given in the annual report, Statistics of Steam Railways of Canada, issued by the Public Finance and Transportation Division of the Dominion Bureau of Statistics.

[^244]:    ${ }^{1}$ Figures include employees or wages for "outside operations" amounting to from 3 p.c. to 6 p.c. of total employees and from 2 p.c. to 5 p.c. of total salaries and wages. ${ }^{2}$ Includes approximately $\$ 10,000,000$ in wages earned in $1943 . \quad{ }^{3}$ Includes Newfoundland railways irom Apr. 1.

[^245]:    ${ }^{1}$ Does not include $\$ 6,984,883$ perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National Railway System, on which interest and dividends are guaranteed by the Federal Government.

[^246]:    ${ }^{1}$ Includes express, baggage, mail and other cars. $\quad{ }^{2}$ Duplications included. ${ }^{3}$ Includes Newfoundland. 4 Includes caboose miles but excludes miles made in passenger and non-revenue trains. ${ }^{5}$ Duplications eliminated; see Table 10 for details of freight carried.

[^247]:    ${ }^{1}$ Working capital, the remainder of the account being eliminated (see p. 591 of the 1942 Year Book). ${ }^{2}$ Includes Federal Government Proprietors Equity and capital stock held by the public; for details see D.B.S. report, Canadian National Railways.

[^248]:    ${ }^{1}$ Excludes electric lines. $\quad{ }^{2}$ Excludes work service.

[^249]:    ${ }^{1}$ Excludes electric lines.

[^250]:    * For further details see D.B.S. publication, Electric Railways of Canada, 1950.

[^251]:    ${ }^{1}$ Includes wages to part-time employees.

[^252]:    * Except as otherwise indicated, the material in this Part has been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.
    $\dagger$ The information in this Section has been revised from material provided by the officials in charge of the administration of motor-vehicle and traffic Acts and Regulations in the individual provinces and the Territories.

[^253]:    ${ }^{1}$ Reported as at Nov. 30, 1950 partly estimated. $\quad{ }^{3}$ Includes all road allowances. $\quad$ Includes 59,461 miles of unimproved road allowances not in use. $\quad 5$ Includes 697 miles of gravelled and 110 miles of improved earth roads of the Northwest Highway System. ${ }^{6}$ Includes 598 miles of Northwest Highway System and 75 miles of the Atlin Road gravelled and 110 miles of Northwest Highway System improved earth roads.

[^254]:    ${ }^{1}$ Includes payments from railways $\boldsymbol{r e}$ elimination of grade crossings, etc.: 1947, $\mathbf{\$ 6 1 , 0 5 7 ; 1 9 4 8 , \$ 1 0 4 , 2 7 7 ; ~}$ 1949, \$251,911; and 1950, \$227,484. $\quad 2$ Includes contributions from Railway Grade Crossing Fund toward elimination of grade crossings, etc.: 1949, $\$ 243,575$; and $1950, \$ 302,021$. The Federal Government also contributed $\$ 121,310$ toward grade separations, etc., on the Trans-Canada Highway during 1950. cludes $\$ 175,398$ federal administrative costs re Trans-Canada Highway.

[^255]:    ${ }^{1}$ Totals include registrations in the Yukon and Northwest Territories.

[^256]:    ${ }^{1}$ Includes taxis. ${ }^{2}$ Includes service cars, tractors, etc. ${ }^{3}$ Includes station-wagons and seven-passenger cars. 'Includes trolley-buses. ${ }^{\text {S }}$ Includes Department of National Defence vehicles carrying permanent plates. ${ }^{6}$ Included with trucks.

[^257]:    ${ }^{1}$ Included with miscellaneous. ${ }^{2}$ Details for Quebec were not supplied by the Province. ${ }^{3}$ Includes all motor-vehicles licence revenue for the Yukon Territory. - Includes revenue from driver's examinations.

[^258]:    ${ }^{1}$ Estimated net sales for Newfoundland, amounting to $7,188,000 \mathrm{gal}$. in 1949 and $8,842,000 \mathrm{gal}$. in 1950 , are included in net totals; gross sales are not available.

[^259]:    * Statisties are given in more detail in the annual report, Motor Carriers, Freight-Passenger, published by the Dominion Bureau of Statistics.

[^260]:    ${ }^{1}$ Includes all persons killed in motor-vehicle accidents by province in which death occurred.

[^261]:    ${ }^{1}$ Exclusive of 21 accidents in the Northwest Territories with 2 killed and one injured and property damage of $\$ 8,330$. Quebec data not available but estimated total accidents and total persons injured are included. ${ }^{2}$ Property damage over $\$ 50$. ${ }^{2}$ Property damage over $\$ 100$. ${ }^{4}$ Property damage over $\$ 75$, Edmonton estimated. ${ }^{5}$ Estimated. ${ }^{5}$ Not complete, portion included represents accidents over $\$ 50$ in "outports" during the period Aug. 1-Dec. 31, 1950. ${ }^{7}$ Totals for provinces reporting.

[^262]:    * Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services, by the Department of Transport and the National Harbours Board; part of the financial statistics, by the Department of Public Works; shipping subsidies by the Director of Subsidized Steamship Services, Canadian Maritime Commission; Panama Canal, by the Governor of the Panama Canal Zone; other canal traffic and statistics of shipping, by the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[^263]:    ${ }^{2}$ Sea-going and inland international.

[^264]:    ${ }^{1}$ Sea-going and inland international. $\quad{ }^{2}$ Includes other small ports not shown separately.

[^265]:    ${ }^{1}$ Approximate-exact figures not available.

[^266]:    ${ }^{1}$ Sales of property, stone, etc.

[^267]:    ${ }^{1}$ Exclusive of harbours under the National Harbours Board as shown in Table 28.

[^268]:    *Sections 1 and 2 of this Part were revised in the Department of Transport and Section 3, except where otherwiseindicated, in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics. For military air transportation, see Chapter XXVII on Defence of Canada.

[^269]:    ${ }^{1}$ Includes non-scheduled service.

[^270]:    ${ }^{1}$ Excludes traffic interchanged between carriers. $\quad{ }^{2}$ Includes $421,627 \mathrm{lb}$. of mail between foreign stations. ${ }^{3}$ Includes $292,908 \mathrm{lb}$. of mail between foreign stations. ${ }^{\text {Includes } 1,247,189 \mathrm{lb} \text {. of }}$ mail between foreign stations.

[^271]:    * Prepared by Brigadier C. S. Booth, Representative of Canada to the International Civil Aviation Organization.

[^272]:    *The Transit Agreement provides for the exchange of the first two "freedoms".
    $\dagger$ The Transport Agreement includes all five "freedoms": (1) The privilege to fly across the territory of a contracting State without landing: (2) the privilege to land for non-traffic purposes; (3) the privilege to put down passengers, mail and cargo taken on in the territory of the State whose nationality the aircraft possesses: (4) the privilege to take on passengers, mail and cargo destined for the territory of the State whose nationality the aircraft possesses; and (5) the privilege to take on passengers, mail and cargo destined for the territory of any other contracting State and the privilege to put down passengers, mail and cargo coming from any such territory.

[^273]:    * Except where otherwise noted, this Part has been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. The Division issues annual reports dealing with telegraph and telephone statistics.
    $\dagger$ Revised by G. C. W. Browne, Controller of Telecommunications, Telecommunications Division, Department of Transport, Ottawa.

[^274]:    ${ }^{2}$ Includes wages charged to expenses and to capital. in both Quebec and Ontario are included under Quebec. systems.

[^275]:    ${ }^{2}$ Statistics of Bell Telephone Company
    ${ }^{2}$ Excludes employees and wages for rural

[^276]:    * Revised in the Department of Transport, Ottawa.

[^277]:    ${ }^{1}$ Applied to the operations of the Department of Transport. ${ }^{2}$ Applied to the operstions of the Department of Transport. ${ }^{2}$ Section 14 (1) of the Canadian
    Broadcasting Act, 1936, provides that, "The Minister of Finance shall deposit, from time to time, in the Bank of Canada, or in a chartered bank to be designated by him, to the credit of the Corporation (a) the gross amount of moneys received in each year from licence fees in respect of private receiving licences and private station broadcasting licences without deducting therefrom any costs of collection or administration".

[^278]:    ${ }^{1}$ Includes licences issued free, numbering 10,673 in $1947,10,676$ in $1948,12,782$ in $1949,15,810$ in 1950 , 18,056 in 1951 and 20,303 in 1952. See Table 4 for classification for 1951.

[^279]:    * Prepared by Donald Manson, General Manager, Canadian Broadcasting Corporation, Ottawa.

[^280]:    * Revised by T. J. Allard, General Manager, Canadian Association of Broadcasters, Ottawa.

[^281]:    For footnotes, see end of table, p. 858.

[^282]:    ${ }^{1}$ Less than $\$ 10,000 . \quad{ }^{2}$ Included in St. John's. $\quad{ }^{3}$ Closed May 26, 1951. $\quad$ Included in Rivière-du-Loup. $\quad{ }^{5}$ Closed Jan. 29, $1952 . \quad{ }^{6}$ Included in ThoroId. ${ }^{7}$ Air mail field.

[^283]:    ${ }^{1}$ Circulation not reported in all cases.
    ${ }^{2}$ Includes bi-weeklies, tri-weeklies and national week-end papers.

[^284]:    ${ }^{1}$ Includes 2 national week－end， 2 bilingual and 1 Saturday edition．
    ${ }^{2}$ Includes 2 national week－end．

[^285]:    - Prepared by the Chief of the Crops Section, Agriculture Division, Dominion Bureau of Statistics.

[^286]:    ${ }^{1}$ Import and export data for wheat, oats, barley and rye, respectively, include flour in terms of wheat, rolled oats in terms of oats, malt in terms of barley and rye flour in terms of rye.
    ${ }^{2}$ Less than 50,000 bu.
    Price and Marketing Arrangements.-With the outset of the 1949-50 crop-year, marketings of western oats and barley were brought under compulsory marketing pools operated by the Canadian Wheat Board. A voluntary pool for Western flaxseed was also provided during 1949-50 but open market prices remained well above the initial pool price and little flax was marketed through the pool. Rye was handled entirely through private trade channels.

[^287]:    - For more detailed information see D.B.S. annual, Live Stock and Animal Products Statistics, and the Department of Agriculture publication, Annual Market Review. Statistics of live stock and poultry are given at pp. 420-422 and 429-432, respectively, of this volume.

[^288]:    * The material in this Section was supplied by various Divisions of the Departments of Agriculture, Fisheries, Mines and Technical Surveys, National Revenue and of the Dominion Bureau of Statistics.

[^289]:    ${ }^{1}$ Not classified separately prior to 1952.

[^290]:    ${ }^{2}$ Included under light fuel oils prior to 1952.

[^291]:    * Railway and express companies have similar facilities.

[^292]:    ${ }^{1}$ Excludes Newfoundland.

[^293]:    * Revised in the Merchandising and Services Section, Industry and Merchandising Division, Dominir Bureau of Statistics.

[^294]:    aries and wages do not include delivery or proprietors' salaries. ${ }_{2}$ Includes taxes and insurance, light, heat and power, repairs, maintenance, depreciation (except on delivery equipment) and rentals on rented premises. ${ }^{4}$ Includes, for unincorporated stores, proprietors' salaries or withdrawals. ${ }_{5}$ Times per year-cost of goods sold, divided by average of beginning and year-end inventories.

    ${ }^{2}$ Includes interest on investments, profits of the Bank of Canada.
    4 Excludes 2 p.c. Old Age Security sales tax of $\$ 24,297,979$

[^343]:    * More detailed information is given in the annual report, Taxation Statistics, published by the Taxation Division, Department of National Revenue, Ottawa.

[^344]:    *The Income Tax Act assented to June 30, 1948, superseded the Income War Tax Act.

[^345]:    ${ }^{1}$ Includes estimated refundable portion. ${ }^{2}$ Includes deferred tax, $\$ 1,308,982 . \quad{ }^{3}$ Includes deferred tax, $\$ 1,002,027$ and tax on private companies, $\$ 41,972,700$. ${ }^{1}$ Includes deferred tax, $\$ 685,967$ and tax on private companies, $\$ 12,596,108$. 5 Includes deferred tax, $\$ 778,617$ and tax on private companies, $\$ 3,440,514$. $\quad$ Includes deferred tax $\$ 629,029$ and tax on private companies, $\$ 1,120,510$. ${ }_{7}$ Includes deferred tax $\$ 548,007$ and tax on private companies $\$ 87,619,776$. ${ }^{8}$ Excludes Old Age Security taxes. ${ }^{9}$ Includes tax of $\$ 14,612,872$ on undistributed income of companies. Information concerning deferred tax and gift tax no longer available.

[^346]:    ${ }^{1}$ Excludes Newfoundland.

[^347]:    ${ }^{1}$ Under terms of the 1947 and 1952 Dominion-Provincial Taxation Agreements all provinees, except Ontario and Quebec, refrain from levying succession duties, hence amounts shown after 1947 for the rest of the provinces are arrears. $\quad{ }^{2}$ Excludes arrears of pre-union death duties. ${ }^{3}$ Fiscal year ended Nov. 30 of preceding calendar year. $\quad{ }^{4}$ Sixteen months. $\quad{ }^{5}$ Fiscal year ended Oct. 31 of preceding calendar year. ${ }^{6}$ Seventeen months. ${ }^{7}$ Eleven months.

[^348]:    ${ }^{1}$ The rates of federal duty shown are those actually applied but a credit may be made to the taxpayer up to one-half of this amount on account of duty paid to the provinces, see $\mathbf{p} .1046$.

[^349]:    ${ }^{1}$ This statement does not include any special grants voted and paid to the Maritime Provinces, Manitoba, Saskstchewan and British Columbia; it also excludes payments to Provinces under the Dominion-Provincial Taxation Agreements and payments of the transitional grant to the Province of Newfoundland. $\quad 2$ Includes payments under the provisions of the Maritime Additional Subsidies Act and additional annual subsidy under terms of union with Newfoundland.
    ${ }^{3}$ See text at p. 1053.

[^350]:    ${ }^{1}$ Subject to deduction of statutory subsidies. See Table 27, p. 1054.
    ${ }^{2}$ The payments for all five years were recalculated, according to the terms of the Agreement of Junc, 1952 in the light of the revised statistics for gross national product and population. Untario did not enter into the 1917 Agreement, consequently, the payments shown were not actually made

[^351]:    ${ }^{1}$ Subject to deduction of statutory subsidies payable in 1952. See Table 27, p. 1054. ${ }^{2}$ Subject to recalculation after Feb. 28, 1957, in the light of revised statistics for gross national product and population then available.
    ${ }^{3}$ Subject to a deduction for succession duty credits allowed by the Federal Government for provincial succession duties paid to Ontario, since Ontario retained its succession duties. This is estimated at $\$ 10,205,000$ for 1952-53.
    ${ }^{4}$ Quebec had not entered the 1952 Agreement as at Oct. 31.
    1952.

[^352]:    ${ }^{1}$ Based on the official estimates of population given at p. 143.
    ${ }^{2}$ This amount represents retarn on investments, which includes interest on investments, profits of Bank of Canada and other items. ${ }^{3}$ The apparent increase in interest paid is due to the accrued interest on refundable taxes having been charged in the year of repayment. public debt on accrued basis.

[^353]:    ${ }^{1}$ Includes bonds purchased and held by the Treasury for sinking funds. ${ }^{2}$ Includes refundabie portion of income tax and excess profits tax.
    ${ }^{3}$ Includes refundable portion of the excess profits tax.

[^354]:    ${ }_{2}^{1}$ Redeemsble at 101 percent. Amount outstanding includes $\$ 6,696,589.00$ redemption bonus.
    ${ }^{2}$ Redeemsble at 101 percent. Amount outstanding includes $\$ 8,471,360.50$ redemption bonus.

[^355]:    * Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. Further details are given in the D.B.S. annual report, Financial Statistics of Provincial Governments. Years referred to throughout this Section are fiscal years ended nearest Dec. 31 of year stated.

[^356]:    ${ }^{1}$ Eleven montha due to change in fiscal year.

[^357]:    ${ }^{1}$ Eleven months due to change in fiscal year.

[^358]:    ${ }^{1}$ Excluden bonde assumed by the Province.

[^359]:    ${ }^{1}$ Includes Newfoundland. ${ }^{2}$ Excludes bonds assumed by the Provinces.

[^360]:    - Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistice.

[^361]:    ${ }^{1}$ Includes the following: N.S.-household tax; N.B.-occupancy tax, Fredericton, and rentals tax, Moncton; Sask.-special franchise; Alta.-franchise and other special. ${ }^{2}$ Includes estimated values for some municipalities; total exemptions are incomplete. ${ }^{3}$ Include specified.

    4 Includes temporary exemptions amounting to $\$ 64,659,000$ in 1948 for all municipalities and $871,154,000$ in 1950 for cities and towns only.
    ${ }_{5}$ Cities and towns only.
    ${ }^{6}$ Cities only.
    ${ }^{7}$ Includes $\$ 223,651,933$ (1946), $\$ 247,390,470(1947), \$ 278,368,097$ (1948), $\$ 311,248,321$ (1949) and $\$ 347,871,475$ (1950), valuation of improvements, the total value of which was $\$ 468,844,049$ (1946), $\$ 511,289,782$ (1947), $\$ 574,582,394$ (1948), $\$ 634,949,978$ (1949) and $\$ 852,431,273$ (1950), and the maximum value at which they could be taxed was $\$ 292,353,568$ (1946), $\$ 379,965,133$ (1947), $\$ 430,936,795$ (1948), $\$ 476,212,483$ (1949) and $\$ 522,294,002$ (1950). $\quad 8$ Consists of $\$ 188,328,203$ (1946), $\$ 190,427,963$ (1947), $\$ 199,388,993$ (1948), $\$ 206,974,496$ (1949) and $\$ 226,258,620$ (1950), valuation of exempted properties, and $\$ 245,192,116$ (1946), $\$ 263,899,312$ (1947), $\$ 296,214,297$ (1948), $\$ 323,701,657$ (1949) and $\$ 504,559,798$ (1950), exemptions of taxable improvements as referred to in footnote 7.

[^362]:    ${ }^{1}$ Includes estimates as actual figures are not available in some instances. ${ }^{2}$ Excludes $81,366,821$ in each of the years 1946 and 1947 and $\$ 2,051,422$ in 1948, 1949 and 1950 being compensation through Provincial Government for loss of income tax. ${ }^{3}$ No figures available for Quebec since 1945. 4 Includes certain provincial and other special taxes (see text following this table), but excludes taxes in Improvement Districts.

[^363]:    ${ }^{1}$ Includes social services taxes.

[^364]:    ${ }^{1}$ Excludes rural schools. $\quad{ }^{2}$ Includes $\$ 13,665,946$ in 1949 and $\$ 17,635,077$ in 1950 capital liabilities (building loans and debentures) for Roman Catholic separate schools and $\boldsymbol{\xi 7 1 0 , 3 5 9}$ in 1949 and $\$ 657,419$ in ${ }_{1950}$ for public schools in unorganized areas. ${ }^{3}$ Excludes liabilities of schools and other local boards and commissions but includes in lieu thereof amounts due by municipal revenue fund accounts to such schools and other local authorities; information required to make the necessary eliminations on this account is not available from published reports (see footnote 2). ${ }^{\text {a }}$. Includes $\$ 300,000$ treasury bills.
    cludes $\$ 1,502,417$ treasury bills in 1949 and $\$ 1,457,056$ in 1950.
    Table 48 gives the debenture principal and interest due, by provinces, for the years 1946 and 1948-50. Statistics are not available for Quebec so that it is not possible to give accurate figures for Canada as a whole. However, the trend has been upward since 1947 in most provinces, a reversal of the decline evident from 1940 to 1946. Retirement of direct debenture debt accounted for the major portion

[^366]:    * National Accounts, Income and Expenditure, 1926-1950 and National Accounts, Income and Expenditure, Revised Preliminary 1951.

[^367]:    ${ }^{1}$ Includes Newfoundiand.

[^368]:    ${ }^{1}$ Includes Newfoundland.

[^369]:    ${ }^{1}$ Includes Newfoundiand.

[^370]:    * Prepared in the Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics. A more extended review appears in D.B.S. report, Canada's International Investment Position. Selected Years 1926 to 1949, and statistics for more recent years in D.B.S report, The Caradian Balance of International Payments, 1951, and Foreign Capital Invested in Canada.

[^371]:    ${ }^{1}$ Includes corporate tarable income, depletion charges and charitable donations, and are adjusted for corporate losses, renegotiation of war contracts and conversion to a calendar-year basis.
    ${ }^{2}$ Includes elective tax on undistributed income of $\$ 54,000,000$ in 1950 and $\$ 48,000,000$ in 1951.

[^372]:    ${ }^{1}$ Includes the Yukon and Northwest Territories.
    ${ }^{2}$ Net authorizations were $\$ 41,160,509$, of which those in excess of $\$ 200,000$ totalled $\$ 22,335,864$ because of partial repayments on account of current authorizations.

[^373]:    ${ }^{1}$ In January 1850 the chartered banks' liability for such of their notes, issued for circulaticn in Canada, as then remained outstanding, was transforred to the Bank of Canada.

[^374]:    * Revised in the Royal Canadian Mint, Ottawa.
    $\dagger$ The Currency Act of 1910 made provision for a silver dollar and a 5 -cent silver coin. The 5-cent silver coin was coined freely until 1921. It still has limited legal tender but has been replaced in the coinage by the nickel 5 -cent piece. In 1942 a 5 -cent piece was coined from 'tombac', a copper-zinc alloy, in order to conserve nickel for war purposes, but this coin was replaced in 1944 by a 5 -cent coin composed of mild steal with a chromium finish.

[^375]:    ' Includes other assets not specified.
    and also deposits elsewhere than in Canada.
    ${ }^{2}$ Includes deposits of Federal and Provincial Governments
    ${ }^{2}$ Includes other liahilities not specified. ${ }^{4}$ After Januarv 1950, the chartered banks' liability for such notes issued for circulation in Canada as then remained outatanding was transferred to the Bank of Canada; these figures cover notes in circulation outside Canada which were not taken over by the Bank of Canada.

[^376]:    For footnotes, see end of table.

[^377]:    ${ }^{1}$ Total Bank of Canada notes in the possession of the chartered bank together with its deposits with the Bank of Canada, but excluding minor amounts of gold carried in such reserves.

[^378]:    ${ }^{1}$ Plun extre of 2 p.c.
    ${ }^{2}$ Plue extre of 1 p.c.
    ${ }^{2}$ Plus extra of y of 1 p.c.
    ${ }^{4}$ Not reported.

[^379]:    -Prepared by J. E. O'Meara, Economics Division, Marketing Service, Department of Agriculture, Ottawa.

[^380]:    * The main operations of the Foreign Exchange Control Board during 1950 are given in the 1951 Year Book, pp. 1056-1057. Reviews of the Board's activities in earlier years will be found in previous Year Books.

[^381]:    * Revised under the direction of R. W. Warwick, Superintendent of Insurance, Department of Insurance.

[^382]:    ${ }^{1}$ Excludes one loan company incorporated under the laws of Quebec, the capital stock and debentures of which have been issued largely outside Canada.

[^383]:    ${ }^{1}$ Includes companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba, which by arrangement are inspected by the Federal Department of Insurance. ${ }^{2}$ Book value of real estate for companies' use and other real estate. ${ }^{3}$ Includes other assets. Includes interest due and accrued. ${ }^{5}$ Includes other company fund liabilities. ${ }_{6}$ For the years 1946-49 chartered by the Provinces of Ontario and Quebec and for the years 1950 and 1951 chartered by all provinces except Nova Scotia, New Brunswick and Manitoba.

[^384]:    ${ }^{1}$ Includes companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba which by arrangement are inspected by the Federal Department of Insurance. ${ }^{2}$ Excludes provincial companies of Nova Scotia, New Brunswick and Manitoba which are included in federal companies.
