# CANADA YEAR BOOK 1954

HER MAJESTY QUEEN ELIZABETH THE SECOND ON THE DAY OF HER CORONATION JUNE 2, 1953

# THE CANADA YEAR BOOK 1954

THE OFFICIAL STATISTICAL ANNUAL OF THE RESOURCES, HISTORY, INSTITUTIONS, AND SOCIAL AND ECONOMIC CONDITIONS OF CANADA

Published by Authority of
The Right Honourable C. D. Howe, Minister of Trade and Commerce

DOMINION BUREAU OF STATISTICS
Information Services Division

Price \$3.00

## PREFACE

The Canada Year Book, the official annual compendium of information on the institutions and the economic and social development of the nation, presents extensive statistical and analytical commentary designed to describe and co-ordinate essential elements in the progress of Canada.

While the regular chapter material has been brought up to date, special feature articles of current interest have been introduced in the 1954 edition including the following: "The Barren-Ground Caribou" (pp. 33-36); "Crown Corporations" (pp. 79-86); "International Activities" (pp. 103-117); "The National Health Grant Program" (pp. 215-223); "Scientific and Industrial Research" (pp. 341-356); "Major Developments in Organization and Policy of the Federal Department of Agriculture" (pp. 366-370); "Administration of Crown Forests in Canada" (pp. 458-465); "Developments in Canada's Mineral Industry" (pp. 482-506); "Canadian Crude Petroleum Situation" (pp. 540-544); "Review of Canadian Manufacturing" (pp. 615-619); "Canals of the St. Lawrence Waterway" (pp. 830-833); "History of Pipeline Construction in Canada" (pp. 861-869); "Review of Foreign Trade" (pp. 961-967); and "Post-War Financial Policy" (pp. 1061-1065).

The present edition continues the extended analysis of the 1951 Census of Canada introduced in the 1952-53 Year Book. A summary of census statistics on dwellings, households and families appears in the Population Chapter along with other basic demographic material; statistics of the 1951 Census of Agriculture relating to farms, farm operators, mechanization, electrification, area, crops and live stock appear in the Agriculture Chapter; labour force statistics of the 1951 Census are given in the Labour Chapter. The 1951 Census of Merchandising and Service Establishments will be analysed in the 1955 edition of the Year Book.

In addition to the special articles and demographic material mentioned above, the current edition introduces other new features in its various chapters. References to the Revised Statutes of Canada 1952 have been made throughout the volume when citing Acts administered by Federal Departments of Government. portions of Chapter II, "Constitution and Government", dealing with the Executive and Legislative branches of the Federal Government have been transferred to Appendix I at the close of the volume to permit the publication of data becoming available subsequent to the General Election of Aug. 10, 1953. In Appendix II are listed the personnel of three provincial governments elected to power during the summer months of 1953. Moreover, Canadian citizenship statistics have been augmented; the tables of vital statistics have been recast to show the main trends since 1921; occupational trends of the labour force have been tabulated on a decennial basis since 1901; an extended analysis of capital expenditures on construction, machinery and equipment has been introduced covering the three years 1951-53. Numerous new diagrams and maps (listed at p. vii) assist in portraying the remarkable economic development of Canada presented in summary for 1952 and 1953 in the Introduction to the volume (pp. xi-xviii).

The "Statistical Summary of the Progress of Canada, 1871-1952" has been transferred to Chapter XXVIII, "Sources of Official Information and Miscellaneous Data", which includes also a directory of such sources, a reference list of special

articles published in former editions of the Year Book, a register of official appointments, a list of federal legislation passed during 1952-53, and a Canadian chronology of events since 1867.

A large, folding map of Canada (1953), especially printed for the Year Book, is provided in the pocket on the inside back cover of the volume.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments in the preparation of material for the Year Book is hereby gratefully acknowledged. Where possible, credit is given to the persons and various services concerned by means of footnotes to the respective sections.

The present volume has been produced in the Information Services Division of the Bureau under the editorship of C. C. Lingard, M.A., Ph.D., Director of the Division, assisted by Miss Margaret Pink and the Canada Year Book Staff. Charts and graphs have been prepared under the direction of J. W. Delisle, Senior Draughtsman of the Bureau.

With a view to the improvement of future editions, the Director welcomes information bearing on any errors or omissions that may have escaped notice and suggestions respecting methods of treatment.

Herbert Marihall

Dominion Statistician.

Dominion Bureau of Statistics, Ottawa, Jan. 18, 1954.

# WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada, as a rule, the imperial system of weights and measures is followed. An exception, however, is the ton where, unless otherwise stated, the short ton of 2.000 lb. is meant.

The following table shows the weights and measures used in Canada in connection with the principal field crops and for wheat flour and fruits:-

	Pounds per Bushel	1	Pounds
Grains—		Fruits (standard conversions)—	
Wheat	60	Apples, per barrel	135
Oats	34	Apples, per box	43
Barley		Pears, per bushel	50
Rye		Plums " "	50
Buckwheat	48	Cherries " "	50
Flaxseed	56	Peaches " "	50
Corn	56	Grapes " "	50
Mixed grains		Pears, per box	42
All others		Strawberries, per quart	$1 \cdot 25$
		Raspberries " "	
AUL and Wilson		Loganberries " "	$1 \cdot 25$

#### Wheat Flour-

1 barrel equals 196 pounds and approximately 4.5 bushels of wheat are used in the production of a barrel of flour.

# Relative Weights and Measures, Imperial and United States

The following tables of coefficients may be used to translate amounts expressed in one unit to the other.

- 1 Imperial pint = 20 fluid ounces.
- 1 United States pint=16 fluid ounces.
- 1 Imperial quart=40 fluid ounces.
- 1 United States quart=32 fluid ounces.
- 1 Imperial gallon = 160 fluid ounces.
- 1 United States gallon = 128 fluid ounces.
- 1 Imperial proof gallon=1-36 United States proof gallon.
- 1 Short ton=2,000 pounds.
- 1 Long ton = 2,240 pounds.
- 1 Barrel crude petroleum = 35 Imperial gallons.

# FISCAL YEARS OF FEDERAL AND PROVINCIAL GOVERNMENTS

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31.

Throughout the Year Book, fiscal-year figures are indicated in the text and headings of tables; in all other cases figures are for calendar years.

## INTRODUCTION

# THE CANADIAN ECONOMY IN 1953\*

Since 1950, Canada's national output has been increasing at an annual rate of about 6 p.c., nearly double the rate of earlier post-war years. The increased level of activity began with the broad expansion in demand that accompanied the defence build-up in NATO countries following the outbreak of hostilities in Korea. The effect on the Canadian economy was to increase the demands on certain end products immediately required, to increase exports of basic materials, and to accelerate the expansion of defence and defence-supporting industry and resource development. These demands, together with a temporary surge of precautionary buying on the part of both consumers and business, had an inflationary effect on prices that diminished as speculative influences subsided and as production increased.

By late 1952, defence demands were levelling off, exports, apart from grain shipments, had lost their previous buoyancy, and non-defence activity such as housing was resuming importance in the capital expenditure program. The high and rising level of domestic consumer demand was becoming an increasingly important stimulus to the continued growth of the Canadian economy, while the level of imports was rising to supplement expanding domestic production.

Although the nature of the stimuli has been changing, the strong expansionary trend of the previous years has continued in 1953. National output in 1953 has increased by about 5 p.c., in both value and volume, over that in 1952. Increased production has been accompanied by higher employment and income levels. The labour force, augmented by a sustained flow of new immigrants, has continued to expand. Yet, on the whole, manpower has been fully employed. At the same time, prices have remained generally stable with only limited variation in certain of the principal price indexes since mid-1952. The General Wholesale Price Index held within a range of 1·5 p.c. for a year after September 1952, and except for the two extreme months, May and August, the range in that period was 0·5 p.c. The Consumer Price Index declined 3·2 p.c. between January 1952 and May 1953, then rose very moderately until October when it again turned downward. The price index of merchandise exports fluctuated less than 2 p.c. from August to August, and the import price index rose 3·5 p.c. in the same period.

The Consumer Market.—The wave of consumer buying which commenced in the latter part of 1950 levelled off early in 1951. The apparent high level of personal stocks, resistance to rising prices, the growing realization that shortages would not be as severe as first anticipated, increased taxes, and the adoption of credit controls were all factors in curtailing consumer demand. During 1952, however, most of these influences disappeared. As money incomes continued to increase, declining retail prices, especially of foods, were raising real incomes. Credit restrictions were suspended in May 1952.

By the beginning of 1953, therefore, the domestic consumer market had strengthened appreciably. This strength was to be one of the dominant features of the Canadian economy throughout the year. In the first ten months, for example, retail sales reached a total of \$9,920,338,000, some 5 p.c. above the level of the corresponding period in 1952. This reflected a slightly greater increase in volume, since retail prices were lower in the second period.

<sup>\*</sup> Prepared in the Economics Division, Department of Trade and Commerce, Ottawa.

The continuing strength of consumer demand has been caused primarily by the first prolonged post-war increase in per capita real income. Increasing employment levels, together with high and rising wages, have resulted in a continuing rise in labour income. For at least eighteen months the relative movements of wages and prices were such that per capita real income was increasing. Although the rate of increase slowed during the latter half of 1953, real income continued higher than in 1952.

Increases in income have been augmented by the accelerated growth of consumer credit. Net outstanding consumer credit increased sharply commencing in the second quarter of 1952, following removal of the restrictions adopted in 1950 and 1951. Since mid-1952 the increase in total consumer credit has kept pace with the rising value of retail sales, and about one-third of total sales value has been credit-financed. The purchase of consumer durables is, of course, responsible for the bulk of credit buying, with automobiles by far the largest single category affected.

Since early 1952, therefore, effective domestic consumer demand has increased. This rise has been sustained by the continued increase in money incomes and by their improved relationship to the retail price level. Consumer credit is an important supplementary element. During 1953 personal expenditure on consumer goods and services has been absorbing in the neighbourhood of 50 p.c. of final goods and services available in Canada. This compares with 48 p.c. in the second quarter of 1951 and 54 p.c. in 1949. In other words, personal consumption, having given way for a time to the more urgent needs of the defence build-up, is again increasing in relative importance.

Defence.—By the latter half of 1952 the growing domestic market began to replace the defence build-up as the principal stimulus to expansion in the Canadian economy. Preliminary indications are that total defence expenditure for 1953 will be very modestly higher than that for 1952, in contrast to a rise of more than one-half between 1951 and 1952. This levelling-off in the defence program means that it has now taken on the role of a sustaining rather than an expansionary element in the economy.

The nature of defence demands on the country's resources and output has also changed. In 1950, the immediate requirements of the operations in Korea were added to Canada's commitments under the North Atlantic Treaty. This meant not only an increased rate of procurement of end items but also a stepped-up rate of defence construction and of industrial production. A major requirement of such a program was expansion of industrial capacity. Existing facilities had to be adapted and re-tooled, and new facilities constructed not only for defence production but also for the production and processing of raw materials and for producing capital equipment. With little slack in the economy, resources had to be diverted to these ends from other uses. Although some cutting back occurred in non-defence sectors of the economy, the shift in resources was achieved principally by controlling the direction of expansion. Thus, the importance of defence expenditures in the first two years of the defence build-up lay in their stimulus to the expansion of the economy and their influence on the direction of its growth.

Construction of defence installations was well under way by the beginning of 1953, both in Canada and in Europe, and expenditures on this phase of defence have been declining. Capital expenditures on the conversion and expansion of

defence industry were also slowing down by the beginning of the year. The early stages of the defence effort absorbed considerable quantities of soft goods, such as clothing, footwear and personal gear, as Canada's Armed Forces expanded both for Korean service and to take part in NATO defence in Europe. By 1953 this aspect of defence procurement was declining in importance and expenditures on soft goods have continued to diminish. There has been, on the other hand, a growing volume of production of defence equipment. The items that required developmental work or special productive facilities have become increasingly available, and a larger proportion of output for defence has been coming from the shipbuilding, gun and ammunition, aircraft and electronics industries.

Capital Investment.—The nature of capital investment in Canada has also been changing in 1953. In the two previous years, investment was heavily concentrated in resources development, in facilities for processing raw materials and in industries producing for defence. New investment in housing and in service and business fields not essential to defence decreased during this period. These developments were accelerated by a variety of measures designed both to promote the first type of investment and to restrict the second. During this phase the annual value of new investment grew from \$3,815,000,000 in 1950 to \$5,122,000,000 in 1952, an increase of 20 p.c. in the first year and 12 p.c. in the second.

By 1953, as stated above, the build-up phase of the defence effort was giving way to the phase of sustained high output. Moreover, increasing production both of basic materials and of productive equipment was progressively easing the supply situation. The principal controls affecting the direction of investment had been removed by the beginning of 1953. These developments paved the way for the resumption of trends interrupted in 1950, and for catching up during the next two years on the secondary development postponed. Surveys of investment plans for 1953 showed that, while maintaining the broadening base of resource development and heavy industry, Canadian investment is moving back into fields temporarily subordinated to the defence build-up.

Total new investment in Canada in 1953, on the basis of preliminary figures, is estimated at \$5,600,000,000, a 9-p.c. increase over 1952. Comparative stability of prices means a roughly similar increase in volume. New housing accounted for the largest dollar increase over 1952. The sharpest percentage increases were realized in the trade and finance groups. Reflecting the growing importance of the domestic consumer market, these expenditures represent construction of shopping centres and other retail outlets, and of wholesaling and office facilities. The investment program also reflects continued expansion in utilities such as electric power and telephone service, while railway outlays provide for the modernization of rolling-stock as well as for the extension of service to new developments of natural resources. During 1953 there has been further large-scale expansion in facilities for development and processing of natural resources. Petroleum and base metals are important in the mining category as are their processing counterparts in the manufacturing field. Several pipeline and refinery projects have been completed

or are in progress. New investment in heavy manufacturing, on the other hand, is declining in importance, while industries manufacturing for the domestic consumer market are increasing their outlays. New investment by agriculture and the construction industry has been on a smaller scale in 1953 than in the previous year.

Foreign Trade.—The world-wide upsurge in demand commencing in the latter part of 1950 had a pronounced effect on a number of Canada's basic exports, notably foodstuffs, metals and wood products. By 1953 much of the urgency previously attached to many of these demands had subsided and prices of international commodities had, in general, declined from the peaks reached earlier. Nevertheless, the physical movement of goods has shown little tendency to decline. The value of Canadian exports has remained at a high level with 1953 totals somewhat lower than those of 1952. When allowance is made for lower prices, the volume of export trade has not changed significantly.

Basically, conditions have continued favourable for Canadian exports. Non-dollar countries for the most part began 1953 with augmented dollar purchasing power and generally have maintained this position during the year with some exceptions, of which France and Brazil are the most important. In the United States, Canada's best customer, a high level of activity prevailed throughout the year. As a result, exports to that market have increased moderately, with lumber, newsprint and pork products showing significant gains.

On the other hand, sales in most overseas markets have been lower. In the United Kingdom and elsewhere in the Sterling Area, a drawing on stocks in the case of some items, together with increased availability of supplies from non-dollar sources, has resulted in considerably lower exports to these markets.

A number of South American countries have encountered increased exchange difficulties which by early 1953 were having an adverse effect on their purchases in Canada. The decrease in exports to these countries was especially marked in the first half of the year by contrast with the same period of 1952. Much of this decline was accounted for by lower automobile shipments. These had been unusually large during the early part of 1952 as a result of shipments being made from Canada on orders normally filled by parent plants in the United States.

Canadian exports to Western Germany increased but those to other European countries declined in the early months of 1953. Except in the case of France, this does not appear to have been a direct result of current exchange problems. Canadian exports seem to have suffered from the general slowing of economic activity in Europe, together with the tendency of European countries to use improved balances for increasing reserves rather than imports. Another notable feature of Canada's trade in 1953 has been the continued high level of sales to Japan which in recent years has become an important market for Canadian goods.

The increasing predominance of grains has been a feature of Canada's export trade since early in 1952. A considerable proportion of the subsequent increase in exports consisted of grain shipments. Because of poor crops in other important exporting countries, large shipments of Canadian wheat went to countries in Europe and the Near East normally supplied from other sources. In addition, the Far East began importing large quantities of Canadian barley for processing, in order to supplement short rice crops. Thus world crop conditions in 1951 and 1952

made possible unusually heavy grain shipments that contributed substantially to Canadian export totals, and the continuation of these grain shipments in the first half of 1953 increased further their share of total exports. However, in the latter half of 1953, grain exports, though still high, were below the levels of the corresponding period in 1952.

Beginning late in 1952, Canada experienced a further upsurge in imports. The underlying causes have been the very strong demand for both consumer and capital goods together with an apparent improvement in the competitive position of foreign producers. Increases in imports have been principally in the consumer goods categories, particularly durables and textiles. On the other hand, there has been some levelling off in 1953 of imports in the steel, chemicals and fuels categories, as Canadian productive capacity increased.

Increased purchases from the United States and from the United Kingdom accounted for nearly all of the higher import values in 1953. Price declines for raw materials have whittled the value of imports from the overseas Sterling Area, while totals from other areas appear to be changing very little from those of 1952.

Moderately lower exports and increased imports have resulted in a change from a positive trade balance in 1952 to a negative one in 1953. This in turn has caused a change from a surplus to a deficit in the international balance of payments on current account. However, in the foreign exchange market this deficit on current account has tended to be offset by a continued capital inflow, thus maintaining the Canadian dollar at a premium over the United States dollar.

A new International Wheat Agreement, to extend for a three-year period, was negotiated during 1953. The price provided for ranges from a maximum of \$2.05 to a minimum of \$1.55 per bu., both prices in U.S. funds basis No. 1 Northern in store Fort William-Port Arthur or Vancouver. Owing to the withdrawal of the United Kingdom from the Agreement, the quotas of exporting countries are reduced. Canada's quota under the Agreement amounts to 163,000,000 bu.

Canada participated in the 1953 meeting of the Contracting Parties to the General Agreement on Tariffs and Trade at which it was agreed to rebind, for an 18-month period commencing Jan. 1, 1954, the tariff changes previously negotiated under the Agreement.

Industry Conditions.—The continuation of favourable markets in 1953 has meant generally prosperous conditions throughout Canadian industry. Moreover, a more stable pattern of demand appears to have resulted in a more even balance of activity than had prevailed in the previous two years. In a number of lines, however, much of the increase in purchases of finished goods has been met through imports and, accordingly, domestic industry has not had the full benefit of the rise in final purchases.

Consumer Goods Industries.—The pick-up in consumer buying during the latter part of 1952 had, by the end of the year, brought a substantial improvement in consumer goods industries which, in the early part of 1952, had experienced considerable slack. Continuing strength in this sector has been one of the notable features of economic developments in 1953. The increase in consumer sales has been widely spread throughout all main consumer groups, including soft as well as hard goods.

Higher consumer incomes have been strikingly reflected in the consumption of food which has risen by 12 p.c. in a two-year period. Thus, per capita consumption of food has shown a significant rise for the first time since the immediate postwar years. The rise in meat consumption has been especially pronounced, beef and veal, for example, being up more than 25 p.c. in the first six months of 1953 compared with the same period in 1952.

The growth of domestic demand for household durables has also been pronounced since early 1952. In that period, low consumer buying had resulted in much unused capacity in these industries. Conditions improved during the year with strengthening of the home market and most durables industries entered 1953 at increased production levels. Continued high and rising incomes, an expanding housing program and a reviving replacement market have helped maintain demand for household appliances in 1953. Yet, during most of 1953, both production and imports have been running ahead of sales. As a result, toward the end of the year there have been signs of excessive accumulation of inventories in some appliance lines.

Sales of new passenger automobiles have shown a substantial increase over the previous record established in 1952. Aided by increased consumer credit, sales of automobiles, both new and used, have provided one of the best examples of the strength of the consumer market in Canada. Partly offsetting this growth of domestic sales, however, has been a decrease in 1953 in motor-vehicle exports, particularly to South America. Within Canada, while the strong demand has continued to attract British and American imports, the bulk of the rise in passenger-car sales has been reflected by output of Canadian factories. This, of course, has included not only assembly plants but also industries supplying raw materials, parts and accessories.

Rising incomes and the expansion of consumer credit have also been reflected in the purchase of clothing in 1953. Increases in retail sales over 1952 levels have not resulted in equivalent increases in manufacturing, however, because of a larger volume of imports both of textile fabrics and of finished garments.

Capital Goods Industries.—Activity in the capital goods industries has, of course, been strongly influenced by the changing nature of the defence and investment programs. Sales of agricultural implements and industrial machinery in 1953 have been below 1952 levels, while building materials, railway rolling-stock and office and store equipment have been in increasing demand. Higher levels of capital goods imports arose in part as a result of increasingly competitive offers among foreign sellers of mass-produced types of equipment. Perhaps more important has been the trend of investment towards industries that normally use imported machinery, such as the machine tools for manufacturing transportation equipment, and much of the apparatus used in non-ferrous metal manufacturing. At the same time, the pulp and paper industry, which uses principally domestically manufactured machinery, has been investing at a slower rate in 1953. Meanwhile, export sales of Canadian-made agricultural and industrial machinery, and office and store equipment have slowed in 1953, while exports of railway rolling-stock have been maintained at good levels.

Minerals, Forest Products and Chemicals.—Production of base metals in Canada increased in 1953, although market conditions differed considerably among the various metals. Nickel and aluminum have been in strong demand, while softer

market conditions have prevailed in the case of copper, lead and zinc. Output of the Canadian iron and steel industry has improved to such an extent that imports of primary shapes have been lower and exports higher than in 1952. Mineral production suffered considerably from the effects of labour disputes in 1953.

Production of crude petroleum has expanded in 1953 and imports have tended to level off. Exploration and development in the petroleum and natural gas industries have continued, but the emphasis in these industries has been increasingly on processing, transportation and marketing. In the case of natural gas this phase has involved complex problems that remain to be solved.

Partly as a result of the growing popularity of oil and gas as household fuels and the increasing use of diesel locomotives, both domestic consumption and imports of coal have been declining. This, together with a drop in exports in 1953, has reduced output and employment in the coal-mining industry.

The output of the Canadian chemicals industry also increased in 1953, principally in the first half of the year. This resulted not only from the opening of new capacity but also from the increased productivity of modernized existing plant. A rise in both exports and imports in the first half of the year resulted chiefly from sale of soda compounds and fertilizers to the United States and purchase of plastics materials from that country.

During 1953, the Canadian pulp and paper industry has continued to operate at a high rate of output. Wood-pulp was produced at a rate above that of 1952 during a good part of the year, and newsprint output showed somewhat less expansion. A heavy increase in the domestic use of newsprint, together with slightly greater American buying, more than offset declining exports to other countries. The expanding domestic market has also stimulated the increasing output of fine papers. During the first half of 1953, Canadian lumber production exceeded the 1952 rate, although neither domestic nor export sales kept pace during the early months of the year.

Agriculture.—Canadian agriculture has, in 1953, experienced another year of high production. Grain crops have been again exceptionally large, with wheat output estimated at 614,000,000 bu. This is second only to the all-time record set in 1952 which, in turn, had followed an unusually good crop in 1951. Despite record export sales, bumper crops in three successive years, together with good harvests in 1953 in other important grain-producing countries, have greatly increased Canada's available supply of grains. Harvests of fodder, fruit and vegetables in 1953 have not been as uniformly favourable as in the case of grains, less than average crops having been obtained for certain products particularly in the case of certain fruits.

Cattle marketings have increased substantially in 1953 but prices have been lower. In the United States, also, marketings have been heavy, resulting in prices too low to attract Canadian beef and cattle. As a result, despite the lifting of the United States embargo on live-stock products early in the year, cattle and beef exports to that market have been extremely low. On the other hand, hog marketings

in Canada have been lower in 1953 and prices have increased. With a firmer market prevailing in the United States also, a considerable volume of Canadian pork products has been sold in that country. Fluid milk production has been moderately higher in 1953 and dairy product prices have in general remained firm.

Total farm production in 1953 is estimated to be moderately lower than in the previous year. With prices of some products also lower, net farm income has declined considerably from the unusually high levels of 1951 and 1952 but remains well above those of previous years.

Summary.—Thus, 1953 has been a year of continued growth in the Canadian economy. The development of new basic material capacity has proceeded apace during the year accompanied by a marked pick-up in the rate of expansion of secondary and service facilities. Output and employment levels have increased, giving rise, in turn, to significantly higher incomes. A generally high volume of activity has prevailed in nearly all segments of Canadian industry. At the same time, markets have been more competitive. As a result of the increased flow of imports, particularly in manufactured goods lines, activity in some Canadian industries has not kept pace with the rising volume of domestic sales. By the end of 1953, expansionary trends in the economy were perhaps not quite as pronounced as earlier in the year but the over-all level of activity remained high.

# SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:—

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed or where "a trace" is meant.
- p preliminary figures.

# PART I.—GEOGRAPHY\*

Canada comprises the whole northern part of the North American Continent, except for the territory of Alaska. The most easterly point is Cape Spear, Newfoundland, at west longitude 52° 37′, and the most westerly point is Mount St. Elias, Yukon Territory, at west longitude 141°. The southernmost point is Middle Island in Lake Erie at north latitude 41° 41′ and northward Canada extends to the North Pole and includes the Arctic Archipelago between Davis Strait, Baffin Bay and the connecting waters northward to and along the 60th meridian on the east and the 141st meridian on the west. Thus, Canada covers in all 48° of latitude and 88° of longitude. It is bounded on the west by the Pacific Ocean and the 1,539·8 linear miles of Alaskan territory, on the south by the United States, a distance of 3,986·8 miles, and on the east by the Atlantic Ocean, Davis Strait and the dividing waters between Ellesmere Island and the Danish territory of Greenland.

Canada is the second largest country in the world, having an area of 3,845,774 sq. miles. It is exceeded in size only by the Union of Soviet Socialist Republics with 8,598,701 sq. miles.† Other comparisons are: China 3,759,191 sq. miles,† continental United States and Alaska 3,608,653 sq. miles,† Australia 2,974,471 sq. miles,† and the Continent of Europe (excluding the European part of the Soviet Union) 1,899,612 sq. miles.†

The sea-coast of Canada comprises the following estimated mileages:-

Mainland.—Atlantic 6,111, Pacific 1,579, Hudson Strait 1,245, Hudson Bay 3,157, Arctic 5,771; total 17,863 miles.

Islands.— Atlantic 8,677, Pacific 3,979, Hudson Strait 60, Hudson Bay 2,307, Arctic 26,786; total 41,809 miles.

Revised by the Geographical Branch and the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.
† Taken from the United : Lions Statistical Year Book, 1952.

Canada's fresh-water area is extensive, constituting nearly 7 p.c. of the total area of the country. Its inland waterways, particularly with respect to transportation and the development of electric power, are among the most vital influences in the national economy.

# 1.-Approximate Land and Fresh-Water Areas, by Province

Note.—For a classification of land area as agricultural, forested, etc., see p. 20.

# Section 1.—Physical Geography

## Subsection 1.—Physiographic Divisions

Canada divides naturally into four major physiographic regions which are differentiated by geological history and structure. They include the Canadian Shield, the Appalachian Region, the Interior Plains Region and the Cordilleran Region. A fifth division, about which much less is known, includes a belt of folded rocks of Palæozoic and Mesozoic age in the northern part of the Arctic Archipelago. The following is a short description of these regions from the standpoint of topography and geology.

The Canadian Shield.—The Canadian Shield is a vast V-shaped area of approximately 1,800,000 sq. miles surrounding Hudson Bay and extending from the coast of Labrador west to the Interior Plains Region and south to the International Border. It is an area, for the most part, of low relief rarely rising more than 1,500 to 2,000 feet above sea-level, except in Labrador where altitudes of 5,000 feet occur. Its surface is hummocky, marked by irregular hills and ridges but these, over wide areas, do not rise more than 100 to 200 feet above the adjacent lakes and valleys. The numerous lakes and rivers that are everywhere so characteristic of the Shield—for it is the great lake region of the world, probably containing more lakes than all the rest of the world put together—were formed as the result of erosion and deposition by continental glaciers that covered the region during the Pleistocene epoch.

One of these ice sheets gathered west of Hudson Bay, another in the heart of Labrador. From these centres the ice moved out in all directions and in its advance scoured off the residual soil, smoothed down the topography, polished and stripted rock surfaces and, by scattering debris irregularly, completely disorganized the drainage. The result was the formation of thousands of lakes of all sizes and shapes. In some of the temporary lakes situated in front of the ice during its retreat, clay and other fine stratified deposits accumulated forming what are known as clay belts.

Geologically, the rocks of the Shield are all very old having been formed in Precambrian time but include sedimentary, volcanic and intrusive varieties of widely different ages. In succeeding eras, the Shield suffered vertical movement at intervals but it has been unaffected by folding or mountain-building deformation. The Canadian Shield is a great storehouse of mineral wealth, particularly of metals. Its gold ores, the copper-zinc-sulphide replacement deposits of Noranda, Flin Flon, etc., and many other ore occurrences were formed by mineralizers given off by intrusive masses during the late stages of their cooling. In eastern Ontario and western Quebec, where granite has intruded limestone and other sediments, there occur deposits of mica, graphite, feldspar, magnesite, fluorite and other minerals.

The Appalachian Region.—This Region includes the Provinces of Nova Scotia, New Brunswick, Prince Edward Island, the Island of Newfoundland and that part of Quebec lying south and east of the St. Lawrence River. It is mountainous or hilly, the highest elevation—4,160 feet—is that of Mount Jacques Cartier on Tabletop Mountain, in the Shickshock Range in central Gaspe.

The rocks of this Region include sediments, volcanics and intrusives chiefly of Palæozoic age with rocks of Precambrian age in local areas on the Island of Newfoundland, New Brunswick, Cape Breton Island and southwestern Quebec. Ordovician strata in Newfoundland contain important deposits of iron. Rocks of Carboniferous age have large coal deposits and also gypsum. Zinc, lead and copper are mined at Red Indian Lake in Newfoundland and other mineral occurrences are known.

The Interior Plains Region.—The Interior Plains are part of the great plains region in the interior of the Continent and, in Canada, extend through Manitoba, Saskatchewan and Alberta northwest to the Arctic Ocean. Other areas, such as the St. Lawrence Lowlands stretching from Lake Huron northeasterly to Anticosti Island and the Hudson Bay Lowland bordering the west side of Hudson Bay, are regarded as outliers of this Region.

The Plains of Western Canada fall into three divisions. The most easterly division is known as the Manitoba Lowlands and has an elevation of about 500 feet. It is underlain by flat-lying Palæozoic strata. The second division consists of horizontally lying Cretaceous beds. The border where they overlap on the underlying Palæozoic sediments is a steep face known as the Manitoba escarpment rising 1,000 to 2,000 feet above the lowland to the east. West of the escarpment the Plains Region rises gradually to an elevation of 4,000 to 5,000 feet in Alberta where the flat-lying beds of the plains change into the folded strata of the foothills. The third division consists of areas of flat-lying rocks of still younger age such as the Wood Mountain Plateau of Tertiary sediments. The steep topographic rise from the central Plains Region to their summits is known as the Missouri Couteau.

Bituminous coal, lignites, petroleum, natural gas and bituminous sands are found in the strata of the Plains Region of Alberta and Saskatchewan and gypsum and salt in the Palæozoic strata in Manitoba. The oil in the important fields of Alberta and Norman Wells in the Mackenzie Valley, N.W.T., is from Devonian beds.

The St. Lawrence Lowlands fall into three subdivisions, the first and most westerly includes Manitoulin Island and that part of Ontario facing on Lakes Erie and Ontario. It shows a prominent topographical feature, the Niagara Escarpment, an abrupt rise of 250 to 300 feet extending from the Niagara River to Bruce Peninsula. The second subdivision extends from the east side of the Frontenac axis (a southward projection of the Canadian Shield that crosses the St. Lawrence River between Kingston and Brockville, Ont.) east to Quebec city, and the third subdivision comprises Anticosti Island and the Mingan Islands.

The strata of the entire belt of the St. Lawrence Lowlands are of Palæozoic age. They lie horizontally or with low dips, are mainly of marine origin, and were deposited in seas that swept over a large part of the Continent. Vertical movements caused these seas to advance and retreat so that the sediments deposited vary considerably. On Anticosti Island the rocks are of Upper Ordovician and Silurian age. The mineral occurrences in the St. Lawrence Lowlands are petroleum and natural gas, salt, gypsum, limestone, dolomite and also clay that can be used for the manufacture of bricks, tiles and cement.

The Hudson Bay Lowland, the other outlier of the Interior Plains, is underlain by flat-lying rocks mostly of Palæozoic age ranging from Ordovician to Devonian. It rises from sea-level with a very gradual gradient to a height of 400 feet. Lignite occurs in the Moose River Basin in beds of Upper Jurassic or Lower Cretaceous age overlying the Devonian beds. The Cordilleran Region.—The Cordilleran Region comprises the mountainous country bordering the Pacific Ocean and covers an area of 600,000 sq. miles. It is made up of three zones. On the east is the Rocky Mountain Range, on the west along the coast is the Coast Range, and between the two is a third belt made up of upland and mountainous country.

The Rocky Mountains have a maximum width of 100 miles and peaks and elevations of from 10,000 to 12,000 feet. The Coast Range varies in width from 50 to 100 miles and rises abruptly from the coast to peaks of from 7,000 to 10,000 feet.

The northern part of the interior belt, known as the Yukon plateau, is a gently rolling upland broken into a series of flat-topped ridges by valleys several thousand feet deep; the southern part, in British Columbia, rises from 3,000 to 4,000 feet above sea-level. To the east between the upland and the Rocky Mountains are a series of mountain ranges, the Selkirks with peaks of 11,000 feet being the most important.

The geological history of the Cordilleran Region is complex but may be summarized as follows. In Precambrian time sediments which are now in the form of limestones, gneisses and schists were deposited in the interior belt. In Yukon, these strata are known as the Yukon group and in central British Columbia as the Shuswap group. These have been altered by intrusive rocks and included with them are the metamorphosed phases of much later rocks. In late Precambrian time argillites and related sediments accumulated on the site of the southern Rockies and in the region now occupied by the Purcell Mountains which are made up dominantly of quartzites of a thickness of over 20,000 feet. Sedimentation progressed during the Palæozoic era from Cambrian to Carboniferous time, and also during that of Mesozoic. Volcanism, the intrusion of granites, and mountain-building took place in the western part of the belt during the Jurassic period giving rise to the Selkirk and Coast Ranges. In late Cretaceous time and continuing over into the Tertiary, pressure from the west folded the rocks in the eastern part of the region giving rise to the Rocky Mountains.

The Cordilleran Region is a producer of gold (lode and placer), silver, lead and zinc, and contains deposits of mercury, tungsten and iron. Most of the known mineral occurrences are in the western Cordilleran belt and are related to late Mesozoic and early Tertiary granitic intrusions. Coal is widespread in the foothills of Alberta and oil and natural gas are also found in this area. Fluorite, gypsum, magnesite, hydromagnesite phosphate, saline deposits, and limestone form other valuable mineral occurrences.

Further details are given in the 1947 Year Book, pp. 19-29, and the 1951 edition, pp. 14-26.

# Subsection 2.—Hydrographic Features

Lakes and Rivers.—Canada's fresh-water lakes and rivers cover an area of 268,611 sq. miles. The outstanding lakes are, of course, the Great Lakes, though only part of these are in Canadian territory. The International Boundary between Canada and the United States passes through Lakes Superior, Huron, St. Clair, Erie and Ontario. Details are given in Table 2.

Lake	Elevation Above Sea-level	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary
	ft.	miles	miles	ít.	sq. miles	sq. miles
Superior Michigan (U.S.A.) Huron St. Clair Erie	602·23 580·77 580·77 575·30 572·40 245·88	383 321 247 26 241 193	160 118 101 24 57 53	1,302 923 750 23 210 774	31,820 22,400 23,010 460 9,940 7,540	11,200 13,675 270 5,094 3,727

# 2.—Elevations, Areas, and Depths of the Great Lakes

There are no tides in these Great Lakes although considerable variation in water-levels is occasioned by strong winds.

Other large lakes of Canada, ranging in area from 9,000 to 12,000 sq. miles, are Lake Winnipeg, Great Slave Lake and Great Bear Lake. Apart from these, notable for size, there are innumerable lakes scattered over that major portion of Canada lying within the Canadian Shield. In an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes. In an area of 5,294 sq. miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

# 3.—Elevations and Areas of Principal Lakes, by Province

Norg.—Areas given are for mean water levels. In the case of those reservoirs and lakes for which two elevations are given, HW means high water, LW low water, and N normal level.

RIVERS

9

In Eastern Canada, the Great Lakes and St. Lawrence drainage basin dominates all others and forms an unequalled system of navigable inland waterways through a region rich in natural and industrial resources. From Duluth at the head of Lake Superior to Belle Isle at the entrance to the Gulf of St. Lawrence, the distance is 2,280 miles. The St. Lawrence waterway and its tributaries, most of which have lakes available for reservoiring, have very large developed and potential power resources.

The greater part of Canada drains into Hudson Bay and the Arctic Ocean; the Nelson River drainage is exceptional in running through the most arable and the most settled part of Western Canada, but otherwise the rivers of the West, east of the Rockies, run away from the settled areas towards the cold northern salt waters and this adversely affects their industrial utility. The Mackenzie River, which drains Great Slave Lake, is, with its headwaters, the longest river in Canada (2,635 miles) and its valley constitutes the natural transportation route through the Northwest Territories down to the Arctic Ocean. From Fort Smith, on the Slave River, large river boats run without any obstruction down to Aklavik on the delta of the Mackenzie, a distance of 1,292 miles. Table 5 gives the lengths of the principal rivers with their tributaries classified according to the four major drainage basins.

#### 5.—Lengths of Principal Rivers and Their Tributaries

Note.—In this table the tributaries and sub-tributaries are indicated by indentation of the names. Thus, the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

Ocean Areas and Seas.—A comprehensive description of the ocean areas and seas of Canada would include sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea-floor and the scope of the information presented here is, therefore, restricted to this and a few salient features of the Atlantic, Arctic and Sub-Arctic and Pacific marginal seas surrounding Canada. Further details are given in the 1947 Year Book, pp. 3-12.

Atlantic.—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged Continental Shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This Shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 120 to 50 miles (at the entrance of Hudson Strait), and northward it merges with that of the Polar Sea. The outer edge of the Shelf, known as the Continental Shoulder, is of varying depths of from 100 to 200 fathoms before the Shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic Continental Shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia, the 40-fathom line lies at an average of 12 miles from

the shore and constitutes the danger line for coastwise shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the Shelf.

The main topographical features of the Atlantic marginal sea-floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shorebanks washes away enormous masses that are deposited over the surrounding sea-floor. The conformation of the continental sea-floor is, therefore, constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Arctic and Sub-Arctic.—The submerged plateau protruding from the northern coast of North America is a major part of the Great Continental Shelf surrounding the North Polar Sea on which lie all the Arctic Islands of Canada, Iceland, Greenland and most of those of Europe and Asia. The Polar Shelf develops its maximum width on the 80th meridian of west longitude where it extends from the south of James Bay to the north coast of Ellesmere Island, a distance of over 2,000 miles.

The floor topography of this continental margin is somewhat hypothetical but sufficient has been charted to indicate an abrupt break at the northern oceanward edge. This steep continental terrace borders the whole western side of the Canadian Archipelago and constitutes one of the most striking and significant features of the Polar regions. From this declivity, deep well-developed troughs, cut by glaciers, enter between the western group of islands. A ridge across Davis Strait on which the depth is about 200 fathoms separates this basin from the open Atlantic.

Hudson Bay and Hudson Strait bite deeply into the Continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea-floor are indicated but, except in inshore waters, few navigation hazards have been located.

Pacific.—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the Continental Shelf extends from 50 to 100 seamiles to its oceanward limit where depths of about 200 fathoms are found. There the sea-floor drops rapidly to the Pacific Deeps, parts of the western slopes of Vancouver and Queen Charlotte Islands lying only four miles and one mile, respectively, from the edge of the declivity. These great detached land-masses are the dominant features of the Pacific marginal sea. Along the whole coast continuous navigation is afforded through an inside passage sheltered from the sea by a protective barrier of islands. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating great caution in navigation.

#### Subsection 3.-Islands

The northern and western coasts of Canada are skirted by clusters of islands. Those on the north include a very large group within the Arctic Circle. On the west coast, Vancouver and the Queen Charlotte Islands are the largest and most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, Anticosti Island and the Magdalen group included in the Province of Quebec are the chief islands off the eastern coast.

Notable islands of the inland waters include Manitoulin Island, 1,068 sq. miles in area, lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

#### Subsection 4.—Mountains

The predominant orographical feature in Canada is the Rocky Mountain System. The named peaks exceeding 11,000 feet in elevation are listed in Table 7.

# 7.—Mountain Peaks 11,000 Feet or Over in Elevation, by Province and Mountain Range

Note.—The highest elevations of Eastern Canada are peaks of the Torngats in Labrador which reach at 5,000 feet and Mount Jacques Cartier, a peak of Tabletop Mountain in the Shickshock Range of the Gaspe District, Que., which rises to 4,160 feet.

# Section 2.—Main Physical and Economic Features of the Provinces

Politically, Canada is divided into ten provinces and two territories. Each of the provinces is sovereign in its own sphere, as set out in the British North America Act, 1867, and its amendments, and as new provinces have been organized they have been granted political status equivalent to that of the original provinces. The Yukon and Northwest Territories, with their present boundaries, are administered by the Federal Government. The chief physical and economic features of each of the provinces and of the territories are reviewed below. Details of resources and their development are given in later chapters.

Newfoundland.—Newfoundland, once the oldest colony of the British Empire, is the newest and most easterly province of Canada. It comprises the Coast of Labrador, an area of 112,630 sq. miles on the mainland, and the Island of Newfoundland. Separating the two portions is the Strait of Belle Isle, 9½ miles in width at its narrowest point. From Nova Scotia across Cabot Strait the distance is 70 miles. The Island is triangular in shape, the three sides each being about 320 miles long, and it has an area of 42,734 sq. miles. The climate of the Island is temperate, with cool summers and mild winters. Climatic conditions in Labrador are more severe.

The Island has low, rolling relief, with its highest elevations in the west where summits in the Long Range Mountains exceed 2,500 feet. Much of the surface is barren and rocky with innumerable ponds and swamps, and most of the land is unsuitable for farming. The river valleys and the west coast are thickly forested and support a thriving wood-pulp industry. The deeply indented coast line has many harbours providing safe anchorage for the fishing vessels that support the important fishing industry. Fishing, mainly for cod, is carried on along the coasts of Newfoundland and Labrador and on the Grand Banks. The Province of Newfoundland has extensive mineral deposits. Iron ore is mined from the huge Wabana deposits on Bell Island and production of iron ore from the large hematite deposits in the Labrador-Quebec region is expected to commence in 1954 following completion of the 360-mile railway to connect the deposits with the port of Seven Islands. Lead-zinc-copper ore is mined at Buchans in the interior of the Island. The vast water-power resources of Labrador are in the first stages of development.

Prince Edward Island.—This, the smallest province of Canada, is about 120 miles in length, with an average width of 20 miles and an area of 2,184 sq. miles. Prince Edward Island lies 10 to 20 miles off the mainland, east of New Brunswick and north of Nova Scotia, and is separated from these Provinces by Northumberland Strait.

The Island attains an altitude of about 450 feet above sea-level and is almost trisected by the deep indentations of Malpeque Bay and by the mouth of the Hillsborough River, which nearly meets Tracadie Bay on the north side. Its rich, red soil and red sandstone formations are distinctive features. The climate is tempered by the surrounding waters of the Gulf of St. Lawrence and, combined with fertile soil and sheltered harbours, offers great inducements to the pursuits of agriculture and fishing. The Province is noted for its production of seed potatoes, its lobster canneries, cyster beds and fur farms.

Nova Scotia.—The Province of Nova Scotia is 381 miles in length by 50 to 105 miles in width and has an area of 21,068 sq. miles almost surrounded by the Bay of Fundy, the Atlantic Ocean and the Gulf of St. Lawrence. The mainland is connected with the Province of New Brunswick by the Isthmus of Chignecto. The Island of Cape Breton, forming the northeast portion of the Province, is separated from the mainland by the narrow Strait of Canso and includes the famous saltwater Bras d'Or Lakes. On the Atlantic side, the mainland is generally rocky and open to the sweep of Atlantic storms; it is extensively indented and has numerous harbours providing safety for the large fishing fleets that support the extensive fishing industry of the Province. The slopes facing the Bay of Fundy and the Gulf of St. Lawrence are sheltered from the Atlantic by low ridges not exceeding an altitude of 1,500 feet and running through the centre of the Province. In striking contrast to the rocky Atlantic side, they present fertile plains and river valleys especially adapted by climate and situation to the growth of apples, pears and other fruits.

Nova Scotia is one of the leading provinces in the production of good-quality bituminous coal suitable for the production of coke and excellent for domestic use and for steam-raising purposes. The chief coalfields are in the Sydney and Inverness areas on Cape Breton Island, and in Pictou and Cumberland Counties on the mainland. Nova Scotia is also an important producer of salt, gypsum and barite.

New Brunswick.—New Brunswick is nearly rectangular in shape with an area of 27,985 sq. miles. The Bay of Chaleur on the north, the Gulf of St. Lawrence and Northumberland Strait on the east, the Bay of Fundy on the south, and Passamaquoddy Bay on the southwest, provide the Province with a very extensive sea-coast. It adjoins the United States on the west and the Province of Quebec on the north and northwest.

The surface of New Brunswick is mostly undulating, its highest elevation of 2,690 feet being in the vicinity of Grand Falls, on the St. John River. In the northeastern half of the Province extensive areas of Crown lands carry valuable stands of merchantable timber and numerous rivers provide access to the lumbering areas. The Province is watered to the west and south by the St. John River, which, in its course of 400 miles, runs through country famed for its beauty.

Economically, the forest resources are of first importance followed by the fisheries, although large areas of rich agricultural land are found in the numerous river valleys, especially that of the lower St. John, and in the broad plains along the Bay of Fundy coast. The mineral resources of the Province include moderate amounts of coal, natural gas and petroleum. A development of exceptional importance occurred early in 1953 when announcement was made of the discovery of a lead-zinc-silver-pyrite deposit near Bathurst. Drilling has since outlined what appears to be a lead-zinc-copper deposit of substantial tonnage. The Federal Department of Mines and Technical Surveys carried out an aeromagnetic survey over the area in March 1950, and the anomalies shown on the resultant map and on other aeromagnetic maps of the district have been staked over an area 70 miles north-south by 40 miles east-west.

Quebec.—Quebec, the largest province of Canada, lies east and southeast of Hudson Bay; adjoining it on the south are the United States and New Brunswick, with Ontario on the west. It has an area of 594,860 sq. miles, and most of the surface is made up of Precambrian rocks of the Canadian Shield. North of the St. Lawrence is the broken rim of the Canadian Shield, rising sharply to the Height of Land (varying from 1,000 to 3,000 feet) from which it descends gently to sea-level at Hudson Bay and Hudson Strait. The Gulf of St. Lawrence and the River St. Lawrence penetrate the entire width of Quebec and divide the Eastern Townships and the Gaspe Peninsula to the south from the larger area of the Province to the north.

With the exception of the treeless zone, extending north of latitude 58°, most of the Province supports a valuable tree growth varying from the mixed forests in the southwest to the coniferous forests in the east and north. In addition to extensive timber limits, which form the basis of a great pulp and paper industry, Quebec is the foremost of the provinces in the development of hydro-electric power and has available water-power resources, at ordinary minimum flow, almost equal to those of Ontario and Manitoba combined. Quebec has made exceptionally rapid progress in the development of its mineral resources and ranks next to Ontario in annual value of mineral output. The Province produces about 70 p.c. of the world output of asbestos and is a leading Canadian producer of copper, gold and zinc. In the Quebec-Labrador region are huge deposits of hematite from which production is expected to commence in 1954. Also, important discoveries of iron ore have been made on the west side of Ungava Bay. At Allard Lake in eastern Quebec are large deposits of ilmenite, an ore of titanium and iron, output from which is shipped to Sorel for treatment. The fisheries in the St. Lawrence River and

Gulf are important and inland waters abound in game fish. The climate and soil of the upper St. Lawrence Valley and of the Eastern Townships are well suited to general farming operations, including dairying and the production of vegetables and maple products.

Ontario.—Lying between Quebec on the east and Manitoba on the west, Ontario has an area of 412,582 sq. miles and is usually regarded as an inland province but its southern boundary has a fresh-water shore line of 2,362 miles on the Great Lakes while its northern limits have a salt-water shore line of 680 miles on Hudson and James Bays.

The surface of Ontario is characteristic of the Canadian Shield, except in the southern triangle lying between the lower lakes and the Ottawa River where the surface is undulating to rolling, being higher to the west of the Niagara Escarpment, northwest of which the highest elevations are obtained. The highest point in Ontario is 2,120 feet, on the promontory at the northeastern corner of Lake Superior. Northwest from the Height of Land, the slope descends very gently to Hudson Bay where a large marginal strip (the Hudson Bay Lowlands) is less than 500 feet above sea-level.

Ontario has long been Canada's leading producer of minerals and accounts for practically all the Canadian production of nickel and for about 95 p.c. of the world output of this metal. It is a leading world source of copper and the platinum metals and, mainly as a result of developments in the Steep Rock and Michipicoten areas, it is rapidly gaining prominence as a source of iron ore. Ontario also produces several of the industrial minerals, a fairly recent addition to the list being asbestos from the Matheson area. The Province produces substantial quantities of natural gas and relatively small amounts of crude petroleum.

The Great Lakes waterways system permits economic international transportation of iron ore and coal for Ontario's basic iron and steel industries. This advantage, together with an abundance of natural resources, has made Ontario the foremost manufacturing province of Canada. Vast forest resources in proximity to hydro-electric power form the basis of a large pulp and paper industry, while the forests of the north are a rich fur preserve.

The lands along the St. Lawrence and the lower lakes possess excellent soil and constitute a highly productive farming district catering to the needs of a large urban population. In the Niagara Peninsula fruit farming has been scientifically developed into a highly specialized industry.

Manitoba.—Manitoba, covering 246,512 sq. miles, is the most central of the provinces. With the Provinces of Saskatchewan and Alberta, it constitutes the Interior or Prairie Plains section of Canada—world-renowned for the quality of its wheat.

Manitoba is a land of wide diversity, combining 400 miles of sea-coast along its northeastern boundary bordering Hudson Bay, great areas of mixed forests, large lakes and rivers covering an area of 26,789 sq. miles, a belt of treeless prairie extending to the southeastern corner of the Province, and patches of open prairie underlain by very fertile soil of great depth. The average elevation of the Province is between 500 and 1,000 feet. The greatest height of 2,727 feet is Duck Mountain, northwest of Lake Dauphin.

Most of that part of Manitoba lying north and east of Lake Winnipeg is underlain by rocks of the Canadian Shield. Within this area are numerous deposits of base metals and gold and from the mines in this area Manitoba obtains all its metal output. The largest operation is at Flin Flon where copper-zinc deposits are located. These deposits straddle the Manitoba-Saskatchewan boundary and, for a number of years, most of the output has come from the Saskatchewan portion. Large coppernickel deposits are being developed at Lynn Lake.

Most of the southern portion of the Province forms part of the great plains region and from this area Manitoba obtains its output of several non-metallic minerals. Crude petroleum was discovered in the Virden district a few years ago and a number of wells are now in production in this general area, the present rate of output being in excess of 1,000 bbl. a day.

Saskatchewan.—Saskatchewan, 251,700 sq. miles in area, lies in the centre of the Prairie Plains between Manitoba and Alberta and extends, as do those Provinces, from the International Boundary on the south to the 60th parallel of latitude on the north. The Canadian Shield extends over the northern third of the Province. This portion is abundantly watered by lakes and rivers and is generally of low relief. It is rich in timber resources and from it comes Saskatchewan's metal output which is practically all obtained from the large copper-zinc deposits straddling the Saskatchewan-Manitoba boundary. The discovery of deposits of uranium ore in the Beaverlodge area north of Lake Athabasca has brought Saskatchewan prominently to the forefront as a potential world source of this ore; production in this area commenced in April 1953.

The southern two-thirds of the Province forms part of the great plains region and is generally fertile, with soil of great depth. Normally, there is sufficient moisture for rapid growth and the abundant sunshine during the long summer season in this northern latitude quickly ripens the crops. This portion of Saskatchewan is rich in non-metallic minerals, including the fuels, and is the source of all of Canada's output of sodium sulphate. During the past few years extensive exploration for crude petroleum and natural gas has been conducted here with increasingly successful results.

Alberta.—This Province covers 255,285 sq. miles and lies between Saskatchewan and British Columbia. The southern part of the Province is dry, treeless prairie, changing to the north into a zone of poplar interspersed with open prairie, and giving way to mixed forests. The Canadian Shield extends only into the northeast corner of Alberta so that, excepting the fringe of mountainous country on its western border, practically the whole of the Province is underlain by arable soil of great depth. Alberta has three marked physical features—the plains, the foothills, and the portion of the Rocky Mountains within its boundaries. Overlying these is the marked difference in vegetation of the arid southwest and the more humid parklands of the remainder of the Province which merges with mixed and coniferous forest. Permanent agricultural settlement reaches its farthest northern point in Canada in the Peace River Valley of Alberta. The southern half of the Province, rising towards the west, lies at a general elevation of from 2,000 to 4,000 feet but, in the northern half, the slope descends until elevations of well under 1,000 feet are reached at Lake Athabasca in the northwest corner.

Alberta has the most extensive coal resources of any of the provinces and, following the discovery of the Leduc oil field, about 20 miles southwest of Edmonton, in 1947, it is rapidly becoming a major world source of crude petroleum. Huge reserves of natural gas have been disclosed, mostly as a result of oil-drilling operations, and prospects are bright for further large discoveries of petroleum and natural gas. These resources provide the basis of Alberta's industrial development. Lumbering is important in the more mountainous western parts and in the north, and ranching is carried on in the dry sections of the south and west. In some southern prairie areas the quantity and distribution of the natural precipitation make permanent agriculture precarious and a number of large irrigation projects have been developed, taking their water supply from rivers rising in the mountains that form the western boundary of the Province. The climate of Alberta is a particularly pleasant one, cooler in summer than the more eastern parts of the country and tempered in winter by the chinook winds, particularly in the south.

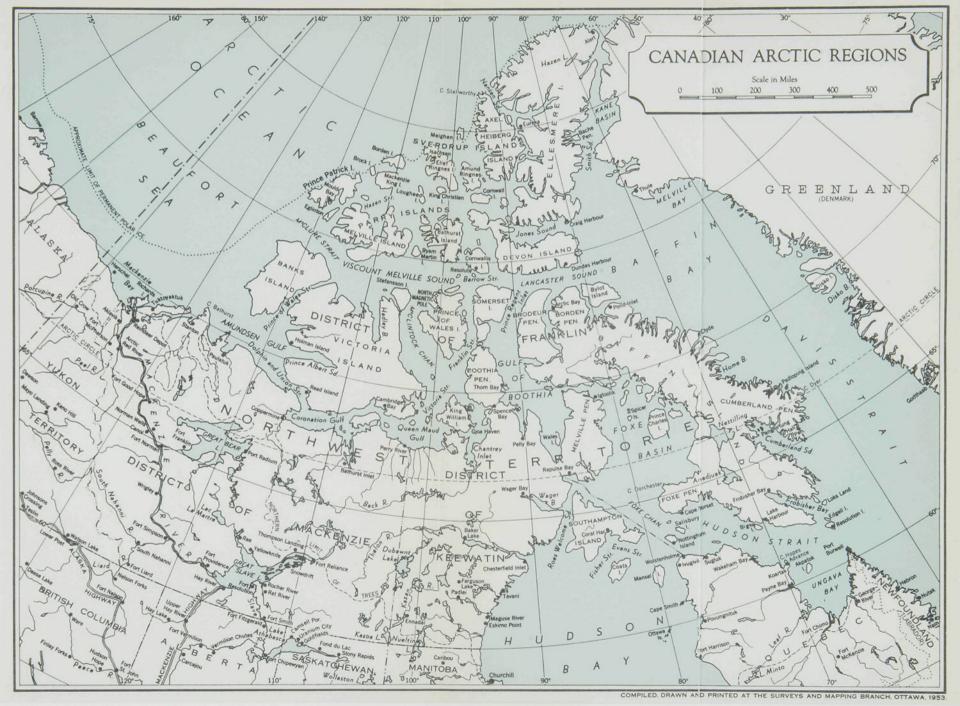

British Columbia.—British Columbia, 366,255 sq. miles in area, is the third largest and the most westerly province of Canada. It includes many islands of the Pacific, notably Vancouver Island and the Queen Charlotte Islands, the area of the former being 12,408 sq. miles.

The predominant feature of the Province is the parallel ranges of mountains that cover all except the northeast corner resulting in a set of parallel linear valleys. Many of these are extremely fertile with climatic conditions well adapted to mixed agriculture or fruit growing. Generally, the agricultural areas of these valleys are relatively small and broken. Two large areas in the Peace River Block and the Stuart Lake District have great agricultural possibilities. The shore-line of the Pacific is deeply indented with many inlets that are ideal for harbourage.

The wealth of the forest resources supports the lumbering and pulp and paper industries and places British Columbia first among the provinces in the production of lumber and timber. The Province excels in fishery products, chiefly on account of the famous Pacific salmon. The mineral resources are remarkable for their variety and wealth. Production of lead, zinc, silver, gold and, to a lesser extent, copper has played an important role in the economic life of the Province since its early days, while valuable coal deposits on Vancouver Island and at Crowsnest and Fernie in the interior have been worked for many years. The Province is one of the chief sources of tungsten ore in the free world and asbestos has been recently added to the list of minerals produced. Huge supplies of natural gas have been disclosed in the Peace River section of the Province. In water-power resources, British Columbia ranks second in Canada.

The Yukon and Northwest Territories.—These vast northern territories extend over an area of 1,511,979 sq. miles, from the 60th parallel of latitude to the northernmost limits. They comprise about 39 p.c. of the surface of Canada.

The Territories are areas of contrast and extremes in topographical characteristics, flora and fauna, and climate. Surface features vary from the treeless plains of the far north, the rolling hills of the Canadian Shield in the east, and the forested valley of the Mackenzie River, to some of Canada's highest mountain peaks in the west; from small streams and lakes to the longest rivers in Canada—the Mackenzie, which is over 2,600 miles in length, and the Yukon, which is approximately 2,000 miles long, and Great Slave and Great Bear Lakes, both of which are over 11,000 sq. miles in area.

Since the Klondike gold rush near the close of the nineteenth century, the Yukon Territory has been an important producer of placer gold. Rich deposits of lead-zinc-silver ore occur in the Mayo area from which a substantial production of these metals is obtained. Interest in the mineral possibilities of the Yukon has been increasing steadily in recent years.

Mineral production in the Northwest Territories is still relatively small considering the size of the region but the prospects for a substantial increase seem to be bright. Oil from the Norman Wells area, pitchblende products from deposits at Port Radium on the east shore of Great Bear Lake, and gold from the Yellowknife area are the chief minerals produced.

The agricultural land of the Territories lies almost entirely in the extension into the Mackenzie Valley of the central plains of the Prairie Provinces and crops are confined to vegetable gardens. In the northern regions the flora and fauna have their own peculiar patterns. There are immense areas of lichens, which at first sight appear to be stretches of broken greyish rock. These, along with sedges, grasses, crowberries, ground-willow, etc., provide food for the caribou and muskoxen.

The winters along the Mackenzie River are bitterly cold, averaging 16° to 25° below zero, but in Yukon they are surprisingly mild and vary from 2° below to 21° below zero.

Hunting of caribou, seals, walrus and whales and fishing and trapping form the principal basis of existence for the native Eskimos, providing food and hides for the manufacture of clothing, sleeping bags, etc. The introduction of reindeer by the Federal Government in the Mackenzie District of the Northwest Territories has provided an important local industry to serve the people's needs.

# PART II.—LAND RESOURCES AND PUBLIC LANDS Section 1.—Land Resources

Extensive areas of arable and forested land, together with vast water-power resources, are the basis of Canada's industrial and commercial life. Agricultural land has been developed on a substantial scale and is well distributed from east to west. It is characterized by a diversity of contour, soil and climate and is thus capable of producing a great variety of crops in a volume well beyond domestic requirements. Of the total land area, 15.5 p.c. is estimated as suitable for cultivation and of this area a little less than 50 p.c. is, at present, occupied. Most of the unoccupied land considered potentially suitable for agriculture is now under forest. Altogether, about 37 p.c. of the total land area of the country is forested. This vast extent is of immense importance, not only in the production of lumber, pulpwood and fuel, but also in tempering the climate and conserving the water supply.

This Section of the Year Book is concerned only with those summary phases of the subject that can be regarded as falling under the definition of physiography used in its wider interpretation. Detailed information regarding individual natural resources and their development will be found in later chapters, together with data concerning the efforts directed to conservation of those resources.

Table 1 classifies the land resources as agricultural, forested or unproductive. Duplication is unavoidable between the totals of present and potential agricultural land and the totals of forested land to the extent of agricultural lands under forest. The figures of agricultural lands are based on the 1951 Census; those on forested land are obtained from the Department of Resources and Development while those for total land area of Canada and the provinces are supplied by the Surveyor General.

1.-Land Area, classified as Agricultural, Forested or Unproductive, by Province

Totals, Land Area	219,723	220,182	248,800	359,279	1,458,784	3,577,163

at Includes the Gatineau Park (70 sq. miles) and the Quebec Battlefields Park (0.36 sq. miles) which are under federal jurisdiction but which are not technically National Parks. Less than 1 sq. mile. Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, as game sanctuaries in which hunting and trapping is otherwise forbidden, and as reserves for reindeer grazing, but which are not regarded as National Parks. Includes Wood Buffalo Park (13,675 sq. miles) which, although reserved by the Federal Government, is not administered as a National Park.

That portion of Wood Buffalo Park in N.W.T. Includes 1,392 sq. miles of unsurveyed lands—Provincial Park areas.

### Subsection 1.--Federal Public Lands

Public lands under the administration of the Federal Government comprise lands in the Northwest Territories, including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, Ordnance and Admiralty Lands, National Parks and National Historic Sites, Forest Experiment Stations, Experimental Farms, Indian reserves and, in general, all public lands held by the several Departments of the Federal Government for various purposes connected with federal administration. The Dominion Lands Act (R.S.C. 1927, c. 113) and the Ordnance and Admiralty Lands Act (R.S.C., 1927, c. 58) were repealed in 1950, while the Territorial Lands Act (R.S.C. 1952, c. 263) and the Public Lands Grants Act (R.S.C. 1952, c. 224) were enacted to replace them and became effective June 1, 1950.

The largest land areas under federal administration are the Northwest Territories and Yukon Territory amounting to about 1,458,784 sq. miles or 41 p.c. of the land surface of Canada. This part of the national domain, which is all north of the 60th parallel of latitude, is under the administration of the Northern Administration and Lands Branch of the Department of Resources and Development.

### Subsection 2.—Provincial Public Lands

Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the Provincial Governments. In 1930, the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan, Alberta and of sections of British Columbia to their respective Governments, and all lands in the Province of Newfoundland, except 6,681 sq. miles of alienated land and 2 sq. miles of federal land, became provincial public lands under the Terms of Union on Mar. 31, 1949.

All land in the Province of Prince Edward Island has been alienated except 11 sq. miles under federal administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXVIII, under "Lands".)

Certain areas in most of the provinces have been set aside for parks and reserves; these are dealt with in Subsection 3.

### Subsection 3.-National and Provincial Parks

The future of Canada in the field of outdoor recreation is being wisely provided for by the establishment of National and Provincial Parks. Many of these Parks are easily accessible by highway, rail or air and offer every type of accommodation from camping facilities to palatial hotels and cosy cabins. A wide variety of summer and winter recreational attractions are available in mountain, lakeland, woodland and seaside areas of exceptional scenic beauty.

The areas of the Parks are given in Table 3; location, year of establishment and main characteristics are given in Tables 4 and 5.

### 3.-Land Area of National and Provincial Parks, by Province, 1953

Province or Territory	National	Provincial	Total
	sq. miles	sq. miles	sq. miles
Newfoundland		42-00	42.00
Prince Edward IslandNova Scotia	7·00 390·61		7.00 390.61
New Brunswick	79-63	_	79-63
Quebec	0.331	20,026-10	20,026-43
Ontario	11.74	5,212-17	5,223.91
Manitoba	1,148.09	2	1,148.09
Saskatchewan	1,496.05	1,685-133	3,181-18
Alberta	20,718.00	109.09	20,827.09
British Columbia. Yukon and Northwest Territories.	1,671.00	14,081.00	15,752-00
Yukon and Northwest Territories	3,625.00	-	3,625-00
Canada	29,147-46	41,155-49	70,302.94

Not including area of Gatineau Park, 70 sq. miles in extent (see p. 32).
Provincial park development is being carried out in some of Manitoba's forest reserves.
Includes Nipawin and Lac La Ronge unsurveyed lands, 1,392 sq. miles in extent.

National Parks.—From 1885, when the first National Park was established around the mineral hot springs at Banff, Alta., until 1953, 28 areas covering more than 29,000 sq. miles have been set aside as National Parks.

These Parks are maintained by the Federal Government for the protection of their flora, fauna and natural phenomena, for the preservation of their scenic beauty and interest and, in come cases, the marking of their historical significance in the building of the nation. They are supervised by the National Parks Branch, Department of Resources and Development, and are developed and maintained in such a manner as to provide perpetual inspiration, education and healthful recreation for present and future generations.

The National Parks are Canada's greatest single tourist attraction. Accommodation in privately owned hotels, bungalow cabins, chalets, lodges and cottages is available, and modern cabins have been built in several of the Parks by the National Parks Administration to afford low-rental accommodation to Park visitors. Recreational facilities include heated outdoor swimming pools with dressing-room buildings; equipped camp-grounds, some with trailer-park facilities; golf courses in superb scenic settings; tennis courts; bowling greens; well-equipped children's playgrounds; athletic fields; horseshoe pitches; outdoor checker-boards; and, in some of the Parks, amphitheatres where plays, concerts and film shows are held in the open. For winter sports there are down-hill and slalom ski courses, ski jumps, ski tows and a chairlift.

A park warden service protects the forests and wildlife and maintains constant vigilance for the safety and comfort of visitors. Stocking and transfer of game fish in order to improve angling opportunities in Park waters are carried out extensively and successfully; fish hatcheries are operated in three of the mountain National Parks. (A special article on Game Fish in Canada's National Parks is given in the 1952-53 Year Book, pp. 34-36.) Two of the National Parks are largely big-game preserves where herds of buffalo and other animals find sanctuary.

In addition to the scenic, recreational and wild animal parks, Canada has eleven national historic parks. The National Parks and Historic Sites Service of the Department of Resources and Development is also responsible for the marking, preservation and restoration of places of great historic interest in Canada. More than 450 such sites have been marked on the recommendation of the Historic Sites and Monuments Board of Canada. The most important recent additions to the list of historic places transferred to National Parks Administration are Lower Fort Garry in Manitoba, Fort Battleford in Saskatchewan, and the Citadel at Halifax, Nova Scotia.

4.—Location, Year Established, Area and Characteristics of	National Par	KS
--	--------------	----

Park	Location	Year Estab- lished	Area	Characteristics
Scenic and Becreational Parks Banff	Western Alberta, on east slope of Rock- ies.	1885	sq. miles 2,564·0	

### 4.—Location, Year Established, Area and Characteristics of National Parks—continued

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
Scenic and Recrea- tional Parks—con.				
Yoho	Eastern British Col- umbia, on west slope of Rockies.	1886	507-0	Lofty peaks, magnificent waterfalls, colourful lakes. Yoho and Kicking Horse Valleys. Accessible by rail and highway, Hotel and bungalow cabin accommodation. Equipped camp-grounds.
Glacier	Southeastern British Columbia, on sum- mit of the Selkirk Range.	1886	521-0	Superb alpine region, towering peaks, glaciers and forests. Accessible by rail only. Climbing, skiing, camping.
Waterton Lakes	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	204-0	Canadian section, Waterton-Glacier Inter- national Peace Park. Mountain play- ground with spectacular peaks and beau- tiful lakes. Accessible by highway. Hotel and bungalow cabin accommoda- tion. Equipped camp-grounds.
Jasper	Western Alberta, on east slope of Rockies.	1907	4,200.0	Mountain playground and noted wildlife sanctuary. Majestic peaks, ice-fields, beautiful lakes and famous resort, Jasper. Mineral hot springs, summer and winter sports. Accessible by rail, highway and air. Hotel and bungalow cabin accommodation. Equipped camp- grounds.
Mount Revelstoke	Southeastern British Columbia, on west slope of Selkirks.	1914	100-0	Rolling mountain-top plateau. Colourful alpine meadows. Accessible by rail and highway. Summer accommodation in Park; all-year accommodation in town of Revelstoke. Championship ski runs and ski jump. Equipped camp-grounds.
St. Lawrence Islands.	In St. Lawrence River between Morrisburg and Kingston, Ont.	1914	189·4 (acres)	Mainland area and 13 islands among Thous- and Islands. Recreational and camping area. Accessible by highway: by boat from nearby mainland points.
Point Pelee	Southern Ontario, on Lake Erie.	1918	6-0	Recreational area. Remarkable beaches, southern flora. Resting place for migratory birds. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp-grounds.
Kootenay	Southeastern British Columbia, on west slope of Rockies.	1920	543-0	Encloses Vermilion-Sinclair section of Banfi-Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and bungalow cabin accommodation. Equipped camp- grounds.
Prince Albert	Central Saskat- chewan, north of Prince Albert.	1927	1,496.0	Forested region dotted with lakes and interlaced with streams. Summer play- ground and recreational area. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp- grounds.
Riding Mountain	Southwestern Mani- toba, west of Lake Winnipeg.	1929	1,148.0	Playground and wildlife sanctuary on summit of escarpment. Fine lakes. Accessible by highway. Hotel and bungalow cabin accommodation. Equip- ped camp-grounds.
Georgian Bay Islands	In Georgian Bay, north of Midland, Ont.	1929	5-4	Recreational and camping area. Unique pillars on Flowerpot Island. Accessible by boat from nearby mainland points. Equipped camp-grounds and annual youth camps on Beausoleil Island.

### 4.—Location, Year Established, Area and Characteristics of National Parks—concluded

Park	Location	Year Estab- lished	Агеа	Characteristics
Scenic and Recrea- tional Parks—concl.			sq. miles	
Cape Breton High- lands.	Northern part of Cape Breton Is- land, N.S.	1936	390-0	Rugged Atlantic coast line with mountain background. Fine seascapes. Recreational opportunities. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Prince Edward Island	North shore of Prince Edward Island.	1937	7-0	Strip 25 miles long on shores of the Gulf of St. Lawrence. Recreational area, fine bathing beaches. Accessible by high way. Hotel and bungalow cabin accommodation. Equipped camp-grounds.
Fundy	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79.5	Delightful recreational area. Forested region, wildlife sanctuary, rugged terrain Bungalow cabin accommodation. Equipped camp-grounds.
Wild Animal Parks				
Elk Island	Central Alberta, near Edmonton.	1913	75-0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Pop- ular recreational area. Accessible by highway. Bungalow cabin accommoda- tion and equipped camp-grounds.
Wood Buffalo <sup>1</sup>	Partly in Alberta and partly in Northwest Terri- tories, between Athabasca and Slave Rivers.	1922	17,300-0	Immense region of forests and open plains Home of largest remaining herd of bison on the Continent. Other wildlife abund- ant.
Historic Parks			acres	
Fort Anne	Nova Scotia, at An- napolis Royal.	1917	31.0	Site of early Acadian settlement. Museum and well-preserved earthworks.
Fort Beauséjour	near Sackville.	1926	81.3	Site of French fort erected in middle of 18th century. Museum.
Fortress of Louis- bourg.	Cape Breton Island, N.S., 25 miles from Sydney.	1941	339-5	Ruins of walled city erected by the French, 1720-40. Interesting excavations. Mus- eum.
Port Royal	Port Royal, N.S., 8 miles from An- napolis Royal.	1941	17-0	Restoration of "Habitation" or first fort built in 1605 by Champlain, DeMonts and Poutrincourt.
Fort Chambly	Chambly, Que	1941	2.5	French fort on Richelieu River, first built in 1665. Museum.
Fort Lennox	Ile-aux-Noix, Que., near St. Johns.	1941	210-0	Site of early French fort built in 1759.
Fort Wellington	Prescott, Ont	1941	8-5	Defence post built 1812-13. Museum.
Fort Malden	Amherstburg, Ont	1941	5.0	Site of defence post built 1797-99. Museums.
Fort Prince of Wales	Northern Manitoba, near Churchill.	1941	50.0	Ruins of fort built 1733-71 to secure control of Hudson Bay for England.
Lower Fort Garry	Manitoba, 20 miles north of Winnipeg.	1950	12.8	Stone-walled fort built by the Hudson's Bay Company between 1831 and 1839.
Fort Battleford	Saskatchewan, 4 miles south of North Battleford.	1951	36-7	North West Mounted Police post built in 1876.

<sup>&</sup>lt;sup>1</sup> Administered by the Northern Administration and Lands Branch, Department of Resources and Development.

Provincial Parks.—In addition to the National Parks already described, most of the provinces have established Provincial Parks. These Parks, as in the case of the National Parks, are areas of great scenic or other interest maintained for the benefit of the public. The Provincial Parks are administered by the Provincial Governments concerned and, in most cases, have not yet reached the degree of development that marks the National Parks. In Prince Edward Island, Nova Scotia and New Brunswick there are no Provincial Parks. In Manitoba, provincial park development is carried out in certain of the province's forest reserves, particularly in Whiteshell Reserve and Cormorant Reserve.

5.-Location, Year Established, Area and Characteristics of Provincial Parks

		Year		
Province and Park	Location	Estab- lished	Area	Characteristics
			acres	
Newfoundland— Serpentine	South of Humber Arm, west coast.	1939	26,880	Undeveloped.
Quebec— Laurentides	25 miles north of Quebec city, on both sides of Quebec-Chicoutimi highway.	-	2,312,100	Altitude 3,000 ft. Numerous lakes, tumultuous rivers. Speckled trout, moose, deer, black bears, wolves, etc. No hunting. Three hotels and 50 fishing camps.
Trembling Mountain.	80 miles north of Montreal, Mont Tremblant Village close to the southern section of Park.		782,720	Famous resort area, summer and winter. Ski school and lifts, 40 miles of ski trails, 9 ski slopes. Lac Trem- blant 750 ft. above sea-level. High- est peak Mont Tremblant, 3,100 ft.
Gaspesian	Gaspe Peninsula	1937	328,960	Established to preserve caribou and wildlife on south side of St. Lawrence. Accessible from Ste. Anne dea Monts, Gaspe. Speckled trout, 5 fishing camps. One hotel at Ste. Anne dea Monts. Includes the highest peaks of the Shickshock Mountains. Highest peak Mount Jacques-Cartier, 4,160 ft.
Mount Orford	On Orford Mountain, 15 miles west of Sherbrooke.	1938	9,970	Altitude 2,860 ft. Skiing and golfing.
La Vérendrye	In western part of Province 140 miles northwest of Montreal on both sides of Montreal-Abitibi highway.		3,038,000	Altitude 1,200 ft. Numerous lakes and rivers. Trout, pike, pickerel and bass. Tourist accommodation and stopping place. Twelve fishing camps maintained by Dept. of Fish and Game.
Chibougamau Fish and Game Re- serve.	30 miles west of Lake St. John. Strip 80 miles long on both sides of Lake Chibougamau highway.		2,176,000	Altitude 1,300 ft. Numerous lakes and rivers. Trout, pike and pickerel. Five fishing camps and one camping ground maintained by Dept. of Fish and Game.
Shick Shocks Fish and Game Re- serve.	Adjacent to and complet- ing Gaspesian Park.	1949	200,960	See "Gaspesian" above.
Kipawa Lake Fish and Game Re- serve.	Approximately 8 miles northeast of Timiska- ming.	1950	640,000	Altitude 1,000 ft. Numerous lakes and rivers. Trout, pike and pickerel.
Mistassini Fish and Game Reserve.		1953	3,328,000	Altitude 1,300 ft. Numerous large lakes. Speckled trout, grey trout, pike and pickerel.
Ontario— Algonquin	In southeastern Ontario in the District of Nipissing and the County of Hali- burton, 141 miles north of Toronto, 105 miles west of Ottawa.		1,754,240	

## 5.—Location, Year Established, Area and Characteristics of Provincial Parks—con.

Province and Park	Location	Year Estab- lished	Area	Characteristics
			acres	
Ontario—concl. Rondeau	In southwestern Ontario in the County of Kent, 20 miles southeast of Chatham, 70 miles east of Windsor.		5,120	Partly cultivated, fine timber stands. Enclosed and wild animals. Fishing, duck - hunting, camping facilities, summer cottage sites, restaurant, store, dance pavilion, other recreational facilities.
Quetico	In northwestern Ontario in the Rainy River dis- trict. Southern boundary adjoins the International Boundary midway be- tween Port Arthur and Fort Frances.	1913	1,190,400	Wilderness area, wildlife preserve. Camping facilities, canoe trips, fishing.
Ipperwash Beach.	In southwestern Ontario in the County of Lambton, on Lake Huron, 100 miles north of Windsor, 50 miles north of Chat- ham.	1937	109	Sand beach, woodland area. Fishing, camping facilities, bathing.
Lake Superior	In northeastern Ontario in the District of Algoma, on Lake Superior, about 70 miles north of Sault Ste. Marie.	1944	345,600	Wilderness area, wildlife preserve. Fishing.
Sibley	In northwestern Ontario in the Thunder Bay dis- trict. On north shore of Lake Superior, 40 miles northeast of Port Arthur and Fort William.	1944	40,320	Wilderness area, wildlife preserve.
Saskatchewan— Cypress Hills	South of Maple Creek near International Boundary.	1932	10,880	Forest area. Bungalow, lodge and cabin accommodation, auto camp.
Duck Mountain	15 miles northeast of Kam- sack.	1932	51,840	Forest and lake area. Beaches. Fish and wild life.
Good Spirit Lake.	20 miles west of Canora	1932	3,827	Camp and picnic grounds. Fishing, swimming.
Greenwater Lake	North of Kelvington	1932	22, 240	Forest and lake area. Swimming, fishing.
Lake Katepwa	In Qu'Appelle Valley, 14 miles north of Trans- Canada Highway from Indian Head.	1932	17	Lake area, camping, fishing, swim- ming, playground activities.
Little Manito	On Manitou Lake	1932	238	Medicinal waters. Chateau, cabin and tourist accommodation.
Moose Mountain	15 miles north of Carlyle	1932	98,560	Lake area. Poplar and white birch stands. Fishing.
Nipawin	35 miles northwest of Nipawin.	1934	161,280	Lodgepole pine stands. Camping, trout fishing.
Lac La Ronge	190 miles north of Prince Albert.	1939	729,600	Lake area. Spruce and poplar stands. Tourist accommodation, trout fishing.
Alberta-	No. Comple			
	On shore of Gull Lake, west of Lacombe.	1930	70	Summer village, lake front. Recreational and picnic facilities.
Park Lake	North and west of Leth- bridge.	1930	186	Recreational and picnic facilities.

### 5.—Location, Year Established, Area and Characteristics of Provincial Parks-con.

Province and Park	Location	Year Estab- lished	Area	Characteristics
Alberta—concl.			acres	
Saskatoon Mountain	In Grande Prairie district.	1930	2,240	Scenic view. Park closed at present.
Sylvan Lake	On shore of Sylvan Lake, 11 miles west of Red Deer.	1930	9	Picnic and parking facilities for tran- sient trade to the summer resort of Sylvan Lake.
Writing-On-Stone	On Milk River east and north of Coutts.	1930	796	Natural obelisks and undeciphered hieroglyphics. Recreational and picnic facilities.
Gooseberry Lake.	North of Consort	1931	1,395	Private summer cottages. Recreational and picnic facilities.
Rochon Sands	7 miles west, 9 miles north of Stettler on Buffalo Lake.	1931	77	Recreational and picnic facilities.
Lundbreck	West of Macleod on Crows- nest Pass Highway.	1932	14	Scenic area adjacent to Lundbreck Falls.
Saskatoon Island	West of Grande Prairie	1932	256	Summer cottages. Recreational and picnic facilities.
Dillberry Lake	On Alberta-Saskatchewan boundary near Chauvin.	1933	500	Private summer cottages. Recreational and picnic facilities.
Hommy	Near Albright	1935	160	Recreational and picnic facilities.
Wapiti River	10 miles south of Grande Prairie.	1936	22	Picnic facilities.
Taber	1 mile west, 1 mile north of Taber on south shore of Oldman River.	1938	83	Recreational and picnic facilities.
Crimson Lake	g miles northwest of Rocky Mountain House.	1948	7,834	Private summer cottages. Recreational and picnic facilities.
Red Lodge	9 miles west of Bowden on Little Red Deer River.	1948	90	Recreational and picnic facilities.
Woolford	Island in St. Mary's	1948	68	Recreational and picnic facilities.
Kinbrook	River. Island in Lake Newell, 9 miles south of Brooks, joined to mainland by a causeway.		96	Surveyed for private summer cottages. Recreational and picnic facilities.
Beauvais Lake	12 miles southwest of Pin- cher Creek.	1952	530	Private summer cottages. Recreational and picnic facilities. Excellent fishing.
Cypress Hills	40 miles south of Medicine Hat.	1952	49,453	Scenic. Strange formation of terrain containing rare specimens of pre- glacial plant, insect and animal life, some species of which are found only in sub-tropical areas. Private sum- mer cottages, tourist camp. Recrea- tional and picnic facilities.
Drumheller Protected Area.	Near Munson Ferry	1952	5,517	Fossilized remains of pre-historic ani mals of the dinosaur type. A second ary road extends through the valley from Drumheller but the fossil bed can be reached only on foot. Inter- esting valley formations.
Garner Lake	6 miles north of Spedden	1952	2,278	
Vermilion	Near Vermilion	1952	1,600	
Gaetz Lake	Red Deer	1952	198	Sanctuary for game birds and animals. Ideal for nature study.

### 5.-Location, Year Established, Area and Characteristics of Provincial Parks-con.

Province and Park	Location	Year Estab- lished		Characteristics
			acres	
British Columbia—1 Strathcona	Campbell River, Van- couver Island.	1911	529,920	Oldest B.C. Provincial Park, situated in the rugged centre of Vancouver Island. Contains many glaciers, alpine meadows and lakes. Della Falls, one of the world's highest falls. Undeveloped and mostly inaccessible.
Mt. Robson	Mt. Robson, adjacent to Jasper Park.	1913	513,920	Rocky Mountain park featuring Mt. Robson, highest peak in the Cana- dian Rockies, Berg Lake and im- pressive glaciers. Access to Berg Lake Camp by horse trail.
John Dean	Sidney, near Victoria, Van- couver Island.	1921	98	Mountain viewpoint overlooking the Saanich Peninsula and Gulf Islands. Features primeval forests and wild flowers. Pienic grounds and hiking trails. Accessible by road.
Kokanee Glacier	Near Nelson	1922	64,000	High mountain park featuring Kokanee Glacier and several scenic lakes. Fishing, mountaineering and skiing. Poor road and trail access.
Mt. Assiniboine	South of Banff	1922	12,800	Outstanding area of Rocky Mountain scenery, features Mt. Assiniboine and small lakes. Hiking, riding, fishing, skiing. Access by horse trail.
Nakusp Hot Spring.	Nakusp, Arrow Lake, southeast B.C.	1925	127	Hot springs. Access by eight miles of trail.
Salt Lake	Prince Rupert	1925	87	Community swimming and picnic area. Access by ferry from Prince Rupert.
Garibaldi	Haney - Squamish, lower mainland, north of Van- couver.	1927	612,615	Outstanding scenic park with moun- tain lakes, peaks and glaciers, flower meadows and interesting geological features. Potential winter sports area. Access by trail from several points on the Pacific Great Eastern Railway.
Mt. Seymour	North Vancouver main- land.	1936	9,156	Mountain, winter-sport park with summer hiking, swimming and berry-picking. Highway under construction.
.Crescent Beach	Crescent Beach, lower mainland near Interna- tional Boundary.	1938	237	Ocean beach. Accessible by road.
Tweedsmuir	Bella Coola, Burns Lake	1938	3,456,000	One of the larger wilderness areas in North America. Scenic boat tours and trail rides. Fishing and hunting.
Peace Arch	White Rock, B.C., and Blaine, Washington, In- ternational Boundary.	1939	16	Landscaped international park featur- ing Peace Arch. Picnic grounds, King George VI Highway.
Wells Gray	North of Kamloops	1939	1,165,005	Undeveloped lake and mountain park. Fishing and hunting. Accessible by poor road and trail.

<sup>&</sup>lt;sup>1</sup> Excludes 31 parks which are mainly of local interest (see pp. 27-30 of the 1950 Year Book).

### 5.-Location, Year Established, Area and Characteristics of Provincial Parks-concl.

Province and Park	Location	Year Estab- lished	Area	Characteristics
			acres	
British Columbia—concl.		Ŷ.		
Chasm	Clinton, central B.C	1940	315	Outstanding geological feature — a great chasm in the Interior Plateau adjacent to the Caribou Highway.
Elk Falls	Campbell River, east coast, Vancouver Island.	1940	2,558	Series of cascades and falls on Camp- bell River. Stand of giant firs.
Englishman River Falls.	Parksville	1940	240	Forest area, picturesque river containing falls and canyons. Picnicking, swimming, camping and hiking. Accessible by highway.
Little Qualicum Falls.	Qualicum Beach, adjacent to Parksville - Alberni highway.	1940	207	Forest area, picturesque river containing falls and canyons. Picnicking, swimming, camping and hiking. Accessible by highway.
Premier Lake	Cranbrook, Canal Flats, southeast B.C.	1940	165	Mostly local use. Fishing, picnicking, swimming. Poor road access.
Silver Star	Vernon, Okanagan, south central B.C.	1940	21,888	Interior mountain park, alpine scenery, berry-picking, skiing. Accessible by poor road.
Stamp Falls	Alberni, Vancouver Island.	1940	424	Popular forest park with river falls, fish ladder and swimming pool. Picnicking, camping. Road access.
Hamber	Big Bend Highway. Park adjoins Jasper and Banff.	1941	2,431,960	Undeveloped forest and mountain area bordering easterly portion of Big Bend Highway.
Manning	Hope-Princeton Highway, south central B.C. near International Boundary.	1941	179,313	Mountain park featuring alpine flower meadows and scenic fishing lakes. Wildlife sanctuary. Accessible by highway.
Darke Lake	Summerland, south Okan- agan.	1943	5,472	Scenic group of interior mountain lakes. Fishing, hunting and boating.
McMillan	Cameron Lake, Vancouver Island.	1944	337	World-famous stand of virgin west- coast forest. Accessible by Alberni- Parksville highway.
Memory Island	Shawnigan Lake, south Vancouver Island.	1945	2	Small undeveloped island in recrea- tional area. Swimming, fishing, adjacent to highway.
Petroglyph	Nanaimo, east coast, Van- couver Island.	1948	4	Site of ancient rock carvings of un- known origin. Accessible by road.
Cultus Lake	Chilliwack, Fraser Valley, lower mainland.	1948	950	Summer park. Swimming, picnicking, fishing.
Ivy Green	Ladysmith, Vancouver Island.	1949	51	Community park and picnic ground.
Cameron Lake	Cameron Lake	1950	733	Attractive lakeside area in an unspoiled rugged mountain valley adjacent to Parksville-Alberni highway.
Miracle Beach	Oyster River, north Van- couver Island.	1950	142	Ocean beach with outstanding vista over the Gulf Islands.

### Subsection 4.—The National Capital Plan\*

The Master Plan to guide the long-range development of Ottawa and the National Capital District, and to creat a Capital in keeping with Canada's achievements and status as a nation, was completed at the end of 1948. The final report on the Plan was forwarded to the Government by the National Capital Planning Committee and the Federal District Commission and tabled in the House of Commons on May 22, 1951. Details of the Plan are given in the 1950 Year Book, pp. 18-20, and progress made is outlined in subsequent editions.

The most important new project undertaken during 1953 was the rebuilding of Sussex Street, a main artery on which are located several national institutions, including the National Archives, the Royal Canadian Mint, the National Research Council, the permanent residence for Canada's Prime Minister, and the residence of the Governor General. Plans call for the removal of the present street-car tracks (motor-buses will be used on the route in future) and overhead wiring is to be placed underground. The project is being carried out jointly by the City of Ottawa and the Federal District Commission.

A project for the improvement of the Hull approach to the Chaudière bridges was also decided upon by the FDC after consultation with the cities of Ottawa and Hull and the Federal Department of Public Works.

Good progress continued on the installation of new railway facilities in accordance with long-range plans to remove the present trackage from central Ottawa and Hull to the urban outskirts, and, subsequently, to use the rights-of-way thus released for arterial roads. Land was acquired along the new rail belt for the relocation of industries requiring rail services. The signal system is being installed in new yards for the use of the Canadian National Railways along the rail belt at the southern edge of Ottawa. When the installations are complete the CNR will transfer its operations from the crosstown tracks and yards that bisect the Capital along Catherine Street. The FDC is acquiring extra land to widen and link up this crosstown right-of-way to permit construction of an east-west traffic artery which will join with Highway 17 east and west of Ottawa. A new rail junction west of the Capital linking two CNR lines and diverting rail traffic to the new rail belt is now in operation, and seven miles of trackage has been lifted preparatory to construction of the western end of the new traffic artery.

The Commission continued its policy of using part of the National Capital Fund, which receives an annual parliamentary grant of \$2,500,000, to share in the costs of extending municipal water and sewage services in conformity with the Master Plan. Progress also continues on the acquisition of land for the new eastern and western parkways, which will run in a broad arc south from the vicinity of Rockcliffe Airport, cross the Rideau River near Hog's Back, and continue west and north to the Ottawa River near Britannia.

Since the inception of the National Capital Plan, the Commission, on the advice of the National Capital Planning Committee, has approved plans of various Federal Government departments for 12 major site developments and 92 buildings. Several of the new buildings, including the head office for Central Mortgage and Housing Corporation on the Montreal Road and the Dominion Bureau of Statistics at Tunney's Pasture, have been completed and occupied. Others nearing completion are the Department of Veterans Affairs building on Wellington street and the Government Printing Bureau in Hull. Approval has been given for the con-

<sup>\*</sup> Revised by the Federal District Commission, Ottawa.
† The Commission is the federal agency responsible for the implementation of the Plan. See also p. 84.

struction of a National Library of Canada building on the high ground overlooking the Ottawa River west of the Supreme Court. The site is at present partly occupied by No. 1 Temporary Building, which is to be removed. Plans for the restoration of the Library of Parliament, which was damaged by fire last year, have also been approved.

Work continued on a variety of other buildings and projects throughout the Capital area. Among these is an overpass on the Montreal Road designed and built by the Commission to provide a controlled entrance to the National Research Council establishment. Removal of the Aylmer building permitted completion of the western approach to the Mackenzie King Bridge. The bridge, which was the first completed project in the National Capital Plan, opens up an east-west traffic artery over the Rideau Canal in Confederation Park. Work was also begun by the Commission on the development of the Hog's Back-Mooney's Bay Park. When completed this area will provide a much-needed and very attractive addition to the Commission's park system in the National Capital.

Gatineau Park.—The development of Gatineau Park, located in the wooded hill-and-lake country of the Laurentians north of the city of Hull and about eight miles from the Capital, was begun by the FDC in 1939. It is the summer and winter playground of the National Capital, and is well-provided with hiking trails and picnic and camping spots. Swimming, boating and fishing are enjoyed in its many lakes and, in the winter, it is the skiing centre of the district.

"Kingsmere", the large country estate bequeathed to the nation by the late Rt. Hon. Wm. Lyon Mackenzie King and placed in the care of the Commission, is located on Kingsmere Lake at the south end of the Park. Land acquisitions by the Commission have increased the area of the Park to about 45,000 acres, and plans call for its ultimate development to about 80,000 acres. Access to the Park will be considerably improved with the completion of a new road running from Val Tetreau on the Ottawa River west of Hull to the Kingsmere area. About four miles of this road is under construction. Eventually, it will be extended to provide a 50-mile scenic route through the Park.

### Section 3.-Wildlife Resources and Conservation\*

The Canadian Wildlife Service.—The Canadian Wildlife Service of the National Parks Branch, Department of Resources and Development, is responsible for attending to wildlife matters coming within the jurisdiction of the Federal Government, except those within the purview of the National Museum and certain activities closely related to Indian affairs.

Its functions include acting in an advisory capacity with regard to conservation and management of wildlife in the Northwest Territories; advising and co-operating with the National Parks and Historic Sites Division regarding fish and wildlife problems in the National Parks; and administration of the Migratory Birds Convention Act, in conjunction with the Royal Canadian Mounted Police and in co-operation with the provincial game authorities. The Canadian Wildlife Service also handles national and international problems relating to Canada's wildlife resources, and co-operates with governmental and other agencies having similar interests and problems in Canada and elsewhere.

The Service issues permits for bird-banding in Canada and is the Canadian clearing-house for bird-banding information. It issues permits to qualified persons

<sup>\*</sup> Prepared by the Canadian Wildlife Service, Department of Resources and Development, Ottawa.

to take migratory birds for scientific purposes; to take and possess migratory birds for propagating purposes; to collect eiderdown; to use firearms or other equipment for the control of migratory birds causing damage to agricultural, fishing or other interests; and to engage in the business of taxidermy.

The Canadian Wildlife Service plans and carries out scientific investigations concerning numbers, food, shelter, migration, reproduction, diseases, parasites, predators, competitors and uses of wild creatures in Canada. In certain of such investigations, e.g., the mid-winter waterfowl inventory, it works in close co-operation with United States authorities conducting parallel studies.

The Service is responsible for the establishment and administration of bird sanctuaries under the Migratory Birds Convention Act. On Dec. 31, 1952, there were 90 bird sanctuaries with a total area of more than 1,800 sq. miles.

The Limnology Section of the Service concerns itself with the maintenance and improvement of sport fishing, the control of aquatic and semi-aquatic insects, the control of algæ, and other biological problems that arise in regard to water areas in the National Parks. It also acts in an advisory capacity to the Northern Administration and Lands Branch in connection with aquatic biological matters.

A series of special articles with relation to the wildlife resources of Canada are being carried in the Year Book. Articles on "Migratory Bird Protection in Canada" and "Game Fish in Canada's National Parks" were carried in the 1951 and 1952-53 editions, respectively. The following article deals with the barren-ground caribou, the most important single natural resource in vast areas of northern Canada.

### THE BARREN-GROUND CARIBOU

A subject receiving close study by administrators and game-management officers in the Northwest Territories is the management of the barren-ground caribou. Over a vast area, the scattered native and white population is dependent, to a large extent, on these animals for supplies of fresh meat and materials for Arctic clothing. Hunting restrictions and a vigorous educational program directed towards the white and the native hunters are among the control measures designed to preserve the barren-ground caribou so as to ensure their availability for use by this and future generations. In recent years, extensive investigations by the Canadian Wildlife Service, Department of Resources and Development, have added much to the knowledge of the status of these animals, and the investigations are continuing from year to year.

Barren-ground caribou inhabit an area of about 600,000 sq. miles in the Northwest Territories and in the northern parts of Alberta, Saskatchewan, Manitoba and Ontario. These large, rangy members of the deer family travel in loose herds of from several hundred to 100,000 or more. Their broad, concave hoofs enable them to travel over crusted snow and help them to keep their footing on ice surfaces. Their long coats of dense, light hair protect them from winter temperatures which, in some sections of their range, may fall as low as 60° below zero.

The summer coat of the caribou is a general rich clove-brown colour, with dark brown on the chest and legs and white markings around each foot, inside the hind legs, on the rump, and on the tail. A light grey strip extends down the neck and along the shoulder to the flank. During the winter months this coat wears down, exposing the white bases of the hairs. Because of this, by late winter or early spring the animals appear greyish-white and are almost invisible against the snow. The hair is shed once a year, in July.

Barren-ground caribou are migratory animals. Their summer range is mainly in the unforested parts of Mackenzie and Keewatin Districts of the Northwest Territories, from the west side of Hudson Bay and Melville Peninsula west to the lower Mackenzie Valley and north to the southern fringe of the islands lying off the Arctic coast. In autumn there is a general migration southward to areas within the tree-line. Some small bands of caribou, however, remain all year on the Arctic tundra.

Caribou migrations occur at three distinct periods of the year—in spring, in mid-summer and in autumn. Studies have revealed that during the spring migration, in April and May, there is a movement of the large herds from the wooded areas, where they have wintered, to the tundra summer range. The mid-summer migration begins in mid-July or early August when there is a general retracing of routes towards the tree-line, followed in September, just before the breeding season, by a swing northward away from the forested areas. After the breeding season ends, usually in October or early November, the autumn migration towards the forested areas begins. If the weather is rigorous, the great columns of caribou generally move swiftly towards their winter ranges but if the weather is moderate the pace slows down.

During these migrations it is usual for caribou to follow well-beaten trails in single file. Sometimes there may be several files parallel to each other; at other times the caribou may bunch together. The parallel trails are usually from one to three feet apart and from six to twelve inches wide. Repeated use over a period of many years has worn these trails to a depth of as much as four inches below the level of the tundra surface. Investigators have reported counting as many as twelve parallel trails on one migration route.

Spring migration routes generally follow waterways, the caribou herds travelling upon the frozen lakes and rivers towards the tundra. During the summer and autumn migrations the animals tend to follow heights of land and to cross the waterways at their narrowest or easiest crossing points.

Calves are usually born in June, during the period known as "spring break-up" Within a few hours they are able to follow their mothers and keep up with the rest of the herd. An adult bull caribou weighs well over 200 pounds and carries an impressive set of antlers; the length of beam of the antlers is often greater than the shoulder height of the animal. An adult cow weighs approximately 150 pounds and has a much smaller antler development. Antlers are shed once a year.

Caribou rely almost entirely on their keen sense of smell to warn them of approaching danger. In comparison with other animals their eyesight is poor, and it is possible to approach within 150 yards of them in open country without being seen. As a rule they are docile and can rarely be goaded into an aggressive act.

The high degree of curiosity of the caribou is well known to white and native hunters, who can attract the animal within easy killing range by almost any kind of unusual behaviour.

As a result of studies made during 1948, 1949 and 1950, the Canadian Wildlife Service has estimated the barren-ground caribou population in Canada at 670,000.\* There has been a great reduction in numbers since 1900, when the population was probably about 1,750,000. Indiscriminate slaughter of caribou by members of early whaling expeditions and the acquisition of modern weapons by the natives of the North have been major causes of rapid reduction of the caribou population. The following quotation† indicates the extent of the slaughter that took place about the turn of the century: "One winter fifteen vessels wintered at Herschel Island and I am reliably informed that these vessels each used from 10,000 pounds to 20,000 pounds of caribou meat an aggregate of over 300,000 pounds in one winter, principally the saddles; at the head of Franklin Bay, in the winter of 1897-98, four ships used of the same kind of meat about 90,000 pounds, and at Cape Bathurst, in 1898-99, one vessel used in the neighbourhood of 40,000 pounds."

Caribou are an important source of fresh, nutritious meat to the native and white populations of the remote areas of the North. Their hides, particularly the softer, finer-furred hides of calves and yearlings, are used as material for making a superior type of Arctic clothing; for this purpose many calves and yearlings are selectively killed during August and September, when the hides are considered to be prime.

It has been estimated that a complete clothing outfit for an Eskimo man (inner and outer parkas, inner and outer trousers, mittens, socks and moccasins) requires about 12 hides. About 25 hides would be required annually to provide satisfactory clothing for a family of two adults and two children. In modern times, however, some of the traditional items of Eskimo clothing have been replaced by imported textile garments—at least in the vicinity of trading posts. Caribou hides are also used for making sleeping robes and other types of covering, and for insulating log houses and tents. Strips of tanned hide serve as cords or ropes. The sinews from along the spine of the caribou are used by the natives for sewing.

With the aid of provincial and territorial game authorities, the Canadian Wildlife Service has, since 1947, carried out extensive studies of all phases of the environment, habits, life cycle, breeding and mortality of the barren-ground caribou. These studies are continuing. They involve aerial surveys and investigations on the ground, as well as the analysis of data supplied by hunters and trappers and obtained from the reports of field officers of the Provincial Governments of Alberta, Saskatchewan and Manitoba. From 1932 to 1949, by means of native game returns completed by the Royal Canadian Mounted Police after interviewing the native hunters,

<sup>\*</sup>Banfield, Dr. A. W. F., Canadian Wildlife Service, Department of Resources and Development, The Barren-Ground Caribou (Ottawa, 1951).

<sup>†</sup> Stone, A. J., "Some results of a natural history journey to Northern British Columbia, Alaska, and the Northwest Territories in the interest of the American Museum of Natural History", Bull. Am. Mus. Nat. Hist. (1900) 13:31-62.

and since 1949 by means of returned licences, the Northwest Territories Administration has collected statistics of game and fur-bearing animals and birds taken. The returns, although by no means completely accurate, provide an important basis for determining relative numbers of caribou killed in different years.

At present, non-residents are forbidden to hunt caribou in the Northwest Territories, and residents, who may kill caribou if they hold a general hunting licence, are restricted both in the use they may make of the meat and in the period of the year in which they may hunt.

The development of mineral resources in the Northwest Territories, with the resultant influx of workers has, as yet, made no appreciable change in caribou range or movements. Forest fires have wiped out some sections of the winter range and are, at present, perhaps the most important factor influencing caribou habitat.

Wastage by humans is believed to have been the most serious cause of reduction in the numbers of caribou. Management measures are now aimed at controlling the number of animals killed annually and at educating the native population along conservation lines. There is reason to hope that the legislation passed in recent years will prevent avoidable wastage, reduce hunting pressure to a rational level, and eliminate the danger of serious depletion of the present herds of barren-ground caribou.

### PART III.—CLIMATE AND TIME ZONES

### Section 1.—Climate

A comprehensive discussion of the climatic regions of Canada is available in the 1948-49 Year Book, pp. 41-62, while detailed tabulations of climatic factors covering 36 meteorological stations located mostly at well-known or populous centres are given in the 1950 Year Book, pp. 35-70. Other articles appearing in previous editions are listed under "Climate and Meteorology" in Chapter XXVIII of this volume.

Table 1 gives long-term temperature and precipitation data for 35 representative Canadian stations; Tables 2 and 3 provide monthly temperature and precipitation data during 1952 for these same stations. These are mostly wellknown or populous places with climates fairly representative of a considerable area. The figures given under "Temperatures" are, of course, averages obtained over the period of observation in each case. Under "Precipitation", in calculating the annual total, inches of rain is considered the total depth of water accumulated on a hypothetical horizontal impervious surface without evaporation. Similarly, the depth of snow given is that which falls on a horizontal surface, without settling, melting or sublimation. Since the depth of water obtained from melting newly fallen snow is roughly one-tenth of the depth of the snow, the total precipitation is obtained by adding together the total rainfall and one-tenth of the depth of the newly fallen snow. A day with rain is, for the purpose of these tables, one on which 1/100 of an inch or more falls and a day with snow is one with at least 1/10 of an inch of newly fallen snow. Whenever the temperature four feet above the ground falls to 32°F, or lower, the day is counted as a day with frost. The average date of the last spring frost and of the first frost in autumn marks the approximate period continuously free from frost.

<sup>1</sup> Day-degrees represent the difference in temperature between the mean temperature of the air and the temperature of 65°F. multiplied by the number of days during which the outside temperature was lower than that figure, computed for the period Sept. 1 to May 31. Fuel consumption for heating purposes will be proportional to these totals.

### Section 2.—Standard Time and Time Zones

Standard time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of times in the world at 24, each time zone extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians 15° longitude apart. Standard time is Greenwich time, all other time zones being a definite number of hours either in advance of or behind Greenwich.

Canada has seven time zones, the most easterly being Newfoundland standard time, three hours and thirty minutes behind Greenwich mean time. In the west, Pacific standard time, used throughout British Columbia and part of the Northwest Territories, is eight hours behind Greenwich, and Yukon standard time, used throughout the Yukon Territory, is nine hours behind Greenwich. Some municipalities adopt the time used by the local railways which, in certain cases, differs from the standard. There are also villages that adopt such time as seems best to suit their convenience, but, in general, the legal boundaries of the different time zones are actually in use. The boundaries of the time zones in Canada are shown in the following map.

Daylight Saving Time.—For some years before World War I there was active propaganda, particularly in the cities, for the use of an earlier time, usually referred to as 'daylight saving time', one hour ahead of standard time, during the summer months. It was considered, from the economic as well as from the health point of view, that people in industrial towns and cities would gain by having longer periods of sunlight at their disposal for recreation. Canada adopted daylight saving time in 1918, but the Canadian Act lapsed at the end of that year. Since that date, however, various towns and cities have adopted daylight-saving by-laws for varying periods in the summer months.

Legal Authority for the Time Zones.—Most of the regulations made in Canada concerning standard time have been passed by the provincial legislatures and the Northwest Territories Council. The exceptions include: the Daylight Saving Act of 1918; an Order in Council (P.C. 4994) issued in 1940 requiring the continuation, for an additional period, of daylight saving time in a number of places in Ontario and Quebec where it had already been in force for the summer; and an Order in Council in 1942 (P.C. 547) making daylight saving time nation-wide, and later revoked by Order in Council (P.C. 6102), ending the observance on Sept. 30, 1945. Legislation, besides determining the boundaries of zones, regulates such matters as the times of coming into effect or expiration of Acts, ordinances, contracts and agreements, times of opening and closing registration offices, law courts, post offices and other public offices, times of open or close seasons for game, and times of opening and closing business houses and places of amusement.

### PART IV.—ASTROPHYSICS

The science of astrophysics is carried on by three Canadian institutions: the Dominion Observatory, Ottawa, Ont., the Dominion Astrophysical Observatory, Victoria, B.C. (operated by the Department of Mines and Technical Surveys), and the David Dunlap Observatory, associated with the University of Toronto. Of the two Government institutions, the Dominion Observatory at Ottawa has specialized mainly in the astronomy of position in solar physics and in various branches of geophysical work, while the major effort in astrophysics has been concentrated at the Dominion Astrophysical Observatory at Victoria, B.C. The David Dunlap Observatory was founded in 1935 and is equipped with very fine astrophysical equipment of a kind similar to that in use at Victoria. It performs not only the function of a privately financed and administrated research institution but is also the nucleus of a university department of astronomy. A special article dealing specifically with the work of the Dominion Astrophysical Observatory at Victoria, B.C., appears in the 1948-49 Year Book, pp. 63-71.

### PART I.—CONSTITUTION OF CANADA

The Canadian federal state was established by the British North America Act, 1867, which united the three British North American provinces of Canada, New Brunswick and Nova Scotia into one country, divided into four provinces, namely, Ontario, Quebec, New Brunswick and Nova Scotia. British Columbia entered the Union in 1871 and Prince Edward Island in 1873. The Provinces of Manitoba, Saskatchewan and Alberta were created out of portions of the territories formerly held by the Hudson's Bay Company and admitted to the Union in 1870, and Newfoundland entered the Union in 1949. At the present time, therefore, Canada consists of ten provinces and the remaining territories, not included in any province, now known as the Yukon Territory and the Northwest Territories.

The British North America Act of 1867 divided legislative and executive authority between Canada on the one hand and the provinces on the other. Judicial authority was not similarly divided, provincial and federal courts having jurisdiction with respect to both federal and provincial laws.

While the British North America Act of 1867 together with its subsequent amendments is popularly regarded as the Constitution of Canada, it is not an exhaustive statement of the laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other statutes of the United Kingdom Parliament (e.g., the Statute of Westminster, 1931), statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the demise of the Crown, the Governor General, the Senate, the House of Commons, electoral

<sup>1</sup> The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).

<sup>2</sup> Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45), and diminished Mar. 1, 1927, in consequence of the Award of the Judicial Committee of the British Privy Council, whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

Extended by the Extension Boundaries Act of Manitoba, 1881, and the Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).

\*Extended by the Extension Boundaries Act of Manitoba, 1881, and the Manitoba Boundaries Extension Act, 1912 (2 Geo. V. c. 32).

\*Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional Districts of Assiniboia, Athabasca, Alberta and Saskatchewan, established May 17, 1882, by minute of Canadian Privy Council, concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

\*By an Imperial Order in Council passed on June 23, 1870, pursuant to the Rupert's Land Act, 1868 (31-32 Vict., c. 105), the former territories of the Hudson's Bay Company knows a Rupert's Land and the North-Western Territory were transferred to Canada, effective July 15, 1870. These territories were designated as the North-West Territories by the Act of 32-33 Vict., c. 3, and as the Northwest Territories by R.S.C. 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada, and these additional territories were formally included in the North-West Territories by 4-5 Edw. VII. c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (33 Vict., c. 3), and a further portion was added to Manitoba in 1881 by 44 Vict., c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905, and in 1912 other portions were added to Manitoba, Ontario and Quebec.

of Alberta and Saskatchewan were formed out of portions of the territories in 1905, and in 1912 other portions were added to Manitoba, Ontario and Quebec.

By 39 Vict., c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1836 a portion of the District of Keewatin was re-annexed, and in 1905 the entire Keewatin District was re-annexed. The Act of 39 Vict., was never proclaimed. By Order in Council of May 8, 1882, the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabasca were created of the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895, the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territories were annexed to Quebec, Ontario and Manitoba. By Order in Council, dated Mar. 16, 1918 (effective Jan. 1, 1920), the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

The provisional district of Vukon, established in 1895, was created a judicial district of the North-West Territories Act (R.S.C. 1888, c.50) on August 16, 1897, and by the Yukon Territory Act (61 Vict., c. 6) was declared to be a separate territory.

districts, elections, Royal Style and Titles, and also statutes of provincial legislatures relating to provincial government and provincial legislative assemblies. Other written instruments, such as the Royal Proclamation of 1763, early instructions to Governors, letters patent creating the offices of Governors and Governors General, and Orders in Council passed pursuant to the British North America Act, also form part of the Canadian constitutional system. In addition, the Constitution of Canada includes well-established usages and conventions. The preamble to the British North America Act states that it was the desire of the original provinces to be united "with a constitution similar in principle to that of the United Kingdom" and accordingly many of the usages and conventions of government that have been developed in the United Kingdom over the centuries are followed in Canada. For example, the Cabinet system of responsible government as developed in the United Kingdom obtains in Canada although no mention thereof is made in the British North America Act.

No provision was made in the British North America Act, 1867, for amendment thereof by any legislative authority in Canada, but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws, and the privileges and immunities of members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949, the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged, and it may now amend the Constitution of Canada except as regards the legislature authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or French language, and the duration of the House of Commons.

Canada's Status in the Commonwealth of Nations. \*—The several stages in the development of the status of Canada have been authoritatively described in the reports of successive Imperial Conferences, including that held at London in 1926 which defined the group of self-governing communities consisting of the United Kingdom and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that, as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs" Simultaneously, with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations, there developed, as a complementary aspect of nationhood, the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations and, more recently, in the United

<sup>\*</sup> See also Canada's Growth in International Status, in the 1952-53 Year Book, pp. 101-104.

Nations, the exercise of treaty-making powers and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931, which provided for the removal of the remaining limitations on the legislative autonomy of the Commonwealth nations.

Thus Canada, under the Crown, has equality of status with the United Kingdom and the other Commonwealth nations in both domestic and foreign affairs; its government advises the Crown in the person of the Governor General on all matters relating to Canada. Canada has membership in the United Nations; makes its own treaties; appoints its own ambassadors and other representatives abroad; levies its own taxes; makes its own laws which are executed by a government dependent on the will of a majority of the people; and maintains its own military, naval and air forces. In short, Canada has achieved the full status of democratic nationhood within the Commonwealth of Nations.

### PART II.—MACHINERY OF GOVERNMENT Section 1.—The Federal Government

Subsections 1 and 2 of this Section, dealing, respectively, with the Executive and the Legislative branches of the Federal Government, are being carried as Appendix I to this volume in order that data becoming available following the General Election of Aug. 10, 1953, may be included.

### Subsection 3.—The Judiciary

### The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act to provide from time to time for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.—This Court, first established in 1875 and now governed by the Supreme Court Act (R.S.C. 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or House of Commons on Private Bills referred to the Court under any rules or orders of the Senate or the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of \$2,000. An appeal may be brought from any other

final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave, the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment, whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts.

The judgment of the Supreme Court of Canada in all cases is final and conclusive.

1. — Chief Justice and Judges of the Supreme Court of Canada, as at Mar. 31, 1953
(In order of seniority)

Name			
The Rt. Hon. Chief Justice Thibaudeau Rinfret	Jan.	8, 194	
The Hon. Justice Patrick Kerwin.	July	20, 193	
The Hon, Justice ROBERT TASCHEREAU	Feb.	9, 194	
The Hon. Justice I. C. RAND	Apr.	22, 194	
The Hon. Justice Roy L. Kellock	Oct.	3, 194	
The Hon. Justice Jas. W. Esrey	Oct.	6, 194	
The Hon, Justice Charles H. Locke	June	3, 194	
The Hon, Justice John R. Cartwright	Dec.	23, 194	
The Hon. Justice J. H. GERALD FAUTEUX	Dec.	23, 194	

Exchequer Court.—The Exchequer Court of Canada was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (R.S.C. 1952, c. 98). The Court consists of a president and four puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada for which sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (R.S.C. 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds \$500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed \$500 or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. Admiralty jurisdiction was first conferred in 1891 by the Admiralty Act (54-55 Vict., c. 29) and the admiralty jurisdiction is now governed by the Admiralty Act (R.S.C. 1952, c. 1). Under this Statute the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise

admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.—Railway Act.—The Railway Act (R.S.C. 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (R.S.C. 1952, c. 271), the name was changed to the Board of Transport Commissioners for Canada. This Court exercises juridiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.—By virtue of para. 21 of Sect. 91 of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (R.S.C. 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Farmers' Creditors Arrangement Act.—Under the Farmers' Creditors Arrangement Act (R.S.C. 1952, c. 111), the county or district courts of the provinces are established as courts for the purposes of this Act and the appeal courts of the provinces are given appellate jurisdiction.

Income Tax Appeal Board.—By the Income Tax Act (R.S.C. 1952, c. 148) an Appeal Board is established, consisting of a chairman and not less than two or more than four members, with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court.

### **Provincial Judiciaries**

Certain provisions of the British North America Act govern, to some extent, the provincial judiciaries. Under Sect. 92 (14) the legislature of each province may exclusively make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts, both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General in Council shall appoint the judges of the superior, district and county courts in each province, except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (R.S.C. 1952, c. 157). Under Sect. 99 the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and House of Commons. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the county or union of counties for which the court is established.

Newfoundland.—Supreme Court [Consolidated Statutes (Third Series) c. 83].— The Supreme Court of Newfoundland consists of a chief justice and two other judges, appointed by the Governor General in Council. The Court has original and appellate jurisdiction.

District Courts [the District Courts Act, 1949 (the Act No. 96 of 1949, Statutes of Newfoundland)].—Under the District Courts Act, 1949, district courts were set up. A district court judge has civil jurisdiction where the amount involved does not exceed \$1,000 and on the criminal side he has the same jurisdiction as a county court judge.

Stipendiary Magistrates and Justices of the Peace [the Summary Jurisdiction Act, 1950 (the Act No. 50 of 1950, Statutes of Newfoundland)].—Stipendiary magistrates and justices of the peace are appointed for the Province and have limited criminal and civil jurisdiction.

Prince Edward Island.—Supreme Court (R.S.P.E.I. 1951, c. 79).— The Supreme Court of Prince Edward Island consists of a chief justice, who is known as the Chief Justice of Prince Edward Island, and two other judges, all appointed by the Governor General in Council. The Court has original and appellate jurisdiction.

Court of Chancery (R.S.P.E.I. 1951, v. 21).—The Court of Chancery consists of a chancellor, a vice-chancellor and the master of the rolls. The chancellor is the Lieutenant-Governor, the vice-chancellor is one of the judges of the Supreme Court and the master of the rolls is one of the other judges of the Supreme Court. The Court has original jurisdiction in chancery matters.

County Courts (R.S.P.E.I. 1951, c. 35).—There are three counties in the Province with a county court and judge for each county. Each court has criminal jurisdiction and also civil jurisdiction generally in actions up to \$500, but has no jurisdiction in cases involving title to or possession of land.

Probate Court (R.S.P.E.I. 1951, c. 124).—The Probate Court has one judge, appointed by the Lieutenant-Governor in Council. The Court has jurisdiction in probate and guardianship matters.

Magistrates and Justices of the Peace (R.S.P.E.I. 1951, c. 89).—Magistrates and justices of the peace are appointed by the Lieutenant-Governor in Council. They have limited criminal and civil jurisdiction.

Nova Scotia.—Supreme Court (S. N.S. 1919, c. 32).—The Supreme Court of Nova Scotia consists of a chief justice and six other judges appointed by the Governor General in Council. The Court has original and appellate jurisdiction in civil and in criminal cases. Sitting individually, the judges act as trial division judges and sitting en banc they act as appeal judges.

Court of Divorce and Matrimonial Causes (R.S. N.S., Third Series, c. 126).— This Court was established by a pre-Confederation statute and has divorce jurisdiction only. The judges of the Supreme Court are also appointed judges of this Court. County Courts (S. N. S. 1945, v. 5).—There are seven county court districts in Nova Scotia and a county court and judge for each district. The judges are appointed by the Governor General in Council. Each court has criminal jurisdiction and jurisdiction in civil cases up to \$1,000, but no jurisdiction where any devise or bequest is disputed.

Probate Courts (R.S. N.S. 1923, c. 217).—By the Probate Act, the county court judges are ex officio judges in probate. Probate matters are decided in the first instance by a registrar of probate and appeals may be taken to the probate judges. A registrar of probate is appointed for each county.

Magistrates.—There are 48 stipendiary magistrates and nine provincial magistrates, all appointed by the Lieutenant-Governor in Council. They have limited criminal jurisdiction and civil jurisdiction up to \$100.

Minor Courts of Civil Jurisdiction.—These consist of courts established pursuant to city charters, municipal courts and justices courts. The city and municipal courts have jurisdiction up to \$100 and justices courts have jurisdiction up to \$20 singly or up to \$80 when two justices are sitting.

Juvenile Courts (S. N.S. 1950, c. 2).—The Child Welfare Act provides for the establishment of juvenile courts and the appointment of juvenile court judges. The courts exercise jurisdiction in juvenile matters under provincial statutes and are also juvenile courts under the federal Juvenile Delinquents Act. There are seven juvenile court judges.

New Brunswick.—Supreme Court (R.S. N.B. 1952, c. 120).—The Supreme Court of New Brunswick has three divisions, namely, an Appeal Division, a Chancery Division and a Queen's Bench Division. The Appeal Division consists of a chief justice, who is known as the Chief Justice of New Brunswick, and two other judges. The Chancery Division consists of three judges who are the judges of the Appeal Division. The Queen's Bench Division consists of a chief justice and three other judges. The Appeal Division has general appellate jurisdiction throughout the Province and the Queen's Bench Division has unlimited original jurisdiction, throughout the Province, in civil and criminal matters except in chancery. All judges are appointed by the Governor General in Council.

Court of Divorce and Matrimonial Causes (R.S. N.B. 1952, c. 63).—This Court was established by a pre-Confederation statute which has continued in force to date. It has divorce jurisdiction only. There is one judge who is appointed by the Governor General in Council.

County Courts (R.S. N.B. 1952, c. 45).—The Province is divided into counties with a county court for each county or group of counties. There are six county court judges, appointed by the Governor General in Council. These courts have criminal jurisdiction, jurisdiction in contracts up to \$1,000 and jurisdiction in damage actions up to \$500. They have no jurisdiction where title to land is brought in question or the validity of any devise or bequest is disputed.

Probate Courts (R.S. N.B. 1952, c. 175).—A Probate Court is established by provincial Act for each county and each such court is presided over by a judge appointed by the Lieutenant-Governor in Council. They have jurisdiction over estates.

Juvenile Courts (R.S. N.B. 1952, c. 123).—The Juvenile Courts Act provides for the establishment of a juvenile court for each place where the federal Juvenile Delinquents Act is in force. Five judges have been appointed, one for Saint John, one for Fredericton, one for the County of Westmorland, one for the County of Gloucester and one for the County of Restigouche. These courts have jurisdiction in juvenile matters under provincial statutes and are also juvenile courts under the federal Juvenile Delinquents Act.

Magistrates.—Magistrates appointed under the County Magistrates Act (R.S.N.B. 1952, c. 46) exercise their jurisdiction over the county for which they are appointed and may sit anywhere in the county. They have jurisdiction up to \$200 in contract and \$100 in tort. They have absolute criminal jurisdiction. Nine of the 15 counties have county magistrates.

Magistrates appointed under the Local Magistrates Act (R.S.N.B. 1952, c. 137) are appointed for a city, town, village or district, and their jurisdiction is limited to same. They have jurisdiction up to \$80 in contract and \$32 in tort. Only in cities do such magistrates have absolute criminal jurisdiction. In a few cases, magistrates are also appointed under city or town charters.

Quebec.—Court of Queen's Bench.—This Court, established under the Quebec Courts of Justice Act (R.S.Q. 1941, c. 15), has two appellate jurisdictions and one original jurisdiction. It is composed of 12 judges appointed by the Governor General in Council, including a chief justice called the Chief Justice of the Province of Quebec, and has appellate jurisdiction in the civil matters mentioned in Sect. 42 ff. of the Code of Civil Procedure, and appellate jurisdiction concerning convictions on indictments (Sect. 1012 ff. of the Criminal Code).

Presided over by a judge of the Superior Court, the Court of Queen's Bench has original jurisdiction in criminal matters when the accused is committed to stand a trial on an indictment, and appellate jurisdiction in accordance with the provisions of Sect. 749 ff. of the Criminal Code relating to the appeal against summary conviction or against the dismissal of a complaint.

Superior Court.—The Superior Court is a court of record and is composed of a chief justice, an associate chief justice and 40 puisne judges, all of whom are appointed by the Governor General in Council. This Court has general original jurisdiction in all suits or actions that are not exclusively within the jurisdiction of the Circuit Court, the Magistrate's Court or the Exchequer Court of Canada and it has exclusive original jurisdiction in cases of petition of right (Sect. 48 ff. of the Code of Civil Procedure).

Magistrate's Courts.—The Lieutenant-Governor in Council may, by proclamation, establish one or more magistrate's courts in and for each judicial district or electoral district or in and for any place in the Province. These courts are courts of record and, in civil matters, have jurisdiction determined by Sect. 61 ff. of the Code of Civil Procedure. To preside over the said courts, the Lieutenant-Governor in Council may appoint 33 magistrates including a Chief District Magistrate and an Associate Chief District Magistrate.

Social Welfare Courts.—Such courts are established for four districts including Montreal, Quebec, Three Rivers and St. Francis. Nine judges, one of whom is a Chief Justice and all of whom have been appointed by the Lieutenant-Governor in Council, preside over the courts. The courts are authorized to take cognizance

of cases of juvenile delinquents within the meaning of the federal Juvenile Delinquents Act, and their jurisdiction also extends to those portions of such provincial Acts as the Youth Protection Schools Act, the Quebec Public Charities Act, the Lunatic Asylums Act and the Adoption Act relating to the protection of children.

Court of the Sessions of the Peace.—This Court is a court of record and is composed of a number of judges, not exceeding 25, including one chief justice with residence at Montreal and one chief justice with residence at Quebec. These judges are appointed by the Lieutenant-Governor in Council and, besides presiding over the court of the sessions of the peace, they exercise, in criminal and penal matters, such powers as are conferred on them by federal Acts as well as by provincial Acts.

Recorder's Courts.—These courts are municipal courts and are established under the authority of by-laws adopted, as the case may be, by the city or town councils. The recorders are appointed by the Lieutenant-Governor in Council.

Commissioners' Courts.—These courts are established by provincial authority. Their original jurisdiction is limited to the matters mentioned in Sect. 59 of the Code of Civil Procedure.

Justices of the Peace.—The justices of the peace are appointed by the Lieutenant-Governor in Council and, as such, they have the powers conferred upon them by the Criminal Code and other federal laws and also by the Quebec Summary Conviction Act (R.S.Q. 1941, c. 29) and other provincial Acts.

Ontario.—Supreme Court (R.S.O. 1950, c. 190).—The Supreme Court of Ontario has two divisions, one of which is known as the Court of Appeal for Ontario and the other as the High Court of Justice for Ontario. The Court of Appeal consists of a chief justice, who is called the Chief Justice of Ontario, and nine other judges. The High Court of Justice consists of a chief justice, who is known as the Chief Justice of the High Court, and 16 other judges. All judges are appointed by the Governor General in Council. The Court of Appeal has general appellate jurisdiction throughout the Province and the High Court of Justice has unlimited original jurisdiction in civil and criminal matters.

County and District Courts (R.S.O. 1950, c. 75).—The Province is divided into 48 counties and districts with a county or district court for each county or district and one or more judges for each court. There are 62 judges in all, and they are appointed by the Governor General in Council. These courts have no criminal jurisdiction except on appeal from the decision of magistrates and justices of the peace in summary conviction cases. They have jurisdiction in contracts where the amount claimed does not exceed \$1,200 and jurisdiction in personal property actions where the amount claimed does not exceed \$1,000.

General Sessions of the Peace (R.S.O. 1950, c. 158).—There is a court of general sessions of the peace for each county and district in the Province. In the Counties of York and Wentworth the sittings are held quarterly and in the other counties and districts, semi-annually. The courts are presided over by the Judge of the County Court acting as chairman. They sit with a jury and have jurisdiction to try any indictable offence except those set out in Sect. 583 of the Criminal Code which are within the exclusive jurisdiction of the Superior Courts.

The County Court Judges Criminal Courts (R.S.O. 1950, c. 74).—These are criminal courts held in every county and district in the Province for the speedy trial of indictable offences under Part XVIII of the Criminal Code. They are presided over by the county or district court judge sitting without a jury. They have jurisdiction to try, on the election of the accused, any indictable offence except those set out in Sect. 583 of the Criminal Code.

Surrogate Courts (R.S.O. 1950, c. 380).—There is a surrogate court for each county or district. The court has jurisdiction to deal with probate and administration matters and is presided over by the county or district court judge.

Division Courts (R.S.O. 1950, c. 106).—There are 248 division courts throughout the Province. These are presided over by the county or district court judge who sits in the jurisdiction where the particular division court is located. Jurisdiction is limited to cases up to \$200 except where there is a written contract or a promise in which case jurisdiction extends to \$400.

Juvenile Courts (R.S.O. 1950, c. 193).—The juvenile courts for Ontario have jurisdiction in juvenile cases under provincial legislation; in addition they are juvenile courts for the purposes of the federal Juvenile Delinquents Act. The judges are appointed by the Lieutenant-Governor in Council; sometimes the county or district judge is appointed, sometimes the local magistrate and sometimes a person is appointed specially for the purpose of acting as a juvenile court judge.

Magistrates (R.S.O. 1950, c. 219).—Magistrates are appointed by the Lieutenant-Governor in Council. They have limited civil and criminal jurisdiction and are ex officio justices of the peace.

Justices of the Peace (R.S.O. 1950, c. 192).—Justices of the peace are appointed by the Lieutenant-Governor in Council. They have limited civil and criminal jurisdiction.

Manitoba.—Court of Appeal (R.S.M. 1940, c. 40).—The Court of Appeal consists of a chief justice, who is called the Chief Justice of Manitoba, and four other judges. All judges are appointed by the Governor General in Council. The Court has general appellate jurisdiction throughout the Province.

Court of Queen's Bench (R.S.M. 1940, c. 34).—The Court consists of a chief justice, who is known as the Chief Justice of the Queen's Bench, and five other judges. All judges are appointed by the Governor General in Council. The Court has unlimited original jurisdiction in civil and criminal cases throughout the Province.

County Courts (R.S.M. 1940, c. 42).—The Province is divided into six judicial districts and a number of county courts are established for each district. There are five judges for the Eastern Judicial District and each of the other districts has one judge. A judge has jurisdiction over all county courts within the judicial district to which he is appointed. These courts have criminal jurisdiction and also jurisdiction, generally, in claims not exceeding \$800 but have no jurisdiction in certain types of actions such as recovery of land.

Surrogate Courts (R.S.M. 1940, c. 45).—There is a surrogate court for each judicial district and the Surrogate Courts Act provides that the county court judge in each judicial district is to be the judge of the surrogate court of that district. These courts have jurisdiction and authority in relation to testamentary matters.

Juvenile Courts (R.S.M. 1940, c. 32).—The juvenile courts are established under the Child Welfare Act and the territorial jurisdiction of each court is set out in the Order in Council establishing the court and appointing the judges. There are a number of judges appointed in each district one of whom is designated the senior judge. The courts have power to deal with cases involving children under the Child Welfare Act and other provincial statutes and are also juvenile courts for the purposes of the federal Juvenile Delinquents Act.

Police Magistrates (R.S.M. 1940, c. 125).—Police magistrates are appointed by the Lieutenant-Governor in Council and, in addition to criminal jurisdiction, they have jurisdiction to try actions for debt where the amount does not exceed \$100. An appeal lies to a county court judge. There are 41 police magistrates in the Province.

Justices of the Peace (R.S.M. 1940, c. 125).—Justices of the peace are appointed by the Lieutenant-Governor in Council. They have limited criminal jurisdiction and also small-debt jurisdiction up to \$100.

Saskatchewan.—Court of Appeal (R.S.S. 1953, c. 66).—The Court of Appeal consists of a chief justice, who is called the Chief Justice of Saskatchewan, and four other judges. All judges are appointed by the Governor General in Council. The Court has general appellate jurisdiction throughout the Province.

Court of Queen's Bench (R.S.S. 1953, c. 67).—The Court of Queen's Bench consists of a chief justice, who is called the Chief Justice of the Queen's Bench, and six other judges. All judges are appointed by the Governor General in Council. The Court has unlimited original jurisdiction in civil and criminal matters throughout the Province.

District Courts (R.S.S. 1953, c. 68).—The Province is divided into 21 judicial districts and there is a district court for each judicial district. The judges are appointed by the Governor General in Council. Each court has jurisdiction generally in all cases where the claim does not exceed \$1,200, but jurisdiction does not include cases where title to land is brought in question or where the validity of any devise or bequest is disputed. Jurisdiction is also excluded in certain personal actions such as malicious prosecution, malicious arrest, false imprisonment, libel, slander and breach of promise of marriage. The courts also have criminal jurisdiction.

Surrogate Courts (R.S.S. 1953, c. 69).—There is a surrogate court for each judicial district and the Surrogate Courts Act provides that the judge of the district court shall be the judge of the surrogate court. The court has jurisdiction in probate matters.

Juvenile Courts (R.S.S. 1953, c. 241).—Under the Corrections Act, a juvenile court for the Province is established within the meaning of the federal Juvenile Delinquents Act for the purpose of dealing with juvenile delinquents and all causes and matters arising under part of the Corrections Act.

The chief probation officer for boys and the chief probation officer for girls are ex officio judges of the juvenile court and, on the recommendation of the Minister, the Lieutenant-Governor may appoint additional judges of the juvenile court.

Magistrates' Courts (R.S.S. 1953, c. 104).—Magistrates are appointed by the Lieutenant-Governor in Council. There are eight full-time and eight part-time magistrates. The magistrates exercise criminal jurisdiction and are ex officio justices of the peace and accordingly have the jurisdiction of a justice of the peace in civil cases.

Justices of the Peace (R.S.S. 1953, c. 105).—Justices of the peace are appointed by the Lieutenant-Governor in Council and, in addition to limited criminal jurisdiction, have jurisdiction in civil cases up to \$100.

Alberta.—Supreme Court (R.S.A. 1942, c. 129).—The Supreme Court of Alberta consists of two branches or divisions; one is designated the Appellate Division of the Supreme Court of Alberta and the other is designated the Trial Division of the Supreme Court of Alberta. The Appellate Division consists of a chief justice, who is called the Chief Justice of Alberta, and four other judges. The Trial Division consists of a chief justice, who is called the Chief Justice of the Trial Division, and five other judges. All judges of the Supreme Court are appointed by the Governor General in Council. The Appellate Division exercises general appellate jurisdiction throughout the Province and the Trial Division has unlimited original jurisdiction in civil and criminal matters.

District Courts (R.S.A. 1942, c. 121).—There are two district court districts in Alberta, namely, the District of Northern Alberta and the District of Southern Alberta, each with a district court. The Court of the District of Northern Alberta consists of a chief judge and five other judges and the Court of the District of Southern Alberta consists of a chief judge and four other judges. All judges are appointed by the Governor General in Council. The district courts, generally, have jurisdiction in all cases where the claim does not exceed \$1,000 and in criminal, probate and guardianship matters.

Juvenile Courts (S.A. 1944, c. 8).—The Child Welfare Act provides for the establishment of a Juvenile Court and every judge of the Supreme Court, every judge of a district court and every police magistrate is ex officio a judge thereof. In addition, the Lieutenant-Governor in Council may appoint other persons to be judges of the juvenile courts; 11 such judges have been appointed. A juvenile court has jurisdiction to hear and determine offences charged against children under any statute of the Province and, in addition, is a juvenile court for the purposes of the federal Juvenile Delinquents Act.

Family Courts (S.A. 1952, c. 32).—The Lieutenant-Governor in Council, by order, may establish a Family Court in any municipality or area within the Province and may appoint, under the provisions of the Magistrates and Justices Act, one or more police magistrates as judges of such court.

Police Magistrates (R.S.A. 1942, c. 134).—Police magistrates have criminal jurisdiction and also jurisdiction in actions for debt not exceeding \$100 and wage claims not exceeding six months wages. One hundred and eighteen police magistrates have been appointed.

Justices of the Peace (R.S.A. 1942, c. 184).—Justices of the peace are appointed by the Lieutenant-Governor in Council. They have limited civil and criminal jurisdiction. Two hundred and sixty-one justices of the peace have been appointed.

British Columbia.—Court of Appeal (R.S.B.C. 1948, c. 74).—The Court of Appeal consists of a chief justice, who is called the Chief Justice of British Columbia, and four other judges who are called Justices of Appeal. All are appointed by the Governor General in Council. The Court exercises general appellate jurisdiction.

Supreme Court (R.S.B.C. 1948, c. 73).—This Court consists of a chief justice, who is called the Chief Justice of the Supreme Court, and seven other judges who are called Judges of the Supreme Court. All are appointed by the Governor General in Council. The Court has unlimited original jurisdiction in civil and criminal matters throughout the Province.

County Courts (R.S.B.C. 1948, c. 75).—There are eight counties in the Province with a county court for each county and one or more judges for each county court. All judges are appointed by the Governor General in Council. Each county court has jurisdiction up to \$1,000 generally and in some cases up to \$2,500 and has jurisdiction in criminal and probate matters. The courts have no jurisdiction in certain types of personal actions such as libel, slander or breach of promise of marriage.

Small Debts Courts (R.S.B.C. 1948, c. 79).—The Small Debts Court Act provides that the Lieutenant-Governor in Council may appoint any stipendiary magistrate, police magistrate or any two justices of the peace to exercise small-debt jurisdiction within the territorial limits for which he or they have been appointed. There are 97 small debts court magistrates. Jurisdiction is limited to \$100 and an appeal lies to the nearest county court judge or Supreme Court judge.

Magistrates and Justices of the Peace (R.S.B.C. 1948, c. 195).—Magistrates and justices of the peace are appointed by the Lieutenant-Governor in Council. They have limited civil and criminal jurisdiction.

Juvenile Courts (R.S.B.C. 1948, c. 77).—Judges of the Juvenile Court are appointed by the Lieutenant-Governor in Council. They have jurisdiction for the purposes of the federal Juvenile Delinquents Act, and also under the following provincial statutes: Protection of Children Act, the Industrial School for Girls Act and the Industrial School for Boys Act.

## Section 2.—Provincial and Territorial Governments\*

In each of the provinces, the Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly, except for the Province of Quebec where there is a Legislative Council as well as a Legislative Assembly.

The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

<sup>\*</sup> The information on the governments of the different provinces given in Subsections 1 to 10 of this Section is brought up to Mar. 31, 1953. Provincial elections held between that date and the date of going to press are covered in Appendix II of this volume.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (30-31 Vict., c. 3 and amendments). Under Sect. 92 of the Act, the Legislature of each province may make laws exclusively in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province: borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings, other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province, including the constitution, maintenance and organization of provincial courts both of civil and criminal jurisdiction, and including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally, all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature may, under Sect. 93, make laws exclusively in relation to education, subject to certain restrictions relating to the establishment of schools by religious minorities. These powers, with similar restrictions, were conferred on the more recently admitted provinces on their inclusion as units in the federation.

The Provincial Legislatures may also make laws, under Sect. 95, in relation to agriculture and immigration, subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.—The main qualifications for persons entitled to be registered as voters in provincial elections are given below and apply, with modifications, to voters in all provinces:—

Every person, male or female, at the age of 21 years, who is a Canadian citizen and was resident in the province of registration 12 months prior to the election date and with two months residence in the electoral district of polling, and who does not fall under any statutory disqualifications, is entitled to be registered as a voter.

The principal exception to the above gives voting privileges to persons in Saskatchewan and Alberta at the age of 18 and 19 years, respectively.

Residence required in the Province of Quebec for provincial elections is two years and in British Columbia six months. In Manitoba a residence period of three months in the electoral district is necessary for registration. Further details connected with disqualifications, etc., may be found in the Election Act of each of the provinces.

#### Subsection 1.-Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Colonel the Honourable Sir Leonard Outerbridge is the present Lieutenant-Governor of the Province; he was commissioned on Aug. 17, 1949.

The Legislative Assembly has 28 members elected for a term of five years.

The Premier and each Cabinet Minister receives a salary of \$7,000 per annum plus a sessional indemnity of \$3,000. Each Member of the House of Assembly receives a sessional indemnity of \$3,000. An additional allowance of \$2,000 is made to the Leader of the Opposition.

### Subsection 2.-Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly.

The Honourable T. W. L. Prowse, the present Lieutenant-Governor of the Province, was commissioned to office on Oct. 4, 1950. Lieutenant-Governors since Confederation are cited in the Year Book 1951, p. 86.

The General Assembly elected Apr. 26, 1951, is the 47th in the history of Prince Edward Island Legislatures and the 22nd since Confederation. It has 30 members who serve for a statutory term of five years, 15 of whom are elected on a basis of adult suffrage and the other 15 elected by property holders only.

The annual salary of the Premier is \$6,000 and the salaries of the Cabinet Ministers are as follows: Attorney and Advocate General and Provincial Treasurer, \$4,500; Minister of Health and Welfare, Minister of Public Works and Highways, Minister of Industry and Natural Resources, Minister of Agriculture, \$4,000 each; Minister of Education and Provincial Secretary, \$3,000 each. Each Member of the Assembly is paid the sum of \$1,000 for each session attended by him and an additional amount of \$500, tax free, as indemnity for expenses incurred. The Speaker is paid an additional sum of \$400 and a further additional amount of \$200, tax free, as an indemnity and the Leader of the Opposition is paid an additional sum of \$800 and a further additional amount of \$200, tax free, for indemnity incurred by him in relation to his official duties.

#### Subsection 3.-Nova Scotia

The Government of the Province of Nova Scotia has a Lieutenant-Governor, an Executive Council and a House of Assembly.

The Honourable Alistair Fraser, the present Lieutenant-Governor, was commissioned to office Sept. 1, 1952. Lieutenant-Governors since Confederation are cited in the Year Book 1951, p. 87.

The General Assembly has 37 members elected for five years, the maximum duration of its existence. The Assembly elected June 9, 1949, was the 44th in Nova Scotia's history and the 21st since Confederation.

The Premier of the Province receives a salary of \$9,000 per annum and each Cabinet Minister a salary of \$8,000 per annum. Each Member of the House of Assembly receives a sessional indemnity of \$1,600 and an allowance of \$800 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of \$1,000 in addition to his sessional indemnity.

## 4.—Legislatures and Premiers of Nova Scotia, 1933-53, and Ministry as at Mar. 31, 1953

### Legislatures, 1933-531

Date of Election				Legislature	Number of Sessions	Date of First Opening	Date of Dissolution

Provincial Secretary	Hon. A. B. DEWOLFE		July 21, 1951		

#### Subsection 4.—New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly.

The Honourable David Laurence MacLaren, the present Lieutenant-Governor, was commissioned to office Nov. 1, 1945. Lieutenant-Governors since Confederation are cited in the Year Book 1951, p. 89.

The General Assembly elected Sept. 22, 1952, is the 42nd in New Brunswick's history and the 15th since Confederation. It has 52 members who are elected for a statutory term of five years.

The Premier receives \$5,000 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is \$5,000, the amount paid as indemnity to each Member of the House of Assembly is \$1,500, and the Leader of the Opposition receives an additional \$2,000. An allowance of \$1,000, in addition to the regular indemnity, is made to the Speaker.

## 5.—Legislatures and Premiers of New Brunswick, 1935-53, and Ministry as at Mar. 31, 1953

#### Subsection 5.—Quebec

The Government of Quebec consists of the Lieutenant-Governor, an Executive Council, and a bicameral legislature—the Legislative Council and the Legislative Assembly.

The Honourable Gaspard Fauteux, the present Lieutenant-Governor, was commissioned to office Oct. 3, 1950. Lieutenant-Governors since Confederation are cited in the Year Book 1951, p. 90.

The Legislative Council has 24 members nominated for life by the Lieutenant-Governor in Council. The Legislative Assembly has 92 elected members and, like the Legislative Council, has the power to bring forward Bills relating to civil and administrative matters and to the amendment or repeal of laws that already exist. A Bill, to be approved by the Lieutenant-Governor, must have received the assent of both Houses. Only the Legislative Assembly can bring forward a Bill requiring the expenditure of public money. The maximum life of a Legislature is five years.

Salaries and allowances of the Premier, Members of the Executive Council, Legislative Council and Legislative Assembly are fixed according to R.S.Q. 1941, c. 4, as amended by 1-2 Eliz. II, as follows: all Members of the Legislative Assembly and Legislative Council receive \$4,000 per annum as salary and \$2,000 by way of allowances; in addition, the Premier receives \$10,000 as salary, \$4,000 allowances and \$2,000 for lodging allowance; Ministers with portfolio an additional \$8,000 as salary and \$2,000 allowances; Ministers without portfolio an additional \$3,000 salary and \$2,000 allowances; the Leader of the Opposition in the Legislative Assembly an additional \$6,000 salary, \$2,000 allowances and \$2,000 for lodging allowance; and the Leader of the Opposition in the Legislative Council an additional \$5,000 salary and \$2,000 allowances.

### Subsection 6.—Ontario

The Government of Ontario consists of the Lieutenant-Governor, the Executive Council and the House of Assembly. The Honourable Louis O. Breithaupt, LL.D., the present Lieutenant-Governor of the Province, was commissioned to office Jan. 24, 1952. Lieutenant-Governors since Confederation are cited in the Year Book 1951, p. 92.

The House of Assembly, the single-chamber Legislature of the Province, is composed of 90 members elected for a statutory term of five years on an adult-suffrage basis.

Besides the regular departments of government, the Niagara Parks Commission, the Ontario Municipal Board, the Hydro-Electric Power Commission of Ontario, the Ontario Northland Transportation Commission, the Liquor Control Board and the Liquor Licence Board have been created.

Under the provisions of the Legislative Assembly Act (R.S.O. 1950, c. 202, as amended 1952, c. 51), each Member of the Assembly is paid an annual indemnity of \$2,600 and an allowance for expenses of \$1,300. In addition, the Speaker receives a special indemnity at the annual rate of \$3,000 and an expense allowance of \$2,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of \$1,000 and the Leader of the Opposition a special indemnity of \$3,000 and an annual allowance of \$2,000 for expenses. Each Member of the Cabinet receives the ordinary indemnity as a Member of the Legislature of \$2,600 plus the \$1,300 expense allowance in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Premier is \$14,000 and for a Cabinet Minister \$10,000.

#### Subsection 7.-Manitoba

Besides its Lieutenant-Governor, Manitoba has a Provincial Executive composed of 10 members and a Legislative Assembly of 57 members, elected for a statutory term of five years. The Honourable Roland Fairbairn McWilliams, the present Lieutenant-Governor of the Province, was commissioned to office Nov. 1, 1940. Lieutenant-Governors since Confederation are cited in the Year Book 1951, p. 94.

The Premier of the Province is paid a salary of \$8,000 per annum and each of the other Members of the Cabinet \$6,000. Members of the Legislature are each paid an indemnity of \$1,670 and an expense allowance of \$830. The Leader of the Opposition is paid an additional amount of \$2,000 and the Speaker of the Legislature an additional amount of \$2.500.

#### Subsection 10.-British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly.

Colonel the Honourable Clarence Wallace, the present Lieutenant-Governor of the Province, was commissioned to office Oct. 1, 1950. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 98.

The Legislative Assembly, elected for a statutory term of five years, has 48 members.

Members of the Executive Council and the Legislative Assembly each receive sessional allowances of \$2,000 and \$1,000 for expenses. In addition, the Premier receives a salary of \$9,000 and each Member of the Executive Council \$7,500. The Leader of the Opposition has a special allowance of \$2,000 and the Speaker and Deputy Speaker receive allowances of \$1,800 and \$500, respectively.

# 11.—Legislatures and Premiers of British Columbia, 1933-53, and Ministry as at Mar. 31, 1953 Legislatures, 1933-531

## Subsection 11.-Yukon and Northwest Territories

Yukon Territory.—The Yukon was created a separate Territory in June 1898. Provision is made for a local Government composed of a Chief Executive, styled Commissioner, and an elective Legislative Council of five members with a three-year tenure of office. The Commissioner administers the Government under instructions from the Governor in Council or the Minister of Resources and Development. The Commissioner in Council has power to make ordinances dealing with the imposition of local taxes, sale of liquor, preservation of game, establishment of territorial offices, maintenance of prisons and municipal institutions, issue of licences, incorporation of companies, solemnization of marriage, property and civil rights, administration of justice, and generally all matters of a local nature in the Territory. The seat of local government is at Whitehorse, Yukon Territory.

#### TERRITORIAL COUNCIL

#### (Five members elected 1952, for three years)

Dawson	V. C. MELLER	Whitehorse East	J. L. PHELPS
Mayo	A. F. BERRY	Whitehorse West	F. D. LOCKE
C	armacks	A. R. HAYES	

#### TERRITORIAL OFFICIALS

Commissioner (Whitehorse)	W. G. BROWN
Superintendent of Works and Buildings	B. G. HARVEY
Registrar of Vital Statistics	M. MUNROE
Legal Adviser	F. G. SMITH

The Director of the Northern Administration and Lands Branch, Department of Resources and Development, is directly responsible for the general administration of the Territory under the Yukon Act (R.S.C. 1952, c. 298), and that Department has five lands and mining officials stationed in the Territory. Other Departments of the Federal Government, including Justice, National Revenue, Transport, Post Office, etc., also maintain officials in the Yukon Territory.\*

Northwest Territories.—The Northwest Territories as reconstituted on Sept. 1, 1905, comprise:

- all that part of Canada north of the Sixtieth Parallel of North Latitude, except
  the portions thereof within the Yukon Territory and the Provinces of Quebec and
  Newfoundland, and
- (2) the islands in Hudson Bay, James Bay and Ungava Bay, except those islands within the Provinces of Manitoba, Ontario and Quebec.

For administrative purposes, the Territories were divided into the provisional districts of Mackenzie, Keewatin and Franklin by Order in Council of Mar. 16, 1918. The Northwest Territories Act, 1905, as amended, provides for the Government of the Territories by a Commissioner (who is Deputy Minister of the Department of Resources and Development) under instructions given from time to time by the Governor in Council or the Minister of Resources and Development. There is a council of eight members, three of whom are elected, and five appointed by the Governor in Council. The Commissioner in Council has power to make ordinances for the Government of the Territories relating to subjects designated by the Governor

<sup>\*</sup> Further information on officials of various Federal Government Departments serving the Yukon Territory may be obtained from the Director, Northern Administration and Lands Branch, Department of Resources and Development, Ottawa.

in Council, subject to any Act of the Parliament of Canada applying to the Territories, respecting such matters as direct taxation within the Territories to raise revenue, establishment and tenure of territorial offices, maintenance of municipal institutions, licences, administration of civil justice, education, public health and generally all matters of a local nature. The administration of the Territories under the Northwest Territories Act and the ordinances passed by the Commissioner in Council is carried on by the Northern Administration and Lands Branch of the Department of Resources and Development. A federal Administrative Officer serves at each of the following Territorial centres: Fort Smith, Aklavik, Hay River and Yellowknife. The seat of government is at Ottawa.

## COUNCIL OF THE NORTHWEST TERRITORIES (AS AT MAR. 31, 1953)

Secretary...... R. BOUCHARD
Legal Adviser..... Wm. Nason

## Section 3.—Municipal Government\*

The earliest local government in Canada was carried out by the seigneurs of New France who bore, along with military command and the administration of justice, the responsibilities of appointing justices of the peace and clerks of roads. Some of these officers were soon replaced by a 'syndic' elected by the people, the first in 1644, though a mayor and two aldermen had held office briefly in the city of Quebec in 1643. When the syndics fell into disuse, such powers were delegated the Governor to officials. The City of Quebec was incorporated in 1832, and the system of local government for the province decreed in 1840 was later remodelled by Acts of 1845, 1847, 1850 and 1860.

In the Atlantic Provinces, Saint John, N.B., had attained the distinction of becoming Canada's first incorporated city in 1785. Incorporation of Halifax, N.S., came in 1841 and Charlottetown, P.E.I., in 1855. In Newfoundland, St. John's was created a town in 1888.

The Ontario Parish and Town Officers Act of 1793 provided for an annual meeting in a parish or township to appoint local officers responsible to Parliament and the courts, but the meetings had no law-making powers. Brockville, in 1832, gained from the Governor in Council some local powers that had previously been exercised through the courts. In 1834, York was incorporated as the self-governing city of Toronto. The Municipal Act of 1849 became the foundation of the local government in Ontario and later provided a model for the western provinces. Subsequently, Acts have been passed in all provinces governing aspects of municipal incorporation, powers and duties. Constitutional provision that jurisdiction over municipal affairs would rest with the provinces has resulted, quite naturally, in dissimilarity in the organization of local government across the country. This

<sup>•</sup> Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

stems not only from the difference in beginnings and subsequent independent growth in each province, but also from variations in requirements arising out of geographical and population differences.

The situation remains in a state of flux, with constant amendment of provincial Acts and charters in an attempt to solve old problems and to meet new ones. Just as the call for new and additional services has enlarged the scope of federal and provincial activities, the municipalities have had to assume responsibilities unheard of a few decades ago, or considered beyond their sphere of activity. As a result, amendments to Acts have varied from those enlarging the powers and the boundaries of municipalities, to those establishing closer provincial control and greater financial aid.

An outline of municipal organization at the end of 1952 in each of the provinces of Canada is given in the following paragraphs.\*

Newfoundland.—Newfoundland has only one city, St. John's. The remainder of the population is mostly dispersed in small settlements along the coast, and only since 1937 have a few of the larger of these been set up individually with local councils as towns or, where two or three are close together, as rural districts (36 in 1953). These latter are not rural municipalities but merely towns consisting of two or more settlements. Local affairs in the remainder of the Province are administered by the Provincial Government. In 1949, the Local Government Act was passed to facilitate incorporations. Thirty of the towns and two of the rural districts are now incorporated under the Act. There are two local government communities with lesser powers of government.

Prince Edward Island.—The Province has one city, Charlottetown, and seven towns all incorporated by special Acts. They include less than one-half of one percent of the area of the Island and only about a quarter of its population. The Village Service Act, 1951, provides for the incorporation of villages. The remaining area of the Province is not organized municipally, the three counties being provincial administrative units only.

Nova Scotia.—Municipal organization in Nova Scotia covers the whole of the Province. Halifax and Sydney are the only cities and they operate under special charters; the latter is also governed by certain special legislation. Towns, which number 40, operate under the Town Incorporation Act. There are no municipalities incorporated as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which, in themselves, do not represent units of local government. However, 12 of these counties each comprise one municipality, and the other six comprise two municipalities each, making a total of 24 rural municipalities.

New Brunswick.—The Province is divided into 15 counties which are incorporated municipalities and have direct powers of local self-government in the rural areas. In effect, therefore, they are rural municipalities. In most cases certain of their powers apply in both rural and urban municipalities. The four cities of Saint John, Fredericton, Moncton and Edmundston have special charters, and the 19 towns operate under the Towns Incorporation Act. There are also three villages and 37 local improvement district areas within the counties but outside the cities, towns and villages that have been incorporated for the provision of limited municipal services.

Municipalities are summarized by type of organization on p. 72.

Quebec.—Municipal divisions in Quebec embrace the more thickly settled areas comprising about one-third of the Province, the remainder being governed by the Province as 'territories'. The organized area is divided into 76 county municipalities, which are divided again into local municipalities under the Municipal Code and designated as village, township or parish municipalities or simply as municipalities. The counties, as such, have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying districts with little or no population. There are 331 villages and 1,109 townships and parishes. A small number of these are independent of the counties in which they are located. Of the 35 cities, a few have special charters. The remainder, along with the 131 towns, are governed by the Cities and Towns Act and numerous special Acts.

Ontario.—Slightly more than one-tenth of the area of Ontario is municipally organized, the remainder being governed entirely by the Provincial Government. The older section of the Province is divided into 43 counties, five of which are united with others for administrative purposes. Although an incorporated municipality, each county is comprised of the towns, villages and townships situated within its borders, which provide its revenue. There are 29 cities, 151 towns, 156 villages, 572 townships and 16 improvement districts. Some of each are located in the northern districts of the Province, which are not organized into counties.

Manitoba.—Only the southern and settled section of Manitoba, comprising less than one-eighth of the area, is organized for local self-government. As in the other three western provinces, there is no county organization and all municipalities are independent, except of provincial control. There are four cities, three with special charters and one governed by a number of special Acts. General Acts govern the 33 towns, 39 villages, 109 rural municipalities and five suburban municipalities. An Act of 1944 (amended January 1945) authorizes organization of local government districts in unorganized or disorganized territory, and 12 such districts have been set up.

Saskatchewan.—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are eight cities, 91 towns, 388 villages and 298 rural municipalities. The area so organized consists of most of the southern two-fifths of the Province. The remainder of this portion is administered for local purposes by the Province in unincorporated local improvement districts. The northern three-fifths is sparsely populated and without local government, though some municipal services are provided by the Province through operation of the Northern Administrative Area.

Alberta.—In Alberta there are cities, towns, villages and rural municipalities known as municipal districts. The latter three classes come under general Acts. Until 1951 each of the seven cities had its own charter, but these have been superseded by the City Act of 1951. There are 72 towns, 137 villages and 57 municipal districts, but less than one-fifth of the Province is so organized. There are also some unincorporated improvement districts administered by the Province in less densely settled areas. Three county municipalities have been set up. These are not counties as they exist in Ontario but municipalities in which the council administers education and municipal hospitals. They are included with the municipal districts mentioned above and in Table 12 on p. 72.

British Columbia.—Less than 0.5 p.c. of the area of British Columbia is organized into municipalities. Additional small areas have sufficient population to require administration of local activities by the Provincial Government. There are 35 cities, 49 villages and 28 districts. The latter are chiefly rural municipalities, except for those adjacent to the principal cities of Victoria and Vancouver, which are largely urban in character. It should be emphazised, however, that the application of the name "city" is somewhat different from the commonly accepted meaning in that several of them have populations of less than 1,000 and perhaps one-half or more would not normally be incorporated as cities in another province.

Yukon and Northwest Territories.—There are two cities and one town in the Yukon Territory and two local administrative districts in the Northwest Territories, all of which provide some municipal services to their local areas. These are not shown in Table 12.

## 12.—Municipalities, by Official Designation, and by Statistical Classification, by Province, 1952

(Number in existence as at Mar. 31, 1953, for Newfoundland; Dec. 31, 1952, for remainder)

<sup>1</sup> This section of the table groups the municipalities according to their official nomenclature which is roughly indicative of size and nature. See footnote 5.

1 This section of the table groups the municipalities under the classification devised by the Dominion-Provincial Conferences on Municipal Statistics, the Classification being designed to bring municipalities into comparable groups for statistical presentation.

2 Includes two local government communities.

3 See text on p. 70.

4 Rural municipalities are designated by different names in the different provinces.

5 Includes 2 units of self-government known as "Suburban Municipalities".

Does not include local government districts.

4 Excludes 20 improvement districts.

5 Includes 55 improvement districts.

10 Excludes 37 local improvement districts.

11 Municipalities hown wholly or partly in metropolitan areas by the 1951 Census of Canada.

## Section 4.—Federal and Provincial Royal Commissions

Federal Royal Commissions.\*—There were no Federal Royal Commissions established in the fiscal year ended Mar. 31, 1953. Commissions appointed back to 1870 are listed in previous Year Books beginning with the 1940 edition, pp. 1108-1110.

Provincial Royal Commissions.—Only those Royal Commissions established in 1952-53 are reported here, this list being in continuance of those in previous Year Books beginning with the 1948-49 edition, pp. 1222-1223:—

Newfoundland.—Royal Commission appointed to inquire into the operation of the Hospital for Mental and Nervous Diseases. Aug. 16, 1952. Commissioner: C. E. Hunt, Q.C.

Nova Scotia.—Royal Commission appointed to examine into and concerning matters relating to the financial support of education in the Province. Mar. 2, 1953. Commissioner: Mr. Justice V. J. Pottier.

Royal Commission appointed to examine into the affairs of certain security companies in the Province, being the National Thrift Corporation and allied companies, and generally to examine into the administration of the Capital Securities Act. Mar. 9, 1953. *Commissioner*: Judge J. G. A. Robertson.

New Brunswick.—Royal Commission appointed to inquire into and report upon certain irregularities relating to the Engineering Service Branch of the Department of Agriculture with reference to improper use of facilities of that Branch by David M. Gilchrist, Dept. of Agriculture. June 4, 1952. Commissioner: Hon. Reginald D. Kierstead.

Royal Commission appointed to inquire into and submit a report concerning Public Works Contract on the Broad Road re A. W. Mason Limited. June 7, 1952. Commissioner: Hon. G. F. Gregory Bridges.

Quebec.—Royal Commission appointed to submit findings, advice and recommendations as to the safeguarding of the rights of the Province, municipalities and the school corporations. Feb. 19, 1953. Chairman: Justice Thomas Tremblay. Commissioners: Esdras Minville, Honore Parent, Q.C., Rev. Father Richard Ares, S.J., John P. Rowat and Paul-Henri Guimont.

Saskatchewan.—Royal Commission on Agriculture and Rural Life, appointed Oct. 3, 1952, to investigate and make recommendations regarding the requirements for the maintenance of a sound farm economy and the improvement of social conditions and amenities in rural Saskatchewan. Chairman: Prof. W. B. Baker. Commissioners: Mrs. Nancy Adams, T. H. Bourassa, H. L. Fowler, C. W. Gibbings, and J. L. Phelps.

British Columbia.—Royal Commission appointed to inquire into the facts relating to the distribution, sale and consumption of spirituous, vinous and malt liquors within the Province. Sept. 12, 1952. Chairman: Hon. H. H. Stevens. Commissioners: Very Rev. Dean Cecil Swanson and George Home. Report printed, 31 pp.

<sup>\*</sup> Commissions constituted under Part I of the Federal Inquiries Act.

<sup>74570 - 6</sup> 

# PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT

## Section 1.—Departments, Boards, Commissions, etc.

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

While it is not possible, owing to the limitations of space, to enumerate in this Section the details of each service or the divisions or sections of all the departments, the main branches are given along with those services that differ in some quality from the larger class of subjects handled by a department. The work of many of these departments is given in detail in later Chapters of this volume. The Index will be useful in locating required information.

Department of Agriculture.—This Department was established in 1867 (30 Vict., c. 53) and conducts the concerns of all phases of agriculture. Research and experimentation are carried out by the Science Service and the Experimental Farms Service; the maintenance of standards and protection of products by the Production Service and Marketing Service; reclamation and development by the Prairie Farm Rehabilitation Administration and the Maritime Marshland Rehabilitation Administration; while security and price stability policies are administered under the Prairie Farm Assistance Administration and the Agricultural Prices Support Board. The results of work in these various fields and information on the policies of the Department in general are made available to the public through the Information Service.

The Department of Citizenship and Immigration.—This Department came into existence on Jan. 18, 1950, under the Minister of Citizenship and Immigration. It comprises the Canadian Citizenship Branch, the Canadian Citizenship Registration Branch, the Immigration Branch and the Indian Affairs Branch.

The Canadian Citizenship Branch assists governmental and non-governmental agencies engaged or interested in facilitating the adjustment and integration of newcomers and in making Canadians conscious of their privileges and responsibilities as citizens.

The Canadian Citizenship Registration Branch administers the Canadian Citizenship Act and is the custodian of all records under that Act and all Naturalization Acts previously in force.

The Immigration Branch administers the Immigration Act and Regulations and is responsible for the selection, examination and transportation of immigrants, the exclusion or deportation of undesirables and the settlement or establishment of immigrants in Canada.

The activities of the Indian Affairs Branch include management of all Indian affairs. Its organization consists of a headquarters office at Ottawa, a regional supervisory staff, and 87 local agencies in the field.

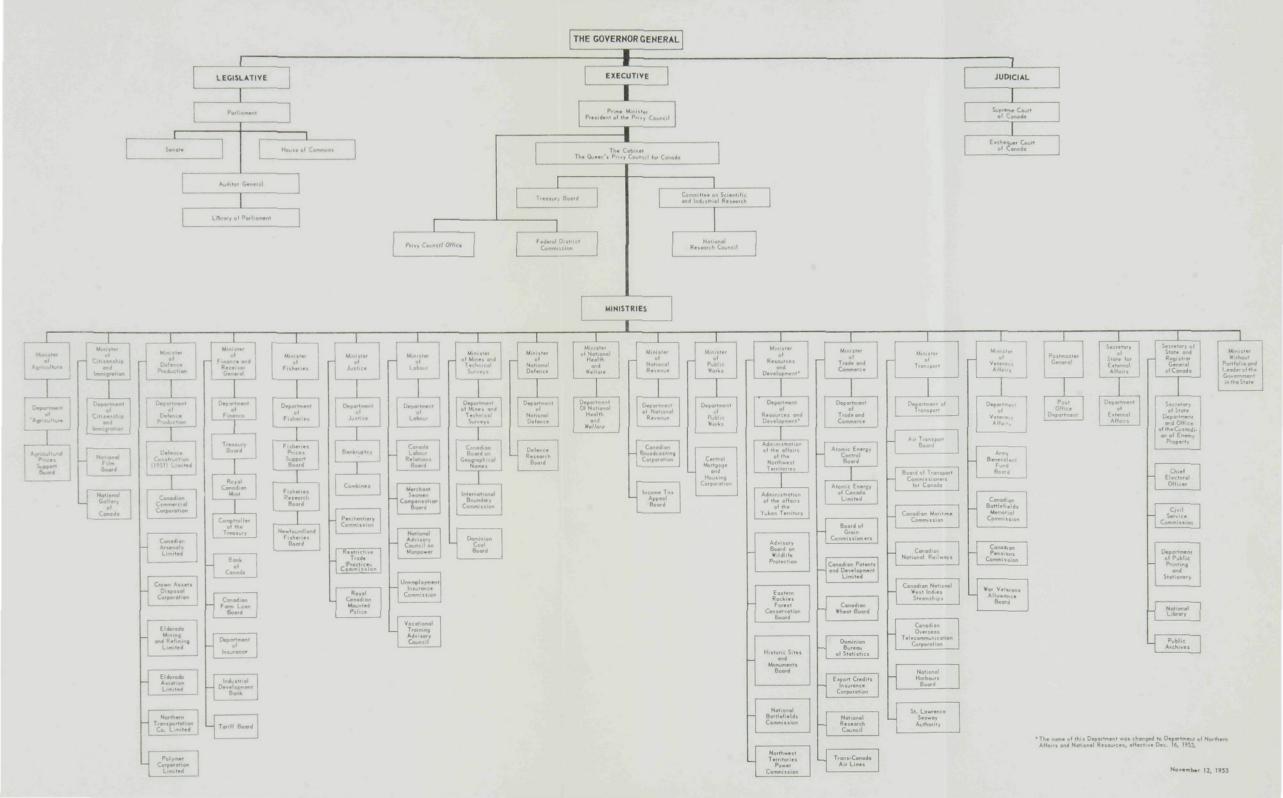

The Minister of Citizenship and Immigration is responsible to Parliament for the National Film Board and for the National Gallery of Canada which is governed by a Board of Trustees.

The Civil Service Commission.—The Civil Service Commission of Canada dates from the Civil Service Act of 1908. Under this Act the Commission was given the responsibility of applying, as far as possible, the principle of appointment by merit in filling permanent positions within departmental headquarters positions at Ottawa, termed the "inside service"

The Civil Service Act of 1918 extended the competitive system of appointments to cover the outside as well as the inside service and temporary as well as permanent appointments. It made the Commission responsible for establishing a system of organization and classification that would secure uniformity in the staffing of the various departments and in the salaries paid for work of equal levels of difficulty and responsibility.

The jurisdiction of the Commission now extends to all departments of the Government and to a large number of boards and commissions, exclusive of Crown corporations.

The Civil Service Commission consists of three members, one of whom serves as Chairman. Each member of the Commission is appointed by the Governor in Council for a term of 10 years, and each has the rank and standing of a Deputy Minister. The Commission has a staff of approximately 580 persons working under its direction and located in the headquarters office at Ottawa and in district offices at St. John's, N't'ld., Halifax, N.S., Saint John, N.B., Montreal, Que., Toronto, Ont., Winnipeg, Man., Regina, Sask., Edmonton, Alta., and Vancouver, B.C.

The Department of Defence Production.—The Department of Defence Production was established on Apr. 1, 1951, under the provisions of the Defence Production Act, 1951, which gave the Department a statutory life of five years. Under the Defence Production Act the powers, duties and functions that were vested in the Minister of Trade and Commerce pursuant to the Department of Munitions and Supply Act, 1939, and the Defence Supplies Act, 1950, were transferred to the Minister of Defence Production. The Defence Production Act repealed the Essential Materials (Defence) Act, 1950–51.

Briefly, its task is to co-ordinate the effort required of the Canadian economy in producing armaments necessary to implement the terms of the North Atlantic Treaty and to co-ordinate the production and purchasing of the requirements of the Armed Forces. The four main units are the Production Branch, the General Purchasing Branch, the Materials Branch and the Aircraft Division. Supporting them are various administrative and service units such as the Economic and Statistics, Legal, Administration, and Comptroller's Branches, the Financial Adviser's Office and Small Industries Division.

The following Crown companies report to Parliament through the Minister of Defence Production: Canadian Arsenals Limited, Crown Assets Disposal Corporation, Defence Construction (1951) Limited, Polymer Corporation Limited, Eldorado Mining and Refining Limited, Northern Transportation Company Limited, and Canadian Commercial Corporation.

The Department of External Affairs.—The main function of this Department is the protection and advancement of Canadian interests abroad.

The Department is headed by the Secretary of State for External Affairs. At the head of the staff is the Under-Secretary of State for External Affairs, with a Deputy Under-Secretary and three Assistant Under-Secretaries. They are assisted by Foreign Service Officers, formally designated Counsellors, and First, Second and Third Secretaries.

The work of the Department at Ottawa is carried on through the following Divisions: the geographical Divisions are the Commonwealth, European, American and Far Eastern; the functional Divisions are the Consular, Defence Liaison, Economic, Information, Legal, Protocol, and United Nations; the "housekeeping" Divisions are Establishments and Organization, Finance, and Personnel. There are two related special sections, Supplies and Properties, and International Conferences. The archives and departmental library are incorporated in a Historical Research and Reports Section and a Press Office arranges press conferences and issues press releases.

The Department of Finance.—The Department of Finance, created in June 1868, is under the authority of the Minister of Finance. The Department is responsible for the financial administration of Canada. It is responsible for the raising of the money required for the various governmental activities by way of taxation or borrowing. The Comptroller of the Treasury, an officer of the Department, is responsible for all Government disbursements.

The work of the Department is organized in six principal Divisions: Administration, Accounting, Treasury Board, Taxation, Economic Policy, and the Comptroller of the Treasury. The Royal Canadian Mint is a branch of the Department and the Inspector General of Banks is an officer of the Department.

The Tariff Board and the Canadian Farm Loan Board are responsible to Parliament through the Minister of Finance.

The Department of Fisheries.—The Department of Fisheries was first organized under a Minister of Fisheries in 1930. Prior to that date the federal fisheries services were maintained by the former Department of Marine and Fisheries, established in 1868. The provinces, under various arrangements, have certain administrative responsibilities in the fisheries but the legislative authority for the regulations of coastal and fresh-water fisheries is with the Federal Department of Fisheries.

The work of the Department includes: conservation and development of the fisheries through the enforcement of fishing regulations, the operation of fish-culture establishments, management and improvement of spawning streams and control of predators; inspection of fish products for quality control and the encouragement of industrial development; promotion of the greatest utilization of fishery products and a proper public understanding of the resource and the industry.

Agencies connected with the Department are the Fisheries Prices Support Board and the Fisheries Research Board of Canada. The Department is also represented on the International Pacific Salmon Fisheries Commission, the International Fisheries Commission (Halibut), the International Commission for the Northwest Atlantic Fisheries and the International North Pacific Fisheries Commission.

The Department of Insurance.—The Minister of Finance is responsible for the Department of Insurance which originated in 1875. Under the Superintendent of Insurance, the Department administers the statutes of Canada applicable to: insurance, trust and loan companies incorporated by the Parliament of Canada; provincially incorporated

insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; and Civil Service insurance.

Under the relevant provincial statutes the Department examines provincial trust companies in the Provinces of Manitoba and New Brunswick and loan and trust companies in the Province of Nova Scotia.

A Fire Prevention Branch was organized in 1919 with responsibility for the administration of Sect. 515 of the Criminal Code. It maintains fire-loss records, makes inspections, reports on fire-prevention legislation and protection methods and endeavours to extend and co-ordinate fire-prevention work in Canada.

The Department of Justice.—This Department provides legal services to the Government and the various government departments, including preparing and settling government legislation, settling instruments issued under the Great Seal, regulating and conducting litigation for or against the Crown, superintending the acquisition of property and prosecutions under federal legislation other than the Criminal Code, administers federal statutes dealing with legal matters and provides administration services for the Supreme Court of Canada and the Exchequer Court.

The Department also superintends the penitentiaries and administers the prison system of Canada.

The Department of Labour.—The Department of Labour was established in 1900 by Act of Parliament (63-64 Vict., c. 24). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; government annuities; government employee compensation; merchant seamen compensation; vocational training; publication of the Labour Gazette, as well as bulletins giving information on industrial and related subjects.

The Unemployment Insurance Commission and National Employment Service is also under the direction of the Minister of Labour. The Canada Labour Relations Board and the National Advisory Council on Manpower also act on behalf of the Minister of Labour. The Department is also the official liaison agency between the Canadian Government and the International Labour Organization.

The Department of Mines and Technical Surveys.—This Department was created by an Act of Parliament (13 Geo. VI, c. 17) which received Royal Assent on Dec. 10, 1949. Its establishment resulted from the reorganization of certain former departments into an integrated organization whose primary function is to provide technological assistance in the development of Canada's mineral resources through investigations, studies and research in the fields of geology, mineral dressing and metallurgy, and topographic, geodetic and other surveys. The Department is under the Minister of Mines and Technical Surveys and is divided into five branches, namely: the Surveys and Mapping Branch, the Geological Survey of Canada, the Mines Branch, the Dominion Observatories and the Geographical Branch.

The Department also administers the Explosives Act which regulates manufacture, testing, sale, storage and importation of explosives, and the Emergency Gold Mining Assistance Act which provides cost-aid to the gold industry.

Boards and Commissions are: Canadian Board on Geographical Names; Dominion Coal Board; Board of Examiners for Dominion Land Surveyors; International Boundary Commission and Interprovincial Boundary Commissions.

The Department of National Defence.—Created on Jan. 1, 1923, by the National Defence Act, 1922, the Department of National Defence was originally an amalgamation of the Department of Militia and Defence, the Naval Service and the Air Board.

In 1940, the Department of National Defence was separated into three departments, one for each of the Armed Services, and continued under this organization until the cessation of hostilities. In order to afford the maximum possible degree of co-ordination, the three Services were again brought into one departmental organization in 1946.

In 1947, the Defence Research Board was formed to carry out research projects for defence. It is responsible to the Minister of National Defence for this function and for advising him on the effect of scientific, technical and other research on national defence.

Department of National Health and Welfare.—The Department of National Health and Welfare was established in October 1944. Under the Minister of National Health and Welfare, the Department, which is composed of three branches (Health, Welfare and Administration), is administered through the Deputy Ministers of National Health and National Welfare.

The Health Branch is divided into three directorates: Health Insurance Studies, Food and Drugs, and Indian Health Services. In the Health Branch are 14 Divisions active in a number of public health fields. Administratively they fall into three groups: advisory medical, environmental sanitation and research development. The Welfare Branch is made up of the Divisions of Family Allowances, Old Age Security, Old Age Assistance and Physical Fitness. The Department is also responsible for federal civil defence planning, with the Civil Defence Co-ordinator reporting to both Deputy Ministers. The Administration Branch includes divisions where activities cover both health and welfare fields such as research, information, legal and library services as well as administrative personnel and purchasing and supply services.

National Museum of Canada.—The National Museum illustrates the natural history of Canada—its geology, biology and anthropology. It was formerly part of the Geological Survey which was founded in 1842 but was separated in 1920, and is now part of the Department of Resources and Development. The Museum carries out field investigations in botany, zoology, vertebrate palæontology, archæology and ethnology including studies of folk-lore and folk-songs, publishes the results of its research and carries out an extensive educational program.

The Department of National Revenue.—From Confederation until May 1918, controls and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Departments of Customs and Inland Revenue. In 1921, the name was changed to the Department of Customs and Excise. In April 1924, collection of income taxes was placed under the Minister of National Revenue and under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

Besides the assessment and collection of customs and excise duty, taxes and revenues and other services by ports and outports, the Department is responsible for the assessment and collection of income taxes and succession duties.

The Minister of National Revenue is responsible to Parliament for the Income Tax Appeal Board and the Canadian Broadcasting Corporation.

Post Office Department.—Operations of the Post Office Department under a Post-master General include: air, land, steamboat and railway mail services; international and domestic mail; postage stamps, money orders and parcel post business. The Department is responsible for the Post Office Savings Bank.

Public Archives.—The Public Archives was founded in 1872 and is administered by the Dominion Archivist who has the rank of a Deputy Minister and is responsible to the Secretary of State. Its purpose is to assemble and make available to the public a comprehensive collection of historical source material relating to the history of Canada. Major emphasis is placed upon official records of the Government, and the personal papers of political leaders and other prominent figures. These are supplemented by copies of many records in the British and French archives that relate to Canada, a fine map collection, a historical library, and many prints, paintings and photographs.

Department of Public Printing and Stationery.—This Department was established in 1886 and is in the charge of the Queen's Printer and Controller of Stationery.

The Department is responsible for supplying all requirements of printing and stationery to and the audit of all accounts for advertising of Parliament and Departments of the Canadian Government; the free distribution and sale of all public documents or papers to the public; the publication of the Statutes of Canada, the Canada Gazette, and all departmental reports, papers, etc., required to be published by authority of the Governor General in Council.

The Department of Public Printing and Stationery is under the jurisdiction of the Secretary of State.

Department of Public Works.—This Department was constituted in 1867 and is responsible for the management, charge and direction of the public works of Canada and, except as specifically provided in other Acts, attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging. The Department maintains architectural and engineering staffs in each province in addition to the Administrative, Architectural, Engineering and Purchasing and Stores Branches at Ottawa.

The Minister of Public Works is responsible to Parliament for the Central Mortgage and Housing Corporation and for federal interests in the Trans-Canada Highway.

Department of Resources and Development.—The Department of Resources and Development was established in January 1950, and comprises sections of the former Departments of Mines and Resources and Reconstruction and Supply. The Department is divided into five branches besides Administration Services: the National Parks Branch administers the National Parks of Canada, historic sites and federal interests in the conservation and protection of wildlife and has charge of the National Museum of Canada; the Engineering

and Water Resources Branch has charge of construction works for all other branches, the measure and record of stream flow, and the investigation of water-power resources; the Northern Administration and Lands Branch deals with business concerning the local government of the Northwest Territories and of Yukon Territory and administers lands, timber, minerals and other resources of the Territories; the Forestry Branch conducts investigations in the protection and utilization of the forest resources of Canada, maintains forest experiment stations and forest products laboratories and administers federal assistance to the provinces under the Canada Forestry Act; the Canadian Government Travel Bureau promotes the tourist industry by encouraging tourist travel from abroad and interprovincial travel in Canada.

The Minister of Resources and Development is also responsible to Parliament for the Eastern Rockies Forest Conservation Board, the Northwest Territories Power Commission, the National Battlefields Commission, the Historic Sites and Monuments Board, and the Advisory Board on Wildlife Protection.

Department of the Secretary of State.—The Department of the Secretary of State was constituted in its present form in 1873. The Secretary of State is the official spokesman of the Federal Government as well as the medium of communication between the Federal and Provincial Governments, all correspondence between the Governments being conducted through his Department with the Lieutenant-Governors. He is the custodian of the Great Seal of Canada and the Privy Seal of the Governor General as well as being the channel through which the general public may approach the Crown.

The Secretary of State is the Registrar General of Canada, registering all proclamations, commissions, licences, warrants, writs and other instruments issued under the Great Seal and certain instruments issued under the Privy Seal. He is responsible for the collection and tabling of parliamentary returns.

The Secretary of State also deals with the organization and administration of the Office of the Custodian of Enemy Property. The Civil Service Commission, the Department of Public Printing and Stationery, the Public Archives, and the Chief Electoral Office are under the jurisdiction of the Secretary of State, but each of the three Civil Service Commissioners, the Queen's Printer, the Public Archivist and the Chief Electoral Officer has the rank of a Deputy Minister.

The Department of the Secretary of State deals with correspondence concerning the Copyright Appeal Board, the Awards Co-ordination Committee, the Public Records Committee and the Inter-departmental Committee on the use of Parliament Hill. The Special Division deals with domestic protocol, government hospitality and related matters.

Department of Trade and Commerce.—The Department of Trade and Commerce was established by Act of Parliament on June 23, 1887, but did not function until Dec. 5, 1892, when an Order in Council to this effect was passed. Prior to its creation, assistance in the development of Canada's foreign trade was provided by five Canadian Commercial Agents, who served on a part-time basis and were responsible to the Minister of Finance. On Jan. 1, 1895, a Canadian Commercial Agent was appointed at Sydney, Australia, on a full-time basis. He thus became the first Canadian Government Trade Commissioner, in the present meaning of the term.

The Canadian Commercial Agency Service was renamed the Canadian Trade Commissioner Service in 1907, as the term agent created the impression that an officer so designated had something to buy or sell. Officers devoting all their time to the promotion of Canadian trade, and on salary, were thus termed Canadian Trade Commissioners, while those receiving an honorarum were still known as Commercial Agents. The following year, the position of Superintendent of Commercial Agencies was abolished, and a Deputy Minister of Trade and Commerce was appointed on Aug. 1, 1908. Forty-nine offices in 39 countries were maintained in 1953. In addition to trade commissioners and assistant trade commissioners, the foreign service officers included eight agricultural specialists, three fisheries specialists and one timber specialist. Where trade commissioners are members of a mission maintained by the Department of External Affairs, they are given diplomatic status and are known as Commercial Counsellors or Commercial Secretaries.

The Department of Trade and Commerce was expanded in 1945 to provide a wide range of additional services to Canadian businessmen, and now comprises the following Branches and Divisions: Canadian Trade Commissioner Service, Commodities Branch, Agriculture and Fisheries Branch, International Trade Relations Branch, Canadian Government Exhibition Commission, International Economic and Technical Co-operation Division (responsible for administration of the Colombo Plan), Information Branch, Industrial Development Division, Standards Branch, Capital Cost Allowance Division and Economics Division.

The following boards, commissions, Crown companies and agencies report to Parliament through the Minister of Trade and Commerce: Atomic Energy Control Board, Atomic Energy of Canada Limited, Board of Grain Commissioners, Canadian Patents and Development Limited, Canadian Wheat Board, Export Credits Insurance Corporation, National Research Council and Trans-Canada Air Lines.

Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43). In 1948, this statute, which had been consolidated as the Statistics Act (R.S.C. 1927, c. 190), was repealed and replaced by the Statistics Act (R.S.C. 1952, c. 257).

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct a census of population and agriculture of Canada at ten-year intervals.

The Bureau is the principal publication agency of the Federal Government; the subjects of the reports cover all aspects of the national economy. The Bureau reports to Parliament through the Minister of Trade and Commerce.

The Department of Transport.—The Department of Transport was created on Nov. 2, 1936, from the former Departments of Marine, Railways and Canals and the Civil Aviation Branch of Department of National Defence.

The work of the Department consists of four main Services: Marine, Air, Canals and Railways. The work of the Marine Service includes aids to navigation, nautical and pilotage services, marine agencies, steamship inspection and floating equipment and direct supervision over 300 public harbours; seven other harbours come under supervision of the Department but are administered by Commissions. Air Services cover the operation of civil aviation, meteorological and telecommunication divisions. The latter includes the administration and regulation of radar, radio marine and radio aeronautical aids to navigation and communication by wire and by government telegraph and telephone. The Canal Service has jurisdiction over the canals and canalized waterways of Canada. These include the main or primary canals on the St. Lawrence River and Great Lakes and a number of subsidiary or secondary canals.

Other services of the Department are in connection with the Government-owned companies: the Canadian National Railways, Hudson Bay Railway, Canadian Government Railway, Canadian National (West Indies) Steamship Service and the Prince Edward Island Ferry and Terminals.

The Minister of Transport is responsible to Parliament for the following boards and commissions: the Air Transport Board; Board of Transport Commissioners; Canadian Maritime Commission; Steamship Inspection Board; National Harbours Board; Park Steamship Company Limited; and Canadian National Railway Securities Trust. The Minister is also responsible to Parliament for the Canadian Overseas Telecommunication Corporation.

Department of Veterans Affairs.—This Department, established in 1944, is conserved exclusively with the welfare of veterans and includes medical, dental and welfare services, land settlement and prosthetic services and insurance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Minister of Veterans Affairs is also responsible for the Canadian Pension Commission and the War Veterans Allowance Board. The Department has administrative offices in all the larger cities across Canada and at London, England.

## Section 2.—Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but, in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulæ of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purpose and sets forth its powers and responsibilities. However, during World War II, the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial companies Act, to which he might delegate any of the powers

conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation, some 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946, the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment, the financial provisions of the Government Companies Operation Act, which were covered by similar provisions in the new Act, were repealed.

One of the more interesting features of the new legislation is the attempt that has been made to define and classify Crown corporations.\* The Act defines a Crown corporation as a corporation that is ultimately accountable through a Minister to Parliament for the conduct of its affairs and establishes three classes of corporation: departmental, agency, and proprietary.

Departmental Corporations.—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. Ten departmental corporations are listed in Schedule B to the Act:—

Agricultural Prices Support Board Atomic Energy Control Board Canadian Maritime Commission Director of Soldier Settlement The Director, The Veterans' Land Act Dominion Coal Board Fisheries Prices Support Board National Gallery of Canada National Research Council Unemployment Insurance Commission,

Agency Corporations.—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis, or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. Schedule C to the Financial Administration Act lists the following as agency corporations:—

Canadian Arsenals Limited
Canadian Commercial Corporation
Canadian Patents and Development Limited
Canadian Sugar Stabilization Corporation Limited
Commodity Prices Stabilization Corporation Limited
Crown Assets Disposal Corporation
Defence Construction (1951) Limited
Federal District Commission
National Battlefields Commission
National Harbours Board
Park Steamship Company Limited.

<sup>\*</sup> Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary, the Industrial Development Bank, because of the special nature of their functions, are excluded from the operations of the Crown corporations Fart of the Act and are governed by their own Acts of incorporation, as are such joint enterprises of the Federal and Provincial Governments as the Eastern Rockies Forest Conservation Board and the Halifax Relief Commission.

Since the proclamation of the Financial Administration Act, Atomic Energy of Canada Limited has been added to the agency grouping, and two corporations, Canadian Sugar Stabilization Corporation Limited and Commodity Prices Stabilization Corporation Limited, have discontinued operations and have surrendered their charters.

Proprietary Corporations.—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without Parliamentary appropriations. Twelve such corporations are listed in Schedule D to the Act:—

Canadian Broadcasting Corporation
Canadian Farm Loan Board
Canadian National (West Indies) Steamships Limited
Canadian Overseas Telecommunication Corporation
Central Mortgage and Housing Corporation
Eldorado Mining and Refining Limited
Export Credits Insurance Corporation
National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
Northern Transportation Company Limited
Northwest Territories Power Commission
Polymer Corporation Limited
Trans-Canada Air Lines.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act, although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission through the appropriate Minister to Parliament.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds either to the Government or the public. In a few instances, corporations have financed all or a portion of their requirements from their own resources or earnings. A special financing arrangement recently adopted has been the allocation of the 15-p.c. excise tax charged on radio and television sets and their parts and accessories to the revenue of the Canadian Broadcasting Corporation.

Prior to 1952, Crown corporations did not pay corporate income taxes. However, the Minister of Finance announced in the 1952 Budget that the Income Tax Act would be amended so that proprietary Crown corporations would pay such taxes on income earned in respect of financial years commencing after Jan. 1, 1952, in the same manner as any privately owned corporation. One desirable result of this amendment will be to make the financial statements of these Crown

companies more comparable with those of private industry with which, in some instances, they are in competition and thus make it easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in the following paragraphs. In a number of cases, further details are included in the Chapters dealing with the subjects concerned; locations are available in the Index.

Agricultural Prices Support Board.—The Board was established in 1944 to assist in stabilizing the prices of agricultural products. The Board reports to Parliament through the Minister of Agriculture.

Atomic Energy Control Board.—In December 1946, by Act of Parliament, all matters concerning atomic energy in Canada were placed under the Atomic Energy Control Board. From Feb. 1, 1947, to Apr. 1, 1952, the National Research Council operated the Chalk River project as an agent of the Board. The Board reports to Parliament through the Minister of Trade and Commerce.

Atomic Energy of Canada Limited.—This Crown Company was incorporated in February 1952 under the Atomic Energy Control Act, 1946, to take over from the National Research Council on Apr. 1, 1952, the operation of the Chalk River project on behalf of the Atomic Energy Control Board. The main functions of the Company are the operation of atomic reactors, research into many aspects of atomic energy and the extraction, processing and marketing of the by-products of the reactors. The Board reports to Parliament through the Minister of Trade and Commerce.

Bank of Canada.—C. 43 of the Statutes of 1934 provides for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a Governor, a Deputy Governor and 12 Directors, the Deputy Minister of Finance being a member of the Board. The Bank is governed by its own Act of incorporation.

Board of Grain Commissioners.—Under the Canada Grain Act 1930 and its amendments, the Board of Grain Commissioners, comprising a Chief Commissioner, wo Commissioners and four Assistant Grain Commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the Canada Gazette and reports to Parliament through the Minister of Trade and Commerce.

Canadian Arsenals Limited.—This Company was set up in September 1945 to take over Crown-owned plant and equipment. Among the items it now manufactures are propellants and explosives, small arms, radars and a wide range of ammunition and components. Its Divisions are as follows, together with the location of their plants: Dominion Arsenals Division (Quebec, Que., Valcartier, Que., Riviere-du-Loup, Que.); Explosives Division (Valleyfield, Que., Shawinigan Falls, Que., and storage depot at St. Dominique, Que.); Filling Division (St. Paul l'Ermite, Que.); Gun Ammunition Division (Lindsay, Ont.); Small Arms Division (Long Branch, Ont.); Instrument and Radar Division (Leaside, Ont.); Gun Division (facilities at Longueuil, Que., leased to another company). The Company is responsible to Parliament through the Minister of Defence Production.

Canadian Broadcasting Corporation.—The Canadian Broadcasting Act, 1936, provides that there shall be a corporation, to be known as the Canadian Broadcasting Corporation, which shall consist of a board of nine governors appointed by the Governor in Council and chosen to give representation to the principal geographic divisions of Canada. An amendment to the Act (Dec. 13, 1951) provided for the appointment of two more governors to give further representation in the Prairie Provinces and in Newfoundland. These appointments have since been made. The Board of Governors determines CBC policy, and the Chairman of the Board is required to devote the whole of his time to the performance of his duties under the Act.

The General Manager is the Chief Executive of the Corporation and directs the operations and activities of the Corporation as well as the application of CBC policy as determined by the Board of Governors. Under the General Manager the organization of the CBC consists of the following principal Divisions: Program, International Service, Engineering,

Commercial, Press and Information, Broadcast Regulations, Station Relations, Personnel and Administration, and Treasury. Regional Representatives are appointed for Newfoundland, the Maritimes, Quebec, Ontario, the Prairies, and British Columbia.

The Corporation reports to a Minister of the Crown (at present the Minister of National Revenue) who is responsible for dealing with CBC operations when under consideration in Parliament.

Canadian Commercial Corporation.—This Corporation was set up in 1946 to assist in the development of trade. Its functions were expanded in 1947 to cover the purchase of munitions and supplies for the Department of National Defence. In 1951, under the terms of the Defence Production Act, the Company was made responsible to the Minister of Defence Production. The Corporation operates very closely with the Department, all its directors being departmental officials.

The Corporation's main function now is to handle defence orders placed in Canada by other governments. It has ordered civilian types of commodities on behalf of certain international organizations, and also civilian goods and services required by the Canadian Government for supply to under-developed countries under the Colombo Plan.

Canadian Farm Loan Board.—The Board was organized in 1929 to make loans to farmers secured by mortgage. Later operations extended loans to fishermen secured by mortgage on real estate. The Board is responsible to Parliament through the Minister of Finance.

Canadian Maritime Commission.—The Commission was created in 1947 (R.S.C. 1952, c. 38) to consider and recommend policies and measures necessary for the operation, maintenance, manning and development of a merchant marine and a ship-building and ship-repairing industry. The Commission is responsible to Parliament through the Minister of Transport.

Canadian National Railways.—Operating under an Act to incorporate the Canadian National Railway Company (1919), brought into effect by Order in Council of Jan. 30, 1923, the Canadian National Railways comprised at that time the old Intercolonial Railway and various eastern branch lines (all embraced in the Canadian Government Railways which were turned over to the Canadian National board for management and operation), the Canadian Northern Railway (1918) and the Grand Trunk Pacific (1923). The Hudson Bay Railway has been operated by the Canadian National Railways for the Canadian Government since 1935 and a separate accounting is made. Additional lines have been built or acquired and are operated by the Canadian National Railways. The C.N.R. is controlled by a Chairman and Board of Directors and is responsible to Parliament through the Minister of Transport.

Canadian National (West Indies) Steamships Limited.—Through the medium of this Crown Company, the Federal Government provides direct steamship services to the West Indies in conformity with the Canada-West Indies Trade Agreement of 1926. The Company is responsible to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.—This Crown Company was created by Act of Parliament (Dec. 10, 1949) to acquire for public operation all external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement, signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Transport.

Canadian Patents and Development Limited.—Incorporated under an amendment to the Research Council Act, passed in 1946, the primary purpose of Canadian Patents and Development Limited is to make available to industry, through licensing arrangements, the inventions and new processes developed by the scientific workers of the National Research Council. The Board of Directors is composed of representatives from industry, from the universities, and from the National Research Council.

Canadian Wheat Board.—Incorporated under the Canadian Wheat Board Act, 1935, to market, in interprovincial and export trade, grain grown in Canada, the Board is empowered to purchase, store, transfer, sell, ship or otherwise dispose of wheat, oats and barley. Established to liquidate accumulated surpluses of wheat and to stabilize the market, it remains the controlling marketing instrument for these grains. The Board reports to Parliament through the Minister of Trade and Commerce.

Central Mortgage and Housing Corporation.—This Corporation was incorporated by Act of Parliament in 1945 to administer the National Housing Act, 1944, and earlier housing Acts, to provide facilities for the rediscounting of mortgages for lending institutions and to co-ordinate activities of the Federal Government in the housing field. Since 1948, the Corporation has administered the functions of Wartime Housing Limited and since 1950 has provided management and supervisory services to Defence Construction Limited which is entrusted with carrying out the construction of defence projects required by the Department of National Defence. The Corporation is responsible to Parliament through the Minister of Public Works.

Crown Assets Disposal Corporation.—This Corporation was set up in June 1944 under the name of War Assets Corporation; the name was changed by statute in December 1949. It succeeded War Assets Corporation Limited, which was set up in December 1943, The Corporation's function is to dispose of surplus Crown assets. It is responsible to Parliament through the Minister of Defence Production.

Defence Construction (1951) Limited.—This Company was set up in 1951 to carry out all defence construction, with the exception of married quarters and runways, replacing the former Crown company, Defence Construction Limited, which was set up in November 1950. The Company reports to Parliament through the Minister of Defence Production.

Director of Soldier Settlement and Director of the Veterans' Land Act.—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, 1942, and in either capacity is legally a corporate soul. For administrative purposes, however, the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

**Dominion Coal Board.**—The Board was created in October 1947 for the purpose of implementing the recommendations of the Royal Commission on Coal. Its duties include research and investigation regarding problems and techniques of production, marketing and distribution and other related matters. The Board reports to Parliament through the Minister of Mines and Technical Surveys.

Eastern Rockies Forest Conservation Board.—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act, which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that area of the eastern slope of the Rocky Mountains which forms part of the watershed of the Saskatchewan River. The function of the Board is to plan, supervise and undertake construction, operation and maintenance of projects and facilities that are necessary for the proper protection of the forests of the area with a view to obtaining the greatest possible flow of water in the Saskatchewan River and its tributaries. The Board is composed of a Chairman and one member appointed by the Federal Government and one member appointed by the Government of the Province of Alberta.

Eldorado Mining and Refining Limited.—The Company was set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited. The name was changed in June 1952. The Company's business is that of prospecting for, mining and refining uranium ores in Canada. It reports to Parliament through the Minister of Defence Production.

Export Credits Insurance Corporation.—Commencing operations in 1945, under the Export Credits Insurance Act, 1944, and comprised of a Board of Directors (including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada) and an Advisory Council, this Crown Company insures Canadian exporters against non-payment by foreign buyers arising out of credit and political risks involved in foreign trade. The Corporation reports to Parliament through the Minister of Trade and Commerce.

Federal District Commission.—This Commission had its genesis in the Ottawa Improvement Commission, established by Parliament in 1899 to improve and beautify the National Capital by the development and construction of parks and driveways and to co-operate with the City of Ottawa in local improvement and conservation. Its membership is honorary in character and appointed by the Governor in Council, and it reports to the Prime Minister. In 1927, the organization's name was changed to the Federal District Commission, its scope of operations widened to include adjacent areas, and its membership increased to ten. Under the F.D.C. Act, the mayors of Ottawa and Hull are included in its membership.

The Commission maintains the grounds of all federal buildings in the National Capital area and landscapes the grounds of new government buildings. In the Ottawa-Hull area (exclusive of Gatineau Park), where it administers 1,878 acres, it has developed 18 parks and 22 miles of scenic driveways.

In 1946 the Commission became the federal agency responsible for carrying out the National Capital Plan. The membership was further increased to permit the appointment of a commissioner resident in each of the provinces and a separate honorary committee was established by the Commission to advise on the development of Gatineau Park. The National Capital Fund, to which Parliament has made annual grants of \$2,500,000 since its inception in 1948, was made available to the Commission to execute the work of the National Capital Plan, and a National Capital Planning Committee was appointed to act as a permanent honorary advisory body to the Commission on the implementation of the Plan

Fisheries Prices Support Board.—The Board was set up in July 1947 to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of an Acting Chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry. The Board has authority to buy fishery products and to sell or otherwise dispose of them, or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

Halifax Relief Commission.—The Commission, a joint enterprise of the Legislature of Nova Scotia (Statutes of N.S., 1918, c. 61) and the Parliament of Canada (Statutes of Canada, 1918, c. 24), was incorporated to administer relief funds contributed for the assistance of sufferers in consequence of the disastrous explosion at Halifax, Dec. 17, 1917.

Industrial Development Bank.—The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to provide loans to industrial enterprises where financing is not available through recognized lending organizations.

National Battlefields Commission.—This Commission was established by Act of Parliament in 1903 to preserve the historic battlefields at Quebec City. The Commission is composed of nine members, seven being appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by an annual statutory grant from the Federal Government and is responsible to Parliament through the Minister of Resources and Development.

National Film Board.—The National Film Board was established in 1939 and the National Film Act, 1950, provides for a Board of Governors of nine members—a Government Film Commissioner, appointed by the Governor in Council, who is Chairman of the Board, three members from the public service of Canada and five members from outside the public service. The Board reports to Parliament through a designated Minister of the Crown (at present the Minister of Citizenship and Immigration). The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and, in particular, films "designed to interpret Canada to Canadians and to other nations".

National Gallery.—The National Gallery was founded in 1880. By Act of Parliament in 1951 it was placed under the management of a Board of Trustees appointed by the Governor General in Council, and is responsible to Parliament through a Minister of the Crown (at present the Minister of Citizenship and Immigration).

The first charge of the National Gallery is the development and care of national art collections. Other important services are the arrangement of loans and exhibitions from abroad and from its own holdings for showing in Canada and abroad, the promotion of good industrial design, and general extension work consisting of the distribution of reproductions for educational purposes, lectures, educational tours, publications, school broadcasts and art films.

National Harbours Board.—The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver and Churchill. The Board is responsible to Parliament through the Minister of Transport.

National Research Council.—In 1917, the Research Council Act was passed and in 1928, laboratories for scientific research were established at Ottawa. The National Research Council now has laboratories for divisions of pure and applied chemistry, building research, mechanical engineering, radio and electrical engineering, physics, applied biology and medical research, and also has workshop services. Regional laboratories have been established at Saskatoon, Sask., and Halitax, N.S.

Processes and improvements developed by the Council are made available under licence to industry through a Crown company, Canadian Patents and Development Limited, and any profits derived from the licensing arrangements are used for further research and development.

The Minister of Trade and Commerce, as Chairman of the Privy Council Committee on Scientific and Industrial Research, is responsible to Parliament for the National Research Council.

Northern Transportation Company Limited.—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the name being changed in 1952. It was previously a company chartered under an Alberta Statute. It has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established, and it carries out the business of a common carrier in the Mackenzie River watershed. The Company is responsible to Parliament through the Minister of Defence Production.

Northwest Territories Power Commission.—The Commission was established by Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. The Act was amended in 1950 to give authority to the Commission to provide similar services in the Yukon Territory. The Commission is composed of a Chairman and two members appointed by the Governor in Council; it operates hydro-electric plants on the Snare River in the Northwest Territories and on the Mayo River in Yukon Territory and a diesel electric plant at Fort Smith, N.W.T. The Minister of Resources and Development reports to Parliament for the Commission.

Park Steamship Company Limited.—After World War II, this Company acted as an agent for Crown Assets Disposal Corporation in the sale and delivery to purchasers of Government war-built ships. This work is completed but the Company remains available to carry out any appropriate duties. It has no staff of its own, any necessary work being done by the staff of the Canadian Maritime Commission. The Company reports to Parliament through the Minister of Transport.

Polymer Corporation Limited.—The Corporation was established in 1942 for the purpose of constructing and operating a synthetic rubber plant, which now turns out a variety of synthetic rubber products. The Corporation reports to Parliament through the Minister of Defence Production.

Trans-Canada Air Lines.—TCA came into being by Act of Parliament in 1937 to provide for the development of a government-controlled scheduled transcontinental air service. Transatlantic air services, which were inaugurated by the Department of Transport during World War II, were later turned over to TCA. TCA now provides service for passenger, mail and commodity traffic over nation-wide routes and also service to the United States and over overseas routes touching at England, Scotland, Ireland, France, Bermuda, the Bahamas, Jamaica, Barbados and Trinidad. TCA is responsible to Parliament through the Minister of Trade and Commerce.

Unemployment Insurance Commission.—The Commission was appointed on Sept. 24, 1940, under the provisions of the Unemployment Insurance Act, 1940, for the purpose of administering the Act. It is composed of three Commissioners: a Chief Commissioner, a Commissioner appointed after consultation with organizations representative of workers, and another after consultation with organizations representative of employers. The Chief Commissioner holds office for ten years and each of the other Commissioners for five years. The Board is responsible to Parliament through the Minister of Labour.

## Section 3.—Acts Administered by Federal Departments\*

## List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

Note.—Copies of individual Acts of Parliament and amendments may be obtained from the Queen's Printer, Ollawa, at prices of from 10 cents to \$1.50 per copy according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered under the Departments given.

## PART IV.—THE CIVIL SERVICE OF CANADA\*

The Federal Civil Service comprises, in the widest sense, all servants of the Crown—other than those holding political or judicial office—who are employed in a civil capacity and whose remuneration is paid wholly and directly from moneys voted by Parliament. Collectively, they form the staffs of the various departments, commissions, boards, bureaux and other agencies of the Federal Government. Nearly every category of occupation is represented in the Civil Service. A few civil servants are appointed by either or both Houses of Parliament directly, a number by departments and other agencies in accordance with the provisions of certain statutes, generally with executive approval of the Governor in Council, and the remainder—by far the majority—are selected and appointed by the Civil Service Commission of Canada.

The Civil Service Commission, as the central personnel agency of the Federal Government, is the custodian of the "merit principle" in respect of both initial appointments and promotions. The steps by which the Commission, in its present form, came to be constituted is the record of Civil Service reform in Canada which began a year after Confederation and culminated in the passing of the Civil Service Act of 1918.

<sup>\*</sup> Text revised by M. M. Maclean, Secretary of the Civil Service Commission of Canada, and statistics prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

Recruitment.—The recruitment of civil servants is conducted by means of open competitive examination through which every citizen has the right to compete for positions in the service of his country.

Examinations are held periodically as the staff requirements of the public service dictate. Any Canadian citizen may apply for headquarters positions open at Ottawa, but applicants for local positions must be residents of the locality in which the vacancy occurs. Competitive examinations are announced through the press and through posters displayed on the public notice boards of post offices, offices of the National Employment Service, offices of the Civil Service Commission, public libraries and elsewhere. The examinations may be written, oral, a demonstration of skill, or any combination of these.

The names of persons successful in Civil Service examinations, arranged in order of rank, are recorded on eligible lists. Examination results are formally announced by publication in the *Canada Gazette* and each candidate—successful or unsuccessful—is advised of his standing. As required, appointments are made from the eligible lists, which usually remain valid for one year.

Statutory preference applicable to veterans of World War I and World War II has been extended to persons who have served in the Korean theatre of operations. Since 1918, upwards of 110,000 veterans have been appointed to the public service, of whom approximately 75,000 have been appointed within the past seven years. The 110,000 figure includes 11,000 disabled veterans who were accorded an additional preference in appointment.

In recent years, the Civil Service Commission has decentralized its operations and now has ten district offices and four sub-offices across the country. The Commission is granting an increasing measure of autonomy and responsibility to these offices to permit more efficient service to field agencies. They now conduct certain examinations that qualify for permanent as well as temporary employment.

Staff Training.—In 1947, the Commission set up a Staff Training Division to promote and guide a systematic service-wide training scheme. The training scheme, sponsored by the Commission, is a joint venture undertaken in co-operation with Federal Government departments, most of which have parallel training divisions. The Commission's Training Division is primarily a co-ordinating agent. It promotes and organizes activities, trains departmental instructors in the presentation of courses, prepares and, in some cases, gives courses of general application to all departments, publishes booklets and other training aids, assists departments in developing training to meet specialized needs, and acts as a general clearing-house for the exchange of information on training matters.

**Promotion.**—It is a prime objective of the Civil Service Act to create a career service. The result is that promotion, like entrance to the Service, is based on merit and a sound promotion system is developing. The present procedure involves the consideration of three factors: seniority or length of service; efficiency of candidates in their present positions; and fitness for the vacant positions. An automatic rating on seniority is given by the Commission and ratings on efficiency and fitness are provided by the department concerned. Appeal machinery, under Commission jurisdiction, has been set up for those employees who feel that their qualifications have not been properly assessed.

Position Classification and Compensation.—Provision is made in the Civil Service Act for the classifying of positions in the public service. A system of position-classification was instituted in 1919 and positions with like duties and responsibilities were classified alike and remunerated equally. Each position has a title, a set of tasks or duties which are proper to it in the organization in which it occurs and, arising out of these duties, a set of qualifications appropriate for their performance. Positions with duties of similar kind are grouped together under a common title to form a class, and grades within the class reflect the level of responsibility.

The determination of rates of compensation for each class is a continuing responsibility of the Commission and salary and wage surveys are conducted constantly. Position classification is a mainspring in the Commission's primary function of recruitment, involving the fixing of standards of qualification for each class of position.

Organization and Methods.—In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. In 1948, the Commission set up an Organization and Methods Service to study problems of management in collaboration with officials directly responsible for major areas of administration. Briefly, this Service affords practical assistance to departments and other agencies of the Government through the systematic examination of structure, operations, procedures and work methods. Its growing facilities are offered, free of charge, to all departments.

Civil Service Statistics.—Monthly returns of personnel and salaries are made by each department of the Federal Government to the Dominion Bureau of Statistics, according to a plan that ensures comparability between departments and continuity in point of time.

From 1914 to 1920, the number of employees increased very rapidly as a result of the extension of the functions of government and of the imposition of new taxes which necessitated additional officials as collectors. New services, such as the Department of Pensions and National Health and the Soldier Settlement Board, were also created during this period. In January 1920, 47,133 persons were employed; this number was the highest reached prior to January 1940, when employees numbered 49,739.

Between March 1939 and March 1952, there was an increase of 85,540 in the total number of permanent and temporary employees.

The departmental distribution accounting for 79.5 p.c. of the total increase is: National Defence 26.6, Veterans Affairs 13.4, Post Office 8.2, National Revenue 7.9, Labour (Unemployment Insurance Commission) 7.9, Agriculture 4.4, Transport 3.9, Public Works 3.6 and Finance (Comptroller of the Treasury) 3.6.

The proportion of permanent employees to total classified employees for March 1952 was 40·6 p.c., unchanged from March 1951.

### 1.—Numbers and Percentages of Permanent and Temporary Civil Service Employees, Month of March, 1939-52

Note.-Figures for the years 1925-38 are given in the 1946 Year Book, p. 1141.

The above data pertaining to Federal Government employment for the fiscal year ended Mar. 31, 1952, are the last to be published from the series "Federal Civil Service Employment and Payrolls". Data from the new series "Government of Canada Employment and Payrolls" are to be presented in the 1955 Year Book and subsequent editions.

The new series has been designed to comprehend all classes of employees (numbers and gross earnings) for all governmental services including employees of boards and commissions. Data for Crown companies are also included.

The basic data for this series of statistics are supplied to the Dominion Bureau of Statistics on a monthly basis by the Treasury Board from individual records and special returns. Information for Crown companies and other government enterprises is available from reports made to the Bureau.

The statistics published monthly\* commencing April 1952, include numbers and earnings for five categories of government employees, e.g., permanent, temporary, prevailing rate, ship crews and casuals, classified according to departments and principal branches of the government service.

### PART V.—CANADA'S EXTERNAL RELATIONS

The growth of Canada's international status is reflected in the development of the Department of External Affairs. A review of the organization and development of that Department is given in the 1952-53 Year Book, pp. 101-104.

### Section 2.—International Activities\*

### Subsection 1.-Canada and Commonwealth Relations, 1950-53†

Developments in Commonwealth relations from the end of the year 1950 to mid-1953 were unspectacular in comparison with the period immediately preceding, which saw such remarkable events as the acceptance of the Republic of India as a continuing member of the Commonwealth, the withdrawal of the Republic of Ireland from the measure of association with the Commonwealth that it had maintained up to that time, and the union of Newfoundland with Canada. During the period 1950-53 the members of the Commonwealth maintained their existing system of consultation and co-operation and were chiefly concerned with developments in the outside world.

The tense international situation resulting from the attitude taken by the Soviet Union and its satellites and from the behaviour of the communist régime in China during the past three years was one of the principal subjects of discussion both by correspondence and at formal or informal meetings, among the Commonwealth group of nations. Both the Commonwealth Meeting on Foreign Affairs held at Colombo, Ceylon, in January 1950 and the Meeting of Commonwealth

Prepared by the Department of External Affairs, Ottawa.
 Brought up to May 31, 1953.

Prime Ministers held at London, England, in January 1951, devoted much time and attention to the above situation and the problems arising from it. In particular, developments in Asia, where the smaller non-communist countries have been exposed to communist infiltration or open invasion, called for the most careful consideration not only by the Commonwealth countries in that area but also by all members of the Commonwealth, whose ideals of freedom and democracy might be endangered by successful aggression.

It was clear that the backward agricultural and industrial condition of many countries of south and southeast Asia, along with the destruction and impoverishment in that area which had resulted from operations during World War II, would, if ignored, undermine any hope that these countries would have a healthy and continuous development along democratic lines. The 1950 Colombo Conference was greatly concerned with this situation and for that reason, among others, urged the necessity of assistance to the nations of south and southeast Asia from the more industrially advanced countries in the Commonwealth and elsewhere. The Colombo Plan (see pp. 116-117), which was fashioned at this meeting and in which Canada is participating, is one of the most promising contributions towards building up the free world and enabling it to stand against totalitarianism.

Another subject that engaged the attention of both the 1950 Commonwealth Meeting of Foreign Ministers and the 1951 Commonwealth Meeting of Prime Ministers was the question of peace settlements, particularly with Japan, and the allied question of security in the Pacific area. While the discussions were helpful in smoothing over some differences of opinion on the Japanese settlement, they did not result in all Commonwealth members reaching a common decision in this matter. The Government of India eventually decided to negotiate a separate treaty with Japan, while the other Commonwealth governments, including Canada, joined the United States and other interested countries in signing a Japanese Peace Treaty at San Francisco, on Sept. 8, 1951. At the same time the position of the more exposed Commonwealth countries in the Pacific area was safeguarded by the signature of a Security Treaty by the United States, Australia and New Zealand.

Developments in China also were among the matters discussed at both meetings. In regard to recognition of the Chinese Communist Government, as in all matters of concern to Commonwealth nations, it was understood that each government must take the responsibility of making its own decision. Until mid-1952, the Chinese Communist Government had been recognized by the three Asian members of the Commonwealth and by the United Kingdom, while the other members of the Commonwealth, including Canada, continued to refrain from recognition.

A new and very serious problem in northeast Asia was created by the invasion of South Korea on June 25, 1950, by North Korean communists. Canada and the other countries of the Commonwealth that were also members of the United Nations supported the action taken by the Security Council to assist South Korean resistance. Most of them, including Canada, contributed armed forces for this purpose. A Commonwealth Division, consisting of United Kingdom, Canadian, Australian and New Zealand combat forces and a medical unit from India, was organized as part of the United Nations forces, and has acquitted itself with distinction. The nations of the Commonwealth, like many other members of the United Nations, have been gravely concerned over the destruction to life and property in Korea, and are contributing to relief and rehabilitation.

Canada gave its full support to a resolution for resolving the prisoner-of-war question, introduced by India and adopted by the United Nations General Assembly, in December 1952.

The 1951 Meeting of Prime Ministers gave careful attention to the discussions on the Korean problem in particular, and on a Far East settlement in general, which were simultaneously being carried on at the General Assembly of the United Nations at New York, and exchanged views on the means by which their representatives at New York could best assist in these discussions. Close liaison was maintained with the United Nations Assembly.

In a declaration issued at the close of the 1951 Meeting, the Prime Ministers, in addition to urging speedy settlements with Germany and Japan, stated they would welcome any feasible arrangement for a frank exchange of views with Stalin or with Mao Tse-tung, and insisted that they did not seek to interfere in the affairs of the Soviet Union, China or any other country. The Commonwealth countries, it was declared, did not regard themselves as an exclusive body, but welcomed cooperation with other nations. It was recognized, however, that so long as the fear of aggression existed the Commonwealth countries would have to strengthen their defences. Continued support of the United Nations and of the Colombo Plan was affirmed.

Both the 1950 Meeting of Foreign Ministers and the 1951 Meeting of Prime Ministers recognized the influence of economic problems upon the international situation, and gave consideration to these important questions.

One economic problem that was becoming acute in 1951 was the shortage of raw materials, and the consequent maldistribution of manufactured and semi-manufactured goods. The Meeting of Prime Ministers felt that, in these circumstances, it would be desirable to have closer and more regular consultation among Commonwealth countries on all questions of supply and production. One result of their examination of this problem was the calling of a meeting of Commonwealth Ministers concerned with supply matters. The meeting opened at London, on Sept. 24, 1951, and made arrangements to increase the exchange of information both on raw materials and on finished goods, and to facilitate deliveries of manufactured articles to countries of the Commonwealth that might require them.

The deterioration in the United Kingdom's financial situation that took place in the autumn of 1951, and the continuing difficulties of the Sterling Area in general, raised urgent problems for all members of the Commonwealth, not excepting Canada, the only non-sterling member. A meeting of Commonwealth Finance Ministers accordingly took place at London in January 1952 at which measures that might be taken to meet the situation were discussed; important steps were later taken by the countries concerned to arrest further deterioration in their own positions. It was felt that further exchanges of news might be useful and the Prime Ministers of the Commonwealth countries met at London in November 1952 to review the position and outlook and consider what further measures might be taken to strengthen the economic position of the Sterling Area Commonwealth countries and what could be done to achieve an effective multilateral system of trade and payments. A plan for a collective approach to freer trade and payments was formulated and this plan has since been discussed with the United States and Western European Governments.

International tension, besides adversely affecting the world's economic development during the past three years, also made it necessary to devote to strengthening the defences of Commonwealth countries resources that would normally have been used to increase trade and prosperity. In general, the distribution of the Commonwealth countries through all parts of the world has made it essential to organize their defences on a regional basis providing for full co-operation with friendly foreign countries. As regards North Atlantic defence, for example, Canada and the United Kingdom, as members of the North Atlantic Treaty Organization, have worked together in co-operation with the other members of NATO, while the United Kingdom, the Union of South Africa, and Southern Rhodesia have consulted with other countries interested in the defence of Africa. A Conference of the Defence Ministers of the United Kingdom, Australia, New Zealand, the Union of South Africa and Southern Rhodesia, at which Canada was represented by observers, was held at London in June 1951 to consider defence problems arising in the Middle East and other regions of common concern.

A number of conferences were held to discuss special problems of an economic, scientific or technical character. These included a conference to review the work of the Commonwealth Agricultural Bureaux; meetings on air transport and aeronautical research; gatherings of survey officers, statisticians, auditors-general, and scientists in various special fields; a British Commonwealth Scientific Conference; a British Commonwealth Forestry Conference; and a Conference of the Commonwealth Parliamentary Association. The last two conferences were held at Ottawa.

In addition, Canada is represented on such standing bodies as the Executive Council of the Commonwealth Agricultural Bureaux; the Commonwealth Economic Committee; the Commonwealth Shipping Committee; the Commonwealth Telecommunications Board; the Commonwealth Air Transport Council; the Commonwealth Advisory Aeronautical Research Council; the Commonwealth Liaison Committee; the Commonwealth Committee on Mineral Resources and Geology; the Imperial Institute; and the Imperial War Graves Commission.

All but one of the Commonwealth Agricultural Bureaux are bodies that collect and distribute information on agricultural research and are located in the United Kingdom. The work of the one in Canada, known as the Commonwealth Bureau of Biological Control is of a somewhat different nature; it undertakes to control the spread of noxious insects and plants by such means as the collection and distribution of parasites. The work of these Bureaux was reviewed by the Commonwealth Agricultural Bureaux Review Conference held at London in June 1950, which made various recommendations for increasing the usefulness of the Bureaux and ensuring co-operation with United Nations organizations and with interested foreign governments. The Canadian Government is represented on the Executive Council of the Commonwealth Agricultural Bureaux by Mr. J. G. Robertson of the Office of the High Commissioner for Canada in the United Kingdom.

The Commonwealth Economic Committee issues annual statistics on world production and trade in certain commodities, including dairy produce, meat, fruit and grain crops, and monthly intelligence bulletins on some of these. It has also, from time to time, undertaken special studies on economic questions of interest to Commonwealth governments. The Canadian representative is Mr. F. Hudd of the High Commissioner's Office at London, England.

The Commonwealth Shipping Committee was established in 1920 for the purpose of making special investigations relating to the co-ordination and improvement of ocean-shipping facilities. It includes representatives of industry as well as of governments. The High Commissioner for Canada in the United Kingdom represents the Canadian Government.

The Commonwealth Telecommunications Board, which operates under the Commonwealth Telegraphs Agreement of 1948, is charged with the duty of making recommendations to Commonwealth governments on joint telecommunications policy, co-ordination of cable and wireless systems, and other telecommunications questions. Canada is represented by Mr. J. H. Tudhope of the High Commissioner's Office at London.

The Commonwealth Air Transport Council is a consultative body for the discussion of civil aviation questions. It issues a quarterly news-letter and holds occasional meetings as required, the latest of which took place at London, England, in June 1953. Mr. J. H. Tudhope is the Canadian member. Canada also participates in an auxiliary regional association, the South Pacific Air Transport Council, which includes the United Kingdom, Australia, New Zealand and Fiji. A meeting of this body was held at Nadi, Fiji Islands, in May 1953. Canada was represented by Mr. L. Glass of the High Commissioner's office in New Zealand.

The Commonwealth Advisory Aeronautical Research Council is an organization for the promotion of aeronautical research and for discussion and exchange of information on questions of aeronautics. Canadian representatives are Air Vice-Marshal D. M. Smith of the Department of National Defence and Mr. R. J. Brearley of the High Commissioner's Office, London. A meeting of this body took place at Ottawa in September 1950.

The Commonwealth Liaison Committee originated very informally as a means by which United Kingdom government departments could keep the London missions of other Commonwealth countries in touch with developments under the European Recovery Program. Its scope has since been extended to cover other economic matters of mutual interest.

The Commonwealth Committee on Mineral Resources and Geology was set up as a result of a recommendation by the Royal Society Empire Scientific Conference of 1946, which was endorsed by the British Commonwealth Scientific Official Conference of that year and further developed by the Specialist Conference on Geology and Mineral Resources held in 1948. Its purpose is to promote collaboration and exchange of information on the investigation of geology and mineral resources throughout the Commonwealth. Dr. G. S. Hume of the Department of Mines and Technical Surveys represents the Canadian Government.

The Imperial War Graves Commission was founded in 1917 for the purpose of permanently commemorating those members of His Majesty's Forces who lost their lives in World War I. Its powers were later extended to cover World War II. Its chief duty is the establishment and maintenance of cemeteries and memorials. There is a Canadian Agency of the Commission at Ottawa; Mr. N. A. Robertson, the High Commissioner for Canada at London is the Canadian representative on the Commission.

Bodies such as these form a useful means of exchanging information and views on special economic, scientific or technical questions and of working out recommendations for the consideration of the governments concerned.

Two controversies between Commonwealth governments, both of which arose before 1950, have continued unsolved: the dispute between India and Pakistan over Kashmir and other matters, and the dispute between India and Pakistan on the one hand and the Union of South Africa on the other respecting the treatment in South Africa of persons of Indian origin. Both disputes are before the United

Nations, and the Canadian Government and other Commonwealth governments which are members of the United Nations have continued to endeavour, in cooperation with other members of that body, to bring about some solution. In addition, an opportunity was taken during the Meeting of Prime Ministers in 1951 to have informal talks on the Kashmir question by the Prime Ministers of Pakistan and India along with some of the other Prime Ministers, including the Prime Minister of Canada. While these talks had no decisive effect, they did assist in clarifying the position and suggesting possible lines that might be explored in working towards a settlement.

A question considered by the Prime Ministers, at London in November 1952, was the revision of the Royal Style and Titles. It was agreed that the Queen's title might vary according to the country concerned, though retaining a common element. The title adopted for Canada is "Elizabeth II, by the Grace of God of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith"

Canada sent an official delegation, headed by the Prime Minister, to attend the Queen's Coronation on June 2, 1953. A meeting of Prime Ministers took place immediately after the Coronation.

Despite difficulties and problems, the Commonwealth association has, during the period covered by this survey, continued to serve as one of the most effective means of international discussion and co-operation, based in large measure on common traditions, similar political institutions and common ideals.

#### Subsection 2.- Canada and the United Nations

The early history of the United Nations and of Canada's part therein is given in the 1946 Year Book, pp. 82-86. Additional material appeared in the 1948-49 edition, pp. 122-125, the 1950 edition, pp. 134-139, and the 1952-53 edition, pp. 113-118. The following material brings the record of Canada and the United Nations up to Apr. 23, 1953, the date of the adjournment of the seventh session of the General Assembly.

The Interim Committee of the General Assembly did not meet during the period under review. The seventh regular session of the General Assembly opened at New York on Oct. 14, 1952, and recessed from Dec. 22, 1952, to Feb. 23, 1953. It dealt with the remaining items on its agenda in a resumed session which lasted from Feb. 24 to Apr. 23 and then adjourned subject to call if an armistice should be concluded in Korea, or if, in the opinion of a majority of members, other developments in Korea should require it.

The Secretary of State for External Affairs of Canada, the Hon. L. B. Pearson, who was chairman of the Canadian Delegation to the seventh regular session, was elected President of the General Assembly and the vice-chairman, the Hon. Paul Martin, Canada's Minister of National Health and Welfare, consequently acted as chairman of the delegation during the seventh session.

Canada has not been a member of the Security Council since Dec. 31, 1949, and completed a three-year term on the Economic and Social Council on Dec. 31, 1952. Canada is a member of all the Specialized Agencies and of the following functional commissions of the Economic and Social Council: the Commission on Narcotic Drugs (indefinite term); the Social Commission to Dec. 21, 1953; the Fiscal Commission to Dec. 31, 1955; and the Statistical Commission to Dec. 31, 1955.

Admission of New Members.—No new members have been admitted to the United Nations since 1950, when the Republic of Indonesia became a member. There are, at present, twenty-one applications outstanding but the Security Council, which held a number of meetings during June, July and September 1952 for the purpose of considering this question, was unable to make any recommendations. In accordance with a resolution adopted at the seventh session, a Special Committee of representatives from nineteen member states, including Canada, was set up to examine the proposals and suggestions that have been made in the General Assembly and its committees, or that may be submitted to the Special Committee by any member of the United Nations. The Committee will report to the eighth regular session of the General Assembly.

The Korean Conflict.—The cease-fire negotiations, which began between representatives of the opposing forces in Korea on July 10, 1951, continued until Oct. 8, 1952, on which date, having reached a state of deadlock on the issue of repatriation of prisoners of war, they were recessed. After long and difficult debate, the seventh session of the General Assembly on Dec. 3, 1952, adopted a resolution on the prisoner-of-war question which was sponsored by India and received fiftyfour favourable votes, including Canada, out of sixty. It provided that, at the end of a period of ninety days after the armistice agreement had been signed, the question of disposition of the prisoners who did not wish to return home would be referred to the political conference provided for in the Draft Armistice Agreement. If the political conference could not reach a decision within thirty days, it was provided that the responsibility for the care and maintenance and for the subsequent disposition of the remaining prisoners should be transferred to the United Nations. Both Communist China and North Korea rejected the Assembly's proposals and there was no further progress until, in a letter of Feb. 22, 1953, the United Nations Command in Korea proposed an exchange of sick and wounded prisoners. This proposal was accepted by the Communist command on Mar. 28 and the exchange began on Apr. 20. Meanwhile, on Mar. 30, the Foreign Minister of the Chinese Communist Government issued the following public statement: "The Government of the People's Republic of China and the Government of the Democratic People's Republic of Korea propose that both parties to the negotiations should undertake to repatriate immediately after the cessation of hostilities all those prisoners of war in their custody who insist upon repatriation and to hand over the remaining prisoners of war to a neutral state so as to insure a just solution to the question of their repatriation". Full-scale negotiations for the purpose of considering this proposal were resumed on Apr. 26.

The military situation in Korea has remained comparatively stable with the opposing forces at approximately the 38th parallel. The United Nations Korean Reconstruction Agency (UNKRA) was established in 1950 for the relief of suffering in Korea caused by the conflict, and for the reconstruction of the country when circumstances might permit. The continuation of military activity prevented the Agency from engaging in large-scale operations until recently, when the stabilization of the front has permitted it to inaugurate its first long-term rehabilitation projects. Up to the present time (May 31, 1953), Canada has been the second largest paid-up contributor to UNKRA.

Collective Measures and Disarmament.—The Collective Measures Committee, which consists of fourteen members, including Canada, was set up by a General Assembly resolution of Nov. 3, 1950 (the "Uniting for Peace" resolution)

and was instructed "to study and report on the measures, including political, economic and military measures, which the United Nations might use to maintain and strengthen international peace and security" During the period under review the Committee studied the problems involved in implementing the clauses of the Uniting for Peace resolution which recommended that member and non-member states determine how they might appropriately carry out the economic and financial measures and the military measures that might be required for participation in United Nations collective action. The General Assembly noted this second report, expressed appreciation of the constructive work done by the Committee, requested it to continue its work for the maintenance and strengthening of the United Nations security system, and instructed it to report to the ninth session.

The Disarmament Commission, of which Canada is a member, was established on Jan. 11, 1952, to replace the Atomic Energy Commission and the Conventional Armaments Commission, and to prepare proposals to be embodied in a universal agreement for the regulation and balanced reduction of all armaments, for the prohibition of all major weapons adaptable to mass destruction, including atomic weapons, and for the effective control of atomic energy. Neither of the two reports submitted by the Commission in 1952 contained any recommendations or conclusions, as it had not been possible to reconcile the differences of view between the Western powers and the Soviet Union.

Palestine.—At the seventh session of the General Assembly, the Arab States requested a review of the work of the Palestine Conciliation Commission on the grounds that it had not fulfilled its mandate to bring about agreement between Israel and its neighbours. By virtue of the temporary territorial arrangements made under the 1949 armistice agreements, Israel controls roughly three-fourths of the former mandated territory of Palestine while, in 1947, the General Assembly recommended that it be shared on a fifty-fifty basis with the Arab States. The Arab States were anxious that any future discussions between the parties should be on the basis of the relevant Assembly resolutions, while Israel wished that negotiations should be without reference to previous decisions taken by the United Nations. It proved impossible to reconcile these opposing points of view and no resolution on Palestine was adopted at the seventh session.

The United Nations Relief and Works Agency for Palestine Refugees (UNRWAPR) continued its work, which so far has primarily been that of relief for some 850,000 Palestinian Arabs who fled from their homes following the setting up of the State of Israel. The rehabilitation program has gone more slowly but negotiations regarding agreements on long-term projects are now proceeding with the Arab governments concerned. Canada made a substantial contribution to UNRWAPR in the autumn of 1952.

Tunisia and Morocco.—National unrest and agitation against French rule in Tunisia and Morocco led to several attempts by Arab and African States during 1951 and 1952 to have one or the other question considered by the Security Council or the General Assembly. Both matters were on the agenda of the seventh session and both were fully debated. Substantially similar resolutions were adopted urging the parties to continue negotiations and to refrain from acts likely to aggravate the present tension. There was a sharp division at the Assembly between those who wished to have these questions examined and those who maintained that the United Nations was not competent to do so. On the grounds that the United Nations was incompetent, the representative of France did not participate in the discussion.

Race Conflict in South Africa.—Upon the initiative of a group of Arab and Asian States, "the question of race conflict in South Africa resulting from the policies of apartheid of the Government of the Union of South Africa' was placed on the agenda of the seventh session of the General Assembly. Though the representative of South Africa argued that the United Nations was not competent to examine the question, which he claimed was a matter of domestic jurisdiction solely, the Assembly proceeded to discuss it and adopted a resolution setting up a three-man commission to study the racial situation in the Union of South Africa and report thereon to the eighth session. Another resolution called upon all member states to bring their policies into conformity with their obligations under the Charter to promote the observance of human rights and fundamental freedoms.

Secretariat Problems.—During the first part of the seventh session of the General Assembly in the autumn of 1952, personnel policy in the United Nations Secretariat became a matter of major public interest and discussion. The Secretary-General had announced on Oct. 20, 1952, the appointment of a Commission of Jurists to advise him on some issues arising out of hearings of the United States Senate Sub-Committee on Internal Security. It was asked to advise on certain issues of law and policy regarding the conduct required of international civil servants and the position of the United Nations with respect to official inquiries by member governments. There was no time to debate this matter at the first part of the session but, at the request of the Secretary-General, an item was placed on the agenda of the resumed session. After a debate in which representatives of member states, including Canada, emphasized the necessity of reconciling the rights and freedoms of United Nations employees and the security of the State in which they serve, the Assembly on Apr. 1, 1953, adopted a resolution citing Articles 100 and 101 of the Charter, expressing confidence that the Secretary-General would conduct personnel policy with these Articles in mind, and requesting him to make a progress report to the next session.

Appointment of a New Secretary-General.—The original term of office of the first Secretary-General, Mr. Trygve Lie, expired on Feb. 1, 1951. At the fifth session in 1950, the Security Council was unable to make a nomination and the Assembly, accordingly, extended Mr. Lie's term for a further three years (until Feb. 1, 1954). On Nov. 10, 1952, Mr. Lie announced his wish to resign, provided a successor could be found, giving as his reason a hope that a new Secretary-General who was the unanimous choice of the five great powers, the Security Council and the General Assembly might be more helpful than he could be. At a number of meetings during February and March, 1953, the Security Council considered and rejected four candidates. Of these, the Secretary of State for External Affairs of Canada, the Hon. L. B. Pearson, received nine favourable votes but was not nominated owing to the negative vote of a permanent member, the Soviet Union. Mar. 31, 1953, however, the concurring votes of all five permanent members made possible the nomination of Mr. Dag Hammarskjold of Sweden. On Apr. 7, 1953, he was elected by the General Assembly by a vote of fifty-seven in favour, one against and one abstention, and took up office on Apr. 10.

The Economic and Social Council.—During 1952, the Economic and Social Council and its functional commissions were engaged chiefly in further work on projects already initiated. The question of helping the economically underdeveloped countries of the world to help themselves continued to engage a large share of attention. The General Assembly confirmed the Council's proposal

that, for 1953, the goal of the expanded program of technical assistance should be \$25,000,000. A total of about \$2,000,000 has so far been pledged, considerably more than for any previous program. The Canadian contribution was \$800,000. The group of experts who studied the possibility of establishing a United Nations development fund for the purpose of making long-term low-interest loans for development projects issued a report in March and the International Bank for Reconstruction and Development is giving further study to the suggestion of establishing an international finance corporation to increase the flow of private capital to under-developed areas. Both these questions received some discussion at the seventh session of the General Assembly and will be on the agenda of the eighth session.

In the social field, a Convention on the Political Rights of Women, prepared by the Commission on the Status of Women, was opened for signature at the seventh session. Twenty-one countries so far have signed. At its sixth session, the General Assembly asked the Commission on Human Rights to draft two Covenants on Human Rights, one to include the traditional civil liberties, the other economic, social and cultural rights. The Commission drafted the substantive articles of both Covenants at its session in 1952 and commenced working on measures of application, that is, on the procedural articles relating to implementation, reservations, a federal state clause, etc. The Social Commission is holding a session in 1953 specially for the purpose of preparing recommendations on a program of concerted action in the social field designed to co-ordinate the activities of the Specialized Agencies and other authorities concerned in social welfare and related matters.

Specialized Agencies.—An eleventh specialized agency of the United Nations, the World Meteorological Organization, started functioning in 1951. The International Refugee Organization came to an end early in 1952. Continuing problems in connection with refugees will be the concern of the Office of the United Nations High Commissioner for Refugees, which was established by the General Assembly in December 1950. The proposed International Trade Organization and the Inter-Governmental Maritime Consultative Organization have not yet come into existence.

#### Subsection 3.-Canada and the North Atlantic Treaty

Within less than two years of the signing at San Francisco, U.S.A., of the Charter of the United Nations in 1945, the hopes of people everywhere for universal peace had given place to growing anxiety. The Security Council, which had been given primary responsibility for the maintenance of security, was already hamstrung by the deliberate tactics of the Soviet representatives. The encouragement of communist régimes in countries under control of the Red Army, and activities in other countries, particularly in Western Europe, provided ample evidence of the imperialistic designs of the Soviet Union. Under these circumstances, nations that found themselves in common danger of aggression were driven to seek security by special co-operation in defensive measures.

A major step in the search for security by Western nations was taken in the spring of 1948 when the United Kingdom, France, The Netherlands, Belgium and Luxembourg signed a treaty, at Brussels, providing for their collective self-defence. In the months that followed there were many signs that determined efforts by Western European nations to co-operate for defence would find a ready response

in North America. Beginning with the summer of 1948, the Ambassadors of the Brussels Treaty Powers and Canada began holding informatory and exploratory talks at Washington with representatives of the United States. Representatives of other North Atlantic countries were invited to the discussions at a later stage and, on Apr. 4, 1949, the North Atlantic Treaty was signed by twelve nations—Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, Norway, Portugal, The Netherlands, the United Kingdom and the United States. The Treaty was accepted by all major groups of opinion in Canada, and it was passed without a single dissenting vote in Parliament.

In 1952, two important steps were taken to extend the coverage of the Treaty. Greece and Turkey were admitted to membership and their territories were thereby included in the area guaranteed by the Treaty. A plan was also approved for the association of German forces with Western defence through membership of the German Federal Republic in a European Defence Community and by the exchange of mutual guarantees between that Community and the North Atlantic Treaty Organization. In May 1952, the European Defence Community Treaty was signed at Paris by Belgium, France, Germany, Italy, Luxembourg and The Netherlands. At the same time, contractual agreements between Germany and the three Occupying Powers were signed at Bonn. When these interdependent agreements are ratified, a European Army is to be established which will include German forces and which will be under NATO command. An Interim Committee has been set up at Paris to study the technical problems connected with the establishment of the European Army.

The Treaty.—The North Atlantic Treaty in its preamble reaffirms the faith of the Parties in the purposes and principles of the Charter of the United Nations and declares that the Parties "are determined to safeguard the freedom, common heritage and civilization of their people, founded on the principle of democracy individual liberty and the rule of law". Article I makes clear that the Treaty does not conflict with the United Nations Charter but rather supplements it.

The primary objective of the Treaty is the preservation of peace and security in the North Atlantic area. The defence measures required for this are defined in Articles 3, 4 and 5. Article 3 provides that "the Parties, separately and jointly, by means of continuous and effective self-help and mutual aid, will maintain and develop their individual and collective capacity to resist armed attack" Article 4 provides that "the Parties will consult together whenever, in the opinion of any of them, the territorial integrity, political independence or security of any of the Parties is threatened". By Article 5, the Parties agree that an armed attack against any of them shall be deemed an attack against all, and that, in the event of such an attack, each will assist the Party or Parties so attacked by taking, individually and in concert with the others, "such action as it deems necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area".

The Parties have also recognized that both the support of military forces and the maintenance of the will to resist depend, in the long run, on promoting the stability and well-being of the North Atlantic area. This objective is embodied in Article 2, the inclusion of which in the Treaty was strongly urged by Canada. This Article declares:

"The Parties will contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions, by bringing about a better understanding of the principles upon which these institutions are founded, and by promoting conditions of stability and wellbeing. They will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them,"

The Treaty Organization (NATO).—Unlike the United Nations Charter, the North Atlantic Treaty has little to say about organization. Article 9 of the Treaty provides merely for the establishment of a Council "to consider matters concerning the implementation of this Treaty", and empowers the Council to set up such subsidiary bodies as may be necessary to achieve the purposes of the Treaty. Under this very general provision the Council has been free to adapt the organization to meet the needs as they arise.

The Council is the supreme governing body. The chairmanship rotates annually in alphabetical order of member countries, the Hon. L. B. Pearson, Canadian Secretary of State for External Affairs, having been Chairman during 1951-52. Originally, the Council consisted of the Foreign Ministers of the Parties to the Treaty. There were also a committee of Defence Ministers, a committee of Finance Ministers and a number of subordinate civilian and military bodies. The Council and the ministerial committees met as occasion required in various national capitals. This rather unwieldy structure has since undergone a number of changes. In 1950, the Council Deputies were established at London to provide supervision and direction of the Organization between sessions of the Council itself. In 1951, as a result of a Canadian proposal, the ministerial committees were amalgamated to form a single Council of governments.

At the Lisbon meeting of the Council in February 1952 a further re-organization was adopted in order to ensure more continuous and effective consultation between member governments on all aspects of the alliance. The Council now meets in permanent session, with headquarters at Paris, where member governments are represented by Permanent Representatives. Mr. A. D. P. Heeney is Permanent Representative of Canada. The Council is assisted by an International Secretariat under Lord Ismay, the Secretary General, who is, at the same time, Vice-Chairman of the Council and presides over meetings of the Permanent Representatives. Periodically, ministerial sessions of the Council are held at which Foreign, Defence and Finance Ministers have an opportunity to review the work of the Organization and approve future plans. Ministerial sessions were held at Paris in December 1952 and in April 1953.

Subordinate to the Council are both civilian and military bodies. On the civilian side there are committees and working groups to deal with such aspects of the Organization's work as the annual review of member countries' defence plans, the construction of fixed military installations for the common use of the NATO forces (called "infrastructure"), budgetary control, emergency planning and Article 2 matters.

On the military side, the senior organ is the Military Committee, which is responsible for providing the Council with military advice and which receives from the Council political guidance. Member countries are represented on the Military Committee by their Chiefs of Staff. The Chairmanship, as in the case of the Council, rotates annually in alphabetical order of the NATO countries. The Standing Group is the permanent executive body of the Military Committee, responsible

for passing strategic and political guidance to the NATO Supreme Commanders. It is located at Washington, D.C., and is composed of the Chiefs of Staff (or their representatives) of the three major contributors to NATO, the United States, the United Kingdom and France. The other members of NATO are in continuous association with the work of the Standing Group by means of the Military Representatives Committee, which consists of representatives of the national military authorities. Direct military command of the NATO forces has been delegated to the Supreme Commanders. The Supreme Allied Commander, Europe (SACEUR), is General Alfred M. Gruenther, U.S.A., who succeeded General Matthew B. Ridgway in 1953. He is responsible for the defence of Western Europe which, for this purpose, is divided into a number of subordinate naval, army and air commands. His headquarters (SHAPE) is located near Paris. Admiral L. D. McCormick, U.S.N., is Supreme Allied Commander, Atlantic (SACLANT), responsible for the defence of the lines of communication across the Atlantic Ocean, with headquarters at Norfolk, Va. Each of these commands has an integrated staff to which Canadian officers have been appointed.

Annual Review.—An important feature of NATO since the Lisbon meeting of the Council has been the development of procedures for reconciling military requirements with national economic and political capabilities. Useful groundwork for this task was provided by the review of defence plans carried out for the Lisbon meeting by the Temporary Council Committee set up at Ottawa in September 1951. It was, therefore, decided at Lisbon that, in future, the build-up of NATO forces should be approved after annual reviews of member countries' defence programs which would take account of the various economic and financial factors affecting each country's defence effort. The review for 1952 was undertaken by the Council of Permanent Representatives, with the assistance of the International Secretariat and the NATO military agencies, and was completed at the Ministerial session of the Council in April 1953.

Canada's Contributions to NATO.—The NATO countries have taken the almost unprecedented step of establishing, in peacetime, combined forces and military commands. Canada's contribution to these NATO forces include units of all three services. During 1953, 42 ships of the Royal Canadian Navy will become fighting units committed to NATO or required for the defence of coastal waters. The 27th Canadian Infantry Brigade Group, which had gone to Europe before the end of 1951, is stationed in Germany under SACEUR's command. By 1954, the Canadian air contribution will be complete with an air division of four wings, comprising twelve squadrons of Sabre jet aircraft. By the end of April 1953, two of these wings had been assigned to SACEUR at the airfields constructed for them at Grostenquin in France and Zweibruecken in Germany.

Canada's prime responsibility is, of course, the immediate defence of Canada and North America from direct attack. The Canadian forces allocated for this purpose have not been assigned to a NATO command because there is, for the North American region, a NATO planning body, called the Canada-United States Regional Planning Group, but no NATO command. Since Canada is expressly included in the territory of the North Atlantic Treaty, however, all Canadian forces and all expenditures on defence by Canada, with the exception of those involved in Canada's part in the United Nations action in Korea, are in support of NATO. The bulk of Canada's three-year defence program of over \$5,000,000,000 for 1951-54 can, consequently, be regarded as representing Canada's contribution to NATO.

In addition to actual forces, Canada has contributed—as has the United States—considerable assistance to the defence efforts of other NATO countries in the form of Mutual Aid programs, under which substantial quantities of arms and ancillary equipment have been supplied. In 1950 and 1951, a total of \$361,000,000 was appropriated for the Mutual Aid program. In 1952, the Canadian Parliament approved an appropriation of \$324,000,000 for this purpose and a further appropriation of the same amount in 1953. This aid has taken the form of the training of airmen from other NATO countries in Canada, the transfer of new equipment from Canadian defence production and transfers of equipment from stocks held by the Canadian forces. Arrangements have been made to train up to 1,400 aircrew each year in Canada. The equipment and training facilities have been allocated to other NATO countries in accordance with recommendations from the appropriate NATO bodies.

Canada has also made contributions to the NATO infrastructure programs of fixed military installations, to the military budgets of the Supreme Commanders and to the civilian budget of the International Secretariat, paying portions of these out of the Mutual Aid appropriations. Up to April 1953, the total Canadian share of approved infrastructure programs was \$53,000,000. At the Ministerial meeting of the Council held in April, a further three-year infrastructure program was approved; Canada's share of this was to be \$63,000,000. The Canadian contribution to the military budget in 1953 was approximately \$1,750,000 and to the civilian budget approximately \$370,000.

#### Subsection 4.-Canada and the Colombo Plan

The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting on Foreign Affairs held at Colombo, Ceylon, Jan. 9-14, 1950. Further meetings were held during the same year and in October a report on the Colombo Plan was published which gave a comprehensive picture of the economic requirements and potential resources of the region and the need for external assistance.

Although the Colombo Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth program. It is designed to assist in the economic development of all countries and territories in the general area of south and southeast Asia.

The Consultative Committee, an intergovernmental body which meets from time to time to review the progress of the Colombo Plan and to consider policy matters in connection with its implementation, now counts as members Australia, Burma, Cambodia, Canada, Ceylon, India, Laos, Nepal, New Zealand, Pakistan, the United Kingdom (and its territories in the area, such as Malaya, Singapore and Sarawak) and Viet-Nam, as well as the United States which is also engaged in a substantial program of economic aid in the same region.

The Canadian Parliament approved a contribution of \$25,000,000 for capital assistance to governments in south and southeast Asia during 1951-52 and a similar amount for 1952-53. Until Mar. 31, 1953, expenditures had been made, or commitments had been given, to the Asian governments against these capital assistance votes for the following purposes and in the amounts indicated:—

India.—For 1951-52, \$10,000,000 for wheat; \$4,500,000 for trucks and buses for the improvement and extension of the Bombay state transport system; and \$500,000 for capital equipment for an irrigation and hydro-electric project.

Pakistan.—For 1951-52, \$5,000,000 for a cement plant in the Thal area where the Pakistan Government is carrying out a large-scale refugee colonization scheme; \$2,800,000 for railway ties; \$2,000,000 for an aerial and geological survey of Pakistan's resources; and \$200,000 for agricultural machinery and related equipment for a model live-stock farm in the Thal area. (This is a joint Canadian-Australian-New Zealand project.)

India.—For 1952-53, \$5,000,000 for wheat; \$3,000,000 for equipment for a hydro-electric project; and \$2,200,000 for locomotive boilers.

Pakistan.—For 1952-53, \$5,000,000 for wheat; \$3,400,000 for equipment for a hydro-electric project; \$170,000 for three aircraft fitted with special equipment for use in the locust control program; and \$500,000 to cover remaining costs of the cement-plant project undertaken during the previous year.

Ceylon.—For 1952-53, \$1,000,000 for fishing vessels, cold storage plant and technical personnel for a fisheries research and development project.

Several of these projects will yield revenue in local currency (counterpart funds) which will, in turn, be used by the government concerned, in consultation with the Canadian Government, to finance further economic development in those countries.

Another important aspect of the Colombo Plan is the provision of technical assistance to governments in the area. To develop this side of the program, a Council for Technical Co-operation has been set up at Colombo to which Canada has appointed a permanent representative. The Technical Co-operation Program, though an integral part of the Colombo Plan, is designed to supplement the technical assistance activities of the United Nations and the specialized agencies in the area.

For each of the years ended Mar. 31, 1951, 1952 and 1953, Parliament authorized appropriations of \$400,000 for technical co-operation under the Colombo Plan. Because of the inevitable delays in the early stages of a program of this kind, the amounts available for the first years were not fully used.

Up to Mar. 31, 1953, about 100 persons had been received for training in Canada in a great variety of technical fields and experts had been supplied by Canada to the Asian countries in such fields as fisheries, refrigeration, marine biology, agriculture, soil erosion, and the maintenance of tractors and agricultural machinery.

The Consultative Committee on the Colombo Plan held its fourth meeting at Karachi, Pakistan, in March 1952, which was attended by a Canadian delegation led by the Hon. George J. McIlraith, M.P. The Committee's main task was to prepare a report on the achievements of the Plan during 1951-52. This Report\* outlines the progress made and the plans for 1952-53, and it contains separate sections describing the activities of each member of the Colombo Plan, whether a contributing or a receiving country.

The annual Policy Session of the Council for Technical Co-operation was held at Colombo during February 1953. The Canadian delegation was headed by Mr. P. Sykes, the Canadian Government Trade Commissioner in Ceylon. The Council reviewed progress and issued a report on technical assistance activities during 1952.

For the year 1953-54, the Canadian Parliament has approved a combined appropriation of \$25,400,000 for both capital and technical assistance. It also established a Colombo Plan Fund to which the current and any subsequent appropriations, together with the unexpended portions of the appropriations for the previous year, will be credited. In this way, unspent funds will not lapse at the end of each fiscal year but will remain available until required.

Note.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The records accumulated at the decennial censuses of Canada since Confederation in 1867 to the latest census, 1951, make a valuable contribution to the demographic history of the nation. Each successive decade has added to the vast scope of the material; the detailed statistical analyses and the numerous monographs and studies available under the several aspects of demography and agriculture have made the census a most important statistical measure of accomplishment and progress. An outline of the history of the census is given in the Year Book 1947, pp. 96-97.

The main legal reason for a periodic census under the constitution of Canada is to determine representation in the House of Commons; this, according to the British North America Act, is based on population (see Appendix I). The payment of provincial subsidies on a per capita basis is adjusted annually on population estimated from census data. In view of this, each person is counted as belonging to the locality of his regular domicile rather than to the place where he may be at the date of enumeration.

The modern nation-wide census, however important this redistribution purpose, has a much wider sphere of usefulness. It constitutes, through the data collected directly from the people, a true measure of the social and economic progress of the country and can, therefore, be used in the regulation and general administration of public affairs, social security and rehabilitation programs, etc.

Basic figures from the 1951 Census have been summarized under the respective headings of this Chapter. More detailed information and extended analyses may be obtained from Census publications.

### Section 1.—Growth of the Population

The population history of Canada, from the first census in 1666 when 3,215 persons were enumerated to the Census of 1951 when the figure was 14,009,429, reveals an outstanding rate of population growth. Each decade, of course, contributed to this growth but the ten-year periods 1901-11, 1911-21 and 1941-51 merit particular mention. In the decade 1901-11, Canada's population increased by  $34 \cdot 2$  p.c., the largest growth in the nation's history. Immigration was the main factor in this gain, 1,900,000 persons having entered the country during the period.

<sup>\*</sup> This Chapter has been revised in the Census (Demography) Division, Dominion Bureau of Statistics.

Despite World War I with its accompanying population losses through casualties, emigration and the wartime influenza epidemic, Canada's population increased by 21.9 p.c. in the 1911-21 decade. This was the largest gain shown by any modern country in the period with the exception of Australia where an increase of 22.0 p.c. was recorded.

The Census of 1951 showed the population of Canada to be 14,009,429, representing an increase of 2,502,774 or 21·8 p.c. over the 1941 figure of 11,506,655. Newfoundland's entry into Confederation accounted for 361,416 of this increase. Excluding Newfoundland, the population in 1951 totalled 13,648,013, an increase of 2,141,358 or 18·6 p.c. over the 1941 population of the nine provinces and the territories. This numerical increase was the largest on record and the percentage increase was exceeded only in the 1901-11 and 1911-21 decades. The population increase in the 1941-51 decade is all the more remarkable when consideration is given to the fact that immigration was greatly restricted during the war years. With the resumption of immigration in the post-war years, however, Canada gained about 424,000 in population through immigrant arrivals over the decade. The period was characterized also by high birth rates, and the natural increase was just under 2,000,000 for the ten-year period.

#### 1.—Numerical and Percentage Distribution of Population, by Province, Decennial Census Years 1871-1951

Note.—The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 are shown in the 1951 Year Book, p. 131. Intercensal estimated populations from 1867-1904 will be found in the 1936 Year Book, p. 141; from 1905-30 in the 1946 edition, p. 127; from 1932-40 in the 1952-53 edition, p. 143; and from 1942-53 in Table 9, p. 129, of the present edition.

<sup>&</sup>lt;sup>1</sup> Census taken by Newfoundland Government in 1945; 1941 figure not available.

For census purposes, metropolitan areas have been established for groups of urban communities that are in close economic, geographic and social relationship. The total population of each of the census metropolitan areas in 1951, with the comparable figure from the 1941 Census covering the same area as 1951, is shown in Table 5. In this table the metropolitan area has been named after the largest city of each urban group.

# 5.—Populations of Census Metropolitan Areas, 1951, compared with Populations of Same Areas in 1941

# Section 2.—Movement of Population

The traditional movement of population on the North American Continent from east to west has not been apparent in Canadian statistics for recent years. The most spectacular changes are shown in the Prairie Provinces and in British Columbia. The three Prairie Provinces lost by migration about 250,000 people between 1931 and 1941 and somewhat more from 1941 to 1951. British Columbia gained at the rate of about 8,000 a year during the 1930's and at about 23,000 a year during the 1940's. On an absolute basis, Ontario received more people than British Columbia but in relation to its larger population this growth was only one-third as important. Quebec's net change was negligible relative to its population. Nova Scotia gained during the 1930's but lost in the 1940's, the Maritime Provinces as a whole losing considerably over the two decades.

8.—Numerical Changes in the Populations of the Provinces, 1931 to 1941 and 1941 to 1951

Province	1931 to 1941	1941 to 1951
	No.	No.

# Section 3.—Intercensal Estimates of Population

Intercensal estimates of the population have many uses. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. More recently, they have proved useful for estimates of labour force and other population characteristics of data collected in sample surveys.

Estimates are constructed in the first place for the total population of Canada and for each province. It is a requirement that these be made available about the date to which they apply, June 1 of each year. As final figures on the components of population changes are not ready at that date, the numbers of births, deaths and immigrants are partly filled in by extrapolation so that a preliminary figure is secured for the June to May interval. To avoid a cumulative error the calculation, in effect, starts anew with the latest preceding census for each year's estimates and uses the most up-to-date figures then available. To the census figures are added the births of the intervening years and the deaths are subtracted. Immigrants are added and emigrants are subtracted. On the last item of this calculation there is least information; it is possible to ascertain from United States immigration figures the number of Canadians entering the United States and sometimes the number of those going to the United Kingdom but data are not available for other countries.

The program of population estimates calls for two figures to be given in respect of each year: one based on preliminary materials, as described above, necessarily involving an extrapolation of birth, death and immigration returns, and the other on final figures subject to no further change. The latter can be made available only when the last item of information has been secured and this last item is the succeeding decennial census. With the release of the 1951 Census totals, the estimates were revised for the decade 1941-51.

Since estimates for successive years are independently calculated back to the latest census, the best estimate of the balance of population change is not obtained by subtracting the figure for one year from that for the year following. Much interest attaches to the year-to-year balance and the following statement is included, which gives all available data on that point.

		Calendar-1	Year Data1		77 - 12 - 1 - 1
Year	Births	Deaths	Natural Increase	Immi- gration	Estimated Population as at June 11

#### 9.—Estimates of Population, by Province, Intercensal Years 1941-53

Norg.—At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for 1867-1994 will be found in the 1936 Year Book, p. 141, for 1905-39 in the 1946 edition, p. 127, and for 1931-40 in the 1952-53 edition, p. 143. Figures for all provinces for 1941 and 1951 and for the Prairie Provinces for 1946 are census figures.

<sup>&</sup>lt;sup>1</sup> Estimates for Newfoundland prior to union with Canada, which took place on Mar. 31, 1949, are not included in Canada totals.

<sup>&</sup>lt;sup>2</sup> Includes Newfoundland.

<sup>3</sup> These estimates are subject to adjustment as later data are made available.

# Section 4.—Rural and Urban Population

Prior to 1951, the population residing within the boundaries of all incorporated cities, towns and villages of a province was classified as urban and the remainder as rural. Since the laws governing incorporation vary among provinces there was no uniform line of demarcation between the rural and urban population throughout Canada. In the 1951 Census, the aggregate size of population within a given area rather than provincial legal status was the main criterion for the rural-urban classification. The population residing in cities, towns and villages of 1,000 or over, whether incorporated or unincorporated, as well as the population of all parts of census metropolitan areas was defined as urban and that outside such localities as rural.

Table 10 presents the rural and urban population, by province or territory, for the years 1941 and 1951. For comparative purposes the rural and urban population has been tabulated by both the 1941 and 1951 rural-urban definitions. The rural is further classified by farm and non-farm residence and the urban by size of locality in Table 11.

<sup>1</sup> Exclusive of 84,264 persons living on farms in localities classed as urban. metropolitan area parts with fewer than 1,000 population.

# Section 5.—Sex and Age Distribution

Sex.—The sex distribution of the Canadian people has been characterized since early colonial times by a preponderance of males, although this condition has been greatly modified in more recent years. In 1666, during the early years of settlement by French immigrants, 63·3 p.c. of the population were males. In 1784, when British immigration to Canada was commencing, there were 54,064 males and 50,759 females and by the middle of the nineteenth century there were 449,967 males to 440,294 females in Lower Canada and 499,067 males to 452,937 females in the more newly settled Upper Canada. Since Confederation, the newer sections of Canada—the west and the northwest—have shown the greatest excess of males.

From 1871 to 1941, for Canada as a whole, the proportion of males never dropped below 51 p.c. of the total population, whereas, for Western Canada it varied between 53 p.c. and 59 p.c. By 1951, however, the proportion of males to the total population had dropped to  $50 \cdot 6$  p.c. for Canada as a whole.

12.—Sex Distribution of the Population, by Province, Census Years 1921-51

Note.—Figures for the Censuses of 1871, 1881, 1891, 1901 and 1911 are given in the 1948-49 Year Book, p. 150.

<sup>&</sup>lt;sup>1</sup> Includes 485 members of the Royal Canadian Navy recorded separately in 1921.

Age.—The age distribution of a population is fundamental to most, if not all, other analyses, for the age factor influences employment, marriage, birth rates and death rates, education, immigration, criminology and a multitude of events and activities that are of great importance in the national life.

Immigration has a strong influence on age distribution: it does not directly affect the very young sections of the population except to a small degree, but it immediately affects the age groups between the 'teens' and the 'twenties' and its effects are carried to the older groups as time goes by. Thus, the influence of the

very heavy immigration of the early years of the century (1900-11) is indicated by the fact that, in 1901, 175·9 persons per 1,000 of the total population were in the age group 20-29 years and 131·3 persons per 1,000 in the group 30-39 years; a decade later, 190·7 per 1,000 were in the former group and 142·8 in the latter. Since immigration slowed down very decidedly after the outbreak of war in 1914, the influence of these earlier accretions to the population has crept through the upper age groups year by year until it has now reached those of the population in their 'fifties'.

Between 1931 and 1941 a more pronounced general ageing of the population is shown owing to practically non-existent immigration and a lower birth rate—factors that were emphasized during the depression years. In 1921, the number per 1,000 of total population between 40 and 59 years of age was 183; it was 201 in 1931 and 209 in 1941. Greater proportional increases, however, are shown by the group 60 years of age or over; this group represented 75 per 1,000 of the total population in 1921, 84 in 1931 and no less than 102 per 1,000 in 1941.

In 1951, there were 203·2 persons per 1,000 of total population between 40 and 59 years of age and 113·7 in the group 60 years of age or over. However, there were 222·7 persons per 1,000 of total population in the under 10 years of age group in 1951 as compared with 182·3 in 1941, 212·7 in 1931 and 240·0 in 1921.

Table 13 shows the population of Canada classified by five-year age groups and sex for the census years 1931, 1941 and 1951. The provincial distribution from the 1951 Census, by specified age groups, is shown in Table 14.

#### Section 6.—Marital Status

Next to the sex and age distribution of a population, that of marital status is probably most fundamental from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population; if the proportion of females in this group is small, the expected proportion of births will also be small. In 1951, 64·0 p.c. of all married females were in the age group 15-44 as compared with 61·6 p.c. in 1941 and 63·5 p.c. in 1931. This indicates a resumption of conditions favourable to the birth rate that prevailed from 1871 to 1921 but was arrested temporarily during the period of world-wide depression.

#### 15.—Marital Status of the Population, 15 Years of Age or Over, by Sex, Census Years 1911-51

Note.—Persons whose marital status was not stated have been pro-rated and assigned to the various categories shown in this table.

<sup>1</sup> Includes legally separated.

Although Canada has more single than married citizens, information from the 1951 Census shows that the nation's married population grew more than twice as fast as the single population in the decade between 1941 and 1951. With a total population increase of nearly 22 p.c., the number of single persons in Canada increased by 13.5 p.c., married by 32.2 p.c., widowed by 22.5 p.c. and divorced by 128.0 p.c. The entry of Newfoundland into Confederation accounted for 3.3 p.c. of the increase in single persons, 2.9 p.c. in married and widowed persons and 0.5 p.c. in divorced persons. Other striking statistics of marital status are the excess of married males over married females, the great preponderance of widows compared with widowers and the large and increasing number of divorced persons.

ORIGINS 135

# Section 7.—Origins

A population composed of diverse racial stocks gives rise to political, economic and social problems quite different in nature from those of one with a small admixture of foreign elements, although, to the extent that certain racial stocks are more readily assimilated than others, the problems are mitigated. It is equally true that the different educational, moral, economic, religious and political backgrounds of a people of mixed origins lend variety and diversity to the national life.

The two basic stocks of the Canadian people are the French and the English: historically the French is much the older and, excepting at the time of the Census of 1921, has exceeded in numbers any one of the basic British stocks.

For purposes of the census, a person's origin or cultural group is traced through his father. For example, if a person's father is German and his mother Norwegian, the origin is entered as "German' Wherever possible, the origin of a person is established by asking the language spoken by the person or by his paternal ancestor when he first came to Canada.

Table 17 shows the population of Canada for the census years 1931, 1941 and 1951 classified by origins, while Table 18 presents the 1951 provincial distribution based on a classification of the numerically largest origins in Canada.

17.—Origins of the Population, Census Years 1931-51

Note.—Figures for the Decennial Censuses 1871-1921 are given in the 1948-49 Year Book, p. 154.

# Section 8.—Religious Denominations

At each census the actual numbers attached to any religious denomination, as reported by the persons enumerated, have been recorded. The distribution of the principal denominations as at the Censuses of 1931, 1941 and 1951 is given in Table 19, and the 1951 provincial distribution is presented in less detail in Table 20.

19.—Principal Religious Denominations of the Population, Census Years 1931-51

Note.—More detailed figures for the Decennial Censuses 1871-1921 are given in the 1948-49 Year Book, p. 155.

### Section 9.—Countries of Birth

The census collects information on both country of birth of immigrant arrivals in Canada and province of birth of the native-born. For persons born outside of Canada the country of birth, as constituted at the date of the census, is recorded. Table 21 gives the total population by country of birth for the census years 1931, 1941 and 1951.

21.—Countries of Birth of the Population, Census Years 1931-51

Note.—Figures for the Decennial Censuses 1871-1921 are given in the 1948-49 Year Book, p. 158.

# Section 10.—Languages and Mother Tongues

Official language is not to be confused with mother tongue. Mother tongue is the language a person first spoke in childhood and still understands; official language (a term used herein for census purposes) refers only to the English and French languages. The numbers of persons speaking one, both or neither of the official languages are given in Table 22, classified by origin.

# 22.—Population Speaking One, Both or Neither of the Official Languages, by Origin, 1951

Note.—Infants are classed as speaking the language of the home.

# Section 11.—Dwellings, Households and Families

Included in this Section is a summary of the principal statistics on dwellings, households and families recorded at the Census of 1951. More detailed information may be found in Volume III of the 1951 Census.

Dwellings and Households.\*—The 1941 Census of Housing was based on a 10-p.c. sample of dwellings situated within the nine provinces. For the 1951 Census, the size of the sample was increased to 20 p.c. and the coverage included Newfoundland but, as in 1941, did not extend to the Yukon and Northwest Territories. For comparison purposes, Newfoundland is omitted from the 1951 figures in Tables 24 and 25.

Table 24 shows that the increase in the number of dwellings during the 1941-51 decade was 11 p.c. higher than the increase in population, thus reducing the number of persons per dwelling from  $4\cdot 3$  to  $4\cdot 0$ . Definitional changes between 1941 and 1951 are partly responsible for the relatively larger increase in dwellings, particularly of the apartment and flat type. Since owned dwellings increased by  $49\cdot 1$  p.c. and rented dwellings by only  $4\cdot 2$  p.c., it would appear that many people who were tenants in 1941 have since bought homes, and that most new homes were built for owners rather than for tenant occupancy.

<sup>&</sup>lt;sup>1</sup> Exclusive of hotels, institutions, camps, etc. other miscellaneous types.

The statistics of Table 25 reflect the high level of prosperity throughout the decade in both urban and rural areas. In 1951 a higher percentage of homes had indoor plumbing, electricity and furnace heating, and had such conveniences as mechanical refrigerators, electric vacuum cleaners, telephones, radios and passenger automobiles. There was a sharp drop in the number of homes needing major

<sup>&</sup>lt;sup>2</sup> Includes auto-trailers, houseboats, tents and

<sup>\* 1951</sup> Census definitions are briefly as follows: Dwellings.—A Dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside. A Single Detached Dwelling, commonly called a single house, is a house containing one dwelling unit and completely separated on all sides from any other building or structure. Apartments and Flats include dwelling units in apartment blocks, suites in duplexes or triplexes, suites in structurally converted houses, living quarters located in business premises, janitor's quarters in schools, etc. In determining the number of Rooms in a dwelling, only those used or suntable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. Housing.—A Household is a person or group of persons occupying one dwelling unit, the number of households thus equalling the number of occupied dwellings. Every person must be a member of some household, whether it consists of a family group with or without servants, lodgers, etc., a group of urrelated persons sharing a dwelling or one person living alone. A dwelling is classed in need of Major Repair if it possesses any one of the following defects: sagging or rotting foundations indicated by cracked or leaning walls; faulty roof or chimney; unsafe outside steps or stairways; interior badly in need of repair. A Crowded Dwelling (or Household) is defined as one in which the number of persons exceeds the number of rooms occupied.

repair. Washing machines are not shown in Table 25 because there are no comparable 1941 figures but, in 1951, 72·5 p.c. of the dwellings possessed a powered type of washing machine. While much of this advance may be attributed to general prosperity, part of the explanation of the trend is to be found in the increasing urbanization of the Canadian population and the availability of modern conveniences to rural areas.

<sup>&</sup>lt;sup>1</sup> For cities of 30,000 or over only. free" dwellings.

Of the 3,409,295 occupied dwellings in 1951 (including Newfoundland but excluding the Yukon and Northwest Territories), 18·9 p.c. were farm dwellings, of which more than 90 p.c. were owner-occupied. In comparison, 59·8 p.c. of the 2,765,005 non-farm dwellings were owner-occupied. Among the provinces, Newfoundland had the largest proportion of owner-occupied non-farm dwellings with 86·2 p.c., followed by Nova Scotia with 72·3 p.c. Quebec had the smallest proportion with 39·8 p.c. Of the total owner-occupied non-farm homes in Canada, 40·4 p.c. were in Ontario and 17·4 p.c. in Quebec. A mortgage was reported by 31·3 p.c. of the owner-occupied non-farm dwellings. In this respect, Ontario was highest with 40·1 p.c., followed by Quebec with 32·6 p.c. and British Columbia with 30·7 p.c. Newfoundland reported the lowest percentage with 3·4 p.c. The median rent for non-farm dwellings was also highest in Ontario at \$38 and lowest in Newfoundland at \$24.

<sup>&</sup>lt;sup>2</sup> For exclusive use of household.

<sup>1</sup> Exclusive of the Territories.

Table 27 shows that 66·7 p.c. of the occupied dwellings were of the single detached type, 26 p.c. apartments and flats and 7 p.c. single attached. The percentage of single detached dwellings was highest in Saskatchewan with 86·7 p.c. and lowest in Quebec with 39·7 p.c. The single attached type was highest in Ontario with 11·3 p.c. and lowest in Alberta with 3·1 p.c. Quebec had by far the largest percentage of apartments and flats, 55·9 p.c. of its occupied dwellings being in that category.

<sup>1</sup> Exclusive of the Territories.

The proportion of dwellings with furnace heating ranged from 62·9 p.c. in Ontario to 7·6 p.c. in Newfoundland. In the case of running water, Quebec led all provinces with 89·5 p.c., while Saskatchewan was lowest with 26·7 p.c. Quebec had also the highest proportion of dwellings with flush toilets (81·6 p.c.) and Saskatchewan the lowest with 19·1 p.c. In the case of dwellings reporting a bath or shower, British Columbia showed the highest percentage with 74·8 and Newfoundland the lowest with 16·4.

Wood and brick (or brick veneer) were the two principal exterior materials used in dwellings across Canada. Wood predominated in the Atlantic and western provinces but in Ontario and Quebec brick or brick veneer ranked first. A fairly high percentage of stucco was used in the western provinces, running from 24·2 p.c. in British Columbia to 13·9 p.c. in Manitoba, while 13·3 p.c. of the dwellings in Ontario and Quebec were of imitation brick or other sidings.

<sup>1</sup> For exclusive use of household.

Housing data for 15 large metropolitan areas show some striking variations. The proportion of single detached dwellings was highest in Victoria with 76.6 p.c. followed closely by Vancouver with 74.4 p.c. The lowest proportion was shown in Montreal with 11.4 p.c. followed by Quebec with 20.7 p.c. As might be expected, the positions were reversed for apartments and flats. The proportion of

<sup>&</sup>lt;sup>2</sup> Exclusive of the Territories.

owner-occupied dwellings was highest in Toronto with 70·8 p.c., followed by Victoria with 69·6 p.c. and Vancouver with 68·5 p.c. In Montreal, 75·6 p.c. of the dwellings were tenant-occupied, in Quebec 63·8 p.c. and in Saint John 62·1 p.c. Median monthly rents ranged from a high of \$53 in Toronto, \$46 in London and \$44 in Ottawa, to a low of \$26 in Saint John, \$28 in St. John's and \$33 in Quebec.

#### 30.-Dwelling Characteristics, by Census Metropolitan Area, 1951

Note.—Numbers of rooms and persons per dwelling and numbers of crowded dwellings for these areas are given in Vol. III of the Census of 1951.

<sup>1</sup> For exclusive use of household.

Families.\*—The number of families increased at a greater rate during the 1941-51 decade than the general population, with the result that the average number of persons per family dropped from  $3 \cdot 9$  to  $3 \cdot 7$ . Table 32 shows that families with no children or with one or two children increased proportionately at the expense of families with three or more children. It is also interesting to note that the increase in number of families was greater than the increase in the number of children in families. This does not necessarily indicate a trend in the birth rate. Other factors have an important bearing, such as the ageing of the population, the great increase in the marriage rate during the years just prior to the 1951 Census, and the tendency for young people to leave the family home for employment elsewhere.

32.—Family Characteristics, Census Years 1941 and 1951

(Excluding Newfoundland and the Territories)

Item	1941	1951	Increase	1941-51	
Item	1941	1951	No.	p.c.	
PopulationNo.	11,489,713	13,622,913	2,133,200	18-6	
Families No. Persons per family " Children in families "	2,525,299 3-9 4,692,571	3,207,587 3·7 5,357,344	682,288 	27·0 14·2	
Percentage of families with—  No children at home	31·2 41·1 17·0 10·7	32·5 43·4 16·5 7·6	Ξ	Ξ	

In Canada, 90·2 p.c. of the families were reported as maintaining their own households; Saskatchewan was the highest with 94·8 p.c. and Newfoundland the lowest with 86·8 p.c. Of the total family heads, 60·6 p.c. were reported as wage-earners or salary-earners; Ontario was highest with 67·5 p.c., followed by British Columbia with 63·7 p.c. and Saskatchewan was the lowest with 33·2 p.c. followed by Prince Edward Island with 36·8 p.c. Ontario showed the highest median earnings of family head followed by British Columbia and Alberta. Prince Edward Island showed the lowest median earnings.

Of the 778,238 children in the 14-17 age group for Canada, 66·0 p.c. were at school in 1951, 21·5 p.c. were in the labour force and 12·5 p.c. were in neither the labour force nor at school. British Columbia had 79·4 p.c. at school, Alberta 77·7 p.c., and Saskatchewan 76·2 p.c. The percentage at school in Quebec, 52·5, was the lowest among the provinces. In the 18-24 age group for Canada, 13·2 p.c. were at school, 73·9 p.c. were in the labour force and 12·9 p.c. were in neither. British Columbia again was high with 19·5 p.c. at school, followed by Alberta with 18·3 p.c. Newfoundland was the lowest with 8·0 p.c. at school and Quebec followed with 9·4 p.c.

<sup>•</sup> For census purposes, a Family consists of husband and wife (with or without children) or a parent with an unmarried child (or children) living together in the same dwelling. Unmarried sons and daughters under 25 years of age and living with their parents are classed as Children as well as wards and guardianship children under 21 years of age. Unmarried sons and daughters, 25 years of age or over, living with their parents are counted as family members but not as children.

# Section 12.—The Blind and Deaf Population

Information was obtained in the 1951 Census for totally blind or deaf persons. Persons blind in one eye, for example, were not recorded as blind and partially deaf persons, such as those able to hear with the help of a mechanical aid, were not included. Table 36 shows the number and proportion of blind and deaf persons per 10,000 population in each province and territory, while Table 37 classifies the blind and deaf population of Canada by age groups. More detailed information on this subject is contained in Volume II of the 1951 Census.

#### Section 13.—Census of the Prairie Provinces

The Census and Statistics Act of 1905 and the Statistics Act of 1918 (replaced by the Statistics Act, 1948) provided for a census of population and agriculture for the Provinces of Manitoba, Saskatchewan and Alberta, to be taken in 1906 and every tenth year thereafter, in addition to the nation-wide decennial census.

The latest Prairie Province census was taken as of June 1, 1946, and the results are summarized in the Year Book 1948-49, pp. 162-171, and in the Year Book 1951, pp. 130-132. More detailed information may be obtained in the census volumes of the 1946 Census of the Prairie Provinces.

#### Section 14.—The Indians and Eskimos of Canada

The Indians.\*—Entry of native tribes into North America probably began as early as 15,000 years ago, according to the findings of archæologists. It is believed that roving bands of hunters, driven from their lands in northeastern Asia, crossed into North America by way of the Bering Strait. Ethnic origins of the Indians appear to have varied. Differences in language were many and, though they varied somewhat from tribe to tribe, religious background and traditions seemed to stem from practically the same source.

There are ten linguistic groups of Indians in Canada, of which four are east of the Rocky Mountains—Algonkian, Athapaskan, Iroquoian and Siouan—and six are west of the Rockies—Kootenayan, Salishan, Wakashan, Tsimshian, Haida, and Tlinkit. Indians of Algonkian stock are the most numerous and are scattered throughout the area from the Atlantic seaboard to the Rocky Mountains. Included in the Algonkian stock are such tribes as the Micmacs of the Maritimes, the Montagnais of Quebec and the Ojibwas, Crees and Blackfeet who live in the Prairie Provinces. The Iroquoian stock, which includes the Hurons, is found mainly in Ontario and Quebec, while tribes of Sioux are located in the Prairie Provinces. The Northwest and Yukon Territories are the usual homelands of the Athapaskan.

According to the 1951 Census, there were 155,874 persons of Indian origin in Canada, distributed by provinces and sex as follows:—

Province	Male	Female	Total	Province Mal	Female	Total
Newfoundland P. E. Island. Nova Scotia New Brunswick Quebec	136 1,379 1,164 7,556	174 121 1,338 1,091 7,075	358 257 2,717 2,255 14,631	Saskatchewan       11, 26         Alberta       10, 74         British Columbia       14, 66         Yukon       7         N.W.T       1,91	3 10,420 2 13,876 4 799	22,250 21,163 28,478 1,533 3,838
Ontario		18,345 10,382	37,370 21,024	Canada79,34	3 76,531	155,874

These figures include all persons with a paternal ancestor of Indian race, many of whom have long been assimilated and have lost their identity as Indians. The number of persons considered as Indians under Indian legislation is placed at 136,407. They are divided into about 600 bands and live on 2,200 or more reserves set aside for their use and benefit.

The Indian Act.—First enunciation of the Crown's policy with regard to Indians was the Proclamation of 1763, which confirmed the practice already being followed of recognizing the title of Indians to the lands they occupied and making compensation for the surrender of their aboriginal interest in the soil. The first office devoted solely to Indian affairs was set up in 1755 under Sir William Johnson and in 1860 Indian administration, formerly under the jurisdiction of the Imperial Government, became the responsibility of the Province of Canada and was placed under the Crown Lands Department.

The administration of Indians and Indian lands was made a federal responsibility by the British North America Act. Immediately following Confederation in 1867, Indian Affairs was attached to the Department of the Secretary of State and in 1873 was transferred to the newly created Department of the Interior. In 1880, under the provisions of the Indian Act, the Indian Affairs Branch became a

<sup>\*</sup> Prepared in the Indian Affairs Branch, Department of Citizenship and Immigration, Ottawa.

separate department and remained so until Dec. 1, 1936, when it became a branch of the Department of Mines and Resources. Since Jan. 18, 1950, Indian Affairs has been a branch of the Department of Citizenship and Immigration.

Following Confederation, the Parliament of Canada enacted legislation concerning Indians which was first consolidated in the Indian Act of 1876. This Act, under which Indian administration was conducted, contained nearly all the Canadian law dealing expressly with Indians and was further revised and consolidated in 1880. It remained in effect, as amended from time to time, until Sept. 4, 1951, when the new Indian Act was proclaimed. The new Act was drafted following a complete review of the old Act and inquiry into Indian affairs by a Special Joint Committee of the Senate and the House of Commons during 1946, 1947 and 1948. Proposed legislation was widely circulated among the Indians and others interested in their welfare, and many representations were received suggesting improvements to the various provisions. Before the passing of the Act, the Minister of Citizenship and Immigration discussed the proposed legislation with representative Indian groups at Ottawa and in other parts of Canada.

Administration.—The primary function of the Indian Affairs Branch, under the Citizenship and Immigration Act and the Indian Act, is to administer the affairs of the Indians of Canada in a manner that will enable them to become increasingly self-supporting and independent. The functions of the Branch include the management of Indian reserves and surrendered lands, trust funds, welfare projects, relief, family allowances, education, descent of property, rehabilitation of Indian veterans on reserves, Indian treaty obligations, enfranchisement of Indians and other matters.

The Indian Act provides a measure of self-government on reserves through Band councils chosen according to tribal custom or under an elective system of secret ballot. The various expenditures of Band funds, with few exceptions, require the consent of the Band council, comprising a chief and councillors. The right to vote in Band elections and other votes is extended to all members of a Band, men and women, who have reached the age of twenty-one years. A number of Indian women have been elected to office since the new Act came into force. Secrecy of voting has been provided under election regulations. The powers of Band councils to make by-laws correspond in a general way with those exercised by councils in a rural municipality.

Indians who are veterans of the First or Second World War and their wives may vote in federal elections. Indians who live off the reserve, under certain circumstances, also have the right to vote, while Indians who live on the reserve may vote if they waive exemption to taxation on personal property such as earnings or other incomes received on the reserve. Indians may sue and be sued, subject to provisions of the Indian Act exempting from seizure real and personal property held on the reserve.

Enfranchisement, the removal of all legal distinction between Indians and other members of the community, is provided for under the Indian Act. An enfranchised Indian is no longer subject to the provisions of the Act. In order to facilitate enfranchisement of Indian Bands, agreements may be entered into with provincial or municipal authorities to provide financial assistance to indigent, infirm, or aged members of the enfranchised Band.

The nomadic existence followed by Bands of Indian hunters is gradually giving way to a more stable way of life. Many Indians are profitably engaged in the fishing industry on the British Columbia coast; Indians across Canada are being encouraged to engage in agricultural pursuits and are prominent in many other trades and occupations. For example, the reputation of the Indians from the Caughnawaga Reserve, near Montreal, as skilful structural steel workers is known throughout North America, providing a profitable source of steady employment for these Indians.

The Indian Affairs Branch takes a census of the Indian population under their jurisdiction at five-year intervals. The figures for 1949 given in Tables 38 and 39 are the latest available.

Education.—The proportion of Indians who have become satisfactorily adjusted to modern conditions is, of course, greater among those who have taken full advantage of the Federal Government's educational program. Residential schools are available to Indian children from broken homes, orphans or those who, because of isolation or the nomadic way of life of their parents, would otherwise be unable to attend school. For children who can live at home, the Federal Government operates day schools in Indian communities. Alternatively, where conditions are favourable, arrangements are made with local educational authorities for Indian children to attend non-Indian schools. An increasing number of Indian children in the elementary grades have been admitted to schools where other children are enrolled and the majority of Indian children attending secondary school and college classes are educated in association with non-Indians. The Federal Government pays the charges for school fees and books, necessary transportation and, for some students who must live away from home, part or all of the cost of room and board.

Similar assistance is given to Indian young people to encourage them to obtain vocational and professional training. Of those who have qualified as school teachers, more than 40 are now serving in Indian schools. Indians have qualified in medicine, dentistry, nursing, agriculture and other professions. Preference in appointment to positions in the Indian service is given to qualified Indians.

In the year ended Mar. 31, 1953, there were 456 Indian schools in operation, comprising 67 residential schools, 347 regular day schools, 30 seasonal schools and 12 hospital schools. The enrolment in residential schools was 10,112 and in all other schools, 15,837. Enrolment by province was: P.E.I., 52; N.S., 605; N.B., 388; Que., 2,426; Ont., 5,861; Man., 3,562; Sask., 3,609; Alta., 3,272; B.C., 5,447; Y.T., 284; and N.W.T., 443.

42.—Enrolment and Average Attendance at Indian Schools, Years Ended Mar. 31, 1944-53

In addition to pupils in Indian schools there were 2,082 Indian children enrolled in elementary grades in provincial schools and 702 in secondary provincial schools, making a total enrolment of Indians in educational classes of 28,739. In the year ended Mar. 31, 1953, there were 1,347 Indians receiving secondary and higher education.

Welfare.—During 1952, 20,713 Indian families received \$3,721,164 in family allowances on behalf of 60,747 children. These payments have helped the Indians to give their children a better-balanced diet and to keep them longer at school. Approximately \$3,000,000 is given annually to Indians through old age security and old age assistance payments and blind persons allowances.

In cases of necessity, the Government gives direct assistance in the form of food, fuel, clothing, household equipment and care to individuals or groups of individuals. The food ration to destitute Indians has recently been increased and extended welfare services are available to the various reserves through the employment of a number of qualified social workers.

Improvement in housing conditions has been achieved in recent years through the efforts of the Indians themselves, as a result of expenditures from appropriation of Indian Band funds, and through Veterans' Land Act benefits. Costs of house repairs during the year ended Mar. 31, 1952, amounted to approximately \$166,085 and the value of new houses built on the various reserves was estimated at \$736,987. Revolving Fund loans are available for the purchase of farm machinery, implements, gas and oil, fencing materials, seed grain, live stock and similar essentials, and also for payment of wages and repairs to buildings and vehicles.

Fur Conservation.—During 1952 the fur-development program, undertaken in co-operation with the various provinces, was continued. Beaver production in Saskatchewan, Manitoba and Ontario increased, approximately 143,500 pelts, with an estimated value of \$1,200,000, being taken. In addition, about 621,000 muskrats, having a value of \$835,000, were trapped in Manitoba and Saskatchewan. Indian participation in the three provinces from the trapping of these fur-bearers was valued at about \$1,290,000. In the Province of Quebec, nine fur preserves with a total area of approximately 150,000 sq. miles are set aside exclusively for Indian trappers under joint management by the Indian Affairs Branch and the Quebec Department of Fish and Game. Five reserves are in production and one in partial production. During 1952, these areas produced over 13,300 beaver, which brought more than \$235,000 to the Indian trappers.

Eight full-time supervisors are employed across Canada to assist the Indians to derive the fullest possible benefits from hunting and trapping.

The Eskimos.\*—The Eskimos are only a fragment of the total population of Canada, numbering, according to the 1951 Census, only 9,733 persons. However, they are part of the human resources of the country and as such are entitled to the benefits of Canadian citizenship and to assistance in adapting themselves to changing conditions. They, together with the Indians, represent the original inhabitants of Canada and their ingenuity and resourcefulness is illustrated by the fact that they have maintained their existence against a harsh unrelenting climate in a region where food, being almost entirely fish or animal, requires great skill to obtain and is most unpredictable in its availability. Advancing civilization has, however, brought many problems to Canada's northernmost citizens, who have been literally translated from the Stone Age to the Atomic Age in a period of 40 to 50 years, and to these problems the Federal Government has been giving increasing attention.

The Northern Administration and Lands Branch of the Department of Resources and Development is responsible for the administration of Eskimo affairs. The Department of National Health and Welfare is responsible for health and medical services. Royal Canadian Mounted Police detachments throughout the north undertake field duties for both Departments. In fact, the problems involved in looking after a sparse Eskimo population scattered over about 900,000 sq. miles of territory requires the continuous co-operation of all northern inhabitants—teachers, missionaries, traders, doctors, nurses, radio operators and weather-station personnel. Administrative contact is maintained by radio and through the Eastern Arctic Patrol which carries representatives of the Administration and other government departments on an annual inspection tour. Officers of the Administration also visit Arctic posts periodically by air.

Family allowances are paid to Eskimos in kind from a list designed to supplement rather than to supplant the normal native diet. Eskimos also enjoy the full benefits of old age security and old age assistance payments and of allowances for blind persons.

Missions, assisted by Government grants, operate hospitals at Aklavik, Chesterfield Inlet and Pangnirtung, and the Department of National Health and Welfare has nursing stations at Coppermine, Fort Chimo, Coral Harbour, Port Harrison, Cape Dorset and Lake Harbour. Tuberculosis and other medical surveys are carried out from year to year and treatment, where necessary, is provided either at the hospitals within the territory or at larger institutions outside.

<sup>\*</sup>Prepared in the Editorial and Information Division, Department of Resources and Development, Ottaws.

To supplement the work of the missions, which operate schools in a number of settlements assisted by Government grants, the Government has, since the end of the Second World War, built eight schools primarily for Eskimo children. These schools are spread across the top of the continent from the Mackenzie Delta to northern Quebec—at Aklavik, Tuktoyaktuk, Coppermine, Chesterfield Inlet, Coral Harbour, Cape Dorset, Port Harrison and Fort Chimo. Missions are also assisted in the operation of two industrial homes, one at Chesterfield Inlet and the other at Pangnirtung, where aged and physically handicapped Eskimos are cared for. Considerable attention has been given in recent years to the conservation of the wildlife resources upon which the Eskimo depends for his livelihood. Game preserves have been established where only natives may hunt and trap and encouragement is given to the observance of hunting practices designed to conserve the supply of game and fish.

To help clarify and co-ordinate thinking on Eskimo problems, a round-table conference was held in May 1952 of all organizations, government and private, concerned with the Eskimos. Represented were the Departments of Resources and Development, Mines and Technical Surveys, National Health and Welfare, Transport, National Defence, and Public Works, as well as the R.C.M.P., the Church of England and Roman Catholic missions, the Hudson's Bay Company, and individuals with special knowledge of or interest in Eskimos. As a result of this conference a continuing committee was established to study the problems of the Eskimos, with a sub-committee to give special attention to educational problems. The first meeting of the committee was held in October 1952. In matters of health it was decided to establish two convalescent or rehabilitation centres for Eskimos who have recovered from tuberculosis and are returning again to the rigours of northern life. These centres will be located at Driftpile, Alta., and Frobisher Bay, southern Baffin Island.

In the education field, it is proposed to extend the present school system (see also pp. 319-320) to provide hostels at schools for Eskimo children who live away from the settlements. Many of these children could attend school during the spring and summer months without interfering too much with their normal, nomadic way of life. Plans are also under way to provide higher education and technical training for those who show particular aptitude. Eskimos with the necessary qualifications will be assisted to prepare themselves for work as teachers, nurses or artisans, either among their own people or in settlements in or out of the Arctic. An eight-room school to include high-school classes will be erected at Aklavik, N.W.T., and the existing school there will be converted into a vocational training centre.

An Eskimo Research Unit was established by the Northern Administration and Lands Branch of the Department of Resources and Development to study Eskimo problems and to work in conjunction with the continuing committee. Efforts will be made to encourage self-sufficiency of the Eskimo by better utilization of the existing resources of the country and the development of small local industries such as whaling, fishing, boat-building, manufacture of clothing, eiderdown collecting and art handicrafts. Eskimos in over-populated or depleted areas will be encouraged and assisted to move to areas where game is more plentiful or where employment may be found. A fund has been established from which loans may be made to assist Eskimos to carry out approved projects for the betterment of their economy.

# Section 15.—Statistics of World Population

The figures in the following table are from the *United Nations Statistical Year Book 1952* and, except where otherwise indicated, are official mid-year estimates for 1951.

Note.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

# PART I.—IMMIGRATION AND EMIGRATION Section 1.—Immigration

Immigration to Canada since early times has been spasmodic, being high in periods of rapid development and prosperity and dropping off during wars and in periods of economic depression. A brief summary of the history of immigration is given in the Year Book 1948-49, pp. 172-173.

### Subsection 1.-Immigration Policy and Administration\*

Policy.—The present policy of the Federal Government is to foster the growth of the population of Canada by the encouragement of immigration and, by necessary legislation and vigorous administration, to ensure the careful selection and permanent settlement of such numbers of immigrants as can be absorbed advantageously in the national economy. In line with this policy, admissible classes include—in addition to certain British subjects, citizens of France, citizens of the United States, and non-immigrants who served in the Canadian Armed Forces—any European immigrant who complies with immigration regulations and can satisfy the Minister of Citizenship and Immigration that he is a suitable immigrant, having regard to the climatic, social, educational, industrial, labour or other conditions or requirements of Canada, and that he is not undesirable owing to his probable inability to become readily adapted and integrated into the life of a Canadian community and to assume the duties of Canadian citizenship within a reasonable time after his entry.

The regulations governing admission to Canada were widened on July 1, 1950, and from that date to the end of December 1952 the Department of Citizenship and Immigration, through its Immigration Branch, effected the entry of 395,515

Revised in the Immigration Branch under the direction of Laval Fortier, Deputy Minister, Department of Citizenship and Immigration, Ottawa.

immigrants. The number entering in the post-war period, 1946 to 1952, amounted to 789,278. British immigrants from overseas countries led in this post-war influx, with a total of 245,885, while the highly successful movement to Canada of people from The Netherlands accounted for 71,036 immigrants. Other ethnic groups were: German, 76,265; Italian, 66,021; Ukrainian, 32,223; and French, 15,978. Occupationally, the main groups were: farmers, 102,989; skilled workers, 99,908; and unskilled workers, 94,181. Of the total, 321,846 were adult males, 274,607 adult females and 192,825 children.

The most important factor responsible for the upswing in immigration in the post-war period was, of course, the buoyant Canadian economy which was capable of absorbing the influx of workers and which is, day by day, creating additional opportunities for new Canadians. To meet Canada's need for people, it was necessary for the Department of Citizenship and Immigration to increase its overseas staff, open new offices and make larger supplies of informational material available for prospective immigrants. Urgently needed immigrants, who cannot afford the cost of the ocean voyage, benefit from the provisions of the Assisted Passage Loan Scheme that was put into effect on Feb. 1, 1951. Interest-free loans are allowed to single persons and heads of families to pay part or all of the cost of ocean transportation and inland rail fare, including meals en route, to destination in Canada. Repayment is required within 24 months after arrival in Canada.

Administration.—The responsibility for all immigration matters under the provisions of the Immigration Act rests with the Minister of Citizenship and Immigration. The Immigration Branch, one of the four branches comprising the Department of Citizenship and Immigration, administers this Act. Headquarters of the Immigration Branch is at Ottawa.

A primary objective of administration is to assist immigrants to become quickly and satisfactorily settled in the Canadian community. The Federal Government continues its interest in them through the work of the Immigration Branch Settlement Service, the Canadian Citizenship Branch of the Department of Citizenship and Immigration and the National Employment Service of the Department of Labour. Liaison is maintained between the Federal Government and provincial authorities and private organizations with a view to co-ordinating the efforts in this field, filling gaps and eliminating duplication.

Immigration Services.—Immigration services in Canada and overseas operate under the supervision of the Director of Immigration. In Canada there are five districts—Atlantic, Eastern, Central, Western and Pacific—each under the supervision of a Superintendent. There are 324 ports of entry along the Canadian-United States border and on the Atlantic and Pacific seaboards and the admissibility of every person who enters Canada is established by an Immigration Officer at one of these ports. At inland offices, located at strategic points throughout the country, applications for the admission of immigrants are investigated and deportation proceedings conducted.

Immigration offices in the United Kingdom are located at London, Liverpool, Glasgow and Belfast. To facilitate compliance with immigration medical requirements, approved British medical practitioners make it possible for British immigrants to undergo medical examination within a short distance of their place of residence. Immigration offices are also in operation at Dublin, Paris, Brussels, The Hague, Stockholm, Berne, Rome, Athens, Oslo, Copenhagen, Helsinki, Hanover, Linz and Karlsruhe.

For the past twenty-five years, a system of preliminary examination of immigrants from Continental Europe has been in effect. This examination is intended to establish, before they embark, the admissibility of persons wishing to settle in Canada in order to avoid the hardship that would ensue from rejection at the Canadian port of entry and subsequent deportation.

The Settlement Service has staffs in all provinces of Canada and in the British Isles. The Settlement Officers in Canada locate and develop opportunities for immigrants in accordance with the needs of the areas under their supervision, ealist the co-operation of provincial and municipal authorities, and advise voluntary organizations that take an active interest in the establishment of immigrants. It is the responsibility of Settlement Officers overseas to locate suitable immigrants to fill the needs ascertained and the opportunities developed by the Canadian section of the Settlement Service. A continuous two-way flow of up-to-date information exists between the officers of the Settlement Service in Canada and those overseas.

### Subsection 2.—Immigration Statistics

Table 1 presents statistics of immigration to Canada from 1908 to 1952. Analyses showing country of last permanent residence, sex, age, marital status, birth-place, origin, nationality, destination and occupation for recent years are given in Tables 2 to 8.

#### 1.-Immigrant Arrivals, 1908-52

Note.—Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1907 in the 1948-49 edition, p. 175.

<sup>&</sup>lt;sup>1</sup> In both Europe and Asia; includes Estonia, Latvia and Lithuania. 
<sup>2</sup> Includes U.S.A. citizens on permit but applying for permanent residence.

Sex, Age and Marital Status.—Of the total immigrants 18 years of age or over entering Canada in 1952, 55 p.c. were males. Before 1931, adult male immigrants normally exceeded females in number, but from 1931 to 1946 female immigrants out-numbered male immigrants almost consistently, particularly in 1945 and 1946 when the wives of Canadian service men were coming in. From 1947 to 1950 adult males again exceeded females by from 10 to 27 p.c., in 1951 by 80 p.c. and in 1952 by 24 p.c.

Throughout the years the sex distribution of persons under 18 years of age has been fairly even. In 1952, of the 44,972 immigrants in this class, 39,655 or 88 p.c. were under 15 years of age.

Of the total male immigrants in 1952, 39 p.c. were married and 59 p.c. single, the remainder being widowed or divorced; the percentage for married and single female immigrants was 47 in each case.

### 3.—Sex Distribution of Immigrants as Adult Males, Adult Females, and Children, 1943-52

Birthplace.—British-born immigrants to Canada in 1952 numbered 44,942 and made up 27 p.c. of the total immigration; the increase over 1951 amounted to 31 p.c. Immigrants born in Continental Europe totalled 105,532, constituting a decrease of 29 p.c. from the previous year. They accounted for 64 p.c. of the immigration compared with 76 p.c. in 1951. Of the 105,532, 19·8 p.c. were born in Italy, 19·7 p.c. in The Netherlands, 19·4 p.c. in Germany and 8·4 p.c. in Poland. The number of United States-born immigrants in 1952 was slightly higher than in 1951, accounting for 5 p.c. of the total as compared with 3 p.c. in the previous year.

5.—Birthplaces of Immigrant Arrivals, 1950-52

Note.—Figures for 1942-49 are given in the corresponding table of previous Year Books beginning with the 1948-49 edition.

Includes the following classes for which totals only are given here: bookbinders, 28; engravers, 28; locomotive engineers, 28; stationary engineers, 14; hat and cap makers, 29; harness and saddle makers, 6; jewellers, goldsmiths and silversmiths, 68; milliers, 26; patternmakers, 59; stonecutters, 12; tanners, 14; tobacco workers, 12; boldermakers, 50; and other, 5,626.

Intended Destination and Occupation.—Experience has shown that not all immigrants reach the province of intended destination or follow intended occupation. Table 8 gives intended destination and occupation as stated by the immigrants entering Canada in 1952. Of the total immigrants, 45 p.c. were dependent wives and children, 10 p.c. were classed as farm workers, 13 p.c. as skilled workers and 12 p.c. as unskilled workers, while 11 p.c. were in the clerical, professional and merchant classes.

Of the total female immigrants, aside from dependent wives and children who accounted for 69 p.c., domestic servants comprised the largest occupational class followed by the clerical and professional classes. Only 3 p.c. were classed as skilled workers.

Rejections and Deportations.—The Immigration Act provides for the rejection and deportation of immigrants belonging to prohibited classes, and also for the deportation of those who become undesirables within five years after legal entry. The results of the operation of these regulations are shown in Table 9.

### 9.—Rejections and Deportations of Immigrants and Others, by Cause and Nationality, 1950-52

Note.—Figures for 1903-39 are given in the corresponding tables of previous Year Books; those for 1940-49 are given in the 1951 edition, p. 150.

**Returning Canadians.**—The numbers of Canadians who returned to Canada during the years 1947 to 1952 after having resided in the United States were as follows: 1947, 8,970; 1948, 5,678; 1949, 4,050; 1950, 3,518; 1951, 3,635; and 1952, 4,707.

# Section 2.—Emigration

Emigration from Canada is an important factor tending to offset both present and past immigration activities. The movement to the United States of native-born Canadians as well as of Europeans who originally migrated to Canada attained considerable proportions at certain periods. The figures of Table 10,

showing the numbers of persons entering the United States from Canada during the years 1943-52, were obtained from the Immigration and Naturalization Service of the United States Department of Justice. No Canadian statistics on emigration are available.

## PART II.—CANADIAN CITIZENSHIP\*

An outline of early naturalization procedure and events leading to the passing of the Canadian Citizenship Act is given in the 1951 Year Book, pp. 153-155.

## Section 1.—The Canadian Citizenship Act

The Canadian Citizenship Act came into force on Jan. 1, 1947, its purpose being to give a clear definition of Canadian citizenship and to provide an underlying community of status for all the people of Canada, helping to bind them together as Canadians. Since Jan. 18, 1950, the administration of Canadian citizenship has been the responsibility of the Department of Citizenship and Immigration. The provisions of the Act with the changes occasioned by the 1950 and 1951 amendments are outlined in the following paragraphs.

Natural-Born Canadian Citizens.—The Act defines the status of natural-born Canadians before and after the coming into force of the Act, including persons born in and outside of Canada and those born on a Canadian ship or aircraft. A person born outside of Canada out of wedlock is a Canadian citizen if his mother was born in Canada, or on a Canadian ship or aircraft, or was a British subject with Canadian domicile, and had not become an alien. A person born outside of Canada of a Canadian parent before Jan. 1, 1947, is not a Canadian citizen unless, at the commencement of the Act, he had been admitted to Canada for permanent residence, or was a minor. If he was born after Jan. 1, 1947, he is not a Canadian citizen unless, within a two-year period following his birth, or within such extended period as may be authorized in special cases by the Minister, his birth is registered with an official Canadian representative abroad, or with the Minister of Citizenship and Immigration. In addition, a Canadian born outside of Canada before or after Jan. 1, 1947, ceases to be a Canadian citizen unless, within one year of age 21 (or

<sup>&</sup>lt;sup>1</sup> Includes Newfoundland.

Prepared in the Canadian Citizenship Branch under the direction of Laval Fortier, Deputy Minister,
 Department of Citizenship and Immigration, Ottawa.

within such longer period as may be authorized), he files a declaration of retention of Canadian citizenship and, in the case of dual nationality, a declaration renouncing the other nationality or citizenship. A Canadian citizen, whether he is abroad or at home, may obtain a certificate of proof of his Canadian citizenship upon payment of a fee of \$1.

British Subjects, Commonwealth Citizens, Citizens of the Republic of Ireland, and Canadian Citizens.—The Citizenship Act states that a Canadian citizen is a British subject. Before the passage of the Act, he could not, officially, describe himself as a Canadian citizen because the official designation for Commonwealth citizens was British subject. Now, he may officially call himself a Canadian. The authority for this procedure is found in Sect. 3 of the Act, which reads:—

"Where a person is required to state or declare his national status, any person who is a Canadian citizen under this Act shall state or declare himself to be a Canadian citizen and his statement or declaration to that effect shall be a good and sufficient compliance with such requirement."

Non-Canadian British subjects continue to have the right to vote in federal, provincial and municipal elections, but they are not Canadian citizens until they have lived five years in Canada. Those who had that residence (Canadian domicile) on Jan. 1, 1947, are Canadian citizens, and those who attain it after that date must apply for certificates of citizenship before being granted the status of Canadian citizens. Citizens of the Republic of Ireland, who are not British subjects, have the same rights, in Canada, as a British subject.

Canadian Citizens other than Natural-Born.—Under the Act, persons naturalized in Canada before Jan. 1, 1947, and British subjects who had Canadian domicile at the commencement of the Act are Canadian citizens. The Act also defines the status as Canadian citizens of women and children, other than natural-born, and the manner in which they would have acquired Canadian citizenship.

Reinstatement of Persons of Canadian Origin Naturalized Outside of Canada.—By the amendment of July 20, 1950, the Minister may, in his discretion, grant a certificate of citizenship to a person who was a natural-born Canadian, or who was a British subject of Canadian origin, and who lost such status by naturalization outside of Canada or for any reason other than marriage. The qualifications include continuous residence in Canada for a period of one year immediately preceding the date of the application as well as certain other requirements.

Status and Procedure of Non-Canadians to Canadian Citizenship.—
Any person who is not a Canadian citizen or is not otherwise a British subject, and is a resident of Canada, may take the first step towards citizenship at any time after his admission to Canada and after he has attained the age of 18 years by filing a Declaration of Intention in the office of the clerk of the court of the district in which he resides. He must then wait not less than one year, and not more than five, before filing with the court his application for citizenship, provided he has reached age 21. He must satisfy the court that he has resided in Canada for one year immediately preceding the date of his application, and a further period of four years in Canada during the six years immediately preceding the date of the application, making a total residence of five years. If he served outside of Canada in the Armed Forces of Canada during time of war, or if the applicant is the wife of and resides in Canada with a Canadian citizen, the residence of one year immediately preceding the date of the application is all that is required. Additional

requirements are lawful admission to Canada for permanent residence, good character, an adequate knowledge of English or French (such knowledge not required if he has resided continuously in Canada for more than 20 years), an adequate knowledge of the responsibilities and privileges of Canadian citizenship, and an intention, if his application is granted, either to reside permanently in Canada or to enter or continue in the public service of Canada or of a province thereof.

When the judge has given his decision, the papers and the decision are forwarded to the Minister of Citizenship and Immigration who may, in his discretion, grant a certificate of citizenship. When a certificate is granted, it is forwarded to the clerk of the court, who then notifies the applicant to appear in court for the purpose of taking the Oath of Allegiance and Declaration of Renunciation of Foreign Allegiance and receiving his certificate of citizenship.

If the application is rejected by the court or by the Minister, the applicant must wait two years before filing a new application.

Status of Married Women.—A Canadian woman does not lose Canadian citizenship upon marriage to an alien, and a non-Canadian woman does not become a Canadian citizen upon marriage to a Canadian citizen. In the former case, she may file with the Minister a Declaration of Renunciation of Canadian citizenship if she has acquired her husband's nationality, and she thereupon ceases to be a Canadian citizen. In the latter case, a non-Canadian woman must apply to the court for a certificate of citizenship. If she is a citizen of another Commonwealth country, she may apply direct to the Minister. The one concession as to qualifications is a residence of only one year in Canada.

A woman of Canadian origin who ceased to be a British subject by reason only of her marriage to an alien prior to Jan. 1, 1947, may regain her status and be granted a certificate of citizenship upon application direct to the Department. She need not be a resident of Canada and no special qualifications are required.

Status of Minors, Foundlings, Posthumous Births, etc.—The Minister may grant a special certificate of citizenship to a minor child of a person to whom a certificate of citizenship is or has been granted under the Act, on the application of that person if the person is the responsible parent, provided the child was born before the date of the grant of the certificate and has been admitted to Canada for permanent residence. The Minister may also grant a certificate to a minor in any special case whether or not the conditions required by the Act have been complied with. Every foundling, who is or was first found as a deserted infant in Canada, shall, until the contrary is proved, be deemed to have been born in Canada. Where a child is born after the death of his father, the child shall, for the purposes of definition of natural-born Canadian citizens, be deemed to have been born immediately before the death of the father.

Children of Diplomatic Representatives in Canada.—The amendment of July 20, 1950 (effective Jan. 1, 1947), excludes from the status of natural-born Canadian citizens the children born in Canada of parents who, at the time of the birth, are the diplomatic or consular representatives of foreign countries in Canada, or who are employees in the service of such representatives.

Adopted or Legitimated Persons.—Effective July 20, 1950, the Act provides that certificates of Canadian citizenship may be granted to adopted or legitimated persons who have been admitted to Canada for permanent residence if the adopter, or the legally recognized father, is a Canadian citizen.

Certificate in Case of Doubt.—A certificate may be granted for the purpose of removing any doubts as to whether the person to whom it is granted is a Canadian citizen, and it is specifically provided that the granting of the certificate shall not be deemed to establish that the person to whom it is granted was not previously a Canadian citizen.

Protection of Status Prior to the Canadian Citizenship Act.—Sect. 44 of the Act provides that, notwithstanding the repeal of the Naturalization Act and the Canadian Nationals Act, the Canadian Citizenship Act is not to be construed or interpreted as depriving any person who is a Canadian national, a British subject or an alien as defined in the said Acts, or in any other law in force in Canada, of the national status he possesses at the time of the coming into force of this Act.

Loss of Canadian Citizenship.—Canadian citizenship may be lost for the following reasons:—

- (1) A Canadian citizen who, when outside of Canada and not under disability (minor, lunatic or idiot), acquires, by a voluntary and formal act other than marriage, the nationality or citizenship of a country other than Canada. This does not apply if that country is at war with Canada at the time of acquisition but, in such a case, the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
- (2) A Canadian citizen who, under the law of another country, is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.
- (3) A Canadian citizen who, when in Canada, acquires voluntarily the citizenship of a foreign country (other than by marriage) may be deprived of his Canadian citizenship by Order of the Governor in Council, on recommendation of the Minister.
- (4) A Canadian citizen, other than natural-born or one who has served in the Armed Forces of Canada in time of war, who resides outside of Canada for six consecutive years without maintaining substantial connection with Canada, loses his citizenship automatically, but the period of absence may, upon application, be extended beyond the six years for good and sufficient cause.

Loss of Citizenship by Revocation—Applicable Only to Naturalized Persons.—The citizenship of a Canadian citizen, other than a natural-born Canadian citizen, may be revoked by the Governor in Council for such reasons as trading or communicating with an enemy country during time of war; disaffection or disloyalty while out of Canada or who, while in Canada, has, by a court of competent jurisdiction, been convicted of any offence involving disaffection or disloyalty; obtaining a certificate of naturalization or Canadian citizenship by false representation or fraud; residence outside of Canada for not less than six years (without maintenance of substantial connection) since becoming a Canadian citizen or being naturalized in Canada; residence for not less than two years (without maintenance of substantial connection) in a foreign country of which he was a national or citizen at any time prior to his becoming a Canadian citizen or being naturalized in Canada.

Loss of Citizenship by Revocation—Applicable to Both Natural-Born and Naturalized Persons.—The Governor in Council may, in his discretion, order that any person shall cease to be a Canadian citizen if, upon a report from the Minister of Citizenship and Immigration, he is satisfied that such person has, when not under a disability, (1) taken or made an oath, affirmation, or other declaration of allegiance to a foreign country, or (2) made a declaration renouncing his Canadian citizenship.

Loss of Citizenship in Relation to Women.—In the case of marriage, a woman who is a Canadian citizen does not lose the status of a Canadian citizen unless, having on marriage acquired her husband's nationality, she makes a declaration renouncing her Canadian citizenship.\*

## Section 2.—Canadian Citizenship Statistics

Citizenship of the Total Population.—Results of the 1951 Census show that 96.8 p.c. of all the people in Canada were Canadian citizens while 0.7 p.c. were citizens of other Commonwealth countries, 1.7 p.c. of European countries, 0.1 p.c. of Asiatic countries, 0.5 p.c. of the United States and 0.1 p.c. of other countries. Table 1 shows the 1951 population classified by country of allegiance and origin. According to this table, 98.0 p.c. of the persons of British Isles origins and 99.7 p.c. of those of French origin owed allegiance to Canada. Corresponding percentages for other European and Asiatic origins were 89.3 p.c. and 78.7 p.c., respectively.

Citizenship Certificates Issued.—In 1952, 20,506 Canadian Citizenship Certificates were issued, 20,135 in English and 371 in French. Corresponding figures for 1951 were 20,937 Certificates, 20,423 in English and 514 in French.

<sup>\*</sup> The foreign countries, under the laws of which a woman does not acquire the citizenship of such countries on marriage, are: Argentina, Brazil, Chile, Colombia, Ecuador, Guatemala, Morocco, Palestine, Panama, Paragusy and Uruguay.

During 1952, the Canadian Citizenship Registration Branch recorded 1,563 certificates of registration of births abroad, 13,323 declarations of intention filed with the courts, 143 declarations of retention of citizenship, and 76 declarations of resumption of Canadian citizenship. Certificates issued free to persons who have had active military service numbered 1,646. Corresponding figures for 1951 were 1,261 registrations of births abroad, 8,653 declarations of intention, 91 declarations of retention of citizenship, 49 declarations of resumption of citizenship and 591 Certificates issued free to persons who have had active military service.

Characteristics of Aliens\* Granted Citizenship Certificates in 1952.— In 1952, for the first time since the Canadian Citizenship Act of 1947 has been in effect, detailed statistics have become available with respect to such characteristics as age, marital status, occupation, period of immigration, residence, as well as previous nationality of aliens granted Certificates of Canadian Citizenship.

Just over 77 p.c. of the aliens granted Citizenship Certificates in 1952 resided in urban centres as compared with 62 p.c. of the total population at the 1951 Census. Regionally, these new Canadians were distributed as follows: 2·2 p.c. in the Atlantic Provinces, 9·9 p.c. in Quebec, 37·5 p.c. in Ontario, 27·0 p.c. in the Prairie Provinces, and 23·3 p.c. in British Columbia.

Almost one-third (31.5 p.c.) of the aliens naturalized in 1952 had immigrated to Canada since the end of World War II. On the other hand, 52 p.c. had immigrated to Canada prior to 1931. Of the post-war immigrant aliens who became Canadian citizens in 1952, slightly over half were Chinese.

Over three-fifths of the aliens naturalized in 1952 were males. Young persons under 20 years of age constituted 18 p.c. of the males but only 6 p.c. of the females. The percentage of both sexes combined who were 20 to 44 years of age was 37, while the percentage 45 to 64 years was 42, and over 65 years, eight.

One-third of all aliens naturalized in 1952 were Chinese and about two-fifths of these Chinese were children recently arrived in Canada. Persons reporting Poland as country of former allegiance were the next largest group, accounting for 17 p.c. of the total.

<sup>\*</sup> Includes all aliens granted Certificates in 1952. In addition to those classified under Sect. 10 (1) of the Citizenship Act 1947, as shown in Table 2, they include the totals shown in Sects. 10 (3) and 10 (4), and a number of those in Sects. 10 (5), 11 (1) and 11 (3).

One-fifth of the male aliens granted Citizenship Certificates were employed in agricultural occupations, while a similar proportion were engaged in service fields. Proprietary and managerial occupations and manufacturing occupations each accounted for 11 p.c. of the males. About 75 p.c. of the females were homemakers.

Note.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The history of the collection of vital statistics in Canada is covered in the 1948-49 edition of the Year Book, pp. 185-188. This Chapter of the Year Book is intended to provide a broad summary of the main trends in Canadian vital statistics during the last 30 years, to compare the principal Canadian rates with those for other countries and to provide lay readers and students of demography, public health, sociology and other related fields with basic Canadian vital statistics data. Detailed data are available from regular DBS annual and quarterly reports, notably Vital Statistics (Preliminary Report) and Vital Statistics of Canada. Certain unpublished data are also available on request.

Births and deaths are classified by place of residence (in the case of births, according to the residence of the mother) and marriages by place of occurrence.

# Section 1.—Summary of Vital Statistics

Table 1 gives a summary of the principal vital statistics of the provinces of Canada for the years since 1921 when the system of collection of national statistics was initiated.

In comparing the birth, death and marriage rates of the provinces, it is important to bear in mind that part of the differences observed may be due to differences in the sex and age distribution of their populations. Similarly, changes in these rates may be due partly to changes in this distribution. These remarks apply also to international comparisons of birth, death and marriage rates.

Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

Canadian Births.—In Canada, the birth rate in 1921 was 29 per 1,000 Since a rate of 35 per 1,000 is very high for countries of modern western civilization the Canadian birth rate had probably not fallen far or for long before then. It fell continuously until 1937 when it was 20 per 1,000 but then, owing to economic recovery and the War, it rose to 22 in 1940, to 24 in 1943 and reached its highest point in 1947 at 28.7. As was the case in most other countries, there was a slight decline in 1948 and the Canadian rate has remained remarkably steady at just over 27 for the four years 1948-51. The birth rates in the provinces followed the same general trend, but in the Maritimes the fall stopped before 1930.

Sex of Live Births.—Wherever birth statistics have been collected, they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless, it is so much of an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada in 1941-51 varied between 1,051 and 1,067. In 1951 there were 1,058 males born for every 1,000 females. Variations in the provincial sex ratios are due to chance variation because of the relatively small number of births involved. The smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year.

Hospitalized Births.—In 1951 over 79 p.c. of Canadian births occurred in hospital. Although the proportions of hospitalized births have increased steadily since 1921 in all provinces, these proportions still vary widely. The existence of prepaid or provincially sponsored hospital, maternity or medical-care plans in some provinces, the unavailability of hospital facilities, particularly in remote rural areas, in others, and preference for home delivery in some local areas are among the factors accounting for provincial variations in this respect.

<sup>1</sup> As at the 1951 Census.

Illegitimacy.—Less than 4 p.c. of the live births in Canada are illegitimate. This percentage is low compared with many countries of the world. In the five-year period 1926-30 it was 3 p.c., whereas the average of the ten years 1941-51 was just over 4 p.c. The apparent increase was due partly to the more complete registration of illegitimate births brought about by the co-operation of provincial registration officials and social welfare agencies.

Stillbirths.—The rate of stillbirths has been falling since 1926, though not equally in all provinces. The rate of stillbirths to unmarried mothers has always been considerably higher than that for married mothers, and consequently higher than the over-all rate.

<sup>&</sup>lt;sup>2</sup> Exclusive of Newfoundland.

Multiple Births.—Approximately one confinement in 85 in Canada results in the birth of more than one child. In the period 1926-51 there have been 82,431 such confinements, of which 81,680 were twins and 741 were triplets. There have been nine sets of quadruplets. The Dionne quintuplets were born in 1934.

The proportion of stillbirths is higher among multiple than among single births. It is about twice as high for twins and between three and five times as high for triplets.

Fertility Rates.—Sex and age distribution of the population is an important factor in determining birth, death and marriage rates. Since more than 95 p.c. of children are born to women between the ages of 15 and 50, differences in the proportion of women of these ages to the population as a whole will cause differences in the birth rates of different countries or regions, even though the fertility of women at each age may be the same. Measures of fertility which are independent of the sex and age distribution of the population have, therefore, been devised. The best known of these are age-specific fertility rates and reproduction rates.

Further details on this subject may be found in the 1947 Year Book, pp. 153-154, or in the DBS report, Gross and Net Reproduction Rates, Canada and the Provinces.

Ages of Parents.—Ages of the parents is an important variable in any analysis of birth statistics. The numerical and percentage distribution of legitimate live births by the ages of the parents is given for each decennium from 1931 in Table 9, of illegitimate live births by the age of the mother in Table 10, and of stillbirths by the age of the mother in Table 11, as well as the average ages of the parents for each year shown.

Besides the fertility rates at each age, three other factors help, in the main, to determine the average age of parents having children: firstly, the average age of potential parents, at any point in time, that is, of the population between the ages of 15 and 50; secondly, the average age of couples at marriage; and thirdly, the

proportions of first and second births to the total. Other things being equal, a high proportion of first and second births will result in a lower average age of parents. In 1930-32, first and second births were 43 p.c. of the total births. By the period 1945-48, first and second births together were 57 p.c. of the total. These changes are very great and account for the lower average age of parents in recent years. However, by 1951 the proportion of first and second births had declined to about 53 p.c.

These tables illustrate other significant facts: that the average age of fathers of legitimate children is about four years higher than the average age of mothers; that the average age of mothers of illegitimate children is four to five years lower than the average age of mothers of legitimate children—in 1930-32 the difference was six years (the fact that over 70 p.c. of illegitimate children are born to mothers under 25 years of age accounts for this difference); and that the average age of mothers of stillborn children is higher than that of the live born. Further, Table 11 shows that the rate of stillbirths per 1,000 live births increases with the age of the mother. It is almost three times as high among mothers of 40-44 years as it is among mothers at the ages of 20-24, and over four times as high among mothers of 45-49 years.

<sup>&</sup>lt;sup>1</sup> Excludes the Province of Quebec. <sup>2</sup> These figures or percentages are of the children whose fathers and mothers were born in the same country. The difference between this figure and the total number of births represents the number of children whose parents were born in different countries.

Ethnic Origins of Parents.—A person's origin is usually traced through the father. For example, if the father is English and the mother French, the person's origin is said to be English. Illegitimate children, however, are usually classified by the origin of the mother since the particulars of the father are seldom known.

Table 14 shows that about 60 p.c. of Canadian children born in 1951 were born to parents of the same ethnic origin, whereas in 1931 over 72 p.c. were born to parents of the same origin.

## Section 3.—Deaths

Declines in the death rate have been recorded in many countries during the past twenty years. Crude death rates should be used with caution in comparing the mortality levels of different populations, for they are affected by differences in the age composition of the population as well as by differences in the levels of mortality.

## Subsection 1.—General Mortality

International Comparisons.—A comparison of the death rates in Canada and the provinces with those in other countries is shown in Table 15. It will be noted that the Canadian death rate is among the lowest in the world and that most of the provinces have lower rates than most other countries.

#### 15.—Death Rates per 1,000 Population of Various Countries compared with Canada and the Provinces, 1951

3 Registra-

Canadian Mortality.—Since 1931, the Canadian death rate has fluctuated between 10·3 and 9·0 per 1,000 of the population, declining slightly in recent years and reaching a record low of 9·0 in 1950 and 1951. As shown in Table 1, pp. 176-178, this decline has been apparent in all provinces but in varying degrees. The generally low rates in the Prairie Provinces are partly due to their younger average population while the uniformly higher rate in British Columbia is due to the increasing proportion of people in the older age groups.

Sex and Age Distribution of Deaths.—Despite reductions in infant mortality over the past 25 or 30 years, more deaths still occur in the first year of life than in any other single year. Of the 107,000 deaths occurring in 1926, 31,000 or almost 30 p.c. were children under five years of age, and three-quarters of those were children under one year of age. In 1951, of the 125,000 deaths, about 17,000 or less than 14 p.c. were children under five years and five-sixths of those were under one year. Most of the reduction took place among children over one month of age but there was a notable decrease as well in the childhood ages up to five years.

Tremendous reductions took place in the mortality pattern since the early 1920's, with the most important reductions in the childhood and early adult ages. In 1926, over 19 p.c. of all male deaths were of persons five to 45 years of age; in 1951, these accounted for only 11 p.c. of total deaths. The reduction in mortality among females in this age group is still more remarkable, dropping from 22 p.c. to 10 p.c. Thus, death rates for males up to age 45 have been roughly halved during the past 25 years while those for females, in the same ages, have been reduced as much as three to four times.

These reductions in the mortality rates in early and middle years of life have, of course, had the effect of increasing the number of people in the older age groups and of raising the average age of the population as a whole. As a natural consequence, much larger proportions of deaths are now occurring at the older ages. Further, the reductions in rates will eventually raise the average age at death. In 1921, the average age at death of males was 39·0 years and of females 41·1 years; by 1951 this had advanced to 56·4 and 58·8, respectively.

<sup>&</sup>lt;sup>2</sup> Excludes infants born alive who died before registration of birth.

Deaths in Urban Centres.—In Table 17, deaths are classified by place of residence of the decedent. Death rates in urban centres vary only slightly from those of their respective provinces. However, owing to the influx of young people from the rural areas, the age distribution of the population in urban centres is often more favourable to a low death rate than that of the province as a whole.

<sup>1</sup> As at the 1951 Census.

Causes of Death.—Table 18 shows the deaths in Canada, grouped according to the International Abbreviated List of 50 Causes. About 80 p.c. are due to the following groups of causes: diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases—tuberculosis, pneumonia and influenza—and nephritis.

The rise in the average age at death has already been noted (p. 188). Causes of death that affect children and young adults mainly have declined. Diphtheria, for example, has been almost wiped out and tuberculosis has been greatly reduced. On the other hand, the ageing of the population increases the proportion of deaths from certain causes that affect older people. Thus, cancer and the diseases of the cardio-vascular-renal systems now account for a substantially larger proportion of all deaths than formerly.

These trends indicate the remarkable success that has attended the attack by health authorities on the infective and contagious diseases which in the past have constituted such a great hazard in the younger and early adult years of life. They have similarly served to emphasize the emergence of the chronic and degenerative conditions of later life as the targets towards which the public health programs of the future will be directed. In effect, Canada has shared the experience of most western nations in exchanging a high mortality in younger life for high morbidity in older age groups.

Nors.—Since 1930, deaths have been classified according to the 1948 (6th) Revision of the International List of Causes of Death, while those for previous years were classified according to earlier revisions of the List. 18.-Deaths and Rates per 100,000 Population, according to the International Abbreviated List of 50 Causes, by Province, 1951

# Subsection 2.—Infant Mortality

International Comparisons.—The completeness of registration of live births and infant deaths varies from country to country and there is some evidence that the under-registration of deaths is proportionately greater for infants than for other ages. The reliability of the basic data should, therefore, be kept in mind when comparing the rates. Despite these variations, the Canadian rate as well as the rates for some of the provinces appear to be considerably higher than those for many other countries of the world.

19.—Infant Mortality per 1,000 Live Births in Various Countries compared with Canada and the Provinces, 1951

(Source: Monthly Bulletin of Statistics of the United Nations and other official publications. In certain cases final figures are not available and provisional data are used.)

Canadian Infant Mortality.—Table 1, pp. 176-178, shows the striking improvement that has taken place in the rate of infant mortality during the past 25 years. Of the children born in 1946-50, approximately 87,000 lived to their first birthday who would have died at the rate prevailing in the period 1926-30.

As illustrated in Table 20, infant mortality of males is 25 to 30 p.c. higher than that of females for Canada as a whole, with wider variations for the individual provinces. As pointed out earlier, there were between 1,051 and 1,067 males born to every 1,000 females in the 1941-51 period. Because male infant mortality is higher, the excess of males is reduced drastically by the end of the first year. For example, in 1940-42, 397,038 male children were born compared with 347,908 female children, an excess of 22,130 or 5·9 p.c.; 25,024 male children died during their first year compared with 18,646 female children, that is 6,378 more. The excess of males at one year of age is thus reduced to 15,752, or 4·4 p.c.

As indicated in Tables 1 and 19, infant mortality rates vary considerably from province to province. One of the principal causes of these variations appears to be the different proportions of births that take place in hospital or under proper

<sup>&</sup>lt;sup>2</sup> Excludes infants born alive but who died before registration of birth.

<sup>3</sup> Registra-

medical care, as pointed out previously on p. 179. Along with increased hospitalization has come better and more widespread pre-natal and post-natal care. Other factors, particularly the supervision of water supplies, improved sanitation and the pasteurization of milk, have also been important.

<sup>1</sup> Excludes the Province of Quebec.

Infant Mortality in Urban Centres.—Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely from year to year. As is evident from Table 21, many cities and towns have, however, maintained consistently low rates as compared with the national rate or the rates for the province in which they are situated.

Causes of Infant Deaths.—Of the 14,584 infant deaths in 1951, almost 15 p.c. were due to immaturity; 14 p.c. to congenital malformations; over 10 p.c. each to pneumonia among infants over four weeks of age and injury at birth; and about 8 p.c. to post-natal asphyxia and atelectasis. These specific causes accounted for 57 p.c. of the total infant deaths.

### Subsection 3.-Maternal Mortality

As indicated in Table 1, pp. 176-178, the number of mothers who die in pregnancy and childbirth has been greatly reduced in recent years. Although the number of births has been much greater in recent years, the number of maternal deaths has declined steadily since about 1930 (when there were 1,215 deaths and a rate of almost five deaths for every 1,000 live births) to 380 in 1951. Since 1945, the rate of maternal mortality has dropped below two per 1,000 live births and was just over one per 1,000 live births in 1951. Mortality among unmarried mothers is higher than among married mothers.

Age at Death.—Table 23 shows the distribution of maternal deaths by age groups and average age at death. The latter is slightly more than two years higher than the average age of all mothers at the time of childbirth. The rates per 1,000 live births by age groups show that age is a most important factor in maternal mortality. Though all the rates are much lower than they used to be, the inequalities between the age groups remain. The rate at 30-34 years is almost twice as high as the rate at 20-24 years, and at 40-44 years it is about five times as high. The higher rate for the "under 20" age group, compared with the age group 20-24, is due to the high proportion of illegitimate children born to young mothers.

Causes of Maternal Deaths.—Table 24 shows, by cause, the numbers and rates of maternal deaths per 100,000 live births. Until a decade ago, puerperal sepsis and toxemias of pregnancy were by far the most important causes. Since 1936, the rate for puerperal sepsis has been reduced by almost 95 p.c. owing in large measure to the use of sulpha and other antibiotics. Although there has been a reduction of over 70 p.c. since 1936 in the maternal death rate from toxemias of pregnancy, this still remains the second major cause of maternal deaths, after complications of delivery.

24,-Maternal Mortality and Rates per 100,000 Live Births, by Cause and by Province, 1951

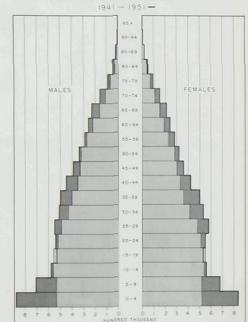

Norg.—Since 1950 deaths have been classified according to the 1948 (6th) Revision of the International List of Causes of Death, while those for previous years were classified according to earlier revisions of the List.

## Section 4.—Natural Increase

In 1926-30, the rate of natural increase in Canada (excess of births over deaths) was 13 per 1,000 population. Owing partly to the depression, the birth rate declined more than the death rate and the rate of natural increase fell to 9·7 in 1937. Since then the rate increased to 12·6 in 1940-42, 14·6 in 1945, 17·6 in 1946 and 19·3 in 1947. The rates of 17·8 in 1948, 18·1 in 1949, 18·1 in 1950 and 18·2 in 1951 were lower owing to increases in total deaths in recent years.

Table 25 shows that the rates of natural increase in the provinces followed generally the rate for Canada as a whole. In earlier years, Saskatchewan and Quebec had the highest rates. The high rates in all the Prairie Provinces were due partly to their relatively younger populations and consequent low death rates. In Quebec, on the other hand, the death rate in 1926-30 was high; it has declined steadily since. Owing to high birth rates, Newfoundland and New Brunswick have had the highest rates of natural increase in Canada in recent years.

The rates are generally higher for females than for males for the reason that death rates for males are higher than for females. In the western provinces particularly, the fact that the ratio of males to females in the total population is higher than in other parts of Canada tends to lower the rate of natural increase.

In a country such as Canada with a fairly young population and where immigration has been large, an excess of males is to be expected but the higher rate of natural increase for females will gradually reduce this excess. The trend is towards an eventual excess of females in the total population as there now is in most European countries.

<sup>1 1950.</sup> 

As a rule, marriage rates vary with the level of economic prosperity. In Canada, England and the United States, the number of marriages was exceptionally high in 1940-42, decreased in 1943 and 1944 but increased in 1945 and 1946, reaching peak rates in the immediate post-war years.

Canadian Marriages.—Table 28 shows the number of marriages and the marriage rates per 1,000 population in Canada and the provinces. Percentages of brides and bridegrooms, according to place of birth, are also given. In 1951, for the country as a whole, about 85 p.c. of the grooms were born in Canada—70 p.c. in the province in which they were married. Almost 90 p.c. of the brides were born in Canada—over 75 p.c. in the province in which they were married. However, there are wide variations from this pattern as between provinces; as might be expected, in the older Atlantic Provinces and Quebec there is a greater tendency to marry native and/or province-born partners than in the other provinces.

Age and Marital Status of Bridegrooms and Brides.—Over 91 p.c. of the marriages in 1951 were between persons who had not previously been married; 5 p.c. of the brides and grooms had been widowed, while almost 4 p.c. of the marriages were of divorced persons. The average age at marriage of bachelors is less than 27 years and that of spinsters less than 24. The average age of widowers and widows at the time of re-marriage is almost double that of bachelors and spinsters. Nine out of ten spinsters married in 1951 were less than 30 years of age—7 out of 10 below 25 years—while 8 out of 10 bachelors were less than 30 and about one-half of the total were below 25 years of age.

<sup>2</sup> See note 1.

Religious Denominations of Brides and Bridegrooms.—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 30 shows the very strong influence that

religion has on marriage. About 70 p.c. of all marriages are between persons of the same religious denomination; among those of Jewish faith, it was 95 p.c. in 1951; among Roman Catholics 89 p.c.; United Church 62 p.c.; and Eastern Orthodox 55 p.c.

# Subsection 2.—Dissolutions of Marriage (Divorces)

For many years after Confederation, the number of divorces granted in Canada were small. There were fewer than 20 divorces in every year before 1900, 21 in 1903, 51 in 1909 and 60 in 1913. These numbers represent less than one per 1,000 of the yearly number of marriages.

The end of World War I in 1918 saw an increase in the number of divorces. The generally unsettled conditions and the long separation of men on Active Service from their wives may have contributed to this increase. Changes in law and procedure may also have been a further factor—at present, Quebec and Newfoundland are the only provinces in which applicants for divorce must secure a private Act of Parliament. The number of divorces had increased to 114 in 1918; 608 in 1926; 700 in 1931; 1,570 in 1936; and 2,369 in 1940. From 1940, the number increased annually to a peak of 8,199 in 1947, declining gradually since that year until in 1951 they were 5,263 or 36 p.c. lower than in 1947. The number rose to 5,562 in 1952.

					2,130					

No fall term of court held in 1944. Cases held over until January 1945.
By a new rule adopted in August 1948, a decree nisi became absolute at the end of three months. As a result, a number of divorces did not become effective until the following year.
Includes 5, 4 and 3 divorces granted to Newfoundland residents in 1950, 1951 and 1952, respectively.

# Section 6.—Vital Statistics of the Yukon and Northwest Territories

The vital statistics of the Yukon and Northwest Territories have been collected since 1924. These statistics are not presented with those of the ten provinces in the tables of this Chapter, because the figures are not considered complete in that the personal particulars in many cases are not available, the small and varying population of each year is not accurately known and, as some areas are accessible

only during the summer months, complete returns are not available sufficiently early in the calendar year for inclusion in the national totals for routine publication. A summary of the principal vital statistics for these Territories is presented in Table 32.

32.—Vital Statistics of the Yukon and Northwest Territories, 1926-51

Nore.—Figures for 1944-51 are by place of residence; for previous years by place of occurrence.

# Section 7.—Canadian Life Tables

Two official life tables for Canada have been published: the first was calculated on the basis of the deaths of 1930-32 and the census population of 1931; the second on the basis of the deaths of 1940-42 and the census population of 1941. In addition, tables have been computed for Canada as a whole for the years 1945 and 1947 based on estimated populations by sex and age and the deaths recorded as having occurred during those years. The life table for 1947 is given in abbreviated form in Table 33.

Life tables give a summary of the health and general conditions of survival of the population in a conventional, standard form. A hypothetical number (100,000) of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the year 1947, of 100,000 males born, 5,198 died in their first year, so that 94,802 survived to one year of age; 408 died in their second year, so that 94,394 survived to two years of age; and so on. At 100 years of age, only 56 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the average number of years which a person might expect to live if the mortality rates in the given years remained constant.

Mortality rates for males are higher at all ages than for females, particularly in infancy. Infant mortality in 1940-42 was 62 per 1,000 live births for males compared to 49 per 1,000 for females. Because infant mortality is still so high, the expectation of life at birth is lower for both sexes than at age one. In 1947 males who had survived their first year had an expectation of life of almost 68 years and females of almost 71 years. The expectation of life of a boy at age 15 was 55 years, and of a girl 58 years. At age 25, it was about 46 years for men and almost 49 for women. At age 70, it was 10.4 years for men and 11.4 years for women.

Table 34 summarizes the life expectancy figures extracted from the Canadian Life Tables for 1931, 1941 and 1947. During this period, life expectancy at birth increased from 60 to over 65 years for males and from 62 to 69 years for females. The greatest increases were among the younger ages for both sexes but were appreciably higher among females than among males and, for females, extended into the older ages. There was little or no appreciable increase between 1931 and 1947 in life expectancy among males over 40, whereas for females the rates increased at all ages up to 80. Increases in life expectation among women of child-bearing age are worthy of note.

## Section 8.—Communicable Diseases

The national reporting of communicable diseases in Canada (exclusive of the Territories) was undertaken in 1933 by the Dominion Bureau of Statistics, at the request of the Federal Department of Pensions and National Health, in co-operation with the Provincial Departments of Health. Since then, the Health and Welfare Division of the Bureau has been responsible for the weekly compilation and analysis of communicable diseases except for a short period during 1939-40, when the work was transferred to the Department of Pensions and National Health. The reports of cases of venereal diseases are included in the current analyses and a standard report form is used by all the provinces.

Table 35 indicates the relative number of cases of certain communicable diseases reported to the Dominion Bureau of Statistics by the Provincial Departments of Health in 1951. The reporting of five diseases (see footnotes to Table 35) is not compulsory in all provinces and the totals should, therefore, be accepted with reservations.

Note.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

A special article on the development of public health, welfare and social security in Canada appears in the 1952-53 Year Book, pp. 224-229. That article outlines the evolution of provincial and municipal administration, the development of federal responsibility, and governmental expenditure in the fields of health, welfare and social security. The special article in the current edition deals in detail with one aspect of federal health activity—the National Health Grant Program.

### THE NATIONAL HEALTH GRANT PROGRAM\*

The National Health Grant Program, launched in 1948 with the announcement by the Prime Minister of ten specific health grants, entered its second five-year period in May 1953 with the addition of three new grants† designed to bring about major advances in the fields of child and maternal health, rehabilitation, and laboratory and radiological services.

<sup>\*</sup> Prepared by the Research Division, Department of National Health and Welfare, based on information supplied by the Directorate of Health Insurance Studies.

<sup>†</sup> Beginning in 1953-54, there are a total of twelve grants under the Program owing to the non-recurring nature of the Health Survey Grant.

The ten original grants were inaugurated to assist the provinces in achieving a number of broad purposes which, set out in relation to the grants with which they are most closely associated, are as follows:—

To survey provincial health services	The Health Survey Grant
To aid in new hospital construction	The Hospital Construction Grant
To improve public health facilities and services in rural and urban Canada	
To intensify efforts to combat mental illness, tuberculosis, cancer, venereal disease, rheumatism and arthritis, and crippling conditions in children.	The Mental Health Grant The Tuberculosis Control Grant The Cancer Control Grant The Venereal Disease Control Grant The Crippled Children Grant
To increase the number of trained workers	The Professional Training Grant
To encourage health research	The Public Health Research Grant

Background of the Program.—While the Canadian constitution places primary responsibility for public health matters upon the provinces, the nature of particular health problems and the fiscal needs of the provinces have combined to bring about federal participation in certain health areas. A federal Department of Health was established in 1919 and the Government began in that year to extend conditional grants-in-aid to the provinces to assist in the control of venereal disease. This grant was generally believed to have been successful in achieving its object of promoting more effective provincial control programs and, although it was discontinued for a few years during the 1930's, the grant was favourably reported upon by the Rowell-Sirois Commission in 1940. In a study prepared for the Commission, it was concluded that federal grants-in-aid of the type established for venereal disease control were required to support broad public health programs which should include sustained attacks upon tuberculosis, mental illness, venereal disease and cancer, together with expanded services in the fields of general public health, maternity care and industrial hygiene.

A parallel concern about the economic aspects of illness led at various times to Parliamentary examination of health insurance as a means of meeting the costs of medical services. By the early 1940's, active consideration was being given to plans for health insurance combined with federal grant support for the training of health workers, for research, and for programs to control a number of specific diseases. In 1941, a Bill was drafted in which public health grants were made conditional upon the adoption by the provinces of health-insurance measures. This approach was retained throughout the intensive examination of the question by the Special Committee on Social Security of the House of Commons in 1943 and also appeared, somewhat modified, in the Proposals of the Government of Canada for the Dominion-Provincial Conference on Reconstruction held in 1945. Proposals set out four types of financial assistance which the Federal Government was prepared to make available to the provinces as part of a general program of reconstruction including: a planning and organization grant to help in the preliminary work of organizing provincial health-insurance systems; health-insurance grants designed to give the provinces financial aid in establishing comprehensive insurance programs; low-cost loans for hospital construction; and grants of varying amounts for such purposes as general public health, tuberculosis control, mental health, venereal-disease control, crippled children, blindness, professional training and public health research.

As a result of the failure of the Conference to reach general agreement, the federal health proposals were not acted upon. In 1948, however, the Government brought forward, as the National Health Grant Program, ten grants which incorporated, in revised form, three of the four types of assistance offered in the Proposals of 1945. The availability of the grants to the provinces was not made contingent upon the provinces establishing health insurance. The Prime Minister described the grants as "fundamental pre-requisites of a nation-wide system of Health Insurance", but stated that they were "essential steps in the development of adequate health services . regardless of whether or not Health Insurance was eventually to be introduced". After five years of experience in the administration of these grants it was considered appropriate to add three new grants in 1953.

Administration of the Program.—Upon its inauguration, the National Health Grant Program became a responsibility of the Minister of National Health and Welfare who assigned its day-to-day administration to the Directorate of Health Insurance Studies. Legislative authority for the Program is derived from the Department of National Health and Welfare Act, from various Appropriation Acts and, more specifically, from annual Orders in Council. During the first two years of the Program, Orders in Council were approved for each of the ten grants individually but, since 1950, the Orders have appeared as General Health Grants Regulations which, in addition to setting forth the provisions governing the specific grants, contain regulations affecting the grant program in general. Under the authority of the Regulations, the Minister has prescribed a number of definitions, forms and conditions, and these, in 1951, were brought together in a Reference Manual which outlines policy provisions and administrative procedures.

The administration of the Program consists, in simple terms, of allocating to the provinces, on a project basis, the funds available under the specific grants. Projects submitted by the provinces are required to meet the conditions outlined in the Regulations, which are designed to secure the aims of the particular grants without impairing the provinces' control of provincial health administration. Provincial autonomy in health planning is, in particular, assured in the provision that the projects submitted should form part of long-term provincial plans and programs in the various health fields. The additional requirements associated with the grants are largely related to matters of financial accounting, adequate record-keeping and the submission of periodic progress reports relating to the effects of the grants in extending and improving health services and facilities.

The projects require the approval of the Minister of National Health and Welfare who, in the process of approval, has the advice of Departmental consultants in a number of health fields and outside advice from health authorities in such agencies as the Canadian Tuberculosis Association and the National Cancer Institute. In the broader aspects of administration, the Minister may consult with the Dominion Council of Health which is composed largely of senior provincial health officials, thus bringing provincial points of view into deliberations on health-grant policies.

Following the Minister's approval of a project, federal funds in the amount designated become available for carrying out that project. The "repayment method" is normally followed with federal funds being paid periodically on evidence of provincial expenditure in approved amounts for approved purposes. Amendments to projects are permitted, subject to the usual approval procedure.

While the administration of the Program continues to be based primarily on the individual grants, the Regulations since 1951-52 have permitted the transfer of funds unexpended by a province under one grant to supplement another which has been fully expended. This provision, designed to give the Program increased flexibility on a year-to-year basis, relates to all of the ten initial grants except the health survey, hospital construction and public health research grants.

Financial Terms and Extent of the Ten Original Grants.—In relation to the financial terms of the grants, it may be stated that the entry of Newfoundland into Confederation resulted in increases being made to all grants in the year ended Mar. 31, 1950, and that further increases were made to most of the grants beginning in the year ended Mar. 31, 1953, through the extension of their provisions to the Yukon and Northwest Territories. Other financial terms of the ten original grants, in summary form, are as follows:—

### Health Survey-

A non-recurring grant of \$645,180, divided on the basis of \$5,000 to each province and the balance allocated according to population, with no province receiving less than \$15,000.

### Hospital Construction-\*

Initially \$13,000,000 available annually. In the year ended Mar. 31, 1953, \$30,673,733 was available, made up of the annual amount of \$13,366,819 together with \$17,306,914 brought forward from earlier years. The grant is allocated to the provinces, solely on the basis of population, for hospital construction at \$1,000 per active treatment bed or bed equivalent (three bassinets each contained in a separate cubicle, 300 sq. feet in a community health centre or 300 sq. feet in a combined laboratory), \$1,500 per chronic bed, and \$500 for a nurses' living quarters bed. The province must match or exceed the federal contribution which in no case exceeds one-third of the total cost.

### General Public Health-

This grant, allocated solely on a basis of population, began at 35 cents per capita in the year ended Mar. 31, 1949, and increased at the rate of 5 cents per capita annually to a maximum of 50 cents per capita reached in the fiscal year 1951-52. Maximum available in 1952-53, \$7,085,501.

### Mental Health-

The initial basis was \$4,000,000 available in the year ended Mar. 31, 1949, increased biennially by equal amounts to reach \$7,000,000 at the beginning of the seventh year; maximum available in the fiscal year 1952-53 was \$6,203,652, divided on the basis of \$25,000 to each province, with the balance allocated according to population.

### Tuberculosis Control-

\$3,000,000 available in the year ended Mar. 31, 1949, increased to \$4,000,000 at the commencement of the third year of the Program. Maximum available in the fiscal year 1952-53, \$4,239,531—\$25,000 to each province with balance allocated 50 p.c. on the basis of population and 50 p.c. on the basis of average number of deaths from tuberculosis in each province in the previous five years.

### Cancer Control-

\$3,500,000 allocated solely on the basis of population, the Federal Government matching the provincial government expenditure. Maximum available in the year ended Mar. 31, 1953, \$3,598,795.

### Venereal Disease Control-

\$500,000 allocated on the basis of \$4,000 to each province and the balance according to population, the Federal Government matching the provincial government expenditure. Maximum available in the year ended Mar. 31, 1953, \$518,099.

### Crippled Children-

\$500,000 allocated on the basis of \$4,000 to each province and the balance according to population. Maximum available in the year ended Mar. 31, 1953, \$519,898.

<sup>\*</sup> The new financial provisions of the Hospital Construction Grant, beginning in the fiscal year 1953-54, are given at p. 220.

### Professional Training-

\$500,000 allocated on the basis of \$4,000 to each province and the balance according to population. Maximum available in the year ended Mar. 31, 1953, \$516,300.

### Public Health Research-

Commenced at \$100,000 and increased by the same amount annually to a maximum of \$500,000 in the year ended Mar. 31, 1953. Maximum available in 1952-53, \$512,900. Allocated to provinces and universities, or research bodies sponsored by provinces, for projects recommended by the Dominion Council of Health and approved by the Minister.

Shortages of qualified personnel and other essential factors in the development of health programs have limited the utilization of the funds made available by the Federal Government under the National Health Grants Program. In each year since the establishment of the grants, however, their utilization has increased. The annual amounts of expenditure were as follows: 1948-49, \$7,600,000; 1949-50, \$15,500,000; 1950-51, \$18,700,000; 1951-52, \$23,900,000; and 1952-53, \$27,300,000. The utilization of the available funds, by grant, over the five-year period is presented in Table 1.

 Amounts Available to the Provinces and Amounts and Percentages Expended under the National Health Grant Program, by Grant, Years Ended Mar. 31, 1949-53.

Grant	Amount Available	Amount Expended	Percentage Expended
	\$	\$	p.c.
Health Survey	645, 180	521,059	80-8
Hospital Construction	66,389.0481	35,555,155	53-6
General Public Health	29,753,301	13,088,841	44-0
Mental Health	23,638,023	12,969,829	54.9
Fuberculosis Control	18,868,145	16,305,898	86-4
Cancer Control	17,874,088	7,745,342	43.3
Venereal Disease Control	2,566,643	2,232,501	87.0
rinnled Children	2,568,442	1,276,515	49.7
Professional Training	2,564,844	2,170,352	84.6
Public Health Research	1,536,748	1,158,179	75-4
Totals	166,404,462	93,023,670	65.9

<sup>&</sup>lt;sup>1</sup> Adjusted to exclude a carryover of unexpended funds from earlier years of the Program.

The Grants Initiated in May 1953.—The three new grants launched in May 1953 were described by the Minister of National Health and Welfare as "logical extensions of the National Health Program" decided upon in the light of experience gained in the previous five years and required to bridge remaining gaps in Canada's health services.

The Child and Maternal Health Grant.—Infant mortality in Canada, though showing annual improvement, has continued to be high as compared with that of other Western nations and has indicated the need of improved Canadian services for mothers and infants. The aim of the Child and Maternal Health Grant is to close gaps in existing services by offering funds to the provinces on a basis related to their indicated needs. A rather wide latitude is to be allowed in the type of projects that might be approved under this grant, including the following possibilities: more clinics where mothers can get guidance on child birth and infant care; more follow-up home nursing visits; expanded services given by provincial divisions of child and maternal health; better educational services for expectant mothers; more medical research on pregnancy; improved equipment for maternity wards in hospitals; and more services for mothers and children in hospital out-patient departments and community health centres.

The Medical Rehabilitation Grant.—Many programs for the rehabilitation of disabled persons have been developed in Canada and a number of these have received federal aid. The programs have been mainly concerned with specific groups and not until the formation, under Federal Government auspices, of the National Advisory Committee on Rehabilitation in 1951, were attempts made to formulate comprehensive plans for rehabilitation. As a major means of closing gaps in existing services, the Committee recommended a federal grant to assist provincial and voluntary programs. The Medical Rehabilitation Grant was established to help achieve this end. It is anticipated that the projects under the grant will be of three major types:

- (1) For the professional training of rehabilitation workers, including physicians, psychiatrists, physiotherapists, occupational therapists, social workers, nurses, remedial gymnasts and rehabilitation officers.
- (2) For rehabilitation equipment, including such items as electrotherapy apparatus, Hubbard baths, whirlpool baths, remedial gymnastic apparatus and other special equipment used to correct disabilities.
- (3) For rehabilitation health services, including the conducting of case-finding surveys, the employment of necessary professional staff for hospitals and rehabilitation centres, the setting-up of units where crippled persons can get help with their appliances and the establishing of other specialized clinics and units essential in a well-balanced program for the disabled.

Laboratory and Radiological Services Grant.—Diagnostic facilities and services, which are of increasing importance in modern medical practice, have been rapidly expanded in recent years, often with the help of various of the national health grants. While such services and facilities are at a high level in a number of centres, many Canadian communities require assistance towards their establishment or improvement. The Laboratory and Radiological Services Grant is designed to provide such assistance through the training of radiologists and other personnel, the extension of laboratory facilities, the provision of diagnostic equipment and the maintenance of laboratory and radiological services.

Financial Extent of the New Grants.—The establishment of the new grants involves a federal financial commitment of \$42,000,000 over a period of five years. The total commitment of the whole National Health Grant Program is not, however, increased by all of this amount. All expenditures under the Health Survey Grant were made in the first five-year period and that grant is non-recurring. A more significant saving is achieved through reducing, by one-half, the Hospital Construction Grant, a reduction made possible by the high rate of construction between 1948 and 1953. After provision is made for completing projects approved during the first five-year period, it is proposed to make \$6,850,000 available annually for new construction.

The three new grants differ in the amounts they make available to the provinces and in the conditions governing projects carried out under them. As a common feature, however, each of the grants increases in amount following the first year of its operation; the Medical Rehabilitation Grant doubles the second year, the Child and Maternal Health Grant doubles at the beginning of the second and third years, and increases in the Laboratory and Radiological Services Grant occur annually for five years. The amounts available over the period are given in Table 2.

2.—Amounts	Available	under	the	New	National	Health	Grants,	Years	Ended
			M	ar. 31,	1954-58				

Year Ended Mar. 31—	Child and Maternal Health	Medical Rehabili- tation	Laboratory and Radiological Services	Total	
	\$	S	\$	\$	
954 955	500,000 1,000,000	500,000 1,000,000	4,300,000 5,100,000	5,300,000 7,100,000	
956	2,000,000	1,000,000	6,000,000	9,000,000	
957 958	2,000,000 2,000,000	1,000,000 1,000,000	6,800,000 7,800,000	9,800,000 10,800,000	
Totals	7,500,000	4,500,000	30,000,000	42,000,000	

The financial terms of the three grants are as follows:-

### Child and Maternal Health-

Specified sums are extended to the Yukon and Northwest Territories and \$10,000 is made available to each of the provinces; the balance is allocated 50 p.c. on the basis of the average number of births over the previous five years and 50 p.c. on the basis of the average number of infant deaths over the previous five years.

### Medical Rehabilitation-

Specified sums are extended to the Yukon and Northwest Territories and \$10,000 is made available to each of the provinces with the balance allocated on the basis of population. Projects submitted by the provinces must form part of a co-ordinated program, bringing together components of the rehabilitation process. Training and equipment projects are eligible for federal payment in full amounts spent by the province; provision-of-service projects are payable by the Federal Government to the extent of one-half the amount expended by the province. While the terms do not specify that provincial services must be maintained at the level existing at the time the grant is established, emphasis is placed on the fact that it is not intended to make rehabilitation a federal field of action but rather to assist the provinces in meeting what is, basically, their responsibility.

Laboratory and Radiological Services-

Distributed solely on a basis of population beginning at 30 cents per capita and increasing by five cents per capita per year for five years. Where services are concerned, the grant is on a matching basis, the costs of approved projects being shared equally by the Federal Government and the province; where training and equipment is involved, payment of the full amount expended may be paid from the federal grant. While the aim is to encourage extension of services, it will also assist the provinces in improving their existing services. The terms of the grant require that these be maintained at at least the standard and to the extent existing at Mar. 31, 1953.

Health Advances with National Health Grant Support.—Since the inauguration of the Program, it has been possible with the national health grant expenditures and with parallel increases in health expenditures by provincial and local governments, to achieve new levels in the extent and quality of Canadian health services. The progress made with the assistance and stimulation of the national health grants extends into many health areas and takes many forms. A partial summary of achievements follows.

Extensive surveys of provincial health personnel, facilities and services have been undertaken by all provinces. Information gained has already resulted in numerous program changes and, as the process of collating and analyzing the data from these surveys and other sources, such as the Canadian Sickness Survey, continues, a basis will be provided for further health planning in Canada.

Federal hospital construction grants have supplemented provincial and local funds in the construction of over 400 hospitals and hospital additions including general, mental, tuberculosis, chronic and convalescent hospitals. Under the

grants during the five-year period the construction was completed, or approved, of 46,000 beds, nearly 6,000 bassinets, approximately 5,700 nurses' beds and space in community health centres and combined laboratories exceeding 2,600 bed equivalents. Hospital facilities have been established for the first time in 144 communities across Canada.

Federal funds under the various grants have made possible the training of about 5,000 health workers. By subsidizing provincially sponsored courses and educational facilities in universities, hospitals and other training centres and by providing living allowances, book and travel allowances and tuition fees to individual students, the health grants have helped to reduce the deficiencies in trained personnel that have retarded all aspects of Canadian health progress. Training has been authorized and supported under nearly all of the grants and the large number of categories of persons trained reflects the broad scope of the programs receiving grant aid. Nurses of various types have constituted the largest single group receiving training, followed by physicians, sanitation personnel and social workers. A large number of training projects have related to hospital administration and to the professional and technical skills required in modern hospital practice. Through funds provided for training and for the extension of services, about 4,600 health workers have been employed on provincial and local staffs.

General public health services have been greatly extended. The organization of local health units has been assisted by the grants and, owing to the rapid increase of the past five years, health-unit services are available in areas covering 60 p.c. of the Canadian population. Provincial and municipal health facilities and services have been strengthened by the purchase of additional technical equipment and the extension of both preventive and treatment services.

The grants have enabled the provinces to intensify their campaigns against the major health hazards. Mental health services have been notably extended. During the five years of the health grants, there has been an increase from 17 to 77 in the number of mental health clinics in operation and a proportionate increase has taken place in measures for the prevention, diagnosis and early treatment of mental illness. Tuberculosis control has presented a particularly encouraging trend. Vigorous case-finding programs and the use of new drugs have served to reinforce an established trend and, in the period under review, have reduced the death rate from this disease by almost one-half. Cancer programs, supported by federal, provincial and voluntary funds, have also grown at a rapid rate and have provided diagnostic or combined diagnostic and treatment services to more than 100,000 persons. Provincial venereal disease control programs, financed jointly by the Federal and provincial governments, have been able to utilize modern advances in treatment and thereby to achieve new success in reducing the incidence of the disease; the decline between 1948 and 1953 was almost 50 p.c. Programs to alleviate crippling conditions in children, to arrest and cure cases of arthritis and rheumatism and to meet the challenge of other diseases have developed as the additional staff and facilities have been made available through the grants.

There has been a significant increase in health research in Canada because of the additional federal funds provided. Projects approved under the Public Health Research Grant and a number of other grants have covered a wide range of health areas including public health administration, sanitation, industrial hygiene, nutrition, geriatrics, clinical medicine and pathology. A considerable number of

additional projects have been concerned with specific diseases, particularly mental illness and tuberculosis and including, as well, blindness, alcoholism, cardiac disease and other illnesses.

# PART I.—PUBLIC HEALTH\*

The planning, supervising and financing of public health and medical care services in Canada rest mainly with the provinces though the actual administration of services is conducted, in most provinces, by municipal and other local authorities. The Federal Government provides consultative and specialist services, assists in the financing of provincial health activities through the National Health Grant Program, and also maintains services for special groups such as veterans and Indians. The functions of the Federal Government are described in Section 1, provincial and municipal health activities are reviewed in Section 2, and hospital statistics are given in Section 3.

# Section 1.—Federal Health Activities

Federal participation in health matters is largely centred in the Department of National Health and Welfare, with certain important programs being administered by the Department of Veterans Affairs, which provides medical and hospital care to veterans chiefly for disabilities resulting from war service; the Department of National Defence, responsible for the health of the Armed Forces; the Medical Division of the National Research Council, which administers grants for medical research; and the Dominion Bureau of Statistics, responsible for the collection and compilation of health statistics. The Department of Agriculture has certain responsibilities in connection with food production.

Under the Department of National Health and Welfare Act of 1944, the Department is responsible for the administration of certain statutes, for research in health matters, for the carrying out of international health obligations undertaken by Canada and, in co-operation with the provinces, for the preservation and improvement of public health.

Under the Quarantine Act, the Department maintains a maritime and aerial navigation quarantine service against entry of infectious diseases; it advises on the administration of sections of the Immigration Act dealing with health, and conducts, in Canada and overseas, the medical examination of applicants for immigration. It also provides care for sick mariners as required under Part V of the Canada Shipping Act, and has certain national and international responsibilities with regard to the pollution of boundary and other waters.

Under the Food and Drugs Act, the Proprietary or Patent Medicine Act and the Opium and Narcotic Drug Act, the Department is responsible for the control of the safety and purity of food and drugs; the registration, preparation and sale of proprietary or patent medicines; and control of the import, export and distribution of narcotic drugs.

The Department advises on the visual eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for selected recipients of these allowances; it is responsible

Sections 1 and 2 of this Part were prepared by the Research Division, Department of National Health and Welfare, Ottawa.

for supervision of health conditions for persons employed on federal public works, as provided under the Public Works Health Act, and maintains a program for the conservation and promotion of the health of civil servants and other Federal Government employees. Medical advisory services are provided to the Department of Transport in all matters pertaining to the safety, health and comfort of air crew and passengers.

The National Health Grant Program.—This Program is dealt with in detail in the special article at pp. 215-223.

Federal Grants to Non-governmental Organizations.—Grants are paid directly to the following non-governmental agencies engaged in health work: the Canadian Red Cross Society, the Canadian Tuberculosis Association, the Victorian Order of Nurses, the St. John Ambulance Association, the Canadian Paraplegic Association, the Canadian Mental Health Association, the Health League of Canada, the Canadian Public Health Association, the Canadian National Institute for the Blind, L'Association Canadienne-Française des Aveugles, L'Institut Nazareth de Montréal and the Montreal Association for the Blind.

Federal grants are also provided under the National Health Grant Program to assist in the operation of special treatment services carried out in a number of provinces by voluntary organizations, such as the Canadian Arthritis and Rheumatism Society and various agencies engaged in the rehabilitation of crippled children.

Medical Care of Indians and Eskimos.—Health services for Indians and Eskimos are administered by the Department of National Health and Welfare. In 1953, 18 hospitals, 33 nursing stations and 62 other health centres were operated by the Department which also reimburses, on a per diem basis, the mission and other non-federal hospitals that provide accommodation for Indians and Eskimos. Full-time departmental medical officers serve the larger Indian reserves and parttime officers serve the smaller bands. In some cases, fees are paid to local physicians for services to Indians.

Consultative and Co-ordinating Services.—The principal co-ordinating agency in the health field in Canada is the Dominion Council of Health, which is composed of the Deputy Minister of National Health who serves as chairman, the Chief Health Officer of each province and five other persons. The Council advises the Minister of National Health and Welfare on the formulation of policy. It is largely responsible for the development of a co-operative health program and for the establishment of services by the Federal Government to assist the provincial health departments. Federal-provincial committees of the Council deal with specific aspects of public health.

Certain Divisions of the Department provide technical information and advice concerning the evaluation of programs and procedures and the establishment of standards in various health fields, and conduct surveys in research and development both independently and in co-operation with other departments and agencies. These Divisions include Blindness Control, Child and Maternal Health, Occupational Health, Nutrition, Mental Health, Dental Health, Epidemiology, Hospital Design, the Laboratory of Hygiene, Information Services, and Research.

# Section 2.—Provincial and Municipal Health Activities

Health services in the provinces are administered in different ways but provincial functions commonly include central planning and administration; the operation of special programs affecting the entire province in such fields as cancer, mental health, tuberculosis and laboratories; consultant service to local authorities; the administration of regulations governing local services; the provision of basic services in areas without municipal organization; and participation in the work of local health units in areas where that type of administration has been developed.

At the local level, responsibility for services varies widely, but municipalities in most provinces provide a range of basic public health services and participate in the costs of hospital care for indigents. In recent years there has been a rapid growth of health services in smaller centres and rural areas through the organization of health units with full-time staff serving counties or other combinations of local government areas. This type of organization, which concentrates on a generalized health program that includes public health nursing, sanitary inspection, communicable disease control, child, maternal and school hygiene and health education, has been introduced in most provinces; financial and administrative responsibility is shared by the provincial and local authorities involved. Despite a trend towards greater provincial participation in these local units, many remain under local administration as do the highly developed health departments found in the larger cities. Outside of fully organized health-unit areas, municipalities usually appoint part-time medical officers and other personnel while the provincial authorities assume responsibility in the areas lacking municipal organization.

Newfoundland.—Health measures in Newfoundland are centrally administered by a Department of Health. Its main functions include the operation of tuberculosis and communicable and venereal disease control programs, nutrition and sanitary inspection services, and the provision, on a prepayment basis, of medical, hospital and nursing care in certain regions.

The Provincial Tuberculosis Dispensary at St. John's provides free diagnostic and treatment services and acts as the centre for tuberculosis control. The Province subsidizes separate tuberculosis control programs conducted in the northern areas by the International Grenfell Association and the Notre Dame Bay Memorial Hospital, and assists the Newfoundland Tuberculosis Association, which maintains a sea-borne X-ray unit, with surveys in other areas.

Free treatment services and drugs for venereal disease are available throughout the Province through full-time and part-time district medical health officers and public health nurses. A school health program includes educational work and such activities as the distribution of chocolate milk-powder and cod-liver oil.

The Department operates a general hospital, a tuberculosis sanatorium and a hospital for mental and nervous diseases all at St. John's and has recently opened a new provincial sanatorium at Corner Brook. Hospitals operated by voluntary agencies receive per diem payments for departmental cases and, in certain outlying areas, substantial provincial grants.

The "cottage hospital" scheme operates on a voluntary prepayment basis and is designed to provide hospital service to approximately 150,000 and domiciliary medical care to about 100,000 of the population of outlying areas. Services are provided through 17 small provincially operated hospitals with a total capacity of about 430 beds and equipped in most cases with laboratory and X-ray facilities.

Medical officers and nursing stations in adjoining communities supplement these services. In most cottage hospital areas, prepayment of \$15 annually for the head of each family and \$7.50 for single adults entitles subscribers to out-patient diagnosis and treatment, to home visits by the doctor and to hospitalization, as required. When necessary, hospitalized cases may be referred to the general hospital at St. John's or to hospitals outside the Province. Hospitalization for maternity is provided only in complicated cases. In three areas, additional premium payments are required to purchase medical services outside of hospitals. In districts not served by doctors, nursing services are provided on payment of a small annual fee. In general, the cost of medical and hospital care for indigents is borne by the Province, but beneficiaries under such programs as federal Old Age Security are usually required to pay premiums in cottage hospital areas.

Prince Edward Island.—The Health Branch of the Department of Health and Welfare includes Divisions of Public Health Nursing, Nutrition, Sanitary Engineering, Dental Health, Laboratories, Venereal Disease Control, Cancer Control, Tuberculosis Control, Mental Health and Vital Statistics.

Generalized public health nursing services are conducted by ten district nurses, and sanitary services are provided under the direction of a public health engineer. Free dental treatment is available for needy children at permanent clinics at Charlottetown and Summerside and for children in Grade I classes in rural areas through a mobile unit. Laboratory facilities are being decentralized through the establishment in the larger hospitals of branches that remain under the supervision of the Central Laboratory at Charlottetown. Venereal disease clinics are operated at Charlottetown and Summerside.

Free diagnostic services for tuberculosis are provided through five clinics maintained by the Division of Tuberculosis Control and through a mobile unit which operates under voluntary auspices. At the Provincial Sanatorium at Charlottetown, streptomycin for treatment, a rehabilitation program of training, and an employment-placement service are available free of charge to all patients. Sanatorium care, though not unqualifiedly free, is heavily subsidized by the Province. Free diagnostic services for cancer are given at a clinic located at Charlottetown. Hospitalization for diagnosis is provided without charge for a period of three days for indigent cancer patients.

A mental health diagnostic clinic chiefly for adults has been opened at Charlottetown and a speech-therapy service has been established for school children with speech and hearing impairments. Patients suffering from the effects of poliomyelitis may receive hospitalization and special treatment services at the Polio Unit of the Provincial Sanatorium, Charlottetown.

Per diem grants are made to general hospitals for all patients and the Province also defrays the cost of operating the Falconwood Mental Hospital.

Nova Scotia.—The principal Divisions of the Department of Public Health are Laboratories, Neuropsychiatry, Hospitals, Vital Statistics, Dental Hygiene, Nutrition, Nursing Service and Sanitary Engineering. In addition, a provincial program of generalized public health services is administered through eight local health divisions, each staffed by public health nurses and sanitary inspectors under the supervision of a full-time divisional medical health officer. The City of Halifax operates its own Health Department.

Laboratory services, including bacteriological and other examinations and milk and water analyses, have been improved and extended through the work of the Provincial Central Laboratory at Halifax and branch laboratories at Sydney and Kentville. Laboratory tests and field investigations are also conducted by the Section of Industrial Hygiene in the Division of Laboratories. Streptomycin for tuberculosis and penicillin for venereal disease cases are provided free.

Three mobile dental clinics provide treatment for children in rural areas; field psychiatrists provide mental guidance and consultant services in two regions and mobile chest X-ray units provide diagnostic services for tuberculosis. At the Victoria General Hospital, Halifax, the Province operates an in-patient and out-patient psychiatric service, a cancer clinic and a Kenny treatment clinic for poliomyelitis.

Five provincially owned hospitals are operated under the direction of the Department—Victoria General Hospital, the Nova Scotia Hospital for mental illness, and three tuberculosis sanatoria. All treatment for tuberculosis and treatment for mental illness in the Nova Scotia Hospital is given without charge. All approved general hospitals receive a provincial per diem subsidy for each patient.

Recipients of blind persons' allowances and mothers' allowances are eligible for limited medical services from the Medical Society of Nova Scotia, including physician's care in the home and office but excluding hospital attendances, surgery, and medical aids or appliances. Under the Hospital Act of Nova Scotia, persons in any of the public-assistance categories as well as other indigents are entitled to receive hospitalization as a municipal responsibility.

New Brunswick.—The Health Branch of the Department of Health and Social Services includes the following Divisions: Hospital Services and Cancer Diagnostic Clinics, Laboratories, Public Health Nursing, Communicable and Venereal Disease Control, Tuberculosis Control, Maternal and Child Health, Dental Health, Mental Health, and Sanitary Engineering.

Medical health officers and most public health nurses are employed by the Province while other local health services are provided through 16 local sub-districts, each corresponding to a county and each having a board of health composed of members appointed by municipal councils. Responsibility for the various local public health functions is divided between the Province and the boards of health. Usually, from three to five sub-districts are serviced by a district medical health officer assisted by public health nurses. In some cases, locally administered nursing services are subsidized by the Province.

Pathological, bacteriological, serological and chemical tests are provided by the Provincial Laboratories at Saint John and Fredericton which also supervise the distribution of vaccines, sera and bacteriologicals, including free immunizing agents, drugs for the treatment of venereal diseases and insulin for indigent diabetics. A Mobile Hygiene Laboratory conducts milk and water analyses during the summer months.

Free X-ray and diagnostic services for tuberculosis are provided at eight clinics in larger centres and physicians' fees are paid for pneumothorax treatments for convalescent tuberculous patients. The Health Department supervises and provides free treatment and care in three privately operated and two provincially owned sanatoria. Ten cancer diagnostic clinics provide free diagnosis and free tissue-examination service. X-ray and radium treatments are provided without

charge in four of the larger hospitals to patients who come under the supervision of the cancer clinics. Acute and immediate post-paralytic cases of poliomyelitis also receive free hospital treatment and grants are made to the Junior Red Cross to provide free treatment for other crippling conditions in children.

A mental health program includes the operation of three preventive and diagnostic clinics and provides special psychiatric training for teachers on regular school staffs in the larger centres. Hospitalization for mental illness is available at the Provincial Mental Hospital at Saint John.

Provincial per diem grants are paid, on behalf of all patients, to approved hospitals.

Quebec.—The Ministry of Health maintains the following Divisions: County Health Units, Sanitary Engineering, Epidemiology, Laboratories, Demography, Hospitals for Mental Diseases, Public Charities, Industrial Hygiene, Nutrition, Venereal Disease, Tuberculosis, Health Education, and Medical Services to Settlers.

The Division of County Health Units supplies services through 67 county and multi-county health units covering more than 60 p.c. of the population of the Province. The maintenance and operation of these units, each with a full-time medical health officer assisted by public health nurses and sanitary inspectors, is the responsibility of the Ministry of Health, with small local financial contributions. In addition, full-time health departments operated by the larger cities serve more than one-third of the provincial population. Drugs supplied by the Provincial Department to physicians and health units include vaccines, sera, streptomycin for sanatoria patients and penicillin for venereal disease. Laboratory services, including bacteriological and other analyses, are available to physicians and health units at the Central Laboratory, Montreal. Assistance is given to agencies operating clinics or dispensaries for prevention, case-finding and treatment of tuberculosis. The Department pioneered with the initiation in 1949 of BCG immunization against tuberculosis administered to new-born infants in hospitals and available to children generally through the health units.

The Department operates public mental institutions and supervises tuberculosis sanatoria which are operated chiefly under private and religious auspices and in which the majority of patients receive care without charge.

The Medical Services to Settlers Division provides free nursing and physician services to residents of isolated areas. The staff consists of salaried nurses and parttime physicians paid on a fee-for-service basis. Services given include obstetrical care, examinations, vaccinations and immunizations, and emergency medical care.

No specially organized program of medical care exists for public assistance recipients in Quebec, although free care to indigents is available from a variety of dispensaries, clinics and other charitable agencies. Under the provisions of the Public Charities Act, free public hospital care is provided to persons unable to pay, with about 50 p.c. of the cost assumed by the Province, 15 p.c. by the responsible municipality and the remainder by the recognized agency providing the service.

Ontario.—The Department of Health carries on public health services through the following Divisions: Public Health Administration, Public Health Nursing, Maternal and Child Hygiene, Dental Services, Epidemiology, Venereal Disease Control, Tuberculosis Prevention, Industrial Hygiene, Laboratories, Medical Statistics, Mental Hygiene and Ontario Hospitals, Nurses' Registration, Public and Private Hospitals, and Sanitary Engineering.

Local public health services are available to more than one-quarter of the population through 27 health units administered locally but with consultative services and financial support supplied by the Department. Elsewhere, local services are organized through full- or part-time municipal health departments, and by the Province in unorganized territory. Provincial grants are made to local boards of health for school dental services and venereal disease clinics.

Public health legislation affecting water supplies, milk and food and other environmental sanitation is administered by the Department. Maternal and child health care is provided through clinics and, in addition, any expectant mother may receive one free pre-natal examination. Systematic dental examinations combined with instruction in dental hygiene have been initiated in five local health units, and a number of school dental-treatment clinics have been established, financed largely by municipalities. In northern areas, two railway dental cars operated by the Province provide treatment and three mobile units operated by the Red Cross also conduct an educational and treatment service in less-populated districts.

The Central Laboratory and 15 branch laboratories (nine provincially operated and six subsidized) carry out bacteriological and other examinations for clinics, hospitals and private physicians. Biologicals and other materials for the prevention and control of communicable diseases, insulin for indigent diabetics and streptomycin for tuberculous patients are distributed free of charge by the Department. Chest clinics, held in approximately 200 centres, are financed mainly through funds of local tuberculosis associations and the Department. The Province pays the major portion of the cost of maintaining patients in sanatoria. Cancer control is administered by the Ontario Cancer Treatment and Research Foundation and provincial grants are given to this organization to subsidize diagnosis and treatment in eight clinics. Care is provided for the mentally ill in 17 institutions operated by the Province. Special units are concerned with the care of epileptics, the tubercular and the criminally insane. In addition, the Province operates four travelling mental health clinics. A provincial hospital for alcoholics and a treatment clinic have recently been opened.

A formal arrangement between the Province and the Ontario Medical Association makes limited medical services available to the recipients of all types of public assistance, including former means-test old age pensioners now receiving the universal pension, and persons receiving old age assistance, blindness allowances, mothers' allowances, and unemployment relief. New applicants for the universal old age pension may qualify under the medical plan on a means-test basis. Recipients of Ontario's disabled persons' allowances (for permanently disabled persons 18 to 65 years of age) have also been included since the inauguration of this new categorical program in July 1952. The medical program includes the services of a physician in his office or the patient's home, necessary consultations, home confinements, and emergency drugs. With the exception of unemployment relief cases where the costs are shared equally by the Province and the responsible municipality, the Province assumes the costs of the monthly per capita payments made for such services.

Provincial per diem grants, which vary according to hospital size, are paid to all public hospitals on the basis of public-ward bed days. Special per diem grants are also made by municipalities on behalf of hospitalized patients, including any persons under the public assistance or pension schemes who can qualify for free hospitalization.

Manitoba.—The Department of Health and Public Welfare consists of four main Divisions: General Administration, Health Services, Psychiatric Services and Welfare Services.

Local preventive health services including local health units and diagnostic units are maintained and operated by the Health Extension Section of the Health Services Division, which recovers part of the costs from the municipalities served. Public health services, currently covering approximately one-third of the Province's population, are provided through 13 full-time units, each comprising a variable number of municipalities; another third of the population is covered by Winnipeg's health service facilities. In three health-unit areas, prepaid diagnostic X-ray and laboratory facilities have been organized. Outside the health-unit areas, the Provincial Nursing Service provides certain public health services.

Under a system of district organization for hospital and medical care, 34 hospital districts have been established; all but two contain at least one general hospital augmented in many cases by one or more medical nursing units. Municipal prepayment plans for medical care, provincially subsidized, operate in a number of districts.

Provincial mental institutions are operated at Winnipeg, Selkirk and Brandon and a school for the mentally defective at Portage la Prairie. Community mental health services are also conducted, including out-patient services at mental hospitals and child guidance clinics.

Provincially operated clinics provide preventive and treatment services for venereal disease. Tuberculosis control is administered by the Sanatorium Board of Manitoba and services include diagnostic and travelling clinics, chest X-ray surveys and a rehabilitation program. The Province assists in the program by maintaining a Central Registry of Tuberculosis and a follow-up service for discharged patients carried out by public health nurses. The cost of hospitalization and treatment in sanatoria is met by provincial grants and by payments from municipalities determined by the patient-days accrued by residents. The Manitoba Cancer Relief and Research Institute, which is subsidized by the Province, administers all cancer activities. A free cancer biopsy service is available and diagnostic services are provided to medically indigent rural residents. Radium and X-ray treatments are available without charge in rural areas and at a nominal charge in urban areas.

Laboratory services are provided through provincial laboratories at Winnipeg, Brandon and Portage la Prairie. In addition, the Department distributes, to doctors, hospitals and government agencies, penicillin and other drugs for the treatment of venereal disease, insulin and other biologicals for indigents and antibiotics for tuberculous patients.

The Provincial Government contributes a grant of one dollar per diem to hospitals and sanatoria for all public-ward patients and lump-sum grants to teaching hospitals.

Public assistance recipients in Manitoba are eligible for limited medical, dental and optical care, on a means-test basis, with almost the entire cost of services assumed by the responsible municipality. Hospital care is provided on a similar basis, municipalities making a payment of \$4 per day for persons with local residence, in addition to the provincial per diem grants. The Province assumes the cost of medical and hospital care provided to some indigents who are unable to establish local residence.

Saskatchewan.—The Saskatchewan Department of Public Health has five main Branches: Regional Health Services, Medical and Hospital Services, Psychiatric Services, Research and Statistics, and Administrative Services. The Health Services Planning Commission functions as an advisory and planning agency on major policy and administrative matters in the Department.

The Regional Health Services Branch includes divisions of communicable disease control, child health, laboratories, venereal disease control, nursing services, dental health, nutrition and sanitation. The Communicable Diseases Division distributes free vaccines and sera to doctors, health departments and hospitals and supervises immunization programs and poliomyelitis clinics at Saskatoon and Regina. The Child Health Division provides services for crippled children, including mobile consultation units and a rehabilitation centre for cerebral palsy patients. Public health laboratory services and the free distribution of certain drugs and biologicals are carried out by the Provincial Laboratories. Field services for venereal disease, tuberculosis, mental health and other public health programs are provided by the Nursing Services Division.

The Regional Health Services Branch is responsible for the organization of health regions which are administered by locally elected health boards although staff is appointed and financial assistance is provided by the Province. Eight of the proposed regions are currently in operation. In addition to the general public health services provided in all regions, the Swift Current Health Region has a prepaid medical-care plan including general practitioner, specialist and diagnostic care for all residents, and limited dental services for children. The plan is financed by personal and property taxes with some Provincial Government contributions. Dental health programs for children have been launched in two other regions.

The Medical and Hospital Services Branch is responsible for the operation of the Saskatchewan Hospital Services Plan, administers the program of medical services to most public assistance recipients, and supervises the operations of the municipal doctor programs and the Air Ambulance Service. In addition to free hospital care, complete medical as well as dental and optical services, including some auxiliary services, are provided to the recipients (including spouses) of the universal old age pension who were formerly in receipt of the old age means-test pension or who can qualify for the provincial supplementary allowance. Persons and their dependants receiving blindness or mothers' allowances, social aid cases and provincial wards are also eligible. Drugs are provided subject to deterrent charges paid by patients of 20 p.c. of the cost. The Provincial Government meets the expenses under the medical program and, for most of these cases, the hospital insurance tax as well. Provincial subsidies of 25 cents per capita per annum and equalization grants are paid to about 100 municipalities with municipal doctor contracts.

The Psychiatric Services Branch supervises psychiatric hospitals and administers community psychiatric services including clinics. Free care and treatment is given for all mentally ill and mentally defective persons requiring hospitalization. The tuberculosis control program, operated by the Saskatchewan Anti-tuberculosis League, includes preventive and treatment services, the latter financed by provincial per diem grants and municipal levies. The Saskatchewan Cancer Commission co-ordinates all cancer-control measures and operates publicly financed consultative, diagnostic and treatment clinics at Saskatoon and Regina.

Under the Saskatchewan Hospital Services Plan, which is a universal compulsory hospital-insurance scheme, most residents are eligible for in-patient public-ward care by the annual prepayment of a personal tax of \$10 by all persons 18 years of age or over or self-supporting, and of \$5 for each dependant under 18 years of age, with a maximum family tax of \$30. Additional funds are provided by the Province, as needed, from general revenue, including, since April 1950, one-third of the proceeds of a 3-p.c. sales tax.

Alberta.—The Department of Public Health includes Divisions of Communicable Disease, Public Health Education, Hospital and Medical Service, Municipal Hospitals, Laboratory, Public Health Nursing, Social Hygiene, Sanitary Engineering, Cancer Services, Mental Health, Tuberculosis Control, Entomology, Nutrition Services and Vital Statistics.

For the provision of local health services, the Province is divided into healthunit districts. The units are administered, with Departmental supervision and financial aid, by local boards of health composed of members appointed by local governments. Fourteen units are directed by full-time medical health officers and two units by public health nurses. Outside the health-unit areas, the Department operates a district nursing service in outlying communities, and is generally responsible for health services in unorganized territory. The larger cities have their own full-time health departments.

Free services regularly provided through Departmental clinics include diagnosis and treatment for venereal disease, medical examination for cancer, mental guidance and psychiatric examinations, X-ray examinations and tests for tuberculosis at stationary and travelling clinics, and mobile X-ray units. Provincial laboratory services at Edmonton and Calgary are available to all doctors and approved hospitals, and sera and biologicals are distributed for preventive work.

On the recommendation of provincial cancer clinics, surgical, X-ray and radium treatment, and hospitalization up to a limit of seven days for diagnostic purposes are provided by the Department. There are four provincial institutions for the mentally ill and one for mental defectives. Sanatoria care and treatment are provided without charge for all resident tuberculous patients and out-patient pneumothorax services are also available. The Department bears the cost of hospital and medical care for rheumatoid arthritic patients under 25 years of age and provides all residents suffering from poliomyelitis with medical, surgical and hospital care and rehabilitation services. Provision has been made to extend treatment services to cerebral palsy patients. All maternity patients satisfying resident requirements may be hospitalized for a 12-day period at provincial expense, and a provincial grant is authorized to assist those who receive maternity services at home.

By agreement with the Alberta College of Physicians and Surgeons and the Dental Association, full medical and dental and optical services are provided to all persons (and dependants) on the universal old age pension who were formerly in receipt of the means-test pension or who can qualify for the provincial supplementary allowance, as well as recipients of old age assistance or blindness or mothers' allowances. The Province assumes the costs involved and also reimburses the municipalities for 60 p.c. of their expenditure on any medical care provided to local indigents. An agreement exists with the Associated Hospitals of Alberta under which public assistance recipients receive standard public-ward care and necessary drugs, with the Province paying reduced per diem rates.

A municipal hospital program provides standard hospitalization for nearly all the population of the Province. The plan is operated at the local level, under provincial supervision, with costs distributed among the patient, the municipality and the Provincial Government. The patient is charged \$1 per day and the municipality pays the remainder of the basic ward rate, raised by a mill-rate tax on real property. The Provincial Government then reimburses the municipality for one-half of this amount.

British Columbia.—The Health Branch of the Department of Health and Welfare consists of three bureaux, two located at Victoria and one at Vancouver. The Bureau of Local Health Services at Victoria includes Divisions of Health Units, Public Health Nursing, Environmental Sanitation, Environmental Management, and Preventive Dentistry. The Central Administration Bureau, also at Victoria, includes Vital Statistics and Public Health Education. The Divisions of Tuberculosis Control, Venereal Disease Control and Laboratories form the Bureau of Special Preventive and Treatment Services, located at Vancouver.

The provision of local public health services is on a health-unit basis. These units are administered and staffed by the Province but are jointly financed by the Province and the local municipalities concerned. Fifteen of the 18 units planned are in operation. In isolated areas, Public Health Nursing Districts, staffed by public health nurses and sanitary inspectors, are forerunners of fully organized health units. The cities of Vancouver and Victoria have their own health departments; other centres have part-time medical health officers.

Special provincial public health services include tuberculosis clinics which provide free diagnostic and consultative service, venereal disease clinics which offer free diagnosis and treatment, and maternal and child health clinics operated by public health nurses which provide immunization and pre-natal and post-natal advice. Branch laboratories are maintained in various parts of the Province through which immunizing agents are distributed free of charge to doctors, health officers and public health nurses. Children's preventive dental programs, provincially subsidized, have been organized in seven local health units. In addition, child dental clinics with local dentists participating are established in 20 communities, the costs being met equally by the community and the Province. In connection with mental health services, the Province operates stationary and travelling child-guidance clinics. A clinic of psychological medicine at the provincial hospital at Essondale functions as an investigatory and active treatment centre for short-term patients.

Provisions for the treatment and control of cancer, which include a treatment centre and a nursing home at Vancouver, consultative clinics located throughout the Province and a free province-wide biopsy service, are the responsibility of the British Columbia Cancer Foundation, an official agent of the Provincial Government. The Province pays the operating costs of the Foundation and helps finance voluntary programs concerned with the physical rehabilitation of paraplegics and cerebral palsied children, the care and treatment of arthritics, and the maintenance of blood-transfusion services.

Institutions for the care of tuberculous and mental patients and infirmaries for persons with incapacitating disabilities are operated by the Province. Indigents are hospitalized in these institutions at public expense while other patients pay if financially able. Rehabilitation and visiting homemaker services are available to tuberculous patients.

Full medical and limited dental and optical care and some drugs are provided to all persons (and their dependants) receiving the universal old age pension who were formerly on the means-test old age pension or who can qualify for the provincial supplementary allowance, and to recipients (including dependants) of old age assistance, blindness or mothers' allowances, local relief and to certain child wards. The Provincial Government assumes the costs of hospitalization for all such persons. Where they hold municipal residence, the Province assumes 80 p.c. of the cost of the medical program, the remainder being shared by all municipalities on a population basis.

Public-ward hospital care is available to nearly all residents through a compulsory provincial prepayment plan. The plan is financed by flat-rate premiums, statutory provincial and municipal per diem grants and grants from provincial consolidated revenue when necessary. Annual premiums amount to \$27 for a single person and \$39 for a person with one or more dependants. Payment of \$1 for each day of hospitalization, with no maximum, is required of patients.

## Section 3.—Hospital Statistics\*

This Section presents a brief outline of hospital conditions in Canada in 1951. In the 1952-53 Year Book, statistics of mental hospitals for 1949 were published. Figures for 1950 may be obtained from the report, *Mental Institutions*, 1950, available from the Dominion Bureau of Statistics.

For statistical purposes, hospitals are classified on the basis of admission policy as public, private or federal. Public hospitals are subdivided into general and special hospitals. However, because mental illness and tuberculosis are major public health problems, statistics for hospitals treating these conditions are prepared independently of those for other public hospitals. This results in five groups of hospitals for which statistics are collected, viz., public, private, federal, mental and tuberculosis.

The number of hospitals reporting is shown in Table 1, and the capacity of such hospitals in Table 2. In these tables, all federal hospitals, whatever the conditions they treat, have been placed in one group. The reason is that, while a large number of these hospitals treat tuberculous patients, only three are designed exclusively for that disease. On the other hand, private hospitals for mental illness and tuberculosis are included in these categories rather than under the classification "private hospitals"

#### Subsection 1.—Statistics of Public Hospitals

Movement of patients, personnel and facilities for in-patients in public hospitals in 1951 are summarized in Tables 4 and 6. Revenue and expenditure are shown in Table 5; the last item in this table, cost per patient day, provides a connection between patient and financial statistics.

#### Subsection 2.—Statistics of Mental Institutions

The 69 mental institutions operating in Canada during 1951 included two Federal Government and four private institutions. Table 8 contains information from 68 of these hospitals. One hospital did not report movement of patients or personnel. The number of patients at the end of 1951, as shown in this table,

includes 4,868 non-residents either on parole or boarding out, distributed by province as follows: Nova Scotia, 119; New Brunswick, 182; Quebec, 1,441; Ontario, 2,443; Manitoba, 175; Saskatchewan, 318; Alberta, 57; British Columbia, 133.

Financial data for 1951, shown in Table 9, cover only public mental institutions, thus excluding private and federal institutions. In addition, two provincial institutions did not report financial statistics. Three municipal institutions in Nova Scotia, now listed as welfare institutions, are also excluded from the financial table, although their movement of psychiatric patients is included in Table 8.

#### Subsection 3.—Statistics of Tuberculosis Institutions

Table 10 shows that, of a total of 18,407 beds in tuberculosis institutions, 4,213 or 22.9 p.c. were located in Federal Government sanatoria and tuberculosis units of the Federal Government and general public hospitals. Movement-of-patients statistics in Table 11 include data from these hospitals and units. Statistics of personnel and hospital facilities include data from sanatoria only. Financial statistics in Table 12 are for public sanatoria only.

#### Subsection 4.—Statistics of Federal Government Hospitals

Hospitals operated by the Federal Government are conducted for special purposes connected with departmental administration, such as care of war veterans and members of the Armed Forces, quarantine and care of immigrants and lepers, care of Indians, etc. Table 13 gives a composite picture of the activities of Federal Government departments in the hospital field in 1951.

13.—Summary Statistics of Federal Government Hospitals, 1951

<sup>&</sup>lt;sup>1</sup> Excludes seven hospitals, with a combined capacity of 125 beds, which did not report movement oppulation, and four other hospitals, the statistics for which are a duplication of D.V.A. statistics.
<sup>2</sup> Excludes newborn.

### PART II.—PUBLIC WELFARE AND SOCIAL SECURITY\*

Responsibility for social welfare in Canada has rested in large part on the provinces which, in turn, have delegated an important share of this responsibility to the municipalities. While constitutional authority has not changed, except with respect to unemployment insurance and old age assistance and security, the financial participation of the Federal Government has been greatly extended in the past two decades in the provision of income maintenance payments.

The creation of the Department of National Health and Welfare in 1944 established for the first time in the Federal Government a department in which matters of welfare are a major responsibility. The Department is charged with the administration of federal Acts relating to welfare which are not assigned by law to other departments. In addition to the general promotion of social welfare, the Welfare Branch of the Department administers the family allowances program, the old age security program and the federal aspects of old age assistance and allowances for blind persons. In addition, grants are made to the provinces to promote physical fitness.

Unemployment insurance is administered by the Unemployment Insurance Commission; welfare and health services for veterans by the Department of Veterans Affairs; and the welfare of Indians and Eskimos by the Department of Citizenship and Immigration and the Department of Resources and Development, respectively.

Administration and financial responsibility in other fields of welfare, such as mothers' allowances, child protection and general assistance or relief, are left entirely to the provinces and their local subdivisions.

## Section 1.—Federal Government Programs

## Subsection 1.—Family Allowances

The Family Allowances Act was introduced in 1944 as a basic social security measure designed to assist in providing equal opportunity for all Canadian children. The allowances involve no means test and are paid entirely out of the Federal Consolidated Revenue Fund. They are not part of taxable income, although persons with children eligible for family allowances obtain a smaller income tax exemption for such children than for children not so eligible.

Allowances are payable in respect of every child under the age of 16 years who was born in Canada or has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Monthly payment is made normally to the mother although any person who substantially maintains the child may be paid the allowance on his behalf. The allowances are paid at the monthly rate of \$5 for each child under 6 years; \$6 for each child from 6 to 9 years; \$7 for each child from 10 to 12 years; and \$8 for each child from 13 to 15 years. The allowances are paid by cheque, except for Eskimo children and a group of Indian children for whom payment is made largely in kind because of lack of exchange facilities in remote areas and the need for education in the use of nutritive foods.

<sup>\*</sup> Except as otherwise indicated, this Part was prepared in the Research Division, Department of National Health and Welfare, Ottawa.

If it is satisfactorily shown to the authorities that the allowances are not being spent for the purpose outlined in the Act, payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who, although she is under 16 years of age, is married.

Family allowances are administered by the National Director of Family Allowances of the Department of National Health and Welfare through Regional Directors in offices located in each provincial capital. A Welfare Section in each regional office deals with welfare questions arising out of the administration of allowances. A Supervisor of Welfare Services advises each Regional Director and reports through him to the Chief Supervisor of Welfare Services, who acts in a similar advisory capacity to the National Director. The actual preparing and issuing of the cheques is the responsibility of the treasury division of each regional office which reports to the Chief Treasury Officer of the Department of Finance with the Department of National Health and Welfare.

The Regional Director for the Yukon and Northwest Territories, located at Ottawa, is responsible for payments to families in those areas. Close co-operation is maintained with the Departments of Citizenship and Immigration and of Resources and Development which are responsible for the welfare of Indians and Eskimos, respectively (see Population Chapter, pp. 151 and 152).

## Subsection 2.—Old Age Security

Under the Old Age Security Act (R.S.C. 1952, c. 200), effective January 1952, a universal pension of \$40 & month is payable by the Federal Government to all persons aged 70 or over, subject only to a residence qualification. Residence requirement is 20 years immediately preceding commencement of pension with certain temporary absences allowed. Where the applicant has not so resided for the complete 20 years, the periods of absence may be made up by having been present in Canada, prior to the 20-year period, for double the periods of absence; for these persons, there is a further requirement of one year's residence immediately preceding the commencement of the pension.

Payment of the pension is suspended when the pensioner leaves Canada. On his return, the pension may be resumed and, in the case of absences not exceeding six months, payment may then be made retroactively for as many as three such months in any calendar year.

The program is financed on a pay-as-you-go basis. Payment of the pension is made from the Consolidated Revenue Fund and charged to the Old Age Security Fund account. The income of the Old Age Security Fund is derived from three sources. First, there is a 2-p.c. tax on personal taxable income, that is, on income less exemptions and deductions. The maximum tax per person is \$60 per annum; the tax became effective in July 1952, resulting in a maximum tax of \$30 for that year. The fund also receives the amount collected by a special 2-p.c. tax on corporate

taxable income and the proceeds of a 2-p.c. sales tax. Temporary loans may be made to the Old Age Security Fund, subject to repayment as directed. Operations of the Fund for the first two years are shown in Table 2.

Expenditure		
Totals, Expenditure (Benefit Payments)	76,066,835	323,141,614

<sup>1</sup> Program in effect for last three months only of fiscal year.

The program is administered by the National Director of Old Age Security of the Department of National Health and Welfare through the ten regional offices established in connection with the payment of family allowances. The two programs are administered largely by the same personnel.

Persons in receipt of pension at the end of 1951 under the Old Age Pensions Act of 1927 were transferred to the rolls of the universal pension as of January 1952 without further action on their part. Other persons make application to the Regional Director located at their provincial capital. The Regional Director for the Yukon and Northwest Territories is located at Ottawa.

In Saskatchewan, Alberta, British Columbia and Yukon Territory, the provincial or territorial governments make supplementary payments to recipients of old age security who qualify under a means test and residence test. In Saskatchewan, the allowance is a flat rate of \$2.50 a month while in the three other jurisdictions it cannot exceed \$10 monthly.

<sup>1</sup> Program in effect for last three months only of the fiscal year.

The Old Age Pensions Act, 1927.—The Old Age Pensions Act of 1927, under which old age pensions were paid jointly by the Federal and Provincial Governments, ceased to be effective Dec. 31, 1951, at which time all recipients thereunder were automatically transferred to the rolls of the universal pension under the Old Age Security Act, 1951. A description of the provisions of the Old Age Pensions Act of 1927 will be found in the 1951 Year Book, pp. 234-236, and statistics of operation for the years ended Mar. 31, 1950 and 1951, and the nine months ended Dec. 31, 1951, are given in the 1952-53 Year Book, pp. 264-265.

#### Subsection 3.—Government Annuities\*

Under the Government Annuities Act (R.S.C. 1952, c. 132) passed in 1908, the Federal Government carries on a service to assist Canadians to make provision for old age. The Act is administered by the Minister of Labour.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in monthly instalments for life, or for life and guaranteed for a period of years. The minimum annuity is \$10 and the maximum \$1,200 a year or the actuarial equivalent if the annuity is to reduce by the amount of payments under the Old Age Security Act. Annuity contracts may be deferred or immediate. Deferred annuities are purchased by periodic or single premiums. Immediate annuity contracts provide immediate income.

The property and interest of the annuitant are neither transferable nor attachable. In the event of the death of the annuitant before a deferred annuity vests, all money paid is refunded with interest to the purchaser or his legal representative. Provision is made in the Act for group annuity contracts, whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members, the purchase money being derived partly from wages and partly from employer contributions. Group annuity plans now in effect cover a variety of industries and many municipal corporations throughout Canada. Annuities arising from individual contracts are taxable as to the interest portion of the annuity payment and the return-of-capital portion is exempt; annuities arising from approved pension plans are fully taxable but the employee and the employer are entitled to tax exemption year by year on their annual contributions to the pension plan.

From Sept. 1, 1908, the date of the inception of the system, to Mar. 31, 1953, the total number of annuity contracts and certificates issued, excluding replacements, was 350,224. On the latter date, 61,238 annuities were being paid amounting to \$28,218,012 annually, and 246,724 deferred annuities were being purchased The total amount of purchase money received up to Mar. 31, 1953, was \$773,286,981

Up to Mar. 31, 1953, 940 corporations, institutions and associations, as compared with 915 up to Mar. 31, 1952, had entered into agreements with the Government to purchase annuities. Under these agreements, 137,537 employees or members were holding certificates for purchase of deferred annuities as compared with 131,749 one year earlier. The number of certificates issued under groups in the year 1952-53 was 13,634 as compared with 12,135 in the previous year.

<sup>\*</sup> Revised in the Government Annuities Branch, Department of Labour, Ottawa.

## Subsection 4.—Other Federal Government Programs

Unemployment Insurance and National Employment Service.—In 1940, by an amendment to the British North America Act, the Federal Government was given jurisdiction in the field of unemployment insurance and the Unemployment Insurance Act was passed, establishing a national system of unemployment insurance which is outlined in Chapter XVII.

The National Employment Service is operated in conjunction with the unemployment insurance scheme. It is administered through the employment and claims offices and supervised by the Department of Labour. This program is also described in Chapter XVII.

Prairie Farm Assistance.—The Prairie Farm Assistance Act is administered by the Department of Agriculture; a description of the legislation is given in Chapter X.

Welfare Services for Indians and Eskimos.—The welfare of Indians and Eskimos is administered by the Department of Citizenship and Immigration and the Department of Resources and Development, respectively; this field is covered in the Population Chapter, pp. 151 and 152.

## Section 2.—Federal-Provincial Programs

### Subsection 1.-Old Age Assistance

The Old Age Assistance Act (R.S.C. 1952, c. 199), effective January 1952, provides for federal financial aid to the provinces for assistance, not exceeding \$40 a month, to persons aged 65 or over subject to a residence qualification of at least 20 years. The payment of old age security commencing at age 70, makes old age assistance effective from ages 65 to 69. Within the limits of the federal Act each province is free to fix the amount of the maximum assistance payable, the maximum income allowed and other conditions of eligibility. The Federal Government's contribution per recipient cannot exceed 50 p.c. of \$40 per month or of the assistance paid, whichever is less.

For an unmarried person the total income allowed, including assistance, cannot exceed \$720 a year; for a married couple, \$1,200 a year; where the spouse is blind within the meaning of the Blind Persons Act, the total income of the couple cannot exceed \$1,320 a year. The exact pension payable in each case depends on the amount of outside income and the resources of the applicant and his spouse. To be eligible for assistance the applicant must not be in receipt of an allowance under the Blind Persons Act or the War Veterans Allowance Act. The applicant must have resided in Canada for at least 20 years immediately preceding the commencement of the assistance, but may have certain temporary absences; where the applicant has not so resided for the 20 years he must have been physically present in Canada, prior to the 20 years, for a total period equal to twice the total of the absences during the 20 years.

Implementation of the program in any province is contingent upon the province passing enabling legislation and signing an agreement with the Federal Government. The program became effective in January 1952 in all areas except Newfoundland, Yukon Territory and the Northwest Territories where the effective date was Apr. 1, 1952. The maximum assistance is \$40 per month in all provinces and territories, except in Newfoundland where it is \$30 per month.

Administrative responsibility for the program is vested in the province; the provincial plan for such administration must be approved by, and cannot be changed except with the consent of, the Governor in Council. Assistance is paid by the province with federal reimbursement made through the Department of National Health and Welfare. The Old Age Assistance Division of that Department administers the federal aspects of the program.

In Alberta, British Columbia and Yukon Territory, the provincial or territorial governments make supplementary payments to recipients of old age assistance who qualify under a means and residence test. The supplementary allowance cannot exceed \$10 monthly.

<sup>5</sup> Exclusive of the Yukon and Northwest Territories.

#### Subsection 2.-Allowances for the Blind

The Blind Persons Act (R.S.C. 1952, c. 17), effective January 1952, provides for financial aid to the provinces toward the provision of allowances not exceeding \$40 a month to blind persons aged 21 or over, subject to a residence qualification of at least 10 years. Within the limits of the federal Act, each province is free to fix the amount of the maximum allowance payable and the maximum income allowed. The Federal Government's contribution per recipient cannot exceed 75 p.c. of \$40 per month or of the allowance paid, whichever is less.

For an unmarried person, the total income allowed, including the allowance, cannot exceed \$840 a year; for an unmarried person with one or more dependent children, \$1,040; for a married couple, \$1,320 a year; where the spouse is also blind within the meaning of the Blind Persons Act, the total income of the couple cannot exceed \$1,440 a year. The exact allowance payable in each case depends on the amount of outside income and the resources of the applicant and his spouse. To be eligible for an allowance the applicant must not be in receipt of assistance under the Old Age Assistance Act, of an allowance under the War Veterans Allowance Act, of a pension under the Old Age Security Act or of a pension in respect of blindness under the Pensions Act. The applicant must have resided in Canada for at least 10 years immediately preceding the commencement of the allowance but may have certain temporary absences; where the applicant has not so resided for the 10 years, he must have been physically present in Canada, prior to the 10 years, for a total period equal to twice the total of the absences during the 10 years.

Implementation of the program in any province is contingent upon the province passing enabling legislation and signing an agreement with the Federal Government. The program became effective in January 1952 in all provinces and in the Yukon and Northwest Territories.

Administrative responsibility for the program is vested in the province; the provincial plan for such administration must be approved by, and cannot be changed except with the consent of, the Governor in Council. The allowances are paid by the province with federal reimbursement made through the Department of National Health and Welfare. The Old Age Assistance Division of that Department administers the federal aspects of the program.

Certain provinces make supplementary payments to recipients of allowances for blind persons. In Saskatchewan a flat rate of \$2.50 a month is payable, without a means test, to recipients of allowances for the blind who fulfil certain residence requirements; in Alberta and British Columbia, a supplementary allowance of up to \$10 a month is payable to those who qualify under both a means and a residence test. The Yukon Territory makes supplementary payments up to \$10 monthly.

8.—Statistics of Allowances for the Blind, by Province, Years Ended Mar. 31, 1952<sup>1</sup> and 1953

<sup>&</sup>lt;sup>1</sup> Program in effect for the last three months only of the fiscal year. <sup>2</sup> Estimated population as at June 1 of each year. <sup>3</sup> Exclusive of the Yukon and Northwest Territories.

A description of the pensions payable to blind persons under the Old Age Pensions Act 1927, repealed in 1951, will be found in the 1951 Year Book, pp. 234-235. The final statistics of operations under that program are given in the 1952-53 Year Book, p. 267.

## Subsection 3.—National Physical Fitness Program

A program of physical fitness and recreation for Canadians was introduced with the proclamation on Oct. 1, 1943, of the National Physical Fitness Act. A National Council was set up on Feb. 15, 1944, to promote the well-being of the people of Canada through physical fitness and recreational activities; its members are appointed by the Governor General in Council. In some provinces, councils have been established by the provincial governments.

A number of projects of significance have been initiated. National Fitness Scholarships are awarded annually to give financial assistance to professionally qualified Canadians with three years' successful experience who desire to improve their professional qualifications. The Council has convened a number of national conferences, including conferences on undergraduate professional preparation and on employee recreation. A Continuing Committee on Employee Recreation and a Canadian Advisory Committee on Aquatics were set up in 1952.

A diploma course for public recreation personnel, limited to 30 students, was organized in 1952 at the Council's request by the University of British Columbia because of the need for trained recreation leaders in the small towns and rural communities of Canada. The Council provided a grant of \$5,000 to assist in organizing and conducting the course. In addition, the Council provided funds for the tuition fees of 29 students selected on a quota basis from all provinces and for the transportation costs of those living outside British Columbia. Nine provinces and the Northwest Territories were represented.

The Act is administered by the Department of National Health and Welfare through the Physical Fitness Division, which provides consultative services on all aspects of fitness and recreation at the request of national organizations and provincial authorities and operates a preview library service for visual aids. The Division acts as a clearing-house for the latest information on fitness, recreation, community centres, physical education, athletics, sports and games, theatre arts and related activities. In addition, it maintains liaison with national associations and comparable organizations in other countries. On behalf of the Council, the Division in 1952 undertook a National Sports Opinion Survey, obtaining from a great number of interested persons opinions on athletic sports and games, with particular emphasis on international competition. The initial report was presented at the annual meeting of the Canadian Sports Advisory Council.

The Federal Government makes available to the provinces on a per capita basis an amount not exceeding \$232,000 annually for the promotion of physical fitness and recreation programs. Financial assistance is given only to those provinces that have signed specific agreements with the Federal Government and to the extent to which they match it dollar for dollar up to the maximum available. During 1952-53, seven provinces and the Northwest Territories participated in the program.

## 9.—Grants Available under the National Physical Fitness Act

Province	Annual Grant Available	Province or Territory	Annual Grant Available
	\$		\$

## Subsection 4.—Training Programs

Under the Vocational Training Co-ordination Act of 1942 as amended, the Federal Department of Labour, in co-operation with the provincial governments, carries on various training projects. Details of these schemes will be found in Chapter XVII, Section 6.

# Section 3.—Provincial Programs Subsection 1.—Mothers' Allowances

All provinces have statutory provision for allowances to enable certain needy mothers to remain at home to care for their dependent children. The total cost of this assistance is paid from provincial funds, except in Alberta where a portion of each allowance is charged to the municipality of residence.

Subject to the conditions of eligibility, which vary from province to province, the allowances are payable to applicants who are widowed or whose husbands are mentally incapacitated and, except in Alberta, to those whose husbands are physically disabled and unable to support their families. They are also payable, except in Nova Scotia, to deserted wives who meet specified conditions; in several provinces to mothers who have been granted a divorce or legal separation and in some to unmarried mothers. Adoptive mothers and foster mothers are also eligible under certain circumstances. The child or children must be under 16 years of age except in Manitoba where the age limit is 15 years. Provision is made in most provinces to extend payment for a specified period if the child is attending school and five provinces continue to pay allowances on behalf of physically and mentally handicapped children for from two to five years.

In all provinces applicants must satisfy conditions of need and residence but both the amount of outside income and resources allowed and the length of residence required prior to application vary considerably, the latter, for example, from one year in Saskatchewan, Ontario and Newfoundland to five years in Quebec. All provinces require that the applicant be resident at the time of application and that the child or children live with the recipient, and most provinces require that they continue to live in the province while in receipt of an allowance. Nationality is a condition of eligibility in six provinces. The applicant must be a British subject, the wife or widow of a British subject or her child must be a British subject, except in Quebec and New Brunswick, where Canadian citizenship is required.

In each province the Act is administered by public welfare authorities, in most provinces through a mothers' allowances board or commission which either makes the final decision regarding eligibility and the amount of allowance granted or acts in an advisory capacity. In some provinces local advisory committees are also appointed. Rates of benefit as of January 1952 are given in the following paragraph.

In Newfoundland, the maximum allowance for a mother and one child is \$25 a month, with \$5 for each additional child and for a disabled father at home; the maximum for a family is \$50 a month, with supplementary assistance of up to \$20 monthly if necessary for proper care and maintenance. In Prince Edward Island a mother with one child may receive up to \$25 a month, with up to \$5 for each additional child; the family maximum is \$50 monthly. In Nova Scotia a monthly maximum of \$80 for a family is fixed by statute; the amount payable to a mother and one child is determined by family need. In New Brunswick the family maximum is \$80 a month, with \$35 for a mother and one child and \$7.50 for each additional child. Where necessary, an additional \$10 may be granted for rent if it is needed and if the allowance is below the family maximum. The maximum allowance in Quebec for a mother and one child is \$35 in a district where the population is under 5,000 and \$40 where it is 5,000 or over. An additional \$1 per month is paid for each of the second, third, fourth and fifth children, \$2 for the sixth and seventh, and \$3 for the eighth and subsequent children. An extra \$5 is allowed when the mother is unable to work or when a disabled father is living at home. Ontario pays a maximum of \$50 a month for a mother and one child, with \$10 for each additional

child and for a disabled father at home. A foster mother with one child may receive up to \$24 per month, with two children up to \$48, and \$10 for each additional child. The allowance may be increased up to \$20 a month where need is shown and a winter fuel allowance is also granted. The maximum monthly allowance in Manitoba for a mother and one child is \$51 per month. An additional \$10 is paid for a child aged one to six years, \$13 for a child seven to 11 years, and \$15.50 for a child 12 to 14 years: \$17.25 is paid for a disabled father in the home. The family maximum is \$167 plus winter fuel for seven months, with supplementary assistance of up to \$25 in special circumstances. In Saskatchewan the maximum allowance for a family is \$85 a month, with \$35 being paid for a mother and one child, \$10 for a second child, \$5 for each subsequent child and \$10 for a disabled father at home. Supplementary assistance under the social aid program may be granted by the local municipality and the costs are shared equally by the Province and the municipality. The allowance in Alberta may not exceed \$50 per month for a mother with one child or \$60 if her other income does not exceed \$120 a year, \$20 for the second child. \$15 for the third and \$10 for each subsequent child. A maximum of \$145 is set for a family with nine or more children. Supplementary aid in the form of public assistance may be granted, where necessary, by the municipality of residence, with the Province reimbursing 60 p.c. of the cost. In British Columbia the maximum monthly mothers' allowance set by statute is \$42.50 for a mother with one dependent child, and \$7.50 for each additional child and for a disabled father living at home. Supplementation from social allowance funds brings the actual maximum monthly payments to \$62.50 per month for a mother and one child and \$12 for each additional child and for a disabled father living at home. Extra expenditure may be met through social allowance funds, and a nutrition allowance is available for tuberculous patients and their families.

## Subsection 2.—Provincial Welfare Services

The care and protection of neglected and dependent children, care of the aged, social assistance or relief, and other special services outlined in the following summary are governed by provincial legislation, although in many areas responsibility for services rests with municipal or voluntary organizations. While the programs and the methods of financing vary considerably, most provinces share the costs of some or all of the municipal services in organized areas and assume the total cost in unorganized territories. The medical services available to social assistance recipients are described at pp. 225-234. Mothers' allowances are dealt with separately at pp. 254-255, old age assistance at pp. 249-250, and allowances for the blind at pp. 251-252.

Newfoundland.—Provincial welfare services are administered by the Department of Public Welfare through a number of regional welfare centres.

Child Care and Protection.—Child welfare has developed largely as a public service and is administered by the Child Welfare Division. Neglected children, made wards of the Director, are placed in foster or adoptive homes or in institutions. The Department pays for the maintenance of wards, grants subsidies for children admitted to orphanages administered by religious organizations, and contributes towards the cost of educating blind and deaf-mute children in institutions at Halifax, N.S., and Montreal, Que. The Division operates an Infants' Home providing short-term care.

In 1953, a Division of Corrections was established to deal with both juvenile delinquents and adult offenders and, for the present, to administer correctional institutions for boys and girls. The Corrections Act, 1953, provides for the establishment of a Youth Guidance Authority, an Adult Guidance Authority and classification centres.

Care of the Aged.—The Province maintains a Home for the Aged and Infirm at St. John's and also pays a per diem rate for needy old people in the Salvation Army Home and in approved boarding homes.

Social Assistance.—Under the Dependents' Allowances Act, the Province grants assistance to needy unemployables not eligible for other forms of statutory assistance. Aid for certain needy able-bodied persons is provided under the Health and Public Welfare Act.

Prince Edward Island.—The Department of Health and Welfare is responsible for the administration of provincial welfare services.

Child Care and Protection.—Under the Children's Protection Act, neglected or delinquent children may be placed under the guardianship of the Director of Child Welfare or an approved child welfare agency. The children are placed in foster or adoptive homes, boarding homes or children's institutions under the inspection of the Director. Provincial grants are made to child welfare agencies and to the two private orphanages, one Protestant and one Roman Catholic. Juvenile Courts are under the Attorney General's Department, and juvenile delinquents are cared for at the expense of the Department of Health and Welfare in correctional institutions of the neighbouring provinces.

Care of the Aged.—The aged and infirm are cared for in Falconwood Mental Hospital and in two provincial infirmaries.

Social Assistance.—The Department provides direct social assistance in rural areas and, by agreement, assumes 50 p.c. of the cost of assistance granted by the City of Charlottetown and the incorporated towns and villages. The Department also operates a province-wide program of financial aid to families where the breadwinner is suffering from tuberculosis and is unable to support the family.

Nova Scotia.—Provincial welfare services are administered by the Department of Public Welfare through a number of regional offices.

Child Care and Protection.—The Child and Family Welfare Branch administers the child-protection legislation including the inspection of institutions and the licensing of foster and maternity homes. Neglected children may be made wards of the Director of Child Welfare or of approved Children's Aid Societies. Each Society receives annually a provincial grant of up to \$2,000; a sum equal to 50 p.c. of funds received through private campaigns or from municipalities for general operating expenses; and an additional grant of not less than \$1,000, the maximum determined on a per capita basis. The Province and municipality of residence contribute towards the maintenance of each ward placed in a foster home or institution, unless a court order for support is made against the parents.

The Branch operates the Nova Scotia Training School for mentally defective children and the Nova Scotia School for Boys for juvenile delinquents. It is also responsible for the operation of the six Juvenile Courts and the supervision of their probation staffs. The municipality of residence is responsible for the maintenance of children in reformatories although the Province may contribute also if the reformatory complies with specified standards.

Care of the Aged.—The aged are cared for in municipal or county homes, in homes operated by religious or private organizations and in private boarding homes where the municipality of residence may contribute to the cost of maintenance. Homes for the aged are subject to provincial inspection but they do not receive direct assistance from the Province.

Social Assistance.—Relief to unemployables is a local responsibility.

New Brunswick.—The Department of Health and Social Services administers provincial welfare legislation.

Child Care and Protection.—Under the Children's Protection Act, administered by the Minister of Health and Social Services, responsibility for protection and placement services is largely delegated to Children's Aid Societies throughout the Province. Guardianship of a neglected child may be vested in a Society, the Director of Child Welfare or in the Court. Orphanages are operated by religious, private or, in some cases, municipal organizations. With a few exceptions, boarding homes must be licensed and are subject to the provincial inspection required for all child-caring institutions. The Province and the municipality of residence each contributes towards the maintenance of wards committed to an institution, and the Province also reimburses municipalities for one-half of the cost of maintaining wards placed in foster homes, up to a prescribed maximum. The Department may place blind or deaf-mute children in special schools at Halifax, N.S. Juvenile Courts are under the Attorney-General's Department and delinquent boys may be placed in the Provincial Industrial School for Boys which reports to the Minister of Health and Social Services.

Care of the Aged.—Homes for the aged are operated under municipal, religious, fraternal or private auspices and are subject to provincial inspection but they receive no direct financial support from the Province.

Social Assistance.—Relief to unemployables is a local responsibility.

Quebec.—Major responsibility for the administration of provincial welfare measures is shared by the Department of Health and the Department of Social Welfare and Youth. The former administers the Quebec Public Charities Act which embodies the Government's policy of granting subsidies to religious and private institutions where they exist rather than creating public services. Grants are made to these institutions on a per diem basis, with the Province, the municipality of residence and the institution sharing the cost of maintenance of indigent persons admitted for care. The Department of Social Welfare and Youth is responsible for preventive and rehabilitative work among neglected and dependent children and for grants to recreation and welfare agencies, in addition to certain important educational functions. Social Welfare Courts are, however, under the jurisdiction of the Department of the Attorney-General.

Child Care and Protection.—Needy or abandoned children are generally cared for in institutions such as orphanages, nurseries and other homes, assisted under the Quebec Public Charities Act, although there is an increasing use of foster homes by child-welfare agencies. However, children who are found by a Social Welfare Court or other court to be particularly exposed to moral or physical dangers may be admitted to recognized youth protection schools under the Youth Protection Schools Act, 1950, administered by the Department of Social Welfare and Youth. Municipalities of residence are required by law to contribute 50 p.c. of the operating and maintenance costs of these schools but, in practice, the Province pays approximately 87 p.c. of all expenses and the entire cost of new construction. The Social Welfare Courts, which in 1950 replaced Juvenile Courts, have statutory responsibility in connection with child and youth protection and certain other provincial programs and also serve as Family Courts.

Children who have been exposed to tuberculosis but who have not been infected are placed with rural families under the supervision of the Department of Health in co-operation with child-welfare agencies.

Care of the Aged.—Institutional care for indigent old people is provided under the Quebec Public Charities Act through private institutions. Under the same Act, family-welfare agencies administer home allowances to needy old people who do not require institutional care.

Social Assistance.—Financial aid is not provided to needy families in Quebec but institutional care for indigents is available under the Quebec Public Charities Act. The Department of Colonization operates a program whereby families in need are settled on the land in newly opened districts and granted financial aid until they become self-supporting. In these areas, a disability pension scheme is linked to a program of free medical services.

Ontario.—Provincial welfare services are administered by the Department of Public Welfare. The Province is divided into 17 welfare districts with a supervisor in charge of each district.

Child Care and Protection.—Child protection legislation is administered by the Child Welfare Branch which supervises the local Children's Aid Societies to which responsibility for the care and protection of neglected and dependent children is delegated. Annual provincial grants to these Societies include token grants based upon the quality and level of services provided in addition to grants equal to 25 p.c. of the amounts raised through voluntary effort. The Province also reimburses the municipalities of residence in amounts not exceeding 25 p.c. of the net cost of maintaining children made wards of Children's Aid Societies. Children's institutions and day nurseries are supervised by the Day Nurseries Branch and must be licensed. The Province makes small per diem grants to non-profit-making charitable institutions and pays one-half of the operating and maintenance costs of municipal day nurseries. Juvenile Courts are under the Attorney-General's Department, while training schools for juvenile offenders are operated by the Department of Reform Institutions.

Care of the Aged.—Municipalities are required by law to provide institutional care for the aged, with the Province contributing 50 p.c. of the net operating and maintenance costs and 50 p.c. of the costs of approved new construction or approved additions and extensions. Both public and private institutions are subject to provincial regulations and inspection and, under certain circumstances, charitable institutions may receive a small per diem grant for each person maintained. Grants are made available to limited-dividend housing corporations to assist in the construction and equipment of low-rental housing projects for elderly persons.

Social Assistance.—Under the Unemployment Relief Act, the Province reimburses municipalities, up to a prescribed maximum, for 50 p.c. of their expenditures on relief to needy unemployables and on incapacitation allowances and rehabilitative measures for single, needy, handicapped residents. In unorganized areas the program is administered and financed by the Department. The Soldiers' Aid Commission extends emergency assistance and advice to former service men and their families. Assistance of up to \$40 per month is granted to permanently and totally disabled persons under the Disabled Persons' Allowances Act.

Manitoba.—The Public Welfare Division of the Department of Health and Public Welfare is generally responsible for provincial welfare services.

Child Care and Protection.—The Director of Public Welfare administers the Included in this administration is the supervision of child-welfare legislation. Children's Aid Societies and of child-caring institutions. The Provincial Public Welfare Division carries on these services directly through a decentralized program of district offices in a large area of the Province. In the remainder of the Province, the Director supervises the four non-denominational Children's Aid Societies in their respective territories. Neglected children may be made wards of the Director of Public Welfare or of a Children's Aid Society. Municipalities are responsible for the maintenance of wards but the Province reimburses them for a portion of these costs from the \$500,000 annual fund distributed among the municipalities in proportion to their relief and child-welfare expenditures. Under agreements between the Province and the Children's Aid Societies, payment of annual provincial grants is conditional on the provision of a basic level of service and the collection of equivalent voluntary contributions; payments are made in accordance with a formula based on the number and cost of social workers per 100,000 population in a representative area where the Division directly administers child-welfare services.

The Division provides foster-home care and supervision for mental defectives placed in the custody of the Director of Public Welfare and, with the Division of Psychiatry, operates a home for mentally defective girls. The Attorney-General's Department is responsible for Juvenile Courts and operates a boys' home and a girls' home for delinquents.

Care of the Aged.—Institutions and nursing homes for the aged and infirm are supervised and licensed by the Department under public health legislation.

Social Assistance.—Municipalities are responsible for assistance to needy residents, but these expenses, as well as ward maintenance costs, are partly reimbursed by the Province from the \$500,000 annual social assistance fund which is allocated on a pro-rata basis. In addition, whenever the costs of social assistance and ward maintenance to any municipality exceed in a year a sum equivalent to four mills of the equalized assessment of such municipality, the Public reimburses 60 p.c. of the excess. The Province is responsible for aid to persons without municipal residence as well as for general assistance in unorganized territory.

Saskatchewan.—Provincial welfare services are administered by the Department of Social Welfare and Rehabilitation.

Child Care and Protection.—The Department provides welfare services for children throughout the Province, with the exception of Saskatoon where certain responsibilities are delegated to the Children's Aid Society. Children found to be neglected are, by court order, made wards of the Minister and are placed in foster homes, adoptive homes or institutions. A portion of the maintenance costs of wards, except of children born out of wedlock, is paid by the municipality of residence. The Branch operates two institutions for the temporary care of wards. It also operates a program of non-ward care and a program for unmarried mothers.

The Corrections Branch of the Department is responsible for both adult and juvenile correctional services, supervises probation and parole services for juvenile delinquents and administers the Saskatchewan Boys' School and the provincial gaols. The Juvenile Court is presided over by a judge who devotes his time exclusively to cases of juvenile delinquency. Juveniles are discharged from correctional institutions only by parole. A Youth Guidance Authority supervises the discharging of juveniles from probation, from institutions and from parole.

Care of the Aged.—The Department operates three homes for the aged, and licenses and supervises all privately operated homes. Maintenance, where necessary, may be arranged under the social-aid program. The Nursing Homes and Housing Branch is responsible for planning to meet future needs of the aged and for cooperating with other governmental organizations in the fields of institutional care and housing for the aged.

Social Assistance and Special Services.—The costs of assistance to needy persons are shared equally by the municipalities and the Department, but the Province pays the entire cost for transients and for persons in unorganized areas. The Rehabilitation Branch provides training and placement services for the handicapped; one-half the cost of this training is borne by the Province and one-half by the municipality of residence. It is also responsible for the rehabilitation of minority groups and operates a farm where the Metis—persons of mixed Indian and white stock who do not qualify under the Indian Act—are instructed in modern methods of farming while being paid for their work. Three schools are conducted for Metis children.

The Department administers the Provincial Housing Act which empowers the Province to enter into public housing projects under Sect. 35 of the National Housing Act, and to stimulate construction of low-rental housing projects by limited-dividend housing corporations.

Alberta.—The Department of Public Welfare is responsible for the administration of provincial welfare measures. It has branches at the four larger centres, and inspectors are located in suitable areas throughout the Province.

Child Care and Protection.—The care of children who are made wards of the Government under court orders or by agreement is under the control of the Child Welfare Commission. These children may be placed in foster homes or in licensed boarding homes or institutions. Permanent wards may also be placed in adoptive homes. The cost of maintenance of wards is paid by the Province which recovers 40 p.c. of such cost from the municipality of residence. The Home Investigating Committee is responsible for the inspection and the licensing, where required, of all homes and institutions in which children are given care. The Attorney-General's Department administers legislation regarding juvenile delinquency.

Care of the Aged.—The Province reimburses municipalities for 50 p.c. of cost incurred for the maintenance of needy, aged or infirm persons in municipally licensed homes. These homes must meet a specified standard before a licence is given and they are inspected periodically by officials of the Department of Public Welfare.

Social Assistance.—Municipalities are responsible for assistance to indigent residents but the Province is authorized to make grants to the municipalities of up to 60 p.c. of the value of the assistance. The Province pays the total cost of assistance granted to transients and to residents of unorganized districts, subject to a refund of 40 p.c. from the districts, through the Department of Municipal Affairs. Families may be assisted through settlement on suitable farm lands. The Single Men's Division maintains two hostels and one welfare centre to care for unemployable, single, homeless men without municipal domicile. Single exservice men are cared for at Calgary and Edmonton without being placed in institutions. The Province has also established nine Metis colonies where settlers have extensive fishing, hunting and trapping rights, and are encouraged to engage in lumbering, agriculture and stock-raising. Educational services are provided and government-operated stores sell goods at cost price.

Widows and Disabled Persons Pensions.—Under the Widows Pension Act which came into force on Apr. 1, 1952, widows aged 60 to 64 years, inclusive, may receive pensions of up to \$40 per month. Wives of husbands committed to hospital under the Mental Diseases Act and wives who have been deserted without reasonable cause for a specified period are also eligible if within the age group. To be eligible, applicants must meet certain conditions of need and residence and must not be in receipt of a mothers' or blind persons' allowance. The maximum income including the pension is \$720 a year.

The Disabled Persons Pension Act, which came into force on June 1, 1953, provides for the payment of pensions of up to \$40 per month to persons who are not under 21 years of age and who have suffered from a chronic disability for at least 12 months and are therefore unable to accept gainful employment. To be eligible, an applicant must not be in receipt of assistance under certain other statutory

programs. The income limits including the pension are, for a single person, \$720 a year and, for a married person living with his spouse, \$1,200 a year including the income of the spouse.

British Columbia.—The administration of provincial welfare services by the Social Welfare Branch of the Department of Health and Welfare is decentralized through district and municipal offices in six regions covering the whole Province. Generalized field service is provided by provincial social workers. The staff of the Social Welfare Branch is also responsible for welfare services required in connection with a number of programs operated by the Health Branch.

Cities and municipalities of over 10,000 population must have their own social welfare departments to administer the social assistance program and to provide case-work services. The Province pays 50 p.c. of the salaries of municipal social workers or, where more than one is needed, matches the municipal appointees worker for worker. Smaller municipalities may have their own or amalgamated social-welfare departments or they may pay for the services of the Social Welfare Branch.

Child Care and Protection.—The Child Welfare Division administers legislation governing the protection of children, including adoptions, and provides direct services except at Vancouver and Victoria where it supervises the Children's Aid Societies. Municipalities are responsible for the costs of maintaining wards, but the Province reimburses them to the extent of 80 p.c. of such expenditure and pays the entire cost for children in unorganized areas. The Province pays the total maintenance cost of wards who are children of unmarried mothers. Child-caring institutions, boarding homes and day nurseries are licensed and supervised. The Social Welfare Branch administers a Boys' and a Girls' Industrial School for delinquent children. Family case-work and rehabilitative supervision of boys and girls released from the schools are carried on in co-operation with the Psychiatric Division and the probation service of the Juvenile Courts, which are under the jurisdiction of the Attorney-General's Department.

Care of the Aged.—The Social Welfare Branch operates the Provincial Home which provides care for aged men. In addition, the Province operates Provincial Homes for the Aged under the mental health program administered by the Provincial Secretary's Department, as well as the Provincial Infirmary for chronic care under the B.C. Hospital Insurance Service. The Province also contributes 33 p.c. of the capital cost of construction of municipal nursing homes, and licenses and supervises municipal and private nursing homes and boarding homes. The maintenance of needy residents, where necessary, is shared with the municipalities on an 80-20 basis. The Province assumes the total cost for provincial charges.

Social Assistance.—The social assistance program is administered by the Director of Welfare and supervised by the Family Division. It includes allowances to indigent individuals or families, counselling services, occupational training and the maintenance costs of nursing-home or boarding-home care. The Province reimburses the municipalities 80 p.c. of the cost of basic and certain supplementary social assistance payments to indigent municipal residents and assumes the total cost of assistance granted to provincial residents.

## Subsection 3.-Workmen's Compensation

In all ten provinces, legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease. A summary of provincial workmen's compensation legislation is given in the Labour Chapter.

#### Subsection 4.—Care of Dependent and Handicapped Persons

Statistics of charitable and benevolent institutions are compiled every five years. The Census of 1951 covered 533 institutions, 490 being residential institutions and 43 being day nurseries. Table 11 shows selected data for 1950 concerning the residential institutions, while Table 12 presents statistics concerning the persons under care on June 1, 1951.

12.—Statistics of Persons under Care in Charitable, Benevolent and Welfare Institutions, by Province, at June 1, 1951

## PART III.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning and education. These agencies, some of which are described below, supplement the services of the federal and provincial authorities in many fields and play a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them.

Canadian Welfare Council.—The Council, established in 1920, is a national association of organizations and individual citizens in partnership to secure comprehensive, well-administered social services of high quality for the Canadian people. It furnishes authoritative information, technical advice and field service in the main areas of social welfare and provides a means of co-operative planning and action by serving as a link between the public and private agencies. Member organizations include community chests and councils, private social agencies, various federal, provincial and municipal departments and other groups and individuals active in the fields of health, welfare and education.

The policies and programs of the Council are determined by its members with the help of a nationally representative elected board of governors. Aided by professional staff, the members work together through divisions of Child and Family Welfare, Recreation, Public Welfare, Delinquency and Crime, and Community Chests and Councils. Other aspects of social welfare are dealt with by special committees and departments, including the Department of French-speaking Services.

Some subjects to which the Council is giving study are: labour, Canadian adoption laws as a step towards improved adoption procedure in all provinces, needs of the aged, public assistance, residence and settlement legislation, rehabilitation of the disabled, health insurance and civil defence. A large number of surveys on a

I Includes homes for unmarried mothers.

variety of subjects have been requested by agencies, communities and provinces. Council publications include the periodicals Canadian Welfare and Bien-être social canadien, an annual directory of Canadian welfare services, and division bulletins, pamphlets and reports.

Canadian Conference of National Voluntary Health and Welfare Organizations.—The Conference, set up in 1949, provides national health and welfare agencies with a clearing-house and a medium for exchange of experience and for joint study and action with a view to increasing co-operation in matters of common concern.

Canadian National Institute for the Blind.—The Institute, founded in 1918, provides extensive rehabilitative services for blind persons and carries on an active program for the prevention of blindness. Its services include home teaching of touch reading and writing, handicrafts, occupational training and placement, welfare services and financial assistance. It operates factories to afford employment for blind men and women and controls tobacco stands, news stands and industrial cafeterias managed by the sightless. Field services are provided through over 30 district offices staffed by field workers and teachers, most of whom are blind. The Institute maintains a national library of Braille and recorded literature, operates several residences and gives financial support to recreational clubs for blind persons. In the preventive field, it operates eye clinics, arranges treatments and distributes literature. The Institute is supported by government grants and voluntary subscriptions.

The Canadian Red Cross Society.—The peacetime program of the Society consists of eight major services. The operation of outpost hospitals and of a blood-transfusion service are important projects in nearly all provincial divisions. Nutrition and visiting homemaker's services, and instruction in swimming and water safety are carried on in most branch areas. In addition, relief is supplied in times of national and international disaster, craft training and recreational centres are operated for hospitalized war veterans, and a national inquiry bureau traces persons for the purpose of reuniting families and friends.

The Canadian Junior Red Cross promotes health and good citizenship in schoolroom branches across Canada. As part of its program, the Junior Red Cross Crippled Children's Fund is maintained to assist in providing treatment for handicapped children.

The Victorian Order of Nurses for Canada.—The Victorian Order of Nurses is a voluntary public health agency, national in scope and having as its primary object the care of the sick in their own homes. Care is given, under medical direction, by visiting nurses to medical, surgical and maternity patients, a large percentage of whom would otherwise be without skilled nursing services. Patients are expected to pay the cost of the home visits, but fees are scaled according to family income and service is never refused because of inability to pay.

Part-time nursing service is given in industrial plants where the number of employees does not warrant full-time employment of a nurse. In smaller centres where the Order provides the only public health nurse, the program is usually enlarged to include school nursing, assistance at immunization clinics and child health centres, and other public health services.

The Health League of Canada.—The Health League of Canada is a voluntary association devoted to health education. Through the media of press, radio, posters, pamphlets, motion pictures and the public platform, the League keeps the public informed concerning the health value of milk pasteurization, immunization procedures for preventable diseases, proper nutritional habits, sanitary work practices by public food-handlers and organized health programs for industrial workers. The League supplements its year-round program with the annual sponsoring of National Health and National Immunization Weeks.

The Order of St. John.—The primary purpose of the Order is to teach first aid and home nursing to citizens of Canada irrespective of age, race and creed, and to provide trained and organized personnel to help in time of emergency. The Canadian branch was organized in 1895 and, since that time, more than 1,250,000 persons have been trained and have passed examinations in various subjects. The Order has its headquarters and national offices at Ottawa, branches in every province and local centres in hundreds of cities, towns and villages throughout Canada. There are two subsidiary branches, the St. John Ambulance Association and the St. John Ambulance Brigade, the first devoted to teaching and the second to rendering voluntary public assistance as required. The Order has been selected as the official organization to train civil defence workers in basic and advanced first aid.

The Canadian Arthritis and Rheumatism Society.—The Canadian Arthritis and Rheumatism Society was incorporated in 1948 for the purpose of reducing morbidity and mortality from arthritic and rheumatic diseases. Its objectives include the raising of funds to support research, the education of professional personnel and of the general public, and the promotion and organization of treatment facilities. A Medical Advisory Board composed of leading physicians, surgeons and scientists advises on the research program, professional education and public relations.

Divisions of the Society are organized in nearly every province. Arthritis clinics sponsored by the Society have been established in 30 out-patient hospital departments and, in addition, 44 mobile physiotherapy units provide treatment and consultations to those unable to leave home.

The Canadian Mental Health Association.—The Canadian Mental Health Association operated between the years 1918 and 1950 as the National Committee for Mental Hygiene. The Association carries on a continuous educational campaign for the general public on various aspects of mental health and, in co-operation with the University of Toronto, conducts a mental health liaison course for selected teachers from all provinces. Provincial branches seek to promote a better understanding of the problems of mental illness and the need for community participation in mental health services. The program of the Association also includes fact-finding surveys of current mental health services and research studies of specific aspects of mental illness and social behaviour.

Other National Health Organizations.—Additional voluntary agencies are engaged in a variety of health activities including financial support and operation of educational programs, research and training, and the provision of treatment. These activities may be directed towards the general public or towards specific categories of ill or disabled persons, such as the paraplegics. Some organizations,

such as those dealing with the blind and the deaf, are interested in the welfare as well as the health problems of the groups served. Organizations of professional medical and related personnel, in particular of public health personnel, assist in the development of agencies and in guiding their activities.

# PART IV.—VETERANS HEALTH AND WELFARE SERVICES\* Section 1.—The Department of Veterans Affairs

The great majority of veterans have now been assimilated into civilian life and the work of the Department of Veterans Affairs has settled into a well-defined pattern, its major functions being concerned with medical treatment, payment of pensions and allowances, welfare work and land settlement. The Department maintains 18 district offices and two sub-district offices in Canada as well as district offices at London, England. The administration of the Veterans' Land Act also requires the maintenance of district and regional offices in locations as accessible as possible to veterans. Travelling welfare officers operate from these offices.

The basis of administration of the Department of Veterans Affairs, established in 1944, is dealt with in the 1946 Year Book, pp. 1053-1054. The work of the Department as it developed year by year is outlined in subsequent editions and is brought up to Mar. 31, 1953, in the following Sections.

### Section 2.—Medical, Dental and Prosthetic Services

Medical Services.—It is the policy of the Department to give veterans the most modern medical treatment possible. Wherever a Departmental hospital is situated in proximity to a medical school, close co-operation is maintained between the two. Veterans hospitals are actively engaged in under-graduate and post-graduate teaching, and members of the medical faculties are employed in the hospitals with other specialists. Eleven hospitals have received approval by the Royal College of Physicians and Surgeons of Canada for advanced post-graduate teaching in internal medicine and general surgery. Seven of these are also approved for advanced post-graduate teaching in specialties. The majority of the consultant staffs at Departmental hospitals are employed on a part-time basis and are also usually engaged in medical teaching.

Professional and other members of the university staffs are employed as consultants and advisers in the same way as medical consultants. Thus, the Department receives expert advice in nursing, pathology, medical social services and other medical sciences.

Special centres for the investigation and treatment of arthritis, paraplegia, tuberculosis, etc., are active in the larger hospitals. Where Departmental facilities are not available, veterans with service-related disabilities receive treatment and hospitalization through the doctor of their choice.

During the year ended Mar. 31, 1953, 106 research projects were submitted to the Advisory Board for Medical Research and Education and, of these, 58 were continuing and 48 were new. These projects included clinical research of the effects of ACTH and Cortisone on various diseases, a follow-up study on Hong Kong

<sup>\*</sup> Contributed by the various Branches of the Department of Veterans Affairs through G. G. Yates, Chief of Information.

prisoners of war, a study on Canadian veterans of World War II and a five-year study of gunshot wounds of the head. During the fiscal year 1952-53, the Department embarked on a long-term project concerning the causes and treatment of atherosclerosis. An ultracentrifuge—one of the few in Canada—was installed at Montreal for carrying out the necessary analyses. In addition, studies were in progress on paraplegia, mental diseases, chronic bronchitis and circulatory diseases. Research information is constantly being exchanged with authorities in the United Kingdom and the United States.

At the end of 1952, the Department had in operation 9,915 beds in 19 institutions. Of these, 12 were active treatment hospitals, two were health and occupational centres for convalescents, four were veterans homes and one was a special institution. (See also p. 242.)

Dental Services.—The number of dental treatments given during the years ended Mar. 31, 1941-53 were:—

Year ended Mar. 31-	Treatments	Year ended Mar. 31-	Treatments
	No.		No.
1941	99,590	1948	1,191,218
1942	73,113	1949	218,173
1943	102,554	1950	158, 149
1944	66,562	1951	128,206
1945	249,170	1952	103,242
1946	509,703	1953	103,255
1947	2,700,052		

Prosthetic Services.—The Prosthetic Services Branch of the Department of Veterans Affairs supplies, by manufacture or procurement, all orthopædic and surgical appliances prescribed by the Treatment Services Branch. The maintenance and renewal of such prostheses for all eligible cases is also the concern of the Branch. A large modern centre at Sunnybrook Hospital, Toronto, together with 11 district centres and five visiting centres in the principal cities, extends the manufacturing, maintenance and fitting service across the country. This system ensures a standardization of parts of major prostheses, a control of quality of supplies and availability of service at all times.

A Research and Development Section at Toronto is constantly at work on improvements and, in co-operation with the manufacturing services, conducts the field-testing of new developments. Close contact is maintained with the National Research Council and with research committees in the United States and the United Kingdom.

During the year ended Mar. 31, 1953, 61,488 persons were supplied with appliances or accessories compared with 60,053 during the previous fiscal year. Total issues during these two years numbered 117,374 and 113,530, respectively.

Vetcraft Shops.—The Department operates Vetcraft Shops at Toronto and Montreal giving sheltered employment to disabled veterans. These shops manufacture poppy emblems and wreaths for sale by the Canadian Legion on Remembrance Day. An average of 60 veterans are employed. Production value was approximately \$238,800 for the 1952 campaign.

### Section 3.—Pensions and Allowances

The Canadian Pension Commission.—The Commission administers the Pension Act and the Civilian War Pensions and Allowances Act and reports to Parliament through the Minister of the Department of Veterans Affairs. The Head Office of the Commission is at Ottawa and representatives, known as Pension Medical Examiners, are located at each District Office of the Department.

It is the responsibility of the Commission to adjudicate upon claims for injury or disease resulting in disability or death during service with the Naval, Army or Air Forces of Canada, and to consider claims for the supplementation of awards to Canadians who suffered disability or death while serving in the Armed Forces of the United Kingdom or its allies in World War I or World War II.

### The Pension Act.—Under the Pension Act (R.S.C. 1952, c. 207):—

- Pensions payable to veterans of the Fenian Raid and Northwest Rebellion under authority of Orders in Council are supplemented to the Canadian scale.
- (2) Pensions payable by Great Britain on account of Canadians who served in the South African War are supplemented to the Canadian scale.
- (3) Pensions for peacetime service prior to World War I payable under Orders in Council are supplemented to the Canadian scale.
- (4) Pensions are paid in respect of service in World Wars I and II for injury or disease or the aggravation thereof resulting in disability or death attributable to or incurred during service.
- (5) Pensions for peacetime service between World Wars I and II and subsequent thereto are paid when the injury or disease or aggravation thereof resulting in disability or death arose out of or was directly connected with service.
- (6) Special provision was made for the Canadian Army Special Force and for those who serve in a theatre of operations.

In previous issues of the Year Book information is given regarding the development of Canadian pension legislation and yearly statistics regarding numbers and liability. As at Dec. 31, 1952, pensions in force were as follows:—

Payable—	Pensions	Liability
·	No.	\$
To dependants	33,695	33,909,476
For disability	160,610	91,461,688
Totals	194,305	125, 371, 164

The pension paid for a total disability to a former member of the Armed Forces of the rank of major and below, with a wife and two or more children, amounts to a personal pension of \$125 monthly, an additional \$45 for his wife, \$20 for the first child, \$15 for the second, and \$12 for each additional child. If he is helpless and in need of attendance, he is granted a Helplessness Allowance, which might vary from a minimum of \$480 to a maximum of \$1,400 per annum depending on the amount of attendance required. In the case of the blind, where the attendance required is not constant, the helplessness award is \$960 per annum.

A pensioned widow receives \$100 per month, with \$40 for the first child, \$30 for the second and \$24 for each additional child. If she remarries, she is granted one year's pension as a final payment and pension usually continues for her children. Pension for a boy expires when he reaches the age of 16, and for a girl at 17. However, it may be continued to the age of 21 if the child is making satisfactory progress in a course of education approved by the Commission.

Civilian War Pensions and Allowances Act.—This Act extends pension legislation to a number of civilian groups whose work was closely associated with the World War II war effort, including merchant seamen, auxiliary services personnel, fire fighters who served in the United Kingdom, special constables with the Royal Canadian Mounted Police, overseas welfare workers, etc.

Veterans' Bureau.—The Veterans' Bureau, staffed by Pensions Advocates, most of whom are lawyers, was established in 1930 to assist those seeking war disability or dependant's pension in presenting their claims to the Canadian Pension Commission (see 1947 Year Book, p. 1142). This service is also given to persons applying for pension under the Civilian War Pensions and Allowances Act. There are District Pensions Advocates in all district offices of the Department. The service is free of charge and most applications for pension are handled in this way. At Mar. 31, 1953, the Veterans' Bureau had 6,644 active claims in hand.

### Section 4.—Rehabilitation of Veterans

The Veterans Welfare Services Branch of the Department of Veterans Affairs is responsible for the administration of benefits available to discharged members of the Forces under the terms of the Veterans' Rehabilitation Act, the War Service Grants Act, and the Veterans Benefit Act of 1951.

The Department renders assistance to veterans and advises them in social problems through the Social Service Division of the Veterans Welfare Services Branch. At the same time, it does not duplicate any service that is already available to a veteran as a citizen. The rehabilitation of women veterans has been conducted along with that of the male veterans and no particular problems have been encountered.

War Service Grants.—The amounts expended as gratuities under the War Service Grants Act up to Mar. 31, 1953, are shown in Table 1.

1.—Gratuity Payments under the War Service Grants Act, Years Ended Mar. 31, 1945-53

Year and Service	Navy	Army	Air Force	Miscellaneous	Total

Re-establishment Credits.—To Mar. 31, 1953, 979,385 veterans re-establishment credit accounts had been opened and 747,284 of these accounts had been closed owing to authorization having been given for the complete disposal of the credit. In addition to the \$285,584,280 authorized for use for the purposes listed in Table 2, about \$59,132,333 was written off for veterans who had used the alternative benefit of training, or had made application to settle under the Veterans' Land Act. Of the total re-establishment credit issued to Mar. 31, 1953, more than 79 p.c. was used for homes.

The expenditures made to Mar. 31, 1953, resulted from 1,988,377 individual approved applications for use of the credit.

2.—Re-establishment Credits Paid, by Required Purposes, Years Ended Mar. 31, 1952 and 1953, with Cumulative Totals to Mar. 31, 1953

Purpose	1952	1953	Total to Mar. 31, 1953
Homes—	\$	3	\$
Purchased under National Housing Act. Purchased other than under National Housing Act. Repairs, etc. Furniture and equipment. Reduction of mortgage.	130, 439 750, 376 481, 137 5, 924, 726 78, 822	64,320 478,147 391,133 4,627,488 60,578	3,195,177 31,421,167 15,602,417 170,668,396 4,313,730

Casualty Rehabilitation.—The Casualty Welfare Division, the function of which is to provide vocational guidance, assistance in securing suitable employment and vocational after-care, maintains a register of all those veterans whose disabilities in relation to other factors, such as education, previous employment experience and personality, constitute a serious problem in occupational adjustment.

There were, up to Mar. 31, 1953, 38,085 registrations with this Division of which 6,662 were still active cases. The registration, according to the type of disability, is shown in the following statement:—

Type of Disability	Active Cases	Closed Cases
-	No.	No.
Amputation Neuro-muscular and skeletal system disabilities Total and partial loss of hearing or sight Neurological cases. Heart and vascular system. Respiratory disabilities Mental and emotional disabilities Unclassified	. 313 . 279 . 337 . 2,992	1,998 10,392 2,474 1,107 3,163 7,491 686 4,112
Totals	6,662	31,423

Among the national agencies with which the Department is in continuous liaison in connection with casualty welfare are: the Army, Navy and Air Force Veterans Association; the Canadian Legion, BESL; the Canadian National Institute for the Blind; the Canadian Paraplegic Association; the Canadian Red Cross Society; the Canadian Tuberculosis Association; the National Society of the Deaf and Hard of Hearing; and War Amputations of Canada.

During the fiscal year ended Mar. 31, 1953, the total number of registrants increased by almost 1,300 cases but the number of active cases decreased by 976. Progress in the rehabilitation of the cases between Mar. 31, 1952, and Mar. 31, 1953, was as follows:—

Status	Mar. 31, 1952	Mar.31, 1953
<del></del> .	No.	No.
Employed. Unemployed. Receiving treatment, training or other services. Rehabilitation not feasible. Closed on WVA.	1.874	31,267 669 2,887 2,088 1,174
Totals	36,788	38,085

Social Service.—The Social Service Division is staffed by professionally qualified social workers who act as consultants to Veterans Welfare Officers dealing with social problems of veterans and their dependants and handle the more complex problems directly. They also have special responsibility regarding staff training in social welfare principles and methods. The Division maintains close liaison with a wide variety of health and welfare agencies, both public and private, to ensure that veterans and their dependants obtain all possible assistance from the community, to which they may be entitled as citizens.

At the request of the Department of National Defence, the Department of Veterans Affairs inquires into home circumstances of members of the Armed Forces. These inquiries are designed to assist the Department of National Defence in making administrative decisions regarding applications for compassionate leave, posting and discharge, and to help the dependants by counselling and, where necessary, by referring them to community agencies. The Social Service Division maintains a full-time liaison office at National Defence Headquarters to facilitate this work. During the year ended Mar. 31, 1953, 3,700 such cases were referred to the Department of Veterans Affairs, an increase of almost one-quarter over the previous year.

Rehabilitation of Older Veterans.—Gainful employment of older veterans, is a continuing problem requiring special attention. Employers have responded admirably to the placement activities of the veteran sections of the National Employment Service, and of the "Older Veteran" Welfare Counsellors of the Department of Veterans Affairs.

Out of a present population of 340,000 veterans of World War I whose average age is 61 years, the unplaced portion of those seeking employment throughout Canada is less than 6,000.

The Corps of Commissionaires is now firmly organized from Newfoundland to Vancouver Island. Employers are finding it a convenient and economical means of filling positions in which trustworthiness is of prime importance. About 6,000 older veterans, many over 70 years of age, are steadily employed through the Corps

of Commissionaires. Employers generally have come to recognize the advantages of older men, particularly veterans, for many jobs that are unattractive or unsuitable for younger men.

A 'team-work' procedure has been developed between the Department, the National Employment Service and local veterans associations, to help fit every older veteran into a job he can do, or otherwise to ensure his means of maintenance. Collectively, about 50,000 cases a year are handled.

Assistance Fund.—New Assistance Fund Regulations were made by Order in Council P.C. 3730, dated Aug. 6, 1952, following the passage of the revised War Veterans Allowance Act. A veteran or a widow receiving an allowance under the Act, with no other income, may, if considered to be in need under the Regulations, be granted up to \$120 per annum from the Fund. Assistance is paid in the form of a continuing monthly grant in cases where income is insufficient to meet the cost of rent, fuel, food and health needs calculated according to the prescribed formula. In other cases, a single grant may be given to meet an emergency.

Applicants are helped to obtain financial assistance from any other source to which they may be entitled, and to utilize all available community health and welfare resources. Increased monthly allowances under the War Veterans Allowance Act of 1952, made retroactive to Jan. 1, 1952, plus the granting of Old Age Security to War Veterans Allowance recipients at age 70, reduced applications to the Assistance Fund. From Aug. 6, 1952, to Mar. 31, 1953, the reported number of applicants was 2,554, of which 2,190 were assisted.

Education Assistance.—Assistance for the university training of veterans is provided under the Veterans' Rehabilitation Act as outlined in the 1948-49 Year Book, pp. 321-322. Since veterans were obliged to commence their university training within 15 months after discharge, the number entering training has dropped very sharply. In the academic year 1952-53, approximately 1,400 veterans in universities were receiving assistance through the Department of Veterans Affairs, compared with about 8,000 in 1951-52, 15,000 in 1949-50 and 24,000 in 1948-49. Since the commencement of the training program, 9,000 veterans have had insufficient qualifying service to carry them through to graduation but 6,068 of them qualified for continued assistance by securing scholarship standing. The distribution of the 1,400 veterans enrolled in 1952-53, by academic years, was: first year 97; second year 120; third year 142; fourth or subsequent year 660, and post-graduate 381. Since the inception of the rehabilitation program in 1941, 54,600 veterans have received university training. This includes 50 men who served with the Special Force in Korea.

The Children of War Dead (Education Assistance) Act, 1953, became effective July 1, 1953. The purpose of this legislation is to make it financially possible for pensioned sons and daughters of men who have died as a result of war service to proceed with educational training beyond the secondary school level. An eligible student may receive a monthly allowance of \$25 while actually in full-time intramural attendance at an educational institution in Canada requiring high-school

graduation for admission thereto. In addition to the allowance, tuition and other fees are payable under conditions respecting educational training that applied in the case of World War II veterans.

Rehabilitation Benefits for Members of the Special Force.—The Veterans Benefit Act, 1951, provides for the extension of rehabilitation benefits to ex-members of the Special Force. Persons who enlisted in the Special Force, served in a theatre of operations and were discharged on strength of the Special Force are eligible for benefits similar to those provided for veterans of World War II. This also applies to members of the reserve and regular forces who served with the Special Force in a theatre of operations subject to certain conditions and time limits respecting commencement and termination of the service performed with the Special Force.

The Veterans' Land Act.—The net number of accounts opened during the year ended Mar. 31, 1953, was 4,223, representing an increase in new settlement under this Act of 336 as compared with the previous fiscal year. Included in the new accounts were 21 opened for veterans of the Special Force.

The payment record of the veterans settled under the Act was further improved during 1952-53. Out of 47,451 World War II veterans with repayable contracts in effect at Mar. 31, 1953, only 0.3 p.c. of the small holders were in arrears of \$100 or more, and only 2.8 p.c. of the full-time farmers and commercial fishermen were in arrears in excess of \$200. Of the latter, the majority are settled in the Prairie Provinces and payment from them is anticipated as soon as circumstances permit them to deliver and market their 1952 harvest.

Lower prices for farm products, unaccompanied by a corresponding decrease in the price of the things farmers buy, forced VLA farmers and the Administration officials to extend and intensify the attention they have been giving to methods of reducing farm production costs. In their day-to-day contact with these veterans and through field days, demonstrations, evening meetings and the dissemination of sound agricultural information, the VLA supervisory staff have assisted them to maintain or increase their incomes in the face of the lower price trend.

Supervision activity in connection with small holders continued to stress the economic advantages of the kitchen garden and the opportunities for secondary incomes through well-chosen agricultural enterprises. The small holders were also encouraged and assisted to maintain the value of their properties through building maintenance and landscaping.

The good payment record of the veterans is undoubtedly due, in part, to the advisory and educational services rendered. In this connection, the Administration gratefully acknowledges the extensive assistance and co-operation received from departments of agriculture, experimental farms, schools and colleges, and from private organizations and associations, commercial companies and successful farmers.

Table 3 shows the number of veterans who qualified for settlement, the number for whom financial assistance was approved, and the amounts approved in the form of loans and grants from the inception of the Act to the end of March 1953.

3.—Summary of Settlement	Status, Loans and	Grants und	er the Veterans	Land

<sup>1</sup> Excludes Indian veterans on reserve lands.

Contracts for new houses continued at approximately the same level in 1952-53 as in the previous year. Of the 16,673 new houses constructed, or on which construction had started, approximately 78 p.c. were built by the veterans themselves, acting as their own contractors.

### 4.—House Construction under the Veterans' Land Act, 1942, Year Ended Mar. 31, 1953

Further activity took place during 1952-53 in connection with the joint assistance building program on city lots with Central Mortgage and Housing Corporation. Order in Council P.C. 147/3233, of July 1, 1950, which authorized this program, was expanded in February 1953 for a period of one year by P.C. 36/258, to provide for the operation of the program on city lots not previously owned by the Director, Veterans' Land Act.

Veterans Life Insurance.—The administration and statistics concerning veterans life insurance will be found in Chapter XXVI.

War Veterans' Allowance.—The War Veterans' Allowance Act is administered by the War Veterans' Allowance Board. The allowance provides assistance to veterans with service in a theatre of actual war or who, in lieu of such service, are in receipt of a disability pension and have reached the age of 60, or earlier if their physical condition prevents them from earning their own living. The allowance may also be paid to the widows of veterans who would themselves have been qualified, but in the case of widows it is payable at the age of 55, or earlier if their physical condition makes the allowance necessary. The allowance is not paid as of right but is subject to certain financial tests.

This Act was completely revised during the Sixth Session of the 21st Parliament, 1952. The new Act recognizes that many of the older veterans are still able to take light or intermittent employment, and its provisions encourage this by eliminating the ceiling on wages for eligible veterans over 60 years during the months in which they are employed and permitting them to receive the allowance during the months in which they may be unemployed.

The maximum rate of an allowance for a single recipient was increased from \$40.41 to \$50 a month, and for a married recipient from \$70.83 to \$90 a month. The permissible income ceiling was raised from \$610 to \$720 a year for a single veteran and from \$1,100 to \$1,200 a year for a married veteran. Where a veteran's wife is blind, the ceiling was raised from \$1,100 to \$1,320 a year.

The previous provision whereby upon the death of a recipient the widow could be granted twelve monthly payments of the amount of the award in payment to him at the time of his death has been changed to permit the payment to the widow of the maximum amount permissible under the Act, i.e., \$90 a month for twelve months. The same provision has been extended in the new Act to the recipient bereft by death of his spouse. This latter provision is entirely new and is designed to assist the veteran recipient in discharging the costs of the last illness and funeral of his wife and his adjustment to single status.

The maximum monthly allowance for orphans has been increased to \$40 for one orphan, \$70 for two orphans, and \$85 for three or more orphans of one veteran. The amount of personal liquid assets that an applicant may have before being granted the allowance is \$1,000 in the case of a single veteran and \$2,000 for a married veteran. In both instances, interest from bonds, etc., up to a maximum of \$25 annually is permitted as exempt income. The permissible value of property which the veteran owns or in which he may have an equity has been raised from \$4,000 to \$6,000. Complete medical and dental treatment by the Department, without cost, is available.

As at Mar. 31, 1953, there were 40,547 recipients including 9,684 widows. The liability for the year was \$26,332,903.

## Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. This is neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people, and the exact limits of the powers of the different legislative bodies require continued definition by the courts.

The exclusive legislative authority of the Parliament of Canada extends to criminal law throughout Canada. This law is based on the common law of England, built up through the ages and consisting first of customs and usages and later of principles enunciated by generations of judges and introduced into Canada, as regards criminal law, by Royal Proclamation in 1763. For particulars of the federal judiciaries see Chapter II, pp. 45-47.

The judicial systems of the provinces as they exist to-day are based upon the British North America Act of 1867. Section 91 provides that "the exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters" In each province (Sect. 92, ss. 14), the legislature may, exclusively, make laws in relation to "the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and of criminal jurisdiction and including procedure in civil matters in those courts". The Parliament of Canada may, however (Sect. 101), establish any additional courts for the better administration of the laws of Canada. For particulars of provincial judiciaries, see Chapter II, pp. 47-55.

It is frequently difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts, but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given set of facts.

Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.

Prior to Confederation, each province had its own criminal jurisprudence and statutes which caused great and increasing inconvenience until the adoption of various consolidation Acts, the chief of which are the Criminal Law and Amendment Acts of 1869 and the Criminal Procedure Act of 1886. These Acts deal exhaustively with procedure in respect of indictable and non-indictable offences, jurisdiction of justices of the peace, juvenile offenders, speedy trials, criminal law, schedules and forms, etc.

Codification of the law of crimes by a Criminal Code Bill, founded on the English draft code of 1880, Stephen's Digest of Criminal Law, Burbidge's Digest of the Canadian Criminal Law, and on the Canadian statutory law, was introduced by the Minister of Justice, Sir John Thompson, passed both Houses of Parliament and became law on July 1, 1893.

The Criminal Code classifies offences as indictable and non-indictable. Indictable offences include all offences that are not punishable by way of summary convictions. A limited few of such offences are triable by magistrates without the consent of the accused, by virtue of Part XVI of the Criminal Code relating to the summary trial of indictable offences. The majority, however, are triable only in the Superior Court of the province with a jury, or by consent of the accused, either under Part XVIII of the Criminal Code relating to the speedy trial of indictable offences, or under Part XVI of the Criminal Code relating to the summary trial of indictable offences. Cases triable by jury without the consent of the accused are: treason, treasonable offences, assaults on the Queen, mutiny, unlawfully obtaining and communicating official information, taking of oath to commit certain crimes, seditious offences, libels on foreign sovereigns, piracy, corruption of officers employed in prosecuting offenders, frauds on the Government, breach of trust by public officers, municipal corruption, selling of appointments to any office, murder, attempt to murder, conspiracy to murder, accessory after the fact to murder, manslaughter, rape, attempt to commit rape, defamatory libel, combination in restraint of trade, conspiring or attempting to commit, or being accessory after the fact to any of the above offences, also bribery or undue influence, personation or other corrupt practice under the Canada Elections Act. Also, when an offence is punishable with imprisonment for a period exceeding five years, the Attorney General may require the charge to be tried by jury.

Capital offences now include levying war, murder, piracy in cases of violence, rape, and treason. This is a drastic modification of the Code as it stood a century and a half ago. Further details of law and procedure are given in the 1951 Year Book, pp. 256-258.

In the Province of Quebec a district magistrate has powers extending beyond those of a magistrate in any other province. He has the same jurisdiction as a county court judge in Ontario and disposes of cases under Part XVIII of the Criminal Code, whereas the jurisdiction of the magistrates of other provinces extends only to Parts XV and XVI of the Criminal Code.

Non-indictable offences include cases usually dealt with summarily by police magistrates and justices of the peace under Part XV of the Criminal Code or under the provincial summary convictions Acts, as the case may be, and comprise breaches of municipal regulations and other minor offences.

The statistics presented in this Chapter are collected directly from the criminal courts in the different judicial districts throughout Canada. There are 157 such districts divided by provinces as follows: Newfoundland 7, Prince Edward Island 3, Nova Scotia 7, New Brunswick 15, Quebec 28, Ontario 48, Manitoba 6, Saskatchewan 21, Alberta 12, British Columbia 8, Yukon Territory 1 and the Northwest Territories I.

## Section 2.—Adult Offenders and Convictions

### Subsection 1.—Adults Convicted of Indictable Offences

The main interest in criminal statistics is concerned with those persons guilty of the more serious crimes. Such offenders are fewer than those who commit non-indictable offences but, from the standpoint of the protection of society, they are more important.

In 1949, the basis of the statistics of indictable crimes was changed from convictions to persons; therefore, the tables in this Subsection can be compared only with those of the 1952-53 Year Book. Another significant difference from the previous tabulations is the change of the reporting year in 1951 from the 12 months ending Sept. 30 to the calendar year.

Where any person is prosecuted at the same hearing for several offences, one offence has to be selected for tabulation. The rule followed is to select that for which the proceedings were carried to the furthest stage—to conviction and sentence if the prisoner was tried on several charges; if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; if the final result of proceedings on two or more charges was the same, the most serious offence (as measured by the maximum penalty allowed by the law) appears in the tables. Where a person was prosecuted for one offence and convicted of another (e.g., charged with murder and convicted of manslaughter), the case appears only under the offence for which he was convicted.

In the case of non-indictable offences, the figures given in Subsection 3 continue to be based on convictions and are comparable with those previously published.

Statistics include only cases finally determined within the year. Cases not entirely disposed of within the year (e.g., tried but sentence postponed) are held over for the next year's report.

Criminal statistics for Newfoundland are included for the first time in 1951.

During the year Jan. 1 to Dec. 31, 1951, the courts of Canada dealt with 34,181 adults charged with 48,225 indictable crimes, of whom 28,980 were found guilty of 39,309 offences. This was a decrease of  $7 \cdot 7$  p.c. as compared with the year ended

Sept. 30, 1950, despite the addition of figures for Newfoundland included in the tables for the first time in 1951.

## Adults Convicted of Indictable Offences and Ratio per 10,000 Population, 16 Years of Age or Over, by Province, Years Ended Sept. 30, 1950 and Dec. 31, 1951

Note.—Figures for years prior to 1951 are for the fiscal year ended Sept. 30; 1951 figures are for the calendar year. Statistics for the three intervening months, October-December 1950, are given in DBS report Statistics of Criminal and Other Offences. Figures for Newfoundland are included for the first time in 1951.

	19	50	1951		
Province or Territory	Persons Convicted	Ratio per 10,000 Population	Persons Convicted	Ratio per 10,000 Population	
	No.	No.	No.	No.	
Newfoundland			490	23	
Prince Edward Island	124	20	109	17	
Nova Scotia	1,464	33	1,296	31	
New Brunswick	905	27	746	23	
Quebec	6,417	25	5,726	22	
Ontario	12,818	39	11,801	36	
Manitoba	1,802	32	1,565	29	
Saskatchewan	1,134	19	1,049	19	
Alberta	2,401	40	2,302	36	
British Columbia	4,178	50	3,821	45	
Totals	31,243	34	28,905	30	
Yukon and Northwest Territories	142	1	75	46	
Canada	31,385	1	28,980	30	

<sup>&</sup>lt;sup>1</sup> Estimates of population 16 years of age or over are not available for the Yukon and Northwest Territories.

Indictable offences are divided into six classes as shown in Table 2. Class I covers crimes against the person. In 1951 the number of offenders in this class was 13·3 p.c. lower than in the previous reporting period. Two-thirds of the offenders were convicted of assaults of various kinds and obstructing police. Fifteen persons were convicted of murder (four fewer than in 1950), seven of attempted murder as compared with 13, and 92 of manslaughter as against 75 in the preceding reporting year.

Classes II, III, IV and V cover offences against property. Thieves predominate among the offenders in these classes though the number was slightly lower in 1951 than in 1950. Burglars and robbers whose serious crimes involve acts of violence are the next most numerous, though in 1951 they decreased by 10.4 p.c. as compared with the previous reporting period. The number of persons who maliciously damaged property also decreased by 23.6 p.c. in the same comparison.

Miscellaneous offences are listed in Class VI. Drunken drivers increased by 22·8 p.c. during 1951. There were 353 offenders under the Opium and Narcotic Drug Act, of whom 312 were convicted of possessing heroin; 238 were males; and 297 were born in Canada. British Columbia courts convicted 54·4 p.c. of the drug offenders and Ontario courts 21·5 p.c.

## 2.—Adults Convicted of Indictable Offences, by Class of Offence, Years Ended Sept. 30, 1950 and Dec. 31, 1951

Note.—See headnote to Table 1, p. 280.

Female Offenders.—There were 1,936 female offenders convicted of indictable offences in 1951, 46 of them in Newfoundland. Nova Scotia, Quebec and Alberta were the only provinces showing an increase over the previous reporting period. Nearly 44.8 p.c. of the women convicted in 1951 were found guilty of theft and receiving stolen goods, while 10 p.c. were committed for assualt. Nine women were convicted of manslaughter and one of murder.

### 4.—Females Convicted of Indictable Offences, by Province, Years Ended Sept. 30, 1949 and 1950, and Dec. 31, 1951

NoteSee headnot	to Table 1, p. 280.

Grand Totals	35,133	32,683	30,922	31,385	28,980

Disposition of Cases and Recidivism.—Of all suspects before the courts for indictable crimes, 84·8 p.c. were adjudged guilty in 1951; the convictions against males (85·2 p.c.) constituted a higher percentage than those against females (79·8 p.c.) and varied greatly as between provinces. Prince Edward Island showed the highest percentage (97·3 p.c.) of convicted persons and Nova Scotia the lowest percentage (74·8 p.c.).

In 1951, 54.8 p.c. of the convicted persons were first offenders, 8.6 p.c. had previously been found guilty of an offence and 20.6 p.c. had two or more earlier convictions. Court records for the remaining 16.0 p.c. were not obtained.

Sentences.—The types of sentences were in much the same proportion in 1950 and 1951. In the latter year, 30·3 p.c. of the persons convicted of indictable crimes were fined, 37·4 p.c. were sent to gaol without option of fine, 5·9 p.c. were committed to reformatories and 6·5 p.c. to penitentiaries, and 19·8 p.c. were given suspended sentences or put on probation. One habitual criminal was given preventive detention. Six persons received life sentences and 15 were given the death penalty.

### 8.—Sentences given for Indictable Offences, by Province, Year Ended Dec. 31, 1951, with Totals for Year Ended Sept. 30, 1950

Court Proceedings.—Figures for 1951 show that 61.5 p.c. of the persons tried by jury were convicted; speedy trials (by court after waiver of jury trial) brought convictions in 76.6 p.c. of the cases so tried and summary trials by magistrates ended in convictions in 86.1 p.c. of the cases.

Of persons charged on indictment, 90.4 p.c. were tried by magistrate or family and juvenile court judge, 2.7 p.c. by judge and jury and 7.0 p.c. by judge.

Tables 9 and 10 summarize court proceedings for the year ended Dec. 31, 1951.

## Subsection 2.—Young Adult Offenders (16-24 Years)

Young men and women from 16 to 24 years of age formed  $40 \cdot 9$  p.c. of the criminal population who committed indictable offences in 1951, although they comprised only  $20 \cdot 3$  p.c. of the total population of 16 years of age or over. As this age group includes some of the most daring offenders, who may be already experienced criminals, as well as first offenders likely to profit by further education and training, it seems worth while to give consideration to it as distinct from the older offender groups.

Almost 75 p.c. of the young offenders were tried in three provinces—Ontario (39·4 p.c.), Quebec (21·0 p.c.) and British Columbia (12·5 p.c.); 46·7 p.c. of these offenders were still under 20 years of age.

Totals	227	25	499	271	2, 493	4, 669	610	509	1,061	1,479	16	11,859

Young men aged 16 to 24 years comprised 32.6 p.c. of the male offenders convicted of assault (including obstructing the police); 61 p.c. of the total who attempted and committed rape; 66.1 p.c. of the male robbery and burglary convictions; 45 p.c. of those guilty of damage to property without violence, which includes all thefts; 76.4 p.c. of those who stole motor-vehicles; 53.4 p.c. and 45.7 p.c., respectively, of those who maliciously damaged property and were found with offensive weapons; and 26.2 p.c. of the reckless drivers.

There were, however, 910 fewer male offenders within this age group in 1951 than in the year ended Sept. 30, 1950, and, except for theft of automobiles, the actual number of youths convicted of the offences referred to above was less in each instance in 1951 than in the previous reporting year.

There were 799 young women offenders in 1951, 20 more than in the previous reporting year. They comprised 41·3 p.c. of all women guilty of indictable crimes. Nearly 50 p.c. of them (385) were guilty of thefts and receiving stolen goods. A third (39) of the women offenders under the Opium and Narcotic Drug Act were in this age group, an increase of 16 over the number convicted in 1950.

## 12.—Young Adult Offenders Convicted of Indictable Offences, by Class of Offence and Sex, Years Ended Sept. 30, 1950 and Dec. 31, 1951

Note. -- See headnote to Table 1, p. 280.

In Table 13 the rates per 100,000 estimated population show the proportions of young offenders in three age groups.

## 13.—Rates per 100,000 Population of Young Adults Convicted of Indictable Offences, by Age Group, Years Ended Sept. 30, 1950 and Dec. 31, 1951

Nore. - See headnote to Table 1, p. 280.

Ĭ		1950		1951						
Age Group	Offenders	Per 100,000 Population in Respective Group	Change from Preceding Year	Offenders	Per 100,000 Population in Respective Group	Change from Preceding Year				
	No.	No.	p.c.	No.	No.	p.c.				
16-17 years	2,926	684	+9.1	2,780	659	- 5.0				
18-19 "	3,107	718	+6.0	2,757	652	-11.3				
20-24 "	6,716	606	-2.1	6,322	581	- 5.9				

The sentences meted out to these young people varied somewhat from those given to offenders of over 24 years of age. A higher proportion of them in 1951 were given suspended sentences, put on probation or sent to reformatories while a lower proportion were fined or given gaol or penitentiary sentences.

14.—Disposition of Sentences for Indictable Offences, Year Ended Dec. 31, 1951

	M	Males	Females		
Disposition of Sentences	16-24 Years	25 Years or Over	16-24 Years	25 Years or Over	
	p.c.	p.c.	p.c.	p.c.	
Suspended sentenceProbationFined	16·4 10·3 23·9	10·5 2·8 34·5	22·4 17·6 17·8	18·4 7·8 35·2	
Gaol. Reformatory.	34·2 8·6 6·6	41.2	30-0 10-1	32.2	
Penitentiary Death	6-6 0-01	3·9 7·0 0·1	2.0	3·1 3·2 0·1	

Through suspending sentence and probation supervising, many of these young offenders received another chance to make good, while reformatory training gave others an opportunity to better their employment possibilities. In this connection it is interesting to note that 30·3 p.c. of the males were recorded as labourers, which indicates that they had no particular skill by which to earn a living; the proportion of male offenders over 25 years of age recorded as labourers was 21·8 p.c. Four percent of the youths were students and another 5·2 p.c. were unemployed as compared with 2 p.c. of the older men. Three out of four of them lived in urban centres.

Of the young female offenders, 35·3 p.c. were not gainfully employed; domestic or personal service was the occupation of 37·5 p.c. and 83·5 p.c. lived in urban centres.

Since those convicted of non-indictable offences are not reported by age of offender, it is not possible to segregate young people of 16 to 24 years of age who have had summary convictions.

### Subsection 3.—Convictions for Non-indictable Offences

Non-indictable offences—those not expressly made indictable—include all offences against provincial statutes and municipal by-laws. Non-indictable offences are triable by magistrate or justice of the peace under Part XV of the Criminal Code or under the provincial summary convictions Acts, as the case may be.

It is debatable how far summary convictions are of a criminal nature and how much their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort as, for example, parking violations or exercising callings without licence, but they do not involve violence, cruelty or serious dishonesty. On the other hand, offences as serious as cruelty to animals and contributing to juvenile delinquency are included under this classification and such indictable offences as common assault and driving with ability impaired may be tried on summary conviction.

Summary convictions increased by 10·5 p.c. to 1,308,466 in the calendar year 1951 from 1,183,991 in the year ended Sept. 30, 1950. Increases were general in all provinces except Quebec and Saskatchewan.

## 15.—Convictions for Non-indictable Offences, by Province, Years Ended Sept. 30, 1942-50 and Dec. 31, 1951

Nors.—See headnote to Table 1, p. 280. Figures for 1900-41 are given in the corresponding tables of previous Year Books beginning with the 1933 edition.

Year	N'f'ld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Yukon	W. T.	Canada

1945		1,394				209.713	22,820		11,576		312	36	455,91
1946		2,715	12,915	13,925	176,996	354,154	36,014	13,985	16,289	32,203	234	242	659,67
1947						407,334	47,170	15,263	18,696	45,585	328	325	752,45
1948					228,502		52, 783	15,488	19,748	85,006	385	238	876,644
1949					232,132				25,551	94,326	232	57	980,489
1950						617,565				117,729	553	172	1,183,993
1951	5,022	2,195	14,850	25,660	267,648	671,893	118,217	22,467	39,956	139,304	950	304	1,308,46

It should be remembered that, while the Criminal Code undergoes little change over a period of time, the figures for summary convictions are greatly influenced by the customs of the people and by the application and degree of enforcement of municipal regulations. These differ from place to place and from year to year and affect non-indictable offences more than they do indictable crimes.

In 1951, marked decreases in certain types of offences, such as vagrancy, contributing to juvenile delinquency, offences under the Lord's Day Act, and gambling, were offset by decided increases in convictions for breaches of traffic regulations, which reached an all-time peak, assault and disturbing the peace, drunkenness and non-payment of radio licence fee. There were 1,290 convictions for leaving the scene of an accident against 424 the previous year.

## 16.—Convictions for Non-indictable Offences, by Type, Years Ended Sept. 30, 1947-50 and Dec. 31, 1951

Note. - See headnote to Table 1, p. 280.

<sup>&</sup>lt;sup>1</sup> Included with Liquor Control and Temperance Acts, and Drunkenness.

Breaches of Traffic Regulations.—Each year breaches of traffic regulations constitute a greater proportion of the total convictions for non-indictable offences. In 1951 they amounted to 81·4 p.c., an increase of 13·5 p.c. over 1950, which alone would account for the increase in summary convictions; 98·9 p.c. of them were offences under provincial highway traffic Acts and municipal by-laws.

## 17.—Convictions for Breaches of Traffic Regulations, by Province, Years Ended Sept. 30, 1942-50 and Dec. 31, 1951

Note.—See headnote to Table 1, p. 280. Figures for 1900-41 are given in the corresponding tables of previous Year Books beginning with the 1933 edition.

Year	N'f'ld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Yukon and N.W.T.	Canada

1950		366	4,265			508,010		12,362	13,772		138	
1951	1,773	580	5,802	15,641	215,222	570,895	106,262	13,325	22,923	112,738	265	11,065,426

For the year 1951, Ontario, with  $42\cdot0$  p.c. of the registrations of motor-vehicles in Canada, had  $53\cdot6$  p.c. of the total convictions for breaches of traffic regulations; Quebec in the same year had  $17\cdot4$  p.c. of the motor-vehicles and  $20\cdot2$  p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. These two provinces have large urban centres, while in provinces with lower degrees of urbanization, such as the Atlantic Provinces, Saskatchewan and Alberta, convictions are lower when considered in proportion to the number of motor-vehicles registered.

Convictions for Drunkenness and Offences against the Liquor Acts.—In considering Table 18, it should be noted that the same person may and often does appear before the courts on such charges more than once within a year and that the number of convictions may thus be well above the number of persons convicted.

## 18.—Convictions for Drunkenness, by Province, Years Ended Sept. 30, 1942-50 and Dec. 31, 1951

Note.—See headnote to Table 1, p. 280. Figures for 1900-41 are given in the corresponding tables of previous Year Books beginning with the 1933 edition.

There is general interest in the relation of alcoholism to crime but when examining statistics to support the assumption that some crimes are associated with the consumption of liquor it should be observed that accurate interpretation would necessitate allowance for population variables such as age and sex distribution and other classifications according to social and economic status, etc.

## 19.—Convictions for Offences against the Liquor Acts, by Province, Years Ended Sept. 30, 1942-50 and Dec. 31, 1951

Note.—See headnote to Table 1, p. 280. Figures for 1900-41 are given in the corresponding tables of previous Year Books beginning with the 1933 edition.

Conviction of Females.—The number of convictions against females for non-indictable offences has increased steadily each year since 1944; the increase in the calendar year 1951 over the year ended Sept. 30, 1950, amounted to 4·4 p.c. Only three provinces, Prince Edward Island, Quebec and Saskatchewan recorded decreases in 1951 from the previous reporting year. British Columbia, Nova Scotia and New Brunswick showed the largest percentage increases in summary convictions against females—36·3 p.c., 21·1 p.c. and 12·3 p.c., respectively.

Total traffic offences for which women were responsible increased in 1951 over 1950 by  $9\cdot5$  p.c. and were the cause of  $82\cdot7$  p.c. of the summary convictions against them.

### Subsection 4.—Appeals

In the calendar year 1951, the Supreme Court of Canada and the provincial supreme courts dealt with 839 appeals of criminal cases as compared with 895 in the year ended Sept. 30, 1950. The Crown was the appellant in 66 of these cases and the accused in 773 cases. The original conviction or orders were affirmed in 511 cases (60·9 p.c.); sentence was varied or the verdict changed or substituted in 166 cases (19·7 p.c.); 115 convictions (13·7 p.c.) were quashed, and 47 new trials (5·6 p.c.) were ordered.

The returns from the county and district courts showed that 810 appeals against summary convictions were disposed of in 1951, as against 747 in the previous reporting year. Of that number the informant was the appellant in 105 cases and the accused in 705 cases. The appeals against convictions and orders were dismissed in 439 cases (54·2 p.c.); sentence was varied and the verdict changed or substituted in 159 cases (19·6 p.c.), and there were 212 acquittals (26·2 p.c.). More than a third (38·0 p.c.) of the appeals in all the courts were heard in Ontario, 15·1 p.c. in British Columbia, 17·4 p.c. in Alberta, 13·1 p.c. in Nova Scotia and 6·3 p.c. in Quebec.

## Section 3.—Juvenile Delinquents

The Juvenile Delinquents Act defines a child as "any boy or girl apparently or actually under the age of 16 years" Provision is made, however, by which the Governor General in Council may proclaim that, in a province the definition of a child be a "person under the age of 18 years". This has been done in British Columbia, Alberta, Manitoba and Quebec. For uniformity, the figures relating to juveniles compiled by the Dominion Bureau of Statistics refer to the younger ages of under 16 years only and deal primarily with cases disposed of by the courts.

In 1950, the practice was abandoned of dividing delinquents into major and minor offences. This division has always been arbitrary and open to question depending on the standards of behaviour in different communities, as a minor delinquency in one locality may be judged a major delinquency in another.

However, in August 1951, Alberta reduced the age of juvenile boys to under 16 years. Newfoundland considers a juvenile to be a girl or a boy of under 17 years of age.

The fact that juvenile court statistics furnish the most comprehensive figures collected on a country-wide basis makes it important that their possibilities and limitations be understood. This Section gives an account of juvenile delinquency in Canada from the viewpoint of legal action taken, for in the eyes of the law a child is a delinquent only when he or she is adjudged before the court to have committed a delinquency. To many people the term 'juvenile delinquent' has a broader interpretation but that adopted in this Section does not include those boys and girls whose misdemeanours have not been reported to the courts or who have been given the necessary advice and aid from their parents, their school, the police or a child-caring agency. Moreover, it does not include those cases that are handled unofficially by the court, where the judge or probation officer makes an adjustment without filing a legal record of the offence. The tendency to follow this practice and thus keep children's names from court records is growing and may account to some extent for the almost steady decrease in the number of recorded court cases in the past eight years. In 1950, approximately 9,482 cases were disposed of in this way.

These statistics represent cases of delinquency reported to the courts from the most trivial infractions to the most serious, that of murder. The number of cases brought before the courts is influenced by such factors as personnel and facilities of the court, community interest in and understanding of the function of a juvenile court, and by variations in the policies of the courts in the disposition of cases. As more courts are established, the additional returns may exaggerate an apparent increase in delinquency or may under-estimate a decrease. In some communities, the juvenile court is the only available agency to provide services to children; in others, there are well-established agencies serving children, of which the juvenile court is only one.

It should be noted, too, that the total figures do not represent the actual number of children charged and found guilty, but rather tend to exaggerate them, for a child referred to the court two or more times during the year for different offences is counted as a different case each time. Neither do the figures represent the number of offences committed by offenders, as, when a child is charged with more than one delinquency at a hearing, only the most serious offence is counted.

Reports of juvenile delinquents were received in 1951 from 154 of the 156 judicial districts. Nine of these had no cases to report. Separate reports were received in 1951 from 156 incorporated urban centres of 4,000 population or more.

Juveniles before the Courts.—The number of cases of juveniles brought before the courts declined steadily each year from 1943 to 1949 and, although there was an increase of 4 p.c. in the number of children brought before the courts in 1950 over 1949 and of 3 p.c. in 1951 over 1950 (the increase in the latter year being mainly accounted for by the addition of 194 cases in Newfoundland), the figures for these years were lower than any year except 1949 in a 25-year period.

### 22.—Juveniles brought before the Courts, by Province, 1947-51

Note.—Statistics for years prior to 1950 are for the fiscal years ended Sept. 30; figures for 1950 and 1951 are given on a calendar-year basis. Statistics for the three intervening months, October-December 1949, are given in DBS report Juvenile Delinquents, 1950. Figures for Newfoundland are included for the first time in 1951.

Province or Territory	1947	1948	1949	1950	1951	Percentage Change, 1950-51

Canada	8,265	7,878	7,038	7,304	7,521	+ 3.0

Increases in the number of court appearances were shown in four provinces and decreases in five, with Quebec showing the greatest percentage decrease. The peak in the number of girls appearing before the courts was reached in 1943, a year later than for boys, followed by a decline each year until 1949. The number of girls appearing in 1950 at 756 was higher than in 1949 but dropped to 716 in 1951.

## 23.—Percentage Change in the Number of Boys and Girls brought before the Courts, 1942-51

Note .- See headnote to Table 22.

Year	Perc from	entage Chan Preceding Y	ge ear	Pero	inge

Reasons for Court Appearances.—The number of children adjudged delinquent by the courts of the 10 provinces in 1951 was 6,644. This was an increase of 93 boys and a decrease of 42 girls over the year 1950, not including the Newfoundland figures.

### 24.—Juvenile Delinquents, by Province, 1942-51

Note.-See headnote to Table 22, p. 296.

1950		10	351	258	1,369	3.056	400	76	204	688	6	6,418
1951	175	52	483	261	1.180	3,024	347	64	242	815	ĭ	6.644

Thieving is the most prevalent delinquency among the boys and, together with receiving stolen goods, was the reason for court appearance in more than one-third of the cases (38·4 p.c.) in 1951. Burglaries, robberies, house- and shop-breaking were committed by 25·2 p.c. of them and another 12·4 p.c. committed wilful acts against property. Only 2·9° p.c. of the boys were guilty of offences against the person and almost 46 p.c. of these were charged with common assault.

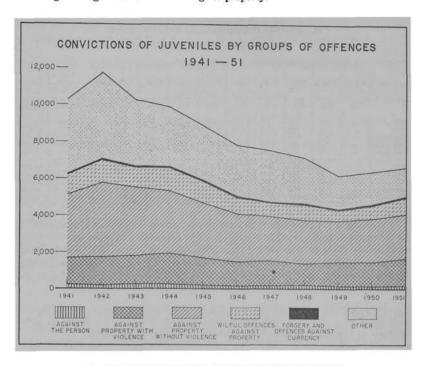

Incorrigibility and vagrancy were the main complaints against the delinquent girls  $(33 \cdot 7 \text{ p.c.})$ ; however, this was a decrease from the  $40 \cdot 7 \text{ p.c.}$  shown in 1950. One girl in every five appeared for theft and securing stolen goods.

### 25.—Juvenile Delinquents, by Group of Offence and Ratio per 100,000 Population 7-16 Years of Age, 1942-51

Note.-See headnote to Table 22, p. 296.

Year	Offences against the Person		against Property		Prop with	Offences against Property without Violence		Wilful Offences against Property		Forgery and Offences against Currency		Other Offences		Total Convictions

Totals	7,545	7,155	6,198	6,418	6,64

Sex and Age of Delinquents.—Juvenile delinquents are predominantly boys. The ratio between boys and girls has remained much the same over a long period and for all offences in 1951 it was approximately one girl to nine boys. Juveniles of 13 to 15 years of age comprised the majority of delinquents,  $70 \cdot 2$  p.c. in the case of boys and  $86 \cdot 4$  p.c. in the case of girls. However, 592 boys  $(9 \cdot 8$  p.c.) and 19 girls  $(3 \cdot 1$  p.c.) were under 11 years of age. There were no delinquent girls under 11 years of age in Nova Scotia, none under 12 years in Alberta and none under 13 years in Prince Edward Island and Saskatchewan.

27.—Percentages of Delinquent Boys and Girls, by Age Group, 1950 and 1951

Note.—See headnote to Table 22, p. 296.

2001 1792		1950		1951			
Age Group	Boys	Girls	Both Sexes	Boys	Girls	Both Sexes

7-12 years	31·6 67·3 1·1	17·5 81·7 0·8	30·2 68·7 1·1	29·0 70·2 0·8	13·2 86·5 0·3	27·6 71·7 0·7	
Totals	100.0	100.0	100.0	100.0	100.0	100-0	

Education and Employment.—Many causes contribute to backwardness in school work. The retarding influence may be illness, over-crowding in the home, disturbed family situations or dull mentality. Presuming that six years is the usual age for entering Grade I, nearly 50 p.c. of the juvenile delinquents (48 p.c. of the boys and 49·7 p.c. of the girls) in 1951, were reported to be two or more years below the normal grade for their years and 3·2 p.c. of the boys and girls were a year or more above it.

Well over 50 p.c. of the boys attained Grades V to VIII, the highest grades attained by the majority of boys who had left school. More than 50 p.c. of the girls had reached Grades VII to VIII, and these were the grades from which the girls left school. Some high school education had been achieved by 14·8 p.c. of the boys and girls.

In 1951, 13·3 p.c. of the delinquent boys and 17 p.c. of the delinquent girls were not attending school. At the time of leaving school their ages ranged from 10 to 15 years with the majority being 14 and 15 years of age. Nearly one-third (31·0 p.c.) of these boys were unemployed. The largest group of wage-earners (108) were in occupations concerned with transportation, such as messengers, helpers on milk-delivery routes, truck drivers' assistants, etc. The next largest group (72) were recorded as day labourers. A large percentage of the girls (42·3 p.c.) were idle after leaving school. Factory work, domestic and personal service were the main occupations of those who were employed.

Birthplaces of Juvenile Delinquents and their Parents.—Canada was the country of birth of 95.8 p.c. of the juvenile delinquents in 1951 (the place of birth was not recorded in 2.6 p.c. of the cases). One hundred and seven (1.6 p.c.) were born in the British Isles, Europe, the United States and China. Ontario was the province of residence of 67.3 p.c. of those born outside Canada.

Both parents of 70.7 p.c. of the delinquent children in 1951 were born in Canada and another 13.6 p.c. had one parent born in this country. To evaluate these figures, comparison should be made of population ratio of children from 7-16 years of age whose parents were Canadian-born with those whose parents were born elsewhere.

Home Circumstances.—The type of home in which he lives and the amount and quality of supervision he receives are important factors in a child's behaviour. The statistics of the marital status of the parents and the place and type of residence of the child reflect home conditions and are worth recording as possible reasons for social or emotional maladjustment. The parents of  $76 \cdot 7$  p.c. of the delinquent children were reported to be living together in 1951. Homes broken by separated parents, divorce or death was the background from which  $18 \cdot 4$  p.c. of these boys and girls came. The mothers of  $8 \cdot 5$  p.c. of the juvenile delinquents were employed other than in the home and, in the cases of another  $3 \cdot 3$  p.c. the mothers were dead. The fathers of  $7 \cdot 6$  p.c. of the cases were deceased. For every five juveniles who appeared in court, four resided in an urban centre and one in a rural district. Of these boys and girls  $86 \cdot 5$  p.c. were living in their own homes at the time they got into difficulties;  $3 \cdot 8$  p.c. of them were in foster homes, either with a relative or some other person, and institutions were the homes of  $2 \cdot 2$  p.c. of them.

Sources of Complaint.—The police were the complainants in the majority of juvenile cases,  $76 \cdot 3$  p.c. of the boys having been so charged. Probation officers were responsible for  $3 \cdot 6$  p.c. and parents for  $3 \cdot 2$  p.c. of those charged. School authorities referred  $2 \cdot 6$  p.c. of the boys to the courts.

The proportion (41.9 p.c.) of girls charged by the police was considerably less than in the case of the boys while parents made more use of the courts for girls than for boys (19.6 p.c.). School authorities laid complaints in 11.9 p.c. and probation officers in 9.9 p.c. of the girls' cases.

Repeaters.—Experience, which dispels or increases resentment to authority, may be a factor in encouraging or deterring repeaters. Some of the responsibility for the attitude that is built up, be it good or bad, rests with the police, the probation officer, the staff of the detention home and the judge. The recollection of how he was charged the first time, how he was handled while awaiting hearing, the opinion of those in whose care he was placed during the process of readjustment, all make an impression on a child.

In 1951, approximately one in every four children brought before the courts failed to heed the first warning and made at least a second appearance. In 1951, 77.4 p.c. of the delinquent children appeared before the courts for the first time, 13.7 p.c. were second offenders, 4.9 p.c. third, while 4 p.c. were dealt with by the courts four or more times.

29.—First Offenders and Repeaters of Major Offences, 1942-51

<sup>&</sup>lt;sup>1</sup> Includes minor offences.

Disposition of Cases.—In 1951, not quite one-half of the children's cases (46·3 p.c.) were heard within four days of the charge and slightly over two-thirds (67·5 p.c.) within nine days. However, nearly a quarter (23·2 p.c.) of the boys and girls had to wait at least two weeks and 12·8 p.c. waited a month or more before the first hearing. These waiting periods may be explained in various ways.

Some county courts sit only twice or even once a month. Hearings may be deferred because of sickness in the family, school examinations, stormy weather, or long distances. The chief cause for delay, however, is the time it takes to investigate the facts properly. The probation officer, and frequently there is only one to a court, has to find out what occurred at the time of the delinquency; he must contact the parents and the school, learn something of the home situation, perhaps arrange medical or psychiatric examinations and explore community resources. The disadvantage of a long waiting period is outweighed by the assistance the court receives in deciding the form of treatment best suited to the child's needs and the type of care that will be the most economical for the community. For these intervening days or weeks most children are left in their own homes while a minority are placed in detention homes and, in the long run, whether the effect of the waiting period is good or bad is determined by the care given the youngster during that time.

Juvenile court judges heard 89.8 p.c. and magistrates 9.8 p.c. of the juvenile cases before the courts. The balance were heard in the higher courts or by justices of the peace. The proportion of those declared delinquent (93.9 p.c.) in the magistrate's courts was greater than in the juvenile courts (87.7 p.c.). In the former court 4.5 p.c. of the cases were dismissed and 1.6 p.c. adjourned sine die while in the juvenile courts only 2.4 p.c. were dismissed but 9.9 p.c. were adjourned sine die.

Some courts consider children whose hearings are adjourned *sine die* as delinquent while others do not and, for the sake of uniformity in this report, the latter point of view is maintained by the Dominion Bureau of Statistics. In assessing the total problem of juvenile delinquency, however, cases adjourned *sine die* have to be taken into account for, when the proportion of cases dealt with in this way increases, the proportion of those declared delinquent declines.

# Juveniles before the Courts, Dismissed and Delinquent, 1947-51 Nore.—See headnote to Table 22, p. 296.

Item	194	1947		1948		1949		50	1951	
	No.	p.c.	No.	p.c.	No.	p.c.	No.	p.c.	No.	p.c.
Before the courts	8,265	100-0	7,878	100-0	7,033	100-0	7,304	100-0	7,521	100-0
Dismissed	197	2.4	190	2.4	166	2-4	197	2-7	195	2.6
Adjourned sine die	523	6.3	533	6.8	674	9.6	689	9-4	682	9-1
Delinquent	7,545	91.3	7,155	90-8	6,198	88-0	6,418	87.9	6,644	88-3

The disposition of cases in 1951 differed as between boys and girls and was most marked in the proportion of those put on probation which was 36·5 p.c. for the boys and 43·0 p.c. for the girls. Fines or restitution were meted out to 22·9 p.c. of the boys but to only 8·0 p.c. of the girls. This is because damage to property, for which restitution seems a reasonable adjustment, is committed relatively more often by boys than by girls. A much larger proportion of girls (34·5 p.c.) than boys (15·4 p.c.) were sent to training schools. Final disposition of case was postponed in 11·1 p.c. of the girls' cases while 19·5 p.c. of the boys were given suspended sentences. Corporal punishment was resorted to in only two cases.

#### Section 4.—Police Forces

The Police Forces operating in Canada are organized under three groups:

(1) the Federal Force, which is the Royal Canadian Mounted Police whose operations cover a very wide field in addition to purely police work; (2) Provincial Police Forces—the Provinces of Ontario and Quebec have organized their own Provincial Forces, but the other provinces engage the services of the Royal Canadian

Mounted Police to perform parallel functions within their boundaries; (3) Municipal Police—every city of reasonable size has its own police organization which is paid for by the local taxpayers and which attends to purely police matters within the borders of the municipality concerned.

## Subsection 1.—The Royal Canadian Mounted Police\*

The Royal Canadian Mounted Police is a Civil Force maintained by the Federal Government. It was organized in 1873 as the North West Mounted Police, whose duties were confined to what was then known as the North West Territories. By 1904, the work of the Force received signal recognition when the prefix "Royal" was bestowed upon it by King Edward VII. In 1905, when Alberta and Saskatchewan were constituted Provinces, an arrangement was made whereby the Force continued to discharge its duties as formerly, each province making a contribution towards defraying the cost. This was continued until 1917.

In 1918, the Royal North West Mounted Police was assigned the duty of enforcing Dominion legislation for the whole of Canada west of Port Arthur and Fort William. Soon after the end of World War I an extension of governmental activities made it obvious that the enforcement of Dominion statutes throughout Canada must be the responsibility of a Dominion Force and, therefore, the jurisdiction of the Royal North West Mounted Police was extended to the whole of Canada early in 1920. In that year, the name of the Force was changed to the Royal Canadian Mounted Police and the former Dominion Police with Headquarters at Ottawa, whose duties were largely connected with guarding public buildings in that city and Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., were absorbed by the Royal Canadian Mounted Police.

Organization.—The Force is controlled and administered by a Minister of the Crown (the Minister of Justice). Its Commissioner has the rank and status of a Deputy Minister. Officers are commissioned by the Crown and for many years have been selected from serving non-commissioned officers. The Force is divided into 15 Divisions, including the Marine Division with Headquarters at Halifax, N.S. There are 602 detachments distributed over the entire country. Its land force transportation consists of 1,023 motor-vehicles, most of which are fitted with two-way radio sets connecting with wireless stations operated by the Force. Such stations operate in both Western and Eastern Canada, including the Quebec-United States boundary area. The Aviation Section of the Force operates eight aircraft of various types. The strength of the Force is approximately 4,500 officers and men, with a reserve strength of about 350. The reserve strength is located chiefly in the larger cities where men can be congregated easily and where instruction can be given in the evenings.

The Marine Division has a strength of about 200 officers and men and operates 26 ships of various kinds, the majority of which are located on the Atlantic Coast and on the Great Lakes. The RCMP schooner St. Roch, which has been used as a floating detachment in the Far North and as a supply ship to isolated detachments, is the only ship to navigate the Northwest Passage from east to west and from west to east and is also the only vessel to have circumnavigated the North American Continent.

The Personnel Branch of the RCMP has officers in each Division across the country. Great care is taken in the selection of recruits.

<sup>\*</sup> Revised by Commissioner L. H. Nicholson, M.B.E., of the Royal Canadian Mounted Police, Ottawa,

Duties.—The Royal Canadian Mounted Police is responsible for enforcing federal laws throughout Canada and is specially empowered to deal with infractions against smuggling by sea, land and air. It also enforces the provisions of the Excise Act, and is responsible for the suppression of traffic in narcotic drugs. In all, the Force has responsibility in over 50 Federal Government Acts, including the Indian Act. It also assists many departments of the Federal Government in administrative duties and is responsible for the protection of government buildings and property. It is the sole police force operating in the Northwest and Yukon Territories. Furthermore, it undertakes secret and security services for the Federal Government. In addition to its federal duties, agreements have been made with the Provinces of Alberta, Saskatchewan, Manitoba, Nova Scotia New Brunswick, Prince Edward Island, Newfoundland and British Columbia whereby the services of the Royal Canadian Mounted Police can be secured to enforce provincial laws and the Criminal Code in rural districts upon payment for such services. The agreement with Saskatchewan has been in existence for 23 years and those with the Provinces of Alberta, Manitoba, New Brunswick, Nova Scotia and Prince Edward Island for 19 years. The agreements were entered into with the Provinces of Newfoundland and British Columbia in August 1950, and the police forces of those provinces were absorbed by the Royal Canadian Mounted Police. The Force has agreements also for policing more than 120 urban centres within the provinces mentioned.

Other Services.—The services of RCMP experts in fingerprints, crime-index information, examination of firearms and questioned documents are available to all other police forces in Canada. A *Police Gazette*, issued monthly and containing instructional articles on police work as well as the latest information on wanted or missing persons, is sent to all police forces across the country. The RCMP has two Police Colleges that are open to selected personnel from other police forces in Canada and to a more limited number of those outside its boundaries.

In recent years the Force has given special attention to crime prevention, as well as detection, and has done much to assist the youth of Canada in developing a healthful outlook towards the police, law, order and responsible citizenship. Personal contacts with over a million young people have been made through school and youth groups supervised by churches and service clubs.

A book entitled Law and Order in Canadian Democracy, containing twenty essays, has been issued by the Force and is available through the Queen's Printer, Ottawa.

#### Subsection 2.—Provincial Police Forces\*

Quebec Provincial Police Force.—The Quebec Provincial Police Force is responsible for upholding law and order over the whole territory of the Province, from the provincial boundary between Ontario and Quebec to the Magdalen Islands in the Gulf of St. Lawrence. The Force, composed of about 800 men, is in charge of a Director, who acts under direct orders from and is responsible to the Attorney-General of the Province.

To facilitate operations, the territory is divided into two almost equal parts designated as the District of Montreal and the District of Quebec. The Director has his office at Montreal and an Assistant Director at the city of Quebec. Working

Revised by Geo. A. Shea, O.B.E., Secretary-Treasurer, Chief Constables' Association of Canada, Montreal, Que.

under these Directors are two Deputies and an Inspector General. In each District the Police Force is divided into three sections: the detective corps, the constabulary and the traffic officers; each section is in charge of a captain supported by a number of lieutenants and sergeants.

A province-wide frequency modulation radio-communication system has been established at Montreal. A main station, operating on the top of Mount Royal, directs radio-equipped cars within a radius of between 60 and 80 miles around Montreal, and similar stations operating from the cities of Quebec and Three Rivers direct the mobile units operating in their respective areas. Substations operate at each of the eight bridges giving access to or exit from the city of Montreal and a number of cars, all equipped with frequency modulation three-way radio units, patrol the surrounding country day and night.

Ontario Provincial Police.—The Ontario Provincial Police is maintained by the Ontario Government under the Attorney-General's Department. The Force is responsible for law enforcement in the rural and unorganized parts of the Province and in certain municipalities by contract.

The development of the Force from its beginning in the early years of Confederation to the passing of the Police Act in 1946, is outlined in the 1950 Year Book, pp. 332-333.

The Force with a strength of approximately 1,385 in 1952 consists of a General Headquarters at Toronto and 16 districts with headquarters at Chatham, London, Dundas, Niagara Falls, Newmarket, Mount Forest, Barrie, Peterborough, Belleville, Perth, Cornwall, Haileybury, Sudbury, Timmins, Port Arthur and Kenora. Each district has detachments adequate to meet law-enforcement requirements. A Criminal Investigation Branch, under the command of a Chief Inspector, is maintained at Toronto to handle crimes of a major nature.

The installation of one of the largest police frequency-modulation radio systems in the world has placed at the command of the police a most efficient method of combating every type of lawlessness. There are in operation 55 fixed stations and 402 two-way radio cruisers and one cabin-cruiser on Lake Temagami. The 250-watt stations at District Headquarters are open 24 hours daily and many of the cars are on continuous round-the-clock patrols.

Up to December 1952, 88 municipalities had availed themselves of the provisions of the Police Act for the policing of their municipalities by the Ontario Provincial Police.

## Subsection 3.-Municipal Police Statistics

Police statistics were submitted for the year 1951 by Chiefs of Police in 236 urban centres, 13 district communities, 11 townships and one unorganized district, of 4,000 population or over.

Criminologists generally agree that the number of offences known to the police is the closest indication of the volume and nature of crime in a country. The number of offences reported as known to the police was 11.9 p.c. lower in 1951 than in the previous year. Of these known offences, 60.7 p.c. were cleared by arrest.

Of the total prosecutions, 5.9 p.c. were for crimes under the Criminal Code and federal statutes, 24.5 p.c. were for offences under provincial statutes; and 70 p.c. were for municipal law infractions. Traffic offences accounted for 86.7 p.c. of the prosecutions.

## Section 5.—Penal Institutions and Training Schools

Penal institutions may be classified under three headings: (1) penitentiaries, where prisoners have long sentences and the turnover is slow; (2) reformatories, where the turnover is also rather slow; and (3) common gaols, where the turnover is extremely rapid.

If the average of the figures for inmates at the beginning and at the end of the year be considered the average population for the year, and the number of discharged as the turnover, the turnover in the years 1950 and 1951 was: in penitentiaries, 44 and 47 p.c.; in reformatories, 286 and 296 p.c.; and in gaols, no less than 1,458 and 1,549 p.c., respectively.

In considering these figures it should be borne in mind that the common gaol population changes from day to day and is made up partly of accused persons awaiting trial who may be either liberated or sent to a penitentiary or reformatory.

<sup>&</sup>lt;sup>1</sup> In 1950, Newfoundland Penitentiary reported for the first time and Oakalla Prison Farm, B.C., previously classed as a reformatory for men, was changed to a gaol.

#### Subsection 1.—Penitentiaries\*

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries of Canada. Eight institutions are included in the system, the two largest being at Kingston, Ont., and St. Vincent de Paul, Que. Others are at Dorchester, N.B., Prince Albert, Sask., Stony Mountain, Man., New Westminster, B.C., Collin's Bay, Ont, and St. John's, N'f'ld.; the latter is operated under provincial authority and the figures for inmates of that institution serving sentences of two years or more are included for 1950-52 in Tables 34 and 35. A Federal Training Centre was opened at St. Vincent de Paul in April 1952 for the treatment and training of offenders under 25 years of age. A Penitentiary Staff College was also set up at Kingston for the training of penitentiary officers through courses of instruction and training conferences. During the year ended Mar. 31, 1952, the average daily population of the penitentiaries was 4,721 and the total net cash outlay for maintenance for the year was \$6,955,970 or \$4.02 per inmate per day.

Females given penitentiary sentences in the various provinces are sent to the Prison for Women at Kingston where special quarters and staff are maintained for their detention and supervision. Female inmates in custody on Mar. 31, 1952, numbered 125.

<sup>\*</sup> Revised by the Commissioner of Penitentiaries, Department of Justice, Ottawa.

<sup>1</sup> Includes Newfoundland.

The Ticket-of-Leave System.—The parole system in Canada is legalized under the Ticket-of-Leave Act (R.S.C. 1952, c. 264) and is administered by the Minister of Justice. It is described in detail in the 1948-49 Year Book, pp. 305-308.

### Subsection 2.—Reformatories and Industrial Farms

Reports on movement of population in reformatories and industrial farms are received yearly and the statistics in Table 36 relate to returns received from nine reformatories and industrial farms for men and four reformatories for women. The revenue for the support of the institutions for men was derived chiefly from provincial funds  $(56 \cdot 0 \text{ p.c.})$  and from the sale by the institutions of farm and industrial products  $(41 \cdot 3 \text{ p.c.})$ . In the case of the institutions for women, income was received from provincial funds  $(31 \cdot 0 \text{ p.c.})$ , municipalities  $(1 \cdot 8 \text{ p.c.})$ , sale of products  $(53 \cdot 4 \text{ p.c.})$  and donations and bequests  $(4 \cdot 6 \text{ p.c.})$ .

36.—Movement of Population in Reformatories and Industrial Farms, Year Ended Mar. 31, 1951

Census of Reformatories and Corrective Institutions, 1951.—A Census of reformatories and of training schools (see pp. 314-316) is taken at five-year intervals, the latest being June 1, 1951. At that date, there were 13 reformative and corrective institutions, four of which were for women. Enumeration cards were completed for 2,551 men and 141 women on June 1, 1951. In these institutions for adults 29 p.c. of the inmates were under 21 years of age at the time of admission and almost 50 p.c. were between the ages of 21 and 39 years. The proportion of single men was 63 p.c. and three out of four of the men whose residence was known lived in urban centres. More than one-half of the women (53·2 p.c.) were single and the majority (91·0 p.c.) of those whose residence was known lived in urban centres.

From five to eight years of elementary school education was recorded for about one-half of the male and female inmates. Only  $6 \cdot 7$  p.c. of the men were unemployed at the time of admission. On the other hand,  $20 \cdot 6$  p.c. of the women were unemployed and another  $34 \cdot 0$  p.c. had never worked.

More than two-thirds of the men (68·1 p.c.) were committed for offences against rights and property and more than 50 p.c. were guilty of theft, breaking and entering, burglary and robbery. Incorrigibility, vagrancy, theft and breaches of the Liquor Control Act were the reasons for 50 p.c. of the women being institutionalized.

Nearly one-half of the men  $(48\cdot0~\text{p.c.})$  were confined for less than one year and  $51\cdot7~\text{p.c.}$  for one year to two years less a day. More than one-half of them  $(51\cdot2~\text{p.c.})$  had been previously committed to a penal institution. The median length of

sentence for the women was between 12 and 18 months. Of those women whose penal record was known, 92·3 p.c. had had earlier commitments to a reformatory.

Canada was the country of birth of 88.7 p.c. of the male inmates and of all but 13 of the females. In all, 272 men were born outside Canada but the majority of them (76.8 p.c.) had lived in this country for 15 years or more. Of those cases in which citizenship was known, all but 40 of the men and all the women were recorded as Canadian citizens. The men came from every province except Newfoundland while the women, with the exception of one, resided in the Maritimes and Ontario, the provinces in which the institutions for women were located.

	517	406	559	478	494
	493	516	552	695	674
Totals— Pupils in residence at beginning of year Admitted during the year. Discharged during the year. In residence at end of year.	1,848	1,799	1,881	2,294	2,357
	1,838	1,822	1,784	1,713	1,866
	1,885	1,740	1,717	1,650	1,896
	1,801	1,881	1,948	2,357	2,327

The period of the financial year varied among the training schools. The last complete financial year before June 1, 1951, showed that the province concerned supplied about three-quarters of the funds for the support of such schools (77·2 p.c. for boys' schools and 70·6 p.c. for girls' schools) and the municipalities a little more than a tenth (12·5 p.c. for boys' schools, 10·2 p.c. for girls' schools). Other financial resources included fees paid by parents, donations, bequests, sale of farm and industrial products and laundry work. Nine of the schools for boys were provincially administered, five were administered by religious orders and one by a board of directors; eight of the schools for girls were administered by religious orders and four were under provincial authority.

Census of Training Schools, 1951.—Returns of the Census of Training Schools of June 1, 1951, were received for 15 training schools for boys and 12 for girls, located in nine provinces; the Census enumerated 2,390 pupils (1,713 boys and 677 girls). The age of admission ranged from 4 to 18 years but those younger than seven years were protection cases. Boys of 14 years of age and girls of 15 years at the time of admission were predominant. More than 50 p.c. of the pupils were in the age group 14 to 16 years; only 2.8 p.c. of the boys and 9.9 p.c. of the girls were 17 years of age or over.

Family neglect and a need for protection brought 5·1 p.c. of the boys and 29·4 per cent of the girls to these training schools. The remainder were committed by the courts for some delinquency. More than 75 p.c. of the boys were charged with theft, burglary, house- and shop-breaking, and incorrigibility. Almost half of the delinquent girls were incorrigible, a term which covers a variety of misdemeanours.

Presuming that six years is the usual age for entering school (Grade I), at the time of admission to training school only one of five boys and one of four girls had the corresponding standard for their age. When admitted, 8.8 p.c. of the boys were unemployed; they had left school mainly from Grades IV to VII; the majority were

14 or 15 years of age. Nearly one-half of the girls (48.9 p.c.) had left school, chiefly from Grades V to VIII, and, like the boys, the majority were 14 or 15 years of age. No occupation was recorded for 28.4 p.c. of the girls from which it may be inferred that they were not gainfully employed.

<sup>1</sup> Includes 'not stated'.

Of those whose birthplace was recorded, all but 20 were born in Canada and all but five had lived in Canada for more than five years. A large majority of the parents were Canadian born but, of those whose place of birth was recorded,  $10 \cdot 7$  p.c. of the pupils had a father and  $8 \cdot 9$  p.c. a mother born in another country;  $16 \cdot 3$  p.c. of the boys and  $24 \cdot 4$  p.c. of the girls were wards of either a children's aid society or a provincial authority. Almost one-half of these boys  $(48 \cdot 4$  p.c.) and more than a third of these girls  $(37 \cdot 0$  p.c.) were permanent wards so that their natural parents, if they were still alive, no longer had any authority over them.

Nine out of ten of both the boys and girls were in commitment for the first time. In many cases no length of stay was specified and pupils were supervised until they were ready to take their place in their community or until home circumstances were such as to afford more satisfactory living conditions. The usual length of residence, at the date of the Census, was between a year and a year and a half; however, at least 26.7 p.c. of the girls and 14.8 p.c. of the boys had been institutionalized for over two years.

42.—Previous Commitments, classified by Length of Time and by Sex, as at June 1, 1951

# PART I.—FORMAL EDUCATION\* Section 1.—Education in the Provinces

Education in Canada is generally the responsibility of the provinces.† Each province has its own system, that of Quebec being a dual one. However, there are two clearly defined types: (1) the English tradition carried on in nine provinces and in the Protestant schools of Quebec and (2) the French tradition followed in the Roman Catholic schools of Quebec.

The English Tradition.—The system of education in each province is established by legislation and administered by a Department of the Provincial Government under a Minister of Education who is a member of the Cabinet and is responsible to the Legislature.

Each of the Atlantic Provinces has a Council of Public Instruction or Board of Education, an advisory group composed of the Premier, Minister of Education, Deputy Minister or Superintendent and certain other appointees. The Council in Newfoundland is made up of the Minister, the Deputy Minister and the Superintendent of Education of each of the four leading religious denominations.

Each Department of Education is concerned with the general administration of the public schools, the conduct of examinations, the certification of teachers, the registration of private schools and trade schools, public and travelling libraries, correspondence courses and also the direct management and control of teacher-training schools, vocational institutes and schools for the blind and the deaf.

See pp. 150-151.

<sup>\*</sup> Except where otherwise indicated, this Part has been prepared in the Education Division, Dominion Bureau of Statistics. †The education of Indian children on reserves is under the jurisdiction of the Federal Government.

Direct control and operation of the public schools is in the hands of local boards of school trustees, usually elected for terms of two or three years. They employ the teachers and administer the revenues received from provincial grants, local taxation and other minor sources. Any fees charged are for secondary education and are merely nominal, except in Newfoundland where they take the place of taxation.

Elementary and secondary education extends over 12 or 13 years or grades depending on the province. The elementary grades terminate with Grade VIII and the secondary grades begin with Grade IX though there is a practical as well as a theoretical separation into three divisions—Primary (Grades I to VI), Intermediate (Grades VII to X), and Senior (Grades XI and XII or XIII). The elementary schools are known as public schools, the secondary schools as high schools. However, many public schools teach some secondary grades and in Prince Edward Island and Newfoundland all grades are taught in the public schools.

In the cities and in some smaller centres there are kindergarten classes for five-year-olds and a few for four-year-olds as part of elementary education. Most children begin Grade I at age six or early seven and many complete the eight grades in seven years. Attendance is compulsory from age seven or eight to age 14 with attendance to age 16 required of urban pupils in some provinces. Emphasis is on the fundamental subjects—reading, writing, arithmetic, health and social studies—with varying additions of science, arts and crafts, music, home economics and shopwork. Many pupils, particularly in rural areas, leave school at the end of elementary schooling and enter employment in agriculture or unskilled occupations.

Secondary education may extend over a period of four or five years. Courses and subjects of study are diversified. A student may choose the academic course leading to university entrance or select courses or subjects preparing for employment in agriculture, commerce or industry. A student may pass from secondary school into commerce or industry at any time during this period provided he or she is over the compulsory age limit.

Further education is available to the high-school graduate through teacher-training school courses of one year for elementary school teachers; specialized technical training extending up to two years in a technical institute—there is at least one such institute in every province; nurse-training school where training extends over three years; or university. University courses are available in all branches of arts, commerce, science, education, philosophy, medicine, theology, etc. Graduation with a first degree (B.A., B.Sc., etc.) requires four years, medicine requires six years and theology seven years. Post-graduate courses require another two or more years.

The French Tradition.—The Quebec Department of Public Instruction is represented in the Cabinet by the Provincial Secretary. Although the Superintendent of Public Instruction is the head of the Department, a Roman Catholic Committee and a Protestant Committee, in charge of the education of Roman Catholics and Protestants, respectively, constitute the Council of Education which formulates policy and superintends the administration of all educational matters. The Council, however, has no authority over many special and technical schools that come directly under various government departments. The Protestant schools follow the English tradition already described; the Roman Catholic schools follow the French tradition.

From the very beginning boys are separated from girls. Both sexes follow through the Primary Grades, I to VII. The girls may then take the Intermediate Grades, VIII and IX, and thence enter a regional household science school, begin a four-year course in a teacher-training school or enter a superior school where a two-year course leads to a school of fine arts, a commercial course or a nurse-training course.

At the end of the fifth year a boy may enter a classical college for an eight-year course ending with a baccalaureate degree, which is prerequisite for entrance to a professional course in university, or he may continue on to the end of the primary course and then spend two years in the complementary course. From this point he may enter a technical school or any one of four sections of the two-year superior course—commercial, scientific, agriculture, technical or pre-teacher-training school. The latter leads to entrance to a teacher-training school, the others lead to specialized schools and advanced courses in technical schools or, after another year of preparatory work, to the higher schools of applied science, commerce and agriculture affiliated with the universities.

The boy who neither enters the classical college nor goes on to the complementary course may go directly from the primary course to a trade school or one of the regional agriculture schools. These schools offer two-year terminal courses.

## Section 2.—Education in the Territories\*

The Northwest Territories.—Education in the Northwest Territories is carried on under authority of the Northwest Territories Act, the School Ordinance and the Regulations thereunder, and the Indian Act and the Regulations thereunder. Day schools for non-Indian children are operated by the Northern Administration and Lands Branch of the Department of Resources and Development at Fort Smith, Hay River, Fort Resolution and Fort Simpson where the inhabitants are predominantly white and of mixed blood. Day schools for the education of Eskimos are also operated by that Branch at Aklavik, Tuktoyaktuk, Coppermine, Chesterfield Inlet, Cape Dorset and Coral Harbour in the Northwest Territories, and at Fort Chimo and Port Harrison in the Province of Quebec.

The Roman Catholic Church operates residential schools at Aklavik, Fort Providence and Fort Resolution, and Mission day schools at Fort Simpson and Fort Smith; the Church of England operates a residential school at Aklavik. These churches and other mission organizations also conduct schools for Eskimos at a number of points in the Eastern Arctic and northern Quebec. Eldorado Mining and Refining Limited at Port Radium and the Discovery Yellowknife Mine in the Mackenzie District also operate day schools.

The only organized school districts are the Yellowknife Public School District No. 1 and the Yellowknife Roman Catholic Separate School District No. 2. The Public School District, established in 1939, operates a modern eleven-classroom elementary and high school which was opened in 1947. The Separate School District was established in 1951 and has under construction a four-classroom school. Meanwhile provision has been made for the attendance of the pupils of this District at the public school.

A Superintendent of Schools, with headquarters at Fort Smith, periodically inspects the schools of the Mackenzie District. These schools follow the program of studies for elementary and secondary schools authorized by the Alberta

<sup>\*</sup>Prepared by the Department of Resources and Development, Ottawa.

Department of Education. In remote areas, elementary and high-school students have access to correspondence-course studies issued by the educational authorities of Alberta and the cost is borne by the Territorial Administration.

A modified elementary school curriculum is followed by some of the federal schools for Eskimos by way of meeting the unique needs in the Arctic regions and a suitable curriculum for teaching Eskimo children in Mission schools is being considered. Because of their nomadic way of life, Eskimos seldom remain long at the settlements and the periods available to the Missions for teaching the children are comparatively short. The Eskimos of the Eastern Arctic have long had a system of syllabic writing (expressed as geometric phonetic characters) which most of them can now read and write proficiently. Syllabic writing has been used successfully to provide educational material in the Eskimo language on health matters, hygiene and native economics for the benefit of both children and adults. It is hoped that the establishment of schools in Eskimo territory will be influential in teaching the Eskimos to understand, speak and read simple English.

A program designed to improve education and welfare facilities generally has been initiated in the Northwest Territories. The program includes regular distribution of educational films, special radio broadcasts to classrooms, the provision of additional equipment and supplies, and increased attention to methods of instruction. Schools are usually staffed by a particular classification of welfare teachers, who carry on welfare work in the communities in addition to regular teaching duties.

Yukon Territory.—Public schools in the Yukon Territory are operated by the Territorial Government at Dawson, Mayo, Whitehorse, Carcross, Teslin, Watson Lake, Haines Junction, Kluane Lake, Brook's Brook, Destruction Bay and Swift River. The Roman Catholic Church operates a day school at Dawson and a residential school at Whitehorse.

The schools in the Territory follow the program of studies of the British Columbia Department of Education. The public schools at Dawson and Whitehorse have high-school departments providing education leading to university entrance. University entrance (junior matriculation) examinations are held in June at Dawson and Whitehorse by authority of the British Columbia Department of Education. The examination papers are forwarded from Victoria and are returned there for grading. In outlying districts, correspondence courses are provided at a nominal fee by the British Columbia Department of Education.

Educational matters in the Yukon Territory are in charge of a Superintendent of Schools, resident at Whitehorse, who is responsible to the Commissioner. Inspections of all schools are made periodically by the Superintendent.

The education of Indian children is carried on in day schools operated by the Indian Affairs Branch of the Department of Citizenship and Immigration and in residential schools operated by religious denominations. Full-time day schools are maintained at Whitehorse, Carmacks, Mayo, Moosehide and Old Crow, and seasonal schools at Burwash Landing, Ross River and at other points as required. A residential school is conducted under the auspices of the Church of England at Carcross. Close to the southern boundary of Yukon Territory at Lower Post in British Columbia, an Indian residential school is conducted under the auspices of the Roman Catholic Church. Residential schools in Yukon receive a per capita grant for Indian children registered therein.

## Section 3.—Statistics of Schools, Universities and Colleges

Educational institutions in Canada are classified into four types: provincially controlled schools, privately controlled schools, universities and colleges, and federal Indian schools. The first three types are dealt with in this Section, while information on Indian schools, with the exception of enrolment figures shown in Table 1, is included with the general material on the Indians of Canada given in the Population Chapter, pp. 150-151.

<sup>&</sup>lt;sup>1</sup> Estimated. <sup>2</sup> Schools for the blind and deaf; these are boarding schools and many of the pupils are from provinces other than the one in which the school is situated. <sup>3</sup> Courses for elementary teachers only; those for secondary teachers are included in university enrolment.

The provincially controlled schools are the most important group and account for about 90 p.c. of the total enrolment shown in Table 1. These systems of public elementary and secondary education are financed mainly by local school authorities, assisted by provincial grants. There are private schools in all provinces (i.e., schools that are not conducted by publicly elected or publicly appointed boards and are not financed out of public money) but their enrolment is not large in comparison with that of the public schools. At the level of higher education, there is a provincial university in each of six provinces and one or more colleges supported out of provincial funds in the other provinces. In addition, there are 16 private universities most of which receive provincial aid and 163 colleges giving degree credit courses. Universities and colleges also receive grants from the Federal Government. The number of agricultural colleges and schools, by province, with type and length of course offered, is given in the Agriculture Chapter, pp. 384-387.

## Subsection 1.—Provincially Controlled Elementary and Secondary Schools\*

Enrolment and Attendance.—At the elementary-school level, enrolments have been increasing since the school year 1944-45, except in Saskatchewan. Birth registrations of the past few years indicate that by 1953-54 the enrolment in Grades I to VIII will have increased from 1,712,662 to over 2,307,000, a total of 595,000, and there is every indication that the increase may amount to 800,000 by 1960. A decline may set in shortly after that. An increase of 800,000 is equal to over 45 p.c. of the 1944-45 enrolment in the elementary schools of Canada. Grades above Grade VIII will begin to feel the effects between 1953 and 1955 and by 1965 secondary school enrolment may be close to double the 1951 total.

Other factors operating to increase enrolment include: the introduction of family allowances in 1945 which, while showing its effects on schools most clearly in improved attendance, is also keeping in school to the legal age limit many pupils who might otherwise leave from a few months to two years before they are lawfully entitled to leave; increased emphasis on the holding power of schools; increased transportation facilities at public expense; the building of dormitories in some provinces; the larger unit of administration; the establishment of junior high schools and composite schools; and the wave of post-war immigration. Enrolment in provincially controlled schools is given for the latest school year available in Table 1 and average daily attendance is shown in Table 2. The average daily attendance figures are more comparable, as between provinces, and for most purposes are probably more significant than those of enrolment.

#### 2.—Average Daily Attendance in Provincially Controlled Schools, by Province, School Years Ended 1942-51

Note.—Comparable figures for earlier years will be found in previous editions of the Year Book, beginning with the 1932 edition.

<sup>&</sup>lt;sup>1</sup> Quebec figures are for 1949-50, enrolled in Prince of Wales College.

Teaching Staffs.—In 1951, the teaching staffs of the publicly controlled elementary and secondary schools comprised 23,995 men and 65,539 women, a total of 89,534. Omitting Quebec for which comparable data are not available, 35 p.c. of the teachers were in cities, 27 p.c. were in towns and villages, 25 p.c. were in one-room rural schools, and the remaining 13 p.c. in schools of two or more rooms outside of urban centres. Again omitting Quebec where 36 p.c. of the teachers are members of religious orders, approximately 25 p.c. of the women teachers are married. Of the total number of teachers in the other nine provinces, at least 10 p.c. are only partially trained or are untrained; also about 10 p.c. of the total staff leave the profession each year.

Financial Support.—The income required to support the public elementary and secondary schools is derived almost wholly from local taxation and provincial grants. Fees for elementary schooling may be charged in Quebec. In some of the other provinces fees are charged for secondary grades but, except where in lieu of taxation, they are quite nominal.

In general, school boards submit their budgets to the local municipal councils which levy for and collect the required amounts. School boards in Quebec and some boards in other provinces have the power to levy and collect taxes for school purposes. Assessment, on which taxes for school purposes are levied, is the valuation of land and buildings (or improvements in some cases) and usually some other factor such as personal property or business income.

Each province has its own method of apportioning grants to local school boards. These grants are of two types. (1) The basic grant may be calculated on a basic minimum cost, an amount per classroom, salary and qualifications of teacher, average attendance, etc. All provinces adopt some means of increasing equality of opportunity by favouring poorer areas over richer ones. (2) Special grants are paid for such features as transportation, music, arts and crafts, special classes, equipment, building costs, night classes, etc. Special grants are largest in Quebec where there is marked emphasis on training for home industries, arts and crafts.

Newfoundland schools are financed largely from provincial funds. Tuition fees may be charged for Grades I to VIII only, except in the 'colleges' (St. John's) where fees may be charged for Grades I to XI. Fees may be charged also to provide for fuel and cleaning or these may be provided in kind. There is no local taxation for school purposes. Provincial grants are mainly for teachers' salaries, school plant maintenance and repairs, and the erection of buildings.

Table 5 presents a comparable statement of the finances of school boards operating publicly controlled schools so far as this can be done with existing records.

## 5.—Financial Support of Provincially Controlled Elementary and Secondary Schools, by Province, for Provincial Fiscal Years Ended 1939, 1949 and 1950

Note.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures, as all revenue of this nature must be repaid ultimately with money raised by local taxation. Figures from 1914 are given in the corresponding tables of previous Year Books beginning with the 1936 edition. The fiscal years of all provinces end Mar. 31, except Nova Scotia (Nov. 30) and New Brunswick (Oct. 31).

<sup>&</sup>lt;sup>1</sup> Net figures, after deduction of sinking funds, except for British Columbia in 1939, for which the gross figure is given. <sup>2</sup> Estimated. <sup>3</sup> Includes contributions to teachers salaries and, in New Brunswick, grants made to schools by the Vocational Education Board. <sup>4</sup> Latest available figures. <sup>5</sup> Includes amounts raised by counties and the township grants on salaries of rural public school teachers.

6 Excludes local boards within larger units.

## Subsection 2.—Private Elementary and Secondary Schools

Private schools include all those not operated by publicly elected or appointed boards. Except in Quebec, they receive no support from public funds. Instruction is similar to that given in public schools except that more opportunities may be given for music, art, etc., and in schools under religious control there is greater emphasis on religious instruction. In most provinces there is some form of inspection or regulation by the provincial Department of Education.

Of the 828 private schools reporting in 1951, 505 were in Quebec, 122 in Ontario, 120 in the Prairie Provinces, 43 in British Columbia and 38 in the Maritimes. There were 6,455 full-time teachers of whom 1,334 were men. Outside of Quebec, the salaries for lay teachers ranged from \$900 to \$5,000 with a median of \$1,862 for women, and from \$1,150 to \$8,000 with a median of \$2,905 for men.

In these schools, about 66 p.c. of the pupils, including 46,000 girls and 29,000 boys, were in the elementary grades. At the secondary level there were 24,000 girls and 13,000 boys.

The private schools are financed largely from fees, legacies, gifts, or by religious orders. The annual fees range from very little to upwards of \$1,000; in 1951 they averaged \$100 for day students and \$500 for boarders and expenditures amounted to over \$17,681,000. Of that amount \$5,338,000 was paid out in teachers' salaries

#### 6.—Enrolment in Private Elementary and Secondary Schools, by Province, Specified School Years Ended 1921-51

Note.—Figures for intervening years will be found in the corresponding tables of the 1937, 1942 and 1946 Year Books.

<sup>1</sup> Exclusive of Quebec.

Business Colleges.—Of the 141 business schools reporting in 1951 in eight provinces (exclusive of Quebec and Newfoundland), 15 were in the Maritimes, 78 in Ontario, 27 in the Prairie Provinces and 21 in British Columbia. There were 199 men and 438 women employed as full-time teachers and 46 men and 135 women as part-time teachers.

Girls predominated in the student body and the enrolment in evening classes was almost equal to the full-time day enrolment. The 1951 enrolment was: full-time day classes, 2,289 boys and 12,868 girls; part-time classes, 446 boys and 2,336 girls; evening classes, 3,239 boys and 11,039 girls. The total for the year was about 3,600 lower than for 1950. About 58 p.c. of the students were 17 to 19 years of age.

Monthly fees ranged from \$10 to \$35 for day classes and from \$6 to \$20 for evening classes. Total operating expenditures for these schools amounted to over \$2,600,000 in 1951 of which \$1,125,000 was for teachers' salaries.

#### 7.—Enrolment in Private Business and Commercial Schools (Business Colleges), by Province, Specified School Years Ended 1921-51

Norg.—Figures include day and evening classes. Those for intervening years will be found in the corresponding tables of the 1937, 1942 and 1946 Year Books.

<sup>&</sup>lt;sup>2</sup> Estimated.

<sup>3</sup> There are no schools of this type in Newfoundland.

## Subsection 3.-Universities and Colleges

The most recent statistics on enrolment in the universities and colleges of Canada (Dec. 1, 1952) show a downward trend owing to the decrease in the number of student war veterans. This trend is expected to continue for another two years. Total registration of full-time university-grade students, including post-graduate students, for the academic year 1949-50 was 74,273 students; for 1950-51, 68,358 students; and for 1951-52, 59,802° students. A return to the pre-war proportions of men to women in the undergraduate enrolment is evident from the following statement:—

Academic Year Ended—	Undergraduate Enrolment	Women Students	War Veterans
	No.	p.c.	p.c.
1931	. 31.576	23.52	_
1941	. 34,750	23 - 47	_
1946		20-80	32-33
1948		18-42	37.30
1950		20-41	11.89
1951		21.66	10.92
1952 <sup>p</sup>		22.45	5.85

Table 8 shows the total number of students registered in universities and colleges in the academic year 1950-51.

8.—Total Registration in Universities and Colleges, by Province, Academic Year Ended 1951

Courses	21,004	1,073	2,069	25,732	49,878

Post-war programs of international co-operation in the field of education have led to an increase in the number of foreign students in Canadian universities. The proportion of students from the United States and the United Kingdom has decreased in favour of students from other countries. In 1951, the latest year for which data are available, there were 3,188 students registered from outside of Canada; in 1938-39, the year preceding the decrease in foreign students because of war restrictions, there were 2,231 students from outside of Canada. The proportion of students from the United States in the foreign student body represented 82 p.c. of the total under pre-war conditions and 55 p.c. in 1951. Students from countries other than the United States and the United Kingdom, who represented only 12 p.c. of the foreign student population in 1938-39, made up 31 p.c. of that population in 1951. This increase was largely the result of the scholarship program of the United Nations agencies and the Colombo Plan, in which Canada participates.

University Graduates.—A total of 16,045 bachelor and first professional degrees was awarded in 1951 as compared with 19,669 in 1950. Degrees in Arts and Pure Science, including Commerce, represented 49 p.c. of the total in 1951, Engineering and Applied Science 17 p.c., and the Medical Sciences 13 p.c. Women students received 22 p.c. of the awards in 1951 as compared with 19 p.c. in 1950.

Degrees conferred in 1951 for post-graduate study and research, other than in Theology, included 352 licences, 1,280 Masterships and 202 Doctorates in Course. The results of a survey on the subjects chosen for theses by candidates for advanced degrees (National Conference of Canadian Universities, June 1952) shows the following classification by broad fields of study and research:—

Item	Master's Degree	Doctorate
<del></del>	No.	No.
Applied Science. Pure Science. Social Sciences. Humanities. Unclassified.	319 311 302 191 157	44 86 32 36 4
Totals	1,280	202

### 9.—Graduates from Universities and Colleges, School Years Ended 1948-51

Note. — Figures for 1920-36 are given in the 1938 Year Book, pp. 993-997, and for 1937-47 in the corresponding tables of subsequent editions.

<sup>&</sup>lt;sup>1</sup> Includes Bachelors of Letters and of Social Science.

<sup>2</sup> Includes Bachelors of Accountancy and Secretarial Science.

<sup>3</sup> Includes diplomas in Architecture from the Schools of Fine Arts of Montreal and Quebec.

<sup>4</sup> Excludes teacher diplomas.

<sup>5</sup> Includes M.A.Sc., M.S.A., M.Sc.F., M.Arch., M.V.Sc., M.Sc. Dent., M. Surgery (where conferred separately).

<sup>7</sup> Except diplomas for teachers and theologians.

Academic Staff.—The total teaching staff, including part-time staff, increased from 9,373 to 9,441 between 1950 and 1951. This increase, in conjunction with the decreased enrolment, brought the ratio of teachers to staff more in line with the experience of pre-war years. By the addition of one-half of the part-time staff to the full-time staff, on the basis of equivalence in instruction, there were eight students for each teacher in the pre-war years while the present teaching load represents nine students to one teacher.

10.—Teaching	Complement in	Universities and Ended 1921-51	Colleges,	Selected	School	Years

<sup>1</sup> Excludes duplication.

Salaries for full-time staff were considerably higher in 1951 and 1952 than in the pre-war years as indicated by the median salaries:—

Classification	Median Salaries			
Position	1952	1951	1959	
	\$	\$	\$	
Dean. Professor Associate professor. Assistant professor. Lecturer.	7,271 6,313 5,227 4,381 3,329	6,950 5,685 4,613 3,834 2,847	5,006 4,345 3,469 2,708 1,035	

Income and Expenditure.—A record of the sources of annual income for a representative group of universities is given in Table 11 for certain years from 1921 to 1951. The distribution of income by source for 1951 was as follows: Government grants, 46 p.c.; fees, 35 p.c.; revenue from endowments, 8 p.c.; other sources, 11 p.c. Expenditure in 1951 amounted to \$670 for each student. A total expenditure amounting to \$40,791,521 was reported by institutions responsible for 80 p.c. of the total enrolment.

#### 11.—Income and Capital Resources of Universities and Colleges, Selected School Years Ended 1921-51

Note.—The larger universities and many of the colleges in Canada are included and represent an enrolment of approximately 80 p.c. of the full-time students of university grade throughout the period. The institutions omitted are mainly those conducted by religious orders where teachers receive little or no salary and the financial returns are, consequently, not comparable.

# PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION

An outline of the Report of the Royal Commission on National Development in the Arts, Letters and Sciences,\* which was tabled in Parliament on June 1, 1951, is given in the 1952-53 Year Book, pp. 342-345.

## Section 1.—The Relationship of Art to Education†

Fine Art Schools, Galleries and Museums.—Fine art appears as an elective subject in the curricula of the faculties of arts in a number of universities, where it may be taken as one subject among five for a year or two; in some, e.g., Acadia University, N.S., there are six or more elective courses. In Mount Allison University, N.B., and in the University of Saskatchewan, there is a sufficient number of courses to allow the taking of a Bachelor's degree with specialization in fine art. At the University of Toronto, Ont., an Honour B.A. in art and archæology is offered, as well as graduate work in this field. Departments of fine arts were opened by McGill University (1948-49), the University of British Columbia (1949-50) and the University of Alberta (1953-54) and re-opened by McMaster University (1951).

There are also schools of art not requiring any fixed academic standing for admission, which are concerned more with the technical development of the artist. The most widely known of these are:—

Nova Scotia College of Art, Halifax, N.S. École des Beaux-Arts, Quebec, Que. École des Beaux-Arts, Montreal, Que. School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que. Ontario College of Art, Toronto, Ont. University of Manitoba School of Art, Winnipeg, Man. Provincial Institute of Technology and Art, affiliated with the University of Alberta, Calgary, Alta. (Summer session at Banff, Alta.) Vancouver School of Art, Vancouver, B.C.

Courses in these schools vary in length with the requirements of the individual student, but may extend over as many as four years. Summer schools of art are sponsored by some of the foregoing institutions, by universities, and by various independent groups.

Public art galleries and museums in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and often concerts are features of the programs of the various galleries. In many cases these institutions supply their surrounding areas with travelling exhibitions, while organizations such as the Maritime Art Association, the Western Canada Art Circuit, the Saskatchewan Arts Board and the Art Institute of Ontario, have been founded to carry on the work on a regional basis. The National Gallery of Canada has a nation-wide program of this nature.

Ottawa, Queen's Printer, 1951.

<sup>†</sup> Revised under the direction of Dr. H. O. McCurry, Director, National Gallery of Canada, Ottawa.

The principal art galleries and museums\* are:-

New Brunswick Museum, Saint John, N.B.
Museum of the Province of Quebec, Quebec, Que.
Montreal Museum of Fine Arts, Montreal, Que.
National Gallery of Canada, Ottawa, Ont.
London Public Library and Art Museum, London, Ont.
Art Gallery of Toronto, Toronto, Ont.
Royal Ontario Museum of Archæology, Toronto, Ont.
Art Gallery of Hamilton, Hamilton, Ont.
Willistead Library and Art Gallery, Windsor, Ont.
Wilnipeg Art Gallery, Winnipeg, Man.
Regina College Gallery, Regina, Sask.
Edmonton Museum of Arts, Edmonton, Alta.
Vancouver Art Gallery, Vancouver, B.C.
Arts Centre of Greater Victoria, Victoria, B.C.

The National Gallery of Canada.—Founded in 1880 by the Marquis of Lorne, the National Gallery at first served only as an exhibition gallery. Provided with an Advisory Arts Council in 1907, and first incorporated under a Board of Trustees in 1913, it has assembled its permanent collection mainly during the past 40 years. This collection of pictures and sculpture, prints and drawings, representing the styles of past and present of various parts of the world, was assembled for public enjoyment, study, and the improvement of arts and industrial products, and as the necessary basis for any program of art education. The National Gallery Act was amended in 1951 to give the institution a larger Board of Trustees and other advantages.

The collection of the National Gallery to-day is of international repute and is accessible to the whole country by means of catalogues, photographs, colour reproductions and, to a limited extent, by loans. The Canadian section, naturally the most inclusive, is the best available source for the study of Canadian art. Each year, examples of the best contemporary work are added, along with those of earlier periods. Recent additions to the European section include important examples of the various schools. Two panels of the Life of Esther series by Filippino Lippi and Bathsheba at her Toilet by Rembrandt, from one of the great collections of Europe, are among the few really great masterpieces to come into Canada up to the present. Between 1951 and 1953, paintings by Benozzo Gozzoli of the Italian school; Stefan Lochner and Lucas Cranach of the German school; Turner and Graham Sutherland of the British; and a group of French paintings by Degas, Sisley, Van Gogh, Bonnard, Braque, Derain and others have been acquired by the Trustees. A sculpture by Maillol has also been added. The Massey Foundation presented paintings by Paul Nash and Duncan Grant as additions to the Massey Collection of English Painting. Drawings by Tiepolo, Rubens, Lancret, Cotman, Wilson, Picasso, Henry Moore and others have also been added. Prints acquired include examples by Rembrandt, Pollaiuolo, Dürer, Schongauer, Gauguin, Toulouse-Lautrec and others.

In 1952 and 1953, exhibitions of the art of other countries included: Five Contemporary British Painters, Ivan Mestrovic, Toulouse-Lautrec, and Finnish Art. Among the Canadian exhibitions held were the special exhibition of Canadian art in honour of the Coronation, Eskimo art, and the designs submitted for the Massey Medals for architecture. Canadian exhibitions were also sent abroad to São Paulo, Brazil; the Venice Biennial; Ceylon and India; and to Germany, Switzerland and the United States.

A complete list of Canadian art museums, societies and schools is included in the Canadian section
of the current issue of the American Art Directory (New York, R. R. Bowker Co.).

The National Gallery conducts a program of extension work thoughout the country. The majority of the exhibitions mentioned above, as well as the annual offerings of the chartered art societies and a variety of smaller collections, are available to the entire country and are widely circulated. About 30 such exhibitions are toured and as many as 200 separate showings have been held annually under the auspices of the National Gallery of Canada. In addition, individual loans of material from the collection are made to a number of centres in all parts of the country each year. In this way, actual works of art are constantly being brought to the attention of the public. Sets of reproductions are also sent on tour of localities that have not the facilities for handling original works of art.

The latest major development in the general educational work of the National Gallery was established in 1948—an Industrial Design Section set up as the result of public interest in bringing the design of Canadian goods up to the best international standards and in fostering distinctive Canadian designs. A number of exhibitions on Canadian industrial art have been held in various parts of the country. In 1953, the Design Centre was opened in the Laurentian Building, Ottawa, to serve as an exhibition centre and as headquarters for the national program in industrial design sponsored by the National Gallery.

Other methods of education in the arts apply more specifically to young people and are designed, in part, to supplement regular school work. The Gallery provides written lectures illustrated by lantern slides on all aspects of art history, reproductions of paintings with introductory texts for art appreciation, school broadcasts, classes for school children at the Gallery, exhibitions of children's art, conducted tours of the Gallery's collections and educational demonstrations, public lectures at Ottawa, and lecture tours throughout Canada.

The National Gallery also maintains an art film library. Silk screen prints by Canadian artists, already famous in many parts of the world as the result of their distribution during the War, are available to schools and to the public generally. These and the facsimile colour reproductions published by the National Gallery are listed in the free leaflet, Reproductions, Publications, and Educational Material. In connection with the CBC school broadcasts on Canadian artists, the National Gallery in 1953 distributed 250,000 small colour reproductions to school children in all parts of the country. The magazine Canadian Art, in the publication of which the National Gallery has taken a leading part, has doubled its circulation since 1945.

Speaking highly of the Gallery's work over many years despite serious difficulties, the Report of the Royal Commission on National Development in the Arts, Letters and Sciences\* made recommendations for the extension and improvement of its exhibition and education services; increases in funds, staff and facilities; maintenance and increase where possible of present appropriations for acquisitions; and, as soon as possible, a new building containing adequate facilities for display, storage, circulation of exhibitions, repair and restoration of paintings. During 1952 and 1953 a national competition was held to select an architect for the new building.

Ottawa, Queen's Printer, 1951. See also Royal Commission Studies, a Selection of Essays prepared for the Royal Commission. Ottawa, Queen's Printer, 1951.

Other Art Organizations.—The leading art organizations of national scope, exclusive of museums and art galleries, include the following:—

Association of Canadian Industrial Designers

Canadian Arts Council\*

Canadian Group of Painters Canadian Guild of Potters

Canadian Handicrafts Guild

Canadian Museums Association†

Canadian Society of Graphic Arts Canadian Society of Painter-Etchers and Engravers

Canadian Society of Painter-Ecchers and Engravers
Canadian Society of Painters in Water Colour

Canadian Society of Landscape Architects and Townplanners

Community Planning Association of Canada

Federation of Canadian Artists

Royal Canadian Academy of Arts Royal Architectural Institute of Canada

Sculptors Society of Canada.

## Section 2.—The Educational and Cultural Functions of the National Film Board:

The National Film Board is a Federal Government agency established by Act of Parliament and reporting to Parliament through the Minister of Citizenship and Immigration. It produces and distributes films, filmstrips and still photos "designed to interpret Canada to Canadians and other nations". Films and filmstrips, produced generally in both English and French and frequently in other languages, are distributed in Canada and abroad. The majority of the Board's films are informative and educational and the Board's long-range program is drawn up after consideration of the requests and needs of many groups and individuals across the country.

In the cultural and educational field, the result has been a series of films on Canadian artists and their work and a number of films on ballet, music, sculpture and stagecraft as well as film and film-strip treatment of Canadian historical and geographical subjects. The Board also makes films on special subjects for government departments. The Board helps to stimulate creative activity by offering a means of artistic expression, by recording cultural and educational progress and by bringing the record of this achievement to millions of Canadians who otherwise would not know of it. The Board also participates directly in cultural development by offering employment to talented musicians, artists, writers, actors and others in the creative field, in addition, of course, to film producers and directors, who themselves are creative artists. A recent example of direct participation in the cultural field was a Board film on the Canadian ballet, Shadow on the Prairie. The original score for both the ballet and the film were the work of a National Film Board composer.

In the general cultural sphere, of which film-making is an important branch—combining and harmonizing, as it does, so many of the arts—Board achievement recently has been recognized by two major awards, the American Academy of Motion Picture Arts and Sciences "Oscar" to Neighbours for outstanding achievement in

<sup>\*</sup> An account of the Canadian Arts Council and a list of its constituent bodies appears in the 1951 Year Book, p. 308.

<sup>†</sup> Formed in 1947 with the object of improving the services of museums as educational institutions by promoting co-operation among themselves, by exchange with other countries and by the training and securing of expert staffs.

<sup>†</sup> Prepared under the direction of the Government Film Commissioner, National Film Board. Other aspects of NFB services are outlined in Chapter XXVIII. See also Chapter II, p. 85.

the short documentary field and the British Film Academy award for the best documentary of the year, which went to the Board's full-length colour feature, Royal Journey. In the year ended Mar. 31, 1953, Board productions won 27 international and national awards.

The Board has done experimental work in third-dimension films, animated sound and live-actor animation. Another technical development is an adaptor for projectors which permits switching the sound track of the same print of a film from one language to another.

Co-operation with cultural and educational groups is an important factor in the Board's non-theatrical distribution, which is organized through a system of voluntary film councils, libraries and circuits. Some 8,000 organizations take part, reaching an annual audience total of almost 13,000,000. In this type of distribution the Board works closely with educational organizations and with branches of provincial government departments. Organizing film festivals and seminars is one practical form of such co-operation.

Board films are also distributed in Canadian theatres at the current rate of 9,000 bookings annually. Such distribution includes the Canada Carries On and Eye Witness series (En Avant Canada and Coup d'Oeil in French) and a number of special theatrical releases like L' Homme aux Oiseaux, Neighbours and Royal Journey.

Non-theatrical distribution abroad is effected through 61 posts of the Department of External Affairs and the Department of Trade and Commerce, foreign distribution agencies, commercial 16mm distributors and a special travel program in the United States. The non theatrical audience total is about 11,000,000 a year. Board films are also shown in theatres abroad and bookings average 770 a month.

Newsreel stories about Canada, produced by the Board, appeared in 451 editions in Canada and abroad during the fiscal year 1952-53. Television bookings for Board films in the first seven months of Canadian operation numbered 229; abroad the total is about 1,700 a year.

# Section 3.—The Educational and Cultural Functions of the Canadian Broadcasting Corporation\*

Many hours of educational or semi-educational programs are broadcast annually by the Canadian Broadcasting Corporation in the English and the French languages. Whether these programs are directed to children or adults, entertainment is combined with information whenever possible. Spoken-word programs cover a very wide range of interests and are presented as readings, talks, discussions, documentary programs, dramatizations or in forms combined with music.

Pre-school Broadcasts.—While many story programs for pre-school-age children are broadcast purely as entertainment, a special series has been developed to give young children, particularly in remote areas, many of the benefits of kindergarten training. This series, Kindergarten of the Air, is broadcast Monday to Friday for children of from two and a half to six years of age. Planned with the advice of kindergarten experts and representatives of the Canadian Home and School Federation, the Federation of Women's Institutes and the Junior League, it includes stories, songs, mental games, keeping-fit exercises, information about

<sup>\*</sup> Prepared under the direction of J. Alphonse Ouimet, General Manager, Canadian Broadcasting Corporation, Ottawa. Other aspects of CBC services are outlined in the Transportation and Communications Chapter. See also Chapter II, pp. 82-83.

animal life and nature study, and encourages good habits of hygiene, eating and relaxation. The program is intended primarily for home listening but has been found useful in many organized kindergarten groups and classes.

School Broadcasts.--In an average school year, more than 1,000 school programs, mostly in dramatized form, are broadcast to all parts of Canada. The CBC also provides upwards of 30 minutes daily broadcasting of specifically planned programs by departments of education to meet classroom requirements. These supplementary aids help teachers to stimulate student imagination and strengthen motives for study. The National School Broadcasts series are planned by the National Advisory Council on School Broadcasting to promote among students a stronger consciousness of Canada and its achievements. During the 1952-53 season, six such series were planned for students from Grade III to senior high school. These were: Voices of the Wild, on Canadian wildlife; I Was There, a series dramatizing outstanding events in Canadian history through the eyes of someone who saw them happen; Our Canadian Painters, a series on the lives and works of well-known artists, presented in co-operation with the National Gallery of Canada; Life in Canada Today, a series of documentaries; Macbeth, a full-length performance of Shakespearean drama; and Things We Are Proud Of, comprising five programs contributed by broadcasting organizations in the United Kingdom, Australia, New Zealand, South Africa and Ceylon, relating to outstanding features in the development of those countries.

The Department of Transport issued nearly 10,000 free receiving licences to schools throughout Canada in 1951-52, indicating that over 45 p.c. of all English-language schools were radio-equipped and using school broadcasts.

In the Province of Quebec, the CBC's French network broadcasts Radio-Collège, a series of weekly programs dealing especially with the fine arts, music, literature, theatrical arts, sciences, religion and philosophy. These broadcasts are not designed for classroom use, being of a more adult nature than those on the English-language networks and scheduled, in the main, for other than school hours.

Particulars of school broadcasts are contained in the manual, Young Canada Listens, and details of the French network series in the manual, Radio-Collège. Both are published annually by the CBC.

Adult Education.—Programs of an adult-education nature take many forms. Issues of the day are discussed on such round-table programs as Citizens' Forum, which has just concluded its first decade of broadcasts, and its French counterpart, Les Idées en Marche. Both are produced in co-operation with the Canadian Association for Adult Education and organized listening groups, which form part of the audience, carry on their own discussions of the topic following the broadcast. The Association co-operates with the Canadian Federation of Agriculture in the presentation of National Farm Radio Forum, a broadcast concerned primarily with discussion of topics of interest to Canadian farmers. This program has developed into the largest listening-group project of its type in the world. Cross Section, a series dealing with economic and social issues—a look at Canada through the eyes of business, labour and the consumer—is typical of the dramatized documentary form in which many programs of an adult-education nature are presented. Understanding of human relationships is fostered by such series as: In Search of Ourselves, presenting stories of people with mild emotional disturbances; and a commentary

by a psychiatrist, psychologist or sociologist; Return Journey, a sensitive study of alcoholism; Down Our Street, a dramatized series concerning many problems faced by to-day's Canadian family; and The Way of Children, a series of reports on the work of child-guidance clinics and the psychiatric departments of children's hospitals. On the French network, Radio-Parents presents broadcasts designed to help parents solve their problems, and general questions sent in by parents on the subject of child care are answered by psychologists in the series Le Courrier de Radio-Parents.

More than 2,600 hours are devoted annually to informative talks on a very wide range of topics including international affairs, consumer information, politics, business and labour interests, community activities and social problems, literature and creative writing, science, nature and sports.

The CBC maintains an office and a resident correspondent at United Nations Headquarters at New York, and an overseas bureau with headquarters at London, England. For programs such as CBC News Roundup, voice reports are brought in from many parts of the world.

Television.—Regular CBC television broadcasting was begun from Toronto (CBLT) and Montreal (CBFT) in September 1952, both stations offering a program service of about six hours each evening. The Toronto station programs only in English while CBFT Montreal divides its time equally between French and English programs, with a few bilingual. It is planned to add another television transmitter at Montreal so that separate complete schedules of English and French programs can be broadcast.

CBC television programs cover a wide range of interests—popular variety shows and light music and comedy programs interspersed with sports, panel discussions, news programs, films, special features for children and noteworthy drama periods including a 90-minute play each week. Both production centres now in operation are equipped with two studios, scenery shops, film equipment, and all associated technical gear for the production of Canadian television programs. Each centre operates a mobile unit, a specially equipped van staffed by a crew of ten and having three television cameras and a transmitter for beaming 'outside' broadcasts back to the studios for regular transmission.

### Section 4.—Public Libraries

Currently the subject of major interest to Canadians in the field of library service is the prospective National Library of Canada, authorized by the National Library Act of June 18, 1952 (1 Eliz. II, c. 31).

National Library Act.—The brief, concise terms of the Act authorize the establishment of an Advisory Council, with representatives from each province in Canada; the appointment of a National Librarian, and Assistant National Librarian, and staff; and prescribe the duties and responsibilities of the National Librarian which include the procurement of book stock, the preparation and maintenance of a National Union Catalogue listing the important holdings of the principal libraries of Canada, and the publication of a National Bibliography in which shall be listed and annotated books produced in Canada, written and prepared by Canadians or of special interest to Canadians. The Act further requires that two copies of each book published in Canada shall be deposited with the National Librarian within one month of its release for distribution or sale, except in the case of expensive books in which case one copy must be deposited.

Preparatory work for the new library is well advanced. The Advisory Council has been established and the National Librarian and his assistant have been appointed. Work on the National Union Catalogue has progressed to the point where the catalogues of about 30 libraries in Canada have been reproduced to provide a key to some 2,500,000 books. The Canadian Bibliographic Centre issues a bimonthly publication, Canadiana, that is distributed on a national and international scale. The removal of the books from the Parliamentary Library, preparatory to the renovations required following the fire of 1952, provides an opportunity for the discretionary selection of material from this source that eventually will be deposited in the National Library. More recently a site has been reserved, in close proximity to the Parliamentary Library and the Houses of Parliament at Ottawa, for the National Library building.

Regional Library Service.—Second in importance to the National Library is the concerted efforts of the provinces to provide library service for residents in rural areas including the more isolated areas of Canada. Regional library service, or an adaptation thereof, now functions in Newfoundland, Prince Edward Island, Nova Scotia, Ontario, Saskatchewan, Alberta and British Columbia. In 1952, New Brunswick and Manitoba each made a survey of existing library facilities and studied the population distribution and the local municipal areas preparatory to the establishment of regional libraries.

1.—Summary Statistics of Libraries Organized for Regional Collaboration, 1951

		C'	3	Expenditure

In January 1953, Ontario inaugurated the Thunder Bay District Library to serve residents of northwestern Ontario; its headquarters are at Fort William. This library deviates from the usual form of organization for a regional library in that it includes incorporated communities and non-incorporated areas. With generous assistance from the Province, a mobile service will be provided which will distribute books to the community libraries in the area, to the schools and to special deposit stations. Service to isolated residents will be provided by mail.

Public Libraries.—The survey of libraries in Canada (1950-52) covers 798 public libraries including the regional libraries listed above, 307 free public libraries and 444 association libraries. Statistics relating to the libraries of Newfoundland are included for the first time in the summarized data for Canada.

Excluding Newfoundland for purposes of comparison, book stock in public libraries in 1951 increased about 20 p.c. over 1949. Circulation increased 11 p.c. and expenditures for current purposes 28 p.c. in the two-year period. The per capita expenditure on public library service for Canada was 44 cents in 1951 as compared with 38 cents in 1949. The proportion spent on new book stock dropped from 20 p.c. in 1949 to 19 p.c. in 1951; the salary quota was unchanged at 51 p.c. of the total for each year. Grants-in-aid from provincial sources increased from 11 p.c. of the revenue in 1949 to 13 p.c. in 1951.

Summarized statistics on the book stock, loans, expenditure and staff for 1951 are recorded in Table 2. Detailed statistics are available in the DBS report Survey of Libraries in Canada, 1950-52.

The growth in area and population of the cities of Canada has made necessary the extension of library service to schools and residents in recently annexed areas. Several cities have adopted a system of regular service by bookmobile in preference to the construction of additional branch libraries. As an alternative, where space permits, deposit libraries in the schools of new areas are used.

The service of municipal libraries in Canada extends beyond the provision of books for reading and reference work. In many communities the municipal library plays a leading role in the development of appreciation of art and music, and is a depository for films used in formal and informal educational programs. In 1952, the Canadian Library Association published a directory of member libraries engaged in audio-visual educational activities. The directory lists 30 public libraries with film collections, including microfilms and film strips. About two-thirds of this number lend film projectors and all of them rent films to responsible community organizations. About 20 public libraries report holdings of more than 20,000 recordings which are rented at from two to ten cents a day depending on the playing time of the record. Seven of the libraries in the group report a stock of 33,000 books for circulation and reference relating to the general field of music. Almost a dozen report musical scores for study and lending and about six report collections of pictures (originals and prints) for lending. The usual rental charged is 1 p.c. of the value of the picture.

A recent project inaugurated by the Willistead Library, Windsor, Ont., has attracted wide-spread attention and a degree of community co-operation unusual in its scope and purpose. Classes in conversational and engineering English, Canadian geography and history are conducted on an informal basis for new Canadians in the district. About 300 adults from foreign countries have received assistance under the project and have been introduced to Canadian customs and forms of government under conditions that have induced mutual respect and friendship.

## Section 5.—Canada and the United Nations Educational, Scientific and Cultural Organization

Liaison between governmental and voluntary organizations in Canada and the United Nations Educational, Scientific and Cultural Organization is the responsibility of the Department of External Affairs. Canadian participation in UNESCO includes representation at the Sessions of the General Conference; the supplying of advice and information on Canadian matters to the Secretariat of UNESCO; co-operation in projects undertaken by the Organization; the sending of Canadian representatives to international seminars sponsored by UNESCO; the administration of UNESCO fellowships and scholarships tenable in this country; and the promotion of UNESCO publications.

The Seventh Session of the General Conference of UNESCO was held at Paris, France, late in 1952. It witnessed the admission of three new states—Spain, the United Kingdom of Libya and the State of Nepal—bringing the Organization's membership to sixty-eight.

The Session made administrative decisions which will have important bearing on the future policy of the Organization. A Working Party on the future program and development of UNESCO was established for the purpose of assigning priorities to various projects to be carried out in the fields of education and culture. Among these projects, fundamental education and technical assistance will be retained at the top of the list. The Exchange of Persons program has been increased considerably in scope and international scientific research, aimed at improving the living conditions of mankind, will be developed further. New projects have been initiated in the realm of cultural co-operation and the improvement of the means of communication among the people of the world.

In addition to its regular annual contribution (\$298,065 U.S. in 1953), the Canadian Government, in 1947, made available to the Canadian Council for Reconstruction through UNESCO a sum of \$200,000 for the purchase of materials "for the purposes of educational, scientific and cultural reconstruction". An additional amount of \$939,250 was obtained by CCRU through public subscription. After completing its program, the CCRU surrendered its charter to the Department of External Affairs in April 1953. The co-operation between the Government and more than 50 voluntary associations, which was encouraged by the CCRU, continues in regard to UNESCO activities.

Canada has tried to maintain a well-balanced contribution to UNESCO. Support given the agency is considered an integral part of Canadian support of the United Nations general program of peace through international understanding.

# PART III.—SCIENTIFIC AND INDUSTRIAL RESEARCH\* Section 1.—The National Research Council

Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the Honorary Advisory Council for Scientific and Industrial Research under a Committee of the Privy Council. Provision was made thereby for the planning and integration of research work, the organization of co-operative investigations, post-graduate training of research workers, and the prosecution of research through grants-in-aid to university professors. This was the basis of the Council's work from 1916 to 1924.

<sup>\*</sup> Sections 1 and 3 of this Part were prepared under the direction of Dr. E. W. R. Steacie, O.B.E., President, National Research Council, Ottawa.

A Special Committee of Parliament, appointed to study a recommendation for the establishment of national laboratories, endorsed the proposal and the Research Council Act was revised by Parliament in 1924. Temporary laboratories were secured and research on the utilization of magnesian limestones for refractories was carried out so successfully that a wartime industry, established during World War I, was re-established on a large scale. As a result, in 1929-30 the Government provided funds for new laboratories.

The National Research Building on Sussex Street, Ottawa, was opened in 1932 and in 1939 construction was begun of the aerodynamics building on a 130-acre site adjacent to the Rockcliffe Airport of the Royal Canadian Air Force. Later, several other buildings were erected on this site, including separate laboratories for research on engines, gas and oil, hydraulics, structures, and wood-working and metal-working shops. Since then, these facilities have been enlarged and extended and new buildings have been provided for engineering, low-temperature studies and high-speed aerodynamics. In 1952, further construction included the applied chemistry laboratories, a thermodynamics building and initiation of work on offices and laboratories for the Division of Building Research, and an extensive laboratory building for the Division of Radio and Electrical Engineering, the latter being on a new 250-acre site on the opposite side of the road. A clover-leaf by-pass provides access from the highway to both sections of the Montreal Road site.

A Prairie Regional Laboratory, constructed on the campus of the University of Saskatchewan, has been in operation since June 1948. A Maritime Regional Laboratory, built on Dalhousie University campus at Halifax, N.S., was opened in June 1952.

The National Research Council consists of the President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour or research in one of the basic natural sciences. Many of the members are drawn from the science departments of Canadian universities.

The Council's scientific and engineering activities are organized in nine Divisions and two regional laboratories, each with its own Director. Four laboratory Divisions are concerned with fundamental and applied studies in the natural sciences: applied biology, pure and applied chemistry, and physics. Three others are devoted chiefly to engineering work—building research, radio and electrical engineering, and mechanical engineering which includes aeronautics and hydraulics. The Division of Medical Research has no laboratories of its own but awards grantsin-aid and fellowships tenable chiefly in the medical schools of Canadian universities.

In addition to its basic research functions, the Council operates an Information Service with a field staff of technical officers who assist the smaller industries across Canada by bringing their operating problems to the attention of the Council. With a trained research staff, using the extensive library facilities available to the Council, it is usually possible to provide the required information at very short notice.

The Council aids industry in two other important ways. A free and constant flow of personnel and information is maintained between the Council laboratories and industrial laboratories, the aim being to have Canadian industry use the Council's laboratories just as the units of a large company use their own laboratories as sources of scientific information and assistance. The Council also undertakes for any firm, under contract, research problems that cannot be solved by private

consulting and testing laboratories and, in return, obtains assistance from many companies. The Council has long-standing and intimate contacts of this cooperative kind with many Canadian industries in various fields.

Associate committees were established by the National Research Council early in its history and have been continued to date. Throughout the years, hundreds of specialists have accepted invitations from the Council to serve on committees and have brought the wealth of their knowledge and experience to bear on the solution of research problems put before them. Members of committees give their time and effort to these special studies without fee or recompense, and their assistance is a source of great strength to the Council.

Assisted research grants have been made by the Council since its inception in 1916. These awards are given to heads of university science departments for the purchase of needed equipment and the employment of junior helpers, usually students. Aid of this kind has been of considerable assistance in enabling the universities to put into operation the excellent graduate schools that now exist in Canada.

Scholarships and grants in aid of research are awarded annually by the National Research Council. Scholarships awarded in science and engineering include Bursaries, Studentships and Fellowships which have values of \$600, \$900 and \$1,200, respectively, for the academic year, to which a summer supplement of \$500 may be added. In addition, Special Scholarships valued at \$1,500 per year and Post-doctorate Overseas Fellowships at \$2,500 are offered. The Council also awards two classes of Graduate Medical Research Fellowships, which have values of \$1,800 to \$3,000 for awards involving graduate training, and up to \$5,000 for senior awards in advanced research. Graduate Dental Research Fellowships of similar value are also made. More than 275 of these different awards were made for 1952-53, totalling in value over \$310,000.

In recent years (since 1948), the National Research Council has opened its doors to a limited number of post-doctorate fellows who have been carefully selected on the basis of merit from the universities of the world. There are now some 76 of these keen young scientists working in the laboratories, most of them in chemistry or physics. They are appointed for one year only but may be retained for a second year if conditions warrant. This flow of young men through the laboratories has a most stimulating effect; it creates a sort of university atmosphere that is both fresh and invigorating and keeps the Council young.

Principal Activities, 1952-53.—Development by industry of applied research laboratories in Canada has made it possible for the National Research Council to broaden its field of work so as to include fundamental studies, especially those having a bearing on problems related to industrial research projects. For example, the Division of Chemistry has been reorganized to form two separate units—Pure Chemistry and Applied Chemistry. A similar arrangement has been made in the Physics Division.

The Division of Pure Chemistry is chiefly concerned with fundamental scientific research, trying to find the reasons for certain chemical reactions. In this work, research extends over a wide range, from the nature and structure of alkaloids found in certain Canadian wild plants, to a study of the infra-red spectra of complex organic compounds including cortisone and other steroid hormones.

In the Division of Applied Chemistry, on the other hand, work is focussed more directly on practical problems such as chemical engineering studies, research on textiles, corrosion of metals, development of more efficient processes for the production of chemicals from natural gas, the properties and uses of natural and synthetic rubbers either alone or in admixture, and the applications of colloid chemistry in the improvement of lubricating greases. A new building for this group was completed and occupied during the year.

Improvements or new processes developed in the laboratories are passed on to industry through Canadian Patents and Development Limited, the Council's patent and licensing agency. In 1952 this Crown company entered an important new field of activities. It arranged for the carrying out of extensive pilot-plant operations on a commercial scale to assess the possibilities of the Cambron process, developed within the Council for the production of ethylene oxide by direct oxidation of ethylene, an important constituent of natural gas.

On the biological side, the laboratories have been actively working on the causes of rot and decay in textiles, wood and related products. Many moulds and bacteria attack the cellulose in these products by producing a ferment or enzyme which breaks down cellulose into simple sugars. Although the existence of the enzyme has been known for over fifty years it has only recently been isolated and purified in its biologically active form, thus opening the way for studies on its mode of action. Research has already shown that traces of certain acid dyes inhibit its activity, a finding that suggests new approaches to the practical problem of preventing decay. On the other hand, it has been found that some dyes and proteins stimulate the enzyme and this stimulatory effect may have a bearing on the ultimate use of cellulosic materials, such as wood-pulp, in fermentation processes.

In physics, a contribution has been made to the knowledge of how certain metals behave over a wide range of temperatures from close to the absolute zero (459·4° below zero F.) up to 200°C. (392°F.). Striking anomalies, hitherto unsuspected, have been found in the heavier alkali metals (rubidium and caesium). Comparison is being made with basic theory and considerable progress has been made in a deeper understanding of fundamental metallic behaviours.

In another physics laboratory it has been found that the so-called alpha bands of ammonia are due to the free "NH<sub>2</sub> radical" and this observation has been put to practical use by the physical chemists in the determination of the NH<sub>2</sub> radical in other chemical reactions. Thus does one science laboratory serve another.

Progress has been made, too, in other important fields in physics. Although the present-day fog-horn has been in general use throughout the world for over 35 years (48 years in Canada), no improvements have been made on it during all this time until recently. Canada pioneered its introduction in 1904 and has again pioneered substantial improvements, which are important not only to Canada but to the whole world. By the application of modern acoustical theory, the horn was redesigned to improve the loading to such an extent that in a comparison test the efficiency was raised from 0.2 p.c. to 15 p.c. There is every reason to believe that the new unit will have a longer life than the old and require less servicing. The practical aspects of the development work were made particularly easy by the experience and co-operation of the Marine Services, Department of Transport.

Three significant developments marked the work in building research during the year. A small Permafrost Research Station was established at Norman Wells, N.W.T., in co-operation with Imperial Oil Limited. A small laboratory was set up and the first field investigation carried out as the beginning of a long-term program of study of permafrost and of foundations on permafrost.

Work has been pressed forward on the revision of the National Building Code, this work being done by the Division for the Associate Committee on the National Building Code. Twenty-nine committees and panels have been at work involving the voluntary contributions of over 200 architects, engineers, contractors and others interested in building. All the technical and secretarial work for the Committee is done within the Division. Use of the new Code, when it becomes available, will promote still further the uniformity of building regulations across Canada.

The major effort in the Division of Radio and Electrical Engineering is now being devoted to defence problems, in which important advances have been realized. In non-secret work, a notable contribution has been made in the extension of the theory of slotted waveguide arrays which will result in smaller radar antennæ and clearer radar pictures.

The aeronautical facilities of NRC's Division of Mechanical Engineering serve the Royal Canadian Air Force and other government agencies concerned in military and defence production programs.

The wind tunnels of the Division were used to provide information in connection with the design of the de Havilland Otter aircraft which is now flying and is one of the most successful aircraft of its type. A high-speed wind tunnel was completed, installed and is now in operation; it is used primarily for the study of aircraft operation at speeds up to and in excess of the speed of sound.

The study of the icing of aircraft and engines and the development of means for their automatic protection has been continued both in the laboratory and in the air.

An interesting study has been made, in the hydraulics laboratory, of the Fraser River in British Columbia. A model of the river was built and river-flow conditions were established as a preliminary step in the investigation of silting conditions in the navigation channel. A larger model covering a longer section of the river has now been constructed and is in operation on a 3½-acre site on the campus of the University of British Columbia, where the climate permits open-air operation the year round.

In the 450-foot model-testing basin, models of lake freighters, ice breakers and other types of ships are tested, together with their propellers, for naval architects and shipbuilders.

In co-operation with engine manufacturers in the Maritimes, a small semidiesel marine engine for fishing boats, together with a variable pitch propeller, was developed in the laboratories and three pilot models were built, one of which was given sea trials by a fisherman in Newfoundland. Two other units were made available to manufacturers.

The Prairie Regional Laboratory is devoted to the study of ways in which science can aid the prairie farmers in finding profitable industrial uses for waste or surplus products. An outstanding development was made this year in sugar chemistry using radioactive tracers, which led to a new synthesis of sugar derivatives.

In the Maritime Regional Laboratory one of the more important investigations in progress concerns the industrial use of the seaweeds found in abundance along the east coast which are of great economic significance.

In medical research, there is the closest integration of the Council's fellowship and medical research program with similar programs of the Defence Research Board, the National Cancer Institute, the Canadian Arthritis and Rheumatism Society, and the Federal Departments of National Health and Welfare and of Veterans Affairs.

The research picture in Canada is encouraging. At every level—the universities, industry, government departments, and in the institutions including the National Research Council which are devoted exclusively to research—satisfactory progress is being made and high standards of work are being maintained.

#### Section 2.—Research in the Atomic Field\*

Atomic energy research in Canada had its origin over 50 years ago when Ernest Rutherford came to this country as Macdonald Professor of Physics at McGill University. There, in collaboration with F. Soddy, he announced in 1902 the results of his investigation of the nature of radioactivity, which had been discovered in 1898 by Henri Becquerel. Rutherford determined the fundamental laws governing spontaneous disintegration of radioactive materials. He went on, both in Canada and England, to make further discoveries of great importance in the development of atomic energy.

Fundamental research into the structure of the atom continued in many countries on a relatively small though fruitful scale over the ensuing years until the first recognition of nuclear fission was announced in Germany by Hahn and Strassman on Jan. 6, 1939. Soon it was discovered that when a neutron split a uranium-235 atom, not only was a remarkable quantity of energy released, but also additional neutrons were given off. This suggested the possibility of creating a chain reaction that would proceed so quickly that a new and tremendously powerful explosive would be available for military use.

The onslaught of World War II eight months later at first pushed into the background interest in harnessing the vast energy now recognized to be contained within the nucleus. But when scientists drew to the attention of their respective governments the possible military application of atomic energy, development work was accelerated.

In Canada, first investigation of the possibility of releasing a large quantity of energy from uranium took place in 1940 at the National Research Council. Dr. George C. Laurence directed an experiment with a bin of coke and uranium. The bin was lined with paraffin wax and filled with ten tons of calcined petroleum coke in which were embedded uniformly spaced packages of uranium oxide. The purpose of the experiment was to determine, by measuring the behaviour of neutrons within this material, whether a large amount of energy could be released if the neutrons were moderated (slowed down by the carbon in the coke) sufficiently to create a chain reaction, and what quantity of material would be needed for this purpose.

While the experiments continued at the National Research Council, progress in the United States toward achieving a chain reaction moved quickly and on Dec. 2, 1942, the first nuclear chain reaction to be initiated by man began a controlled

<sup>\*</sup> Prepared by Clyde Kennedy, Public Relations Officer, Atomic Energy of Canada, Limited, Chalk River, Ont.

release of the tremendous energy stored within the atom. On the squash court underneath the west stands of Stagg Field on the University of Chicago campus, American scientists, working under the direction of Enrico Fermi, piled up layers of graphite and uranium (hence the term "pile") until the power indicators showed that a chain reaction had been initiated.

In 1942 the Government of the United Kingdom, where significant experiments had been made, suggested to the Government of Canada that a joint Canadian-United Kingdom atomic energy project should be set up in Canada. This was agreed to and by January 1943 British scientists arrived to work with hastily recruited Canadian scientists in a research centre established in a house on Simpson Street, Montreal. In February the group moved to the newly completed University of Montreal to work in great secrecy on the design of a heavy-water pile. Although considerable progress was made in this laboratory on the investigation of fundamental nuclear processes, the staff was hampered by a feeling in the United States, where atomic research was well advanced, that close co-operation with the scientists at Montreal would involve security risks through the wider distribution of classified United States research results.

At the Quebec Conference in August 1943, President Roosevelt, Prime Minister Churchill and Prime Minister Mackenzie King agreed that closer co-ordination of the allied efforts in the nuclear field was desirable and among other things it was agreed that a large heavy-water pile should be built immediately in Canada. A technical committee consisting of General Groves, Sir James Chadwick and Dr. C. J. Mackenzie was set up to co-ordinate this joint program on atomic energy. Dr. J. D. Cockcroft of the United Kingdom was appointed Director, Defence Industries Limited was engaged to undertake the detailed design and construction, a site on the Ottawa River about 130 miles west of Ottawa was chosen and construction started in 1944. By September 1945, a small low-power atomic energy pile, known as ZEEP, was in operation at Chalk River. This was the first pile outside of the United States to produce energy by nuclear fission.

In December 1946, by Act of Parliament, all matters concerning atomic energy in Canada were placed under the Atomic Energy Control Board. The Board immediately asked the National Research Council to assume responsibility for the operation of the complete establishment at Chalk River and, on Feb. 1, 1947, the Council formally took over that responsibility. By then, 400 scientists and engineers were engaged on research and development of atomic energy, the largest organization ever created in Canada to carry out a single research project.

In 1947, Dr. David A. Keys took on direction of the Chalk River project, with the research program being under the direction of Dr. W. B. Lewis, Dr. Cockeroft returned to England to take charge of the United Kingdom atomic energy project which was founded in 1946.

In July 1947, Canada's second reactor (the term reactor has replaced "pile" in atomic energy parlance) went into operation. It was outstanding because it had the highest neutron flux of any known reactor and, like ZEEP, used natural uranium as a fuel and heavy water as a moderator. With this reactor it was possible to produce radioactive isotopes with a high specific activity for which there was great demand. Purchasers of Canadian isotopes include the United States, the United Kingdom and various countries in western Europe and South America. Shipments have been made within Canada to industries, hospitals and universities.

Because of the increasing industrial aspects of the project and the growing view that large-scale industrial application of atomic energy was closer at hand than had been expected, the Government decided that the project should be operated by a separate organization without further responsibilities. Therefore, a new Crown company, Atomic Energy of Canada Limited, was incorporated in February 1952, under the Atomic Energy Control Act, 1946, to take over from the National Research Council, on Apr. 1, 1952, the operation of the project.\* In 1953 the project employed a total of 1,700 people, of whom some 550 were scientific and technical personnel. The residential area for the project, Deep River, which is seven miles up the Ottawa River from the project, had a population of about 2,600 by the end of that year.

The Commercial Products Division of the new Company, which handles the marketing of isotopes, was transferred from Eldorado Mining and Refining Limited on Aug. 1, 1952. This Division, which has its headquarters at Ottawa, offers for sale the following products: isotopes which are produced in bulk at Chalk River and processed as required by the Division before shipment; equipment and instruments which are manufactured by the Division at Ottawa; and radium which is obtained in bulk from Eldorado Mining and Refining Limited and processed into various forms suitable for use in industry, research and therapy. Radioactive isotopes for use in the human body, such as iodine-131, phosphorus-32 and gold-198, are supplied by the Division to Charles E. Frosst and Company, Montreal, for distribution. More than a thousand shipments of isotopes were made during 1952. Six Cobalt-60 Beam Therapy Units were produced and are now installed in hospitals at London, Ont., Winnipeg, Vancouver, New York, Minneapolis and Chicago.

In December 1952, the NRX reactor broke down but restoration began immediately. So far as is known, this was the first time a large nuclear reactor had been completely dismantled after several years of operation and information of a particularly valuable nature was obtained. By the end of 1953, considerable progress had been made in the construction of a third and even more powerful natural uranium-heavy water reactor known as NRU.

Considerable progress was achieved during 1952-53 in the acquisition of new basic knowledge of nuclear science in its many phases, as well as in the chemical separation operations and isotope production processes. The ZEEP was used for essential investigations in connection with design of fuel rods and lattice arrangements required for the new NRU reactor. The NRX reactor was in continuous operation at high-power level 90 p.c. of the 24-hour-per-day period from the beginning of April 1952 until the breakdown occurred on Dec. 12 which caused its shut-down. Many fundamental investigations were performed during this period on nuclear reactions using the high flux which this reactor provided.

The Van de Graaff accelerator was operating on two shifts at potentials as high as 3,000,000 volts, providing a strong beam of protons of uniform and predetermined energy. These energetic particles have been employed to determine resonance levels in disintegrating nuclei and the angular distribution of the products of such reactions have been measured. The angular scattering of protons of given velocities by nuclei has also been investigated. Nuclear investigations on delay times of the order of a thousand millionth of a second between the emission of a  $\beta$  and subsequent  $\gamma$  ray from a disintegrating nucleus have continued, using special  $\beta$  ray spectrometers and coincident timing circuits. During the period of NRX operation,

<sup>\*</sup> The President of the Company was Dr. C. J. Mackenzie, C.M.G., succeeded on Oct. 31, 1953 by W. J. Bennett, O.B.E., President of Eldorado Mining and Refining, Limited.

experiments using mono-energetic neutrons as bombarding particles were carried out. Analyses of position of different nuclei in chemical compounds were investigated using neutron spectrometers.

New methods of separating plutonium and certain valuable isotopes from the mixture of fission products have been developed by the research chemistry and operations groups, which indicate from such laboratory scale experiments that they will prove very efficient in plant operations. Methods of fabricating fuel rods enriched with plutonium have been worked out and employed in the reactor to provide excess neutrons for irradiation of materials used to produce isotopes. The new mass spectrograph with which isotopic composition of natural and reactor-produced elements can be determined has given excellent results since it commenced operations during the year. Investigations on the chemical and physical properties of irradiated elements, their radiations and methods of decay have been investigated, as well as X-ray analyses of irradiated materials. This fundamental information accumulated by the physics, chemistry and metallurgical research branches will be of special value in the design of future power reactors.

The plutonium and uranium-233 (from irradiated thorium) separation plants continued operating successfully. The new plant for separating the depleted uranium from the fission products has proved a very efficient process.

Fundamental investigations into changes produced in living cells have been carried out by the Biology Branch. Mutations have been observed in such fast-growing materials as moulds. By using carbon dioxide labelled with the radioactive isotope carbon-14, and by employing various types of radiations, experiments have been directed towards solving the still unknown way in which radiation damages cells and causes lethal effects. The presence of zinc in certain parts of organs has also been detected by the use of isotopes.

Other investigations that have proved very successful have been performed in co-operation with the Department of Agriculture and the Forestry Branch on the uptake of nutriment, motion of sap and the behaviour of insects. Methods of measuring radioactive materials in air and minute quantities in human excreta have been developed. Tests of various filters, gas masks and methods of decontamination have occupied the Radiation Hazards Control Branch. The Electronics Branch has devised special instruments for measuring high activity by remote control detectors.

Engineers, physicists and other scientists have co-operated with the staff of the consulting engineers responsible for the design of the NRU reactor.

## Section 3.—Other Scientific and Industrial Research Facilities

Aside from the work of the National Research Council and Atomic Energy of Canada Limited, Canadian research is carried on by various federal agencies, provincial organizations, universities and industries.

For many years, raw materials were the basis of Canada's export trade; Government departments concerned with natural resources therefore became involved in research and large and powerful research organizations were established by the Departments of Agriculture, Fisheries, Mines and Technical Surveys, and Resources and Development. When secondary industry also became important, the Government established the National Research Council, operating under a committee of the Privy Council, to link science with industry for the best economic results.

The Department of National Defence and the Department of National Health and Welfare also maintain research laboratories. A system of committees, with nation-wide representation, eliminates unnecessary duplication of work from these national research organizations.

Several provinces in Canada have established Provincial Research Councils to stimulate and support research on problems having special provincial significance.

The universities, of course, form an extremely important part of the Canadian pattern of research, much of it along fundamental lines; however, practical problems are not neglected, especially those of regional interest.

All three types of institutions—federal, provincial and university organizations—have an interest in problems of industrial significance: this is part of the current Canadian pattern of research. While many Canadian industries now possess research facilities—some of them quite extensive—the main bulk of industrial research to date has been done under government auspices.

Thus the unique problems of the country, particularly its large area coupled with a small population, have led to a typically Canadian organization of research, of which a very strong associate committee system is perhaps the most distinctive feature.

Federal Institutions.—Although research by industrial concerns has been slow to develop in Canada, government research has expanded rapidly, at first because of the need for speeding up the production of raw materials, which were for many years the basis of Canada's export trade, and secondly because of the more recent interest in the processing of these raw materials and because of the necessity to meet the needs of national defence. Federal institutions involved in research include the Departments of Agriculture, Fisheries, Mines and Technical Surveys, National Defence, National Health and Welfare, Resources and Development, and Trade and Commerce; the National Research Council; and Crown corporations such as Atomic Energy of Canada Limited.

The scientific work of the Department of Agriculture is described at pp. 373-375 of this volume, the work of the Defence Research Board in Chapter XXVII (See Index), specialized work in scientific forest research at pp. 468-469, investigational work of the Department of Fisheries at pp. 590-591; and the work of the National Research Council at pp. 341-346. The activities of the other federal institutions engaged in research are described briefly in the following paragraphs.

Department of Mines and Technical Surveys.—The Department of Mines and Technical Surveys maintains a number of scientific services concerned with Canada's mineral resources—geology, mineralogy, topography and other services. The Department's Bureau of Mines is extremely well equipped for the task of studying the mineral resources of the country. The Bureau is responsible for mineral, metallurgical and fuel research, and carries out mineral dressing, extractive metallurgy and other phases of work on minerals basic to plant practice. In its modern physical metallurgy laboratories, the Bureau works on corrosion and its prevention, foundry research, heat treatment, fatigue and stress and strain, and welding. It is equipped to work on gases in metals and possesses a machine for shot-peening.

During the second world war, a special Minerals Projects Division of the Bureau carried on exploration and development work on strategic minerals and financed some university research in that field. In the fuel research laboratories, investigations are conducted on oils, gases and solid fuels. This includes coal analysis and classification, and studies in hydrogenation.

The Department's Bureau of Geology and Topography is responsible for the discovery of mineral resources, for studying the nature and extent of underground water resources and for ground and air mapping services. The Bureau has cooperated with the National Research Council and the Royal Canadian Air Force on problems associated with air photography for mapping purposes.

Dominion Observatories located at Ottawa, Ont., and at Victoria, B.C., carry on the usual functions of observatories and are interested in astrophysics, photogrammetry, terrestrial magnetism and earthquakes. A chain of teleseismic seismographs is maintained and short-period seismographs are utilized in connection with mine rock-burst research.

Department of National Health and Welfare.—The Department of National Health and Welfare is not organized primarily for research but, nevertheless, some research is carried out in the Food and Drug Laboratory and in the Laboratory of Hygiene, in addition to routine work. The Department has provided considerable funds for research in public health. There are also federal-provincial health grants for work on the prevention and treatment of crippling conditions in children, mental health, tuberculosis, the control of cancer and venereal diseases, and arthritis. To co-ordinate its medical health programs, conferences are held by representatives of the National Research Council, Defence Research Board, the National Cancer Institute, and the Public Health Research Grants Committee. These conferences provide for reasonably clear definition of the field of each organization and have prevented uneconomical overlapping.

Department of Trade and Commerce.—Rapid development of grain production in Western Canada led to the passing, in 1912, of the Canada Grain Act. This Act is administered by a Board of Grain Commissioners who are responsible for control of the transportation, weighing, grading and warehousing of Canadian grain. The Board soon encountered problems that required scientific study and a Grain Research Laboratory was established at Winnipeg in 1913.

The Grain Research Laboratory is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. Each year the Laboratory provides certain information required by the Board for administering the Canada Grain Act. The Laboratory collects and tests samples of various crops to obtain information on the current quality of all grains shipped during the crop year. Fundamental research is also undertaken; the program is directed towards increased understanding of what constitutes quality in cereal grains and towards improving the methods of assessing quality.

Canadian Patents and Development Limited.—Canadian Patents and Development Limited is a Crown corporation established in 1948. The primary purpose of the Company is to make available to industry, through licensing arrangements, new processes and improvements in processes developed by the scientific workers of the National Research Council. The services of the Company have also been made available to government departments and other agencies, and have been

extended to Canadian universities. The Company arranges to obtain patents of inventions originating in these agencies and handles all licensing matters for them. Any profits that the Company may derive from its licensing arrangements are used for further research and development.

Provincial Organizations.—The fact that only a few provincial research organizations exist does not indicate a lack of interest in research in the provinces. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems. Agriculture is particularly well covered because of its great importance as an export industry; the network of Federal Department of Agriculture laboratories and Experimental Stations, together with agricultural colleges and provincial research councils, provides this industry with a very well-developed research service.

Alberta Research Council.—The Province of Alberta set up a Scientific and Industrial Research Council in 1921. The scope of its work was not outlined in detail but mention was made of the need of promoting mineral development within the Province. This Council operates under an Act somewhat similar to the Act setting up the National Research Council of Canada and is financed by Provincial Government appropriations. The investigations include studies of the coal resources of the Province, the bituminous sands of the Athabasca region, geological and soil surveys, and natural gases. The Council is located at the University of Alberta and operates in close co-operation with the Science Department of that institution, some of its members being on the university staff. Advisory Committees have been appointed to consider the programs for various projects and the chairmen of these Committees form the Technical Advisory Committee of the Council.

British Columbia Research Council.—The British Columbia Research Council was set up in 1944 to deal with problems of primary and secondary industries. The Council makes surveys as a basis of new production from untapped sources, and to encourage the processing of raw materials when research indicates that economic possibilities exist. Members are specifically charged with bringing to the Council's attention the problems of industry, and the Council acts as a clearing-house for supplying technical assistance and advice to industries in British Columbia. Special committees are appointed for the life of specific projects.

Nova Scotia Research Foundation.—The Nova Scotia Research Foundation was set up in 1946. It has no laboratories; instead, the policy has been to stimulate research facilities already established in the Province. The Foundation co-operates with provincial and Federal Government departments and with industries, and assists local universities and colleges by lending equipment. Through its library and abstracting services it supplies scientific and technical information to industry and to research workers. It processes aerial photographs and aerial maps for geological, geographical, ecological, land-use and other surveys. The Foundation has sponsored research on slag utilization, diatomite recovery and underground gasification of coal. Surveys of availability of raw materials for new industries have been made and data have been acquired on mining, soils, lumbering, seaweed utilization and land-use.

Saskatchewan Research Council.—The Saskatchewan Research Council was established in 1947 for "research and investigation in the physical sciences as they affect the economy of the Province of Saskatchewan, and such particular matters as may be brought to its attention from time to time by the Lieutenant-Governor in

Council". The term "physical sciences" is given a broad interpretation to include biological sciences, agriculture and engineering. The Council encourages both pure and applied scientific research relating to the resources and economy of Saskatchewan. Among the projects supported by the Council are: utilization of the Saskatchewan lignites, studies on water supplies, clays, winter lubrication of engines, irrigation pumps, tracer research in agriculture, animal nutrition, and housing.

Research Council of Ontario.—The Research Council of Ontario started operations in 1948. Its functions are to advise the Government on research with particular reference to natural resources. The Council provides means of integrating provincial research problems and co-ordinating efforts towards their solution; for example, Government assistance may be given to projects supported by two or more units within an industry, to encourage the pooling of effort if individual organizations are unable to finance research alone. Grants-in-aid of research have been made to universities and to the Ontario Research Foundation, and a system of scholarships aimed at increasing the number of scientific workers in the Province is in operation.

The Ontario Research Foundation.—The Ontario Research Foundation was established in 1928, and is financed by an endowment fund composed of subscriptions from manufacturers, corporations, private individuals, and a grant from the Provincial Government on a dollar-for-dollar basis with the other contributions. The Foundation carries on research to assist agriculture and industry in developing the natural resources of the Province. Many investigations have been undertaken in the industrial field and the Foundation is well equipped to work in metallurgy, textiles, chemistry and biochemistry. The services of the Foundation are at the disposal of industry on a fee basis, and consultative services, testing, short-trial studies and long-term investigations have been undertaken for hundreds of firms. The work has resulted in better products and in more efficient processing.

The Banting Research Foundation.—The Banting Research Foundation supports the work of the Banting and Best Chair of Medical Research in the University of Toronto and aids medical research throughout Canada.

The Rockefeller Foundation.—The Rockefeller Foundation assists various agencies in Canada in the furtherance of scientific research in medical science, natural science, social science and public health.

Canadian Universities.—In eight of the ten Canadian provinces there is at least one major university with graduate-school facilities for training in research. In Ontario there are four; in Quebec, three. In addition, a large number of universities and colleges provide first-class undergraduate training, or training in special fields. Thus, Canadian universities provide adequate training up to the doctorate level in practically all fields of science.

In the main, research in Canadian universities has followed the traditional pattern found in the graduate schools of the British Commonwealth. It has been largely fundamental but, in certain schools, a great deal of research has been done on the basic local problems. The universities co-operate with Federal Government departments, provincial government departments, and the National Research Council in researches on most of the natural resources. One such co-operative

project has been established at the University of Toronto in the form of a computation centre. This is operated by the University and financially supported by the Defence Research Board and the National Research Council, with the object of developing computation equipment and of training competent operators in this new and complex field of work.

Industrial Research.—Many small industries and some large ones in Canada have, in the past, been totally unaware of the value of research to their industries and to the country, partly because many Canadian companies are subsidiaries of companies in the United Kingdom and the United States, and partly because small companies find it impossible to finance their own research. This general problem is well recognized in Canada, but cognizance should be taken of Canada's vast areas, absence of concentration of similar industries, and proximity to the relatively vast research facilities of the United States.

What Canada has done about industrial research, in the face of these rather formidable difficulties, has been partly covered above: in one way or another Canadian universities, provincial institutions and federal organizations have aided Canadian industry and, although relatively little research has been done in Canada by industrial organizations, a very great deal of research has been done on their behalf.

This picture is changing rapidly. To-day, Canadian industries are becoming aware of the value of research and many industries now possess research facilities—some of them quite extensive. A survey made by the Canadian Manufacturers' Association a few years ago showed that over 360 of their member companies maintained laboratories in which more than 3,100 persons were employed in research, testing or control. Examples of Canadian industries with powerful research organizations are: Aluminum Laboratories Limited at Kingston, Ont.; Consolidated Mining and Smelting Company at Trail, B.C.; and Ayerst, McKenna and Harrison Limited at Montreal, Que.

Aluminum Laboratories Limited undertakes both fundamental and applied research; its divisions include an industrial group to bridge the gap between scientific development and commercial application, plus mechanical testing, metallography, electro-metallurgy, physics, chemical-metallurgy, analysis and documents. Experimental alloys are constantly being produced and tested for such properties as hardness and resistance to corrosion.

The Consolidated Mining and Smelting Company maintains a large Research and Development Division. It has special laboratories equipped for study in ore-dressing, electrolysis, gas reactions, metallographic and petrographic work, X-ray diffraction of crystals, materials testing, and instrument design, and has many important developments to its credit, including the differential flotation process used on ores of the famous Sullivan mine.

Ayerst, McKenna and Harrison Limited has followed an extensive research program for some years in such fields as vitamins, antibiotics, liver extracts, bacteriological products, sex hormones, gland products, and veterinary medicines. It also does basic research and supervises the Canadian Government plant at St Laurent for the large-scale production of penicillin.

Other companies with sizable research departments represent many diversified interests, for example: Canadian Industries Limited, International Nickel Company, Dominion Rubber Company, Imperial Oil Limited, Shawinigan Chemicals Limited, the Maple Leaf Milling Company, Canadian Breweries Limited and Canada Packers. There are, of course, many others.

To an increasing extent, recent scientific developments are leading to a reasonably swift industrial application, as shown by the establishment of such companies as Isotope Products Limited at Oakville, Ont., and Computing Devices of Canada Limited at Ottawa, Ont.

To date, however, the main bulk of industrial research continues to be done under Government auspices, and sometimes with the co-operation of universities. Two further examples of this Canadian habit of co-operation between industries and other organizations may be cited: the Research Division of the Hydro-Electric Power Commission of Ontario, a provincial service, and the Pulp and Paper Research Institute, intimately associated with McGill University. These organizations are briefly described in the following sections.

Hydro-Electric Power Commission of Ontario.—The Research Division of the Hydro-Electric Power Commission of Ontario receives its main impetus from the continuing expansion of power-generating facilities throughout the Province.

The Electrical Research Department deals mainly with improvements in power equipment, insulation, lightning protection, illumination and electrical metering. New uses for electricity are under investigation, mostly on experimental equipment, e.g., crop-drying apparatus, soil-heating coils under greenhouses and heat pumps.

The subjects of study in the Structural Research Department include masonry materials, soil mechanics, vibration and "galloping" of transmission lines, and the best ways to test various construction components. Since one of the most widely used materials in hydro structures is concrete, all problems relating to this material are handled by a special Concrete Control Section. The Chemical Research Department is concerned with such varied items as corrosion, liquid electrical insulants, paints, plastics, protective coatings, weed control, and even black-fly control.

The Pulp and Paper Research Institute of Canada.—Because so much of the Canadian economy is dependent upon pulp and paper, the need has long been recognized for research on cellulose chemistry and other technologies associated with the use of cellulose. Near the beginning of the century, the Federal Government set up a Montreal branch of the Forest Products Laboratory, which worked closely with McGill University department of chemistry, and early in the 1920's the pulp and paper industry began to support research in this branch. In 1950, the Institute became an independent corporation under federal charter; it is administered by a Board of Directors consisting of appointees from McGill, industry, and the Federal Department of Resources and Development.

This Corporation has taken over the building it occupied on the McGill University grounds, together with all its equipment—the land remains University property and is lent to the Corporation. The Corporation has complete control of the operation, subject to the provision that work leading to degrees will be under the control of the appropriate faculties of the University.

Numerous contributions to fundamental knowledge of the chemistry of cellulose and lignin have been made by Institute personnel. McGill's Division of Industrial and Cellulose Chemistry forms an integral part of the Institute; to some degree, the Institute has also become the pulp and paper industry's bureau of standards.

At present the physical chemistry section is concerned mainly with problems of the surface chemistry of cellulose, swelling of cellulose, and float properties of suspensions. Research on the reactivity of cellulose, cellulose derogates, chemistry of bark and of lignin is being carried out by the organic chemistry section.

## CHAPTER IX.—SURVEY OF PRODUCTION\*

#### CONSPECTUS

	PAGE	1963 St. 1964 (1967)	PAGE
SECTION 1. CURRENT TRENDS OF COM- MODITY PRODUCTION	357	SECTION 3. PROVINCIAL DISTRIBUTION OF PRODUCTION	360
SECTION 2. INDUSTRIAL DISTRIBUTION OF PRODUCTION	358	PRODUCTION IN EACH PROVINCE	362

Note.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The scope of the Survey of Production is limited to the actual production of commodities. The activities of such industries as transportation, communication, trade, finance and service are excluded except as they are indirectly reflected in the value of output of the commodity-producing industries. This is in contrast to the scope of the widely used Gross National Product series (see Chapter XXIV), which encompasses all industries. Net production, or "value added" is generally considered more significant as a measure of output than gross value of production, and is, consequently, stressed in the following analyses and tables. It is obtained by deducting from the total or "gross" value of output, the cost of materials, fuel, purchased electricity and supplies consumed in the production process.

The measurement of value added is similar, although not strictly comparable, to the concept involved in the contribution of each industry to gross national product at factor cost (net income originating plus depreciation). Apart from variations in the statistical structure, the main difference is that value added, as computed for each commodity-producing industry, includes the cost of such services as insurance, advertising, transportation, communications, etc. In national income accounting, the contribution of these services to gross national product at factor cost is classified to the non-commodity industries from which they originate.

The value series shown in the following tables incorporate basic changes in classification and method of compilation for several of the industries. In order to maintain continuity of the series, the revisions were extended back to 1938. In the process of revision, adjustments for duplication between primary and secondary industries, necessary under the former system of compilation, were eliminated.

## Section 1.—Current Trends of Commodity Production

In 1950, the net value of commodity production in Canada rose to the record level of \$10,562,000,000, an advance of more than 9 p.c. over 1949. Most of the increase occurred in the field of secondary production (manufacturing and construction). Both higher prices and an appreciable gain in the volume of output for the majority of industries contributed to the advance.

Preliminary estimates for 1951 indicate further increases in the values of both primary and secondary production. The index of industrial production (which measures the volume of output in the manufacturing, mining and electric power

Prepared in the Business Statistics Section, Research and Development Division, Dominion Bureau of Statistics.
 † A description of the revised methods of compilation is given in the DBS Bulletin, Survey of Production 1933-1930.

sectors) rose 7 p.c. over 1950 while the general index of wholesale prices advanced by 14 p.c. The value of farm output was also considerably higher in 1951, owing to larger crops and higher prices.

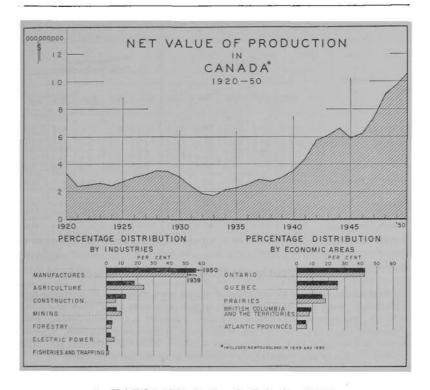

During 1952, industrial production averaged nearly 3 p.c. above the level of the preceding year. By contrast, wholesale prices declined by about 6 p.c. in the same comparison. Although prices of farm products also declined in 1952, favourable growing and harvesting conditions resulted in record crops of wheat, barley and soybeans and near-record or above-average outturns of most other field crops.

#### Section 2.—Industrial Distribution of Production

Between 1946 and 1950, the total net value of commodity production rose by more than 69 p.c. Higher price levels, sustained demand for consumer goods at home and abroad, the industrial development program and the expansion of defence industries have all contributed to this rapid advance. Most of the industrial groups showed increases in the five-year comparison, the largest gains being recorded in construction, mining and manufacturing. The continuing high level of building activity and the rapid advance of construction costs resulted in an increase of 214 p.c. in value of output for the construction industry. Higher prices and greater volume also accounted for the 104-p.c. gain in the value of mining and the 71-p.c. advance in the value of manufactures. The electric-power industry also expanded steadily since World War II, while forestry operations, after showing a moderate decline in 1949, resumed their upward trend in 1950. value of agricultural output, after having receded slightly between 1948 and 1949, showed a further decline of about 7 p.c. in 1950, but was still 29 p.c. greater than in 1946. The trend in the output of fisheries was irregular over the period, declines having been shown in 1947 and 1949. Production in the trapping industry showed a tendency to decline.

Secondary production (construction and manufactures) has contributed a distinctly larger proportion of the total value of Canadian commodity output during recent years than it did before the second world war. Manufacturing constitutes the bulk of secondary production and, during the first five post-war years, has contributed between 54 p.c. and 58 p.c. of the total value of commodity production, compared with less than 52 p.c. in 1938 and 1939. The construction industry, which is frequently subject to steep fluctuations, had been accounting for approximately 6 p.c. of the total before the War. After declining during the war period, it recovered strongly in recent years; its value represented over 12 p.c. of total production in 1950.

The contribution of primary production to the Canadian aggregate has fallen off relatively to secondary production, and in 1950 stood at only 31.6 p.c., the lowest on record. However, the absolute value of primary production almost tripled between 1938 and 1950. Throughout the period, agriculture remained by far Canada's leading primary industry, providing rather more than 20 p.c. of the total value of commodity production in most years. Mining contributed about 6 p.c. during the past few years, a smaller proportion than a decade ago. The relative importance of electric power has also receded compared with pre-war years. The share of the forestry industry in commodity production, after fluctuating considerably, stood at 3.6 p.c. in 1950.

#### 1.-Net Value of Production, by Industry, 1946-50

Note.—Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and supplies consumed in the production process.

#### Section 3.—Provincial Distribution of Production

Substantial increases in net value of output were shown by all provinces and territories between 1946 and 1950. The largest percentage gain, which amounted to 82 p.c., was recorded by Ontario. British Columbia and Alberta followed with advances of about 73 p.c. and 69 p.c., respectively, in the same comparison. Quebec showed an increase of 61 p.c. and value of output in Manitoba gained 51 p.c. The Atlantic Provinces and Saskatchewan recorded more moderate increases.

Newfoundland data excludes agriculture, fisheries, trapping and fish processing.
2 Forestry and construction figures for the Yukon and Northwest Territories are included with British Columbia.

Ontario, having the largest population and a well diversified economy, contributed nearly 43 p.c. of the total commodity production in 1950. Quebec's share amounted to 26 p.c. and British Columbia contributed the third largest share of 9 p.c.

Newfoundland data excludes agriculture, fisheries, trapping and fish processing.
2 Forestry and construction figures for the Yukon and Northwest Territories are included with British Columbia.

Per Capita Production.—The per capita net value of production in nine provinces (Newfoundland excluded) rose to \$784 in 1950 as compared with \$734 in 1949 and \$592 in 1947. Ontario continued by a wide margin to hold first place among the provinces with a per capita figure of \$1,008, while British Columbia with \$852 regained second position from Alberta; the latter fell back into third place with a per capita production of \$780. Quebec, Saskatchewan and Manitoba followed in that order with per capita figures of \$693, \$634 and \$618. The last three positions were held by the Maritime Provinces: New Brunswick, Nova Scotia and Prince Edward Island showed per capita output levels of \$440, \$410 and \$303, respectively. Compared with 1949, all provinces showed gains in this analysis except Saskatchewan which receded sharply owing to lower agricultural returns, and Nova Scotia which remained unchanged.

## Section 4.—Distribution of Commodity Production in Each Province

Atlantic Provinces.—Available figures for the Province of Newfoundland, which has come into the Canadian picture for 1949 and 1950, show that the manufacturing industries lead in net value of production. Those industries are dominated by the forest and fisheries resources of the Province, the pulp and paper industry being in first place. Unfortunately, no information is available regarding the fish-processing industry and its position in the economy of the Province cannot be evaluated. Nor is any information available regarding the primary fisheries industry, which is undoubtedly of great importance.

The net value of commodity production in Prince Edward Island rose from \$8,244,000 in 1938 to \$29,063,000 in 1950, a considerable increase, although slightly below the Canadian average. Prince Edward Island's economy is still mainly agricultural; fisheries, manufacturing and construction constitute the bulk of the non-agricultural output.

Value of production for Nova Scotia increased by over 178 p.c. during the period, from \$93,938,000 in 1938 to \$261,640,000 in 1950. Manufacturing output expanded very rapidly during the War and, in recent years, has contributed about 40 p.c. of the Province's commodity production. Mining and agriculture have been the most valuable primary industries throughout the period, with mining providing a rather larger share of the Province's wealth in more recent years. Fisheries is Nova Scotia's third primary industry. Construction was at a high level in the post-war period, contributing more than 17 p.c. of total production in 1949 and 1950.

New Brunswick's net value of production rose from \$61,708,000 in 1938 to \$225,128,000 in 1950. Manufacturing industries provided somewhat less than one-half of this total during most years. Agriculture and forestry are the main primary activities. Agriculture contributed more than 20 p.c. of the provincial value of production during the war years and more recently, somewhat less. Forestry's share has fallen off since 1947. Activity in the construction industry increased considerably since the end of the War, accounting for nearly 15 p.c. of the value of output in 1950, compared with 6 p.c. in 1945.

Quebec.—Net value of production in Quebec increased nearly four-fold during the period under review, rising from \$697,407,000 in 1938 to \$2,752,445,000 in 1950. Manufacturing industries largely dominate the Province's economy, contributing over 70 p.c. of all value of production during some war years, and more than 65 p.c. in the post-war period. However, the primary industries of agriculture, forestry, mining and electric power still add substantially to the Province's output, with agriculture's share averaging 10 to 12 p.c. during the post-war years. The relative importance of electric power and mining has declined since 1938, although the latter's position has shown improvement in recent years. The contribution of forestry is still greater than in 1938 and 1939, but has been declining since 1948. The construction industry contributed over 10 p.c. of total value in 1949 and 1950, compared with 7.5 p.c. in 1938.

Ontario.—In Ontario, the net value of production for 1950 was nearly four times the 1938 value. The Ontario economy is largely dominated by manufactures, which were responsible for over 70 p.c. of value of production during the war years and for about 68 p.c. in subsequent years. This compares with a

contribution of 62 p.c. in 1938. Agriculture is Ontario's principal primary industry, with mining next in importance. The relative importance of these two industries has dropped sharply since 1938, although their dollar values have increased. The value of the construction industry has risen sharply since 1945 and accounted for 12 p.c. of the net value in 1950 compared with 4 p.c. in 1945 and 6 p.c. in 1938.

Prairie Provinces.—The value of commodity production in Manitoba rose from \$135,842,000 in 1938 to \$474,577,000 in 1950 without the general balance of the economy altering greatly over the period. Agriculture remained the Province's principal industry, accounting, in most years, for from 40 p.c. to 50 p.c. of the net value of production. The share of manufacturing usually stood between 35 p.c. and 40 p.c. The Manitoba mining industry, the output of which fell off markedly during the War, has shown some expansion in recent years, but its share of the total is still well below that of 1938. By contrast, value of construction output rose in the post-war period and in 1950 accounted for over 14 p.c. of the provincial total. In 1938 construction contributed only 5 p.c. of the net value of production.

The Saskatchewan economy is greatly dependent on agricultural production. In 1950, for the first time in nine years, agriculture's share of the Province's net value of output fell below 75 p.c. Throughout the period, fluctuations in total value of production and in value of agricultural output paralleled each other closely. Depressed conditions in 1938 were followed by a swiftly rising trend, partly obscured by violent year-to-year fluctuations in value of production. Net value reached record levels in 1948 and 1949 but fell off appreciably in 1950. Although the actual value of Saskatchewan's manufacturing output rose steadily, it still constituted only from 7.5 to 10 p.c. of the net value of production during the post-war years, much the smallest proportion among the older provinces. Mining and construction were the other industries with appreciable values of output.

The Alberta economy has also been largely agrarian until very recently. Before World War II, agriculture provided over 60 p.c. of value of production, and it still contributed nearly 60 p.c. between 1946 and 1948. During 1949 and 1950, however, the share of agriculture dropped substantially as that of mining and construction rose, but it easily remained the Province's principal industry. The value of mineral output increased sharply since 1947, owing principally to the rapid development of the Province's petroleum resources. Throughout the period, manufacturing was Alberta's second industry and contributed between 17 p.c. and 20 p.c. of the net value of production during the post-war years. Its position is being challenged, however, by the fast-growing mining and construction industries.

British Columbia.—Net value of production in British Columbia increased from \$228,573,000 in 1938 to \$971,878,000 in 1950, an advance of more than 300 p.c. Since the Second World War, manufacturing has provided about one-half the aggregate amount. Five primary industries make substantial contributions to the Province's output, these being, in order of 1950 value of production, forestry, mining, agriculture, fisheries and electric power. The economy of British Columbia is therefore one of the most diversified in the nation, and the forestry and construction industries particularly have shown marked expansion during the post-war period. Compared with 1938, the relative importance of the manufacturing and construction industries has risen sharply at the expense of agriculture, mining and electric power.

Norz.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Agriculture, including stock-raising and horticulture, is the most important of the primary industries of the Canadian people, employing, according to the Census of 1951, 15·6 p.c. of the total labour force and 19·2 p.c. of the labour force males. In addition, agriculture provides the raw materials for many Canadian manufactures and its products in raw or manufactured form constitute a very large percentage of Canada's exports. The area of present and potential agricultural land is shown by province at p. 20 of this volume.

## Section 1.—Federal Government in Relation to Agriculture\*

The creation of the Department of Agriculture is provided for in Sect. 95 of the British North America Act (1867), which says, in part, that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada" As a result of this provision, there exists at the present time a Department of Agriculture, with a Minister of Agriculture at its head, in the Federal Government and in each of the provinces except Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Natural Resources.

The following special article reviews the federal agricultural legislation that has been put into effect since the need for aid and promotion was first indicated.

Except as otherwise indicated, this material was prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, Ottawa.

## MAJOR DEVELOPMENTS IN ORGANIZATION AND POLICY OF THE FEDERAL DEPARTMENT OF AGRICULTURE

Canada's first move to organize for the promotion of agriculture was made more than a century ago. By Act of the Legislature of the Province of Canada, passed on Nov. 10, 1852, provision was made for setting up a Bureau of Agriculture, under a Minister of the Crown. This Bureau later became a department, fore-runner of the Department of Agriculture of to-day. In addition to general agriculture, the Bureau concerned itself with agricultural statistics and registration (including the Census), and with patents and inventions. Later it was given responsibility for immigration and the building of colonization roads.

The Early Days.—The present Department of Agriculture was established by Act of the new Parliament of Canada, following Confederation in 1867. Little progress was made during the first few years but, under an Act passed in 1869, attention was directed to the safeguarding of Canadian live stock against the introduction of contagious diseases. By 1884, inspection and quarantine stations had been established all along the International Boundary and at Atlantic seaports. Attention was also being given to the eradication of diseases already in the country and the first entomologist was appointed in 1884 to investigate the ravages of crop-destroying insects.

In 1885, preliminary steps were taken to set up the experimental farms organization and Parliament passed an Act in 1886 respecting Experimental Farm Stations. This provided for a central farm at Ottawa, Ont., and branch farms at Nappan, N.S., Brandon, Man., Indian Head, N.W.T., and Agassiz, B.C. Dr. William Saunders was appointed the first Director.

Departmental organization at this time comprised only two branches dealing specifically with agriculture—Experimental Farms and Veterinary. In 1890, the first Dairy Commissioner was appointed to aid farmers in the improvement of butter and cheese manufacture and in the better feeding of dairy cattle for milk production. A Dairy Products Act, passed in 1893, made provision for the branding of dairy products and for prohibiting the sale of filled or imitation cheese.

In 1895, the possibilities of the British market as an outlet for Canadian produce began to attract attention. Arrangements were made for shipments of butter and cheese under refrigeration and these proved highly successful but similar efforts with fruit shipments were less satisfactory.

Early regulatory legislation administered by the Department included measures providing for the registration of cheese factories and creameries in 1897, for the control of insect pests (San José scale) in 1898, for the incorporation of live-stock record associations in 1900, and the Fruit Marks Act in 1901. In 1903, provision was made for the inspection of seeds and testing for purity and germination. Cow-testing was begun in 1904 and the Animal Contagious Diseases Act was amended to provide compensation for the owners of live stock slaughtered under the Act. At the 1906-07 Session of Parliament an Act was passed to encourage the establishment of cold-storage warehouses for perishable food products and the Meat and Canned Foods Act was brought in at the same time. The Destructive Insect and Pest Act was passed in 1910.

In the early years of the 20th century the departmental organization gradually developed: in 1905, the seed and live-stock divisions were withdrawn from the Dairy Branch and set up as separate branches; in 1912, the Census and Statistics office was transferred to the Department of Trade and Commerce; the Agricultural

Instruction Act, passed in 1913, provided annual grants, over a ten-year period, to the provinces for the encouragement and assistance of agricultural education; the Entomological Branch and the Fruit Branch were established in 1914 and, in the same year following the outbreak of war, the Department was asked to take over the purchase of supplies for the British Government and a special organization was formed for that purpose. In 1918, those matters not concerning agriculture but still under the control of the Department were transferred elsewhere.

During the next two decades, marked progress was made in the improvement of agriculture and the development of production and marketing policies under various legislative enactments. Marquis wheat, then at its peak of popularity, was an outstanding example of plant improvement, contributing many millions of dollars in new wealth by its ability to ripen early and thus extend the area of profitable production. It, in turn, was superseded by other varieties, bred to overcome the menace of rust and other pests. Improved varieties of other crop plants, superior kinds of hardy fruits, and finer strains of farm animals and poultry were among the contributions to Canadian agriculture during this period.

The Period 1920 to 1939.—Many of the present-day policies covering the grading of farm products had their beginning in this period. Grading of dairy produce for export was provided by legislation in 1921. In 1922, egg-grading regulations, which had been set up in 1917 to cover export shipments, were made applicable to the domestic market. In the same year, regulations governing the grading of hogs were passed, launching a program that resulted eventually in the almost complete conversion of the industry from the production of lard-type to bacon-type hogs. This program was initiated in an effort to recapture a share of the United Kingdom market.

As a result of disastrous rust epidemics in Western Canada and the need for finding an answer to the problem, a new Rust Research Laboratory was opened in 1925 at Winnipeg, Man., to study the menace of wheat rust.

Challenged in the courts of Ontario in 1926, the egg-grading regulations were found to be beyond federal jurisdiction. Public opinion was solidly behind the regulations, however, and the difficulty was overcome by the passage of provincial enabling legislation. Similarly, other grading legislation, applicable initially to interprovincial and export trade, was extended to cover domestic trading by action of the various provincial governments.

Grade standards for dressed poultry were set up in 1928 and record-ofperformance for poultry was inaugurated in 1929 at a time when average annual production per bird was around 80 to 90 eggs. In 1929, standards were adopted for beef and the Advanced Registry policy for purebred swine was introduced. Carcass grading of hogs on a voluntary basis was begun in 1934. Effective December 1940, live grading of hogs was discontinued and carcass grading has since been the only official system.

The various grading policies introduced by the Department served not only to create price differentials for quality products but resulted in substantial increases in consumption. The grading of hogs laid the foundation for a great expansion of the industry, improving the quality of bacon and pork products and stimulating domestic and export trade. Egg grading resulted in such an upsurge in demand that Canada soon outstripped all other countries in per capita consumption of eggs. Fruits and vegetables, dairy products, wool, beef, dressed poultry and canned goods afford other examples of the benefits accruing from marketing on a graded basis.

The prolonged drought period of the 1930's in Western Canada, coupled with generally depressed economic conditions, brought the Department of Agriculture into the fields of marketing legislation, assistance and rehabilitation programs. The Natural Products Marketing Act, passed in 1934, provided for the establishment of a Dominion Marketing Board. The object of the Act was to improve the methods and practices of marketing natural products in domestic and export trade. In 1936, the Act was declared ultra vires by the Supreme Court of Canada and the decision was upheld in 1937 by the Imperial Privy Council. The Government then decided to assist orderly marketing by the encouragement of pools which would return to the producer the maximum sales return for his product, less a maximum margin for handling expenses agreed upon in advance.

In 1935, with the passage of the Prairie Farm Rehabilitation Act, the Department moved to the relief of prairie agriculture. The three major purposes of the Act were: to develop tillage and cropping practices that would enable farmers to farm successfully under a wide and fluctuating range of physical and economic hazards; to divert crop production from poor land and to use such land for grazing; and to make better use of the limited water resources of the prairie area. In succeeding years the developments under the program of the Prairie Farm Rehabilitation Act did much to change the farming pattern over a large part of Western Canada. So valuable have been the results of this program that it has been retained and extended over an increasingly large part of the country. The magnitude of the undertakings stemming from this legislation is indicated by the fact that \$76,500,000 has been spent on it since its inception.

In 1937, the organization of the Department of Agriculture was changed and its activities grouped into services on a functional basis. Activities relating to production were included in one service, those relating to marketing in another, and the research activities in the natural sciences were grouped together in a third. The Experimental Farms organization, aside from the units concerned with botany, chemistry and bacteriology, comprised the fourth major service.

In 1939, the Wheat Co-operative Marketing Act and the Agricultural Products Co-operative Marketing Act were passed. The Wheat Co-operative Marketing Act was used for only one year after which most problems connected with the marketing of wheat were handled by the Department of Trade and Commerce under the Canadian Wheat Board Act. The Agricultural Products Co-operative Marketing Act, which covers the marketing of all agricultural products other than wheat, has been used to a considerable degree. Its purpose is to aid farmers in pooling returns from the sale of their products by guaranteeing initial payments and thus assisting in the orderly marketing of the product. Sales returns are made to producers on a co-operative plan.

In order to provide a measure of assistance for farmers who might suffer from low yields because of factors beyond their control, the Prairie Farm Assistance Act was passed in 1939. When the average yields in designated areas fall below certain figures, direct money payments are made to farmers within the area. A 1-p.c. levy on all western grain marketed in Canada provides some of the funds from which assistance payments are made. Up to Mar. 31, 1953, \$143,327,607 had been paid out to farmers and the total levy collected was \$69,832,427.

World War II Period.—The outbreak of war in 1939 brought many changes to Canadian agriculture and to the activities of the Department. The appointment of an Agricultural Supplies Committee (later Board) provided the machinery whereby the Department could move to keep Canadian agriculture functioning in such a manner as to meet the needs of the people of Canada and their allies. The Board undertook various programs for assisting production, including the provision of aid to producers whose natural markets were lost because of the War and the conservation of supplies of materials needed in production. Other Boards set up to handle specific commodities followed the general pattern of operation established by the Supplies Board.

The loss of export markets for wheat resulted in the introduction of a scheme for reducing the acreage sown to wheat. Along with this, a system of delivery quotas was adopted to ensure that every farmer should have a fair opportunity to market a portion of his crop. In order to compensate farmers for loss of income arising from their inability to sell as usual, payments were made to encourage the seeding of coarse grains and the extension of summer-fallow on land that otherwise would be sown to wheat. In 1942, the Wheat Acreage Reduction Act was passed, placing the program on a definite statutory basis and representing the first occasion on which the Department had sought by legislation to directly influence production programs. Having accomplished its purpose, the program was discontinued after the 1943 season. More than \$85,000,000 was distributed to farmers and landowners during the three years that the program operated.

Another important policy of the Department initiated during the war years was that of paying freight assistance on feeds. Under this program substantial payments were made against the cost of moving feed grains from the Prairie Provinces to Eastern Canada and British Columbia, thus stimulating the output of livestock products and aiding in the marketing of coarse grains. From the inception of the policy up to Mar. 31, 1953, assistance was given on the movement of 31,381,865 tons of feed grain. Total cost during the period was \$188,212,524.

The Federal and Provincial Governments have, through legislation and in other ways, provided marketing aids related to research, education, information, inspection, grading and many other service measures designed to assist in correcting the maladjustments in marketing within agriculture and between agriculture and the rest of the economy.

The Post-War Period.—In 1944, the Agricultural Prices Support Act was passed with the stated purpose of "endeavouring to ensure adequate and stable returns for agricultural products during the transition from war to peace and to endeavour to secure a fair relationship between the returns from agriculture and those from other occupations". This assistance was to compensate for the controls placed on the prices of agricultural products during the War.

The Prices Support Board, established under the Act, is authorized to purchase products outright or to underwrite the market through guarantees or deficiency payments to producers. A working capital revolving fund of \$200,000,000 is provided for its operations. In 1950, the Act was extended on a continuing basis.

The rehabilitation of dyke-land in Nova Scotia and New Brunswick was provided for under the Maritime Marshland Rehabilitation Act. This measure, passed in 1948, empowers the Department of Agriculture to undertake the construction of

all main protective works and to do all the engineering required, on condition that the provinces assume responsibility for the proper use of the lands protected and for necessary drainage works. The Act provides for the development of new areas in addition to the reconstruction and repair of existing works.

Another measure which is of considerable importance in price stabilization is the Agricultural Products Marketing Act, 1949. A number of provincial governments have passed legislation providing for a Board to control or regulate the marketing of agricultural products produced within the province concerned. This Act enables such provincial marketing legislation to be applied in the same way to the marketing of agricultural products outside that province and in export trade.

In retrospect, the development of the Department of Agriculture over the past century falls into a fairly well-defined pattern. Initially, agriculture itself played a minor role in the departmental activities but, as the country opened up and farming became more extensive and correspondingly more important in the country's economy, it gradually made increasing demands for governmental recognition. Sound policies for the development and regulation of Canadian agriculture were developed within the Department of Agriculture during the first decades of the present century. Drought and depression in the 1930's left a permanent mark on the industry and altered, in considerable degree, the cultural practices over large areas of the country. War imposed new strains on the agricultural economy but it also paved the way for lasting advances in many lines of production. Finally, in the post-war period, Canadian agriculture has broken new ground in the fields of planned production and marketing.

Progress is not necessarily measured in terms of costs. Nevertheless, some indication of the broadening of departmental activities is given by the amounts of money spent over the past 45 years. These outlays, averaged for five-year periods from 1906 to 1950, are as follows:—

Period	Average Annual Expenditure	Period	Average Annual Expenditure	
	\$	~	8	
1906-10. 1911-15. 1916-20. 1921-25. 1926-20.	3,321,233 5,049,727 7,037,296	1931–35. 1936–40. 1941–45. 1946–50.	20,961,666 75,548,381	

While the Department of Agriculture has progressed steadily during the past hundred years, the most spectacular advances have been made during the two latest decades. The Department has now developed to the point where it is of major importance in Canada's administrative set-up.

### Subsection 1.—General Policy and Price Stability

All the activities of the Department are directed toward the production of marketable farm products. Apart from the initial research and experimentation in connection with operations on the farm itself, it is essential that processing, grading and inspection of farm products should be of a high standard if markets both at home and abroad are to be retained and new ones developed. It is with this end in view that the inspection and grading activities of the Department have become of increasing importance. By inspection and grading the buyer is able to obtain a product suited to his requirements; the producer is compensated according to the grade of his product and is thus encouraged to produce a high-quality commodity.

The results of experimental and research work and the policies of the Department, in general, are given to farmers and to the public through bulletins, the press, radio and screen. Releases on market conditions and prices are a regular feature of this publicity.

Measures taken by the Government of Canada, designed to give price stability and security to the industry, are outlined in the special article on pp. 366-370.

Farm Credit.—The Federal Government has made provision for the extension of credit to farmers under the Canadian Farm Loan Act and under the Farm Improvement Loans Act. The Prairie Grain Producers' Interim Financing Act, 1951, was emergency legislation intended primarily to relieve any hardship caused by the extremely unfavourable harvesting conditions of that autumn.

The Canadian Farm Loan Act, 1929.\*—Long-term farm mortgage credit is made available to Canadian farmers under the provisions of this Act, which is administered by the Canadian Farm Loan Board. The Board makes loans for the purchase of live stock, farm equipment and farm land, for improvements, for refinancing debts and for covering operating expenses. The Board also provides short- and intermediate-term credit to its long-term mortgage borrowers by means of five-year second mortgages with collateral chattel security.

From the commencement of operations in 1929 to Mar. 31, 1952, the Board has lent \$79,429,000. Loans approved in the year ended Mar. 31, 1952, totalled \$4,238,400, a decline of 10 p.c. from the previous year. Approximately 60 p.c. of current borrowing is to buy land or pay debts secured on land. Assets under administration by the Board increased by more than \$7,000,000 in the past five years, amounting to \$29,864,550 at Mar. 31, 1952.

The Farm Improvement Loans Act, 1944.\*—The Farm Improvement Loans Act is designed to provide intermediate-term credit and a type of short-term credit to farmers to enable them to equip, improve and develop their farms. There is scarcely anything a farmer wants in the way of mechanical aids for his farm operation or for his home for which a loan may not be made. Assistance may also be obtained for the purchase of live stock, principally foundation or breeding stock; for installation or repair of farm electric systems; for repair, alteration or construction of farm buildings, including the home; and for fencing, drainage and other development projects. The Act is intended to assist the farmer who previously has not been able to obtain adequate credit for such purposes. Moreover, credit is provided on security and terms that are convenient and suited to the individual borrower. The Act is administered by the Department of Finance.

The chartered banks are the lending agency under the Act. The legislation, originally operative for three years, has been extended from time to time for three-year periods. The Government guaranteed each bank against loss up to 10 p.c. of the total loans made by it during the period. Under the Act, the guarantee was limited by a provision stating that it would not apply to any loan made after the aggregate of all loans made by all banks in a given period reached an amount fixed by statute. When, in February 1951, the Act was extended for another three years, the amount fixed was \$200,000,000. Within two years the loans almost totalled this amount, and a further extension of the Act was made for three years from Apr. 1, 1953. The aggregate of loans for this three-year period, affected by the guarantee, was set at \$300,000,000. By Dec. 31, 1952, 80 claims amounting to \$38,383 had been paid under the guarantee.

Loans may be obtained for terms up to seven years with interest not to exceed 5 p.c. The maximum amount to be advanced to a borrower at any one time was increased to \$4,000 by the legislation of 1953. The borrower himself must provide 20 p.c. to 33 p.c. of the cost of his project.

Prepared by D. M. McRae, Supervisor, Farm Improvement Loans Act, Department of Finance.

By Dec. 31, 1952, \$230,986,561, or 65·3 p.c. of the total of all loans made, had been repaid. Of the loans made during the first three years of operation, all but 0·7 p.c. had been repaid; of those made during the second three years, all but 9·7 p.c. had been repaid; for the 22 months of the third three-year period ended Dec. 31, 1952, 38·7 p.c. had been repaid.

#### 3.—Loans made under the Farm Improvement Loans Act, by Purpose, 1945-52

Prairie Grain Producers' Interim Financing Act, 1951.—This Act, which came into force Jan. 15, 1952, provides short-term credit to grain producers in the Prairie Provinces who, because of congested delivery points or inability to complete harvesting of their grain, are in need of credit until their grain can be delivered. Individual advances can be made to a maximum of \$1,000.

## Subsection 2.—Agricultural Research and Experimentation

The Department of Agriculture conducts, on a broad scale, scientific research and experimentation on the control of pests and diseases, the nutritional requirements of plants and animals, the breeding and testing of new species and varieties, the microbiology of soils and foods, investigations of crop production and cultural methods,

and many other matters. This work is carried on mainly by the Science Service and the Experimental Farms Service. In addition to providing information on current production problems, the work is of paramount importance to the long-time well-being of agriculture.

Conservation of the soil is of basic importance to agriculture. Research in that field takes the form of soil surveys and study of methods for protecting and conserving soil resources and is carried on in collaboration with the provincial governments. Studies include the chemistry of the soil, cover crops, value of manure and fertilizers, cultural methods, use of tillage machinery and development of large land-reclamation projects.

The Department has for many years conducted investigations into the control of insects and diseases of forest trees. The limited silvicultural work carried on has been done with the aim of maintaining a supply of trees suitable for planting on the prairies as shelter belts against the wind and to prevent soil and snow drifting. Basically, this is also a soil-conservation measure.

As might be expected, much of the research and experimental work carried on is concerned with crop plants for, after the soil itself, they are of chief importance. This work includes the breeding and testing of suitable varieties of crops to be grown under the varying climatic conditions throughout Canada. Their culture, their nutritional value and, in the case of food crops, their suitability for human consumption—even their appeal or lack of appeal to a somewhat discerning housewife—are continuously under study.

Work on live stock includes mainly the feeding, care and handling of stock, its protection from insects and diseases, and the production of suitable market and breeding types. A limited amount of work has also been done on the production of new strains of animals.

Research and study of processed products such as milk, butter, cheese and meat, and of fruits and vegetables is a most active item in the scientific work of the Department. Storage of agricultural products creates many problems that call for constant study.

Chemical and biological research and experimentation is mainly of an applied nature. That is, the Department does not specialize in so-called fundamental research involving the discovery of basic scientific phenomena and laws, but concentrates mainly on the adoption of known processes and the application of such processes to specific aims. At the same time, some discoveries bordering on fundamental research are occasionally made, and it is also found necessary to extend to some degree into the basic field where certain information is lacking in applied science.

Agricultural research, particularly in plant science, must be decentralized to a great extent for most problems must be studied where they occur. Apart from the value to farmers of having a local source of information, the experimental farms and science laboratories are widely distributed because the work can be done in no other way. In addition to the headquarters of the Experimental Farms Service at Ottawa, work is carried on at 28 branch experimental farms and 20 substations. Experimental work of local application is done at 162 illustration stations, 54 district substations and 11 fox and mink illustration stations. The work of the Science Service, centralized at Ottawa, is also augmented by about 100 laboratories throughout the country.

In the field of economic research, studies in farm management, land utilization, marketing and farm-family living are undertaken in all parts of the country. The scope of the scientific and experimental work of the Department is revealed when it is realized that there is no plant or animal in Canada that is not susceptible to damage by disease caused by bacteria, fungi or viruses, or subject to attacks by insects or, in the case of animals, by internal parasites. That the work of the agricultural scientist is never done is illustrated by the appearance of a new stem rust of wheat (Race 15B) which attacks varieties previously found to be rustresistant. The only answer to this menace is the development of a new resistant strain necessitating an intensive breeding program. The answers to many such problems are found only after years of continuous study and investigation.

### Subsection 3.-Protection and Grading

Unlike manufactured articles, even close scrutiny of most agricultural products is no clue to their purity as food, or their value to the farmer for further production. Obviously, products that are eventually used as food must be pure and healthful and must come up to standards of quality established for them. On the other hand, if agriculture is to be conducted on a sound basis, the supplies farmers buy—seeds, feeds, fertilizers and pesticides—must also carry some guarantee that they will be as represented. Much of the research and experimental work would go for naught if legislation were not provided to see that the end-product of such work was satisfactory. In addition, Canada's live stock, crops and trees must be protected from diseases that might be introduced with importations from other countries, or that might originate in Canada.

These protective and grading services are a most important part of the work of the Department of Agriculture. They come under two sections, the Production Service and the Marketing Service, and the necessary authority is gained from about 20 Acts or their regulations. Generally, the protective features and the grading to standards or approval of analyses of farm supplies come under the Production Service. The grading of most food products is the responsibility of the Marketing Service.

Health of Animals.—The protection of the health of Canada's live stock is a most important service. To guard against the introduction of contagious diseases from foreign lands stringent regulations are enforced by the Health of Animals Division covering the importation of live stock, live-stock products and even packing material and litter. Provision is also made for the control or eradication of animal diseases developing within Canada. The Division is responsible for the inspection of animals slaughtered for food, and post-mortem examination is made on all carcasses in the course of slaughter and dressing before the meat is approved for human consumption. Sanitary conditions in packing plants and slaughter houses come under review and all canned meats must meet high standards of processing to qualify as food.

Protection of Supplies.—The Plant Products Division, in co-operation with the provinces and other agencies, is primarily concerned with the administration of Acts respecting feeding stuffs, fertilizers, pesticides, hay and straw, fibre flax and binder twine, and the production of seed. The inspection services of the Division have three main functions: (1) to enforce the Acts that regulate the sale of the agricultural supplies; (2) to provide, as required, such services as seed-crop inspection

and the sealing of seed produced from inspected and other approved crops; (3) to co-operate with provincial governments and other agencies in promoting and improving supplies of seeds, feeds, fertilizers and pesticides.

Visual inspection is of little value for most of these products and laboratory testing is necessary; the laboratory services of the Division maintain branch offices across Canada. In the case of seeds it is a complex matter, for they must be tested for germination, variety, purity and freedom from weeds and other kinds of seeds before they are graded. All feeding stuffs, fertilizers and pesticides are subject to registration, and this is refused if the use of products would be dangerous, if the ingredients or analyses are unsatisfactory, or if the claims made regarding their value are incorrect or misleading.

Plant Protection.—The Division of Plant Protection functions with regard to plants and plant products much as the Health of Animals Division does with animals, and administers the Destructive Insect and Pest Act. Imported nursery stock and plant material are all subject to inspection as protection against the introduction of insects and diseases. Extensive inspection is maintained within Canada to identify, localize and exterminate dangerous enemies of crops and trees. Provision is also made for the inspection of potato crops to be used for seed, both for the domestic and the export market, and for the issuance of health certificates required for a wide range of plant products.

Standards and Inspection.—For 50 years or more, the Department has been steadily establishing and improving standards of quality for agricultural products. This work originated in an effort to improve the quality of export commodities and has gradually extended to include many products that move in interprovincial trade. The provinces have in most cases adopted these standards for enforcement within their respective areas on products marketed intraprovincially.

Grade standards are established and enforced for dairy products, meats, eggs and poultry, fruits and vegetables (canned and processed, and seed). Grade standards are widely recognized outside Canada and many Canadian foods and agricultural products command premium prices because of the strict quality standards maintained.

Dairy Products.—The grading and inspection services of the Dairy Products Division are somewhat typical of those of other sections of the Marketing Service. Cheddar cheese, creamery butter and dry skimmed milk must be graded before being exported; in practice this means practically all the cheddar cheese, 60 p.c. of the creamery butter and 82 p.c. of the dry skimmed milk. In addition, creamery print butter is branded as to grade in nine provinces. Dairy products are required to meet standards of composition, to be of correct weight or volume and be described accurately in accordance with the provisions of the Dairy Industry Act and regulations thereunder. In the case of condensed, evaporated and dried-milk products, technical assistance is given on manufacturing and sanitation problems.

Meats.—In addition to the approval of carcasses for human consumption, inspection and grading of meats is of importance. All hogs marketed at stockyards and plants are rail graded, that is, the farmer is paid on the dressed weight and quality of the carcass. Export bacon is inspected as well as other export meat and meat products. The better grades of beef are marked according to standards of

Choice and Good beef, making them eligible for marketing as Red and Blue brands, respectively. Lamb carcasses are graded on an optional basis, and wool is inspected and graded in some 28 registered wool warehouses.

Eggs and Poultry.—Registered egg-grading stations are the basic units in the grading and packing of eggs; registered poultry-processing and eviscerating stations are the basic units in the processing, eviscerating, grading and packing of poultry; and registered egg-breaking stations are the basic units in the processing, grading and packing of frozen egg products. These stations have been brought to a high standard of efficiency with regard to sanitation, equipment, temperature control, grading and packaging.

Inspection of eggs, poultry and frozen egg products is compulsory on all sizable quantities intended for export. Inspection is compulsory for interprovincial shipments of poultry of 10,000 lb. or over. These products are also check-inspected periodically for grade when offered for wholesale and retail sale. The sale of eggs by grade, at retail, is compulsory throughout Canada, and the sale of poultry by grade, at retail, is compulsory in many of the larger consuming centres.

Canned boneless poultry for interprovincial and export shipment must be packed according to grade and prepared in registered canneries. Registered poultry canneries also operate on a high standard of efficiency with respect to sanitation, temperature control, cooking procedure, packaging, etc.

Fruits and Vegetables.—A commercial inspection service covering fresh fruits and vegetables is provided and dealers and brokers handling these commodities in interprovincial, export and import trade are licensed and are subject to established regulations.

The fruit and vegetable canning and processing industry has made great strides in the past quarter-century. In 1952, the 526 plants licensed to operate produced processed fruits and vegetables valued at \$200,779,150. The inspection of these plants, the testing of the products and the grading is done by the Canning Section of the Fruit and Vegetable Division.

Maple Products and Honey.—Regulations are established for the inspection, analysis and grading of these products. Maple-products manufacturers and sugarbush owners, operating interprovincially or for export, are licensed. To prevent the possibility of adulteration of maple syrup and sugar, inspection is made of manufacturing plants, stores and restaurants. Interprovincial and export shippers of honey are registered.

## Subsection 4.—Canada's Relationship with FAO

The Food and Agriculture Organization of the United Nations (FAO) was conceived at a special United Nations Conference at Hot Springs, Virginia, in May-June 1943 and brought into being at Quebec in October 1945. Its objectives include the raising of levels of nutrition and standards of living of the peoples of all countries, improvement in the efficiency of production and distribution of farm, forest and fisheries products, and the betterment of the conditions of rural populations. Membership in the Organization expanded from 42 member nations in 1945 to 68 by the end of 1952. Headquarters of the Organization is at Rome, Italy.

FAO is governed by a Conference in which each member nation has one vote. The Conference meets every second year and between sessions a Council acts for the Conference. The Council has 18 members, elected for a period of two years.

The work is directed by a Director-General who, with the Chairman of the Council, is elected by the Conference for a two-year term of office. Under the Director-General are the General Secretariat, Special Assistants and the Area Liaison Service which includes the regional offices for North America, Latin America, Asia and the Far East, and the Near East and European areas. The Organization is divided into five technical Divisions: agriculture, economics, fisheries, forestry and nutrition.

FAO carries out four major types of activity. (1) It serves as a world extension or advisory service mobilizing modern scientific knowledge for increased production, improved handling and processing, and better distribution of food and other farm, forest and fisheries products. Much of the work is concerned with the economic development of under-developed areas. (2) It serves as a forum for bringing governments together for organizing international action. (3) It provides all governments, to the limits of its facilities, with facts and figures relating to food, agriculture, forestry, fisheries and nutrition. (4) It endeavours to appraise the outlook for production and consumption and the likely developments of international trade in food and agricultural commodities.

In the field of economic development, experts, scientists and investigating missions are supplied at the request of member countries to work in the country concerned on problems that are hindering its development. Through this program of technical assistance, FAO, by December 1952, had signed agreements with 52 countries to provide technical assistance and had recruited 890 experts, including those who had completed their assignments; 109 agreements were still being negotiated and 142 instructors were involved in training centres. The experts, who were drawn from 40 countries, were active in 53 countries and FAO was concerned in 27 co-operative projects with other international agencies. Under the Fellowship program, 367 fellowships were being arranged at the end of 1952, 42 had completed courses and 97 were enrolled.

Canada, as an important producer in agriculture, forestry and fisheries, has maintained a strong interest in the development of FAO. A Canadian was a member of the original Executive Committee and continued to sit on the Council and the Advisory Committee which supervise the work of the Organization between biennial Conferences. A number of Canadians are included in FAO's Headquarters staff and, under the Expanded Technical Assistance Program during 1952-53, Canadian specialists served in Afghanistan, Ceylon, Chile, Egypt, Ethiopia, Finland, Haiti, India, Iraq, Korea, Malaya and Pakistan. Canadian universities, federal and provincial government departments, and commercial organizations have assisted in FAO's Expanded Technical Assistance Program by training a number of scholars and Fellows during 1952-53. It is expected that Canadian participation in the Program will be increased during 1954-55.

# Section 2.—Provincial Governments in Relation to Agriculture\* Subsection 1.—Agricultural Services

Newfoundland.—Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines and Resources.

The Division maintains an extension service and encourages agricultural development by the payment of bonuses on the purchase of pure-bred sires and for the clearing of land; by assistance with agricultural exhibitions and the payment

<sup>\*</sup>Information supplied by the agricultural authorities of the various provinces.

of a subsidy on agricultural limestone. Each year several scholarships are awarded young men enabling them to take a two-year degree course in agriculture. Government policy relating to the clearing of land for agricultural purposes, with government-owned tractors, is administered by the Land Development Division of the Department of Mines and Resources.

Prince Edward Island.—The Department of Agriculture is presided over by a Minister assisted by a Deputy Minister, a Dairy Inspector, a Pathologist, a Veterinarian and five subsidized Assistant Veterinarians, a Soil Assistant, a Poultry Director, three Field Representatives, a Supervisor and Assistant Supervisor of Women's Institutes.

Nova Scotia.—The Nova Scotia Advisory Committee on Agricultural Services was established a few years ago to further the effective prosecution, within the Province, of agricultural policies and projects of the Federal and the Provincial Departments of Agriculture.

The main purpose and function of the Committee, which meets quarterly, is to determine ways and means by which the purposes of both Departments of Agriculture can best be served, and how the work of those Departments may be co-ordinated and directed through integrated agricultural policies and with a minimum duplication of services.

Every effort is made by the Department of Agriculture and Marketing to "help the people to help themselves". This is being done through strengthening member-interest in such organizations as the Nova Scotia Farmers' Association, Nova Scotia Fruit Growers' Association, through various agricultural co-operative organizations, through credit unions and through several producer-organizations.

New Brunswick.—Provincial Government policy concerning agriculture in New Brunswick is directed by the Department of Agriculture. This Department has as its head the Minister of Agriculture who is assisted by a Deputy Minister and the Directors of the following services: extension, live stock, dairy, veterinary, poultry, horticulture, field husbandry, soils and crops, plant protection and promotion, agricultural engineering, home economics, Credit Union Co-operative Association, agricultural education, apiculture, and agricultural societies.

Quebec.—The Department of Agriculture of Quebec comprises eleven services: rural education, rural economy, extension, animal husbandry, horticulture, field husbandry, information and research, home economics, animal health, rural engineering and the secretariat. Each service is divided into sections dealing with particular problems.

The Department also includes many other special organizations such as the Research Council, the Dairy Industry Commission, the Dairy School of St. Hyacinthe, the Provincial Extension Farm (Deschambault), the Fur Bearing Animals Extension Farm (St. Louis de Courville). The Farm Credit Bureau, the Quebec Sugar Refinery (St. Hilaire) and the Veterinary College (St. Hyacinthe) are also under the authority of the Minister of Agriculture, and the Office of Rural Electrification is connected with the Provincial Executive Council.

The annual competition for the Agricultural Merit Order, organized in 1890, is held alternately in each of five regions. Each contest lasts five years and covers the different farm productions; the main objective is an economical increase in crop and cattle yields. County Farm Improvement Contests have been conducted

for more than twenty years and are still very popular. Over 6,000 competitors have benefited from these contests which promote better methods of culture designed to increase farm income.

Soil-improvement policies include large drainage projects carried out by the Department and smaller projects carried out by groups of farmers with government help. In the past five years, 500,000 acres of land have been improved or reclaimed and 400,000 acres of underground drainage have been completed.

Various forms of assistance are offered towards improvement of crops and live stock. An artificial insemination station operates at St. Hyacinthe for the benefit of 31 breeders' clubs, and plant-breeding stations for cereal and forage crops, vegetables and small fruits are maintained in a number of localities. Trained specialists are employed in the work of controlling plant and animal pests and diseases; the main laboratories are situated at Quebec and field laboratories are located in different districts or in schools.

Agricultural co-operation is widespread in Quebec. There are 600 co-operatives with 69,000 members and 90 agricultural societies with 28,000 members look after local interests and organize county exhibitions. There are also 850 Cercles de Fermières (Women's Institutes) in operation with a membership of 48,000; 500 farmers' clubs with a membership of 24,000, and 140 junior farmer clubs where 3,400 young boys and girls are working on numerous practical agricultural projects.

The Farm Credit Bureau was established in 1936. During its 17 years of operations, the Bureau has placed at the disposal of 36,000 farmers of Quebec a sum of \$96,000,000 and has established 13,000 young men on farms.

Ontario.—The Ontario Department of Agriculture provides financial assistance and administrative services to agriculture through its Head Office, 11 branches, three Experimental Farms, and through research and extension work carried on at the four educational institutions under its administration. In addition to general administration, the Head Office administers the policies providing assistance to farmers and settlers in northern Ontario in connection with land breaking and clearing, and with improving farms and live stock. (1) The Live Stock Branch promotes live-stock improvement policies, licences and examines stallions and gives support to pure-bred live-stock associations; (2) the Crops, Seeds and Weeds Branch assists in the development of good cultural practices and promotes the use of improved strains of seed, the improvement of pastures, and the eradication of weeds; (3) the Dairy Branch provides an inspection, instruction and supervision service to all dairy factories and promotes the production of clean milk on farms; (4) the Farm Economics Branch conducts cost studies on agricultural production in co-operation with agricultural organizations; (5) the Fruit Branch enforces fruit and vegetable regulations, provides information to growers, and administers the Co-operative Marketing Loans Act: (6) the Co-operation and Markets Branch administers the Farm Products Control Act, the Credit Unions Act, the Ontario Food Terminal Act and the Farm Products Containers Act; (7) the Milk Control Board, under the Milk Control Act, regulates and supervises the marketing of fluid milk; (8) the Agricultural and Horticultural Societies Branch gives assistance to agricultural and horticultural fairs and exhibitions, plowing matches and other competitions, and administers the Community Centres Act; (9) the Agricultural Representatives Branch carries on an educational and extension service through agricultural representatives located in all counties and districts and gives direction to club work carried on among farm youth; (10) the Women's Institute Branch and Home Economics Service gives leadership and direction to organized activities of rural women; (11) the Statistics and Publications Branch, in co-operation with the Dominion Bureau of Statistics, provides a crop-reporting service and gathers and disseminates data on crops, live stock and dairy products. The Horticultural Experiment Station at Vineland, the Western Ontario Experimental Farm and Agricultural School at Ridgetown, the Demonstration Farm at New Liskeard, the Kemptville Agricultural School, the Ontario Agricultural College and the Ontario Veterinary College at Guelph, all under the administration of the Department, provide research and extension services to Ontario agriculture.

Manitoba.—The Department of Agriculture of Manitoba serves through the following branches: agricultural extension; live stock; dairy; agricultural publications and statistics; weeds administration; co-operative services; and the provincial veterinary laboratory.

The Extension Service deals with agronomy, horticulture, poultry, agricultural engineering, beekeeping, 4-H Clubs and women's work, and has specialists devoting their attention to these subjects. Meetings, field days and short courses are held. There are 31 agricultural representatives located throughout the Province, each representative serving from one to five municipalities. Six home economists serve designated areas.

The Live Stock Branch administers the Animal Husbandry Act, develops and administers policies that encourage the improvement and production of live stock, and works in close co-operation with the Veterinary Laboratory Service and the Federal Health of Animals Division in the control of live-stock diseases.

The Dairy Branch administers the Dairy Act, supervises the grading of cream, inspects creameries and cheese factories, gives instruction in cheese- and buttermaking, issues licences to makers of dairy products and to cream graders and conducts a dairy-cost study among milk producers. Extension activities include addressing meetings and preparing articles and leaflets on dairy-farm problems.

The Agricultural Publications and Statistics Branch publishes and distributes, annually, approximately 100,000 bulletins, circulars, posters, leaflets, etc.

The Weeds Administration Branch directs the activities of 18 municipal weedcontrol units comprising 70 rural municipalities engaged in eradicating deep-rooted, persistent perennial weeds; supervises weed demonstrations; investigates weed problems; conducts weed surveys; and prepares weed literature, radio addresses, articles, pictures, mounted weed specimens, etc.

The Co-operative Services Branch takes care of the registration and supervision of co-operatives and credit unions and the administration of the Acts governing them. The Branch also collects and compiles statistics on co-operative activity throughout the Province. The Director is Secretary of the Co-operative Promotion Board.

The Veterinary Laboratory operates a diagnostic laboratory for animal diseases, the services of which are available to veterinarians and live-stock owners.

Saskatchewan.—The Saskatchewan Department of Agriculture is organized as follows. (1) The Administration Branch includes the Accounting Division handling staff records, accounts and vouchers and mail assembly; the Agricultural Records Division, handling records particularly of Agricultural and Horticultural Societies;

the Statistics Division, which, in co-operation with the Dominion Bureau of Statistics, collects data on crop conditions, production, marketings and income; and the Radio and Information Division which broadcasts farm information daily over seven private stations. (2) The Agricultural Representative Service has a field staff of 37 agricultural representatives, four area supervisors and specialists in farm mechanics and visual aids. The Farm Labour Division co-ordinates farm labour requirements and services with federal agencies. The Service provides an extension field staff for all Branches of the Department as well as for the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services. In farm labour matters, co-operation is maintained with the Federal Department of Labour and the National Employment Service in directing annual movements of farm labour in and out of the Province. Agricultural representatives work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with the scientific and practical information necessary for improvement in agriculture. Agricultural committees are instrumental in studying local farm problems and in initiating agricultural improvement programs. These programs are encouraged through an Earned Assistance Program under which the Department pays one-half the costs of local group development projects. (3) The Animal Industry Branch includes four divisions. The Dairy Division administers dairy herd improvement programs and assists producers with management and production problems; inspects and licenses dairy manufacturing and frozen-food locker plants; and administers dairy, locker-plant and margarine legislation. The Livestock Division encourages the use of suitable animals for breeding purposes by the establishment of pure-bred sire areas and by assistance in the purchase and distribution of stallions, bulls, boars and rams. It registers brands, licenses live-stock dealers and agents and promotes programs on insect control, feeding and management. The Poultry Division maintains flock-testing and turkey-grading services; administers an approved hatchery policy, licenses produce dealers and poultry buyers, hatcheries and hatchery agents. It also assists with poultry shows and field days and otherwise promotes flock improvement. The Veterinary Division assists students in veterinary science under a scholarship plan, administers disease-testing and vaccination programs and co-operates with Federal Government officials and local veterinarians in disease prevention and control. (4) The Conservation and Development Branch is responsible for the engineering, farming and land-development activities of the Department, including irrigation and drainage programs conducted in co-operation with the Federal Government and irrigation on departmental and privately owned projects. Reclamation of land by drainage, development of misused land and underutilized land, and construction of provincial community pastures all come within its jurisdiction. The Branch administers the Farm Implement Act and provides engineering service for conservation and water-control projects. (5) The Lands Branch classifies all land administered by the Department of Agriculture according to the use for which it is best suited; disposes of such land under long-term leases or by inclusion in land-utilization projects; collects rentals for land under disposition; clears and breaks plots made available for settlement; and operates community pastures. (6) The Plant Industry Branch organizes and administers programs for

crop improvement and crop protection, and advises on seed and crop improvement, soil conservation, horticultural problems, weed control and management of irrigated land. The improvement of grassland is promoted through a forage crop program. The Seed Plant Division carries on custom cleaning of forage seeds and registered cereals. The Apiary Division advises on beekeeping and honey production, carries on continuous inspection for American foul brood and supervises grading.

Alberta.—The Alberta Department of Agriculture is organized as follows. (1) The Field Crops Branch deals with all matters that pertain to the utilization of soil and the production of crops. A Commissioner of Field Crops and four Supervisors administer programs and policies relating to crop improvement, soil conservation and weed control, crop protection and pest control, and horticulture. Agricultural Service Boards of municipalities carry out programs and administer regulations for which the municipality is made responsible by provincial legislation; the Department is represented on each Board. (2) The Live Stock Branch aids in maintaining the quality of herds and flocks by assisting farmers in securing pure-bred herd sires and by maintaining an artificial insemination laboratory. The work of the Branch includes the supervision of live-stock feeder associations and the administration of legislation relating to stock inspection, brands, domestic animals and the sale of horned cattle. (3) The Dairy Branch administers the Dairymen's Act and the Frozen Food Locker Act. Grading and purchasing of raw produce by all dairy plants are under regulation, as well as standards of construction, manufacture, processing, sanitation and temperature control for dairies and frozen-food lockers. A regular cow-testing service is available to dairy producers and the Branch laboratory provides facilities for chemical and bacteriological analyses needed for indus-Yearly cost studies and dairy-farm management services are trial directives. operating in the principal milk-producing areas. (4) The Poultry Branch carries on programs for the improvement of poultry husbandry, supervises flock approval for the control of pullorum disease, maintains a practical poultry-breeding plant for the distribution of breeding stock and issues all hatchery, wholesale, first receiver and truck licences for the handling of poultry products. (5) The Veterinary Services Branch provides the scientific diagnosis of live-stock and poultry diseases through its laboratory; conducts investigations of disease conditions; gives lectures in veterinary science at the University of Alberta, Schools of Agriculture, and a large number of meetings; and actively promotes government policies aimed at reducing disease losses throughout the Province. (6) The Apiculture Branch administers the Bee Diseases Act which requires the registration of all beekeepers and the maintenance of an inspection service; it also administers the regulations on honey grading. The Branch carries on a considerable amount of general educational work. (7) The Agricultural Extension Service operates 40 offices and employs the services of 45 district agriculturists and 14 district home economists. The district agriculturists work with farmers, assisting them with their problems and with departmental policies designed to improve the standard of agricultural practices; the district home economists provide a similar service for farm women. Bulletins are prepared dealing with agricultural and home economics topics and weekly farm notes are prepared for distribution to the press. The Branch is responsible for the supervision of agricultural societies and, in co-operation with the Federal Department of Labour, is concerned with recruitment and placement of farm labour. (8) The Fur Farm Branch administers the licensing and exporting of live animals and pelts, assists fur farmers with problems pertaining to care and management and stock improvement,

and operates a vaccine distemper assistance plan to control disease. (9) Schools of agriculture and home economics are operated at Olds, Vermilion and Fairview. Practical two-year courses in agriculture and home economics are offered to young men who intend to farm and to young women who plan to become homemakers. During the summer the schools are used for short courses and gatherings of farm people. A comprehensive 4-H Club program, designed to train boys and girls in the essentials of citizenship and practical agriculture and homemaking, is conducted; in 1952, the program embraced 13 projects. (10) A Radio and Information Branch, established on Apr. 1, 1953, provides a radio program consisting of five broadcasts a week over six Alberta stations.

British Columbia. - The Department of Agriculture has four main divisions. (1) The Administrative Division is responsible for the general direction of agricultural policies, administration of legislation affecting agriculture, supervision of extension programs, collection of agricultural statistics, compilation of reports and publications, preparation of material for agricultural exhibitions, supervision of farmers' and women's institutes, as well as the carrying out of soil surveys in various sections of the Province. (2) The Animal Industry Division consists of general live-stock, veterinary, dairy and poultry branches and supervises the promotion and improvement of animal production, fur farms, brand inspection, inspection of beef grading, control of contagious diseases of animals, eradication of insect pests detrimental to live stock, and field extension connected with animal nutritional work. (3) The Plant Industry Division includes horticulture, field-crop, plant pathology, entomology and apiculture branches and supervises fruit, vegetable and seed production and surveys dealing with orchards, small fruits, flowering bulbs and greenhouse areas; also the suppression of insect pests, plant disease inspection with control of noxious weeds and general promotion of crop production. In addition there are field officials in 12 of the principal fruit and vegetable producing areas who undertake extension work on behalf of field crop, fruit and vegetable producers. (4) The Agricultural Development and Extension Division includes field-extension work through the district agriculturist service, clearing agricultural lands for production, agricultural engineering, farm labour supply, and junior club projects. Extension Division officials of the Department are located in 32 agricultural centres throughout the Province.

## Subsection 2.—Agricultural Colleges and Schools

All provinces, with the exception of Newfoundland, provide facilities for training in agricultural science at university level. Such colleges are administered by either the Department of Agriculture or the Department of Education of the respective provinces.

Prince Edward Island.—The two-year course in scientific agriculture offered at Prince of Wales College is designed for students preparing to enter third year at Macdonald College, Que. The course is started every second year.

In the Vocational School, the one-year course offered in agriculture is planned to provide not only knowledge and skill but to develop in the student a sense of the dignity and importance of agriculture as a calling and an understanding of the importance of the industry to the Province.

Nova Scotia.—Nova Scotia Agricultural College at Truro offers three courses: the first two years of a course leading to the degree of Bachelor of Science in Agriculture; a two-year course in general agriculture; and a two-year course in vocational agriculture. In addition, the College assists in conducting short courses at various provincial centres, supports Folk Schools and gives leadership and direction to the 4-H Club organization.

New Brunswick.—The Province's four Agricultural Schools are located at Woodstock, Fredericton, St. Joseph and Edmundston. Two-year agricultural courses extending over five months each year are offered at St. Joseph, Fredericton and Edmundston while at Woodstock a three-year course is conducted. The curriculum includes training in all phases of agriculture, shop and general academic work. Ten-month home economics courses are offered at Woodstock and St. Joseph in conjunction with the agricultural courses.

Ouebec.—Courses in agricultural schools in the Province include a four-year university course leading to a degree of Bachelor of Science in Agriculture at the following universities: Laval Faculty of Agriculture (Ste. Anne de la Pocatière); L'Institut Agricole d'Oka (affiliated with the University of Montreal); and McGill Faculty of Agriculture (Macdonald College). At the Provincial Veterinary School (St. Hyacinthe), affiliated with the University of Montreal, a four-year course is offered leading to a Doctorate degree in veterinary medicine. There are also nine secondary agricultural schools throughout the Province: 10 regional schools and six orphanages offering courses in agriculture. More than 1,200 students, the great majority of whom are sons of farmers, attend these intermediate and regional schools of agriculture, and in the orphanages 160 pupils follow practical agricultural courses. In each case, a farm is annexed to the school for practical training and specialists give instruction on the maple-sugar industry, farm mechanics, co-operatives, plant protection, veterinary hygiene, aviculture, marketing and sylviculture. co-operatives and clubs are organized and directed by the pupils, under the supervision of their professors. Household science training for the daughters of farmers and settlers is given in five of these schools. The courses extend over the four summer months of two consecutive years.

Ontario.—The two-year course of the Ontario Agricultural College for the Associate Diploma in Agriculture is planned to provide basic training of personnel in agriculture. Young persons interested in making agriculture their vocation study the application of science to agricultural practice and also receive training for rural citizenship.

The four-year course for the degree of Bachelor of Science in Agriculture is designed for fundamental education in the science of agriculture. A sound training is provided for farming as a profession, for entrance into government extension and allied agricultural services, agricultural industry, teaching, and for those who wish to proceed to graduate studies for the Master's and Doctorate degrees.

Graduate courses are also offered leading to the degree of Master of Science in Agriculture. Graduate students are enrolled in a department or departments of the Ontario Agricultural College conjointly with a department or departments of the University of Toronto for advanced courses of study and training in experimentation and scientific investigation. M.S.A. graduates may go into teaching, research, or for further post-graduate study for a Doctorate degree.

The Ontario Veterinary College offers a course leading to the degree of Doctor of Veterinary Medicine. The course is five years in length with two four-month periods of regulated summer internship. In addition to its function as a teaching institution, the College is a centre for research into the diseases of animals and provides free consultation for veterinary surgeons in practice as well as extension services in the interests of the live-stock industry.

The Kemptville Agricultural School offers diploma courses in the following subjects:—

(1) A two-year diploma course in agriculture (two terms of six months each) giving practical training in modern farm methods designed primarily for young people who wish to farm but serving also as a preparation for many other occupations closely connected with agriculture. Stress is laid on the development of community leadership. A 300-acre school farm and residence life are features of the Kemptville Agricultural School. (2) A one-year diploma course (six-month session) leading to a diploma in homemaking and qualification for the less exacting positions in fields of home economics. (3) A two-year diploma course (two terms of six months each) for girls wishing to prepare for positions in the tourist trade, food services, sewing centres and other fields of home economics. (4) A three-month winter course for all dairy apprentices leading to the Dairy School Diploma required for certified buttermakers, cheesemakers and operators of dairy manufacturing plants.

Western Ontario Agricultural School offers a practical course intended for young men who propose to return to farming. It consists of two winter courses of 20 weeks each, starting late in October and ending late in March. All subjects relating to agriculture are included in the curriculum.

Manitoba.—The Faculty of Agriculture and Home Economics offers a degree course and a two-year diploma course in agriculture as well as a one-year diploma course in agriculture and homemaking. Classes for young men and for young women are held throughout the autumn and winter months at Brandon. These courses are recognized by the University of Manitoba which, in the case of the girls, awards a diploma for the one-year course and, for the boys, accepts the course at Brandon as the equivalent of the first year of the two-year diploma course.

Saskatchewan.—Saskatchewan offers a degree course in agriculture designed to meet the needs of those who intend to teach agriculture in secondary schools or colleges, to engage in research or administrative work, or to farm. Specialization is possible with permission of the faculty. Provision is made for combined courses in agriculture and arts or commerce. Post-graduate courses are available.

The Saskatchewan School of Agriculture offers a practical course intended to give sound training in farm practice and also to train young men to become rural leaders.

All courses leading to a degree in home economics require four years. The prescribed course of studies for the first two years is the same for all pupils but in the third and fourth years four types are offered: (1) for teachers, (2) for dietitians, (3) general, and (4) additional specializations. A combined course leading to a degree in arts and science and in home economics requires at least five years.

Alberta.—The University of Alberta offers a four-year degree course in agriculture to students with senior matriculation or its equivalent. Students may elect a general program or major in a wide range of special courses in the fields of

animal science, economics, entomology, dairying, plant science, and soils. Graduate work at the Master level is offered in all departments and at the Doctorate level in some.

The Alberta Schools of Agriculture and Home Economics, located at Olds, Vermilion and Fairview, offer practical courses in agriculture and homemaking. The purpose of the schools is to train young men for farming and young women for homemaking.

The regular course in agriculture and in home economics requires two terms, each extending from late October to early April. A special two-in-one course of one term is offered to students who have completed 70 high-school credits. These schools accept students who have reached 16 years of age. There are no academic requirements for regular students, although Grade VIII is desirable, and no tuition fees for residents of Alberta. Living accommodation is provided in modern dormitories with dining-room, auditorium and gymnasium facilities.

During the summer months the schools are used for agricultural meetings and conferences of organizations that are connected with agriculture. During the month of July, leadership courses, 4-H Club gatherings, farm camps and other events keep the facilities in constant operation.

British Columbia.—The Faculty of Agriculture at the University of British Columbia offers a four-year general degree course in agriculture and a five-year honours course. In the honours course there are 15 different fields in which a student may specialize. Work is also offered by the Faculty of Agriculture in the Faculty of Graduate Studies through which a student may proceed to the degrees of Master of Science in Agriculture and Master of Science; in a limited number of fields, work is offered at the Doctorate level. The Faculty also offers a one-year or two-year diploma course in occupational agriculture, adaptable to the needs of individual students.

In co-operation with various branches of the provincial Department of Agriculture and under the auspices of the University Extension Department, the Faculty of Agriculture also offers a number of short courses which vary in length from one or two days to several weeks.

## Section 3.—Agricultural Irrigation and Land Conservation

## Subsection 1.—Federal Projects\*

#### PRAIRIE FARM REHABILITATION ACT

The Prairie Farm Rehabilitation Act is a rehabilitation program conceived by Parliament in 1935 to meet the problems of drought and soil drifting adversely affecting agriculture on the Canadian prairies.

Existing agencies of the Government of Canada were assisted, with P.F.R.A. funds, to expand their activities in providing leadership in the immediate drought problems. In particular, cultural investigations were carried out by the Experimental Farms Service to ensure the most economic use of the limited supply of soil moisture for crop production and the prevention of soil drifting farm lands that were a menace to surrounding good land. A program of water conservation to meet

<sup>\*</sup> Prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, by G. J. Matte, Associate Director of Rehabilitation.

immediate needs was also initiated in 1935. Other services, such as the Economics Division, were assisted where special knowledge was required for rehabilitation measures.

The major activities of the P.F.R.A. Administration, with headquarters at Regina, Sask., include the construction, for the Government of Canada, of all projects concerned with water conservation and land utilization in the Prairie Provinces. The five principal phases of investigational study in the field of engineering include surveys (exploration), soil mechanics, drainage, hydrology and design. These studies are undertaken by P.F.R.A. to gather the fundamental groundwork of technical and other basic information that is required before construction of any project is undertaken. Considerable work in each of these fields of study was undertaken during the year ended Mar. 31, 1952, together with co-operative studies using the services of existing government departments.

#### Water Conservation

Small and Community Projects.—P.F.R.A. provides engineering and financial assistance to farmers in the construction of water conservation works within drought areas of the three Prairie Provinces as a rehabilitation measure. The amount of financial assistance awarded is largely dependent upon the type and size of the project contemplated. At all times P.F.R.A. policy, with respect to assistance provided, is to assist farmers to rehabilitate themselves. Authority to proceed with construction is first secured through the respective provincial water rights departments. Water conservation projects in this category are classified either as "individual farm projects" or as "community projects" undertaken by a group of farmers.

Individual Farm Projects.—During 18 years of operation, P.F.R.A. has provided assistance to farmers to construct 48,324 individual farm projects in the form of dugouts and small dams, many of which are suitable for irrigation. The objective is to provide adequate water-storage facilities where water shortages exist, and to assure dependable water supplies through irrigation for domestic requirements, for stock-watering and for the production of live-stock feed.

The construction of these projects has extended the benefits of water to all parts of the dry area. By so doing, a much larger number of farmers have been rehabilitated than would have been possible through the construction of large schemes on well-defined watersheds, and without the movement of settlers from their present holdings. The maintenance of valuable live-stock herds has been secured by assuring dependable water supplies on farm stock-watering projects and through the development of 90,000 acres of irrigated land on small irrigation schemes.

Community Projects.—The development of community projects is necessarily confined within the narrow reaches of well-defined watersheds where sufficient water resources are available. Where a group of farmers organizes a water-users' association or a rural municipality provides leadership in an irrigation or water-storage project, P.F.R.A. co-operates with the local body. The usual procedure is for the Government of Canada to assume the capital cost of storage and connecting works and the provincial body to assume the responsibility for the distribution of water to the land or along the watershed. The local body also undertakes maintenance and operation.

To Mar. 31, 1953, P.F.R.A. provided the necessary assistance to construct 254 community projects. The majority of these are located on six watersheds originating in the three Prairie Provinces. Their purpose is to conserve surplus spring runoff water that flows in streams early in the season to supplement short supply later in the year. By maintaining stream flows, farmers are assured of dependable water supplies for live stock and for irrigation use. In addition, community projects provide homes for farmers moved from submarginal areas to where they can be assured a livelihood.

P.F.R.A.'s responsibility for the development of large community irrigation schemes terminates with the construction of primary reservoirs and connecting canals. In special cases where the need for early returns to farmers proved imminent, P.F.R.A. has assisted further in the development of the irrigable land and has maintained a constant surveillance of the project's operations and progress. At times, agreement has been reached between P.F.R.A. and the provincial government concerned whereby P.F.R.A. provides engineering and financial assistance to construct primary works and the province agrees to assist with the development of the irrigable area. Such an agreement is in effect in connection with sections of the Swift Current Irrigation Project being developed in Saskatchewan.

Major Irrigation Projects.—During recent years P.F.R.A. has administered special votes by Parliament for the construction of water conservation and development projects that involve large expenditures of money. These undertakings have extended P.F.R.A. administration beyond the boundaries of the P.F.R.A. area in the three Prairie Provinces into British Columbia.

St. Mary Irrigation Project.—The St. Mary Irrigation project has been undertaken by agreement between the Government of Canada and the Province of Alberta. The Government of Canada has agreed to construct the main supply reservoirs and connecting works. The Province of Alberta has undertaken the responsibility for construction of the auxiliary reservoirs and distribution system from the main works to the land.

The St. Mary River System is by far the most important irrigation project undertaken in Canada and when completed will irrigate an area of approximately 510,000 acres. Construction of the St. Mary Dam, key structure on the whole project, was completed in 1951. It stands 195 feet high and is 2,536 feet wide, and creates a reservoir capable of storing 320,000 acre-feet of water. Approximately 200 miles of main canal have been built and 10,000 acres of land have been developed, together with over 100 miles of the distribution canal system. Further lands will be developed in 1953 and 1954.

South Saskatchewan River Development.—This development in central Saskatchewan is a proposed multipurpose project to be used for developing power and irrigation, the irrigable area lying between the town of Elbow and the city of Saskatcon. The key structure on the project will be a dam on the South Saskatchewan River located at a point midway between the towns of Outlook and Elbow.

The plan is to stabilize agriculture in the south-central area of the Province where prolonged droughts have created serious economic problems for over 50,000 farmers. Full use will be made of the river's control, power, urban water supply and recreational benefits. Considerable investigational work has been undertaken on this project, a full report of which was presented to the Government of Canada in 1951. In view of the large expenditure involved in this proposed development,

a Royal Commission was appointed in 1951 to conduct an inquiry as to whether the economic and social returns to the Canadian people would be commensurate with the cost. The inquiry was completed in 1952 and a report submitted to Parliament.

Bow River Irrigation Project.—The Bow River project was purchased by the Government of Canada in 1950 from the Canada Land and Irrigation Company, a private British interest. Development of this project will ensure water to 57,000 acres of presently irrigated land and will bring an additional 180,000 acres "under the ditch".

Engineering surveys, drainage studies and soil mechanics investigations were started in 1950. Construction activities so far have been mainly the repair and enlargement of old and worn out structures to meet new and increased demands. Twelve thousand acres of new land in the Hays district of the Bow River irrigation project were prepared for settlement in 1951. A complete irrigation distribution system was installed in the area (see also p. 396).

Red Deer Irrigation Project.—The proposed Red Deer River development concerns the irrigation of an estimated 400,000 acres of land located in the east-central part of Alberta. The project will consist of a dam on the Red Deer River at Ardley and about 100 miles of main canal to two main reservoirs—Craig Lake and Hamilton Lake. The dam will contain power installations to produce power for pumping and also for sale commercially. An estimated 20,000,000 kwh. of water power will be available for sale when fully developed. Plans for the development of the project are under preparation.

Irrigation Development in British Columbia.—Irrigation development in British Columbia has been undertaken in connection with the Veterans' Land Act and at the request of the British Columbia Government. Three projects, namely, the Chase irrigation project and the Johnstone Western Canada ranching projects No. 1 and No. 2, have been completed within the South Thompson Valley area. On these projects, 809 acres of land have been developed for irrigation for the benefit of approximately 40 veterans of World War II.

In the Okanagan Valley three new projects have been completed, the Westbank irrigation project and the Bankhead project near Kelowna, and the Cawston Benches project located east of the town of Keremeos. The three projects irrigate 1,782 acres of land and provide locations for 170 veterans of World War II. The Penticton West Benches project, to irrigate approximately 200 acres and accommodate 97 veterans on small holdings, will be completed in 1953.

Intensive farming is practised in the Okanagan and South Thompson Valleys. The land developed for irrigation by P.F.R.A. will be used mainly for the growing of small fruits and vegetables and for dairying.

New projects are constantly being investigated as potential development areas. During the year ended Mar. 31, 1952, investigation reports were completed for: Lister Project, Creston; Grandview Flats Project, Vernon; Black Mountain Irrigation Project, Black Mountain Irrigation District; Salmon Arm Irrigation Project, Salmon Arm; Pitt Meadows Dyking District No. 1, Port Coquitlam; and the British Columbia Fruitlands Irrigation Project, between Kamloops and Tranquille.

Major Reclamation Projects.—Riding Mountain Reclamation Project.— Extensive investigations have been undertaken by P.F.R.A. in the Riding Mountain area at the request of the Manitoba Government. A serious flood problem exists on a number of streams flowing off the north and east slopes of Riding Mountain and Duck Mountain, causing damage to a large area of valuable agricultural land. P.F.R.A. was asked to devise and carry out a plan to relieve a land area of over 252,000 acres affected by flooding.

The cost of reclamation in the area is borne jointly by the Government of Canada and the Government of Manitoba. Construction work so far has centred mainly along Edwards and Mink Creeks in the Riding Mountain area. The work consisted of clearing and dyking stream channels and straightening the alignment of channels by building stream cutoffs and diversions. The larger portion of the work on these two streams was completed in 1951.

Stream bank erosion studies are also being continued on streams of Riding Mountain to stabilize stream banks and minimize erosion problems. It will be necessary to continue the studies for a number of years before definite results can be presented.

Saskatchewan River Reclamation Project.—Surveys and investigations were made by P.F.R.A. during the past two years to determine the possibility of successfully reclaiming land for agriculture in the Pasquia area of the Saskatchewan River Delta region near the town of The Pas in Manitoba. The findings were favourable and, as a result, an agreement was reached on Apr. 17, 1953, between the Government of Canada and the Province of Manitoba for the construction of the necessary reclamation works to protect the area from flooding and to settle about 96,000 acres of suitable land. The Government of Canada is assuming the costs of building the main protective works, and the Province is assuming the costs of settlement, maintenance of works, and internal drainage. Half of the reclaimed land will be reserved for the resettlement of farmers from drought areas and the remainder is to be sold. Part of the proceeds from the sale of the lands will go to the Federal Government as a partial reimbursement of the costs of building the main protective works. Construction was started early in 1953; it will take three years to complete the works consisting of dykes, drains and diversion of streams.

Assiniboine River Project.—This project was undertaken as a direct result of damaging floods that occurred in 1950 in the vicinity of Winnipeg from the Assiniboine and Red Rivers. The project is being undertaken at the request of the Manitoba Government to prevent further flooding on the Assiniboine River, particularly between Brandon and Virden and between Portage la Prairie and Headling where thousands of acres of valuable agricultural land have been inundated repeatedly. All the studies undertaken are in conjunction with the Red River Basin investigation currently being carried out.

Several alternative plans are being investigated to divert excess water from the Assiniboine River during flood stages. Detailed study is being given to water runoff data in the Assiniboine River Drainage Basin and the possibility of building water-storage works on the headwaters of the Assiniboine River.

Lillooet Valley Reclamation Project.—The Lillooet Valley Reclamation Project was undertaken upon agreement between the Government of Canada, the Government of British Columbia and the Pemberton Valley Reclamation District. This project is located in the Lillooet River Valley above and below the town of Pemberton and its objective is to protect lands now under cultivation from flooding and to reclaim additional lands by dyking and drainage. The land reclaimed amounts to 14,000 acres, which will allow farmers in the district to increase their holdings and also permit the settlement of hundreds of additional inhabitants.

Construction work to deepen and straighten the channel leading from Lillooet Lake to Green Lake, below the town of Pemberton, was completed in 1949. The construction of dykes and drains to reclaim the flooded areas along Miller Creek to Ryan Creek and Green River to Miller Creek was completed in 1952. No damage from flooding occurred in the protected areas during 1952-53.

#### Land Utilization

In addition to cultural and water-conservation activities, the rehabilitation of drought areas involves the conversion of large tracts of land proved to be unsuitable for crop production, which had initially been cultivated to a permanent grass cover for live-stock production, and the relocation of farmers residing thereon. To this end, P.F.R.A.'s Land Utilization Program has constructed 59 operating pasture units, resulting in the reclamation of 1,652,020 acres of submarginal land. During the 1951-52 construction season 61,820 additional acres were fenced and included in the pasture system.

During the year ended Mar. 31, 1953, summer grazing was provided for 93,207 head of live stock owned by between 5,500 and 6,000 patrons living on lands adjacent to these pastures.

An extensive pasture improvement program is in effect on all pastures and is immediately initiated as soon as new areas are enclosed. This policy has more than doubled the 1938 average carrying capacity on pasture land. The three improvement policies most extensively practised in all pastures are: (1) regrassing—since 1938 approximately 175,000 acres of land in community pastures have been regrassed; (2) development of stock-watering sites—to Mar. 31, 1953, over 1,000 stock-watering dams, dugouts and wells have been constructed in community pastures; and (3) pasture management and controlled grazing.

#### PRAIRIE FARM ASSISTANCE ACT

The Prairie Farm Assistance Act, passed in 1939 and administered by the Federal Department of Agriculture, provides for direct money payments by the Federal Government, on an acreage basis, to farmers in areas of low crop yields in the Prairie Provinces and the Peace River District of British Columbia. The Act was designed to assist the municipalities and provinces, in years of crop failure, to meet relief expenditures which would normally be too great to be assumed by them. The Act provides that payments be made to farmers under certain conditions and terms and, in order that the Federal Government's costs may be defrayed to some extent, it is required that 1 p.c. of the purchase price of all grains (wheat, oats, barley and rye) marketed in the Prairie Provinces be paid to the Federal Government and set aside in a special fund for the purposes of the Act.

If the farmer, who may be an owner, a tenant, or a member of a co-operative farm association engaged in farming, is located in a crop-failure area, he may be awarded assistance on not more than one-half of the cultivated land or a maximum of 200 acres. The rates of payment range up to \$2.50 per acre.

From the inception of the scheme to Mar. 31, 1953, the total amount paid out under the Act was \$143,327,607. The amount collected under the 1-p.c. levy to Feb. 28, 1953, was \$69,329,954.

### MARITIME MARSHLANDS REHABILITATION ACT

The marshlands of Prince Edward Island, Nova Scotia and New Brunswick are among the more productive soils in Canada when protected and properly cultivated. They are composed of deposits laid down by tidal waters and are, for the most part, adjacent to the Bay of Fundy.

The initial areas were reclaimed as early as 1630 and since that time about 80,000 acres have been protected by dykes and aboiteaux. These structures prevented flooding by tide water and permitted cultivation after drainage had been carried out.

Through a variety of circumstances—loss of cattle markets, loss of hay markets and the increase in labour costs-maintenance of the protective structures was not adequately carried out and, in many cases, deterioration of the structures resulted. Because the marshlands, when protected, can play such an important role in the agricultural economy of the provinces concerned, the Government of Canada and the Provincial Governments of Nova Scotia and New Brunswick passed legislation permitting them to carry on a program of reclamation and rehabilitation of these lands. The federal Act, the Maritime Marshland Rehabilitation Act, was passed in 1948. Complementary provincial marshland reclamation Acts were passed by both Nova Scotia and New Brunswick in 1949. These Acts permitted agreements to be signed whereby the Government of Canada would construct or reconstruct the protective works, normally called dykes, aboiteaux and breakwaters, and also would assume the responsibility of maintaining these works until such time as they could be turned back to the Provinces. The Federal Government is responsible also for any engineering work in connection with the complete program. The Provinces are responsible for the organization of the marsh areas, the freshwater drainage and acquisition of any land required. They are responsible also for the instigation and follow-up of a suitable land-use program. Owing to the small area of marshland in Prince Edward Island, no provincial legislation was considered necessary in that Province.

By Mar. 31, 1953, the Provinces had asked to have 119 areas considered for reclamation purposes. These comprised 32,547·2 acres of marshland in New Brunswick (including 6,892·2 salt or unprotected marsh), 33,333·8 acres in Nova Scotia (including 5,453·2 salt or unprotected marsh) and 275 acres in Prince Edward Island. It is estimated that the 66,156 acres of marshland in the three Provinces constitute an integral part of 375,000 acres of farm land.

By the end of the 1953 construction season, protective works of a major type had been carried out on 59 projects and 35 areas had been temporarily reconstructed.

Investigations to determine the advisability of constructing a large structure to eliminate the need for many miles of dyke and many aboiteaux were being carried out on the Annapolis River in Nova Scotia and on the Tantramar and Shepody Rivers in New Brunswick. Construction on the Shepody River Project will likely be started in 1953.

## Subsection 2.—Provincial Projects

Saskatchewan.\*—Crown lands have been administered by the Lands Branch of the Saskatchewan Department of Agriculture since Apr. 1, 1947. On Apr. 1, 1949, the Conservation and Development Branch was established and made responsible for: (1) the administration of water rights; (2) development of irrigation;

Prepared under the direction of W. H. Horner, Deputy Minister of Agriculture, Regina, Sask.

(3) reclamation of land by flood control and drainage; (4) the restoration of abandoned, under-utilized and misused lands; (5) the preparation of unoccupied land for settlement; (6) the construction of provincial community pastures outside the area covered by the agreement with P.F.R.A. and not provided for in the agreement with the Federal Government.

The Provincial Department of Agriculture's conservation and development activity in the field of agricultural rehabilitation and reclamation is based on co-ordination with the Federal P.F.R.A. program, with which a closely knit working arrangement is maintained. The following is a summary of the Saskatchewan Department of Agriculture activities, according to the above division of responsibility, as at Dec. 31, 1952.

Dry Land Fodder Projects.—Development of 41 dry land feed and fodder projects has been undertaken, nine of which have been completed or partially completed and made available for disposition to rural municipalities or co-operative associations. All of these projects have been developed for forage production and are situated on abandoned or under-utilized lands.

The area under development for fodder production totals 44,579 acres of which 20,647 acres are in the nine projects available for disposition. An additional 7,734 acres are in preparation for seeding to forage crops.

Irrigated Forage Projects.—Nine irrigated feed and fodder projects are under development in the area of the Province where there is a winter feed deficiency for live stock. An irrigable area of 15,233 acres is involved in these projects with 1,855 acres producing forage crops.

One irrigable fodder project has 850 acres producing forage and this portion has been made available for disposition to rural municipalities or co-operative associations. Seventeen rural municipalities and co-operative associations have been assisted in developing smaller dry land and irrigated fodder projects as insurance against a feed shortage. A total of 9,680 acres are in these projects with 3,770 acres seeded to forage crops.

Irrigation Development.—Secondary distribution systems on irrigation projects installed since Apr. 1, 1949, for which storage and main canals have been constructed by P.F.R.A. have brought 20,731 acres under the ditch. During the same period 29 water-users' organizations have been established with a total membership of 701 farmers.

Pasture Development.—In the area of the Province outside the P.F.R.A. program the development and improvement of 61 pastures, with a total area of 610,780 acres, has been carried out. These pastures are operated by the Lands Branch of the Department of Agriculture, by the municipality or municipalities in which they are located, or by co-operative associations. In 1952, provincial community pastures provided grazing for 7,370 head of live stock over one year old, with a natural increase in the pastures of 1,811 calves. This live stock was the property of 438 local farmers.

Drainage Development.—Flood control and drainage to reclaim lands is proceeding in 95 projects. The northeastern area bordering on the presently settled area of the Province is receiving particular attention. Lands benefited by drainage works either constructed or in the process of construction total 530,100 acres.

Surveys for drainage and flood works that will benefit 1,169,700 acres are near completion. Channel improvement works to secure more adequate drainage have been constructed in five sub-drainage districts.

Miscellaneous Project Work.—Miscellaneous projects include the regrassing of 10,870 acres and the planting of 331,000 trees. Rural municipalities and local organizations may obtain assistance for tree planting either through the use of government-owned equipment or financially for the purchase of machinery.

Fifty-seven dams and dugouts have been constructed for groups of farmers in the area of northern Saskatchewan outside the P.F.R.A. area of operations.

Nine Conservation and Development Areas, comprising a total of 1,350,260 acres, were established during the period Apr. 1, 1949, to Dec. 31, 1952.

Development of Land for Settlement.—The development and improvement of unoccupied land for agricultural settlement in six new projects has been carried out under the supervision of the Lands Branch during the period Apr. 1, 1950, to Dec. 31, 1952. These projects included the breaking of 50 acres on each of 273 farm units. A total of 12,350 acres were broken and prepared for seeding. Each of these farm units is to be leased for a 33-year term, the leases specifying the conservation methods to be followed.

Alberta.\*—Extensive surveys have been carried out in Alberta to determine the distribution and extent of the available water supplies in the Province and their most beneficial use for irrigation, water power and other purposes. Sect. 69 of the Alberta Water Resources Act gives the Minister of the Department of Water Resources wide powers with respect to investigation of the water resources of the Province.

In more recent years much of the work has been carried out by the Federal Government in co-operation with the Provincial Government. Stream measurement is now done by the Hydrometric Service of the Federal Department of Resources and Development, while irrigation surveys are carried out largely by the Water Development Organization under P.F.R.A. The Water Resources Division, Federal Department of Resources and Development, and the power companies operating in the Province also assist in the program.

The Calgary Power Company has completed a fairly extensive and detailed water-power survey of the Bow River and its tributaries and, as a result, the Company has constructed a number of water-power reservoirs and power stations on the stream. Also, in co-operation with the Provincial Government, the Company has made a preliminary survey of Lesser Slave River and the Athabasca River from Athabasca to McMurray.

By Order in Council dated Feb. 17, 1941, the St. Mary and Milk River Water Development Committee was set up to investigate and report on the many phases of irrigation development of southern Alberta including water supplies available to Canada from the Waterton, Belly, St. Mary and Mild Rivers; the most feasible plan to put these waters to the most beneficial use; the benefits that such water-development projects would confer on federal and provincial interests; the allocation of costs; and methods that might be adopted to finance such developments. The Committee completed a very thorough investigation and published a full and comprehensive report, not only on the projects on the international streams, but also on other projects in Alberta.

<sup>\*</sup> Prepared by J. L. Reid, Secretary, Alberta Power Commission, Edmonton, Alta

The allocation of water to the major irrigation projects in Alberta, as approved by the Prairie Provinces Water Board, are as follows:—

Project	Acres Irrigable	Water Allocation in Acre Feet
St. Mary and Milk River Development	465,000	796,000
Western Irrigation District	50.000	85.700
Eastern Irrigation District	281 000	562,000
Bow River Irrigation Development	240,000	478,534
United Irrigation District	34 000	51.000
Lethbridge Northern District	96 125	150,000
Mountain view irrigation District	3.600	6,000
Aetha Irrigation District	7.300	13,000
Leavitt Irrigation District	4.400	7,000
Macleod Irrigation District	5.000	8,000
Private Projects	70,000	80,000
Totals	1.256,435	2,237,234

The following paragraphs outline developments during 1952-53.

St. Mary River Project.—Progress on this important project for 1952-53 was excellent and contrasted sharply with progress reported in the 1951-52 season when adverse weather greatly retarded the work. In 1952-53, 54,000 acres of new land were put under the ditch and expenditures of the Water Resources Office on the development were about \$4,200,000, used for the construction of canals, purchase of material, acquiring rights and colonization. The estimated expenditure for 1953-54 is \$3,975,000.

Bow River Project.—During 1952, P.F.R.A. continued work on enlarging the main canal. Total expenditure given by that organization in the 1951-52 report was \$6,738,745. This amount has been augmented by 1952 expenditure and will be greatly exceeded in 1953 when the Travers Dam will be built.

The Government of Alberta has made an initial appropriation for 1953-54 of \$250,000 for development of the Retlaw-Lomond tract.

William Pearce Irrigation Project.—During 1952, the Water Resources Office submitted a brief to the Royal Commission investigating the merits of the South Saskatchewan Project (in Saskatchewan), pointing out that the William Pearce project provided a more economical method of irrigating those lands in Saskatchewan covered by the South Saskatchewan proposal and in addition will irrigate the large tract near Hanna in Alberta. The Commission recommended that the entire Saskatchewan River problem be reviewed. This recommendation would entail the inclusion of the William Pearce project.

In 1952, further studies were made of the suitability of the soils in those areas blocked out for the William Pearce project.

Macleod Irrigation District.—The Water Resources Office reconstructed part of the distribution system and built a considerable portion of new distribution works. Expenditure on this development for the year ended Mar. 31, 1953, totalled \$30,188.

Lake-Level Stabilization.—In co-operation with Ducks Unlimited, three projects were constructed in 1952—at Moore and Tucker Lakes near Bonnyville, and at Grey's Lake near Hemaruka. All of these projects consist of dams in the outlets to lakes with pipes inserted under the dams to permit continuous flow. The Water Resources Office built, for fishing and recreation, two dams for the Department of Lands and Forests—one at Elkwater Lake near Medicine Hat and the Hartell Dam, near Turner Valley. Expenditure on the five dams was about \$25,000.

Heart River Project.—During 1952, five 36-inch water-control gates were installed on the combined roadway and control structure at the outlet of Winagami Lake. The question is under consideration of augmenting the domestic water supply for the town of McLennan by means of a canal from Lake Winagami to Kimiwan. Study of the power development from Winagami Lake is being conducted.

Stream Control.—The Highwood River at High River has a definite tendency at high stages of flow to return to its ancient channel down the Little Bow Valley. This would be disastrous as the waters of the Highwood merge with those of the Bow to serve two large irrigation diversions. Moreover, the existence of the town of High River depends on the effectiveness of the control measures. The work of dyking the right bank of the river has gone on for several years but, because of the shifting channel conditions, further dyking will be necessary.

The following projects were built in 1952:-

- (1) A new canal and dyke system was built to create increased flow at the point where the Trans-Canada Highway crosses Mackay Creek near Walsh.
- (2) Serious flooding in the city of Medicine Hat occurred in the spring of 1952 from overflow of Sevenpersons and Ross Creeks. The work of cleaning out the channels of these streams was started in 1952 and was continued in 1953.
- (3) The Oldman River has, for years, been wearing away its bank at the town of Fort Macleod; a new channel was built in 1952 to redirect the flow of the river.
- (4) A dyke was constructed along the Bow River to protect a low-lying area in Bowness.
- (5) A small river diversion project was built on the Belly River near Standoff to ensure water delivery to two pumping licensees and also to save valuable private property from inundation.
- (6) In the spring of 1952, violent flood flow of Michichi Creek eroded the banks of the new channel built in 1951; the most vulnerable stretches of the channel were, therefore, lined with creosoted timber.

The following amounts were expended on provincial government projects during the year ended Mar. 31, 1953:—

Project	Amount	Purpose
W.L. ID. D. C.	\$	
Highwood River Protection  Mackay Creek at Walsh	45,118 36,690	Flood control
Macleod Irrigation District.		Irrigation
Oldman Diversion at Macleod	22,377	Stream control
Heart River Diversion. Sevenpersons and Ross Creeks at Medicine Hat	3,161 35,030	Stream control Flood control
Elkwater Lake Dam.	7,090	Recreation
Hartell Dam	9,855	Recreation
Belly River Diversion	6,204	Stream control
Bow River Protection (Bowness)	10,308	Flood control
Тотац	206,021	

Water Power.—Calgary Power Limited commenced construction of the Bearspaw dam, located on the Bow River a few miles above Calgary. This project when completed will produce some 22,000 h.p. of electric energy and, by creating a small storage for ice accumulations, is the first step towards solving winter flooding n the Calgary-Bowness area.

A project which is indirectly connected with power development is the creation of a dam on the Vermilion River at Vermilion by Canadian Utilities Limited for condensing cooling water. This Company also increased its diversion from the Red Deer River at Drumheller for the same purpose.

Peace River Dugout Program.—The Provincial Department of Agriculture extends assistance for the construction of dugouts in the Peace River area because of a serious lack of underground water. Assistance is on the basis of six cents per cubic yard up to a maximum of \$120 per dugout (2,000 cubic yards) and, to Mar. 31, 1953, totalled \$184,725 on 2,048 dugouts. The program, which is of incalculable benefit to the Peace River area, is administered by District Agriculturists.

Ground Water.—The Provincial Government has recently passed new legislation regarding the study of ground water; it is expected that a start on this program will be made in 1953.

British Columbia.\*—About 17 p.c. of the arable land in British Columbia is under cultivation and nearly all the grazing area is being utilized. The 1,100,000 acres developed give a ratio of approximately one acre per person. Within this arable area there exist 150,000 acres of irrigated land, an acreage considered to be less than one-half the ultimate total that can be served by water (approximately 350,000 acres).

About two-thirds of the irrigated area is made up of individual projects, while the remaining 50,000 acres are served by the larger irrigation projects listed below.

## Section 4.—Statistics of Agriculture\*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information is obtained through the Decennial Census of Canada and the Census of the Prairie Provinces. Complete details of the 1951 Census of Agriculture may be found in Volume VI of the Census of Canada, 1951.†

The Bureau also collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and live-stock estimates, values of farm lands, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to the marketing of grain and live stock, dairying, milling and sugar industries and cold-storage holdings.

<sup>\*</sup> Revised in the Agriculture Division, Dominion Bureau of Statistics.
† Copies obtainable from the Dominion Statistician or the Queen's Printer, Ottawa, Ont.

In the collection of annual and monthly statistics, the Federal Department of Agriculture and the Provincial Departments of Agriculture, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, co-operate with the Bureau. Many thousands of farmers throughout Canada also send in reports voluntarily.

The figures for 1949 to 1952 (except for 1951 Census data) contained in this Section do not include those for Newfoundland, though that Province came into Confederation on Mar. 31, 1949. Agriculture plays a relatively minor part in Newfoundland's economy. The climate is not well suited to the production of any but the hardier crops and the amount of pasture land and arable soil is limited.

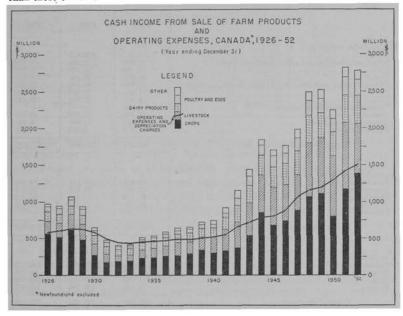

### Subsection 1.-Farm Income and Capital

Farm Cash Income.—Estimates of farm cash income are based on reports of marketings and prices received by farmers for principal farm products and are subject to revision. The estimates include the amounts paid on account of wheat participation certificates, oats, barley and flax (to the end of 1950) adjustment and equalization payments. Also included are those Federal and Provincial Government payments that farmers receive as subsidies to prices. It is estimated that, during 1952, Canadian farmers (excluding Newfoundland farmers) realized \$2,778,300,000 from the sale of farm products and from participation payments on previous year's grain crops, an amount only 1.2 p.c. below the revised and all-time high cash income of \$2,811,900,000 estimated for 1951. Supplementary payments made to western farmers under the provisions of the Prairie Farm Assistance Act amounted to only \$5,100,000 as compared with \$13,800,000 and \$10,400,000 paid during 1950 and 1951, respectively.

The maintenance of farm cash income at near-record levels in 1952 can be largely attributed to a substantial increase in receipts from the sale of field crops which offset, to a great extent, the decline in cash returns from live stock and some of the live-stock products.

Spring marketings of grain were exceptionally heavy in Western Canada as a result of the heavy carryover of both threshed and unthreshed portions of the 1951 crop. Weather conditions were excellent during the growing and harvesting seasons of 1952 with the result that prairie farmers were able to produce record crops of high quality. At the beginning of the year the initial price for wheat was \$1.40 per bu., basis No. 1 Northern at the Lakehead. On Feb. 1, it was raised to \$1.60 and continued at that level until July 31 when it was again set at \$1.40. Subsequent payments on wheat during 1952 included a 20-cent per bu. adjustment payment on all wheat delivered between Aug. 1, 1951, and Jan. 31, 1952, and a final payment of 25·2 cents on all wheat delivered during the crop year 1951-52. The initial price of barley at the beginning of the year of 96 cents per bu., basis No. 3 C.W. 6-row at Lakehead, was increased to \$1.16 for the period Mar. 1 to July 31 and then lowered to 96 cents for the remainder of the year. Subsequent payments on barley, during 1952, included a 20-cent per bu. adjustment payment on all barley delivered between Aug. 1, 1951, and Feb. 29, 1952, and a final payment of 14·7 cents per bu. on all

barley delivered during the crop year 1951-52. Initial prices for oats for the entire year were set at 65 cents per bu., basis No. 2 C.W. at the Lakehead, with final payments amounting to 18.5 cents per bu. Apart from the grain crops, the most spectacular increase in field-crop receipts occurred in the case of potatoes; prices for this commodity during 1952 averaged more than two and one-half times higher than those of 1951.

A general and substantial drop in average live-stock prices together with lower marketings of all live stock, except hogs, accounted for the significant decline in live-stock receipts in 1952. The greatest decline occurred in the case of cattle and calves. The prices of these live stock, which had been declining since the beginning of the year, declined still further after the outbreak of foot-and-mouth disease in February and the consequent imposition by the United States of an embargo on imports. Compared with 1951, hog prices were down significantly in 1952. From July 1951 when the peak was reached, hog prices declined from \$38.86 per cwt. (including federal premium), basis Grade A hogs, Toronto, to \$26.00 per cwt. by the middle of February 1952. On Feb. 16, the Agricultural Prices Support Board was authorized to support hog prices at this level. This basis of support was continued throughout the year. Poultry and egg receipts were also down substantially in 1952. Although the production of eggs and poultry meat was higher in 1952 than in 1951, prices were down sufficiently from the high levels of the previous year to more than offset this gain. On the other hand, income from dairying was up slightly, as a result of increased production, more than compensating for a decline in prices.

Totals	2,213,226	2,811,949	2,778,34	

Farm Net Income.—Preliminary estimates indicate that during 1952 Canadian farm operators (excluding Newfoundland farmers) realized a net income from farming operations of \$1,949,900,000. This figure, the second highest on record, is 11 p.c. lower than the record high net income of \$2,188,600,000 realized in 1951 and 35 p.c. higher than the 1950 estimate of \$1,448,100,000. The decline from the level reached in 1951 was the net result of a decrease of 4 p.c. in gross farm income and an increase of 6 p.c. in farm operating expenses, including depreciation charges. The decline in gross farm income was the result of slightly lower returns from the sale of farm products and a substantial drop in the value of year-end changes in farm-held stocks of grains and live stock. Income in kind for 1952 was virtually unchanged from 1951. Nearly all items included in farm operating expenses were higher in 1952 than in 1951, the result of generally higher prices for goods and services bought by farmers and greater numbers of farm machines on farms requiring increased outlays for operation and maintenance.

Value of Farm Capital.—The items included in the term "farm capital" as used in Table 10 are: lands and buildings; implements and machinery, including motor-trucks and automobiles; and live stock, including poultry and animals on fur farms. The value of lands and buildings for intercensal years is based on the value of occupied farm lands reported annually by crop correspondents; annual values of farm implements and machinery are estimated on the basis of sales reported each year.

Value of Farm Lands.—The average value of occupied farm lands in Canada for 1952 is reported at \$48 per acre. This represents an increase of 2·1 p.c. over the average value in 1951 and an increase of 100 p.c. over the 1935-39 average. Increases in farm land values over 1951 levels were recorded in all provinces except Nova Scotia, New Brunswick and Alberta. In the latter Province no change was recorded between 1951 and 1952. The all-Canada average is determined by weighting the provincial averages by the area of occupied farm land in each province. The upward trend in farm land values from pre-war levels reflects, at least in part, the relative changes that have occurred in the price levels of farm products and of the things farmers buy. The DBS index of farm prices of agricultural products for 1952

<sup>&</sup>lt;sup>2</sup> Includes poultry and animals on fur farms.

was 170.4 p.c. above the 1935-39 level while, for the same year, the index of prices of commodities and services used by farmers, including living costs, increased 128.6 p.c. from the 1935-39 base period level.

#### Subsection 2.—Volume of Agricultural Production

The index of physical volume of agricultural production, based on the period 1935-39 inclusive, represents a measure of "net farm production". This is achieved by removing duplication, such as when feed grains credited to field-crop production reappear in the form of live stock and live-stock products.

The index established a new record for Canada in 1952 when it reached 165·0, almost one point higher than the previous record of 164·2 established in 1942.

#### 12.—Index Numbers of Physical Volume of Agricultural Production, by Province, 1941-52

(1935-39=100. Exclusive of Newfoundland)

Note.—For a description of this index, methods and coverage, see DBS Quarterly Bulletin of Agricultural Statistics for April-June, 1952. Figures for 1935-40 are given in the 1950 Year Book, p. 420.

Year	P.E.I.	N.S	N.B	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total

#### Subsection 3.—Field Crops

Canadian farmers in 1952 harvested record crops of wheat, barley and soybeans and near-record crops of rye, sugar beets and shelled corn. In Western Canada, the major grain-producing area, excellent weather prevailed throughout the

season in sharp contrast to 1951 when much of the grain had to be left in the fields for harvest the following spring. In many parts of Eastern Canada, on the other hand, unfavourable weather conditions interfered with seeding, plant growth and harvesting and, although yields of practically all the principal grain crops were above average, they were below those of 1951.

Favourable weather in Western Canada in 1952 contributed to producing a crop not only of record volume but also of high quality. Almost 66 p.c. of the wheat inspected during the crop year 1952-53 graded No. 4 Northern or higher (excluding "Toughs" and "Damps"), in marked contrast to only 32 p.c. in 1951-52 when an abnormally wet harvesting season reduced grades sharply. Similar improvement in grades was also evident in Western oats, barley, rye and flaxseed.

The gross value of production of principal field crops produced on Canadian farms in 1951, based on average prices received by farmers throughout the 1951-52 crop year, was estimated at \$2,124,000,000—the first time that the total value has exceeded the two-billion-dollar level. Largely as a result of record wheat and barley crops, the gross value of field crops produced in 1952 is expected to exceed the 1951 record. Estimates of the value of the 1952 crops, based on average prices received by farmers in the crop year ended July 31, 1953, will be published in DBS crop reports issued at regular intervals throughout the year and in the Quarterly Bulletin of Agricultural Statistics.

Stocks of Grain in Canada.—Table 16 shows the stocks of Canadian grain on hand in Canada and in the United States on July 31, for the years 1950-52, with averages for the five-year periods 1935-39, 1940-44 and 1945-49. Stocks in Canada are broken down into stocks in commercial positions and those on farms, with a separate column for farm stocks in the Prairie Provinces. An additional column indicates the amounts held in country elevators in the Prairie Provinces.

#### Carryover of Canadian Grain as at July 31, 1950-52, with Five-Year Averages, 1935-49

Norg. - Figures for individual years prior to 1950 will be found in corresponding tables of previous editions of the Year Book.

The Federal Department of Agriculture inspects all live stock in plants designated as inspected establishments under the Meat and Canned Foods Act. A statistical record is kept of these inspections and the figures appear in Table 19. Local wholesale butchering and such slaughterings as are carried out by retail butchers and by farmers for their own use are not included. Actually, the slaughtering and meat-packing industry is concentrated into a comparatively small number of large establishments to facilitate greater efficiency and utilization of products. Thus, the figures of Table 19 are fairly inclusive. The slaughtering

and meat-packing industry is dealt with in its proper relation to all other manufacturing enterprises in Chapter XVI of this volume. On a gross value basis it normally ranks among the three largest manufacturing industries in Canada but it owes its importance to the value of raw products obtained from the farmer and the rancher rather than to the value added by the manufacturing process.

Wool.—Wool production in Canada (exclusive of Newfoundland) in 1952 was 11·8 p.c. above that of 1951. The 1935-39 average was 16,022,000 lb. and the 1952 production 7,691,000 lb. The shorn-wool production in 1952 was higher, the result of the increase in sheep population. Average fleece weight was 7·7 lb. compared with 7·5 lb. in 1951. The 11·1 p.c. increase in wool pulled from domestic skins was partly accounted for by an increase in inspected slaughterings of sheep and lambs.

Exports of wool in 1952 were 3,639,000 lb. compared with 2,656,000 lb. in 1951, while imports dropped from 69,012,000 lb. in 1951 to 49,537,000 lb. in 1952. Thus, assuming there was no change in stocks, the domestic disappearance of wool was lower by 26.8 p.c. in 1952 than in 1951.

Comparable data for the period 1942-50 are not included in this edition because revisions based on census information have not yet been completed. Revised figures for 1951, based on the census, with comparable data for 1952 are as follows:—

	1951	195#
Shorn Wool—         1b.           Yield per fleece	7·5 5,700 74 4,231	7.7 6,378 36 2,265
Total pulled wool'000 lb.	1,182	1,313
Total wool production	6,882	7,691
Apparent consumption	73,238	53,589

### Subsection 5.—Dairying

Milk Production.—Milk production in 1952 amounted to 16,784,982,000 lb., an increase of 361,400,000 lb. over the previous year but a considerable reduction from the high point of 17,628,610,000 lb. reached in 1945. The proportion of the total milk production used for factory-made dairy products increased from 51·1 p.c. in 1951 to 52·2 p.c. in 1952, and the proportion sold in fluid form showed a fractional increase. Milk used for all purposes on farms (home consumed, manufactured and fed) declined from 23·1 p.c. of the total in 1951 to 22·0 p.c. in 1952.

### 20.—Production and Utilization of Milk, by Province, 1949-52, with Totals for 1945-52

Norg.—Figures for years prior to 1949 will be found in corresponding tables of previous editions of the Year Book.

<sup>1</sup> Includes values of skim milk, buttermilk and whey retained on farms.

Butter and Cheese Production.—Butter production in 1952 amounted to 324,499,000 lb., an increase of approximately 18,584,000 lb. as compared with 1951. Of the total produced in 1952, 280,747,000 lb. was creamery butter, 42,039,000 lb. dairy or farm-made butter and 1,713,000 lb. whey butter. This output may be compared with the peak production of 371,000,000 lb. reached in 1941 which was

made up of 286,000,000 lb. of creamery butter, 83,000,000 lb. of dairy butter and about 2,000,000 lb. of whey butter. The decline from the 1941 total was not continuous in the intervening years. The total for 1943 was 2,000,000 lb. lower than that for 1941, followed by declines for the next three years to 328,194,000 lb. in 1946, increases for two years to 350,317,000 lb. in 1948 and then decreases again to 1951, the lowest production since 1930. However, the loss in butter production in 1951 was more than covered by margarine output which amounted to 105,151,000 lb. In 1952, the amount of margarine produced increased to 105,924,000 lb.

Factory cheese production in 1952 was estimated at 72,658,000 lb., a decrease of 21,603,000 lb. or 22·9 p.c. from the 1951 estimate and a 65·0 p.c. decline from the peak production of 207,431,000 lb. reached in 1942. Total cheese production, including factory and farm-made cheese, amounted to 208,219,000 lb. in 1942. The total manufactured in 1952, on the other hand, was the lowest on record. Indeed, judging from early estimates of farm-made cheese production and cheese exports, it is apparent that the 1952 output was the lowest since the mid-1880's. Following the peak output of 1942, production fell to 166,274,000 lb. in 1943 and rose again to 188,729,000 lb. in 1945. However, from 1945 to 1948 factory output was cut approximately in half as a result of the restrictions placed on the importation of cheese into the United Kingdom. Lower creamery butterfat prices in 1949 and the uncertainties resulting from the introduction of margarine in that year caused farmers to sell more of their milk to the cheese factories, but this recovery was temporary and in the three succeeding years a decline of over 48,000,000 lb. occurred.

#### 22.—Production of Butter and Cheese, by Province, 1949-52, with Totals for 1945-52

Note.—Figures for years prior to 1949 will be found in the corresponding tables of previous editions of the Year Book.

<sup>&</sup>lt;sup>1</sup> Factory-made cheese includes cheddar and other cheese made from whole milk. The latter amounted to 4,115,000 lb. in 1949, 5,005,000 lb. in 1950, 5,477,000 lb. in 1951 and 6,084,000 lb. in 1952, produced principally in Quebec and Ontario.

Production of Concentrated Milk Products.—Products manufactured in concentrated milk plants and creameries equipped with powder manufacturing facilities are classified as whole-milk products and milk by-products. Production of whole-milk products in 1952 increased 3 p.c. over 1951 production, while concentrated milk by-products increased 27 p.c.

24.—Production of Ice Cream, by Province, 1949-52

Domestic Disappearance of Dairy Products.—The estimated consumption of fluid milk and cream, on a milk basis, amounted to 4,524,000,000 pt. in 1952, 74,000,000 pt. higher than the 1951 consumption and 670,000,000 pt. above that of 1942. The average daily consumption per capita was 0.88 pt. in 1952 compared with 0.89 pt. in 1951. The peak daily per capita consumption of approximately 1 pt. was reached during the period 1944-46 when subsidies were in effect.

Domestic disappearance of butter (creamery, dairy and whey) was approximately 318,478,000 lb. in 1952, compared with 317,204,000 lb. in 1951 and 370,153,000 lb. in 1948. Per capita figures reflected this decline, falling from 28·73 lb. in 1948 to 22·64 lb. in 1951 and 22·07 lb. in 1952. The per capita consumption of margarine for 1951 and 1952 was 7·45 lb. and 7·34 lb., respectively.

The domestic disappearance of cheese (including cheddar, process and other) was about 84,719,000 lb. in 1952, an average of 5.87 lb. per capita. In the previous year the per capita average was 5.70 lb.

The domestic disappearance of concentrated whole-milk products increased from 19.92 lb. per capita in 1951 to 20.31 lb. in 1952.

Disappearance of all dairy products represented the equivalent of approximately 1,068 lb. of milk per capita in 1952 compared with 1,082 lb. in 1951.

<sup>1</sup> Includes malted milk, cream powder and substandard products of a variable fat content, items that do not appear separately in this table.

2 Since the quantities used for human consumption and live-stock feeding cannot definitely be established, per capita figures cannot be calculated.

3 Includes milk by-products items not separately listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein and powdered whey.

4 Includes ice cream in terms of milk.

### Subsection 6.—Poultry and Eggs

Statistics of production and consumption of poultry meat and eggs are given in Tables 27 to 29.

28.—Production, Utilization and Value of Farm Eggs, by Prov	vince, 1952	
---	-------------	--

Province	Average Number of Layers	Average Pro- duction Per 100 Layers	Net Eggs Laid <sup>1</sup>	Sold	Used on Farms <sup>2</sup>	Value per Dozen³	Total Value Sold and Used
	'000	No.	'000 doz.	'000 doz.	'000 doz.	cts.	\$'000
Newfoundland Prince Edward Island Nova Scotia New Brunswick Quebec Ontario Manitoba Saskatchewan Alberta British Columbia,	670 508 3,408 8,565 2,075 2,482 2,544	17,438 20,566 18,265 18,872 18,897 16,569 15,456 16,179 19,679	6,351 11,407 7,614 53,409 133,398 28,546 31,996 34,113 25,069	5,418 8,078 5,725 40,526 119,731 24,529 24,259 25,634 22,893	933 3,329 1,889 12,883 13,667 4,017 7,737 8,479 2,176	34·5 46·5 48·5 44·2 41·2 32·0 27·9 33·9 43·3	2,193 5,299 3,694 23,606 54,973 9,135 8,927 11,560
Totals	22,236	157,991	331,903	276,793	55,110	39-2	130,249

<sup>&</sup>lt;sup>1</sup> Total laid less loss. This figure is not equal to "Sold" and "Used on Farms" because of the carryover on farms at beginning and end of the year.

<sup>2</sup> Includes eggs used for hatching.

<sup>3</sup> Average value at farms for all purposes.

#### 29.—Production and Domestic Disappearance of Eggs and Poultry, 1952

#### Subsection 7.-Fruit

Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. In Nova Scotia production is centred mainly in the Annapolis Valley and in New Brunswick it is centred in the St. John River Valley and Westmorland County. The fruit-growing districts of Quebec are the Montreal area, the North Shore area, the Eastern Townships and Quebec city district. In Ontario, fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia, the four well-defined fruit areas are the Ökanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not suitable for commercial tree-fruit culture.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a very large proportion of the deciduous fruit consumed in Canada is domestically grown. Considerable

quantities of apples, strawberries and blueberries are exported annually. The United States is the most important export market for Canadian fruit. The import restrictions of the United Kingdom have greatly reduced exports of Canadian fruit to that market in recent years. In most of the producing areas, and particularly in the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario and the Okanagan Valley of British Columbia, fruit-growing is the principal form of agriculture and its prosperity is of paramount importance to the economy of those areas. Apples and small fruits are produced commercially in the four provinces named, but tender tree fruits and commercial vineyards are limited to Ontario and British Columbia.

Canning and processing industries have developed in the fruit-growing districts and, although the importance of the processing market varies with different fruits, it provides a valuable outlet for substantial proportions of most Canadian-grown fruit crops. Some canned fruits are exported.

#### Subsection 8.-Special Crops

Tobacco.—The chief tobacco-growing area of Canada is located in southern Ontario in the counties adjacent to Lake Erie. Most of the cigarette tobacco comes from that district. In Ontario in 1952, 81,303 acres of flue-cured or Bright Virginia type tobacco and 1,406 acres of Burley tobacco were harvested. These are the most important types grown, though dark air-cured and fire-cured tobacco as well as cigar tobacco are grown on a more limited scale. The only other important production comes from Quebec. In 1952, 4,650 acres of flue-cured tobacco, 1,227 acres of cigar tobacco and 1,197 acres of pipe tobacco were harvested in that Province.

A study of Department of National Revenue reports of tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past three decades. In 1922, the first year for which comparable figures are available, the Canadian per capita consumption of cigarettes was 229, cigars 20, cut tobacco 1·26 lb., plug tobacco 1·14 lb. and snuff about 1·25 oz. By 1952, the annual per capita consumption of cigarettes had increased to 1,237, cigars had dropped to 13·9, cut tobacco went up to 2·15 lb. and plug declined considerably.

Sugar Beets and Beetroot Sugar.—Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta, and seven beet-sugar factories are located in these Provinces. In Quebec, commercial production, which centres in the St. Hilaire area of the Eastern Townships, started in 1944; in 1951, about 97,000 tons were harvested from 10,000 acres. The sugar-beet industry of Ontario is largely confined to the southwestern section of the Province and factories are located at Wallaceburg and Chatham. The wartime reduction in acreage, caused by labour shortage and competition from other crops, has been overcome and, in 1951, Ontario factories processed about 341,000 tons harvested from over 31,000 acres.

Processing of sugar beets in Manitoba began in 1940 when 95,000 tons were handled. In 1951, the factory processed 178,000 tons from 19,000 harvested acres. In Alberta, where the industry has shown steady growth, sugar beets are produced

under irrigation with yields averaging above those received in the other provinces. In 1950, the three Alberta factories, located in the south of the Province at Raymond, Picture Butte and Taber, handled 349,000 tons of beets from a harvested area of over 32,000 acres.

Apiculture.—Honey is produced commercially in all provinces of Canada, Ontario being the largest producer. There is a considerable movement of honey, particularly from the Prairie Provinces, to other parts of Canada and to other countries, although the export trade in this commodity has been sharply reduced in recent years owing to strong competition and to import restrictions imposed by many countries.

The 1951 crop was the largest since 1948, despite a reduction in the number of bee colonies. In 1952 production was lower owing to a further reduction in colony numbers and a return to a normal yield after the extremely high production per colony experienced in 1951.

In order to facilitate storage, shipment and uniformity of quality, considerable quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces.

As a matter of interest it is noted that bees are kept in some of the fruit-growing and greenhouse districts of the country chiefly for purposes of pollination.

Maple Sugar and Syrup.—Maple syrup is produced in the Provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and the United States as the centre of the maple-products industry. Virtually all of the maple products exported are sent to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped.

Most of the syrup sold in Canada is marketed in one-gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

Fibre Flax.—The demand for fibre flax was heavy during the war years when exports increased to many times the pre-war volume. After World War II, however, exports of fibre flax to Canada's principal market, the United Kingdom, dropped sharply and acreage devoted to this crop decreased; in 1950 it was at the lowest level since 1931. In 1951 there were some increases in both acreage and production. Flax is now grown commercially only in Ontario and Quebec.

#### Subsection 9.—Prices of Agricultural Produce

During 1952, the monthly index numbers of farm prices of agricultural products were lower than the corresponding figures for 1951, except in January. Higher prices during 1952 for potatoes, which kept the Maritime indices well above the 1951 levels, did not offset the lower prices received for live stock, dairy products, poultry and eggs in the national index. The annual average for the year at 270.4 was 9 p.c. below the record high of 296.9 reached in 1951 but was still higher than the index for any other year. It should be noted that the index number of 270.4 is

not strictly comparable with the 1951 index and will be revised. In connection with grains, western farm prices used to construct the 1951 index and the 1952 index up to July were final prices, whereas those used since August 1952 are initial prices for oats and initial prices plus interim payments for wheat and barley.

## 49.—Average Index Numbers of Farm Prices of Agricultural Products, by Province, 1942-52, and by Month, 1951 and 1952

(1935-39=100)

Note.—A description of this index, its coverage and the methods used will be found in DBS Quarterly Bulletin of Agricultural Statistics for October-December, 1946.

¹ Average cash closing price, Winnipeg Grain Exchange, to Sept. 27, 1943; thereafter, initial payments plus additional payments to producers. ¹ Based on cash closing prices, Winnipeg Grain Exchange. From Aug. 1, 1944, to Oct. 22, 1947, prices of oats and barley remained at or near the government-imposed ceiling prices. From Oct. 23, 1947, to July 31, 1949, open market trading again prevailed. Equalization payments to producers are included for the crop years 1943-44 to 1947-48, inclusive. ³ Average cash closing price, Winnipeg Grain Exchange, except where otherwise noted. ⁴ During March the Canadian Wheat Board assumed control of Canadian flaxseed stocks and the price was held at \$1.64 for remainder of crop year. ⁵ Fixed price to growers. ⁵ \$5 fixed price to growers plus 50 cents participation payment. ¹ Winnipeg Grain Exchange renewed trading in flaxseed cash and futures on Aug. 16, 1948. The Canadian Wheat Board was authorized to buy all flaxseed offered to it during the 1948-49 crop year on the basis of \$4\$ per bushel for No. 1 C.W. in store Fort William-Port Arthur.

### 42.—Yearly Average Prices per 100 lb. of Canadian Live Stock at Principal Markets, 1947-52

Note.—Classification of live stock was changed in February 1949 as follows: steers up to 1,050 lb. changed to steers up to 1,000 lb.; steers over 1,050 lb. to steers over 1,000 lb.; lambs, good handy weights to lambs, good; sheep, good handy weights to sheep, good.

#### Subsection 10.-Food Consumption

Consumption of Major Foods.—A study of consumption of the major foods was undertaken during World War II by the Dominion Bureau of Statistics in recognition of the national and international significance of such information. While data on total consumption of certain commodities such as wheat, alcoholic beverages, meats, etc., had been available for a considerable period, it was found necessary to establish a per capita level of consumption of a wide range of products on a comparable basis.

The figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations have been made at the retail stage of distribution, except meats for

which the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reached the hands of the consumer. It should also be pointed out that there are minor discrepancies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers were not available. However, the figures represent the best summary of food consumption data that has been compiled for Canada.

All basic foods have been classified under 13 main commodity groups. Totals for each group have been computed using common denominators for the group, as for example: milk solids (dry weight) in the case of the dairy-products group; fat content in the case of fats and oils; and fresh equivalent in the case of fruits. All foods have been included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 43 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1935-39 as an average for comparison with the years 1950, 1951 and 1952.

### 43.—Per Capita Supplies of Food Moving into Consumption, 1950-52, with Average for 1935-39

Note.—Figures for 1952 are preliminary and certain revisions are anticipated for the years 1950 and 1951 as a result of forthcoming intercensal revisions of production estimates.

<sup>&</sup>lt;sup>1</sup> Fluctuations in apparent per capita flour consumption are partly due to the fact that complete data on flour inventories in all positions are not available. <sup>2</sup> Not available pending revision of intercensal estimates. <sup>3</sup> Includes soybean flour. <sup>4</sup> Exclusive of Newfoundland. <sup>6</sup> Includes process cheese. <sup>6</sup> Includes cream expressed as milk.

Consumption of Meats.—Production of meats from slaughter, total supply, distribution and per capita consumption of meats and lard are shown in Table 44. All estimates are on a carcass-weight basis except canned meats which are in terms of product.

## 44.—Supply, Distribution and Consumption of Meats and Lard, 1948-52, with Average for 1935-39

Note.—Estimates for 1942-51 are not strictly comparable with those for 1952, since revisions for those years necessitated by the 1951 Census of Agriculture have not yet been completed.

<sup>&</sup>lt;sup>1</sup> Edible meat excluding offal. <sup>2</sup> Basis cold dressed carcass weight. <sup>2</sup> Includes edible offal of beef and veal. <sup>4</sup> Quantity small; included with beef. <sup>8</sup> Edible meat excluding fats and offal. <sup>6</sup> The positive changes represent deductions from the available supply during a given year and therefore are subtracted, similarly, negative changes represent an increase in disappearance. <sup>7</sup> Includes rendered pork fat.

### Section 5.-Agricultural Statistics of the Census\*

Census of Agriculture statistics relating to farms, farm operators, mechanization, electrification and area are included in this Section. Data relating to crops and live stock for 1951 are given in Section 4. Newfoundland data are excluded from historical tables as no comparable data for previous years are available.

Number of Occupied Farms.—The number of occupied farms in Canada at June 1, 1951, was 623,091, or 619,465 excluding Newfoundland. This compares with 732,858 farms in 1941. The apparent decrease of 113,393 farms since 1941 is, however, not a true indication of the change in number of farms in Canada because of the changes made in the definition of a farm for census purposes. In the 1951 Census, a farm was defined as a holding on which agricultural operations are carried out. The holding may consist of a single tract of land or of a number of separate tracts held under different tenures. It must be (a) three acres or more in size or (b) from 1 to 3 acres in size with agricultural production in 1950 valued at \$250 or more. Where the farm was made up of several parts located in different municipalities, the 1951 Census reported the complete farm as one unit in the municipality where the headquarters was located.

The 1941 Census counted as farms all holdings one acre or more in size if the 1940 production were valued at \$50 or more. Unlike the 1951 Census, it counted as separate farms those parts of farms lying outside the municipality in which the farm headquarters was located although the farm area was counted only once.

Allowing for these changes in definition it would seem that the decrease in number of farms (exclusive of Newfoundland) between 1941 and 1951 would be of the order of 58,000 or about 8.6 p.c. instead of 113,393 or 15.5 p.c.

In British Columbia the number of farms, under the 1951 definition, was 21·1 p.c. greater in 1951 than in 1941, but all other provinces showed decreases, ranging from 3·7 p.c. for Manitoba to 15·7 p.c. for Nova Scotia.

#### 45.-Number of Occupied Farms, by Province, 1941 and 1951

<sup>•</sup> Prepared in the Agriculture Section of the Census Division, Dominion Bureau of Statistics.

Farms Classified by Tenure.—While the proportion of owned farms in Canada decreased from  $80 \cdot 5$  p.c. in 1931 to  $75 \cdot 5$  p.c. in 1941, there was an increase to  $78 \cdot 5$  p.c. in 1951. In the latest Census, Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba and British Columbia reported the largest proportion of owned farms in 20 years. Prince Edward Island, Saskatchewan and Alberta showed smaller proportions than in 1931, but the percentages in these Provinces were up from 1941. All provinces except New Brunswick, Quebec and British Columbia have shown a steady increase since 1931 in the proportion of farms that are partly owned and partly rented; the Prairie Provinces, where this type of land tenure is particularly important, showed an increase of  $41 \cdot 6$  p.c.

The proportion of tenant-operated farms in each of the provinces was lower than that recorded in either the 1931 or 1941 Censuses. While the Prairie Provinces had shown a percentage increase in tenant-operated farms in 1941, the percentage in 1951 was even less than in 1931.

<sup>1</sup> Includes data for the Yukon and Northwest Territories.

Farms Classified by Size of Holding.—Although only  $4\cdot0$  p.c. of the farms in Canada were less than 10 acres in size,  $25\cdot7$  p.c. in British Columbia and  $53\cdot3$  p.c. in Newfoundland were in this size group. Less than 6 p.c. of the farms in the other provinces were under 10 acres in size.

The largest percentage of farms in the Maritime Provinces, Quebec, Ontario and Manitoba were in the 70 to 239 acre size group. In Saskatchewan and Alberta the 240 to 399 acre group contained the largest percentage of farms while in British Columbia it was the 10 to 69 acre group and in Newfoundland the 3 to 9 acre group that had the largest proportion.

For Canada as a whole, 19.0 p.c. of the farms were 400 or more acres in size. However, it was only in the Prairie Provinces that these larger farms formed a significant proportion of the total. In Saskatchewan 52.8 p.c., Alberta 38.7 p.c. and Manitoba 29.1 p.c. of the farms were 400 or more acres in size. In the other provinces, the proportion of farms of 400 or more acres ranged from 7.4 p.c. in British Columbia to less than 1 p.c. in Newfoundland and Prince Edward Island.

Economic Classification of Farms.—All farms (except institutional farms, etc.) with reported sales of farm products of \$1,200 or more in 1950 were classified as commercial farms. Also included in this group were farms reporting sales of between \$250 and \$1,199 in 1950 if the farm operator worked off the farm less than 100 days and reported the value of farm sales greater than income received from other sources. Of the 623,091 farms in Canada, 75·4 p.c. were classified as commercial farms. The smallest percentage of commercial farms was in Newfoundland where only 21·5 p.c. of the 3,626 farms were in this category. At the other extreme was Saskatchewan where 90·6 p.c. of the farms were so classified.

Of the total farms in Canada,  $3\cdot4$  p.c. reported sales of farm products of \$10,000 or over in 1950. Alberta had the largest proportion of farms in this group with  $6\cdot0$  p.c. and Ontario had the second largest proportion with  $5\cdot6$  p.c.

Part-time farms included those with sales of farm products between \$250 and \$1,199 in 1950 if the operator reported that he worked 100 or more days off the farm, or reported the farm income less than income from other sources. This group accounted for 10·5 p.c. of all farms in Canada.

If the value of farm products sold was less than \$250 in 1950, the farm was classified as a small-scale farm and 14 p.c. of the farms in Canada were in this class. The province with the largest proportion of small-scale farms was Newfoundland with 62.4 p.c., while Saskatchewan had the lowest with 5.3 p.c.

Experimental farms, community pastures, Indian reserves and farms operated by institutions were classified as institutional farms, etc.

Age of Farm Operators.—During the period 1921-41 there had been a gradual increase in the proportion of farm operators in the higher age groups, until, in 1941,  $46 \cdot 1$  p.c. of the operators were 50 or more years of age. This trend was reversed in 1951, however, when  $40 \cdot 9$  p.c. were reported in this older age group, the lowest proportion since the 1921 Census.

The 1951 Census figures also show a reversal of the trend toward fewer farms occupied by operators in the younger age groups. While the proportion of farm operators under 40 years of age had decreased from 39.6 p.c. in 1921 to 30.8 p.c. in 1941, it increased to 34.3 p.c. in 1951. The 1951 Census showed the largest proportion of farm operators under 40 years of age since the Census of 1921 for all provinces except Alberta. In Alberta the proportion was greater in 1951 than in 1941 but still less than in either 1931 or 1921.

<sup>1 60</sup> years or over. 2 Includes data for the Yukon and Northwest Territories.

Farm Machinery.—The tremendous increase in farm mechanization during the past 20 years is clearly shown in the census figures on the number of machines and the number of farms reporting them. One of the important increases has been in the use of tractors, 150 p.c. more being reported on farms in 1951 than in 1941. Farmers in Quebec, Prince Edward Island and British Columbia reported five times as many as in 1941, New Brunswick farmers over four times as many, Ontario and Nova Scotia farmers three times as many, and Prairie Province farmers twice as many.

Compared with 1941, there has also been a sharp increase in the use of motor-trucks on farms in all provinces, ranging from an increase of 93 p.c. in British Columbia to an increase of 186 p.c. in Quebec. The 10-year increase for all Canada was 153 p.c. The number of automobiles on farms showed an increase of only 4.5 p.c. for the same period. The largest increases were in Quebec (53.9 p.c.) and British Columbia (28.7 p.c.). Nova Scotia, New Brunswick and Ontario had fewer automobiles on farms in 1951 than in 1941, but it should be noted that there were also fewer farms in these Provinces.

Grain combines increased 376 p.c. in the 10-year period, the Prairie Provinces and Ontario accounting for most of the increase. While there were only 8,917 combines reported in Canada in 1931 and 19,013 in 1941, the figure climbed to 90,500 by 1951. The number of combines on farms in Saskatchewan increased from 6,019 in 1931 to 42,997 in 1951 and accounted for a substantial part of the increase. Despite the increase in the use of combines, there were 4.0 p.c. more threshing machines on Canadian farms in 1951 than in 1941. All provinces except Nova Scotia, Ontario, Alberta and British Columbia reported decreases ranging from 12.1 p.c. in New Brunswick and 10.5 p.c. in Saskatchewan to 1.4 p.c. in Prince Edward Island, but increases in other provinces—particularly the 75.3-p.c. increase in Ontario—out-weighed these decreases.

Grain binders were not included in the 1941 Census, but the 1951 Census showed a decrease for Canada of 29·7 p.c. compared with 1931. Nova Scotia, New Brunswick, Quebec and British Columbia reported slight increases in the number of grain binders, but the other provinces reported substantial decreases ranging from 17·3 p.c. in Prince Edward Island to 45·4 p.c. in Saskatchewan.

The expansion in farm electrification is reflected in the increased numbers of electric motors on farms. For Canada as a whole, the increase was 238 p.c. as compared with 1941 and over 10 times the number in 1931; all provinces contributed. The increase in stationary gasoline engines was confined to the western provinces as all provinces eastward from Ontario showed a considerable decrease as compared with 1941.

While no information is available from the 1941 Census on milking machines, the 1951 Census showed that there were over 11 times as many on farms in 1951 as in 1931.

<sup>&</sup>lt;sup>1</sup> Includes duplication where farms had tractors under 15 h.p. and 15 h.p. or over. data for the Yukon and Northwest Territories.

Farm Electrification.—Slightly more than one-half of the farms in Canada reported electric power. Ontario had the largest proportion with 73·8 p.c., followed by Nova Scotia with 71·1 p.c., British Columbia with 68·8 p.c., and Quebec with 67·1 p.c. Saskatchewan had the smallest proportion with only 16·3 p.c. Power line was reported to be the source of power on over 90 p.c. of the farms reporting electricity in all provinces except Saskatchewan and Alberta. In Alberta, 60·1 p.c. of the farms reported power-line source, 13·2 p.c. wind electric, and 28·1 p.c. other sources. In Saskatchewan, 31·9 p.c. of the farms reported power line, 34·4 p.c. wind electric, and 35·8 p.c. other sources.

<sup>2</sup> Includes

Farm Areas.—The total area of occupied farms in Canada was slightly greater in 1951 than in 1941. Excluding Newfoundland, for which 1941 figures are not available, the 1951 total shows an increase of 395,551 acres or 0.2 p.c. over that of 10 years earlier. Increases in the Prairie Provinces and British Columbia more than offset decreases in each of the eastern provinces.

Area of improved land increased by 5.7 p.c. in the 10-year period, but this increase was entirely owing to increases in the Prairie Provinces and British Columbia. Decreases were recorded in each of the Maritime Provinces, Quebec and Ontario. Similarly, while there was an increase of 10.5 p.c. in the area under crops for Canada as a whole, this increase was confined to the Prairie Provinces and British Columbia.

The total area of owner-operated farm land increased by 6·3 p.c. in 1951 as compared with 1941, increases in the western provinces outweighing decreases in the Maritime Provinces, Quebec and Ontario. The largest increase in farm land owned by the operator was in Manitoba (18·8 p.c.) followed by British Columbia (14·8 p.c.) and Saskatchewan (13·2 p.c.). Nova Scotia recorded the largest decrease, having 15·6 p.c. less land owned by farm operators in 1951 than in 1941. Each province except British Columbia showed a decrease in the area rented by farm operators, the decrease for Canada being 14·0 p.c. This decrease in rented land ranged from 8·5 p.c. in Alberta to 49·5 p.c. in Nova Scotia; British Columbia recorded an increase of 23·8 p.c.

### Section 6.—International Crop Statistics

Tables 53 and 54 are based on official estimates published in March 1953 by the Foreign Agricultural Service, United States Department of Agriculture, and give the acreages and production of wheat and the production of oats and barley for the harvests of 1951 and 1952, with averages for the years 1945-49, in the leading countries of the world.

53.—Estimated Acreages and Production of Wheat Harvested in 1951 and 1952 in Specified Countries, with Average for 1945-49

Note.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Land is the basis of the Canadian economy and wise use of the land is the foundation of good forestry. Good forestry will aid in maintaining agricultural lands against drought and erosion; will continuously protect water-catchment areas and assure supplies of water; will furnish good cover for game and fur-bearing animals; and will give Canadians and their tourist guests opportunities for recreation which only the forests can provide.

### Section 1.—Forest Regions†

The forests of Canada cover a vast area in the north temperate climatic zone. Wide variations in physiographic, soil and climatic conditions cause marked differences in the character of the forests in different parts of the country; hence eight fairly well defined forest regions may be recognized. These are the Boreal, Great Lakes-St. Lawrence, Acadian, Deciduous, Subalpine, Columbia, Montane, and Coast Forest Regions, as illustrated on the accompanying map. The relative proportion of the total area of all forest regions occupied by each is as follows:—

Region	Percentage of Total Regional Area	Region	Percentage of Total Regional Area
Boreal Great Lakes - St. Lawrence Subalpine	7.9	AcadianColumbiaDeciduous	0.9
Montane	2.5	TOTAL	100-0

The Boreal Forest Region.—This forest Region, covering the greater part of Canada, stretches unbrokenly from Newfoundland westward to the boundary of Alaska. Along its southern border it follows the limits of the Great Lakes-St. Lawrence Region and then skirts the grasslands of the Prairies to the foothills of the Rocky Mountains and northwestward into the Yukon Territory. The northern

<sup>\*</sup> Sections of this Chapter that deal with forestry and forest administration have been revised in the Forest Economics Section, Forestry Branch, Department of Resources and Development. Sections dealing with forest utilization and forest industries, except as otherwise noted, have been revised in the Forestry Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

<sup>†</sup> A more detailed discussion of forest regions is given in the Department of Resources and Development, Forestry Branch Bulletin No. 89, A Forest Classification for Canada, by W. E. D. Halliday. Accounts of variations in Canadian physiography, climate, etc., are given in Chapter I of this volume.

limits of tree growth form its boundary to the north. White and black spruce, trembling aspen, balsam poplar, tamarack, white birch and jack pine comprise the principal trees of the Region.

Within the Region are two sections that are quite distinctive—the Northern Transition and the Aspen Grove. The Northern Transition Section lies between the merchantable forests on the south and the Arctic tundra on the north. White and black spruce, tamarack and white birch, stunted in growth, are the characteristic trees. In the Aspen Grove Section, lying as a transition zone between the true forest region to the north and the open grasslands to the south, the trembling aspen is the dominant tree species. Bur oak, white elm and green ash are found in certain localities.

The Great Lakes-St. Lawrence Forest Region.—This Region lies south of the Boreal Forest in the eastern part of Canada, from the drainage basin of the Great Lakes-St. Lawrence River System to southeastern Manitoba. Some of the earliest centres of settlement are within the Region and in many portions the forest has been largely cleared and remains now only in woodlots. The area is characterized by the occurrence of white pine, yellow birch and sugar maple. A large number of species occur, including red pine, jack pine, white spruce, black spruce, balsam fir, cedar, hemlock, white birch, other maples and the elms.

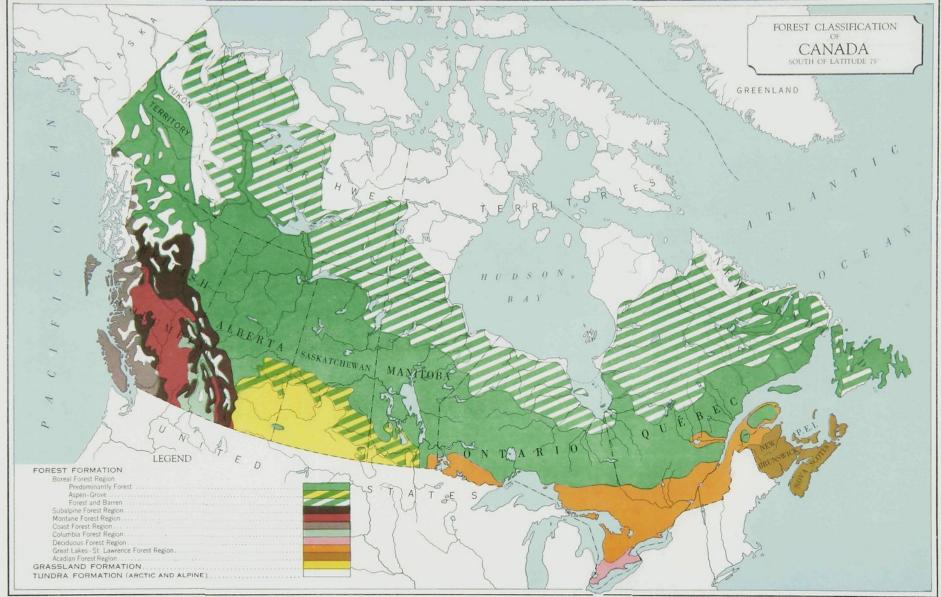

The Acadian Forest Region.—This Region includes Prince Edward Island, Nova Scotia, and all but the northwest corner of New Brunswick. Red spruce is the dominant conifer and is usually associated with balsam fir, white and black spruce, hemlock, yellow birch, sugar maple and white birch.

The Deciduous Forest Region.—The Deciduous Region of Canada consists of a small northerly portion of the temperate forest of the same type as in the United States. The Region occupies the Sarnia-Niagara peninsula of southern Ontario. Beech and sugar maple, associated with basswood, red maple and several oaks are the characteristic trees. Many broad-leaved species such as hickory, black walnut, tulip-tree, cucumber-tree, mulberry, sycamore, sassafras, and a number of other species find their northern limit in this Region.

The Subalpine Forest Region.—This is essentially a coniferous forest region, occupying the upper slopes of the Cordilleran System east of the Coast ranges, and lying between the Alpine Tundra formation and the Montane Forest Region. Generally, the Region lies between altitudes of 3,000 and 6,000 feet. The dominant tree species are Englemann spruce, alpine fir, lodgepole pine and trembling aspen.

The Columbia Forest Region.—The forests of this Region, often referred to as the interior wet belt of British Columbia, comprise stands in the valleys of the Columbia and Fraser Rivers that lie between altitudes of 2,500 and 4,000 feet. These forests are somewhat similar in composition to those of the Coast Region. The principal tree species are Englemann spruce, western red cedar, western hemlock and Douglas fir. Associated with these are grand fir, western white pine and western larch. Black cottonwood is found on rich alluvial soils.

The Montane Forest Region.—This Region forms part of the interior dry belt of British Columbia and is found, generally, at elevations below the Columbia Region. It covers an extensive series of plateaux, valleys and ranges in the interior

of the Province. Typical of the Region are ponderosa pine, Douglas fir, lodgepole pine and trembling aspen. Towards the northern half of the Region, ponderosa pine disappears, leaving Douglas fir and lodgepole pine as characteristic species.

The Coast Forest Region.—The western slopes of the Coast and Cascade Mountains and the islands along the coast comprise this Region. It produces the largest trees and heaviest stands in Canada. The dominant trees are western hemlock and western red cedar. Associated with these are Douglas fir in the south and Sitka spruce in the north. Also occurring in the Region are yellow cedar, western white pine and amabilis fir. Black cottonwood and red alder are the important hardwood species in the Region.

### Section 2.—Native Tree Species

There are more than 150 tree species in Canada, of which 31 are conifers, commonly called 'softwoods'. About two-thirds of these softwoods are of commercial importance. Of the large number of deciduous or 'hardwood' species, only about 10 p.c. is of any great commercial value to the wood-using industries. About 82 p.c. of the volume of merchantable timber is made up of softwood species.

Detailed information on Canadian trees is given in Forestry Branch Bulletin No. 61, Native Trees of Canada,\* published by the Department of Resources and Development.

### Section 3.—Forest Resources

The forested area of Canada (exclusive of Labrador) is estimated at 1,320,321 sq. miles, or 37 p.c. of the total land area. In comparison, only 15 p.c. of the land area is considered to be of present or potential value for agriculture and 4 p.c. is classed as "improved and pasture"

Over 40 p.c. of the total forested area of Canada is classified as "non-productive", i.e., incapable of producing crops of merchantable wood. However, these forests do provide valuable protection for drainage basins and shelter for game and furbearing animals.

Of the productive half of the forested area, 503,000 sq. miles are considered to be now accessible for commercial operations. Further details are given in Chapter I, Table 1, p. 20. The economically inaccessible productive forests contain much valuable timber suitable for lumber and pulpwood. At present it is not economical to conduct cutting operations on these areas but, as low-cost methods of transportation are developed, as accessible forested areas become depleted, and as the demand for wood products increases, these inaccessible productive forests will be brought progressively into commercial development. Owing generally to less favourable climatic conditions, the productive capacity of these inaccessible timberlands is expected to be less than that of the accessible areas now being logged.

The predominant part that lumber and other forest products have played in the development of Canada has resulted in a tendency on the part of many to evaluate the forests in terms of timber alone. A growing realization of the economic importance of the non-timber values, however, is bringing about increasing recognition of their true value and thus developing a broader concept of forestry.

<sup>\*</sup> Obtainable from the Queen's Printer, Ottawa, price \$1.50.

Under the terms of the Canada Forestry Act, 1949, the Federal Government offers financial support to all provinces to assist them in completing an inventory of their forest resources by aerial photographic methods. This federal assistance is on a 50-50 basis and will assist in the preparation of a national forest inventory. The latest estimates of the total stand of timber, by province and region, appear in Table 1. These estimates are subject to constant revision as more accurate and complete inventories are compiled.

<sup>&</sup>lt;sup>1</sup> Cubic volumes do not include wood in stumps and unusable tops. <sup>2</sup> Exclusive of Labrador. <sup>3</sup> Including estimates of inaccessible stands in the Yukon and Northwest Territories.

Forest Land Tenure.—Private individuals or corporations own 7 p.c. of Canada's total forest land. The remaining 93 p.c. is still in the possession of the Crown in the right of the Federal Government or of the provinces: rights to cut Crown timber under lease or licence have been granted on 16 p.c. of the total forest land. Some of the unalienated land has already been logged and has reverted to the Crown but, in the main, it is located in the inaccessible and less accessible areas.

Farm woodlots on the 623,000 farms across Canada cover about 22,780,000 acres (Census of 1951)—13 p.c. of the total farm area and over 7 p.c. of the total accessible productive forest. These small wooded tracts, ranging in size from three or four acres to 200 or more acres, are among the most accessible forests in Canada. Further, the woodlots of Eastern Canada are, in general, highly productive because they lie in the southern parts of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.

### Section 4.—Forest Depletion and Increment

A general account of forest depletion and increment is presented in this Section. Details of the scientific control of those influences that account for wastage, viz., forest fires, insect pests, etc., are dealt with in Section 5, Forest Administration.

Depletion.—The average annual rate and cause of depletion of reserves of merchantable timber during the ten years 1941-50 are given in Table 4. Of the total depletion, 79 p.c. was utilized and 21 p.c. was destroyed by fire, insects and disease. The utilization of 2,842,687,000 cu. feet comprised 39 p.c. logs and bolts, 31 p.c. pulpwood, 26 p.c. fuelwood, and the remaining 4 p.c. miscellaneous products. Approximately 6 p.c. of the logs and bolts and pulpwood were exported in unmanufactured form.

The more efficient utilization of timber that has been cut is one factor related to forest depletion. There is little doubt that in the past too high a percentage of the sawn log was discarded. Changes of great significance have been taking place in the uses of wood, permitting the utilization of sizes and qualities previously considered unmerchantable. The development of the manufacture of rayon, cellophane and numerous other products in the cellulose industry is rapidly extending the use of wood. Plastic-wood products, fibre board and laminated wood are providing an increasing demand for the formerly inferior classes of wood, resulting in the more complete utilization of forest resources and in the elimination of much waste.

4.—Average Annual Forest Depletion	during the Ten-Year Period 1941-50
------------------------------------	------------------------------------

Item	Usable Wood	Utilization and Wastage	Depletion
	M cu. ft.	p.c.	p.c.
Products Utilized—	CONTRACTOR OF	(F10101)

By insects and disease	500,000	68.4	14.0
Average Annual Wastage	731,524	100-0	20-5
Average Annual Depletion	3,574,211		100.0

Increment.—The area of occupied forests in the country totals about 312,000 sq. miles, or 200,000,000 acres. This area includes some land that cannot be classified as productive forest land as well as some water. While precise information is not available, the net land area of occupied productive forest is estimated to be approximately 70 p.c. of the total occupied area, or about 140,009,000 acres.

Almost all of Canada's primary forest products are obtained from these occupied productive regions. During the post-war period the average annual rate of felling on this area exceeded 25 cu. feet per acre. When an allowance for losses caused by fire, insects and disease is added, the average annual rate of depletion for the whole area approaches 30 cu. feet per acre. In many localities, however, this rate has been greatly exceeded; in others, it has been considerably less. Complete estimates of the rates at which the forests of Canada grow are not yet available. The vast size of the country, the diversity of growing conditions and the complex character of the forests place great difficulties in the way of estimating growth. However, the results of numerous studies indicate that over considerable tracts growth exceeds 25, 30 or even 40 cu. feet per acre per annum, but in other areas classed as productive the growth is much less. It seems probable, therefore, that considerable portions of Canadian forests are being cut too heavily at present. Large areas of productive forest still remain unoccupied and, while some unoccupied areas may prove to be quite as productive as those now occupied, a large proportion is difficult of access and is of relatively low productivity. The general situation emphasizes the urgent need for more intensive forest management.

### Section 5.—Forest Administration

#### Subsection 1.—Administration of Federal and Provincial Timber-Lands

The summary information on forest administration, normally carried under this heading in the Year Book, has been replaced by a special treatment prepared by the Forest Economics Section of the Forestry Branch, Department of Resources and Development.

### ADMINISTRATION OF CROWN FORESTS IN CANADA

Ninety-three per cent of the forests of Canada are owned by the people and are administered by either the Federal or Provincial Governments. In the Maritime Provinces, however, most of the forest has been retained under private ownership. In Prince Edward Island practically all the forest is in private holdings, chiefly farmers' woodlots. In Nova Scotia 73 p.c. of the forest land is privately owned, made up generally of areas exceeding 1,000 acres in extent. Fifty per cent of the forests of New Brunswick are owned by individuals and corporations. The remaining provinces have the following proportions of forest under private ownership: Newfoundland, 16 p.c.; Quebec, 7 p.c.; Ontario, 8 p.c.; Manitoba, 7 p.c.; Saskatchewan, 7 p.c.; Alberta, 7 p.c.; and British Columbia, 4 p.c.

The major proportion of the Crown forests are owned and administered by the provincial governments. The Federal Government administers the forest lands of the Yukon and Northwest Territories and all other federal lands such as the National Parks and forest experiment stations. Most of the provinces have established forest reserves, and seven provinces also maintain Provincial Parks. Forest reserves are set aside either as a source of supply of forest products for industry, or as protection to prevent soil erosion. In both instances, controlled logging operations are carried on and particular care is taken to prevent harmful depletion of the forest resources at any time. In the case of protection forests, the decision as to whether any particular area can be logged in a given year depends on its effect on erosion. No logging would be allowed on a hillside, for example, no matter how desirable from a commercial point of view, if it is likely to interfere with the control of streamflow.

Table 3, p. 455, gives the areas of National and Provincial Parks, forest reserves and forest experiment stations, by province. The National Parks, which range in size from a few acres to hundreds of square miles, are described at pp. 23-25 and Provincial Parks at pp. 26-30.

#### Federal Administration

The Canada Forestry Act, passed by the Federal Government in 1949, provides, among other things, authority for the operation of forest experiment stations and forest products laboratories, some of which have been in existence for many years. The Act also authorizes the granting of federal assistance to the provinces to enable them to improve the management of their own forests.

A conference, with representatives from all the provinces, was convened at Ottawa by the Minister of Resources and Development in May 1951 to consider the Federal Government's proposals in detail. The Conference approved, in principle, a draft agreement covering federal assistance to the provinces in forest inventory and reforestation, which provided that the Federal Government pay one-half the cost to the provinces of completing and maintaining their forest inventories during the next five years, and that the Federal Government pay one-fifth of the cost to the provinces of reasonable programs for the reforestation of provincial Crown lands, provided that the federal contribution would not exceed, in any year, the amount by which the combined expenditures for the reforestation of such lands exceeded the average of the province's own expenditures for such purposes during the previous three years.

Between Dec. 4, 1951, and June 12, 1952, the Federal Government entered into agreements with all the provinces, except Quebec and Newfoundland, based generally on the above provisions.

Federal Forestry Branch.—The chief functions of the Forestry Branch of the Department of Resources and Development are to provide information and assistance, in forestry matters of national importance, to the provincial authorities, who administer the publicly owned forests lying within provincial boundaries, and to the industries who depend on the forests for their raw materials. The Branch conducts research in forestry and in the utilization of forest products and provides financial help to the provinces in connection with the activities mentioned above.

The Forestry Branch organization comprises three Divisions concerned with Forest Research, Forest Products Laboratories and Forest Operations. A special Section concerned with Forest Economics constitutes a part of the Branch administration.

District Offices are maintained at St. John's, N'f'ld.; Fredericton, N.B.; Valcartier, Que.; Winnipeg, Man.; and Calgary, Alta. A special research unit at the headquarters at Ottawa serves as a district office for Ontario so far as forest research work is concerned. Forest Experiment Stations are located at Acadia near Fredericton, N.B.; Valcartier, Que.; Petawawa, Ont.; Riding Mountain National Park, Man.; and Kananaskis, Alta. Forest Products Laboratories are located at Ottawa and Vancouver.

The Forest Operations Division is concerned primarily with the administration of federal-provincial forestry agreements under the Canada Forestry Act. The duties involved include examination of programs for forest inventory and reforestation which are submitted annually by the provinces as a basis for federal participation in costs, and examination of work carried out in accordance with these programs prior to payment by the Federal Government under the terms of the agreements. A co-operative agreement between the Governments of Canada and New Brunswick, under which the Federal Government is paying one-third of the cost of an aerial spraying operation against the spruce budworm in northern New Brunswick, is also administered by the Forest Operations Division.

The work of the Forest Research Division and Forest Products Laboratories Division is described in Section 3, pp. 468-469.

Eastern Rockies Forest Conservation Board.—This joint Board, supported by the Federal and Alberta Governments, is responsible for protecting the eastern slopes of the Rocky Mountains. Federal participation in this project is based on the fact that the Saskatchewan River has its headwaters in the Rocky Mountains and flows through the Provinces of Saskatchewan and Manitoba, as well as Alberta.

Federal funds have been provided to finance construction of roads and other improvements needed in the protection program, but forestry operations in the area are carried out by the staff of the Alberta Department of Lands and Forests.

Department of Agriculture.—Investigation of outbreaks of injurious forest insects and of tree diseases are carried on by the Forest Biology Division, Science Service, Federal Department of Agriculture, because these lines of work are closely allied with the larger fields of general entomology and plant pathology. This work is done in close co-operation with the federal and provincial forest services. The

Department also maintains two tree-planting stations located at Indian Head and Sutherland, Sask., which provide farmers in the three Prairie Provinces with planting stock for the establishment of windbreaks and shelter-helts.

#### Provincial Administration

The responsibility for forest administration in each province is centred in a department of government headed by a Minister, who is an elected member of the legislature and a member of the Provincial Cabinet. The permanent head of the department, the Deputy Minister, is responsible for the execution of approved policies and for departmental administration. The name given the forestry department varies with the province; also, there are considerable differences in organization and in the titles and duties of the principal officers. The similarities, however, are of greater importance than the differences, and the functions performed by each forest administration are virtually the same.

In each province, the department responsible for forest administration usually performs other duties in connection with lands, mines or other natural resources. In most cases a branch form of organization is used, with the senior forestry officer directly responsible to the Deputy Minister. In Quebec there are separate services concerned with forestry and forest protection, each having its own chief. In Nova Scotia, Ontario and British Columbia, a divisional form of organization is used in which the Deputy Minister is, in effect, in direct charge of forestry work.

In addition to the departmental headquarters, usually located at the provincial capital, each forest service maintains administrative districts with a district officer in charge of each. Large districts may be further divided into sub-districts, each in charge of a field officer or forest ranger. The district chiefs and their field staffs carry on the administration according to instructions issued from head office, and important questions outside the ordinary routine are referred to head office for consideration. Ordinary business, however, can be conducted more efficiently by district officials who are thoroughly familiar with conditions in their own localities.

Senior staffs of the forest services are made up largely of men who have received university training in forestry. However, during the past 20 years several provinces have established special ranger-training schools, which give systematic instruction in the many and varied tasks the field men are called upon to perform. Increase in facilities for ranger-training is one of the most important forestry developments in recent years.

Forest Protection.—Protection of the forests against fire is the most urgent duty of any forest administration and, at the same time, the most difficult and costly. The vast extent of Canada's forests, lack of adequate access roads in many regions, and climatic conditions combine to make fire protection a problem of primary importance.

Although many improvements in fire-protection organization and methods have been effected over the past 30 years, the fire menace is still a major obstacle to the introduction of better forest management. Carelessness with camp fires and smoking materials, and improper burning of slash when clearing land, are still far too common in Canada. An average of over 5,000 fires are reported each year, almost 4,000 of which are known to be caused by human agency.

In Quebec and Newfoundland, forest protective associations have been formed to handle fire protection on licensed Crown lands. The other provincial fire-protection services provide protection for all forests except those lying within organized municipalities.

Field work in the provinces is controlled from District Offices, where these exist, or by district fire rangers. Subdivisions of districts are looked after by fire rangers, who may be assisted by lookout men and patrolmen. The observers in lookout towers report the appearance of smoke to a central office by telephone or radio. Patrolmen carry out regular patrols along roads or waterways and warn travellers against carelessness with fire, as well as suppress or report fires that break out. Special crews construct improvements needed for protection purposes, such as roads, trails, telephone lines, lookout towers and ranger cabins. Usually these crews are kept on duty throughout the fire season and are used as stand-by fire-fighting crews. All fire-protection services possess modern equipment such as portable fire pumps and hand tools, special vehicles and effective communication systems. Aircraft are used extensively for fire detection and to carry men and supplies to the scene of a fire.

Assistance to provincial forest fire-protection services along railway lines is given under the Railway Act, administered by the Board of Transport Commissioners for Canada. The Board has wide powers relating to fire protection along railway lines under its jurisdiction. Certain officers of the various forest authorities are appointed ex officio officers of the Board of Transport Commissioners and co-operate with the fire-ranger staffs that the railway companies are required to employ under the Railway Act.

Fires that start must be put out as quickly as possible, but the objective of all protection services is to prevent them from starting. Means taken to reduce the number of outbreaks include posting of warning notices along roads and portages and in camps, restriction or prohibition of travel in forest areas during periods of exceptional fire danger, radio addresses and plays, articles in the press advocating care with fire in the woods, and specially prepared talks to school children. Settlers are required by law to obtain permits to burn slash and to conduct their burning under supervision at times of low fire hazard.

For protection of the forests against injurious insects and tree diseases, the provincial forest services co-operate with the Division of Forest Biology of the Science Service of the Federal Department of Agriculture.

Disposal of Crown Timber.—The general policy in Canada is to maintain forest lands under public ownership. Industrial and private users of wood may be granted rights to cut standing timber under prescribed conditions, but title to the land itself remains with the Crown.

Many timber users need only relatively small quantities of timber from time to time. Others, including the larger lumber companies and the great pulp and paper concerns, must be assured of adequate supplies of wood for long periods in the future. Without this assurance they could not secure the huge capital investments essential to provide modern manufacturing plants.

Holders of timber-leases must pay annual ground rents for forest land, running from \$5 to \$20 per sq. mile east of the Rockies, but amounting to \$140 per sq. mile on the west coast of British Columbia. Lease holders must also pay fire-protection taxes or other protection charges, the basis for which differs according to province.

Standing timber is usually paid for shortly after it has been felled and scaled. Rates are on a unit volume basis—so much per thousand board feet, cord, cunit (100 cubic feet), linear foot, or by the piece, such as a railway tie.

Prices paid for Crown timber are frequently made up of different kinds of charges—Crown dues, royalties and stumpage—depending on usage in a particular province. Payments of the kind described as Crown dues are officially called royalties in British Columbia and stumpage in New Brunswick. Charges described as stumpage are known in Ontario as bonus dues.

Crown dues are rates of payment for timber, established by statute or by Order in Council, and apply uniformly throughout whole provinces or in large regions. Varying rates are set for different species and, in British Columbia, for different grades of logs of the same species. They are, in effect, minimum prices for Crown timber and are not affected by such factors as extra high quality of timber, or very easy accessibility, which might justify higher prices for particular stands.

Stumpage (as the term is used here), when paid for Crown timber, consists of charges additional to Crown dues. Such charges reflect the difference between the real value of a particular stand of timber and the Crown dues rates. This additional value may arise from exceptionally high quality, easy accessibility, and a number of other factors. Stumpage charges may not be finally determined until a sale is completed. For example, the government of a province where Crown dues for white pine are set at \$2.50 per M ft.b.m. may consider that a certain lot of better-than-average timber located near a good road is really worth at least \$10. The block may then be offered for auction at an "upset price" of \$10, made up of \$2.50 for Crown dues and \$7.50 for stumpage. If the timber is put up for auction and no bid as high as the upset price is received, there will be no sale. On the other hand, competition among bidders may force the final price up to \$12. The selling price then represents Crown dues of \$2.50 and stumpage of \$9.50 per M ft.b.m.

There are a number of different ways of disposing of Crown timber which are reviewed briefly in the following paragraphs under the designations: timber berths, forest-management licences, pulpwood berths, timber sales and timber permits.

Timber berths are areas of Crown timber-lands held under lease by operators in the forest industries. It is customary to make berths renewable for a specified number of years, and many of the older berths were renewed for as long as 99 years. Annual renewals are granted if the holder takes out an annual licence to operate, pays his ground rent and timber charges, and observes the conditions relating to methods of operation, filing of returns, and so forth, under which the berth was granted. In several provinces, the maximum size of a single berth is limited by law. Timber berths are disposed of by public competition, the successful bidder usually paying a lump sum for the right to occupy the berth. Crown dues are payable as the timber is cut. Boundaries of timber berths are described in the leases.

Forest-management licences were established by the legislature of British Columbia in 1947 as a new form of tenure. Under the legislation, the Minister of Lands and Forests is authorized to enter into an agreement with any person whereby specified areas of Crown lands are reserved in perpetuity for the use of that person, provided he so manages the forests that a sustained-yield output will be assured.

If the person already owns or holds certain timber-lands within the areas prescribed, these are automatically included in the licence. The object is to ensure sufficient supplies of timber, in perpetuity, for established forest industries.

Royalties at regular rates are to be paid for all timber considered merchantable at the time the licence is issued. On all timber that attains merchantable size after the licence is issued, stumpage and royalty will be paid at the rate of 16 p.c. of the appraised stumpage value at the time of cutting. Land rental is at the rate of one cent per acre, one-sixth of the regular rate.

Pulpwood berths are large areas leased to pulp and paper companies. Erection of a pulp and paper mill requires a great deal of money. No company will build one unless assured of sufficient timber supplies to permit its operation for a considerable number of years. Thus, pulpwood berths are usually established by agreement between government and company. An important condition of such agreements is that the company must erect and operate a mill of specified size by a certain date or lose possession of the berth. Berths of this kind may be good for 21 to 50 years (99 years in Newfoundland), with renewal privileges at the end of the original agreement. Crown dues and ground rent are paid at stipulated rates.

Timber sales are made by public competition at upset prices per M ft. b.m., per cord, or other unit of measurement. Bidding above the upset price is also on a unit volume basis rather than in lump sums for the whole sale and is usually good for periods of one to five years. Ground rent may or may not be required on timber sales. Payment is made as timber is cut but the successful bidder may be required to furnish a guarantee deposit, a bond, or both at time of sale. The area of a timber sale is defined in the same way as that of a timber berth.

Timber permits give the holders the right to cut specified small quantities of wood from Crown lands, for their own use or for sale. Payment of dues for all the wood to be cut may be required when the permit is issued, final adjustments being made after the wood is scaled. Free permits are sometimes granted certain classes of people, such as settlers or non-profit organizations, to enable them to obtain building logs, saw timber or fuelwood, with the stipulation that it be for their own use.

The relative importance of these several methods of disposing of Crown timber differs in each province; and different names for the same sort of arrangement may be found in various parts of Canada.

Forest operators in Crown timber are required to observe certain regulations. Details vary from province to province and from time to time. The following are merely examples of the kind of requirements that might appear in a typical lease: the operator may be forbidden to cut trees of less than specified stump diameter; maximum stump heights may be prescribed; use of inferior kinds of timber in the construction of camps, culverts and bridges may be required; and burning of logging slash may be necessary. In addition, operators are required to keep book records that may be readily inspected and to maintain their camps in sanitary condition.

To ensure that operators comply with government regulations and any special conditions contained in a lease, logging operations on Crown lands are inspected periodically by officials of the Department. Definite evidence of failure to observe regulations may close down operations until the situation is corrected or, in extreme cases, the berth or sale may be cancelled.

Timber Scaling.—Since payment of government dues is based on the amount of material scaled, it is of considerable importance to both the government and the operator that scaling be accurate. Scalers may be employed by the government or the operator and, in both cases, must take oath that the measurements are fair and just to both parties.

Men wishing to become scalers are required to serve a term of apprenticeship with qualified scalers. They must then pass examinations set by government boards before they can become licensed scalers. Those of more than average experience and ability are employed as check scalers to remeasure a sample of each scaler's work, thus checking his efficiency. Licences of those who fail to maintain the required standard are cancelled.

The cord of 128 stacked cubic feet, standardized under the Federal Weights and Measures Act, is established as a unit of measurement throughout Canada. The board-foot content of sawlogs is calculated according to different log rules in different provinces. New Brunswick, Ontario and British Columbia use rules named after the individual province; Alberta uses the Scribner Rule; Quebec the Roy Rule; and Manitoba and Saskatchewan the International 4" Kerf Rule.

Other Provincial Functions.—Forest Surveys.—Extensive forest inventory surveys on a large scale are being conducted by most provinces through special survey divisions. Mention has already been made of the financial assistance given for forest inventories and reforestation by the Federal Government under the terms of the Canada Forestry Act. Forest surveys, with the aid of air photography, provide the most economical and expeditious means of obtaining reliable information on the extent, character and volume of the forest resources.

Reforestation.—Most of the forests of Canada reproduce themselves, after logging, by natural means. Securing new growth of the most desirable species is usually a matter of proper management of logging operations. There are areas, however, from which all possible sources of seed supply have been removed and the existing young growth destroyed by fire. Here, forests can only be re-established by seeding or planting. Planting may also be necessary to check drifting sand or provide shelter for farm buildings and fields. Several provinces maintain large forest nurseries where stock is grown both for forest plantings and for the use of farmers. Permanent nursery stations are also maintained. These employ small permanent staffs and provide considerable local employment during the transplanting seasons; the output of these stations runs into millions of small trees annually.

Farm Forestry.—Farm woodlots are the most accessible of all forests. Although privately owned, their importance to the community justifies the advice and assistance to their owners provided by the provincial forest services. The latter are increasing their efforts to encourage farmers in improving the management of their woodlots. Most provinces employ qualified foresters for this purpose who also help in marketing forest products.

In British Columbia, legislative provision has been made for classifying as tree farms such privately owned land as the owner wishes to place under sustained yield. If a satisfactory working plan is submitted, the forest owner is given a preferred tax rate, which is approximately one-third of the rate that would apply if the land were held for liquidation purposes.

Wildlife Protection.—In most provinces, administration of laws respecting hunting and fishing is carried out by staffs specially appointed for that purpose. In others, forest officers are required to act as game and fish wardens in addition to their other duties. Whether responsible for wildlife or not, the forest ranger must always take an interest in the movements of hunters and fishermen in his district because their presence magnifies the danger of forest fires. The majority of men who go into the woods to hunt or fish are careful with their camp fires and with smoking, but there will always be a small number who may start conflagrations through ignorance or carelessness.

Education of the Public.—The development of public understanding of all phases of forestry from forest protection to utilization of forest products is of paramount importance. The appalling losses caused by forest fires resulting from carelessness continue to be emphasized in educational programs by government agencies, companies, and associations such as the Canadian Forestry Association. The federal and provincial forest services carry on extensive programs of public education in forest-fire prevention with invaluable aid from the press, the radio, the motion-picture industry and many industrial organizations. The Federal Forestry Branch has distributed to schools more than 350,000 copies of The ABC's of Forest Fire Prevention, in English and French editions, as well as other publications for school and general use.

One of the most practical methods of adult education is the Tree Planting Railway Car of the Canadian Forestry Association, which has been operating its prairie shelter-belt campaign for over 30 years. Its purpose is to demonstrate and encourage tree planting around prairie homes. The results to date show over 250,000,000 trees distributed by Federal Government and other forest nurseries.

Through many other media, such as 4-H Forestry Clubs, Boy Scout forestry badge work, Royal Canadian Mounted Police handbooks and school science text-books, public interest is stimulated in Canada's forest resources and the cause of forestry thereby promoted.

#### Subsection 2.—Forest-Fire Protection

The Federal Government is responsible for fire-protection measures in the forests under its administration, chiefly those of the Yukon and Northwest Territories, the National Parks, Indian lands and forest experiment stations. Each of the provincial governments, except that of Prince Edward Island, maintains a fire-protection organization co-operating with owners and licensees for the protection of timbered areas, the cost being covered by special taxes on timber-lands.

A more detailed description of the administration of fire-protection organizations is given in the special article, "Administration of Crown Forests in Canada", pp. 458-465.

Forest-Fire Statistics.—The number of forest fires in 1951, which totalled 4,529, was appreciably lower than the average of 5,281 for the ten years 1941-50. Also, the total area burned in 1951 was 896,426 acres, an area considerably less than half the average loss for the ten-year period. Although the area burned was so much smaller, the actual costs of fire-fighting in 1951 were very high, amounting to almost three times the ten-year average. Almost two-thirds of the costs were incurred in British Columbia where expenditures for this activity were nearly ten times higher than usual.

The weather in Newfoundland was a little drier than normal during most of the season and it was only in June and July that the fire situation became serious. In Nova Scotia and New Brunswick, weather conditions were generally favourable for fire protection and each of these Provinces enjoyed a very favourable fire season. The weather in Quebec and Ontario was highly variable during the summer of 1951. More than half of the total number of fires in both those Provinces occurred in May. Manitoba, Saskatchewan and Alberta all had well-distributed rains throughout most of the fire season and, except in a few small areas, there were no prolonged, dangerous periods of drought. In British Columbia, the coastal regions experienced persistent dry weather in the early spring and the fire season opened about two weeks earlier than usual. Critically dry conditions developed about the end of June and continued until the end of September, necessitating complete forest closure to travel and industry over wide areas during this period.

5.—Summary Statistics of Forest-Fire Losses, 1951 compared with Ten-Year Average, 1941-50

### Subsection 3.—Research in Forestry

Forest research and forest products research facilities have been greatly expanded throughout Canada during the past five years. The Federal Government, several provincial governments, the Pulp and Paper Research Institute of Canada, the four universities with faculties of forestry, and a number of the larger industrial companies conduct research in these fields. The Forestry Branch of the Federal Department of Resources and Development conducts research in silviculture, management, forest inventory methods, forest-fire protection and forest economics. An extensive program of research is under way on the experiment stations and on other lands, where an increasing proportion of the total effort is being expended in co-operation with provincial authorities and industry.

Forest Research.—Research in silviculture and management has been concentrated since World War II upon problems of regeneration, growth and stand development, and on harvest cutting methods. A regeneration survey extending from the Rocky Mountains to the Atlantic Coast has provided information on the status of regeneration on cut-over and burned lands and has been followed by more intensive work to assess the factors responsible for the success or failure of regeneration and to devise practical methods of obtaining reproduction. Studies are made of growth and succession in the most important forest types and of development of a satisfactory basis for classifying forest sites for effective growth and productivity. Research in tree breeding is also carried on for artificial propagation by selection and development of superior strains. Research in forest management devises methods of applying the knowledge of silviculture, regulation of cut and protection in order to manage the forest at its highest production level.

In the field of forest-fire research, the Federal Forestry Branch is working towards full co-operation with the provincial forest services to achieve the best methods of forest-fire protection. The leading contributions of the Branch to date have been in the field of fire-hazard research and in the development of equipment and techniques for fire-fighting. Increasing attention, however, is being given to research in such fields as fire-control planning, visible area mapping, detection and communications equipment, and the training of fire crews. A number of provincial forest-protection services are also engaged in research activities. Notable advances have been made in several provinces in the development of forest communications equipment, the dropping of supplies to fire-fighters by parachute, and the design of mechanical fire-fighting equipment.

Research in forest inventory methods is of increasing importance because of the greatly expanded inventory programs being conducted in most provinces. Data from photographs are correlated with field work to develop new techniques of timber estimating. Various methods of sampling are being investigated and compared. Research is being continued in methods for measuring tree images and tree shadows to determine heights, crown widths, crown closure and other data from photographs taken in different seasons of the year under various conditions. Studies are also being made in the identification of species and sub-types and the classification

of forest sites by the use of air photographs. Construction of suitable photogrammetric and other scientific apparatus include the forestry tri-camera method of air photography, which has been developed to provide maximum forestry information at minimum cost, and the shadow height calculator, constructed to facilitate the determination of tree heights from shadows in air photographs.

Research in forest economics includes studies and analyses of forest taxation (federal and provincial), land tenure and forest land valuation. A study of the economics of forest management has been carried out on a pulpwood limit in Quebec in order to develop a technique for evaluating the results that may be expected from a program of sustained-yield forest management.

Forest-Products Research.—Two Forest Products Laboratories conduct forest-products research, one at Ottawa, Ont., and the other at Vancouver, B.C. The purpose of this research is to supply the basic and practical knowledge required for the best possible utilization of Canada's forest resources and includes studies of the factors affecting the quality of wood and of manufactured wood products; the factors causing wood waste in logging and manufacturing; the mechanical, physical and chemical properties of wood and their relation to adaptability in use; the treatment of wood and its use in the manufacture of fibre products, alcohol, turpentine, etc.; new and more valuable uses for woods; and the application of laboratory findings to the standardization of lumber grades and the improvement of timber specifications in the building codes of Canadian cities. The Forest Products Laboratories co-operate with similar organizations in other countries, with the provinces and with industry.

The Pulp and Paper Research Institute of Canada at Montreal, Que., a corporation supported by the Federal Government, the Canadian Pulp and Paper Association and McGill University, carries out research in the field of pulps and papers. The program of work includes studies of the structure and properties of wood and bark and their chemical components; the improvement of pulping processes; studies for the improved utilization of waste products; and the improvement in the design of industrial equipment.

Forest Biology.—The Division of Forest Biology of the Science Service, Federal Department of Agriculture, undertakes investigations dealing with the biology and control of insects and diseases affecting forest and shade trees. The Zoology Unit maintains ten regional laboratories at strategic points across the country. The Forest Pathology Unit operates six branch laboratories. An insect disease laboratory was recently established at Sault Ste. Marie, Ont., for fundamental research on virus, fungi, and bacterial diseases of insects.

A special article dealing with Noxious Forest Insects and Their Control appears in the 1947 Year Book, pp. 389-400. A detailed account of the activities in forest pathology in Canada may be found in the 1948-49 Year Book, pp. 416-417.

### Section 6.—Forest Utilization

Forest utilization is concerned with the many industries employed in the hewing down of timber in the forest and its transformation into the numerous utilitarian shapes and forms required in modern living. The basic industries provide the raw material for sawmills, pulp and paper mills and for the wide range of secondary industries that convert the products of the basic industries into more highly manufactured goods such as veneers and plywoods, sash and doors, furniture and all the vast range of industries that use wood in any form in their processes. These industries, especially the pulp and paper industry and the lumber industry, contribute substantially to the value of Canada's export trade and thereby provide the exchange necessary to pay for a large share of the imports purchased from other countries, particularly the United States.

### Subsection 1.-Woods Operations

In connection with operations in the woods, it should be borne in mind that the forests not only provide the raw materials for the sawmills, pulp mills, wood distillation, charcoal, excelsior and other plants, but also provide logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products which are finished in the woods ready for use or exportation. A number of minor forest products help swell the total, such as Christmas trees, maple sugar and syrup, balsam gum, resin, cascara, moss and tanbark.

It has been estimated that operations in the woods during the logging season in 1951 gave employment amounting to 47,434,000 man days and distributed \$503,000,000 in wages and salaries.

8 _Value	of Woods	Operations	by Product.	1916-51

<sup>&</sup>lt;sup>1</sup> In estimating the annual drain on Canada's forest resources, certain converting factors have been used, each of which represents in cubic feet the quantity of merchantable wood used to produce one unit of the material in question. The factor for logs and bolts for the British Columbia coastal region is 175 and for the rest of Canada 200. Other factors: pulpwood 85, fuelwood 80, hewn railway ties 5, poles and piling 15, fence posts 1-2 and wood for distillation 80. A change in computing the converting factor was introduced in 1944-45 and is described in the 1946 Year Book, pp. 285-266.

### Subsection 2.—The Lumber Industry

The manufacture of sawn lumber is the second most important industry in Canada depending on the forest for its raw materials.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills and mills for cutting-up and barking or rossing of pulpwood, reports of which were compiled for 1951, was 7,934 as compared with 7,551 for 1950. Mills sawing less than 15,000 ft. b.m. are excluded but account for less than one-half of one per cent of the total lumber production. Employees numbered 62,415 and wages and salaries amounted to \$132,058,607. The logs, bolts and other materials and supplies of the industry were valued at \$313,174,713, the gross value of production was \$591,551,749 and net value \$271,865,508.

Lumber production in Canada reached its maximum in 1951 at 6,948,697,000 ft. b.m. Average values were fairly uniform until 1916, but increased rapidly from 1917 to 1920, to decline gradually during the following years to the lowest level for the entire period in 1932. With the exception of 1938 and 1949, increases took place each year from 1933 to 1951.

Lumber Exports.—Exports of planks, boards and square timber are given in the Chapter on Foreign Trade.

### Subsection 3.—The Pulp and Paper Industry\*

The manufacture of pulp and paper has been the leading industry in Canada for many years and the post-war development of the industry has more than kept pace with the vast industrial growth of the nation. Pulp and paper stands first among all industries in value of production, in exports, in total wages paid and in capital invested. It is the largest consumer of electric energy and the largest industrial buyer of goods and services, including transportation, in the land. The industry has a newsprint output five times that of any other country and provides over one-half the world's newsprint needs. Canada is also the world's greatest wood-pulp exporter and stands second only to the United States as a producer of pulp. Thus, this Canadian industry, with four-fifths of its output moving abroad, ranks as one of the major industrial enterprises of the world.

There are three classes of mills in the industry. In 1951, 34 were making pulp only, 26 were making paper only and 66 were combined pulp and paper mills.

The industry includes three forms of industrial activity: operations in the woods with pulpwood as a product, the manufacture of pulp and the manufacture of paper. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. Less than one-fifth of the pulpwood cut in Canada is exported in raw or unmanufactured form and a large proportion of such exports is cut from private lands.

A special article on the pulp and paper industry appears in the 1952-53 Year Book, pp. 467-475.

<sup>1</sup> Given in terms of rough or unpeeled wood.

The manufacture of pulp, the second stage in this industry, is carried on by mills producing pulp only and also by paper manufacturers operating pulpmills in conjunction with paper-mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species of wood for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulpmill, but there are also a number of 'cutting-up' and 'rossing' mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for export. Pulpwood is measured by the cord (4' by 4' by 8' of piled material). One cord of rough pulpwood contains approximately 85 cu. feet of solid wood, and one cord of peeled pulpwood 95 cu. feet.

Pulp Production.—Of the total 1951 pulp production, 70·7 p.c. was made in combined pulp and paper mills for their own use in manufacturing paper. The remainder was made for sale in Canada or for export. About 56 p.c. was groundwood pulp and over 18 p.c. unbleached sulphite fibre, these being the principal components of newsprint paper. Bleached sulphite, bleached, semi-bleached and unbleached sulphate, soda fibre, semi-chemical, other grades and groundwood and chemical screenings made up the remainder. A considerable market has developed for screenings in connection with the manufacture of rigid insulating boards.

The manufacture of the 9,314,849 tons of pulp produced in 1951 entailed the use of 12,229,371 cords of rough pulpwood valued at \$316,600,016 and the equivalent of 324,693 rough cords of other wood (i.e., sawmill chips, slabs and edgings, sawdust, butt cores, etc.) valued at \$8,522,006. The total value of materials used in the manufacture of pulp was \$370,442,643.

<sup>&</sup>lt;sup>2</sup> Includes Newfoundland.

<sup>&</sup>lt;sup>1</sup> Includes production in British Columbia, Manitoba, New Brunswick and Nova Scotia. cludes Newfoundland.

Pulp Exports.—The chief market for Canadian newsprint and pulp is the United States. Prior to the War this market alone absorbed about 85 p.c. of the pulp exports and 80 p.c. of the newsprint exports. In 1945, the proportions were 76 p.c. and 83 p.c., respectively, and in 1951, 82 p.c. and 93 p.c., respectively.

World Pulp Statistics.—Figures of production, exports and imports of pulp for certain countries of the world have again become available after the interruption caused by World War II and are shown for 1951 in Table 18. It is estimated that these countries produce approximately three-quarters of the world supply of pulp.

Paper Production.—During 1951 there were 92 establishments producing paper and paper board in Canada as compared with 91 in 1950. In addition to newsprint, Canadian mills have a highly developed production of fine paper, wrapping paper, tissues, paper board and other cellulose products.

19.—Paper Production, by Type, 1942-51

World Newsprint Statistics.—Since 1913, Canada has led the world in the export of newsprint. Figures for the leading producing countries for the two latest years available are given in Table 22; 1939 figures are included for comparative purposes. The six countries listed accounted for 80 p.c. of the estimated world production in 1951, Canada contributing about 54 p.c.

Statistics of the Combined Pulp and Paper Industries.\*—The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries, for they are frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into stationery and other highly processed paper products are often combined in one plant. This further converting of paper within the pulp and paper industry itself represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper mills in this industry are attributed to the particular industrial group of converting plants to which they properly belong. Including manufacturing operations as far as the basic paper-making stage, there were altogether 126 mills in operation in 1951. The employees numbered 57,291 and their salaries and wages amounted to \$213,169,906. If the pulp made for their own use in combined pulp and paper mills is disregarded, the total value of materials and supplies used in the industry as a whole can be considered as amounting to \$483,014,009 in 1951, \$373,897,470 in 1950 and \$348,662,719 in 1949; the gross value of production as \$1,237,897,000 in 1951, \$954,137,651 in 1950 and \$836,148,393 in 1949; and net value of production, \$679,257,743 in 1951 \$511,142,983 in 1950 and \$423,375,527 in 1949.

The pulp and paper industry is one of the leading single manufacturing industries in Canada. In 1951 it was first in net value of production, in gross value of production and in salaries and wages paid, and second in employment. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. In world trade, generally speaking, pulp and paper are Canada's main commodities—usually greater than wheat and far greater than nickel. Newsprint alone, over a considerable period, has brought Canada more export dollars than wheat, nickel or any other single commodity.† The United States market absorbs, annually, practically all pulpwood exports and over 80 p.c. of the pulp and the paper shipments of Canada. About one-half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

### Subsection 4.—The Veneer and Plywood Industries‡

Plywood and veneer production in Canada continues to increase in volume and in value, an increase largely attributable to more general recognition of the many advantages to be gained by the application of larger units in construction of buildings and for other purposes.

All plywood produced prior to World War II was dependent upon cold-press adhesives. Then the discovery of relatively cheap synthetic resin glues permitted the manufacture of water-resistant and water-proof plywood. During the War,

trade statistics. The Forest Products Laboratories, Forestry Branch, Department of Resources and Development, Ottawa.

See Chapter XVI for further particulars regarding the pulp and paper and paper-converting industries.
 † For reasons given in Section 1, Part II of the Foreign Trade Chapter, gold is excluded from Canadian

hot-pressing methods were developed so that the industry was able to meet the rigid specifications for aircraft components. Later, many new hot presses were introduced and this method of manufacture has become almost universal throughout the industry.

The production of hardwood plywood is largely confined to the eastern provinces. The changes in manufacturing methods applied to hardwood plywood have resulted in its adaptation to many new uses, particularly to attractive wall finishes for homes and other buildings, flush doors, radio and television cabinets and other home and office furniture.

Softwood plywood is produced almost solely in British Columbia. Douglas fir is the type most commonly manufactured because of the availability of largediameter logs of this species from which large sheets of clear veneer can be obtained. The use of synthetic resin adhesives is responsible for the production of a product that has become almost indispensable to the construction industry-for wall panels. concrete forms, roofing, sheeting, house sub-floors; for construction of silos, cribs and caissons; for box-car linings, bus bodies, trailers, power-driven and other types of watercraft; for box panels and crate linings, case goods and core-stock for furniture; for plywood-faced doors and for many other uses.

The heating of glued veneers in moulds by high-frequency electric fields (dielectric heating) permits the manufacture of shaped plywood, which is now being used for furniture, radio cabinets and similar products. This development is becoming more widely appreciated as its possibilities are better known.

Veneers of Canadian manufacture are not confined to species native to Canada. A number of imported woods of special decorative value are veneered successfully and provide the furniture industry with a wide choice of finishes. Exports of veneers and plywoods produced in Canada have increased in value from \$969,256 in 1938 to a high of \$18,655,285 in 1952.

# Subsection 5.—The Wood-Using Industries

The wood-using group comprises thirteen industries,\* other than sawmills and pulp mills, using wood as their principal raw material. Most of these industries obtain from the sawmills the wood they transform into planed and matched lumber, boxes, barrels, furniture, caskets and other manufactured or semi-manufactured products, but the veneer and plywood and excelsior industries usually manufacture their products direct from logs and bolts.

This wood-using group does not include every industry into which wood enters as a raw material but only those producing commodities whose chief component is wood. There are a number of industrial groups in which wood is an important raw material, such as the manufacture of agricultural implements, musical instruments, etc., and others, such as the manufacture of machinery, in which wood is necessary but only in comparatively small proportions. There are also many cases where wood is used indirectly in the manufacture of all-metal products, as, for example, in the use of wooden patterns and wooden foundry boxes in making metal castings. Wood in the form of barrels, boxes and other containers also enters into the distribution of commodities of all kinds.

In 1951, the wood-using group, comprising 4,041 establishments, gave employment to 68,864 persons and paid out \$151,003,467 in salaries and wages. The gross value of its products was \$561,825,023 and the net value \$257,412,502.

The importance of secondary industry in providing employment will be appreciated when it is noted that the number of employees in the wood-using group was more than 68,000, as compared with sawmills with approximately 62,000 employees and pulp and paper with about 57,000 in 1951.

Item	1949	1950	1951
Sawn lumber	1,759,834	1,893,861	1,981,239
	105,422,963	120,604,966	138,846,528

	14,435,898	17,087,654	19,314,591
Other wood used \$	3,582,162	3,959,258	4,101,186
Totals \$	138,796,319	160,044,940	188,277,770

24.-Wood Used by Wood-Using Industries, 1949-51

### Subsection 6.—The Paper-Using Industries

The paper-using group comprises three industries† engaged primarily in manufacturing commodities of paper and paperboard. Establishments engaged in printing, publishing, bookbinding and the allied graphic arts also consume large quantities of these materials, but, under the standard industrial classification adopted by the Dominion Bureau of Statistics in 1948, they are grouped separately.

Furniture; sash, door and planing mills; veneer and plywood; hardwood flooring; boxes, baskets
and crates; wood-turning; coffins and caskets; cooperage; woodenware; lasts, trees and wooden shoefindings;
beekeepers' and poultrymen's supplies; excelsior; and other wood-using industries.

<sup>†</sup> Paper boxes and bags: roofing paper; and miscellaneous paper goods.

Some paper-using establishments purchase paper as a raw material from the pulp and paper industry and merely subject it to some form of treatment to fit it for further manufacture in some other industry. This occurs in the manufacture of coated, sensitized or corrugated paper. Other firms purchase paper and subject it to some treatment to fit it for some definite final use such as in the manufacture of asphalt roofing or waxed wrapping paper. Another large group uses paper and paperboard as a raw material for conversion into paper bags, boxes, envelopes, laminated wallboard and other commodities.

In recent years the manufacture of containers and packages of various kinds has grown very rapidly since ways have been found of converting tough and cheap paper stocks into strongly made boxes which compete very favourably with the wooden crates and packing cases formerly used. Small attractive paper containers for use in the retail trade are growing in favour with the purchasing public and constitute an important branch of the paper-using industries.

Composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and in some cases coated with a mineral surfacing, is being increasingly used as a substitute for metal roofing, wooden shingles and siding materials. Woodfibre building boards, some of which are produced by lamination in the paperusing industries, are now used extensively in construction, especially for insulating purposes, replacing lumber and wood lath.

The growth of the paper-using industries in Canada since 1923 reflects these developments. In 1923, the 152 establishments in this group employed 6,870 persons, distributed \$7,442,102 in salaries and wages and produced goods valued at \$31,760,948. In 1951, these industries comprised 421 plants, provided employment for 25,598 persons whose earnings totalled \$63,351,100 and produced products worth \$351,944,692.

#### Subsection 7.—Printing, Publishing and Allied Industries

The Printing Trades Group is made up of five closely related industries: printing and publishing, comprised of publishers who operate printing plants; printing and bookbinding, including general or commercial printers and bookbinders; lithographing, comprised of plants specializing in that process; engraving, stereotyping and electrotyping, including photo-engraving; and trade composition or type-setting for printers. A sixth industry covering publishers of periodicals who do not print their publications has been included since 1949. Although, strictly speaking, these publishers are not manufacturers, they are closely related to the printing trades which produce the plates, cuts, etc., and print for them newspapers, magazines, directories, year-books, almanacs, house organs and other periodicals.

In 1951, the printing trades employed 60,076 persons whose earnings totalled \$162,779,233. Their output was valued at \$414,259,662 and the raw materials used and services received cost \$133,525,783.

Periodicals valued at \$166,384,319 accounted for 40 p.c. of the value of printed matter and other products, daily newspapers alone contributing \$118,395,368. The value of periodicals is made up of \$116,748,028 received from advertising and \$49,636,291 received from subscriptions and sales of publications. In addition, the 1,354 publishers in the sixth industry reported revenues of \$23,984,782 from advertising and \$8,698,603 from sales of publications.

### Section 1.—Canada's Mineral Resources

The tremendous expansion that has taken place in Canada's mineral industry from the end of World War II to 1951 is reviewed in the 1952-53 Year Book, pp. 476-495. The following special article brings that information up to June 1953.

### DEVELOPMENTS IN CANADA'S MINERAL INDUSTRY. JANUARY 1952 TO JUNE 1953†

The period covered by this review has been one of the busiest in the history of Canada's mineral industry and thus there are many developments of interest and much solid accomplishment to report. Nothing quite so colourful as the discoveries of the Leduc and Redwater oil fields in Alberta in 1947 and 1948, respectively, occurred during this period. However, there were several developments of outstanding interest, among them being the discoveries of huge iron-bearing deposits in northern Ungava toward the close of the period and the discoveries of large base-metal deposits in the Bathurst area of northern New Brunswick. Another development, announced early in June, is the proposed Yukon-British Columbia power project by Ventures Limited which will involve the expenditure of hundreds of millions of dollars and will provide power for a metallurgical industry that will treat ores from many parts of the world. Uranium, too, has been sharing the limelight particularly as a result of activities in northern Saskatchewan. These developments, to which further reference is made elsewhere in this review, are indicative of the rapid growth of the mineral industry and they provide additional proof that Canada is still well to the fore in the opportunities it offers in the field of mineral resources development.

<sup>\*</sup>Except where otherwise noted, this Chapter has been revised in the Mining, Metallurgical and Chemical Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

† Prepared under the direction of Marc Boyer, Deputy Minister. Department of Mines and Technical Surveys, Ottawa, by G. H. Murray, Chief, Editorial and Information Division, and Mrs. M. J. Giroux of the Editorial Staff. In preparing this article the authors made free use of material contained in the preliminary annual mineral reviews for 1952 published by the Department of Mines and Technical Surveys.

Notable headway was made during the review period toward the completion of a number of mining and related projects that have been under way for several years. One of the largest of these is the Quebec-Labrador iron-ore development. involving an expenditure of approximately \$200,000,000. The 358-mile railway to connect the deposits to the port of Seven Islands is scheduled for completion by the end of 1953 and shipments from the deposits are expected to commence in the summer of 1954. Thus, in a matter of months, one of the largest potential sources of iron ore in the world will have been brought into operation. Another large project within a few months of completion is the Trans Mountain pipeline which will carry crude oil from wells in the Edmonton area to the Vancouver area and also into northwestern United States.\* The 711-mile pipeline will cost an estimated \$90,000,000. Still another nearing completion is the Lynn Lake nickel-copper project of Sherritt Gordon Mines Limited, about 500 miles north and slightly west of Winnipeg, Man., and its related project at Fort Saskatchewan in Alberta. The whole project, including the 147-mile railway from Sherridon, Man., to Lynn Lake, and the refinery plants at Fort Saskatchewan, will cost an estimated \$52,000,000.

The International Nickel Company of Canada Limited is bringing to completion a \$150,000,000 program involving a changeover from open-pit and underground to entirely underground operations, a substantial increase in the annual tonnage of ore mined, the introduction of oxygen flash smelting of the Company's copper concentrates in which all smelting heat requirements are met by reacting the concentrates with oxygen, and the erection of a concentrator at the Creighton property capable of handling 12,000 tons of ore daily.

Nearing completion also is a program of plant expansion in the cement industry which was started in 1947 and was necessitated by the greatly accelerated post-war activities in the construction industries. It will raise Canada's cement-making capacity to approximately 22,000,000 bbl. a year.

At the same time, the asbestos industry has been undergoing considerable expansion, more particularly in the Eastern Townships of Quebec, source of over 97 p.c. of the Canadian output of asbestos. Here, the leading producer, Canadian Johns-Manville Company Limited, has been expanding and modernizing its facilities at Asbestos and is replacing the present milling plant. Asbestos Corporation is developing a new mine on a recently discovered deposit from which production is expected in 1954. Regular production of asbestos from Cassiar Asbestos Corporation's McDame mountain deposit in northern British Columbia is expected to commence in July 1953.

Throughout the period under review, crude oil and natural gas developments were prominently to the forefront, a main development being the decision of Interprovincial Pipe Line Company to extend the pipeline from its present terminus at Superior, Wis., to Sarnia, Ont., a distance of approximately 635 miles. Present indications are that the extension will be in operation by the spring of 1954. The construction of this extension and of the Trans Mountain pipeline to Vancouver will pave the way for an increase in the daily output of crude petroleum from fields in Western Canada to an eventual 600,000 bbl. There were several other developments of interest in connection with crude petroleum. These are covered in the special article, "Canadian Crude Petroleum Situation", at pp. 540-544, and, accordingly, little further reference is made to them in this review. Quite apart from actual developments in the various fields in Western Canada, much of the interest in natural gas was centred on the likelihood or otherwise of bringing the gas by pipeline into Ontario and

The pipeline was officially opened Oct. 16, 1953.

<sup>74570-314</sup> 

Quebec. Such a line would cost an estimated \$300,000,000 and the whole matter seems destined to receive increasing attention. The reserves of natural gas in Western Canada have been increasing at a considerably higher rate than has consumption and thus there is need of finding new market outlets. This is emphasized by the fact that the contemplated increases in crude-oil production to supply the Trans Mountain and Superior-to-Sarnia pipelines would result in a marked increase in the output of natural gas, which, unless market outlets are developed, would be mainly wasted.

For the mineral industry as a whole, the outlook in mid-1953 appeared to be bright, an encouraging feature being improved prospects for the gold industry. Among the many favourable factors in the outlook for the metals are: the arrangements by the United States Government to purchase large quantities of Canadian-produced nickel over lengthy periods; the scheduled production of iron ore from the Quebec-Labrador deposits and from the deposits at Marmora, Ont., in 1954; and the rising tempo of activities in the principal metal-consuming industries in Canada and abroad. Perhaps the most favourable factor in the outlook for the industrial minerals is the steady increase in activities in the construction and related industries. Huge quantities of these minerals are required also in Canada's rapidly expanding chemical and metallurgical industries.

The developments in the mineral industry during the review period on a regional basis follow.

British Columbia.—Lead, zinc, copper, gold, coal, silver and iron ore make up the bulk of the Province's mineral output. Declines in the prices of lead and zinc led to the closing of several marginal producers and thus contributed to the decrease in the value of the Province's mineral output from \$176,279,000 in 1951 to \$172,907,000 in 1952. However, mining activity in the main was at a high level.

In the base-metal field, the Consolidated Mining and Smelting Company of Canada Limited made good progress on its \$65,000,000 modernization and expansion program. The rehabilitation of its lead smelter and the extension to its electrolytic zinc plant was nearing completion in June 1953 but, because of poor marketing conditions for lead and zinc, the Company decided not to place its H.B. property into production as planned. The mill extension to the Company's Tulsequah zinc-copper-lead mine in northern British Columbia was completed in January 1953 and the new fertilizer plant at Kimberley was ready for operation in mid-summer. Power generation at the Company's new Pend d'Oreille plant, scheduled to commence early in 1954, is expected to offset any further shortage of power such as that which forced a substantial reduction in the treatment of custom concentrates in the winter of 1952-53.

The mining of tungsten ore moved to the forefront as Canadian Exploration Limited, a subsidiary of Placer Development Limited, increased the capacity of its mill to 500 tons daily on ore being drawn from three sources—from its original Emerald orebody in the Salmo area, from the Dodger orebody discovered in 1951 about one-half mile east of the Emerald, and from the Feeney orebody to the north of the Emerald. The daily mill rate will be increased to 700 tons in 1953 as development and stoping become more advanced in the Dodger mine. One other property, the Red Rose mine south of Hazelton which is under lease to Western Tungsten Copper Mines Limited, came into production during the period and several others were under exploration.

The high quality of the asbestos fibre from the property of Cassiar Asbestos Corporation Limited in the McDame area of northern British Columbia makes production so distant from markets economically feasible. The entrance of this mine into production in July 1953 will, for the first time, add asbestos to the list of British Columbia's mineral products. The initial daily rate of 150 tons is expected to be increased to 500 tons by July 1954.

British Columbia has long had hopes of building up an iron-ore industry and these hopes now appear to be materializing. Argonaut Company Limited, the sole producer in January 1952, did considerable development work on its Quinsam Lake deposits and increased its production from 101,371 tons of magnetite concentrates in 1951 to 551,812 tons in 1952. This, coupled with the addition of a second producer, Texada Mines Limited, which brought two new orebodies on Texada Island into production, increased the Province's total output of magnetite concentrates to 760,828 tons in 1952. Meanwhile, extensive exploration was carried out on other known deposits including the Elk Lake magnetite property of Quatsino Copper Gold Mines Limited, where four orebodies were discovered.

Although copper production declined in volume in 1952, higher prices resulted in an increase in the value of output to \$12,476,000 compared with \$12,111,000 in 1951. Output, in the form of concentrate, comes mainly from the Copper Mountain copper-gold-silver mine of the Granby Consolidated Mining, Smelting and Power Company Limited, 12 miles from Princeton, and from the copper-zinc-gold-silver property of Britannia Mining and Smelting Company Limited at Britannia Beach. Concentrates are shipped to Tacoma, Washington, for refining. At Granby's Copper Mountain mine a substantial tonnage of ore was developed which can be mined economically by open-pit methods. The zinc content of the ore produced by Britannia Mining and Smelting exceeds that of the copper. Exploration was carried out on a number of copper showings throughout the Province. A recently discovered property in the area at the head of Portland Canal disclosed copper mineralization over a large area.

Other metal developments include the active exploration of the old Pacific Nickel Mines property near Choate and of a property 90 miles north of Kamloops on which uranium has been discovered.

The opening up of the Kitimat-Kemano district to industry and settlement by Aluminum Company of Canada's \$550,000,000 project is focusing increasing attention on the mineral potential of the whole region. Initial production from the project is expected to commence in 1954 and will amount to 83,000 metric tons of aluminum annually from an installation of 450,000 h.p. generating capacity. The whole project involves the development of over 2,200,000 h.p. of hydro-electric energy for an eventual annual output of 500,000 metric tons of aluminum.

Production of coal decreased slightly in 1952 to 1,644,000 tons. Bituminous coking coals, ranging from high to low volatile, are mined on Vancouver Island and in the Crowsnest, Telkwa and Nicola areas. Minor quantities of subbituminous coal are produced, mainly in the Princeton field. In the Kootenay (Crowsnest) area, medium-temperature oven by-product coke is manufactured, chiefly for industrial consumption. Crow's Nest Pass Coal Company Limited completed the installation of 16 additional by-product coke ovens in 1952 bringing its total to 52 coke ovens with a combined capacity of 500 tons daily. The coke is shipped to Consolidated Mining and Smelting Company at Trail and to the United States.

The discovery of extensive reserves of natural gas in the British Columbia section of the Peace River district is of outstanding importance. Proven gas reserves were officially estimated at approximately 1,600,000,000,000 cu. feet as at Aug. 31, 1952. Over 32,000,000 acres are held under permit in the area. Altogether, over \$8,000,000 was spent on exploration, drilling and geophysical work for natural gas and oil in the Province in 1952. A pipeline to bring the gas from the district into southern British Columbia and northwestern United States is under consideration (see under Alberta).

The construction of Trans Mountain's 711-mile, 24-inch oil pipeline from Edmonton to Vancouver is scheduled for completion in the autumn of 1953 and refinery facilities in the Vancouver area are being greatly extended to provide the extra capacity needed. The line will have an initial capacity of 120,000 bbl. a day which can be increased to 200,000 bbl. a day through the construction of additional pumping stations.

The Province's output of sulphur, gypsum, clay products, cement, sand and gravel, and other non-metallic minerals is, for the most part, used locally and, with the exception of cement, showed little change during the period. Cement production, however, advanced from 1,325,000 bbl. valued at \$3,311,000 in 1951 to 1,528,000 bbl. valued at \$4.046,000 in 1952.

Alberta.—Events in the oil and gas industry in Alberta, the heart of Western Canadian oil developments, moved more rapidly during the review period than at any other time since the discovery of Leduc in 1947. Over \$300,000,000 was spent on exploration and development in the Province in 1952 with the result that important extensions were made to existing fields. Several outstanding wells were discovered, the chief of which was in the Bonnie Glen-Pigeon Lake district, and reserves of crude petroleum increased to nearly 2,000,000,000 bbl. Production of oil rose from 45,915,000 bbl. valued at \$113,870,000 in 1951 to 58,677,000 bbl. valued at \$139,886,000 in 1952. (For further details on Alberta oil developments, see pp. 541-542.)

The outstanding event in the natural gas industry in Alberta was the permission granted by the Alberta Government to Westcoast Transmission Company Limited to export gas from the Peace River area (of both Alberta and British Columbia) by a pipeline to be built to Vancouver and thence south into the northwest area of the United States. Approval for the building of this line in Canada was given by the Board of Transport Commissioners at Ottawa and the matter of extending the line into the United States is before the Federal Power Commission at Washington. The line will be economical only if a considerable market becomes available in the United States; the amount of gas that can be sold in Canada alone would not justify the expenditure involved in building a line 645 miles long from Peace River to Vancouver through mountainous terrain.

New and important natural gas discoveries were made in 1952-53. In the more central part of Alberta gas continued to be discovered in large quantities as wells were drilled for oil. One of the largest gas discoveries, with only limited amounts of oil present, was in the Nevis area, 12 miles west of Stettler. Several wells have been completed in this field which may have a reserve of 500,000,000,000 cu. feet. The Alberta Petroleum and Natural Gas Conservation Board stated, in its report of March 1952, that "with a continued incentive for exploration for oil and gas resulting in the drilling of some 400 to 500 wildcat wells a year, the Province of Alberta can safely anticipate the development of further established reserves of natural gas at an

average rate of at least 1 trillion cubic feet a year for at least the next 8 to 10 years". The Nevis discovery alone is likely to provide half of that amount for 1952 and it is but one of several important areas discovered during the year.

In the Pigeon Lake area of Alberta the Leduc-Wizard Lake-Bonnie Glen trend was extended southwestward with the finding of more oil overlain by extensive gas caps. West of this, at Minnehik, a large gas discovery was made in the Mississippian limestone which is the productive horizon of the foothills areas. In the area south of Calgary a large flow of gas occurred in three Shell Oil Company wells drilled near Okotoks. A feature of this gas is the abnormally large content of hydrogen sulphide.

There are few areas in Alberta where drilling is being done that gas does not occur, but in many of these the gas is presently not considered important. Wells in many areas, however, have provided substantial flows, as for example in the Lac La Biche, Clive, Fort Saskatchewan, Big Lake, and Morinville areas north and east of Edmonton, and at Chancellor and along the Stettler-Big Valley reef trend farther south. Also in the Peace River area of Alberta two fields, Gordondale and Rycroft, added new reserves to those previously proven. In all, about 155 potential gas wells were drilled in Alberta during 1952 and the reserves have been increased by perhaps 3,500,000,000,000,000 cu. feet.

The requirements for natural gas in Alberta continued to increase but the reserves increased at an appreciably higher rate than the consumption so that there is need of finding additional markets. At the end of the review period, increasing thought was being directed toward opening up Ontario and the Montreal area to natural gas from Alberta and the other Prairie Provinces via a pipeline over an all-Canadian route which would cost an estimated \$300,000,000.

Developments in oil and gas have given rise to a rapid growth in refining capacity and to the establishment of a petrochemical industry in Alberta. To mention a few of the plants: Celanese Corporation of America by the end of June 1953 had nearly completed a \$55,000,000 plant just east of Edmonton, the output from which will include various industrial organic chemicals; nearby, Canadian Industries Limited had started to build a \$13,000,000 polythene plant; and at Fort Saskatchewan to the northeast of Edmonton, Sherritt Gordon Mines Limited was building a \$17,000,000 refinery in which ore from its Lynn Lake deposits in northern Manitoba will be processed.

In the tar sands along the Athabasca River, Alberta has what is believed to be the largest single oil reserve in the world. These sands contain reserves of oil estimated at from 100,000,000,000 to 250,000,000,000 bbl. Economic methods of extracting the oil from the sands were worked out on a pilot-plant scale by the Federal Government at Ottawa and by the Provincial Government on its pilot plant at Bitumount, 60 miles north of Waterways on the Athabasca River. During the review period, nine different companies secured exploration permits and were carrying out extensive drilling operations. Some were doing research on the different production and refining problems.

Alberta is Canada's principal coal-producing province and in 1952 contributed 41 p.c. or 7,195,000 tons of the total Canadian output. Production, however, continues to decline because of the increasing use being made of diesel engines by the railways and of oil and gas for domestic and commercial purposes. Output includes almost all ranks of coal including a small tonnage of semi-anthracite. Bituminous coals ranging from high to low volatile, which form the bulk of the output, are produced in the Crowsnest, Nordegg and Mountain Park areas, lower-rank

bituminous non-coking coals in several areas of the foothills, subbituminous coal in the Drumheller, Edmonton, Brooks, Camrose, Castor and Carbon areas, and coal on the border of subbituminous and lignite is produced in the Tofield and Redcliff areas. The Cascade area was the only field that produced semi-anthracite in 1952.

The coal industry continued its mechanization of surface and underground operations with the twofold objective of reducing production costs and of producing better-quality coal for marketing. Increasing attention was paid to the production of prepared coal such as briquettes and fabricoal for which there is a growing demand. Over 37 p.c. of the output was strip mined in 1952, a 5-p.c. decrease from 1951 owing partly to the closing of nine strip mines.

The presence of large quantities of natural gas in the Province has assisted greatly in the expansion of output of some of the industrial minerals. Sulphur was produced during the period for the first time in Alberta's history when Shell Oil Company of Canada began to recover, early in 1952, elemental sulphur at a rate of about 10,000 tons annually from the scrubbing of sour natural gas from the Jumping Pound field. The gas contains about 3.5 p.c. by volume of hydrogen sulphide and a 90-p.c. recovery of the sulphur is made. Royalite Oil Company Limited began the recovery of from 9,000 to 10,000 tons of elemental sulphur annually from a similar plant in its Turner Valley gas field in June 1952.

The Province possesses a steadily expanding clay-products industry which is centred mainly in the Medicine Hat area close to supplies of natural gas. Brick and tile products are made from clays and shales obtained within the Province. However, clays are imported from Saskatchewan for the production of sewer pipe, stoneware, etc., and from the United States for the production of tableware. The output of clay products in 1952 was valued at \$2,151,000 compared with \$1,788,000 in 1951.

Alberta also produces salt, cement and structural materials. Canada Cement Company Limited installed new kilns in its wet-process plant at Exshaw which contributed largely to the increase in the output of cement from 1,649,909 bbl. valued at \$3,898,043 in 1951 to 1,748,305 bbl. valued at \$4,388,245 in 1952.

Saskatchewan.—Developments in crude oil, natural gas and uranium have made the period covered by this review one of the most significant and fruitful in Saskatchewan's mining history. However, owing mainly to a decrease in production from the Flin Flon deposits that straddle the Saskatchewan-Manitoba boundary, the Province's mineral production decreased to a value of \$48,647,000 in 1952 compared with \$51,033,000 in 1951.

The search for oil and gas and other related developments reached a new high with expenditures amounting to upwards of \$40,000,000 in 1952 compared with \$20,000,000 in 1951. Developments taking place in the crude petroleum field are dealt with at p. 542. Proven reserves of natural gas rose to nearly 225,000,000,000 cu. feet by the end of February 1953. Production, which comes from the Unity, Brock and Lloydminster-Lone Rock fields, increased from 860,000,000 cu. feet in 1951 to 950,000,000 cu. feet in 1952. Several discoveries were made in the Coleville-Brock area. The Brock field, which was discovered in 1951 and to which extensions were made in 1952, appears to be the largest and most favourable gas reserve so far found in the Province. A distribution system using gas from the Brock field and serving the town of Kindersley and the village of Brock was constructed during the review period and plans were made to build a pipeline from the field to Saskatoon.

The Crown-owned Eldorado Mining and Refining Company's uranium property, Ace-Fay, in the Beaverlodge area north of Lake Athabasca, was put into operation in April 1953, bringing Saskatchewan to the forefront as a source of uranium ore. The mill has an initial capacity of 500 tons a day but is designed to permit an expansion to 2,000 tons daily. Several private companies are also active in the Beaverlodge area and underground exploration is being carried out at different properties. A rush into the area during the review period resulted in the staking of more than 1,000 claims, bringing the total number to over 3,000. Pitchblende discoveries were made on several properties, chiefly in the Milliken Lake part of the region; the discovery made by Gunnar Gold Mihes Limited in St. Mary's Channel is probably the most interesting.

The Beaverlodge district is opening up rapidly to settlement and three new communities are being built. Eldorado Mining and Refining Limited has nearly completed a large camp at Beaverlodge Lake including modern homes for its staff, a school and a hospital. A smaller settlement at Black Lake has been named Bushell. About midway between Beaverlodge and Bushell, the Saskatchewan Government has laid out a large townsite called Uranium City.

Several discoveries of uranium were also made in the Black Lake, Charlebois Lake and Lac La Ronge regions and, late in 1952, Eldorado staked a large block of claims in the Foster Lake area.

Until the entry of Eldorado's Ace-Fay mine into production, Hudson Bay Mining and Smelting Company Limited was Saskatchewan's only metal producer and in 1952 accounted for over 77 p.c. of the value of the Province's mineral output. More than half the production from the Company's Flin Flon copper-zine-gold deposits comes from the Saskatchewan side of the boundary. The Company also produces cadmium, selenium and tellurium. During the review period, the Company brought its slag-fuming plant into production and dropped its milling rate from 5,000 to 4,000 tons of ore daily in line with plans to decrease its milling rate without reducing the value of the metal output through the re-treatment of zinc plant residues in the new plant. Through its subsidiary, Hudson Bay Exploration and Development Company Limited, the Company carried out extensive exploration in the Canadian Shield area of Saskatchewan, particularly in the Birch Lake area where it is engaged in shaft-sinking operations on a promising gold-copper property and at Annabella Lake where it has been exploring claims.

Aside from the production from the Flin Flon deposits and more recently from the Ace-Fay mine, the Saskatchewan portion of the Canadian Shield, which underlies the whole northern third of the Province, has yielded relatively little mineral wealth to date. However, whole areas of this region are being explored and much staking has been in progress in the Lake Athabasca area.

Saskatchewan accounted for over 11 p.c. of Canada's volume of coal output in 1952, all the coal mined in the Province being lignite. Almost all of the 1952 output was strip-mined and came chiefly from the Bienfait district in southeastern Saskatchewan, the other main producing fields being Estevan and Roche Percee in the same area. Production in 1952 at 2,083,000 tons was 6 p.c. lower than in 1951. Approximately 65 p.c. of the output is shipped to Manitoba for domestic and industrial use.

The Province's output of non-metallics in 1952 comprised sand and gravel, sodium sulphate, salt and clay products, in that order. With the exception of salt, each showed declines in volume and value from 1951. The demand for sodium

sulphate, which comes from highly concentrated brines and from alkali lakes in southwestern Saskatchewan, remained good but output was affected by unfavourable weather. Prairie Salt Company Limited, wholly-owned subsidiary of Dominion Tar and Chemical Company Limited, recorded a new high of 34,000 tons in the production of fine salt from its vacuum plant at Unity. The brine comes from a salt bed 3,500 feet underground.

Oil drilling has brought extensive deposits of potash to light in several areas of the Province. Exploratory activity on these has been widespread with over 1,000,000 acres covered by pre-exploration permits. Western Potash Corporation Limited has commenced shaft-sinking operations on a deposit near Unity and Potash Corporation of America is investigating a deposit in the Quill Lake area.

Manitoba.—Most of the interest in mineral developments in Manitoba during the review period has been centred in the Lynn Lake area, 500 miles northwest of Winnipeg, where Sherritt Gordon Mines Limited has been busily engaged in preparing its copper-nickel orebodies for production, and in southwestern Manitoba where the discovery of crude oil a few years ago has been followed by the successful drilling of a number of wells and by a daily production of 1,200 bbl. (March 1953).

Indications are that production from the Lynn Lake deposits will commence before the close of 1953. In the underground work, major attention has been given to preparing the "A" orebody for mining. By the end of June, foundations for the mill had been laid and construction of the plant was in progress. The Laurie River power development was completed, construction of the refinery at Fort Saskatchewan in Alberta was proceeding, and construction of the 147-mile railway from Sherridon to Lynn Lake was scheduled for completion before the close of 1953.

Initially, the nickel concentrate from the Lynn Lake deposits will be shipped to Fort Saskatchewan for refining and the copper concentrate to Noranda Mines Limited, Noranda, Que., for smelting. Eventually, however, both the copper and nickel will be refined at Fort Saskatchewan. Present plans call for an annual production of 8,500 tons of nickel, 4,500 tons of copper, 150 tons of cobalt and 70,000 tons of ammonium sulphate for fertilizer. The leach process to be used to treat concentrates is expected to result in higher recoveries at lower costs than would be possible by use of conventional methods. Most of the sulphur in the concentrates will be converted into ammonium sulphate. Natural gas will be used as fuel at the Fort Saskatchewan plant and the Company has contracted for its requirements from Midwestern Industrial Gas Limited.

Aside from developments at Lynn Lake, exploration in northern areas of Manitoba has revealed extensive deposits of low-grade nickel which, in the light of a continued heavy demand for the metal and improved metallurgical practices, may some day prove mineable on a commercial basis. Canadian Nickel Company Limited, subsidiary of the International Nickel Company of Canada Limited, is exploring low-grade nickel bodies in the area about Mystery Lake and in the Grass River area. Berens River Mines Limited has also been exploring a deposit in the Mystery Lake area and is having tests made of the ore using the Sherritt Gordon leach treatment.

From its operations at Flin Flon, Hudson Bay Mining and Smelting Company Limited and its subsidiary, Cuprus Mines Limited, in 1952 produced 61,783 tons of refined zinc at its electrolytic zinc plant at Flin Flon, about 7,000 tons more than was produced in 1951. The output of zinc oxide from the slag fuming plant

put into operation in 1951 accounted for the increase. At the Company's mine which straddles the Manitoba-Saskatchewan boundary at Flin Flon, 1,559,081 tons of copper-zinc ore were hoisted in 1952 and 118,610 tons of zinc concentrate were produced. Underground development at its Schist Lake copper-zinc mine, 3½ miles south of Flin Flon, is being continued and the Company is developing several other deposits in the Flin Flon area but these are reported to be essentially copper orebodies containing little or no zinc.

Manitoba's gold production, at 142,000 oz. t. in 1952, was close to 22,000 oz. t. lower than in 1951. About 85 p.c. of the output came from the Nor-Acme mine at Snow Lake and from the San Antonio mine in the Rice Lake area and the remainder as a by-product of base-metal operations at Flin Flon. The decrease in production was caused by the closing of the Ogama-Rockland mine in 1951, by a decline of 5,000 oz. t. in Nor-Acme's production, and by a decline in output from the Flin Flon operations. Production from San Antonio increased almost 4,000 oz. t. over that of 1951.

In addition to the exploratory activity in the search for nickel in the Precambrian areas of northern Manitoba, other companies explored copper and zinc prospects in the Herb and Dion Lake areas. In southeastern Manitoba, Falconbridge Nickel Mines Limited drilled a nickel-copper occurrence in the Bird River area and Gunnar Gold Mines Limited explored chromite bodies at Euclid Lake to the north of Bird River.

Of the several significant oil finds made, one—a Daly well near Virden—has developed into an oilfield and drilling results indicate the possibility of other producing areas. Production of crude petroleum increased from 10,698 bbl. valued at \$26,500 in 1951 to 80,000 bbl. valued at \$196,000 in 1952. No commercial finds of natural gas have been made as yet in Manitoba.

The Province's output of industrial minerals, including structural materials increased from \$8,399,000 in 1951 to \$8,820,000 in 1952 and comprised cement, sand and gravel, stone, lime, clay products, gypsum, and salt, in that order. Canada Cement Company Limited increased the output from its plant at Fort Whyte by 75,000 bbl. over that of 1951 to 1,615,000 bbl. in 1952. Manitoba's gypsum production, which showed a slight increase in both volume and value of output over that of 1951, is mined by Gypsum, Lime and Alabastine (Canada) Limited at Gypsum-ville, and by Western Gypsum Products Limited at Amaranth.

Salt production showed little change. During the review period, Canadian Salt Company Limited bought the Neepawa salt well property from which salt brine has been produced continuously since 1935.

Activity within the bentonite industry gave indication of an increased output in the near future. This included the taking over of the crushing and drying plant of Pembina Mountain Clays Limited at Morden and an activating plant at Winnipeg by Industrial Minerals Corporation of New York, and the exploration of deposits in the Miami-Morden district by Actiloids Limited of Winnipeg.

Ontario.—Ontario is Canada's leading mineral-producing province and in 1952 accounted for 34·3 p.c. of the value of the Canadian mineral output. Nickel, gold and copper, in that order, were the chief contributors, followed by sand and gravel, iron ore, the platinum metals, cement, clay products, lime, silver, salt and asbestos. Ontario produced all of the Canadian output of nickel in 1952, all of the

platinum metals, cobalt, nepheline syenite and graphite, and most of the salt. It also accounted for over half of the total Canadian output of iron ore and of gold, and approximately half of the copper.

Developments in the nickel industry point to a considerable expansion in Canada's nickel potential and, because of the short supply of the metal, have attracted much attention. They include: the continued expansion of facilities by the two main producers, International Nickel Company of Canada Limited and Falconbridge Nickel Mines Limited; the shipping of development ore by East Rim Nickel Mines Limited and Milnet Mines Limited in the Sudbury Basin to Falconbridge Nickel Mines; and the promise of production from a third company, Nickel Offsets Limited, during 1953.

Production of nickel in all forms in 1952 was 280,013,300 lb., valued at \$150,908,900, an increase of slightly more than 4,200,000 lb. over 1951 and about 8,000,000 lb. short of 1943, the peak year. All but a small part of the output in 1952 came from the mines of International Nickel Company and Falconbridge Nickel Mines. The remainder originated in silver-cobalt ores from the Cobalt area, which were treated by Deloro Smelting and Refining Company Limited. About 55 p.c. of the nickel produced was refined at International Nickel Company's plant at Port Colborne, Ont.

With the full changeover to underground operations anticipated during 1953, International Nickel Company will have completed the \$150,000,000 expansion program commenced five years ago. This changeover will mean the mining of approximately 13,000,000 tons of ore a year from underground for the production of approximately 250,000,000 lb. of refined nickel. The program includes the mining of low-grade ore at the Creighton mine and the erection of a 12,000-ton concentrator at that mine, the introduction of the flash-smelting of copper concentrates at the Company's plant at Copper Cliff, and extensive underground development in the Company's various mines, which now totals more than 325 miles.

Ore mined from underground and surface in 1952 amounted to 13,248,593 tons, the highest tonnage produced in the Company's history. Ore lifted from underground was 10,196,068 tons compared with 7,780,143 tons in 1951 and with 5,733,269 tons in 1950. Production of nickel in all forms amounted to 249,017,358 lb., an increase of over 5,000,000 lb. compared with 1951.

Falconbridge Nickel Mines produced over 28,000,000 lb. of nickel in 1952 and plans to greatly expand its output in the next few years. A fourth converter has been installed in the smelter and the preparation of the new Hardy mine for production is nearing completion. At Fecunis Lake in the Levack area on the north side of the Sudbury Basin, a large new orebody was discovered during the review period and initial results from extensive investigation indicate over 10,000,000 tons of copper-nickel ore with an average grade equal to the main Falconbridge body. Numerous additions were also made to the Company's refinery at Kristiansand in Norway.

With the prime purpose of developing its properties and of modernizing its treatment facilities, Falconbridge Nickel entered into contract (announced in February 1952) with the United States Defense Materials Procurement Agency to supply up to 75,000,000 lb. of nickel, 1,500,000 lb. of cobalt and up to 25,000,000 lb. of copper over a nine-year period. In a second contract (announced in April 1953) the Company agreed to furnish, by mid-1962 at market price, 100,000,000 lb. of nickel over and above the tonnage specified in the 1952 contract. The United States

Government will also buy from the Company an additional 50,000,000 lb. of nickel within this period, if available, and, at option, another 50,000,000 lb. at market price between 1962 and mid-1967 as well as up to 52,000,000 lb. of copper by the end of 1958 at prices ranging from 19.5 cents to 30 cents a lb., and large amounts of cobalt at \$1.80 a lb. or at market price if higher. First deliveries of nickel, totalling 2,000,000 lb. under the second contract, were to be made in 1953.

The 1953 contract means a \$42,000,000 expansion of mine and mill facilities and an increase in production of from 25,000,000 to 30,000,000 lb. of nickel per year for a regular annual output of from 55,000,000 to 60,000,000 lb. It involves development to production of the Company's Fecunis Lake property, an extension of its smelting facilities in the Sudbury area and a further expansion of the capacity of its Norway refinery from 30,000,000 to 40,000,000 lb. a year.

The United States Defense Procurement Materials Agency also signed contracts with East Rim Nickel Mines Limited and Milnet Mines Limited for over 4,000,000 lb. of nickel. In each case, Falconbridge Nickel Mines is the smelting and refining agent. East Rim Nickel Mines began shipping development ore to the Falconbridge mill for concentration during 1952, reaching a rate of 3,000 tons a month late in the year. East Rim's own 1,000-tons-per-day mill is expected to be completed in the autumn of 1953. Milnet Mines Limited began sinking a 400-foot shaft with plans to mine 300 tons a day. Nickel Offsets Limited has been doing underground development and has a 300-ton mill under construction.

Developments within the iron-ore industry at the various properties during the review period greatly enhanced Ontario's potentialities as a producer of iron ore. Steep Rock Iron Mines Limited continued to carry out a large-scale expansion program on its hematite deposits in northwestern Ontario. Major projects were the preparation of the Errington underground mine for operation and its Hogarth orebody for open-pit mining, both of which were scheduled to start in 1953. Production in 1952 totalled 1,274,666 long tons, a slight decrease from 1951, and was drawn entirely from the Errington open pit in which operations were expected to cease in mid-1953 after the removal of 800,000 tons of ore. Production in 1953 is estimated at from 1,250,000 to 1,500,000 tons and will be drawn from the Errington open pit, the Errington underground mine and the Hogarth open pit. The 1954, 1955 and 1956 tonnages for the Errington and Hogarth ore bodies are estimated at 2,000,000, 3,000,000 and 3,500,000 tons, respectively.

Caland Ore Company Limited, a subsidiary of Inland Steel Company, leased the "C" orebody of the Steep Rock deposits from Steep Rock Mines Limited and plans to spend \$50,000,000 on the leased area to develop it toward production, possibly by 1960. Projected annual output is 3,000,000 tons.

Algoma Ore Properties Limited, Ontario's only other producer of iron ore at present, carried out extensive underground development at its Helen and Victoria mines in the Michipicoten area in preparation for mining at greater depth. Production consists of siderite which is sintered at Jamestown, three miles from the Helen mine. The Company is expanding its sintering facilities from 1,200,000 to 1,600,000 tons a year to handle the anticipated increase in ore production. The siderite contains about 35 p.c. iron. Algoma Ore Properties holds other properties in the Michipicoten area including the Alexander mine which is east of the Victoria mine, the Goulais River Iron Range, the Goudreau pyrite property, the Bartlett siderite property, the Johnson Location, and the Siderite Hill group.

In southeastern Ontario, Marmoraton Mining Company Limited proceeded with the removal of 20,000,000 tons of limestone capping on its magnetite deposit near Marmora about 32 miles east of Peterborough, with a view to production before the end of 1954. The construction of permanent repair shops, warehouses, change room and offices is nearing completion. Engineering plans are being prepared with a view to construction of the hoisting, crushing and magnetic concentration plants during 1953 and 1954. The concentrator is being designed for annual production of 500,000 net tons of concentrates, which will be agglomerated and shipped by rail to a new pier to be constructed on Lake Ontario, near Picton, Prince Edward County. Lake ore-carriers will transport the product to the Bethlehem Steel Company plant at Lackawanna, near Buffalo, New York. The Federal Government has completed hydrographic surveys at the port site and construction is expected to commence during 1953.

Several companies were engaged in exploratory and development activity on various properties but, up to the end of June 1953, none had announced definite production plans.

Despite increased operational costs, a fixed price for gold, and the exchange losses due to a strong Canadian dollar, Ontario's gold industry continued to be quite active. Output in 1952 decreased to 2,458,359 oz. t. valued at \$84,247,963 compared with 2,462,979 oz. t. in 1951 valued at \$90,760,776. There were 36 actual gold producers in the Province at the end of April 1953. During the review period, three new mines, Bonwhit, Hugh-Pam and Tisdale Ankerite, all in the Porcupine camp, came into production and one mine, Theresa of Theresa Gold Mines Limited in northwestern Ontario, resumed operations. Ten mines ceased operations.

Development work was carried out at several mines with encouraging results, particularly in the Porcupine area, Canada's greatest gold-producing camp, where most of the mines were engaged in underground exploration and development. In the Larder Lake camp, Kerr-Addison Gold Mines Limited obtained outstanding results in the development of high-grade ore at depth and recorded a new high in output. Production in the Kirkland Lake area dropped in 1952 mainly because of difficulties in operation at Lake Shore Mines Limited. In the Patricia and Thunder Bay areas several mines opened up better-grade ore and generally made up for losses incurred by other producers. Mines showing gains in output included Campbell Red Lake Mines Limited in the Patricia district and MacLeod-Cockshutt Gold Mines Limited in the Thunder Bay region.

Ontario's output of cobalt increased sharply to 1,303,400 lb. in 1952 from 951,607 lb. in 1951 while that of silver showed an increase of 1,750,000 oz. t. over the 1951 production to 6,274,359 oz. t. in 1952 despite a drop of 5 cents an oz. t. in the price of silver. Demand for cobalt continues to increase as new uses develop and the United States Government late in 1952 announced a further increase of 6,000,000 lb. in its projected cobalt needs for 1955 to 27,000,000 lb., more than two and a half times its 1950 requirements.

Output continued to come mainly from a small group of producers in the Cobalt camp, and partly as a by-product of base-metal operations in the Sudbury area. Shipments from the Cobalt camp were made in the form of straight cobalt concentrates and of cobalt-silver concentrates. A smelter is being built south of the town of Cobalt to turn out refined cobalt, silver and nickel.

Exploratory and development activity particularly for base metals remained at a high level. In the Sudbury area, Ontario Pyrites Company Limited entered into a broader program of development at its two zinc-copper-lead-silver-gold properties in the belief that operations on a larger scale than was originally intended may be warranted. Underground exploration greatly increased known ore reserves and metallurgical tests are being carried out on the ore to determine the most suitable method of treatment. Geneva Lake Mines installed a 150-ton mill at its zinc-lead property at Lake Geneva, 40 miles northwest of Sudbury, but the Company deferred commencement of production pending an improvement in metal prices.

In the Kenora district, Quebec Nickel Corporation Limited carried out surface exploration and diamond drilling on a copper-nickel deposit near Werner Lake and a nickel-copper prospect near Emo in the Rainy River district was diamond drilled by Ventures Limited and Falconbridge Nickel Mines. In the Temiskaming district, New Ryan Lake Mines Limited commenced the production of copper concentrates from a mill at Matachewan with a 100-ton-a-day capacity. Toward the end of the review period, columbium-tantalum-uranium deposits were discovered on the Manitou Islands in Lake Nipissing. Inspiration Mining and Development Company Limited is exploring the deposits and having tests made of the ore in order to work out possible methods of treatment.

Ontario's output of industrial minerals was valued at \$76,839,000 in 1952 compared with \$73,818,000 in 1951 and was comprised mainly of structural materials, salt, asbestos, nepheline syenite and gypsum.

A widespread search for new asbestos deposits was carried out in northern Ontario particularly in the vicinity of the Munro asbestos mine in Matheson township and in the Timmins area. Fibre from a deposit in the latter area was being tested at the end of the review period. Meanwhile, production at the Munro mine continued at about 2,000 tons a month. Fibre from the operations is short and is used by Canadian Johns-Manville Company Limited to make various asbestos products.

Ontario accounted for 77 p.c. of the Canadian volume of output of salt in 1952. Output, which that year amounted to 766,000 tons with a value of \$4,518,000, comes from wells drilled into salt beds that lie from 800 to 1,500 feet below the surface at Goderich, Sarnia, Warwick and Sandwich in southwestern Ontario.

Cement production in 1952 declined in volume to 5,433,263 bbl. but advanced in value to \$13,517,086 compared with the 1951 output of 5,438,101 bbl. valued at \$12,494,677. Cement-producing facilities were expanded by Canada Cement Company Limited in its plant at Belleville and by St. Mary's Cement Company Limited in its St. Mary's plant.

American Nepheline Limited continued to be the sole producer of nepheline syenite in the Western Hemisphere. Output, which comes from extensive deposits on Blue Mountain in Peterborough County, increased by 4,000 tons over the 1951 output to 85,500 tons in 1952 valued at \$1,116,500.

A significant development during the review period was the discovery of deposits of kyanite near Mattawa and in the Wanapitei area east of Sudbury. This mineral is of value as a ceramic refractory. Ore from deposits in both areas is being tested to ascertain whether commercial development is warranted.

Production of natural gas in 1952 amounted to 7,916,000,000 cu. feet valued at \$3,166,400 and of crude petroleum to 192,000 bbl. with a value of \$660,480. In all, 168 successful gas wells were completed in southwestern Ontario in 1952 of which

160 resulted from development drilling and eight from exploratory tests. The exploratory tests resulted in four gas discoveries, three of which are in Lambton County and the other in Elgin County. An estimated 32,000,000,000 cu. feet of gas was added to the reserves.

Three hundred and fifty-four wells were drilled for oil in 1952, of which 86 were exploratory tests and 268 were development wells. The exploratory tests resulted in three shallow oil wells, eight gas wells and 75 dry holes. The development drilling resulted in 25 oil wells, 160 gas wells and 83 dry holes. Exploratory drilling in 1952 added about 70,000 bbl. of oil to existing reserves.

Quebec.—Mining in Quebec, Canada's second largest mineral-producing province, has continued to forge ahead. During the review period the great new iron-ore industry on the Quebec-Labrador boundary moved much nearer to completion and, coupled with developments in copper and zinc and with exploratory achievements in Chibougamau and Ungava, give promise of a steadily increasing metal output in coming years. In 1952 the value of mineral production increased to \$267,259,931 compared with \$255,530,071 in 1951. Outstanding gains in value of output were made by asbestos, cement, lead, sulphur and titanium dioxide. The volume of output of zinc, gold and silver increased considerably in each case but, because of price declines, output values were lower than in 1951. Asbestos accounted for more than 32 p.c. of the total value of Quebec's mineral output in 1952.

Much progress is being made by Iron Ore Company of Canada on its \$200,000,000 Quebec-Labrador iron-ore project. With a force of up to 6,300 men employed on various phases of the project, construction of the 358-mile railway and terminal, power, dock and townsite facilities was proceeding at a rapid rate at the end of the period. Every effort is being made to complete the railway in 1953. Work on the giant ore docks at Seven Islands was nearing completion and the construction there of staff houses, shops, warehouses, offices, etc., will continue throughout 1953. Work was started on the power site at Ste. Marguerite River, which will supply power for the docks and the townsite at Seven Islands and which will be completed in 1954.

Although the activities of the exploration and mining departments were dwarfed by the construction effort on other phases of the iron-ore project, considerable work was accomplished during the review period in readying the mines for production. Ferriman No. 3 deposit in Quebec and Ruth Lake No. 3 deposit in Labrador will be the first to be brought into production. Each contains an estimated 20,000,000 tons of ore available for open-pit operation. Although work on the Knob Lake townsite had been started, the major construction program on shops, warehouses, offices and residences will not get under way until 1954.

Total expenditure on the iron-ore project by the end of 1952 was \$113,000,000 of which \$62,000,000 was spent during 1952 for equipment, supplies and labour. Shipments of approximately 1,000,000 tons are expected to be made in 1954 and these are to be increased steadily until the minimum specified yearly rate of 10,000,000 tons is reached.

Exploratory activity north of Knob Lake in Ungava is revealing extensive iron-ore deposits. Fenimore Iron Mines Limited discovered a large deposit of siderite named Gossan Hill about 80 miles from tidewater at Fort Chimo and approximately 225 miles north of Knob Lake. The Company plans to carry out extensive drilling on the deposits and to test the ore to ascertain whether a concentrate of suitable grade can be produced. The ore can be mined by open-pit methods.

The Cyrus Eaton interests late in 1952 announced the discovery of large mediumgrade deposits of hematite immediately north of the Fenimore deposits and about 300 miles north of Iron Ore Company's project. Pilot-plant tests show the ore to be amenable to beneficiation and shipments can be made by sea from Ungava Bay ports.

Fort Chimo Mines Limited, a subsidiary of Frobisher Limited, is carrying out geological mapping and trenching on its concession about 180 miles northwest of Knob Lake. A deposit of manganiferous hematite has been discovered about four miles south of the north boundary of the concession and, although the silica values in the ore are above the commercial limit for lean iron ore, further trenching and possibly drilling are considered justified.

Meanwhile, base-metal production decreased almost \$1,000,000 in value from 1951 to 1952 because of the decline in the prices of zinc, gold and silver. Noranda Mines, Quebec's leading producer, reported a general gain in volume of output. From its Horne copper-gold-silver-pyrite mine at Noranda in western Quebec, it produced 50,760,000 lb. of copper and 200,280 oz. t. of gold during 1952 compared with 50,630,000 lb. of copper and 194,470 oz. t. of gold in 1951. In all, that is including its treatment of custom ores, it produced 141,115,000 lb. of new copper and 352,690 oz. t. of gold in 1952, an increase of 3,230,000 lb. of copper over that of 1951. The gold output was about the same.

Late in 1952 the Company made the necessary financial arrangements covering the bringing in of its Gaspe deposits by a subsidiary, Gaspe Copper Mines Limited, early in 1955. During the review period, development was continued on these deposits which contain an estimated 67,000,000 tons of ore. A modern townsite has been laid out and plans drawn up for a plant designed to treat 6,500 tons of ore daily and a smelter production of 125 tons of copper anodes. Arrangements have been completed for the supply of power from the Quebec Hydro-Electric Commission's power project on the Bersimis River on the north shore of the St. Lawrence River, which will involve the laying of a 31-mile submarine cable across the river and 135 miles of surface transmission lines to the Company's property by late 1954.

Noranda's proposed expenditure of \$30,000,000 also includes the development of the Macdonald Mines Limited zinc-pyrite property about seven miles from Noranda, and the construction of a \$4,000,000 plant at Welland, Ont., for the production of elemental sulphur, sulphur dioxide and high-grade iron sinter. The new Welland plant, which is expected to be in operation by mid-1954, will treat about 350 tons of pyrite concentrates a day. At the Macdonald property, the Company will design and supervise the construction of a mill with a minimum capacity of 1,500 tons a day and other necessary mine equipment.

Among Quebec's other base-metal producers, increases in volume of output were recorded by East Sullivan Mines Limited, where depth development revealed good values in both zinc and copper, and by Waite Amulet Mines Limited, which brought its East Waite mine into production during the review period. On the other hand, decreases in volume of output were reported by several companies including Quemont Mining Corporation Limited and Normetal Mining Corporation Limited. Ascot Metals Corporation Limited, which has been operating two mines, the Moulton Hill and the Suffield, has announced its intentions of closing down the Moulton Hill mine and of concentrating on production from the Suffield which is more economical to operate. In Montmagny township southeast of Quebec city,

Eastern Metals Corporation Limited is carrying out underground development on a nickel-zinc-copper deposit with interesting results. Tentative plans have been made to deepen the shaft to 1,000 feet.

Barvue Mines Limited, near Barraute in western Quebec, commenced tuning in its new 6,000-ton concentrator in November 1952 at about 50 p.c. capacity; gradually increasing this until, by the end of the review period, its average daily milling rate was 4,270 tons. The Barvue deposit, estimated to contain 18,000,000 tons averaging  $3\cdot 3$  p.c. zinc, is being mined by open-pit methods. Operations at the mine are not affected by the decline in the price for zinc as the Company still has about two years to go on a contract for the supply of 175,000 tons of concentrates at  $17\frac{1}{2}$  cents (U.S.) a pound.

Despite higher operating costs and lower profits, Quebec's gold output increased by 42,000 oz. t. to 1,109,677 oz. t. in 1952. However, the value of output at \$38,029,000 in 1952 was more than 3 p.c. lower than in 1951. The increase in volume of output was due chiefly to the attainment by Lamaque Gold Mines Limited in the Val d'Or area of its objective of 2,000 tons a day early in 1952, and to the entry into production of the new 500-ton mill of Bevcourt Gold Mines Limited in Louvicourt township in mid-year. East Malartic Mines Limited, Fournière township, found good ore on the deeper levels and Barnat Mines Limited, in the same area, increased production from its north zone. Quebec's base-metal mines accounted for 25 p.c. of the total Canadian gold output in 1952. Two of the smaller mines, Quesabe Mines Limited, Duprat township, and Heva Gold Mines Limited, Rouyn district, were closed because of failure to find new ore.

Quebec Iron and Titanium Corporation made considerable headway in the mining and experimental treatment of ilmenite ore from its deposits in the Allard Lake area. Primary crushing commenced at the mine, following completion of an electric power line from Havre St. Pierre to the mine, instead of at Havre St. Pierre itself. At Sorel, the Corporation installed a conveyor belt and dock facilities for the loading and shipment of titanium dioxide slag by water, a new pig-casting machine for the production of iron in a size suitable for the primary iron and steel industry and it placed furnaces No. 2, No. 3 and No. 5 into operation. When all five furnaces are in operation, the plant capacity will be 1,500 tons of ore daily for an annual output of 250,000 tons of titanium dioxide slag and 175,000 tons of high-grade iron. The Corporation did no further work during the review period on the delineation of its orebodies in the Allard Lake area and ore reserves remain at from 125,000,000 to 150,000,000 tons of ilmenite.

The Chibougamau area, 210 miles northeast of Noranda, continued to receive major attention, having been made accessible by means of a 165-mile all-weather road from the Lake St. John district to the village of Chibougamau. Exploratory and development activity was at record levels. Four properties, Opemiska Copper Mines (Quebec) Limited, Campbell Chibougamau Mines Limited, Merrill Island Mining Corporation Limited, and Chibougamau Explorers Limited, were on the threshold of production and several other companies were exploring and developing properties throughout the district, many with promising results.

Chibougamau Explorers completed a 600-foot shaft to open three levels. Campbell Chibougamau Mines Limited was sinking a four-compartment shaft to a depth of 1,000 feet on the Merrill group in Obalski and McKenzie townships,

where ore reserves are estimated at 1,050,000 tons, and Opemiska Copper Mines began construction of a 400-ton mill with production planned in 1953. Connecting roads have been built into the properties from the highway.

Production of non-metallics increased in value from \$135,284,079 in 1951 to \$147,812,017 in 1952. Of this, the output of asbestos, which comes from seven producing companies, accounted for \$85,025,942 in 1952, an increase of \$7,398,079 over that of 1951 owing partly to an increase in prices and partly to the mining and marketing of better-grade material. Actual volume of output in 1952, however, amounted to 943,123 tons, a decrease of 3,487 tons below that of 1951.

During the past few years, much expansion has taken place in the asbestos industry. The leading producer, Canadian Johns-Manville Company Limited, is expanding and modernizing its facilities at Asbestos where it operates the Jeffrey mine, the world's largest asbestos mine. The Company is rebuilding and enlarging its mill and making a gradual changeover to underground mining. Expansion programs are also being carried out by: Asbestos Corporation Limited which has four producing mines, King and Beaver at Thetford Mines, British Canadian at Black Lake, and Vimy in Coleraine township; Johnson's Limited which operates an underground mine at Thetford Mines and an open pit at Black Lake; and Bell Asbestos Mines Limited which has converted its operation at Thetford to underground mining. Other producing companies comprise Flintkote Mines Limited a few miles east of Thetford Mines, Quebec Asbestos Corporation Limited at East Broughton, and Nicolet Asbestos Mines Limited at St. Remi de Tingwick.

Dominion Asbestos Mines Limited plans production in 1953 from a deposit near St. Adrien, Wolfe County. Exploratory and development work is being carried out at a number of other properties.

Cement and other structural materials, magnesitic dolomite, sulphur and titanium dioxide make up most of the remainder of non-metallic production. Cement production increased almost 260,000 bbl. in volume of output in 1952 over 1951 to a total of 7,312,537 bbl. valued at \$19,027,592. Production comes from the wet-process plants of Canada Cement Company Limited at Montreal and Hull and from the new plant of Le Ciment Québec at St. Basile where new kilns are expected to go into production later in 1953 bringing plant capacity to 1,500,000 bbl. a year.

Increasingly large quantities of sand and gravel are being produced by Quebec's 52 operators for use in concrete works, buildings and road construction. Production in 1952 increased to 33,687,000 tons valued at \$11,787,000 compared with 31,298,000 tons valued at \$10,617,000 in 1951.

Quebec is the only source of magnesia minerals worked in Canada for magnesia products. Output rose in value from \$2,438,000 in 1951 to \$2,914,000 in 1952. Dolomitic magnesite is mined by underground methods at Kilmar in Argenteuil County to supply raw materials for the basic refractories plant of Canadian Refractories Limited. At Wakefield, Aluminum Company of Canada Limited recovers magnesia from a deposit of brucitic limestone.

Sulphur showed a marked increase in volume and value of output in 1952 increasing from 161,489 tons valued at \$895,253 in 1951 to 219,738 tons valued at \$1,519,149 in 1952. Output consisted of sulphuric acid which is produced from domestic by-product pyrite by Nichols Chemical Company Limited at its Valleyfield plant where current plant expansion will approximately double the previous plant output. This production was augmented during the review period by Aluminum

Company of Canada Limited when it began the manufacture of sulphuric acid at a new plant at Arvida from gases resulting from the roasting of zinc concentrates produced by Barvue Mines Limited.

New Brunswick.—Chief development in mining during the review period was the discovery, late in 1952, of what appears to be an important zinc-lead-silver-copper property near Bathurst in the northeastern part of the Province. Because of the fact that New Brunswick has never had a metal production of any consequence, the discovery has opened up whole new possibilities in mining and has raised much interest in the Province's base-metal potentialities.

The discovery was made as a result of drilling and geophysical surveys of an old iron-ore concession about 16 miles south of the town of Bathurst. Extensive reserves of good grade ore have been outlined and the presence of tin in the orebody has been confirmed. The Brunswick Mining and Smelting Corporation is planning to carry out extensive geophysical work on the property. It has leased from the Provincial Government an old railway into the property for a period of 10 years and has made tentative plans for an initial mill production of 5,000 tons.

Prior to this discovery, several companies were busily engaged in exploring and developing properties in northeastern New Brunswick. These include M. J. O'Brien Limited and Noranda Mines Limited with lead-zinc-silver-copper properties approximately 16 miles north of the Brunswick Mining and Smelting Corporation property; New Calumet Mines Limited on its Orvan brook deposit, 35 miles to the northwest; and Keymet Mines Limited with a lead-zinc prospect 32 miles to the north. News of the discovery gave rise to extensive staking in the vicinity and beyond and, by the end of May 1953, an estimated 25,000 to 30,000 claims had been staked in northern, western and southern New Brunswick. Promising occurrences are known in several of these areas and there is every likelihood that others will be found as a result of such widespread exploratory activity.

Mining has always been one of New Brunswick's lesser industries, the value of mineral production having ranged from a low of \$420,227 in 1899, the first year of recorded production in the Province, to a high of \$12,756,975 in 1950. In 1952 New Brunswick ranked tenth among the Canadian provinces and territories with an output valued at \$12,035,360. This represented a 25-p.c. increase over the 1951 value owing mainly to the introduction of a cement industry and to an increase in the output of coal, the chief mineral product.

Coal in 1952 accounted for over 46 p.c. of the total value of output. Production, which has been increasing steadily, reached a new high of 742,823 tons valued at \$5,836,736 compared with 653,439 tons valued at \$4,822,869 in 1951, the previous high. Production comes from in and around the Minto area, about 40 miles from Fredericton, and is a high volatile bituminous coking coal. About 90 p.c. of the output is strip-mined.

Other mineral production consists of sand and gravel, cement, clay products, gypsum, lime and minor quantities of natural gas and crude petroleum. Production of these minerals in 1952 was valued at \$6,419,360.

Cement appeared on the list of New Brunswick's mineral products during the review period for the first time in the Province's history when Canada Cement Company Limited put its new plant at Havelock, the only dry process plant in Canada, into operation early in 1952. Production that year totalled over 592,000 bbl. valued at more than \$1,500,000. Plant capacity is 800,000 bbl. a year. Limestone and shale for the manufacture of the cement are drawn from deposits in the vicinity of the plant.

Gypsum production, which in 1952 totalled almost 108,000 tons, showed little change and came from deposits in the Hillsborough area. Output was manufactured within the Province into all grades of plaster and wallboard including high-quality plasters for specialized uses.

Small quantities of natural gas and crude petroleum are produced in the Stony Creek field about nine miles south of Moncton. Output of natural gas in 1952 amounted to 200,200,000 cu. feet valued at \$148,710 compared with 261,579,000 cu. feet in 1951 valued at \$194,312. Crude petroleum production in 1952 totalled 14,500 bbl. valued at \$20,300.

Nova Scotia.—Coal-mining forms the core of the mineral industry in Nova Scotia and in 1952 accounted for almost 80 p.c. of the total value of the Province's mineral output. Industrial minerals—particularly gypsum of which Nova Scotia is the leading Canadian producer, barites most of the Canadian output of which is produced within the Province, and salt—account for the bulk of the remaining output. Total production in 1952 increased \$3,814,217 over 1951 to a total value of \$63,541,473 owing mainly to the addition of the output of zinc, lead, copper, silver and gold from the reopened Stirling mine of Mindamar Metals Corporation Limited in Richmond County and to an increase in the output value of coal.

High and medium volatile bituminous coking coals are produced in the Sydney, Cumberland and Pictou areas, and some non-coking bituminous coal is mined in the Inverness area. Coal output increased in value from \$49,113,932 in 1951 to \$51,227,678 in 1952 but decreased in volume from 6,307,629 tons to 5,905,265 tons. It is used mainly to supply the requirements of the railways of the area, the steel and paper industries, for local domestic use and to produce electric power.

The largest operator, Dominion Steel and Coal Corporation Limited, operates a group of mines in the Sydney area for the production of coke for its steel plants and for commercial purposes. In order to overcome steadily increasing costs of haulage into submarine workings, the Corporation is building a 6,225-foot inclined tunnel into its workings to transport men, material and coal to and from the surface. Mechanization of the coal mines continues and most of the main coal mines are now fully mechanized. Nine Dosco 'miners', a machine recently developed by the Dominion Steel and Coal Corporation which cuts and loads coal at the rate of 500 tons in eight hours, are now in use in the Province.

The Federal and Provincial Governments continue to carry out extensive research on coal in Nova Scotia. This includes co-operative stratigraphic, structural and petrographic studies of the coal deposits of the Sydney coalfield and is intended essentially to assist development and prolong the productive life of the field.

In the industrial minerals field, production in the main showed little change in 1952 from 1951. Gypsum declined in volume from 3,190,030 tons in 1951 to 2,968,537 tons in 1952 but increased in value from \$4,107,822 in 1951 to \$4,192,858 in 1952. Nova Scotia that year accounted for over 82 p.c. of the total Canadian output. Canadian Gypsum Company Limited, the largest producer, operates quarries at Wentworth near Windsor in Hants County and ships the output to its plants in the United States. National Gypsum Company (Canada) Limited operates

quarries for export purposes at Walton in Hants County and at Dingwall in Victoria County. The output is shipped to Company plants in the United States. A small percentage of the output from Dingwall is shipped to gypsum plants in Quebec and to cement plants in Eastern Canada. Windsor Plaster Company Limited produces raw gypsum from a small quarry near Brooklyn for its plaster mill at Windsor, and Victoria Gypsum Company Limited operates a quarry at Little Narrows and ships the gypsum to the United States and to the West Indies.

Nova Scotia possesses Canada's largest known reserves of barites and one of the largest barites deposits in the world in the Pembroke-Walton area of Hants County. The deposit was discovered in 1940 and went into production in 1941. In 1952, the Province accounted for over 99 p.c. of the total Canadian production of barites and Canadian Industrial Minerals Limited with mine and mill at Walton produces most of the output. Production in 1952 increased to 118,630 tons valued at \$1,355,564 from 96,865 tons valued at \$1,115,693 in 1951 and comprised crude barites for the chemical trade and ground barites for industrial filler, paint and drilling mud. Almost the entire output is exported, more than half as crude. During the review period the Company set under way a stripping program which has made available 1,000,000 tons of ore for open-pit operations.

Salt is produced in Nova Scotia by the mining of rock salt and by the brining process. The only salt mine in Canada is operated at Malagash in Cumberland County by Canadian Salt Company Limited and the mined rock salt is crushed, screened and sold as a de-icing salt for roads and railways. It is also used as fishery, refrigerator, hay and dairy salts, as stock licks and for dust laying. Fine salt from vacuum pan evaporators is produced near Amherst by Dominion Salt Company Limited from brine obtained from massive salt beds, 860 feet below the surface at this point. Total production increased from 127,252 tons valued at \$1,631,904 in 1951 to 149,924 tons valued at \$1,681,683 in 1952.

Other industrial minerals produced are silica brick and structural materials including clay products. Quartzite from Chegoggin Point, Yarmouth County, is used by the Dominion Steel and Coal Corporation Limited to produce silica bricks.

Over half of the \$3,800,000 increase in the value of the Province's mineral output from 1951 to 1952 came from the zinc, lead, copper, silver and gold produced at the Stirling mine of Mindamar Metals Corporation following its reopening in June 1952, after being idle for 20 years. The mill operated at a 500-ton per day rate and the mine workings were deepened from 500 to 1000 feet. The indicated ore reserves are estimated at 780,000 tons.

Elsewhere, exploratory work was being done on a lead property at Gay River in Colchester County and on a copper occurrence at Cap d'Or in Cumberland County.

Newfoundland.\*—Interest in Newfoundland's mineral potentialities continued to increase and exploratory and development activity reached new levels during the review period. Mineral production in 1952 was valued at \$32,898,734, approximately the same as in 1951. Output comprises mainly zinc, iron ore, lead, fluorspar and copper, in that order. The Province also produces some silver and gold, sand and gravel, stone, cement and gypsum. The entire output of iron ore comes from the Bell Island mines of Dominion Wabana Ore Limited, and the zinc, lead, copper, gold and silver from the mine of Buchans Mining Company Limited at Red Indian Lake.

<sup>•</sup> For developments in the Quebec-Labrador iron-ore field, see p. 496.

The mechanization and modernization program under way at Dominion Wabana Ore Limited, wholly-owned subsidiary of Dominion Steel and Coal Corporation Limited, was originally scheduled for completion in 1952 but difficulties hampered operations and resulted in a decrease in output from 1,724,991 tons in 1951 to 1,634,500 tons in 1952. However, the program is nearing completion and shipments in 1953 are expected to show substantial increases. The Company operates four mines, all production coming from submarine workings under the Atlantic Ocean with some haulages extending four miles. The main part of the mechanization program consists of the installation of a belt-conveyor hoisting system. The Company's production goal remained at 2,500,000 tons a year.

Production from the Buchans mine was valued at \$28,183,921 in 1952 compared with \$28,953,585 in 1951 and comprised concentrates containing 64,112,000 lb. of zinc valued at \$11,197,802; 36,696,600 lb. of lead valued at \$5,933,840; 5,696,870 lb. of copper valued at \$1,625,887; 8,030 oz. t. of gold valued at \$275,188; and 584,505 oz. t. of silver at \$488,354. The Company is continuing the development of its Rothermere orebodies from which a substantial percentage of the production came in 1952. As a result of this development work, output is expected to increase from approximately 27,000 tons per month in 1952 to at least 30,000 tons per month in 1953.

Various companies are carrying out exploratory and development work on properties in different parts of the Island. Newfoundland and Labrador Corporation, which was originally formed as a Crown company early in 1951 but which now comprises both government and private interests, has been actively engaged in carrying out a large-scale exploration and development program on its 24,000 sq. miles of mineral holdings in five concessions in Newfoundland Island and Labrador. A second company, British Newfoundland Corporation, comprising British and Canadian firms, plans to do similar work on mineral holdings consisting of 50,000 sq. miles in Labrador and 10,000 sq. miles in Newfoundland Island. Falconbridge Nickel Mines Limited is doing extensive work on its concession in the Notre Dame Bay area, giving major attention to the Gull Lake, Tilt Cove, Rambler, Little Bay and South West Arm copper deposits, and New Jersey Zinc Explorations Limited is investigating an area south of Corner Brook. In the same area, Independent Mining Corporation Limited is investigating an old copper-zinc property. Buchans Mining Company Limited is actively exploring and developing occurrences on its concession area. In Labrador, Frobisher Limited continues to investigate copper deposits in the Seal Lake area.

Newfoundland has extensive reserves of fluorspar and in 1952 accounted for over 98 p.c. of the total Canadian output with a production of 82,503 tons valued at \$2,473,167. All the commercial fluorspar veins occur in the vicinity of St. Lawrence, a town on the southeast coast of Newfoundland, most of the veins being within six miles of St. Lawrence Harbour. St. Lawrence Corporation of Newfoundland Limited supplies about 75 p.c. of the production. By means of a combination gravity and flotation mill, it turns out one of the highest grade concentrates in the world and sells its output in the metallurgical and chemical markets in

Canada and the United States. Output from Newfoundland Fluorspar Limited, a subsidiary of Aluminum Company of Canada Limited, is used mainly in the production of aluminum.

Elsewhere in the non-metallic field, North Star Cement Limited brought its quarries at Humbermouth into production and began operations at a rated capacity of 600,000 bbl. annually. Production in 1952 amounted to 122,000 bbl. valued at \$500,000.

Development of the extensive deposits of gypsum on the west coast of the Island in the Bay St. George area was begun during the review period and production in 1952 amounted to 8,100 tons which was processed in a new factory erected in 1951 by the Provincial Government at Humbermouth near Corner Brook. One section of the plant is for the manufacture of gypsum plaster, and the other is for the manufacture of gypsum wallboard and lath. Capacity of the plaster mill is about 200 tons per day and that of the wallboard mill about 250,000 sq. feet daily.

Newfoundland has promise of the production of asbestos in the development work being done on a deposit of the mineral near Bluff Head on the west coast by Newfoundland Asbestos Limited. A 100-ton mill is being built on the property and production is expected to begin during 1953.

Yukon Territory.—Mineral production in Yukon Territory comprises silver, lead, zinc and cadmium from the Mayo district, gold from placer operations mainly in the Dawson mining region and coal from the Carmacks area. Production in 1952 was valued at \$11,276,221 or almost \$1,500,000 more than in 1951 owing to increasingly successful operations in the Mayo district. This, plus the discovery of what appears to be an important deposit of nickel in the Kluane Lake area in southwestern Yukon, has greatly increased interest in the Territory's mineral potential.

The continued provision of transportation and power facilities has meant much to the opening up of the Territory to exploration and development. During the review period, a 3,000-h.p. hydro-electric power development on the Mayo River was placed in operation to provide power to the Keno Hill camp and to the Mayo landing area. The project was financed by the Federal Government at a cost of over \$4,000,000. A 110-mile all-weather highway is being built to connect Dawson with the Whitehorse-Mayo road at the Stewart River crossing. The estimated cost of the highway is \$500,000 of which the Federal Government is paying \$300,000 and the Territorial Government, \$200,000. The latter will carry out the actual construction of the highway. A 10-mile truck road from Keno to the top of Keno Hill was built during the review period at a cost of \$200,000 which was borne jointly by the Federal Government and United Keno Hill Mines Limited.

The Mayo district through United Keno Hill Mines Limited, Canada's second largest producer of silver, accounted for over 75 p.c. of the total value of mineral production in the Territory in 1952. Until April 1953, when a mill jointly owned by three companies in the area was brought into production, United Keno Hill Mines was the only producer in the Mayo area. As the result of an expansion program now almost completed, and the provision of hydro-electric power, its output of lead and zinc concentrates and silver precipitates which it ships to Trail, B.C., has shown marked gains. During 1952, the lead content of its concentrates increased to 18,246,339 lb. from 12,533,071 lb. in 1951; the zinc to 10,865,797 lb. from 5,678,999 lb.; the silver to 3,967,506 oz. t. from 3,442,788 oz. t., and the cadmium content to 126,489 lb. from 66,452 lb. During the first quarter of 1953, the output of silver

increased 66 p.c. over the same quarter of 1952, that of lead 107 p.c., and of zinc over 135 p.c. Substantial reserves of high-grade ore have been established in new deeper levels at the Hector mine and considerable development has been carried out at other mines on the Company's extensive property, particularly at the Onek mine.

Production from the district will be further increased with the placing in operation in April 1953 of a 100-ton mill jointly owned by Mackeno Mines Limited, Yukeno Mines Limited and Bibis Yukon Mines Limited. The mill, which is to be operated on a custom basis, was temporarily closed in May 1953 for adjustment. Initial mill feed will be drawn from the Mackeno mine and from Bellekeno Mines Limited. Several other companies have been doing exploration and development work on properties in the district.

All the gold produced in Yukon Territory is from placer operations, the largest being that of the Yukon Consolidated Gold Corporation Limited. The Corporation operates seven dredges in the vicinity of Dawson. Smaller operators are Yukon Gold Placers Limited, Clear Creek Placers Limited, Kluane Dredging Company, Yukon Explorations Limited and Burwash Mining Company Limited. Total placer production in 1952 amounted to 78,869 oz. t. valued at \$2,702,841.

The possibility of adding nickel and copper to Yukon's mineral output looms large with the discovery by Hudson Bay Exploration and Development Company Limited, a subsidiary of Hudson Bay Mining and Smelting Company Limited, of a nickel-copper deposit in the Kluane Lake district. Initial drilling has indicated 67,000 tons of good-grade nickel-copper ore with cobalt, platinum and palladium values. The discovery has led to widespread staking in and beyond the area and Prospectors Airways Company Limited, one of several companies actively engaged in exploration, has reported the discovery of copper-nickel at Quill Creek adjoining the Hudson Bay holdings and at White River about 40 miles to the southeast.

Yukon's output of coal, which comes from the Carmacks area, is small and ranges from bituminous to anthracite. Output, which is for local use, totalled 8,000 tons in 1952 compared with 3,696 tons in 1951.

Near the close of the review period tentative plans for a Yukon-British Columbia power development project of great promise were announced by Ventures Limited. The project will involve the expenditure of hundreds of millions of dollars for the development of a minimum of 4,300,000 h.p. to serve as the basis of a great metallurgical industry for the treatment of ores from around the world. The project will take years to complete. The Company is now carrying out surveys to determine the power potential available.

Northwest Territories.—Mineral production in the Northwest Territories has increased steadily in value since gold was first produced in the Yellowknife area in 1938, and in 1952 reached a record of \$9,033,714 compared with \$8,288,747 in 1951 and \$471,000 in 1945. This is exclusive of pitchblende products which are not reported. Gold accounted for almost 94 p.c. of the output in 1952 and crude petroleum, silver, natural gas and copper, in that order, for most of the remainder. Small amounts of tungsten concentrates were also produced during the review period by Tungsten Corporation of Canada Limited from the re-treatment of mill tailings at its mines at Outpost Island.

A record gold production of 246,245 oz. t. was produced in 1952, an increase of 34,000 oz. t. over 1951, the previous peak year. Gold mining activity is centred in the rich Yellowknife area where Giant Yellowknife Gold Mines Limited, Canada's

fifth largest gold producer, accounts for the greater part of the output. Output in 1952 also came from the Con mine of the Consolidated Mining and Smelting Company of Canada Limited, Consolidated Discovery Yellowknife Mines Limited, and from Negus Mines Limited.

Giant Yellowknife Gold Mines continued to carry out an extensive expansion program which, during the review period, included the extension of its milling rate from 420 to over 700 tons and expanded mill facilities to permit the removal of arsenic from fumes, it has also provided additional living accommodation at the mine and at Yellowknife townsite. Underground development at the Con mine revealed several orebodies of good grade. Consolidated Discovery Yellowknife Mines Limited maintained a daily milling rate of 92 tons of ore averaging 1·12 oz. t. per ton, this being the highest grade mill feed of any gold mine in Canada. Development of the Company's deepest level (950-foot) shows ore of higher grade than mine average and greater tonnage per vertical foot. It is expected that hydro-electric power will reach the mine by May 1953. The Negus mine was closed in September 1952. Other gold properties in the Yellowknife district and some in the McKay-Courageous Lake area have been receiving exploratory attention.

At Port Radium on Great Bear Lake, Crown-owned Eldorado Mining and Refining Limited completed the construction of a leaching plant for the treatment of mill tailings and rebuilt the crushing plant and gravity mill which were destroyed by fire in November 1951. It is estimated that the new mill and leaching plant will increase production by 75 p.c. The Company expects to complete the sinking of the new internal shaft from the eleventh level to open up five new levels in the northeast section of the mine by June 1953.

At Hottah Lake, about 60 miles south of Great Bear Lake, Indore Gold Mines Limited installed a mill with a rated capacity of 50 tons daily and reported that production began late in 1952. Ridley Mines Holding Company carried out underground exploration on its Rex property near the East Arm of Great Slave Lake. Radiore Uranium Mines Limited did development work on a pitchblende showing in the same region.

Much work was done on base metal properties in the Northwest Territories during the period. Pine Point Mines Limited, a subsidiary of the Consolidated Mining and Smelting Company of Canada Limited, continued to outline its large lead-zinc deposit at Pine Point on the south shore of Great Slave Lake with encouraging results. The bringing of this property into production is dependent upon the establishment of sufficient reserves of ore to justify the construction of about 350 miles of railway. A 70-mile truck road was built to connect the property to the MacKenzie Highway at Alexandra Falls. On the B.B. property north of McLeod Bay, Great Slave Lake, Joe Indian Mountain Metal Mines Limited was reported to have outlined, by exploratory drilling, over 1,000,000 tons of ore averaging 10 p.c. zinc.

On the west coast of Hudson Bay, Rankin Inlet Nickel Mines Limited is doing extensive drilling and further exploration of its property near Rankin Inlet. At Ferguson Lake, Canadian Nickel Company Limited, a subsidiary of International Nickel Company of Canada Limited, is carrying out extensive exploration on nickel-copper showings on a 1,152 sq. mile concession.

## Section 2.—Government Aid to the Mineral Industry\*

### Subsection 1.—Federal Government Aid

The Department of Mines and Technical Surveys.—The Federal Department of Mines and Technical Surveys, which came into being on Jan. 20, 1950, as a result of a departmental reorganization at Ottawa, continues the services, but in larger measure, rendered to the mineral industry by the former Department of Mines and Resources. The Department has five branches—Surveys and Mapping Branch, Geological Survey of Canada, Mines Branch, Dominion Observatories, and Geographical Branch. The Department's functions include the administration of the Emergency Gold Mining Assistance Act and of the Explosives Act.

Surveys and Mapping Branch.—The Branch provides the base maps required for use in the development of Canada's natural resources, produces and distributes all Canadian aids to navigation, is responsible for all legal surveys of federal lands, and provides a national system of levelling and precision surveys for use as geodetic control by federal, provincial and private agencies.

The Geodetic Survey provides the original surveys that form the framework or basic control for mapping throughout Canada and for engineering and surveying projects related to natural resources development. Survey stations are established at fairly regular intervals across Canada and are marked by permanent monuments whose latitudes, longitudes and elevations above mean sea-level are determined with a high degree of accuracy. The determination of geographical position by astronomical observations for mapping purposes in northern areas is being superseded by Shoran trilateration in which the adaptation of radar is meeting with success.

The Topographical Survey provides base topographical maps that show all significant natural and artificial features fundamental to the study and economic development of mineral and other natural resources. The Topographical Mapping Section is responsible for the field surveys that provide ground control for mapping from aerial photographs, and the Air Survey Section plots and produces maps from these aerial photographs. The National Air Photographic Library indexes, preserves and distributes prints for all aerial photography done by or for the Federal Government. The Topographical Survey administers the Canadian Board on Geographical Names.

The Legal Surveys and Aeronautical Charts Division makes and records legal surveys of federal Crown lands in the Yukon and Northwest Territories, the National Parks and Indian lands and reserves. This Division prepares and distributes aeronautical charts (the preparation of the base maps for which involves planimetry derived from tri-camera aerial photography and altimetry derived from radar measurements), flight manuals and electoral maps.

The Canadian Hydrographic Service is responsible for the charting of the coastal and inland navigable waters of Canada, the analyses of tides and tidal current phenomena and the investigation of water-surface elevations of the St. Lawrence-Great Lakes waterway. The resultant data are published in the form of official navigation charts, volumes of Sailing Directions, Tide Tables and Water Level Bulletins.

Revised under the direction of Marc Boyer, Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

The Map Compilation and Reproduction Division prepares, draughts and reproduces maps, charts and plans for lithographic printing and multi-colour. The work includes the preparation and photo-reproduction of air-chart bases, the reproduction and printing of air information for aeronautical charts, the preparation and printing of topographical maps, and the reproduction and printing of hydrographic charts.

The Branch had 16 geodetic, 46 topographic and 17 legal survey parties in the field in 1953. Nine ships and nine motor launches were engaged in charting operations.

Geological Survey of Canada, -- The primary function of the Geological Survey is to obtain information on the geology of Canada that will be of assistance in the search for and development of mineral deposits. The results of its activities also provide a basis for the appraisal and conservation of Canada's mineral resources generally, including water supplies, for soil surveys and for the solution of geological problems that frequently arise in construction projects. Reports issued by the Geological Survey include: memoirs with fairly complete descriptive accounts of the geology of particular areas and accompanied, as a rule, by geological maps; bulletins dealing with problems rather than areas; papers issued as soon as possible after the close of the field season, treating separately of each area and summarizing the information acquired; and the Economic Geology Series reports, dealing in a comprehensive way with mineral deposits of a particular type. Coloured geological maps are issued on various scales from one inch equalling a few hundred feet to one inch equalling eight or more miles, the common standard scales being one inch to one mile and one inch to four miles. Preliminary maps showing the geology in pattern are issued shortly after the field season ends for those areas where the search for metals or minerals is active.

In 1953, the Geological Survey had 77 parties in the field, the same number as in 1952. The work undertaken included an aerial reconnaissance by conventional aircraft in northern Ungava covering the northern continuation of the Quebec-Labrador iron belt, and the investigation of a folded belt of metamorphic rocks in northern Ellesmere Island, less than 500 miles from the North Pole.

The Regional Geology Division carries out geological surveys of the bedrock formations and associated ores and economic materials of Canada by means of annual programs of systematic investigations and geological mapping, mainly of areas that have been mapped topographically. It conducts airborne magnetometer surveys as an aid to regional geological mapping and prospecting.

The Stratigraphic Palæontology Division carries out palæontological and stratigraphical investigations and studies that are of great importance in geological mapping, interpretation of structures, and exploration for natural fuels and minerals.

The Mineralogy Division prepares and distributes mineral and rock collections for use of prospectors and educational institutions, organizes and maintains a systematic collection of minerals for reference and exchange, and identifies mineral specimens sent in by the public.

The Radioactivity Resources Division is concerned with the field and laboratory investigation of Canadian resources of radioactive raw materials and maintains free testing and advisory services for uranium prospectors. As agent of the Atomic Energy Control Board, the Division receives the results of analyses for uranium and thorium and reports on the development of radioactive mineral deposits, which information is incorporated in a confidential inventory.

The Pleistocene and Engineering Geology Division makes studies of the unconsolidated materials that mantle the bedrock throughout the greater part of Canada. The geological study of these materials is a prerequisite for many types of engineering and agricultural projects.

The Fuels Resources Division is engaged in the technical study and interpretation of rock cuttings from wells drilled for oil and natural gas with a view to directing exploration for these minerals to localities offering the greatest promise of production. The Division also investigates the geology of coal deposits as a basis for estimating Canada's coal reserves and conducts research into the microscopic character of individual seams.

The Geological Cartography Division prepares cartographical representations for the reproduction of preliminary and standard geological maps, compiles and edits geological and related maps, prepares drawings for maps in the Airborne Magnetic series, and provides drawings, tracings, diagrams, designs, etc., as required.

The technical editing of all reports and map manuscripts published by the Geological Survey is conducted by the Geological Manuscripts Division, which also prepares quarterly and annual reports on the progress of field and office projects, supervises papers prepared for publication and supervises and assists in the preparation of geological map compilations.

Mines Branch.—The Branch is concerned in the main with the technological problems of the mineral industry and maintains well-equipped ore-testing, mineral-dressing, fuel-research, ceramic, radioactivity and industrial minerals laboratories.

The Mineral Dressing and Process Metallurgy Division serves Canada's mineral industry through its tests, investigations and research on all types of Canadian ores. The main purposes of these activities are to devise economic and efficient methods of processing ores—a service of special benefit to new mining ventures and particularly to those developing low-grade or complex deposits—and to assist mine operators in solving problems encountered in mill practice. Much of the Division's recent research has been on the extraction of gold from complex ores and on the processing of titanium ores. As a service to industry and to assist the Department of National Defence, extensive investigations have been conducted on the corrosion of metals.

The Radioactivity Division is concerned with investigations of radioactive ores, particularly with the development and application of methods whereby marketable concentrates may be produced from individual uranium ores. The primary purposes of the Division's technical services and laboratory facilities are to help bring new properties into production by determining methods suitable for treatment of particular ores and to encourage the search for uranium deposits. Extensive experimental and development work is conducted on the treatment of ores and products from the properties of Eldorado Mining and Refining Limited, a Crown company.

The work of the Industrial Minerals Division is related to the development and processing of industrial minerals, including water used for industrial purposes. The Division makes field studies of deposits, examines industrial processes utilizing them and conducts research into methods of beneficiating minerals from deposits of marginal and submarginal quality to bring them up to the standards demanded by modern industry.

The Fuels Division studies the type, quality and uses of all fuels. It makes studies of production methods, largely for the purpose of devising cheaper and more efficient methods of mining, preparing, processing and utilizing coals. Work in the field or laboratories includes: the investigation of methods of mining, particularly of rock pressures in relation to the economical mining of coal at depth, and of coal preparation such as the cleaning and utilization of the low-grade finer sizes of bituminous coal which predominate in Canadian mining operations; the development of a coal-fired gas-turbine; investigations into the making of coke for foundry and other metallurgical uses and into the increased use of Canadian coal in domestic stokers; high-pressure hydrogenation tests on coal for the production of synthetic liquid fuel, and hydrogenation as applied to the refining of oil from the bituminous sands of Alberta; and analyses of crude oils and natural-gas products.

The Physical Metallurgy Division aids the metal industries through the development of new alloys, new manufacturing techniques and new applications, and in activities aimed toward improving present practices in metal fabrication. It serves the Department of National Defence by extensive research and investigative work concerned broadly with the development of defence materials and prototype equipment and with the metallurgical problems of that Department. The Division also handles the metallurgical problems of the atomic energy project at Chalk River.

The Mineral Resources Division provides a mineral information service that is freely used by government departments, mining and allied industries, and others interested in mining or its significance in the Canadian economy. A mineral resources index inventory is maintained of all known occurrences and of mines, both active and potential, special attention being given to those minerals in which Canada is deficient. The Division makes specific economic studies of various phases of the mining industry. It gives technical advice as required for the administration of the Emergency Gold Mining Assistance Act and prepares reports, on request, to aid in the administration of such matters as: tax exemptions on new mining properties; tax deductions as an encouragement to prospecting for base metals, other minerals and petroleum; and tax allowances for the drilling of deep-test wells for oil in unproven fields.

Dominion Observatories.—The two main units of the Dominion Observatories are the Dominion Observatory at Ottawa, Ont., and the Dominion Astrophysical Observatory at Victoria, B.C. Permanent magnetic observatories are maintained at Agincourt, Ont., Meanook, Alta., and at Resolute Bay and Baker Lake, N.W.T. Seismic stations for recording earthquakes are operated at Victoria, Horseshoe Bay and Alberni, B.C.; Ottawa and Kirkland Lake, Ont.; Seven Falls and Shawinigan Falls, Que.; Halifax, N.S.; Saskatoon, Sask.; and Resolute Bay, N.W.T.

The Dominion Observatory at Ottawa is responsible for the time service of Canada, which involves nightly astronomical observations of accurate star positions and radio-broadcast services for distributing accurate time to all parts of Canada. Other astronomical activities centred at Ottawa include upper atmospheric studies by means of meteor observations, studies of the sun and its effect on earthly conditions, and mathematical studies of the atmospheres of the sun and stars. The geophysical work, also administered from Ottawa, includes the magnetic survey of Canada, with emphasis on aids to air and sea navigation, as well as field and observatory work of interest to the geophysical prospector. The methods of seismology are employed not only to study interesting and economically important aspects of the earth's crust in Canada, but also as part of world-wide investigations of the

earth's interior. Gravity observations are carried on throughout Canada with a generally similar purpose, special attention being paid to methods of locating mineral deposits.

The Dominion Astrophysical Observatory at Victoria is devoted to fundamental research into the physical characteristics of the sun, stars, planets and the material of interstellar space. The 73-inch reflecting telescope is one of the largest in the world and through its use many important contributions have been made to astronomical knowledge.

The Geographical Branch.—The function of the Branch is to organize and make available all the geographical data on Canada and on foreign countries that might be of use in promoting the economic, commercial and social welfare of Canada. The work is of two kinds—the compilation of geographical material of national significance, and geographical surveys in the field. The chief project at present is the compilation, in co-operation with various Departments of the Federal Government, of a new Atlas of Canada to replace the Atlas issued in 1915.

The Dominion Coal Board.—The Dominion Coal Board was established by the Dominion Coal Board Act (R.S.C. 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act, the Board was constituted a Department of Government to advise on all matters relating to the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of advising upon and administering transportation subventions.

Ancillary to these principal duties, the Board is empowered to undertake research and investigations with respect to:—

- (1) the systems and methods of mining coal;
- (2) the problems and techniques of marketing and distributing coal;
- the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
- (4) the position of coal in relation to other forms of fuel or energy available for use in Canada;
- (5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
- (6) the co-ordination of the activities of Government Departments relating to coal;
- (7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.

In addition, the Dominion Coal Board Act provides authority in the case of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

Assistance by transportation subventions, which has been maintained in varying degrees during the past twenty-four years, was designed to further the movement of Canadian coals to some portions of Central Canada by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. As these costs and the conditions of the Canadian coal industry are subject to variation, the Board must review from time to time the rates of subvention and the areas where the assistance is required. The Orders in Council presently governing assistance on the shipment of coals from the several coal-producing provinces are as follows: Nova Scotia—P.C. 3253 of June 11, 1952, as amended; New Brunswick—P.C. 3252 of June 11, 1952; Saskatchewan—P.C. 912 of Feb. 21, 1951, as amended; Alberta and Crowsnest Pass area of British Columbia—P.C. 1953–64 of Jan. 16, 1953. In addition, Order

in Council P.C. 1094 of Mar. 15, 1949, provides assistance on coal mined in the Provinces of Alberta and British Columbia where exported from Canadian seaports to foreign countries other than the United States and its territorial possessions or sold as fuel for ships' stores. During the year ended Mar. 31, 1953, a total of 2,586,042 tons was shipped under subvention and \$4,623,696 was paid in assistance.

Because of the growing impact of oil and natural gas on the markets for Canadian coal, the Board and its staff intensified its study of the relation of these competing sources of energy and of possible new outlets for the solid fuel.

On the matter of technical research as related to marketing and distribution, the Board continued to maintain close liaison with the Division of Fuels of the Department of Mines and Technical Surveys. Under the auspices of the Board, a fourth Dominion-Provincial Conference on Coal Research was held at Ottawa on June 4 and 5, 1952, for the purpose of co-ordination and exchange of ideas. It was attended by delegates from the provincial governments and research bodies of Nova Scotia, Saskatchewan, Alberta and British Columbia, representatives from the Canadian National Railways and the Canadian Pacific Railway Company, together with federal representatives from the Dominion Coal Board and Department of Mines and Technical Surveys.

The Interdepartmental Committee on the Supply to the Armed Forces of Fuel and Equipment for Heating continued its activities during the year. Furthermore, at the request of several government departments for advice on coal matters, a Committee composed of senior purchasing agents of the various government departments was established and meetings were held throughout the year under the auspices of the Dominion Coal Board.

The Board maintained its efforts to create a uniform system of coal-mine cost accounting which would provide an accurate presentation of the costs of production.

Pursuant to the recommendations of the Royal Commission on Coal (1946), the Board continued to work for a reduction in customs duties and sales tax on coalmining machinery. As agent of the Minister of Mines and Technical Surveys, the Board continued to handle applications for loans under the Maritime Coal Production Assistance Act (R.S. C. 1952, c. 173) and administer the loans granted thereunder. The Board also continued to administer payments under the Coke Bounty Act (1930, c. 6) which provides a subsidy on Canadian coal used in the manufacture of coke for metallurgical purposes. During the year ended Mar. 31, 1953, 801,890 tons had been bonused at a cost of \$396,935.

The Dominion Coal Board consists of seven members including the Chairman who is its Chief Executive Officer with the status of a deputy-minister. The Board is responsible to, and subject to the direction of, the Minister of Mines and Technical Surveys.

#### Subsection 2.—Provincial Government Aid\*

Nova Scotia.—Under the provisions of the Mines Act (S.N.S., 1950, c. 3), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises and levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour, or the guarantee of bank loans. Any such work must be approved by the Department of Mines. The Government is also authorized to assist the mining industry to procure power on

<sup>\*</sup> Information supplied by the Departments of Mines or Mines Branches of the various provinces.

the most economical basis, and may guarantee the Nova Scotia Power Commission against any loss incurred on account of capital investments made for that purpose or revenue. Mining machinery and equipment that may be used in searching for, testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation, on payment, of unworked coal lands, operation of coal mines, loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the Province.

New Brunswick.—The Mines Branch of the New Brunswick Department of Lands and Mines examines mineral and rock specimens for prospectors and makes preliminary examinations of mineral prospects where requested. In addition, the Mines Branch distributes maps.

Quebec.—The Mining Act (R.S.Q. 1941, c. 196) authorizes the Quebec Department of Mines to build, maintain and improve roads needed for mining development. Such work is done by contract under the supervision of departmental engineers. The Act gives the Department considerable latitude in this respect. In certain cases, major roads have been built to new mining districts and completely paid for; on the other hand, if a particular property requires a branch road from an established highway, the owner may be required to contribute a portion of the cost. To prevent the development of uncontrolled settlements in the vicinity of operating mines, the Department regulates the use of land and permits the establishment of well-organized communities. The municipal organization of such communities is jointly administered by the Department of Mines and the Department of Municipal Affairs.

The Department maintains well-equipped laboratories for the benefit of prospectors, geologists, engineers and mine operators. The facilities include equipment for mineralogy, petrography, ore-dressing, and analysis by wet or dry assays, spectrography or X-ray. Quantitative and mineralogical determinations are made free, but quantitative analyses are made for a fee according to a tariff schedule. The Mining Act provides coupons to be used by prospectors in paying for such analyses.

At Val d'Or in western Quebec, the Department maintains a sampling and treatment plant where tests may be made on bulk samples and where precious metals may be recovered for prospectors at cost price. The treatment plant, which is fully equipped to carry out a wide variety of pilot-scale ore-dressing tests, is at the disposal of mine owners wanting to establish mill-flow sheets. At Thetford Mines, in the heart of the asbestos district, the Department maintains a laboratory where classification of asbestos is made according to standard designations or grades. The Province has authorized the establishment of research laboratories to assist mining and metallurgical enterprises in the processes and techniques of extracting, transforming and utilizing ores.

The Department undertakes geological mapping and inspection. The work is divided between two branches, one responsible for reconnaissance aerial mapping, the other doing detailed mapping in mining districts and inspection of individual deposits or properties. Field parties are headed by geologists or mining engineers.

The published reports on these investigations are distributed free upon request. During the field season, about 30 parties are maintained in different sections of the Province. In mining districts, offices in charge of resident geologists are maintained to collect, preserve and compile geological information disclosed by mining explorations. The individual sheets of the compiled geology are made available to the public.

The Department employs inspectors whose duties are almost exclusively concerned with the safety of workmen in operating mines. Two Mobile Mine Rescue Stations are also operated and a mine rescue training program conducted.

In the field of education for prospectors, five-week courses at university level are organized each year at Laval and Montreal Universities. University scholarships are granted each year to deserving undergraduates and post-graduates in mining, geology and metallurgy, thus contributing to the training of qualified engineers for the benefit of the mining industry. Lectures are given to prospectors at different localities throughout the Province.

Ontario.—The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the Province, as briefly enumerated below.

Mining Lands Branch.—This Branch handles all matters dealing with the recording of mining claims, assessment work, etc., and the final issuance of title to mining lands. As a service to the mining public, individual township maps are prepared and kept up to date showing lands open for staking and recorded and patented claims therein. As new surveys are made or later data become available, maps are revised in line with such information. District Mining Recorders maintain offices at strategic locations throughout the Province.

Geological Branch.—A continuing program of geological mapping and investigation is carried out by the geological staff of the Department. Detailed reports and geological maps of the areas studied are made available to the public. In many of the active areas of the Province, resident geologists are engaged to gather, and make available to the public, information concerning geological conditions, exploration and development within their respective districts. One geologist specializing in industrial minerals is maintained on the staff to examine deposits of this order, investigate methods of treatment and recovery of such minerals, and to compile data on the uses, specifications and markets for such products. Collection and dissemination of information on ground water resources is also a function of a section of the Geological Branch. During the winter months courses of instruction for prospectors are held in various centres throughout the Province.

Laboratories Branch.—The Provincial Assay Office, located in the East Block of the Parliament Buildings, Toronto, carries out wet analyses and assays of metal and rock constituents on a custom fee basis and also renders the same service free of charge to holders of valid assay coupons issued for the performance of assessment work on mining claims. The Timiskaming Testing Laboratories situated at Cobalt, in addition to performing fire assays and chemical analyses, conducts a bulk sampling plant mainly to assist the producers of the area in the marketing of the cobalt-silver ores. A Cable Testing Laboratory, wherein all hoisting ropes in use at the mines are periodically tested, is operated under the supervision of the Inspection Branch.

Inspection Branch.—The main function of this Branch is the regular examination of all operating mines, quarries, sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the Province. Mine rescue stations in the principal mining sections are operated under the supervision of the Inspection Branch.

Exhibitions.—The Department each year presents displays pertaining to mining within the Province at such exhibitions as the Central Canada at Ottawa, the Canadian National at Toronto, and the Northern Ontario at Schumacher.

Publications Branch.—All maps and reports of the Department are distributed through the agency of the Publications Branch located at the main office of the Department.

Library.—A mining library for departmental reference only is maintained within the Department. This library is comprised mainly of publications and maps of the Federal and Provincial Governments of Canada as well as of numerous periodicals and bulletins from the United States.

Mining Roads.—The most recent service of the Department is the provision of mining roads. In general, two classes of road-building are envisioned under this program. The first class of road contemplated is a mining access road, financed solely by the Department, for the purpose of opening up favourable areas for exploration; the second class of road, undertaken jointly by the Department and local mining operators, is intended to assist in the provision of required service roads to such operators.

Manitoba.—The Mines Branch of the Manitoba Department of Mines and Natural Resources offers four main services of assistance to the mining industry: (1) maintenance, by the Mining Recorder's office at Winnipeg and The Pas, of all records essential to the granting and retention of titles to every mineral location in Manitoba; (2) compilation, by the geological staff of the Branch, of information pertinent to mineral occurrences of interest both in the past and the present and expansion of this information by a continuing program of geological mapping; (3) enforcement of mine safety regulations and, by collaboration with industry, initiation of new practices, such as those concerned with mine ventilation and the training of mine rescue crews, which contribute to the health and welfare of mine workers; and (4) maintenance of a chemical and assay laboratory to assist the prospector and professional man alike in the classification of rocks and minerals and the evaluation of mineral occurrences.

Saskatchewan.—The assistance given to the mining industry by the Saskatchewan Government consists of: (1) the maintenance of a geology department, under a principal geologist; (2) resident geologists stationed in or near the principal mining areas; (3) geological survey parties and reports; (4) prospectors' school; (5) prospectors' assistance plan; and (6) native trainees plan.

The Geology Department has its headquarters at Regina. The principal geologist and staff are available at all times to give information and other help to interested parties.

Resident geologists are stationed at Uranium City, Goldfields and Prince Albert to give all possible assistance to prospectors in those areas. During the summer months, geological survey parties study and map attractive areas and prepare reports which are made available to anyone interested.

The prospectors' school gives basic training in geology, mineralogy and prospecting and exploration techniques to future prospectors. Prospecting has become a skilled and specialized trade and instruction in this field will help young men to get a start in a profession very vital to the mining industry of Canada.

The prospectors' assistance plan, which is intended to encourage prospecting, assists bona fide prospectors by way of equipment and transportation and provides technical advice regarding geologically favourable areas.

The native trainees plan has a twofold purpose: (1) to train the Indians and Metis in the northern part of the Province to recognize the common minerals so that, as they go about their usual work, they will be aware of mineral indications that may be of value; (2) to train them to a point where they may be used as prospectors for the exploration companies and, by so doing, extend their means of livelihood beyond the hunting and trapping field.

Alberta.—Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and trains mine-rescue crews. The oil and gas industries are served in a similar way by the Petroleum and Natural Gas Conservation Board. Its regulatory measures, however, are also concerned with the prevention of waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board also compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the Province and has carried forward projects concerned with the uses and development of minerals. The Council has studied the occurrence, uses and analysis of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, the upgrading and the cleaning of coal and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. The Council's work with bituminous sands has helped with the development of the hotwater separation process and the operation of pilot plants. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture.

The Province from time to time has had commissions examine various aspects of the mining industry when it was considered that their findings would be of assistance in developing such industries. In a recent move, the Province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, has maintained a detailed supervisory and safety training program concerned with the drilling of oil and gas wells.

Of assistance also to mining companies and oil companies are the special deductions provided for in the Alberta Corporation Income Tax Act. These follow the parallel provisions in the Federal Income Tax Act.

British Columbia,—The Department of Mines of British Columbia provides the following services: (1) detailed geological mapping as a supplement to the work of the Geological Survey of Canada; (2) free assaying and analytical work for prospectors registered with the Department; (3) assistance in the field to the prospector by departmental engineers and geologists; (4) grubstakes, limited to a maximum of \$500, for prospectors; (5) assistance in the construction of mining roads and trails; and (6) inspection of mines to ensure safe operating conditions.

# Section 3.-Mining Legislation

Federal Mining Laws and Regulations.\*—The Federal Government administers the mineral lands of the Yukon and Northwest Territories as well as those within Indian reserves and in National Parks.

Mining laws and regulations covering the Yukon and Northwest Territories are administered by the Northern Administration and Lands Branch, Department of Resources and Development. Grants issued for federal lands, the property of the Federal Government, in these regions reserve to the Crown the mines and minerals that may be found on or under such lands, together with the right of operation.

Mining rights on vacant and certain other federal lands may be acquired by lease for a period usually of 21 years, renewable for further periods of like duration, on the terms and conditions specified in the various Acts and regulations relating to federal lands.

The disposal of minerals occurring in Indian reserves is subject to the consent of the Indians owning the reserve.

The Acts and regulations governing mining and quarrying on federal lands are summarized in Report No. 828, entitled Mining Laws of Canada, issued in 1951 by the Mines Branch, Department of Mines and Technical Surveys, Ottawa. This publication also lists all the laws and regulations pertaining to mining on federal lands. Copies of these individual laws and regulations may be obtained by applying to the Northern Administration and Lands Branch, mentioned above. Another publication of interest in connection with mining regulations and available from the aforementioned Mines Branch is entitled Summary Review of Dominion Tax and Other Legislation Affecting Mining Enterprises in Canada.

Provincial Mining Laws and Regulations.†—All mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves and National Parks which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments.

The granting of land in any province, except Ontario and Nova Scotia, no longer carries with it mining rights upon or under such land. In Ontario, mineral rights are expressly reserved if they are not to be included. In Nova Scotia, all minerals belong to the Crown except limestone, gypsum and building materials and, in granting land from the Crown, the right to these minerals goes with the title. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick and Quebec also included certain mineral rights. Otherwise, mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer,

<sup>\*</sup> Revised under the direction of Marc Boyer, Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

<sup>†</sup> Compiled from material supplied by the provincial governments.

general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum, gas) and quarrying. Under these divisions of the provincial mining industry, regulations may be summarized as follows:—

Placer.—In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

General Minerals.—These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia, the most elaborate laws and regulations apply in this division. In all provinces, except Alberta, a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some cases but limited in others. A claim of promising ground of a specified size may then be staked. This claim must be recorded within a time limit, with the payment of recording fees, except in Quebec where no fees are required. Work to a specified value per annum must be performed upon the claim for a period of up to ten years. There is no time limit in British Columbia but \$500 assessment work, of which a survey may represent one-fifth, must be performed and recorded before a Crown grant may be obtained. In Quebec, a specified number of man-days of work must be performed and the excess may be carried forward for renewals of licence. Before mining can be commenced, a mining concession must be purchased for which it is necessary to produce an engineer's report indicating the presence of an orebody. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In the case of Newfoundland, the provincial mining tax has been modified since Confederation on Mar. 31, 1949, to conform with the provincial obligations under the Federal-Provincial Tax Agreement and no other form of taxation or royalties exists.

Fuels.—In provinces where coal occurs, the size of holdings is laid down together with the conditions of work and rental under which they may be held. In Quebec, ordinary mining claims give rights to all mineral substances and to their development, but stakings for combustible natural gas, salt, coal, mineral oil or naphtha, or iron sands may cover 1,280 acres per claim. In some cases royalties are provided for. Acts or regulations govern methods of production. In the cases of petroleum and natural gas, an exploration permit or reservation is usually required. However, in Alberta, leases usually follow the exploration reservation whether or not any discovery is made, because exploration costs are applicable in part on the first year's rental. In other provinces, except Manitoba, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area subject to carrying out drilling obligations and paying a rental, fees or a royalty on production.

Quarrying.—Regulations under this heading define the size of holdings and the terms of lease or grant. On Quebec private lands, the quarry belongs to the owner; on Crown lands, mineral rights belong to the Crown and may be obtained in accordance with the provisions of the law, although the rights to exploit peat or marl must be obtained by special licence. In British Columbia quarry rights are not reserved in Crown grants.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

## Section 4.—Statistics of Mineral Production

The importance of mineral production, as compared with other primary industries in Canada, is indicated in Chapter IX, while its part in the foreign trade of Canada is dealt with in Chapter XXI.

### Subsection 1.—Value and Volume of Mineral Production

Historical Statistics.—Definite records of the annual value of mineral production go back to 1886 only, although actual production began with the earliest settlements. The figures given in Table 1 are not strictly comparable throughout the whole period, minor changes having been adopted in methods of computing both the metallic content of ores sold and the valuations of the products. Earlier methods resulted in a somewhat higher value than those now in use would have shown. However, the changes do not interfere with the general usefulness of the figures in showing the broad trends in the mineral industry.

Except for the 1920-30 period, the value of Canada's mineral production practically doubled each decade since the turn of the century. From \$64,000,000 in 1900, it rose to \$107,000,000 in 1910 and \$228,000,000 in 1920. In 1930 it was \$280,000,000, rising to \$530,000,000 in 1940 and \$1,045,000,000 in 1950. Similarly, the revised index of physical volume of output from Canadian mines (see p. 523) advanced from 37.6 (average 1935-39=100) in 1920 to 63.9 in 1930 and 125.7 in 1940. In the next decade, however, the volume gain was not quite so rapid, the index standing at 145.4 in 1950 and 174.7 in 1952.

Year	Total Value	Value per Capita	Year	Total Value	Value per Capita	Year	Total Value	Value per Capita

1.—Value of Mineral Production, 1886-1952

Current Production.—Mineral production during 1952 was valued at \$1,278,000,000, according to a preliminary estimate. This was the highest output value on record, being \$33,000,000 or 2.6 p.c. above the 1951 total of \$1,245,000,000. The outstanding gain was made by crude petroleum which was \$27,000,000 above the 1951 value, but asbestos and cement were each up about \$7,000,000 and iron ore about \$3,000,000. On the other hand, the output values for the principal metals, including gold, nickel, copper, zinc and lead, were all below the corresponding totals for the previous year.

The total output value of all metals was \$728,000,000 in 1952 compared with \$746,000,000 in 1951, a drop of 2.4 p.c. In volume of output the gains outnumbered the losses but these advances were not sufficient to offset the price

<sup>&</sup>lt;sup>1</sup> Beginning with 1931, exchange equalization on gold production is included. of Newfoundland production from 1949.

<sup>&</sup>lt;sup>2</sup> Includes value

declines during the year. The tonnage of zinc was up 12 p.c. but the total value declined nearly 2 p.c.; lead production increased 4 p.c. but the value dropped 8 p.c.; output of nickel was greater by 1·5 p.c. but the value was slightly lower than for the previous year; and gold production was up 0·6 p.c. in quantity but down 6 p.c. in value, the average price being \$34·27 in 1952 compared with \$36·85 in 1951. Copper production declined 4·5 p.c. and the increase in average price during the year was not sufficient to offset this decline, the value being down by nearly 1 p.c.

The value of mineral fuels rose 13 p.c. to \$262,000,000 in 1952. Crude petroleum gained 28 p.c. in quantity and 23 p.c. in value, and natural gas rose 10 p.c. in volume and 30 p.c. in value. The tonnage of coal declined 6.6 p.c. but the value was about the same as in 1951.

The value of the non-metallics group was \$124,000,000 in 1952, an increase of 7 p.c. over 1951. The tonnage of asbestos shipments was slightly lower than in the previous year owing to decreased demand for short fibres, but the increase in the price of the longer fibres brought the total value to a new high. Sulphur in the form of pyrite, sulphuric acid and elemental sulphur gained 18·6 p.c. in quantity. The output of barite and fluorspar increased; gypsum, salt and nepheline syenite remained about the same; and feldspar and mica declined as compared with 1951.

The value of most structural materials continued to rise, the group reaching a total of \$164,000,000 in 1952 compared with \$151,000,000 in 1951. Three new cement plants, one in each of the Provinces of Newfoundland, New Brunswick and Quebee, contributed to a record output of that product, which advanced 8 p.c. in quantity and 18 p.c. in value over 1951. Brick and clay products, sand and gravel, and stone all advanced but the output of lime was nearly 3 p.c. lower than in 1951 in both tonnage and dollars.

Analysis of Current Value and Volume.—In order to interpret more clearly and simply the trends in mineral production in Canada over the past ten years, Table 3 gives the percentage of the total value contributed by each principal mineral in each year. Values upon which percentages in this table are based are the annual values of mineral production, expressed in Canadian currency, as shown in Tables 1 and 2.

<sup>1</sup> Includes minor items not specified.

A revised index of the physical volume of mineral production has been prepared by the Dominion Bureau of Statistics, based on the period 1935-39.\* This index supersedes, from 1935 to 1952, the index published in previous editions of the Year Book.

<sup>\*</sup> The construction of this index, which is a component of the revised index of industrial production, is described in DBS Reference Paper, Revised Index of Industrial Production, 1936-51.

The total volume of mineral output attained a wartime peak in 1941 when the production index stood at 132. Principally because of the steady recession in the mining of gold and other principal metals during the next five years, the index gradually declined and reached a ten-year low point of 97 in 1946. Since then, sharp gains in the production of petroleum and other non-metals, together with a moderate increase in metals output, resulted in a sustained advance to a record high level of 175 in 1952.

### Subsection 2.—Provincial Distribution of Mineral Production

Since 1907, Ontario has been the principal mineral-producing province of Canada. In 1943, that Province accounted for 44 p.c. of Canada's total, but its share has declined steadily to 34 p.c. in 1952. Alberta's share of the total showed the greatest increase in the ten-year period, rising from 9 p.c. to 15 p.c. accounted for by the tremendous increase in the crude petroleum output of that Province. The proportion contributed by Quebec increased in the same period from 19 p.c. to 21 p.c. and by British Columbia from 12·9 p.c. to 13·5 p.c. In the same comparison, Saskatchewan's share decreased from 5·0 p.c. to 3·8 p.c., Manitoba's from 2·5 p.c. to 1·9 p.c., and Nova Scotia's from 5·6 p.c. to 5·0 p.c. Newfoundland produced about 3 p.c. of the total mineral production of Canada in 1952. As compared with 1951, gains in value were registered for all provinces except Ontario, Manitoba, Saskatchewan and British Columbia.

5.-Value of Mineral Production, by Province, 1943-52

Norg.—Figures for 1899-1910 are given in the 1933 Year Book, p. 345; for 1911-28 in the 1939 edition, p. 323; and for 1929-42 in the 1946 edition, p. 323.

### Subsection 3.—Production of Metallic Minerals

The metals of chief importance in Canada are copper, gold, iron, lead, nickel, those of the platinum group, silver and zinc. These metals are dealt with individually in the following paragraphs. In addition, there are a number of metals produced in minor quantities, principally as by-products in the treatment of metalliferous ores (see Tables 2 and 6).

Copper.—Copper production declined about  $4\cdot 5$  p.c. in 1952 to 258,000 tons from 270,000 tons in 1951, owing mainly to the closing of the Sherritt Gordon mine on the Manitoba-Saskatchewan border in September 1951. In Nova Scotia, a new mill began operations in April 1952, producing about 416 tons of contained copper before the year-end. In each of the other provinces the tonnage estimated for 1952 was slightly less than that for 1951.

About 48 p.c. of Canada's copper comes from the nickel-copper mines in the Sudbury district of Ontario. Converter copper is produced and further treated at Copper Cliff, and nickel-copper matte produced at Falconbridge is exported to Norway for refining. Mines in northern Quebec account for 26 p.c. of Canada's copper output. These ores are treated at Noranda to produce copper anodes which are shipped to Montreal for refining. Mines in the Flin Flon area of northern Manitoba and Saskatchewan accounted for 16 p.c. of the 1952 copper production. As already mentioned, Sherritt Gordon Mines Limited ceased operations completely at Sherridon, Man., in September 1951 and expect to be in full operation at Lynn Lake, Man., in the latter part of 1953. Lynn Lake copper concentrates will be processed at Fort Saskatchewan, Alta., where a \$17,000,000 refinery is under construction, also scheduled for operation in the last quarter of 1953. British Columbia mines account annually for about 8 p.c. of Canada's copper, and concentrates produced in that area are exported to the United States for treatment. Concentrates from Newfoundland, amounting to about 1 p.c. of the total, are exported to Belgium and to the United States.

Output of refined copper at 197,000 tons in 1952 was about 20 p.c. below the 1951 production. Because of a strike at a Montreal refinery, some blister anodes were exported to the United States for refining.

The use of refined copper in Canada in 1952 was estimated at 132,000 tons, about 60 p.c. being rolled into wire rods and 40 p.c. utilized for brass, bronze and miscellaneous purposes. Exports amounted to 114,000 tons, a 6-p.c. increase over the 107,000 tons exported in the previous year. Shipments to the United Kingdom dropped to 41,600 tons from 52,000 tons in 1951.

7.—Copper Production, by Province, with Total Value, 1943-52

Norz.—Figures for 1866-1910, inclusive, will be found in the 1916-17 Year Book, p. 272; for 1911-28 in the 1939 edition, p. 335; and for 1929-42 in the 1946 edition, p. 331.

<sup>&</sup>lt;sup>1</sup> Includes 6 tons valued at \$1,428 produced in N.W.T. in 1944 and 1 ton valued at \$536 in 1951. 
<sup>2</sup> Includes 416 tons valued at \$237,387 produced in Nova Scotia and 2 tons valued at \$1,427 produced in N.W.T.

Gold.—Despite a drop in value in 1952 of \$10,400,000 to \$151,500,000, gold was still Canada's leading mineral although it exceeded nickel only by a very narrow margin. Quantity production was up slightly to 4,420,000 oz. t. from 4,393,000 oz. t. in 1951. However, because of the favourable exchange position of the Canadian dollar in relation to the United States dollar, the price realized by gold producers in Canada averaged only \$34.27 per\_oz. t. in 1952 compared with \$36.85 per oz. t. in 1951. Beginning at \$35.19 per oz. t. in January, the price, in Canadian dollars, declined to a low of \$33.59 in September and closed out the year at \$33.97. Gains in output of 16 p.c. in the Northwest Territories and 4 p.c. in Quebec more than offset slight declines in Ontario and the other producing provinces. Ontario's mines accounted for 55.6 p.c. of the total output and Quebec's mines for 25.1 p.c.

### 8.—Quantity and Value of Gold Produced, by Province, 1943-52

Note.—Values are calculated at world prices in Canadian funds. Figures for 1862-1910, inclusive, will be found in the 1916-17 Year Book, pp. 268-270; for 1911-28 in the 1939 edition, pp. 336-337; and for 1929-42 in the 1946 edition, p. 332.

Iron Ore.—Production of iron ore in 1952 at 5,200,000 tons was the largest on record, being about 11 p.c. over the 1951 figure. This gain was almost all accounted for by an increase in shipments from British Columbia mines. The tonnage mined in Newfoundland and Ontario decreased about 5 p.c. to 1,600,000 tons and 2,700,000 tons, respectively.

Developments under way in the iron-ore industry give promise of greatly increased production within the next few years. The Wabana mine in Newfoundland was closed down on Apr. 1, 1953, in order that radical improvements might be made in production methods. Operations on an increased scale will be commenced later in the year. In Ontario, heavy development programs were prosecuted in the Steep Rock and Michipicoten fields during 1952 and production gains will be registered in the near future. There is definite evidence that Ontario is becoming a major source of iron ore and that other fields will be added to those now in production, including the low-grade deposit near Marmora in eastern Ontario which will be producing in 1954. Most encouraging progress is being made in the enormous task of developing the Quebec-Labrador iron deposits for production, a project involving the expenditure of \$200,000,000. Its initial objective of 10,000,000 tons annually is expected to begin in 1954. New deposits of medium-grade iron ore have been discovered near Ungava Bay, nearly 1,000 miles north of Quebec city. The area is stated to possess almost unlimited tonnage, mainly on the surface and easily mined.

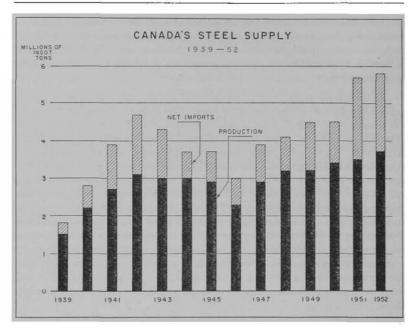

Exports from Canadian iron mines totalled 3,800,000 tons in 1952, including 700,000 tons to the United Kingdom, 337,000 tons to Germany, 794,000 tons to Japan and 2,000,000 tons to the United States. Imports were in excess of 4,000,000 tons, mostly from the United States.

# 9.—Iron-Ore Shipments and Production of Pig-Iron, Ferro-Alloys and Steel Ingots and Castings, 1943-52

Nors.—Figures for 1886-1910, inclusive, will be found in the 1936 Year Book, p. 373; for 1911-28 in the 1939 edition, p. 340; and for 1929-42 in the 1946 edition, p. 333.

<sup>&</sup>lt;sup>1</sup> Includes production of 1,272 tons in British Columbia.

Lead.—Although lead production in British Columbia, the principal producing province, was slightly lower in 1952 than in 1951, substantial advances in other areas brought about an over-all increase of 4 p.c. The total production, which includes refined lead and recoverable lead in ores and concentrates exported, was 164,879 tons in 1952 as compared with 158,231 tons in 1951. Newfoundland showed an increase of 12 p.c. to 18,348 tons, Quebec an increase of 34 p.c. to 10,401 tons and Yukon Territory an advance of 45 p.c. to 9,123 tons. Nova Scotia had a production of 871 tons in 1952, the first since 1939.

The Canadian price for refined lead was 19.50 cents per lb. in January 1952, dropping to 15.98 in May, 14.08 in October and 13.50 in December. Because of these recessions, the value of output, amounting to \$53,300,000, was about 8 p.c. below the 1951 total.

Exports of refined lead increased to 130,000 tons in 1952 from 106,000 tons in 1951. Shipments to the United States rose to 100,000 tons from 60,000 tons in 1951 while sales to the United Kingdom dropped to 27,000 tons from 35,000 tons.

## 10 .- Quantity and Value of Lead Produced from Canadian Ores, 1943-52

Note.—Figures for 1887-1910, inclusive, will be found in the 1929 Year Book, p. 367; for 1911-28 in the 1939 edition, p. 341; and for 1929-42 in the 1946 edition, p. 333.

Nickel.—About 90 p.c. of the world's nickel comes from the Sudbury area in northern Ontario. There are two large operators in this district, International Nickel Company of Canada Limited which has a smelter at Copper Cliff and a nickel refinery at Port Colborne, Ont., and Falconbridge Nickel Mines Limited which operates a smelter at the mine site but exports the matte to Norway for refining. Some nickel was recovered in the form of oxides and salts from cobalt ores treated at the Deloro smelter of Deloro Smelting and Refining Company.

Output of nickel in all forms in 1952 was 140,000 tons compared with 138,000 tons in 1951, including refined nickel, nickel in oxide and the recoverable nickel in matte shipped for export. The 1952 figure was close to the record of 144,000 tons produced in 1943. Because of the exchange situation, the average price for refined nickel at 55 cents per lb., Canadian funds, was slightly lower than for 1951 so that the output value of \$150,900,000 was slightly below the 1951 total.

Exports of refined nickel in 1952 totalled 77,000 tons, going mostly to the United States. Shipments of nickel in matte and oxide for export amounted to 65,000 tons including 28,000 tons to the United Kingdom, 21,000 tons to the United States and 15,000 tons to Norway. Canadian consumption of refined nickel amounts to about 2,500 tons annually.

### 11.—Quantity and Value of Nickel Produced, 1943-52

Note.—Figures for 1889-1910, inclusive, will be found in the 1929 Year Book, p. 368; for 1911-28 in the 1939 edition, p. 342; and for 1929-42 in the 1946 edition, p. 333.

Metals of the Platinum Group.—This group of metals includes platinum, palladium, rhodium, ruthenium, osmium and iridium. These metals occur in the nickel-copper ore of the Sudbury district and are recovered in the tank residues from the nickel refinery at Port Colborne, Ont. The crude residues are sent to Acton, England, for refining. The large increase in the output of nickel-copper ores has made Canada the leading producer of platinum since 1934, when it displaced the U.S.S.R. The industrial uses of the platinum metals have expanded considerably in recent years, particularly in electrical and chemical equipment, in jewellery and in medical and dental appliances. Canada produced 269,900 oz. t. of platinum metals with a total value of \$18,048,182 in 1952.

### 12.—Quantity and Value of Platinum and Palladium<sup>1</sup> Produced, 1943-52

Notz.—Records of the platinum production in Canada go back to 1887 but, prior to 1921, the amounts were comparatively small and the basis of calculation was not comparable with that now used. Figures for 1921-39 will be found in the 1940 Year Book, p. 340, and for 1940-42 in the 1951 edition, p. 513.

<sup>&</sup>lt;sup>2</sup> Figures include an accumulated

Silver.—Silver production in 1952 at 24,376,000 oz. t. was the highest since 1930 and, except for that one year, it was greater than at any time since the period from 1909 to 1916 when operations in the Cobalt district were at their height. Renewed activity in that area brought about a notable increase in Ontario's output in recent years; that output amounted to 6,274,000 oz. t. in 1952 as compared with 2,563,000 oz. t. in 1949.

Silver mining is not a distinct industry in Canada as the silver-bearing minerals occur in association with other metals of economic value. Most of the metal is obtained from the treatment of base-metal ores although substantial amounts are recovered from gold-quartz ores and from alluvial gold deposits. In 1952, approximately 31 p.c. of Canada's silver came from British Columbia, 26 p.c. from Ontario, 17 p.c. from Quebec and 16 p.c. from Yukon Territory.

13.—Quantity of Silver Produced, by Province, with Total Value, 1943-52

Note.—Figures for 1887-1910, inclusive, will be found in the 1916-17 Year Book, p. 271; for 1911-28 in the 1939 edition, p. 345; and for 1929-42 in the 1946 edition, p. 334.

<sup>&</sup>lt;sup>1</sup> Includes relatively small quantities produced in Alberta.

Zinc.—A record for zinc production was established in 1952 when 382,000 tons were produced, an amount 12 p.c. above the 1951 total. Output was higher in all producing provinces, the percentage gains being as follows: Newfoundland, 12; Quebec, 11; Manitoba and Saskatchewan, 12; British Columbia, 9; and Yukon Territory, 91. There was a substantial production in Nova Scotia for the first time since 1940. Owing to a reduction in the price of zinc, which averaged 17.46 cents per lb. for the year, the total value of production at \$133,500,000 was about 2 p.c. below the 1951 value.

In 1952 about 167,000 tons of zinc were exported, 14 p.c. more than in 1951. The United Kingdom took the greater share, exports to that country amounting to 87,000 tons as compared with 55,000 in 1951. Shipments to the United States were 71,000 tons compared with 84,000 tons in 1951. The zinc content of ores and concentrates exported in 1952 totalled 182,000 tons, mostly from Eastern Canada to the United States but with some shipments to France, Belgium and the United Kingdom.

Output of refined zinc totalled 222,000 tons, nearly 7 p.c. above the 1951 figure, but consumption in Canada dropped 16 p.c. to about 51,000 tons.

### 14.—Quantity and Value of Zinc Produced, 1943-52

Note.—Figures for 1911-28 are given in the 1939 Year Book, p. 347, and for 1929-42 in the 1946 edition, p. 335.

<sup>&</sup>lt;sup>1</sup> Estimated foreign smelter recoveries and refined zinc produced in Canada.

### Subsection 4.—Production of Non-Metallic Minerals (Excluding Fuels)

The most important minerals in this group are asbestos, salt, gypsum and sulphur, but it also includes numerous other items such as peat moss, quartz, magnesitic dolomite, sodium sulphate, fluorspar, barite, nepheline syenite, feldspar, silica brick, mica, soapstone and talc, and graphite (see Tables 2 and 6).

Asbestos.—Production of asbestos was lower in tonnage but higher in value in 1952 than in 1951. Higher prices for the longer fibres accounted for the value gain. Quebec produced 943,000 tons in 1952 compared with 947,000 in 1951 and Ontario 23,000 tons compared with 27,000. Exports of asbestos were valued at \$86,000,000 in 1952 and included 340,000 tons of milled fibres, 561,000 tons of shorts and 692 tons of crude.

Three new mills were under construction at the year-end, one at McDame Mountain, B.C., one at St. Adrien, Que., and the third at Lewis Brook, N'f'ld.

### 15.—Quantity and Value of Asbestos Produced, 1943-52

NOTE.—Figures for 1896-1910, inclusive, will be found in the 1911 Year Book, p. 424; for 1911-28 in the 1939 edition, p. 354; and for 1929-42 in the 1946 edition, p. 353.

Salt.—Salt is obtained from brine wells in the Provinces of Ontario, Manitoba and Alberta, but in Nova Scotia it is recovered by mining rock-salt and by evaporation from brine. Domestic production is sold principally to the dairy, meat-curing and canning industries, to fisheries, to highways and transport departments, to agriculturists for use as a soil sweetener, to chemical industries, and as table salt. About 50 p.c. of the salt production is used in making caustic soda, soda ash and related chemicals.

16.—Quantity of Salt Produced, by Province, with Total Value, 1943-52 Norg.—Figures for the years 1926-42 are given in the 1946 Year Book, p. 354.

Gypsum.—The use of gypsum in the building trades has increased rapidly and Canada has extensive deposits of gypsum favourably situated for commercial development. A production peak was reached in 1951 at 3,803,000 tons, the 1952 output being slightly lower. Nova Scotia produces approximately 85 p.c. of the Canadian annual output, most of which is exported to the United States in crude form.

17.—Quantity of Gypsum Produced, by Province, with Total Value, 1943-52

NOTE.-Figures for 1926-42 are given in the 1943-44 Year Book, p. 321.

<sup>&</sup>lt;sup>1</sup> Includes 8,100 tons valued at \$56,700 produced in Newfoundland.

Sulphur.—Sulphur production, including the content of smelter gases used for making sulphuric acid and liquid sulphur dioxide, the sulphur in pyrite, and elemental sulphur amounted to 441,000 tons in 1952. The two plants in Alberta that commenced production of sulphur from natural gas during 1952 have a combined capacity of 20,000 tons of high-grade sulphur annually. A new unit at Copper

Cliff, Ont., which produces liquid sulphur dioxide from smelter gases, also came into operation toward the end of 1952 with a potential annual capacity of 90,000 tons of sulphur dioxide. A plant has been completed at Arvida, Que., which will make about 45,000 tons of sulphuric acid yearly from gases derived from the roasting of zinc concentrates. In addition, plans are under way for the erection of a plant near Niagara Falls, Ont., to utilize pyrite to make about 50 tons of elemental sulphur and 300 tons of sulphuric acid daily, and a new fertilizer plant is being built at Kimberley, B.C., which will require a sulphuric acid plant with a capacity of about 300 tons daily.

## 18.—Quantity and Value of Sulphur Produced, 1943-52

Note.—Figures for 1926-42 are given in the 1946 Year Book, p. 355.

### Subsection 5.—Production of Fuels

Coal.—Information on the coal reserves of Canada is given in the 1950 Year Book, pp. 516-518.

In 1952, coal production was lower in all the principal producing areas compared with the previous year. In Alberta the decline amounted to nearly 7 p.c., in Nova Scotia to 8 p.c., in Saskatchewan 9 p.c., and in British Columbia 7 p.c. Increases in output were recorded for New Brunswick and Yukon Territory only. Total production for Canada declined 7 p.c. but increased prices resulted in a slightly higher value.

### 19.-Coal Production, by Province, with Total Value, 1943-52

Note.—Figures for 1874-1910, inclusive, will be found in the 1911 Year Book, p. 419; for 1911-28 in the 1939 edition, p. 348; and for 1929-42 in the 1946 edition, p. 347.

<sup>&</sup>lt;sup>1</sup>Entered for consumption. <sup>2</sup>Includes coal ex-warehoused for ships' stores. <sup>2</sup>Canada also imported 142,435 tons of briquettes of coal or coke valued at \$1,114,617 in 1945, 182,231 tons valued at \$1,449,221 in 1946, 245,678 tons valued at \$2,233,654 in 1947, 308,753 tons valued at \$3,204,839 in 1948, 186,971 tons valued at \$2,185,707 in 1949, 191,134 tons valued at \$2,316,570 in 1950, 170,157 tons valued at \$2,061,798 in 1951, and 155.597 tons valued at \$1,886,619 in 1952.

### 21.-Exports of Coal Produced in Canada, 1943-52

Note.—Figures for 1868-1910, inclusive, will be found in the 1911 Year Book, p. 421; for 1911-28 in the 1939 edition, p. 349; and for 1929-42 in the 1946 edition, p. 348.

Year	Quantity	Value	Year	Quantity	Value
	tons	\$		tons	\$
1943 1944 1945 1946 1947	1,110,101 1,010,240 840,708 862,489 714,549	5,428,362 5,984,827 5,303,543 5,946,224 5,440,788	1948 1949 1950 1951 1952P	1,273,262 432,043 394,961 435,083 388,960	11,555,985 3,563,892 3,198,040 3,495,664 3,203,522

The sources of coal consumed in Canada in the years 1943-52 are shown in Table 22 and detailed figures of coal made available for consumption in 1951 and 1952 are given in Table 23; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not cleared for consumption until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally, the coal made available for consumption is greater than the apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond but, while remaining in bond at the port, it is available for domestic consumption if required.

### 22.-Consumption of Canadian and Imported Coal in Canada, 1943-52

Note.—Figures for 1886-1910, inclusive, will be found in the 1921 Year Book, p. 354; for 1911-28 in the 1939 edition, p. 350; and for 1929-42 in the 1946 edition, p. 349.

Petroleum.—A special article on the Canadian Crude Petroleum Situation up to the end of 1951 is given in the 1952-53 Year Book, pp. 524-527. The following article extends the survey to the end of 1952. A special article on the construction of pipelines in Canada will be found in the Transportation Chapter of this volume.

### CANADIAN CRUDE PETROLEUM SITUATION\*

During 1952, significant progress was made in establishing new crude oil reserves in the Prairie Provinces. The long-established fields like Turner Valley, 35 miles southwest of Calgary, where the discovery of crude oil in 1936 caused an upsurge of drilling activity, continued to produce at a declining rate. However, the production from the older fields is now a relatively small part of the yield that has resulted from the newer fields found following the discovery of Leduc in 1947.

<sup>\*</sup> Prepared by Dr. G. S. Hume, Director General of Scientific Services, Department of Mines and Technical Surveys, Ottawa.

Since Leduc began to produce there has been an ever-increasing tempo to exploration activity both in the number of geological and geophysical surveys followed by drilling and in the extent of the areas under active development. Exploration activity necessarily slows down during the winter but, so far, each seasonal decline has been succeeded by a period of even greater activity than at any previous time. This has resulted in larger sums of money being risked in the drilling of more wildcat wells and in more discoveries being made in a region now extending across the whole of the prairies and northwestward into northeastern British Columbia and into the southern part of the Northwest Territories, south and west of Great Slave Lake.

Although Leduc was the first major discovery in the present surge of exploration, the area surrounding it continues to be quite active. The Woodbend field, discovered late in 1947 on the north side of the North Saskatchewan River opposite the Leduc field, has been found to be a continuation of that field, and a northward trend for the productive Devonian reef formation was indicated by the discovery in 1950 of the Acheson field, west of Edmonton. To the south of the Leduc field a number of small isolated Devonian reef fields have been found but the trend of the reef, slightly southwest from Leduc, was indicated by the discovery of the Wizard Lake field in 1951 and the Bonnie Glen field, a few miles farther south, late in the same year. This trend was confirmed by more drilling at Bonnie Glen in 1952 and by developments to the southwest in the Pigeon Lake area. Early in 1953 the trend was extended still farther to Homeglen, 30 miles from the southern part of the Leduc field and 14 miles south and slightly west of the Pigeon Lake area.

Thus, this trend has now been extended for a length of more than 60 miles and the oil contained within the various fields that comprise it amounts to several hundred million barrels. In fact, the Bonnie Glen-Pigeon Lake discoveries in 1952 added about 250,000,000 bbl. of recoverable reserves to 50,000,000 bbl. in the Wizard Lake field, 230,000,000 bbl. in the Leduc field, and 66,000,000 bbl. in the Stony Plain-Acheson field, placing the total so far discovered on this trend at some 600,000,000 bbl. This is about 100,000,000 bbl. less than the original recoverable reserves in the Redwater field, 30 miles northeast of Edmonton, found in 1948 and now almost wholly drilled on 40-acre spacing. The Redwater oil field, so far the largest found in Western Canada, comprises more than 37,000 acres and has about 925 wells producing or capable of production.

The other major reef trend in Alberta under active development extends from south of Camrose through Stettler, Caprona, and Big Valley to Drumheller on Red Deer River, a distance of about 100 miles. To the north and slightly west of Camrose is the Camrose-Armena field and, about 10 to 15 miles farther north, the Joseph Lake field. Both of these produce oil from the Upper Cretaceous Viking sand rather than from the deeper Devonian reef limestone. This shallower productive sand has been particularly prolific in natural gas yield in other areas, as in the Viking-Kinsella field which supplies Edmonton and other cities and towns as far south as Red Deer. In 1952 there were several important discoveries on the Stettler-Big Valley reef trend, including Malmo at Red Deer Lake, perhaps the most significant being the gas-distillate field at Nevis, 12 miles west of Stettler. There are now several wells of high potential yield in this area and the natural gas reserves are expected to be large. There is also some oil in the field but the wells are shut in pending the development of a market for the gas.

In addition to these discoveries on the two outstanding reef trends, there were numerous discoveries in 1952 in other areas of Alberta that bear no particular structural relationship to one another. A few miles northwest of Edmonton, oil was found in the St. Albert area, and at Sturgeon Lake about 200 miles northwest in the Peace River area, a discovery was made in a Devonian reef that is of more than ordinary interest in that it means a field in the Peace River area of the same type as Leduc, Redwater, and the other more southerly reef fields. The extent of the Sturgeon Lake reef area cannot be judged as yet but there can be no doubt of its importance. Its discovery has led to renewed interest in the Peace River area and will result in much drilling activity.

In Saskatchewan, there has been much more exploration activity than previously and several new oil fields were discovered in 1952. In the southwestern part of the Province there has been a very considerable extension of the Coleville field and new pools at Midway, Cantuar, Success and Java have been found in the general vicinity of the Fosterton field. The oil from these areas is heavier than the reef oil from the Alberta fields and all production is from formations younger than the Devonian. In the Coleville field the production is of Mississippian age but the producing beds are somewhat older than the productive Turner Valley Rundle limestone. In the Midway field the production comes from a Jurassic sand which overlies the Mississippian, and in the Cantuar and Success fields production is from still younger Lower Cretaceous beds. Jurassic oil has also been found in the Eastend area, 65 miles south of Fosterton. In 1952, a further discovery of medium heavy oil, also from Jurassic sands, was made at Frontier, 15 miles south of Eastend, and still another at Rapdan about five miles east of Eastend.

In the southeastern part of Saskatchewan, an oil discovery at Wapella, about 20 miles west of the Manitoba boundary, appears to be of considerable importance. Subsequent drilling has revealed that oil occurs not only in the Lower Cretaceous, as in the discovery well, but is present also in this field in Jurassic sands. Perhaps the most spectacular find in Saskatchewan, however, was made in the Forget area, about 60 miles southwest of Wapella. Production in this discovery was made in Mississippian beds of similar age as those that produce in the Daly field at Virden in Manitoba. Some light oil has been found at Driver, near the Coleville field, and at Ratcliffe, 40 miles south and slightly west of Weyburn. In the Ratcliffe area two wells have shown considerable promise although the present yield is small.

In Manitoba, the Daly field at Virden has been expanded and in 1952 discoveries were made at Linklater near the Saskatchewan boundary, at Tilston 12 miles south of Linklater, and at Waskada in the extreme south of the Province. All of these discoveries are in Mississippian strata. The Tilston discovery was the first flowing well in Manitoba and hence gives promise of being of greater importance than the others. Considerable water was present with the oil in the Waskada well. Another small discovery was made at a well near Coulter, also in the extreme southwest part of the Province, and still another at Lulu Lake on the top of Turtle Mountain.

Manitoba now has a production of more than 1,000 bbl. a day and, although no discovery to date in the Province rates as high as Forget in Saskatchewan, 65 miles west of the Manitoba-Saskatchewan boundary, the whole of southwestern Manitoba and southeastern Saskatchewan has become a region of intense interest because it is 600 miles closer to the eastern market than are the fields in the Edmonton area.

In 1952 there were 1,573 wells drilled in Alberta, 488 in Saskatchewan, 74 in Manitoba and 15 in northeastern British Columbia, a total of 2,150. Many of these were development wells drilled within the boundaries of oil fields. Consequently, 1,177 new oil wells were completed, of which 922 were in Alberta, 214 in Saskatchewan, and 40 in Manitoba; one in British Columbia has not been produced. There were also 138 dry gas wells, of which 121 were in Alberta and 17 were in Saskatchewan. In addition, there were 27 wet gas wells containing distillate—17 in Alberta and 10 in British Columbia. The number of dry holes drilled was 808, of which 513 were in Alberta, 257 in Saskatchewan, 34 in Manitoba, and 4 in British Columbia.

In 1952, there was some exploratory activity in the Northwest Territories west and south of Great Slave Lake. Several wells were drilled, in some of which oil shows were found but no well had sufficient oil to produce. However, the results are encouraging for further exploration. The only production in the Northwest Territories at present is from the Norman Wells field where the oil is refined for local use and for mining enterprises in the Territories. In 1952, production from the Norman Wells field was 301,000 bbl., an increase of nearly 73,500 bbl. over 1951.

The year 1952 was important in the development of new markets for oil from Western Canada in that work began on the building of a new oil pipeline from the Edmonton area to Vancouver across the Cordillera. When completed in 1953, the line will have an initial capacity of 120,000 bbl, a day, and extensions of the line to new refineries in the State of Washington are already planned. Also during the year an announcement was made by Interprovincial Pipeline Company that the pipeline now terminating at Superior, Wisconsin, would be extended along the south shore of Lake Superior, across Mackinac Straits at the north end of Lake Michigan, and thence to Sarnia. This line will be 30 inches in diameter and will be capable of handling 300,000 bbl. a day. This is more than the capacity of the line now terminating at Superior so that the original line to Superior will be duplicated to bring its capacity to the necessary amount. Imperial Oil Limited built three large tankers to handle the oil from Superior to Sarnia during the navigation season and British American Oil Company Limited built a tanker to supply its refineries in Central Canada. The proposed pipeline will make it possible to deliver oil to the Sarnia area on a year-round basis uninterrupted by winter conditions.\*

The building of pipeline outlets from the Prairie Provinces, as proposed, will make it possible to produce oil in amounts up to about 600,000 bbl. a day. During 1952, peak production exceeded 200,000 bbl. a day and there was potential production of possibly 300,000 bbl. a day. Thus, the new outlets will allow considerable expansion, a situation quite in harmony with the excellent prospects for further discoveries.

Oil production continues in relatively small amounts in Ontario and New Brunswick. In 1952, Ontario produced 192,000 bbl. as compared with 197,171 bbl. in 1951, and New Brunswick yielded 14,500 bbl. compared with 15,551 bbl. In Gaspe the search for oil is being continued but there is no production at present. Some further interest has also been shown in the prospects of the sedimentary basin south and west of Hudson and James Bays but no drilling was done in 1953 in actual prospecting. Information as to the thickness and character of the sediments has been obtained by drilling done by the Ontario Department of Mines.

<sup>•</sup> More detailed information regarding Canadian oil and gas pipelines is given in the Transportation Chapter (see Index.)

In 1952, Canadian crude oil production totalled 60,864,500 bbl., an increase of 27·8 p.c. over the 1951 production of 47,615,534 bbl. Western Canada accounted for 99 p.c. of the total with Alberta yielding 58,677,000 bbl. or 96 p.c. There was an increase in Saskatchewan in 1952 with a yield of 1,600,000 bbl., and Manitoba, which had no production previous to 1951, showed a yield of 80,000 bbl.

Thus, the main expansion in oil production has been in the Prairie Provinces and, with drilling activity at a high rate, it is expected that further discoveries will be made in 1953 and that the increase in yield over 1952 will be substantial.

24.—Quantity and Value of Crude Petroleum Produced, by Province, 1943-52

Note.—Figures for 1936-42 will be found in the 1948-49 Year Book, p. 476.

Includes 10,698 bbl. valued at \$26,478 produced in Manitoba.
\$196,000 produced in Manitoba.

Natural Gas Production.—Alberta accounts for almost 90 p.c. of Canada's production of natural gas. It is estimated that the total output for all provinces was almost 88,000,000,000 cu. feet in 1952, of which 79,000,000,000 cu. feet was from Alberta's wells. Ontario's production amounted to almost 8,000,000,000 cu. feet in 1952. (See also the special article on the construction of pipelines in Canada, Chapter XIX.

<sup>2</sup> Includes 80,000 bbl. valued at

### Subsection 6.—Production of Structural Materials

Production of structural materials is dependent upon the activity of the construction industry; output in 1952 reached a record value of \$164,046,644. This group includes clay and clay products (brick, drain tile, sewer pipe, etc.), cement, lime, sand, gravel and stone.

26.-Value of Structural Materials Produced, by Province, 1943-52

Note.-Figures for 1926-42 are given in the 1946 Year Book, p. 355.

Clay Products.—The sales value of clay products produced in 1952 was the highest recorded. Increases in Nova Scotia, Ontario and Alberta more than offset decreases in the other provinces. Common clays suitable for the production of building bricks and tile are found in all the provinces; production is greatest in Ontario and Quebec. Stoneware clays are produced largely from the Eastend and Willows areas in Saskatchewan and shipped to Medicine Hat, Alta., where, utilizing the cheap gas fuel, they are manufactured into stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs in Nova Scotia and, although it has not been developed extensively for ceramic use, some is used for pottery. Two

large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia. Deposits of high-grade, plastic, white burning clays occur in northern Ontario and deposits yielding high-grade china clay have been found along the Fraser River in British Columbia but these have not been used on a commercial scale. Ball clays of high bond strength occurring in the white mud beds of southern Saskatchewan have not been developed to any extent.

27.—Value (Total Sales) of Clay Products Produced, by Province, 1943-52 Note.—Figures for 1926-42 are given in the 1946 Year Book. p. 356.

Cement.—The production of cement has increased greatly since the end of World War II and imports have also been relatively high during the same period. The largest production is in Quebec and Ontario although there are active plants in Manitoba, Alberta and British Columbia. Three new plants, one in each of the Provinces of Newfoundland, Quebec and New Brunswick, have raised the annual rated capacity for Canada to about 22,000,000 bbl.

Sand, Gravel and Stone.—Deposits of sand and gravel are numerous throughout Eastern Canada, with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of the haul. This accounts for the large number of small pits and the small number of large plants. Every province, except New Brunswick and Prince Edward Island, produces natural bonded sand but some grades particularly suitable for certain industries demand a much higher price than ordinary sand. Quebec and Ontario contributed 75 p.c. of the total quantity of sand and gravel in 1951. The greater part of the output is used in road improvement, concrete works and railway ballast, and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone.

The stone industry has two main divisions, stone quarrying and the stone-products industry. The granite, limestone, marble, sandstone and slate quarries of Canada yield high-grade structural and decorative materials and also supply requirements for chemical and other allied industries. The gross value of stone of all varieties produced in Canada in 1951 totalled \$28,649,768 as compared with \$25,895,357 in 1950.

# Section 5.—Industrial Statistics of the Mineral Industry

The scope of the annual statistics on mineral production published by the Dominion Bureau of Statistics includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc, and nickel-copper industries, as well as a section on metallurgical works. Additional data published at irregular intervals include such features as capital employed, numbers of employees, wages and salaries paid and net value of sales.

The figures for 'net value of shipments' of industries given in Tables 30 and 31 are, in each case, the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada, less the cost of materials, fuel, etc. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table 2 of this Chapter where, in the case of copper, lead, zinc and silver, the values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum, where imported ore only is used, and of cobalt which comes mainly from African ores. The net sales of these plants include, therefore, the net value of the metals recovered from these imported ores and, to this extent, the net sales shown in Tables 30 and 31 include products of other than Canadian origin.

<sup>&</sup>lt;sup>1</sup> Includes freight and smelter charges and cost of ores treated. cost of process supplies, fuel, electricity, freight and smelter charges.

<sup>&</sup>lt;sup>2</sup> Gross value of shipments less <sup>3</sup> Includes natural abrasives.

# Section 6.—World Production of Certain Metallic Minerals and Fuels

Table 32 shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1951. These figures are taken from the *United Nations Statistical Year Book 1952*, which presents production figures for 1932–51 for a much more extensive list of mining and quarrying industries. The 1951 figures are provisional and have been converted from kilogrammes in the case of gold and metric tons in the case of the other metals and fuels shown.

#### 32.—World Production of Certain Metallic Minerals and Fuels, 1951 P.

Note.—Dashes used throughout this table indicate that no figures were given in the *United Nations Statistical Year Book* in those cases, either because there was no production or because the quantity was not available.

## Section 1.--Water-Power Resources and Their Development\*

Canada, a land of many lakes and rivers, has been abundantly endowed by nature with great water-power resources which are well distributed across the country. In most sections, adequate precipitation and favourable topography result in numerous rivers on which falls and rapids frequently occur and offer excellent opportunities for the development of hydraulic power; with the exception of the prairies of the middle west, water-power resources of importance are found in virtually every part of the country. In British Columbia, where precipitation is high, the rivers flowing down the Pacific slope of the Rocky Mountains offer many fine power sites. Alberta, although a prairie province, also has mountain streams from the Rockies as well as great reserves of undeveloped power on its large northern rivers. The great Canadian Shield of Precambrian rock, which forms an arc around Hudson Bay, covers a portion of the Northwest Territories and northern Saskatchewan as well as a large part of Manitoba, Ontario, Quebec and Labrador; it is a rough, forest-covered, well-watered area characterized by innumerable lakes and by rivers with many falls and rapids. The potential power of the Great Lakes-St. Lawrence River System forms part of the great resources of Ontario and Quebec upon which their status as the principal manufacturing provinces of Canada is dependent and which compensates in large degree for the lack of indigenous coal. In New Brunswick, Nova Scotia and on the Island of Newfoundland, the precipitation is moderately heavy and the rivers, while not large, afford numerous possibilities for power developments of moderate size. In Labrador, the potential resources of the Hamilton River are outstanding.

An accurate comparison of Canada's water-power resources and their development with those of other countries† is not possible owing to incomplete world statistics and differing bases of tabulation. However, from available figures as at the end of 1950, it appears that Canada ranks second among the countries of the world in total installed capacity, being exceeded only by the United States; in

Revised in the Water Power Division, Department of Resources and Development, Ottawa.
 More detailed information on the water-power resources of other countries is given in the 1951 Year Book, pp. 531-533.

installation per thousand population, Canada is exceeded only by Norway. Canada is in approximately sixth place in potential power resources but those resources are, on the whole, more readily available to prospective markets than is the case in other countries that outrank Canada, an exception being the United States. In particular might be mentioned the enormous potential resources of the great river systems of Africa and Asia.

#### Subsection 1.—Available and Developed Water Power in Canada

Table 1 gives a summary of the water-power resources of Canada and their development as at Dec. 31, 1952.

1.—Available and Developed Water Power, by Province, as at Dec. 31, 1952

	Available 24 at 80 p.c.	Turbine	
Province or Territory	At Ordinary Minimum Flow	At Ordinary Six-Months Flow	Installation <sup>1</sup>

Yukon and Northwest Territories	382,500	814,000	31,450
Canada	29,207,000	50,705,000	14,305,880

<sup>&</sup>lt;sup>1</sup> Includes water wheels and hydraulic turbines installed.

The figures given in the first and second columns of the above table represent 24-hour power and are based upon rapids, falls and power sites of which the actual drop, or the head of possible concentration, has been measured or at least carefully estimated. Recent revisions in power estimates for the Provinces of Quebec and Newfoundland, resulting from the tabulation of some new sites, the use of higher run-off factors in computing available flows and changed flow conditions on controlled rivers, have appreciably increased the total of available power at average flow. Tabulations of potential power in Canada are still not complete as many unrecorded rapids and falls of undetermined power capacity exist on rivers and streams throughout the country, particularly in the less-explored northern districts. Apart from cases where definite studies have been carried out and the results recorded. no consideration has been given to the power concentrations that are feasible on . rivers and streams of gradual gradient, where economic heads possibly may be created by the construction of dams. Thus, the figures in Table 1 of available power, under the two conditions of stream flow, represent only the minimum water-power possibilities of Canada.

The third column gives the total capacity of the water wheels actually installed. These figures should not be placed in direct comparison with those in the first and second columns to deduce the percentage of the available water-power resources that has been developed. At developed sites, the water-wheel installation averages 30 p.c. greater than the corresponding calculated maximum available power at

the same sites. Figures of Table 1, therefore, indicate that the at present recorded water-power resources will permit of a turbine installation of nearly 66,000,000 h.p. and that the turbine installation at Dec. 31, 1952, represents approximately 22 p.c. of recorded water-power resources.

The development from year to year of Canada's water-power resources is a good index of the country's industrial growth and of the change in its economic life since the beginning of the present century. In 1900, prior to the inception of long-distance transmission of electricity, Canada's economy was based largely on agriculture and the total of hydraulic installations, mostly small mills, was only 173,000 h.p. With the successful solution of the problems of transmission of electric energy for use in distant communities, the development of large hydraulic projects became practicable and, by 1910, total installation had risen to 977,000 h.p. In ensuing decades, the growth in installed capacity, partly speeded by war demands. proceeded at an accelerated rate.

The figures in Table 2, and the graph on p. 557, show clearly the consistent and accelerating growth in the total capacity of hydraulic installations since the beginning of the century. In the period 1900-05, the average annual increase was about 56,000 h.p., a rate that was stepped up sharply in subsequent years because of improvements in the transmission of electricity and the building of large central electric stations. During the period 1906-22, development proceeded at a fairly uniform rate of 150,000 h.p. per annum. The heavier demand for electricity during the prosperous 1920's increased the rate of installation sharply in 1923 and it continued at about 377,000 h.p. per annum for the period 1923-35. aftermath to the economic depression, the rate of installation was low during the years 1936-39 after which the power required for war purposes accounted for the high average rate of increase of 481,000 h.p. per annum during the period 1940-43. Few developments were undertaken in the later war years or in the immediate postwar period, so that only a small amount of new capacity came into operation in the 1944-47 period. However, the results of the later post-war program of construction are apparent in the large growth in the years 1948-52 when the average rate was about 857,000 h.p. per annum. Present programs of expansion indicate a continuation of this rate of growth for some years.

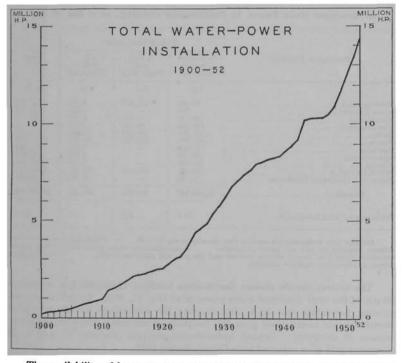

2.—Hydraulic Turbine Horse-Power Installed, by Province, as at Dec. 31, 1900-52

Norg.—Figures for each year 1900-30 are given in the 1939 Year Book, p. 361, and for 1931-39 in the 1946 edition, p. 362.

The availability of large amounts of hydro-electric energy has so fostered the economical utilization of the natural products from land, forest and mine that Canada has become a highly industrialized nation. Low-cost power is fundamental in

meeting the enormous requirements of the pulp and paper industry—Canada's largest industry and one of the world's great industrial enterprises; it also allows the economical mining, milling and refining of base and precious metals and facilitates their fabrication into a multitude of manufactured articles. Canada's outstanding growth in the post-war period has been made in conjunction with accelerated development of water-power resources. From hydro-electric plants ranging in capacity from a few hundred to more than 1,000,000 h.p., networks of transmission line carry power to most urban centres and to an increasing number of rural districts. This wide distribution of power has facilitated the decentralization of industry, enabling manufacturing processes to be carried on in many of the smaller centres of population. Economical domestic electrical service, too, contributes in no small measure to the high standard of living enjoyed in Canada.

With a total capacity of 14,305,880 h.p., present water-power plants in Canada, if operated at full load, would produce energy at a rate corresponding to the output of more than 143,000,000 manual workers, on the commonly accepted basis of one mechanical horse-power equalling the working capacity of ten men.

Table 3 shows, under three classifications, the purposes for which the developed water power is primarily utilized.

<sup>2</sup> Includes only water power actually developed by pulp and paper companies.
<sup>3</sup> Includes only water power actually developed by industries other than central electric stations and the pulp and paper industries.
<sup>4</sup> Includes water wheels and hydraulic turbines installed.

The central electric station classification totalling 12,859,956 h.p. represents 90 p.c. of the total developed water power as at Dec. 31, 1952. In 1900 the corresponding percentage was 33.5, thus showing the tremendous growth in central electric station installations since the inception of successful long-distance transmission of electricity. Central hydro-electric stations produced 97 p.c. of all electricity sold in or exported from Canada during 1952.

The pulp and paper turbine installation total of 854,347 h.p. includes only water power actually developed and directly used by pulp and paper companies. In addition, this industry is the greatest purchaser of central electric station power,

buying more than 15 p.c. of all power sold for industrial purposes. Part of the purchased power is classed as secondary, being used for steam generation by electric boilers.

The 'other industries' group develops 591,574 h.p. solely for its own use. These diversified industries also provide a broad market for the power sold by the central electric stations.

The figure of total hydraulic installation in Canada, 14,305,880 h.p., is the cumulative total of all existing installations of water wheels and hydraulic turbines irrespective of whether or not the equipment has been in use during the year. It has been adjusted to Dec. 31, 1952, by the inclusion of new installations completed during the year and by deletion of those old units which were dismantled.

# Subsection 2.—Water-Power Developments in the Provinces and Territories, 1952

Keeping pace with the expansion of general industrial activity throughout Canada, a record-high total of 1,066,250 h.p. of new hydraulic turbine capacity was brought into operation in 1952; active construction proceeded on other developments with a total ultimate capacity of more than 3,000,000 h.p. New developments were widely distributed throughout Canada, although the greater number were located in Quebec. Projects that have been undertaken in rather remote locations indicate the future economic value of other undeveloped sites in unsettled regions. Construction was also active in the field of power distribution and in the building of thermal-electric plants. Over-all progress in each province, principally covering hydro-electric development, is outlined below.

Atlantic Provinces.\*—The Newfoundland Light and Power Company Limited brought into operation in December its new plant of 7,500 h.p. at tidewater on the Horse Chops River, Cape Broyle. Farther upstream, a second plant which will have a capacity of 10,000 h.p. was under construction for 1953 operation. Investigations are being made towards a new development of about 20,000 h.p. on Piper's Hole River at the head of Placentia Bay. The Anglo-Newfoundland Development Company Limited proceeded with the modernization of its two plants on the Exploits River: at Grand Falls, four 4,000-h.p. turbines were replaced by 5,500-h.p. units for an increase in capacity of 6,000 h.p.; at its Bishop's Falls plant, the replacement of two 1,700-h.p. turbines by units of 2,700 h.p. is expected to be completed early in 1953 and additional changes at both plants will be made at a later date. The Union Electric Light and Power Company is planning the building of two plants, one on Georges Brook of 1,200 h.p., and one on the Trinity River at Lockston of 4,000 h.p. In Labrador, the Iron Ore Company proceeded with a development for 1954 operation of 12,000 h.p. on the Ashuanipi River.

The Nova Scotia Power Commission completed its Gulch development on the Bear River, consisting of one unit of 8,600 h.p. under 225-foot head. Investigations are being made covering a development of 5,000 h.p. on the Mersey River at Lower Great Brook. The Nova Scotia Light and Power Company Limited brought into operation a 4,000-h.p. plant at White Rock on the Gaspereau River, replacing a plant of 1,105 h.p. A development on the Nictau River of 9,000 h.p. under 400-foot head is under construction for 1953 operation.

<sup>\*</sup>In addition to water-power development, the construction of fuel-electric plants included: Newfoundland Light and Power Company Limited, a 3,580-h.p. diesel at St. John's; Nova Sootia Light and Power Company at Halifax, a unit of 22,500 kw. for 1933 operation; Seaboard Power Corporation Limited at Glace Bay, N.S., a unit of 18,750 kw. for 1933 operation; New Brunswick Power Commission at Grand Lake, a unit of 6,250 kw. completed and one of 18,750 kw. under installation.

Construction of the 27,000-h.p. development on the Tobique River by the New Brunswick Electric Power Commission was up to schedule for completion early in 1953. Investigations covering power sites were continued on the St. John River. The Maine and New Brunswick Electrical Power Company Limited increased its installed capacity by replacing a unit of 2,400 h.p. with one of 5,000 h.p.

Quebec.—The orderly development of the Province's great water-power resources continued, with 597,000 h.p. of new capacity completed in 1952 and with other large projects under construction.

The Quebec Hydro-Electric Commission was actively engaged on several developments. At Beauharnois on the St. Lawrence River, capacity was increased by 222,000 h.p. in four units and two other units were under installation for 1953 operation, which will bring total capacity of the over-all development to 1,408,000 h.p.; ultimate capacity of the site is about 2,000,000 h.p. On the upper Ottawa River, good progress was made on the two-unit 16,000-h.p. development at Rapid II for 1953 operation. On the Bersimis River, a northern tributary of the lower St. Lawrence, a large development below Lake Casse, initially of 300,000 h.p. by 1956 and ultimately of 1,000,000 h.p., is being undertaken. It is planned to transmit power across the St. Lawrence River by submarine cable to the Gaspe Peninsula and the plant will also be tied in with Beauharnois by a high-voltage line. Two obsolete plants, 28,800 h.p. at St. Timothee and 21,600 h.p. at Chambly, have been permanently closed.

The Aluminum Company of Canada completed its five-unit 275,000-h.p. development at Chute-du-Diable on the Peribonka River, and brought into operation one unit of 55,000 h.p. at Chute-à-la-Savanne, a few miles downstream. The latter plant, also of 275,000 h.p., will be completed in 1953 and both plants will be tied in with the Saguenay River generating stations.

The Manicouagan Power Company brought into operation in December 1952 the first unit of 45,000 h.p. in its development near the mouth of the Manicouagan River, and the second unit is expected to be completed early in 1953. Power is being supplied to Baie Comeau and later may be transmitted south across the St. Lawrence River by submarine cable. Ultimate capacity is 270,000 h.p.

Price Brothers and Company made good progress on two hydro-electric developments on the Shipshaw River, one of 70,000 h.p. and the other of 9,000 h.p., with operation scheduled for 1953.

The Ste. Marguerite Power Company is proceeding with the construction of a two-unit 17,000-h.p. plant on the Ste. Marguerite River for 1954 operation. The City of Mégantic has undertaken the development of 4,500 h.p. on the Chaudière River, with operation of one unit of 2,250 h.p. expected in 1953.

The Shawinigan Water and Power Company has completed the necessary works to enable the diversion of run-off from 260 sq. miles of the drainage basins of northward flowing rivers into the Gouin Reservoir, which will increase the firm capacity of its seven power plants on the St. Maurice River. The Quebec Streams Commission carried out storage and power studies and successfully continued its extensive storage-dam operations for the regulation of river flow.

Ontario.—The Hydro-Electric Power Commission of Ontario continued construction during 1952 on two major hydro-electric projects.\* In the Otto Holden Generating Station on the Ottawa River above Mattawa, seven of the total of eight units, each of 33,000 h.p., were brought into operation in 1952 and the final unit was expected to be on line early in 1953. On the Niagara River at Queenston, good progress was made on many phases of construction concerned with the Sir Adam Beck-Niagara Generating Station No. 2, which will have an ultimate capacity of 1,260,000 h.p. in 12 units and is scheduled for initial operation in 1954 and for completion in 1956. The intake works for the first of the two tunnels, the excavation of this tunnel and associated canal, headworks and power-house foundations are well advanced. On the Nipigon River, the installation of a third unit of 45,000 h.p. is being undertaken in the Pine Portage station for 1954 operation.

The Great Lakes Power Company is constructing a two-unit 20,000-h.p. plant at Scott Falls on the Michipicoten River for 1953 operation. It is also undertaking, for 1954 operation, the development of 15,000 h.p. in two units at McPhail Falls, a few miles upstream.

Prairie Provinces.†—The Manitoba Hydro-Electric Board completed the final two units of its six-unit 114,000-h.p. Pine Falls development on the lower Winnipeg River, and has begun preliminary construction on the development of 80,000 h.p. at McArthur Falls for 1955 operation; contracts have been awarded for power-house equipment. The Winnipeg Electric Company completed in September 1952 the installation of the sixth and final unit of 37,500 h.p. in its Seven Sisters plant on the Winnipeg River. Sherritt Gordon Mines Limited brought into operation its 7,000-h.p. plant on the Laurie River and power is now being supplied to the Lynn Lake mining field; preliminary construction towards a second development will begin in 1953.

Calgary Power Limited has undertaken the installation of a unit of 30,000 h.p. in its Ghost plant on the Bow River for 1954 operation. The Company has also begun preliminary construction at the Bearpaw site, near Calgary, of a 22,000-h.p. plant for 1955 operation. The installation is being planned of a new unit of 1,000 h.p. in the Astoria plant at Jasper, which is operated by Northland Utilities Limited; the Company is considering also a development of 1,150 h.p. on the Hart River, near McLennan, Alta.

British Columbia.—In British Columbia, two new developments were completed in 1952 and construction was active on other extensions and major new projects.

The British Columbia Electric Company Limited completed its power house at Wahleach Lake with operation of the single unit of 82,000 h.p. at 2,000-foot head beginning in December. The Company has placed an order for the fourth

<sup>\*</sup> The Commission also had under construction two large steam-electric stations; at Windsor the second 66,000-kw. unit was placed on line in February 1952 and the plant of 264,000 kw. in four units will be completed in 1953. At Toronto. two units totalling 183,000 kw. were brought into operation and the fourth unit scheduled for May 1953; two units will operate temporarily at 25 cycles but, when these are converted to 60-cycle operation, the plant will be rated at 400,000 kw.

t The City of Winnipeg brought into operation a steam turbine of 15,000 kw. and a second unit of 25,000 kw. is being installed for 1953 operation. The Manitoba Hydro-Electric Board is planning a steam-electric plant of 60,000 kw. at Brandon for 1956 operation. The Saskatchewan Power Corporation increased the capacity of its thermal generating plants by 37,655 kw., the principal additions being 25,000 kw. at Saskatoon, 10,000 kw. at Prince Albert, and 1,865 kw. at Unity; present plans call for additions of 20,000 kw. at Estevan during 1954-56 and of 50,000 kw. at Saskatoon during 1954-57. Steam-electric plant additions in Alberta comprised 7,500 kw. completed at Drumheller by Canadian Utilities, 30,000 kw. under construction by the City of Edmonton for 1953, and 30,000 kw. by the City of Medicine Hat, also for 1953 operation.

unit of 62,000 h.p. to be installed in its Bridge River plant for 1954 operation; preliminary work has been undertaken to raise the level of the Lajoie Dam to provide increased storage.

The British Columbia Power Commission brought into operation its two-unit 4,000-h.p. Clowhom Falls plant; ultimate capacity is 12,000 h.p. In its John Hart plant on the Campbell River, installation is under way on two additional units, each of 28,000 h.p., with operation scheduled for early 1953, which will bring total capacity to 168,000 h.p. Surveys and investigations were made covering proposed small hydro-electric developments on the Kokish River on Vancouver Island and on the Spillimacheen River, near Golden.

The Aluminum Company of Canada made good progress on its great Nechako-Kitimat development and work was well up to schedule for anticipated 1954 initial operation. The Kenney Dam on the Nechako River at Grand Canyon has been completed and storage of water begun. About four miles of the 10-mile 25-foot-diameter tunnel through the Coastal Range and about one-half of the excavation for the underground power house have been completed. Ultimate capacity is estimated at more than 2,000,000 h.p., the present program comprises 420,000 h.p. in three equal units.

The Consolidated Mining and Smelting Company Limited made rapid progress on its Waneta development on the Pend d'Oreille River and it is now expected that the plant will be brought into service in 1953. Initial capacity will comprise two turbines, each of 105,000 h.p.; ultimate capacity is 420,000 h.p.

A minor addition of 50 h.p. was made by the Ashcroft Water, Electric and Improvement Company by unit replacement in its Bonaparte River plant. New undertakings planned for 1953 include 1,200 h.p. on Wilson Creek by Violamac Mines, and 3,200 h.p. at Port Alice by Alaska Pine and Cellulose Limited.

Yukon Territory.—In November, the Northwest Territories Power Commission brought into operation its Mayo River development of 3,000 h.p. to serve the Galena and Keno Hill mining areas. The project includes an earth-fill dam on the Mayo River and a storage dam on Mayo Lake.

The Yukon Hydro Company Limited is planning to increase, in 1953, the capacity of its Porter Creek plant near Whitehorse from 500 h.p. to 1,440 h.p.

### Section 2.—The Central Electric Station Industry

Central electric stations are companies, municipalities or individuals selling or distributing electric energy, whether generated by themselves or purchased for resale. Stations are divided into two classes according to ownership, viz., (1) commercial—those privately owned and operated by companies or individuals, and (2) municipal—those owned and operated by municipalities or provincial governments. These are subdivided according to the kind of power used into (a) hydraulic, (b) fuel, and (c) non-generating. This last sub-class purchases practically all the power it resells; a few of these stations have generating equipment that is held for emergencies. The hydraulic stations contain water turbines and wheels with approximately 88 p.c. of the total capacity of hydro installations in all industries in Canada. The generators driven by this hydraulic equipment generate 97 p.c. of the total output of all central electric stations.

4.—Electric Energy Generated, by Type of Station, 1937-51, a	nd by Province, 1951	Ĺ

#### Subsection 1.—Statistics of Central Electric Stations\*

The growth of the central electric station industry has been practically continuous since 1919, when statistics of kilowatt hours generated were first made available. Minor hesitations in output occurred in years of recession but the general movement has been strongly upward and, based on monthly data, the output of central stations during 1952 was more than eleven times that of 1919. The central electric station industry is one that is particularly suited to large-scale operation because of the huge outlay of capital necessary. Total horse power installed increased almost continuously even during the depression years, mainly because large power projects planned before the depression were in process of construction. Expansion since the end of World War II has been spectacular and large additional developments are currently under way (see pp. 559-562). Installed capacity of the industry in hydro and thermal units is now about equal to one horse-power for every Canadian.

#### 5.—Summary Statistics of Central Electric Stations, 1942-51

Norg.-Figures for 1917-31 are given in the 1940 Year Book, p. 369, and for 1932-41 in the 1950 edition, p. 564.

Domestic Service.—The power used by domestic customers or for residential purposes amounts to over 14 p.c. of the total production of central electric stations. Details of the number of domestic customers served, the kilowatt hours delivered and the costs to the customers, exclusive of direct federal, provincial and municipal taxes on such service, are shown in Table 7. The average consumption per customer and average cost per kilowatt hour vary considerably as between municipalities and also as between provinces, but the differences in the average bills are smaller. The availability of low-cost power to domestic users contributes greatly to the high standard of living enjoyed in Canada. Average consumption per customer is double that of 15 years ago and costs are 19 p.c. lower per kilowatt hour.

7.-Summary Statistics of Domestic Consumption of Electricity, 1942-51

Year	Customers	Consumption	Average Consump- tion per Customer	Average Charge per Annum	Average Charge per kwh.
	No.	'000 kwh.	kwh.	\$	ets.

Farm Service.—Table 8 shows the number of farm customers, the average annual consumption, average annual revenue and the average revenue per kilowatt hour sold to these customers in each province in 1951. Rural electrification has made considerable progress since the end of World War II. Farm customers added during 1951, totalled 32,618 and the national total at 336,345 increased by 10·7 p.c. over 1950. The relatively large numbers of farm customers in Ontario and the low average revenue per kilowatt hour is evidence of the assistance given in this field by the Ontario Government. It is estimated that about 54 p.c. of the farms in Canada now enjoy the benefits of power-line service. Many other farms generate their own electricity by the use of engines, windmills, etc.

#### 8.—Farm Service Furnished by Central Electric Stations, 1950 and 1951

Note. —Farm service was not reported separately in Newfoundland, Yukon Territory or the Northwest Territories.

Equipment of Central Electric Stations.—Auxiliary equipment includes only thermal engines and generators operated by them in hydraulic stations and in non-generating plants and does not include spare equipment in thermal stations or spare hydraulic equipment in hydraulic stations. Such equipment is classed as main-plant equipment. The capacities of the equipment are the manufacturers' ratings and, for water wheels and turbines, the kilowatt hour capacities vary with the supply of water. The majority of the hydraulic stations are large, serving wide areas over transmission lines, whereas most of the plants with thermal engines are small, serving the needs of the local municipality. In 1951, the number of thermal engines decreased as compared with previous years. Larger units are being installed to replace, in some instances, two or three small units. Equipment data were not included for small industries or firms, particularly in Saskatchewan and Alberta, where output was largely consumed by their own plants.

#### 9.—Main-Plant Equipment of Central Electric Stations, by Province, and Total Auxiliary-Plant Equipment, 1950 and 1951

Note.-Kva. means kilo-volt-amperes.

Export and Import of Electric Power.—Electric energy is exported from Canada only under licence and an export tax of 0.03 cents per kilowatt hour is levied with some exceptions. The export duties for the years ended Mar. 31, 1949 to 1952, were \$435,867, \$431,895, \$608,602 and \$743,407, respectively.

Exports for the years 1949-52 are shown in Table 10. There are also large interprovincial movements of electric energy from Quebec to Ontario, and smaller movements from Nova Scotia and Quebec to New Brunswick, Manitoba to Ontario, Saskatchewan to Manitoba and British Columbia to Alberta.

The water allowed to be diverted at Niagara Falls for power purposes was increased by 5,000 cu. feet per second to the Canadian side in November 1940, owing to a diversion of water from Long Lake and the Ogoki River from the James Bay watershed to the Great Lakes watershed. In 1941, a further increase of 9,000 c.f.s. to the Canadian plants and 12,500 c.f.s. to the United States plants was permitted,

and in 1943 an additional 4,000 c.f.s. to Canadian plants, bringing the totals up to 54,000 c.f.s. for Canada and 32,500 c.f.s. for the United States. This increased water, with greater development of plants on the St. Lawrence River, made possible the increased export of both firm and secondary power to the United States (5,000 c.f.s. will produce about 150,000 h.p. at the Queenston, Ont., plant). During 1948 and 1949, increased demands from domestic consumers and low water reduced the surplus energy available for export but exports increased again in 1950 to 1952.

<sup>2</sup> Mainly by British Columbia Electric Railway Company.

### Subsection 2.—Ownership and Regulation of Central Electric Stations\*

Water power is developed in Canada by provincial commissions, by municipalities and by private companies—hydro-electric plants. The first such provincial commission was formed in Ontario in 1906 to act as trustee for a group of municipalities to develop and distribute electricity. The Hydro-Electric Power Commission of Ontario now generates and purchases power, transmits it to rural and urban municipalities and serves large power customers. Similar commissions have been formed in most of the other provinces.

<sup>•</sup> The information included under the provincial headings of this Subsection has been revised by the various provincial commissions or authorities concerned.

<sup>1</sup> Includes Newfoundland.

A large portion of the power development in Quebec is connected with pulp and paper plants and with the aluminum industry. Such power plants are operated as separate organizations and deliver power to the parent companies at relatively low rates. Substantial blocks of power are also produced in Quebec for export to Ontario.

Table 12 shows statistics of municipally or publicly owned central electric stations, by province, for 1950 and 1951. Table 14 shows comparable statistics for commercial stations.

<sup>&</sup>lt;sup>1</sup> Includes Newfoundland.

The predominant position of Quebec in the electric-power field can be seen from the figures of Table 14. Of the total power generated in Canada by all central electric stations in 1951, 41 p.c. was generated by privately owned or commercial stations in the Province of Quebec; this percentage decreased from 57 in 1943 as a result of the transfer in 1944 of the Montreal Light, Heat and Power Company and the Beauharnois Power Company to the publicly owned Quebec Hydro-Electric Commission.

In 1951, all stations in Ontario produced a little more than one-half as much power as the Quebec stations and only 11 p.c. of the total for Ontario stations was produced by privately owned stations.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. The governing bodies of the provincial electric-power commissions, their functions and activities are summarized by provinces in the following paragraphs. In certain cases, privately owned utilities are also covered.

Newfoundland.—There are no publicly owned hydro-electric systems in Newfoundland. The largest water power development in the Province is located at Deer Lake. The plant, which is operated by Messrs. Bowater's Newfoundland Pulp and Paper Company Limited, has a total capacity of 150,000 h.p. This Company develops hydro-electric energy at Deer Lake mainly for its own use in the manufacture of pulp and paper and also supplies electric power to the Buchans Mining Company for its mining operations and to the Newfoundland Light and Power Company Limited which distributes electricity to consumers in Corner Brook and adjacent communities in the Bay of Islands sections.

The Anglo-Newfoundland Development Company Limited develops hydroelectric power at two plants situated at Grand Falls and Bishop's Falls with a total capacity of 43,340 h.p. The Company utilizes most of its hydro-electric power in the manufacture of pulp and paper and supplies light and power to the towns of Grand Falls, Bishop's Falls, Botwood and adjacent communities.

The Newfoundland Light and Power Company Limited has five plants that develop hydro-electric energy, with a total installed capacity of 37,900 h.p. It distributes electricity to the city of St. John's and the town of Bell Island and the iron mining operations there. The Company has a new plant at Horse Chops River, Cape Broyle, with an installed capacity of 7,500 h.p. and another situated about four miles upstream at Horse Chops River with a capacity of 10,000 h.p. for operation in 1953. Investigations are also being carried on by the Company towards a new development of about 20,000 h.p. on the Piper's Hole River which empties into the head of Placentia Bay.

The United Towns Electric Company Limited operates seven plants, of which five are located at Conception Bay and two on the Burin Peninsula. The Company sells light and power to communities on the Avalon and Burin Peninsulas and to the fluorspar mining operations at St. Lawrence on the Burin Peninsula. It developed 22,022,347 kwh. during 1952. The West Coast Power Company, a subsidiary of the United Towns Electric Company, operates a plant on Lookout Brook, a tributary of Flat Bay Brook which flows into St. George's Bay. It generated 8,371,400 kwh. in 1952.

Two small companies, the Clarenville Light and Power Company and the Union Electric Company, operate plants at Clarenville and Port Union, respectively. Nova Scotia.—Legislation relating to the use of water power was first enacted in Nova Scotia in 1909 under "An Act for the Further Assistance of the Gold Mining Industry" In 1914, legislation was passed initiating the development of water power in the Province and this was carried on in an investigatory manner in cooperation with the Federal Government until 1919 when the Nova Scotia Power Commission was created under the Power Commission Act. Certain investigatory work is still carried on in Nova Scotia by the Federal Government in close association with the Commission. The control of the water resources of the Province is vested in the Crown and is administered under the provisions of the Nova Scotia Water Act of 1919. The Commission pays the regular fees for water rights.

The function of the Commission is to supply electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service by providing for financial assistance to equalize cost and revenue of extensions, the construction of which has been approved by the Governor in Council as qualifying under the Act. In 1941, an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transmission, distribution, supply and use of power in the Province.

Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1952, showed total fixed assets of \$34,950,158 including work in progress amounting to \$2,551,147. Current assets amounted to \$483,603. Liabilities are shown as follows: fixed \$26,376,272; current \$3,683,718; contingency and renewal reserves \$3,249,675; sinking fund reserves \$5,269,776; and general reserves and special reserves \$1,927,832.

The initial development of the Commission was an 800-h.p. installation on the Mushamush River which went into operation in 1921 and delivered 192,000 kwh. in the first complete year of operation. Succeeding years showed a marked growth in installed capacity, reaching 101,450 h.p. in hydraulic turbines, 3,962 h.p. in diesel units and 21,125 kw. in steam turbines by Nov. 30, 1952, with a total generation for that year of 390,724,748 kwh.

The territory of the Commission extends over the entire Province and embraces nine systems which include 25 generating stations and 3,888 miles of transmission and distribution lines, through which 49 wholesale and 25,493 retail customers received 374,846,087 kwh. during the year ended Nov. 30, 1952.

The installed capacity and annual output of the various systems of the Nova Scotia Power Commission are given in Table 15.

The Trenton steam station of the Sheet Harbour System is being augmented by a 20,000-kw. unit which is expected to start operations some time in 1955, and a 6,000-h.p. hydro development is scheduled to start operations in 1954.

<sup>1</sup> Minimum head.

New Brunswick.—The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. Generating stations owned and operated by the Commission are as follows:—

Plant	Type	Capacity
		h n
Musquash	Water power	10,000
Grand Lake	Steam	43,550
Saint John	Steam	25,500
Chatham	Steam	16,750
Grand Manan	Diesel	1,045

Plant	Type	Capacity
St. Stephen Campobello	Diesel Diesel Diesel	2,500
TOTAL CAPA	CITY	103,310

The Musquash, Grand Lake, Saint John, Tobique and Chatham plants are interconnected and operate in parallel at all times. The St. Stephen and Shippegan plants also may be paralleled with the system as required.

A new steam plant was placed in operation at Grand Lake in the autumn of 1951, adding 16,750 h.p. to the Commission's generating capacity. A 25,000-h.p. unit will be in service in this same plant in May 1953 and a water-power installation of 27,000 h.p. will be in operation in April 1953 at the Tobique Narrows for an additional total of 53,000 h.p. and a then-installed capacity of 156,310 h.p.

High-voltage transmission was increased from 694 miles in 1951 to 749 miles in 1952. Power is sold "en bloc" to the cities of Saint John, Moncton and Fredericton and to the town of Sussex.

<sup>&</sup>lt;sup>2</sup> Distribution only.

<sup>&</sup>lt;sup>2</sup> Purchased energy.

<sup>4</sup> Rated in kilowatts.

<sup>\*</sup> The Tobique 27,000-h.p. development will be completed early in 1953.

The statistical information given in Table 16 shows the growth of the Commission's undertakings since 1924.

16Growth of the	New Brunswick	Electric Power Commission,	Years Ended
	Oct. 31, 192	4, 1945 and 1949-52

<sup>&</sup>lt;sup>1</sup> Five months—Nov. 1, 1950, to Mar. 31, 1951. The Commission's fiscal year-end changed in 1951 from Oct. 31 to Mar. 31.

<sup>2</sup> Year ended Mar. 31.

Quebec.—The Quebec Streams Commission.—Created by S.Q. 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (R.S.Q. 1925, c. 46) and 20 Geo. V, c. 34, the Quebec Streams Commission was authorized to ascertain the water resources of the Province, to make recommendations regarding their control, and to construct certain storage dams and operate them so as to regulate the flow of streams. It has assisted companies engaged in such work by the systematic collection of data on the flow of the principal rivers and on meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mainly by the regulation of the flow of the principal power streams through the construction of storage dams.

From 1912 to 1925, a number of storage reservoirs were built or acquired by the Commission, charges being made to benefiting companies to cover interest and amortization on the capital invested as well as the cost of operation. Since 1925, companies or persons have availed themselves of the latitude given them by R.S.Q. 1925, c. 46, to build the necessary dams; such storages have been transferred to and are operated by the Commission, the cost of operation only being charged annually to the interested companies or persons. The Commission now controls and operates 28 storage-reservoirs in the Province.

Among the rivers controlled by the Commission, either by means of dams on the rivers or by controlling the outflow of lakes at the headwaters, are: the St. Maurice, now developing 1,110,550 h.p.; the Gatineau, 528,000 h.p.; the du Lièvre, 274,000 h.p.; the St. Francis, 100,000 h.p.; the Chicoutimi, 41,400 h.p.; the Au Sable, 33,200 h.p.; and the Metis, 15,700 h.p. The Commission also operates nine reservoirs on North River, two in the watershed of the Ste. Anne-de-Beaupré River, and one at the outlet of Lake Morin, on Rivière-du-Loup (lower).

Reservoirs not Controlled by the Quebec Streams Commission.—Among storagereservoirs not controlled or operated by the Commission are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River, and the Onatchiway on the Shipshaw River; the Témiscouata Lake on Madawaska River, controlled by the Gatineau Power Company; Memphremagog Lake on the Magog River, controlled by the Dominion Textile Company; Témiscamingue and Quinze Lakes on the Ottawa River, controlled by the Federal Department of Public Works; Kipawa Lake on the Ottawa River, controlled by the Gatineau Power Company; and Dozois Lake on the Upper Ottawa River, controlled by the Quebec Hydro-Electric Commission.

Power developments on the Saguenay River, benefiting from the Peribonca and Lake St. John reservoirs, amount to 1,950,000 h.p. since the Chute-à-Caron (Shipshaw) project has been completed.

The Quebec Hydro-Electric Commission.—The Quebec Hydro-Electric Commission was established by S.Q. 8 Geo. VI, c. 22, with the object of supplying power to the municipalities, industrial and commercial undertakings and to citizens of the Province of Quebec at the lowest rates consistent with sound financial administration.

On Apr. 15, 1944, in accordance with the provisions of this Act, the Commission took over: (a) the system of Montreal Light, Heat and Power Consolidated for the generating and distribution of electricity; (b) the undertaking of the Montreal Island Power Company for the generating and distribution of electricity; and (c) all the shares of the capital stock of the Beauharnois Light, Heat and Power Company. Thus, the Quebec Hydro-Electric Commission now controls, among other assets, the following hydro-electric plants:\*—

Plant	River	Installed Capacity
Cedars. Sault-au-Recollet. Beauharnois. Rapid VII	St. Lawrence	1,241,000

The Commission operates a public utility system which supplies electric light and power requirements to Greater Montreal and surrounding districts, embracing a population of nearly 1,500,000. From the Cedars plant, electric energy is supplied to the Aluminum Company of America at Massena, N.Y., and through Beauharnois Light, Heat and Power Company power is sold to the Hydro-Electric Power Commission of Ontario. Sales involved are in the neighbourhood of 100,000 h.p. to Massena, N.Y., and 250,000 h.p. to Ontario.

#### 17.—Growth of the Quebec Power Systems, 1943-52

Note.—Figures for the years 1935-42 will be found in the 1950 Year Book, p. 572.

18.—Distribution of Quebec Primary Power, by System, 1947-52

(Coincident with Montreal System neak)

In addition to the ownership and operation of these generating and distributing systems, the Quebec Hydro-Electric Commission administers the 64,000-h.p. Upper Ottawa River plant at Rapid VII and also the Dozois Reservoir. Average primary power statistics for this Northern Quebec System (Cadillac-Noranda district) are as follows: 1947, 18,140 h.p.; 1948, 21,270 h.p.; 1949, 34,790 h.p.; 1950, 35,500 h.p.; 1951, 30,550 h.p.; and 1952, 29,200 h.p.

Ontario.—The Hydro-Electric Power Commission of Ontario is a separate entity, a self-sustaining public concern endowed with broad powers to produce, buy and deliver electric power throughout the Province and to perform certain regulatory functions with respect to the municipal electrical utilities that it serves. The enterprise represented by the Commission is generally known and referred to as the Ontario Hydro.

The members of the Commission, a Chairman and two Vice-Chairmen, are appointed by the Lieutenant-Governor in Council to hold office during pleasure. One Commissioner must be a member, and two may be members, of the Executive Council of the Province of Ontario.

The Commission was created in 1906 by an enactment of the Ontario Legislature after consideration of recommendations made by advisory commissions. These had been appointed in response to public demand that the water powers of Ontario should be conserved and developed for the benefit of all the people of the Province. The Commission operates under the authority of the Power Commission Act (7 Edw. VII, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified by numerous amending Acts (R.S.O., 1950, c. 281).

The 1940 Year Book contains a general article which deals with the early history of the Hydro-Electric Power Commission of Ontario and its later development both in organization and resources following the lines so well established by the first Chairman, Sir Adam Beck.

The undertaking initially proposed to purchase a block of 100,000 h.p. from the Ontario Power Company Limited at Niagara Falls and to distribute this to 13 municipalities which had signed the original contracts with the Commission to take power at cost. In 1909 the task of constructing a transmission system to distribute power to the member municipalities was begun and, by the end of the following year, power was being supplied to several of them. Similarly, and at about the same time, the Commission built a short transmission line and a substation to serve Port Arthur with power purchased from the Kaministiquia Power Company. These two pioneer systems eventually grew into the two co-operative systems—the Southern Ontario and the Thunder Bay Systems.

The Southern Ontario System developed through a series of consolidations of various smaller systems. The establishment of the original Niagara System was followed in 1911 by the formation of the Severn System. Subsequently, the establishment of other systems to serve groups of municipalities in various sections of the Province had brought, by 1919, the number of systems to eleven. In 1924, the Severn and two other systems were consolidated to form the Georgian Bay System and in 1929 and 1930 a consolidation of four systems created the Eastern Ontario System. In 1944, the Southern Ontario System came into being through the consolidation of the Niagara, Georgian Bay and Eastern Ontario Systems.

In the northern part of the Province the Commission continued to operate the Thunder Bay System. In addition, it undertook during the 1930's to operate, in trust for the Provincial Government, a group of unconnected systems serving mainly mining and pulp and paper industries and known as the Northern Ontario Properties. On Jan. 1, 1952, the Northern Ontario Properties and the Thunder Bay System were merged for financial and administrative purposes and the consolidation continues to be known as the Northern Ontario Properties.

In each of the Southern Ontario System and the Northern Ontario Properties, as at present constituted, the Commission's customers include municipal electrical utilities, certain large industrial users, and retail customers in a small group of local municipal systems and in rural municipalities.

The Southern Ontario System serves the older and more populous part of Ontario lying south of a line drawn from Mattawa on the upper Ottawa River approximately west to Georgian Bay. Primarily it serves a group of 312 municipalities receiving power at cost under contracts established according to the provisions of the Power Commission Act. It is, therefore, referred to as a cooperative system.

The Northern Ontario Properties is not a co-operative system in the same sense, though it continues to serve the municipalities that were formerly members of the Thunder Bay co-operative system. It also continues to operate, in trust for the Province, a large part of the facilities serving the industrial and mining areas of northern Ontario. The territory served by the Northern Ontario Properties extends in the northern part of the Province from the Quebec boundary to the boundary of Manitoba. Though it is not a wholly integrated power system, the Northern Ontario Properties comprises two Divisions which in themselves are integrated operational and administrative units, the Northeastern and the Northwestern Divisions. No power-line connection exists between these two divisions but the Northeastern Division has been interconnected since 1950 with the Southern Ontario System.

The growth of Ontario Hydro's resources, both physical and financial, reflects the remarkable industrial and social development of the Province. In 1914, the Commission purchased its first generating station, Big Chute on the Severn River. Later in the same year, the first Commission-built generating station at Wasdell Falls, also on the Severn River, was placed in service. The program of purchase and construction of generating stations thus launched reached a climax between 1917 and 1925 in the construction of the great Queenston-Chippawa development, later renamed Sir Adam Beck-Niagara Generating Station No. 1 in honour of the first Chairman. This station first delivered power in 1922. Yet, commencing four years later, the Commission found it necessary to negotiate for the extensive purchase of power from large Quebec suppliers in order to satisfy Ontario's steadily growing power demands.

In the past ten years and particularly since 1945, growing demands for power have taxed the capacity of the Commission's resources. In December 1942 the dependable peak capacity of the Commission's resources was 1,766,500 kw. By 1945 the peak capacity was greater by 171,000 kw. than the 1942 capacity. The aggressive program of capital construction inaugurated in 1945, however, had resulted by the end of 1952 in a dependable peak capacity of 3,353,350 kw., or an increase of 1,415,850 kw. in seven years. Almost half of this increase represented the combined output of the Des Joachims, Chenaux and Otto Holden Generating Stations, all of which are located on the Ottawa River. Other notable hydroelectric developments have been Pine Portage Generating Station serving the lakehead area of the Northwestern Division, and George W. Rayner Generating Station in Ontario's northeastern mining area. The recent construction of two large fuelelectric stations at Toronto and Windsor, named the Richard L. Hearn and the J. Clark Keith Generating Stations respectively, marked a departure from the Commission's almost complete reliance on hydraulic resources. Even with the present greatly expanded power production, however, the Commission's resources are taxed to capacity to meet demands at time of annual peak load.

Major activity in the power development program at present is the construction of Sir Adam Beck-Niagara Generating Station No. 2 near Queenston, a project made possible by the Niagara Diversion Treaty of 1950. Water will be diverted from the Niagara River at a point about two miles above the Falls. It will be conveyed for about five miles by twin pressure tunnels that pass under the city of Niagara Falls and reach a maximum depth of over 300 feet below the surface of the ground. Returning to the surface at a point about  $2\frac{1}{4}$  miles from the headworks, the water will flow through a canal to the forebay.

Twelve units at the station will have an installed capacity of 900,000 kw. In 1953, preliminary work necessary for the ultimate incorporation of a pumped-storage installation and associated generating capacity at this project will be undertaken. Such work, including widening of the canal, enlargement of the forebay, and the extension of certain parts of the headworks and substructure, can be carried out more economically and with less hazard before water is admitted to the new canal and forebay in 1954. The completed pumped-storage scheme will consist of a storage reservoir adjacent to the forebay, a reversible-pump plant, and four additional generating units at the main generating station. By this means, additional peak capacity can be made available within the limits of the Niagara Diversion Treaty of 1950, in stages as dictated by system requirements, and at a cost less than that of new fuel-electric generation.

Even the maximum development of resources at Niagara would not reduce the urgent necessity for the power that could be provided by the development of the International Rapids Section of the St. Lawrence River. This great power project was approved by the International Joint Commission in October 1952, and Ontario Hydro is prepared to proceed with it as soon as the Federal Power Commission at Washington grants a licence to an authority to carry out the power project on the United States side of the river.

In 1949 the Commission embarked on a complex program of frequency standardization in the Southern Ontario System, and this program was comprehensively treated in the 1951 Year Book, pp. 540-548. By the end of 1952, the area to be standardized had been reduced from about 12,000 to approximately 7,000 sq. miles. The magnitude and complexity of the operation have been increased, however, as the result of the growth in population and industrial production.

As a further indication of the broadened scope of the operation, it is now estimated that the domestic customers in the area referred to will have, on the average, almost twice the number of frequency-sensitive items estimated in 1947.

The basic principle governing the financial operations of the undertaking is that electrical service is provided by the Commission to the municipalities, and by the municipalities to their customers at cost. Cost includes all charges for operating and maintenance, for interest on capital investment, and reserves covering depreciation, contingencies and obsolescence, and for the stabilization of rates. It also includes a reserve for a sinking fund to retire the Commission's capital debt.

The undertaking from its inception has been self-supporting apart from the assistance given by the Provincial Government which provides 50 p.c. of the capital cost of rural distribution facilities in pursuance of its long-established policy of assisting agriculture. The Province also guarantees the payment of principal and interest of all bonds issued by the Commission and held by the public.

The undertaking as a whole involves two distinct phases of operations as follows: The first phase of operations is the provision of the power supply-either by generation or purchase—and its transformation, transmission and delivery in wholesale quantities to municipal electrical utilities, certain large industrial customers and rural operating areas. This phase of operations is performed by The Hydro-Electric Power Commission of Ontario. The second phase of operations is the retail distribution of electric energy. In most cities and towns, in many villages and in certain thickly populated areas of townships, retail distribution of electric energy is conducted by municipal commissions under the general supervision of The Hydro-Electric Power Commission of Ontario as provided for in the Power Commission Act and the Public Utilities Act. These local commissions own and operate their own distribution facilities. The Hydro-Electric Power Commission of Ontario owns the distribution facilities and conducts retail distribution in a small number of municipalities through what are called local systems. Throughout most of rural Ontario, the Commission, on behalf of the respective townships, operates the distribution facilities and attends to all physical and financial operations connected with the retail distribution of energy to the customers in the rural operating areas. Since 1944, the rate structure applying to the Commission's farm, hamlet, commercial and summer service customers has been uniform throughout the Province.

The balance sheet of the Commission shows that gross investment in fixed assets at Dec. 31, 1952, amounted to \$1,176,866,092, against which there was an accumulated reserve for depreciation of \$136,717,958. Included in the gross investment is an amount representing rural assets under administration totalling \$145,469,077. Of this amount, \$71,841,139 represents the assistance given by the Province of Ontario for rural construction. The Commission's assets, allowing for the deduction of depreciation reserve and Provincial assistance referred to above, stood at \$1,193,983,213.

The 329 municipal electrical utilities, which operate under cost or fixed-rate contracts with the Commission and distribute power in 334 municipalities in the Province, had a gross investment in fixed assets amounting to \$193,795,886. The provision for depreciation amounted to \$50,985,329. Municipal assets, after deduction of this depreciation reserve, were \$305,343,051, of which \$128,655,935 represented the equity of the municipalities in the Commission's systems.

The following tables give statistics of resources generated and purchased, development program, distribution and service of the Commission.

19.—Resources Generated and Purchased (All Systems), as at December 1951 and 1952

19-4-	Comm	ission's Gene	Power Purchased			
Year and System	Hydro	electric <sup>1</sup>	Fuel-el	ectric1	rower rurchased	
	kw.	h.p.	kw.	h.p.	kw.	h.p.

Totals, Resources	2,035,250	2,728,217	202,300	271,180	704,200	943,968
December 1952— Southern Ontario System Northern Ontario Properties—	1,659,150	2,224,062	444,000	595, 174	687,100	921,045
Northeastern Division Northwestern Division	301,600 259,800	404,290 348,257	_300	-402	1,400	1,877
Totals, Resources	2,220,550	2,976,609	444,300	595,576	688,500	922,922

Dependable peak capacity—the amount of power subject to periodic change as equipment and water conditions vary, which the source is expected to be able to supply at the time of the system's peak demand. For the Commission-operated generating stations, it is presumed that all units are available and that the supply of water is normal. Contractual stipulations govern the capacities of sources of purchased power.

#### 20.—Summary of Development Program of The Hydro-Electric Power Commission of Ontario (1945 to 1955), as at Dec. 31, 1952

Manitoba.—The Manitoba Power Commission was established in 1919 for the purpose of distributing electric energy, both wholesale and retail, throughout the Province, with the exception of the Greater Winnipeg area. The utility currently operates under authority of an Act respecting the Manitoba Power Commission (R.S.M. 1940, c. 166), as amended.

The Commission's supply of electric energy for distribution is purchased from the Winnipeg Electric Company at various points, chiefly at or near the city of Winnipeg. Arrangements for the Commission's purchase of power are contained in the Seven Sisters Agreement of 1928 between the Province of Manitoba and the Winnipeg Electric Company. The Commission has gradually acquired practically all of the municipally owned and privately owned generating plants operating within its jurisdiction and has spread a network of transmission lines across the Province. All energy distributed is now generated by hydro power.

The Commission's program, started in the 1930's and designed to bring hydroelectric power at uniform service rates to all urban centres of 20,000 or over population, is now virtually complete and currently serves 419 centres. In 1942,

the Manitoba Electrification Enquiry Commission was appointed by the Provincial Government to study the feasibility of widespread farm electrification in the Province. It was concluded that, with the Manitoba Power Commission's network of transmission lines as a source of supply and with the economy in design of farm lines that had been worked out, it would be practicable to bring the benefits of hydro-electric power to over 90 p.c. of the farms in the Province, provided the farmers themselves were prepared to assist in certain organizational and operational matters. A test program undertaken in 1945 proved successful and, thereafter, the Commission conducted annual programs of farm electrification. Shortages of materials restricted the size of these programs until 1948 when the set goal was reached of 5,000 farm connections. The program has since continued on an areacoverage basis and the Commission served over 34,000 farms by the end of 1952. The 1953 program, which is planned to serve another 5,000 farms, will be the last undertaken on an area-coverage basis. The only farmers remaining will be those in isolated pockets or those who have not availed themselves of the opportunity to take service.

Saskatchewan.—The Saskatchewan Power Corporation, established Feb. 1, 1949, and operating under the provisions of the Power Corporation Act (S.S. 1950, c. 10), as amended, succeeds the Saskatchewan Power Commission which operated from Feb. 11, 1929, to Jan. 31, 1949. The main functions of the Corporation are the generation, transmission, distribution, sale and supply of electric energy and steam. It is also authorized to produce or purchase, and to transmit, distribute, sell and supply natural or manufactured gas and the Corporation entered into that field in 1952 (see p. 582).

In 1952, the Corporation served 579 urban communities (with six or more customers) in retail sales and three urban communities (Saskatoon, Swift Current and Battleford) in bulk sales. Its activity is extended to the entire Province with the exception of such cities as Regina and Weyburn which own and operate municipal plants and distribution systems, and Moose Jaw where the local plant and distribution system is owned and operated by National Light and Power Company Limited. A number of small communities, the largest of them being the town of Kamsack, are not served by the Saskatchewan Power Corporation at present, although some such utilities, mostly privately owned, were taken over by the Corporation in 1952.

Particulars of the operations of the Saskatchewan Power Commission from 1929 to 1948 and of the operations of the Saskatchewan Power Corporation from 1949 to 1951 are given in the 1952-53 Year Book and earlier editions. At the end of 1952, the Corporation served 107,942 customers; 21,367 were located in communities supplied with power in bulk sales and 86,575 were retail customers. The latter group comprised 74,632 customers in communities considered as urban and 11,943 in areas classified as rural, predominantly farms. All customers absorbed 332,674,176 kwh. of which 300,297,970 kwh. were generated in Corporation plants and 32,376,206 kwh. were purchased in bulk from Regina and National Light and Power utilities. Total invested capital of the Corporation at the end of 1952 amounted to \$36,009,143.

During 1952, the Saskatchewan Power Corporation owned and operated four steam-generating plants (Estevan, North Battleford, Prince Albert and Saskatoon), and 12 diesel plants with capacities over 500 kw. each (Assiniboia, Humboldt, Maple Creek, Meadow Lake, Melville, Moosomin, Swift Current, Tisdale, Unity,

Watrous, Wynyard and Yorkton). The total available capacity of the Corporation in generating plants at the end of 1952 was assessed at 133,450 kw. of which 111,950 kw. was located in steam plants and 21,500 kw. in diesel plants. These figures include 36,900 kw. extensions to the steam plants in Saskatoon and Prince Albert and the gas diesel plant in Unity, which were carried out in 1952.

At the end of the year the Saskatchewan Power Corporation owned and operated 13,071 miles of transmission and rural lines, 4,314 miles of which were added during the year. Several large substations were built in 1952 with a total capacity of 46,000 kva.

23.—Growth of the Saskatchewan Power Corporation, 1945-52

In the last two months of 1952, the Saskatchewan Power Corporation commenced the distribution and sale of natural gas. It purchased the commodity in bulk from Husky Phillips Company in the Brock area, and resold it in retail to the customers in the town of Kindersley and the village of Brock. In these communities the Corporation maintained 33 miles of transmission and distribution line valued at \$353,352. There were 254 customers at the end of 1952 using natural gas with the combined two-month consumption of 74 M cu. feet. The Corporation has completed detailed surveys in connection with the proposed extension of gas service to the city of Saskatoon.

Alberta.—Public ownership of power-generating and distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately owned systems is the Board of Public Utility Commissioners, which has jurisdiction over the distribution and sale of electricity. The Board has power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates.

There are three private utility services in the Province: Calgary Power Limited, Canadian Utilities Limited and Northland Utilities Limited. A synopsis of these services is given below.

Calgary Power Limited.—This Company has eight hydro-generating plants on the Bow River and its tributaries, west of Calgary. These plants are: Horseshoe Falls, Kananaskis Falls, Ghost River, Cascade, Barrier, Spray, Rundle and Three Sisters. At Dec. 31, 1951, the Company's total plant capacity was 206,550 h.p. Barrier plant, completed in 1947, was the first Company plant to be operated by remote control. Recently, Cascade, Three Sisters, Spray and Rundle plants were linked to a central control room at Kananaskis. The remaining plants will

be remote-controlled as soon as the installations can be made. The Company has reservoirs at Lake Minnewanka (180,000 acre-feet), Interlakes (Kananaskis Lakes) (90,000 acre-feet), Spray Lakes (200,000 acre-feet), and forebay storage of 74,000 acre-feet at Ghost.

Power from these plants, together with that received under interchange agreements with the cities of Lethbridge and Edmonton, is fed into a transmission network which supplies the entire electrical requirements of the cities of Calgary and Red Deer and 235 smaller urban centres in central and southern Alberta. At Dec. 31, 1952, over 1,400 oil wells were being supplied with electric pumping service as well as other requirements directly related to the oil industry, such as gathering stations, refineries, pipeline pumping, and the many large industrial plants recently located near Edmonton.

Calgary Power Limited transmission system, comprising over 4,100 miles of lines of all voltages, extends from Westlock in the north to Milk River in the south and from Macklin (Saskatchewan), Chauvin, Brooks and Taber in the east to Nordegg, Banff and Crowsnest Pass in the west. An eastern extension will soon be completed to link a new 30,000-kw. power plant at Medicine Hat with the system. The cities of Calgary and Red Deer and the towns of Ponoka, Macleod and Cardston are supplied on a wholesale basis and own their own distribution systems. All other points on the system are supplied on a retail basis. The Company has 3,529 miles of main transmission lines and 600 miles of distribution lines.

An extensive farm-electrification program is in progress in Alberta and at Mar. 31, 1953, the Company was serving approximately 15,288 farms over 10,000 miles of the farmer-owned Rural Electrification Co-operative Association rural transmission lines. The program calls for the addition of from 3,000 to 4,000 farms each year for the next several years. Calgary Power does all the engineering, construction and operation of these co-operatives through a non-profit subsidiary (Farm Electric Services Limited), energy being supplied to the farm co-operative consumers at cost. Expenditure during the next five years for additional plant capacity, transmission lines and distribution systems is estimated at \$50,000,000.

Canadian Utilities Limited.—Towns and villages northeast of Drumheller are supplied from a 19,000-kw. steam plant in that city by Canadian Utilities Limited, while towns and villages north and east of Vegreville are served from a new gas-fired 8,000-kw. steam plant at Vermilion. There are tie lines with the Calgary Power Limited system at Vermilion, Vegreville and Drumheller. This utility also serves the areas around Grande Prairie from a 3,600-h.p. diesel engine plant located at that centre. The Company serves over 24,900 customers in approximately 204 towns, villages and hamlets, including 50 Rural Electrification Associations in the Province, through a network of approximately 2,000 miles of transmission lines and 2,150 miles of Rural Association lines. In 1949, the Company embarked on a program of extending its lines to farmers on a co-operative basis. The system is constructed and operated at cost for the farmer.

Northland Utilities Limited.—This Company, with headquarters at Edmonton, supplies electric energy to 5,376 consumers in 27 communities. Diesel generating plants are located at Jasper, Mayerthorpe, Athabasca, High Prairie, McLennan, Peace River, Lac La Biche, Manning, Fairview, Wildwood and Hay River, N.W.T. Low-voltage transmission lines extending from these generating stations supply

electricity to 370 farms and 17 villages. In addition, in 1948, the Company constructed a 665-kva. hydro plant on the Astoria River in Jasper National Park for the Department of Mines and Resources.

The Northland Utilities Limited also serves 1,200 consumers at Dawson Creek, B.C., with natural gas and 310 at Fairview and Bluesky.

British Columbia.—The British Columbia Power Commission was appointed Apr. 17, 1945, under the provisions of the Electric Power Act, "an Act to provide for improving the availability and supply of electric power" Operations were commenced in August 1945 with the acquisition of electrical properties in several parts of the Province. The following statement shows the growth in the number of customers to April 1953:—

Year Ended Mar. 31	Services Acquired	Services Installed	Total Services for Period	Cumulative Services to End of Period
	No.	No.	No.	No.
1946 (from August 1945)	13,270	832	14,102	14,102
1947	7,151	1,786	8,937	23,039
1948	1,000	3,431	4,431	27,470
1949	831	3,318	4,149	31,619
1950	4,686	3,321	8,007	39,626
1951	473	4.075	4,548	44,174
1952	103	2,600	2,703)	22022
Sold June 1951	-325	-640	<b>-965</b> }	45,912
1953	_	3,597	3,597	49,509
Totals	27,189	22,320	49,509	49,509

This growth has been accompanied by a corresponding increase in generating capacity from 8,285 kw. at Mar. 31, 1946, to 124,415 kw. at Mar. 31, 1953. The number of power districts rose in that period from 12 to 27 and there was also a large increase in the line mileage in operation. In 1952, there was considerable development of distribution systems to supply electrical services to rural areas, particularly in the North Okanagan district. Two new power districts, supplied from locally situated diesel generating systems, were opened in the Queen Charlotte Islands and at Fort St. James.

In 1946, the Commission established a promotional rate structure designed to "permit and encourage the maximum use of power" as required by the Act. This rate structure was extended as fast as increased plant capacity and distribution systems were installed to take care of the growth in load anticipated through its introduction. Within five years all acquired operations were enjoying this modern rate structure and, since 1951, all power districts have been charged in accordance with these promotional rates.

The Commission's main development on Vancouver Island—the John Hart plant—is being enlarged for the third time. This plant, now comprising four turbines of 28,000 h.p. each with an equivalent electrical rating of 20,000 kw., is being augmented by the addition of the final group of two units of the same size. When this additional installation is completed during the summer of 1953, the

capacity of the John Hart Generating System will be 168,000 h.p., or 120,000 kw. Preliminary work is under way to provide additional water-storage capacity at Buttle Lake.

The John Hart development now serves, through Commission transmission and distribution systems, territory on Vancouver Island between Duncan and Campbell River, including the Comox Valley, Alberni, Lake Cowichan and Nanaimo-Duncan power districts. The B.C. Electric Railway Company Limited takes delivery of power at Nanaimo and transmits a large block for distribution in Victoria and environs, so that the John Hart development serves all main portions of Vancouver Island. The facilities provided as a result of this development have led to the establishment of three major industries on Vancouver Island—one at Nanaimo, one at Port Alberni, and one at Duncan Bay.

On the mainland another major power project, the Whatshan development on the west side of Lower Arrow Lake, has been completed. It is designed for an ultimate 66,000-h.p. capacity and the first two turbines of 16,500 h.p., generating 11,250 kw. each, began operation in May 1951. Power from this plant is transmitted 75 miles at 138,000 volts to Vernon in the Okanagan Valley. Through an interconnection with Kamloops in the north and the West Kootenay Power and Light Company Limited lines to the south, a large area in the interior of the Province can be served by this project.

Other hydro-electric power projects, in various stages of development, are described below.

- (a) The Clowhom Falls Generating System consists of two 1,500-kw. generating units. It began operation in May 1952, serving the Sechelt Peninsula, northwest of Vancouver.
- (b) The Puntledge hydro system being acquired from the Canadian Collieries (Dunsmuir) Limited consists at present of a 9,000-h.p. hydro installation. It is being rebuilt to provide 35,000 h.p. to meet the growing needs of the Vancouver Island system.
- (c) Plans are under way for a hydro development at Spillimacheen in the Columbia Valley, situated roughly half way between Golden in the north and the Windermere area in the south. Initial capacity will be approximately 5,700 h.p., and generation will feed a proposed new 33-kv. transmission line from Golden to Edgewater, a distance of approximately 70 miles. Besides supplying a large rural area, electric energy from the Spillimacheen development will replace diesel generation at both Golden and Athalmer.
- (d) Preliminary investigations have been completed regarding the possible development of a 6,000-h.p. hydro generating system at Kokish River on northeast Vancouver Island.

Despite the benefits derived through industrial and other developments in the more thickly populated areas of the Province, it is in the remote and more sparsely populated portions that the benefits resulting from the activities of the Commission are more keenly felt. In less than seven years, the diesel capacity of generating stations which largely supply the requirements of the smaller power districts and rural communities has increased from 880 to 14,595 kw.

The Northwest Territories and Yukon Territory.—The Northwest Territories Power Commission was created by an Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1949, the Act was extended to include Yukon Territory.

The Northwest Territories Power Commission has authority to construct and operate power plants as required in a territory having an area of over 1,500,000 sq. miles. The Commission is continually investigating power needs in this large area and studying reports on hydro-electric power sites.

The Commission has in operation a hydro-electric power development on the Snare River some 94 miles northwest of Yellowknife, N.W.T. Power has been supplied from this plant since the autumn of 1948 to the mines in the Yellowknife area and, in the summer of 1949, a transmission-line connection was completed to augment the supply of power to the town of Yellowknife.

A diesel generating station and distribution system was put into operation at Fort Smith, N.W.T., in October 1950. This project supplies the various government establishments at Fort Smith, e.g., the Departments of Resources and Development, Transport, National Defence (R.C.C.S.), Health and Welfare, and Public Works as well as the Royal Canadian Mounted Police and private commercial consumers and residents of the settlement.

A new hydro-electric development was completed on the Mayo River approximately six miles north of Mayo Landing, Y.T., in December 1952. This plant is delivering power to the mining developments in that area and to the settlement of Mayo Landing.

The total capital investment of the Commission as at Dec. 31, 1952, was approximately \$8,500,000.

# Section 3.—Total Development of Electric Power from All Available Sources

In Section 1 of this Chapter total water-power resources are given with the proportion that, so far, has been developed. Table 3 of that Section analyses the hydraulic turbine installation by the proportions in central electric stations, in pulp and paper mills, and in other industries. This is useful material, but it does not take into account electric power developed in central electric stations or in other industries from sources other than hydraulic.

Section 2 covers the central electric station industry including stations under the public ownership of provincial and municipal governments and those under private ownership. Neither of these Sections, however, gives a complete presentation of the total electric power developed in Canada. All the hydraulic energy developed is not converted to electric power: there are a number of water wheels and water turbines used for direct drive that are not geared to electric generators. On the other hand, certain central electric stations in the Atlantic Provinces, Ontario and the Prairie Provinces generate electricity from steam or internal combustion engines. It is the purpose of this Section to show the total electric power generated from all available sources. Most of the power comes, of course, from central electric stations, the figures having been given in Table 4 of Section 2, p. 563. The total kilowatt hours of electric power generated by central electric stations is divided into that generated from water power and that generated from thermal engines of all kinds.

As shown in Table 25, total electric power generated by central electric stations in 1951 was 54,851,844,000 kwh. For a complete presentation, the power generated by manufacturing industries for their own use and the power generated by the primary mining industry for use in its own operations must be added. There are a few other sources of electric energy included, such as electric railways which produced 13,016,772 kwh. in 1951. This production has been taken into the annual total shown in Table 25. There are numerous small lighting and power plants on farms, rural homes, summer resorts, stores, etc., where electricity from central electric stations is not available and for these no data are available.

#### 25.—Total Power Generated by Central Electric Stations, Manufacturing and Mining Industries, 1942-51

Note.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The immense fishery resources of Canada are derived from the prolific seafishing waters of the North Pacific and North Atlantic, and from numerous lakes and rivers of the inland provinces. Canada ranks high in fishery production and leads the world in monetary returns from the export of fishery products. (See Chapter XXI for fisheries exports.)

Fishing is Canada's oldest industry and, although its relative importance in the nation's economy has diminished through the years, the industry has shown considerable expansion and is still of paramount consequence to the coastal provinces and to the inland areas adjacent to waters where commercial fishing is pursued. Of particular importance is the fishing industry of Newfoundland where, from the standpoint of number of people directly employed in the catching and processing of fish and those indirectly affected, it ranks first among the industries. In Nova Scotia, fish-curing and packing is the leading manufacturing industry, in Prince Edward Island it ranks second and in New Brunswick and British Columbia the industry stands third in importance.

An account of the Canadian Fishing Grounds is given in the 1951 Year Book, pp. 472–475.

#### Section 1.—Governments and the Fisheries

#### Subsection 1.—The Federal Government\*

The British North America Act gave the Federal Government full legislative responsibility for the regulation of the coastal and the inland fisheries of Canada. Under the Act, laws are made for the protection, conservation and development of the fisheries throughout the country. The provinces, however, have property rights in the non-tidal fisheries and have been delegated certain administrative responsibilities in varying degree. Consequently, while all the regulations governing fishing are made by the Federal Government, the work of administering the fisheries (enforcing the different laws and regulations, inspecting fish products, issuing licences, etc.) is done in some cases by federal officers and in others by provincial officers, according to arrangements made with the different provinces and without duplication of staff.

<sup>\*</sup> Revised in the Department of Fisheries, Ottawa.

Specifically, all tidal or sea fisheries, except those of Quebec, are administered by the Federal Department of Fisheries while the fresh-water or non-tidal fisheries, with some exceptions, are administered by the provincial departments. The exceptions are the Yukon and Northwest Territories, Nova Scotia, New Brunswick and Prince Edward Island where the fresh-water fisheries are federally administered.

The work required in the conservation, development and general regulation of the nation's coastal and fresh-water fisheries is performed by three agencies under the Minister of Fisheries:—

- The Department of Fisheries proper, with headquarters at Ottawa and area offices under Chief Supervisors at Vancouver, Winnipeg, Halifax and St. John's.
- (2) The Fisheries Research Board of Canada, with headquarters at Ottawa and seven stations across Canada.
- (3) The Fisheries Prices Support Board, with headquarters at Ottawa.

The Department of Fisheries.—The chief responsibilities of the Department of Fisheries throughout Canada are, in brief, to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the optimum utilization of the resource; and to develop a proper public understanding of the resource and the industry.

The larger part of the Department's staff is stationed in the field, working in the four above-mentioned spheres, and is comprised mainly of a protection staff and an inspection staff. The protection officers, including those on the Department's 74 patrol and protection vessels, are concerned with the enforcement of the conservation regulations under the Fisheries Act and other Acts designed to ensure a continuing maximum yield of fish. The inspection officers are responsible for the inspection of fish products and processing plants under the Fish Inspection Act and relevant sections of the Meat and Canned Foods Act.

The conservation program of the Department is carried out by the Conservation and Development Service. Protection officers not only enforce regulations pertaining to restricted areas, close seasons, limitations in location and types of gear, but they inspect spawning streams and keep them clear of obstructions. Engineers of this Service construct fishways to enable fish to by-pass dams. Hatcheries are maintained to restock waters where the fisheries are under federal administration.

To ensure a high standard of quality, inspection of fish and fish products is carried out by the Inspection and Consumer Service. Fish inspection laboratories are maintained on the Atlantic and the Pacific Coasts. The Service also has a staff of home economists at Ottawa who operate a test kitchen and carry out demonstrations and lectures on methods of preparing and cooking fish and fish products.

Through the mediums of printed material, films, radio and exhibitions, the Information and Educational Service informs the public on the various aspects of the industry and the work of the fisheries service with the object of developing a better understanding of the resource and those engaged in its exploitation. The Service works closely with the Conservation and Development Service in matters concerning conservation of fisheries, and with the Inspection and Consumer Service toward encouraging increased consumption of Canadian fish products in both North American and export markets.

The Markets and Economics Service, which has a staff of economists and market analysts, is responsible for bringing together a fund of factual information, through surveys and other means, on the primary fisheries and on the processing, transportation and distribution of fishery products. Such facts and their interpretation form the basis for development and for other programs of the Department. In the marketing field continual study and interpretation is carried out on market trends in the foreign and the domestic fields. In co-operation with the Department of Trade and Commerce and its Trade Commissioner Service, work is being done on the development and extension of export markets for Canadian fish.

In addition to providing these regular services, the Department assists the commercial fishing industry in several special ways. For the purpose of promoting efficient primary fishing operations and improving the marketing of fishery products, assistance is provided for the construction of draggers and long-liners and for bait-freezing and storage facilities on the Atlantic Coast. Restrictions against trawlers have been eased to permit the licensing of new trawlers built in Canada or the United Kingdom. For each new trawler built in Canada, the owner is eligible for a licence to operate a used trawler imported from either the United Kingdom or the United States and registered in Canada after payment of duty. A bona fide applicant wanting only one trawler can import a used one from the United Kingdom without having to lay down a new keel in Canada. The policy affecting the importation of trawlers from the United Kingdom and the United States applies to ships purchased from any country entitled to most-favoured-nation treatment in accordance with Canada's obligations as a signatory of the General Agreement on Tariffs and Trade.

The Department also provides assistance in the education of fishermen by making payments to educational institutions that have agreed to carry out educational work among adult fishermen.

The Fisheries Research Board.—The functions of the Fisheries Research Board of Canada, which was established in 1937, cover a wide field in the interests of conservation, development and management of the fishery resources of the country. Parliament passed new legislation in 1953 increasing the membership of the Board from 15 to 19 to allow for wider regional representation and providing for the appointment of a permanent chairman.

The work of the Board is, generally, biological and technological in character and is carried out at seven stations: the Biological Station at St. Andrews, N.B., with its substation at Ellerslie, P.E.I.; the Pacific Biological Station, Nanaimo, B.C.; the Central Fisheries Research Station, Winnipeg, Man.; the Newfoundland Fisheries Research Station, St. John's, N'f'ld.; the Atlantic Fisheries Experimental Station, Halifax, N.S.; the Pacific Fisheries Experimental Station, Vancouver, B.C.; and the Gaspe Fisheries Experimental Station at Grande Rivière, Que.

Scientific investigations are an important part of the development of the commercial fishing industry and provide the basis for conservation measures put into effect by the Department. Almost all the principal stocks of commercial fish are under observation by the Board's biologists. Many species, such as Pacific salmon, Atlantic salmon, Atlantic groundfish, lobster, herring, albacore, whitefish, whales, oysters and clams, are being studied intensively. The studies provide knowledge of the life history, growth rate, reproduction, distribution, enemies, diseases, etc., of the fishes, shellfish and sea mammals. Special investigations are

undertaken as problems arise. The Board has completed a survey of the fisheries resources of the Northwest Territories and is exploring the fisheries resources of Canada's Eastern Arctic.

Fundamentally, the objective of the Board's technological investigations is to eliminate waste through the utilization of all fishery products that come out of the waters and the putting of those products to the best possible use in the light of current knowledge. The Board's knowledge is continually expanding through basic and applied research and this is helping to bring about a wider distribution of fishery products, a higher level of quality in the products marketed, a better understanding of the use of fish in general nutrition and of fish by-products for food, medicinal and industrial purposes.

The Fisheries Prices Support Board.—Under the Fisheries Prices Support Act, passed in 1944, this Board was set up in July 1947 to recommend to the Government price-support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry, representative of the various fish-producing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices nor has it any jurisdiction over operations in the fishing industry or the fish trade.

Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum aggregate amount of \$25,000,000 but only on recommendation of the Federal Treasury Board and authorization of the Governor in Council. The most recent price-support action by the Board resulted from marketing problems in respect of Newfoundland salted codfish.

The Board maintains a small staff for administrative and research activities. The work is closely integrated with that of the Department's Markets and Economics Service and, where possible, services required by the Board are carried out by Department personnel. The Board has carried out field surveys on market conditions and possibilities, and on factors affecting the income of fishermen in the various producing areas. It keeps the financial position of fishermen under continuous review and makes recommendations to the Government on the basis of the facts as it finds them. Special investigations are made when serious problems arise in particular areas.

International Fisheries Conservation.—Fisheries regulation is sometimes needed on the high seas in international waters and international treaties have had to be made. Canada's obligations under such treaties with the United States and other countries are administered by the Department of Fisheries.

Canada and the United States have led the world for years in joint fisheries conservation development. Major examples of this joint effort are the International Fisheries Commission, concerned with the preservation of the halibut stocks of the North Pacific and the Bering Sea, and the International Pacific Salmon Fisheries

Commission, concerned with the conservation and development of the sockeye salmon of the Fraser River. Investigations carried out under the Commission's auspices, subsequent regulation and limitation of catches and, in the case of salmon, the construction of fishways appear to have been successful in arresting and reversing an earlier trend towards depletion of these fisheries. Another case of restoring a depleted marine resource by international agreement and action is that of the fur seals of the Pribilof Islands in the Bering Sea. Under the Provisional Fur Seal Agreement, Canada receives 20 p.c. of the fur-seal skins taken annually by the United States Government from the Pribilofs. Only surplus animals are killed.

In 1949, the Government of Canada became a signatory, along with nine other countries, to the International Northwest Atlantic Fisheries Convention which came into force in 1950. The work of the Commission, established under this Convention, concerns the scientific investigations of the fishery resources of the northwest Atlantic. The Commission has no regulatory powers but can make recommendations to the respective governments regarding measures that may be necessary for maintaining the stocks of fish that support the international fisheries in the Convention area. The third annual meeting of the Commission was held at New Haven, Conn., in May 1953, by which time all the signatory countries had ratified the treaty and appointed official representatives to the Commission. Treaty signatories are: Canada, Denmark, Iceland, the United States, the United Kingdom, France, Italy, Norway, Portugal and Spain. Headquarters of the Commission is at Halifax, N.S.

A step towards international action in regulating the high seas fisheries of the northern Pacific Ocean was achieved in December 1951, when Canada, the United States and Japan conferred at Tokyo and reached an agreement on fisheries problems. The resulting convention was ratified by the three contracting governments and instruments of ratification were deposited at Tokyo in June 1953. The treaty is known as the International Convention for the High Seas Fisheries of the North Pacific Ocean. The Convention aims at providing the maximum sustained yield of the fishery resources of the northern Pacific non-territorial waters with each of the parties assuming obligations to encourage conservation measures. It provides also for the establishment of a commission representing the three parties. The commission will study the northern Pacific fisheries, determine the application of the treaty principles and will promote and co-ordinate the scientific studies necessary for ascertaining conservation programs.

Under existing principles of international law, all nations have an equal right to exploit the fishery resources of the high seas. Problems have arisen when attempts have been made to conserve certain resources and the Convention is the first attempt to meet those problems. By joint agreement, Canada, the United States and Japan are prepared to waive some of these international rights and, under certain conditions, to abstain from fishing stocks that are under conservation by one or more of the other parties. Halibut, salmon and herring off the British Columbia coast meet the conditions of the Convention and Japan has agreed to abstain from fishing these resources.

Canada is a member of the International Whaling Commission and is obligated to collect biological data on whales caught by Canadian vessels. Whaling operations are conducted off the Newfoundland and British Columbia coasts.

#### Subsection 2.—The Provincial Governments\*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.—The union of Newfoundland with Canada on Mar. 31, 1949, brought about a transfer of some responsibilities in fisheries administration. The Newfoundland Fisheries Board remained the agency of government in the supervision of salt-codfish marketing, but fish and plant inspection, operation of bait depots, etc., became the concern of the Federal Department of Fisheries. The Board, formerly responsible to the Government of Newfoundland through the Commissioner for Natural Resources, became responsible to the Minister of Fisheries for Canada.

The Provincial Government is concerned mainly with improvement and development in fishing and production methods and has conducted experiments in long-lining and deep-water trawling, in the construction of multi-purpose fishing craft and in the exploration of potential fishing grounds. Steps are being taken to secure more efficient use of fisheries salt. Loans have been made available to processors for the establishment or development of fishing fleets and processing plants, and to fishermen for the construction and purchase of modern vessels capable of a greater variety of fishing operations and larger production.

In 1951, the Governments of Canada and Newfoundland established the Newfoundland Fisheries Development Committee, consisting of representatives of fishermen, processors and exporters, and of both Governments. The objective of this Committee is to establish the role of each sector of the industry and each government, jointly or severally, in the organization and development of the fisheries. Action has been taken by both Governments in certain matters considered as necessary preliminaries to an over-all program, such as an economic and sociological survey of fishing settlements and the encouragement of the use of community rather than individual stages and rooms by shore fishermen.

The inland waters of Newfoundland, which provide excellent sport fishing, are not commercially exploited to any significant degree. The lakes and ponds remain under the authority of the Natural Resources Branch of the Provincial Department of Mines and Resources, but the rivers and streams—the resort of migratory fish such as salmon and sea trout—passed under federal jurisdiction as a consequence of the union. Matters of conservation and guardianship are, therefore, mainly or wholly the concern of the Federal Department of Fisheries, although to the extent to which they affect the ponds and lakes they are subject to provincial or joint action.

Prince Edward Island.—The major responsibility for aid to the fisheries of this Province is undertaken by the Federal Government. Prince Edward Island, however, has established a Department of Industry and Natural Resources which administers the commercial and game fisheries.

Consultations were held in 1950 with marine architects and fishing ports were visited along the Atlantic seaboard with a view to obtaining the best information on boats and gear most adaptable to the Province's coastal waters. These

Prepared by the respective provincial departments responsible for fisheries administration.

studies resulted in the adoption of the 60-ft. Island Dragger. During the search for information on boats, much was learned of the possibility of adapting the drag-net principle to smaller boats and experiments were conducted to ascertain power requirements and general feasibility. The major part of the revenue of the commercial fishermen of the Province is provided by lobster, smelt and oyster catches.

The streams of the Province are, as a whole, mostly spring-fed and fairly constant in flow, thus providing excellent spawning grounds and nurseries for game fish, of which speckled trout are by far the most important. With such favourable conditions for reproduction, the problem is to increase the production of trout of a size attractive to anglers. Comprehensive biological investigations are being carried on by the Fisheries Research Board to attain this objective by determining the most efficient procedure in stocking, managing and cropping. The Province provides the sites for these investigations and the Conservation and Development Branch of the Federal Department of Fisheries builds the necessary dams and supplies the fish required for experimental purposes.

Nova Scotia.—The basic responsibility for the administration of tidal and inland fisheries in Nova Scotia is undertaken by the Federal Government. The Province, however, supplements the activities of this authority through its Department of Trade and Industry. In practice, a system of co-operative effort has been worked out between the two authorities with each free to carry out individual responsibilities and specific programs. Provincial activities fall into three sections—development, administration and research.

Development.—Development activities include engineering services, financial assistance to the fisheries industry generally, and educational services to the fishermen.

Engineering services are related to the design, construction and equipment of boats, vessels and fish-processing plants. A marine engineer is employed for these services and for the extension of consultant services to all persons interested in the industry. Financial assistance is extended, by way of loans, for the construction and modernization of fish-processing plants and to fishermen for the acquisition of boats and engines. Where the requirements of large new plants have exceeded the capacity of local authorities, the Province has provided such utilities as water lines and rail sidings; the Province also operates a bait freezer at Cheticamp.

Educational services extended to fishermen comprise instruction in basic navigation, rules of the road, and care and maintenance of marine engines by means of short courses at selected outports and a permanent school maintained at Lunenburg. This educational program is assisted by grants under the Canadian vocational training program of the Federal Department of Labour.

Administration.—The Nova Scotia Fisheries Act serves to supplement federal jurisdiction and is administered jointly by the Department of Trade and Industry and the Federal Department of Fisheries. The Act requires fish-processing plants and fish buyers to obtain annual licences, which are issued by the Department of Trade and Industry only on the recommendation of inspectors of the Federal Department of Fisheries and the certification of the Department of National Health and Welfare as to compliance with standards of construction, operation and sanitation contained in federal regulations.

Information obtained from the licensing activities and other statistics supplied by the Federal Department of Fisheries enables the Provincial Department of Trade and Industry to handle inquiries in respect of the fisheries industry.

Research.—Provincial fisheries research activities have been confined largely to the inland trout and salmon fisheries. The Department of Trade and Industry has carried out a five-year program of water control on the LaHave River in the interests of salmon preservation and development; has undertaken experiments in fertilization of lakes and in partial poisoning of lakes to reduce the numbers of coarse fish in competition with trout for the available food supply; and has conducted some special studies of trout populations and salmon migrations. Research activities of this nature have been continued under the direction of the Nova Scotia Research Foundation.

New Brunswick.—The commercial fisheries of New Brunswick are under the jurisdiction of the Federal Department of Fisheries. Since 1945, a Fisheries Division has been in operation under the provincial Department of Industry and Development. In 1946, a Fishermen's Loan Board was established to provide financial assistance to bona fide fishermen for the purchase of new boats and engines. Since its formation the Board has lent over \$1,590,000 of which more than \$805,000 has been repaid. It has modernized the deep-sea fishing fleet by the introduction of a most effective small dragger, 37 units of which are operating in the area of the Gulf of St. Lawrence and three in the Bay of Fundy. Seven additional modern units are under construction. The Fisheries Division is promoting experiments on scallop and flounder dragging as well as on the seining of herring in the Gulf of St. Lawrence area.

Quebec.—The Minister of Game and Fisheries administers both the sea and the inland fisheries of Quebec. The Department is composed of two divisions—the Division of Maritime Fisheries and the Division of Fish and Game, the latter being charged with the administration of the inland fisheries.

Sea Fisheries.—Quebec is the only province administering its own sea fisheries. For the benefit of producers and fishermen, it provides a system of cold-storage plants for the freezing and preservation of fish. Since the erection of the first plant in 1932, the network has grown to 50 plants with a daily freezing capacity of 250 tons of fish and a storage capacity of 16,000,000 lb. These cold-storage plants also perform a valuable service to fishermen by providing them with frozen bait. In addition, the Department owns and maintains 115 snow houses where fish may be chilled before being sent to storage or filleting plants, 40 culling sheds, and three artificial drying plants where 6,000,000 lb. of fish may be processed annually.

The Department maintains a staff of inspectors, fish wardens, technicians and technologists for the administration of fishery legislation and the application of new techniques to the expansion of the industry. The central administration is located at Quebec city, with an office at Gaspe for the administration of cold-storage plants. Statistics are compiled by the Department of Trade and Commerce in co-operation with the inspectors of the Maritime Fisheries Division.

Fish inspection is carried out under federal and provincial legislation by provincial inspectors, who are vested with additional powers for export purposes by the Federal Government. Educational work among the fishermen and producers is also conducted by the Department in order to teach the latest methods of fish preparation and obtain high-quality products. The new Fisheries Training School at Grande Rivière gives to fishermen of all ages the opportunity of taking free theoretical and practical courses in fishery, while the Superior School of Fisheries at Ste. Anne-de-la-Pocatière trains technologists in a four-year course. Encouragement is given to the cooperative associations of fishermen through the Social Economic Service of the latter institution. Under a maritime credit system, fishermen are able to obtain loans from credit unions for the purchase of boats and gear. The Department adheres to the federal-provincial agreement on the building of draggers and long-liners and assumes the building costs on a five-year capital refunding plan.

The fish trade is being promoted by advertising campaigns in newspapers and magazines, cooking demonstrations, educational films and free distribution of fish recipes and publicity leaflets, as well as by exhibits at fairs.

Hydrographical research in the Gulf of St. Lawrence, studies on the location of new fishing grounds as well as experiments on sea-fish biology are conducted by a Marine Biological Station at Grande Rivière and two substations of the North Shore and Magdalen Islands. This research has brought into use new types of modern fishing vessels recommended to fishermen. The Department also operates a Limnological Laboratory at Quebec city for studying the biology of the freshwater fish of the St. Lawrence River and tributaries.

Inland Fisheries.—The Division of Fish and Game exercises jurisdiction over the inland waters. Three hundred full-time wardens are employed and licences are required for sport-fishing and hunting, the revenue from which is applied to the improvement of fishing and hunting conditions.

Five hatcheries are maintained at strategic points throughout the Province: St. Faustin, Lachine, Baldwin's Mills, Tadoussac and Gaspe. These establishments distribute speckled trout, Atlantic salmon and grey trout fry, fingerlings and older fish.

The Department administers five parks or reserves in all of which, except for Mount Orford Park, excellent fishing can be found. The Gaspe and Laurentides Parks are renowned for their trout fishing. The Chibougamau Reserve and the La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Four salmon streams, all under the jurisdiction of the Fish and Game Division, are open to anglers: the Romaine River, the St. Jean River, the Petite Cascapédia River and the Matane River.

The Department co-operates with sportsmen through a joint committee composed of departmental officials and the directors of the larger fish and game associations. The committee studies the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the Province,

The Biological Bureau of the Province, located at the University of Montreal, and the big piscicultural laboratory at Quebec City, with its two stations for practical work located in the Mont Tremblant and Laurentides Parks, study problems connected with marine life.

Ontario.—The fishery resources of Ontario are administered by the Division of Fish and Wildlife, Department of Lands and Forests. The Division operates under the authority of the Fisheries Act (Canada), the Special Fishery Regulations for the Province of Ontario, the Ontario Game and Fisheries Act and the Regulations connected therewith.

Commercial Fishing.—The commercial fishing industry in Ontario provides employment to about 4,000 persons directly and to many more indirectly, and produces an annual harvest of from 30,000,000 lb. to 37,000,000 lb. of fish. For the year ended Dec. 31, 1951, the landed value revenue to licensed fishermen for the production of fish was \$7,035,000.

The industry, although widely scattered throughout the Province, is centred chiefly on the Great Lakes, particularly Lake Erie which is noted for its whitefish, herring and blue pickerel. Lake Superior continues to be the leading producer of lake trout. Other principal species of fish taken commercially are: yellow pickerel, herring or ciscoes, sturgeon, pike, catfish (including bullheads), carp and suckers. Many of the smaller inland lakes are commercially fished, especially those in the northwestern portion of the Province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60-ft. tugs, and types of gear also vary from the most common gill net, pound and trap nets, seines and baited hooks to small hand-operated seines and dip nets. Fishing methods and equipment have been rapidly modernized during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs. Such aids as depth-sounding devices, radar, ship-to-shore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use, as well as new types of fishing gear. Nylon gill nets are replacing cotton and linen nets and a very efficient and economical trap-net is gradually replacing the pound-net in Lake Erie and other waters.

Excellent co-operation and understanding of the complex problems involved in the administration and management of Ontario's fresh-water fishing industry by the Government and the fishermen, through their local associations and the Ontario Council of Commercial Fisheries, is working to the advantage of the industry as a whole.

Angling.—In Ontario, with its estimated water area of 64,441 sq. miles, angling constitutes one of the most widely distributed recreations. There are 144 different kinds of fish in the Province, including such species as lake and speckled trout, yellow pickerel, black bass, pike and maskinonge. While it is difficult to measure the value of sport fishing to the Province, a revenue of \$1,868,745 for the year ended Mar. 31, 1952, was obtained from the sale of angling licences, mainly to non-residents as residents require a licence for Provincial Parks only.

In order to maintain Ontario's reputation for excellent game-fishing, the wise management of this renewable resource is a prime factor, and a well-trained field staff of conservation officers and biologists is located in the 22 forestry districts of the Province.

Provincial Hatcheries.—Ontario operates 28 hatcheries and rearing stations. Excellent results have been produced in the culture and distribution of the various species of both commercial and game fish. The distribution for the year ended

Mar. 31, 1952, numbered 378,080,408, comprising whitefish, herring, pickerel, trout (including lake, speckled, brown and Kamloops), maskinonge, bass and ouananiche. Two of the finest trout-rearing stations on the Continent are located in Ontario at Dorion near Port Arthur, and at Hill Lake near Englehart.

Fisheries Research.—Research in Ontario is carried on in the Great Lakes, where commercial fisheries problems are being investigated, and in inland waters, where game-fish populations are being studied. At the recently completed Fisheries Research Station on South Bay, Manitoulin Island, studies relating to the removal and utilization of the less valuable species are being carried on and the effects investigated of this removal on stocks of the more valuable commercial and game species. In Algonquin Park, a careful record of angling quality is kept in a number of test lakes to allow evaluation of management techniques. Certain of the more barren lakes are being treated with inorganic fertilizer and its effect on the microscopic organisms and fish is being closely watched.

The habits of lake trout and eastern brook or speckled trout are being studied in order to provide additional information on the proper management of these species. The increase in the sea lamprey and the drastic drop in production of lake trout in recent years in Lake Huron (including Georgian Bay and North Channel) are believed by many authorities to be directly related and have led to considerable joint research by the Ontario Government and by Federal and State Governments in the United States. Co-operation is maintained in the exchange of biological findings and, where practicable and feasible, the results are applied in an attempt to control this menage.

Established fish-management principles are applied by biologists in the various forestry districts. Their program includes such projects as biological surveys and investigations, bass harvesting, coarse fish removal, sea lamprey control, creel census studies, fish tagging and other related subjects.

Manitoba.—The Department of Mines and Natural Resources administers the fisheries in Manitoba. Commercial operations are supervised during the various fishing seasons by officers using patrol boats in summer and bombardier snow-mobiles in winter; eight of the former and ten of the latter are maintained by the Department. The fish cultural service operates five fish hatcheries and two egg-collecting camps. During the fiscal year ended Mar. 31, 1952, 102,300,000 pickerel fry and eyed eggs, 82,350,000 whitefish eggs and fry, 1,385,000 trout fingerlings, and 29,000 adult perch, northern pike, largemouth and smallmouth black bass were distributed in the fishing waters of the Province.

The catch of fish from commercial fishing during the year ended Mar. 31, 1952, reached an all-time high. The most important of the 14 varieties of fish included in the harvest were pickerel, whitefish and sauger; the most famous species is the Winnipeg goldeye. More than 6,500 persons find full-time or part-time employment in the fisheries and probably as many more are employed in associated industries.

Many changes have recently been made in the production and marketing of fish, the trend being toward the production of a fish fillet ready to cook and toward improvement in handling to enhance quality. The catch is immediately iced in the fishing boats, fishing stations on shore are equipped with efficient coolers and fish freighting vessels are fitted with mechanical refrigeration. In winter, fast modern mechanical transportation, including aircraft and snowmobiles, is used to rush the catch from lake to rail. In some cases the catch is brought to the processing plant

still alive and in a matter of hours the fillets have been prepared, weighed, packed and quick-frozen. Approximately 90 p.c. of the catch is exported to the United States, Winnipeg providing the principal domestic market.

Saskatchewan.—The administration of fisheries in the Province of Saskatchewan comes under the Fisheries Branch of the Provincial Department of Natural Resources with head office at Prince Albert. Most of the fisheries resources are concentrated in the northern half of the Province, where the lakes have always been a source of food to the fur traders, trappers, prospectors and the Cree and Chipewyan Indians who inhabit the area, and also provide food and supplementary income to the settlers and homesteaders on the agricultural fringe.

There are approximately 129 commercially fished lakes in the Province and the principal species of fish include lake trout, whitefish, pickerel, northern pike, sturgeon, cisco, Arctic grayling, goldeye, mullet, perch and burbot. The growth of the filleting industry has been of particular significance, 15 filleting plants having been established since 1945. That the fishery resources are important to mink ranchers in the Province is evidenced by the fact that in the year ended Mar. 31, 1952, 67 fur-farm fishing licences were issued and 28,000 mink were fed under these licences; 672 domestic licences and 1,377 free licences to Indians were also issued.

There has been marked development recently in sport fishing. For the fiscal year 1951-52 there were 38,225 resident and 6,275 non-resident angling licences sold, compared with 6,000 resident and 1,500 non-resident licences sold in 1945.

The main endeavour in the fish cultural activities in the Province during the past few years has been to extend the range of the Arctic grayling species from the Far North into the Churchill River area, and to introduce eastern brook trout and certain warm-water species into areas where preliminary study seems to indicate suitable environment. To a large extent the indiscriminate planting of fish has been discontinued. A fish hatchery is operated at Fort Qu'Appelle for the hatching of pickerel, rainbow, brown and lake trout, and two experimental ponds have been built to facilitate the study, under controlled conditions, of the introduction of warm-water species from the United States. An experimental hatchery has been established at Lac la Ronge, where Arctic grayling and lake trout eggs have been hatched. An Arctic grayling spawn camp has also been established in the Fonddu-lac River, near Black Lake and a pickerel spawn camp is located on the Montreal River, near Lac la Ronge.

The management of the provincial water areas is conducted on a scientific basis. In 1947, a large-scale biological program was undertaken and more than 100 water areas have since been studied. The main emphasis has been on the study of productivity of the various water areas as well as the inter-relationship of the species and life histories. In so far as known facts will permit, the management of the various lakes has been placed on a sustained-yield basis. Experiments are in progress on the introduction of non-native species into suitable water areas. Where sport-fishing pressure has increased, such as on Lac la Ronge, Last Mountain Lake and Amisk Lake, a creel census has been established and the annual harvest is recorded. The Fisheries Laboratory, established in 1949 at the University of Saskatchewan, has three permanent biologists on its staff; usually about 12 students of the University are employed each summer on biological surveys.

The Fisheries Branch has conducted a program of education designed to acquaint people of the Province with the importance of scientific research and the necessity of certain regulations governing the administration of fisheries. Three colour and sound films have recently been made on sport fishing.

Alberta.—Commercial and game fishing are administered by the Fisheries Branch of the Department of Lands and Forests.

Regulations under the Alberta Fishery Act, designed to improve the packing, handling, processing, storage and quality of commercial fish, have been well received and supported by the Alberta industry. In line with a policy for producing good-quality fish, lakes in which whitefish are infected with the pike tapeworm and do not meet the quality standard have been closed to commercial fishing.

Biological surveys of many lakes and streams taken over the past ten years have provided an opportunity to observe the result of former management policies. It was found that the classical tenets of trout-stream management, including close seasons, legal minimum, feeder stream closure and hatchery plants, were inadequate or incorrect. A new management plan is being conducted featuring the 'fallowing' of smaller tributary streams, abolition of the legal size minimum, except in the case of lake trout, a continuous open season on large streams and rivers and the removal of close seasons for pike, pickerel and perch. Trout-rearing stations and a provincial trout hatchery support trout-stream populations whenever required in cases of natural disaster, severe winter kill, introduction of new species or areas that have no spawning grounds.

A long-term experiment to test the effectiveness of the Canyon Creek whitefish hatchery was begun in 1941 by planting eyed eggs in certain lakes in alternate years. The evidence gathered indicated that natural reproduction was sufficient and the hatchery was closed.

British Columbia.—The Provincial Department of Fisheries was organized in 1901-02 and soon became very active in fish-cultural work, building and operating fish hatcheries and instituting scientific research into various fishery problems.

Broadly speaking, the administrative and regulative jurisdiction over the fisheries in British Columbia rests with the federal authority. When British Columbia entered Confederation in 1871, the Government of Canada undertook to protect, conserve and promote the fisheries of the Province, and one of the important functions of the Provincial Department of Fisheries is to observe these aspects and to keep the Provincial Government informed through the appropriate Minister.

The ownership of the fisheries in the non-tidal waters is vested in the Crown, in the right of the Province, as are the shell-fisheries, such as oyster-fishing and clam-fishing in the tidal waters. The authority to administer and regulate these fisheries is vested in the Province, although the regulations covering them are made under federal Order in Council on the advice and recommendation of the Province.

The provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish-processing plants under a system of licensing. Provision is also made for the settlement by arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Net-fishing in the non-tidal waters of the Province, including commercial fishing, is regulated and administered by the Provincial Department of Fisheries, while authority for regulation of the game fisheries in the non-tidal waters is vested in the Game Commission, a branch of the Provincial Government administration. The Game Commission operates a number of trout hatcheries and egg-taking stations for re-stocking purposes.

The harvesting of marine plants of commercial importance in British Columbia, including the kelps, has recently been placed under the Provincial Department of Fisheries for regulation and control. Some research has already been done on a few of the more important species and more will be undertaken as required.

The Provincial Department of Fisheries has established a marine laboratory at Ladysmith on Vancouver Island for the purpose of conducting biological research into those species over which the Province has control, principally oysters, clams and other forms of shell-fish as well as marine plants. This research is conducted with the object of encouraging the industry to produce better products more economically and of enabling the Department to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis. The Department co-operates closely with the research work done by the Fisheries Research Board of Canada, particularly on the Pacific Coast.

# Section 2.—Fishery Statistics\* Subsection 1.—Primary Production

The marketed value of all fishery products in Canada (exclusive of Newfoundland) rose to \$175,718,000 in 1951, a figure higher by almost 16 p.c. than that of 1950. The record production of the West Coast fisheries accounted for most of the increase. The landings of fish, amounting to 1,448,300,000 lb., although 3 p.c. lower than the previous year were, nevertheless, maintained at a high level.

The data for Newfoundland are not included in the following tables as comparable information for that Province is not available. It is estimated, however, that in 1951 the landings of fish in Newfoundland amounted to about 612,500,000 lb., with a value to the fishermen of \$13,500,000, while the marketed value of fisheries products was in the neighbourhood of \$29,000,000.

 Revised in the Fisheries Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

# 1.—Marketed Values of All Products of the Fisheries, 1870-1951 (Exclusive of Newfoundland)

Year	Value	Year	Value	Year	Value
	\$'000		\$'000		\$'000
370	6,577	1920	49,241	1942	75, 117
375 380	10,350 14,500	1925	47,942	1943	85,59
885	17,723	1935	47,804 34,428	1944	89,440 113,87
390	17,715	1936	39,165	1946	121, 12
395	20,199	1937	38,976	1947	123,900
900	21,558 29,480	1938	40, 493 40, 076	1948	139,74
010	29,965	1940	45, 119	1949	151, 13
915	35,861	1941	62,259	1951	175,71

Three provinces accounted for 85 p.c. of the total marketed value of fisheries products in 1951; British Columbia's share was 50 p.c., a substantial increase over the previous year, followed by Nova Scotia with 23 p.c. and New Brunswick with 12 p.c.

In 1951, on the basis of marketed value, salmon was far ahead of all the other leading species of fish, strengthening its traditional position. Lobsters and cod were tied for second place, while herring was not far behind. Most of the main species showed increases in 1951 compared with 1950.

Table 4 shows the quantities of the main species of the commercial fisheries landed (primary products only) and values marketed (primary and secondary products). Minor items, and secondary products not specifically derived from one particular kind of fish, are grouped in the item "Other"

#### 4.—Quantities Landed and Values of All Marketed Products of the Chief Commercial Fisheries, 1947-51

(Exclusive of Newfoundland)

Nors.—The quantity landed excludes the weight of livers, but the value of liver products is included in the value for the species concerned.

#### Subsection 2.—The Fish-Processing Industry

In 1951, a total of 639 firms were engaged in the fish-processing industry in Canada (including Newfoundland). The marketed value of their products was \$163,010,000, almost 26 p.c. higher than in 1950; about one-half of the increase is accounted for by the inclusion of Newfoundland in the 1951 figures.

Note.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

# Section 1.—The Fur Industry

#### Subsection 1.-Fur Trapping

The fur industry was at one time the most vigorous and remunerative industry in Canada and it still contributes many millions of dollars annually to the national income. Until the end of the 19th century practically all Canadian furs were wild-caught and, although fur-farming has developed rapidly during the present century, trapping continues to provide nearly 60 p.c. of the income from raw furs produced in Canada.

Wild fur-bearers are still taken in moderate numbers, even in settled areas of this country, but the populations of such animals have, in general, been so reduced by the advance of settlement that the principal trapping areas now lie in the Northwest Territories and the northern parts of the provinces. Many wild animals, including some important fur-bearers, are subject to marked fluctuations in numbers from year to year, and these fluctuations are often greatest and most nearly regular in northern regions. The number of pelts of certain wild species taken annually is notably affected by these fluctuations.

Another and perhaps more important factor governing the 'take' of wild-animal furs is the fluctuation in demand and in price consequent on changes in fashion. Thus, the vogue of recent years for short-haired furs, resulting from the desire of women to present as slender a silhouette as possible while wearing a fur coat, has caused a decrease in demand for fox and other long-haired pelts and a corresponding decrease in the number of such pelts taken by trappers. In areas, such as parts of the Northwest Territories, where these furs were formerly a staple source of income, this change in style has resulted in serious hardship. It is obvious that the problems thus created cannot be solved by wildlife-management practices.

Conservation and management of fur-bearers are, however, receiving increasing attention from federal and provincial authorities. Scientific studies of many species are being made to determine the principal factors controlling their numbers, the optimum annual harvest that should be taken, and the best methods of increasing that harvest. Among the controlling factors being studied are food, shelter, weather, diseases, parasites and predators.

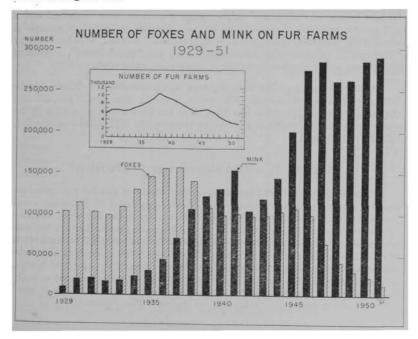

In certain fur-producing districts, provincial and territorial authorities have instituted a registration system in accordance with which trap-lines or trapping areas are assigned to individuals on a constant basis. This system puts the responsibility on the registered trapper for the conservation of fur-bearers in his own area and has, in general, proved highly successful.

Forest fires frequently wipe out for some time wild-fur production over large areas. Provincial forest services combat this menace by well-organized fire-fighting systems, including the use of aircraft and parachute-dropped fire-fighters and equipment, and by public education. Beaver dams also help to level off the effects of floods and drought, natural catastrophes that seriously affect fur-bearers and other wildlife. Beavers are, in fact, so useful as assistants to wildlife-management services that numbers of them are often transplanted, by air or otherwise, from areas where they are too numerous to areas where their activities will improve habitat for themselves and for other species.

The most important aspects of management of the fur-trapping industry are: constant practical scientific research, maintenance of suitable habitat and its improvement where possible, sound and balanced regulation of the harvest of furbearers, provision of competent and adequate field staffs, and free education of trappers with respect to the principles of wildlife management. By these means many areas depleted of fur-bearers have once again become productive. Such means will become increasingly important in maintaining Canada's position as a major producer of raw furs.

#### Subsection 2.—Fur Farming

Although early developments in raising fur-bearing animals on farms took place first in Prince Edward Island around 1887 and in Quebec in 1898, fur farming to-day is carried on in all the provinces of Canada. Foxes were the first fur-bearers to be raised in captivity on a commercial scale but mink, chinchilla, raccoon, marten, fisher, fitch, nutria and others are now being reared. Mink are the most numerous, followed by the various types of foxes and these two far outnumber all other kinds of fur-bearing animals.

608 FURS

There was a slow and steady increase in the number of fur farms until 1920 when 587 were reported, with a period of more rapid growth from 1920 to 1938 when the number reached 10,454. After the outbreak of hostilities in 1939 and the loss of the London and European markets, prices declined and many fur farms went out of production. Though prices rose considerably after the War, operating costs also increased and the number of fur farms, particularly those conducted in conjunction with other farming operations, continued to decrease. By 1951, only 3,072 reported but, despite this decrease in number, volume of production gradually increased over the period.

While the earliest and most intensive fur-farming operations were concerned with fox-raising in the Maritime Provinces and Quebec, the sharp decline in the popularity of fox furs and the steady rise in mink resulted in Ontario and Western Canada taking predominant positions in the raising of fur animals. A distribution of the 315,485 animals on fur farms at Dec. 31, 1951, showed 12 p.c. in British Columbia, 47 p.c. in the Prairie Provinces, 25 p.c. in Ontario, 10 p.c. in Quebec and 6 p.c. in the Maritime Provinces.

Furs have for centuries been used for clothing and adornment and, with the demands of fashion, the development of new colour phases in fox and mink has been an important incentive to the fur-farming industry. There have always been mink mutations in the wild state but these unusual animals stood little chance of survival and such pelts were exceedingly rare. Starting with wild-caught mink, breeders have, by cross-breeding, produced mink furs in a variety of colours. Among the earliest mutations to appear was an attractive bluish-gray mink which became known as "Platinum" mink. Then mutations were cross-breed and a still greater profusion of colour combinations appeared, an excellent example of which is the "Sapphire" mink, a cross of the steel-blue "Aleutian" with the blue-gray "Platinum". Other unusual colour patterns are the "Royal Pastel", a beautiful brown mink with a bluish cast, and an exquisite snow-white mink.

In 1937, some chinchillas were imported into Saskatchewan. These valuable little animals have a rich, soft fur. The outlay for raising them is small and, although the original cost of chinchillas was high, there has been a steady increase in the number on farms first by import and then by breeding. In 1951, 8,530 were reported, valued at \$1,800,000.

## Section 2.—Statistics of Fur Production\*

Total Fur Production Statistics.—Early records of raw-fur production are confined to the decennial censuses, when account was taken of the numbers and values of pelts obtained by trappers. In 1920, the Dominion Bureau of Statistics commenced an annual survey of raw-fur production, basing the statistics on information supplied by the licensed fur traders. This survey was continued for some years. More recently, annual statements based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are now used in the preparation of the statistics issued annually by the Bureau. Figures for Prince Edward Island are based on returns supplied to the Dominion Bureau of Statistics by fur traders in that Province.

<sup>1</sup> Approximate.

Ontario leads the provinces in value of fur production, accounting for 25 p.c. of the total in the 1951-52 season. The numbers of pelts taken in Alberta, Saskatchewan and Manitoba were greater than in Ontario but, in these provinces, squirrel pelts, which are lower-priced furs, made up a large part of the total. In Ontario the more valuable mink, beaver and fox pelts brought the total value to a higher level.

2.—Pelts of Fur-Bearing Animals Produced, by Province, Years Ended June 30, 1951 and 1952

		1951		1952

Canada	7,479,272	31,134,400	100.0	7,931,742	24,199,111	100-0	

The average prices of the main kinds of pelts taken in 1951-52 were considerably lower than in 1950-51. Mutation mink pelts, however, brought slightly higher prices, rising from \$21.60 to \$21.99 while standard mink dropped from \$20.57 to \$16.87. Fox pelts of all types decreased, silver fox falling from \$13.06 per pelt to \$11.48. The average value of beaver pelts was \$14.91 in 1951-52 as compared with \$23.58 in the previous year; muskrat was \$1.42 compared with \$2.25 and squirrel was 43 cents compared with 66 cents.

<sup>&</sup>lt;sup>2</sup> Includes Newfoundland.

Exclusive of Newfoundland.

Fur-Farm Statistics.—In 1951, the number of fur farms continued the decrease occurring each year since 1946, dropping from 3,492 in 1950 to 3,072 in 1951. The value of fur animals on farms at Dec. 31, 1951, was slightly lower than at the end of 1950 but the revenue from operations was higher, amounting to \$12,400,000 compared with \$11,800,000.

The number of farms reporting foxes in 1951 decreased since 1950 by 38 p.c. to 609, while the number of animals on these farms was lower by 40 p.c., totalling 14,336 valued at \$341,839. Mink farms showed a decline from 2,557 in 1950 to 2,324 in 1951, but the number of animals on the farms reached a record total of 292,125 valued at \$8,022,408 in 1951, which was 5,973 more in number than in 1950. Fox pelts produced decreased by 31 p.c. while mink pelts increased by 5 p.c.

# Section 3.—Marketing of Furs

The first Canadian fur auction sale was held in 1920 at Montreal, Que., and although that city has always been the leading Canadian fur mart, auction sales are now held at Vancouver, B.C., Edmonton, Alta., Regina, Sask., and Winnipeg, Man. The Saskatchewan Government maintains a Fur Marketing Service at Regina to assist producers in that Province.

Grading.—The grading of furs to secure uniformity was introduced in 1939 by the Federal Department of Agriculture so that furs may be purchased by grade without the necessity of buyers from other countries personally examining the

<sup>2</sup> Included in "Fox, other".

<sup>2</sup> Included in "Fox, other".

pelts. Grading offers many advantages to the producer as well as to the trade in general. It educates the rancher as to the proper value of his pelts and creates an incentive to improve the quality of the product; it furnishes guidance in the planning of future matings, aids in raising the standard of quality of the entire crop of pelts and helps in advancing the level of prices for high-quality pelts.

Exports and Imports.—Prior to World War II, Canada marketed fur pelts mainly in the United Kingdom but, since that market was practically dormant during the war years, the fur trade was carried on mainly with the United States. Though a definite revival of trade with the United Kingdom took place after the War, almost 80 p.c. of Canadian fur exports still go to the United States.

The Canadian fur trade, both export and import, is chiefly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Exports consist largely, of course, of furs which Canada produces in greatest abundance, mink being the most valuable followed by beaver, muskrat and fox. On the other hand, furs such as Persian lamb, certain types of muskrat, rabbit, squirrel, sheep and lamb, which are not produced to any extent in Canada, make up the major portion of the imports.

Total exports and imports of all furs to and from the United States, the United Kingdom and all countries are given for the years 1949-52 in Part I, Section 4, of Chapter XXI, Tables 13 and 14.

# Section 4.—The Fur-Processing Industry\*

The rather general term "fur processing" includes the fur-dressing and -dyeing industry and the fur-goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis, while the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves.

Fur-dressing and -dyeing industry statistics were first recorded in 1917, when 12 establishments with 512 employees reported receipts of \$1,071,805. Eight establishments in 1924 reported a revenue of \$1,120,895, expenditures on dyes, chemicals and other materials used of \$162,013, and expenditures on salaries and wages to 539 employees of \$561,233. Of the 3,473,909 skins treated in that year, muskrat pelts made up 47 p.c., rabbit 19 p.c. and squirrel 10 p.c.

The greatest number of skins treated was reported in 1941, when 14,592,079 were handled, but almost 53 p.c. of those were rabbit skins so that the revenue for that year was only \$2,476,289. The record revenue reported was that for 1949, when \$6,691,418 was received and rabbit skins constituted 38 p.c. of the total skins processed.

In 1951, the number of skins treated was 9,768,616, of which rabbit skins comprised 32 p.c., muskrat pelts 30 p.c., squirrel skins 14 p.c., Persian and other types of lambskins 11 p.c., and 'mouton' and other shearling wools 5 p.c.

	6,691,418	6,514,772	5,302,761

Statistics for the fur-goods industry, on a comparable basis, are available from 1921, when 219 establishments reported a gross value of production of \$13,639,609, with employees numbering 2,621 who received \$3,013,706 in salaries and wages. Cost of materials used in the manufacturing process totalled \$8,118,833. Principal statistics for the industry for the years 1949 to 1951 are given in Table 9.

9.—Principal Statistics of the Fur-Goods Industry, 1949-51

Item	1949	1950-	1951
Establishments	642	609	612
Employees on Salaries— Male No. Female "	1,305	1,250	1,203

	60,955,010	61,930,099	61,209,546

Changes in living habits and standards that have taken place in the past quarter-century are reflected in the type of goods produced by the fur-goods industry. For example, in 1921 there were 31,604 ladies' fur coats and jackets produced whereas, in 1948, there were 225,711 ladies' fur coats made; the number dropped to 191,915 in 1950 but rose to 201,626 in 1951. The manufacture of men's fur coats, however, showed a decided reversal in the market; there were 4,655 men's fur coats and 1,037 men's fur-lined coats manufactured in 1921 but only 632 in 1951.

Norz.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter deals with manufacturing industries in Canada in three Parts. Part I is a textual review of manufacturing in 1951 compared with the previous year. Part II gives general analyses including: the historical development of manufacturing; detailed treatment of current production under various groupings and individual industries; and principal factors in manufacturing production such as capital, employment, salaries and wages and size of establishment. Part III deals with the provincial and local distribution of manufacturing production.

### PART I.—REVIEW OF CANADIAN MANUFACTURING

Canada is no longer on the fringes of industrialization but ranks among the world's most important manufacturing countries. Basic historical developments, such as the opening of the West and the magnitude of requirements of all kinds for World Wars I and II, have been followed by recent discoveries of far-reaching significance. Such events as the discovery of a major oil pool on the prairies in 1947, the discovery of large-scale deposits of iron ore and the successful search for uranium have given new dimensions to Canadian thinking and business planning. These are the factors that explain the records of capital expenditures year by year since the end of the War. Yet it is not the mere rate of expansion that is significant. There have been other periods when Canada's population has grown more rapidly and in many respects the rate of industrial expansion in the late 1920's was relatively as great as in the post-war years. The real significance of the latter period is that never before has there been an advance on such a broad industrial front.

The second point to be observed is the changing emphasis of Canadian manufacturing activity. By 1949 the period of post-war conversion was passed and Canada had entered a new phase of economic expansion which derived its dynamic from the discovery of new resources and the application of new processes. This meant that even the sharp recession in the United States in 1949 failed to have significant effects in Canada. The Korean conflict and the consequent rearmament program gave an added impetus to the expansion of Canadian industry and to the development of Canadian basic resources. Capital expenditures that contributed most to the defence of Canada were given priority. Additional capacity was created to meet the requirements of the specialized defence program-aircraft, electronic equipment, ships and guns-many items of which had never before been produced in Canada. Measures such as steel control, credit regulations and deferred depreciation had the desired effect. A shift gradually took place toward the further expansion of basic industrial capacity and away from investment in consumer goods and services.

It should be emphasized that Canada's development as an industrial country is based upon and not independent of her position as a trading nation. In 1952, Canada was sixth among the world's industrial powers and the world's third largest trader. Canada's exports earned a quarter of her income and Canada's per capita trade at \$571 was higher than that of any other country. At the same time, Canada's position has become more closely linked with the North American Continent and trade with the United States has grown to the point where that country took nearly two-thirds of Canada's exports in 1952.

The stability of current levels of manufacturing is indicated by the fact that such activity is the result of business assessments of resources and market potentialities. Millions of dollars are being invested in oil because the prairies can produce oil as economically as other great fields on the North American Continent. Petrochemical plants are being erected because the raw materials are readily at hand. Kitimat is based on the coincidence of abundant and cheap hydro-power and access to ocean transportation, both of which are essential to the low-cost production of aluminum. Exploitation of the Ungava iron ore deposits rests on the belief that the steel industry of the North American Continent will need the high-grade ores involved in order to meet continuing peace-time demands. No country is in a more favourable position than Canada to supply uranium for the production of atomic energy.

The manufacturing industries of Canada in 1951 again established a new record in gross value of production with a total of \$16,392,187,132. This represents an increase of  $18 \cdot 6$  p.c. over the previous year's value. Part of the increased value was accounted for by an increase of about  $6 \cdot 0$  p.c. in the physical volume of production and the balance by increased prices of fully and partly manufactured products. Accompanying the rise in output was an increase of  $6 \cdot 3$  p.c. in the number of persons employed, with an increase of  $18 \cdot 2$  p.c. in the salaries and wages paid. Salary and wage payments at \$3,276,280,917 were the highest on record and exceeded the previous high, reported in 1950, by \$505,013,482.

Not all segments of manufacturing production were affected to the same degree by the impact of the war in Korea. The greatest expansion was reported by the industries classified in the durable goods group which, according to preliminary estimates, achieved an increase of 10·4 p.c. in the physical volume of

production, as compared with an increase of only  $2 \cdot 7$  p.c. for the industries producing non-durable goods. For manufacturing as a whole the increase was  $6 \cdot 1$  p.c., the index at  $242 \cdot 1$  being only  $0 \cdot 2$  points below the record wartime level attained in 1944.

As was to be expected, the industries producing for national defence made the greatest gains in production during 1951. Accordingly, most of the industry groups producing durable goods reported increased activity, while only a few of the industry groups producing consumer goods reported increases in production. The transportation equipment group, with an increase of 20 p.c. in physical volume, experienced the greatest expansion in production. This was followed by products of petroleum and coal with 13 p.c., iron and steel products 11 p.c., non-ferrous metal products 10 p.c., non-metallic mineral products 9 p.c., paper products 8 p.c., electrical apparatus and supplies 7 p.c., chemicals and allied products 6 p.c., rubber products 5 p.c., foods and beverages 4 p.c., wood products 3 p.c., and miscellaneous industries 0.5 p.c. In the non-durable goods sector, the greatest decline in physical volume of production was reported by the leather products group with 8 p.c., followed by tobacco and tobacco products with 6 p.c., clothing 4 p.c., textiles 2 p.c. and printing, publishing and allied industries 0.3 p.c.

Manufacturing establishments reporting in 1951 numbered 37,021. These plants furnished employment to 1,258,375 persons who received \$3,276,280,917 in salaries and wages. They also produced goods with a selling value at the factory of \$16,392,187,132 and spent \$9,074,526,353 for materials, while the value added by manufacture totalled \$6,940,946,783. It should be remembered that the value added by manufacture does not represent the manufacturers' profits. The value added is obtained by subtracting the cost of materials, including fuel and electricity, from the value of products. The difference represents the value added to the materials by labour. It is this difference which the employer of labour uses to pay for the labour itself, overhead expenses and interest and profits. Compared with the previous year, there was an increase of \$998,888,554 in the value added by manufacture.

Fifteen leading industries accounted for nearly 50 p.c. of total value of production of all industries in 1951. The largest industry—pulp and paper—which has been steadily expanding since the end of the War, is embarking on a further stage of development. From 1946 to 1951, the physical volume of production of the industry increased by one-third and new projects were under way or in an advanced state of planning. For example, in British Columbia a \$40,000,000 mill was nearing completion and projects involving around \$75,000,000 were under construction. multi-million-dollar plants were scheduled for Alberta, and significant additions to capacity were planned by a number of Ontario and Quebec companies. In 1951, a 5-p.c. increase was secured in newsprint production by speeding up machines and by more efficient plant operation. New mills contributed to a 20-p.c. increase in market pulp production and a 14-p.c. increase in the output of paperboard and papers other than newsprint. The gross value of production of this industry rose from \$954,000,000 in 1950 to \$1,238,000,000 in 1951. The industry ranks first in wages paid, first in new investment, first in exports as well as first in value of output. It produced one-quarter of the world's output of wood-pulp. Most of the production was processed domestically to provide 54 p.c. of the world's supply of newsprint.

Five industries in the foods and beverages group ranked among the 15 largest in Canada. Because of the basic importance of agriculture to the Canadian economy these industries are in the forefront of industrial activity. The raw products of the

farm must be further processed in meat-packing plants, in canning factories, in milk, cheese and butter establishments or in flour mills. The value of production of the slaughtering and meat-packing industry, which ranks second, rose from \$757,000,000 in 1950 to \$892,000,000 in 1951; butter and cheese production was valued at \$331,000,000 in 1950 and \$374,000,000 in 1951; flour milling reported a rise in gross value of production from \$247,000,000 in 1950 to \$281,000,000 in 1951; over the same period miscellaneous food preparations advanced from \$180,000,000 in 1950 to \$260,000,000 in 1951; the bread and other bakery products industry showed a gain from \$215,000,000 in 1950 to \$245,000,000 in 1951. In the post-war years, despite the virtual completion of war relief and emergency feeding programs, the food industries have continued to forge ahead. In 1951 farm income was the highest on record and agriculture's contribution to the gross national product of Canada was 30 p.c. higher than in 1950.

The third leading industry—non-ferrous smelting and refining—had a gross value of production of \$670,000,000 in 1950 which rose to \$861,000,000 in 1951. Canada has been the world's leading exporter of non-ferrous metals for over a decade and is also one of the world's leading producers of non-ferrous metals, standing first in the production of nickel, second in aluminum and zinc and fourth in copper and lead. The most important base-metal ore-bodies, at Sudbury, Ont., and Kimberley, B.C., were discovered before the turn of the century. They contain ores of two or more base metals intimately associated and frequently containing appreciable quantities of precious metals such as gold, silver and platinum. Present-day extraction methods are a triumph of modern techniques. Important new discoveries of non-ferrous metals include copper in the Gaspe Peninsula, copperzinc ores at Chibougamau and zinc in Barraute Township in northwestern Quebec, titanium at Allard Lake on the Gulf of St. Lawrence and nickel-copper at Lynn Lake in northern Manitoba.

The manufacture of motor-vehicles was Canada's fourth largest industry in 1951 and the motor-vehicle parts industry ranked thirteenth. Gross value of production of motor-vehicles rose from \$676,000,000 in 1950 to \$743,000,000 in 1951 when the productive capacity of the industry was nearly three times the prewar capacity. In 1951 a record number of over 415,000 vehicles of all types were produced; in the same year retail sales of passenger cars amounted to \$683,000,000 and sales of commercial vehicles to \$267,000,000, both record highs. The trend of passenger-car ownership reflects the rising standard of living and the growth of the motor-vehicle industry: in 1939 there were 9.5 persons for each passenger car in the country and in 1951 an estimated 6.7 persons per passenger car. The development of the motor-vehicle parts industry also moved upward, production rising from \$227,000,000 in 1950 to \$263,000,000 in 1951.

The fifth leading industry—petroleum products—grew from \$512,000,000 in 1950 to \$599,000,000 in 1951. In many respects petroleum has been Canada's most outstanding post-war development. Crude petroleum production almost quadrupled from 1947 to 1951 and refining capacity increased by 50 p.c.

For the Canadian lumber industry, 1951 was a year of near-record activity, the output of sawmills advancing from \$497,000,000 in 1950 to \$592,000,000. For most of the period since the end of the War, demand for sawmill products continued to exceed the available supply and, as a reflection, lumber prices more

than doubled. During these years the annual lumber output averaged 6,200,000,000 bd. ft., a 60-p.c. increase over the average rate for the four years immediately prior to World War II.

Gross value of production of the primary iron and steel industry advanced from \$341,000,000 in 1950 to \$465,000,000 in 1951. The industry is making tremendous progress because of the expansion of iron-ore production; between 1945 and 1951 production of the Steep Rock mines increased from 500,000 tons to more than 1,300,000 tons and an annual 3,000,000-ton output is expected by 1955. Potentially more important are the developments presently taking place in the Quebec-Labrador area. When production in this field gets under way in 1954, Canada should rank among the six largest producers of iron ore in the world.

Increased activity has been reported by the railway rolling-stock industry. This industry, which in 1950 ranked sixteenth with a gross value of production of \$194,000,000, moved up into tenth position in 1951 with an output of \$301,000,000.

In the textile group, only one industry ranked among the fifteen largest in 1951. Output of the cotton yarn and cloth industry advanced from \$257,000,000 in 1950 to \$274,000,000. Both the men's and women's factory clothing industries failed to rank among the leading fifteen industries in 1951. The textile industry was typical of other consumer goods industries which faced a market softening. Investment resources had been largely expended on the basic enlargement of industrial capacity and in the early post-war years production had been expanded to meet large backlogs of demand. The outbreak of hostilities in Korea provided another stimulus to sales but, as this precautionary buying subsided, idle capacity developed in some industries. The same condition in other industrialized countries resulted in an increase in competition in the Canadian market. The gross value of production of the textile industry rose by 85 p.c. between 1946 and 1950. New investment was high during those years and despite the considerable decline in production and sales from early 1951, planned investment in 1952 was up to the levels of the two previous years.

The gross value of production of the rubber goods industry advanced from \$239,000,000 in 1950 to \$312,000,000 in 1951. Canada ranks among the leading countries of the world as a manufacturer of rubber goods and the industry makes an important contribution to the country's export trade. It should be pointed out, however, that much of the increase in 1951 was accounted for by price advances. While many kinds of rubber footwear were produced at a rate exceeding that of 1950, there was a decline in the physical production of some important items such as passenger car tires. The industry is practically confined to Ontario and Quebec with Ontario accounting for almost 70 p.c. of production and employment.

# PART II.—ANALYSES OF MANUFACTURING STATISTICS Section 1.—Growth of Manufacturing

This Section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, employees, salaries and wages paid, cost of materials and value of products. Also, it includes information on the consumption of manufactured products as well as a treatment of value and volume data.

#### Subsection 1.—Historical Statistics of Manufacturing

It is impossible to give absolutely comparable statistics of manufacturing over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, as far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

#### 1.—Summary Statistics of Manufactures, 1917-51

Note.—Statistics of manufacturing from 1870 have been published, but between that year and 1917 figures are not on a comparable basis to the series given below. Statistics for significant years will be found in the 1943-44 Year Book, p. 363. Statistics of the non-ferrous metal-smelting industries were included in manufactures in 1925 for the first time.

<sup>&</sup>lt;sup>1</sup> For 1924 and subsequent years the net value of production is computed by subtracting the cost of fuel and electricity and the cost of materials from the gross value. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available. <sup>2</sup> A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. <sup>3</sup> Includes Newfoundland.

<sup>1</sup> See footnote 1, Table 1.

<sup>&</sup>lt;sup>2</sup> See footnote 2, Table 1.

<sup>&</sup>lt;sup>2</sup> Includes Yukon Territory.

In order to retain some continuity with the past, Table 3 continues the historical series on the chief component material classification basis. Similar statistics under the Standard Classification groups (see pp. 630-631), worked back to 1945, are given in Table 10, pp. 632-633.

3.—Summary Statistics of Manufactures, by Industrial Group, Significant Years, 1917-51
